—*Documents regarding the peace conference (American Association of International Conciliation, June, 1919, no. 139, pp. 798-799).*—"The essential factors were studied with a care not to be found in any of the great congresses of history. . . . For the convenience of controversy, the story was widely circulated of the most formidable Treaty in history hurriedly improvised and thrown together by four fallible and ill-informed men, closeted in a dark room, imposing upon the world their whim as law. The time has come to meet

this fable with the facts. The Treaty was studied, prepared and discussed for six long months by fifty-eight technical commissions on which sat the foremost specialists of each country which held 1,640 meetings. The conclusions of these commissions, verified by twenty-six local investigations, were discussed from January 10 to June 28 by three bodies: the Council of Ministers of Foreign Affairs which held thirty-nine meetings; the Council of Ten which held seventy-two meetings and the Council of Four which held one hundred and forty-five meetings. These three councils also gave hearings to the chairmen of the technical commissions, and all the representatives of Allied or neutral countries interested. Finally when at the beginning of May, the texts were settled upon, the cabinets of the various Powers were called into consultation."—A. Tardieu, *Truth about the treaty*, pp. 97-98.

Course of discussion: Language.—German treaty.—League of Nations.—Criticism of President Wilson.—Dispute over Saar valley and left bank of Rhine.—Disposition of Fiume and Shantung.—New frontiers of Europe.—Poland.—Reparations.—Austria.—Russia.—Balkan problem.—At the first plenary meeting of the conference "Mr. Wilson asked permission to present the following aspects of the matter (concerning the language of the treaty): 'French has been the language of European diplomacy, but we have now reached the beginning of a new era, and enter upon world diplomacy. It is hardly decisive to follow European precedence which gives the French language this position. The language of the other side of the globe is English, and this is a congress of the world. Moreover, the greater part of the people represented in this congress use the English language.' He sincerely doubted whether any American when looking at this document in French would be satisfied that it was an exact expression of the decision of the Conference. . . . The upshot of the matter was that English and French were both made official and the Treaty was printed with English on one page and French on the next. It was one of many evidences of the shifting of power from the old to the new. Indeed, English was the dominant language at the Conference. A large proportion of the foreign delegates, like the Chinese, Japanese, South Americans, and others, spoke it as their second language, and of the Council of the five heads of the great Powers only Orlando of Italy spoke no English, while only two, Clemenceau and Orlando, spoke French. Clemenceau and Sonnino (Foreign Minister of Italy) spoke English fluently, and Baron Makino of Japan spoke it well."—R. S. Baker, *Woodrow Wilson and world settlement*, v. 1, pp. 76, 204, 208.—"It was resolved . . . to concentrate into one huge document all the matters that required to be regulated with each of the enemy states respectively, and to set to work first upon the German volume. As a result, no personal conference took place with the enemy delegates at all and, to quote from the most authoritative British account of the proceedings 'the complexity of conditions and the pressure of time compelled the treaty to be drawn up in sections and prevented the cumulative and converging effect of the provisions from being realized at the time.'"—A. E. Zimmern, *Europe in convalescence*, p. 109.—"Behind the scenes during the early weeks two interesting and important struggles were going on, as to the disposition of the German colonies and Turkey, and as to the League of Nations. A strong tendency developed in favor of dividing up the spoils, making a preliminary treaty

which should penalize and disarm Germany and allow the world to return to normal as quickly as possible, leaving the question of a league of nations for the future. President Wilson, however, had long been convinced that the League of Nations should be established as an integral part of the new international order, and that it should have general oversight of the former German colonies and Turkey. Premier Hughes of Australia was at first in favor of a policy of annexation of the German colonies, as was even General Smuts of South Africa; Japan also was disposed to insist on the terms of the earlier treaties. At the second plenary session (January 25) the conference voted that a league of nations as 'an integral part of the general treaty of peace' was 'essential,' and appointed a committee to draft a constitution. . . . By the end of the month, owing largely to the persistence of President Wilson, the general idea of mandatories for the German colonies and Turkey was accepted, with modifications, which secured the assent of Australia, South Africa, and Japan. The League of Nations Commission met February 3, and continued to hold meetings daily. Very decided differences of opinion arose. The Japanese contended for a 'racial equality' clause; the French insisted that the League must possess adequate military power to cope with Germany in particular. Only by making the armistice terms more drastic, and by promising a special defensive treaty by which Britain and the United States would aid France in case of a German attack, was it possible to secure unanimous agreement. At the plenary session of February 14 the draft of the League Covenant was read. The next day President Wilson sailed for the United States. On February 19 Premier Clemenceau was shot, but fortunately was able to be back at work in a short time. For a while the chief interest centered in economic matters—the amount of reparation Germany should make, and the manner in which it should be assessed and collected. Territorial questions were discussed, and a special committee appointed to co-ordinate the reports of the territorial commissions. The disposition of the surrendered German fleet was debated. On March 1 Marshal Foch presented a report on the military terms of the Treaty. In the meantime President Wilson was endeavoring to rouse public opinion in the United States in favor of the League Covenant, and the debate on the subject in the Senate was becoming extremely bitter. As soon as possible after the close of the session of Congress, the President returned to Paris. He found a renewed disposition on the part of some of the Supreme Council to make a preliminary peace with Germany at once, leaving the League of Nations to be settled later. This the President refused to permit, and in view of the complexity of the settlement, and the necessity for some organization for carrying out its terms, the Allied leaders became more and more sincerely convinced that the President was right, and that the League must be an integral and interwoven element in the treaty. . . . By this time President Wilson's original popularity had somewhat cooled. The opposition in the United States encouraged those in Europe who had from the start disliked the President and his ideas. He was made the target of open attacks on the part of the press. He was blamed for postponing peace and delivering the world to bolshevism, war, and starvation, while he chased rainbows. To some observers it seemed as if the President had relied too much on the statement of general principles without having worked out a detailed and practicable solution of

the specific problems which were bound to come up. To be sure, this gave him the advantage of approaching particular questions with an open mind, but too often it put him in the ungracious position of a critic and obstructionist of some plan carefully worked out by one or other of the powers. While some of the 'practical' men were denouncing President Wilson as a self-willed visionary utterly incapable of dealing with real conditions, others of the liberal and radical wing were beginning to say, partly in sorrow, partly in anger, that he had surrendered to the reactionary crowd and was helping in the old secret fashion to make an old-fashioned imperialistic peace, thinly disguised with a few fine phrases. . . . During the latter part of March, with this feeling of restlessness growing, the leaders of the Conference were struggling with the problems of the amount of reparation to be demanded from Germany, with the question of the Saar Valley and of the left bank of the Rhine. The American delegation favored fixing a definite sum for which Germany was to be held responsible. They objected to the annexation of the Saar Basin to France, and had no sympathy with the project of detaching the Rhine provinces from Germany. Increasing secrecy marked all the proceedings of the Council, now narrowed to the four leaders. Differences within the Council were intense. By April 3 the President's physical strength gave way and he was forced to remain in bed; but he was determined not to yield his positions, and on April 7 he ordered the 'George Washington' to sail at once for France. This was quite correctly interpreted as an intimation that he was about to withdraw from the Conference. Almost immediately compromise solutions were proposed, which the President felt he could honorably accept. On April 11 the Labor Commission submitted a report, and April 28 the revised Covenant of the League of Nations was adopted by the Plenary Conference. By this time the treaty was regarded as so nearly finished that the German delegation was told to come to Versailles. Before they arrived, however, there arose two further crises which threatened again to disrupt the whole Conference. First the Italian leaders, who had urged without success that their claims along the Adriatic should be settled before the German treaty was signed, threatened to withdraw from the conference. The central issue was the disposition of the city of Fiume and parts of the Dalmatian coast. [See ADRIATIC QUESTION; FIUME: 1919: Claims of Italians and Jugo-Slavs; ITALY: 1918-1919.] President Wilson had been opposed to all claims beyond 'the clearly recognizable limits of nationality.' He had been willing to consent, though with some reluctance, to give Italy defensible frontiers at the expense of the Germans in the Tyrol, perhaps not realizing at first the extent to which this did violence to nationalistic principles. On April 23 the President took the unusual step in open diplomacy of issuing a public statement of his reasons for opposing Italy's claims to Fiume and Dalmatia. [See FIUME: 1919: Attitude of President Wilson, etc.] The Italian leaders resented this appeal to Italian liberal sentiment, and they promptly left the conference to lay their case before their people. Strengthened by the demonstrations of confidence, they accepted the invitation of the leaders to return to Paris May 7. Meanwhile it had been necessary to placate the Belgian representatives, who felt they were not to receive enough of the indemnity or of new territory in Africa. [See BELGIUM: 1919: At the Peace Conference.] The last great crisis was with the

Japanese over Shantung. The final decision was largely in favor of Japan, and the Chinese delegation decided not to sign the Treaty."—A. P. Scott, *Introduction to the peace treaties*, pp. 68-74.—"The new frontiers of Germany constituted one of the fundamental and one of the most troublesome problems of the peace conference of Paris. About them waged the conflict of ideas between a peace of justice and a peace of violence, and in them are illustrated the chief difficulties which arose in giving effect to the peace of justice which the conference sought to establish. They meant the release of submerged nationalities like the Danes of Schleswig, and the undoing of ancient wrongs like the partition of Poland, or recent acts of force like the annexation of Alsace-Lorraine in 1871. They involved the question of the best kind of national boundaries and the meaning and limits of self-determination."—C. H. Haskins, *New boundaries of Germany* (E. M. House and C. Seymour, ed., *What really happened at Paris*, pp. 37).—"Belgium . . . obtained some rectification of frontier, . . . [and] also attains, in accord with her own ambitions, 'complete independence and full sovereignty'; she is no longer to be either neutralised or protected, and the treaties of 1839 are entirely abrogated. As regards Luxemburg, Germany is compelled to denounce her various treaties with the Grand Duchy, to recognise that it ceases to be a part of the German Zollverein, to renounce all rights of exploitation of the railways, and to adhere to the abrogation of its neutrality. Schleswig-Holstein presented a problem hardly less difficult than that of Alsace-Lorraine. In no respect, however, did the Paris Conference show more scrupulous regard for the rights even of a defeated enemy or stricter adherence to its own avowed principles. In filching these duchies, in 1863, from the crown of Denmark, Bismarck had shown himself as unscrupulous as he was shrewd. Still, Holstein is German, and Prussia is allowed, therefore, to retain it, together with southern Schleswig; the fate of central and northern Schleswig was to be determined by plebiscite. The inhabitants of the northern zone have plumped for Denmark; those of the central zone, including Flensburg, for Prussia. . . . Roumania is doubled in size by acquisition of Bessarabia (from Russia), of Transylvania, a large part of the Bukovina, and half the Banat. [See RUMANIA: 1919: Creation of Greater Rumania.] Bulgaria, with whom a Peace treaty was signed at Neuilly (27th November, 1919), has had to pay the penalty of its adherence to the Central Empires. Strumitza, with other territory on the west, has gone to Jugo-Slavia, and Bulgarian Macedonia to Greece. The rest of the Balkan settlement is embodied in a treaty signed with Turkey at Sèvres (10th August, 1920)."—J. A. R. Marriott, *Europe and beyond*, pp. 304, 308.—"Among the political problems that came before the Peace Conference, the problem of the reconstruction of Poland was one of the first to be taken up and one of the last to be finished. Indeed, it is not altogether finished even yet (1921). It was also one of the gravest and thorniest questions with which the Conference had to deal. It was difficult because the eastern frontiers of Poland could not be settled without reference to the Russian Soviet Government, whose existence the Peace Conference could not pretend to ignore but never felt able to recognize; and because the western frontiers of Poland could not be fixed without taking a good deal of territory from Germany; and taking territory from Germany is very serious business. . . . As now constituted, the new state has an area of about 148,000 square miles,

i.e., it is much larger than the United Kingdom or Italy, and about three-fourths as large as France. Its population, which cannot be fixed with any certainty because of the chaos caused by the war, is variously estimated at between twenty-seven and thirty-two millions. At all events, Poland now ranks as the sixth state of Europe, both in size and in population; and it may be considered by far the most important of the new states which the war has produced in eastern Europe."—R. H. Lord, *Poland* (E. M. House and C. Seymour, ed., *What really happened at Paris*, pp. 67, 86).—Paderewski's "knowledge of American and English character made him a most powerful exponent of Polish affairs at the Peace Conference of Paris. The steadying effect of his work was of vast benefit to his people. He was threatened by Bolshevism outside of Poland, by doubters within; he was confronted by almost general want, the lack of money and troops, the absence of rolling stock, a threatening horde of Germans on the west, and the Ukrainian army in Galicia on the southeast. These difficulties were increased by the extraordinary nature of the Polish program. Almost every Polish leader wanted to see the greatest possible Poland created, no matter at what expense to the neighboring states. Many wished to see even East Prussia included. It was taken for granted that Danzig would become a Polish port. All of Eastern Galicia was assumed to be naturally Polish territory, though inhabited chiefly by Ruthenians. No leader could have won on such a program before a great congress of European leaders striving to adjust rival claims. The best that Poland could do was far short of her hopes, and the leader of the hour was destined to enjoy only a short period of authority."—I. Bowman, *New world*, p. 331.—"Poland was deprived of Danzig, converted into a free city under the League of Nations, and no boundary was fixed in Upper Silesia between Poland and Germany, or, on the east, between Poland and Russia. Out of these omissions came the Russo-Polish war and the bitter quarrels over the Upper Silesian plebiscite area."—J. H. Rose, *Development of the European nations, 1870-1921*, p. 417.—As to the indemnities Germany was called on to pay, "apart from the initial instalment of five billion dollars to be covered (although it was not) by existing property of various sorts—and a few provisions for future deliveries in kind, such as the coal clauses—no methods of payment were laid down. A grandiose financial scheme indeed there was, outlined in Annex II of the Reparation Clauses—a scheme for bond issues, under control of the Commission, to the amount of twenty-five billion dollars. . . . The Americans . . . wanted a fixed sum, definitely stated, and within the capacity of the Germans to pay [but the other nations refused to agree to this]."—R. S. Baker, *Woodrow Wilson and world settlement*, v. 2, pp. 402-403.—"When the Peace Conference opened, the empire of Austria-Hungary was a thing of the past. [See AUSTRIA-HUNGARY: 1917-1918; HUNGARY: 1918-1919 (December-March).] One journalistic critic complains that the conference angrily broke up Austria into jigsaw bits; but the accusation betrays a wealth of ignorance and shows how much easier it is to be critical than correct. The United States and Great Britain would have been glad to create a federation of Danubian nationalities, which, without the vices that had led to the fall of the Hapsburgs, might have accomplished the economic integration and preserved the political order so essential to the tranquility and prosperity of south eastern Europe. . . . The nationalities would have none of it. They had freed themselves, they were

instinct with the sense of their own capacity, bursting with nationalistic ambitions, suspicious of any federation as likely to revive the tyranny under which they had so long suffered. The conference lacked the right, as well as the power, to impose union upon them. By virtue of the principle of self-determination it was for the nationalities to determine their own destiny, and if they preferred disunion no one could deny them. . . . The peace conference was, accordingly, placed in the position of executor of the Hapsburg estate. The heirs were generally recognised—Czecho-Slovakia, Poland, Roumania, Jugo-Slavia, the new lesser Austria, lesser Hungary, and Italy. The duty of the conference was to determine the character of the division. Even this had already been fixed in its broad lines, so that much of the task of the peacemakers consisted simply in the determination of detailed frontiers."—C. Seymour, *End of an empire* (E. M. House and C. Seymour, ed., *What really happened at Paris*, pp. 90-91).—The conference has been harshly criticised as having dismembered Russia against her wishes, but all the parts of Russia separated from that empire definitely asked for freedom in accordance with President Wilson's point dealing with self-determination. The following gives the extremist point of view: "The dismemberment of Russia was accomplished by the Peace Conference in the following manner: First: In derogation of Russia's sovereignty, and without Russia's consent, Finland was recognized as an independent state. Second: Esthonia was recognized as an independent state which deprived Russia of Reval. This port, together with Helsingfors in Finland, are justly considered the keys to the Gulf of Finland. Third: An independent state, Latvia, was carved out of Russia's territory, depriving the latter of Riga and the Gulf of Riga. These three measures resulted in shutting off the Russian Empire from the Baltic, leaving to Russia but one port in the Gulf of Finland, namely, Petrograd, which is not ice-free. Fourth: Lithuania was recognized as independent, depriving Russia of her strongholds in the Northwest, and also of the strategic advantage of holding the Kovno-Nieman defense system. Fifth: Bessarabia was ceded to Rumania, taking away from Russia one of her richest wheat regions in the South, together with the valuable strip of territory along the Black Sea coast. Sixth: Russia was deprived of the Caucasus, which was deliberately dismembered into a number of little savage republics. As a result of this Russia has lost her oil fields and one of her richest mining regions. Seventh: At the expense of Russia, it was planned to create a Greater Poland, carving out of Russia's body such regions as have practically no Polish inhabitants at all."—B. L. Brasol, *World at cross roads*, pp. 243, 245-246.—"In attempting to understand the Balkan problem, there are several fundamental considerations which must be kept in mind. In itself the Balkan Peninsula is not an enormously rich prize, although the possibilities of economic development are considerable. Its wider significance lies in the fact that with Asia Minor it forms a great natural bridge between Europe and Asia. For centuries its valleys have been the highways for commerce, conquest, and migration between Central and Western Europe and the Near East. During these centuries of invasion and migration and shifting political control the population has become tremendously mixed in language, religion, race, and national consciousness. . . . President Wilson had declared that the relations of the Balkan states to each other should be determined by friendly counsel along historically established lines of allegiance

and nationality, with international guarantees of the political, economic, and territorial integrity of each state. Unfortunately few were in a mood for friendly counsel, and there were no lines of allegiance and nationality that were generally recognized. . . . [The Conference decided that] in the matter of national territory Bulgaria should lose comparatively little. Toward Rumania the boundary was to be that of 1914. This leaves to Rumania the 2,969 square miles of the Dobrudja seized for strategic purposes in the Second Balkan War, 1913. During the Great War Bulgaria had occupied all of the Dobrudja to the Danube. The whole of the district is claimed by the Bulgars on historical and nationalistic grounds. . . . A. P. Scott, *Introduction to the peace treaties*, pp. 224-225, 229-230.

Arraignment of the Kaiser.—"In order to satisfy public opinion, something had to be said about the Kaiser. It was agreed that international law provided no precedents for trying him. Therefore it was declared that 'the Allied and Associated Powers publicly arraign William II of Hohenzollern, formerly German Emperor, for a supreme offense against international morality and the sanctity of treaties. A special tribunal will be constituted to try the accused, thereby assuring him the guarantees essential to the right of defense.' The United States, Great Britain, France, Italy, and Japan will each appoint a judge. 'In its decision the tribunal will be guided by the highest motives of international policy, with a view to vindicating the solemn obligations of international undertakings and the validity of international morality. It will be its duty to fix the punishment which it considers should be imposed. The Allied and Associated Powers will address a request to the government of the Netherlands for the surrender to them of the ex-Emperor in order that he may be put on trial.' . . . As a matter of fact, the prospect of the actual trial of the Kaiser was somewhat of an embarrassment. The request was duly made on the Netherlands for his surrender, and promptly refused as unwarranted by international law."—A. P. Scott, *Introduction to the peace treaties*, pp. 154, 155.

Sea outlets for land-locked states.—"Like Switzerland and Hungary, Czecho-Slovakia is a landlocked state. It borders the Danube for less than a hundred miles, and this river, as we have seen, flows past so many other states that it is not a Czech stream as the Seine is French or as the Volga is Russian. [See DANUBE: 1856-1919.] To improve the facilities for water transportation, the Moldau and other tributaries of the Elbe have been canalized, although a great commerce cannot be developed on the Elbe until a deeper channel is provided in Saxony and Bohemia. With these and other improvements, the cheap export of goods would be favored. Further assistance is given by provisions in the treaty of Versailles for the export of Czech goods over German rivers (chiefly the Elbe) and from German ports, where it is stipulated Czecho-Slovakia shall have the privilege of making installations and shall enjoy rights of a special character. The importance of this is seen in the fact that before 1914 three times as much Austro-Hungarian commerce flowed through Hamburg as through Trieste, though special customs arrangements were responsible for part of this result. If the Allies can enforce the international agreements they have signed respecting freedom of transit from one state across the territory of a neighboring state, the interior nations will not suffer because they do not themselves own ports and railways to them. . . . To create a trade balance,

Austria must manufacture and export, and if she is to become a strong nation, she will have to do this more efficiently than in the past. There are already in operation the canals, waterways, and short hauls for the products of her factories. On the other hand, her sea outlets are no longer open to unrestricted use and development; they are in the hands of other powers. Only the Danube is left as a water connection with the commercial highways of the sea. It is difficult to see how Austria can create a commercial fleet under these conditions. It is natural that, confronted by these difficulties, the Austrian leaders should have turned more and more to the possibilities of a union with Germany. In March 1919, the National Assembly framed a constitution which declared that German-Austria was part of the German Republic. It went on to say that the union was dependent upon arrangements yet to be made. But the Allied and Associated Powers required Austria to remain a separate country, at least until some future time. Again on 1 October 1920 the project was revived by the Austrian National Assembly, which directed the government to carry out within six weeks a plebiscite on the union of Austria with Germany, but it was never held. Such action would have the special support of the Pan-Germans. France would always oppose the project because of her fear of increasing the strength of her traditional enemy. For the same reason the project will be opposed by the small central European states just created, who are naturally suspicious of any augmentation of German power. With Austria joined to her, Germany would have a population of 65,000,000, as compared with the 64,000,000 she had before the war."—I. Bowman, *New world*, pp. 331-332, 244-245, 214.

Question of Syria and Mesopotamia.—France desired to have control of Syria, and Britain of Mesopotamia, but President Wilson stood firm against this unless there were proof that the peoples of these countries wanted their suzerainty. "He again set forth clearly the American position and programme. First, the right of self-determination of these people. Here are his words: The point of view of the United States of America was . . . indifferent to the claims both of Great Britain and France over peoples unless those peoples wanted them. One of the fundamental principles to which the United States of America adhered was the consent of the governed. This was ingrained in the thought of the United States of America. Hence, the . . . United States (wanted to know) whether France would be agreeable to the Syrians. The same applied as to whether Great Britain would be agreeable to the inhabitants of Mesopotamia. It might not [the president said] be his business, but if the question was made his business, owing to the fact that it was brought before the Conference, the only way to deal with it was to discover the desires of the population of these regions. Second, he wanted a settlement on a basis, not of secret diplomacy, but of facts. The present controversy . . . broadened into a case affecting the peace of the whole world. . . . He was told that, if France insisted on occupying Damascus and Aleppo, there would be instant war."—R. S. Baker, *Woodrow Wilson and world settlement*, v. 1, p. 76.

Question of Turkey.—As ever in European conferences, no one could agree what to do with Turkey. For this reason President Wilson decided that the commission to the Near East should also find out the desires of the peoples of Turkey. "On May 21 Wilson had reached the end of his patience, and despite his intense desire to keep allied action unanimous and based upon full coöperation,

he informed the Council that he had instructed his commissioners to leave at once for Turkey. Whatever the others did, he was determined to have the investigation made—for his own information and, if necessary, for public use. Lloyd George offered to appoint his members of the Commission at once, but when Clemenceau held back, Lloyd George declared he also must stand out. So the Americans set out alone; and by a kind of tacit agreement the whole discussion of Turkey, especially with reference to Italy, dropped into abeyance. The American Commission left Paris May 25 and 29 and did not return until August 27, after the treaties had been signed and Wilson had sailed for home. Their valuable report was thereafter buried in the American State Department."—R. S. Baker, *Woodrow Wilson and world settlement*, v. 2, p. 203.

Dismantling of Heligoland provided by treaty. See VERSAILLES, TREATY OF: Part III: Section XIII; HELIGOLAND: 1920.

Question of Egyptian independence. See EGYPT: 1918-1919.

Question of interned German vessels.—During the early years of the war, German ships took refuge in neutral ports and these were seized as the various neutrals declared war on Germany. The peace conference debated whether nations should keep all their seizures. "Mr. Lloyd George pointed out that the United States of America, Brazil and Portugal had all received ships considerably in excess of their losses in the war. France had lost in the war perhaps a million tons of shipping and would only receive about 40,000 tons with a proportion of the remainder. Great Britain had lost nearly 8 million tons, and would not receive more than one to one and a half million tons. . . . He was not fighting for British trade, but what he wished to insist on was that if 30 per cent. of Germany's shipping must be allowed to her, the arrangement must be made on the dead level, and every nation must contribute its share. . . . The British people, however, would not understand, if all the loss fell on France and Great Britain. He pointed out that the United States had acquired a net gain of three or four hundred thousand tons of shipping (and this was some of the best shipping that Germany had possessed) owing to the fact that this shipping had taken refuge in its ports for fear of capture by the British navy. . . . President Wilson pointed out that this shipping was the only reparation that the United States would receive after all their efforts in the war. Mr. Lloyd George said that for the next few years, tonnage was worth a great deal more than money. Those who were able first to establish themselves in overseas trades, would gain enormous advantages. . . . It would have been easier for him to justify to the British Parliament a claim by the United States for pensions than for these ships."—R. S. Baker, *Woodrow Wilson and world settlement*, v. 2, pp. 304-305.

Guarantees of protection for small and new states.—The conference leaders realising the amount of racial hatred which new and small states would encounter, incorporated in the terms of the treaty clauses guaranteeing the recognition and protection of these states.—"Each state includes something of a nationalistic minority, which will look for support to its kinsmen, who form the majority in the neighboring state. Czecho-Slovakia and Rumania, we have seen, include large minorities of aliens; Ruthenians are brought under the political control of Poland; Germans and Jugo-Slavs are annexed in large numbers by Italy. Jugo-Slavia includes comparatively few outsiders, but the differences between Croats,

Slovenes, and Serbs do not promise a tranquil future. In the United States we think little of the dangers apt to proceed from a racial mélange, but in this part of Europe, if a man speaks a different language from that of his neighbor, he becomes almost necessarily his enemy. With this in mind the Conference, much to the disgust of the states, drew up guarantees to be furnished to all minority groups, assuring them the protection and the justice which in this country are taken as a matter of course. How seriously these guarantees will be observed is a problem of the future. We may also expect that difficulties will develop from economic quarrels. Three of the states formed from the Hapsburg empire are absolutely landlocked. Of these, lesser Austria is perhaps in the worst plight. Cut off from territorial access to the sea, with its capital city of 2,000,000 inhabitants placed on the eastern frontier; and poor in natural resources, the new Austria lacks many of the conditions conducive to economic prosperity. It would have been natural, in view of the purely German character of its population, to have permitted union with Germany. This was, on the whole, approved by the American delegates, as it was requested by the Austrians themselves. The French, however, set their face firmly against any acquisition of territory by the secular enemy across the Rhine."—C. Seymour, *End of an empire: Remnants of Austria-Hungary* (E. M. House and C. Seymour, ed., *What really happened at Paris*, pp. 107-108).

Colonies and mandates.—The German colonies were put under the protection of the League of Nations and mandates were given to various countries for them. "In a spirit of altruism, and in order to insure that victors in war should not profit by their victory (thereby removing one of the inducements to warfare), the mandatory system was launched by the framers of the League of Nations Covenant."—G. Aston, *British Middle-east mandates* (*Outlook*, July 12, 1922).—The planning of these mandates was the work of General Smuts, whose fine, well-balanced personality, made him one of the greatest assets at the conference. It was felt that as a former enemy of Great Britain his methods of how to rule conquered territories would be invaluable. "In his well-known memorandum on the League of Nations General Smuts formulated a proposal . . . that a system of mandates should be devised under which the state administering a territory should be responsible to the League of Nations and should conduct a stewardship along general lines recognized by the League to be just and proper. . . . The mandate system provides for three types of mandates. The class A mandates are to apply to the territories formerly Turkish, which are to be set up as provisionally independent nations, subject to administrative advice and assistance from a mandatory Power until such time as they can stand alone. Such mandates are to apply to Palestine, Syria, and Mesopotamia. The class B mandates are to apply to Central African territories, administered under conditions which will guarantee freedom of conscience and religion to the native inhabitants, will prohibit such abuses as the slave trades, the arms traffic, and the liquor traffic, will prevent the arming of natives for other purposes than police, and will maintain an open door and equal opportunity for the commerce of all members of the League. A third type of mandate, class C, deals with such sparsely settled territories as Southwest Africa and certain of the Pacific Islands, which are to be administered, subject to the same safeguards for the natives, under the laws of the mandatory as

integral portions of its territory."—M. O. Hudson, *Protection of minorities and natives in transferred territories* (E. M. House and C. Seymour, ed., *What really happened at Paris*, pp. 225-226).

Labor clauses.—"The direct opening for the insertion of a labor clause in the treaty was provided in the original draft of the Covenant of the League of Nations. Article 20 provided as follows: 'The high contracting parties will endeavour to secure and maintain fair and humane conditions of labor for men, women and children, both in their own countries and in all countries to which their industrial and commercial relations extend; and to that end agree to establish as part of the organisation of the League of Nations a permanent bureau of labor.' To give effect to Article 20 the supreme council representing the Allied and Associated Powers at Paris created the commission on international labor legislation. . . . The commission held thirty-five sessions. . . . The report of the commission, submitted to the peace commissioners, was in two parts. The first part was a draft convention creating a permanent organisation for international labor legislation. The second part contained the labor clauses, known as Labor's Bill of Rights consisting of nine essential clauses expressing fundamentals for insertion in the treaty of peace. The draft convention provided for the establishment of a permanent labor organisation, adherence to this organisation to be obligatory upon all of the high contracting parties. Acceptance of the principles enunciated in Labor's Bill of Rights was to be a part of the approval of the treaty as a whole."—S. Gompers, *Labor clauses of the treaty* (E. M. House and C. Seymour, ed., *What really happened at Paris*, pp. 310-321).

Reception of treaties.—"The five Paris treaties were signed in this order: With Germany, at Versailles, June 28, 1919; with Austria, at St. Germain, September 10, 1919; with Bulgaria, at Neuilly, November 27, 1919; with Hungary at Trianon, June 4, 1920; with Turkey at Sèvres [see SÈVRES, TREATY OF (1920)], August 10, 1920."—J. H. Rose, *Development of the European nations, 1870-1921*, p. 410.—"On the seventh of May [1919] . . . the completed draft of the Treaty [of Versailles] was handed to the German representatives. Their attitude on receiving the terms did not make a very favorable impression. The powers refused the Germans' repeated request for oral discussion but they granted fourteen days in which to submit written objections of counter-proposals. An extensive summary of the terms of the Treaty was made public, but the text was withheld. The decision, though technically justified on the ground that modifications were still possible, caused renewed criticism of the methods by which the 'open covenants of peace' were being 'openly arrived at.' In the United States particularly opponents of the administration were scathing in their denunciations. Although the German delegates had been prepared in advance for the main terms of the Treaty, the severity of the document as a whole was felt with stunning force. As soon as possible, the German representatives sent notes to the Council protesting against particular provisions. The Allies replied to the separate notes, making a few modifications, but not in very substantial points. On May 17 Count von Bronckdorf-Rantzau, the leader, returned to Germany for a brief conference with his government. On May 20 a week's extension of time was granted. On the twenty-ninth the Germans submitted their counter-proposals, together with a long letter explaining their point of view, and summarizing their former objections to the various provisions of the Treaty.

. . . The Allies replied June 16 in a letter and a detailed discussion of the counter-proposals. Germany's guilt in forcing the war and the atrocities committed during its course were recalled; and Germany was reminded that justice demanded the utmost possible reparation, from which they could not escape by an eleventh-hour change to a republic. . . . While for the most part the Allies insisted on the territorial clauses as drawn, they agreed to a plebiscite in upper Silesia, and modified the arrangements as to Schleswig. They denied that it was their intention to strangle Germany economically. They pointed out that Germany would save \$400,000,000 a year in reduced armaments, and would have the productive efforts of the 600,000 men no longer kept under arms. When Germany proved her fitness to join the League, the Allies would admit her. The Germans were given five days to sign the Treaty as modified. There was much talk in Germany of refusing to sign, and the Allies made every preparation to extend their area of military occupation and to tighten the blockade. The Scheidemann government resigned rather than accept the humiliation of agreeing to the Allied terms. After much difficulty an emergency government under Gustav Bauer received a vote of confidence from the National Assembly. Bauer then agreed to sign the Treaty as under duress, and with reservations and protests, and with the understanding that it should be revised by the League of Nations after two years. The Allies refused to accept any reservations, or to extend the time limit. With bitterness of spirit, protesting that they yielded only to superior force, and denouncing the 'unheard-of injustice of the peace conditions,' the Germans at last yielded [June 23rd]. On June 28, five years to a day after the death of Archduke Francis Ferdinand, and in the Hall at Versailles where the German Empire had been proclaimed, the little-known German delegates, who had consented to serve, put their signatures to the Treaty which was designed to end forever the German menace. China refused to sign, and General Smuts signed with a separate statement that he considered the document in many respects unsatisfactory."—A. P. Scott, *Introduction to the peace treaties*, pp. 74-75, 77-79.—See also VERSAILLES, TREATY OF.—The Treaty of St. Germain with Austria was presented on June 2. "The Austrian representatives at St. Germain argued with a logic, which to many Americans seemed incontrovertible, that Austria was in reality a new state, sprung from the revolution of November, 1918, and that it should not be punished by being forced to assume responsibility for a war debt and reparations account incurred by the Hapsburg government with which it had no connection. . . . Austria, they insisted, was as much a new state as Czecho-Slovakia."—C. Seymour, *End of an empire* (E. M. House and C. Seymour, ed., *What really happened at Paris*, p. 100).—See also ST. GERMAIN, TREATY OF.—"The efforts of the Bulgarians to obtain a modification of the terms were largely in vain, and November 27, 1919, the Treaty was signed at Neuilly, near Paris. [See NEUILLY, TREATY OF.] Rumania finally consented to sign, but the South Slavs still delayed. Bulgaria feels very bitter at the size of the reparation demanded, at the loss of territory, and at the failure to secure any of the 'unredeemed brethren' in Macedonia and the Dobrudja. On the other hand it should be noted that Bulgaria is allowed to retain something like half of the territory gained from Turkey in 1913."—A. P. Scott, *Introduction to the peace treaties*, p. 235.—The Bulgarian and Turkish treaties were

scrapped by the Lausanne conference. See NEAR EAST, OR LAUSANNE, CONFERENCE (1922-1923).—Most of the Allied peoples were disappointed with certain clauses and aspects of the Treaty of Versailles, but all the Allied governments ratified it January 10, 1920, with the exception of the United States. There are three great matters which have come into being from the Paris conference: "(1) The forming of an organization for the preventing of war. (2) The sincere effort to give racial entities self-determination. (3) The declaration of a policy of trusteeship in regard to mandates."—E. M. House, *Versailles peace in retrospect* (E. M. House and C. Seymour, ed., *What really happened at Paris*, p. 425).

PARIS, Congress of (1856). See ITALY: 1856-1859; RUSSIA: 1854-1856; PARIS, DECLARATION OF.

PARIS, Declaration of (1856).—The Declaration of Paris was an attempt in 1856, at the close of the Crimean War, to define maritime law relating to neutral ships in time of war. "The Declaration was framed by the representatives of Austria, France, Great Britain, Prussia, Russia, Sardinia and Turkey. At the outbreak of the war in 1914 the only maritime powers which had not formally accepted the Declaration were the United States, Spain, Mexico, Venezuela, Bolivia and Uruguay. . . . In practice the United States acted in accord with its rules during the Civil war, and during the Spanish-American war of 1898 both belligerents observed its principles. At the Second Hague Conference of 1907 the delegates of Spain and Mexico, in voting on convention No. VII, declared that their governments accepted the Declaration in its entirety."—J. W. Garner, *International law and the World War*, v. 1, pp. 12-13.—See also INTERNATIONAL LAW: 1856-1909; FREEDOM OF THE SEAS: Question still open.—The following is the text of the declaration: "The Plenipotentiaries who signed the Treaty of Paris of the 30th of March, 1856 (No. 264), assembled in Conference,—"

"Considering: That Maritime Law, in time of War, has long been the subject of deplorable disputes; that the uncertainty of the law and of the duties in such a matter, gives rise to differences of opinion between Neutrals and Belligerents which may occasion serious difficulties, and even conflicts; that it is consequently advantageous to establish a uniform doctrine on so important a point; that the Plenipotentiaries assembled in Congress at Paris cannot better respond to the intentions by which their Governments are animated, than by seeking to introduce into international relations fixed principles in this respect;

"The above-mentioned Plenipotentiaries, being duly authorised, resolved to concert among themselves as to the means of attaining this object; and, having come to an agreement, have adopted the following solemn Declaration: (1) *Privateering* is, and remains abolished; (2) The *Neutral Flag* covers Enemy's Goods, with the exception of Contraband of War; (3) *Neutral Goods*, with the ex-

ception of Contraband of War, are not liable to capture under Enemy's Flag; (4) *Blockades*, in order to be binding, must be effective, that is to say, maintained by a force sufficient really to prevent access to the coast of the enemy.

"The Governments of the Undersigned Plenipotentiaries engage to bring the present Declaration to the knowledge of the States which have not taken part in the Congress of Paris, and to invite them to accede to it. Convinced that the maxims which they now proclaim cannot but be received with gratitude by the whole world, the undersigned Plenipotentiaries doubt not that the efforts of their Governments to obtain the general adoption thereof, will be crowned with full success. The present Declaration is not and shall not be binding, except between those Powers who have acceded, or shall accede, to it. Done at Paris, the 16th of April, 1856."—E. Huetslet, *Declaration between Great Britain, Austria, etc.* (*Map of Europe by treaty*, v. 2, pp. 1282-1283).

PARLEMENT OF PARIS.—The Parlement of Paris was a judicial body meeting in Paris when called by the king to register his edicts. It was never a legislative body. Other parlements on the model of that of Paris were instituted in the provincial towns of France. "The Parlements were in no sense representative. They were nominees of the Crown; and as high courts of justice, they proved firm friends to prerogative. [See COURTS: France: Lack of uniformity.] . . . Having no commission from the king, nor from the people, . . . their pretensions were naturally resisted."—T. E. May, *Democracy in Europe*, p. 94.—"When the Carolingian Monarchy had given place, first to Anarchy and then to Feudalism, the mallums, and the Champs de Mai, and (except in some southern cities) the municipal curia also disappeared. But in their stead there came into existence the feudal courts. Each tenant in capite of the crown held within his fief a Parlement of his own free vassals. . . . There was administered the seigneur's 'justice,' whether haute, moyenne, or basse. There were discussed all questions immediately affecting the seigneurie or the tenants of it. There especially were adopted all general regulations which the exigencies of the lordship were supposed to dictate, and especially all such as related to the raising tailles or other imposts. What was thus done on a small scale in a minor fief, was also done, though on a larger scale, in each of the feudal provinces, and on a scale yet more extensive in the court or Parlement holden by the king as a seigneur of the royal domain. . . . [When Philip Augustus went to the Holy Land, he provided for the decision of complaints against officers of the crown by directing the queen-mother and the archbishop of Rheims, who acted as regents, to hold an annual assembly of the greater barons.] This practice had become habitual by the time of Louis I. For the confirmation and improvement of it, that monarch ordered that, before the day of any such assemblage, citations should be issued, commanding the attendance, not, as before, of the greater barons exclusively, but of twenty-four members of the royal council or Parlement. Of those twenty-four, three only were to be great barons, three were to be bishops, and the remaining eighteen were to be knights. But as these members of the royal council

did not appear to St. Louis to possess all the qualifications requisite for the right discharge of the judicial office, he directed that thirty-seven other persons should be associated to them. Of those associates, seventeen were to be clerks in holy orders, and twenty légistes, that is, men bred to the study of the law. The function assigned to the légistes was that of drawing up in proper form the decrees and other written acts of the collective body. To this body, when thus constituted, was given the distinctive title of the Parlement of Paris."

—J. Stephen, *Lectures on the history of France*, lecture 8.—See also BASOCHIE.

1461-1483.—Offices become hereditary.—Bed of justice.—"From the time of Louis XI [1461-1483] they (the members of Parlement) always bought their official posts. More and more frequently they bequeathed them to their sons, thus forming magisterial dynasties, a legal nobility."—A. Tilley, *Modern France*, p. 12.—During the reigns of weak kings, the Parlement tried to obtain the power of discussing the edicts; under strong kings they signed without discussion. "Sometimes Parlement advanced very high pretensions. Its members were, they said, the real though unselected representatives of the Nation—the States General in Miniature. At other times they traced back their origin to the King's "Court," recalled its independent character in feudal times, and declared themselves equal in authority to the king. The view taken by the kings . . . was very different. They regarded the registration as a mere useful form. If the Parlement hesitated about registering, they first issued orders for immediate registration: if there was further resistance they went down themselves, held a session that was called a 'bed of justice' [see BED OF JUSTICE] from the throne on which the king sat, and enforced registration."—A. J. Grant, *French monarchy*, v. 1, p. 10.

1516.—Ordered by Francis I to register his concordat with the pope. See FRANCE: 1515-1518.

1527-1641.—Pretensions limited by Francis I, Henry of Navarre, and Richelieu.—In 1527 Francis I forbade Parlement to meddle with the administration. "Henry IV [1589-1610], knew well how to manage this company of magistrates, and manage them he did, firmly and sensibly. When they refused to register the Edict of Nantes, he summoned to the Louvre deputies from all the Chambers. 'What I have done,' he said, 'is for the good of peace. I speak to you not in royal robe, or with sword and cape, but as a father of his family conversing freely with his children. I ask you to register the edict I have granted the Protestants. God has chosen to give me this kingdom, which is mine by birth and conquest. You, gentlemen of Parliament, would not be in your seats but for me. If obedience was due to my predecessors, it is much more due to me.' When a father addresses his children in such terms, he is generally obeyed. The edict was speedily registered. With Richelieu and the minority of Louis XIII, came again stormy times. In 1615 the Parliament without the royal order, dared to summon princes, dukes, peers and high officials to deliberate upon the needs of the state, and the relief of the people. 'We,' it said, 'hold the place in council of the princes and barons, who, from time immemorial were near the person of the king.' This assumption Richelieu constantly fought against. He would not allow the pretension of magistrates to meddle in affairs of State. There was constant altercation between the king and Richelieu on the one side and Parliament on the other, whether about point of jurisdiction or the registration of edicts respecting finances. On one of these occasions the entire

Parliament was ordered to the Louvre, and there with bare heads and on bended knees was compelled to supplicate the king's forgiveness. This humiliating experience was not sufficient to restrain their assertions of right and authority and the struggles continued for ten years longer, when in 1641 the king issued an edict prohibiting the Parliament from any interference in affairs of State and administration, the preamble of which is as formal a declaration of absolute power as any ever promulgated by Louis XIV. The Cardinal had at last gained the victory. The attempts of Parliament at independence during the wars of the Fronde, only demonstrated how futile was its authority, and how completely was it the tool of the uppermost faction."—J. M. Robinson *Study of the Parliament of Paris*, pp. 38-39.

1643-1714.—Will of Louis XIII revoked.—Ignored by Louis XIV.—Bull Unigenitus registered.—In 1643, on the death of Louis XIII, Parlement set aside his will at the request of the queen, Ann of Austria. In 1648 it failed in its attempt to abolish intendants. In this quarrel Paris took the part of the Parlement but Louis XIV punished it by ignoring it until the end of his long reign. "The two great questions with which the Parliaments are identified during the 18th century, are the controversies concerning the papal bull 'Unigenitus' and the expulsion of the Jesuits. The long quarrel between the Jansenists and the Jesuits was fanned into fresh flame by the final publication of the Pope's bull, which quoted one hundred and one propositions from the work of Père Quesnel and condemned them as heretical. The bull Unigenitus appeared Sept. 8, 1713, and was registered by the express wish of Louis XIV, Feb. 14, 1714. The dying king, troubled and alarmed by discussions he deemed hurtful to true religion, desired to see the kingdom at peace before his death; but for fifty years the bull Unigenitus was a fruitful cause of dispute and resistance between Parliament and the Church, while the court party veered from one side to another as selfish interest dictated."—J. M. Robinson, *Study of the Parliament of Paris*, p. 41.

1756.—Forbidden by Louis XIV to decree administration of sacraments.—Suppression of chambers of inquiry. See FRANCE: 1756-1759.

1763-1770.—Power revived.—"After the disastrous Peace of Paris, 1763, the Parlement had increased its pretensions. It was aided by the blow which the Seven Years War had inflicted upon the royal power, by the expulsion of the Jesuits in 1764—a great triumph for Parlement—by the loss of influence by the papacy, and by the opinion of Voltaire and other sceptical writers. Not that Voltaire supported the Parlement; on the contrary he hated that body as being opposed to toleration and reform. It burnt the books of free thinkers, it had an annual procession in honor of the Massacre of St. Bartholomew, it fought against the issue of loans upon interest, it resisted the practice of inoculation. Its judicial posts could be purchased. But as being the outspoken opponent of despotism and the Jesuits, it acquired a popularity which continued till the outbreak of the Revolution."—A. Hassall, *France, medieval and modern*, p. 186.—This popularity led Parlement to contend that edicts registered against its will were invalid. In 1770 it flatly refused to register an edict of Louis XV, preferring to resign instead.

1770-1791.—Resignation changed to exile by Louis XV.—Recalled by Louis XVI.—Given "permanent vacation" by States-General.—"On December 10 [1770] the whole of the members resigned; it remained only for them to perish along with the laws." The king [Louis XV] ordered them

to return, but in vain; the course of Justice was suspended. . . . On the night of January 19, 1771, musketeers awoke all the members of Parlement and demanded a plain answer of Yes or No to the question whether they were willing to re-enter the service of the king. Most answered resolutely No; those who had answered Yes, some thirty five, withdrew their consent next day. All were sent by lettres de cachet to different places of exile."—A. J. Grant, *French monarchy*, v. 2, p. 250.—"By the advice of Chancellor Maupeou, the king took the extreme step of suppressing altogether the ancient Parliaments of the realm, both in the capital and the provinces. To take their place six new tribunals were instituted Feb. 23, 1771, under the name of conseils-supérieurs, in the towns of Arras, Blois, Châlons-sur-Marne, Clermont, Lyons, and Poitiers, the central court of justice being still maintained at Paris. This great organic change was not accomplished without obstinate resistance on the part of the Parliaments and expostulations even from the princes of the blood; but the great mass of the people looked on indifferently. The privileges and immunities of the Parliaments had lost them their hold upon the third estate, and their later contentions with the crown were regarded as so many selfish struggles for their own aggrandizement. To recommend the new courts to public favor, Maupeou announced that justice would now be administered free of expense, and the sale of offices was forbidden. When the new king ascended the throne he reestablished the Parliaments; but they had learned no wisdom from their exile. After fourteen years, Louis XVI found himself in the same situation as the king, his grandsire, facing refractory counselors. They continued to make angry remonstrances about registering money loans, and the king was obliged to use the despotic measure of a Bed of Justice. The Parliament doubtless thought it was conciliating public opinion, which was averse to new taxes, but the needs of the Treasury were urgent and its demands continued. [See FRANCE: 1774-1788.] Finally the Parliament of Paris declared that according to the ancient constitution of France, the establishment of new imposts belonged only to the States-General. It little anticipated that this cry meant its own destruction. The States-General, transformed into the Constituent Assembly, had scarcely existed four months when the great tribunals ceased to be. Nov. 3, 1789, Alexander Lameth moved the abolition of the Parliaments. 'They are now in vacation,' objected some one. 'So much the better,' shouted Mirabeau, 'Let them remain there; they will pass from sleep to death, and there will be no return.' The decree, voted with cries of joy by the majority, declared that the Parliaments should be in perpetual vacation. Temporary courts were at once organized, and in September, 1791, new judicial organizations were framed. Thus the Parliaments of France passed out of history."—J. M. Robinson, *Study of the Parliament of Paris*, pp. 44-45.—See also FRANCE: 1787-1789.

English: Early stages of its evolution, House of Lords and House of Commons.—Witenagemot.—Great Council.—Curia Regis.—The origin of the English Parliament lies partly in the free assemblies of Germanic peoples, partly in the Witenagemot of the Anglo-Saxons, and partly in the Great Council and Curia Regis of William I. The House of Lords has its origin in the great Council. (For the specific origin of the House of Commons see below: 1215-1343.) The Witenagemot was not a representative gathering in the modern sense. "Associated with the king in the general government was an assembly of the chief men of the state, lay and clerical. The Anglo-Saxons called this assembly the Witenagemot, the court of the wise men, and the name undoubtedly indicates the principle of its composition. Its membership was not official nor designated in any way that we should call constitutional in the modern sense. No officer nor individual possessed a right to attend. It was not a representative assembly, nor were the members elected. As nearly as we can tell the king determined what persons should attend any given meeting, but it seems probable that his choice was not always free. . . . That the witen consciously represented the nation in any action which it took is highly improbable. . . . [Under William I the place of the Witenagemot was taken by the Great Council and the Curia Regis. The Great Council consisted of the king and his tenants in chief. At its meetings all matters relating to his rule in England and Normandy were discussed, oaths of allegiance to him were given, and offenders of rank were punished. This Great Council is the origin of the present House of Lords. The Curia Regis was a smaller and more permanent council.] It is necessary to understand as clearly as possible the difficult fact that to the men who were acting in it, the great and the small council were identical in everything except size. The small council was the active body in the intervals between the meetings of the great council, but it was not a committee of the great council. . . . In fact the steady and permanent institution by which, day by day, the business of the Anglo-Norman state was operated and supervised was the small council. . . . The constitutional history of the reign of William I falls naturally into two divisions; the changes which the Conqueror brought about, and the institutions which remained practically unchanged. . . . In the field of the general government of the State, two changes out-weigh all others in importance; the substitution of a stronger royal power for the Saxon, and the introduction of political feudalism. In the construction and machinery of the Norman state no normal and constitutional way was provided by which a will opposed to the king's could act or even express itself. Feudal law did provide a way . . . but hardly one which we should call constitutional. It implied rebellion and civil war as its means of operation and the first step towards modern constitutional government in Magna Carta a hundred and fifty years after the Conquest was to invent a method of giving effect to a will opposed to the king's without civil war. Meanwhile the state was the king quite as truly as in the France of Louis XIV. . . . If the king was strong and ruled firmly the state was in good order. If he was weak or vacillating it fell to pieces. . . . Even the great council, the national assembly existed to do his business, not the nation's; it had no right of initiative except by petition; its decisions were his decisions and invalid if he did not make them his."—G. B. Adams, *Constitutional history of England*, pp. 14-15, 60, 51, 53, 54.

1215-1343.—Influence of Magna Carta on the

growth of Parliament.—Simon de Montfort.—Model Parliament.—"If we regard it as belonging to the year 1215 and disregard what it has come to mean to later times, Magna Carta was in substance a feudal document. . . . Modern scholars have failed to find in it any of the great principles or institutions of English liberty on which we especially pride ourselves: Parliament, consent to taxation, the jury trial, Habeas Corpus; and they have therefore said that the influence of Magna Carta in the growth of the English constitution and of English liberty has been greatly overstated. The conclusion does not follow from the premises. None of the principles named is in the charter, and yet it was by a very true instinct that the English nation recognized for centuries that the Great Charter was the palladium of their liberties, and in a very right sense it was actually the beginning of the English constitution considered as limited monarchy. . . . Scholars have not yet come to an agreement among themselves as to the source from which the idea or the practice of representation was derived, nor can we say that they were looked upon at the close of the thirteenth century with anything like our modern clearness of understanding. They were understood, however, clearly enough to be consciously applied in the step that was taken, and from that beginning they have grown through uninterrupted experience into our present-day conception of representative government. . . . The old great Council remained unchanged. For a long time it still acted now and then alone as Parliament, and for a longer time yet traces of its independent powers and functions survived. The new elements were grouped around it, not organically absorbed into it changing its nature. It still exists in fact, almost unchanged, in the present House of Lords. Before very long these new elements drew off by themselves into a separate 'House,' the House of Commons, leaving the old great Council by itself as the other house of the new Parliament. The surviving great Council, however, changed in one respect. It was no longer in the strict sense a feudal body. Its members were descendants of the feudal barons; the hereditary feature remained; their service was based in form upon the old service, but no one any longer thought of it as a return for land and all ideas about it that were really feudal died out, were dying out in England in general at that time, except in deductions that were merely legal or ceremonial. The new elements were first introduced into the old Council not in conformity to any theory that was then held, nor with any intention of permanent policy. The step was first taken to serve an immediate practical end and implied no pledge nor even desire on anyone's part that the experiment should be repeated. Deputies from the English counties were summoned to a meeting of the Council, in this case the small Council, in 1254, to report the feeling of the counties about a tax which the government desired to lay. In the process by which this introduction was made, a precedent was exactly followed which had long been in use when the Council acting as a court desired a report from a county court upon their action in some case which had been before them."—G. B. Adams, *Outline sketch of English constitutional history*, pp. 45, 59-60.—"In January, 1265, Simon gathered his second Parliament. It was here that the great constitutional advance was made with which his name is especially connected; for to this assembly were called not only two knights from each shire, but also, practically for the first time, two citizens or burgesses from twenty-one cities or boroughs mentioned individually by name. It is for this reason that *Simon de Montfort has been*

styled the creator of the House of Commons. He is, however, scarcely entitled to the name."—D. J. Medley, *Student's manual of English constitutional history*, p. 144.—"The house of commons was not, in fact, created either by Simon de Montfort or by Edward I. Representatives of shires, cities, and boroughs attended the king's court at Westminster (as early as 1213) for judicial and financial purposes before either Simon or Edward issued their famous writs. They came, indeed, sporadically and not as a body of men; but their organization into a 'house' of commons required a great deal more than the simultaneous summons to shires and boroughs issued by Simon and Edward. It grew up during the fourteenth century, and its growth is slow and obscure. . . . In 1343 there is fuller evidence of the activity of the commons: not only is their advice asked, and articles drafted by the lords submitted for their consent, but they add provisions of their own, and the ensuing statutes are said to have been 'ordained' by *la commune* as well as by the king and the peers. . . . Commons is a form of 'communes' or 'communities' and as early as the 14th century, the official handbook to parliament lays it down that the king can hold a parliament with the 'community' of his realm although no bishop, earl or baron attends; but that without the 'community' no parliament can be held, though bishops, earls and barons, and all their peers are present with the king."—A. F. Pollard, *Evolution of Parliament*, pp. 113, 243, 12.—See also WITENAGEMOT; ENGLAND: 1216-1272; KNIGHTS OF THE SHIRE.

1244.—Earliest use of the name.—In 1244, "as had happened just one hundred years previously in France, the name 'parliamentum' occurs for the first time [in England] (Chron. Dunst., 1244; Matth. Paris, 1246), and curiously enough, Henry III. himself, in a writ addressed to the Sheriff of Northampton, designates with this term the assembly which originated the Magna Charta: 'Parliamentum Runemede, quod fuit inter Dom. Joh. Regem patrem nostrum et barones suos Anglia' (Rot. Claus., 28 Hen. III). The name 'parliament' now occurs more frequently, but does not supplant the more indefinite terms 'concilium,' 'colloquium,' etc."—R. Gneist, *History of the English constitution*, v. 1, ch. 19, and foot-note, 2a.—"The name given to these sessions of Council [the national councils of the 12th century] was often expressed by the Latin 'colloquium'; and it is by no means unlikely that the name of Parliament, which is used as early as 1175 by Jordan Fantosme, may have been in common use. But of this we have no distinct instance in the Latin Chroniclers for some years further, although when the term comes into use it is applied retrospectively."—W. Stubbs, *Constitutional history of England*, ch. 13, sect. 150.

1258.—The Mad Parliament.—An English Parliament, or Great Council, assembled at Oxford 1258, so-called by the party of King Henry III from whom it extorted an important reorganization of the government, with much curtailment of the royal power.—Based on W. Stubbs, *Constitutional history of England*, v. 2, ch. 14, sect. 176.—See also ENGLAND: 1216-1272.

1264.—Simon de Montfort's Parliament. See ENGLAND: 1216-1272.

1275-1295.—Development under Edward I. See ENGLAND: 1275-1295.

1376.—The Good Parliament.—The English parliament of 1376 was called the Good Parliament; although most of the good work it undertook to do was undone by its successor.—Based on W. Stubbs, *Constitutional history of England*, v. 2, ch. 16.

1388.—The Wonderful Parliament.—In 1387, King Richard II was compelled by a great armed demonstration, headed by five powerful nobles, to discard his obnoxious favorites and advisers, and to summon a Parliament for dealing with the offenses alleged against them. "The doings of this Parliament [which came together in February, 1388] are without a parallel in English history,—so much so that the name 'Wonderful Parliament' came afterwards to be applied to it. With equal truth it was also called 'the Merciless Parliament.'" It was occupied for four months in the impeachment and trial of ministers, judges, officers of the courts, and other persons, bringing a large number to the block.—J. Gairdner, *Houses of Lancaster and York*, ch. 2, sect. 5.

ALSO IN: C. H. Pearson, *English history in the fourteenth century*, ch. 11.

1404.—The Unlearned Parliament.—"This assembly [1404, reign of Edward IV] acquired its ominous name from the fact that in the writ of summons the king, acting upon the ordinance issued by Edward III in 1372, directed that no lawyers should be returned as members. He had complained more than once that the members of the House of Commons spent more time on private suits than on public business."—W. Stubbs, *Constitutional history of England*, v. 3, ch. 18, sect. 634.

1413-1422.—First acquisition of Privilege. See ENGLAND: 1413-1422.

1425.—The Parliament of Bats.—The English Parliament of 1425-1426 was so-called because of the quarrels in it between the parties of Duke Humfrey, of Gloucester, and of his uncle, Bishop Beaufort.

1867.—Second Reform Bill. See ENGLAND: 1865-1868.

1882-1888.—Closure rule and "guillotine."—"The Government were obliged to resort to expedients, which, then and thereafter, imposed grave restrictions on the liberty of debate in the House of Commons. Mr. Gladstone's closure rule of 1882 had proved a failure. It had been directed against a small minority, and had placed on the Chair the initiative in bringing it into operation. Only when it appeared to the Speaker or Chairman to be the 'evident sense of the House' that the question should be put was he so to inform the House, and even then the closure was not in ordinary cases to be applied unless supported by at least 200 members. As a consequence of these restrictions the closure rule of 1882 was only twice applied during the five years of its existence, and in 1887, before proceeding with the Prevention of Crimes Bill, the Conservative Government resolved materially to strengthen it. The Irish party was twice as numerous as in the Parliament of 1880, and was now reinforced by the whole of the regular Opposition. Accordingly a new closure rule, passed after a debate extending over fourteen sittings, transferred the initiative from the Chair to the House by dispensing with the necessity of a declaration from the

Chair of the sense of the House before the closure could be moved. In the following year the number of members voting for the closure before it could be carried was reduced from 200 to 100. . . . [Later came] the process, afterwards nicknamed the 'guillotine,' and destined to be used with increasing frequency in later years. When used as an exceptional measure of necessity its application was irrational in practice, because the amount of time given to discussion of clauses in bills varied with the order in which they were printed, without reference to their importance; and essential matters, such as the power given by the bill of 1887 to the Irish Executive to proclaim an association as unlawful, were undiscussed; but when the system was methodised and the compartments into which bills were divided for the purposes of closure were carefully selected with the object of securing that no important point should escape the attention of the House, it became much less open to objections."—F. Holland, T. E. May, *Constitutional history of England*, v. 3, pp. 178-0.

1883.—Act to prevent corrupt and illegal practices at elections. See ENGLAND: 1883.

1910.—Question of veto power of House of Lords. See ENGLAND: 1910.

1911.—Parliament Act.—"Since 1885 in everything except a few points, less important practically than theoretically, England has been a democracy. It is indeed fair to say that, so far as the immediate influence of public opinion upon government policy is concerned, England has been for a generation more democratic than the United States. The cabinet system of government, the ministry responsible to the House of Commons, losing office when it loses its majority, provides a way by which almost automatically, without waiting for a future election day, a change of national judgment is carried out in a change of government policy, provided always that opinion changes in the House of Commons with the change of opinion outside. It has done so certainly in the past and may be expected to do so in the future. As a further step in the line of development which we are now following, the progress of the constitution towards democracy, the enactment of the Parliament Bill of 1911 should not be overlooked."—G. B. Adams, *Outline sketch of English constitutional history*, p. 194.—"In the Middle Ages the Commons only appeared in Parliament with the Speaker at their head and save for his orations they were dumb. To-day when men talk of Parliament, in nine cases out of ten they are thinking of the House of Commons and to say that the House of Commons wields nine tenths of the sovereignty of Parliament is an under rather than an overstatement of the truth."—A. F. Pollard, *Evolution of Parliament*, p. 316.—"The Parliament Act asserts the exclusive power of the House of Commons. [See ENGLAND: 1911 (August 18).] . . . First is the indignant protest of the House of Commons on December 2, 1900, against the action of the Lords in reserving the finance bill for a vote by the people in a general election, as 'a breach of the Constitution.' In this, passing by the important admissions of Lord Balfour of Burleigh in 1909, of Mr. Balfour in 1908, 1907, and 1906, and of Lord Salisbury in 1895, the House

of Commons followed the precedent of their own resolutions of July 6, 1860. Then they had voted that their control over taxation and supply was exclusive as to 'matter, manner, measure, and time.' Earlier in 1671 and 1678 the Commons had passed the well-known resolutions against the power of the House of Lords to alter aids and supplies which 'are the sole gift of the Commons.' The preamble of a supply bill had been fixed in 1628 stating the intention of the 'Commons' to 'give and grant' the 'duties' provided by the bill. It is true that the House of Lords had never given up the merely legal power to amend or reject a finance bill. It is true that by their standing order of 1702 they had protested against 'tacking' that is 'annexing' to a finance bill matter 'which is foreign to and different from the matter of the said Bills of Aid or Supply' as 'unparliamentary,' and tending 'to the destruction of the constitution.' And it is true that with regard to many separate bills involving directly or indirectly a financial charge there is prior to 1860 a long record of amendment, delay or rejection on the part of the House of Lords, in spite of the general principle already laid down by the House of Commons. But analysis of the character of these actions by the Lords, appreciation of the political as well as of the constitutional circumstances involved, and lastly the realization that for the bulk of those precedents men must turn to a period when the executive was not exclusively or even primarily dependent on or responsible to the House of Commons—all of these considerations do not materially or constitutionally weaken the strength of the convention which has decreed to the Commons the control over finance. The Parliament Act in this respect provides in statutory form for restoration of the Constitution to a position beyond the reach of a hostile majority in the House of Lords."—A. L. P. Dennis, *Parliament Act of 1911* (*American Political Science Review*, May, 1912, p. 209-211).—The provision enabling the Commons to pass any bill over the veto of the Lords is a different matter. The Commons alone, if sufficiently unanimous can entirely determine the course of legislation. "In a democratic community the ideal constitution provides for great stability in fundamental laws and great facility for change in everyday administration and legislation. In the past the British constitution has possessed these qualities. Sovereign power was concentrated in the hands of Parliament, which could therefore act with great speed and decision when so minded. But security was provided against revolutionary change by an independent second chamber, constituted partly on the hereditary principle and partly by nomination of the government of the day, and unalterably conservative in character. This security has now been destroyed, and it is certain that it will never be restored in its old form. The alternative most usually put forward is the restoration of the veto power to a reformed second chamber. Experience, however, all over the world shows that it is extraordinarily difficult to find any method of constituting a satisfactory second chamber with coordinate powers to those of the Lower House . . . It either becomes the creature of one party, in which case its decisions are not really independent, or it becomes simply another reflection of the popular will, competing for power with the lower house, but not really representing an independent point of view. The truth of the matter would seem to be that in a modern democracy it is the electorate itself which must perform the most important duty of the second chamber, and be alike the security against revolutionary change by temporary party majorities and the authority which

must secure the peaceful acceptance by minorities of important measures of constitutional reform."—*Parliament Act* (*Round Table*, Dec., 1916, pp. 20-21).—The Parliament Act "did away in law with the power formerly possessed by the House of Lords of absolute veto of popular measures which they had already lost in theory. There was no doubt natural reluctance to have the powerlessness of the peers so bluntly stated in statute terms, but the law really did not more than remove all possibility of a serious collision between the two houses which came so near to occurring more than once in the nineteenth century. In one particular the Parliament Bill is a distinct departure from the ordinary English practice. It is the embodiment of a constitutional principle in a statute; that is, the principle is legalized in definite words which state exactly what shall and what shall not be, an approach on a single point towards a written constitution. In this respect it is in line with the Bill of Rights of 1689 and with some provisions of the Act of Settlement in 1701, rather than with the general trend of English history, which has left the constitution to be expressed in unwritten custom and convention. But a written constitution is not out of harmony with English history, as is shown by the acts mentioned and by other legislation in earlier history which has become obsolete. The reason why the English constitution is unwritten is not because there is any especial political virtue about that form of constitution which was foreseen and chosen. The unwritten constitution was as little intended as a Parliament of two houses. It was an accident of the situation and was due to the fact that the work which England was doing in constitution making was new to human experience. The constitutional future could not be foreseen nor planned in detail, nor the needs of government provided for in advance, because this road had never been traveled before. The constitution was slowly made, not according to any theoretical ideal, but by finding a practical solution for every problem as it arose. The result in each case was rather a way of doing things than a formal provision, though it might be and often was afterwards put into statute form as a single detail."—G. B. Adams, *Outline sketch of English constitutional history*, pp. 104-105.

1911-1921.—Loss of power to cabinet and electorate.—From the time of the 1911 Parliament Act, "scrutiny reveals the fact that, so far as the actual exercise of its powers is concerned, Parliament has lost, and is losing, on the one side to the cabinet, and on the other to the electorate. For the moment there is something shocking in this discovery; we had been accustomed to think of Parliament as the great organ of popular government, and a diminution of the powers which it wields suggests a back-set for democracy. But reassurance comes when we reflect that loss of power to the cabinet is not necessarily inconsistent with popular government, since the cabinet is made up largely of elected members of Parliament, and is responsible to the House of Commons; while, of course, a loss to the electorate means throwing power back directly into the hands of the people."—F. A. Ogg and C. A. Beard, *National governments and the World War*, p. 250.

1916.—Relations between cabinet and House of Commons.—As the World War progressed the House of Commons was found too unwieldy a body for discussion of war plans, and the cabinet was called more frequently. Even then it was difficult to get members together quickly enough and by 1916 only a few important cabinet ministers were summoned to discuss matters with the prime min-

ister. This inner cabinet had all the facts of the war given to them and they made decisions which were rarely questioned by Parliament. In fact Parliament's work dwindled into that of passing the decisions and desires of this body into law. In this way "business of the highest importance was transacted with the utmost celerity. Acts of Parliament of enormous scope were often passed in a single day, which in ordinary times would have been wrangled over for months. . . . Another novel experience was the two Houses in secret session for the consideration of War measures. The first of these sessions was held on April 25, 1916, when the Government laid before Commons and Lords in their respective Chambers the proposals for the compulsory recruiting of men for the armies in the field. . . . Parliament was found capable of adapting itself, in all respects, to the national needs in that roughest and most perilous passage which this country has encountered in its voyage through time."—M. MacDonagh, *Pageant of Parliament*, v. 2, pp. 191, 194, 196.

1545-1592.—Alienation from the Holy See and erection, with Placentia, into a duchy, for the House of Farnese.—"Paul III was the last of those ambitious popes who rendered the interests of the holy see subordinate to the aggrandizement of their families. The designs of Paul, himself the representative of the noble Roman house of Farnese, were ultimately successful; since, although partially defeated during his life, they led to the establishment of his descendants on the throne of Parma and Placentia for nearly 200 years. . . . He gained the consent of the sacred college to alienate those states from the holy see in 1545, that he might erect them into a duchy for his natural son, Pietro Luigi Farnese; and the Emperor Charles V. had already, some years before, to secure the support of the papacy against France, bestowed the hand of his natural daughter, Margaret, widow of Alessandro de' Medici, upon Ottavio, son of Pietro Luigi, and grandson of Paul III. Notwithstanding this measure, Charles V. was not subsequently, however, the more disposed to confirm to the house of Farnese the investiture of their new possessions, which he claimed as part of the Milanese duchy; and he soon evinced no friendly disposition towards his own son-in-law, Ottavio. Pietro Luigi, the first duke of Parma, proved himself, by his extortions, his cruelties, and his debaucheries, scarcely less detestable than any of the ancient tyrants of Lombardy. He thus provoked a conspiracy and insurrection of the nobles of Placentia, where he resided; and he was assassinated by them at that place in 1547, after a reign of only two years. The city was immediately seized in the imperial name by Gonzaga, governor of Milan. . . . To deter the emperor from appropriating Parma also to himself [Paul III] could devise no other expedient than altogether to retract his grant from his family, and to reoccupy that city for the holy see, whose rights he conceived that the emperor would not venture to invade." But after the death of Paul III, the Farnese party, commanding a majority in the conclave, "by raising Julius III. to the tiara [1550], obtained the restitution of Parma to Ottavio from the gratitude of the new pope. The prosperity of the ducal house of Farnese was not yet securely established. The emperor still retained Placentia, and Julius III. soon forgot the services of that family. In 1551, the pope leagued with Charles V. to deprive the duke Ottavio of the fief which he had restored to him. Farnese was thus reduced . . . to place himself under the protection of the French; and this measure, and the indecisive war which followed, became his salvation. He still preserved his throne when Charles V. terminated his reign; and one of the first acts of Philip II., when Italy was menaced by the invasion of the duke de

Guise [1556], was to win him over from the French alliance, and to secure his gratitude, by yielding Placentia again to him. But a Spanish garrison was still left in the citadel of that place; and it was only the brilliant military career of Alessandro Farnese, the celebrated prince of Parma, son of duke Ottavio, which finally consummated the greatness of his family. Entering the service of Philip II., Alessandro gradually won the respect and favour of that gloomy monarch; and at length, in 1585, as a reward for his achievements, the Spanish troops were withdrawn from his father's territories. The duke Ottavio closed his life in the following year; but Alessandro never took possession of his throne. He died at the head of the Spanish armies in the Low Countries in 1592; and his son Ranuccio quietly commenced his reign over the duchy of Parma and Placentia under the double protection of the holy see and the monarchy of Spain."—G. Procter, *History of Italy*, ch. 9.

PARNASSIENS, school of French poets, so named because they contributed to a lyric anthology known as "Le Parnasse Contemporain." See FRENCH LITERATURE: 1800-1885.

PARNASSUS, mountain ridge in Greece, eighty-three miles northwest of Athens, near the ancient Delphi. It was celebrated as the haunt of Apollo, the muses and nymphs, and hence as the seat of music and poetry. See DORIANS AND IONIANS; THESSALY.

PARNELL, Charles Stewart (1846-1891), Irish statesman and Nationalist leader. Elected to

Parliament, 1875; became leader of Nationalist party, 1880; arrested on the charge of obstructing enforcement of new Land Act, 1881; imprisoned, 1881-1882; re-elected to Parliament, 1885; career and party wrecked by scandal, 1890. See IRELAND: 1873-1879; 1881-1882, to 1885-1891.

PAROLE SYSTEM. See PRISON REFORM: United States: Indeterminate sentence and parole system of New York; Correctional institutions; Results of prison reform movement.

PARRIS, Samuel (1653-1720), American clergyman. Noted for his prosecution of the alleged witchcraft cases in Salem, 1692-1693. See MASSACHUSETTS: 1602.

PARRY, Sir Charles Hubert Hastings (1848-1918), English composer. See MUSIC: Modern: 1842-1921: Modern English composers.

PARRY, Sir William Edward (1790-1855), English naval officer and Arctic explorer. See ARCTIC EXPLORATION: 1819-1848; Chronological summary: 1819-1820; 1821-1823; 1824-1825; 1827.

PARSEES, or Parsis.—"On the western coast of India, from the Gulf of Cambay to Bombay, we find from one hundred to one hundred and fifty thousand families whose ancestors migrated thither from Iran. The tradition among them is, that at the time when the Arabs, after conquering Iran and becoming sovereigns there, persecuted and eradicated the old religion [of the Avesta], faithful adherents of the creed fled to the mountains of Kerman. Driven from these by the Arabs (in Kerman and Yezd a few hundred families are still found who maintain the ancient faith), they retired to the island of Hormuz (a small island close by the southern coast, at the entrance to the Persian Gulf). From hence they migrated to Din (on the coast of Guzerat), and then passed over to the opposite shore. In the neighbourhood of Bombay and in the south of India inscriptions have been found which prove that these settlers reached the coast in the tenth century of our era. At the present time their descendants form a considerable part of the population of Surat, Bombay, and Ahmadabad; they call themselves, after their ancient home, Parsees, and speak the later Middle Persian."—M. Duncker, *History of antiquity*, v. 5, bk. 7, ch. 2.—"The present Zoroastrians, or Parsees, are but the remnant of a once powerful people. During the many vicissitudes of war and national decay their ancient political power has become dissipated, and through contact with peoples of other religions their original religious teaching has lost its purity, and a lifeless formalism has taken the place of its once vital spiritual force. As for the sacred literature of the Zoroastrians, it, like themselves, is now but fragmentary; the elements necessary to give it complete comprehensive form are lost.—C. M. Remey, *Bahai movement*, p. 40.—The Parsees of India are divided into two sects, the Shenshabis and the Kadmis, whose difference is one of chronological reckoning rather than of faith. There are only two distinct classes among the Parsees—the *priests* and the *people*. Priestly office is hereditary, but, though no one may become a priest who was not born to the position, a priest's son may become a layman. The Parsees are peculiar among eastern peoples in their prohibition of polygamy except in unusual cases.—See also INDIA: People: ZOROASTRIANS.

PARSI LANGUAGE. See PHILOLOGY: 14.

PARSIS. See PARSEES.

PARSONS' CAUSE, celebrated case decided by the court of Hanover county, Virginia. See VIRGINIA: 1763.

PARTHENII.—This name was given among the Spartans to a class of young men, sons of Spartan

women who had married outside the exclusive circle of the Spartiate. The latter refused, even when Sparta was most pressingly in need of soldiers, to admit these "sons of maidens," as they stigmatized them, to the military body. The Parthenii, becoming numerous, were finally driven to emigrate, and found a home at Tarentum, Italy.—Based on E. Curtius, *History of Greece*, bk. 2, ch. 1.—See also TARENTUM.

PARTHENON: B. C. 445-431.—Building of the Parthenon.—Festivals.—Pericles had occasion to erect on the highest point of the Acropolis, in place of the ancient Hecatompodon, a new festive edifice and treasure-house, which, by blending intimately together the fulfilment of political and religious ends, was to serve to represent the piety and artistic culture, the wealth and the festive splendour—in fine, all the glories which Athens had achieved by her valour and her wisdom. [See ATHENS: B. C. 461-431: General aspect of Periclean Athens.] . . . The architect from whose design, sanctioned by Pericles and Phidias, the new Hecatompodon was erected, was Ictinus, who was seconded by Callicrates, the experienced architect of the double line of walls. It was not intended to build an edifice which should attract attention by the colossal nature of its proportions or the novelty of its style. The traditions of the earlier building were followed, and its dimensions were not exceeded by more than 50 feet. In a breadth of 100 feet the edifice extended in the form of a temple, 226 feet from east to west; and the height, from the lowest stair to the apex of the pediment, amounted only to 65 feet. . . . The Hecatompodon, or Parthenon (for it went by this name also as the house of Athene Parthenos), was very closely connected with the festival of the Panathenæa, whose splendour and dignity had gradually risen by degrees together with those of the state. . . . The festival commenced with the performances in the Odeum, where the masters of song and recitation, and the cither and flute-players, exhibited their skill, the choral songs being produced in the theatre. Hereupon followed the gymnastic games, which, besides the usual contests in the stadium, foot-race, wrestling-matches, &c., also included the torch-race, which was held in the Ceramicus outside the Dipylum, when no moon shone in the heavens; and which formed one of the chief attractions of the whole festival.—E. Curtius, *History of Greece*, bk. 3, ch. 3.—See also ACROPOLIS OF ATHENS; also ATHENS: Map of ancient Athens.

B. C. 431-A. D. 1456.—Previous to its destruction.—The Parthenon seems to have remained substantially without alteration or serious damage, until in the fifth century, it was transformed into a Christian church dedicated to St. Sophia. In 1456 Athens came into the hands of the Turks, and a minaret was added to the Parthenon for the purpose of making it into a mosque.

1687.—Destructive explosion during siege of Athens by the Venetians. See ATHENS: 1687-1688; TURKEY: 1684-1666.

1801.—Removal of marbles by Lord Elgin.—In 1801 Lord Elgin obtained permission to remove the débris that had collected over the ruin of the original building and to make casts and drawings. He also transported many remnants of the original sculpture which he discovered on the grounds or in Turkish houses to England. The Elgin marbles were bought by the British government and are now in the British Museum.

PARTHENOPE, ancient name of Naples. See NEAPOLIS AND PALEPOLIS.

PARTHIA AND THE PARTHIAN EMPIRE.—"The mountain chain, which running southward of the Caspian, skirts the great plateau of Iran, or Persia, on the north, broadens out after it passes the south-eastern corner of the sea, into a valuable and productive mountain-region. Four or five distinct ranges here run parallel to one another, having between them latitudinal valleys, with glens transverse to their courses. The sides of the valleys are often well wooded; the flat ground at the foot of the hills is fertile; water abounds; and the streams gradually collect into rivers of a considerable size. The fertile territory in this quarter is further increased by the extension of cultivation to a considerable distance from the base of the most southern of the ranges, in the direction of the Great Iranian desert. . . . It was undoubtedly in the region which has been thus briefly described that the ancient home of the Parthians lay. . . . Parthia Proper, however, was at no time coextensive with the region described. A portion of that region formed the district called Hyrcania; and it is not altogether easy to determine what were the limits between the two. The evidence goes, on the whole, to show that while Hyrcania lay towards the west and north, the Parthian country was that towards the south and east, the valleys of the Etrek and Gurghan constituting the main portions of the former, while the tracts east and south of those valleys, as far as the sixty-first degree of E. longitude, constituted the latter. If the limits of Parthia Proper be thus defined, it will have nearly corresponded to the modern Persian province of Khorasan. . . . The Turanian character of the Parthians, though not absolutely proved, appears to be in the highest degree probable. If it be accepted, we must regard them as in race closely allied to the vast hordes which from a remote antiquity have roamed over the steppe region of Upper Asia, from time to time bursting upon the south and harassing or subjugating the comparatively unwarlike inhabitants of the warmer countries. We must view them as the congeners of the Huns, Bulgarians and Comans of the ancient world; of the Kalmucks, Ougurs, Usbegs, Eleuts, &c., of the present day. . . . The Parthians probably maintained their independence from the time of their settlement in the district called after their name until the sudden arrival in their country of the great Persian conqueror, Cyrus, [about 554 B. C.]. . . . When the Persian empire was organised by Darius Hystaspis into satrapies, Parthia was at first united in the same government with Chorasmia, Sogdiana and Aria. Subsequently, however, when satrapies were made more numerous, it was detached from these extensive countries, and made to form a distinct government, with the mere addition of the comparatively small district of Hyrcania." The conquests of Alexander included Parthia within their range, and, under the new political arrangements which followed Alexander's death, that country became for a time part of the wide empire of the Seleucidae, founded by Seleucus Nicator,—the kingdom of Syria as it was called. But about 250 B. C. a successful revolt occurred in Parthia, led by one Arsaces, who founded an independent kingdom and a dynasty called the

Arsacid. (See SELEUCIDE: B. C. 281-224; B. C. 224-187.) Under succeeding kings, especially under the sixth of the line, Mithradates I. (not to be confused with the Mithradatic dynasty in Pontus), the kingdom of Parthia was swollen by conquest to a great empire, covering almost the whole territory of the earlier Persian empire, excepting in Asia Minor and Syria. (See BACTRIA.) On the rise of the Roman power, the Parthians successfully disputed with it the domination of the east in several wars (see ROME: Republic; B. C. 57-52), none of which were advantageous to the Romans, until the time of Trajan.—G. Rawlinson, *Sixth great oriental monarchy: Parthia*.—Trajan, 115-117 (see ROME: Empire: 96-138) "undertook an expedition against the nations of the East. . . . The success of Trajan, however transient, was rapid and specious. The degenerate Parthians, broken by intestine discord, fled before his arms. He descended the river Tigris in triumph, from the mountains of Armenia to the Persian gulf. He enjoyed the honour of being the first, as he was the last, of the Roman generals who ever navigated that remote sea. His fleets ravaged the coasts of Arabia. . . . Every day the astonished senate received the intelligence of new names and new nations that acknowledged his sway. . . . But the death of Trajan soon clouded the splendid prospect. . . . The resignation of all the eastern conquests of Trajan was the first measure of his [successor Hadrian's] reign. He [Hadrian] restored to the Parthians the election of an independent sovereign, withdrew the Roman garrisons from the provinces of Armenia, Mesopotamia and Assyria; and in compliance with the precept of Augustus, once more established the Euphrates as the frontier of the empire."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 1.—In the reign of Marcus Aurelius Antoninus at Rome, the Parthian king Vologeses III. (or Arsaces XXVII.) provoked the Roman power anew by invading Armenia and Syria. In the war which followed, the Parthians were driven from Syria and Armenia; Mesopotamia was occupied; Seleucia, Ctesiphon and Babylon taken; and the royal palace at Ctesiphon burned (165 A. D.). Parthia then sued for peace, and obtained it by ceding Mesopotamia, and allowing Armenia to return to the position of a Roman dependency. Half a century later the final conflict of Rome and Parthia occurred. "The battle of Nisibis [217], which terminated the long contest between Rome and Parthia, was the fiercest and best contested which was ever fought between the rival powers. It lasted for the space of three days. . . . Macrinus [the Roman emperor, who commanded] took to flight among the first; and his hasty retreat discouraged his troops, who soon afterwards acknowledged themselves beaten and retired within the lines of their camp. Both armies had suffered severely. Hierodian describes the heaps of dead as piled to such a height that the manœuvres of the troops were impeded by them, and at last the two contending hosts could scarcely see one another. Both armies, therefore, desired peace." But the peace was purchased by Rome at a heavy price. After this, the Parthian monarchy was rapidly undermined by internal dissensions and corruptions, and in 226 it was overthrown by a revolt of the Persians (see PERSIA: B. C. 150-A. D. 226), who claimed and secured again, after five centuries and a half of subjugation, their ancient leadership among the races of the East. The new Persian Empire, or Sassanian monarchy, was founded by Artaxerxes I on the ruins of the Parthian throne.—G. Rawlinson, *Sixth great oriental monarchy: Parthia*, ch. 3-21.

PARTHIAN HORSE, PARTHIAN ARROWS.—"Fleet and active coursers, with scarcely any caparison but a headstall and a single rein, were mounted by riders clad only in a tunic and trousers, and armed with nothing but a strong bow and a quiver full of arrows. A training begun in early boyhood made the rider almost one with his steed; and he could use his weapons with equal ease and effect whether his horse was stationary or at full gallop, and whether he was advancing towards or hurriedly retreating from his enemy. . . . It was his ordinary plan to keep constantly in motion when in the presence of an enemy, to gallop backwards and forwards, or round and round his square or column, . . . at a moderate interval plying it with his keen and barbed shafts."—G. Rawlinson, *Sixth great oriental monarchy: Parthia*, ch. 11.

PASCUA, Latin name for revenue collected from pasture lands. See VEGETAL.

PASHA, or Pacha, Turkish title. See BEY.

PASHITCH, or Pashich, Nicola (1846-), Serbian statesman. Became leader of the Radical party, 1881; ambassador to Russia, 1893-1894; premier of Serbia, 1891-1892, 1904-1905, 1906-1908; again became premier, 1912, and was political head of the Serbian government during the World War; Serbian representative at the Paris peace conference, 1919. See JUGO-SLAVIA: 1920-1921; 1922; VERSAILLES, TREATY OF: Conditions of peace; WORLD WAR: 1917: V. Balkan theater: c.

PASHTUN, or Pakhtun, ancient tribe of Afghanistan. See ARACHOTI.

PASKEVITCH, Ivan Fedorovitch, Count of Erivan, Prince of Warsaw (1782-1856), Russian field marshal. Fought in Napoleonic wars, 1805-1813; gained victory over Persians, 1826-1828; became commander of Russian forces in Poland and suppressed revolt, 1831; led invasion into Hungary, 1840. See HUNGARY: 1847-1849; POLAND: 1830-1832.

PASQUIER, Étienne (1529-1615), French jurist and author. See FRENCH LITERATURE: 1552-1610.

PASSAIC RIVER, New Jersey, flows into Newark bay below Newark. It is about 100 miles long. It was the site of the settlement of Newark in 1667. See NEW JERSEY: 1664-1667.

PASSAMAQUODDIES, North American Indian tribe.

PASSAROWITZ, Treaty of (1718). See BOSNIA: 1528-1875; HUNGARY: 1600-1718; TURKEY: 1714-1718.

PASSAU, town in the republic of Bavaria, Germany, at the junction of the Inn and Ilz rivers with the Danube, near the Austrian frontier, ninety miles northeast of Munich. It was taken by the Bavarians and French in 1703. See GERMANY: 1703

Treaty of (1552). See GERMANY: 1546-1552.

PASSCHENDAELE RIDGE, small elevation about six miles northeast of Ypres, Belgium. It was held by the Germans from 1914 to 1917. Captured by Canadian troops in 1917, abandoned by the Allies in the German spring offensive of 1918; it was recaptured in September, 1918. See WORLD WAR: 1914: I. Western front: u, 8; 1917: II. Western front: d, 5; d, 20; d, 23; d, 24; 1918: II. Western front: d, 13; e, 2; q, 2.

PASSÉ, South American Indian tribe. See GUCK, OR COCO, GROUP.

PASSIONIST ORDER, name generally applied to the order whose full name is the Congregation of Discalced Clerks of the Holy Cross and Passion of Our Lord Jesus Christ, founded by St. Paul of the Cross, 1725. See MONASTICISM: 16th-19th centuries.

PASSPORTS.—The issuing of passports is a convenient system adopted by states to secure for their citizens a right of transit through foreign countries, which permission might in international legal theory be withheld. Technically the foreign country grants the citizen the passport, and accepts his certificate of citizenship as a title to the right, accorded by all civilized states, of unobjectionable foreigners to pass through. In those countries which even in time of peace exercise strict supervision over aliens entering and residing, the local or national visé on the certificate corresponds to the technical passport. In practice, the certificate itself has received the name passport and actually serves that purpose, being often, if not unregulated by foreign officials, at least only inspected, the visé, where it is affixed, serving merely as evidence of inspection. The passport is the accepted international certificate or evidence of citizenship, although its evidentiary value is *prima facie* only. In the practice of the United States, it is issued by the Secretary of State or under his authority by a diplomatic or consular officer. It certifies that the person therein described is a citizen of the United States and requests for him while abroad permission to come and go as well as lawful aid and protection.—E. M. Borchard, *Diplomatic protection of citizens abroad*, p. 493.—Passports were common during the Middle Ages. In 1521, we read of the duke of Albany asking for one for his secretary. Evelyn in his Diary (1666) says, "I was commanded to go with him to the Holland Ambassador, where he went to stay for his passport." Previous to 1914, Great Britain required no passport for either entering or leaving, and there was none required between Canada and the United States; but in most European countries they were necessary in order to leave, if not always to enter. In the United States, in order to deal with the flood of immigration, an immigrant, even though provided with a passport properly viséed by a United States consul, cannot enter the country, except by permission of the immigration authorities. (See STATE DEPARTMENT OF THE UNITED STATES, 1700-1900.) The charge for passports issued by the United States is now ten dollars. According to the act of 1856 there was no charge for passports. In 1874 a charge of five dollars was made. In 1888 this was reduced to one dollar. The present charge began in 1920. In October, 1920, an international conference regarding passports was held, attended by the representatives of twenty-eight countries, at which recommendations were made to simplify existing conditions. In 1922 a great deal of friction was caused by the act of September 22, which prevented an alien wife of an American citizen from automatically becoming a citizen through her marriage. See NATURALIZATION: United States: Laws relating to women.

PASSY, Frédéric (1822-1912). French economist and author. One of the founders of the International Peace League, 1868; awarded, with Dunant, the Nobel peace prize, 1901. See NOBEL PRIZES: Peace: 1901; PEACE MOVEMENT: Peace organizations.

PASTEUR, Louis (1822-1895). French biological chemist and pathologist. Famous for his researches in bacteriology and fermentation; began the practice of inoculation for hydrophobia in 1885. See CHEMISTRY: General: Modern: Lavoisier, etc. ;

PATAGONIA, southernmost portion of South America, including all of Argentina south of the Rio Negro, together with the adjacent parts of Chile. See LATIN AMERICA: Map of South America.

PATAGONIANS AND FUEGIANS.—"The Patagonians call themselves Chonek or Tzoueca, or Inaken (men, people), and by their Pampean neighbors are referred to as Tehuel-Che, southerners. They do not, however, belong to the Aucanian stock, nor do they resemble the Pampeans physically. They are celebrated for their stature, many of them reaching from six to six feet four inches in height, and built in proportion. In color they are a reddish brown, and have aquiline noses and good foreheads. They care little for a sedentary life, and roam the coast as far north as the Rio Negro. . . . On the inhospitable shores of Tierra del Fuego there dwell three nations of diverse stock, but on about the same plane of culture. One of these is the Yahgans, or Yapoos, on the Beagle Canal; the second is the Onas or Aonik, to the north and east of these; and the third the Aliculufs, to the north and west. . . . The opinion has been advanced by Dr. Deniker of Paris, that the Fuegians represent the oldest type or variety of the American race. He believes that at one time this type occupied the whole of South America south of the Amazon, and that the Tapuyas of Brazil and the Fuegians are its surviving members. This interesting theory demands still further evidence before it can be accepted."—D. G. Brinton, *American race*, pp. 327-332.

PATARA, Oracle of. See ORACLES.

PATARENES, PATERINI.—About the middle of the eleventh century, there appeared at Milan a young priest named Ariald who caused a great commotion by attacking the corruptions of clergy and people and preaching repentance and reform. The whole of Milan became "separated into two hotly contending parties. This controversy divided families; it was the one object which commanded universal participation. The popular party, devoted to Ariald and Landulph [a deacon who supported Ariald], was nicknamed 'Pataria,' which in the dialect of Milan signified a popular faction; and as a heretical tendency might easily grow out of, or attach itself to, this spirit of separatism so zealously opposed to the corruption of the clergy, it came about that, in the following centuries, the name Patarenes was applied in Italy as a general appellation to denote sects contending against the dominant church and clergy—sects which, for the most part, met with great favour from the people."—A. Neander, *General history of the Christian religion and church* (Bohn's ed.), v. 6, p. 67.—"The name Patarini is derived from the quarter of the rag-gatherers, Pataria."—W. Moeller, *History of the Christian church in the Middle Ages*, p. 253, footnote.—During the fierce controversy of the eleventh century over the question of celibacy for the clergy (see PAPACY: 1056-1122), the party in Milan which supported Pope Gregory VII (Hildebrand) in his inflexible warfare against the marriage of priests were called by their opponents Patarines.—Based on H. H. Milman, *His-*

tory of Latin Christianity, bk. 6, ch. 3.— See also ALBIGENSES; CATHARI; PAULICIANS.

PATAVIUM, ancient name of Padua. See VENETI OF CISALPINE GAUL.

PATAY, Battle of (1429). See FRANCE: 1429-1431.

PATCHINAKS, UZES, COMANS.—The Patchinaks, or Patzinaks, Uzes and Comans were successive swarms of Turkish nomads which came into southeastern Europe during the tenth, eleventh and twelfth centuries, following and driving each other into the long and often devastated Danubian provinces of the Byzantine empire, and across the Balkans. The Comans are said to have been Turco-mans, with the first part of their true name dropped off.—Based on E. Pears, *Fall of Constantinople*, ch. 3.—See also RUSSIA: 865-941.

PATENT RIGHT. See EQUITY LAW: 1875.

PATENTS OF INVENTION: Great Britain: 1907.—Patents and Designs Act.—A requirement of the manufacture of patented articles in the United Kingdom, introduced in an act of the British Parliament passed and approved in August, 1907, which came into force August 29, 1908, seriously changed the operation of patents issued to foreigners. It is contained in the following sections:

"27.—(1) At any time not less than four years after the date of a patent and not less than one year after the passing of this Act, any person may apply to the comptroller for the revocation of the patent on the ground that the patented article or process is manufactured or carried on exclusively or mainly outside the United Kingdom. [In 1918 an act was passed stating that the articles patented must be made in Great Britain.]

"(2) The comptroller shall consider the application, and, if after enquiry he is satisfied that the allegations contained therein are correct, then, subject to the provisions of this section, and unless the patentee proves that the patented article or process is manufactured or carried on to an adequate extent in the United Kingdom, or gives satisfactory reasons why the article or process is not so manufactured or carried on, the comptroller may make an order revoking the patent either—(a) forthwith; or (b) after such reasonable interval as may be specified in the order, unless in the meantime it is shown to his satisfaction that the patented article or process is manufactured or carried on within the United Kingdom to an adequate extent: Provided that no such order shall be made which is at variance with any treaty, convention, arrangement, or engagement with any foreign country or British possession.

"(3) If within the time limited in the order the patented article or process is not manufactured or carried on within the United Kingdom to an adequate extent, but the patentee gives satisfactory reasons why it is not so manufactured or carried on, the comptroller may extend the period mentioned in the previous order for such a period not exceeding twelve months as may be specified in the subsequent order.

"(4) Any decision of the comptroller under this section shall be subject to appeal to the court, and on any such appeal the law officer or such other counsel as he may appoint shall be entitled to appear and be heard."

PATER PATRIÆ.—"The first individual, belonging to an epoch strictly historical, who received this title was Cicero, to whom it was voted by the Senate after the suppression of the Catilinarian conspiracy."—W. Ramsay, *Manual of Roman antiquity*, ch. 5.

PATERINI. See PATARENES.

PATERNALISM.—A government which, in addition to the primary functions of maintaining order and security, undertakes definitely to promote the social well-being of its people, is termed paternalistic. In the late eighteenth and early nineteenth centuries, such procedure was considered an unjustifiable and dangerous encroachment on individual rights. But as the idea of "natural law" (or the *laissez faire* theory of government [see DEMOCRACY: Tendencies of the 19th century]) came to be discredited by the iniquities of its actual application, the sphere of government was extended. France had indeed retained something of this view from the time of Napoleon. After 1870 the imperial German government developed it to a very high degree. England and America have followed more slowly under the pressure of necessity. Insurance, pensions, the preservation of health, the regulation or even operation of various industries, are some of the duties frequently assumed by governments, on the ground that if left to individual enterprise they would be performed with less efficiency and economy, or not performed at all.

PATERNO, town in the province of Catania, Sicily, eleven miles northwest of Catania, on the site of ancient Hybla. See HYBLA.

PATERSON, William (1658-1719), British financier, founder of the Bank of England. Head of an expedition formed to settle the Isthmus of Darien, called New Caledonia, 1698. PATNA, native state in India, under British control; also the name of a division, district, and capital in the same state. The population of the city was 119,976 in 1921. See INDIA: Map.

1763.—Massacre at. See INDIA: 1757-1772.

PATRÆ, or **Patras**, seaport on the western coast of Greece, seventy miles northwest of Corinth. In 1920 it had a population of 52,174. See ACHÆAN LEAGUE.

PATRES CONSCRIPTI, Rome. See CONSCRIPT FATHERS.

PATRIARCH OF ANTIOCH. See PAPACY: Supremacy of the Roman See: Grounds of the denial.

PATRIARCH OF THE WEST.—"It was not long after the dissolution of the Jewish state [consequent on the revolt suppressed by Titus] that it revived again in appearance, under the form of two separate communities mostly dependent upon each other: one under a sovereignty purely spiritual, the other partly temporal and partly spiritual,—but each comprehending all the Jewish families in the two great divisions of the world. At the head of the Jews on this side of the Euphrates appeared the Patriarch of the West; the chief of the Mesopotamian community assumed the striking but more temporal title of 'Resch-Glutha,' or Prince of the Captivity. The origin of both these dignities, especially of the Western patriarchate, is involved in

much obscurity."—H. H. Milman, *History of the Jews*, bk. 18.—See also JEWS: 200-400.

PATRIARCHAL SOCIETY. See CHURCH AND STATE: Totemism.

Reestablished at Alexandria. See PAPACY: 1806 (March).

Question in Russia. See RUSSIA: 1917 (August); 1917-1922.

PATRICIAN, title given by the Romans to one belonging to the nobility by right of birth or privilege.

Early title. See COMITIA CURIATA; PLEBIANS; ROME: Ancient kingdom: Early character and civilization: B. C. 472-471.

Later title.—"Introduced by Constantine at a time when its original meaning had been long forgotten, it was designed to be, and for a while remained, the name not of an office but of a rank, the highest after those of emperor and consul. As such, it was usually conferred upon provincial governors of the first class, and in time also upon barbarian potentates whose vanity the Roman court might wish to flatter. Thus Odoacer, Theodoric, the Burgundian king Sigismund, Clovis himself, had all received it from the Eastern emperor; so too in still later times it was given to Saracenic and Bulgarian princes. In the sixth and seventh centuries an invariable practice seems to have attached it to the Byzantine viceroys of Italy, and thus, as we may conjecture, a natural confusion of ideas had made men take it to be, in some sense, an official title, conveying an extensive though undefined authority, and implying in particular the duty of overseeing the Church and promoting her temporal interests. It was doubtless with such a meaning that the Romans and their bishop bestowed it upon the Frankish kings, acting quite without legal right, for it could emanate from the emperor alone, but choosing it as the title which bound its possessor to render to the church support and defence against her Lombard foes."—J. Bryce, *Holy Roman empire*, ch. 4.

PATRICK, Saint, patron saint of Ireland. "St Patrick was probably born about 389 A. D., perhaps at a small place called Bannaventa, near the Severn. His family was Christian, and his father was a man of recognised position and a Roman official. When he was sixteen years old some Irish Celts or Gaels raided his native town, and he was carried away as a slave to serve an Irish master in Connaught [some say Antrim]. At the end of six years he managed to escape, and reaching the coast of Wicklow, he joined a trading ship bound for Gaul. Making his way to the South of France on foot, he entered the Monastery of Lérins, and after he had received a religious training he returned to his old home in Britain. He here had a vision, in which a voice summoned him to Ireland, urging him to convert the people to Christianity. . . . He was consecrated bishop in 432 A. D., and setting out with a company of fellow workers, he landed in the north. . . . His enthusiasm, his courage, and a wise determination not needlessly to interfere with pagan ceremonies and customs, overcame all opposition and won over the people to the new religion. He founded churches and monasteries in many parts of Ireland, after the model of those in Europe, with Armagh as the central See; and from his time Ireland has taken her place in universal Christendom."—C. Maxwell, *Short history of Ireland*, pp. 6-8.—See also CHRISTIANITY: 5th-6th centuries: Irish church and its missions; EDUCATION: Medieval: 5th-6th centuries; IRELAND: 432; 5th-6th centuries; MISSIONS, CHRISTIAN: 4th-7th centuries.

PAULICIANS.—"After a pretty long obscurity the Manichean theory revived with some modification in the Western parts of Armenia, and was propagated in the 8th and 9th centuries by a sect denominated Paulicians. Their tenets are not to be collected with absolute certainty from the mouths of their adversaries, and no apology of their own survives. There seems however to be sufficient evidence that the Paulicians, though professing to acknowledge and even to study the apostolical writings, ascribed the creation of the world to an evil deity, whom they supposed also to be the author of the Jewish law, and consequently rejected all the Old Testament. . . . Petrus Siculus enumerates six Paulician heresies: 1. They maintained the existence of two deities, the one evil, and the creator of this world; the other good, . . . the author of that which is to come. 2. They refused to worship the Virgin, and asserted that Christ brought his body from heaven. 3. They rejected the Lord's Supper. 4. And the adoration of the cross. 5. They denied the authority of the Old Testament, but admitted the New, except the epistles of St. Peter, and, perhaps, the Apocalypse. 6. They did not acknowledge the order of priests. There seems every reason to suppose that the Paulicians, notwithstanding their mistakes, were endowed with sincere and zealous piety, and studious of the Scriptures. . . . These errors exposed them to a long and cruel persecution, during which a colony of exiles was planted by one of the Greek emperors in Bulgaria. From this settlement they silently promulgated their Manichean creed over the western regions of Christendom. A large part of the commerce of those countries with Constantinople was carried on for several centuries by the channel of the Danube. This opened an immediate intercourse with the Paulicians, who may be traced up that river through Hungary and Bavaria, or sometimes taking the route of Lombardy, into Switzerland and France. In the last country, and especially in its southern and eastern provinces, they became conspicuous under a variety of names; such as Catharists, Picards, Paterins, but, above all, Albigenes. It is beyond a doubt that many of these sectaries owe their origin to the Paulicians; the appellation of Bulgarians was distinctively bestowed upon them; and, according to some writers, they acknowledged a primate or patriarch resident in that country. . . . It is generally agreed that the Manicheans from Bulgaria did not penetrate into the west of Europe before the year 1000; and they seem to have been in small numbers till about 1140. . . . I will only add, in order to obviate cavilling, that I use the word Albigenes for the Manichean sects, without pretending to assert that their doctrines prevailed more in the neighbourhood of Albi than elsewhere. The main position is that a large part of the Languedocian heretics against whom the crusade was directed had imbibed the Paulician opinions. If any one chooses rather to call them Catharists, it will not be material."—H. Hallam, *Middle Ages*, ch. 9, pt. 2, and footnotes.—See also **CATHARI**; **ALBIGENES**.

1774-1790.—Theologians of Pavia.—"In 1774, the Austrian Government instituted a theological faculty in the University of Pavia. In 1783, the Emperor Joseph II transferred to Pavia, for use in the newly instituted *Collegium Germanicum et Hungaricum*, the collections belonging to the old *Collegium Germanicum* of Milan. The divines of the theological faculty of Pavia came to be classed as Jansenists. The classification appears to have been based not so much upon their teaching of the Augustinian doctrine of Grace as upon their own sharp antagonism to the theories and practices of the Jesuits. These divines contended openly that the so-called Jansenist heresy was a phantom, and they also undertook the defence of the Church of Utrecht. They were, further, opponents of the doctrines taught by the Jesuits in regard to morality; they were in sympathy with the claims of the Gallican Church, and finally, they maintained stoutly the necessity for reforms within the Catholic Church on the lines indicated by the Synod of Pistoja. In the years succeeding 1781, were placed upon the Index the titles of a number of writings by these theologians and by others who had accepted their views"—G. H. Putnam, *Censorship of the Church of Rome*, pp. 174-175.—See also PORT ROYAL AND THE JANSENISTS.

PAWNEE FAMILY (called "Caddoan").—"The Pawnee Family, though some of its branches have long been known, is perhaps in history and language one of the least understood of the important tribes of the West. In both respects it seems to constitute a distinct group. During recent years its extreme northern and southern branches have evinced a tendency to blend with surrounding stock; but the central branch, constituting the Pawnee proper, maintains still in its advanced decadence a bold line of demarcation between itself and all adjacent tribes. The members of the family are: The Pawnees, the Arikaras, the Caddos, the Huecos or Wacos, the Keechies, the Tawaconies, and the Pawnee Picts or Wichitas. The last five may be designated as the Southern or Red River branches. At the date of the Louisiana purchase the Caddos were living about 40 miles northwest of where Shreveport now stands. Five years earlier their residence was upon Clear Lake, in what is now Caddo Parish. This spot they claimed was the place of their nativity, and their residence from time immemorial. . . . They have a tradition that they are the parent stock, from which all the southern branches have sprung, and to some extent this claim has been recognized. . . . The five [southern] bands are now all gathered upon a reserve secured for them in the Indian Territory by the Government. . . . In many respects, their method of building lodges, their equestrianism, and certain social and tribal usages, they quite closely resemble the Pawnees. Their connection, however, with the Pawnee family, not till recently if ever mentioned, is mainly a matter of vague conjecture.

. . . The name Pawnee is most probably derived from 'pá-rik-í,' a horn; and seems to have been once used by the Pawnees themselves to designate their peculiar scalp-lock. From the fact that this was the most noticeable feature in their costume, the name came naturally to be the denominative term of the tribe. The word in this use once probably embraced the Wichitas (i. e., Pawnee Picts) and the Arikaras. . . . The true Pawnee territory till as late as 1833 may be described as extending from the Niobrara south to the Arkansas. They frequently hunted considerably beyond the Arkansas; tradition says as far as the Canadian. . . . On the east they claimed to the Missouri, though in eastern Nebraska, by a sort of tacit permit, the Otoes, Poncas, and Omahas along that stream occupied lands extending as far west as the Elkhorn. In Kansas, also, east of the Big Blue, they had ceased to exercise any direct control, as several remnants of tribes, the Wyandots, Delawares, Kickapoos, and Iowas, had been settled there and were living under the guardianship of the United States. . . . On the west their grounds were marked by no natural boundary, but may perhaps be described by a line drawn from the mouth of Snake River on the Niobrara southwest to the North Platte, thence south to the Arkansas. . . . It is not to be supposed, however, that they held altogether undisturbed possession of this territory. On the north they were incessantly harassed by various bands of the Dakotas, while upon the south the Osages, Comanches, Cheyennes, Arapahoes and Kiowas (the last three originally northern tribes) were equally relentless in their hostility. . . . In 1833 the Pawnees surrendered to the United States their claim upon all the above described territory lying south of the Platte. In 1858 all their remaining territory was ceded, except a reserve 30 miles long and 15 wide upon the Loup Fork of the Platte, its eastern limit beginning at Beaver Creek. In 1874 they sold this tract and removed to a reserve secured for them by the Government in the Indian Territory, between the Arkansas and Cimarron at their junction."—J. B. PEABODY FUND.—"In 1867 George Peabody of Baltimore, merchant and banker . . . [began a] line of national benefactions . . . by establishing the Peabody Education Fund. . . . The donation was made in the interests of education in the southern states, and the trustees assumed the obligation to administer the fund in the interests of the entire South. [See GIFTS AND BEQUESTS.] . . . In the year 1875 the first step in the new direction was taken by establishing a normal school at Nashville, Tennessee. At that time the normal school idea was new in the south, and it was decided to use this first school as an instrument for educating all of the southern states to a sense of the necessity of maintaining schools for the training of teachers. To attain this end, the trustees voted to establish a large number of scholarships amounting to \$200 each to enable worthy students from all the southern states to attend this central training school. In this way the normal school at Nashville became a leader in the development of the normal school idea throughout the southern part of the country. . . . By the year 1903 this part of the work had been completed, and it became evident to the trustees that the time had come to direct the fund toward other ends. Consequently the board voted in 1904 to discontinue the payment of scholarships in connection with the Peabody Normal College at Nashville and seriously turned its attention to deciding on possible new lines of service. After long deliberation and careful study of the entire field, the trustees decided that the greatest usefulness could be reached through endowing an educational institution which should for all time be a benefit to the entire south. Their investigations satisfied them that this end would be best attained by the endowment of the Peabody College for the higher education of teachers. They decided to do this, partly because Nashville had already become known as an educational center, and partly because it is the site of the Vanderbilt University, an institution among the first, if not the very first, of southern universities. This arrangement made easy the fullest co-operation between the existing university and the new teachers' college, and averted useless expense through the duplication of plants, courses, and instructors. The arrangement whereby the first endowment of the new institution was completed was that the trustees of the Peabody fund donated the sum of \$1,000,000, the University of Nashville [Vanderbilt University] gave the land and buildings of the Peabody College for Teachers, the county of Davidson contributed \$100,000, the city of Nashville \$200,000, and the state of Tennessee \$250,000. This initial endowment, with subsequent additions, is . . . 'maintaining an institution that is destined to touch every aspect of the southern educational system from the kindergarten to the college, and will reach, directly or indirectly, every city, town, village, and rural community.'"—L. P. Ayres, *Seven great foundations*, pp. 12-17.—See also CAPITALISM: 19th century: United States.

PEACE, KING'S. See COMMON LAW: 871-1066; 1110; 1135; 1300.

PEACE MOVEMENT: Origin of concept.—Religious and philosophical development.—In primitive society war is accepted as normal. Spring was once described as the season "when kings go forth to war" quite as naturally as it is now characterized by the plowing of fields and the sowing of seed. With the growth of civilization peace became more and more desirable. There is no finer poetry of peace than that in the book of Isaiah. But the Hebrew concept of peace, and also that of Greece and Rome, was based on the assumption of the complete supremacy of one nation or race, all possible motive for war (so far as the dominant race was concerned) being thus removed. The idea of the brotherhood of all mankind, and the consequent moral iniquity of war first appears (in the western world at least) in the teachings of Christ, and it is from this source aided, perhaps, by the Stoic philosophy, that it has maintained and widened its position. The early Christians believed, of course, in complete non-resistance; but by amalgamation with the practical Roman system, and under pressure of the great invasions, Christianity became almost as militant a faith as Mohammedanism. The imperial idea, retained by the papacy as well as by the Holy Roman empire, tended toward peace between its members, but feebly. Other wars than the crusades had religious sanction. But, in general, the "church claimed to be the center of a *Republica Christiana*, and taught that a unity of spirit should pervade separate nationalities and secure them in the bond of peace by its divine appeal. . . . Poets like Dante still dreamt in the fourteenth century of a universal peace; with all the kingdoms of the world united under one divine principality."—W. Collins, *League of Nations (International conciliation, Jan., 1910, p. 70)*.—With the Reformation all vestiges of this moral restraint between nations broke down. On the other hand certain of the new religious sects (notably the Anabaptists, Moravians and Mennonites) advanced anew the principle of non-resistance and the inherent immorality of war, based upon a literal interpretation of the gospels. The Society of Friends, however, was the only one to produce any constructive plan, namely, Penn's famous "Essay towards the present and future peace of Europe," by no means a non-resistant project. Other similar projects resulted from observation of the evils of international anarchy. But in actual practice the idea of peace made little or no progress against the more popular principles of Machiavelli.

Holy Alliance (1815).—**Concert of Europe.**—During the darkest period of the struggle against Napoleon, "the states other than France began to think of some permanent form of coöperation for restraining him; and they even began to speculate on the possibility of some permanent arrangement by which the world might be saved from a recurrence of such a vast waste of life and treasure as was involved in that struggle."—J. S. Bassett, *Lost fruits of Waterloo, p. 45*.—Thus was initiated the Holy Alliance, the first deliberate attempt at international organization for world peace.—See also **HOLY ALLIANCE; CONCERT OF EUROPE**.

Peace organizations.—"The peace movement in its present organized sense began in New York City in 1800, in a tract written by David Low Dodge, a business man, that was entitled, 'The Mediator's Kingdom Not of This World.' This pamphlet caused a lively controversy among religious leaders and was succeeded in 1812 by a more important contribution entitled, 'War Inconsistent with the Religion of Jesus Christ.' Dr. Noah Worcester, of Boston, however, published on Christmas Day, 1814, a sermon known as 'A Solemn

Review of the Custom of War,' that did more to arouse the conscience of the world to the evils of the war system than any other appeal made up to that time. . . . The organization of peace societies began almost simultaneously in America and England. The New York Peace Society, the first in the world, was formed in August and the Massachusetts Peace Society, in December, 1815. The British Peace Society, the oldest in continuous existence, was organized in June, 1816, and has always carried on its work in London. The movement grew rapidly in the United States, particularly in New England, where in the State of Connecticut alone there was at one time a peace society in every county. But nearly all the peace societies were absorbed by or affiliated with the American Peace Society, a national organization founded in New York City, May 8, 1828, which later moved its headquarters to Hartford and then to Boston. William Ladd, the founder of the American Peace Society (q. v.), though little known to-day, was one of the greatest men in the history of internationalism. . . . The most successful of the American promoters of peace after Ladd, and his logical successor, was Elihu Burritt, who also wrote and spoke on a Congress and Court of Nations, promoting in Europe the plan of Mr. Ladd's essay. . . . International Peace Congresses were held in London, 1843; Brussels, 1848; Paris, 1849; Frankfort, 1850; London, 1851; Manchester and Edinboro, 1853. Of nearly all these, Burritt, tactful as he was indefatigable in getting the people of the nations together, was the leading spirit. The peace movement had in England at that time the staunch support of Richard Cobden, John Bright and Henry Richard. In France its most distinguished champion was Victor Hugo. . . . A revival in the peace movement came in 1889. In that year a new series of international peace congresses began, which continued with few interruptions until . . . [1914]. The chief promoters were Hodgson Pratt, of England, and Frederic Passy, of France. In 1880 the Interparliamentary Union, an association of statesmen in the different congresses and parliaments of the world, was organized by William Randal Cremer, an Englishman, and friend of the cause of labor, who was also assisted by Mr. Passy. . . . Within the years [1890-1914] . . . remarkable developments have taken place in the promotion of the peace idea in the United States. The American Peace Society, which has remained the historic peace organization in America for nearly a century, has worked steadily in State legislatures and in Congress to secure an arbitral system between this country and other nations* and to promote the Court and Congress advocated by its early leaders. . . . It has also worked for the promotion of better relations between the United States and Latin-American countries. . . . Other peace societies established in former years in this country have also been active, among them the Universal Peace Union, founded in 1866, by Alfred H. Love; the Friends' Peace Association of Philadelphia, the Peace Association of Friends in America, and the National Association for the Promotion of Arbitration, Washington. The Peace Department of the Woman's Christian Temperance Union has been constant in its labors. Lucretia Mott, Julia Ward Howe, Hannah J. Bailey, Betsy Lockwood, and Lucia Ames Mead have been foremost among the women workers for peace in the United States. Of the more recently founded agencies for the promotion of peace none has had more profound influence than the Lake Mohonk Arbitration Conference organized by Albert K. Smiley in 1895. This . . . brought together every year between

three and four hundred leading educators, clergymen, lawyers and business men who . . . discussed problems of international arbitration and peace from every point of view and formulated their conclusions in a platform of resolutions. . . . The Conference has had for its guests ministers of Latin-American countries, European nations and the ambassadors of Great Britain, China and Japan. . . . The American Peace and Arbitration League was formed in 1909. . . . About the same time the American Association for International Conciliation was formed in New York City under the presidency of Dr. Nicholas Murray Butler. . . . It publishes and sends monthly to libraries literature on the progress of international relations. . . . It is related to the movement of the same name on the continent of Europe, which is under the leadership of Baron d'Estournelles de Constant, of France. The year 1910 was memorable in the peace movement in the United States. Within that year there were formed by Hamilton Holt and others, the World Federation League in New York City for the distinct promotion of world federation, and at Baltimore the American Society for Judicial Settlement of International Disputes with Hon. James Brown Scott as president, and Theodore Marburg as secretary. . . . But of more significance for the permanent success of the peace movement were the two great financial foundations laid within that remarkable year. The first of these, known as the World Peace Foundation, formerly called the International School of Peace, was established by Edwin Ginn, of Boston. . . . The second, . . . The Carnegie Peace Fund, the gift of Andrew Carnegie, of New York, amounting to \$10,000,000, was announced in Washington, December 14, 1910, at the time of the meeting of the American Society for Judicial Settlement of International Disputes. . . . [In 1903 Carnegie had given half a million dollars for the erection of a building at The Hague to be called the Temple of Peace.] The peace movement . . . [was] extended in Great Britain and Europe. The activities of the London Peace Society have been constant and effective for nearly a century. . . . Other societies like the International Arbitration League founded by Sir William Randal Cremer, in 1870, the journal of which is the *Arbitrator*, and the International Arbitration and Peace Association, the journal of which is *Concord*, have also been distinct forces in educating British public opinion in peace ideas. In Germany the movement . . . [was] led by Dr. Adolf Richter and Dr. Ludwig Quidde; in Austria by Baroness Von Suttner and Alfred H. Fried, in France by Frederic Passy, Emile Arnaud, Professor Richet, and others. In Italy the leading worker . . . [was] Signor Moneta, of Milan. In Belgium, Senator La Fontaine and Auguste Beernaert . . . distinguished themselves by the services they . . . rendered in the study and promotion of arbitration. In Switzerland, Elie Duncommun and Dr. A. Gobat . . . served as heads of the International Bureau of Peace. This bureau was established in 1891 and is the means by which about five hundred peace societies throughout the world are federated. The Scandinavian countries have made progress in a practical way by the adoption of arbitration treaties and the principle of neutralization."—J. L. Tryon, *Rise of the peace movement* (*Yale Law Journal Mar.*, 1911).—See also INTERNATIONAL: 1012.

Typical views of war.—Undeniably the conviction has grown in the world that war is undesirable, from the point of view of self-interest as well as from that of morality. The latter view found its most powerful exponent in Tolstoi. "It is comprehensible that a heathen, a Greek, a Roman, even

a medieval Christian, ignorant of the Gospel and blindly believing all the prescriptions of the Church, might fight, and fighting, pride himself on his military achievements; but how can a believing Christian, or even a sceptic involuntarily permeated by the Christian ideals of human brotherhood and love, which have inspired the works of the philosophers, moralists and artists of our time, how can such take a gun or stand by a cannon, and aim at a crowd of his fellow-men desiring to kill as many of them as possible?"—L. N. Tolstoi, *Bethink yourselves*, pp. 13-14.—Tolstoi's fellow-countryman, Ivan Stanislavovich Bloch, or Jean de Bloch, developed the totally different idea, that modern warfare, by its intrinsic nature, is bound to defeat its own ends. "M. Bloch was not a peace man in the ordinary sense of the term. . . . He had arrived at the conviction, which he had embodied in his great work on the Future of War, that in the modern world war had become an impossible arbiter of international disputes. . . . In the discussion on the rules and customs of war he took no interest whatever. Neither did he concern himself in the least with what may be called the ethical arguments directed against resort to war as a means of settling disputes. His position, which he was at all times ready to maintain against all comers, was that in the modern world nations could not go to war with each other without entailing a dislocation of the social fabric which would bring about a general cataclysm. . . . Put in a sentence, M. Bloch's argument may be stated as follows:—A modern war must be a long war, and a long war must necessarily result first in starvation, and then in revolution. It is, therefore, indispensable to provide some means of settling disputes other than an appeal to a tribunal which could not give a decisive verdict before the costs of the procedure had reduced the litigants to bankruptcy and involved them in social chaos."—*Character sketch: The late M. Jean de Bloch* (*Review of Reviews*, Feb., 1902).—During the early twentieth century the idea of the futility of war was much discussed, and refutations were evolved of the current conviction that war was politically and psychologically necessary. Perhaps the most important individual contribution was that of R. N. A. Lane (Norman Angell). "In 1909 there appeared in England a little book entitled, 'Europe's Optical Illusion,' written by Norman Angell, a man then wholly unknown to the world. Before the year was over, Count von Metternich, German Ambassador to England, had delivered a speech which was a frank paraphrase of this book; it had been quoted at length in the French Assembly; it had attracted the attention of King Edward and of the Emperor of Germany, and it was stirring the admirals and generals of Europe. Sir Edward Grey declared that the 'illusion,' viz., the erroneous idea that economic advantage follows military victory, had first dawned on his vision through reading this book. The chiefs of four European States asked for 'a book in place of a booklet'; whereupon, a year later appeared 'The Great Illusion,' which embodied the gist of the criticisms of the earlier booklet and presented cogent and penetrating refutations of the same."—Mrs. J. M. Forbes, *Peace movement and some misconceptions*, pp. 10-11.—In this book "the author . . . sets out to prove that military and political power give a nation no commercial advantage; that it is an economic impossibility for one nation to seize or destroy the wealth of another, or for one nation to enrich itself by subjecting another. He establishes this apparent paradox by showing that wealth in the economically civilized world is founded upon credit and

commercial contract. If these are tampered with in an attempt at confiscation by a conqueror, the credit-dependent wealth not only vanishes, thus giving the conqueror nothing for his conquest, but in its collapse involves the conqueror; so that if conquest is not to injure the conqueror, he must scrupulously respect the enemy's property, in which case conquest becomes economically futile. . . . The author also shows that international finance has become so independent and so interwoven with trade and industry that the intangibility of an enemy's property extends to his trade. . . . In the second part—'The Human Nature of the Case'—the author asks, What is the basis, the scientific justification of the plea that man's natural pugnacity will indefinitely stand in the way of international agreement? . . . The author shows that human nature is not unchanging; that the warlike nations do not inherit the earth; that warfare does not make for the survival of the fittest or virile; that the struggle between nations is no part of the evolutionary law of man's advance, and that that idea resides on a profound misreading of the biological law that physical force is a constantly diminishing factor in human affairs, and that this diminution carries with it profound psychological modifications; that society is classifying itself by interests rather than by State divisions; that the modern State is losing its homogeneity; and that all these multiple factors are making rapidly for the disappearance of State rivalries."—R. N. A. Lane (Norman Angell), *Great illusion*, pp. vii-ix.

Attitude of governments.—Although the peace movement had by this time achieved organization, publicity, and considerable support, there remained a profound disagreement as to methods. Many were willing to admit the force of the arguments against war, but dismissed all remedies as absolutely impracticable. The official world in general deferred to public opinion to such an extent as openly to advocate peace measures. But the fact that these measures never were put into force, or at most were so devised as to evade the fundamental issues, indicates lack of sincere conviction. This does not imply of course, that individual statesmen may not have been sincere. The two Hague conferences and the various arbitration treaties of the pre-war period are the most important phases of governmental action. At the Hague conferences (see HAGUE CONFERENCES), "the Powers in general, and the Governments of Great Britain, the United States, France, Spain and Italy in particular, were formally committed mutually and before their own peoples, to the search for a practical plan for an arrest of armaments by international agreement. What was done to fulfill this solemn promise? In November, 1910, the United States Government addressed to the Governments of Austria-Hungary, Belgium, France, Germany, Great Britain, Italy, Japan, Holland, Russia and Turkey, an invitation to cooperate with it in the establishment of a commission to study how the limitation of armaments might be brought about. A month later President Taft stated that no power had then accepted this invitation. . . . On March 26th, 1913, in the House of Commons, Mr. Winston Churchill, First Lord of the Admiralty, made a remarkable speech on what he called 'the pitiful folly,' the 'absurd thralldom' of ever-increasing armaments, and threw out his suggestion for 'a naval holiday.' [See NAVAL HOLIDAY.] 'If for the space of a year no new warships are built by any nation, in what conceivable manner would the interests of any nation be affected or prejudiced? It is an appeal which we address to all nations, and to no nation with more sincerity than to our great neighbor over

the North Sea.'"—G. H. Perris, *Arrest of armaments* (*London Review of Reviews*, Feb.-Mar., 1921, pp. 107-108).—"The proposal, however, was unfavourably received by the German press generally, and politely negatived both by the official organs and by the German Minister of Marine. It was pointed out that a suspension of warship building might lead to reciprocal suspicion that the money was being used in other ways, for aircraft, for example, and submarines. Again, as Great Britain could build faster than Germany, she would be in a better position when the suspension ended."—*Annual Register*, 1913, p. 214.—Meanwhile the small nations of America had made definite progress, not towards universal peace so much as towards the more immediate object of peace among themselves. Arbitration treaties became more frequent, and somewhat broader in their scope.—See also AMERICAN REPUBLICS, INTERNATIONAL UNION OF; ARGENTINA: 1902; CENTRAL AMERICA: 1904; 1908; ARBITRATION, INTERNATIONAL: Modern: 1898-1899; 1907; Second peace conference at The Hague; INTERNATIONAL LAW: 1856-1909; HAGUE CONFERENCES; HAGUE TRIBUNAL.

Attitude of Socialists, Internationals and labor-organizations before the World War.—"Joint action of an international character was the aim of the policy expressed at many international Socialist Congresses, and at the Congress of 1907 this policy was expressed in a resolution as follows: 'If war threatens to break out it is the duty of the working class in the countries concerned and of their Parliamentary representatives, with the help of the International Socialist Bureau as a means of co-ordinating their action, to use every effort to prevent war by all the means which seem to them most appropriate, having regard to the sharpness of the class war and to the general political situation. Should war none the less break out, their duty is to intervene to bring it promptly to an end and with all their energies to use the political and economic crisis created by the war to rouse the populace from its slumbers and to hasten the fall of capitalist domination.' This was the policy of the pre-war Internationale on which were represented the official policy of the constituent groups in regard to war and the danger of war. In November 1912 a special Congress had been held at Basle to protest that there should be no participation of the Great Powers in the Balkan War; and another Congress, at which it was proposed to discuss methods of stopping wars, was to have been held in Vienna in August 1914. When, however, war was declared on the 28th July by Austria against Serbia, the governing body of the Internationale, met at Brussels, decided to hold the Congress in Paris on the 9th August and issued a statement to the effect that they had heard declarations from representatives of all nations threatened by a world war describing the political situation in their respective countries. The Bureau urged the workers to demonstrate against war, and it indicated that the German and French workers would bring pressure to bear on their Governments in order that Germany may secure in Austria a moderating action and in order that France may obtain from Russia an undertaking that she will not engage in the conflict.' The pressure of Labour organizations on the governments of the several countries was, however, never exerted and other forces moved rapidly towards war. Jean Jaurès was murdered in Paris on the 31st July; and thus not only the French but the whole Labour movement was deprived of a keen intelligence and a lofty imagination. The visit of a German socialist to Paris on the 1st August proved useless for affecting the situ-

ation, and the Internationale for all practical purposes disappeared when the different national sections for various reasons decided to support their governments."—H. W. V. Temperley, ed., *History of the peace conference of Paris, v. 1, pp. 205-206.*

Outbreak of World War.—Pacifism and the conscientious objector.—"The careless enthusiasm with which a great many people hailed the outbreak of war in 1914, swept the peace advocates into the background and was the occasion of some sarcasm at their expense. But as the struggle grew in grimness and horrors the advocates of peace on principle returned to their old position in public esteem, and have steadily gained on it."—J. S. Basset, *Lost fruits of Waterloo, p. 39.*—Amid the furious patriotism of 1914-1918, there was equally passionate arraignment of war and the system that made it inevitable: Grelling and Liebknecht in Germany, Latzko in Austria, and in France, Barbusse. Henry Ford's much ridiculed "Peace Ship" (December 4, 1915) was a futile but expressive indication of the survival in America of opposition to the principle of war. This opposition was undoubtedly an element in the long delay of America's entry into the war, and in the subsequent popularity of the slogan, "War to end war." That even in 1917 the nation was far from unanimous, is proved by the prominence of the pacifist movement and the problem of conscientious objectors. "Conscientious objectors include Christians, Jews, agnostics and atheists; economic conservatives and radicals; philosophic anarchists and orthodox socialists. . . . At one extreme of our ranks is the Tolstian non-resistant, at the other the man whose objection is to participation in *this* war. . . . The extreme non-resistant . . . is persuaded that the supreme force in the world is Love and that Love can only win by its own weapons, which are never the weapons of violence. He is accused of ethical optimism, but he is too much of an ethical realist to preach to great armies the modern doctrine that they go out to kill each other with bayonets, bombs, big Berthas and poisonous gas in a spirit of love. He may believe in *dying* for one's country or for ideals; but not in *killing* for them. And his objection is by no means only to killing, but to the essential autocracy, the lies, the contempt for personality, the stark barbarism of war which knows no crime but defeat. . . . [Another] class of conscientious objectors . . . will not declare that no wars have ever been justified or that under no conceivable circumstances would they fight, but . . . feel that the ghastly horrors of this conflict will not win the liberty they seek."—N. M. Thomas, *War's heretics, pp. 2-5.*

Constructive plans.—One of the first organizations representing reaction against the war, was the Union of Democratic Control, founded in 1914 in England, and advocating especially "open diplomacy" and a larger share for the people at large in international relations. The American pacifist Brotherhood of Reconciliation has advocated similar methods.—See also LEAGUE OF NATIONS; Former projects; Plans formulated during World War; EUROPE: Modern: League of Nations; INTERNATIONAL JUSTICE, PERMANENT COURT OF; NOBEL PRIZES: Peace.

Peace, arbitration and disarmament.—"The Peace Conference of Paris did not attempt to solve it [the problem of disarmament], but in its final work there are one or two references to it couched in phrases which, to me at least, glow with the rays of a radium light. . . . I shall dwell for a moment on the essential military peace terms with Germany, inasmuch as I find my thesis in the preamble to those terms, which reads as follows: 'In

order to render possible the initiation of a general limitation of the armaments of all nations, Germany undertakes strictly to observe the military, naval, and air clauses which follow.' . . . Now to analyze it, what was allowed and forbidden to Germany? We allowed her a military and naval establishment assumed to be sufficient, together with her numerous police and gendarmerie, to maintain internal order. We forbade a military system, and the existence beyond a limited amount or manufacture of arms and munitions, both of which are necessary solely for the purposes of international war. We said that we compelled them to do that in order that the rest of the world might promptly do likewise. In other words the nations [in the Covenant of the League of Nations] have bound themselves, at least so far as a solemn form of words can do, to begin at the earliest practicable moment a general limitation of armaments, culminating in the abolition of military systems and all military materials, the sole object of which is international war."—T. H. Bliss, *Limitation of armaments (Nation, Dec. 22, 1920, p. 727).*—Disarmament proposals were pressed especially by the American delegation. France, on account of her ingrained fear of Germany, was very sceptical. Yet the pressure of necessity and of public opinion has forced some curtailment of armaments in Europe. "The signatures to the armistice were scarcely dry before France and Italy made semi-official announcement that they would undertake or prosecute no battleship construction. As for Great Britain, she put in the pruning knife with a ruthless hand, stopping all battleship construction, and scrapping no less than 156 warships, including many that were on the ways and partially built. . . . As for what we are doing as our share in a disarmament of our own proposing, we cannot do better than quote from the recent report of the Secretary of the Navy: 'With battleships in service equal to or superior to any now in commission and six huge battle cruisers and twelve battleships now under construction a number of them larger than any now in commission, the Navy is pressing forward to greater things.'"—*Peace League and disarmament (Scientific American, Dec. 20, 1919, p. 602).*—"Dr. E. B. Rosa, chief physicist of the United States Bureau of Standards, in a careful analysis of the appropriations for 1920, found:

Appropriations for the Fiscal Year Ending June 30, 1920

I. Expenses due to past wars	\$3,855,482,586	67.8%
II. Army and Navy	1,424,138,677	25. %
III. Civil departments	181,087,225	3.2%
IV. Public works	168,203,557	3. %
V. Research, educational and developmental	57,093,661	1. %
Total	\$5,686,005,706	100. %

Ninety-three per cent of our appropriations went for war!"—H. R. Mussey, *Disarmament (Survey, Jan. 15, 1921).*—See also WASHINGTON CONFERENCE; ENGLAND: 1022 (April-May).

Stabilising effect of international finance.—"Without money and credit, no state can go to war today. So much, at least, is clear. The relation of finance to war has never been completely understood, and the views upon the question prevailing today are, in their extreme forms, widely contradictory. Mr. Norman Angell would have us believe that sound business sense, on a profit-and-loss basis, requires the abolition of war. Extremists

on the other side defend the thesis that the malevolent power of greedy bankers, who see in war a chance for gain, stands behind the diplomats in every outbreak of hostilities. Writers of this school aver that international finance has become so powerful that statesmen are helpless to enter upon a war in the face of opposition from the financiers; whereas another group without denying either the power of international financiers or the degree of dependence of one state upon another prevailing in the field of international finance, assert that financiers and statesmen together may drift helplessly into a war which none of them desire, but which they are powerless to avoid. In spite of the contradictory character of these views, it is easy to see that international finance, by virtue merely of the enormous complexity of its interrelations, is of necessity a stabilizing influence in the relations between states; and that in general its influence—which upon occasion is tremendous—is likely to be used for the preservation of peace, because of the chaos to which war on the modern scale necessarily reduces the whole intricate system.”

—J. Bakeless, *Economic causes of modern war*, no. 6, pp. 177-178.

Peace associations active during 1922.—Meetings of the Twenty-second International Peace Conference and the International Parliamentary Conference.—During 1922 the following associations and societies (which represent some of the most important peace societies) were actively working for peace by means of conferences, meetings, and distribution of literature: (1) The Non-Partisan Association for the League of Nations; (2) World Peace Foundation; (3) Church Peace Union; (4) Women's International League for Peace and Freedom. This organization has its headquarters in Geneva where it is in touch with nearly all the European movements. The American branch is in Washington; (5) The American Association for International Conciliation publishes a monthly magazine; (6) The International Relations Club makes a point of exchanging the very best speakers and authorities to lecture in countries other than their own; (7) The Institution of International Education helps students and others to understand the history, manners, and customs of countries; (8) In Chicago the American Commission for the Outlawry of War is working; (9) In New York is the Committee of Educational Publicity in the Interest of World Peace; (10) In Paris is the Bureau international de la paix. Business men have several societies which work individually for peace through commercial intercourse and the settlement of legal questions affecting international business. First and foremost is (11) the International Chamber of Commerce with headquarters in Paris. It suggests that all exports and importers have printed on their notepaper the following clause:—"The contracting parties agree to submit to arbitration, in accordance with the arbitration rules of the International Chamber of Commerce, the settlement of all disputes in connection with the execution of this contract."—Out of the Pan-American Scientific Congress has grown (12) the American Institute of International Law; There is also (13) the American Society of International Law:—The churches are working largely through (14) the World Alliance for International Friendship through the Churches:—Pennsylvania has two societies, (15) the Pennsylvania Peace Society, and (16) the Pennsylvania Arbitration and Peace Society: The Friends who have never believed in war have (17) the Peace Association of Friends.

On July 25, 1922, twenty-one nations including

Germany met in London for the Twenty-Second International Peace Conference to discuss plans for greater friendship and commerce among nations. On August 28-30, 1922, twenty-four nations sent representatives to Vienna to the International Parliamentary Conference. The chief points discussed were, the rights of national minorities, intellectual coöperation, and disarmament.

PEARL HARBOR, large landlocked lagoon of eleven square miles on the south shore of Oahu, Hawaii, elaborately fortified as an American naval station. Its only entrance is a narrow passage three miles long and just wide enough to admit vessels. "The United States Government has spent over \$13,000,000 in making Pearl Harbor able to offer adequate resistance to attack from land or sea. . . . [It is] as formidable and as important a fortress as any in the world. . . . The fortifications extend along the coast for a distance of fifteen miles, from the volcano on the east of Honolulu to Pearl Harbor, nine miles west of the city. . . . At the base of the volcano is a group of . . . emplacements called Fort Ruger; at the other end, guarding the entrance to Pearl Harbor, is Fort Kamehameha. These defensive works can not . . . be seen from the ocean. . . . The landward defenses, . . . consist of a series of formidable earthworks, and extend in the form of a crescent from Pearl Harbor on the West, where the naval base is located, to Honolulu. . . . The naval station occupies a square mile of land, and is one of the most completely equipped in the world. It is provided with a first-class ship-repairing outfit, including the largest dry dock in the world; it has coaling-plant, fuel oil plant, and a magazine for naval ammunition."—M. PELAGIANISM.—“Pelagianism was . . . the great intellectual controversy of the church in the fifth century, as Arianism had been in the fourth. . . . Every one is aware that this controversy turned upon the question of free-will and of grace, that is to say, of the relations between the liberty of man and the Divine power, of the influence of God upon the moral activity of men. . . . About the year 405, a British monk, Pelagius (this is the name given him by the Greek and Latin writers; his real name, it appears, was Morgan), was residing at Rome. There has been infinite discussion as to his origin, his moral character, his capacity, his learning; and, under these various heads, much abuse has been lavished upon him; but this abuse would appear to be unfounded, for judging from the most authoritative testimony,

from that of St. Augustin himself, Pelagius was a man of good birth, of excellent education, of pure life. A resident, . . . at Rome, and now a man of mature age, without laying down any distinct doctrines, without having written any book on the subject, Pelagius began, about the year . . . 405, to talk much about free-will, to insist urgently upon this moral fact, to expound it. There is no indication that he attacked any person about the matter, or that he sought controversy; he appears to have acted simply upon the belief that human liberty was not held in sufficient account, had not its due share in the religious doctrines of the period. These ideas excited no trouble in Rome, scarcely any debate. Pelagius spoke freely; they listened to him quietly. His principal disciple was Celestius, like him a monk, or so it is thought at least, but younger. . . . In 411 Pelagius and Celestius are no longer at Rome; we find them in Africa, at Hippo and at Carthage. . . . Their doctrines spread. . . . The bishop of Hippo began to be alarmed; he saw in these new ideas error and peril. . . . Saint Augustin was the chief of the doctors of the church, called upon more than any other to maintain the general system of her doctrines. . . . You see, from that time, what a serious aspect the quarrel took: everything was engaged in it, philosophy, politics, and religion, the opinions of Saint Augustin and his business, his self-love and his duty. He entirely abandoned himself to it." In the end, Saint Augustin and his opinions prevailed. The doctrines of Pelagius were condemned by three successive councils of the church, by three successive emperors and by two popes—one of whom was forced to reverse his first decision. His partisans were persecuted and banished. "After the year 418, we discover in history no trace of Pelagius. The name of Celestius is sometimes met with until the year 427; it then disappears. These two men once off the scene, their school rapidly declined."—F. Guizot, *History of civilization* (tr. by Hazlitt), v. 2, lecture 5.—See also PORT ROYAL AND THE JANSENISTS: 1602-1700.

PELAGOSA, island in the Adriatic sea, off the coast of Apulia, Italy. In 1915 it was occupied by the Italians, who were allowed to retain it by the Treaty of Rapallo in 1920. See **WORLD WAR: 1915**; **IX. Naval operations: b, 4**; **LONDON, TREATY OR PACT OF; RAPALLO, TREATY OF (1920)**.

PELASGIANS.—Under this name we have vague knowledge of a people whom the Greeks of historic times refer to as having preceded them in the occupancy of the Hellenic peninsula and Asia Minor, and whom they looked upon as being kindred to themselves in race. In Homeric times the Pelasgians seem to have been a people of southern Thessaly, while in the "Iliad" they are mentioned as the allies of the Trojans. Recent historians have used the word to refer to the peoples of Greece, before the Aryan invasion, to whom is attributed the pre-Mycenæan civilization. Some historians attribute the Mycenæan civilization itself to the Pelasgians, holding that they gradually absorbed their Aryan conquerors, the Achæans. "Such information as the Hellenes . . . possessed about the Pelasgi, was in truth very scanty. They did not look upon them as a mythical people of huge giants—as, for example, in the popular tales of the modern Greeks the ancestors of the latter are represented as mighty warriors, towering to the height of poplar trees. There exist no Pelasgian

myths, no Pelasgian gods, to be contrasted with the Greeks. . . . Thucydides, in whom the historic consciousness of the Hellenes finds its clearest expression, also regards the inhabitants of Hellas from the most ancient times, Pelasgi as well as Hellenes, as one nation. . . . And furthermore, according to his opinion genuine sons of these ancient Pelasgi continued through all times to dwell in different regions, and especially in Attica."—E. Curtius, *History of Greece*, bk. 1, ch. 1.—"It is inevitable that modern historians should take widely divergent views of a nation concerning which tradition is so uncertain. Some writers, among whom is Kiepert, think that the Pelasgi were a Semitic tribe, who immigrated into Greece. This theory, though it explains their presence on the coast, fails to account for their position at Dodona and in Thessaly. . . . In another view, which has received the assent of Thirlwall and Duncker, Pelasgian is nothing more than the name of the ancient inhabitants of the country, which subsequently gave way to the title Achæan, as this in its turn was supplanted by the term Hellenes. . . . We have no evidence to support the idea of a Pelasgic Age as a period of simple habits and agricultural occupations, which slowly gave way before the more martial age of the Achæans. The civilization of the 'Achæan Age' exists only in the epic poems, and the 'Pelasgic Age' is but another name for the prehistoric Greeks, of whose agriculture we know nothing."—E. Abbott, *History of Greece*, pt. 1, ch. 2.—See also **DORIANS AND IONIANS**; **ARYANS**; **Meaning of term; ITALY: Ancient; CENOTRIANS; PERRHEBIANS**.

PELONES, North American Indian tribe. See **APACHE GROUP**.

PELOPIDS, PELOPONNESUS.— "Among the ancient legendary genealogies, there was none which figured with greater splendour, or which attracted to itself a higher degree of poetical interest and pathos, than that of the Pelopids:—Tantalus, Pelops, Atreus and Thyestes, Agamemnon and Menelaus and Ægisthus, Helen and Klytaem-

nestra, Orestes and Elektra and Hermione. Each of these characters is a star of the first magnitude in the Grecian hemisphere. . . . Pelops is the eponym or name-giver of the Peloponnesus: to find an eponym for every conspicuous local name was the invariable turn of Grecian retrospective fancy. The name Peloponnesus is not to be found either in the Iliad or the Odyssey, nor any other denomination which can be attached distinctly and specially to the entire peninsula. But we meet with the name in one of the most ancient post-Homeric poems of which any fragments have been preserved—the Cyprian Verses. . . . The attributes by which the Pelopid Agamemnon and his house are marked out and distinguished from the other heroes of the Iliad, are precisely those which Grecian imagination would naturally seek in an eponym—superior wealth, power, splendour and regality.”—G. Grote, *History of Greece*, pt. 1, ch. 7. —“Of the . . . family of myths . . . that of Pelops [is] especially remarkable as attaching itself more manifestly and decisively than any other Heroic myth to Ionia and Lydia. We remember the royal house of Tantalus enthroned on the banks of the Sipylus, and intimately associated with the worship of the Phrygian Mother of the Gods. Members of this royal house emigrate and cross to Hellas from the Ionian ports; they bring with them bands of adventurous companions, a treasure of rich culture and knowledge of the world, arms and ornaments, and splendid implements of furniture, and gain a following among the natives, hitherto combined in no political union. . . . This was the notion formed by men like Thucydides as to the epoch occasioned by the appearance of the Pelopidæ in the earliest ages of the nation; and what element in this notion is either improbable or untenable. Do not all the traditions connected with Achæan princes of the house of Pelops point with one consent over the sea to Lydia?”—E. Curtius, *History of Greece*, bk. 1, ch. 3.

PELUCONES, one of the parties in Chilean politics, supposed to have some resemblance to the English Whigs.—Based on E. J. Payne, *History of European colonies*, p. 270.

PELUSIUM.—“Behind, as we enter Egypt [from the east] is the treacherous Lake Serbonis; in front the great marsh broadening towards the west; on the right the level melancholy shore of the almost tideless Mediterranean. At the very point of the angle stood of old the great stronghold Pelusium. Sin, in Ezekiel’s days, ‘the strength of Egypt’ (xxx. 15). The most eastward Nile-stream flowed behind the city, and on the north was a port commodious enough to hold an ancient fleet. . . . As the Egyptian monarchy waned, Pelusium grew in importance, for it was the strongest city of the border. Here the last king of the Saïte line, Psammeticus III, son of Amasis, awaited Cambyses. The battle of Pelusium, which crushed the native power, may almost take rank among the decisive battles of the world. Had the Persians failed, they might never have won the command of the Mediterranean, without which they could scarcely have invaded Greece. Of the details of the action we know nothing.”—R. S. Poole, *Cities*

of Egypt, ch. 11.—See also PERSIA: B. C. 549-521. —It was at Pelusium that Pompey, defeated and flying from Cæsar, was assassinated.

PENESTÆ.—In ancient Thessaly there was “a class of serfs, or dependent cultivators, corresponding to the Laconian Helots, who, tilling the lands of the wealthy oligarchs, paid over a proportion of its produce, furnished the retainers by which these great families were surrounded, served as their followers in the cavalry, and were in a condition of villanage,—yet with the important reserve that they could not be sold out of the country, that they had a permanent tenure in the soil, and that they maintained among one another the relations of family and village. This . . . order of men, in Thessaly called the Penestæ, is assimilated by all ancient authors to the Helots of Laconia.”—G. Grote, *History of Greece*, pt. 2, ch. 3.

PENNSYLVANIA: Area.—Population.—**Geographical description.**—Resources and climate.—Pennsylvania, sometimes called the "Keystone State," is a middle Atlantic state, and one of the original thirteen. It has an area of 45,126 square miles, and in 1920 it had a population of 8,720,017. "An examination of a good map of Pennsylvania will show that the state forms almost an exact parallelogram, touching the waters of the Delaware on its eastern boundary and extending to Ohio and West Virginia on the west and to Lake Erie on the northwest, with straight lines forming its northern and southern and western boundaries; that throughout nearly its whole extent it is traversed by numerous mountain ranges of the Appalachian system, . . . from northeast to southwest; that it is remarkably well watered by large rivers and their mountain tributaries; that it has very few lakes, most of which are but little larger than ponds; and that between its mountain ranges are many valleys of considerable extent, the most noted being the Schuylkill, Wyoming, Chester, Lebanon, Cumberland, Juniata, Ligonier, Monongahela, Allegheny, Shenango, and Ohio valleys. Many of the mountain ranges of Pennsylvania lead up to extensive and fertile plateaus upon which may be found well-tilled farms and attractive and prosperous towns and villages."—J. M. Swank, *Progressive Pennsylvania*, pp. 75-76.—"Corn is a great product between the Alleghanies and the Delaware river; wheat and rye have always been extensively produced in all the valleys of the State; tobacco during many years has been a large and profitable product in Lancaster and a few other counties. Orchard fruits of all kinds adapted to the climate, grapes and other small fruits in some districts have all added to the

wealth and prosperity of the agricultural population. [See **U. S. A.**: Economic map] The climate of Pennsylvania is widely varied . . . In the southern and eastern parts the summers are hot and the winters reasonably temperate. On the Alleghany highlands and the central and northern uplands the winters are very severe. . . . Until the middle of the last century Pennsylvania was pre-eminently a great and rich agricultural Commonwealth. From that time forward, the construction of numerous railroads and other transportation facilities, gave a powerful impetus to a great variety of other interests."—H. M. Jenkins, ed., *Pennsylvania, colonial and federal*, v. 3, p. 475.

1641.—Settlement from New Haven, on the site of Philadelphia. See **NEW JERSEY**: 1640-1655.

1664.—Partly included in grant to duke of York. See **NEW YORK**: 1664.

1673.—**Repossession of the Delaware by the Dutch.** See **NEW YORK**: 1673.

1681.—**Proprietary grant to William Penn.**—"William Penn was descended from a long line of sailor ancestors. His father, an admiral in the British navy, had held various important naval commands, and in recognition of his services had been honored by knighthood. A member of Parliament, and possessed of a considerable fortune, the path of worldly advancement seemed open and easy for the feet of his son, who had received a liberal education at Oxford, continued in the schools of the Continent. . . . Fortune and preferment seemed to wait the acceptance of William Penn. But at the very outset of his career the Divine voice fell upon his ears as upon those of St. Paul." He became a follower of George Fox, and one of the people known as Quakers or Friends. "Many trials awaited the youthful convert. His father cast him off. He underwent a considerable imprisonment in the Tower for 'urging the cause of freedom with importunity.' . . . In time these afflictions abated. The influence of his family saved him from the heavier penalties which fell upon many of his co-religionists. His father on his death-bed reinstated him as his heir. 'Son William,' said the dying man, 'if you and your friends keep to your plain way of preaching and living, you will make an end of the priests.' Some years later we find him exerting an influence at Court which almost amounted to popularity. It is evident that, with all his boldness of opinion and speech, Penn possessed a tact and address which gave him the advantage over most of his sect in dealings with worldly people. . . . In 1680 his influence at Court and with moneyed men enabled him to purchase a large tract of land in east New Jersey, on which to settle a colony of Quakers, a previous colony having been sent out three years before to west New Jersey. Meanwhile a larger project filled his mind. His father had bequeathed to him a claim on the Crown for £16,000. Colonial property was then held in light esteem, and, with the help of some powerful friends, Penn was enabled so to press his claim as to secure the charter for that valuable grant which afterward became the State of Pennsylvania, and which included three degrees of latitude by

five of longitude, west from the Delaware. 'This day,' writes Penn, Jan. 5, 1681, 'my country was confirmed to me by the name of Pennsylvania, a name the king [Charles II] would give it in honour of my father. I chose New Wales, being as this a pretty billy country. I proposed (when the Secretary, a Welshman, refused to have it called New Wales) Sylvania, and they added Penn to it, and although I much opposed it, and went to the King to have it struck out and altered, he said 'twas past, and he would take it upon him. . . . I feared lest it should be looked upon as a vanity in me, and not as a respect of the King, as it truly was, to my father, whom he often mentions with praise.' 'In return for this grant of 26,000,000 of acres of the best land in the universe, William Penn, it was agreed, was to deliver annually at Windsor Castle two beaver-skins, pay into the King's treasury one fifth of the gold and silver which the province might yield, and govern the province in conformity with the laws of England and as became a liege of England's King. He was to appoint judges and magistrates, could pardon all crimes except murder and treason, and whatsoever things he could lawfully do himself, he could appoint a deputy to do, he and his heirs forever.' The original grant was fantastically limited by a circle drawn twelve miles distant from Newcastle, northward and westward, to the beginning of the 40th degree of latitude. This was done to accommodate the Duke of York, who wished to retain the three lower counties as an appanage to the State of New York. A few months later he was persuaded to renounce this claim, and the charter of Penn was extended to include the western and southern shores of the Delaware Bay and River from the 43d degree of latitude to the Atlantic. . . . The charter confirmed, a brief account of the country was published, and lands offered for sale on the easy terms of 40 shillings a hundred acres, and one shilling's rent a year in perpetuity. Numerous adventurers, many of them men of wealth and respectability, offered. The articles of agreement included a provision as to 'just and friendly conduct toward the natives.' . . . In April, 1681, he sent forward 'young Mr. Markham,' his relative, with a small party of colonists to take possession of the grant, and prepare for his own coming during the following year. . . . In August, 1682, Penn himself embarked."—S. Coolidge (S. C. Woolsey), *Short history of Philadelphia*, ch. 2.—"The charter [to Penn], which is given complete in Hazard's Annals, consists of 23 articles, with a preamble. . . . The grant comprises all that part of America, islands included, which is bounded on the east by the Delaware River from a point on a circle twelve miles northward of New Castle town to the 43° north latitude if the Delaware extends so far; if not, as far as it does extend, and thence to the 43° by a meridian line. From this point westward five degrees of longitude on the 43° parallel; the western boundary to the 40th parallel, and thence by a straight line to the place of beginning. . . . Grants Penn rights to and use of rivers, harbors, fisheries, etc. . . . Creates and constitutes him Lord Proprietary of the Province, saving only his allegiance to the King, Penn to hold directly of the kings of England, 'as of our castle of Windsor in the county of Berks, in free and common socage, by fealty only, for all services, and not in capite, or by Knight's service, yielding and paying therefore to us, our heirs and successors, two beaver-skins.' . . . Grants Penn and his successors, his deputies and lieutenants, 'free, full, and absolute power' to make laws for raising money for the public uses of the Province, and for other public purposes at

their discretion, by and with the advice and consent of the people or their representatives in assembly. . . . Grants power to appoint officers, judges, magistrates, etc., to pardon offenders."—J. T. Scharf and T. Westcott, *History of Philadelphia*, v. 1, ch. 7.

1681-1682.—Penn's Frame of Government.—

Before the departure from England of the first company of colonists, Penn drew up a frame of government which he submitted to them, and to which they gave their assent and approval by their signatures, he signing the instrument likewise. The next year this frame of government was published by Penn, with a preface, "containing his own thoughts upon the origin, nature, object, and modes of Government. . . . The Frame, which followed this preface, consisted of twenty-four articles; and the Laws, which were annexed to the latter, were forty. By the Frame the government was placed in the Governor and Freemen of the province, out of whom were to be formed two bodies; namely, a Provincial Council and a General Assembly. These were to be chosen by the Freemen; and though the Governor or his Deputy was to be perpetual President, he was to have but a treble vote. The Provincial Council was to consist of seventy-two members. One third part, that is, twenty-four of them, were to serve for three years, one third for two, and the other third for one; so that there might be an annual succession of twenty-four new members each third part thus continuing for three years and no longer. It was the office of this Council to prepare and propose bills, to see that the laws were executed, to take care of the peace and safety of the province, to settle the situation of ports, cities, market towns, roads, and other public places, to inspect the public treasury, to erect courts of justice, institute schools, and reward the authors of useful discovery. Not less than two thirds of these were necessary to make a quorum; and the consent of not less than two thirds of such quorum in all matters of moment. The General Assembly was to consist the first year of all the freemen, and the next of two hundred. These were to be increased afterwards according to the increase of the population of the province. They were to have no deliberative power; but, when bills were brought to them from the Governor and Provincial Council, to pass or reject them by a plain Yes or No. They were to present sheriffs and justices of the peace to the Governor, a double number for his choice of half. They were to be elected annually. All elections of members, whether to the Provincial Council or General Assembly, were to be by ballot. And this Charter or Frame of Government was not to be altered, changed, or diminished in any part or clause of it, without the consent of the Governor, or his heirs or assigns, and six parts out of seven of the Freemen both in the Provincial Council and General Assembly. With respect to the Laws, which I said before were forty in number, I shall only at present observe of them that they related to whatever may be included under the term 'Good Government of the Province'; some of them to liberty of conscience; others to civil officers and their qualifications; others to offences; others to legal proceedings, such as pleadings, processes, fines, imprisonments, and arrests; others to the natural servants and poor of the province. With respect to all of them it may be observed, that, like the Frame itself, they could not be altered but by the consent of the Governor or his heirs and

the consent of six parts out of seven of the two bodies before mentioned."—T. Clarkson, *Memoirs of William Penn*, v. 1, ch. 18.

1682.—Acquisition by Penn of claims of duke of York to Delaware.—“During the negotiations between New Netherland and Maryland in 1659, the Dutch insisted that, as Lord Baltimore’s patent covered only savage or uninhabited territory, it could not affect their own possession of the Delaware region. Accordingly, they held it against Maryland until it was taken from them by the Duke of York in 1664. But James’s title by conquest had never been confirmed to him by a grant from the king; and Cecilus Calvert, the second Lord Baltimore, insisted that Delaware belonged to Maryland. To quiet controversy, the duke had offered to buy off Baltimore’s claim, to which he would not agree. Penn afterward refused a large offer by Fenwick ‘to get of the duke his interest in Newcastle and those parts’ for West Jersey. Thus stood the matter when the Pennsylvania charter was sealed. Its proprietor soon found that his province, wholly inland, wanted a front on the sea. As Delaware was ‘necessary’ to Pennsylvania, Penn ‘endeavored to get it’ from the duke by maintaining that Baltimore’s pretension ‘was against law, civil and common.’ Charles Calvert, the third Lord Baltimore, was ‘very free’ in talking against the Duke of York’s rights; but he could not circumvent Penn. The astute Quaker readily got from James a quit-claim of all his interest in the territory included within the proper bounds of Pennsylvania. After a struggle, Penn also gained the more important conveyances [August, 1682] to himself of the duke’s interest in all the region within a circle of twelve miles [radius] around Newcastle, and extending southward as far as Cape Henlopen. The triumphant Penn set sail the next week. At Newcastle he received from James’s agents formal possession of the surrounding territory, and of the region farther south.”—J. R. Brodhead, *History of New York*, v. 2, ch. 7.

1682-1685.—Penn’s arrival in his province.—His treaty with the Indians.—Founding of Philadelphia.—Penn sailed, in person, for his province on September 1, 1682, on the ship *Welcome*, with 100 fellow passengers, mostly Friends (see FRIENDS, SOCIETY OF: 1656-1702), and landed at Newcastle after a dreary voyage, during which thirty of his companions had died of smallpox. “Next day he called the people together in the Dutch court-house, when he went through the legal forms of taking possession. . . . Penn’s great powers being legally established, he addressed the people in profoundest silence. He spoke of the reasons for his coming—the great idea which he had nursed from his youth upwards—his desire to found a free and virtuous state, in which the people should rule themselves. . . . He spoke of the constitution he had published for Pennsylvania as containing his theory of government; and promised the settlers on the lower reaches of the Delaware, that the same principles should be adopted in their territory. Every man in his provinces, he said should enjoy liberty of conscience and his share of political power. . . . The people listened to this speech with wonder and delight. . . . They had but one request to make in answer; that he would stay amongst them and reign over them in person. They besought him to annex their territory to Pennsylvania, in order that the white settlers might have one country, one parliament, and one ruler. He promised, at their desire, to take the question of a union of the two provinces into

consideration, and submit it to an assembly then about to meet at Upland. So he took his leave. Ascending the Delaware . . . the adventurers soon arrived at the Swedish town of Upland, then the place of chief importance in the province. . . . Penn changed the name from Upland to Chester, and as Chester it is known. Markham and the three commissioners had done their work so well that in a short time after Penn’s arrival, the first General Assembly, elected by universal suffrage, was ready to meet. . . . As soon as Penn had given them assurances similar to those which he had made in Newcastle, they proceeded to discuss, amend, and accept the Frame of Government and the Provisional Laws. The settlers on the Delaware sent representatives to this Assembly, and one of their first acts was to declare the two provinces united. The constitution was adopted without important alteration; and to the forty laws were added twenty-one others, and the infant code was passed in form. . . . Penn paid some visits to

WILLIAM PENN

the neighbouring seats of government in New York, Maryland, and the Jerseys. At West River, Lord Baltimore came forth to meet him with a retinue of the chief persons in the province. . . . It was impossible to adjust the boundary, and the two proprietors separated with the resolution to maintain their several rights. . . . The lands already bought from the Redmen were now put up for sale at four-pence an acre, with a reserve of one shilling for every hundred acres as quit-rent; the latter sum intended to form a state revenue for the Governor’s support. Amidst these sales and settlements he recollected George Fox, for whose use and profit he set aside a thousand acres of the best land in the province. . . . Penn was no less careful for the Redskins. Laying on one side all ceremonial manners, he won their hearts by his easy confidence and familiar speech. He walked with them alone into the forests. He sat with them on the ground to watch the young men dance. He joined in their feasts, and ate their roasted hominy and acorns. . . . Having now become intimate with Taminet and other of the native kings, who had approved these treaties, seeing great advantages in them for their people, he proposed to

hold a conference with the chiefs and warriors, to confirm the former treaties and form a lasting league of peace. On the banks of the Delaware, in the suburbs of the rising city of Philadelphia, lay a natural amphitheatre, used from time immemorial as a place of meeting for the native tribes. The name of Sakimaxing—now corrupted by the white men into Shackamaxon—means the place of kings. At this spot stood an aged elm-tree, one of those glorious elms which mark the forests of the New World. It was a hundred and fifty-five years old; under its spreading branches friendly nations had been wont to meet; and here the Redskins smoked the calumet of peace long before the pale-faces landed on those shores. Markham had appointed this locality for his first conference, and the land commissioners wisely followed his example. Old traditions had made the place sacred to one of the contracting parties,—and when Penn proposed his solemn conference, he named Sakimaxing [or Shackamaxon] as a place of meeting with the Indian kings. Artists have painted, poets sung, philosophers praised this meeting of the white men and the red [November, 1683]. . . . All being seated, the old king announced to the Governor that the natives were prepared to hear and consider his words. Penn then rose to address them. . . . He and his children, he went on to say, never fired the rifle, never trusted to the sword; they met the red men on the broad path of good faith and good will. They meant no harm, and had no fear. He read the treaty of friendship, and explained its clauses. It recited that from that day the children of Onas and the nations of the Lenni Lenapé should be brothers to each other,—that all paths should be free and open—that the doors of the white men should be open to the red men, and the lodges of the red men should be open to the white men,—that the children of Onas should not believe any false reports of the Lenni Lenapé, nor the Lenni Lenapé of the children of Onas, but should come and see for themselves, . . . that if any son of Onas were to do any harm to any Redskin, or any Redskin were to do harm to a son of Onas, the sufferer should not offer to right himself, but should complain to the chiefs and to Onas, that justice might be declared by twelve honest men, and the wrong buried in a pit with no bottom,—that the Lenni Lenapé should assist the white men, and the white men should assist the Lenni Lenapé, against all such as would disturb them or do them hurt; and, lastly, that both Christians and Indians should tell their children of this league and chain of friendship, that it might grow stronger and stronger, and be kept bright and clean, without rust or spot, while the waters ran down the creeks and rivers, and while the sun and moon and stars endured. He laid the scroll on the ground. The sachems received his proposal for themselves and for their children. No oaths, no seals, no nummeries, were used; the treaty was ratified on both sides with yea,—and, unlike treaties which are sworn and sealed, was kept. When Penn had sailed, he held a note in his mind of six things to be done on landing: (1) to organize his government; (2) to visit Friends in Delaware, Pennsylvania and New Jersey; (3) to conciliate the Indians; (4) to see the Governor of New York, who had previously governed his province; (5) to fix the site for his capital city; (6) to arrange his differences with Lord Baltimore. The subject of his chief city occupied his anxious thought, and Markham had collected information for his use. Some people wished to see Chester made his capital; but the surveyor, Thomas Holme, agreed with Penn that

the best locality in almost every respect was the neck of land lying at the junction of the Delaware and the Skuykill rivers. . . . The point was known as Wicocoa. . . . The land was owned by three Swedes, from whom Penn purchased it on their own terms; and then, with the assistance of Holme, he drew his plan. . . . Not content to begin humbly, and allow house to be added to house, and street to street, as people wanted them, he formed the whole scheme of his city—its name, its form, its streets, its docks, and open spaces—fair and perfect in his mind, before a single stone was laid. According to his original design, Philadelphia was to cover with its houses, squares, and gardens, twelve square miles. . . . One year from the date of Penn's landing in the New World, a hundred houses had been built; two years later there were six hundred houses."—W. H. Dixon, *History of William Penn*, ch. 24-25.—See also PHILADELPHIA: Penn's commission; U. S. A.: 1607-1752.

1685.—**Maryland boundary question.**—Points in dispute with Lord Baltimore.—"The grant to Penn confused the old controversy between Virginia and Lord Baltimore as to their boundary, and led to fresh controversies. The question soon arose: What do the descriptions, 'the beginning of the fortieth,' and 'the beginning of the three and fortieth degree of northern latitude,' mean? If they meant the 40th and 43d parallels of north latitude, as most historians have held, Penn's province was the zone, three degrees of latitude in width, that leaves Philadelphia a little to the south and Syracuse a little to the north; but if those descriptions meant the belts lying between 30° and 40°, and 42° and 43°, as some authors have held, then Penn's southern and northern boundaries were 39° and 42° north. A glance at the map of Pennsylvania will show the reader how different the territorial dispositions would have been if either one of these constructions had been carried out. The first construction would avoid disputes on the south, unless with Virginia west of the mountains; on the north it would not conflict with New York, but would most seriously conflict with Connecticut and Massachusetts west of the Delaware. The second construction involved disputes with the two southern colonies concerning the degree 30-40 to the farthest limit of Pennsylvania, and it also overlapped Connecticut's claim to the degree 41-42. Perhaps we cannot certainly say what was the intention of the king, or Penn's first understanding; but the Quaker proprietary and his successors adopted substantially the second construction, and thus involved their province in the most bitter disputes. The first quarrel was with Lord Baltimore. It has been well said that this 'notable quarrel' 'continued more than eighty years; was the cause of endless trouble between individuals; occupied the attention not only of the proprietors of the respective provinces, but of the Lords of Trade and Plantations, of the High Court of Chancery, and of the Privy Councils of at least three monarchs; it greatly retarded the settlement and development of a beautiful and fertile country, and brought about numerous tumults, which sometimes ended in bloodshed.'—B. A. Hinsdale, *Old Northwest*, ch. 7.—"As the Duke of York claimed, by right of conquest, the settlements on the western shores of the Bay of

WILLIAM PENN'S TREATY OF LASTING FRIENDSHIP WITH THE INDIANS
A meeting held under the great elm at Shackamaxon, now Kensington, November, 1683
(After painting by Benjamin West)

Delaware, and had, by his deed of 1682, transferred to William Penn his title to that country, embracing the town of Newcastle and twelve miles around it (as a reasonable portion of land attached to it), and as far down as what was then called Cape Henlopen; an important subject of controversy was the true situation of that cape, and the ascertainment of the southern and western boundaries of the country along the bay, as transferred by the Duke's deed. . . . After two personal interviews in America, the Proprietaries separated without coming to any arrangement and with mutual recriminations and dissatisfaction. And they each wrote to the Lords of Plantations excusing themselves and blaming the other. . . . At length, in 1685, one important step was taken toward the decision of the conflicting claims of Maryland and Pennsylvania, by a decree of King James' Council, which ordered, 'that for avoiding further differences, the tract of land lying between the Bay of Delaware and the eastern sea, on the one side, and the Chesapeake Bay on the other, be divided into equal parts, by a line from the latitude of Cape Henlopen to the 40th degree of north latitude, the southern boundary of Pennsylvania by Charter; and that the one half thereof, lying towards the Bay of Delaware and the eastern sea, be adjudged to belong to his majesty, and the other half to Lord Baltimore, as comprised in his charter.' . . . This decree of King James, which evidently exhibits a partiality towards the claims of Penn, in decreeing the eastern half of the peninsula to his majesty, with whom Lord Baltimore could not presume, and indeed had declined to dispute, instead of to the Proprietary himself, by no means remove the difficulties which hung over this tedious, expensive, and vexatious litigation. For . . . there existed as much uncertainty with respect to the true situation of Cape Henlopen and the ascertainment of the middle of the Peninsula, as any points in contest."—J. Dunlop, *Memoir on the controversy between William Penn and Lord Baltimore (Memoirs of the Pennsylvania Historical Society, v. 1)*.—See also below: 1700-1767.

1691-1693.—Practical separation of Delaware. See DELAWARE: 1601-1702.

1692-1696.—Keith's schism.—Penn deprived of his government.—Later restoration.—Early resistance to proprietary yoke.—"While New England and New York were suffering from war, superstition, and the bitterness of faction, Pennsylvania was not without internal troubles. These troubles originated with George Keith, a Scotch Quaker, formerly surveyor-general of East Jersey, and at this time master of the Quaker school at Philadelphia, and champion of the Quakers against Cotton Mather and the Boston ministers. Pressing the doctrines of non-resistance to their logical conclusion, Keith advanced the opinion that Quaker principles were not consistent with the exercise of political authority. He also attacked negro slavery as inconsistent with those principles. There is no surer way of giving mortal offense to a sect or party than to call upon it to be consistent with its own professed doctrines. Keith was disowned by the yearly meeting, but he forthwith instituted a meeting of his own, to which he gave the name of Christian Quakers. In reply to a 'Testimony of Denial' put forth against him, he published an 'Address,' in which he handled his adversaries with very little ceremony. He was fined by the Quaker magistrates for insolence, and Bradford, the only printer in the colony [see PRINTING AND THE PRESS: 1685-1693] was called to account for having published Keith's address. Though he obtained a discharge, Bradford, how-

ever, judged it expedient to remove his types to New York, which now [1692] first obtained a printing press. The Episcopalians and other non-Quakers professed great sympathy for Keith, and raised a loud outcry against Quaker intolerance. Keith himself presently embraced Episcopacy, went to England, and took orders there. The Quaker magistrates were accused of hostility to the Church of England, and in the alleged maladministration of his agents, joined with his own suspected loyalty, a pretense was found for depriving Penn of the government—a step taken by the Privy Council without any of the forms, or, indeed, any authority of law, though justified by the opinions of some of the leading Whig lawyers of that day." Governor Fletcher of New York was now authorized for a time to administer the government of Pennsylvania and Delaware. "He accordingly visited Philadelphia, and called an Assembly in which deputies from both provinces were present. Penn's frame of government was disregarded, the Assembly being modeled after that of New York. Fletcher hoped to obtain a salary for himself and some contributions toward the defense of the northern frontier. The Quakers, very reluctant to vote money at all, had special scruples about the lawfulness of war. They were also very suspicious of designs against their liberties, and refused to enter on any business until the existing laws and liberties of the province had been first expressly confirmed. This concession reluctantly made, Fletcher obtained the grant of a small sum of money, not, however, without stipulating that it 'should not be dipped in blood.' . . . The suspicions against Penn soon dying away, the administration of his province was restored to him [1694]. But the pressure of his private affairs—for he was very much in debt—detained him in England, and he sent a commission to Markham [his relative and representative in Pennsylvania] to act as his deputy. An Assembly called by Markham refused to recognize the binding force of Penn's frame of government, which, indeed, had been totally disregarded by Fletcher. To the restrictions on their authority imposed by that frame they would not submit. A second Assembly [1696] proved equally obstinate, and, as the only means of obtaining a vote of the money required of the province toward the defense of New York Markham was obliged to agree to a new act of settlement, securing to the Assembly the right of originating laws. A power of disapproval was reserved, however, to the proprietary, and this act never received Penn's sanction."—R. Hildreth, *History of the United States, v. 2, ch. 21*.

1701-1718.—New Charter of privileges and city charter of Philadelphia.—Divorcing of Delaware.—Differences with the proprietary.—Death of Penn.—It was not until 1690 that Penn returned to his domain after an absence of fifteen years, and his brief stay of two years was not made wholly agreeable to him. Between him and

his colonists there were many points of friction, as was inevitable under the relationship in which they stood to one another. The assembly of the province would not be persuaded to contribute to the fortification of the northern frontier of the king's dominions (in New York) against the French and Indians. Penn's influence, however, prevailed upon that body to adopt measures for suppressing both piracy and illicit trade. With much difficulty, moreover, he settled with his subjects the terms of a new constitution of government, or Charter of Privileges, as it was called. The old Frame of Government was formally abandoned and the government of Pennsylvania was now organized upon an entirely new footing. (See also PHILADELPHIA: 1701.) "The new charter for the province and territories, signed by Penn, October 25, 1701, was more republican in character than those of the neighboring colonies. It not only provided for an assembly of the people with great powers, including those of creating courts, but to a certain extent it submitted to the choice of the people the nomination of some of the county officers. The section concerning liberty of conscience did not discriminate against the members of the Church of Rome. The closing section fulfilled the promise already made by Penn, that in case the representatives of the two territorial districts [Pennsylvania proper, held under Penn's original grant, and the Lower Counties, afterwards constituting Delaware, which he acquired from the Duke of York] could not agree within three years to join in legislative business, the Lower Counties should be separated from Pennsylvania. On the same day Penn established by letters-patent a council of state for the province, 'to consult and assist the proprietary himself or his deputy with the best of their advice and council in public affairs and matters relating to the government and the peace and well-being of the people; and in the absence of the proprietary, or upon the deputy's absence out of the province, his death, or other incapacity, to exercise all and singular the powers of government.' The original town and borough of Philadelphia, having by this time 'become near equal to the city of New York in trade and riches,' was raised, by patent of the 25th of October, 1701, to the rank of a city, and, like the province, could boast of having a more liberal charter than her neighbors; for the municipal officers were to be elected by the representatives of the people of the city, and not appointed by the governor, as in New York. The government of the province had been entrusted by Penn to Andrew Hamilton, also governor for the proprietors in New Jersey, with James Logan as provincial secretary, to whom was likewise confided the management of the proprietary estates, thus making him in reality the representative of Penn and the leader of his party. Hamilton died in December, 1702; but before his death he had endeavored in vain to bring the representatives of the two sections of his government together again. The Delaware members remained obstinate, and finally, while Edward Shippen, a member of the council and first mayor of Philadelphia, was acting as president, it was settled that they should have separate assemblies, entirely independent of each other. The first separate assembly for Pennsylvania proper met at Philadelphia, in October, 1703, and by its first resolution showed that the Quakers, so dominant in the province, were beginning to acquire a taste for authority, and meant to color their religion with the hue of political power." In December, 1703, John Evans, a young Welshman, appointed deputy-governor by Penn, arrived at Philadelphia,

and was soon involved in quarrels with the assemblies. "At one time they had for ground the refusal of the Quakers to support the war which was waging against the French and Indians on the frontiers. At another they disagreed upon the establishment of a judiciary. These disturbances produced financial disruptions, and Penn himself suffered therefrom to such an extent that he was thrown into a London prison, and had finally to mortgage his province for £6,000. The recall of Evans in 1709, and the appointment of Charles Gookin in his stead, did not mend matters. Logan, Penn's intimate friend and representative, was finally compelled to leave the country; and, going to England (1710), he induced Penn to write a letter to the Pennsylvania assembly, in which he threatened to sell the province to the crown, a surrender by which he was to receive £12,000. The transfer was in fact prevented by an attack of apoplexy from which Penn suffered in 1712. The epistle, however, brought the refractory assembly to terms." In 1717 Gookin involved himself in Irish troubles and was recalled. Sir William Keith was then appointed "the last governor commissioned by Penn himself; for the great founder of Pennsylvania died in 1718. . . . After Penn's death his heirs went to law among themselves about the government and proprietary rights in Pennsylvania."—B. Fernow, *Middle colonies (Narrative and critical history of America, v. 5, ch. 3)*.

1709-1710.—Immigration of Palatines and other Germans. See PALATINES.

1710-1740.—Scotch-Irish influence in the colony.—"The larger part of the Scotch-Irish migration to America appears to have come to Pennsylvania attracted probably by the fame of the colony for religious liberty and fertile soil. They scattered themselves to some extent all over the State, . . . but the greater part congregated in what is now known as the Cumberland valley. This valley was, in colonial times, known as the Kittochtinney, afterwards changed into Kittatinney, and now Cumberland. . . . Fighting had become part of the religion of the Scotch-Irish, as peace was part of the religion of the Quakers, and they used the rifle to settle difficulties with the Indians which the Quakers settled by a treaty. Rough, independent, and vigorous, they sometimes carried these qualities to excess, and became connected with a great deal of the disorder which marked the history of the colony. They were the instigators of the Whiskey Rebellion, which Washington put down soon after the Revolution, and in the records of the colonial period we usually find them described as uncivilized and cruel. In his 'Introductory Memoir to the Journal of Braddock's Expedition,' Sargent has a passage which, although the Scotch-Irish have objected to it is a very fair description of them at that time: 'They were a hardy, brave, hot-headed race, excitable in temper, unrestrainable in passion, invincible in prejudice. Their hand opened as impetuously to a friend as it clinched against an enemy. They loathed the Pope as sincerely as they venerated Calvin or Knox, and they did not particularly respect the Quakers. If often rude and lawless, it was partly the fault of their position. They hated the Indian while they despised him, and it does not seem, in their dealings with this race, as though there were any sentiments of honor or magnanimity in their bosoms that could hold way

against the furious tide of passionate, blind resentment. Impatient of restraint, rebellious against everything that in their eyes bore the semblance of injustice, we find these men readiest among the ready on the battle-fields of the Revolution. If they had faults, a lack of patriotism or of courage was not among the number. . . . Large numbers of them marched to the York Barrens, 'in what was then Lancaster County near the Maryland boundary line, without first offering to buy the land from William Penn. When spoken to on the subject, they replied that Penn had solicited colonists and they had come accordingly. A more serious offence was their settling without purchase on the lands of the Indians, an intrusion which is generally believed to have caused several massacres. In 1743 the proprietors began to eject them from the unpurchased lands, and as a preliminary proceeding ordered a careful survey to be made. The surveyors and the assistants were resisted, their instruments broken, and they were compelled to retire. The Scotch Irishmen insisted that the land was theirs, because they had expended time and labor in its improvement. But when legal proceedings were begun, they submitted, accepted leases, and in the end many of them purchased the lands; and this submission has been considered by some of their descendants as an act of remarkable graciousness."—S. 1753-1799.—Connecticut claims and settlements in Wyoming valley.—Susquehanna Company's treaty with the Five Nations.—Pennamite and Yankee War.—"The charter bounds [of Connecticut] extended west to the Pacific Ocean [see CONNECTICUT: 1662-1664]: this would have carried Connecticut over a strip covering the northern two fifths of the present State of Pennsylvania. Stuart faithlessness interfered with this doubly. Almost immediately after the grant of the charter, Charles granted to his brother James the Dutch colony of New Netherland, thus interrupting the continuity of Connecticut. Rather than resist the king's brother, Connecticut agreed and ratified the interruption. In 1681 a more serious interference took place. Charles granted to Penn the province of Pennsylvania, extending westward five degrees between the 40th and 43d parallels of north latitude." Under the final compromise of Penn's boundary dispute with Lord Baltimore the northern line of Pennsylvania was moved southward to latitude 42° instead of 43°; but it still absorbed five degrees in length of the Connecticut western belt. "The territory taken from Connecticut by the Penn grant would be bounded southerly on the present map by a straight line entering Pennsylvania about Stroudsburg, just north of the Delaware Water Gap, and running west through Hazelton, Catawissa, Clearfield, and New Castle, taking in all the northern coal, iron, and oil fields. It was a royal heritage, but the Penns made no attempt to settle it, and

Connecticut until the middle of the 18th century had no energy to spare from the task of winning her home territory 'out of the fire, as it were, by hard blows and for small recompense.' This task had been fairly well done by 1750, and in 1753 a movement to colonize in the Wyoming country was set on foot in Windham county. It spread by degrees until the Susquehanna Company was formed the next year, with nearly 700 members, of whom 638 were of Connecticut. Their agents made a treaty with the Five Nations July 11, 1754, by which they bought for £2,000 a tract of land beginning at the 41st degree of latitude, the southerly boundary of Connecticut; thence running north, following the line of the Susquehanna at a distance of ten miles from it, to the present northern boundary of Pennsylvania; thence 120 miles west; thence south to the 41st degree and back to the point of beginning. In May, 1755, the Connecticut general assembly expressed its acquiescence in the scheme, if the king should approve it; and it approved also a plan of Samuel Hazard, of Philadelphia, for another colony, to be placed west of Pennsylvania, and within the chartered limits of Connecticut. The court might have taken stronger ground than this; for, at the meeting of commissioners from the various colonies at Albany, in 1754, the representatives of Pennsylvania being present, no opposition was made to a resolution that Connecticut and Massachusetts, by charter right, extended west to the South Sea. The formation of the Susquehanna Company brought out objections from Pennsylvania, but the company sent out surveyors and plotted its tract. Settlement was begun on the Delaware River in 1757, and in the Susquehanna purchase in 1762. This was a temporary settlement, the settlers going home for the winter. A permanent venture was made the next year on the flats below Wilkes-Barre, but it was destroyed by the Indians the same year. In 1768 the company marked out five townships, and sent out forty settlers for the first. Kingston. Most of them, including the famous Captain Zebulon Butler, had served in the French and Indian War; and their first step was to build the 'Forty Fort.' The Penns, after their usual policy, had refused to sell lands, but had leased plots to a number of men on condition of their 'defending the lands from the Connecticut claimants.' The forty Connecticut men found these in possession when they arrived in February, 1760, and a war of writs and arrests followed for the remainder of the year. The Pennsylvania men had one too powerful argument, in the shape of a four-pounder gun, and they retained possession at the end of the year. Early in 1770 the forty reappeared, captured the four-pounder, and secured possession. For a time in 1771 the Pennsylvania men returned, put up a fort of their own, and engaged in a partisan warfare; but the numbers of the Connecticut men were rapidly increasing, and they remained masters until the opening of the Revolution, when they numbered some 3,000. . . . But for the Revolution, the check occasioned by the massacre [of 1778] [see U.S.A.: 1778 (July)], and the appearance of a popular government in place of the Penns, nothing could have prevented the establishment of Connecticut's authority over all the regions embraced in her western claims. . . . The articles of confederation went into force early in 1781. One of their provisions empowered congress to appoint courts of arbitration to decide disputes between States as to boundaries. Pennsylvania at once availed herself of this, and applied for a court to decide the Wyoming dispute. Connecticut asked for time, in

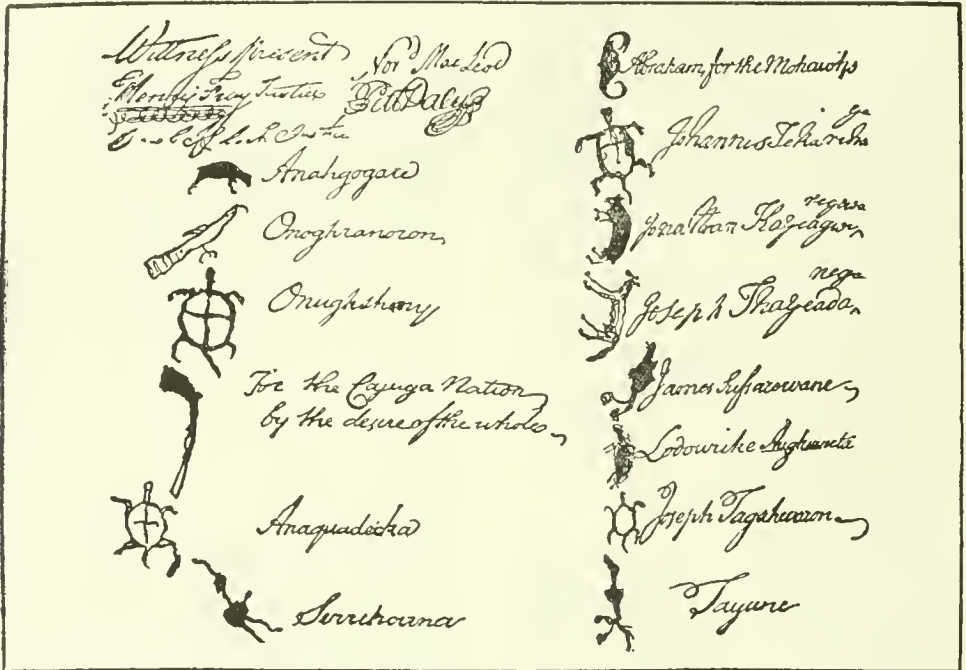

order to get papers from England; but congress overruled the motion, and ordered the court to meet at Trenton in November, 1782. After forty-one days of argument, the court came to the unanimous conclusion that Wyoming, or the Susquehanna district, belong to Pennsylvania and not to Connecticut." Connecticut yielded to the decision at once; but, in 1786, when, following New York and Virginia, she was called upon to make a cession of her western territorial claims to Congress (see U.S.A.: 1781-1786) she compensated herself for the loss of the Susquehanna district by reserving from the cession "a tract of about the same length and width as the Wyoming grant, west of Pennsylvania, in northeastern Ohio; . . . and this was the tract known as the Western Reserve of Connecticut. It contained about 3,500,000 acres.

1757-1762.—Question of taxation in dispute with proprietaries.—Franklin's mission to England.—"For a long while past the relationship between the Penns, unworthy sons of the great William, and now the proprietaries, on the one side, and their quasi subjects, the people of the Province, upon the other, had been steadily becoming more and more strained, until something very like a crisis had [in 1757] been reached. As usual in

SIGNATURES OF THE CHIEFS OF THE "SIX NATIONS" AFFIXED TO A COMMERCIAL TREATY WITH THOMAS AND RICHLARD PENN (Original in the New York Public Library)

. . . The unfortunate Wyoming settlers, deserted by their own State, and left to the mercy of rival claimants, had a hard time of it for years. The militia of the neighboring counties of Pennsylvania was mustered to enforce the writs of Pennsylvania courts; the property of the Connecticut men was destroyed, their fences were cast down, and their rights ignored; and the 'Pennamite and Yankee War' began. . . . The old Susquehanna Company was reorganized in 1785-86, and made ready to support its settlers by force. New Yankee faces came crowding into the disputed territory. Among them was Ethan Allen, and with him came some Green Mountain Boys. [It was not until 1799 that the controversy came to an end, by the passage of an act which confirmed the title of the actual settlers]."—A. Johnston, *Connecticut*, ch. 15. ALSO IN: C. Miner, *History of Wyoming*, letters 5-12.—W. L. Stone, *Poetry and history of Wyoming*, ch. 4-5.

English and Anglo-American communities, it was . . . a question of taxation, which was producing the alienation. At bottom, there was the trouble which always pertains to absenteeism; the proprietaries lived in England, and regarded their vast American estate, with about 200,000 white inhabitants, only as a source of revenue. . . . The chief point in dispute was, whether or not the waste lands, still directly owned by the proprietaries, and other lands let by them at quitrents, should be taxed in the same manner as like property of other owners. They refused to submit to such taxation; the Assembly of Burgesses insisted. In ordinary times the proprietaries prevailed; for the governor was their nominee and removable at their pleasure; they gave him general instructions to assent to no law taxing their holdings, and he naturally obeyed his masters. But since governors got their salaries only by virtue of a vote of the Assembly, it seems that they

sometimes disregarded instructions, in the sacred cause of their own interests. After a while, therefore, the proprietaries, made shrewd by experience, devised the scheme of placing their unfortunate sub-rulers under bonds. This went far towards settling the matter. Yet in such a crisis and stress as were now present in the colony . . . it certainly seemed that the rich and idle proprietaries might stand on the same footing with their poor and laboring subjects. They lived comfortably in England upon revenues estimated to amount to the then enormous sum of £20,000 sterling; while the colonists were struggling under unusual losses, as well as enormous expenses, growing out of the war and Indian ravages. At such a time their parsimony, their 'incredible meanness,' as Franklin called it, was cruel as well as stupid. At last the Assembly flatly refused to raise any money unless the proprietaries should be burdened like the rest. All should pay together, or all should go to destruction together. The Penns too stood obstinate, facing the not less resolute Assembly. It was indeed a deadlock! Yet the times were such that neither party could afford to maintain its ground indefinitely. So a temporary arrangement was made, whereby of £60,000 sterling to be raised the proprietaries agreed to contribute £5,000, and the Assembly agreed to accept the same in lieu or commutation for their tax. But neither side abandoned its principle. Before long more money was needed, and the dispute was as fierce as ever. The burgesses now thought that it would be well to carry a statement of their case before the king in council and the lords of trade. In February, 1757, they named their speaker, Isaac Norris, and Franklin to be their emissaries 'to represent in England the unhappy situation of the Province,' and to seek redress by an act of Parliament. Norris, an aged man, begged to be excused; Franklin accepted. . . . A portion of his business also was to endeavor to induce the king to resume the Province of Pennsylvania as his own. A clause in the charter had reserved this right, which could be exercised on payment of a certain sum of money. The colonists now preferred to be an appanage of the crown rather than a fief of the Penns. [In this latter object of his mission Franklin did not succeed; but he accomplished its main purpose, procuring, after long delays, from the board of trade, a decision which subjected the proprietary estate to its fair share of taxation. He returned home after an absence of five years.]"—J. T. Morse, Jr., *Benjamin Franklin*, ch. 3.

ALSO IN: J. Parton, *Life of Franklin*, v. 1, pt. 3. 1760-1767.—Settlement of Maryland boundary dispute.—Mason and Dixon's line.—The decision of 1685, in the boundary dispute between the proprietaries of Pennsylvania and Maryland, "formed the basis of a settlement between the respective heirs of the two proprietaries in 1732. Three years afterward, the subject became a question in chancery; in 1750 the present boundaries were decreed by Lord Hardwicke; ten years later, they were, by agreement, more accurately defined; and, in 1761, commissioners began to designate the limit of Maryland on the side of Pennsylvania and Delaware. In 1763, Charles Mason and Jeremiah Dixon, two mathematicians and surveyors [sent over from England by the proprietaries], were engaged to mark the lines. In 1764, they entered upon their task, with good instruments and a corps of axemen; by the middle of June, 1765, they had traced the parallel of latitude to the Susquehannah; a year later, they climbed the Little Alleghany; in 1767, they carried forward their

work, under an escort from the Six Nations, to an Indian war-path, 244 miles from the Delaware River. Others continued Mason and Dixon's line to the bound of Pennsylvania on the southwest."—G. Bancroft, *History of the United States*, pt. 2, ch. 16.—"The east and west line which they [Mason and Dixon] ran and marked . . . is the Mason and Dixon's line of history, so long the boundary between the free and the slave States. Its precise latitude is 39° 43' 26.3" north. The Penns did not, therefore, gain the degree 39-40, but they did gain a zone one-fourth of a degree in width, south of the 40th degree, to their western limit, because the decision of 1760 controlled that of 1770, made with Virginia. . . . Pennsylvania is narrower by nearly three-fourths of a degree than the charter of 1681 contemplated. No doubt, however, the Penns considered the narrow strip gained at the south more valuable than the broad one lost at the north."—B. A. Hinsdale, *Old Northwest*, ch. 7.

1775-1794.—Warfare with Indians.—"During the entire period of the Revolution and for some time afterward, the western portion of Pennsylvania was subject to frequent invasion by hostile Indian warriors, allies of the British, and nearly the entire counties of Westmoreland and Allegheny were actually laid waste, and the inhabitants were obliged to shelter themselves in forts. Westmoreland was attacked while the court was in session and though the records were preserved, the town with most of the property it contained was burned, and a number of persons were killed or taken prisoners. Though the northern frontier of this country was continually harassed, those in the more southwardly settlements were by no means exempted from their share of the general distress. It was not until about the close of the war that arrangements were made for an adjustment of the boundary."—H. M. Jenkins, ed., *Pennsylvania, colonial and federal*, v. 2, pp. 130.—The Indians were finally

defeated in 1794 by Anthony Wayne after a war of over two years.

1775-1847.—Development of industries.—“During the Revolution cannon and cannon balls were cast at many of the Pennsylvania furnaces. The bar iron and castings made in the Schuylkill valley during the eighteenth century were taken down the river to Philadelphia in boats, which were poled back to their starting points with great labor. After the Revolution the manufacture of iron . . . was rapidly extended into the interior of the State. Bishop says that in 1786 there were seventeen furnaces, forges, and slitting-mills within thirty-nine miles of Lancaster. About 1789 there were fourteen furnaces and thirty-four forges in operation in Pennsylvania, according to a list published by Mrs. James. In 1791 the number of furnaces had increased to sixteen and of forges to thirty-seven. In 1796 the slitting and rolling mills were said to roll 1,500 tons per annum. The articles of iron and steel manufacture at this time were of great variety, including stoves, pots, kettles, plow irons, sheet iron, nails, spikes, cannon balls, scythes, axes, saws, etc. . . . In 1838 there were in existence within a radius of fifty-two miles of Lancaster 102 furnaces, forges, and rolling mills. . . . Huntingdon and Centre counties constituted the principle iron producing district in the country . . . until after 1842, when the tariff of that year and the discovery that iron could be made with anthracite and bituminous coal enabled other districts in the State and country to wrest from these counties their iron sceptre. . . . Before the completion of the Pennsylvania Canal and the Portage Railroad . . . [the iron] was transported with great difficulty. Bar iron from Centre county was at first carried on the backs of horses to the Clarion river and was then floated on boats and arks to Pittsburg. Pig and bar iron from Huntingdon county were hauled over the Frankstown road to Johnstown and thence floated to Pittsburg by way of the Conemaugh river. Subsequently blooms were sent to Pittsburg from Huntingdon county by wagon. ‘Juniata iron’ was also largely sold in eastern markets, the Juniata and Susquehanna rivers furnishing an outlet before the building of the Pennsylvania Canal. It was noted throughout the country for its excellence. . . . The iron age having been succeeded . . . by the steel age, it became necessary for Pennsylvania to seek for ores of purer quality than those which, as a rule, are found inside its own boundaries. These . . . it has found mainly in the Lake Superior region. . . . Other ores adapted to the manufacture of steel have been imported from Europe, Africa, and Cuba. The first use of Lake Superior iron ore in any blast furnace in this country occurred in 1853, at Sharpville furnace, in Mercer county, Pennsylvania, then owned by David and John P. Agnew, and in the same year it was used at Clay furnace, in the same county, at both furnaces successfully. . . . The first coal was shipped from Pittsburg in 1803, when the *Louisiana* was ‘ballasted with the fuel, which was sold in Philadelphia for 37½ cents a bushel.’ In 1820 coal mining was begun at Coal Centre (Greenfield), and ten years later at Limetown, both on the upper Monongahela, in Washington county. Most of the product of those early years was put on board of boats . . . holding from 4,000 to 6,000 bushels. On these it was floated to Pittsburg and the Ohio river towns. . . . [In 1854 George H. Bissell] organized the Pennsylvania Rock Oil Company, the first of its kind in the United States, and leased the land on which were situated the principal oil springs.”

—H. M. Jenkins, ed., *Pennsylvania, colonial and federal*, v. 3, pp. 351-352, 358, 359, 385, 431, 440.

1776.—End of royal and proprietary government.—Adoption of a state constitution.—“Congress, on the 15th of May, 1776, recommended . . . ‘the respective Assemblies and conventions of the United Colonies, where no government sufficient to the exigencies of their affairs has been hitherto established, to adopt such government as shall, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents in particular, and America in general.’ A diversity of opinion existed in the Province upon this resolution. . . . The Assembly referred the resolve of Congress to a committee, but took no further action, nor did the committee ever make a report. ‘The old Assembly,’ says Westcott, ‘which had adjourned on the 14th of June, to meet on the 14th of August, could not obtain a quorum, and adjourned again to the 23d of September. It then interposed a feeble remonstrance against the invasion of its prerogatives by the Convention, but it was a dying protest. The Declaration of Independence had given the old State Government a mortal blow, and it soon expired without a sigh—thus ending forever the Proprietary and royal authority in Pennsylvania.’ In the meantime, the Committee of Correspondence for Philadelphia issued a circular to all the county committees for a conference in that city on Tuesday, the 18th day of June. . . . The Conference at once unanimously resolved, ‘That the present government of this Province is not competent to the exigencies of our affairs, and that it is necessary that a Provincial Convention be called by this Conference for the express purpose of forming a new government in this Province on the authority of the people only.’ Acting upon these resolves, preparations were immediately taken to secure a proper representation in the Convention. . . . Every voter was obliged to take an oath of renunciation of the authority of George III., and one of allegiance to the State of Pennsylvania, and a religious test was prescribed for all members of the Convention. . . . The delegates to the Convention to frame a constitution for the new government consisted of the representative men of the State—men selected for their ability, patriotism, and personal popularity. They met at Philadelphia, on the 15th of July, . . . and organized by the selection of Benjamin Franklin, president, George Ross, vice-president, and John Morris and Jacob Garrigues, secretaries. . . . On the 28th of September, the Convention completed its labors by adopting the first State Constitution, which went into immediate effect, without a vote of the people. . . . The legislative power of the frame of government was vested in a General Assembly of one House, elected annually. The supreme executive power was vested in a President, chosen annually by the Assembly and Council, by joint ballot—the Council consisting of twelve persons, elected in classes, for a term of three years. A Council of Censors, consisting of two persons from each city and county, was to be elected in 1783, and in every seventh year thereafter, whose duty it was to make inquiry as to whether the Constitution had been preserved inviolate during the last septennary, and whether the executive or legislative branches of the government had performed their duties.”—W. 1789-1842.—Internal communication.—A "special movement in internal improvement enterprises began soon after 1789, and was continued on the part of the State government until the final sale of the system of public works in 1857; and by incorporated companies it has since continued to the present time. To-day [1922] turnpike and toll road companies are almost unheard of, and nearly all the thoroughfares of travel of that kind are under the supervision of the authorities of the respective counties of the State. The era of navigable artificial canals in Pennsylvania actually began with the work undertaken by the Society for the Improvement of Roads and Canals, although suggestions looking to the same end were made as early as 1762. Canal construction was begun soon after 1790, and within the next few years the State gave material assistance to such enterprises. A little later, under pressure of public necessity, widespread demand and political influences, the State itself turned builder and succeeded in opening a navigable waterway from the Susquehanna river to Lake Erie, and by indirect route, with auxiliary lines, joined the lake on the west with tide-water on the east. In this great undertaking there was expended more than \$35,000,000 of public moneys, yet the end accomplished certainly justified the outlay, for of all early measures proposed for the development of the resources of our State in general, that which resulted in the construction of the public works, more frequently referred to as the State canal, was productive of the greatest benefit to all . . . [the] people, regardless of residence or personal concerns. In earlier years Pennsylvania had kept even step with her sister States in public improvements, even under adverse conditions, but the completion of the system of canals within her borders gave her a certain prestige and placed her in the front rank of the progressive states of the union. On final sale there was realized hardly a third of the actual cost of the public works, yet as a measure of progress and development the wisdom of the expenditure never has been doubted. The period of

canal construction was continued until about 1850, and during that time the territory of the State became well traversed with artificial water courses. To a large extent this means of travel and traffic has been superseded by modern railroads, but it is doubtful whether greater comparative prosperity has come with the new conditions. During the days of canals and turnpikes, all interests, even to those of the remotest country hamlets, were directly benefited by their operation, but after both were compelled to yield ascendancy to the railroads the commercial centers and larger cities derived the greatest benefits, while the lesser towns and agricultural localities suffered corresponding loss. . . . The opening of highways and turnpikes gave rise to the incorporation of bridge companies, although generally the turnpike companies built and maintained the bridges along the line of their own roads. It was the custom of early times to establish fording places across the smaller rivers and creeks, yet the first companies built bridges in case no safe fording place was found and a ferry could not be successfully operated. Bridges were erected in Pennsylvania as early as 1786, in which year a 'horse bridge' was built across Crum creek, near Chester, on the route of the King's highway. A drawbridge, undoubtedly the pioneer of its class, was built over the same stream in 1700. These structures were built at public expense, whereas the bridges built by incorporated companies were maintained by tolls charged passengers for crossing them. As early as 1798, according to Hazard's Register, a bridge was built over the Schuylkill, on Market street in Philadelphia, and it is claimed that this was the 'first great structure of its kind in America.' It was of wood, and cost \$300,000, and while not the first bridge in the country, it was the first great bridge. . . . It was the result of enterprise on the part of an incorporated company, and the example set was industriously followed until all the large streams of the State were spanned with substantial bridges. . . . At the Callowhill street crossing over the Schuylkill, in Philadelphia, in 1842, Charles Ellet built the first wire suspension bridge in the United States. . . . It was torn down in 1874."—H. M. Jenkins, ed., *Pennsylvania, colonial and federal*, v. 3, pp. 255-257, 266-267.

1790.—Second constitution.—"The success of the Federal Convention and the ratification by Pennsylvania of the Constitution of the United States gave new life to the Federalists, and they determined to have a new Constitution for Pennsylvania. A convention was called which met in Philadelphia, November, 1780. It prepared a constitution and then adjourned in February, 1790, until the following August, thus giving ample time for the document to be discussed. When the convention reassembled the instrument was adopted without being referred to a popular vote. The new constitution was to a large extent modeled on that of the United States. The old executive council, the single legislative house, and the censors were swept away, and a governor to be elected by the people, and a legislature of two houses took their place. Most of the important State officials, including the judges, were to be appointed by the governor. The new constitution took effect at once (October, 1790). General Thomas Mifflin was elected governor and was twice re-elected, holding office until 1790."—A. C. Thomas, *History of Pennsylvania*, pp. 170-171.

1790-1800.—Philadelphia the capital of the country. See PHILADELPHIA: 1776-1800.

1794.—Whiskey Rebellion.—"In every part of

the United States except Pennsylvania and in by far the larger number of the counties of that state, the officers of the Federal Government had been able to carry the excise law [passed in March, 1791, on the recommendation of Hamilton], unpopular as it generally was, into execution; but resistance having been made in a few of the western counties, and their defiance of law increasing with the forbearance of the Government in that State, prosecutions had been ordered against the offenders. In July, the Marshal of the District, Lenox, who was serving the process, and General Neville, the Inspector, were attacked by a body of armed men, and compelled to desist from the execution of their official duties. The next day, a much larger number, amounting to 500 men, assembled, and endeavored to seize the person of General Neville. Failing in that, they exacted a promise from the Marshal that he would serve no more process on the west side of the Alleghany; and attacking the Inspector's house, they set fire to it, and destroyed it with its contents. On this occasion, the leader of the assailants was killed, and several of them wounded. Both the Inspector and Marshal were required to resign; but they refused, and sought safety in flight. A meeting was held a few days later, at Mingo Creek meeting-house, which recommended to all the townships in the four western counties of Pennsylvania and the neighboring counties of Virginia, to meet, by their delegates, at Parkinson's ferry, on the Monongahela, on the 14th of August, 'to take into consideration the situation of the western country.' Three days after this meeting, a party of the malcontents seized the mail, carried it to Canonsburg, seven miles distant, and there opened the letters from Pittsburg to Philadelphia, to discover who were hostile to them. They then addressed a circular letter to the officers of the militia in the disaffected counties, informing them of the intercepted letters, and calling on them to rendezvous at Braddock's Field on the 1st of August, with arms in good order and four days' provision. . . . This circular was signed by seven persons, but the prime mover was David Bradford, a lawyer, who was the prosecuting attorney of Washington County. In consequence of this summons, a large body of men, which has been estimated at from five to seven thousand, assembled at Braddock's Field on the day appointed. . . . Bradford took upon himself the military command, which was readily yielded to him. . . . Bradford proposed the expulsion from Pittsburg of several persons whose hostility had been discovered by the letters they had intercepted; but his motion was carried only as to two persons, Gibson and Neville, son of the Inspector. They then decided to proceed to Pittsburg. Some assented to this, to prevent the mischief which others meditated. But for this, and the liberal refreshments furnished by the people of Pittsburg, it was thought that the town would have been burnt. . . . The President issued a proclamation reciting the acts of treason, commanding the insurgents to disperse, and warning others against abetting them. He, at the same time, wishing to try lenient measures, appointed three Commissioners to repair to the scene of the insurrection to confer with the insurgents, and to offer them pardon on condition of a satisfactory assurance of their future obedience to the laws. . . . Governor Mifflin followed the example of the President in appointing Commissioners to confer with the insurgents, with power to grant pardons, and he issued an admonitory proclamation, after which he convened the Legislature to meet on the 3d of November. The

Federal and the State Commissioners reached the insurgent district while the convention at Parkinson's ferry was in session. It assembled on the 14th of August, and consisted of 226 delegates, all from the western counties of Pennsylvania, except six from Ohio County in Virginia. They appointed Cook their Chairman, and Albert Gallatin, Secretary, though he at first declined the appointment. . . . The Commissioners required . . . an explicit assurance of submission to the laws; a recommendation to their associates of a like submission; and meetings of the citizens to be held to confirm these assurances. All public prosecutions were to be suspended until the following July, when, if there had been no violation of the law in the interval, there should be a general amnesty. These terms were deemed reasonable by the sub-committee; but before the meeting of sixty took place, a body of armed men entered Brownsville, the place appointed for the meeting, and so alarmed the friends of accommodation, that they seemed to be driven from their purpose. Gallatin, however, was an exception; and the next day, he addressed the committee of sixty in favor of acceding to the proposals of the Commissioners; but nothing more could be effected than to pass a resolution that it would be to the interest of the people to accept those terms, without any promise or pledge of submission. . . . On the whole, it was the opinion of the well-disposed part of the population, that the inspection laws could not be executed in that part of the State; and that the interposition of the militia was indispensable. The Commissioners returned to Philadelphia, and on their report the President issued a second proclamation, on the 25th of September, in which he announced the march of the militia, and again commanded obedience to the laws. The order requiring the militia to march was promptly obeyed in all the States except Pennsylvania, in which some pleaded defects in the militia law; but even in that State, after the Legislature met, the Governor was authorized to accept the services of volunteers. . . . The news that the militia were on the march increased the numbers of the moderate party. . . . Bradford, who was foremost in urging resistance to the law, was the first to seek safety in flight. He sought refuge in New Orleans. A second convention was called to meet at Parkinson's ferry on the second of October. A resolution of submission was passed, and a committee of two was appointed to convey it to the President at Carlisle. . . . On the return of the committee, the Parkinson ferry convention met for the third time, and resolutions were passed, declaring the sufficiency of the civil authorities to execute the laws; affirming that the excise duties would be paid, and recommending all delinquents to surrender themselves. . . . Lee, then, as Commander-in-chief, issued a proclamation, granting an amnesty to all who had submitted to the laws; and calling upon the inhabitants to take the oath of allegiance to the United States. Orders were issued and executed to seize those offenders who had not signed the declaration of submission, and send them to Philadelphia; and thus was this purpose of resisting the execution of the excise law completely defeated, and entire order restored in less than four months from the time of the burning of Neville's house, which was the first overt act of resistance. It was, however, deemed prudent to retain a force of 2,500 militia during the winter, under General Morgan, to prevent a return of the spirit of disaffection which had so long prevailed in Pennsylvania."—G. Tucker, *History of the United States*, v. 1, ch. 7.

1807-1822.—Nominating conventions.—Harrisburg, the capital.—“To Pennsylvania may be credited the beginning of . . . the nominating convention. The President of the United States and the governors of the States had usually been nominated by caucuses of the Congress or Legislature, as the case might be. The Democrats of Delaware County in 1807, in view of the fact that they had no voice in the nomination of the governor, proposed that delegates should be chosen to nominate candidates for office. The suggestion was partly adopted, and in 1817 Governor Findlay was nominated in this way, and in 1820 the method was adopted by both parties. ‘The Pennsylvania Plan,’ as it was called, spread to other States, was adopted by the national parties, and has been employed ever since. Governor Snyder, having served three terms, was ineligible for re-election, and William Findlay, who had been State treasurer for a number of years, was nominated by the Democrats, and after a campaign marked by bitter personalities, was chosen governor by a small majority (1817). Early in 1810 Governor Snyder had approved the Act establishing Harrisburg as the capital. The government offices were removed to that town in 1812, and on May 31, 1810, the corner stone of the capitol was laid. The building was first occupied in January, 1822. Findlay served only one term (1817-1820). He was a strong advocate of internal improvements, especially by opening the rivers for navigation and by constructing canals.”—A. C. Thomas, *History of Pennsylvania*, pp. 216, 222.

1825-1836.—Internal improvements.—Experience with early railroads.—“Pennsylvania in the course of ten years had incurred a debt of twenty-four millions, chiefly for internal improvements, owned six hundred miles of canal and one hundred and twenty of railroad, and had received during 1835 nearly seven hundred thousand dollars in tolls. As planned, the Commonwealth was to build the railroads, but furnish neither cars nor motive power. Any citizen might use his own vehicles, provided toll was paid to the state for the use of the rails. At first, therefore, individuals and firms engaged in the business of transportation, provided their own cars and horses, employed their own drivers and charged such rates as competition and the tolls exacted by the State would permit. The result was dire confusion. The road from Philadelphia to Columbia was a single-track affair with turnouts to enable cars going in opposite directions to pass each other. But it often happened, as the curves were many and sharp, that teamsters did not see each other ‘till they came face to face on the track between two turnouts. Who should go back would then become a question not always settled peaceably. In the hope of preventing such quarrels and delays, a post was put half-way between each pair of turnouts, and the rule made that when two cars met the one which had passed the post should have the right of way. But the drivers . . . paid no heed to the posts or the rules, and in despair the commissioners ordered a second track to be laid from Philadelphia to Columbia. Toward the close of

1834 this improvement was completed, and then for the first time two locomotives dragging long trains of little cars, ran over the line from Lancaster to Philadelphia. The next year a third locomotive made its appearance, and from that hour the horse as a motive power was doomed. Opposition to the use of steam was strong. Locomotives would ruin the farming interests, hens would cease to lay, cows would no longer give milk, rates of insurance on houses and barns would rise, and hundreds of teamsters would be put out of employment. But it was so clear that both horses and steam could not be used at the same time on the road, and the engineer insisted so strongly on the use of steam, that the commission, in 1836, excluded the horse, supplied locomotives, and charged toll for moving the cars of shipping firms or individuals.”—J. B. McMaster, *History of the people of the United States*, v. 6, pp. 341-342.

1834-1841.—Establishment of free common schools.—“In Pennsylvania the establishment of free common schools was withstood vigorously. From 1809-1835 the state provided education for children whose parents would take oath that they could not afford to send them to private pay schools. Self-respecting poor would not submit to this act and by 1834 more than two hundred thousand children were out of school. Then the state established free tax-supported schools, and fixed the first Friday in September for the election of directors in each school district. . . . Scarcely had the legislature assembled in December, 1834, when petitions for the repeal of the act were received from thirty-eight counties out of fifty-one. Lancaster sent eighty-two; Berks sent sixty-three; Chester sent forty. Opposition was least along the New York border, greatest in the German counties, and formidable in the central and south-eastern districts. Beyond the mountains the law was fairly well received. The Senate passed a bill suspending the law for five years. But Thaddeus Stevens in the House saved the schools. The bill was amended but not repealed, and Pennsylvania was given a free, common-school system. Pupils rushed in, new schools were opened, and the number rose from seven hundred and sixty-three in 1835 to four thousand and eighty-nine in 1837. Hard times reduced them to thirty-one hundred and fifty-one. But they rose again to over five thousand in 1841 and went on increasing in number year after year.”—J. B. McMaster, *History of the people of the United States*, v. 7, pp. 160-161.

1838-1845.—Third constitution.—Financial difficulties.—“The Constitution adopted in 1790 was not satisfactory to many, and almost at once efforts were made for its revision. . . . By 1825 the feeling had grown so strong that the question was submitted to a popular vote, which was against revision. Ten years later the question was submitted again and an affirmative vote was the result. The Whigs were against a revision, while the Democrats supported one. As in former elections the northern and western counties were in favor of change, and the eastern counties opposed it. At the election for delegates to a convention the parties were so equally represented that there were chosen sixty-six Whigs and Anti-Masons, sixty-six Democrats, and one doubtful delegate. As this man usually voted with the Whigs, the result was a more conservative document than would otherwise have been the case. The convention met at Harrisburg, May 2, 1837, and continued its sessions at Harrisburg and at Philadelphia until February 22, 1838. . . . On the whole the changes were not radical. A few of the most

important were: Senators were to be elected for three years instead of four—one-third to be chosen annually; terms of governors and legislative sessions were to begin on the first Tuesday in January instead of in December; the qualifications for electors were made less strict—one year's residence in the State and ten days in the election district, instead of two years' residence. The old document allowed any freeman to vote, the new one inserted the word 'white.' In consequence of the insertion of this word Thaddeus Stevens refused to sign the document, although he was a delegate. An article provided for amendment was also inserted. But probably the most important change was that which limited the appointing power of the governor. He was given the power to appoint the secretary of the commonwealth, and with the advice and consent of the Senate, all the judges; but all county officers were made elective. The terms of the judges, which had been 'during good behavior,' were changed to fifteen years for Supreme Court judges, ten years for those of lower rank, and five years for associate judges. Judges also were made removable by the governor on application of the Legislature. The popular vote took place in October, 1838, and the new constitution was adopted by the small majority of twelve hundred in a large poll. . . . Meantime the finances of Pennsylvania were in a bad condition. The zeal for public improvements had carried the legislature in its appropriations far beyond the limits of safety. Near the end of Governor Ritner's term of office (1838) the State debt was about \$30,000,000, and the annual expenses of the State were several hundred thousand dollars beyond its income. On June 19, 1838, a flood in the Juniata carried away forty miles of canal and \$400,000 were borrowed from the Bank of the United States to pay for repairs. To complete the system of canals several millions more were needed, and . . . earlier loans would soon fall due. The financial outlook for the State was certainly gloomy. . . . [When] David R. Porter was chosen governor by a comparatively small majority . . . the treasury was not only bare of funds, but there was a continual demand for money to carry on the work of public improvements which could not well be stopped without heavy loss. Besides this, so far as appeared, there would be no funds to meet the interest soon due on the State bonds. The banks refused to advance money, and indeed, owing to the state of the money market and the recent financial crisis, they were unable to do so. Governor Porter succeeded in raising several millions and for a time tided over the danger. Notwithstanding all his efforts, the Legislature adjourned without making sufficient provision for the claims upon the State. He called it together again and new loans and taxes were authorized, but still the indebtedness of the State increased, and certificates instead of cash were given in payment of interest due. These, of course, increased the debt still further and depressed the value of the bonds until they fell to one-half their face value. As a considerable portion of the debt was held in England, there was much hard feeling there which expressed sharp words by Sydney Smith, the great essayist. 'The fraud,' he wrote, 'is committed in the profound peace of Pennsylvania by the richest State in the Union. . . . It is an act of bad faith which has no parallel and no excuse.' . . . It should be stated that in a few years Pennsylvania paid all her indebtedness, principal and interest, with interest on the deferred interest. But the previous non-payment remains as a fact to which patriotic Pennsylvanians look back

with a feeling of humiliation. It was not until 1845, when the State debt had reached \$40,000,000, that a solid foundation for the State finances was reached, and from that time the credit of Pennsylvania has been of the highest."—A. C. Thomas, *History of Pennsylvania*, pp. 231-235.

1873.—Fourth constitution.—"By an act approved June 2, 1871, the question of calling a convention for the purpose of forming a new Constitution was submitted to the people on October 10, 1871, and was favorably decided by a vote of 316,097 for and 69,715 against. The act regulating the holding of the convention was approved April 11, 1872, the number of delegates was fixed at one hundred and thirty-three, and they were elected on October 8, 1872. The convention met in the House of Representatives at Harrisburg on November 12, 1872, and adjourned November 27, to meet in Philadelphia, January 7, 1873, where the balance of its sessions were held. William M. Meredith, of Philadelphia, was elected president. He died August 17, 1873, during an adjournment. The convention on reconvening September 16 elected as his successor John H. Walker, of Erie county. . . . On November 3, 1873, the convention finished its work of drafting the . . . Constitution. It was submitted to the people at an election held December 16, 1873, and adopted by a vote of 253,744 to 108,594. This Constitution went into effect January 1, 1874."—*Smull's legislative handbook and manual of the state of Pennsylvania, 1921-1922*, p. 399.

1875.—Exposure of the Molly Maguires.—"Among the anthracite coal miners (of Pennsylvania) a society was formed, probably about 1854, called the Molly Maguires, a name long known in Ireland. The members were all Irish, professed the Roman Catholic faith, and were active in the Ancient Order of Hibernians. The Church, the better class of Irishmen, and the Hibernians, however, were shocked by the doings of the Molly Maguires and utterly disowned them. They began their career of blackmail and bullying by sending threats and death notices embellished with crude drawings of coffins and pistols to those against whom they fancied they had a grievance, usually the mine boss or an unpopular foreman. If the recipient did not heed the threat, he was waylaid and beaten and his family was abused. By the time of the Civil War these bullies had terrorized the entire anthracite region. . . . Finally the president of one of the large coal companies employed James McParlan, a remarkably clever Irish detective. He joined the Mollies, somehow eluded their suspicions, and slowly worked his way into their confidence. An unusually brutal and cowardly murder in 1875 proved his opportunity. When the courts finished with the Mollies, nineteen of their members had been hanged, a large number imprisoned and the organization was completely wiped out."—S. P. Orth, *Our foreigners (Chronicles of American series)* pp. 117-118.

1889.—**Johnstown disaster.**—On May 31, 1889, a break in the dam at the outlet of Conemaugh Lake caused a flood to sweep over Johnstown. The loss of property, amounting to over \$10,000,000, was overshadowed by the death of about 2,000 inhabitants of the stricken district.

1892.—**Homestead strike.**—“During the presidential campaign of 1892 a violent strike at the Carnegie Steel Company’s works in Homestead, Pennsylvania, arose from a reduction in wages and a refusal of the company to recognize the Iron and Steel Workers’ Union. An important feature of this disturbance was the use of armed Pinkerton detectives by the company for the protection of its buildings. Armed with rifles they fell into conflict with the workmen, a miniature military campaign was carried on, lives were lost and large amounts of property destroyed. Eventually the entire militia of the state had to be called out to maintain peace.”—C. R. Lingley, *Since the Civil War*, p. 320.—See also LABOR STRIKES AND BOYCOTTS: 1877-1911.

1897-1908.—**Capitol burned.**—New capitol built.—“In February, 1897, the dignified state capitol at Harrisburg was burned. A new capitol building was at once authorized by the Legislature which was in session at the time. The new building was to be fireproof, of renaissance style of architecture, and was to cost not exceeding \$500,000. The new building, though occupied by the Legislature in January, 1899, was not completed until 1906, and the interior decorations are still unfinished [written in 1913]. The result is one of the most beautiful state buildings in America. The cost, however, owing in part to changes in the plans, has been about \$4,000,000, and the furniture and general equipment about \$9,000,000 more. This latter sum was such an extraordinary expenditure that investigations were made which revealed extensive and systematic fraud deserving no other name than robbery. The legal prosecution lasted so long that several of the men charged with taking part in the frauds died before conviction. The State recovered some of the money, and two or three of the defrauders were imprisoned.”—A. C. Thomas, *History of Pennsylvania*, p. 276.

1902.—**Coal strike.**—Settlement by arbitration. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1902-1920.

1905-1906.—**Creation and organization of state constabulary.**—“The Act creating the Department of State Police of the State of Pennsylvania was a brief and simple document. The law was very loosely drawn—purposely so, of well considered intent. The work that it was designed to institute was entirely experimental, creative. A new organization had to be devised to fit the particular conditions that it would be called upon to handle. The requirements of these conditions could be accurately visualized and worked out by one man only, the man at the head of the organization; and the whole fate of the undertaking, for better or for worse, must therefore hang upon the character, the inspiration, of that one man. . . . [Governor Pennypacker offered the Superintendency of the State Police to Captain John C. Groome, commanding the First City Troop of Philadelphia.]—K. Mayo, *Justice to all*, pp. 11-15.—Captain Groome was very successful in his new office. The need for such a force for the enforcement of law had long been evident. “In the street car strike in Philadelphia in 1910 a company of militia was

disarmed and made ridiculous by a mob of women, which was promptly handled and made to behave by a small body of police. In the Pressed Steel Car strike at McKee’s Rocks, near Pittsburgh, the strikers cheered the Constabulary, even after they had been sharply handled by the police. They recognized that the Constabulary were doing their duty, and doing it well, admired their courage, and respected them for showing as much consideration as possible. . . . It is the prevention of crime and the apprehending of rural offenders which seem to us the chief reasons for a Constabulary. . . . It is a striking fact that the number of arrests by the Pennsylvania Constabulary . . . decreased from 5,028 in 1908 to 1,144 in 1912. This does not indicate any police laxity; on the contrary, . . . the [steady decrease] is traceable directly to the preventive work of . . . [the police], who patrol annually between 400,000 and 500,000 miles, although there are but 228 of them [1919], and they are likely to be drawn off at any moment for strike or emergency duty. Thus, they furnish from their number trustworthy State detectives. In the matter of the Coatesville lynching, for instance, the Constabulary placed detectives in that town and obtained the evidence upon which the indictments of the lynchers were based. It is safe to say that if a single member of the force had been in town on the day of the lynching, the town and State would not have been disgraced. Yet the service of the Constabulary . . . cost the State only \$331,000 a year [written in 1914]. . . . It is perfectly plain that by its preventive work the Pennsylvania police have saved the State much more than they have cost, to say nothing of the comfort and security given to districts hitherto terrorized by the lawless, or in danger from wandering criminals. . . . The Pennsylvania police have done yeoman service as forest rangers and game and fire wardens, in addition to all their own duties; in 1906, prior to the establishment of the police, seven civilian game-wardens were shot at and four killed. Since the police appeared all such attacks have ceased.”—*Nation*, Jan. 1, 1914, pp. 4-5.

1906.—**Reform legislation.**—The popular revolt of 1905 in Philadelphia against the intolerable rottenness of municipal government under the dominant party “machine” had prompt effects in the state. “When the election, last November, and still more the reports made by working politicians in the best organized and informed machine in the land, showed that these classes wanted a change, the machine and its leaders changed instantly. A pliant governor was as prompt to call the Legislature in extra session as he had been to find reasons for the vilest excess of the political plunderers of the State. The same Legislature as before met, and in a brief session passed every measure for which reformers had been asking in vain for twenty-five years,—two of them in more drastic form than any one had yet proposed. Save that the Corrupt Practices Act is more precise and severe than any yet passed, except in Connecticut, and the separation and protection of the civil service of Philadelphia more complete than has yet been enacted for an American city, the new legislation follows the general trend of such measures in other States.”—*Review of Reviews*, Apr., 1906.

1908-1909.—**Application of commodities clause of Hepburn Act to anthracite railroads.** See RAILROADS: 1908-1909.

1910.—**Forestry policy of the state.**—Its relation to taxation.—Forestry academy.—“The exhaustion of timber in . . . [the] state has been

caused more by excessive taxation than by any real demand for lumber. If forest owners could have seen any coming relief from taxation, they would have been glad to hold their resources for the future, and only enough would have been cut to meet actual needs, and for this a fair payment would have been made. Regulation of cutting by 'a trust,' even, would have been helpful. There seems to be but one remedy for this condition of affairs. 'So long as land remains in the condition known as timber land, the owner, or owners, thereof should pay no taxes upon it, except in so far as he, or they, derive an actual revenue from it.' [If this statement, made in 1894], had been modified so as to read 'should pay no taxes upon the timber, except in so far as he or they derive an actual revenue from it,' there would have been a practical accord with the new-born thesis of the National Conservation Association, which demands 'the separation, for purposes of taxation, of the timber from the land on which it grows, so that the forest crop shall be taxed only when it is harvested, while the land shall be taxed every year.' It may be stated, as an indication of the advanced relation of Pennsylvania to the forestry problem, that a bill was introduced [in 1909] to create out of lands owned by individuals or corporations auxiliary forest reserves, to be practically under the direction of the State Department of Forestry. The land of these reserves was to be assessed for taxation at a minimum of one dollar an acre. The timber was to remain untaxed until cut, when the owner or owners were to pay an income tax of seventy-five cents for each thousand feet of coniferous timber cut, and fifty cents for each thousand feet of other timber cut. The bill failed of passage, but its reception was such as to indicate passage of it, or of a similar bill, in the near future. As a state Pennsylvania has made a notable start in forestry, by the purchase of 916,375 acres of non-agricultural land, which is set apart as a perpetual forest reserve, and which cannot be sold, or in any way alienated from the purpose for which it was intended. For planting all suitable land within this area three nurseries have been established, in which there are now millions of forest tree seedlings growing, which will be planted as fast as ready for removing. Pennsylvania has had for several years a State Forest Academy, located at Mont Alto, in which young men are educated, at state expense, for the public forestry service. Admission to this school can be gained only after a rigid competitive examination. On the average, there are about sixty applicants each year, and from this number the ten who have passed the best mental and physical examination are accepted, after they have given satisfactory bond in the sum of five hundred dollars, to remunerate the state for money expended upon them, if they are dismissed for misconduct, failure to pass examinations, or for failure to promptly obey orders. In addition to this forest academy, there is now a large class engaged in the study of forestry at the State College, where a highly satisfactory curriculum has been established."—J. T. Rothrock, *Forestry policy of Pennsylvania (Annals of the American Academy of Political and Social Science, Mar., 1910)*.

1911-1915.—Administrative changes.—Centralization of school control.—Social legislation.—In 1911 the legislature of Pennsylvania created the bureau of medical education, established a department of insurance and revised the existing school laws along the line of greater centralization. Two years later the record of legislation, while falling short of expectations, was commendable.

It included a primary election law, a mother's pension act, the creation of a public utilities board and the substitution of electrocution for hanging as the highest penalty for crime. In the meantime Pittsburgh had taken steps in 1912 to investigate moral conditions. A city ordinance provided for the selection of a morals efficiency commission of twelve, which was to make a survey and report to the city officials. The work of the commission was so well done that it became a model for other communities in a widespread campaign for civic righteousness. It was not until 1915 that Pennsylvania succeeded in enacting a program of social legislation. The most striking achievements were the passage of a child labor law and a series of acts constituting a law of workmen's compensation. The former places the minimum age for child labor at fourteen and restricts the maximum working day to nine hours and the maximum week to fifty-one hours, eight of which must be spent in vocational training. The plan of the workmen's compensation is optional, but the common law defenses of employers, who elect to accept the compensation system, are eliminated. Finally, the legislature established an employment agency in the state department of labor, with the hope of serving both labor and capital.

1915.—Lackawanna railroad construction.—Forestry.—On November 6, 1915 an original piece of railroad construction was opened on the Lackawanna road between Scranton, Pennsylvania, and Binghamton, New York. The feature of the work is the great viaduct over the Tunkhannock Valley. It is half a mile long and as high as a twenty-story building. The whole cut-off from Clark's Summit to Halstead, Pennsylvania, is 30.6 miles long and cost the road \$12,000,000. Although it reduces the distance between New York and Buffalo just 3.6 miles, officials claim that it would pay for itself many times over because of the grade and curvature which it eliminates.

1917-1918.—Taxation and internal improvements.—Municipal home rule.—World War legislation and activities.—Mineral production.—In 1917 the legislature passed an inheritance tax law and a year later authorized the issuance of bonds to the amount of \$50,000,000 for use in the construction and improvement of highways. An act of 1917 granted to municipalities within the state the authority to adopt the commission manager or manager type of government. The response of the state to the nation's need during the World War resulted in 297,891 men entering the national Service. This was approximately 7.93% of the whole force. A tank camp, Camp Colt, was located at Gettysburg, and an ambulance unit camp was organized at Allentown. In 1917 the state obligated itself to pay to the dependents of soldiers in the service an amount equal to the difference between that paid by the federal government and that paid in civil employment. Such payment was not to exceed \$2,000. In 1917 Pennsylvania ranked first in the value of her mineral products, producing coal, clay products, cement, and natural gas to the value of \$880,220,510. This was 21.6% of the total mineral production of the United States. The amount of coal mined in the state in 1918 was 183,712,000 tons. This was the largest amount mined in any state in the Union.

ALSO IN: *Mineral resources of the United States, (United States Geological Survey, 1917, pt. 1, pp. 44A, 68A)*.

1918-1922.—Commission on constitutional amendment.—In the fall of 1918 William C. Sproul was elected governor of Pennsylvania, pledged to a program of constitutional revision.

Between the election in November and the meeting of the legislature in January, 1919, there was much discussion of this subject. . . . William Draper Lewis, dean of the University of Pennsylvania Law School, long an advocate of revision, urged that a board should first study the subject carefully, with a view to making specific recommendations to a convention to be called later. . . . On March 11 the Crow bill was introduced providing for a commission of twenty-five citizens to study the question of revision and amendment, and report to the session of 1921. . . . [It passed both House and Senate rapidly and was] signed by Governor Sproul on June 4, 1919. . . . The commission met in the senate chamber at Harrisburg two or three days a week, from December 9 to February 11, by which time it had tentatively adopted a complete draft of a revised constitution. It then adjourned until April 6. This preliminary draft, as it was officially known, was printed and given wide circulation throughout the state, with the announcement that public hearings would be held at Harrisburg, beginning April 6. . . . The outstanding feature of the draft, from the liberal point of view, was the provision for a real budget system. Closely related to the budget provision was one specifying that appropriations to educational, beneficial and charitable institutions not wholly under the control of the state should be made in a lump sum to a class or classes of such institutions, thus eliminating much of the evil of the present log-rolling system of making specific appropriations from the state treasury to individual institutions of this character. This preliminary draft contained a new article on municipalities, which were defined as including counties, cities, townships, boroughs, school districts, and incorporated districts. The existing provisions, in original form or as amended, dealing with these subjects . . . were grouped together in this new article, and certain new sections were added. . . . The section relating to debt limit was clarified and that on sinking funds permitted the issuance of serial bonds. . . . The commission reconvened on April 6, and held public hearings in Harrisburg during the next two weeks. . . . After the public hearings in April, the commission again met on May 11, . . . to pass upon all that it considered important of the [suggested] amendments."—E. L. Burnham, *Pennsylvania commission on constitutional amendment (National Municipal Review, Mar., 1921)*.—In 1922 the legislature granted \$5,000 for further work of the commission.

1919.—New charter granted to Philadelphia.—Unicameral system. See PHILADELPHIA: 1919. 1919-1922.—Improvement in administrative efficiency.—Commission appointed for Delaware river bridge.—The 1918-1919 session of the Pennsylvania legislature "was marked by the passage of a considerable number of important bills for the improvement of the administrative economy and efficiency of the state government. Many of these measures were recommended by the economy and efficiency commission during the administration of Governor Brumbaugh, but failed of passage then because of his hostility toward the commission and its work, a hostility culminating in the abolition of the commission by the governor and the veto of recommendations made by it and approved by the legislature. When Governor Sproul succeeded to the office of chief executive, although handicapped by the lack of an economy and efficiency commission, he took up vigorously the task of raising the standard of administrative organization, renewing many of the recommendations of the old commission and adding others to

them. . . . Governor Sproul's activities resulted in the reorganization of the adjutant general's office, the state arsenal, the bureau of standard weights and measures, the department of the secretary of the commonwealth, the state police, the bureau of the fire marshal, the office of the state treasurer, the bureau of statistics, the topographic and geologic survey commission, the attorney general's department, the department of agriculture, the state library, the department of printing and binding, the board of pardons, the department of public instruction, the insurance department, the workmen's compensation bureau, the department of internal affairs, and the governor's office. New bureaus and commissions created in carrying out the plan of reorganization included those of vocational training, standardization of positions in the state department, supervision over the erection of all memorials and other works classed as art, the Delaware river bridge project, and the rehabilitation of physically incapacitated workmen. The number of assistant general agents of the state board of public charities, inspectors in the department of labor and industry, and travelling auditors in the auditor general's department, was also increased. Salary adjustments were made in the cases of the governor, state banking examiners, assistant general agents and the secretary of the committee on lunacy of the state board of public charities, legislative employes, and public school teachers in the state. Other measures passed as part of Governor Sproul's program for administrative improvement included the creation of a sinking fund to replace insurance for state institutions and state property; advances of appropriations to state institutions; regulations for the retirement of state employes; the relief of the government from auditing duties; the publication of biennial, instead of annual, reports of state departments; the abolition of the office of health officer for the port of Philadelphia and of the state quarantine board; standardization of methods of accounting, purchasing and recording in state institutions; the legislative adoption of a constitutional amendment prohibiting the payment of any money from the state treasury except by an act of assembly specifying the amount, purpose, and time of such appropriation; the erection of state office building, and provision for the employment of experts by the governor whenever in his judgment they may be needed."—*National Municipal Review, Oct., 1919, p. 584*.—"An act of the 1019-1020 session of the Pennsylvania legislature also provides for a commission, consisting of the board of commissioners of public grounds and buildings, the mayor of Philadelphia, and two other citizens of the state appointed by the governor, to act with the New Jersey bridge commission in the construction of a Delaware river bridge connecting Philadelphia and Camden. The joint commission is authorized to prepare plans, select a site, gather estimates, and proceed with the actual construction of the bridge as far as money for the purpose is appropriated. The states of Pennsylvania and New Jersey are to bear the cost equally, and of Pennsylvania's share the city of Philadelphia is to pay half."—*National Municipal Review, Oct., 1919, pp. 587-588*.

1921.—Speaker of House of Representatives unseated.—"For the first time in the records of Pennsylvania legislative history, the House of Representatives . . . [on April 26, 1921] declared the office of Speaker vacant, and after deposing Robert S. Spangler of York. . . . at the organization in January, elected Samuel A. Whitaker of Chester County Speaker for the remainder of the session.

The change in Speakers was accompanied by turbulent scenes, and was the result of dissatisfaction on the part of Governor Sproul and his friends with the action of the Speaker and his supporters in regard to reporting out certain bills favored by the State Administration."—*New York Times*, Apr. 27, 1921.

PENNSYLVANIA GERMANS.—"When 'the news spread through the Old World that William Penn, the Quaker, had opened an asylum to the good and the oppressed of every nation, and Humanity went through Europe gathering up the children of misfortune,' our forefathers came out from their hiding places in the forest depths and the mountain valleys which the sun never penetrated, clad in homespun, their feet shod with wood, their dialects oftentimes unintelligible to each other. There was scarcely a family among them which could not be traced to some ancestor burned at the stake for conscience sake. Judge Penny-packer says: 'Beside a record like theirs the sufferings of Pilgrim and Quaker seem trivial.' . . . The thousands of Germans, Swiss and Dutch who migrated here on the invitation of Penn, came without ability to speak the English language, and without any knowledge, except that derived from general report, of the customs and habits of thought of the English people. They went vigorously to work to clear the wilderness and establish homes. They were sober, religious, orderly, industrious and thrifty. The reports the earlier settlers made to their friends at home of the prosperity and liberty they enjoyed in their new homes, induced from year to year many others to come. Their numbers increased so much as to alarm the proprietary officials. Logan wanted their immigration prevented by Act of Parliament, 'for fear the colony would in time be lost to the crown.' He wrote a letter in which he says: 'The numbers from Germany at this rate will soon produce a German colony here, and perhaps such a one as Britain received from Saxony in the 5th Century.' As early as 1747, one of the proprietary Governors attributed the prosperity of the Pennsylvania colony to the thrift, sobriety and good characters of the Germans. Numerous as they were, because this was in its government a purely English colony, the part they took in its public affairs was necessarily limited. The Government officials and the vast majority of the members of the Assembly were all English. During the long struggle in the Colonies to adjust the strained relations with Great Britain, the Germans were seem-

ingly indifferent. They saw no practical gain in surrendering the Penn Charter, and Proprietary Government, under which they had obtained their homes, for the direct rule of the British King. They could not understand the distinction between King and Parliament. . . . When, therefore, in 1776, the issue was suddenly enlarged into a broad demand for final separation from Great Britain, and the creation of a Republic, all their traditional love of freedom was fully aroused. Under the Proprietary rule, although constituting nearly one-half the population of the colony, they were practically without representation in the General Assembly, and without voice in the Government. The right of 'electing or being elected' to the Assembly was confined to natural born subjects of England, or persons naturalized in England or in the province, who were 21 years old, and freeholders of the province owning fifty acres of seated land, and at least twelve acres improved, or worth clear fifty pounds and a resident for two years. Naturalization was not the simple thing it now is. The conditions were exceptionally severe, and comparatively few Germans qualified themselves to vote. The delegates to the Colonial Congress were selected by the General Assembly. In November, 1775, the Assembly instructed the Pennsylvania delegates not to vote for separation from Great Britain. The majority of the delegates were against separation. . . . At the election for new members in May, 1776, in Philadelphia, three out of four of those elected were opposed to separation. The situation was most critical. Independence and union were not possible without Pennsylvania. Geographically, she was midway between the Colonies. She was one of the wealthiest and strongest. Her government was in the hands of those opposed to separation. One course only remained. Peaceful efforts in the Assembly to enfranchise the Germans, by repealing the naturalization laws and oath of allegiance, had failed, and now this must be accomplished by revolution, because their enfranchisement would give the friends of liberty and union an overwhelming and aggressive majority. This was the course resolved on. The Philadelphia Committee called a conference of committees of the Counties. On the 18th of June, 1776, this provincial conference, numbering 104, met in Philadelphia. The German counties were represented no longer by English Tories. There were leading Germans in the delegations from Philadelphia, Lancaster, Northampton, York, Bucks and Berks. In Berks, the loyalist Biddle gives place to eight prominent Germans, headed by Gov. Heister, Cols. Hunter, Eckert and Lutz. The proprietary government of Pennsylvania, with its Tory Assembly, was overthrown—foundation, pillar and dome. This conference called a Provincial Convention to frame a new Government. On the petition of the Germans, the members of the Convention were to be elected by persons qualified to vote for Assembly, and by the military associators (volunteers), being freemen 21 years of age, resident in the province one year. This gave the Germans the right to vote. Thus says Bancroft: 'The Germans were incorporated into the people and made one with them.' The 10th of June, 1776, enfranchised the Germans, and made the Declaration of Independence possible. . . . It is absolutely true, that, as the English people of the province were divided in 1776, the Germans were the potential factors in securing the essential vote of Pennsylvania for the Declaration of Independence. . . . Throughout the Revolution, these Germans . . . were the steadfast defenders of the new Republic. Dr. Stillé, in his

recent admirable 'Life of Dickinson,' concedes that 'no portion of the population was more ready to defend its homes, or took up arms more willingly in support of the American cause.' Washington, when in Philadelphia after the war, testified his high appreciation of the hearty support the Germans gave him, and the cause he represented, by worshiping with his family in the old German church on Race street. The descendants of the Pennsylvania-Germans have settled all over the West, contributing to Ohio, Illinois and other Western States, the same sturdy, honest population that characterizes Pennsylvania."—E. K. Martin and G. F. Baer, *Addresses (Proceedings, Pennsylvania-German Convention, Apr. 15, 1891)*.

PEONAGE: Introduction by Spaniards.—Twentieth century conditions in Central and South America.—Peonage is a status or condition of compulsory service based upon the indebtedness of the peon to the master. The basic fact is indebtedness. (Clyatt case, 197 U.S., 207.) Peonage was introduced into both North and South America by the Spanish conquerors in the sixteenth century. "The first settlers everywhere forced the Indians to work for them, either by declaring them slaves, as a punishment for rebellion, or by establishing the *encomienda* system. [See ENCOMIENDA; COLONIZATION: Spanish.] The Indians never entirely regained their economic independence, for their descendants, with the exception of a few

thousands who live an isolated, half-savage life in clearings in the forest, are to the present day [written in 1918] dependent upon employment on the plantations of the white families. . . . [In Guatemala] the *jornaleros*, or day laborers, are still held on the plantations under a peonage system. Theoretically the Indian is perfectly free to contract himself or not as he pleases, but when he has once done so, he may not leave his employer's service until he has completed the time for which he agreed to work and has repaid any money which the patron may have lent him. If he attempts to escape, he is hunted down by the authorities and returned to the plantation; and the entire expense of capturing him and bringing him back is debited in his account. If, on the other hand, he refuses to work, he may be imprisoned until he is in a more reasonable frame of mind. Those who still prove obstinate, after fifteen days in jail, may be sent at the request of the employer to the convict labor squads, where fifty per cent of the returns of their labor are set aside for the benefit of their creditors. The whole system depends upon keeping the *mozo* in debt. For this purpose, he is allowed a limited amount of credit at the plantation store and is even loaned small sums of money from time to time if necessary. Few are energetic or ambitious to make a serious effort to free themselves from these obligations. They have in fact little incentive to do so, for those who leave the plantation can only look forward to similar employment elsewhere, or what is much worse, to imprisonment into the army, from which *mozos* working on large coffee, sugarcane, banana, or cacao plantations are legally exempt. . . . This peonage system, in itself pernicious, is subject to the gravest abuses. The short-sighted and improvident Indians are easily persuaded to accept advances of money when they have some immediate occasion, such as a baptism or a funeral, for spending it, without realizing apparently the onerous conditions under which they must make repayment."—D. G. Munro, *Five republics of Central America* (D. Kinley, ed., *Carnegie endowment for international peace*, pp. 7-8, 60, 62).—The country about Eten in Peru is a land of "large landed estates whose rich proprietors are grand seigneurs and whose workmen are peons subject to their every whim. As a general thing the common people are well treated and their lords are kind, generous, and hospitable, even if a bit fiery and worldly. These conditions are more apt to occur in Peru than in Chile, where the spirit of manhood and personal independence is the best developed anywhere in South America."—C. S. Osborn, *Andean land (South America)* v. 2, p. 162.—"The peonage system, while undoubtedly existing in many localities in the same sense in which it still survives in some American mill-towns, is by and large a thing of the past [written in 1922], and in some republics—the most notable recent example being Ecuador—has received its death blow through formal legislative action decreeing its total abolition and cancelling the debts owed by any persons in a state of peonage to their masters."—J. Warshaw, *New Latin America*, p. 103.—See also ECUADOR: 1018.

Mexico.—Peonage on haciendas.—Contract labor in prison system.—Conditions in Yucatan.—Abolition in Mexico.—Labour, as measured by wages paid to the individual workman, is cheap in Mexico, but large employers state that when the total cost is compared with the output, there is very little difference between the price of labour here and other parts of the world. This generalization as to cost does not apply on the great haci-

endas. . . . There, labour is employed under peculiar conditions, which in many cases is hardly to be distinguished from actual slavery. . . . The hacendado (proprietor) supplies his peons with everything they eat or drink or wear, and the cost is charged against the peon's wages; for there is as yet [1914] no 'Truck Act' in the Republic. The peons are generally born and reared on the estate. When they arrive at maturity, often before it, the first thing they do is to borrow from the hacendado a sum of money to enable them to get married. From that hour the labourer ceases to be a free man. . . . Never again in his life will the peon be free of debt, because it is a sheer impossibility for him to save any money. Indeed, he rarely or never sees any money. He toils from year's end to year's end; the hacendado, or his manager, supplying food and clothes as the peon requires them for himself and his wife and children; and every year he gets deeper into the mire. So long as he owes a single peso he is tied body and soul to the estate on which he was born. Imprisonment for debt is supposed to be contrary to the laws of the Republic, but a peon in debt, if he runs away, will be arrested and handed back to his master. . . . If, in his despair, he commits a crime and is imprisoned, he is in even deeper slavery than before, because the system of contract labour prevails in Mexico, and criminals are hired out to contractors, who usually see to it that they make a profit on the transaction. Little wonder, then, that the late Francisco Madero's promise to reform the laws relating to 'peonage,' and to give every peon land and a mule of his own, brought the poor, discontented wretches flocking to his standard, and enabled him to overthrow Porfirio Diaz. The bitter disappointment that followed the failure of Madero to fulfill any of his promises . . . had much to do with the disorder [which followed]."—R. J. MacHugh, *Modern Mexico*, pp. 111-113.—Owing to the commercial aspect of the work on which the peons are employed, the system developed in its worst form in Yucatan. In 1914 an investigator wrote as follows: "Slavery is peonage carried to its greatest possible extreme, and the reason we find the extreme in Yucatan is that, while in some other sections of Mexico a fraction of the ruling interests are opposed to peonage and consequently exert a modifying influence upon it, in Yucatan all the ruling interests are in henequen. The cheaper the worker the higher the profits for all. The peon becomes a chattel slave. Maya slaves die off faster than they are born, and . . . two-thirds of the Yaquis die during the first year of their residence in the country. Hence the problem of recruiting the slaves seemed . . . a very serious one. . . . [It was not, however, so serious as it seemed. All that was necessary was to get a free laborer into debt.] The amount of the debt does not matter, so long as it is a debt, and the little transaction is arranged by men who combine the functions of money lender and slave broker. Some of them have offices in Merida and they get the free laborers, clerks and poorer class of people generally into debt . . . by playing on their needs and tempting them. . . . These men buy and sell slaves. And the planters buy and sell slaves. . . . Slaves are not only used on the henequen plantations, but in the city, as personal servants, as laborers, as household drudges, as prostitutes. . . . The debt element in Yucatan not only does not palliate the condition of the slave, but rather makes it harder. It increases his extremity, for . . . it reaches out its tentacles and drags down his brother, too. The

portion of the people of Yucatan who are born free possess no 'inalienable right' to their freedom. They are free only by virtue of their being prosperous. Let a family, however virtuous, however worthy, however cultivated, fall into misfortune, let the parents fall into debt and be 'unable to pay the debt, and the whole family is liable to pass into the hands of a henequen planter. Through debt, the dying slaves of the farms are replaced by the unsuccessful wage-workers of the cities. . . . The slaves of Yucatan get no money. They are half starved. They are worked almost to death. They are beaten. A large percentage of them are locked up every night in a house resembling a jail."—E. J. Turner, *Barbarous Mexico*, pp. 18-22.—In 1911 the abolition of peonage was one of the chief issues in the overthrow of President Diaz. The new government had promised freedom and a dollar a day but so far (1922) the average wage is less than this.—See also MEXICO: 1885-1908; 1910-1923.

In the United States.—Russell report.—Investigation by Immigration Commission.—Peonage in the South.—Prison peonage.—Early in the century complaints were made that a virtual system of peonage was maintained in some parts of the United States. Directions were given for an official investigation, which was made by Charles W. Russell, the assistant attorney-general, who reported as follows: "Under the criminal law as now in force the offense of peonage may be defined as causing compulsory service to be rendered by one man to another on the pretext of having him work out the amount of a debt, real or claimed. That is Mexican peonage proper, as defined by our highest court in the Clyatt case (197 U.S., p. 207). But, as fully explained in my report of October, 1907, and January, 1908, where there is no indebtedness either real or claimed, a conspiracy to cause compulsory service of citizens of the United States is punishable; and so, also, according to the only court that has directly passed upon the question, is the carrying or enticing any person from one place to another in order that he may be held in compulsory service.

"I use the words 'compulsory service' as equivalent to the constitutional phrase 'involuntary servitude' because the Supreme Court so treats them in the Clyatt case, and I say that a mere claim of debt is sufficient because several inferior courts have so decided, and because in the Clyatt case the indictment, to which no objection seems to have been made, alleged a mere claim of indebtedness. . . . I have no doubt, from my investigations and experiences, that the chief support of peonage is the peculiar system of State laws prevailing in the South, intended evidently to compel service on the part of the workingman. It is hoped that an enlightened self-interest and the demand for labor made necessary by the expansion of old industries and the introduction of new will lead to the amendment or repeal of the State laws which are the chief support of peonage practices. These State laws take various forms and are used in various ways to uphold peonage and other kinds of involuntary servitude. Some of them are vagrancy laws, some contract labor or employment laws, some fraudulent pretense or false promise laws, and there are divers others. Some few of those in question, such as absconding debtor laws, labor enticing, and board-bill laws, were not originally passed to enslave workmen; but in view of the use to which they are put, need amendment in order that they cannot be so abused. These laws are used to threaten workmen who, having been

defrauded into going to an employer by false reports as to the conditions of employment and the surroundings, naturally become dissatisfied as soon as they find how they have been defrauded. . . . Until we began our work in October, 1906, the chief supply of peons came from the slums—i. e., foreign quarters of New York, and from Ellis Island, through the operations of licensed labor agents of New York. These were reaping a rich harvest from the price per head for laborers supplied to employers at a distance, and the temptations to fill all orders and outdo rival agents by a total disregard of truth and honesty in dealing with both laborer and employer was too great for a number of these brokers." "The Immigration Commission was already planning an investigation of alleged peonage cases in which immigrants were concerned, when, on March 2, 1908, the following resolution was passed by the House of Representatives: 'That the Immigration Commission be requested to make an investigation into the treatment and conditions of work of immigrants on the cotton plantations of the Mississippi Delta, in the States of Mississippi and Arkansas, and upon the turpentine farms, lumber camps, and railway camps in the States of Florida, Mississippi, Louisiana, and other States, and to report them at as early a date as possible.' Many complaints of peonage and ill treatment had been made by immigrant laborers working in southern States. Reports of conditions in that section, which had appeared in magazines and newspapers, had inspired the resolution which was a combination of two resolutions introduced by two southern Congressmen. It was denied that peonage existed in the South, and no suggestion or intimation was made, during the debate in the House upon the resolution, that any condition of peonage had ever existed either in the East or in the West. As is evidenced by the Congressional Record, the phrase 'and other States' was inserted so as to avoid the appearance of sectionalism. . . . The word 'peonage' does not appear in the House resolution, the Commission having been requested 'to make an investigation into the treatment and conditions of work of immigrants.' It was evidently intended, however, that an examination should be made of complaints and cases in which peonage had been alleged, and the peonage committee confined its work chiefly to such matters. . . . This committee found and reports that instances of peonage . . . had occurred in 1906 and 1907 in some of the southern States, but these were only sporadic instances and the Commission found no general system of peonage anywhere. There had been convictions in Florida, including one case in which the defendants resided in Alabama, and the most flagrant case found was in the State of Arkansas. In the Arkansas case the immigrant was arrested as a vagrant, convicted before a justice of the peace, and sentenced to pay a fine of \$10 and costs. There was added to this sentence, without authority of law, the expenses and mileage of the constable who came to the town where he was arrested, and the expenses and mileage of the constable and prisoner going from the place of arrest to the convict farm, the lessee of which paid to the county where the arrest took place 25 per cent of the fine only and the justice's costs, but held the prisoner to work out both the legal and illegal expenses at the rate of 75 cents a day. In this case the prisoners were kept in a barn, 80 men being kept in a moderate-sized building with no special arrangements for ventilation or sanitation. On Saturday nights the men were locked into the building and kept there until

Monday morning. There was a good deal of sickness among the men, despite the fact that during the week days they were healthfully employed out of doors. While at work the men were guarded by 'trusties' armed with shotguns. There were both white and colored men among the trusties. Members of the subcommittee were present in the United States circuit court in Little Rock when the proprietor of this particular farm was the unsuccessful defendant in the suit for damages brought by a prisoner who had been so illegally detained and in whose favor the jury gave a substantial verdict. These prisoners, held to work at illegal sums and some of whom were whipped and otherwise illtreated, illustrate what is commonly accepted as peonage. On the other hand, the following statement of facts also constitutes peonage: A laborer secures an advance, either in money or by way of payment of transportation expenses, under an agreement to work out the amount. He leaves his employment with or, as frequently happens, without justification before the employer is fully repaid. The employer procures his arrest, either on the ground of obtaining money under false pretenses or under the labor statutes of many of the States, and then enters into a new agreement with the laborer that, if he will return to his employment and work out his indebtedness the criminal proceeding will be dropped. A majority of the cases brought to the attention of the Commission approach nearer the latter class than the first. While in the South the Commission was informed that cases of restraint of foreign laborers, which constituted peonage under the Clyatt decision, existed in many northern states, and consequently an investigator who had been with the committee in the South was directed to investigate these complaints. The result was that in every State except Oklahoma and Connecticut the investigator found evidence of practices between employer and employee which, if substantiated by legal evidence in each case, would constitute peonage as the Supreme Court has described it. In connection with the southern cases it should be noted that in nearly every instance brought to the attention of the Commission the laborers who were held in peonage had been sent south from New York City, the victims of gross misrepresentations by labor agents there as to conditions under which they were to work, and totally unfitted for the work to which they were going. . . . Practically all of the prosecutions for peonage have been had in the South; indictments have been found in Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Kentucky, Missouri, Arkansas, and Louisiana, and convictions or pleas of guilty in Virginia, West Virginia, North Carolina, Georgia, Florida, Alabama, Mississippi, Arkansas, and Missouri. In the opinion of the Commission the vigorous prosecutions have broken up whatever tendency there was toward peonage in connection with aliens in the southern States, and the fact that juries in those States will convict even in cases of technical peonage unaccompanied by brutality would seem to indicate that offenses against alien laborers will not be permitted to go unpunished. Possibly the most widely heralded case of alleged peonage was that connected with the building of the extension of the Florida East Coast Railway. These allegations were investigated by the Bureau of Labor, by the governor of Florida, and by the Immigration Commission. . . . Neither the governor of Florida, the Commission, nor the Department of Justice . . . [was] able to find anything in the nature of legal proof that peonage

ever existed upon any of this work of the Florida East Coast Railway. . . . The peonage cases in the South relating to immigrants have been found to cover almost every industry—farming, lumbering, logging, railroading, mining, factories, and construction work. . . . Federal attorneys and judges in the southern States have been unable to find any provisions in the statutes of the United States imposing penalties for the imposition of slavery unaccompanied by some special feature. It is apparent that Congress has never passed a general measure providing for the enforcement of the thirteenth amendment. Under Revised Statutes, section 5508, . . . if a person simply places or holds another in slavery, it is impossible for the Federal courts to impose penalties under statutes at present in vogue, unless the placing or holding be for the purpose of forcing the settlement of a debt, no matter how great may be the abuses perpetrated upon the person held. In the Clyatt case the Supreme Court decided unmistakably that the peonage statute . . . referred only to cases where the return or arrest or holding has been for the purpose of enforcing the payment of a debt. . . . The Federal attorney for the southern district of Alabama testified before the peonage committee that he could not obtain an indictment in a case in his district in which a woman had been held in slavery on an isolated farm for about ten years, . . . because no statute could be found covering the case. A similar case . . . [was] reported from Virginia. Two of the members of the Commission visited Chicago, St. Louis, St. Paul, and other cities of the West. . . . They found in several parts of the West that the padrone system was practiced to a considerable extent by the proprietors of shoe-shining establishments, and that in some of the lumber and railroad camps in Minnesota and North Dakota laborers were held in a state of technical peonage. . . . Undoubted evidence . . . [was] discovered that peonage . . . [was] practiced in the western States, and the indications . . . [were] that there are many cases of involuntary servitude in that section. The peonage investigation . . . developed the fact that involuntary servitude may be found in the East as well as in the South and the West. Since the evils of involuntary servitude have been largely stamped out in the southern States, there . . . probably existed in Maine [in the lumber districts] the most complete system of peonage in the entire country. . . . In February, 1907, a bill became a law making it a crime for a person to enter into an agreement to labor for any lumbering operation or in driving logs and in consideration thereof receive any advance of goods, money, or transportation, and unreasonably and with intent to defraud, fail to enter into said employment as agreed and labor a sufficient length of time to reimburse his employer for said advances and expenses. Judges in municipal courts and trial justices were given jurisdiction to try cases under this law, and the act provided that it would take effect immediately upon approval. When this bill was before the legislature, requests were made by citizens interested in factories and other industries that the provisions of the statute be made to protect all employers of labor. The attorney who introduced the bill on behalf of the lumber interests which he represented, . . . stated that he had refused to accede to these requests, inasmuch as he believed the provision should not be extended. The protection granted by the statute, therefore, was restricted to a favored class, persons interested in 'lumbering operations and in driving logs.' . . . [Under this law] jus-

tics of the peace in Maine have decided indiscriminately that, in order to obtain a conviction under the law of that State it is necessary to show only that the laborer obtained the 'advances' and failed 'to labor a sufficient length of time to reimburse his employer.' . . . Considerable peonage has resulted from this statute . . . [which] has been vigorously enforced."—United States Immigration Commission, *Peonage and the treatment and conditions of work of immigrants (pamphlet)*, pp. 7-12.—"There are to-day in certainly six states, and probably in ten, in which the institution of slavery formerly existed, laws which make it possible to compel men to render service against their will, and that too when they have committed no act which, outside of those States would be held to be a crime in any English-speaking community. For convenience, these laws may be classed under at least five heads: Contracts of employment, enticement of laborers to quit their employers, violation of a contract with a surety by one convicted of a misdemeanor, the laws of vagrancy, and the laws relating to immigrant agents. The laws relating to contracts of employment are to be found on the statute books of six States—Alabama, Florida, Georgia, Mississippi, North Carolina and South Carolina. These laws are very similar in their phraseology and in the penalties attached to their violation in all of these States. The Alabama law, which has recently [written in 1915] been declared unconstitutional by the Supreme Court of the United States, . . . provides, . . . that any person who enters into a contract in writing to perform any service for another and thereby obtains money or other personal property from such person with intent to defraud the person, and who leaves his service without performing the act or refunding the money or goods, shall be guilty of a misdemeanor; or that any person who in writing makes a contract for the rent of land and obtains money or personal property from the landlord with intent to deceive him and leaves without performing the service, refunding the money, or paying for the property, shall be guilty of a misdemeanor. The penalty for each of these offenses is a fine not exceeding \$300 and in default of payment, imprisonment for a period of not exceeding one year. This Alabama statute was later amended, . . . [so as to provide] that the failure of any person who enters into such contracts to perform the service, or to cultivate the land, or refund the money, or pay for the goods, shall be prima facie evidence of the intent to injure his employer or landlord, or to defraud him. . . . Another form in which peonage is practiced is by the passage of acts making it unlawful to entice laborers to leave their employers or landlords, or to employ persons who have left their employers without fulfilling their contracts. Such laws are found in Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee. . . . A third law under which peonage is practiced, . . . [found in Alabama alone] provides that when any person who has been convicted of a misdemeanor, signs a written contract in open court approved by the judge of the court in consideration of another person becoming his surety on a confession of judgment for the fine and costs, agrees to perform any service for such person and afterwards fails or refuses to perform the service, on conviction will be fined not less than the amount of damages which the party contracting with him has suffered, and not more than five hundred dollars. . . . In many of the Southern States the vagrancy laws are exceedingly drastic, and under their enforcement by the courts

almost any person may be convicted as a vagrant, and being unable to pay his fine or to give surety for his future good conduct may enter into a contract, with one who does pay his fine or become his surety, to work for him, and if he does not perform the labor may be prosecuted . . . and for the second offense may enter into a contract for additional service for an extended period, and thus the restraint of his liberty may be almost interminable."—L. M. Hershaw, *Peonage (Occasional Papers, no. 15, American Negro Academy, pamphlet, pp. 7-9)*.

Another system commonly known as peonage is the convict lease system in which the prison considers the prisoners its debtors and leases them out to contractors. This system is being severely condemned both in itself and in its methods. "Briefly summed up, the specific charges preferred by Colonel Byrd, . . . who had made a most painstaking and exhaustive investigation of the convict lease camps of Georgia are as follows [written in 1907]: (1) Robbing convicts of their time allowances for good behaviour. . . . In the event of good conduct the law provides that a prisoner's term of confinement shall be shortened four days during each month of service. In fifteen out of twenty-four private camps the contractors did not give the convicts a single day off for good service, nor did they even make pretence of doing so. (2) Forcing convicts to work from fourteen to twenty hours a day. (3) Providing them no clothes, no shoes, no beds, no heat in winter, and no ventilation whatever in single rooms in summer in which sixty convicts slept in chains. (4) Giving them rotten food. (5) Allowing them to die, when sick, for lack of medical attention. (6) Outraging the women. (7) Beating to death old men too feeble to work. (8) Killing young men for the mere sake of killing. (9) Suborning jurors and county officers, whose sworn duty it is to avenge the wrongdoing of guards."—M. C. Terrell, *Peonage in the United States (Nineteenth Century, Aug., 1907)*.—Early in 1923, owing to the death in a Florida prison camp of a prisoner named Tarbert, who had been "contracted out," a great deal of publicity was directed to the system of prison peonage. It was proved that his death was the direct result of ill-treatment, and as a consequence the state legislature passed a law forbidding corporal punishment of such prisoners. Various associations of workers, for example, the International Association of Garment Workers, condemned the contract system, and issued pamphlets naming the states in which the system was in use, and the firms who took advantage of it.

PEPLUM.—"The peplum constituted the outermost covering of the body. Among the Greeks it was worn in common by both sexes, but was chiefly reserved for occasions of ceremony or of public appearance, and, as well in its texture as in its shape, seemed to answer to our shawl. When very long and ample, so as to admit of being wound twice round the body—first under the arms, and the second time over the shoulders—it assumed the name of diplax. In rainy or cold weather it was drawn over the head. At other times this peculiar mode of wearing it was expressive of humility or of grief."—T. Hope, *Costume of the ancients, v. 1*.

PEPPERRELL, Sir William (1606-1759), American soldier. See NEW ENGLAND: 1745.

PEPYS, Samuel (1633-1703), English diarist. Noted for his "Diary," begun in 1660, giving an account of English life during the reign of Charles II.

PERGAMUM, or Pergamus.—This ancient city in northwestern Asia Minor, within the province of Mysia, on the north of the river Caicus (see GREECE: Map), became, during the troubled century that followed the death of Alexander (323 B. C.), first the seat of an important principality, and then the capital of a rich and flourishing kingdom, to which it gave its name. It seems to have owed its fortunes to a great deposit of treasures—part of the plunder of Asia—which Lysimachus, one of the generals and successors of Alexander, left for safe keeping within its walls, under the care of an eunuch, named Philetærus. This Philetærus found excuses, after a time, for renouncing allegiance to Lysimachus, appropriating the treasures and using them to make himself lord of Pergamum. He was succeeded by a nephew, Eumenes, and he in turn by his cousin Attalus. The latter, "who had succeeded to the possession of Pergamum in 241 [B. C.], met and vanquished the Galatians in a great battle [see GALATIA], which gave him such popularity that he was able to assume the title of king, and extend his influence far beyond his inherited dominion. . . . The court of Pergamum continued to flourish till it controlled the larger part of Asia Minor. In his long reign this king represented almost as much as the King of Egypt the art and culture of Hellenism. [See SCULPTURE: Hellenistic.] His great victory over the Galatians was celebrated by the dedication of so many splendid offerings to various shrines, that the Pergamene school made a distinct impression upon the world's taste. Critics have enumerated seventeen remaining types, which appear to have come from statues of that time—the best known is the so-called 'Dying Gladiator,' who is really a dying Galatian. . . . Perhaps the literature of the court was even more remarkable. Starting on the model of Alexandria, with a great library, Attalus was far more fortunate than the Ptolemies in making his university the home of Stoic philosophy."—J. P. Mahaffy, *Story of Alexander's empire*, ch. 20.—From the assumption of the crown by Attalus I the kingdom of Pergamum existed about a century. Its last king bequeathed it to the Romans in 133 B. C. and it became a Roman province. Its splendid library of 200,000 volumes was given to Cleopatra a century later by Antony, and was added to that of Alexandria. (See also LIBRARIES: Ancient: Greece.) The name of the city is perpetuated in the word parchment, which is derived therefrom. Its ruins are found at a place called Bergamah.—See also SELEUCIDÆ: B. C. 224-187; ALEXANDRIA: B. C. 282-246.

In the Netherlands. See NETHERLANDS: 1521-1555, to 1594-1609.

Roman Catholics: In England. See ENGLAND: 1585-1587; 1587-1588; 1678-1679.

In Ireland. See IRELAND: 1691-1782.

Waldenses. See WALDENSES.

PERSEIDÆ, supposed descendants of Perseus. See ARGOS.

PERSEPOLIS, in ancient geography, one of the capitals of the Persian empire, about thirty-five miles northeast of modern Shiraz. See BABYLONIA: Map.

Origin of the city. See PERSIA: Ancient peoples, etc.

B. C. 330.—Destruction by Alexander.—Although Persepolis was surrendered to him on his approach to it (B. C. 331), Alexander the Great determined to destroy the city. "In this their home the Persian kings had accumulated their national edifices, their regal sepulchres, the inscriptions commemorative of their religious or legendary sentiment, with many trophies and acquisitions arising out of their conquests. For the purposes of the Great King's [Darius I] empire, Babylon, or Susa, or Ekbatana, were more central and convenient residences; but Persepolis was still regarded as the heart of Persian nationality. It was the chief magazine, though not the only one, of those annual accumulations from the imperial revenue, which each king successively increased, and which none seems to have ever diminished. . . . After appropriating the regal treasure—to the alleged amount of 120,000 talents in gold and silver (= £27,600,000 sterling)—Alexander set fire to the citadel. . . . The persons and property of the inhabitants were abandoned to the licence of the soldiers, who obtained an immense booty, not merely in gold and silver, but also in rich clothing, furniture, and ostentatious ornaments of every kind. The male inhabitants were slain, the females dragged into servitude; except such as obtained safety by flight, or burned themselves with their property in their own houses."—G. Grote, *History of Greece*, pt. 2, ch. 93.—See also MACEDONIA: B. C. 334-330.—Persepolis revived under the Sassanidae about 200 A. D., and was able to offer a strong resistance to the Moslem armies in the seventh century. It seems to have been flourishing in the fourteenth century but disappeared from history by the sixteenth.

Celebration on return to Washington. See WASHINGTON, D. C.: 1919.

PERSIA

Area.—Population.—Geographical description.—Climate.—Resources.—"The area of Persia is estimated at 628,000 square miles, that is to say it is more than three times the size of France, and its people number only about nine and a half millions. . . . Persia is bounded on the north by the Caspian Sea and Russia in Asia; on the west by the Turkish Empire; on the east by Afghanistan and British Baluchistan, the Persian Gulf and Arabian Sea washing its southern shores. [See ASIA: Map.] Within these boundaries there are enormous differences in the formation of the country and the climate. . . . The centre of Persia is a vast plateau, some 2,000 to 6,000 feet in elevation, separated from the low-lying lands on the Caspian and the Persian Gulf by formidable mountain barriers, in which are many splendid peaks, ranging from 13,000 to 15,000 feet in height. This tableland is crossed diagonally from northwest to south-east by frequent chains of mountains separating wide plains, and it is possible to drive between these ranges for some hundreds of miles. But if any one wishes to visit the capital Teheran or the holy city Meshed from Europe, he must, soon after leaving the Caspian, cross the Elburz mountains. This mighty chain runs over five hundred miles from west to east, and its highest peak, the extinct volcano Demavend, rises to a height of 20,000 feet."—E. C. Sykes, *Persia and its people*, pp. 1-2.—"Owing to the lack of communications very little is done to tap the resources of the country. For example, Persia possesses many minerals, but as she has few railways, roads, or navigable rivers to carry them to the ports or to markets, this source of wealth is almost untouched. The famous turquoise mines near Nishapur, which have been known from very early times, . . . are most inadequately worked, and the valuable Caspian fisheries are leased to a Russian company. . . . For many years the imports of Persia have exceeded the exports, and this is partly owing to the slow and expensive methods of carriage, and still more to a short-sighted Government that puts obstacles in the way of enterprise and is suspicious of any man who becomes rich and does not conceal the fact. . . . Though there are many rain-fed crops grown in northern Persia, yet as a rule the soil is irrigated. . . . The chief crop of the country is barley, which is the food of horses and mules, . . . [and] also the food of the poor, wheat bread being only for the well-to-do. . . . [Rice] comes from the rainy districts round the Caspian, and tobacco is cultivated here and in the south. . . . Cotton is grown in many places, and dates are an important product of low-lying parts of Persia, usually situated near the Persian Gulf, and constitute the wealth of its inhabitants, . . . The opium poppy is largely grown on the Persian Plateau and is a real misfortune to the inhabitants. . . . A good deal of silk is produced in Persia. . . . The grape is cultivated throughout the country. . . . Wine is made in many places,

but the white wines of Hamadan and Shiraz rank the highest, . . . and from the refuse of the grapes, arrack, the favourite spirit of the country, is concocted."—E. C. Sykes, *Persia and its people*, pp. 10, 212-213, 215-216.—"Oil is probably the chief . . . asset of Persia for which there is a keen demand. The oil fields of Persia alone would make her important in international affairs; she is comparable in this respect with Mexico. . . . Persian oil is at present coming from Maidan-i-Naphtun, about two hundred miles north-northeast of the head of the Persian Gulf. . . . There are many other localities where oil may be obtained, but development awaits stable political conditions."—I. Bowman, *New world*, p. 468.—"The oil reaches the coast by means of a pipe line. "From the pumping station at Tembi it is lifted over the two ranges, the Imam Riza and the Tul-i-Khayyat; . . . [whence] it flows without obstruction to the refinery at Abadan on the Shatt-al-Arab [at the head of the Persian gulf], 142 miles from the fields. The pass over the Tul-i-Khayyat is 1,300 feet, and the pressure on the pipes here is 600 pounds to the square inch."—E. Candler, *In the Persian oil-fields* (*Living Age*, June 21, 1910).

Influence of geography. See ASIA: Influence of geography, etc.

Ancient people and country.—"Persia Proper seems to have corresponded nearly to that province of the modern Iran which still bears the ancient name slightly modified, being called Farsistan or Fars. . . . Persia Proper lay upon the gulf to which it has given name, extending from the mouth of the Tab (Oroatis) to the point where the gulf joins the Indian Ocean. It was bounded on the west by Susiana, on the north by Media Magna, on the east by Mycia, and on the south by the sea. Its length seems to have been about 450 and its average width about 250 miles. . . . The earliest known capital of the region was Pasargadae, or Persagadae, as the name is sometimes written, of which the ruins still exist near Murgab, in lat. 30° 15', long. 53° 17'. Here is the famous tomb of Cyrus. . . . At the distance of thirty miles from Pasargadae, or of more than forty by the ordinary road, grew up the second capital, Persepolis. . . . The Empire, which, commencing from Persia Proper, spread itself, toward the close of the sixth century before Christ, over the surrounding tracts, [extended from the Caspian sea and the Indian desert to the Mediterranean and the Propontis]. . . . The earliest appearance of the Persians in history is in the inscriptions of the Assyrian kings, which begin to notice them about the middle of the ninth century, B. C. At this time Shalmanezzer II. [the Assyrian king] found them in south-western Armenia, where they were in close contact with the Medes, of whom, however, they seem to have been wholly independent. . . . It is not until the reign of Sennacherib that we once more find them brought into contact with the power which aspired to be mistress of Asia. At the time of

their re-appearance they are no longer in Armenia, but have descended the line of Zagros and reached the districts which lie north and north-east of Susiana. . . . It is probable that they did not settle into an organized monarchy much before the fall of Nineveh. . . . The history of the Persian 'Empire' dates from the conquest of Astyages [the Median king] by Cyrus, and therefore commences with the year B. C. 558 [or, according to Sayce, 549 B. C. (see below)]."—G. Rawlinson, *Five great monarchies: Persia, ch. 1 and 7.*—See also ARYANS; IRAN; ACHÆMENIDS; KURDISTAN AND THE KURDS.

B. C. 549-521.—Founding of the empire by Cyrus the Great, king of Elam.—Conquest of Media, Persia, Lydia, and Babylonia.—Restoration of the Jews.—Conquest of Egypt by Kambyses.—"It was in B. C. 549 that Astyages was overthrown [see MEDIA]. On his march against Kyros [Cyrus] his own soldiers, drawn probably from his Aryan subjects, revolted against him and gave him into the hands of his enemy. 'The land of Ekbatana and the royal city' were ravaged and plundered by the conqueror; the Aryan Medes at once acknowledge the supremacy of Kyros, and the empire of Kyaxares was destroyed. Some time, however, was still needed to complete the conquest; the older Medic population still held out in the more distant regions of the empire, and probably received encouragement and promises of help from Babylonia. In B. C. 546, however, Kyros marched from Arbela, crossed the Tigris, and destroyed the last relics of Median independence. . . . The following year saw the opening of the campaign against Babylonia [see BABYLONIA: Invasion by Cyrus]. But the Babylonian army, encamped near Sippara, formed a barrier which the Persians were unable to overcome; and trusting, therefore, to undermine the power of Nabonidos by secret intrigues with his subjects, Kyros proceeded against Kroesos. A single campaign sufficed to capture Sardes and its monarch, and to add Asia Minor to the Persian dominions [see LYDIANS; ASIA MINOR: 724-539 B. C.]. The Persian conqueror was now free to attack Babylonia. Here his intrigues were already bearing fruit. The Jewish exiles were anxiously expecting him to redeem them from captivity, and the tribes on the sea coast were ready to welcome a new master. In B. C. 538 the blow was struck. The Persian army entered Babylonia from the south. The army of Nabonidos was defeated at Rata in June; on the 14th of that month Sippara opened its gates, and two days later Gobryas, the Persian general, marched into Babylon itself 'without battle and fighting.' . . . In October Kyros himself entered his new capital in triumph."—A. H. Sayce, *Ancient empires of the East: Herodotus 1-3, appendix 5.*—"The history of the downfall of the great Babylonian Empire, and of the causes, humanly speaking, which brought about a restoration of the Jews, has recently been revealed to us by the progress of Assyrian discovery. We now possess the account given by Cyrus himself, of the overthrow of Nabonidos, the Babylonian king, and of the conqueror's permission to the captives in

Babylonia to return to their homes. The account is contained in two documents, written, like most other Assyrian and Babylonian records, upon clay, and lately brought from Babylonia to England by Mr. Rassam. One of these documents is a tablet which chronicles the events of each year in the reign of Nabonidos, the last Babylonian monarch, and continues the history into the first year of Cyrus, as king of Babylon. The other is a cylinder, on which Cyrus glorifies himself and his son Kambyses, and professes his adherence to the worship of Bel-Merodach, the patron-god of Babylon. The tablet-inscription is, unfortunately, somewhat mutilated, especially at the beginning and the end, and little can be made out of the annals of the first five years of Nabonidos, except that he was occupied with disturbances in Syria. In the sixth year the record becomes clear and continuous. . . . The inscriptions . . . present us with an account of the overthrow of the Babylonian Empire, which is in many important respects very different from that handed down to us by classical writers. We possess in them the contemporaneous account of one who was the chief actor in the events he records, and have ceased to be dependent upon Greek and Latin writers, who could not read a single cuneiform character, and were separated by a long lapse of time from the age of Nabonidos and Cyrus. Perhaps the first fact which will strike the mind of the reader with astonishment is that Cyrus does not call himself and his ancestors kings of Persia, but of Elam. The word used is Anzan or Ansan, which an old Babylonian geographical tablet explains as the native name of the country which the Assyrians and Hebrews called Elam. This statement is verified by early inscriptions found at Susa and other places in the neighbourhood, and belonging to the ancient monarchs of Elam, who contended on equal terms with Babylonia and Assyria until they were at last conquered by the Assyrian king Assur-bani-pal, and their country made an Assyrian province. In these inscriptions they take the imperial title of 'king of Anzan.' The annalistic tablet lets us see when Cyrus first became king of Persia. In the sixth year of Nabonidos (B. C. 540) Cyrus is still king of Elam; in the ninth year he has become king of Persia. Between these two years, therefore, he must have gained possession of Persia either by conquest or in some peaceable way. When he overthrew Astyages his rule did not as yet extend so far. At the same time Cyrus must have been of Persian descent, since he traces his ancestry back to Teispes, whom Darius, the son of Hystaspes, in his great inscription on the sacred rock of Behistun, claims as his own forefather. . . . The fact that Susa or Shushan was the original capital of Cyrus explains why it remained the leading city of the Persian Empire; and we can also now understand why it is that in Isaiah xxi. 2, the prophet bids Elam and Media, and not Persia and Media, 'go up' against Babylon. That Cyrus was an Elamite, however, is not the only startling revelation which the newly-discovered inscriptions have made to us. We learn from them that he was a polytheist who worshipped Bel-Merodach and Nebo, and paid public homage to the deities of Babylon. . . . The first work of Cyrus was to ingratiate himself with the conquered population by affecting a show of zeal and piety towards their gods, and with the nations which had been kept in captivity in Babylonia, by sending them and their deities back to their homes. Among these nations were the Jews, who had perhaps assisted the king of Elam in his attack upon Nabonidos. Experience had taught

Cyrus the danger of allowing a disaffected people to live in the country of their conquerors. He therefore reversed the old policy of the Assyrian and Babylonian kings, which consisted in transporting the larger portion of a conquered population to another country, and sought instead to win their gratitude and affection by allowing them to return to their native lands. He saw, moreover, that the Jews, if restored from exile, would not only protect the southwestern corner of his empire from the Egyptians, but would form a base for his intended invasion of Egypt itself. . . . The number of exiles who took advantage of the edict

BAS-RELIEF OF CYRUS THE GREAT

(From Perrot and Chipiez's "History of Art in Ancient Egypt")

of Cyrus, and accompanied Zerubbabel to Jerusalem, amounted to 42,300. It is probable, however, that this means only the heads of families; if so, the whole body of those who left Babylon, including women and children, would have been about 200,000. . . . The conquest of Babylon by Cyrus took place in the year 538 B. C. He was already master of Persia, Media, and Lydia; and the overthrow of the empire of Nebuchanezzar extended his dominions from the mountains of the Hindu Kush on the east to the shores of the Mediterranean on the west. Egypt alone of the older empires of the Oriental world remained independent, but its doom could not be long delayed. The career of Cyrus had indeed been marvellous. He had begun as the king only of Anzan or Elam, whose power seemed but 'small' and contemptible

to his neighbour the great Babylonian monarch. But his victory over the Median king Astyages and the destruction of the Median Empire made him at once one of the most formidable princes in Western Asia. Henceforth the seat of his power was moved from Susa or Shushan to Ekbatana, called Achmetha in Scripture, Hagmatan in Persian, the capital of Media. . . . The conquest of Media was quickly followed by that of Persia, which appears to have been under the government of a collateral branch of the family of Cyrus. Henceforth the king of Elam becomes also the king of Persia. The empire of Lydia, which extended over the greater part of Asia Minor, fell before the army of Cyrus about B. C. 540. . . . The latter years of the life of Cyrus were spent in extending and consolidating his power among the wild tribes and unknown regions of the Far East."

—A. H. Sayce, *Introduction to the books of Ezra, Nehemiah and Esther*, ch. 1, 3.—See also JEWS: B. C. 604-530; B. C. 537; MILITARY ORGANIZATION: 2.—"Cyrus, who was undoubtedly one of the most beneficent of Oriental sovereigns, was succeeded by his son Cambyses, whose extraordinary career presents a marvel of human folly and wickedness. He found Persia entering upon a period of rare prosperity, but requiring to be for a time at rest, in order to consolidate the vast conquests of Cyrus. Cambyses seems, however, to have had his reason affected by coming into possession of such power. He began his reign by organizing an immense armament of armies and fleets against Egypt. [See MILITARY ORGANIZATION: 5.] The Egyptians were defeated in a great battle at Pelusium, the gate to their country, and Psammetichus, the king of this unhappy people, was cruelly slain, after Cambyses entered the capital. [See also EGYPT: B. C. 525-332.] . . . No people were ever more harshly treated by a conqueror than the Egyptians were when the hosts of Persia encamped on the banks of the Nile and profaned the majestic temples of Thebes. Having entirely subjugated the country, Cambyses pushed his conquests far to the south, among the burning plains of Nubia, called in those times Æthiopia; the objective point of the expedition was the Temple of Jupiter Ammon, in the southwest, and Æthiopia, in the south, the latter division being under the charge of Cambyses himself. He penetrated as far as Meroë. The former army vanished in the desert, victims to thirst and the deadly simoon. The latter division was also overcome by hunger, and forced to return. The hardships of this expedition seemed to increase the caprice and cruelty of Cambyses. There was no people so superstitious, so addicted to the most minute religious ceremonies, so absorbed in a profound veneration for the gods or the sacred symbols, as the Egyptians. Cambyses left no means untried to outrage every object they considered sacred. When the people of Memphis were engaged in rejoicing at the appearance of the bull they worshipped as Apis, Cambyses himself slew that sacred animal with a stroke of his poinard. He also gave himself up to the most brutal excesses. In the midst of this career of unbridled debauchery, the tyrant dreamed that his brother Smerdis had conspired against him in his absence from Persia, and seized the throne. Without any confirmation of his dream, Cambyses sent Prexaspis, one of his near officers, to Persepolis, who, without trial or examination, caused the unfortunate Smerdis to be secretly beheaded. When Atossa, the sister and wife of Cambyses, heard of this atrocious deed, she upbraided her husband for his wickedness. He only replied by kicking her so violently in the stomach

that she died. Deciding to return at once to Persia, Cambyses in turn received a mortal wound from his naked sword while in the act of mounting his horse. Thus the empire of Persia, in a critical period of its existence, was left without a king or any direct heir to the sceptre. But when the news of the death of Cambyses reached Persia, an extraordinary event occurred. Although a state secret, yet the death of Smerdis appears to have been known to some of the magi. One of them bore a striking resemblance to the murdered brother of Cambyses, and he now usurped the throne, and for over a year succeeded in avoiding suspicion. But the false Smerdis, . . . kept himself so closely in the ark or citadel of the capital, that Otanes, a Persian nobleman, had his suspicions aroused. Aware that there was a magian who resembled Smerdis, it occurred to Otanes that perhaps Smerdis had been made away with by a conspiracy of the magi, who had thus got the power into their own hands. If this were so then the false Smerdis could be detected, because he had been deprived of his ears. Phadyma, a daughter of Otanes, had been one of the wives of Cambyses. When the false Smerdis usurped the throne, he also, according to custom, married the wives of the late king. At the request of her father, Phadyma fed of the head of the usurper when he was asleep. She thus obtained convincing proof of the true character of him who had so boldly aspired to sit on the throne of Cyrus and Djemsheed. After this revelation a conspiracy of seven nobles connected with leading families of Persia was formed, who speedily murdered the false Smerdis. Persia was again without a ruler. The crisis was desperate. Here was a vast empire composed of many opposing elements and ready to fall to pieces on the first opportunity; while those magnates of the empire who were best fitted to be selected to succeed to the crown were naturally ambitious to grasp the opportunity themselves, and so jealous of their rivals that a civil war, attended with the most disastrous results, seemed exceedingly probable. The difficulty was avoided by a device as ingenious as it was creditable. The seven conspirators agreed to select one from their own number to be possessor of Persia. Various accounts are given of the way in which the election was made. Some records state that they decided to meet at sunrise, and he whose horse should neigh first should be adjudged the winner. Owing to the cunning of the groom of Darius, his horse first gave the auspicious signal, and thus raised him in a moment from a mere subject to absolute ruler of one of the largest of the world's empires. But as Darius was distinctly connected with the Achemenian line, the only one of the seven in whose veins coursed the blood royal, it is more likely that the other six preferred to settle the succession on him rather than allow such a prize to one of merely equal rank with themselves. Whatever the cause which led to the selection of Darius, the result of this event proved of great advantage to Persia. The young king, for he was at this time only about thirty years of age, showed himself at once to be a born ruler of men, a great soldier, and an administrator of vast capacity. He was also a man whose ambition seems to have been tempered with patriotism, and, unlike many Oriental monarchs, he did not allow his unlimited power to degenerate into reckless and ruthless cruelty. Darius found the great empire which had come into his hands torn by dissensions, or falling apart for lack of a strong arm to hold its various inharmonious elements together. He set to work with amazing vigor and ability to restore peace

and order, and left behind him a reign which stamps him as one of the great sovereigns in history. —S. 177. *Herodotus, Persia*, pp. 20-23.

—*Alford's A. H. 1870. Fresh Light from the ancient monuments*, ch. 7.—*L. A. Keyser's Story of Media, Persia, and Persia*, ch. 10-12.

B. C. 521-493.—Reign of Darius I.—Indian and Scythian invasions.—Ionian revolt and its suppression.—210 given to the insurgents by Athens. —Darius, the son of Hystaspes is probably regarded as the second founder of the Persian empire. [See *Herodotus*.] His reign is dated from the first day of the year answering to B. C. 521; and it lasted 36 years, to Dec. 23, B. C. 485. . . . The Great Inscription of Darius represents him as the hereditary champion of the Achemenians against Goths and all other rebels. . . . It is by the grace of Ormazd that he does everything. . . . The restoration of the Zoroastrian worship, and the putting down of several religions, are the matters recorded in the great inscription. . . . [On Persia, Media and Assyria] . . . [which Sir Henry Rawlinson first deciphered in 1802] . . . in the sixth year of Darius (B. C. 515). [See Philology, 13.] . . . The empire of which Darius became king embraced, besides the following provinces: 'Persia, Susiana, Bactriana, Assyria, Arabia, Egypt, these which are of the sea (the islands), Sardia, Ionia, Media, Armenia, Cappadocia, Parthia, Zarangia, Acha, Chorasmia, Bactria, Sogdiana, Gandaria, the Saces, Sattagydia, Arachotia, and Media: in all twenty-three provinces.' . . . All the central provinces constituting the original empire, from the mountains of Armenia to the head of the Persian Gulf as well as several of those of the Iranian tableland, had to be reconquered. . . . Having thus restored the empire, Darius pursued new military expeditions and conquests in the true spirit of his founder. To the energy of youth was added the idea that quiet might breed new revolts, and by such motives, if we may believe Herodotus, he was urged by Queen Atossa at the instigation of the Greek physician, Democedes,—to the conquest of Greece; while he himself was minded to construct a bridge which should join Asia to Europe, and so to carry war into Scythia. It seems to have been according to an Oriental idea of right, and not as a mere pretext, that he claimed to punish the Scythians for their invasion of Media in the time of Cyaxares. So he contented himself, for the present, with sending spies to Greece under the guidance of Democedes, and with the reduction of Samos. The Scythian expedition, however, appears to have been preceded by the extension of the empire eastward from the mountains of Afghanistan—the limit reached by Cyrus—over the valley of the Indus. . . . The part of India thus added to the empire, including the Panjab and apparently Sindh, yielded a tribute exceeding that of any other province. . . . The Scythian Expedition of Darius occupies the greater part of the Fourth Book of Herodotus. . . . The great result of the expedition, in which the king and his army narrowly escaped destruction, was the gaining of a permanent footing in Europe by the conquest of Thrace and the submission of Macedonia. . . . It was probably in B. C. 508 that Darius, having collected a fleet of 600 ships from the Greeks of Asia, and an army of 100,000 or 300,000 men from all the nations of his empire, crossed the Hellespont by a bridge of boats, and marched to the Danube, conquering on his way the Thracians within, and the Getae beyond, the Great Balkan. The Danube was crossed by a bridge formed of the vessels of the Ionians, just

above the apex of its Delta. The confusion in the geography of Herodotus makes it as difficult as it is unprofitable to trace the direction and extent of the march, which Herodotus carries beyond the Tanais (Don), and probably as far north as 50° lat. The Scythians retreated before Darius, avoiding a pitched battle, and using every stratagem to detain the Persians in the country till they should perish from famine." Darius retreated in time to save his army. "Leaving his sick behind, with the campfires lighted and the asses tethered, to make the enemy believe that he was still in their front, he retreated in the night. The pursuing Scythians missed his line of march, and came first to the place where the Ionian ships bridged the Danube. Failing to persuade the Greek generals to break by the same act both the bridge and the yoke of Darius, they marched back to encounter

cal party applied for aid to Aristagoras, the tyrant of Miletus, who persuaded Artaphernes to send an expedition against Naxos. The Persian commander, incensed by the interference of Aristagoras on a point of discipline, warned the Naxians, and so caused the failure of the expedition and ruined the credit of Aristagoras, who saw no course open to him but revolt. . . . With the consent of the Milesian citizens, Aristagoras seized the tyrants who were on board of the fleet that had returned from Naxos; he laid down his own power; popular governments were proclaimed in all the cities and islands; and Ionia revolted from Darius (B. C. 501). Aristagoras went to Sparta . . . and tried to tempt the king, Cleomenes, by displaying the greatness of the Persian empire; but his admission that Susa was three months' journey from the sea ruined his cause. He had better success at Athens;

DARIUS THE GREAT, RECEIVING A DELEGATION

Bas-relief at Persepolis

the Persian army. But their own previous destruction of the wells led them into a different route; and Darius got safe, but with difficulty, to the Danube. . . . The Hellespont was crossed by means of the fleet with which the strait had been guarded by Megabazus, or, more probably, Megabyzus; and the second opportunity was barred against a rising of the Greek colonies. . . . He left Megabazus in Europe with 80,000 troops to complete the reduction of all Thrace. [Megabazus not only executed this commission, but reduced the kingdom of Macedonia to vassalage before returning to his master, in 506 B. C.]—P. Smith, *Ancient history of the East*, bk. 3, ch. 27.—"Darius returned to Susa, leaving the western provinces in profound peace under the government of his brother Artaphernes. A trifling incident lighted the flame of rebellion. One of those political conflicts, which we have seen occurring throughout Greece, broke out in Naxos, an island of the Cyclades (B. C. 502). The exiles of the oligarchi-

cal party knew that Artaphernes had been made their enemy by Hippias. They voted twenty ships in aid of the Ionians, and the squadron was increased by five ships of the Eretrians. Having united with the Ionian fleet, they disembarked at Ephesus, marched up the country, and surprised Sardis, which was accidentally burnt during the pillage. Their forces were utterly inadequate to hold the city; and their return was not effected without a severe defeat by the pursuing army. The Athenians re-embarked and sailed home, while the Ionians dispersed to their cities to make those preparations which should have preceded the attack. Their powerful fleet gained for them the adhesion of the Hellespontine cities as far as Byzantium, of Caria, Caunus, and Cyprus; but this island was recovered by the Persians within a year. The Ionians protracted the insurrection for six years. Their cause was early abandoned by Aristagoras, who fled to the coast of Thrace and there perished. . . . The fate of the revolt turned at

last on the siege of Miletus. The city was protected by the Ionian fleet, for which the Phœnician navy of Artaphernes was no match. But there was fatal disunion and want of discipline on board, and the detection of the Samians gave the Persians an easy victory off Ladé (B. C. 495). Miletus suffered the worst horrors of a storm, and the other cities and islands were treated with scarcely less severity. This third subjugation of Ionia inflicted the most lasting blow on the prosperity of the colonies (B. C. 493). Throughout his narrative of these events, Herodotus declares his opinion of the impolicy of the interference of the Athenians. The ships they voted, he says, were the beginning of evils both to the Greeks and the barbarians. When the news of the burning of Sardis was brought to Darius, he called for his bow, and shot an arrow towards the sky, with a prayer to Auramazda for help to revenge himself on the Athenians. Then he bade one of his servants repeat to him thrice, as he sat down to dinner, the words, 'Master, remember the Athenians.' Upon the suppression of the Ionian revolt, he appointed his son-in-law Mardonius to succeed Artaphernes, enjoining him to bring these insolent Athenians and Eretrians to Susa.—P. Smith, *History of the World: Ancient*, v. 1, ch. 13.—See also GREECE: B. C. 500-493: Rising of Ionians, etc.

B. C. 480-405.—From Xerxes I to Artaxerxes II.—Disastrous invasion of Greece.—Loss of Egypt.—Recovery of Asia Minor.—Decay of the empire.—"Xerxes I, who succeeded Darius, B. C. 486, commenced his reign by the reduction of Egypt, B. C. 485, which he entrusted to his brother, Achæmenes. He then provoked and chastised a rebellion of the Babylonians [see BABYLON: Decline], enriching himself with the plunder of their temples. After this he turned his attention to the invasion of Greece [where he experienced the disastrous defeats of Salamis, Platea, and Mycale (see GREECE: B. C. 480: Persian Wars, etc., to B. C. 479)]. . . . It was now the turn of the Greeks to retaliate on their prostrate foe. First under the lead of Sparta [see GREECE: B. C. 481-479], and then under that of Athens they freed the islands of the Ægean from the Persian yoke, expelled the Persian garrisons from Europe, and even ravaged the Asiatic coast and made descents on it at their pleasure. [See ATHENS: B. C. 479.] For twelve years no Persian fleet ventured to dispute with them the sovereignty of the seas; and when at last, in B. C. 466, a naval force was collected to protect Cilicia and Cyprus, it was defeated and destroyed by Cimon at the Eurymedon. Soon after this Xerxes' reign came to an end. This weak prince, . . . on his return to Asia, found consolation for his military failure in the delights of the seraglio, and ceased to trouble himself much about affairs of State. . . . The bloody and licentious deeds which stain the whole of the later Persian history commence with Xerxes, who suffered the natural penalty of his follies and his

crimes when, after reigning twenty years, he was murdered by the captain of his guard, Artabanus, and Aspamitres, his chamberlain. . . . Artabanus, placed on the throne the youngest son of Xerxes, Artaxerxes I [405 B. C.]. . . . The eldest son, Darius, accused by Artabanus of his father's assassination, was executed; the second, Hystaspes, who was satrap of Bactria, claimed the crown; and, attempting to enforce his claim, was defeated and slain in battle. About the same time the crimes of Artabanus were discovered, and he was put to death. Artaxerxes then reigned quietly for nearly forty years. He was a mild prince, possessed of several good qualities; but the weakness of his character caused a rapid declension of the empire under his sway. The revolt of Egypt [460-455 B. C.] was indeed suppressed after a while, through the vigorous measures of the satrap of Syria, Megabyzus; and the Athenians, who had fomented it, were punished by the complete destruction of their fleet, and the loss of almost all their men. [See ATHENS: B. C. 460-455.] . . . Bent on recovering her prestige, Athens, in B. C. 499, despatched a fleet to the Levant, under Cimon, which sailed to Cyprus and laid siege to Citium. There Cimon died; but the fleet, which had been under his orders, attacked and completely defeated a large Persian armament off Salamis, besides detaching a squadron to assist Amyrtæus, who still held out in the Delta. Persia, dreading the loss of Cyprus and Egypt, consented to an inglorious peace [the much disputed 'Peace of Cimon,' or 'Peace of Callias.' [See ATHENS: B. C. 449-446.] . . . Scarcely less damaging to Persia was the revolt of Megabyzus, which followed. This powerful noble . . . excited a rebellion in Syria [447 B. C.], and so alarmed Artaxerxes that he was allowed to dictate the terms on which he would consent to be reconciled to his sovereign. An example was thus set of successful rebellion on the part of a satrap, which could not but have disastrous consequences. . . . The disorders of the court continued, and indeed increased, under Artaxerxes I, who allowed his mother Amestris, and his sister Amytis, who was married to Megabyzus, to indulge freely the cruelty and licentiousness of their dispositions. Artaxerxes died B. C. 425, and left his crown to his only legitimate son, Xerxes II. Revolutions in the government now succeeded each other with great rapidity. Xerxes II, after reigning forty-five days, was assassinated by his half-brother, Scyrdianus, or Sogdianus, an illegitimate son of Artaxerxes, who seized the throne, but was murdered in his turn, after a reign of six months and a half, by another brother, Ochus. Ochus, on ascending the throne, took the name of Darius, and is known in history as Darius Nothus. He was married to Parysatis, his aunt, a daughter of Xerxes I, and reigned nineteen years, B. C. 424-405, under her tutelage. His reign . . . was on the whole disastrous. Revolt succeeded to revolt; and though most of the insurrections were quelled, it was at the cost of what remained of Persian honour and self-respect. Corruption was used instead of force against the rebellious armies. . . . The revolts of satraps were followed by national outbreaks, which, though sometimes quelled, were in other instances successful. In B. C. 408, the Medes, who had patiently acquiesced in Persian rule for more than a century, made an effort to shake off the yoke, but were defeated and reduced to subjection. Three years later, B. C. 405, Egypt once more rebelled under Nephertites, and succeeded in establishing its independence. The Persians were expelled from Africa, and a native prince seated himself on the throne of the Pha-

raobs. It was some compensation for this loss, and perhaps for others towards the north and north-east of the empire, that in Asia Minor the authority of the Great King was once more established over the Greek cities. It was the Peloponnesian War, rather than the Peace of Callias, which had prevented any collision between the great powers of Europe and Asia for 37 years. Both Athens and Sparta had their hands full; and though it might have been expected that Persia would have at once taken advantage of the quarrel to reclaim at least her lost continental dominion, yet she seems to have refrained, through moderation or fear, until the Athenian disasters in Sicily encouraged her to make an effort. She then invited the Spartans to Asia, and by the treaties which she concluded with them, and the aid which she gave them, reacquired without a struggle all the Greek cities of the coast [412 B.C.] . . . Darius Nothus died B.C. 405, and was succeeded by his eldest son, Arsaces, who on his accession took the name of Artaxerxes. Artaxerxes II, called by the Greeks Mnemon, on account of the excellence of his memory, had from the very first a rival in his brother Cyrus."—G. Rawlinson, *Manual of ancient history*, bk. 2, sect. 24-39.

B. C. 413.—Tribute again demanded from Greek cities in Asia Minor.—Hostility to Athens.—Subsidies to her enemies. See GREECE: B. C. 413.

B. C. 401-400.—Expedition of Cyrus the Younger.—Retreat of the Ten Thousand.—Cyrus the Younger, so called to distinguish him from the great founder of the Persian empire, was the second son of Darius Nothus, king of Persia, and expected to succeed his father on the throne through the influence of his mother, Parysatis. During his father's life he was appointed satrap of Lydia, Phrygia and Cappadocia, with supreme military command in all Asia Minor. On the death of Darius, 404 B.C., Cyrus found himself thwarted in his hopes of the succession, and laid plans at once for overthrowing the older brother, Artaxerxes, who had been placed on the throne. He had acquired an extensive acquaintance with the Greeks and had had much to do with them, in his administration of Asia Minor, during the Peloponnesian War. That acquaintance had produced in his mind a great opinion of their invincible qualities in war, and had shown him the practicability of forming, with the means which he commanded, a compact army of Greek mercenaries which no Persian force could withstand. He executed his plan of gathering such a column of Greek soldiers, without awakening his brother's suspicions, and set out upon his expedition from Sardes to Susa, in March 401 B.C. As he advanced, finding himself unopposed, the troops of Artaxerxes retreating before him, he and his Asiatic followers grew rash in their confidence, and careless of discipline and order. Hence it happened that when the threatened Persian monarch did confront them, with a great army, at Cunaxa, on the Euphrates, in Babylonia, they were taken by surprise and routed, and the pretender, Cyrus, was slain on the field. The Greeks—who numbered about 13,000, but whose ranks were soon thinned and who are famous in history as the Ten Thousand,—stood unshaken, and felt still equal to the conquest of the Persian capital, if any object in advancing upon it had remained to them. But the death of Cyrus left them in a strange situation,—deserted by every Asiatic ally, without supplies, without knowledge of the country, in the midst of a hostile population. Their own comman-

der, moreover, had been slain, and no one held authority over them. But they possessed what no other people of their time could claim—the capacity for self-control. They chose from their ranks a general, the Athenian Xenophon, and endowed him with all necessary powers. Then they set their faces homewards, in a long retreat from the lower Euphrates to the Euxine, from the Euxine to the Bosphorus, and so into Greece. "Although this eight months' military expedition possesses no immediate significance for political history, yet it is of high importance, not only for our knowledge of the East, but also for that of the Greek character; and the accurate description which we owe to Xenophon is therefore one of the most valuable documents of antiquity. . . . This army is a typical chart, in many colours, of the Greek population—a picture, on a small scale, of the whole people, with all its virtues and faults, its qualities of strength and its qualities of weakness, a wandering political community which, according to home usage, holds its assemblies and passes its resolutions, and at the same time a wild and not easily manageable band of free-lances. . . . And how very remarkable it is, that in this mixed multitude of Greeks it is an Athenian who by his qualities towers above all the rest, and becomes the real preserver of the entire army! The Athenian Xenophon had only accompanied the expedition as a volunteer, having been introduced by Proxenus to Cyprus, and thereupon moved by his sense of honour to abide with the man whose great talents he admired. . . . The Athenian alone possessed that superiority of culture which was necessary for giving order and self-control to the band of warriors, barbarized by their selfish life, and for enabling him to serve them in the greatest variety of situations as spokesman, as general, and as negotiator; and to him it was essentially due that, in spite of their unspeakable trials, through hostile tribes and desolate snow-ranges, 3,000 Greeks after all, by wanderings many and devious, in the end reached the coast. They fancied themselves safe when, at the beginning of March, they had reached the sea at Trapezus. But their greatest difficulties were only to begin here, where they first again came into contact with Greeks. [Sparta, then supreme in Greece, feared to offend the great king by showing any friendliness to this fugitive remnant of the unfortunate expedition of Cyrus. The gates of her cities were coldly shut against them, and they were driven to enter the service of a Thracian prince, in order to obtain subsistence. But another year found Sparta involved in war with Persia, and the surviving Cyreans, as they came to be called, were then summoned to Asia Minor for a new campaign against the enemy they hated most.]"—E. Curtius, *History of Greece*, bk. 5, ch. 3.

B. C. 150-A. D. 226.—Embraced in Parthian empire.—Recovery of national independence.—Rise of Sassanian monarchy.—“About B. C. 163, an energetic [Parthian] prince, Mithridates I., commenced a series of conquests towards the West, which terminated (about B. C. 150) in the transference from the Syro-Macedonian to the Parthian rule of Media Magna, Susiana, Persia, Babylonia, and Assyria Proper. It would seem that the Persians offered no resistance to the progress of the new conqueror. . . . The treatment of the Persians by their Parthian lords seems, on the whole, to have been marked by moderation. . . . It was a principle of the Parthian governmental system to allow the subject peoples, to a large extent, to govern themselves. These people generally, and notably the Persians, were ruled by native kings, who succeeded to the throne by hereditary right, had the full power of life and death, and ruled very much as they pleased, so long as they paid regularly the tribute imposed upon them by the ‘King of Kings,’ and sent him a respectable contingent when he was about to engage in a military expedition.”—G. Rawlinson, *Seventh great oriental monarchy*, ch. 1.—“The formidable power of the Parthians . . . was in its turn subverted by Artshir, or Artaxerxes, the founder of a new dynasty, which, under the name of Sassanides [see SASSANIAN DYNASTY], governed Persia till the invasion of the Arabs. This great revolution, whose fatal influence was soon experienced by the Romans, happened in the fourth year of Alexander Severus [226]. . . . Artaxerxes had served with great reputation in the armies of Artaban, the last king of the Parthians; and it appears that he was driven into exile and rebellion by royal ingratitude, the customary reward for superior merit. His birth was obscure, and the obscurity equally gave room to the aspersions of his enemies and the flattery of his adherents. If we credit the scandal of the former, Artaxerxes sprang from the illegitimate commerce of a tanner’s wife with a common soldier. The latter represents him as descended from a branch of the ancient kings of Persia. . . . As the lineal heir of the monarchy, he asserted his right to the throne, and challenged the noble task of delivering the Persians from the oppression under which they groaned above five centuries, since the death of Darius. The Parthians were defeated in three great battles. In the last of these their king Artaban was slain, and the spirit of the nation was for ever broken. The authority of Artaxerxes was solemnly acknowledged in a great assembly held at Balkh in Khorasan.”—E. Gibbon, *History of the decline and fall of the Roman empire*, v. 1, ch. 8.

A. D. 226-627.—Wars with the Romans.—The revolution in Asia which subverted the Parthian empire and brought into existence a new Persian monarchy—the monarchy of the Sassanides—occurred 226 A. D. The founder of the new throne, Artaxerxes, no sooner felt firm in his seat than he sent an imposing embassy to bear to the Roman emperor—then Alexander Severus—his haughty demand that all Asia should be yielded to him and that Roman arms and Roman authority should be withdrawn to the western shores of the Ægean and the Propontis. This was the beginning of a series of wars, extending through four centuries

and ending only with the Mahometan conquests which swept Roman and Persian power alike out of the contested field. The first campaigns of the Romans against Artaxerxes were of doubtful result. In the reign of Sapor, son of Artaxerxes, the war was renewed, with unprecedented humiliation and disaster to the Roman arms—Valerian, the emperor, was surrounded and taken prisoner, after a bloody battle fought near Edessa (260),—remaining until his death a captive in the hands of his insolent conqueror and subjected to every indignity (see ROME: Empire: 192-284). Syria was overrun by the Persian armies, and its splendid capital, Antioch, surprised, pillaged, and savagely wrecked, while the inhabitants were mostly slain or reduced to slavery. Cilic and Cappadocia were next devastated in like manner. Casarea, the Cappadocian capital, being taken after an obstinate siege, suffered pillage and unmerciful massacre. The victorious career of Sapor, which Rome failed to arrest, was checked by the rising power of Palmyra (see PALMYRA). Fifteen years later, Aurelian, who had destroyed Palmyra, was marching to attack Persia when he fell by the hands of domestic enemies and traitors. It was not until 283, in the reign of Carus, that Rome and Persia crossed swords again. Carus ravaged Mesopotamia, captured Seleucia and Ctesiphon and passed beyond the Tigris, when he met with a mysterious death, and his victorious army retreated. A dozen years passed before the quarrel was taken up again, by Diocletian (see ROME: Empire: 284-305). That vigorous monarch sent one of his Cæsars—Galerius—into the field, while he stationed himself at Antioch to direct the war. In his first campaign (297), Galerius was defeated on the old fatal field of Carrhæ. In his second campaign (297-298) he won a decisive victory and forced on the Persian king, Narses, a humiliating treaty, which renounced Mesopotamia, ceded five provinces beyond the Tigris, made the Araxes, or Aboras, the boundary between the two empires, and gave other advantages to the Romans. There was peace, then, for forty years, until another Sapor, grandson of Narses, had mounted the Persian throne. Constantine the Great was dead and his divided empire seemed less formidable to the neighboring power. “During the long period of the reign of Constantius [337-361] the provinces of the East were afflicted by the calamities of the Persian war. . . . The armies of Rome and Persia encountered each other in nine bloody fields, in two of which Constantius himself commanded in person. The event of the day was most commonly adverse to the Romans.” In the great battle of Singara, fought 348, the Romans were victors at first, but allowed themselves to be surprised at night, while plundering the enemy’s camp, and were routed with great slaughter. Three sieges of Nisibis, in Mesopotamia—the bulwark of Roman power in the East—were among the memorable incidents of these wars. In 338, in 346, and again in 350, it repulsed the Persian king with shame and loss. Less fortunate was the city of Amida (modern Diarbekir), in Armenia, besieged by Sapor, in 350. It was taken, at the last, by storm, and the inhabitants put to the sword. On the accession of Julian, the Persian war was welcomed by the ambitious young emperor as an opportunity for emulating the glory of Alexander, after rivalling that of Cæsar in Gaul. In the early spring of 363, he led forth a great army from Antioch, and traversed the sandy plains of Mesopotamia to the Persian capital of Ctesiphon, reducing and destroying the strong cities of Perisabor and Maogamalcha on his march. Finding Ctesiphon

phon too strong in its fortifications to encourage a siege, he crossed the Tigris, burned his fleet and advanced boldly into the hostile country beyond. It was a fatal expedition. Led astray by perfidious guides, harassed by a swarm of enemies, and scantily supplied with provisions, the Romans were soon forced to an almost desperate retreat. If Julian had lived, he might possibly have sustained the courage of his men and rescued them from their situation; but he fell, mortally wounded, in repelling one of the incessant attacks of the Persian cavalry. An officer named Jovian was then hastily proclaimed emperor, and by his agency an ignominious treaty was arranged with the Persian king. It gave up all the conquests of Galerius, together with Nisibis, Singara and other

tory to future conflicts, Anastasius now founded and Justinian afterwards strengthened the powerfully fortified city of Dara, near Nisibis. The value of the new outpost was put to the proof in 526, when hostilities again broke out. The last great Roman general, Belisarius, was in command at Dara during the first years of this war, and finally held the general commands. In 529 he fought a great battle in front of Dara and won a decisive victory. The next year he suffered a defeat at Sura and in 532 the two powers arranged a treaty of peace which they vauntingly called "The Endless Peace"; but Justinian (who was now emperor) paid 11,000 pounds of gold for it. "The Endless Peace" was so quickly ended that the year 540 found the Persian king Chosroes, or

TRIUMPH OF SHAPUR I OVER VALERIAN

Bas relief in stone of Naksch-i-Rustam
(From "L'Art antique de la Perse")

Roman strongholds in Mesopotamia; on which hard terms the Roman army was permitted to recross the Tigris and find a refuge in regions of its own. The peace thus shamefully purchased endured for more than half-a-century. Religious fanaticism kindled war afresh, 422, between Persia and the eastern empire; but the events are little known. It seems to have resulted, practically, in the division of Armenia which gave Lesser Armenia to the Romans as a province and made the Greater Armenia, soon afterwards, a Persian satrapy, called Persarmenia. The truce which ensued was respected for eight years. In the year 502, while Anastasius reigned at Constantinople and Kobad was king of Persia, there was a recurrence of war, which ended, however, in 505, without any territorial changes. The unhappy city of Amida was again captured in this war, after a siege of three months, and 80,000 of its inhabitants perished under the Persian swords. Prepara-

Nushirvan, at the head of an army in Syria ravaging the country and despoiling the cities. Antioch, just restored by Justinian, after an earthquake which, in 526, had nearly levelled it with the ground, was stormed, pillaged, half burned, and its streets drenched with blood. The seat of war was soon transferred to the Caucasian region of Colchis, or Lazica (modern Mingrelia), and became what is known in history as the Lazic War (see LAZICA), which was protracted until 561, when Justinian consented to a treaty which pledged the empire to pay 30,000 pieces of gold annually to the Persian king, while the latter surrendered his claim to Colchis. But war broke out afresh in 572 and continued till 591 (see CANZACA, OR SHIZ, BATTLE OF), when the armies of the Romans restored to the Persian throne another Chosroes, grandson of the first, who had fled to them from a rebellion which deposed and destroyed his unworthy father. Twelve years later

this Chosroes became the most formidable enemy to the empire that it had encountered in the East. In successive campaigns he stripped from it Syria and Palestine, Egypt, Cyrenaica, and the greater part of Asia Minor, even to the shores of the Bosphorus. Taking the city of Chalecedon in 616, after a lengthy siege, he established a camp and army at that post, within sight of Constantinople, and held it for ten years, insulting and threatening the imperial capital. But he found a worthy antagonist in Heraclius, who became emperor of the Roman East in 610, and who proved himself to be one of the greatest of soldiers. It was twelve years after the beginning of his reign before Heraclius could gather in hand, from the shrunken and exhausted empire, such resources as would enable him to turn aggressively upon the Persian enemy. Then, in three campaigns, between 622 and 627, he completely reversed the situation. After a decisive battle, fought December 1, 627, on the very site of ancient Nineveh, the royal city of Dastagerd was taken and spoiled, and the king, stripped of all his conquests and his glory, was a fugitive (see **ROME: Medieval city: 565-628**). A conspiracy and an assassination soon ended his career and his son made peace. It was a lasting peace, as between Romans and Persians; for eight years afterwards the Persians were in their death struggle with the warriors of Mohammed.—Based on G. Rawlinson, *Seventh great oriental monarchy*.

1258-1393.—Mongol empire of the Ilkhans.—Khulagu, or Houlagou, grandson of Jenghiz Khan, who extinguished the caliphate at Bagdad, 1258, and completed the Mongol conquest of Persia and Mesopotamia (see **BAGDAD: 1258**), "received the investiture of his conquests and of the country south of the Oxus. He founded an empire there, known as that of the Ilkhans. Like the Khans of the Golden Horde, the successors of Batu, they for a long time acknowledged the suzerainty of the Khakan of the Mongols in the East."—H. H. Howorth, *History of the Mongols*, pt. 1, p. 211.—Khulagu "fixed his residence at Maragha, in Aderbajan, a beautiful town, situated on a fine plain watered by a small but pure stream, which, rising in the high mountains of Sahund, flows past the walls of the city, and empties itself in the neighbouring lake of Oormia. . . . At this delightful spot Hulakoo [or Khulagu] appears to have employed his last years in a manner worthy of a great monarch. Philosophers and astronomers

were assembled from every part of his dominions, who laboured in works of science under the direction of his favourite, Nesser-ud-deen. [The title of the Ilkhans, given to Khulagu and his successors, signified simply the lords or chiefs (the Khans). Their empire was extinguished in 1393 by the conquests of Timur.]—J. Malcolm, *History of Persia*, v. 1, ch. 10.—"It was under Sultan Ghazan, who reigned from 1294 to 1303, that Mahometanism again became the established religion of Persia. In the second year of his reign, Ghazan Khan publicly declared his conversion to the faith of the Koran. . . . After Sultan Ghazan the power of the Mongolian dynasty in Persia rapidly declined. The empire soon began to break in pieces. . . . The royal house became extinct, while another branch of the descendants of Hulaku established themselves at Bagdad. At last Persia became a mere scene of anarchy and confusion, utterly incapable of offering any serious resistance to the greatest of Mussulman conquerors, the invincible and merciless Timur."—E. A. Freeman, *History and conquest of the Saracens*, lecture 6.

1386-1393.—Conquest by Timur. See **TIMUR. 15th-16th centuries.—Domination in Caucasus. See CAUCASUS: 1400-1737**.

1499-1887.—Founding of Sefavean dynasty.—Triumph of the Sheahs.—Subjugation by Afghans.—Deliverance by Nadir Shah.—Khajar dynasty.—"At an early period in the rise of Islamism, the followers of Mohammed became divided on the question of the succession to the caliphate, or leadership, vacated by the death of Mohammed. Some, who were in majority, believed that it lay with the descendants of the caliph, Moawiyeh, while others as firmly clung to the opinion that the succession lay with the sons of Alee and Fatimeh, the daughter of the prophet, Hassan and Hussein, and their descendants. In a desperate conflict on the banks of the Euphrates, nearly all the male descendants of the prophet were slain [see **CALIPHATE: 680**], and almost the entire Mohammedan peoples, from India to Spain, thenceforward became Sunnees—that is, they embraced belief in the succession of the line of the house of Moawiyeh, called the Ommiades. But there was an exception to this uniformity of belief. The Persians, as has been seen, were a people deeply given to religious beliefs and mystical speculations to the point of fanaticism. Without any apparent reason many of them became Sheahs [or Shiah], or believers in the claims of the house of Alee and Fatimeh. . . . Naturally for centuries the Sheahs suffered much persecution from the Sunnees, as the rulers of Persia, until the 15th century, were generally Sunnees. But this only stimulated the burning zeal of the Sheahs, and in the end resulted in bringing about the independence of Persia under a dynasty of her own race. In the 14th century there resided at Ardebil a priest named the Sheikh Saifus, who was held in the highest repute for his holy life. He was a lineal descendant of Musa, the seventh Holy Imam. His son, Sadr-ud-Deen, not only enjoyed a similar fame for piety, but used it to such good account as to become chieftain of the province where he lived. Junaid, the grandson of Sadr-ud-Deen, had three sons, of whom the youngest, named Ismail, was born about the year 1480. When only eighteen years of age, the young Ismail entered the province of Ghilan, on the shores of the Caspian, and by the sheer force of genius raised a small army, with which he captured Baku. His success brought recruits to his standard, and at the head of 16,000 men he defeated the chieftain of Alamut, the general sent against him,

and, marching on Tabreez, seized it without a blow. In 1499 Ismail, the founder of the Sefavean dynasty, was proclaimed Shah of Persia. . . . The establishment of the Sefavean dynasty also brought about the existence of a Sheah government, and gave great strength to that sect of the Mohammedans, between whom and other Islamites there was always great bitterness and much bloodshed. Ismail speedily carried his sway as far as the Tigris in the southwest and to Kharism and Candahar in the north and east. He lost one great battle with the Turks under Selim II. at Tabreez [or Chaldiran (see TURKEY: 1481-1520)], but with honor, as the Persians were outnumbered; but it is said he was so cast down by that event he never was seen to smile again. He died in 1524, leaving the record of a glorious reign. His three immediate successors, Tahmasp, Ismail II., and Mohammed Khudabenda, did little to sustain

never recovered from the blow. Mahmood died in 1725, and was succeeded by his cousin Ashraf. But the brief rule of the Afghans terminated in 1727. Nadir Kuli, a Persian soldier of fortune, or in other words a brigand of extraordinary ability, joined Tahmasp II., who had escaped and collected a small force in the north of Persia. Nadir marched on Ispahan and defeated the Afghans in several battles; Ashraf was slain and Tahmasp II. was crowned. But Nadir dethroned Tahmasp II. in 1732, being a man of vast ambition as well as desire to increase the renown of Persia; and he caused that unfortunate sovereign to be made way with some years later. Soon after Nadir Kuli proclaimed himself king of Persia with the title of Nadir Kuli Khan. Nadir was a man of ability equal to his ambition. He not only beat the Turks with comparative ease, but he organized an expedition that conquered Afghanistan and proceeded eastward until Delhi fell into his hands, with immense slaughter [see INDIA: 1662-1748]. . . . He was assassinated in 1747. Nadir Kuli Khan was a man of great genius, but he died too soon to establish an enduring dynasty, and after his death civil wars rapidly succeeded each other until the rise of the present or Khajar dynasty, which succeeded the reign of the good Kerim Khan the Zend, who reigned twenty years at Shiraz. Aga Mohammed Khan, the founder of the Khajar dynasty, succeeded in 1794 in crushing the last pretender to the throne, after a terrible civil war, and once more reunited the provinces of Persia under one sceptre. . . . Aga Mohammed Khan was succeeded, after his assassination, by his nephew Feth Alee Shah, a monarch of good disposition and some ability. It was his misfortune to be drawn into two wars with Russia, who stripped Persia of her Circassian provinces, notwithstanding the stout resistance made by the Persian armies. Feth Alee Shah was succeeded by his grandson Mohammed Shah, a sovereign of moderate talents. No events of unusual interest mark his reign, excepting the siege of Herat which was captured in the reign [of his successor] from the Afghans. He died in 1848, and was succeeded by his son, Nasr-ed-Deen Shah [who was still sovereign in 1877].”—S. G. W. Benjamin, *Story of Persia*, ch. 20.

ABBAS I, THE GREAT
 (From an original Persian painting)

the fame and power of their country, and the new empire must soon have yielded to the attacks of its enemies at home and abroad, if a prince of extraordinary ability had not succeeded to the throne when the new dynasty seemed on the verge of ruin. Shah Abbass, called the Great, was crowned in the year 1586, and died in 1628, at the age of seventy, after a reign of forty-two years [see TURKEY: 1623-1640]. This monarch was one of the greatest sovereigns who ever sat on the throne of Persia. . . . It was the misfortune of Persia that the Sefavean line rapidly degenerated after the death of Shah Abbass. . . . Taking advantage of the low state of the Sefavean dynasty, Mahmood, an Afghan chieftain, invaded Persia in 1722 with an army of 50,000 men. Such was the condition of the empire that he had little difficulty in capturing Ispahan, although it had a population of 600,000. He slaughtered every male member of the royal family except Houssein the weak sovereign, his son Tahmasp, and two grandchildren; all the artists of Ispahan and scores of thousands besides were slain. That magnificent capital has

1799-1817.—Early English, French and Russian relations with Persia.—Treaties with England.—Friction with Russia.—“Towards the close of the eighteenth century Tippoo Sultan sent a mission to Persia seeking an alliance, and Marquis Wellesley followed suit, his envoy being a native of Persian extraction. Tippoo fell at Seringapatam in 1799, but the value of Persian friendship once recognized, the Indian Government determined to secure it if possible, and in 1800 Captain (afterwards Sir John) Malcolm arrived from India at the Court of the Shah on a mission, of which the origin and object are thus stated by the envoy himself: ‘The power possessed by its (the Persian)

sovereign of checking the Afghans, who threatened to invade India, and of repelling the ambitious views of France, if ever directed to that quarter, led the governor-general of the British possessions in the East to form an alliance with Feth Ali Khan immediately after he was raised to the throne.' This policy had the temporary success which was desired of diverting the Afghans from their meditated invasion of India, and an impression was made of the power of the English nation, both on the King of Persia and his subjects. . . . Malcolm's first visit was followed almost immediately (1801) by an abortive attempt on the part of Napoleon to establish relations with Persia through the medium of an Armenian merchant. Malcolm meantime had concluded a treaty providing that Persia should lay waste Afghanistan if the latter attacked India, but 'remarkable, chiefly, for the bitterness with which its proscribed the French.' Four years later, war having broken out between France and Russia, Napoleon sent Colonel Romieu to Teheran with definite proposals for an alliance. Romieu died, but in 1806, the Shah having in turn sought his friendship, the Emperor despatched Joubert on the same errand with a happier result; for the latter, after suffering detention and imprisonment on the road, eventually reached Teheran, and returned thence to Europe accompanied by a duly accredited Persian envoy, who followed Napoleon to Tilsit, and there concluded a treaty with him, afterwards ratified at Finkenstein (May 1807). Russia and France were now allies, and the former Power could, of course, offer no objection when General Gardanne was sent with seventy commissioned and non-commissioned officers to drill and instruct the Persian army. In England and in India, however, this proceeding, naturally enough, roused great uneasiness [especially as Malcolm was refused admission to Persia]. . . . By March 1809 the French mission was at Tabriz in a condition of honourable detention, and English influence [was] once more paramount. According to Malcolm, 'The King of Persia had listened to the overtures of Bonaparte in the hope that this mediation or his power would enable him to recover Georgia; but when changes in the conditions of Europe compelled the French Emperor to abandon his designs in Asia, he (the Shah) reverted to his alliance with the English.' Sir Harford Jones concluded a second treaty with the Shah, Feth Ali, soon after his arrival at the capital (March 12th (N.S.) 1809), providing, amongst other things, that in the event of any European forces invading Persia a British force or equivalent subsidy, besides guns, munitions of war, and officers, to an amount and in numbers to be settled later on, would be furnished from India. . . . [A third] Anglo-Persian treaty [made in November, 1814] renewed the agreement as to subsidy, the supply of officers and men, of arms and munitions of war, etc. and most gratuitously provided that 'the limits of Russia and Persia should be determined according to the admission of Great Britain, Persia, and Russia.' But quarrels soon arose in regard to the payment of the subsidy, and in 1815 all British non-commissioned officers were ordered by their Mission to leave the country. D'Arcy, Hart, and some other commissioned officers remained, and the last named acquired and maintained a position of extraordinary influence in Persia, until his death by cholera in 1830. Meantime the rupture between France and Russia in 1812 had materially altered the position of affairs. England, though still desirous of maintaining her friendship with Persia, could no longer openly aid the latter in her disputes or conflicts with Russia,

and the British officers in the service of the Shah were forbidden to take any part in actual warfare. . . . It can hardly be denied that Russia had more than once ample ground for distrust and anger based upon the presence and activity of English agents, avowed or unavowed, at the Persian Court and in the ranks of the Persian army. Nevertheless we have Paskievitch's emphatic testimony in favour of English policy. 'I care not to inquire into the motives which led the late commander-in-chief in Georgia to misrepresent during ten years to H. I. M. and the Ministry our relations with Persia, and even with England in those parts. But if the English have enormous influence in the East, it is because they have constantly and warmly taken to heart the interests of those who have sought their protection, politically. I see by the official correspondence, now before me, that since our embassy of 1817, so meagre in useful results, and up to the last rupture, it was imputed as a crime to the English that they sought the friendship of that one of the Shah's sons who has always shown partiality for Europeans; and it was a matter of offense that Abbas Mirza failed to prefer ourselves, who refuse him even the title of heir to his father's throne, solemnly guaranteed to him by the treaty, to a nation which supplied him with money and arms, and with officers to drill his troops.'"—J. F. Baddeley, *Russian conquest of the Caucasus*, pp. 176-181.

1896.—Assassination of the shah.—False charges against the Babis.—Punishment of alleged accomplices.—Nasiru'd-Din Shah, the fourth king of the Qajar dynasty, succeeded to the throne of Persia on Dhu'l-Qa'da 22, A.H. 1264 (September 20, A.D. 1848), and would therefore enter on the fiftieth year of his reign on . . . May 6, 1896. Great preparations had been made to celebrate his Jubilee, . . . when, only three days before these celebrations were to have taken place, the world was startled by the news of his assassination. . . . The Crown Prince, or *Il'ali-ahd*, Muzaffaru'd-Din Mirza, was instantly summoned by telegraph from Tabriz, where he was proclaimed Shah on the morrow of his father's death; and shortly afterwards he was peaceably crowned at Tihran. . . . Suspicion, which had at first (unjustly enough) fallen on the Babis, soon fell on Sayyid Jamalud-Din, on another of his disciples, Mirza Aqa Khan, and on Shaykh Ahmad of Kirman and Hajji Mirza Hasan Khan *Khavāruil-Mulk*, and the extradition of these four was demanded by the Persian from the Turkish government. The three last-named were finally surrendered to the Persian authorities, and were secretly put to death at Tabriz."—E. G. Brown, *Persian revolution*, pp. 50, 11-12.—See also BABISM.

1899.—Represented at first Hague conference. See HAGUE CONFERENCES: 1800: Constitution.

1904.—Telegraphic communication with India.—In 1904 telegraphic communication was opened between Teheran and India. This was an important event politically as well as commercially for British safety in India has always depended on knowledge of what is happening in the neighboring countries.

1905-1907.—Beginnings of revolutionary movement.—Shah Muzaffar-ed-Din.—Taking of

"bast," and its effect.—Extortion of a constitution and election of a representative assembly.—Death of the shah.—In 1907, popular demands compelled the shah to grant a written Constitution. The following account of conditions and events which opened, attended and followed the constitutional revolution have been derived, partly from official correspondence of the period between the British legation at Teheran (or Tehran) and the foreign office at London, as published in Blue Book Cd. 4581, 1909, and partly from letters and despatches to the leading journals of London and New York. The shah, Muzafer-ed-Din, who came to the throne in 1896, on the assassination of his father, Nâsr-ed-Din was credited with a desire to reform the government of his kingdom, and made considerable effort to that end in the early years of his reign; but the adverse forces controlling his court were too strong for him, and he seems to have yielded to them completely at last. He was surrounded by a corrupt ring which lived on the spoils of government, and piled debt upon debt. Under the last of the grand viziers (Atabegs, or Atabeks) who ruled Persia in his name before the outbreak of revolution, "governments were put up for sale, grain was hoarded and sold at extortionate prices, the Government domains were stolen or sold for the benefit of the conspirators, rich men were summoned to Teheran (or Tehran) and forced to disgorge large sums of money, oppression of every sort was countenanced for a consideration; the property, and even the lives, of all Persian subjects were at their mercy. Finally, there was every reason to believe that a conspiracy was on foot to dethrone the foolish and impotent Shah and to oust the Valiabd [heir to the throne]. In their place was to be put the Shooa-es-Sultaneh, the Shah's younger son, who was a by-word even in Persia for extortion and injustice. The policy of the Atabeg and his friends had thus aroused the opposition of all classes in Persia; of the few more or less patriotic statesmen, who knew to what a goal the country was being led; of the priests, who felt that their old power and independence would perish with that of their country; and of the great mass of the population and the mercantile classes, who were the daily victims of the tyranny of their oppressors. In December [1905] the storm broke. The Governor of Teheran, without any just cause, ordered an aged Seyed to be cruelly beaten. A large number of the prominent Mujtehedhs took 'bast' [refuge] in the shrine of Shah Abdul Azim, near the capital." The "taking of 'bast,'" or refuge, in some sanctuary or other place of protection, is an old Persian mode of political protest or demonstration, to command attention to public discontents. In 1848 the chief persons of the empire had taken refuge with the English and Russian legations in order to obtain the exile of a tyrannical minister, Mirza Aghassi, and since then it had been the custom of persons who had grievances against their own government to take refuge under the shelter of a foreign legation. The "Mujtehedhs" mentioned in the above quotation as having resorted to this expedient in December, are the higher and more influential of the Mohammedian priests in Persia, distinguished from the Mullahs or common priests, whose ranks are open to any believer who can read the Koran and who assumes to interpret its laws. The Government used vain endeavors of bribery and intimidation to break up the "bast" at the shrine of Shah Abdul Azim. The refugees had stirred up the whole country by a published statement of grievances, appealing to the patriotism of the people,

and the Shah surrendered to the effect produced. He made promises of a grant of popular representation, and of administrative reforms. By the end of January a promising state of affairs seemed to have been brought about. "The refugees were brought back to Teheran in the Shah's own carriages, escorted by an enthusiastic crowd." But dissensions between the popular leaders and the Mujtehedhs soon arose. "No definite step was taken to give effect to the Shah's promises, except a vague letter promising Courts of Justice and a new Code, and the appointment of a Council to consider the whole question of reforms. In this Council it soon became evident that the Government could control the leaders of the reform movement, and that the sympathies of the great Mujtehedhs were not heartily with the popular movement. All was outwardly quiet in Teheran, but in the provinces the people of Shiraz and Resht had taken violent measures to prevent the reappointment of the Shah's sons as their Governors, and the movement in both cases was successful. In the capital itself the streets and the bazaars were quiet, but every day sermons were preached in the mosques, in which, as one of the popular party said, 'What we hardly dared to think a year ago was openly spoken.' The best-known preacher of Teheran, a Prince of the Imperial house, preached every Friday against the tyrannies and corruption of the Government. An order for his expulsion was issued. The chief Mujtehedhs, incited by the people, pressed the Government to withdraw the measure, and the Government had to yield." In the middle of May the shah had a paralytic stroke and was removed to the country. For some weeks there was a lull in the popular agitation. Then, early in July, the principal Mujtehedhs were roused by the conduct of the grand vizier to a fresh preaching of revolt. On July 11 the vizier ordered the arrest of one of the preachers; a crowd of people attempted to rescue him, and was fired on by the troops. General rioting in the capital ensued, with victory, for a time, on the side of the people; but in the end the government appeared to have won the day. "The town was in the hands of the troops. The popular leaders had fled. The Shah was in the hands of their opponents. For the popular party the outlook was a grave one." In these circumstances the leaders had recourse again to the "bast," and this time in a foreign legation. "On the evening of the 9th fifty Mullahs and merchants appeared at the Legation and took up their quarters for the night. Their numbers soon increased, and on the 2nd September there were about 14,000 persons in the Legation garden. Their conduct was most orderly. The crowd of refugees was organized by the heads of the guilds, who took measures to prevent any unauthorized person from entering the Legation grounds. Tents were put up and regular feeding places and times of feeding were provided for. The expense was borne by the principal merchants. No damage of a wilful character was done to the garden, although, of course, every semblance of a bed was trampled out of existence, and the trees still bear pious inscriptions cut in the bark. Colonel Douglas, the Military Attaché, kept watch over the Legation buildings, but no watch was needed. Discipline and order were maintained by the refugees themselves. The Government sent answers to the popular demands, which they requested Mr. Grant Duff [the British minister] to read to the people. The Government communications were received with derision. At last there appeared to be no other resource than a personal appeal to the Shah. The people stated firmly that unless their

demands were granted they would remain in the Legation, as it was their only place of safety, and they maintained that until the Shah knew what was the real situation their requests would never receive due consideration. Mr. Grant Duff obtained the consent of His Majesty's Government, and announced to the Minister for Foreign Affairs that he demanded an audience. An audience was fixed for the 30th July. The audience, however, never took place. The Commander of several of the Tehran regiments, on whom the Minister of the Court and the Grand Vizier chiefly depended, made the fatal announcement that his troops would not serve against the people, and that they were on the point of themselves taking refuge in the British Legation. The Court party yielded. The Sadr Azam [Grand Vizier] resigned, and the Azad-ul-Mulk, head of the Kajar tribe [the tribe of the imperial dynasty], proceeded to Kum in order to inform the refugee Mullahs that the Shah had granted their demands for a National Assembly and for Courts of Justice. The chief difficulty which then confronted Mr. Grant Duff was that the people had entirely lost confidence in their own Government, and declined to treat with them except through the British Representative. When the Government made the announcement of the projected reforms, the people answered that they would not accept the promise of the Government unless it was confirmed and guaranteed by the Government of the King of England. This was naturally impossible. Acting under instructions, Mr. Grant Duff informed the refugees that he could do no more for them, and entirely declined to guarantee the execution of the Shah's Decrees. The Government then attempted to come to an arrangement direct. It failed. The popular leaders rejected the Shah's Decrees as vague or inadequate, and were posted up in the city they were torn down and trampled on. In this extremity the Government again appealed to Mr. Grant Duff and begged him for his assistance. At his suggestion a meeting took place at the residence of the new Grand Vizier, the late Minister for Foreign Affairs, between the Government and the popular leaders. After a long discussion, at which Mr. Grant Duff took no part except when questioned, an agreement was arrived at, and an amended Rescript published which definitely promised a National Representative assembly [in the Persian language a *Mejlis* or *Mcdjliis*] with legislative powers. The Rescript was read out in the British Legation to the assembled refugees and was received with enthusiasm. . . . On the night of the 16th the Mujtehed returned amid popular plaudits, and on the 18th a grand meeting was held in the Palace precincts as a sort of earnest of the National Assembly." The court party, however, had only suffered an appearance of defeat. It spent the next week "in gradually paring down all the Shah's promises, and in the production of a Rescript in which the original project of the Constitution was hardly recognizable. The late Grand Vizier, who had lingered in the neighborhood, suddenly returned to his country seat near the Shah's residence, and the Shah absolutely refused to sign the Regulations for the Assembly. The popular excitement was intense. Notice was served on Mr. Grant Duff that the people would again take refuge in the Legation, if necessary, by force. About twenty-five of the leaders actually did take up their quarters there. It seemed as if the disturbances were about to break out anew." But now the Russian minister came into coöperation with Mr. Grant Duff, in representations to the shah that overcame

the evil influences by which he was swayed. Regulations for the election of delegates to the Assembly were now signed; but fresh difficulties arose from the refusal of provincial governors to carry them out. These in turn were overcome and the elections were held. "Meanwhile it had been decided, in order to avoid delay, that the Tehran Members of the Council should meet at once, without waiting for the provincial Delegates, and the first session of the new Assembly was opened [October 7, 1906] by the Shah himself, in the presence of the priests, the Court, and the foreign representatives. . . . The Assembly soon showed its power. It refused absolutely to consent to the Anglo-Russian advance [of a preferred loan] on the ground that the public revenues ought not to be pledged to foreigners. It announced its intention of instituting reforms, especially in the finances of the country, and providing itself the necessary funds for carrying on the Government by founding and endowing a National Bank. But, before taking any steps of this nature, it insisted on having a signed Constitution. A Committee was nominated to consider the terms of the Constitution, and, in consultation with a Committee named by the Government, a Constitution was drawn up and submitted to the Chamber." It did not satisfy the popular demand and scenes of confusion followed; but in the end it was amended and approved, and, on January 1, 1907, the important instrument, ratified by the shah and by the *valiahd*—the heir to the crown—was delivered to the assembly and received with joy. One week later, January 8, the shah died.

1907.—Anglo-Russian convention. See ANGLO-RUSSIAN AGREEMENT OF 1907.

1907.—Represented at second Hague conference. See HAGUE CONFERENCES: 1907.

1907-1908.—New shah, Mohammed Ali.—Reactionary policy.—Hostility between shah and assembly.—Intrigues and riots in Ispahan.—Attempted assassination of the shah.—His temporary victory.—Muzaffarud-Din Mirza "was succeeded by his son Muhammad Ali Mirza, who was duly crowned on Jan. 19, [1907] and whose second son, Sultan Ahmad Mirza, was proclaimed *Wali-ahd* (Crown-Prince) on Jan. 25. That the new Shah should dislike the Constitution and regard the *Majlis* with suspicion and aversion was perhaps natural enough, for he had looked forward to exercising the same autocratic and irresponsible powers as his predecessors had been wont to enjoy. . . . He manifested this dislike by not inviting the Deputies to be present at his Coronation. . . . This omission, the first of a series of slights upon the *Majlis* by the Shah, was greatly resented by the deputies, and their anger was increased by the refusal of the responsible Ministers to appear in the House and answer questions. For it was provided by the Constitution that, though the Ministers were to be nominated by the Shah, they were to be responsible to the Assembly, and that without its consent no tax should be imposed, no expenditure incurred, and no foreign loan or concession allowed. Now at this juncture not only did the responsible Ministers absent themselves from the Assembly, but the raising of a fresh loan of £400,000 in equal moieties from Russia and England, on certain conditions not made public, was still in contemplation. The project for this loan had been drafted in Russia and the draft had been approved by England, while the Shah's one object was to obtain money, regardless of Persia's future well-being. But at the last moment the Assembly, which nobody seems to have taken into account, came to the rescue and absolutely refused to sanc-

tion this transaction, which the *mullas*, with a wise and far-sighted patriotism, denounced as the final sale of Persia's independence. So convinced was the Prime Minister that the people were in earnest that he refused to go forward with the matter, understanding that if he did so his life would not be safe. And although he still refrained from appearing in the Assembly in person, he caused the other Ministers, . . . to be present at its deliberations."—E. G. Browne, *Persian revolution*, pp. 133, 134.—"The leading feature of the reform movement, in the spring of 1907, was the development of intense jealousy of everything and everybody foreign, irrespective of nationality. This feeling reached its climax in the end of February, when the *Mejliss* procured the dismissal of the two principal Belgian officials of the Customs Department. . . . The various non-Islamic elements of the population suffered some persecution, and many Chaldeans from the west left the country, while considerable numbers of Jews emigrated to Palestine. Parsis were murdered, without punishment being inflicted on the culprits. Parties in the *Mejliss* were violently divided on the subject of religious equality, the clericals loudly maintaining the necessity for the maintenance of Mohammedan supremacy. A prominent divine of Isfahan, and a champion of the new movement, went so far as to suggest that Europeans even should be forced to adopt habits and customs more consonant with the respect due by them to Moslems. It was a *seyd* of Shiraz, however, who most aptly epitomised the Persian idea of liberty. In a fit of enthusiasm this worthy man raced down a street shouting 'Long live Freedom,' punctuating his cries by sticking his knife into the scholars of a Jewish school. . . . Meanwhile there arose in Teheran a Press that for unbridled license in the discussion of things and people could not have been rivalled. Vituperation was its strong point. . . . The establishment of numerous secret societies, commonly called *anjumans*, was another influence for evil. The *anjumans* became all-powerful in the capital, and in reality dictated to the *Mejliss*. . . . Ostensibly established for the promotion of constitutional aims, these societies became instruments for the gratification of personal spite and revenge, and for the collection of money by threats, besides being revolutionary, if not anarchistic, to the core. Ending of the Kajar dynasty was, notoriously, the aim of their more extreme members. . . . Disorder in the provinces was easily stirred up by judicious expenditure, and the blame was attributed to dissatisfaction with the new style of government. Each side fomented disturbances with the object of discrediting the cause of the other. Meanwhile the Shah's intrigues and the foolishness of the *Mejliss* were having their due effect throughout the country. One of the troubles of Persia is that most of its mountainous regions are inhabited by nomad and semi-nomad tribes of turbulent and lawless character. These wild people were usually held in check by the policy of setting tribe against tribe and chief against chief. What the Persian lacks in resolution is made up for in craft, and the Government had generally been successful in controlling within reasonable limits these disturbing elements. The tribesmen understood that they were regarded in Teheran as troublesome children, and they maintained their reputation by continual acts of disobedience, followed in due season by remorseful submission. It was a great game in which the Shah never over-harrassed his faithful subjects, while the subjects themselves knew better than to go too far. Behind the diplomacy of the Govern-

ment there was always the whole power of the Empire, a poor enough thing in itself, but overwhelming when employed against a single tribe. Now, however, the dangerous effect of the mushroom press of Teheran was being reflected among the tribes, while the weakness of the central government, due to the conflict between the Shah and *Mejliss*, was becoming apparent in . . . local government. Disorder rose to the surface and there was no strong hand to suppress it. . . . Throughout the year 1907 the situation in the provinces gradually went from bad to worse. Isfahan, Shiraz, Yezd, Meshed, and Kermanshah, besides many other less important places, underwent periods of lawlessness, during which authority was completely set at naught. Trade was paralyzed by the occupation of the caravan routes by organized freebooters, among whom the Bakhtiari were conspicuous. Several cases of robbery of Europeans took place, and the Imperial Bank manager at Shiraz was fired at, and narrowly escaped with his life. . . . Relations between the Shah and the *Mejliss* reached a crisis in the middle of December. The Shah having declined to accede to a request for the dismissal of certain reactionaries, the Cabinet sent in their resignations on the 14th. Next day the ministers were summoned to the palace, where, immediately on arrival, they were arrested. The servant of the Prime Minister, Nasr-ul-Mulk, an Oxford graduate and a G. C. M. G., ran to the British Legation and reported that his master was to be executed in a few hours, whereupon Mr. Marling sent the Oriental Secretary to interview the Shah. The Shah disclaimed any intention of injuring Nasr-ul-Mulk, who, along with the rest of the Ministers, was allowed to leave the palace. . . . Meantime the *Mejliss* appeared to be completely cowed by the action of the Shah. The militant Nationalists who, armed to the teeth, bravely defended the Parliament House in time of peace now showed no signs of life, and the Shah could have occupied the buildings if he had wanted, and there and then ended the *Mejliss* and resumed his powers as an autocrat. Whether it was that he . . . had not really intended the execution of the Ministers, or that his pusillanimity was just as great as his opponents, and he merely lacked the nerve to do what he wished, cannot be said for certain. In any case one perceives a lack of determination in all concerned. The Shah proving irresolute, and the British intervention on behalf of the Ministers having hardened Nationalist hearts, the Baharistan garden, which contained the Parliament House, and the adjacent Siparsalar mosque, were 'slowly' occupied by armed members of the *anjumans*, until by night there was said to be assembled 3,000 armed men ready to defend the *Mejliss*. . . . No fighting took place, and the Shah eventually gave way all along the line, agreed to dismiss the obnoxious reactionaries, and himself swore . . . on the Koran to be faithful to the Constitution. . . . On 28th February [1908] a determined [but unsuccessful] attempt was made upon the life of the Shah. . . . During the spring there was a lull in disorders throughout the country, though official reports denied the existence of any real improvement. Popular dissatisfaction with the *Mejliss* began to grow, for its failure to improve the situation, and the patent fact that it was being exploited by self-interested parties, caused a revulsion in public feeling. When early in June [1908] the Shah made a sudden exit from the palace within the town and took up his quarters in the Bagh-i-Shah, outside the city walls, it was generally supposed he was hatching plans for a *coup*.

The Nationalists were also busy, and a commission representing all the *anjumans* elaborated a scheme of defence. Thousands of armed men rallied round the *Mejliss* . . . and on the 22nd the *Mejliss* . . . decided to send an ultimatum to the Shah. The initiative was taken by the other side, however, and early the next morning the city was startled by the roar of cannon and the sound of heavy firing. . . . With the exception of one place the country took the Shah's *coup* quietly, and . . . there appears to have been a good deal of relief at the disappearance of the *Mejliss*, so discredited had it become in its later days. The Teheran *anjumans* vanished like pricked bubbles, and the flamboyant press was utterly blotted out. The Powers made it clear to the Shah, however, that they would not tolerate recriminatory measures against the Constitutionalists. Representation had the effect of inducing the Shah to promise another *Mejliss*, and to grant an amnesty, the latter applicable to all political offenders."—D. Fraser, *Persia and Turkey in revolt*, pp. 30-41, 45.

1908-1909.—Final hostilities between the shah and supporters of the constitution.—Tabriz, the center of a revolutionary movement.—Entrance of the Bakhtiari into the struggle.—Siege of Tabriz and relief by the Russians.—Capture of Teheran by the nationalists and Bakhtiari.—Deposition of the shah.—Son enthroned.—When in June, 1908, the shah had established his authority at Teheran, Tabriz became the center of popular opinion on the side of the constitutionalists, or nationalists, and the main seat of their strength. Fighting began there on June 23, simultaneously with the conflict at Teheran, and continued intermittently and indecisively throughout July and August, at the end of which time the nationalists were said to be 10,000 strong. On September 24 the royalists began a bombardment of the town, with five guns, to which the nationalists responded vigorously with four. October 10 the nationalists assumed the offensive, attacking the camp of the besiegers, routing their cavalry, and securing possession of a defensible bridge. On September 24, under pressure from the representatives of Great Britain and Russia, the shah decreed that a *Mejliss* (national assembly) "composed of religious and proper persons, wil, by the help of God and the favor of the 12th Imam, be convoked by us for the 10th Shavval"—that is, November 14—and that a law of elections should be made known by October 27. The latter date passed without producing the promised election law and no elections followed in November; but on the 5th of the later month the shah's partisans organized a "demonstration" at Teheran against the Constitution, on the strength of which the mendacious sovereign replied to British and Russian remonstrances against his faithlessness by saying that "a large section of the population regarded a constitutional régime as contrary to their religion." Presently, on November 22 he issued a rescript proclaiming that the Ulama had declared such an institution as a parliament to be contrary to Islam and therefore he would not convoke it. Early in 1909 the revolt first organized at Tabriz became rife in many parts of the nominal empire of the shah, both north and south. On January 25 *The Times of India* stated that "the Caspian littoral is being lost to the Shah. . . . Then in the far south, almost on the Gulf littoral, the Nationalists of Laristan have thrown off all semblance of the Shah's authority. Recently it was stated that the Bakhtiari had risen in revolt, and had looted Isfahan. . . . Communications between Bushire and Shiraz . . . have been interrupted

for many months." Before the end of March the nationalists were in control of the coast of Border Abad and Bushire on the Persian coast. On March 30 the following went to the London *Times* from Teheran: "The state of numerous districts to the east of the capital during the last fortnight, the situation at present remains practically unaltered. . . . The Bazar is now partially closed, but the business of the town proceeds without interruption. From our side there is nothing to apprehend for the present. The Bakhtiari have made no sign, though their position has been rendered materially more secure by the recent espousal of Nationalism by the most notable family at Shiraz. From Raskh the revolutionaries continue to launch remonstrance, warning, and anathema at the Shah, but they are too weak to march on the capital with a kind of irregular army. . . . A section of the Nationalists [at Tabriz] advocate negotiating with the besiegers, but Sattar Khan has decided to continue his resistance." On April 20 the shah yielded to the insistence of the British and Russian legation, that he should allow an armistice at Tabriz of six days and the importation into the town of sufficient food for that period. Meantime a detachment of Russian Cossacks, under General Snamky, had crossed the frontier into Persia, and was marching to Tabriz with supplies. This Russian relief expedition, approved by the British government, reached the beleaguered city without resistance on April 30, and its presence brought the conflict at that point to an end. A correspondent of *The Times*, who had been in Tabriz throughout the siege, taking some leadership in the defence (in company with a teacher attached to the American Mission's high school, Mr. Busherville, who met death in the fighting) and who gave, two months later, a graphic narrative of the experience, said in concluding it: "Tabriz was ultimately saved by the coming of the Russians. Their entry into the town was the direct cause of the opening of the roads, the dispersal of the disappointed armies of the Shah, the promulgation of the Constitution, and the appointment of a Constitutionalist Ministry. It saved Tabriz from a surrender which could not otherwise have been delayed for three days longer, and thereby it averted the complete collapse of the Constitutional movement." With victory at Tabriz snatched from him, the Shah ostensibly threw up his hands. On May 5 it was announced that he had fixed July 10 for the election of a representative Assembly. This revival of promises failed, however, to arrest the revolutionary movement. On May 7, the nationalists expelled a royal force from Kazvin—less than a hundred miles from Teheran—and declared their intention to march on Teheran. The framing of a new electoral law, to the satisfaction of an electoral committee of the nationalists, was finished on June 6, and the shah's signature to it was expected in a few days. High hopes were placed on the coming of Nasr ul-Mulk, the exiled statesman at Paris, who had been solicited to accept the prime ministry, and who seemed slow to take the proffered honor. But the wrecked structure of constitutional government could not so easily be set in motion. The revolutionaries at Kazvin became threatening again, and were in motion toward Teheran before the end of June, while the Bakhtiari began a simultaneous advance. On June 20th the Russian government issued orders "to assemble a considerable force at Baku to be held in readiness in case of a *coup d'état* against the Persian capital." Meantime the new electoral law had been signed, but not promulgated, "owing to the prevailing excitement."

it was said. The Russian and British legations attempted mediation between the Siphahdar who commanded the revolutionaries, and the shah, to check the former's advance, but his demands made their intervention hopeless. The shah's forces pushed out to intercept the on-coming revolutionaries, encountered them on July 11, eighteen miles west of Teheran, and fighting went on at a distance from the city for two days; but forces which slipped between the defensive lines made their way into the capital on the morning of July 13, and there was fighting in the streets until the 16th. The shah then sought refuge at the Russian legation, and the Russian officers of the Persian Cossacks, besieged in their barracks, made terms with the Nationalist leaders. Four days later the Persian situation was stated to the British House of Commons by the secretary of state for foreign affairs, Sir Edward Grey, as follows: "The Shah, after taking refuge in the Russian legation, abdicated, and his son, Sultan Ahmed Mirza [a young child] has been proclaimed Shah by the Nationalist Committee under the regency of Azad-ul-Mulk, head of the Kajar tribe, pending the convocation of Parliament. The commanders of the Fedai and Bakhtiari, as temporary chiefs of the Persian Government, have accepted the services of the Persian Cossack brigade under their Russian officers, on condition that the latter are completely under the orders of the Minister of War. This arrangement was ratified at a meeting between the commanders and Colonel Liakhoff. Teheran is quiet, and the Persian Cossacks are already fraternizing with the Fedai. The Siphahdar has been appointed Minister of War, and the Sirdar Assad Minister of the Interior." On July 17 the provisional government gave notice to the Anglo-Russian legations of the selection of the new Shah, and asked that he should be delivered to their keeping; whereupon, wrote *The Times* correspondent, "M. Sablin announced the request to the Shah, who replied that he thought his mother would not consent. The Shah then took M. Sablin to his mother and an affecting scene ensued. Both the mother and father broke down at the thought of parting with their favourite son and offered their second son in his place. M. Sablin replied that the selection had been made by the people and that he had no voice in the matter. The boy wept bitterly in sympathy with his parents and declined to leave his mother. Finally their Majesties were persuaded to agree. On receiving the Shah's assent, the necessary proclamation was immediately promulgated and it was arranged that the Regent and a Nationalist deputation would receive the little Shah." At Teheran, affairs settled quickly into quiet, but disorders were prolonged in various parts of the provinces, being especially serious at Shiraz. On September 9 the deposed shah left the shelter of the Russian legation and journeyed, with his queen, four younger children and several friends, under Russian escort, to a residence in Russia, at Odessa, which was his choice. Persia was still waiting for the able and much trusted constitutionalist statesman, Nasr-ul-Mulk, to return from his exile at Paris and accept the offered premiership in the government; but on September 21 the report went out that he had definitely declined the post. He returned to Persia, however, in October. On October 11 the Russian government made known that it had decided to withdraw the greater part of the troops it had been keeping at Tabriz. A new Mejliss, for which the regent had ordered elections, was assembled on November 15. On December 7 the Mejliss unanimously approved the

proposals of the government with regard to borrowing abroad and the employment of Europeans in executive capacities for the reorganization of the finance department.

1908 (October).—Deposed shah in exile.—Protocol between Persian government and British and Russian governments regarding his status and affairs.—"Mahomed Ali, so recently Shah of Persia, early in October took up residence in the palace at Odessa. . . . His debts, amounting to rather more than £300,000, had been taken over by the Persian Government; and, on the day prior to his departure from Teheran, a protocol had been signed by the British and Russian representatives on the one hand, and the Persian Government on the other, in which occurred the following provisions:—'Article 1. His Majesty, Mahomed Ali Mirza, having declared that he had delivered to the Persian Government all jewels and other Crown property which was in his possession, the Persian Government, after having drawn up a list of all the jewels and other objects received, will present to the two Legations a list of what is missing and of what has been changed, and the two legations will obtain from Mahomed Ali Mirza precise explanations, with all possible details, as to the fate of these jewels and other objects, and, should any of them be found in the possession of his Majesty himself, or of persons in 'bast (sanctuary), at the Russian legation, or the details furnished be inexact, the two legations will do all in their power to obtain the restitution of these objects. Article 2.—If, from July 16th, 1900, it shall be proved before the tribunals of the two Legations that his Majesty Mahomed Ali Mirza has sold, pledged, or caused the disappearance, from that date, of jewels or objects of the Crown, the value of these objects shall be deducted from his pension by the Persian Government if it be found impossible to restore the objects themselves.' Article 3 provides for the delivery of documents relating to the Crown jewels deposited as surety with banks or other loan establishments, or with private persons for money advanced to his Majesty, so that the Persian Government shall be able, at its pleasure, to redeem the said jewels. Article 4 provides that all personal debts of the ex-Shah will be transferred to the account of the Persian Government. Article 5 provides that he should hand over to the Persian Government all his personal property. Article 6 provides that the Persian Government should allow him an annual pension of 100,000 toman. Article 8 provides for his departure from Teheran for abroad forty-eight hours after the signing of the protocol. 'Article 11. The two representatives engage themselves to give to his Majesty Mahomed Ali Mirza serious injunctions that he should abstain in the future from all political agitation against Persia, and the Russian Imperial Government promises on its side to take all efficacious measures not to allow such disturbing proceedings on his part. If his Majesty Mahomed Ali Mirza leaves Russia, and if he is proved to the satisfaction of the two Legations from a country other than Russia to have caused political agitations against Persia, the Persian Government will have the right to stop paying his pension.'"—A. Hamilton, *Prospect in Persia* (*Fortnightly Review*, Jan., 1910).

1909 (January).—Earthquake in Luristan.—Seismographs in many parts of the world gave token of a violent earthquake on January 23, 1909; but three weeks passed before the locality of the shock was learned. It proved to have been centered in western Persia, in the mountainous province of Luristan, and to have been heavily destruc-

tive of life. Its greatest severity was reported to have been in a region at two days journey from Burujurd. Many villages were wholly or partly destroyed, several having been completely engulfed, and the loss of life is estimated to have been between 5000 and 6000 people.

1910.—German interest in Persia.—Accord of Potsdam.—Railway projects.—In 1910 an agreement with respect to German railway projects in Persia was reached between Germany and Russia. "The Accord of Potsdam, as it is called, was made in the form of a note presented by the Russian Government to Germany, and accepted by her. Russia declared that she would in no way oppose the realization of the project of the Bagdad railway up to the Persian Gulf, and that she would construct to the border of Persia a railway to join a spur of the Bagdad railway from Sadije to Khanikin. In return for this, Germany was to promise not to construct railway lines outside of the Bagdad railway zone, to declare that she had no political interest in Persia, and to recognize that 'Russia has special interest in Northern Persia from the political, strategic, and economic points of view.' The German Government was to abandon any intention of securing a concession for a trans-Persian railway. On the other hand, Russia promised to maintain in Northern Persia the 'open door,' so that German commercial interests should not be injured. . . . The Potsdam stipulations brought prominently before Europe the possible significance of Germany's free hand in Anatolian and Mesopotamian railway constructions. It also aroused interest in the possibility of an all-rail route from Calais to Calcutta, in which all the Great Powers except Italy would participate. The trans-Persian and all other railway schemes in Persia came to nothing. Between 1872 and 1890 twelve district railway projects had received concessions from the Persian Government. One of these, the Reuter group, actually started the construction of a line from the Caspian Sea to the Persian Gulf. A French project for a railway from Trebizond to Tabriz had gained powerful financial support. All these schemes were frustrated by Russian diplomacy. In 1890, Russia secured from the Persian Government the exclusive right for twenty-one years to construct railways in Northern Persia. Needless to say, no lines were built. Russia had all she could do with her trans-Siberian and trans-Caucasian schemes."—H. A. Gibbons, *New map of Europe*, pp. 92-93.—See also PERSIAN GULF.

1910-1911.—Request for American financial administrators.—Appointment of W. Morgan Shuster.—Constructive work.—Dismissal forced by Russia.—Russian ultimatums.—"During the months of November and December, 1910, the idea had been discussed among the deputies of the Medjlis of securing finance administrators from the United States in the hope that officials who were free from any European influence would be able to accomplish some practical results in the reorganization of the archaic and chaotic treasury of Persia. . . . When, shortly afterwards, the Persian Government did request that the American State Department should lend its assistance to secure the services of five American financial experts, the British Government was asked whether the objections previously expressed by Russia to Americans going to Persia for this task were shared by England. The British reply was that such had been the view of their Government, but that the objections no longer existed. The Russian Government was then obliged either to object openly to the employment of American citizens as such, or to use smooth diplomatic language and allow

the matter to proceed. On February 2, 1911, the Medjlis approved the terms of our contracts by a large majority and amid great enthusiasm. We [W. Morgan Shuster and staff] went to Persia, therefore, in good faith, and in the natural belief that the two powers having (to use their own language) 'special interests' there offered no objection to the fair and honest accomplishment of our task. . . . It seemed perfectly obvious to us that no headway at all could be made toward straightening out Persia's financial affairs unless full powers to deal with the chaotic situation were conferred by proper authority upon those to be charged with the task. My purpose in drafting the law of June 13, 1911, was to establish a central organization to be known as the office of the Treasurer-general of Persia, which should be responsible for and have charge of the collection and of the disbursement of all revenues and Government receipts, from whatever source derived—an office which should make and authorize all payments, for whatever purpose, in behalf of the central Government of Persia. Up to that time, collections of money had been made not only by the officials of the Ministry of Finance, but by certain departments of the Ministry of Posts and Telegraphs, of the Ministry of Justice, of the Ministry of the Interior, of the Ministry of Public Instruction, and by the Passport Bureau of the Ministry of Foreign Affairs. In like manner, these different government departments had been expending, without supervision or control, such funds as they were able to collect. . . . As it was, despite the handicaps under which those charged with the new law labored, and despite the abnormal conditions of war and disorder into which Persia was plunged but a few weeks after this law was passed, during the eight months of our work in Teheran a large proportion of the taxes stated to be due were collected both at the capital and throughout the provinces, the extraordinary expenses incident to the attempt of Muhammad Ali Mirza to regain the throne were promptly met, the salaries of the diplomatic representatives of Persia abroad were sent them for the first time in several years, all foreign obligations and the current salaries of the different ministries were promptly paid, and a complete and accurate record of every receipt and expenditure was kept in the central office of the Treasurer-general."—W. M. Shuster, *Strangling of Persia*, pp. 3, 4, 6, 24.—"Unfortunately for the success of his mission, Mr. Shuster from the first adopted an attitude which, whether justified or not, was certain to bring him into opposition with Russia. Firmly convinced of the injustice of the Anglo-Russian Convention, he carried his opinions to the extent of refusing even to call upon the British and Russian Ministers. However technically correct this may have been in view of his opinions, it must be admitted that in following this course he debarred himself from the opportunities for informal personal discussions which in a small community may so often be of the greatest value in clearing away difficulties and misunderstandings. Thus from the beginning there was latent opposition to the Treasurer-general [W. M. Shuster] upon the part of Russia. The first serious clash was occasioned by the former desiring to appoint as chief of the proposed Treasury Gendarmerie, Major Stokes, a British officer, who was beyond question the most suitable man available in view of his experience and qualifications. As, however, it was contemplated that the new force should operate throughout Persia, it is hardly surprising that Russia should oppose the contemplated appointment.

That objection should be taken to the appointment of a British officer to a high executive position within the Russian sphere can hardly occasion wonder, and was, indeed, to be anticipated from the beginning. Had it been proposed to appoint a Russian officer to a similar position in the British sphere, a protest upon . . . [the part of Great Britain] would almost certainly have followed. The British Foreign Office, in the first instance, offered no opposition to the loan of Major Stokes' services, but thereafter, as the result of Russian representations, adopted an entirely different attitude, and absolutely refused to sanction the proposed appointment."—J. M. Balfour, *Recent happenings in Persia*, pp. 100-101.—On November 20, at noon the Russian government presented to Persia its second ultimatum [concerning Mr. Shuster], demanding its acceptance within the space of just forty-eight hours. The language of this remarkable document is important enough to be quoted in full: "In the course of our interview on Friday (November 24) I had the honor of explaining to Your Excellency the reasons which impelled the Imperial Government of Russia to put several further proposals before the Persian Government, and I have been waiting for my Government's instructions on the subject. Those instructions have now reached me and I have the honor to make on behalf of the Russian Government the following proposals: (1) The dismissal of Mr. Shuster and Mr. Lecoffre; the status of the other persons who have been invited into service by Mr. Shuster will be determined in accordance with the second proposal. (2) An undertaking by the Persian government not to engage in the service of Persia foreign subjects without obtaining the consent of the Russian and British legations. (3) The payment by the Persian government of an indemnity to defray the expenses of the present despatch of troops to Persia. The amount and manner of such compensation will be fixed after the receipt of the Persian government's reply."—W. M. Shuster, *Evangelizing of Persia*, pp. 106-107.—The following day Mr. Shuster received formal notice of dismissal from the shah and decided to return to the United States.

1911-1923.—Office of treasurer-general.—"It will be remembered that Mr. [W. M.] Shuster was invested with what were little less than dictatorial powers. After his elimination at the instance of Russia, he was succeeded as Treasurer-General by a Belgian official. While the Majlis had been content to invest Mr. Shuster with unusual powers, it was by no means prepared to agree to these being exercised by any official who happened to occupy the post which he had held. For the time being it was not possible to alter the position, since one of the first acts of Russia when she intervened in 1911 had been to dissolve the Majlis. When, however, during the war a new Majlis found itself free to act, it took the opportunity of framing a law for the constitution of the Ministry of Finance, which greatly diminished the importance of the appointment in question. . . . The consequence is that Persian finances are to-day [1922] controlled by an organization which, while adequate to provide in theory for all possible contingencies, is either unduly involved or unnecessary for practical purposes. As a consequence staffs have been inflated to a grotesquely excessive degree, and departments are fully staffed which have never been called upon to carry out their functions. . . . The department whose duty it was to deal with the budget had never functioned, for the good and sufficient reason that there had never been a budget for it to deal with. The na-

tional debt department readily undertook to provide a full statement of the foreign debt, but upon receipt this proved to stop prior to the war. The feelings of the officials concerned appeared to be . . . hurt at the idea that they should be expected to be conversant with the debt incurred during the war. . . . The department which was supposed to examine the accounts of the various Ministries was practically in a state of suspended animation, since the latter seemed to have a rooted objection to rendering accounts in anything under three or four years. . . . Under such circumstances any financial adviser who is not invested with practically despotic powers must certainly fail, as both Mr. Shuster and Mr. Armitage-Smith [the British controller of finance] found by experience. The Persian is delighted to have an adviser, particularly if he is able to arrange credits for him, but he objects most strongly to that adviser interfering in administration or attempting to effect reforms."—J. M. Balfour, *Recent happenings in Persia*, pp. 130-138, 155.—On September 29, 1921, the British controller of Persian finance was withdrawn from Persia. A year later, August 15, 1922, a contract was signed between the United States and Persia in which the former undertook to send an administrator-general of finances once again to Persia. Accordingly Dr. Millspaugh sailed to take up the appointment. He has already come into conflict with Reza Khan, the War Minister has introduced in the Mejlis, a bill for compulsory military service for the building up of the Persian army to such strength as will insure the respect of her neighbours. That the country cannot afford a large army is a consideration that carries no weight with Reza Khan, whom not even the Financial Minister, Dr. Millspaugh, can control, and who insists that the money will have to be found even if all the government departments, with the sole exception of the Ministry of War, have to be closed down."—*New York Times Current History*, July, 1923, p. 707.

1914-1916.—Part in the World War.—Neutrality violated by Russians and Turks.—Fighting on Turkish territory.—Germany favored by industrial regions.—Shah induced to join Allies.—In the outbreak of the World War in 1914 the shah declared the neutrality of Persia, but during 1915 and 1916 fighting between the Russians and the Turks took place in the north, the Russians having Tabriz as their base and the Turks operating from Bagdad via Kermanshah. In southern Persia, the British organized a force of gendarmerie under the command of General Sir Percy Sykes. German propaganda was very successful among the Bakhtiari tribes of industrial Persia. "The Bakhtiaris' sympathies were undoubtedly German, but fortunately their interests are bound up with [those of the Allies] . . . for there is a great argument in dividends, and the Khans are shareholders in two operating companies controlled by the Anglo-Persian Oil Company. Their income from the wells alone probably exceeds all their combined revenue of State, and it is yearly increasing. . . . The Bakhtiaris, whatever their political sympathies, helped . . . [the Allies] through the early spring troubles in 1915. But the crisis in the autumn was much more serious. The Hun Jihad was spreading south. The Shah was on the point of leaving Teheran. The Bakhtiari representative at Ispahan had been won over, and German emissaries were continually with the Khans in their summer quarters at Chiga-kor, pressing them to come to a decision. . . . It seemed the result of masterly diplomacy that with no visible emblem of power the Germans were able to per-

suade the Persians that they were bound to win the war, and that they were stronger than the Russians and the British, whose legions were on the spot. But the campaign was made easy for them by the Persians hatred of Russia, and in a lesser degree of Great Britain; by the belief, among the tribesmen at least, that the Germans, if not Mahometans, were the champions of Islam; and by a lavish and reckless expenditure of gold on a scale that we had never contemplated. . . . In two days, perhaps one, Persia would have been engulfed, if the Russian troops had not reached Kazvin within a day or two's march of the capital. Their arrival just turned the scale. The young Shah was on the point of joining the hostile confederates at Ispahan when the British and Russian Ambassadors persuaded him to stay and save his country."—E. Candler, *In the Persian oil fields* (*Living Age*, June 21, 1910).—See also *WORLD WAR: 1915: VII. Persia and Germany; 1916: VI. Turkish theater: d, 3; d, 4; d, 7.*

1916.—Railroad opened from Julfa to Tabriz.—In order to send troops and war material more easily from Russia into Persia, the railroad from Julfa on the Russian border to Tabriz was completed in 1916.

1917-1918.—Famine.—American relief.—After the collapse of imperial Russia in 1917, Persia suffered from widespread famine in the northern area which was the Russian sphere of influence. The American committee for Armenian and Syrian relief extended their work to include Teheran and spent over \$2,000,000 in alleviating conditions. In appreciation of this the shah in 1918 subscribed \$100,000 to the fourth Liberty loan.

1918.—Military operations.—Turkish activities.—Bolshevism. See *WORLD WAR: 1918: VI. Turkish theater: b; b, 7.*

1919 (May).—Persian demands at the peace conference.—"Persia, on account of her Russian and British spheres of influence and German propaganda with Turkish aid at Teheran, played a potential rather than an active rôle in the war, but her interests in the settlement at Paris are none the less important to the reconstruction of the Near East. Through Mr. Tagizadeh, a member of the Persian Parliament, she addressed a memorandum to the Peace Conference on May 18 covering her aspirations. This memorandum declared that the occupation of Persian territory by the troops of the Allies . . . [was] no longer necessary; that all illegal, reactionary treaties, obligations, &c., forced upon the Teheran Government in the past should be canceled. (One of the most harmful arrangements . . . [was] declared to be the Anglo-Russian agreements of 1907 and 1916.) After reciting the obligations of the world to Persia, the document . . . [asked] for a loan from the League of Nations—\$100,000,000 for debts and 'State reorganization.'"—*New York Times Current History*, July, 1919, pp. 74-75.

1919 (August).—Anglo-Persian Agreement.—English loan to Persian government.—An agreement between the governments of Great Britain and Persia was concluded on Aug. 9, 1919, including the making of a substantial loan by Great Britain. The agreement and loan were praised as a demonstration of friendship and helpfulness by the advocates of British policy, but in other quarters were sharply criticized as a device for establishing complete British control of Persian affairs. The text follows:

No. I.—Preamble: In virtue of the close ties of friendship which have existed between the two

Governments in the past, and in the conviction that it is in the essential and mutual interests of both in future that these ties should be cemented, and that the progress and prosperity of Persia should be promoted to the utmost, it is hereby agreed between the Persian Government on the one hand, and His Britannic Majesty's Minister, acting on behalf of his Government, on the other, as follows:

1. The British Government reiterate, in the most categorical manner, the undertakings which they have repeatedly given in the past to respect absolutely the independence and integrity of Persia.

2. The British Government will supply, at the cost of the Persian Government, the services of whatever expert advisers may, after consultation between the two Governments, be considered necessary for the several departments of the Persian Administration. These advisors shall be engaged on contracts and endowed with adequate powers, the nature of which shall be the matter of agreement between the Persian Government and the advisers.

3. The British Government will supply, at the cost of the Persian Government, such officers and such munitions and equipment of modern type as may be adjudged necessary by a joint commission of military experts, British and Persian, which shall assemble forthwith for the purpose of estimating the needs of Persia in respect of the formation of a uniform force which the Persian Government proposes to create for the establishment and preservation of order in the country and on its frontiers.

4. For the purpose of financing the reforms indicated in clauses 2 and 3 of this agreement, the British Government offer to provide or arrange a substantial loan for the Persian Government, for which adequate security shall be sought by the two Governments in consultation in the revenues of the customs or other sources of income at the disposal of the Persian Government. Pending the completion of negotiations for such a loan the British Government will supply on account of it such funds as may be necessary for initiating the said reforms.

5. The British Government fully recognizing the urgent need which exists for the improvement of communications in Persia, are prepared to co-operate with the Persian Government for the encouragement of Anglo-Persian enterprise in this direction, both by means of railway construction and other forms of transport; subject always to the examination of the problems by experts and to agreement between the two Governments as to the particular projects which may be most necessary, practicable and profitable.

6. The two Governments agree to the appointment forthwith of a joint Committee of experts for the examination and revision of the existing Customs Tariff with a view to its reconstruction on a basis calculated to accord with the legitimate interests of the country and to promote its prosperity. (Signed at Teheran, August 9, 1919.)

No. II.—Preamble: Contract between the British Government and the Persian Government with reference to an agreement concluded this day between the said Governments. It is agreed as follows:

Article 1. The British Government grant a loan of £2,000,000 sterling to the Persian Government, to be paid to the Persian Government as required in such instalments and at such dates as may be indicated by the Persian Government after the

British Financial Adviser shall have taken up the duties of his office at Teheran, as provided for in the aforesaid agreement.

Art. 2. The Persian Government undertakes to pay interest monthly at the rate of 7 per cent. per annum upon sums advanced in accordance with article 1 up to the 20th March, 1921, and thereafter to pay monthly such amount as will suffice to liquidate the principal sum and interest thereon at 7 per cent. per annum in twenty years.

Art. 3. All the revenues and Customs receipts assigned in virtue of the contract of the 8th May, 1911, for the repayment of the loan of £1,250,000, are assigned for the repayment of the present loan with continuity of all conditions stipulated in the said contract, and with priority over all debts other than the 1911 loan and subsequent advances made by the British Government. In case of insufficiency of the receipts indicated above the Persian Government undertakes to make good the necessary sums from other resources, and for this purpose the Persian Government hereby assigns to the service of the present loan, and of the other advances above mentioned, in priority and with continuity of conditions stipulated in the aforesaid contract, the Customs receipts of all other regions, in so far as these receipts are or shall be at its disposal.

Art. 4. The Persian Government will have the right of repayment of the present loan at any date out of the proceeds of any British loan which it may contract for. (Signed at Teheran, August 9, 1919.)

1920.—Granted free passage to Black sea. See SÈVRES, TREATY OF (1920): Part XI. Ports, waterways and railways.

1921-1922.—End of British sphere of influence.—British troops were maintained in Persia for two years after the armistice, but owing to criticism at home of the expense (\$100,000,000 in two years) "on Jan. 18 [1921] the British decided to withdraw their troops from Northern Persia; the Cossack division followed suit. The effect was to paralyse trade and fill with dread the bazaars of Teheran. The Premier, Mochir-ed-Dowieh, threatened to resign, the Shah to abdicate. Then the merchants rallied and suggested that the proposed treaty with the Soviet did not really affect the country as a whole, but only the northern portion, which, before the war, had been the Russian sphere, where now the Bolsheviks wished to establish a military base for movements to the east and southeast, but not to the south. So the Premier and the Shah decided to remain."—*New York Times Current History*, Mar., 1921, p. 512.

—On February 20, 1921, Reza Khan sometimes called the "strong man of Persia" marched on Teheran in order to protect it from Soviet attack. "To abrogate the treaty with Great Britain was the first act of the new Government installed at Teheran by the coup d'état of General Reza Khan, leader of the Persian Cossacks. . . . On April 9, Zia-ed-Din, the new Premier, entertained foreign officials at a dinner in Teheran and explained the foreign policy of his Government, as some of his guests had taken offense at the abrupt language employed in the published programme. He declared that the relations with Great Britain were now completely cordial, owing to the 'disappearance' of the Anglo-Persian agreement, which 'had bred clouds of misunderstanding.' Persia, he continued, depended on sincerely good relations with Russia and England. In addition she turned to America, who had ever opposed the Anglo-Persian pact, for agricultural and to France for legal advisers, and she also contemplated employ-

ing Belgians and Swedes."—*New York Times Current History*, June, 1921, pp. 520-527.—At the time when the Anglo-Persian agreement was concluded (1907), "Persia was being defended and financed by Great Britain. By the autumn of 1920 the situation had changed in every respect. The Meshed force had gone, as had that in the Caucasus. The Caspian flotilla was in the hands of the Bolsheviks. The Kazvin force was to depart in the spring, and, owing to the restraining orders under which its commander acted, had suffered seriously in prestige, and had been compelled to fall back before the Bolsheviks. . . . and to evacuate Ghilan. Lastly, the subsidies to Government and individuals alike had ceased. The consequence was that Persia found herself abandoned to her own resources, and left to the tender mercies of the Bolsheviks, deprived alike of military and financial aid. When there was nothing to be hoped for from the British Government, and the ratification of the Agreement could only result in incurring the resentment of the Moscow Government, it would have been pure folly to attempt to comply with Lord Curzon's demands for ratification. In such circumstances Lord Curzon's statements that he was the best friend that Persia possessed only resulted in provoking an outburst of fury, derision, and contempt throughout the country, where he is considered to be Persia's greatest enemy and would-be oppressor. Why, then, did he press so strongly for ratification? There would appear to be only two explanations: either he utterly failed to understand the situation, or the British Government desired to be free of the Agreement, while throwing the onus of repudiation upon Persia."—J. M. Balfour, *Recent happenings in Persia*, p. 133.—During the whole of the summer of 1922 a wave of anti-British feeling swept through the country terminating in the signing of a treaty with Soviet Russia in which Persia undertook, in the event of a war between Persia and England, to allow forces to attack Irak (Mesopotamia) through Persia.

PERSIA, Constitution of (1906).—A Constitution for Persia was signed by the shah, Muzafer-ed-Deen, December 30, 1906, of which the following is, in part, the text:

In the name of God the all Merciful! Whereas by our Firman of the 5th August, 1906, we commanded the constitution of a National Assembly [Majlis] for the progress and welfare of the State and nation, the strengthening of the foundations of the kingdom, and the carrying out of the laws of Islam; and whereas, in accordance with the clause by which it is provided that, as each individual member of the State has a right

to take part in the superintendence and decision of public affairs, we therefore have permitted the election and appointment of Deputies on behalf of the nation; and whereas the National Assembly has been opened through our gracious benevolence, we have decreed the following Articles of constitutional Regulations for the National Assembly, including the duties and business of the Assembly and its limitations and relations toward Government Departments:

Institution of the assembly

[Articles 1-14 declare the National Assembly to be "composed of members elected at Tehran and in the provinces"; their place of meeting to be at Teheran; their number 160, but may if necessary be increased to 200; their term of service two years; they are "representative of the whole Persian nation", the Tehran deputies to have "the option of instituting the Assembly and starting discussion and debates," and "their decisions by majority during the absence of the provincial deputies will be valid and are to be carried out." The Assembly itself is given the right to fix the time of its recess and its sitting; its members cannot be proceeded against by any person; its proceedings must be public and open to newspaper reporting, but false reporting shall be punished.]

Duties of the assembly, its limitations and rights

Art. 15. The National Assembly has the right to discuss truthfully and sincerely all matters it considers to be desirable in the interests of the State and nation to investigate; and, subject to the approval of a majority, to submit them, in the enjoyment of the utmost safety and confidence, with the approval of the Senate, to His Imperial Majesty the Shah, through the first person of the Government, for His Majesty's signature, and to be then put into execution.

Art. 16. In general, all laws necessary for the strengthening of the Government and kingdom, and the regulation of State affairs, and for the Constitution of Ministries, must receive the sanction of the National Assembly.

Art. 17. The necessary Bills for making new laws, or for the alteration, amplification, or cancellation of existing laws, will, when desirable, be prepared by the National Assembly to be submitted to His Imperial Majesty the Shah for signature with the approval of the Senate, and to be then put into execution.

Art. 18. The regulation of financial matters, the modification of the Budget, the alteration of the arrangement of taxation, the refusal or acceptance of impositions, as well as the inspections which will be undertaken by the Government, will be done with the approval of the Assembly.

Art. 19. The Assembly will have the right, for the purpose of reforming financial matters and facilitating the relations of the Governors and the apportioning of the provinces of Persia, and the reappointment of Governors, after the Senate has given its approval, to demand from the Government authorities that the decision arrived at should be carried out.

Art. 20. The Budget of each Ministry must be finished for the succeeding year in the last half of each year, and must be ready fifteen days before the 20th March.

Art. 21. Should it be necessary with regard to the constitutional laws of the Ministries to make a new law, or to alter or cancel existing laws, it

will be done with the consent of the National Assembly, whether its necessity be first pointed out by the Assembly or by the responsible Minister.

Art. 22. Whenever a part of the revenue or property of the Government or State is to be sold, or a change of frontier or border becomes necessary, it will be done with the approval of the National Assembly.

Art. 23. Without the approval of the National Assembly no concession whatever for the formation of Companies or Associations shall be granted by the Government.

Art. 24. Treaties, Conventions, the granting of concessions, monopolies, either commercial, industrial, or agricultural, whether the other party be a native or a foreigner, can only be done with the approval of the National Assembly. Treaties which it may be in the interests of the Government or nation to keep secret are excepted.

Art. 25. All Government loans of any nature whatsoever, whether internal or foreign, will be made with the knowledge and approval of the National Assembly.

Art. 26. The construction of railways or roads, whether the cost be defrayed by the Government, by Associations or Companies, whether native or foreign, can only be undertaken with the approval of the National Assembly.

Art. 27. Should the Assembly find in any place a fault in the laws or an irregularity in their fulfilment, it will draw the attention of the responsible Minister to the same, and he will have to give the necessary explanations.

Art. 28. Should a Minister, in contravention of one of the laws which have received the Imperial sanction, by misrepresentations obtain the issue of a written or verbal order from His Imperial Majesty the Shah, and excuse himself thereby for his delay and negligence, he will by law be responsible to His Imperial Majesty the Shah.

Art. 29. Whichever Minister who in a matter or matters should not be able to answer for his actions in accordance with the laws approved by His Imperial Majesty, and if it should be apparent that he has broken the law and transgressed the stipulated limitations, the Assembly will petition His Imperial Majesty for his dismissal, and when his fault has been determined by the Courts of Justice he will not again be allowed to serve the Government.

Art. 30. The National Assembly has the right whenever it considers it desirable to make petitions direct to His Imperial Majesty by the means of a body composed of the President and six Members elected by the six classes. The time for the audience must be arranged for through the Minister of Court.

Art. 31. The Ministers have the right to be present at the sittings of the National Assembly, and to sit in the place set apart for them, and to hear the debates of the Assembly; and should they think it necessary, they may ask the President for permission to speak and give the necessary explanations for the discussion and investigation of affairs.

Art. 32. Any individual member of the public may make a statement of his case, or complaints or criticisms, to the office of the Assembly, and, if the matter concerns the Assembly itself, a satisfying answer will be given to him; but should the matter concern one of the Ministries, it will be sent to that Ministry for investigation, and in order that a satisfying answer be given.

Art. 33. New laws which are necessary will be prepared at the responsible Ministries, and will

be given to the National Assembly by the responsible Minister or by the Sadr Azam, and after receiving the approval of the Assembly will receive His Imperial Majesty's sign-manual and be put into execution.

Art. 34. The President of the Assembly can, if necessary, of his own initiative or by the desire of ten Members of the Assembly or of a Minister, form a Secret Committee, without the presence of newspaper reporters or spectators, composed of a number of persons chosen from among the Members of the Assembly, at which the other Members of the Assembly will not have the right to attend. The result of the deliberations of the Secret Committee can, however, only be put into execution when the Secret Committee in the presence of three-quarters of the persons elected accept the point at issue by a majority of votes, and if the matter be not passed by the Secret Committee, it will not be stated in the Assembly and will remain secret.

Art. 35. Should the Secret Committee be instituted by the President of the Assembly, he has the right to inform the public of any part of it he thinks fit; but if the Secret Committee is instituted by a Minister, the publication of the debate can only be subject to that Minister's permission.

[Articles 36-42 are regulative of the transaction of business between the Assembly and the Ministries of the Government in matters of debate, inquiry, action on bills, etc.]

Institution of the Senate

Art. 43. Another Assembly, called the Senate, will be constituted, composed of sixty Members, whose sittings will coincide, after its constitution, with those of the National Assembly.

Art. 44. The Regulations of the Senate must receive the approval of the National Assembly.

Art. 45. The Members of the Assembly will be chosen from among the enlightened, intelligent, orthodox, and respectable persons of the State, thirty persons on behalf of His Imperial Majesty, of whom fifteen from among the inhabitants of Tehran and fifteen from the inhabitants of the provinces, and thirty persons on behalf of the nation, of whom fifteen persons elected by the people of Tehran and fifteen persons elected by the people of the provinces.

Art. 46. After the constitution of the Senate all affairs must receive the approval of both Assemblies. If those affairs are initiated by the Senate or by the body of Ministers, they must first be determined in the Senate and passed by a majority, and then be sent to the National Assembly for approval; but affairs initiated in the National Assembly will, on the contrary, pass from that Assembly to the Senate, with the exception of financial matters, which will be the prerogative of the National Assembly, and the Senate will be informed of the arrangements made by the Assembly regarding these affairs in order that the Senate should make its observations on the same to the National Assembly, which is, however, at liberty, after the necessary investigations, either to accept or to refuse the proposals of the Senate.

Art. 47. So long as the Senate is not constituted affairs will require only the approval of the National Assembly and the sign-manual of His Imperial Majesty to be put into execution.

[Article 48 provides for the constituting of a "third assembly," composed of an equal number of members from the National Assembly and the Senate, to deal with cases in which those two

bodies are in disagreement, and for the ultimate dissolution of the National Assembly, preparatory to the election of a new one, in case no settlement of the disagreement is reached.

Article 49 allows the new Teheran deputies then elected to begin their labors, outside of the points at issue, as soon as they are ready.]

The conclusion of the Constitution is as follows:

Art. 50. During each term of election—that is to say, during two years—a general election will not be called more than once.

Art. 51. It is decreed that the Sovereign who succeeds us should protect these limitations and Articles, which aim at the strengthening of the State and of the foundations of the kingdom, and the protection of justice and contentment of the nation, which we have decreed and put into execution, and which they must look upon as their duty to fulfil.

In the month of Zilkade the Unclean, 1324.
O God the Almighty!

The Constitutional Laws of the National Assembly and the Senate, containing fifty-one Articles, are correct.

14th of the month of Zilkade, 1324 (30th December, 1906).

In the handwriting of Muzaffer-ed-Deen Shah:

It is correct.

(Sealed) Valiahd (Mohammed Ali Shah).

(Sealed) Mushbir-ed-Dowleh (the Grand Vizier).

Constitutional law, as passed by the National Assembly and signed by the shah on October 8, 1907.—One hundred and seven articles "to complete the fundamental laws of the Constitution of Persia" were "added to the constitutional law" by the signature of the shah on December 30th, 1906. The first two are as follows:

Article 1. The official religion of Persia is the branch of the Twelve Imams of the Shia Sect of Islam. The Sovereign of Persia must be of, and contribute to the spread of, this religion.

Art. 2. The National Assembly has been founded by the help of the Twelfth Imam, the bounty of His Islamic Majesty, the watchfulness of the Mujtehedes and the common people. The laws passed by it must never to all ages be contrary to the sacred precepts of Islam, and the laws laid down by the Prophet. It is obvious that the decision as to whether the laws passed by the Assembly are in opposition to the precepts of Islam rests with the Ulema. It is therefore officially decreed that for all ages a Committee composed of five persons, who shall be Mujtehedes and religious doctors, and who also must be acquainted with the requirements of the times, shall be elected in the following manner: The Ulema and doctors of Islam who are recognized by the Shias as the centre of imitation shall make known to the National Assembly the names of twenty of the Ulema possessing the above-mentioned qualities. The National Assembly shall, by agreement on casting of lots, elect five of them or more, according to the requirements of the age, and admit them as members. This Committee shall discuss and thoroughly investigate the Bills brought in by the National Assembly, and reject every one of these Bills which is contrary to the sacred precepts of Islam, in order that it may not become law. The decision of this Committee is final. This Article will not be liable to change until the advent of the Twelfth Imam.

[Articles 3-7 relate to boundaries of the King-

dom, its capital, its flag, protection of the lives and property of foreigners, and the integrity of the Constitution.

Articles 8-25 are in the nature of a "bill of rights," affirming equality of rights to all; immunity from arbitrary arrest, punishment, exile or sequestration of property; freedom of "the study of teaching of arts, letters and sciences" "except in so far as they are forbidden by the Sheri"; freedom of publication for all "except heretical works"; freedom of "societies and associations which do not provoke religious or civil strife"; inviolability of postal and telegraphic communications, except under authority of law. All primary and secondary schools are placed under the direction and surveillance of the Ministry of Education.

Articles 26-29 define, as follows:]

Powers of the realm

Art. 26. The powers of the realm spring from the people. The Constitutional Law defines the method of using those powers.

Art. 27. The powers of the realm are divided into three parts:—

Firstly, legislative power, whose province it is to make and amend laws. This power emanates from His Imperial Majesty the Shah, the National Assembly, and the Senate. Each one of these three sources possesses the right of originating laws; but their passing is conditional to their not being contrary to the laws of the Sheri, and to the approval of the two Assemblies, and to their receiving the Imperial signature. But the making and approval of laws relating to the revenue and expenditure of the realm belong to the National Assembly alone. The interpretation and commentary of laws is the peculiar duty of the National Assembly.

Secondly, the judicial power, which consists in the distinguishing of rights. This power belongs to the Sheri Tribunals in matters appertaining to the Sheri, and to the Courts of Justice in matters appertaining to the civil law ("urf").

Thirdly, the executive power, which rests with the Sovereign. That is to say, the Laws and Decrees will be executed by the Ministers and Government officials in the name of His Imperial Majesty in the manner defined by law.

Art. 28. The three above-mentioned powers shall always be differentiated and separated from one another.

Art. 29. The particular revenues of each province, department, and commune shall be regulated by the Provincial and Departmental Assemblies in accordance with their own particular laws.

[Articles 30-34 define the status of the members of the National Assembly.]

Rights and powers of the crown

[Articles 35-57 set forth the rights and powers of the Crown. The sovereignty of Persia is declared to be "a trust which, by the grace of God, has been conferred on the person of the Sovereign by the people." The succession is vested in Muhammed Ali Shah Kajar and his descendants; the Crown Prince to be "the eldest son of the Sovereign whose mother is a Persian and a princess." Provision is made for the election by a joint committee of the Senate and the National Assembly on the succession of a minor, who cannot govern personally till his age is eighteen. The powers of the sovereign are thus defined:]

Art. 43. The Sovereign cannot, without the

approval and sanction of the National Assembly and the Senate, interfere in the affairs of another country.

Art. 44. The Sovereign is absolved from all responsibility. The Ministers of State are responsible in all matters.

Art. 45. All the Decrees and Rescripts of the Sovereign shall only be put into execution when they have been signed by the responsible Minister, who is responsible for the accuracy of the contents of that Firman or Rescript.

Art. 46. The dismissal and appointment of Ministers are by order of the Sovereign.

Art. 47. The conferring of commissions in the army and orders and honorary distinctions, with due observance of law, is vested in the person of the Sovereign.

Art. 48. The Sovereign has the right, with the approval of the responsible Minister, to choose the important officials of the Government Departments, either at home or abroad, except in cases excepted by law. But the appointment of the other officials does not concern the Sovereign, except in cases defined by law.

Art. 49. The issuing of Firmans for the execution of laws is one of the rights of the Sovereign, but he may not delay or suspend the execution of those laws.

Art. 50. The supreme command of the military and naval forces is vested in the person of the Sovereign.

Art. 51. The declaration of war and the conclusion of peace rest with the Sovereign.

Art. 52. Treaties which, in accordance with Article 24 of the Constitutional Law of the 14th Zilaadeh, 1325 (30th December, 1900), must be kept secret, must, on the removal of this necessity, and provided that the interests and security of the country demand it, be communicated by the Sovereign to the National Assembly and the Senate, with the necessary explanations.

Art. 53. The secret clauses of any Treaty cannot annul the public clauses of that Treaty.

Art. 54. The Sovereign can summon the National Assembly and the Senate to an extraordinary Session.

Art. 55. Coins shall be struck, according to law, in the name of the Sovereign.

Art. 56. The expenses of the Imperial household must be defined by law.

Art. 57. The powers and prerogatives of the Sovereign are only such as have been defined by the existing constitutional laws.

[Articles 58-70 relate to the Ministers, who must be Mussulmans and native Persian subjects, princes of the first rank not eligible. They are severally and jointly responsible to both Assemblies. Commands of the sovereign cannot divest them of responsibility, which is to be defined by law. The Assembly or the Senate can accuse and prosecute them for offenses before the High Court of Appeal.]

Judicial tribunals

[Judicial tribunals of the kingdom are the subject of Articles 71-80. "The Supreme Court of Justice and the subsidiary Courts" are declared to be "the official centres to which all suits must be referred, and judgment in matters appertaining to the Sheri rests with the fully qualified Mujte-heds." Suits relating to political rights concern the Courts of Justice, excepting those which are excepted by law. No Court of Law can be instituted except by law. One Court of Appeal for the whole Kingdom is to be instituted at the Capital. The sittings of all tribunals shall be

public, except in cases when the tribunal judges that this would be prejudicial to order or decency. "The Presidents and the members of the Courts of Justice will be chosen in the manner decreed by the law of the Ministry of Justice, and will be appointed by virtue of a royal Firman." No judge may be suspended, temporarily, or permanently, without a trial or proof of offence. Military tribunals will be instituted according to a special law.]

Miscellaneous

[Provincial Assemblies of elected representatives are provided for in Articles 90-93.

Articles 94-103 have relation to finances. They declare that no taxes may be levied or exemptions from them allowed except by law; that no favor to individuals shall be shown in taxation; that nothing shall, on any pretext, be demanded from the people, otherwise than by law; and provision is made for the creation of a State Accounts Department, to be chosen by the National Assembly.

The last four articles relate to the army, which is required to be in all particulars under regulation of law. "The army vote must pass the National Assembly every year."]

PERSIA, Royal road of. See ROYAL ROAD OF ANCIENT PERSIA.

PERSIAN GULF: Great Britain's interest.—Russian and British conflicts.—Anglo-Russian Agreement of 1907.—Berlin to Bagdad railway.—Relation to World War.—Because of its position as a maritime highway to India and the East, the Persian gulf has been the center of diplomatic intrigue since the beginning of the twentieth century. "Englishmen, looking for trade, visited . . . [the gulf] in the reign of Elizabeth. In its early days the East India Company established a party at Bunder Abbas, and fought stoutly with Dutch and Portuguese rivals for the better part of two centuries. An Indian navy first began the survey of the Gulf, and looked to its lighting. For fifty years . . . [the British] hunted down the pirates and cleared out their strongholds on the Pirate Coast; . . . protected Persia against those who would have deprived her of a seaboard; . . . policed the waters; . . . suppressed slavery and gun-running; . . . wrestled with the plague, and introduced the rudiments of sanitation in the marshy estuaries."—J. Buchan, *Nelson's history of the war*, v. 5, p. 108.—Between 1900 and 1907 the chief rival of Great Britain in Persia and hence in the gulf, was Russia, and conflicts arose on this subject. These conflicts ended in the Anglo-Russian Agreement whereby Russia recognized Great Britain's special interest in the gulf. (See ANGLORUSSIAN AGREEMENT OF 1907.)—"The delimitation of the zones was sharply attacked by Lord Curzon, Earl Percy, and other Imperialist critics as unduly favourable to Russia. The Government replied that the treaty must be judged as a whole, that the safety of India was fully secured, and that the removal of dangerous differences was well worth the price that it had cost."—G. P. Gooch and J. H. B. Masterman, *Century of British foreign policy*, p. 75.—Meanwhile Germany "saw a chance of finding [in Mesopotamia] a field for exploitation which would make it for Germany what Egypt was to Britain and Morocco to France. German professors told excited audiences that a thousand years ago the land had supported six million people, and that what had once been might be again. If Germany won a foothold on the Gulf, not only would she have the exploiting of Mesopotamia, but she would

have weakened the British hold upon India. . . . Her trump card was the Bagdad railway. In 1899 a German company, backed by the Deutsche Bank, obtained a concession from the Porte to build a railway from Konieh, then the terminus of the little Anatolian railway, to Bagdad and Basra on the Persian Gulf. The concession was made valuable by a Turkish guarantee of the interest on the cost of construction at the rate of £700 per kilometre per annum. Britain awoke somewhat late in the day to the political purport of the new railway, and a diplomatic conflict began which was still in progress at the outbreak of war."—J. Buchan, *Nelson's history of the war*, v. 5, pp. 110-111.

1914.—British control. See WORLD WAR: 1914: IV. Turkey: i.

PERSIAN LANGUAGE. See PHILOLOGY: 13; 14; 23.

PERSIAN LITERATURE: Early Persian poets of note: Firdausi, Sadi, Hafiz, and Omar Khayyam.—"A distinguished Oriental scholar of Columbia University says, 'The title of Persian literature to a place among the great literatures of the world is a recognized one, and it is in this domain, perhaps, that Persia makes the greatest claim upon our interest. In age the *Avesta* and the old Persian inscriptions carry us back at least to the sixth century before Christ, and possibly earlier; the Pehlevi literature belongs to the Sassanian period from the third to the sixth century after Christ; and the modern Persian began within the last thousand years. It sprang up a century or two after the Arab conquest as a renaissance movement with the revival of the old national feeling; and this period is certainly the most interesting of all. Some knowledge of Firdausi, Sadi, and Hafiz belongs to true culture, and Omar Khayyam has become an English classic through Fitz-Gerald's version. The less-known names of the romantic poets Nizami, the dervish Jalal Ad Din Rumi, and the mystic Jami (died in 1492), the last classic poet of Persia, should be mentioned as deserving to be known to lovers of literature. . . . The names of Firdausi, Omar Khayyam, Sadi and Hafiz are world renowned. . . . Firdausi wrote the *Shah-nama*, or the 'Story of the Kings,' in which he collected legends of Persian monarchs and heroes from the earliest ages—as early as 3485 B.C. . . . He was born in the Tenth century, in Tus, a town of northeast Persia, in the province of Khorasan. He married at the age of twenty-eight and lived ninety-two years. The story of *Shah-nama* is briefly this: The last of the Sassanian kings, Yezdijard, collected all the chronicles and traditions connected with Persia and her sovereigns, and had them put together to form the book known as *Syoral Mulk* or the *Bostanama*. In the tenth century a Persian history was ordered to be prepared by the Sassanian king Monsur. Almorī wrote it in prose while Dakiki began the same in verse but was assassinated by a slave after he had written only 2000 verses. So in later years the work was entrusted to the poet Unsori at an old age. Poet Unsori became feeble and they turned the work over to Firdausi to do the whole in verse. He wrote the work in such a style that he is called the Homer of the East. . . . There is probably no Persian poet so well known today as Omar Khayyam. He is read from east to west, translated in almost every language. . . . Eight centuries ago Omar delighted in the rose and nightingale, and his thoughts on life and death are as fresh today as they were in the time of Nizam-ul-Mulk. His was a great soul seeking for a knowledge of God

and eternity, wondering of God and his mighty handiworks. He lived a beautiful and useful life, for the pleasures of this world he cared naught. His teaching for usage of grape juice was to purify the surroundings of Naishapur. The clay waters of his home town were not healthy, fevers were numerous in his time, so as a physician, Omar commended the people to drink grape juice. Omar was not a drunkard, . . . and it must be admitted by those who have made a study of the *Rubaiyat* that . . . [he] appeals [more] strongly for spiritual things . . . than he does for the material things. . . . The *Gulistan* is a collection of stories. It teaches lessons of morality, policy and wisdom. It is a work next to the *Koran*, and is a moral guide to the Persian youth. [If one were to listen to a conversation in Persian, even if he knew nothing of the language, it would not be long before he could detect] the name of Sadi. 'Sadi guft,' or 'Sadi says,' is used very frequently. . . . At the finishing of the famous 'Rose Garden' the pure soul of Sadi, like a phoenix, spread its wings and fled from its earthly prison. . . . Hafiz was born during the golden age of Persian poetry in his beloved city of Shiraz in the first part of the fourteenth century and died according to the inscription on his tomb in 1388. Hafiz was his poetical name and signified that he knew by heart the *Koran*, his real name being Shamsud-Din-Mohammed, which means Son of Faith. There is very little accurate knowledge of his early life. At one time he became a teacher of the *Koran* in a college in Bagdad, and here the poet read from his own verses, the fame of which drew great numbers of pupils to him. . . . Hafiz left no complete volume of his works like Shakespeare. They were collected after his death. They are 573 ghazels or odes, 42 aphorisms, 79 quatrains and several kasidas and other forms. The principal themes of his odes are love, wine and roses, but these themes all have a secondary interpretation and a moral significance. . . . He was a 'Persian of the Persians.'—Y. B. Mirza, *Iran and the Iranians*, pp. 194-196, 206, 210, 215-216.—'If we confine our attention to Persian literature in the narrower sense of the expression, meaning only what is written in the Persian language, the field which we survey is undoubtedly less rich and varied than if we include the Arabic literature produced by Persians. Yet even then it is a literature of which any nation might be proud, especially in the domain of poetry, more particularly mystical poetry. It is almost impossible to estimate the comparative values of different literatures, since, apart from personal bias, few people are really conversant with more than two or three literatures; but few critics would deny that in any equitable list of the really great poets of the world in all ages, Persia would certainly be represented by two or three names at least. Indeed it is rather a case of *embarras de richesses*; if there had been far fewer poets and each one had written far less, they would have been more diligently read and more highly appreciated. Thus the *Mystical Mathnawi* of Jalalu'd-Din Rumi contains some 20,000 verses; the *Shahnama*, or 'Epic of the Kings' of Firdaws, 60,000; and the poetical works of 'Attar' at least 70,000. Naturally the same level of excellence is not always maintained, and it becomes almost impossible for the most diligent reader to be sure that he has discovered the finest passages in one of these prolific writers, let alone the endless procession of others who extend through the last thousand years. For it is certainly an error to imagine, as some pretend, that no first-class poetry has been produced in Persia since the time of

Jami, i. e. since about A. D. 1500. Some at least of the poets of our own time are of a very high order, and the political Revolution of 1906 brought into being a new school of poets and a new style of poetry possessed of real merit and originality. . . . A very florid and to us distasteful prose prevailed under Tamerlane and his successors, with whom it passed into India and there continued. From that debased style too many Europeans . . . have formed their ideas of Persian prose literature, but a far finer and simpler style prevailed in Persia from the eleventh to the fourteenth century and again from the sixteenth century down to the present day. In particular there are some excellent historical, biographical, and ethical works, books of travels and treatises on politics, while the last few years have seen the development of an admirable journalistic style."—E. G. Browne, *Persian constitutional movement*, pp. 8-9.—'It is impossible to fix a definite date at which Modern Persian literature may be said to have begun. Probably Persian converts to Islam began to write their language in the Arabic character very soon after the Arab Conquest—that is to say, some time in the eighth century of our era. The first attempts of this sort were probably mere memoranda and notes, followed, perhaps, by small manuals of instruction in the doctrines of Islam. Fragmentary utterances in Persian, and even brief narratives, are recorded here and there in the pages of early Arabic writers, and these at least serve to show us that the Persian of late Sassanian and early Muhammadan times was essentially the same as that with which we meet in the earliest monuments of Modern Persian literature."—E. G. Browne, *Literary history of Persia*, p. 11.

[It covers an area of 722,461 square miles.] To the north lie Ecuador and Colombia, to the east Brazil and Bolivia, to the south Chile; on the west, her seaboard is washed by the Pacific Ocean. [See **LATIN AMERICA**: Map.] . . . Physically the country falls naturally into three zones, of which the central or mountainous zone may be further subdivided into three 'belts,' differing in height and character. (1) The coast zone, that farthest to the west, is a practically rainless strip extending from the extreme north to the extreme south of Peru, and scarcely exceeding 60 miles in width at any point; (2) the zone of the sierras, or Andine region, follows the north-west to south-east line of the Andes crests throughout the country, and its uplands broaden out, especially in the south, to form the great tableland on which Lake Titicaca is situated, the mean height being from 11,000 to 12,000

feet above sea-level; (3) beyond the region of the sierras lies the montaña zone or river and forest zone. Roughly speaking, the coastal zone occupies about a tenth of the republic, the sierras a fourth part, and the montaña occupies the remaining thirteen-twentieths of the whole—though it is this zone which is in question through boundary disputes.”—E. C. Vivian, *Peru*, pp. 1-3.—“This vast territory, . . . much of which is as yet unsettled and almost unknown, is divided into twenty three departments, two maritime provinces, and the constitutional province of Callao. These, in turn, are subdivided into 113 provinces and 803 districts. . . . [The total population of Peru in 1922 was 4,620,200.] The climate of Peru varies as much as do that country’s geographical characteristics, and to speak about the Peruvian climate as a whole would involve the use of more

[See also LATIN AMERICA: Agriculture.] Very few minerals are not found in Peru. Peruvian miners are the Indians of the mountains, while the capital and the managerial talent for the development of the mines are generally furnished by foreigners. A few factories of cotton and woolen goods have been established at Arequipa and Lima. Other manufactures are beverages, cigars, cigarettes, chocolate, and ‘Panama hats.’ Official statistics show that in 1914 Peru exported animal products which amounted to 750,518 libras. The three most important items in that category were the wool of sheep, alpaca wool, and various kinds of hides. In 1914 Peru exported vegetable products which amounted to 4,894,690 libras, the most valuable items being sugar, cotton, rubber, rice, cacao, and straw hats. In that year Peru exported mineral products, largely copper and silver, which

MONOLITHS FORMING A NATURAL GATEWAY INTO THE ROCK FOREST OF PERU

comprehensive terms than are found even in a meteorological vocabulary. Nothing can be more tropical than the climate of the miasmatic swamps of the Montaña region; nothing more arctic in its severity than the cold of the snow-clad peaks of the Andes; nothing more arid than the desolate plains of the Puna, or the rainless quebradas of the lower Cordilleras. . . . Although the sun has often great power during the middle hours of the day in the Peruvian coastal zone, the nights and early mornings are always cool, and often, in the winter, decidedly chilly. This is due, in great measure, to the cold Antarctic current, . . . [known as Humboldt’s current], which flows up the whole length of the Peruvian coast.”—*West Coast Leader, Peruvian Year Book*, 1921, pp. 21-22.—“The chief occupation in Peru is agriculture. Scattered through the coastal region are numerous plantations of cotton and sugar cane. Cereals and potatoes are raised upon the Andean plateau. Cacao, coffee, and crude rubber are the chief products of the wooded eastern slopes of the Andes.

amounted to 3,073,865 libras. The unit of monetary value is the libra, a beautiful gold coin—legally the equivalent of ten soles—which has served alike as the basis of internal trade and international exchange.”—W. S. Robertson, *History of the Latin-American nations*, p. 353.

Origin of name.—“There was a chief in the territory to the south of the Gulf of San Miguel, on the Pacific coast, named Biru, and this country was visited by Gaspar de Morales and Francisco Pizarro in 1515. For the next ten years Biru was the most southern land known to the Spaniards; and the consequence was that the unknown regions farther south, including the rumored empire abounding in gold, came to be designated as Biru, or Peru. It was thus that the land of the Yncas got the name of Peru from the Spaniards, some years before it was actually discovered.”—C. R. Markham, *Narrative and critical history of America*, v. 2, ch. 8.

Paternal despotism of the Incas.—"The bulk of the population [of Peru] is composed of the aboriginal Indians, the natives who had been there from time immemorial when America was discovered. The central tribe of these Indians was that of the Yncas, inhabiting the region in the Sierra . . . [known] as the Cuzco section. Such a country was well adapted for the cradle of an imperial tribe. . . . The Ynca race was originally divided into six tribes, whose lands are indicated by the rivers which formed their limits. Of these tribes the Yncas themselves had their original seat between the rivers Apurimac and Paucartampu, with the lovely valley of the Vilcamayu bisecting it. The Canas dwelt in the upper part of that valley up to the Vilcañuta Pass, and on the mountains on either side. The Quichuas were in the valleys round the head waters of the Apurimac and Abancay. The Chancas extended from the neighbourhood of Ayacucho (Guámanga) to the Apurimac. The Huancas occupied the valley of the Xauxa up to the saddle of the Cerro Pasco, and the Rucanas were in the mountainous region between the central and western cordilleras. These six tribes eventually formed the conquering Ynca race. Their language was introduced into every conquered province, and was carefully taught to the people, so that the Spaniards correctly called it the 'Lengua General' of Peru. This language was called Quichua, after the tribe inhabiting the upper part of the valleys of the Pachachaca and Apurimac. Their territory consisted chiefly of uplands covered with long grass, and the name has been derived from the abundance of straw in this region. . . . The name was given to the language by Friar San Tomas in his grammar published in 1560, who perhaps first collected words among the Quichuas and so gave it their name, which was adopted by all subsequent grammarians. But the proper name would have been the Ynca language. The aboriginal people in the basin of Lake Titicaca were called Collas, and they spoke a language which is closely allied to the Quichua. . . . The Collas were conquered by the Yncas in very remote times, and their language, now incorrectly called Aymara, received many Quichua additions; for it originally contained few words to express abstract ideas, and none for many things which are indispensable in the first beginnings of civilized life. One branch of the Collas (now called Aymarás) was a savage tribe inhabiting the shores and islands of Lake Titicaca, called Uros. . . . The Ynca and Colla (Aymara) tribes eventually combined to form the great armies which spread the rule of Ynca sovereigns over a much larger extent of country. . . . In the happy days of the Yncas they cultivated many of the arts, and had some practical knowledge of astronomy. They had domesticated all the animals in their country capable of domestication, understood mining and the working of metals, excelled as masons, weavers, dyers, and potters, and were good farmers. They brought the science of administration to a high pitch of perfection, and composed imaginative songs and dramas of considerable merit. . . . The coast of Peru was inhabited by a people entirely different from the Indians of the Sierra. There are some slight indications of the aborigines having been a diminutive race of fishermen who were driven out by the more civilized people, called Yuncas. . . . The Yncas conquered the coast valleys about a century before the discovery of America, and the Spaniards completed the destruction of the Ynca people."—C. R. Markham, *Peru*, ch. 3.—"In the minuter mechanical arts, both [the Aztecs of Mexico and

the Incas of Peru] showed considerable skill; but in the construction of important public works, of roads, aqueducts, canals, and in agriculture in all its details, the Peruvians were much superior. Strange that they should have fallen so far below their rivals in their efforts after a higher intellectual culture, in astronomical science, more especially, and in the art of communicating thought by visible symbols. . . . We shall look in vain in the history of the East for a parallel to the absolute control exercised by the Incas over their subjects. . . . It was a theocracy more potent in its operation than that of the Jews; for, though the sanction of the law might be as great among the latter, the law was expounded by a human lawgiver, the servant and representative of Divinity. But the Inca was both the lawgiver and the law. He was not merely the representative of Divinity, or, like the Pope, its viceregent, but he was Divinity itself. The violation of his ordinance was sacrilege. Never was there a scheme of government enforced by such terrible sanctions, or which bore so oppressively on the subjects of it. For it reached not only to the visible acts, but to the private conduct, the words, the very thoughts of its vassals. . . . Under this extraordinary polity, a people advanced in many of the social refinements, well skilled in manufactures and agriculture, were unacquainted . . . with money. They had nothing that deserved to be called property. They could follow no craft, could engage in no labor, no amusement, but such as was specially provided by law. They could not change their residence or their dress without a license from the government. They could not even exercise the freedom which is conceded to the most abject in other countries, that of selecting their own wives. The imperative spirit of despotism would not allow them to be happy or miserable in any way but that established by law. The power of free agency—the inestimable and inborn right of every human being—was annihilated in Peru."—W. H. Prescott, *History of the conquest of Peru*, v. 1, bk. 1, ch. 5.—See also AMERICA: Prehistoric; ANDESAINS; INDIANS, AMERICAN; Cultural areas in South America: Inca area; RACE PROBLEMS: Previous to 1900.

Empire of the Incas.—"The Inca empire had attained its greatest extension and power precisely at the period of the discovery by Columbus, under the reign of Huayna Capac, who, rather than Huascar or Atahualpa, should be called the last of the Incas. . . . From their great dominating central plateau, the Incas had pressed down to the Pacific, on the one hand, and to the dense forests of the Amazonian valleys on the other. Throughout this wide region and over all its nations, principalities, and tribes, Huayna Capac at the beginning of the 16th century ruled supreme. His empire extended from four degrees above the equator to the 34th southern parallel of latitude, a distance of not far from 3,000 miles; while from east to west it spread, with varying width, from the Pacific to the valleys of Paucartambo and Chuquisaca, an average distance of not far from 400 miles, covering an area, therefore, of more than one million square miles, equal to about one-third of the total area of the United States, or to the whole of the United States to the eastward of the Mississippi River. . . . [It extended over modern Ecuador, Peru, Bolivia, Chile and part of Argentina.] In the islands of Lake Titi-

caca, if tradition be our guide, were developed the germs of Inca civilization. Thence, it is said, went the founders of the Inca dynasty, past the high divide between the waters flowing into the lake and those falling into the Amazon, and skirting the valley of the river Vilcanota for more than 200 miles, they established their seat in the bolson [valley] of Cuzco. . . . It is not only central in position, salubrious and productive, but the barriers which separate it from the neighboring valleys are relatively low, with passes which may be traversed with comparative ease; while they are, at the same time, readily defensible. The rule of the first Inca seems not to have extended beyond this valley, and the passes leading into it are strongly fortified, showing the direction whence hostilities were anticipated in the early days of the empire, before the chiefs of Cuzco began their career of conquest and aggregation, reducing the people of the bolson of Anta in the north, and that of Urcos in the south. . . . The survey of the monuments of Peru brings the conviction that the ancient population was not nearly so numerous as the accounts of the chroniclers would lead us to suppose. . . . But a small portion of the country is inhabitable, or capable of supporting a considerable number of people. The rich and productive valleys and bolsones are hardly more than specks on the map; and although there is every evidence that their capacities of production were taxed to the very utmost, still their capacities were limited. The ancient inhabitants built their dwellings among rough rocks, on arid slopes of hills, and walled up their dead in caves and clefts, or buried them among irreclaimable sands, in order to utilize the scanty cultivable soil for agriculture. They excavated great areas in the deserts until they reached moisture enough to support vegetation, and then brought guano from the islands to fertilize these sunken gardens. They terraced up every hill and mountain-side, and gathered the soil from the crevices of the rocks to fill the narrow platforms, until not a foot of surface, on which could grow a single stalk of maize or a single handful of quinoa, was left unimproved. . . . It would be safe to estimate the population under the Inca rule at . . . perhaps somewhere between ten and twelve millions; notwithstanding Las Casas, the good, but not very accurate, Bishop of Chiapa tells us that, "in the Province of Peru alone the Spaniards killed above forty millions of people."—E. G. Squier, *Peru*, ch. 1.—According to the tradition of the Incas, the foundations of the empire were laid about the year 1200, when Manco Capac and his wife Mama Occllo, children of the sun, appeared in the bolson or valley of Cuzco saying that their father, the sun, had sent them to instruct the people. "In the name of Ticviriracochoa, and of the Sun and of the other gods, Manco Capac laid the foundations of the new city. The original and beginning of it was a small stone house with a roof of straw that Manco Capac and his women built, to which they gave the name of Curicancha, meaning the place of gold. This is the place where afterwards, stood that celebrated and most rich temple of the sun, and now a monastery of monks of the order of San Domingo."—*Chronicle of Pedro de Leon* (tr. by C. R. Markham), pt. 2, p. 22.—"We are supposed to have the names of the successors of Manco Capac, who were Sinchi Rocca, Lloque Yupanqui, and Mayta Capac in the thirteenth century, but we know very little of what they did or what progress was made by the tribe under them. It is said, however, that, in the period of their official lives, the Cuzcans began to estab-

lish a tribal predominance in the *bolson*, by 'drawing in the surrounding tribes rather by peaceful means than by conquest;' which probably means that they confederated with the neighboring tribes for purposes of warfare defensive and offensive. They thus established the highest form of government known to the Indians at that time and laid the foundations of the future Incariate. The accession of Capac Yupanqui probably marks the completion of this confederation and the beginning of aggressive operations beyond the *bolson*. . . . Capac Yupanqui, who succeeded Mayta Capac about the beginning of the Fourteenth Century, was successful in finding pretexts for war, and conquered the tribes of the west as far as the pass of Vilcanote, overlooking the Titicaca basin. Inca Rocca, the next Inca, is said to have given his attention to internal improvements, which would seem to imply that the development of the Incariate had begun, and that Cuzco was becoming wealthy. Yahuar Huaccac, the seventh Inca, was unfortunate and the period of his rule was disastrous. His successor bore the name of the Peruvian deity, Uira Cocha, and began a wonderful series of conquests which, within a century and a half, extended the Incariate over half of the western part of South America. By the conquest of the Collas he annexed to the Cuzcan Incariate the whole of the Titicaca basin, once the seat of the Piruas, but at that time occupied by tribes of shepherds being too high and cold for successful agriculture. There were copper mines in the region capable of furnishing materials for weapons and tools for the Cuzcans superior to those to which they had been accustomed. As a result of these conquests a system of colonization began, to be subsequently developed into what were called *mitimaes*, and these led to commercial enterprises whereby maize and cotton raised in one part of the country could be exchanged for the wool, potatoes, live-stock and copper of the higher regions. Uira Cocha also annexed the tribes of the Yucay valley, and then turned his attention to the Chancas, who were at the head of a great confederation of tribes beyond the Apurimac river. But while his military operations in that direction were incomplete, he died. He was succeeded by Urco, who, being defeated by the Chancas, was deposed by the tribal council, thus furnishing evidence that the office of Inca was still elective and had not passed beyond the control of the council of the tribe. The Chancas came within sight of Cuzco and the decisive battle in the history of the Incariate was fought on the heights above that famous seat of the Incas. Urco's younger brother, Yupanqui, had there gathered warriors from all parts of the territory already subject to the Cuzcans, and his brilliant victory over the Chancas gained for him the election to the office of Inca, from which his brother was deposed. He assumed, then or after his further victories, the title of Pachacutec (he who changes the world). The memory of the great battle between the Cuzcans and the Chancas was fresh in the popular mind, a century and a half later, when the Europeans arrived in the country, and as they passed over this ancient battlefield, they saw the stuffed skins of the vanquished Chancas set up as memorials by the roadside. In the process of 'changing the world,' Yupanqui subdued the Huancas, allies of the Chancas, and thus extended the Incariate to the shores of the Pacific. It was also in accordance with his programme of changing the world that the *mitimaes* were fully developed and applied, as a stroke of policy on the part of the Inca and for

the relief of the overcrowded portions of the Incariate. We are told by Pedro Cieza de Leon, in a book published in Seville in 1553, that, 'as soon as a province was conquered (by the Cuzcans), ten thousand to twelve thousand men were ordered to go there with their wives; but they were always sent to a country where the climate resembled that from whence they came.' . . . The Pachacutec was succeeded by Tupac Yupanqui, who completed the subjugation of the coast valley tribes, and extended his conquests south as far as the River Maule, three hundred miles beyond the site of the present city of Santiago in Chile. In that region the tribes are said to have retained their autonomy after the ancient manner, and became allies of the Cuzcans rather than their subjects. To the north of what is now the boundary between Peru and Ecuador dwelt tribes which were loosely attached members of a confederacy headed by the Caras of Quito. Their resistance to the warriors of Tupac was brief, and he was able to make these tribes the military base of a great war against Quito. In 1455 he won a great battle over the Caras. On the coast he extended his conquests to the Gulf of Guayaquil and returned to Cuzco in 1460. He died three years later, while in the midst of preparations to wipe Quito out of existence. . . . In 1430 Hualcopo became Shiri, and upon him was imposed the task of opposing the military operations of the Cuzcan Inca, Tupac Yupanqui. It is alleged that the victory of Tupac Yupanqui, in 1455, left sixteen thousand Cara warriors dead upon the field of battle. Hualcopo retired first to Riobamba and then to a well fortified position further north and nearer to Quito. From this position Tupac Yupanqui was unable to drive him. He died in the same year that Tupac Yupanqui died, and was succeeded by Cacha, the fifteenth, and, as it proved, the last Shiri. He was a warrior and devoted the first years of his official life to recovering what his predecessor had lost to the Cuzcans. Huayna Capac was the successor of Tupac Yupanqui. He was delayed in resuming his predecessor's campaigns against the Caras, by the necessity of conducting some military operations in the south. Returning thence in due time victorious, he devoted the remainder of his life to the conquest of Quito. He first reduced to absolute obedience the tribes of the Gulf of Guayaquil, whom his predecessor had left half independent, and extended his conquests on the northern shore nearly as far as the equator. Some of the tribes he exterminated. Having thus here and elsewhere secured lines of communication, he advanced against Quito. The Caras under Cacha fought stubbornly, but were overthrown in one battle after another, and was finally defeated, and their Shiri was slain. Huayna Capac entered Quito in triumph. The Caranquis, a warlike people living north of Quito, were overwhelmed and exterminated. Tradition states that twenty-four thousand Caranquis were massacred, and their bodies were thrown into the lake which now bears the name of Yahuarcocha (the pool of blood). . . . The times of Huayna Capac were undoubtedly the Golden Age of the Peruvians and present to best advantage the opportunity for our study of what is often very carelessly called their civilization. We would speak more accurately if we called it a study of their culture, or of their institutions."—A. H. Noll, *Peruvians*, pp. 10, 21-26, 28.—Huayna Capac died in 1525 and gave the north of the country to his son, Atahualpa, and the south to another son, Huascar. The strife between these two sons contributed to the

ease with which the Incas were overcome by the Spaniards.

1200-1527.—Ancient culture.—Agriculture.—Craftsmanship.—Social and political organization.—Religious ceremonies.—In Peru, South American culture reached its highest development for here, through agriculture, a larger population could be supported than in the hunting areas. The culminating civilization in Peru was that of the empire of the Incas, which the Spaniards found on their arrival. "The Peruvians were primarily agriculturists, and though the valleys were extremely fertile, yet throughout the greater part of the country cultivation was carried on under difficulties. Large tracts of the interior were situated at such an altitude that maize could not ripen there, and, under ordinary circumstances, were unable to support a large population. On the rainless coast agriculture was, normally, only possible in the neighbourhood of the rivers, none too numerous, which had their sources in the mountains; and their fertilizing influence extended but a short distance from their actual banks. Where the climate was favourable, the very uneven nature of the country, and the steepness of the mountain-slopes, rendered special measures necessary for the retention of the soil, and here too arrangements had to be made for irrigation. [See also AGRICULTURE: Beginnings of plant cultivation.] For agricultural purposes a threefold division of the land was made. Certain tracts throughout the empire were reserved for the Sun, and the revenues from these were devoted to the maintenance of the temples and ministers of the state religion. Part of the remainder was divided among the population at large according to their needs; and the rest was royal property. Each head of a family received a plot for himself, with additional plots for each child. When a son married, he took over the control of that portion which his father had received at his birth, but when a daughter married, her portion lapsed to the state. If the population of a neighbourhood increased, part of the crown-lands passed into their hands. The cultivation of the land, like everything else, was controlled by special officials, and the inhabitants of the village laboured in common. The local 'church-lands' received the first attention, and next the lands apportioned for the use of the villagers. Even here a certain precedence was observed, in that the fields of the widows, aged and sick, came first. . . . The aqueducts of Peru constitute a feature which has deservedly moved the wondering admiration of the early chroniclers. By their means alone was the coast enabled to support the large population which existed there before the Spanish conquest; and it is owing to the fact that the Spaniards failed to maintain the system that large tracts of country, formerly reclaimed from the desert, are now abodes of utter desolation. Many of these aqueducts and reservoirs on the coast dated from pre-Inca times, but the Inca did much to extend the range of their utility. [See also AQUEDUCTS: Peruvian.] . . . A large variety of crops was cultivated throughout the empire, but, where the climate allowed, maize, of several kinds, formed the staple produce. In the loftier altitudes of the interior, however, maize could not be grown, but the hardy quinoa, a kind of buckwheat, took its place. Here, too, the potato flourished as well as in the lower country, and the oca, another tuber, was also of economical importance where it could be grown. . . . The most highly-prized product of Peruvian agriculture was the coca. . . . The leaves were chewed, together with lime or

bone-ash, and were held in such estimation that they were reserved for the Inca. Large plantations were prepared, especially in the eastern province, and were tended with the greatest care. . . . Coca figured as an offering in most religious ceremonies. But the Peruvians were also a pastoral people, and their flocks . . . [of llamas and alpacas, both of which they had domesticated], were of the greatest importance to them. . . . Of the various products of Peruvian craftsmanship the pottery is the most important archæologically. . . . The remarkable regularity and gracefulness of some of the forms in which the vases were moulded . . . bear witness to the masterly skill with which the primitive potter handled his material. Undoubtedly the early inhabitants of Truxillo and the neighborhood take the premier place as workers of clay. . . . The basis of the Peruvian social system was the family, and the people were divided into a number of *ayllu*, or lineages; at Cuzco these *ayllu* were divided into two groups, living in different parts of the city, and called respectively Hanan-Cuzco and Hurin-Cuzco ('Upper Cuzco' and 'Lower Cuzco'). The origin of this two-fold division is obscure, and is explained differently by different authors. Manco Capac, Lloque Yupanqui, and Inca Rocca have respectively been credited with the arrangement, while Montesinos makes it date from as far back as the fifth reign of his early list. It is probable that it was of early date, since it was not peculiar to the Inca. . . . While the Inca state was yet small, the primitive communistic system continued in operation without much supervision; but as the empire grew, and tribe after tribe was added to it, an official class gradually sprang into existence, whose duty it was to see, not only that every man performed his share of work but also that the products of united labour were fairly distributed. The idea of constant supervision, . . . was neither new nor distasteful to the Peruvians. Individual freedom meant nothing to them, and obedience to a superior was a habit. . . . Of the growth of the huge bureaucracy which the Spaniards found in Peru, little can be said, but it is probable that it only began to be evolved from the primitive communism when, under Pachacuti, the policy of effective conquest and colonial expansion was seriously inaugurated. Later its ramifications extended to every hamlet of the empire. The latter, for the purposes of administration, was divided into provinces, each ruled by an hereditary Curaça who had power to impose local by-laws in accordance with the customary code of the Inca. Under the Curaça was a hierarchy of officials, ranging from sub-chiefs to subordinate inspectors whose responsibility was limited to the supervision of no more than ten heads of families. A strict census was kept of the population and resources of each province, and the returns were sent regularly to Cuzco. In accordance with the census, tribute was imposed, and, as money was a thing unknown in Peru, all tribute was in kind. Of this tribute the most minute records were kept, and the system by which the imperial accounts were registered deserves a short description. No form of writing can be proved to have existed under the Inca. . . . But if they had no form of writing, the Peruvians had invented a very serviceable substitute, the *quipus*. These *quipus* were cords on which were made knots of almost infinite multiplicity. For the purposes of reckoning, each form of knot represented a different number, and each string a different subject; to some of the strings, subordinate strings were attached serving as footnotes,

and the strings forming one set of accounts were arranged as a fringe along a master-string. An indication of the nature of the objects enumerated was furnished by the colour of each string, and the combinations of colour and types of knots gave an almost endless variety to the uses to which this method of recording could be put. It is even said that events were recorded by means of the quipus, and the statement is not incredible, since the system was in the hands of professional accountants, Quipucamayoc, who gave their whole lives to its study and elaboration. [See also QUIPU.] . . . The question of the disposal of the dead was of great importance throughout Peru, since . . . some form of ancestor-worship was practised throughout, both on the coast and in the Sierra. Belief in the continued existence of the soul after decease was found practically everywhere, though the accounts of its fate varied locally. . . . The custom, almost universally prevalent, at any rate in early times, of interring the favourite wives and even retainers with important individuals, also bears witness to a belief in the continued existence of the soul. At the same time, by a natural confusion of thought, the actual body was regarded as in some way sentient, since frequent offerings of food and especially drink were made at the tombs, and the mummies were brought out at stated intervals and ceremonial feasts were held in their honour. There is no evidence that any preservative preparation was injected into the body . . . after death. Its preservation was due mainly to the dry atmosphere of the coast and the higher sierra. . . . The actual form of grave differed according to locality. In the highlands natural caverns, often enlarged by artificial means, were employed as mausolea, and the bodies were arranged in a seated position round the walls or in niches. Many of these mortuary caves are situated in the face of some inaccessible cliff, and the dead must have been lowered there by means of ropes. The entrance was always carefully concealed with masonry. In many parts of Peru, especially in the neighborhood of Cuzco, occur outcropping rocks which have been carved with stairways, seats, and all manner of intricate channels leading from small reservoirs. . . . Important ceremonies took place in all the provinces at the death of the reigning Inca, a feature of which was the recitation by selected poets of all the feats performed by the deceased, and which were renewed at stated intervals for a whole year. A peculiar custom connected with the demise of a ruler was the following: His palace with all its contents, including the gold and silver furniture, was left exactly, as it was at his death, and did not pass into the possession of his successor; even the staff of servants, it is said, was still maintained. This custom accounts in a large measure for the great quality of gold which the Spaniards found in Peru at their arrival, since each Inca was obliged to supply himself with an entirely new outfit of the utensils necessary to his rank. . . . The subject of the religion or religions of Peru is one of great complexity. . . . Most of the early chroniclers, some of whom were of Inca descent, give valuable information concerning the beliefs and ceremonies of the people, and the writings of the early missionaries are of the highest importance in this respect. In its main outlines the religion as found by the Spaniards was fairly homogeneous in character throughout Peru. . . . but very great differences existed in the quality of the beliefs, and, from the cultural standpoint, those of the present population differed from those held by the educated Inca as widely as the primi-

PERUVIAN ANTIQUES

1. Border of cotton towel with woven ornament. 2 and 3. Bags of richly ornamented woolen material. 4 and 5. Peruvian grave tablets. 6. Part of gorgeous garb of a mummy, in Gobelin style. 7. tive village cults of India from the highest tenets of Hinduism. Of the creator-gods, the name of Uiracocha [was] the deity worshipped by the rulers of the pre-Inca empire who came from the Collao. Uiracocha is closely connected with Tiahuanaco, the megalithic site at the south end of Lake Titicaca. . . . To him is attributed the creation of the sun and moon, and he held power over lightning and thunder. After the creation he travelled northwards through the country in the guise of an elderly man with a long beard, and performed various miracles with the aid of a magic staff, finally disappearing over the sea in the neighbourhood of Porto Viejo. The latter part of the myth probably represents the conquest of the country by his worshippers. His full name is given as Con Ticsi Uiracocha, and appears to be derived from some language other than the Quichua dialect, which was the official tongue of the Inca empire at the time of the Spanish conquest. In other parts of the Collao this creator who held power over the heavenly bodies was known as Tonapa and Tarapaca, and his cult seems to have extended as far south as the north-west provinces of the Argentine Republic. The Quichua name for the creator was Pachacamac (the 'Soul of the Universe'), and this Pachacamac was identified with Uiracocha. . . . The beliefs concerning the supernatural powers varied according to the status of the individual. Huayna Capac, we are told, harboured doubts concerning the divinity of the Sun itself, since he remarked that it was obliged to perform an appointed journey, presumably at the bidding of some higher power; and some of the prayers to Uiracocha, which luckily have been preserved, bear witness to the spirituality of the religious beliefs held, at any rate by the ruling class."—T. A. Joyce, *South American archaeology*, pp. 117-119, 121-122, 193-194, 100-103, 144-146, 149-151, 160.

1528-1531.—Commission and preparations of Pizarro.—"In the spring of 1528, Pizarro and one of his comrades, taking with them some natives of Peru and some products of that country, set out [from Panama] to tell their tale at the court of Castile. Pizarro . . . found the Emperor Charles V. at Toledo, and met with a gracious reception. . . . His tales of the wealth which he had witnessed were the more readily believed in consequence of the experiences of another Spaniard whom he now met at court, the famous conqueror of Mexico. Yet affairs in Spain progressed with proverbial slowness, and it was not until the expiry of a year from the date of his arrival in the country that the capitulation was signed defining the powers of Pizarro. By this agreement he was granted the right of discovery and conquest in Peru, or New Castle, with the titles of Captain-general of the province and Adelantado, or lieutenant-governor. He was likewise to enjoy a considerable salary, and to have the right to erect certain fortresses under his government, and, in short, to exercise the prerogatives of a viceroy. Almagro was merely appointed commander of the fortress of Tumbez, with the rank of Hidalgo; whilst Father Luque became bishop of the same place. . . . Pizarro, on his part, was bound to raise within six months a force of 250 men; whilst the government on theirs engaged to furnish some assistance in the purchase of artillery

and stores. [Thus commissioned, Pizarro left Seville in January, 1530, hastening back to Panama, accompanied or followed by four half-brothers, who were destined to stormy careers in Peru. Naturally, his comrade and partner Almagro was ill pleased with the provision made for him, and the partnership came near to wreck; but some sort of reconciliation was brought about, and the two adventurers joined hands again in preparations for a second visit to Peru, with intentions boding evil to the unhappy natives of that too bountiful land. It was early in January 1531 that Pizarro sailed southward from the Isthmus for the third and last time."—R. G. Watson, *Spanish and Portuguese South America*, v. 1, ch. 6-7.

1531-1533.—Pizarro's conquest.—**Treacherous murder of Atahualpa.**—"Pizarro sailed from Panama on the 28th of December, 1531, with three small vessels carrying one hundred and eighty-three men and thirty-seven horses. In thirteen days he arrived at the bay of San Mateo, where he landed the horses and soldiers to march along the shore, sending back the ships to get more men and horses at Panama and Nicaragua. They returned with twenty-six horses and thirty more men. With this force Pizarro continued his march along the sea-coast, which was well peopled; and on arriving at the bay of Guayaquil, he crossed over in the ships to the island of Puna. Here a devastating war was waged with the unfortunate natives, and from Puna the conqueror proceeded again in his ships to the Peruvian town of Tumbez. The country was in a state of confusion, owing to a long and desolating war of succession between Huascar and Atahualpa, the two sons of the great Ynca Huayna Capac, and was thus an easy prey to the invaders. Huascar had been defeated and made prisoner by the generals of his brother, and Atahualpa was on his way from Quito to Cusco, the capital of the empire, to enjoy the fruits of his victory. He was reported to be at Caxamarca, on the eastern side of the mountain; and Pizarro, with his small force, set out from Tumbez on the 18th of May, 1532. . . . The first part of Pizarro's march was southward from Tumbez, in the rainless coast region. After crossing a vast desert he came to Tangarara, in the fertile valleys of the Chira, where he founded the city of San Miguel, the site of which was afterwards removed to the valley of Piura. The accountant Antonio Navarro and the royal treasurer Riquelme were left in command at San Miguel, and Pizarro resumed his march in search of the Ynca Atahualpa on the 24th of September, 1532. He detached the gallant cavalier, Hernando de Soto, into the sierra of Huancabamba, to reconnoitre, and pacify the country. De Soto rejoined the main body after an absence of about ten days. The brother of Atahualpa, named Titu Atauchi, arrived as an envoy, with presents, and a message to the effect that the Ynca desired friendship with the strangers. Crossing the vast desert of Secura, Pizarro reached the fertile valley of Motupe, and marched thence to the foot of the cordilleras in the valley of the Jequetepeque. Here he rested for a day or two, to arrange the order for the ascent. He took with him forty horses and sixty foot, instructing Hernando de Soto to follow him with the main body and the baggage. News arrived that the Ynca Atahualpa had reached the neighborhood of Caxamarca about three days before, and that he desired peace. Pizarro pressed forward, crossed the cordillera, and on Friday, the 15th of November, 1532, he entered Caxamarca with his whole force. Here he found excellent accommodation in the large masonry buildings, and

was well satisfied with the strategic position. Atahualpa was established in a large camp outside, where Hernando de Soto had an interview with him. Atahualpa announced his intention of visiting the Christian commander, and Pizarro arranged and perpetrated a black act of treachery. He kept all his men under arms. The Ynca, suspecting nothing, came into the great square of Cusco in grand regal procession. He was suddenly attacked and made prisoner, and his people were massacred. The Ynca offered a ransom, which he described as gold enough to fill a room twenty-two feet long and seventeen wide, to a height equal to a man's stature and a half. He undertook to do this in two months, and sent orders for the collection of golden vases and ornaments in all parts of the empire. Soon the treasure began to arrive, while Atahualpa was deceived by false promises, and he beguiled his captivity by acquiring Spanish and learning to play at chess and cards. Meanwhile Pizarro sent an expedition under his brother Hernando, to visit the famous temple of Pachacamac on the coast; and three soldiers were also despatched to Cusco, the capital of the empire, to hurry forward the treasure. They set out in February, 1533, but behaved with so much imprudence and insolence at Cusco as to endanger their own lives and the success of their mission. Pizarro therefore ordered two officers of distinction, Hernando de Soto and Pedro del Barco, to follow them and remedy the mischief which they were doing. On Easter eve, being the 14th of April, 1533, Almagro arrived at Caxamarca with a reinforcement of 150 Spaniards and 84 horses. On the 3rd of May it was ordered that the gold already arrived should be melted down for distribution; but another large instalment came on the 14th of June. An immense quantity consisted of slabs, with holes at the corners, which had been torn off the walls of temples and palaces, and there were vessels and ornaments of all shapes and sizes. After the royal fifth had been deducted, the rest was divided among the conquerors. The total sum of 4,605,670 ducats would be equal to about £3,500,000 of modern money. After the partition of the treasure, the murder of the Ynca was seriously proposed as a measure of good policy. The crime was committed by order of Pizarro, and with the concurrence of Almagro and the friar Valverde. It was expected that the sovereign's death would be followed by the dispersion of his army, and the submission of the people. This judicial murder was committed in the square of Caxamarca on the 20th of August, 1533. Hernando de Soto was absent at the time, and on his return he expressed the warmest indignation. Several other honorable cavaliers protested against the execution. Their names are even more worthy of being remembered than those of the heroic sixteen, who crossed the line on the sea-shore at Gallo."—C. R. Markham, *Pizarro and the conquest and settlement of Peru and Chili* (*Narrative and critical history of America*, v. 2, ch. 8).

1533-1548.—**Fighting of Spanish conquerors over the spoils.**—"The feud between the Pizarros and the Almagros, which forms the next great series of events in American history, is one of the most memorable quarrels in the world. . . . This dire contest in America destroyed almost every person of any note who came within its influence, desolated the country where it originated, prevented the growth of colonization, and changed

for the worse the whole course of legislation for the Spanish colonies. Its effects were distinctly visible for a century afterward. . . . There were no signs, however, of the depth and fatality of this feud between the Pizarros and Almagros at the period immediately succeeding the execution of Atahualpa. That act of injustice having been perpetrated, Pizarro gave the royal borla [a peculiar head-dress worn by the reigning Incas, described as a tassel of fine crimson wool] to a brother of the late Inca [who died two months later, of shame and rage at his helpless position], and set out from Cassamarca on his way to Cusco. It was now time to extend his conquests and to make himself master of the chief city of Peru." After a slight resistance, the Spaniards entered "the great and holy city of Cusco," the capital of the Incas, on the 15th of November, 1533. According to the Spanish descriptions it was a remarkable city, constructed with great regularity, having paved streets, with a stone conduit of water running through the middle of each, with grand squares and many splendid palaces and temples. "In Cusco and its environs, including the whole valley which could be seen from the top of the tower, it is said that there were 'a hundred thousand' houses. Among these were shops, and store-houses, and places for the reception of tribute. . . . The great Temple of the Sun had, before the Spaniards rifled Cusco, been a building of singular gorgeousness. The interior was plated with gold; and on each side of the central image of the Sun were ranged the embalmed bodies of the Incas, sitting upon their golden thrones raised upon pedestals of gold. All round the outside of the building, at the top of the walls, ran a coronal of gold about three feet in depth." For three years the Spaniards held undisturbed possession of Cusco, reducing it to the forms of a Spanish municipality, converting the great Temple of the Sun into a Dominican monastery and turning many palaces into cathedrals and churches. In the meantime, Fernando Pizarro, one of the four brothers of the conqueror, returned from his mission to Spain, whither he had been sent with full accounts of the conquest and with the king's fifth of its spoils. He brought back the title of Marquis of Francisco, and a governor's commission, the province placed under him, to be called New Castile. For Pizarro's associate and partner, Almagro, there was also a governorship, but it was one which remained to be conquered. He was authorized to take possession and govern a province, which should be called New Toledo, beginning at the southern boundary of Pizarro's government and extending southward 200 leagues. This was the beginning of quarrels, which Pizarro's brothers were accused of embittering by their insolence. Almagro claimed Cusco, as lying within the limits of his province. Pizarro was engaged in founding a new capital city near the coast, which he began to build in 1535, calling it Los Reyes, but which afterwards received the name of Lima; he would not, however, give up Cusco. The dispute was adjusted in the end, and Almagro set out for the conquest of his province (Chile), much of which had formed part of the dominions of the Inca, and for the subduing of which he commanded the aid of a large army of Peruvians, under two chiefs of the royal family. A few months after this, in the spring of 1536, the nominally reigning Inca, Manco, escaped from his Spanish masters at Cusco, into the mountains, and organized a furious and formidable rising, which brought the Spaniards, both at Cusco and Los Reyes, into great peril, for many months. Before the revolt

had been overcome, Almagro returned, unsuccessful and disappointed, from his expedition into Chile [see CHILE: 1535-1724] and freshly determined to assert and enforce his claim to Cusco. It is said that he endeavored, at first, to make common cause with the Inca Manco; but his overtures were rejected. He then attacked the Inca and defeated him; marched rapidly on Cusco, arriving before the city April 18, 1537; surprised the garrison while negotiations were going on and gained full possession of the town. Fernando and Gonzalo, two brothers of the Marquis Pizarro, were placed in prison. The latter sent a force of 500 men, under his lieutenant Alvarado, against the intruder; but Alvarado was encountered on the way and badly beaten. In November there was a meeting brought about, between Pizarro and Almagro, in the hope of some compromise, but they parted from it in sharper enmity than before. Meantime, the younger Pizarro had escaped from his captivity at Cusco, and Fernando had been released. In the spring of 1538 Fernando led an army against the Almagristas, defeated them (April 6, 1538) in a desperate battle near Cusco and entered the city in triumph. Almagro was taken prisoner, subjected to a formal trial, condemned and executed. The Pizarros were now completely masters of the country and maintained their domination for a few years, extending the Spanish conquests into Chile under Pedro de Valdivia, and exploring and occupying other regions. But in 1541, old hatreds and fresh discontents came to a head in a plot which bore fruit in the assassination of the governor, the Marquis Pizarro, now past 70 years of age. A young half-caste son of old Almagro was installed in the governorship by the conspirators, and when, the next year, a new royally commissioned governor, Vaca de Castro, arrived from Spain, young Almagro was mad enough to resist him. His rebellion was overcome speedily and he suffered death. Vaca de Castro was superseded in 1544 by a viceroy, Blasco Nuñez Vela, sent out by the emperor, Charles V., to enforce the "New Laws," lately framed in Spain, under the influence of Las Casas, to protect the natives, by a gradual abolition of the "repartimientos" and "encomiendas."—A. Helps, *Spanish conquest in America*, v. 4, bk. 17-18.

1539-1541.—Gonzalo Pizarro's expedition to the head waters of the Amazon and Orellana's voyage down the great river. See AMAZON RIVER: Discovery and naming.

1544-1548.—Audiencia Real.—Death of Gonzalo Pizarro.—"In 1544 was instituted the *Audiencia Real* [see AUDIENCIAS]; it was about this time that the first viceroy of Peru appears upon the scene. Blasco Nuñez de Vela who had been appointed to take over the government from Cristobal Vaca de Castro, the successor of Pizarro, distinguished himself by his extreme cruelty; so much so that the *Audiencia* headed by Gonzalo Pizarro, the one remaining brother of Francisco Pizarro, resolved to imprison him and send him to Spain; but he was able to escape, and landed at Tumbes, where he gathered together an army to attack Gonzalo Pizarro, who defeated and killed him at Añaquito. Gonzalo Pizarro was counselled to proclaim independence and make himself king of Peru. Consternation reigned in Spain at these events. A lawyer named La Gasca was sent to restore order, with powers to grant a general pardon; but he soon found that the turbulent Spaniards could only be dominated by force. Gonzalo Pizarro and Francisco de Carbajal were taken

prisoners at Saxahuaman, and were beheaded at Cuzco. Thus, with the death of the last of the group of 'conquistadores,' finally peace was restored. La Gasca returned to Spain after having founded the city of La Paz, to-day the principal metropolis of Bolivia, and the second viceroy, Antonia de Mendoza, definitely initiated the rule of the viceroys. Through the *Audiencia Real*, the Royal Court of Appeal, the 'New Laws' formulated for the government of the country commenced to be enforced. These laws, made in Spain, were just and merciful toward the poor Indians, but the action of the 'conquistadores' and viceroys was such as to completely defeat their purpose; it being their custom when receiving an order from the Spanish government to say: 'We obey, but we do not comply,' a cryptical phrase which has become famous in Spanish. For this reason it is an error to reproach the Spanish nation for the cruelties practised upon the Indians which were perpetrated by only a few of her sons blinded by cupidity and ambition; and much less to blame that country for the fanaticism of some of the friars, when it should be remembered that one of them, Father Las Casas, inspired by a feeling of the purest Christianity, wrote the celebrated 'Letters from the Indies,' which raised in Spain a wave of indignation in favor of the Indians."—*West Coast Leader, Peruvian Year Book*, 1921, pp. 29-30.

1550-1816.—Under the Spanish viceroys.—Vicissitudes of Spanish rule.—Diversion of viceroyalty.—Career of General O'Higgins.—Preparation for revolt.—Ecclesiasticism.—Treatment of Indians.—Growth of liberal ideas.—"After Gonzalo Pizarro's death a peaceful viceroy arrived in Peru, sprung from one of the noblest families of the peninsula. This was Don Antonio de Mendoza. . . . Don Antonio died in 1551, after a very brief enjoyment of his power; but from this date, during the whole period of the rule of kings of the Austrian House, the Peruvian Viceroyalty was always filled by members of the greatest families of Spain. . . . At an immense distance from the mother country, and ruling at one time nearly the whole of South America, including the present republics of Venezuela, New Granada, Ecuador, Peru, Chilé, Bolivia, and La Plata, the court of the Viceroys was surrounded by regal pomp and magnificence. . . . The archbishop of Lima ranked next to the viceroy, and filled his post during his absence from the capital. . . . It was not long after the conquest before the inquisition, that fearful engine of the despotic power of Spain, was established in Peru. . . . The Indians were exempted from its jurisdiction in theory, but whether, in practice, this unfortunate and persecuted people always escaped may be considered as doubtful. It was only in the beginning of the nineteenth century, and shortly before the commencement of the war of independence, that this fearful tribunal was abolished." Under the senseless government of Philip II. the seeds of decay and ruin were planted in every part of the Spanish empire. "Though receiving from the silver mines of Peru and Mexico the largest revenue of any sovereign in Europe, his coffers were always empty, and of \$35,000,000 received from America in 1595, not one rial remained in Spain in 1596. . . . Then followed the reigns of his worthless descendants and their profligate ministers; and fast and heedlessly did they drive this unfortunate country on the high road to ruin and poverty. On the establishment of the Bourbon kings of Spain in 1714, a more enlightened policy began to show itself in [the Audiencias and in] the various

PIZARRO BEFORE CHARLES V

measures of government; and the trade to the colonies, which had hitherto been confined by the strictest monopoly, was slightly opened. At this time, the commerce of Peru and Mexico was carried on by what was called the 'flota,' consisting of three men-of-war and about fifteen merchant vessels, of from 400 to 1,000 tons. Every kind of manufactured article of merchandise was embarked on board this fleet, so that all the trading ports of Europe were interested in its cargo, and Spain itself sent out little more than wines and brandy. The flota sailed from Cadiz, and was not allowed to break bulk on any account during the voyage. Arriving at Vera Cruz, it took in, for the return voyage, cargoes of silver, cocoa, indigo, cochineal, tobacco, and sugar; and sailed to the rendezvous at Havannah, where it awaited the galleons from Porto Bello, with all the riches of Peru. The galleons were vessels of about 500 tons; and an immense fair, which collected merchants from all parts of South America, was commenced at Porto Bello on their arrival." About the middle of the 18th century, "a marked change appears to have come over the colonial policy of Spain; and the enlightened government of the good Count Florida Blanca, who was prime minister for 20 years, introduced a few attempts at administrative reform, not before they were needed, into the colonial government. The enormous viceroyalty of Peru, long found to be too large for a single command, was divided; and viceroys were appointed in La Plata and New Granada, while another royal audience was established at Quito. The haughty grandees of Spain also ceased to come out to Peru; and in their places practical men, who had done good service as captains-general of Chile, were appointed viceroys, such as Don Manuel Amat, in 1761, and Don Agustin Jauregui, in 1780. At last Don Ambrosio O'Higgins, whose father was a poor Irish adventurer, who kept a little retail shop in the square at Lima, became viceroy of Peru, and was created Marquis of Osorno. . . . His son, the famous General O'Higgins was one of the liberators of Chile. O'Higgins was followed in the viceroyalty by the Marquis of Aviles, and in 1806, Don José Abascal, an excellent ruler, assumed the reins of government. . . . But the rule of Spain was drawing to a close. The successor of Abascal, General Pezuela, was the last viceroy who peacefully succeeded. . . . Many things had tended to prepare the minds of the Creole population for revolt. The partial opening of foreign trade by Florida Blanca, the knowledge of their own enslaved condition, obtained through the medium of their increasing intercourse with independent states, and, finally, the invasion of the mother country by Napoleon's armies, brought popular excitement in South America to such a height that it required but a spark to ignite the inflammable materials."—C. R. Markham, *Cuzco and Lima*, ch. 6.—"By 1632 the intolerable condition of the Indians had reached a point which attracted notice. These unfortunate people were exploited in every conceivable sense; the exactions and abuses directed against them coming equally from priest as from layman. In 1664 some alleviation of their lot was brought about by regulations promulgated by the viceroy, Santistevan. The monopoly of Spanish commerce on the west coast began to be destroyed, both British and French traders acquiring trade rights by the signing of the Treaty of Utrecht in 1713; and this marked a period in which aversion to Spanish rule and methods among the colonists became deepened. Certain conciliatory measures, such as the giving the titles of

nobility to various prominent colonists by the viceroys Antonio Manso and Manuel Amat, were initiated; but it was too late to arouse any spirit of friendship for the Bourbon dynasty or for Spain. In 1746 an appalling earthquake destroyed Lima, whilst a tidal wave swept away the port of Callao. In 1776 the continued exactions against the long-suffering people, in the form of taxes and restrictions, began to bear some natural effect, and some insurrection broke out, notwithstanding which, the Council of the Indies continued their ceaseless demands upon the colonists. It was seen, however, that the territory governed from the viceroyalty of Peru, at Lima, was too large for practicable supervision. New Granada, with a capital at Bogota, had already been separated, and in 1776 Buenos Ayres was also made the seat of a viceroy, including the territory now belonging to Bolivia. The crushing abuse of the Indians by forced labour in mines and factories [see PEONAGE: Introduction by Spaniards], had seriously diminished the populations of the provinces surrounding the principal mining and agricultural regions. The people were at such a stage that death seemed preferable to their condition; and when a leader arose in the person of Tupac Amaru, a descendant of the Incas who had remained in the valley of Vilcamayo since the murder of their leader by Toledo, they broke out into rebellion, and the whole of the interior of Peru was quickly aflame. Various battles were fought, and successes gained by the people; all excepting the whites declaring common cause. But, unfortunately, the insurrection failed at length, and Tupac was executed with the most savage brutality at Cuzco, in May 1781. . . . Some reforms were made in the treatment of the Indians after the events above described, and . . . considerable scientific, geographical, and literary advance [was] gained under the viceroys Jauregui, De la Croix, Taboada and others, including Don Francisco Gil—the latter the most enlightened of the whole succession of Peruvian rulers—during the years 1780 to 1790. [Under Gil] the coast was partly surveyed, a nautical school established, newspaper printed, statistics compiled, maps and surveys made, botanical studies of the *flora* carried out—all those matters which, theoretically, the Spaniards are enthusiastic about, but which they have, in practice, generally left other nations to do. . . . At the close of the eighteenth and beginning of the nineteenth century, . . . commences the growth of liberal and revolutionary ideas in Peru. These were first nourished in the centres of learning of Lima and Arequipa, until the nobility, and even the ladies of Lima, were imbued with the awakening spirit. Secret clubs began to meet, arrests followed, and a popular movement began to assume form. On September 1813, when news of the abolition of the Inquisition in Spain was received in Lima, there was an outbreak and the Holy Office, its archives, prisons and instruments of torture, were destroyed amid general rejoicing. . . . Peru, remained for a while loyal to the crown of Spain, but the cry of independence was raised at Cuzco in August 1814 by [Pumacagua, a native chief, and] a number of prominent Peruvians, some of whom were men of good birth, and feeling became unanimous for throwing off the Spanish yoke. Against their banded forces marched General Ramirez, but the patriots retreated over the snowy Cordillera from Arequipa. Ramirez received a letter from Pumacagua, the aged leader of the Peruvians, asking him for whom he was fighting, seeing that Ferdinand VII. of Spain had been sold to the French. Ramirez, however, with

a force of thirteen hundred well-disciplined men, armed with muskets, would waste no words with them, and Pumacagua, disposing only of eight hundred soldiers and unarmed Indians, stood up for battle. The Peruvians were routed, the guns captured, and large numbers killed, whilst as to the Indians, the Spaniards barbarously cut off their ears and sent them away among their people to tell the tale. Other operations took place both by land and sea, a Spanish squadron being defeated in May 1814 by Captain William Brown, a British seaman commanding revolutionary vessels from the Argentine. An organised rising was planned at Lima, but was frustrated by the arrival of veteran troops from Spain. Bolivia and Chile had been reconquered, Peru was brought under subjection; Buenos Ayres alone remained in freedom. It seemed that Spanish power was to be triumphant; and in July 1816 Pezuela entered

SIMÓN BOLÍVAR

Lima as Viceroy. It was but a lull before the culminating tempest which should clear the rule of Spain away before it, for events were but leading on to the historic days of Junin and Ayacucho."—C. R. Enock, *Peru*, pp. 61-65.

1579.—Piracies of Drake. See AMERICA: 1572-1580.

1746-1911.—Earthquakes.—"Peru has from time immemorial been subject to earthquake shocks, many of which have been very severe and fatal, as, for instance, the one which in 1746 entirely destroyed Lima, while a tidal wave swept away the port of Callao. Arica and Arequipa were nearly destroyed in 1868, the whole of the Pacific seaboard was again ravaged in 1877, and so recently as 1911 most of the towns and villages in the Department of Apurimac were laid in ruins, over 200 deaths resulting in the capital, Abancay, alone. Minor shocks are of frequent occurrence, the intermittent tremblings of the ground being usually accompanied by loud reports, and often by brilliant illuminations of the sky."—*West Coast Leader, Peruvian Year Book*, 1921, p. 22.

1776.—Separation of viceroyalty of Buenos Ayres. See ARGENTINA: 1580-1777.

1820-1826.—Struggle for independence.—Help from Chile and Colombia.—San Martin and Bolivar, the liberators.—The decisive battle of Ayacucho.—"The great struggle for independence in the Spanish provinces of South America had been elsewhere, for the most part, crowned with success before Peru became the theatre for important action. Here the Spaniards maintained possession of their last stronghold upon the continent, and, but for assistance from the neighbouring independent provinces, there would hardly have appeared a prospect of overthrowing the viceregal government. . . . In the month of August, 1820, independence having been established in Chili [see CHILE: 1810-1818], an army of between 4,000 and 5,000 men was assembled at Valparaiso for the purpose of breaking up the royalist strongholds of Peru, and of freeing that province from the dominion of Spain. The command was held by General Jose de San Martin, the emancipator of Chili, to whose exertions the expedition was mainly attributable. Such vessels of war as could be procured were fitted out and placed under command of Lord Cochrane. In the month following, the whole force was landed and quartered at Pisco, on the Peruvian coast, without opposition from the royalist forces, which retreated to Lima, about 100 miles northward. An attempt at negotiation having failed, the army of invasion was again in motion in the month of October. The naval force anchored off Callao, where, on the night of November 5th, Lord Cochrane [afterwards Lord Dundonald], commanding in person, succeeded in cutting out and capturing the Spanish frigate Esmeralda, which lay under the protection of the guns of the fort, and in company with a number of smaller armed vessels. This exploit is considered as one of the most brilliant achievements of the kind on record. The main body of the Chilean troops was transported to Huará, about 75 miles north of the capital. . . . As San Martin, after some months' delay at Huará, advanced upon Lima, the city was thrown into the utmost confusion. The Spanish authorities found it necessary to evacuate the place. . . . The general [San Martin] entered the city on the 12th of July, 1821, unaccompanied by his army, and experienced little difficulty in satisfying the terrified inhabitants as to his good faith and the honesty of his intentions. All went on prosperously for the cause, and on the 28th the independence of Peru was formally proclaimed, amid the greatest exhibition of enthusiasm on the part of the populace. On the 3d of the ensuing month San Martin assumed the title of Protector of Peru. No important military movements took place during a considerable subsequent period. The fortress at Callao remained in possession of the royalists" until the 21st of September, when it capitulated. "The independent army remained at Lima, for the most part unemployed, during a number of months subsequent to these events, and their presence began to be felt as a burden by the inhabitants. In April, 1822, a severe reverse was felt in the surprise and capture, by Canterac [the viceroy], of a very considerable body of the revolutionary forces, at Ica. . . . An interview took place in the month of July, of this year [1821], between the Protector and the great champion of freedom in South America, Bolivar, then in the full pride of success in the northern provinces. The result of the meeting was the augmentation of the force at Lima by 2,000 Columbian troops. During San Martin's absence the tyranny of his minister, Mon-

teagudo, who made the deputy protector, the Marquis of Truxillo, a mere tool for the execution of his private projects, excited an outbreak, which was only quelled by the arrest and removal of the offending party. In the succeeding month the first independent congress was assembled at the capital, and San Martin, having resigned his authority, soon after took his departure for Chili. Congress appointed a junta of three persons to discharge the duties of the executive. Under this administration the affairs of the new republic fell into great disorder." In June, 1823, the Spanish viceroy regained possession of Lima, but withdrew his troops from it again a month later. Nevertheless, "all hopes of success in the enterprise of the revolution now seemed to rest upon the arrival of foreign assistance, and this was fortunately at hand. Simon Bolivar, the liberator of Venezuela, and the most distinguished of the champions of freedom in South America, had so far reduced the affairs of the recently constituted northern states [see COLOMBIA: 1810-1819; 1819-1830] to order and security, that he was enabled to turn his attention to the distressed condition of the Peruvian patriots. He proceeded at once to the scene of action, and entered Lima on the 1st of September, 1823. . . . He was received with great rejoicing, and was at once invested with supreme power, both civil and military. . . . In February, 1824, an insurrection of the garrison at Callao resulted in the recapture of this important stronghold by the Spaniards, and a few weeks later the capital shared the same fate. The revolutionary congress broke up, after declaring its own dissolution and the confirmation of Bolivar's authority as supreme dictator. This gloomy state of affairs only served to call forth the full energies of the great general. He had under his command about 10,000 troops, the majority of whom were Columbians, stationed near Patavilca. The available forces of the royalists were at this period numerically far superior to those of the patriots." An action which did not become general took place on the plains of Junin, but no decisive engagement occurred until the 9th of December, 1824, "when the decisive battle of Ayacucho, one of the most remarkable in its details and important in its results ever fought in South America, gave a deathblow to Spanish power in Peru. The attack was commenced by the royalists, under command of the viceroy. Their numbers very considerably exceeded those of the patriots, being set down at over 9,000, while those of the latter fell short of 6,000. . . . After a single hour's hard fighting, the assailants were routed and driven back to the heights of Condorcanqui, where, previous to the battle, they had taken a position. Their loss was 1,400 in killed and 700 wounded. The patriots lost in killed and wounded a little less than 1,000." Before the day closed, Canterac, the viceroy, entered the patriot camp and arranged the terms of a capitulation with General Sucre—who had commanded in the battle and won its honors, Bolivar not being present. "His whole remaining army became prisoners of war, and by the terms of the capitulation all the Spanish forces in Peru were also bound to surrender." A strong body of Spanish troops held out, however, in Upper Peru (afterwards Bolivia) until April, 1825, and the royalists who had taken refuge at Callao endured with desperate obstinacy a siege which was protracted until January, 1826, when most of them had perished of hunger and disease. "Bolivar was still clothed with the powers of a dictator in Peru. . . . He was anxious to bring about the adoption by the Peruvians of the civil

code known as the Bolivian constitution, but it proved generally unsatisfactory. While he remained in the country, it is said, 'the people overwhelmed him with professions of gratitude, and addressed him in language unsuitable to any being below the Deity.' A reaction took place notwithstanding, and numbers were found ready to accuse this truly great man of selfish personal ambition."—H. Brownell, *North and South America: Peru*, ch. 12-13.

1825-1826.—Founding of republic of Bolivia in Upper Peru.—Bolivian constitution.—"Bolivar reassembled the deputies of the Congress of Lower Peru, February 10, 1825, and in his message to that body resigned the dictatorship, adding, 'I felicitate Peru on her being delivered from whatever is most dreadful on earth; from war by the victory of Ayacucho, and from despotism by my resignation. Proscribe for ever, I entreat you, this tremendous authority, which was the sepulchre of Rome.' On the same occasion he also said; 'My continuance in this republic is an absurd and monstrous phenomenon; it is the approbrium of Peru'; with other expressions equally strong; while at the same time, at the pressing solicitation of the Congress, he consented, notwithstanding his many declarations of reluctance, to remain at the head of the republic. Nothing could exceed the blind submissiveness of this Congress to Bolivar. After investing him with dictatorial authority for another year, they voted him a grant of a million of dollars, which he twice refused, with a disinterestedness that does him the greatest honor. . . . Liberality of feeling, and entire freedom from rapacity of spirit, must be admitted as prominent traits in his character. After continuing in session about a month, the Congress came to a resolution, that as they had granted absolute and unconditional power to Bolivar, in regard to all subjects, whether legislative or executive, it was unnecessary, and incompatible with his authority, that they should continue to exercise their functions; and they accordingly separated. Bolivar, being left without check or control in the government, after issuing a decree for installing a new Congress at Lima the ensuing year, departed from Lima in April, for the purpose of visiting the interior provinces of Upper and Lower Peru."—C. Cushing, *Bolivar and the Bolivian constitution* (*North American Review*, Jan. 1830).—"The dictator then set out on a triumphal tour. Traveling along the coast to Arequipa, he reached Cuzco on the 26th of June, and La Paz, in upper Peru, on the 18th of August. On October 5th, he was at Potosi, and in November at Chuquisaca. The whole tour was one continued ovation. In traveling across the basin of Lake Titicaca, Bolivar was met by a deputation of Indians headed by Chuqui-huana, the chief of Azangaro, who delivered the following eloquent address of welcome:—"It pleased God to form a great empire out of savages, and He created Manco Capac. The people sinned and He delivered them up to Pizarro. After three centuries of expiation He has taken compassion on their sufferings, and has sent you. You, then, are the fulfiller of the design of providence, and no former deeds appear equal to those which have been done by you. You have liberated five nations. In the great destiny to which they are called, they will raise your fame higher still. As the ages roll on, your

glory will increase, as the shade lengthens when the sun goes down.' At the furthest point of his tour southward, Bolivar created a new nation. In August, 1825, a general assembly had met at Chuquisaca, and decreed that Upper Peru should be a separate and independent republic, with the name of Bolivia in honor of the dictator. [See BOLIVIA: 1825-1826; LATIN AMERICA: 1778-1824.] Upper Peru had been part of the viceroyalty of Buenos Ayres since 1770. Situated in the heart of the Andes, at vast distances either from Lima or Buenos Ayres, its independence seemed desirable. Although isolated by its mountains, those very mountains contained the richest silver and copper mines in the world, while the eastern forests might be expected to offer prospects of future wealth. It was also arranged that Bolivia should have a small strip of sea coast between the boundaries of Chile and Peru, with Cobija as a seaport. . . . General Sucre, who had received the title of marshal of Ayacucho, was chosen to be the first president of Bolivia on October 3rd, 1826. Chuquisaca was made the capital, its name being changed to Sucre, but La Paz is the principal town in Bolivia. During the absence of the dictator an executive committee ruled at Lima, composed of the Colombian General Tomas Heres, Don Hipolito Unanue, and Don José Maria Pardo."—C. R. Markham, *History of Peru (Latin-American Republics Series, pp. 281-282)*.—"Medals, statues, and pictures were bountifully and profusely decreed, in honor of both Sucre and Bolivar. To the latter was voted a million of dollars, as an acknowledgment of his preeminent services to the country. With the same characteristic magnanimity, which he displayed on a like occasion in Lower Peru, he refused to accept the grant for his own benefit, but desired that it might be appropriated to purchasing the emancipation of about a thousand negroes held in servitude in Bolivia. Finally, they solicited Bolivar to prepare for the new republic a fundamental code, that should perpetuate his political principles in the very frame and constitution of the state. Captivated by the idea of creating a nation, from its very foundation, Bolivar consented to undertake the task, if, indeed, which has been confidently asserted to be the case, he did not himself procure the request to be made. The Liberator left Chuquisaca in January, 1826. . . . He transmitted the form of a constitution for Bolivia from Lima, accompanied with an address, bearing date May 25, 1826. Of this extraordinary instrument, we feel at a loss to decide in what terms to speak. Bolivar . . . again and again declared, that it contains his confession of political faith. He gave all the powers of his mind to its preparation; he proclaimed it as the well-weighed result of his anxious meditations. . . . This constitution proposes a consolidated or central, not a federal, form of government; and thus far it is unobjectionable. Every ten citizens are to name an elector, whose tenure of office is four years. The Legislative power is to be vested in three branches, called tribunes, senators, and censors. Tribunes are to be elected for four years, senators for eight, and censors for life. So complicated is the arrangement proposed for the enactment of laws by means of this novel legislature, and so arbitrary and unnatural the distribution of powers among the several branches, that it would be impracticable for any people, having just notions of legislative proceedings, to conduct public business in the projected mode; and much more impracticable for men, like the South Americans, not at all familiar with the business of orderly legislation. But the

most odious feature in the constitution relates to the nature and appointment of the executive authority. It is placed in the hands of a president, elected in the first instance by the legislative body, holding his office for life, without responsibility for the acts of his administration, and having the appointment of his successor. The whole patronage of the state, every appointment of any importance, from the vice-president and secretaries of state down to the officers of the revenue, belongs to him; in him is placed the absolute control of all the military force of the nation, it being at the same time specially provided, that a permanent armed force shall be constantly maintained. For the mighty power, the irresistible influence, which this plan imparts to the executive, the only corresponding security, assured to the people, is the inviolability of persons and property. The constituent Congress of Bolivia assembled at Chuquisaca, May 25, 1826, and passively adopted the proposed constitution to the letter, as if it had been a charter granted by a sovereign prince to his subjects, instead of a plan of government submitted to a deliberative assembly for their consideration. It took effect accordingly, as the constitution of Bolivia, and was sworn to by the people; and General Sucre was elected president for life under it, although one of its provisions expressly required, that the president should be a native of Bolivia."—C. Cushing, *Bolivar and the Bolivian constitution (North American Review, Jan., 1830)*.

1826.—Represented at Pan-American congress in Panama City. See COLOMBIA: 1826.

1826-1876.—Retirement of Bolivar.—Attempted confederation with Bolivia and war with Chile.—Succession of military presidents.—Abolition of slavery.—War with Spain.—"As Bolivar . . . was again prevailed upon [1826] by the Peruvians to accept the dictatorship of the northern republic, and was at the same time President of the United States of Colombia, he was by far the most powerful man on the continent of America. For a time it was supposed that the balance of power on the southern continent was falling into Colombian hands. . . . But the power of Bolivar, even in his own country, rested on a tottering basis. Much more was this the case in the greater Viceroyalty. The Peruvian generals, who ruled the opinion of the country, were incurably jealous of him and his army, and got rid of the latter as soon as they could clear off the arrears of pay. They looked upon the Code Bolivar itself as a badge of servitude, and were not sorry when the domestic disturbances of Colombia summoned the Dictator from among them [September, 1826]. The Peruvians, who owed a heavy debt, both in money and gratitude, to Colombia, now altogether repudiated Bolivar, his code, and his government; and the Bolivians followed their example by expelling Sucre and his Colombian troops (1828). The revolution which expelled the Colombian element was mainly a national and military one; but it was no doubt assisted by whatever of liberalism existed in the country. Bolivar had now shown himself in Colombia to be the apostle of military tyranny, and he was not likely to assume another character in Peru. The ascendancy of Colombia in the Perus was thus of short duration; but the people of the two Perus only exchanged Colombian dictatorship for that of the generals of their own nation."—E. J. Payne, *History of European colonies, pp. 200-201*.—"A Peruvian Congress met in 1827, after General Bolivar had returned to Colombia, and elected Don José Lamar, the leader of the Peruvian infantry at Ayacucho, as President of

the Republic; but his defeat in an attempt to wrest Guayaquil from Colombia led to his fall, and Agustín Gamarra, an Ynca Indian of Cuzco, succeeded him in 1829. Although successful soldiers secured the presidential chair, the administration in the early days of the Republic contained men of rank, and others of integrity and talent. . . . General Gamarra served his regular term of office, and after a discreditable display of sedition he was succeeded in 1834 by Don Luis José Orbegoso. Then followed an attempt to unite Peru and Bolivia in a confederation. The plan was conceived by Don Andrés Santa Cruz, an Ynca Indian of high descent, who had been President of Bolivia since 1829. Orbegoso concurred, and the scheme, which had in it some elements of hopefulness and success, was carried out, but not without deplorable bloodshed. The Peru-Bolivian Confederation was divided into three States—North Peru, South Peru, and Bolivia. During the ascendancy of Santa Cruz, Peru enjoyed a period of peace and prosperity. But his power excited the jealousy of Chile, and that Republic united with Peruvian malcontents, headed by General Gamarra, to destroy it. A Chilean army landed, and Santa Cruz was hopelessly defeated in the battle of Yungay, which was fought in the Callejón de Huaylas, on the banks of the river Santa, on January 20th, 1839. A Congress assembled at the little town of Huancayo, in the Sierra, which acknowledged Gamarra as President of the Republic, and proclaimed a new Constitution on November 16th, 1839. But the new state of things was of short duration. On the pretext of danger from the party of Santa Cruz, war was declared upon Bolivia, which resulted in the defeat of the Peruvians at the battle of Yngavi, near the banks of Lake Titicaca, on November 20th, 1841, and the death of Gamarra. A very discreditable period of anarchy ensued, during which Gamarra's generals fought with each other for supremacy, which was ended by the success of another Indian, and on April 19th, 1845, General Don Ramón Castilla was proclaimed Constitutional President of Peru. . . . Uneducated and ignorant, his administrative merits were small, but his firm and vigorous grasp of power secured for Peru long periods of peace. . . . At the end of Castilla's term of office General Echenique succeeded him; but in 1854 Castilla placed himself at the head of a revolution, and again found himself in power. A new Constitution was promulgated in 1856; the tribute of the Indians and negro slavery were abolished, and a grant of \$1,710,000 was voted as compensation to the owners of slaves. The mass of the people ceased to be taxed. The revenue was entirely derived from sales of guano, customs duties, licences, and stamps. . . . When Castilla retired from office in 1862, he was succeeded by General San Roman, an old Ynca Indian of Puno, whose father had fought under Pumacagua. The Republic had then existed for 40 years, during which time it had been torn by civil or external wars for nine years and had enjoyed 31 years of peace and order. Very great advances had been made in prosperity during the years of peace. . . . General San Roman died in 1863, his Vice-President, General Pezet, was replaced [through a revolution] by Colonel Don Mariano Ignacio Prado, and a war with Spain practically ended with the repulse of the Spanish fleet from Callao on May 2nd, 1866. The war was unjust, the pretext being the alleged ill-treatment of some Spanish immigrants at an estate called Talambo, in the coast valley of Jequetupeque, which might easily have been arranged by arbitration. But the success at Callao

aroused the enthusiasm of the people and excited strong patriotic feelings. Colonel Don José Balta was elected President of Peru on August 2nd, 1868, the Constitution having been proclaimed on August 31st, 1867. The Senate is composed of Deputies of the Provinces, with a property qualification, and the House of Representatives of members nominated by electoral colleges of provinces and districts, one member for every 20,000 inhabitants. The district colleges choose deputies to the provincial colleges, who elect the representatives to Congress. There are 44 senators and 110 representatives. Executive power is in the hands of a President and Vice-President, elected for four years, with a Cabinet of five Ministers. . . . The government of Colonel Balta entered upon a career of wild extravagance, and pushed forward the execution of railways and other public works with feverish haste, bringing ruin upon the country. . . . It is sad that a wretched military outbreak, in which the President was killed on July 26th, 1872, should have given it a tragic termination. . . . On August 2nd, 1872, Don Manuel Pardo became Constitutional President of Peru. He was the first civilian that had been elected. . . . He came to the helm at a period of great financial difficulty, and he undertook a thankless but patriotic task. . . . He was the best President that Peru has ever known. When his term of office came to an end, he was peacefully succeeded, on August 2nd, 1876, by General Don Mariano Ignacio Prado."—C. R. Markham, *Peru*, ch. 8.

1872-1883.—Finances under Pardo and Prado.—Domestic conditions during Chilean War.—"Because of President Balta's enormous expenditures, Pardo found the finances of Peru demoralized. Still he arranged for the construction of two new ironclads. To promote economy, however, he reduced the size of the army. President Pardo was succeeded by General Mariano Prado in 1876. During that year a contract was made with the consignees for the disposal of guano which, owing to the introduction of artificial manures, was not so favorable to Peru as the contract of 1860. The deposits were made a government monopoly in 1875. In April 1877, the government issued 20,000,000 soles of inconvertible paper money."—W. S. Robertson, *History of the Latin-American nations*, p. 344.—On November 18, 1879, the Chileans, who had invaded the country, were victorious over the Peruvians at San Francisco. A revolution followed. President Prado fled, and throughout the remaining years of the war, the country was much disturbed. In 1880 Nicholas de Pierola took control as dictator. He was followed by President Calderón who made an abortive attempt to carry on the government and to make peace with Chile. General Iglesias was then (1883) nominated with the support of the Chileans in order that an administration might be formed with authority to sign the treaty of peace.—See also CHILE: 1833-1884.

1884-1908.—Prostration of country after Chilean War.—Civil war.—Administration of Cáceres.—Arrangements for meeting public debt.—Efforts to improve conditions of Indians.—Advance in internal development.—Further financial and economic advance under Prado.—"After the signing of this treaty [of Ancón, 1884]. General Iglesias assumed command of the government, the Assembly convoked by him ratifying his appointment as president of Peru and approving the Treaty of Ancón. But a great part of the nation refused to recognize his authority and could not be induced to lay down their arms; General Cáceres, who with General Canevaro and

others had sustained the honor of their country through four years of incessant struggle against heavy odds, continued the bitter fight to the last. On the 2d of December, 1885, General Cáceres occupied Lima and was installed as constitutional president of the republic on August 10, 1886, seven years after the declaration of war by Chile. He was the unanimous choice of the nation and was elected amid the acclamations of the people, without regard to political parties, his election signifying the final restoration of peace. President Cáceres devoted his chief attention to reorganizing the various departments of the administration. The consolidation of the public debt was effected, the foreign debt contracted by the loans of 1869, 1870, and 1872 being cancelled by a contract with the corporation which represented the bondholders. By this contract, Peru ceded, in payment of its debt, the usufruct, for sixty-six years, of all the state railways and the guano in Peru, not, however, in excess of three million tons, and furthermore obligated itself to pay eighty thousand pounds a year for thirty-three years in consideration of the construction of one hundred and sixty kilometres of railway in addition to the mileage already built. When General Cáceres retired from the presidency in 1890 he was succeeded by Colonel Remigio Morales Bermudez, who died just before the expiration of his term in 1894. The second vice-president, General Borgoño, assumed the presidency, disregarding the right of the first vice-president, Dr. Alejandro del Solar. The disturbances threatened by this irregular proceeding culminated in civil war when General Cáceres assumed command of the government for the second time, though his attitude brought about the coalition of the Civil and Constitutional parties, formerly antagonistic but henceforth proving a powerful combination for political peace and progress. General Cáceres resigned from the presidency in March, 1895, and a government committee took charge of the administration, presided over by Don Manuel Candamo, its first act being to convoke Congress for a general election. . . . The result of the elections of 1895 was the choice of Don Nicolás de Pierola [who had led the revolt against Cáceres], a well-known statesman, whose government was one of order and improvement in financial and industrial affairs. During his administration the gold standard was adopted in Peru, the monetary unit being the Peruvian pound, equal in weight and fineness to the English pound sterling. This reform . . . greatly stimulated the investment of foreign capital in Peru, the stability of exchange being an important factor in attracting all kinds of enterprises. Among other noted reforms, President Pierola secured the reorganization of the army, obtaining from the French government the appointment of a military mission to direct this work; a military school, under the direction of French officers, was established, which has proved eminently satisfactory. To President Pierola is also due the inauguration of the national general post office, and projects for the construction of a state prison, an insane asylum, and other edifices. His government was marked by peace and order, and the country made rapid progress in recuperating from the effects of the war of the Pacific. President Pierola was succeeded by President Eduardo Lopez de Romaña, who continued the work of peaceful development, retiring from office at the end of his term to give place to President Manuel Candamo, who was elected in 1903. President Candamo was a statesman of progressive ideas and lofty principles, and a leader of the Civil

party, founded by Don Manuel Pardo; his programme of government included many important measures for the national well-being. A law was passed devoting the product of the tobacco tax to the construction of new railways, and taxes were decreed which doubled the fiscal revenue of the state. Every effort was made to turn the people away from a bitter contemplation of the past, with its terrible experiences, and to direct them toward a brighter future. . . . And the people were ready to follow the wise direction of a chief executive who stimulated them to make their best endeavors and who encouraged education, industrial development, and commercial activity by every possible means. The administration of President Candamo marked the inauguration of a new era for Peru. The strife that had followed the period of war was buried, . . . [but the patriotic efforts of this progressive leader] were cut short by his death only seven months after being elected to office. . . . On the death of President Candamo, the second vice-president, Señor Serapio Calderon, succeeded to the office of chief executive. He governed with prudence and success during the months that intervened between the death of President Candamo and the inauguration of his successor, a period that was marked by the unsettled conditions which are usual during the year of the presidential election in all republican countries. By his authority a general election was called which resulted in the choice of Dr. José Pardo as president of the republic. . . . On the 24th of September, 1904, he was inaugurated by the sovereign will of the nation, in accordance with the principles of the Civil party, founded by his illustrious father. Although only forty years of age at the time of his election, President Pardo was an experienced statesman and diplomatist, having been Minister of Foreign Affairs and President of the Council of Ministers during the administration of President Candamo, as well as diplomatic representative of the government on a special mission to the Court of Spain in a previous administration. . . . During President Candamo's term, Dr. Pardo [had] successfully advocated the settlement by arbitration of difficult questions between his country and Bolivia, Ecuador, and Brazil; and, as president of the ministerial council, he was the principal leader in framing important laws for the building of railroads and for fiscal reform which were afterward sanctioned by Congress. When President Pardo assumed office, he proceeded . . . to carry into effect the policy which he had adopted, and which was declared in his inaugural message. The keynote of his administration . . . [was] industrial and educational progress. . . . Toleration in religion, justice in legislation, and an earnest endeavor to promote the well-being of the country, morally and materially, . . . [were] exemplified in the attitude of President Pardo's government throughout the four years that he . . . guided the destinies of the nation. In foreign relations, Peru . . . attained a more honored position than ever before. The nation was represented . . . in the Pan-American Conference at Rio de Janeiro in 1906, and at the International Conference of the Hague in 1907. In home government, in military matters, in the departments of justice and public instruction, in finance, and in the development of public works of enormous benefit to the country, the results of a wise and careful direction of executive authority . . . were to be seen. Education . . . [was] reformed and established on a uniform and democratic basis, the annual appropriation of funds for this purpose . . . [were] in-

creased . . . to three times the amount formerly set aside for its maintenance . . . [until it amounted] to nearly one-tenth of the budget. The postal service . . . received especial attention, and improvements . . . [were] made which render it one of the most efficient branches of public administration. The reconstruction of the national navy . . . [was effected], the new cruisers, *Grau* and *Bolognesi*, which arrived in 1907 from the European shipyards, being handsome modern battleships. Industrial progress . . . [was] fostered and encouraged by the extension of railways, and new lines . . . [were put] under construction in every part of the republic. Commerce . . . [increased] and the fiscal receipts . . . nearly doubled. . . . Foreign capitalists . . . [made many] new investments in the country. . . . The sources of national wealth . . . increased, partly owing to the discovery of valuable mines of coal and petroleum and to the revival of Peru's guano industry. . . . The interests of agriculture . . . [were] promoted by a careful study of its needs in the various regions; hydrographic experts . . . [were] employed to solve the problem of irrigation in the dry sections of the coast, and artesian wells . . . [were] sunk at various points in the northern district. The importation of thoroughbred stock, the employment of foreign specialists in the various branches of husbandry to give lectures on the subject, and the free and liberal distribution of pamphlets, reports, and maps throughout the farming communities . . . [were] among the activities of the government in behalf of agricultural reform. . . . Congress . . . voted large sums for the purpose of carrying out sanitary works in the centres of population throughout the republic, especially in the ports. Commissions, composed of medical men and engineers . . . [undertook] the improvement of sanitary and hygienic conditions, and this important reform is now far advanced, many cities already enjoying its benefits. . . . The four years during which President Pardo . . . governed Peru . . . [were] marked by events of the greatest significance, not only in the history of that republic but in the annals of South American politics. The visit of Secretary Root of the United States in 1906 and the passing of the great Atlantic Squadron in 1908, are incidents that deserve to be recorded. . . . The [presidential] election took place in May, 1908, and the successful candidate . . . [Augusto Leguia] was inaugurated on the 24th of September, 1908. . . . [Leguia] is one of Peru's greatest men, his name being especially identified, as Finance Minister, with the successful financial operations of the present government during the first three years of Dr. Pardo's term."—M. R. Wright, *Old and the new Peru*, pp. 157-165, 172, 174.

1890.—Represented at First International American Conference. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

1894-1900.—Dispute with Chile concerning Atacama, Tacna and Arica. See CHILE: 1894-1900.

1901.—Education Act.—"Primary education in Peru, originally in the hands of local authorities, has been taken over by the national government. In 1901 the Peruvian President sanctioned a law which regulated primary, secondary, and higher education. Primary education, which extended over five years, was made obligatory for boys between the ages of six and fourteen and for girls between six and twelve. Secondary education was placed under the direct control of the secretary of public instruction, justice, and religion. The law of 1901 provided two different types of sec-

ondary schools, the *colegio* and the *liceo*. The *colegio* or academy was intended to be preparatory to higher education, while the *liceo* was designed to prepare pupils for the practical arts, as agriculture, mining, commerce, and mechanical industry. Higher education was carried on in four universities and in other national institutions. Among the latter are an engineering school, an agricultural college, and a school of industrial arts. By the law of 1901 Peruvian universities were divided into two classes; that is to say, major and minor. Minor universities, composed of at least two colleges, are located at Arequipa, Cuzco, and Trujillo. The only major university is the renowned University of San Marcos at Lima which has six colleges: Theology, jurisprudence, medicine, philosophy and letters, mathematics and natural sciences, and political and administrative sciences. This institution derives its revenue from appropriations by the Peruvian government and from an endowment due to private donations. It has been an important factor in the intellectual life at Peru."—W. S. Robertson, *History of the Latin-American nations*, p. 354.—See also EDUCATION: Modern developments: 20th century; General education: Latin America; UNIVERSITIES AND COLLEGES: 1551-1912.

1901-1906.—Participation in Second and Third International American Conferences. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902; 1906.

1903.—Boundary disputes in the Acré region with Bolivia and Brazil. See ACÉ DISPUTES: Claims.

1905.—Arbitration treaties with Colombia and Ecuador.—In a message to the Peruvian congress, July 28, 1906, President Pardo communicated treaties of arbitration with Colombia, one general in its nature, the other special for the settlement of existing boundary questions. Of the latter the message said: "As in former treaties of the same character which have been heretofore concluded with that Republic, the controversy is submitted to the decision, to be based upon considerations of equity, of His Holiness Pope Pius X. But as our question with Colombia is connected with the one with Ecuador, it has been agreed that the arbitration with Colombia shall only take place after the termination of the one in which we are now proceeding with Ecuador, upon the adjudication by the royal Spanish arbitrator to Peru of territories which are likewise claimed by Colombia."

1907.—Diplomatic relations with Chile re-established.—Tacna and Arica questions remain open. See CHILE: 1907.

1908-1914.—Election of Leguia.—Revolutionary disturbances.—Election of Billinghurst as president.—Commercial depression.—On May 27, 1908, Augusto B. Leguia became president, succeeding Dr. Pardo. Señor Leguia had previously been premier and minister of finance and commerce, prior to which he had been managing director of a great English sugar company in Peru. A revolutionary movement had been attempted a few weeks before, in which Isaias Piérola and his brothers were engaged, and which suffered defeat. "In 1910, President Leguia was called upon to face a grave conflict with Ecuador. War with the northern Republic appeared inevitable and the President mobilized an army of 25,000 men . . . to advance on the frontier. During this first administration he brought to a termination under conditions very advantageous for Peru the old and complicated questions of the Bolivian and Bra-

zilian frontiers, achieving to a certain point the friendship and even the moral alliance of the latter country. The threatened conflict with Ecuador was solved owing to the friendly mediation of the United States, Brazil and the Argentine, but other difficulties arose owing to the assaults on the legations and consulates of Peru and on peaceful Peruvian merchants and workmen in Bolivia, Ecuador, Colombia, and at Iquique, Tacna and Arica. [Consequent on these occurrences] President Leguia ordered the severance of diplomatic relations with . . . [Chile] and the withdrawal of the Peruvian Legation from Santiago, at the same time sending the Chilean Minister in Lima his passports."—*West Coast Leader, Peruvian Year Book, 1921, p. A.*—"Under Don Augusto B. Leguia, . . . the country made most gratifying ad-

AUGUSTO B. LEGUÍA Y SALCEDO

vancement. In a brief account of some of the progressive steps made during this administration mention must be made of the notable fiscal improvements, resulting from the skilful handling of the national resources, with the consequent improved financial prestige abroad; the settlement of the boundary questions with Brazil and Bolivia, the cordial international relations brought about, the firm handling of the Ecuadorian affair, followed by a conciliatory policy, the victory obtained in the Hague tribunal, etc., in international affairs; in local affairs, many worthy undertakings, the sanitary campaign initiated, the sewerage and paving of Callao begun, the Quarantine Station at San Lorenzo established, the Military Hospital created, likewise the Asylum at Magdalena, the establishment of lighthouses along the coast, the Naval School at La Punta, etc., are additional milestones to national progress."—*Ibid.*, p. 35.—"The economic and financial condition of during the year immediately preceding the war

was far from satisfactory. Commercial and industrial depression, due to the low price of sugar, rubber, cotton and copper—the staple products of Peru—together with the political disturbances which occurred during the early part of 1914, had created conditions which not only threatened the leading industries, but also placed a severe strain on the financial system of the country. Of Peru's agricultural products, the most important is sugar. The declining prices of the year 1913 placed this basic industry in a most unfavorable condition. . . . Guillermo Billinghurst was elected President of Peru in 1912. Soon after his accession to power differences developed with the national Congress which became more acute during the course of the year 1913. A situation finally developed which led the Congress to express its opposition by refusing to vote the budget for 1914. The President thereupon declared that in view of this refusal he would regard the budget of the previous year as in force, and proceeded to act accordingly. In February, 1914, a military uprising led by Colonel Benavides forced the resignation of President Billinghurst and exiled him from the country. The Congress thereupon proceeded to elect Colonel Benavides, whose rank was raised to that of general, to the provisional presidency of Peru pending a new election. The outbreak of the World War found Peru, therefore, in the most unfavorable economic, financial and governmental situation to withstand the strain which the European conflict involved. Under the most favorable conditions, Peru is a country financially dependent on Europe. Her merchants have been accustomed to long term credits, her banks are in the main financed by European capital. The immediate effect of the war was to bring about a violent decline in customs receipts as well as a marked, although less serious, decline in the revenues from other sources."—L. S. Rowe, *Early effects of the war on Peru*, pp. 3, 14-15.

1910.—Represented at Fourth International American Conference. See *AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910.*

1912-1913.—Putumayo atrocities.—Revelations of Sir Roger Casement.—The rubber industry suffered not only from oriental competition, but from reports of cruelty to Indians coupled with forced labor in the rubber district of Putumayo. The chief offender in this traffic was the Amazon Rubber Company, an Anglo-Peruvian concern. Rumors of inhuman conduct practised by the officials of the company had reached the outer world. Sir Roger Casement, then British consul at Rio de Janeiro, was instructed to make an investigation. This report, published in July, 1912, revealed a serious scandal and created considerable sensation in the United States and Great Britain. The Peruvian government denied all knowledge of the abuses and took immediate steps to suppress the evil. The British and Peruvian governments both appointed commissioners to proceed to the Putumayo region and investigate the charges. The House of Commons appointed a select committee to take the evidence of officials connected with the headquarters of the company in London. The Peruvian government appointed commissions to frame a scheme of reforms, at the same time deputing a permanent commissioner and a judge to reside in the district. On August 8, 1912, the pope issued an encyclical on the Putumayo case. On September 13 the Peruvian parliament passed a resolution demanding punishment of the guilty offi-

cials, and also protesting against the American and British attitude towards the atrocities in the region of the Amazon river. "On March 19 [1913], the Peruvian Amazon Co. was wound up in London, but the investigation continued, although the atrocities themselves were shown to have practically disappeared. Peru claimed that accounts were exaggerated, and José Arana, against whom attacks were chiefly directed, offered himself for trial."—*American Year Book*, 1913, p. 127.

1914.—Percentage of railways controlled by the government. See RAILROADS: 1917-1919.

1914-1916.—Internal affairs during World War.—Financial difficulties.—Improvement in internal finances.—Withdrawal of Peruvian minister at Washington.—In September, 1914, President Billinghurst stated that the strictest internal economy would be necessary for Peru, and that a foreign loan would have to be floated. It was believed that ex-President Leguía was hostile to Billinghurst's methods and an attack was made on his house and he was forced to leave the country. "Political discontent, which had been occasionally manifested under previous presidents, reached a climax under Billinghurst whose arbitrary rule stimulated the disaffection. Rumors of his project for the settlement of the long-standing dispute with Chile about Tacna and Arica somehow provoked suspicions that he was unduly favorable to Peru's former antagonist. After the President had suspended the publication of a newspaper which served as the organ of the opposition and had arrested some prominent politicians, early on the morning of February 4, 1914, Colonel Oscar Benavides and other military leaders boldly seized Billinghurst, forced him to resign, and deported him to Chile. Despite the opposition of the Vice-President, the provisional government which the revolutionists organized was promptly acknowledged by Peruvian authorities as legal. The United States and leading nations of Latin America soon recognized the Benavides régime."—W. S. Robertson, *History of the Latin-American nations*, pp. 350-351.—Colonel Benavides unexpectedly resigned in August, 1915, and ex-President José Pardo was elected in his place. "President José Pardo of Peru resigned on account of ill health on March 15, 1916, in favour of the first Vice-President, Ricardo Bentin. In his message he had called attention to economic affairs, which, although in bad shape at the outset of his administration, now [1916] have a satisfactory outlook. Due to mismanagement in previous years, the national debt had risen to £8,550,679 on Dec. 31, 1915, and the revenue had fallen off 40 per cent. To remedy this it was necessary to practice strict economy and to create new resources. For this purpose new taxes were imposed, including an inheritance tax, varying from one per cent. to 11 per cent., a 10 per cent. duty on many hitherto free articles, and a new export duty on minerals. Financial conditions improved steadily throughout the year, there being a large increase in both exports and imports and a corresponding increase in customs receipts. . . . Early in the year [1916] the Peruvian Minister at Washington was recalled because the Government could not afford to keep up the legation. It was rumored in July that Peru and Venezuela had entered upon a secret agreement to seize large tracts of land involved in boundary disputes with Colombia and Ecuador. The Peruvian Supreme Court held that contracts made under Peruvian laws could not be affected by the British 'Trading with the Enemy' Act. A peace treaty was completed between Peru and Uruguay which provides for a commission of five

members to which shall be submitted all questions, not constitutional, which do not yield to ordinary diplomacy. This commission shall have at least one year in which to investigate, and after their report there shall be a six months' delay, after which, should a settlement still be impossible, the matter shall be carried to The Hague. The treaty is for five years and is to be continued indefinitely unless one country wishes to withdraw."—*American Year Book*, 1916, p. 115.

1917.—Severance of diplomatic relations with Germany.—"On Feb. 8 [1917] the Peruvian Minister of Berlin was instructed to demand reparation and indemnity for the sinking of the Peruvian bark *Lorton* on Feb. 5 by a German submarine in Spanish territorial waters and in a later note to the American Government the Government of Peru expressed its appreciation of the 'principles and intentions' of the United States in breaking off diplomatic relations with Germany. The German Government, on Feb. 15, replied to the Peruvian note and stated that the case of the *Lorton* was under investigation. On July 28 President Pardo addressed the Peruvian Congress, sympathetically outlining the substance of President Wilson's address to Congress of April 2, adding that Peru 'can not be indifferent to the words of President Wilson and adheres . . . to such noble purposes.' . . . On Aug. 8 the Peruvian Senate unanimously adopted the following resolution: 'In view of the high and democratic ideas expressed by President Wilson on the Republic of the United States taking part in the European conflict, the Senate of Peru declares that it emits a vote of sympathy to the United States of North America on account of the declarations made by its President that embody for the Republics of the American Continent the rules of the united action to which their purposes must be consecrated.' On Aug. 9 it was announced that the Peruvian Government had refused an offer of the German Government to submit the case of the *Lorton* to a Prize Court and again insisted on reparation and indemnity therefor. No reply having been received to the further notes of the Peruvian Government with reference to the *Lorton* the Government on Sept. 26 demanded satisfaction from Germany within eight days, adding that, if its demands were not met, diplomatic relations would be severed. . . . 'On Oct. 6 the Peruvian Congress by a vote of 105 to six decided to sever relations with Germany and on Oct. 11 it was announced that the Government had granted the use of Peruvian ports to a British squadron. In notifying Secretary Lansing of the breach of diplomatic relations the Peruvian Foreign Minister indicated that the Peruvian Government acted in accordance with its desire 'that the policy of the whole continent be a concerted ratification of the attitude of the United States, which took up the defense of neutral interests and insisted on the observance of international law.'"—*American Year Book*, 1917, pp. 56-57.

1919.—Emigration encouraged.—"According to the immigration decree of 1910, the nation undertakes to pay 3rd class fare for the white immigrant who is not a gipsy, and for three members of his family, provided that, his admittance having been agreed to, his morality is sound. It guarantees the living and lodging expenses of the immigrant and his family for a term of six days, counting from the time of landing, and his transport to the place that he elects for residence. A board of officials, representatives of the Government and the Maritime Sanitary authorities examine either personally or through their subordinates under their responsibility, both immigrants and their

families and luggage: immigrants are allowed to land only at Callao for the present. . . . Of some four hundred British immigrants who took advantage of the above decree, many preferred to return home, some remained and found suitable employment, but practically none but an insignificant percentage actually undertook colonization work, despite the facilities the laws provide."—*West Coast Leader, Peruvian Year Book, 1921, p. 45.*

1919.—Represented at Paris conference and at Versailles. See PARIS, CONFERENCE OF: Outline of work; VERSAILLES, TREATY OF: Conditions of peace.

1919-1920.—General election.—Peaceful victory of Leguía.—Promulgation of new constitution.—Augusto B. Leguía received an overwhelming majority of the electoral vote in Peru in the elections which took place in May [1919]. Notwithstanding this, it became known that it was the intention of the government of Dr. Pardo to avoid complying with the popular will. Congress, controlled by the friends of the government, was to nullify the elections and a third person or compromise candidate was to have been elected, who consequently would not have had a popular majority. In carrying out this plan the former government began to close printing offices, where publications supporting Leguía were published, placing therein military guards, which were withdrawn by the present government, notwithstanding that judges, the Superior Court and later the Supreme Court ordered the Minister of Justice and other authorities to return these properties to their owners. At the same time persons in public life and those identified with politics as well as workmen, all supporters of Leguía, were imprisoned. These acts of force were clearly dictatorial and were carried out in spite of public protest. In view of this, and as these repressive measures increased day by day, the supporters of Leguía, backed by public opinion, decided as a last measure to act, in order that the popular vote be not made sport of. On the morning of July 4, President Pardo was taken from the palace and placed in a separate department in the penitentiary, where he was treated with every consideration. The public forces respected the popular will and joined the movement, which took place without bloodshed. There was no interruption in the social and business life of the city. The holiday proclaimed in honor of the United States was held as planned. Enthusiastic meetings took place in the provinces in favor of the new government as soon as the news reached them, and the authorities and soldiers everywhere joined the movement without hesitation. The Supreme Court and other institutions have already recognized the new government. President Leguía has received from all parts thousands of letters, cablegrams and telegrams of congratulation. There has been no change whatsoever in the normal life of the country."—E. Higginson, consul-general of Peru in the United States, *Statement issued in 1910.*—"After . . . [the] general election [of 1919], congress adopted a new Constitution which was promulgated in January 1920. The principal features of the new Constitution are: The renewal of the legislative power shall be complete and shall necessarily coincide with the executive power. The term of both powers is five years. The legislative power consists of a senate of 35 senators and a chamber of 110 deputies. The senators and deputies and the President of the Republic are elected by direct popular vote. The regular annual session of congress shall be not less than 90 or more than 120 days. An extra session of congress may be called

by the executive whenever he deems expedient. The senate and chamber of deputies shall only meet jointly to inaugurate their sessions, sanction international treaties, and to execute the electoral powers vested in them by the constitution. Members of congress are ineligible to any other public office. Diplomatic ministers shall be appointed by the president and confirmed by the senate. Constitutional guarantees shall not be suspended by any law or authority. Changes in office in the judiciary shall be determined by a law which expressly prescribes the exclusive conditions of promotions. The tax on incomes shall be progressive. Disputes between capital and labor shall be submitted to compulsory arbitration. Congress shall not grant personal rights involving an outlay of the national treasury. Congress shall not issue legal-tender currency except in case of war. There shall be three local legislatures, representing the north, center, and south of the Republic, which shall meet annually during a period of 30 days, and whose acts shall be communicated to the National Executive for fulfilment, who, in case of non-acceptance, shall submit them, with his observations, to congress in order that they may follow in that body the same procedure as vetoed laws. The provisional councils are autonomous in the management of matters intrusted to them, but the levying of excise taxes must be approved by the Government. There shall be a council of state (cabinet) composed of six members chosen by a vote of the council of ministers and confirmed by the senate. Only the Government may grant, according to law, pensions and compensations. No one shall receive from the Government more than one salary or compensation. The mineral resources are nationalized entirely when located within fifty kilometers of the coast or frontiers."—*Latin-American Year Book, 1920, pp. 575-576.*

PERUGIA (ancient Perusia).—"Beside the Tiber as it emerges first upon the plain, rises a great hill to a height of 1200 feet above its waters, which has the position of a spur thrown forward from the northern mountains; and standing at the centre of the northern line of the level country, its summit commands absolutely the whole region. . . . Prehistoric man naturally first occupied this citadel; the Pelasgi built upon it; and the Etruscans made it one of their greatest cities,—a prominent member of their historic league. It was they who gave it the name of Perusia. The Romans early coveted the town, as the unavoidable capital and mistress of Umbria; and their consul Fabius in B. C. 300 succeeded in taking it. After several unsuccessful revolts the Etruscans acquiesced in Roman rule, . . . and Perugia gradually became a thorough Roman municipium. In B. C. 40 came the [war of Perusia], . . . which utterly destroyed the ancient city, . . . leaving no trace behind but the indestructible Etruscan walls, which still exist. The consul Lucius Antoninus, fleeing before Octavius Augustus, took refuge in Perugia, which supported him for seven months, and fell by famine; then the citizens themselves set fire to their beloved city, and it perished. When it arose from its ashes it was Augustus himself who built it, and it received the name of Augusta Perusia. The city never suffered another destruction. . . . Successively Byzantine fortress and Lombard duchy, the town at length shook itself free from foreign restraint, and began about eleven hundred A. D. to assert its natural hegemony over Umbria. Then came the centuries of extraordinary domestic conflict, . . . wars with Assisi, battles with Spoleto, sacks of Arezzo, till the valleys were red with the blood of the unfortunate inhabitants. The lesser towns gradually gave way before the stronger, till Perugia asserted its rule over all. . . . Not content with their outer conflicts, the citizens of Perugia fought constantly between themselves,—brawling, murdering, battling, burning, demolishing, till it is a wonder that any buildings of the Middle Ages remain to-day. . . . Yet, in accordance with the history of other cities, through all this turmoil within and wars without Perugia waxed even stronger and wealthier; her most prosperous centuries were certainly the fourteenth and fifteenth. Before the establishment of the power of the nobles, three extraordinary men at different times obtained sole mastery of the city, men who were first pure condottieri: . . . Michelotti in 1393, the great Braccio Fortebraccio from 1416 to 1424, and Niccolo Piccinino in 1440. . . . From the struggles between the nobles after 1450 the Baglioni finally emerged supreme, having killed, banished, or utterly subdued their rivals; and began about 1488 that tyrannical domination of the family which was the predominant characteristic of mediæval Italian towns. . . . Their sway was ended in 1535 by Pope Paul III., . . . who took Perugia by force, demolished their castles, and banished them. The Papacy had for five hundred years pretended to exercise suzerainty over the city. . . . But after Paolo Farnese their rule was absolute. Upon the site of the Baglioni strongholds he built a gigantic fortress,—a Bastille, which subjected and imprisoned the Perugians for three hundred years. The

joy with which they pulled this down upon the occupation by Victor Emmanuel in 1860 was not less than that of the Parisian populace in 1790. In the domain of art Perugia came later into the fold of the Renaissance than Assisi, or Siena, or Florence. . . . Pietro Vannucci became so identified with the town, adorning it with his frescoes and canvases and conducting there a school of painting, that he received the appellation of Peruginò."—E. R. Williams, Jr., *Hill towns of Italy*, pp. 162-166.—See also BAGLIONI.

PETITION OF RIGHT (1628).—In English law, the term petition of right means the process by which under certain circumstances a subject may proceed against the Crown, or the sovereign in person. The procedure is principally governed by the Petition of Right Act, 1860. "Under the maxim that the Crown can do no wrong, it is exempt from criminal proceedings, and even from a civil action arising in tort. Civil actions also against the Crown or its servants for the recovery of real or personal property (except in particular instances where a different remedy is provided by statute . . .) can only be brought by the particular process of Petition of Right, which is available to the subject in cases of debt, or for damages or breach of contract; but this remedy is not available in actions arising out of tort."—E. W. Ridge's

Constitutional law of England, p. 37.—In 1628 “the Commons . . . under Wentworth’s inspiration, decided to bring in a bill which, while ignoring the question of what had been law, should set definite legal limits to the activities of the Crown for the future. Here, however, Wentworth was defeated by the king [Charles I] himself, . . . [who] thought to avoid the issue by asking the Commons whether his ‘royal word and promise were not sufficient guarantee.’ . . . The Commons insisted that there should be some definite understanding between king and parliament as to what were the customs of the realm [before they granted the subsidies for which he asked]. . . . At the suggestion of Coke, therefore, they changed the bill to the form of a petition of right. . . . That is, instead of making a new law, the Commons proposed to fall back upon the appeal to existing statutes.” —B. Terry, *History of England, p. 148.*—The following is the text of the Petition of Right: “To the King’s Most Excellent Majesty. Humbly show unto our Sovereign Lord the King, the Lords Spiritual and Temporal, and Commons in Parliament assembled, that whereas it is declared and enacted by a statute made in the time of the reign of King Edward the First, commonly called, ‘Statutum de Tallagio non concedendo,’ that no tallage or aid shall be laid or levied by the King or his heirs in this realm, without the goodwill and assent of the Archbishops, Bishops, Earls, Barons, Knights, Burgesses, and other the freemen of the commonalty of this realm: and by authority of Parliament holden in the five and twentieth year of the reign of King Edward the Third, it is declared and enacted, that from thenceforth no person shall be compelled to make any loans to the King against his will, because such loans were against reason and the franchise of the land; and by other laws of this realm it is provided, that none should be charged by any charge or imposition, called a Benevolence, or by such like charge, by which the statutes before-mentioned, and other the good laws and statutes of this realm, your subjects have inherited this freedom, that they should not be compelled to contribute to any tax, tallage, aid, or other like charge, not set by common consent in Parliament: Yet nevertheless, of late divers commissions directed to sundry Commissioners in several counties with instructions have been issued, by means whereof your people have been in divers places assembled, and required to lend certain sums of money unto your Majesty, and many of them upon their refusal so to do, have had an oath administered unto them, not warrantable by the laws or statutes of this realm, and have been constrained to become bound to make appearance and give attendance before your Privy Council, and in other places, and others of them have been therefore imprisoned, confined, and sundry other ways molested and disquieted: and divers others charges have been laid and levied upon your people in several counties, by Lords Lieutenants, Deputy Lieutenants, Commissioners for Musters, Justices of Peace and others, by command or direction from your Majesty or your Privy Council, against the laws and free customs of this realm and where also by the statute called, ‘The Great Charter of the Liberties of England,’ it is declared and enacted, that no freeman may be taken or imprisoned or be dismissed of his freeholds or liberties, or his free customs, or be outlawed or exiled; or in any manner destroyed, but by the lawful judgment of his peers, or by the law of the land: And in the eight and twentieth year of the reign of King Edward the Third, it was declared and enacted by

authority of Parliament, that no man of what estate or condition that he be, should be put out of his lands or tenements, nor taken, nor imprisoned, nor disherited, nor put to death, without being brought to answer by due process of law: Nevertheless, against the tenor of the said statutes, and other the good laws and statutes of your realm, to that end provided, divers of your subjects have of late been imprisoned without any cause showed, and when for their deliverance they were brought before your Justices, by your Majesty’s writs of Habeas Corpus, there to undergo and receive as the Court should order, and their keepers commanded to certify the causes of their detainer; no cause was certified, but that they were detained by your Majesty’s special command, signified by the Lords of your Privy Council, and yet were returned back to several prisons, without being charged with anything to which they might make answer according to the law: And whereas of late great companies of soldiers and mariners have been dispersed into divers counties of the realm, and the inhabitants against their wills have been compelled to receive them into their houses, and there to suffer them to sojourn, against the laws and customs of this realm, and to the great grievance and vexation of the people: And whereas also by authority of Parliament, in the 25th year of the reign of King Edward the Third, it is declared and enacted, that no man shall be forejudged of life or limb against the form of the Great Charter, and the law of the land; and by the said Great Charter and other the laws and statutes of this your realm, no man ought to be adjudged to death; but by the laws established in this your realm, either by the customs of the same realm or by Acts of Parliament: and whereas no offender of what kind soever is exempted from the proceedings to be used, and punishments to be inflicted by the laws and statutes of this your realm: nevertheless of late divers commissions under your Majesty’s Great Seal have issued forth, by which certain persons have been assigned and appointed Commissioners with power and authority to proceed within the land, according to the justice of martial law against such soldiers and mariners, or other dissolute persons joining with them, as should commit any murder, robbery, felony, mutiny, or other outrage or misdemeanor whatsoever, and by such summary course and order, as is agreeable to martial law, and is used in armies in time of war, to proceed to the trial and condemnation of such offenders, and them to cause to be executed and put to death, according to the law martial: By pretext whereof, some of your Majesty’s subjects have been by some of the said Commissioners put to death, when and where, it by the laws and statutes of the land they had deserved death, by the same laws and statutes also they might, and by no other ought to have been, adjudged and executed: And also sundry grievous offenders by colour thereof, claiming an exemption, have escaped the punishments due to them by the laws and statutes of this your realm, by reason that divers of your officers and ministers of justice have unjustly refused, or forborne to proceed against such offenders according to the same laws and statutes, upon pretence that the said offenders were punishable only by martial law, and by authority of such commissions as aforesaid, which commissions, and all other of like nature, are wholly and directly contrary to the said laws and statutes of this your realm: They do therefore humbly pray your Most Excellent Majesty, that no man hereafter be compelled to

make or yield any gift, loan, benevolence, tax, or such like charge, without common consent by Act of Parliament; and that none be called to make answer, or take such oath, or to give attendance, or be confined, or otherwise molested or disquieted concerning the same, or for refusal thereof; and that no freeman, in any such manner as is before-mentioned, be imprisoned or detained; and that your Majesty will be pleased to remove the said soldiers and mariners, and that your people may not be so burdened in time to come; and that the foresaid commissions for proceeding by martial law, may be revoked and annulled; and that hereafter no commissions of like nature may issue forth to any person or persons whatsoever, to be executed as aforesaid, lest by colour of them any of your Majesty's subjects be destroyed or put to death, contrary to the laws and franchise of the land. All which they most humbly pray of your Most Excellent Majesty, as their rights and liberties according to the laws and statutes of this realm; and that your Majesty would also vouchsafe to declare, that the awards, doings, and proceedings to the prejudice of your people, in any of the premises, shall not be drawn hereafter into consequence or example: and that your Majesty would be also graciously pleased, for the further comfort and safety of your people, to declare your royal will and pleasure, that in the things aforesaid all your officers and ministers shall serve you, according to the laws and statutes of this realm, as they tender the honour of your Majesty, and the prosperity of this kingdom. [Which Petition being read the 2nd of June 1628, the King's answer was thus delivered unto it. The King willeth that right be done according to the laws and customs of the realm; and that the statutes be put in due execution, that his subjects may have no cause to complain of any wrong or oppressions, contrary to their just rights and liberties, to the preservation whereof he holds himself as well obliged as of his prerogative. On June 7 the answer was given in the accustomed form, 'Soit droit fait comme il est désiré.']" The Commons at once granted five subsidies, amounting to about £350,000, which they had virtually promised in case the king signed the petition.—See also **HABEAS CORPUS**.

PETROBRUSIANS, HENRICIANS.—"The heretic who, for above twenty years, attempted a restoration of a simple religion in Southern France, the well-known Pierre de Bruys, a native of Gap or Embrun, . . . warred against images and all other visible emblems of worship; he questioned the expediency of infant baptism, the soundness of the doctrine of transubstantiation, and opposed prayers for the dead; but he professed poverty for himself, and would have equally enforced it upon all the ministers of the altar. He protested against the payment of tithes; and it was, most probably, owing to this last, the most heinous of all offences, that he was, towards 1130, burnt with slow fire by a populace maddened by the priests, at St. Gilles, on the Rhone. . . . His followers rallied . . . and changed their name of Petrobrusians into that of Henricians, when the mantle of their first master rested on the shoulders of Henry, supposed by Mosheim [Eccles. Hist., v. 2] to have been an Italian Eremitic monk."—L. Mariotti (A. Gallenga), *Frà Dolcino and his times*, ch. 1.

PETROCORII, Gallic tribe established in the ancient Périgord, the modern French department of the Dordogne.

PETROGRAD (formerly **St. Petersburg**): Location and population.—General description.—Foundation by Peter the Great.—Petrograd, as St. Petersburg has been called since 1914, was the capital of the old Russian empire. It was built by Peter the Great on a peninsula and several islands in the Gulf of Finland at the mouth of the River Neva. (See **RUSSIA**: Map of Russia and the new border states.) Its population in 1915 was 2,318,645. "Peter set to work about building the town, which took his name, . . . with wonderful alacrity. In a year's time forty thousand houses were made; there were wharfs, canals, and bridges, and, what was more important, on the little island of Cronslot and on another, Ostrof, formidable defences. . . . On the 27th May, 1703, the first stone of the future city was laid, and by the end of that year it was a fortified town of considerable size. Too great praise cannot be given to the judgment which selected the site, nor to the determination which accomplished, in time of war, a work which usually, in time of peace, would have occupied a much longer period. Obstacles of all kinds had to be combated with. The soil was so unhealthy that ten thousand workmen perished during the build-

ing; the amount of drainage which had to be done was incredible. The people, especially the boyars, heard with great irritation that a new town on a dreary sea waste, cold, and half the year blocked with ice, was to be made the capital; also at the most undesirable extremity of the Empire, in a place, in fact, which had only recently belonged to them, and which they might again at any moment lose, and that they were to live there and be turned into sailors and navigators. However, Peter was resolved upon it, and so, against their inclinations and for the good of their descendants, a large part of an inland people were turned to some extent into a maritime one."—J. A. Shearwood, *Russia's story*, pp. 73-75.—See also RUSSIA: 1703-1718.—During the empire, "the chief industries carried on in St. Petersburg . . . were metal works, cotton and paper making, and the preparation of various kinds of nutritious foods. In the last-mentioned one-fourth of the people employed . . . [were] women. In the districts of which St. Petersburg is the centre, the cotton, wool, silk and flax industries . . . [were] most important."—A. M. B. Meakin, *Russia, travels and studies*, p. 70.—In 1703 Peter the Great ordered all the court and nobility who owned 500 serfs or more to build houses in St. Petersburg and to live in them during the winter season. In 1712 the court moved from Moscow to the new city, and the court life of St. Petersburg was considered the most magnificent in the world. Peter also invited experts and workers from all western nations to establish trades. Catharine II forcibly increased the population to 300,000. She made it a centre for the learned men of Europe by opening the university in 1790 and founding the Imperial library (finished 1810).—See also LIBRARIES: Modern Russia.—"Very little has been written about the English colony at St. Petersburg. They are, in the main the descendants or successors of the English merchants who settled in Archangel in the reign of Philip and Mary, soon after Sir Hugh Willoughby had discovered Archangel. 'The English Factory,' as they were called, removed to St. Petersburg soon after its foundation by Peter the Great. . . . For years past the English colony, once so flourishing in St. Petersburg, . . . [steadily melted away]. It is the story of the Hanseatic League in England over again. The Russians . . . gradually learned to do for themselves what they were once obliged to employ the English to do for them, and the latter . . . gradually sought a fortune elsewhere. 'The English form a colony apart,' wrote Kohl in 1842."—A. M. B. Meakin, *Russia, travels and studies*, pp. 15-16.

1790-1830.—Affairs with Poland.—In 1700 the treaty for the third partition of Poland was signed in St. Petersburg. In 1830 under Nicholas I. the Russians believed that Poland was becoming a national menace, and riots took place in which the leaders demanded strong repressive measures to be taken against the Poles.

1800.—Description of the city.—The following description of Petrograd is taken from a translation of the German book of Henry Storch, who visited Petrograd in 1800: "In proportion to the bulk, extent, and population of Petersburg, the public security is as great as anywhere. Robberies and murder are so seldom heard of, that all thought of danger is entirely banished. Accordingly, people walk alone, without any weapon or attendance, at all hours of the night, along the streets, and even in the remotest, most unfrequented, and even uninhabited parts of the town. This fact, extraordinary in such circumstances, is, however, not so much the consequence of a well-organized and vigilant police, as the effect of the

good-tempered national character. The common Russian, if not corrupted by a long stay in the residence, seduced by the propensity to drink, or pressed by extreme want, is seldom disposed to excesses of this nature. To this may be added a certain reverence towards the superior ranks, which from the sentiment of their vassalage, and from the way in which they are brought up, is peculiar to this people. . . . Of all the learned establishments in the residence no one is of so indefinite and so extensive a sphere of operation as the Academy of Sciences. The proper aim of all foundations of this class, the enlargement of the boundaries of literary knowledge, should be here at the same time connected with the popular destination of disseminating useful knowledge throughout the country. Peter the Great has often been censured for having, when he had conceived the design of civilizing his people, instituted an academy rather than schools: but this censure is unfounded. His plan was much deeper laid and much more adequately arranged than those who blame him seem to imagine. It appears from the regulation which he designed for the academy founded after his death, that his idea was to make it the mother of all the establishments for education that should be hereafter erected in Russia. . . . Bread, that prime and most general necessary, is brought to St. Petersburg from the countries bordering on the Volga. Both rye and wheaten bread are eaten here: the latter is the common food of even the lowest and poorest classes. The goodness of it naturally in part depends on the manner of its preparation, and accordingly varies very much. On the whole, the baking here is good, and often excellent, it being impossible anywhere, even in Paris, to eat better bread than here. At the tables of the great, and in what are called good houses, only wheat-bread is eaten; and what a considerable article this at times may be, is apparent from the housekeeping of Count Razumofsky; where, in far cheaper times, the consumption of the several kinds of bread alone, came annually to upwards of a thousand rubles. The rye-bread is well-tasted and yields more nourishment. It is universally eaten, and even in families of good condition, where they have the means of choosing between this and the other. The poorer sort use what is called black bread, prepared of rye-meal unbolted, and is uncommonly nutritious."—H. Storch, *Picture of Petrograd*, pp. 113, 133, 207.—

1837.—Winter palace destroyed.—In 1837 fire broke out in the Winter palace built by Nicholas I. and the damage done was estimated at twenty million roubles. The palace was rebuilt by Nicholas II at an even greater cost.

1838-1851.—Railways.—In 1838 a railway was built from St. Petersburg to Pavlosk, and in 1851 the railway to Moscow was completed.

1857.—Serfs freed.—In 1857 by the express wish of the tsar, all the serfs in the city were given their freedom.

1879-1885.—Improvements.—In 1870 Alexander II opened the present bridge, spanning the Neva, and in 1885, the ship canal to Kronstadt.

1882-1889.—University disturbances. See RUSSIA: 1890.

1898.—Exhibition of British artists.—In 1808, to show friendship with Great Britain, a great exhibition was held of works of British artists

1900.—Naval storehouses burned.—In 1000 a fire of unknown origin burned the naval storehouses to the ground.

1900-1901.—University riots. See RUSSIA: 1000-1901.

1905.—Revolution. See RUSSIA: 1904-1905:

Outline of leading events in revolution; 1905 (January); (October).

1910.—First mosque opened.—In 1910 a great Mussulman mosque was opened and Ferdinand of Bulgaria and his queen were invited to the opening ceremonies.

1914.—Strikes. See RUSSIA: 1914 (July).

1914.—Reception of British declaration of war. See WORLD WAR: Diplomatic background; 66.

1914.—Name becomes Petrograd.—In 1914, by imperial edict, the name of the city was changed from St. Petersburg to Petrograd.

1917-1919.—Effects of World War and revolution.—“In Petrograd one of the things that . . . [struck] coldness to one's heart . . . [was] the long lines of scantily clad people standing in the bitter cold waiting to buy bread, milk, sugar or tobacco. From four o'clock in the morning they . . . [began] to stand there, while it . . . [was] still black night. Often after standing in the line for hours the supplies . . . [ran] out. Most of the time only one-fourth pound of bread for two days was allowed; and the soggy, black peasant's bread is the staff of life in Russia—it is not a 'trimming' like our American bread. Cabbage is also a staple diet. . . . Petrograd with food for three days was not tragic or sad. Russians accept hardships uncomplainingly. . . . Weeks at a stretch the street cars would not run. People walked great distances without a murmur and the life of the city went on as usual. . . . The most remarkable thing about Russians is this wonderful persistence. Theaters somehow managed to run two or three times a week. The Nevsky after midnight was as amusing and interesting as Fifth Avenue in the afternoon. The cafés had nothing to serve but weak tea and sandwiches, but they were always full. A wide range of costumes made the picture infinitely more interesting. There is practically no 'fashion' in Russia. Men and women wear what they please. At one table would be sitting a soldier with his fur hat pulled over one ear, across from him a Red Guard in ragtags, next a Cossack in a gold and black uniform, earrings in his ears, silver chains around his neck, or a man from the Wild Division, recruited from one of the most savage tribes of the Caucasus. . . . Street fighting grew more serious as the Kerensky government tottered, and to go about the streets meant that one often found oneself in dangerous places, packed in angry mobs of newly aroused citizens. People were always being killed by snipers in order to start riots.”—L. Bryant, *Petrograd under the Bolsheviks* (*Travel, Jan., 1919*).—See also RUSSIA: 1917 (March 8-15); (April); (July); (August-September); (October-November); 1918-1920; BOLSHÉVIKI: Development and political form; WORLD WAR: 1917: III. Russia and the eastern front: d; e; f; p.

1917-1922.—Restrictions on foreigners.—In 1917 the Communists forbade foreigners to enter or leave Petrograd. Many tried to leave by way of Finland only to perish in nearly every case among the swamps and morasses. In 1920 British subjects were allowed to leave, but as all property was declared to belong to the Communist government, they had to be extradited at the expense of the British government. In 1922, the port was re-opened to foreign trade. “Foreign trade, . . . according to the Russian journal, *Economic Life*, was dwindling as a result of the ever-decreasing gold reserve and the lowering of Russian industrial production. Plans were being laid in Petrograd at the end of July to restore the port, which before the war was one of Russia's greatest economic assets, and

which is now in a sad state of decay. Since navigation reopened in May, some 206 ships were reported to have landed cargoes; of these only eight were able to obtain return cargoes.”—*New York Times Current History, Sept., 1922, p. 1076*.

PEUCINI.—“The Peucini derived their name from the little island Peuce (Piczino) at the mouth of the Danube. Pliny (iv. 14) speaks of them as a German people bordering on the Daci. They would thus stretch through Moldavia from the Carpathian Mountains to the Black Sea. Under the name Bastarnæ they are mentioned by Livy (xl. 57, 58) as a powerful people, who helped Philip, king of Macedonia, in his wars with the Romans. Plutarch (*Life of Paullus Æmilius*, ch. ix.) says they were the same as the Galatæ, who dwelt round the Ister (Danube). If so, they were Gauls, which Livy also implies.”—Church and Brodribb, *Germany of Tacitus: Geographical notes*.

PEUKETIANS. See CENOTRIANS.

PEUTINGER, Konrad (1465-1547), German humanist and historian. See HISTORY: 22.

PEUTINGERIAN TABLE.—This is the name given to the only copy which has survived of a Roman official road-chart. “Tables of this kind were not maps in the proper sense of the term, but were rather diagrams drawn purposely out of proportion, on which the public roads were projected in a panoramic view. The latitude and longitude and the positions of rivers and mountains were disregarded so far as they might interfere with the display of the provinces, the outlines being flattened out to suit the shape of a roll of parchment; but the distances between the stations were inserted in numerals, so that an extract from the record might be used as a supplement to the table of mileage in the road-book. The copy now remaining derives its name from Conrad Peutinger of Augsburg, in whose library it was found on his death in 1547. It is supposed to have been brought to Europe from a monastery in the Latin kingdom of Jerusalem, and to have been a copy taken by some thirteenth century scribe from an original assigned to the beginning of the fourth century or the end of the third.”—C. Elton, *Origins of English history, ch. II and plate 7*.

PHÆACIANS.—"We are wholly at a loss to explain the reasons that led the Greeks in early times . . . to treat the Phæacians [of Homer's *Odyssey*] as a historical people, and to identify the Homeric Scheria with the island of Corcyra [modern Corfu]. . . . We must . . . be content to banish the kindly and hospitable Phæacians, as well as the barbarous Cyclopes and Læstrygones, to that outer zone of the Homeric world, in which everything was still shrouded in a veil of marvel and mystery."—E. H. Bunbury, *History of ancient geography*, v. 1, ch. 3, sect. 3.

PHALANX, term adopted by François Fourier as the name of the Socialistic community living in a "phalanstery" or common dwelling. See SOCIALISM: 1832-1847; 1840-1847.

PHALANX, Macedonian.—"The main body, the phalanx—or quadruple phalanx, as it was sometimes called, to mark that it was formed of four divisions, each bearing the same name—presented a mass of 18,000 men, which was distributed, at least by Alexander, into six brigades of 3,000 each, formidable in its aspect, and, on ground suited to its operations, irresistible in its attacks. The phalangite soldier wore the usual defensive armour of the Greek heavy infantry, helmet, breast-plate, and greaves; and almost the whole front of his person was covered with the long shield called the aspis. His weapons were a sword, long enough to enable a man in the second rank to reach an enemy who had come to close quarters with the comrade who stood before him, and the celebrated spear, known by the Macedonian name *sarissa*, four and twenty feet long. The *sarissa*, when couched, projected eighteen feet in front of the soldier, and the space between the ranks was such that those of the second rank were fifteen, those of the third twelve, those of the fourth nine, those of the fifth six, and those of the sixth three in advance of the first line; so that the man at the head of the file was guarded on each side by the points of six spears. The ordinary depth of the phalanx was of sixteen ranks. The men who stood too far behind to use their *sarissas*, and who therefore kept them raised until they advanced to fill a vacant place, still added to the pressure of the mass. As the efficacy of the phalanx depended on its compactness, and this again on the uniformity of its movements, the greatest care was taken to select the best soldiers for the foremost and hindmost ranks—the frames, as it were, of the engine. The bulk and core of the phalanx consisted of Macedonians; but it was composed in part of foreign troops."—C. Thirlwall, *History of Greece*, ch. 48.—See also MILITARY ORGANIZATION: 6; MACEDONIA: B. C. 367-356.

PHALARIS, Brazen bull of.—Epistles of.—Phalaris is said to have been a rich man who made himself tyrant of the Greek city of Agrigento in Sicily, about 570 B. C., and who distinguished himself above all others of his kind by his cruelties. He seems to have been especially infamous in early times on account of his brazen bull. "This piece of mechanism was hollow, and sufficiently capacious to contain one or more victims enclosed within it, to perish in tortures when the metal was heated: the cries of the suffering prisoners passed for the roarings of the animal. The artist was named Perillus, and is said to have been himself the first person burnt in it by order of the despot."—G. Grote, *History of Greece*, pt. 2, ch. 43.—At a later time Phalaris was represented as having been a man of culture and letters, and certain Epistles were ascribed to him which most scholars now regard as forgeries. The famous treatise of Bentley is thought to have settled the question.

PHALERUM. See PIREUS.

PHANAGORIA, ancient Greek colony on the island now called Taman, opposite the Crimea. See BOSPHORUS, Cimmerian: City and kingdom.

PHANAR. See PHANARIOTS.

PHANARIOTS, or Phanariotes.—The name Phanariots was originally given to the inhabitants of Phanar, a Greek quarter in Stambul, Constantinople. In the eighteenth and nineteenth centuries it was specifically used for Greek officials who ruled in the Danubian provinces of the Turkish empire. "The reduction of Constantinople, in 1453, was mainly achieved by the extraordinary exploit of Mahomet II. in transporting his galleys from the Bosphorus to the interior of the harbour, by dragging them overland from Dolma Bactche, and again launching them opposite to the quarter denominated the Phanar, from a lantern suspended over the gate which there communicates with the city. The inhabitants of this district, either from terror or treachery, are said to have subsequently thrown open a passage to the conqueror; and Mahomet, as a remuneration, assigned them for their residence this portion of Constantinople, which has since continued to be occupied by the Patriarch and the most distinguished families of the Greeks. It is only, however, within the last century and a half that the Phanariots have attained any distinction beyond that of merchants and bankers, or that their name, from merely designating their residence, has been used to indicate their diplomatic employments."—J. E. Tennent, *History of modern Greece*, v. 2, ch. 12.

PHELAN, James Duval (1861-), American political leader. Mayor of San Francisco, 1897-1902; United States senator, 1915-1921. See SAN FRANCISCO: 1901-1909: Struggle with political corruption.

PHELPS' AND GORHAM'S PURCHASE (1788). See NEW YORK: 1786-1799.

PHERÆ, town in ancient Thessaly which acquired an evil fame in Greek history, during the fourth century, B.C., by the power and the cruelty of the tyrants who ruled it and who extended their sway over the greater part of Thessaly. Jason and Alexander were the most notorious.

PHI BETA KAPPA, the oldest of the American Greek letter fraternities, and the only one making the cultivation of scholarship its central aim. It was started December 5, 1776, in William and Mary college, Williamsburg, Virginia. Five years later, chapters were formed at Harvard and Yale. These are now the oldest in the country, since the original chapter was suffered to lapse. Eligibility to election is confined to a fraction of the graduates of a college (usually not more than one-tenth of the graduating class), who have distinguished themselves in the subjects defined as the "humanities." A charter has been granted to Oxford university, England, through the instrumentality of American Rhodes scholars. Chapters now exist in most American colleges and universities of the first rank. Sometimes elections are made in the junior year as a mark of special distinction. In some chapters alumni members are chosen from those who have made original contributions to scholarship of special merit.

PHIDIAS. See PHEIDIAS.

PHILADELPHIA, Asia Minor.—The city of Philadelphia, founded by Attalus Philadelphus of Pergamum, in eastern Lydia, not far from Sardes, was one in which Christianity flourished at an early day, and which prospered for several centuries, notwithstanding repeated calamities of earthquake. It was the last community of Greeks in Asia Minor which retained its independence of the Turks. It stood out for two generations in the midst of the Seljuk Turks, after all around it had succumbed. The brave city was finally taken by the Ottoman sultan, Bayezid, or Bajazet, about 1390. The Turks then gave it the name Alashehr.—Based on G. Finlay, *History of the Byzantine and Greek empires*, v. 2, bk. 4, ch. 2, sect. 4.

PHILADELPHIA, Pennsylvania: Location.—Area.—Population.—Philadelphia, the largest city of Pennsylvania, lies a little over a hundred miles up the Delaware river. It was founded in

1682 and laid out in the form of a parallelogram of only two square miles in area, but the town soon outgrew the original boundaries. "In 1854, by the consolidation of nine districts, thirteen townships, and six boroughs, the city and the county were made one in extent, having an area of about 130 square miles. . . . The population in 1910 was 1,549,008, and the census of 1920 . . . [gives the city a population of 1,823,779]. . . . The city extends far beyond the county line, and . . . its manufacturing and shipbuilding industries stretch along the Delaware for many miles beyond the . . . political boundaries. . . . The city lies on the west bank of the Delaware River, which separates it from Camden, New Jersey, a city of about 150,000, which bears the same physical relation to Philadelphia as Brooklyn does to Manhattan. . . . Philadelphia is third in population and second in manufactures in the United States."—G. E. Nitzsche, *Philadelphia, guide to the city*, pp. 8-9.

Penn's commission.—**Founding of city.**—**Rapid growth.**—"Among William Penn's instructions to his commission charged with selecting a site for the location of a settlement were the following injunctions: 'Let the Rivers and Creeks be sounded on my side of Delaware River, Especially Upland (renamed Chester) in order to settle a great Towne, and be sure to make your choice where it is most navigable, high, dry, and healthy, that is, where the most ships may best ride, of deepest draught of Water, if possible to Load, or unload at ye Bank or Key side. . . . It would do well if the River coming into the Creek be navigable, at least for Boats up into ye country. . . . Such a place being found out, for Navigation, healthy Scituation and good Soyle, for Provision, lay out ten Thousand acres contiguous to it in the best manner you can as . . . the Liberties or the said Towne.' From these directions it is clear that the site of Philadelphia was not determined by chance or accident. The locality chosen for the 'great Towne' was 105 miles up the deep tidal estuary of the Delaware on the neck of land made by the Delaware and its first large western tributary, the Schuylkill. Here the Delaware curves westward, giving to the Philadelphia side a deep channel close to the shore, and back of the river the land rises in gentle steps to rolling hills 400 feet in altitude in the north and western parts of the city. The level but well-drained land near the river was an ideal spot for a city. The higher lands gave fine residential sections, and falling streams capable of furnishing water power for the first industries. The wisdom of the early selection has been proved by the subsequent development of the city. Following . . . instructions, Penn's surveyor devised a town plot of checker-board pattern with the streets running at right angles to one another. No provision was made for diagonal streets, now so necessary for rapid transit. The town plot . . . contained . . . nearly thirteen hundred acres, and was not enlarged from 1682 until the year 1854. The streets were laid out on a grand scale for that day, with a width of fifty feet, a figure which unfortunately was not frequently changed in extending streets until recent years. To avoid any 'man-worship' the streets running north and south were numbered, while those running east and west were named for the trees of the forest. Broad Street and High (Market) Street were given greater width than the other streets. Four 'squares' or parks were laid out in regular positions in the city plot. The growth of the city from the first was remarkable. . . . By 1700 . . . [it] had seven hundred houses; and by 1750 over two thousand. In the eighteenth

century, Philadelphia became the leading city on the continent. This success was due to several causes. First, religious toleration was practiced in Pennsylvania on a broad scale; secondly, the cordial welcome of foreigners led many thousands to migrate to the colony from the Rhine regions of Germany; third, the great natural resources and diversified agriculture furnished material for commerce; and last, the mingling of sects and races developed an intellectual type more liberal than the New Englander or the Southerner of that time. Philadelphia in the eighteenth century literally swarmed with organizations for economic, intellectual and social welfare. The first fire company [1718] and the first fire insurance company [1752] were organized; educational and scientific bodies were created, such as the College (later the University), the Library Company [1731], the American Philosophical Society [1727] and the first medical school. The welfare of the poor was promoted by the Pennsylvania Hospital, and the Quaker Almshouse and Bettering House, where separate provision was first made for the care of the insane. In nearly all of these associations Benjamin Franklin played an important part, either as originator or as supporter. Particularly in scientific research, with Franklin, Rittenhouse, Godfrey, Bartram and others, did Philadelphia stand pre-eminent.—*Philadelphia, the nation's historic city* (*Bulletin of the Philadelphia Chamber of Commerce*, 1917, pp. 1, 16, 18-19).—See also PENNSYLVANIA: 1682-1685; U.S.A.: 1607-1752.

1746-1760.—Raids of privateers.—Franklin's military defense organization.—Streets paved.—At the opening of the eighteenth century "the dominion of the Penns was the granary of America, Philadelphia the supply port for provisions for any fleet operating above the Spanish Main. [See COMMERCE: Era of geographic expansion: 17th-18th centuries: North American colonies.] . . . But [1746] now the trade with the other British possessions was nearly at a standstill from the privateers in the bay. Landing parties burned plantations in the Lower Counties, and the city was in terror lest some French or Spanish man-of-war would make its way up the unprotected river, and have the place at its mercy. The Assembly was appealed to in vain to do something for defence. No militia law could be passed, had the

Assembly been ever so willing, for, with no Governor, there was no power of legislation. Money, it had not, and while controlled by Quakers, it would not undertake obligations for such purposes. Benjamin Franklin, who for some years had been Clerk of the Assembly, and also Deputy Postmaster-General under ex-Governor Spotswood, of Virginia, wrote a pamphlet called *Plain Truth*, and suggested an association for defense at a town meeting. About 1,200 persons present enrolled themselves. Altogether about 10,000 names came in from the whole province. A battery was established where sixty years afterward, the United States started its navy yard (foot of Prime street, Philadelphia)."—H. M. Jenkins, ed., *Pennsylvania, Colonial and Federal*, v. 1, p. 408.—"Up to this time, and nearly as late as 1760, Philadelphia continued unpaved. Its soil being of clay, the streets were nearly impassable in the rainy season. Franklin's first move towards better streets was to engage a man to sweep around the market-place. He then wrote a pamphlet suggesting that people would find it pleasant and profitable to have the streets swept before their own doors. This experience of moderately clean streets gave rise to a general desire of the people to have their avenues paved, but it took ten years before the desirable improvement could be carried out."—C. Morris, ed., *Makers of Philadelphia*, p. 9.

1776-1800.—Philadelphia, informal capital of the united colonies, and the temporary capital of the republic.—"In Carpenter's Hall the First Continental Congress met to adopt measures to encourage Massachusetts, and to threaten the English merchants with non-importation and non-exportation agreements. In the State House, the Second Continental Congress opened its session; there Washington accepted command of the Continental forces; there the Declaration of Independence was debated and adopted; there Congress received the French Minister, the first foreign representative in this country; there the Articles of Confederation, were framed, and after much delay put into operation. [There the constitutional convention met in 1787]; there Congress and its committees organized the foreign relations, the finance, and the military and naval measures of the war. In Philadelphia, Congress borrowed its first loan, £6,000, as well as printed its first issue of paper money. . . . From 1700 to 1800, Philadelphia was again the capital of the country. Here, in Congress Hall, now so admirably restored, the work of the Congress was carried on. Here the Supreme Court, under the great Judiciary Act of 1780, began its remarkable career. Here [in 1702] the United States Mint was organized in the first building ever owned by the National Government. Here the First United States Bank opened its doors for business and soon erected that imposing structure in Corinthian style.

which is now occupied by the Girard National Bank."—Philadelphia Chamber of Commerce, *Philadelphia, the nation's city*, pp. 18-21.

details of garrison life. The trifling affairs that occurred during the remainder of the season served rather as a zest to the pleasures which engaged them than as a serious occupation. . . . No sooner were they settled in their winter-quarters than the English set on foot scenes of gayety that were

INDEPENDENCE HALL IN 1790

1777-1778.—Gay winter with the British in the city.—Battle of the Kegs.—Mischianza.—“The year 1778 found the British at Philadelphia in snug quarters, unembarrassed by the cares of the field, and, except for occasional detachments, free from other military duties than the necessary

long remembered, and often with regret, by the younger part of the local gentry. . . . Of all the band, no one seems to have created such a pleasing impression or to have been so long admirably remembered as André. His name in our own days lingered on the lips of every aged woman

whose youth had seen her a belle in the royal lines. . . . The military feats about Philadelphia, in the earlier part of 1778, were neither numerous or important. Howe aimed at little more than keeping a passage clear for the country-people, within certain bounds, to come in with marketing. The incident known as the Battle of the Kegs was celebrated by Hopkinson in a very amusing song that, wedded to the air of Maggy Lander, was long the favorite of the American military vocalists; but it hardly seems to have been noticed at Philadelphia until the whig version came in. The local newspapers say that, in January, 1778, a barrel floating down the Delaware being taken up by some boys exploded in their hands, and killed or maimed one of them. A few days after, some of the transports fired a few guns at several other kegs that appeared on the tide; but no particular notice of the occurrence was taken. These torpedoes were sent down in the hope that they would damage the shipping." When Howe was displaced from the command and recalled, his officers, among whom he was very popular, resolved "to commemorate their esteem for him by an entertainment not less novel than splendid. This was the famous Mischianza [or Meschianza] of the 18th of May, 1778; the various nature of which is expressed by its name, while its conception is evidently taken from Lord Derby's fête champêtre at The Oaks, June 9th, 1774, on occasion of Lord Stanley's marriage to the Duke of Hamilton's daughter. . . . The regatta, or aquatic procession, in the Mischianza was suggested by a like pageant on the Thames, June 23rd, 1775. . . . A mock tournament—perhaps the first in America—was a part of the play."—W. Sargent, *Life and career of Major John André*, ch. 9.

1787.—Seat of Federal constitutional convention. See U. S. A.: 1787.

1789-1855.—Divided responsibility in government.—"From 1789 to 1854 what is now known as the Old City, *i. e.*, from Vine to South Streets, and from the Delaware to the Schuylkill Rivers, grew and prospered under the legislative charter of 1789 and its supplements up to the consolidation act of 1854. The records of this period are of the first importance. In it we note the advent of Philadelphia as a modern American municipality. The entire personality of the city is changed; it becomes the creature of the legislature. Every vestige of a close corporation, which was the distinguishing feature of Penn's charters, is swept away. . . . All freemen have a voice in the election of the municipal government. Throughout the period are manifested the ebb and flow of two distinct lines of policy. Starting out with a remembrance of the evils of divided authority, and a well-expressed effort toward concentration of executive power and responsibility, we find in the latter half of the period a steady reversal of this policy, indicated by the absorption of all branches of executive supervision and control by the various committees of councils. The mayor is, step by step, shorn of his various powers and duties as executive until he is relegated to the position of being simply chief of police and the figure head of the corporation. The responsibility

is scattered through a dozen committees, whose personnel changes from year to year, and the executive wheels are found running by a complex system which could not fail of disastrous results even then. These defects become intensified when carried over into the operations of the immensely consolidated city and county."—E. P. Allinson and B. Penrose, *City of Philadelphia as it appears in the year 1893*, p. 5.

1798.—Bridge built across the Schuylkill. See PENNSYLVANIA: 1789-1842.

1798-1801.—Water supply.—"The city was, in 1798, still supplied with water from pumps in every street, placed near the roadbed, at distances of about sixty or seventy feet. There were few sewers, and they were not properly made; much of the household refuse and garbage was thrown out in the alleys, and in the back yards of the houses. At this time a skillful English architect, Benjamin H. Latrobe, came to Philadelphia, and the matter of water supply was entrusted to him. He decided that water-works should be erected on the banks of the Schuylkill near the city. From these the water could be pumped by steam power into a raised reservoir, so it could be distributed throughout the city. The plan met with great opposition, but was adopted. The place chosen for the works was where Chestnut Street now meets the Schuylkill. The water was carried in a brick tunnel down Chestnut Street to Broad, then to Centre Square (the site of the present City Hall), where an engine raised it thirty-six feet above the ground into a reservoir. From this it was distributed in hollow logs, having a channel of three or four inches in diameter. These were sunk in all the principal streets. The work was begun in 1799. So great was the opposition that the works were injured several times. The water was turned on in January, 1801, and the results were all that the most hopeful had looked for—the health of the people was better, there was greater security against destruction by fire, and habits of cleanliness were induced and strengthened."—A. C. Thomas, *History of Pennsylvania*, p. 102.

1800.—Seat of government removed to Washington. See WASHINGTON, D. C.: 1791-1800.

1814.—Baptist Triennial Convention. See BAPTISTS: Triennial Convention established.

1824.—Visit of Lafayette.—In 1824 Lafayette, who was on a visit to the United States, was invited to Philadelphia and accorded a warm civic welcome.

1827.—First modern trade union formed. See LABOR ORGANIZATION: 1825-1875.

1833-1864.—Stronghold of anti-slavery agitation.—In 1833 the American Anti-Slavery Society was organized in Philadelphia. From the first the city was a stronghold of the abolitionists and the scene of struggles between the abolitionists and the slave holders. In 1838 an anti-abolitionist mob burned Pennsylvania Hall three days after it was dedicated to the discussion of abolition, temperance and equality. In 1856 the great national convention of the Republican party met here. During the Civil War, the city was a center for the care of the wounded, and in 1864 the great sanitary fair for the benefit of the United State Sanitary Commission was held here.

1854-1887. — Consolidation Act. — Reckless financial management.—By the middle of the nineteenth century "Philadelphia, in common with other great cities, staggered under a burden of laws, ordinances, customs and practices often resulting in legislative and executive maladministration. The consolidation act of 1854 was a

necessary act of great political wisdom at the time. The city and the contiguous territory, which had become densely populated, had practically become one city. There was a common future and common wants. Adequate development was crippled by the multiplicity and jealousy of the many existing governing bodies acting independently of each other. The evils of the situation were recognized. The question of consolidation was agitated for ten years before it was effected. It was opposed by the local leaders. In 1853 the friends of the act met and elected Hon. Eli K. Price for the Senate, and also candidates in the house pledged to support it and it was finally passed January 30, 1854. The act of 1854, while a great advance, did not meet the evils; nor was its intent confirmed to nor its spirit observed by councils. They neglected the exposure and correction of the abuses of the departments and usurped in fuller measure than ever before almost every form of executive duty. If the water department wanted a pump, it was the water committee which decided on the kind, style and horse power. If the highway department paved a street, it was the highway committee which supervised the letting, execution and approval of the contract. There was no general supervision of public work. A condition of affairs, which was bad enough in the Old City, became intolerable when carried into the immensely extended business of consolidated Philadelphia, which had assumed proportions which demanded the most intelligent system and responsible supervision to obtain efficient service and adequate returns for money expended. The financial management became more reckless every year, until the city was threatened with bankruptcy. The most noticeable features of the act of consolidation that are new are the offices of city controller and receiver of taxes, created by the act of 1854. The greatest improvements which took place during the period also had reference to finance. The constitution of 1874 placed a limit to the creation of funded debt, and the act of June 11, 1879, compelled the city 'to pay as you go.' Very shortly after the consolidation act, one whose position gave him every opportunity to measure the defects of our system, and whose abilities entitled his opinion to the greatest weight, summed up in forcible English the radical defects in the organic law. . . . The essence of our present charter, given by the act of 1885, known as the Bullitt Bill, is to be found in the second annual message of Hon. Richard Vaux, Mayor of Philadelphia, 1858."—E. P. Allinson and B. Penrose, *City of Philadelphia as it appears in the year 1893*, pp. 5-6.

1876.—Centennial exhibition. See CENTENNIAL OF 1876; U. S. A.: 1876; 1877.

1885-1919.—New charter known as Bullitt Bill.—"Under the . . . [1885] charter, known as the Bullitt Bill, the attempt . . . [was] made and in theory approximately attained to concentrate all executive power in one head, the mayor, responsible directly for the whole administration to the people who elect him. A few subordinate heads of departments . . . [were] appointed by and responsible to this head, the mayor. A complete separation . . . [was] made between the executive and legislative branches of government. And a stringent limitation . . . [was] placed on the power to accumulate indebtedness. Careful regulations . . . [were] framed for the financial system and methods. Provisions . . . [were] made for the impeachment of corrupt officials. . . . Its framers went as far as they dared to go and not en-

counter the opposition of certain offices or commissions, the vices of which were not so instantly pressing. The executive power . . . [was] vested in the mayor and certain departments. I. Public Safety, director appointed by the mayor; this . . . [included] the police, fire, health and building inspection. II. Public Works, director appointed by mayor; this . . . [included] the old departments of water, gas, highway and survey. III. Receiver of Taxes. IV. City Solicitor. Both city officers elected by the people at the spring municipal election. V. City Treasurer. VI. City Controller. Both county officers elected at the autumn State election. VII. Board of Education, appointed by the judges. VIII. Charities and Corrections; president and four directors appointed by the mayor. IX. Sinking Fund Commission; made up of the mayor, city controller and one member elected by councils."—E. P. Allinson and B. Penrose, *City of Philadelphia as it appears in the year 1893*, p. 7.

1894.—Municipal government conference. See MUNICIPAL GOVERNMENT: Municipal program framed by the National Municipal League.

1897.—Opening of commercial museum.—A commercial museum which has acquired great importance was opened in Philadelphia on June 2, 1897. "In both aim and results the institution is unique. Other countries, also, have their commercial museums, which are doing excellent work. Their scope, however, is much more limited; the Museum of Philadelphia differing from them in that it is an active, not merely a passive, aid to the prospective exporter. The foreign museums, situated in London, Bremen, Hamburg, Stuttgart, Vienna, Havre, Brussels, and various other commercial centres, do not extend active aid, but content themselves with more or less complete displays of samples of domestic and foreign competitive goods sold in export markets. The theory of their organization is, that the manufacturer, contemplating a foreign business campaign, will be enabled to pursue it intelligently through the study of these samples. The initiative is left to the exporter himself, who must discover what opportunities exist for him abroad; and it is also left to him to take advantage of his opportunities in the way that may seem best to him. The display of manufactured samples is only a small part of the work of the Philadelphia Museum. This institution shows not only what goods are sold in foreign markets, but also where those markets are, what commercial conditions obtain in connection with them, what particular kinds of goods they demand, how these markets may be best competed for, and where the raw material may be most profitably purchased. It furnishes information, furthermore, as to business connections as well as the credit ratings of the agents or firms recommended. To secure specific information it is not necessary to visit the institution itself; for reports of trade opportunities abroad are distributed by the Museum to its members; and these reports are provided with photographs of many of the articles which, at that particular time, are in demand, in certain parts of the world. Under these circumstances, the exporter is practically provided with a staff of expert, foreign representatives, without any expense to himself beyond the merely nominal fee for membership. While its activities are dependent to a certain extent upon the income derived from subscribers, the Museum is not a money-making institution. Indeed, its income from this source does not cover half the expenditures. It is enabled to carry on its work only by reason of the generous, annual appro-

priation provided for it by the City Councils of Philadelphia. But a very large income is required to maintain a staff of 150 employees in Philadelphia, as well as 500 regular and several thousand occasional correspondents scattered throughout the world. The only advantage which the city itself derives from the Museum is that resulting indirectly from the presence of foreign buyers attracted to Philadelphia by the museum's work."—W. P. Wilson, *Philadelphia Commercial Museum* (Forum, Sept., 1899).

1905.—Municipal reform.—By the end of the nineteenth century the historic and once progressive city was in the control of a group of corporations, including the gas company, whose iniquities were being heralded abroad by zealous municipal reformers. "Self-government seemed to have disappeared. . . . In Pennsylvania and Philadelphia [it was said], the corporation pays the machine, and the machine aids the corporation. . . . [In 1905 the objection of the people to the new rates for gas, stirred them to break the power of the corporations.] Philadelphia . . . reformed. It . . . [was] the swiftest and most thorough municipal revolution known in American civic annals. Without an election and without primaries, without warning and without preparation, the great deep of small householders,—which is Philadelphia,—moved from below. . . . The pulpit of small churches knew it before the press, the little division leaders before the ward managers, and they before the chiefs of the organization. In a week, the city seethed. Children of councilmen came crying from the public schools. No one would play with them. Callous, thick-skinned politicians found their mail, their telephones, and their daily tours one hot rain of protest from their old neighbors. Division leaders reported defection by the avalanche. The small householder, the narrow burgher, comfortable, contented, owning his house, careless over ideals, education, corruption, and venal voter, was aflame over a bigger gas bill. It is the old story of ship money and stamp taxes. No vote was necessary. No primary was needed. The leaders of a political machine are ignorant of much, but they know the voice of the voter in the land. John Weaver, the mayor, chosen by the machine, and its lifelong friend and supporter, had been a fair case lawyer and district attorney. Honest, narrow, clean-lived, of a legal mind, restive at the way he was treated as a mere figurehead, he recognized the civic revolution because he was himself of the class that had risen. He had, moreover, in his day won his division and was a ward leader."—*American Review of Reviews*, July, 1905.

1909.—Evil conditions revived.—Defeat of revolt against them.—The old mastery of the city government by an all-powerful and shameless political "machine" was recovered at the end of the term of Mayor Weaver, and conditions were soon as corrupt as before the momentary and partial cleansing had been performed. In 1909 a hopeful revolt against them was undertaken, under the lead of D. Clarence Gibboney but the effort failed.

1911-1915.—Mayorality of Rudolf Blankenburg.—"There never has been in Philadelphia, since William Penn handed over the charter to the city of his heart (the city named before it was born), an equal four years of growth and of civic uplift than during the Blankenburg administration which has just [1915] gone out of office. It is not desired to dwell on the millions in money which have been saved by an administration free from graft, and administered by business men in a busi-

ness way. . . . It may be said at once and without fear of contradiction, that a full \$5,000,000 have been saved to the city in operating expenses. This has been the least of the administration's accomplishments, and five years from now this money side of it will probably be forgotten. There are three great physical accomplishments that are memorable in their character and epoch making in their effect on the physical character of the city. By the South Philadelphia railroad agreement, with its attendant abolition of grade crossings, an additional area equal to the original city is now made available for homes and factories, for wharves and terminals. Never before had any agency brought the heads of all the great railroads serving this city into a conference in which they were citizens first and railroad men afterward. And the reason they continued in the delicate, long drawn out and sometimes nearly broken negotiations was because they had confidence in the mayor and his counselors, and because they were being asked only for a square deal for the city, and for their companies as well. What administration would not be proud to have given the city the comprehensive rapid transit plan, which will directly benefit every citizen no matter where he lives; and we, on the outside, cannot appreciate the thousand and one moves involved in carrying through this gigantic engineering project. New acts of the legislature, ordinances of councils, legal obstacles, great physical engineering and financial problems, all have apparently been satisfactorily solved. The third great undertaking was the getting under way of the development of the port of Philadelphia that our foreign and coast wide commerce might have room to breathe. This work had been started by previous administrations, but nothing done. . . . The mayor, himself, has said that the greatest single change affected by the administration was the status of the individual employe,—his emancipation from the galling yoke of the political gangster. Free men can hardly imagine the condition of the servitude in which every office holder lived prior to this administration. Compelled to live in certain divisions, where his political services would be most useful, forbidden to move without permission, assessed for political funds, the disbursement of a large part of which was never accounted for, he was made to serve the bosses rather than the dictates of his judgment or conscience. It is true we had a law on our statute books forbidding all this, but it was a dead letter from the day it was passed in 1906 until Rudolph Blankenburg's administration enforced it. Instead of a cringing, fawning set of office holders driven to pull door bells and perform many a mean and odious task for the bosses, within two years the city departments were alive with alert, clean, interested young men. . . . With the close of the Blankenburg administration to-day ends a sixteen-year campaign for the political regeneration of Philadelphia. It is worthy of a retrospective glance. The campaign began soon after Samuel H. Ashbridge took office as mayor, when the true character of his administration was revealed. During this period graft in its coarsest forms became the undisguised purpose and policy of the city government. Its manifestations ranged from the fortunes taken by officials and contractors down to the most sordid . . . traffic in private licenses and the theft of children's pennies in policy gambling. No source of illicit tribute was overlooked. More than two thousand speak-easies flourished under the protection of politicians, yielding vast profits to the promoters and, in return, furnishing

legal addresses for 75,000 fictitious names entered on the voting lists. Gamblers operated in perfect security, and paid a specified percentage of their gains to 'the front.' White slavery during this régime became an organized and protected traffic. The very streets of the city were sold by private treaty to a group of political and financial adventurers. Even from the privations of the helpless paupers of the community graft was extorted to enrich favorites of the ring. . . . In the twelve years of the fight preceding his election Rudolph Blankenburg was a conspicuous exponent of reform. For a long time he was regarded by the public with interest rather than with serious attention; but finally his persistent and picturesque denunciations of the city's despoilers touched the imagination of the ever-growing army of revolt against misrule. He made his greatest impression by the oft-repeated assertion that the mayor of Philadelphia was clothed by the charter with sufficient power to destroy the contractors' combine, and that the election of a reform executive would mean the sweeping away of that evil system. By the time he had convinced the majority of decent citizens on these points they had made up their minds that he was himself the one man qualified for the task. After twelve years of incessant warfare against corruption, therefore, during which the grosser forms of election fraud had been eliminated, the demand for decent government prevailed. Mr. Blankenburg was elected mayor."—C. F. Jenkins, *Blankenburg administration in Philadelphia: A symposium (National Municipal Review, Apr., 1916)*.

1915.—Formation of League to Enforce Peace. See U.S.A.: 1915 (June): League to Enforce Peace.

1917-1919.—Fifth ward election murder and trial.—On September 19, 1917, Policeman George Eppley was shot to death while protecting the Fifth Ward primary elections.—"The murder was the climax of a struggle between rival factions of the Republican 'organization' for control of the Fifth Ward. Behind one of these factions stood the Vares brothers, wealthy political contractors, dominant in the city, but aspiring to State control; behind the other stood the Penrose-McNichol combination, which takes its name from Senator Boies Penrose. . . . These two factions agreed in making up the 'slate' of candidates for some of the important county officers and for magistrates. In the Fifth Ward, however, in which the gunmen's murder took place, there was a struggle between McNichol, represented by his lieutenant, James A. Carey, and the Vares, represented by their lieutenant, a butcher named Isaac A. Deutsch. To these two political manipulators, both of whom had done their share to give the district the nickname of 'the Bloody Fifth,' was left the struggle for a seat in Select Council and the political slavery or freedom of thousands of newly naturalized Jews, constituting the main citizenship of the ward. . . . Through his patrons, the Vares, Deutsch controlled the police. In the two months immediately preceding election thirty patrolmen in the Fifth Ward were transferred refusing to take Deutsch's orders, and their places were taken by willing political servants from other districts. Independent merchants were arrested and prosecuted under obsolete ordinances. A restaurant owner was persecuted to the point of attempted suicide by a Negro policeman stationed in his place of business for the express purpose of driving away customers by an exhibition of bad manners. Street fights in which notorious policemen were concerned occurred nightly.

The first rumblings of publicity on Fifth Ward conditions came with charges that draft exemptions were being sold by the Deutsch workers for political support. But, characteristically, the Jewish residents of the district exerted themselves to avoid open conflict. Formal protests were made to the Mayor [Thomas B. Smith, 1916-1920], by the 'Big Sisters,' a well-known philanthropic organization of women for civic betterment, who reported that such police conditions in 'free America' seriously handicapped their work of Americanization; and the Rev. Dr. McDermott, of the local Roman Catholic church, described conditions as the worst in the thirty-three years of his residence there. To all these reports and the affidavits which accompanied them Mayor Smith's only reply was an assurance that 'the matter would be investigated.' A few days, later, however, he publicly told a delegation of Deutsch workers that he 'stood behind the police.' . . . The Deutsch workers and police from that moment redoubled their violence. On the eve of the [primary] election the political club of the Carey faction was raided, two men slugged unconscious, and a shot fired through the window by a policeman while other officers stood outside the door. On primary election morning came the murder, in full sight of uniformed patrolmen, by gunmen identified for purposes of police protection by gray hats and a white ribbon under their second waistcoat button. Election officers were arrested and polling-places closed. But at midnight the count revealed that Carey had won. . . . The arrest of the Mayor, Deutsch, and Lieutenant Steinberg, alias Bennett, on warrants sworn out by a citizens' committee followed. . . . [An investigation began] which led to the arrest of William Finley, the leading lieutenant of the Vares, the manager and two operatives of the private detective agency which was engaged to bring the gunmen here for \$1,000, and six of the gunmen. And at a six-day hearing in the municipal court the whole plot was laid bare in fourteen hundred pages of testimony. . . . No link is missing in the chain of evidence which binds the Vares organization to the Fifth Ward political tuggery. . . . The testimony showed that Mayor Smith had expressed his intention of 'going the limit to get Carey,' and that he was kept informed as to the successive stages of the campaign's outrages. The hearing was attended by several circumstances which tended to damn Mayor Smith in the public mind quite as much as the evidence actually presented. While Maloney [head of a local detective agency] was being held by the District Attorney as his most important witness, the administration's detective bureau attempted to silence him by issuing a warrant for his arrest as an accomplice. Only the District Attorney's habeas corpus proceedings blocked service of the warrant until after the hearing. The scheme was as obviously designed to suppress evidence as the refusal of the Mayor, even on order of the Court, to submit reports of his investigators on Fifth Ward conditions before the election. For this he was held in contempt of court."—H. P. Quicksall, *Government by murder: The unhappy plight of Philadelphia (Outlook, Oct. 24, 1917)*.—In February, 1918, Jacob Marcia was declared guilty of murder. Mayor Smith was indicted on a charge of conspiracy, but was acquitted in February, 1919.

1919.—New charter.—Uni-cameral system.—Financial provisions.—"Philadelphia's new charter is an epoch-making piece of legislation. The most important single reform is the creation of a small single-chambered council of 21 members, one

for each 20,000 assessed voters, in place of the big cumbersome body of 146 men elected by 'pocket boros.' Each member of the new body . . . will serve for four years. The basis of the new charter was the Bullitt bill, under which Philadelphia has been governed for 32 years, and which concentrated great authority in the hands of the mayor. The new charter, while adhering to the theory of a responsible mayor, provides a system of checks and balances to overcome the abuses which developed under the Bullitt charter. The essential features of the new charter are: (1) The creation of a small council of 21 members, already mentioned. (2) The grant of authority to the city to do its own street cleaning and repairing, to attend to the collection of ashes, waste, rubbish and garbage. (3) The establishment of a business-like budget for city finances. (4) The institution of civil service provisions, among them one making political activity and the payment of contributions by policemen and firemen a misdemeanor punishable by fine and imprisonment. The establishment of a central purchasing department, the office of city architect, a permanent city planning commission and the appointment instead of the election of the city solicitor are also features of the charter. The Bureau of Health is raised to the rank of a department, and the Bureau of Charities, Correction, and Recreation are consolidated in a Department of Public Welfare. The new instrument fails in that it does not eliminate partisan nomination and election. To offset this defect, the legislature adopted a group of reform bills dealing with election matters. Chief among these are an amended personal registration bill, an amended uniform primary act and an act to safeguard 'the intention of the voter' in marking his ballot. Persons unfamiliar with Philadelphia's political condition may fail to appreciate how thoroly the agents of the contractor's machine controlled the voting. Thru control of the legal machinery governing legislation and election, they have upon repeated occasions thwarted the public will. These new laws safeguard the ballot and are no less important than the charter itself in freeing Philadelphia from those political conditions which brought upon her the brand 'Corrupt and Contented.'—*Philadelphia's epoch-making charter (American City, Sept., 1910, p. 202)*.—"Closely linked with the improvement in the form of the city legislature are provisions for paying each councilman an annual salary of \$5,000, and prohibiting dual office holding, an evil which has blighted Philadelphia politics for years. Other political changes embody a model civil service provision, and the prohibition of political activity or political contributions on the part of the police and firemen. Teeth are provided for the law by permitting any taxpayer to bring proceedings to have the employment of any offender declared illegal and to restrain payment of compensation to him. The subjugation of Philadelphia to 'contractor rule' is so notorious that the dramatic element is readily apparent in the vital provision that the city itself shall do its unspecifiable work, such as street cleaning and repairing, and the collection of ashes, waste, rubbish and garbage, except in special cases when a majority of all the members of the council, with the approval of the mayor, may otherwise direct. The vagueness with which such work must ordinarily be specified, and the latitude of interpretation permitted to political satellites in the rôle of minor officials, have in the past given rise to intolerable excesses on the part of political contractors. It was to correct these scandalous

abuses, and to place such work on a basis of honesty and efficiency, that this provision was put into the charter and kept there in the face of the most violent opposition from those who have fattened on the city during a long period, which—be it hoped—is now ended. Another long step in advance is constituted by the financial provisions of the new charter. The mayor is required to submit to the council by October 15 of each year a statement showing the estimated receipts, fixed liabilities, and proposed expenditures of the city for the ensuing year. This statement must be considered in open session by the council, which, not later than December 15, shall pass an ordinance setting forth the financial program for the ensuing year, at the same time fixing a tax rate that will produce sufficient revenue, with the funds from other sources, to meet the fixed liabilities and the current expenditures set forth in the council's financial program. The limit set in this program cannot be exceeded, and the city comptroller is forbidden to countersign any warrant pertaining to any of the appropriations until the council shall have first passed all appropriations necessary for the expenses of the current year."—R. Ramsey, *Politics (National Municipal Review, Aug., 1919)*.

1921.—Further evidence of bad government.—Mandamus evil.—"Not content with establishing numerous governmental agencies in Philadelphia and saddling the cost of maintaining them on the city treasury, the people of Pennsylvania have in many cases adopted an exceedingly vexatious method of having the cost determined. They have given local agencies power to finance themselves out of city funds. . . . Millions of dollars are disbursed annually by the city to satisfy contractual obligations—including the wages of an army of employes—the amounts of which are not fixed by the legislature nor controlled by council. Broad powers to determine what shall be spent for the maintenance of the courts are vested in the judges. The president judge of the municipal court is authorized to appoint 'such tipstaves or employes as are reasonably necessary,' and their number and compensation are to be fixed by a majority of the judges of the court. The president judge is also authorized to appoint a chief probation officer 'and such additional probation officers and employes as he may determine, at salaries not to exceed \$2,500 a year.' Other statutes give judges power to fix the number or compensation, or both, of janitors, stenographers, detectives, etc. The constitution provides that the prothonotary (chief clerk) shall appoint such assistants as may be necessary and authorized by the courts of common pleas of Philadelphia county, and that the clerk of the orphans' court may appoint assistant clerks with the approval of the court. . . . The Philadelphia county prison is managed by a board of inspectors appointed by the courts of common pleas. This board has authority to fix the salaries of all persons employed in the institution, to contract for supplies, and to determine the 'quantum and kind of food to be furnished to each person.' The county commissioners are authorized to draw their warrant on the 'county treasury' for 'any deficiency in keeping and maintaining said prison.' A board of managers, appointed by judges, has authority to establish houses of detention for delinquent

children—one house for each twenty-five children. The powers of the board are as comprehensive as those of the board of prison inspectors mentioned above. A recent act of assembly authorized the creation of a house of detention for untried prisoners which is to be administered in the same way. . . . If there are no appropriated funds against which the agencies can draw warrants, the employé or other claimant to whom promises have been made brings suit against the city. As there is seldom any doubt that the services have been rendered, and that the law of the state makes the city liable for the amount which has been promised, there is usually no point in contesting the case. The city solicitor therefore brings the city into court amicably, agrees to the facts, waives a jury trial, and, except in rare instances, makes no argument on the law. Judgment against the city is the result. The plaintiff then proceeds under an act of assembly which authorizes the court to issue a writ—known as a 'mandamus'—commanding the city treasurer to pay the judgment, with interest and costs, out of any unappropriated moneys in his possession, and if there be none such, out of the first moneys, received for the use of the city. The writ differs from a common law mandamus in that the statute expressly contemplates the possibility of its issuance against an empty treasury. If because of lack of unappropriated funds the writ is not satisfied when presented to the treasurer, it is registered as of the date of presentation, and draws interest at 6 per cent until paid. Claimants not desiring to wait for the city to be in funds to pay their writs have had no difficulty in selling them at par to the banks, which usually regard them as especially choice securities. . . . The use of the writ of mandamus to collect salaries of appointees of judges is peculiarly objectionable. The impression is abroad in Philadelphia that judges are above the law; that they are arbitrarily asserting superiority over the legislative and executive branches of the government. While, in a strict legal sense, their use of the mandamus perhaps does not justify this, nevertheless the spectacle of a judge appointing an employé, fixing his salary, sitting as judge and jury in a suit to collect the salary, rendering judgment in favor of his own appointee, and commanding the city to satisfy the judgment, is not edifying."—C. G. Shenton, *Philadelphia's "mandamus evil"* (*National Municipal Review*, Feb., 1921).

PHILIPPINE ISLANDS

Geographical features, population, and natural resources.—The Philippine islands form the northern section of the Eastern archipelago, from which they are separated on the south by the Zulu and Celebes seas. On the east they are bounded by the Pacific ocean, and on the northwest by the China sea. [See PACIFIC OCEAN: Map of southeastern Asia.] There is probably no other group in the world that contains so many islands so compactly situated. The official enumeration gives a total of 3,141 islands. The aggregate land area is 115,000 square miles. "Mindanao (area 46,721 square miles) and Luzon (area 44,235 square miles) are by far the largest of the Philippines group, each of them exceeding Cuba (area 43,000 square miles), which was acquired [by the United States] at the same time. Samar is the next largest island, having an area of 5,448 square miles; Palawan (Paragua) has an area of 5,037 square miles; the Visayan group, of which Negros, Panay, and Cebu are the principal islands, has an aggregate area of 25,302 square miles. Panay is the largest of this group, 5,103 square miles; Negros, 4,854 square miles; Cebu, 1,782 square miles. Leyte Island has an area of 4,214 square miles and Mindoro 4,108 square miles. Only two other islands, Bohol (area 1,614 square miles) and Masbate (area 1,732 square miles) exceed in size a thou-

sand square miles. In all cases the area of adjacent islets has been included in that of the main island."—H. M. Wright, *Handbook of the Philippines*, p. 4.—See also BAGUIO.—The population has been steadily growing for several centuries; and as the resources of the islands are great, the growth is expected to continue. In 1903 the government census gave the total population as 7,635,426. In 1910, it was estimated at 8,276,802, and by the census taken by order of the Philippine legislature in 1918, the total population was set at 10,314,310.—"The Philippines reach from the fifth degree of north latitude to the nineteenth. They therefore lie wholly within the tropics, although the Batanes group, north of Luzon, stretches to within more than a hundred miles of the limits of this zone. The temperature, as might be expected in an island climate, is remarkably equable. The warmest and coldest months in Manila differ by less than four degrees centigrade, and the greatest observed differences are only twenty-two degrees apart."—A. L. Kroeber, *Peoples of the Philippines* (*Handbook Series*, no. 8, pp. 24-25).—"The underground forces are still active, and reveal themselves by tremendous eruptions, and especially by earthquakes, which are almost continuous. Manila was nearly destroyed by the earthquake of 1863. Cyclones, here called typhoons, range as

far south as about 10° N. lat. . . . The magnificent primeval forests contain dye-woods, hard-grained timbers, and medicinal and other useful plants. On the plantations are grown rice, maize, sugarcane, cotton, coffee, and tobacco (second only to that of Cuba). The largest wild mammal is the buffalo, and next to it the gibbon; there are several other species of apes and lemurs, antelopes

stones."—D. Patrick, *Chambers' concise gazetteer of the world*, p. 554.

People: Negritos.—Malays.—Wild tribes.—“For administrative purposes the Spaniards divided the natives into Christians, non-Christians and Moros, and this classification has been retained by the American government. . . . The Christians include the seven groups of people who are prop-

IGORROTE PILGRIMS ON THEIR WAY TO A SHRINE

© Keystone View Co.

and deer. The carnivora are chiefly represented by several species of civet, the insectivora by the porcupine. The only dangerous animals are the crocodile, snakes, and some other reptiles. Birds are very numerous, of the gallinacean family especially. Insects are very various; and the fresh and marine waters abound in fishes, turtles, molluscs, and sponges. Of minerals the most widely diffused are coal and iron; copper also occurs, as well as gold, lead, sulphur, cinnabar, quicksilver, alum, besides jasper, marble, and fine building

erly known as Filipinos, who inhabit the Christian provinces and are subject to the legislative power of the Philippine legislature. The Moros are the Mohammedans who make up the mass of the population of the southern islands. The non-Christians, including the wild men and the Moros, constitute approximately one-eighth of the population . . . and are scattered over about one-half of the territory. According to race and origin, the people fall into two groups, the Malays and the aborigines. The former include the Filipinos,

Moros and wild men, distinguished by religion and different stages of development; the latter are the few Negritos who still linger superfluous on the stage."—C. B. Elliott, *Philippines to the end of the military régime*, pp. 86-87.—"It is universally conceded that the Negritos of to-day are the disappearing remnants of a people which once populated the entire archipelago. They are, physically, weaklings of low stature, with black skin, closely-curling hair, flat noses, thick lips, and large, clumsy feet. In the matter of intelligence they stand at or near the bottom of the human series, and they are believed to be incapable of any considerable degree of civilization or advancement. Centuries ago they were driven from the coast regions into the wilder interior portions of the islands by Malay invaders, and from that day to this they have steadily lost ground in the struggle for existence, until but a few scattered and numerically insignificant groups of them remain. . . . It is believed that not more than 25,000 of them exist in the entire archipelago and the race seems doomed to early extinction."—Philippine Commission, *Report*, Jan. 31, 1900, p. 11.—The term Indonesian is sometimes applied to peoples of Mindanao who are physically superior to the other inhabitants of the islands, being taller and of lighter skin. They are now supposed to represent the last migration of Malays to the islands. (See MALAY, MALAYSIAN, OR BROWN, RACE.) "It is now generally conceded that the various tribes and people of the Archipelago other than the Negritos are of Malayan ancestry. But Malay as a descriptive term is not very definite. 'We are not wise enough,' says Le Roy, 'to say just who or what the Malay is. He is the typical brown man of the Asiatic Seas and their confines.' . . . These people are supposed to have come to the Archipelago in three waves. Long before the arrival of the Portuguese, in the Southwest, in their little sharp-prowed and out-rigged water craft, they pushed their way from island to island until they reached the Philippines. The earliest wave probably extended even to the north of Luzon, Formosa and Japan. These early comers have been called pre-Malays. They were no doubt followed by others of the same kind, who, having been for a long period subjected to certain influences, were more advanced in civilization than their predecessors. There is a Sanscrit element in their language which suggests the time when their ancestors were subjected to the influence of the Buddhists, who came from India, and for generations, ruled Java and the neighboring islands. When the Spaniards arrived, the Malays who represented this second wave were considerably more advanced than the people of the hills and forests. A last wave carried the Mohammedan Malays, who became known as Moros. Being warlike and virile, they soon proselyted their predecessors in the southern islands and even succeeded in making a Mohammedan city of Manila. . . . [The civilized tribes] who are known as Filipinos, occupy substantially all the cultivated parts of the country north of Mindanao. They now number about eight millions and represent nearly every stage of race culture. They are divided into seven groups, commonly called tribes, the Tagalogs, Visayans, Bicolos, Ilocanos, Pampangos, Pangasines and Ibangs. . . . The Tagalogs and Visayans constitute the majority of the civilized Filipinos. The former occupy the central part of Luzon; the latter, Cebu, Panay, Negros, and the other islands of the central group. The Ilocanos live along the northwest coast of Luzon; the Pampangos and Pangasines on the great plains between Manila

and the Gulf of Lingayan; the Bicolos in the extreme south of Luzon; and the Ibangs in the Cagayan Valley in the northeast of Luzon."—C. B. Elliott, *Philippines to the end of the military régime*, pp. 89-90, 100.—"The wild tribes are numerous. . . . The title of Igorrotes or Igolotes, once the name of a single tribe, was gradually extended to include the several head-hunting tribes of Luzon, and later to embrace nearly all the wild tribes of the island. There are said to be several tribes of head-hunters, comprising the Altasanes, the Apayaos, and the Gaddanes. It is stated that a Gaddanes youth cannot hope to win a bride unless he can show at least one human head in proof of his valor. Of the tribes of Mindanao, seventeen are included among the pagan hill tribes, and most of the smaller islands have interior wild tribes."—C. Morris, *Our island empire*, p. 395.—In spite of their reputation for head-hunting, the Igorrotes have always shown wonderful capacities in certain directions. "The most colossal industrial undertaking in the Philippines, and perhaps the most stupendous task ever accomplished by a thoroughly savage people, is to be found in the marvellous Igorrote rice-terraces in the mountains of central and northern Luzon Island. Here the Igorrotes have built terraces for the growing of rice, like giant steps up the sides of steep mountain canyons to a height of three thousand feet or more. These terraces, each of which is flooded with water at certain periods of the year, are wonderful feats of engineering; sometimes they follow the contour of a canyon for as great a distance as half a mile without varying two inches from the dead level."—H. M. Wright, *Handbook of the Philippines*, p. 48.

Language.—Malay origin.—Superior character of Tagalog.—Hindu influences.—Writing.—"With the exception of the Negrito, all the languages of the Philippines belong to one great family, which has been called the 'Malayo-Polynesian.' . . . It should be a matter of great interest to Filipinos that the great scientist, Baron William von Humboldt, consider the Tagalog to be the richest and most perfect of all the languages of the Malayo-Polynesian family, and perhaps the type of them all. 'It possesses,' he said, 'all the forms collectively of which particular ones are found singly in other dialects; and it has preserved them all with very trifling exceptions unbroken, and in entire harmony and symmetry.' The Spanish friars, on their arrival in the Philippines, devoted themselves at once to learning the native dialects and to the preparation of prayers and catechisms in these native tongues. They were very successful in their studies. . . . In this way the Bisayan, the Tagalog, and the Ilokano were soon mastered. In the light of the opinion of von Humboldt, it is interesting to find these early Spaniards pronouncing the Tagalog the most difficult and the most admirable. 'Of all of them,' says Padre Chirino [Jesuit], 'the one which most pleased me and filled me with admiration was the Tagalog. Because, as I said to the first archbishop, and afterwards to other serious persons, both there and here, I found in it four qualities of the four best languages of the world: Hebrew, Greek, Latin, and Spanish; of the Hebrew, the mysteries and obscurities; of the Greek, the articles and the precision not only of the appellative but also of the proper nouns; of the Latin, the wealth and elegance; and of the Spanish, the good breeding, politeness, and court.' The Malayan languages contain a considerable proportion of words borrowed from the Sanskrit, and in this the Tagalog, Bisayan, and Ilokano are in-

cluded. Whether these words were passed along from one Malayan group to another, or whether they were introduced by the actual presence and power of the Hindu in this archipelago, may be fair ground for debate; but the case for the latter position has been so well and brilliantly put by Dr. Pardo de Tavera that his conclusions are here given in his own words. 'The words which Tagalog borrowed,' he says, 'are those which signify intellectual acts, moral conceptions, emotions, superstitions, names of deities, of planets, of numerals of high number, of botany, of war and its results and consequences, and finally of titles and dignities, some animals, instruments of industry, and the names of money.' From the evidence of these words, Dr. Pardo argues for a period in the early history of the Filipinos, not merely of commercial intercourse, like that of the Chinese, but of Hindu political and social domination. 'I

attained by the peoples which have developed these several languages. . . . The use of Spanish never became common, and knowledge of this language was limited to the educated few. After fifteen short years English is far more widely spoken than Spanish ever was. When English comes into comparatively general use, as it will if the present educational policy is adhered to, one fundamental difficulty in the way of welding the Filipinos into 'a people' will have been largely done away with."—D. C. Worcester, *Philippines, past and present*, v. 2, p. 936.—See also PHIL-
OLOGY: 27.

Previous to 1521.—Development before discovery by Spaniards.—Trade with China.—Culture.—"Very different from the Hindu was the early influence of the Chinese. There is no evidence that, previous to the Spanish conquest, the Chinese settled or colonized in these islands at all;

IGORROTE RANCH AT LUZON
(After water color drawing by Hans Meyer)

do not believe,' he says, 'and I base my opinion on the same words that I have brought together in this vocabulary, that the Hindus were here simply as merchants, but that they dominated different parts of the archipelago, where to-day are spoken the most cultured languages,—the Tagalo, the Visayan, the Pampanga, and the Ilocano; and that the higher culture of these languages comes precisely from the influence of the Hindu race over the Filipino.' . . . When the Spaniards arrived in the Philippines, the Filipinos were using systems of writing borrowed from Hindu or Javanese sources."—D. P. Barrows, *History of the Philippines*, pp. 90-93.—"There is no literature worth mentioning written in the native dialects, nor do they open a way to the fields of science, the arts, history, or philosophy. Their vocabularies are comparatively poor in words, and they do not afford satisfactory media of communication, especially as words of generalization are almost entirely lacking. This latter fact conclusively demonstrates the stage of mental evolution

and yet three hundred years before the arrival of Magellan their trading-fleets were coming here regularly and several of the islands were well known to them. One evidence of this prehistoric trade is in the ancient Chinese jars and pottery which have been exhumed in the vicinity of Manila, but the Chinese writings themselves furnish us even better proof. About the beginning of the thirteenth century, though not earlier than 1205, a Chinese author named Chao Ju-kua wrote a work upon the maritime commerce of the Chinese people. One chapter of his work is devoted to the Philippines, which he calls the country of Mayi. According to this record it is indicated that the Chinese were familiar with the islands of the archipelago seven hundred years ago. 'The country of Mayi,' says this interesting classic, 'is situated to the north of Poni (Burney, or Borneo). About a thousand families inhabit the banks of a very winding stream. The natives clothe themselves in sheets of cloth resembling bed sheets, or cover their bodies with sarongs.

[The sarong is the gay colored, typical garment of the Malay.] Scattered through the extensive forests are copper Buddha images, but no one knows how they got there. 'When the merchant (Chinese) ships arrive at this port they anchor in front of an open place . . . which serves as a market, where they trade in the produce of the country.' . . . The products of the country are stated to be yellow wax, cotton, pearl, shells, betel nuts, and yuta cloth, which was perhaps one of the several cloths still woven of abacá, or pina. The articles imported by the Chinese were 'porcelain, trade gold, objects of lead, glass beads of all colors, iron cooking-pans, and iron needles.' . . . This Chinese trade continued probably quite steadily until the arrival of the Spaniards. Then it received an enormous increase through the demand for Chinese food-products and wares made by the Spaniards, and because of the value of the Mexican silver which the Spaniards offered in exchange. . . . The spread of Mohammedanism and especially the foundation of the colony of Borneo brought the Philippines into important commercial relations with the Malays of the south. Previous to the arrival of the Spaniards these relations seem to have been friendly and peaceful. The Mohammedan Malays sent their praus northward for purposes of trade, and they were also settling in the north Philippines as they had in Mindanao. . . . This intercourse and traffic had acquainted the Filipinos with many of the accessories of civilized life long before the arrival of the Spaniards. Their chiefs and datos dressed in silks, and maintained some splendor of surroundings; nearly the whole population of the tribes of the coast wrote and communicated by means of a syllabary; vessels from Luzon traded as far south as Mindanao and Borneo, although the products of Asia proper came through the fleets of foreigners; and perhaps what indicates more clearly than anything else the advance the Filipinos were making through their communication with outside people is their use of firearms. Of this point there is no question. Everywhere in the vicinity of Manila, on Lubang, in Pampanga, at Cainta and Laguna de Bay, the Spaniards encountered forts mounting small cannon, or 'lantakas.' The Filipinos seem to have understood, moreover, the arts of casting cannon and of making powder. . . . The unit of their political order was a little cluster of houses of from thirty to one hundred families, called a 'barangay,' which still exists in the Philippines as the 'barrio.' At the head of each barangay was a chief known as the 'dato,' a word no longer used in the northern Philippines, though it persists among the Moros of Mindanao. The powers of these datos within their small areas appear to have been great, and they were treated with utmost respect by the people. The barangays were grouped together in tiny federations including about as much territory as the present towns, whose affairs were conducted by the chiefs or datos, although sometimes they seem to have all been in obedience to a single chief, known in some places as the 'hari,' at other times by the Hindu word 'raja,' or the Mohammedan term 'sultan.' Sometimes the power of one of these rajas seems to have extended over the whole of a small island, but usually their 'kingdoms' embraced only a few miles. . . . Beneath the datos, according to Chirino and Morga, there were three classes of Filipinos. First were the free 'maharlika,' who paid no tribute to the dato, but who accompanied him to war, rowed his boat when he went on a journey, and attended him in his house. . . . Then there was a

very large class, who appear to have been freedmen or liberated slaves, who had acquired their own homes and lived with their families, but who owed to dato or maharlika heavy debts of service. . . . Beneath these existed a class of slaves. . . . These slaves were absolutely owned by their lord, who could theoretically sell them like cattle; but, in spite of its bad possibilities, this Filipino slavery was apparently not of a cruel or distressing nature. The slaves were frequently associated in kindly relations with their masters and were not overworked. . . . Children of slaves inherited their parents' slavery. If one parent was free and the other slave, the first, third, and fifth children were free and the second, fourth, and sixth slaves. This whole matter of inheritance of slavery, was curiously worked out in details."—D. P. Barrows, *History of the Philippines*, pp. 93, 97-104.

1521.—Discovery by Magellan.—Death of Magellan.—Departure of Spaniards.—"Just as our own country accidentally became known to the European navigator in search of oriental riches, so were the Philippines unexpectedly found lying in the path of that skillful, fearless explorer, Magellan, while on an expedition in the interest of the Spanish crown, [the first known voyage around the world]. . . . The little fleet, composed of the *La Trinidad*, commanded by Magellan himself, the *San Antonio*, *Victoria*, *Santiago*, and *Concepción*, left San Lucas, the port of Seville, on August 10, 1519, and mapping a course along the African coast and past the Canary islands, reached Sierra Leone. Following then the South American coast, it arrived at Rio Janeiro in December, four months out from Spain. Severe cold now compelled Magellan to winter in the San Julian river, and here he remained five months. From the beginning difficulties similar to those which Columbus had experienced had beset his path; jealousies, discouragement, superstitions, and mutinies among the sailors coupled with shipwrecks combined to dismay him. One ship was lost in a storm and another deserted, so with only three vessels he followed the labyrinthine course between the islands at the extremity of South America, discovering here the straits which bear his name, and passed on to the broad Pacific. . . . Magellan continued westward and in March reached Butúan, on the northern shore of Mindanao, where he landed and, raising a cross on a small hill near by and celebrating the first mass in the Philippines, took possession of the island in the name of the king of Spain, and began to win over the people to Spanish sovereignty. Hardly had he become acquainted with the place, however, before he was convinced, from the glowing accounts given him of the wealth and fertility of an island called by the natives Sabo, that fairer lands lay to the northward; and accordingly, setting out with a native chief and some of his Spanish followers, Magellan proceeded north and entered Cebú harbor in April, 1521. Hostility was at first shown the newcomers by the Cebuans, who gathered to prevent their coming ashore, but through the good offices of the Butúan chief friendliness replaced ill-feeling, formal oaths of good will with drinking of blood each from the other's breast were exchanged between Magellan and the native king, and a treaty made in the name of Charles I of Spain. The friars of Magellan's party began at once to teach the people, and many, among them the king himself, were baptized. In his zeal to cement the friendship of these natives Magellan promised them aid in carrying on their war against the inhabitants of the

neighboring island of Mactan, and for the purpose of impressing upon them the superiority of the Spanish soldiers resolved to make the expedition accompanied only by a few of his own men. Arrangements were quickly completed, and less than three weeks after his arrival at Cebú he started on an enterprise which was to prove disastrous; for in his eagerness he had not reckoned on the size of the enemy. A landing by night was effected, but at daybreak the natives swarmed the shores and by force of numbers repulsed the little group and killed many, among them Magellan. As a completion to the catastrophe, Barbosa, who succeeded to the command, and a number of his officers, upon their return to Cebú, were treacherously put to death by the Christian king, who had invited them to a feast. So few Spanish soldiers now remained that the *Concepción*, the poorest of the three vessels, was sunk in the harbor, and the long return voyage from the San Lazarus islands, as Magellan had named this group, to Spain was begun. On the way Portuguese in the island of Ternate were encountered and difficulties experienced; but continuing their route by way of India in one vessel, the *Victoria*, under the command of del Caño, the survivors of the famous expedition reached Seville in 1522, three years from their departure, after having accomplished the first circumnavigation of the globe."

—F. W. Atkinson, *Philippine islands*, pp. 45, 50-54.—See also PACIFIC OCEAN: 1513-1764.

1542.—**Second Spanish expedition.**—**Naming of islands.**—**Portuguese opposition.**—"In 1542 another expedition sailed from Mexico, under command of Lopez de Villalobos, to explore the Philippines and if possible to reach China. Across the Pacific they made a safe and pleasant voyage. . . . At last Villalobos reached the east coast of Mindanao, but after some deaths and sickness they sailed again and were carried south by the monsoon to the little island of Sarangani, south of the southern peninsula of Mindanao. The natives were hostile, but the Spaniards drove them from their stronghold and made some captures of musk, amber, oil, and gold-dust. In need of provisions, they planted the maize, or Indian corn, the wonderful cereal of America, which yields so bounteously, and so soon after planting. Food was greatly needed by the Spaniards and was very difficult to obtain. Villalobos equipped a small vessel and sent it northward to try to reach Cebu. This vessel reached the coast of Samar. Villalobos gave to the island the name of Filipina, in honor of the English Infante, or heir apparent, Philip, who was soon to succeed his father, Charles V. as King Philip the Second of Spain. Later in his correspondence with the Portuguese Villalobos speaks of the archipelago as Las Filipinas. Although for many years the title of the *Islas del Poniente* continued in use, Villalobos' name of Filipinas gradually gained place and has lived. While on Sarangani demands were made by the Portuguese, who claimed that Mindanao belonged with Celebes, and that the Spaniards should leave. Driven from Mindanao by lack of food and hostility of the natives, Villalobos was blown southward by storms to Gilolo. Here, after long negotiations, the Portuguese compelled him to surrender. The survivors of the expedition dispersed, some remaining in the Indies, and some eventually reaching Spain; but Villalobos, overwhelmed by discouragement, died on the island of Amboyna. The priest who ministered to him in his last hours was the famous Jesuit missionary to the Indies, Saint Francis Xavier."—D. P. Barrows, *History of the Philippines*, pp. 117-118.

1564-1572.—**Conquest and permanent occupation by Legaspi.**—**Founding of modern city of Manila.**—"Twenty-three years elapsed after the sailing of Villalobos' fleet before another Spanish expedition reached the Philippines. The explorers who went out under Miguel Lopez de Legaspi in 1564 were destined to accomplish the permanent occupation of the archipelago by the Spanish in 1565. Legaspi was justly regarded as the "Father of the Philippines" by the Spanish. "This explorer, with an expedition of four hundred Spanish soldiers and sailors, left Mexico where he was in the Spanish service, warranted as governor and captain-general for life of all the islands he might occupy. He came to Cebú in 1565 and erected the first structures of white men, a fort and several dwellings. His most famous companion was an Augustinian monk, Andres de Urdaneta, who, with four others of his order, was intrusted with the spiritual care of such races as were conquered. The adventurers survived, chiefly by baptizing the niece of a native ruler and marrying her to a Spaniard; and when they baptized her uncle a little later, Cebú became friendly territory. In 1566 came Juan de Salcedo, grandson of Legaspi and a youth of but seventeen years, who was destined to become the conqueror of the Philippines. He was but twenty-one, in 1570, when he was one of the leaders of a successful expedition against Manila, then with its environs a place of some thirty thousand Malays. In 1571 Legaspi organized the government of Cebú upon Spanish line, dividing all the natives as slaves among his favorites. This done, he set out for Manila, whose inhabitants burned it upon seeing his approach. The modern city, as we know it, was then founded upon the ruins with stately Catholic ceremonies, its government confided to alcaides, and its domain divided among the conquerors so that each had a plot upon which to build his home. The native sovereign was baptized and his name changed to Felipe in honor of the Spanish monarch; the missionaries spread over Luzon as rapidly as their movements could be made safely, and young Salcedo proceeded to do the rest of the converting with the sword. Salcedo, though, to do him justice, was a benevolent conqueror, and became a hero to the natives, being ultimately canonized in their history to a place second only to that of his grandfather, who lived but a year following his gaining of Manila. [Legaspi's death occurred in Manila, in 1572.] In two or three years, the entire Archipelago was under Spanish domination, except the present province of Cagayan, the most northern on Luzon, and Mindanao and the Zulu group at the extreme south, the conquered districts having a total population of about six hundred and seventy-five thousand."—F. Chamberlin, *Philippine problem*, pp. 4-5.—The early Spanish rule in the islands was exceedingly mild, as the causes which led to cruelties in Spanish America did not exist. The islands possessed little wealth of the kind likely to attract adventurers; and the long voyage necessary to reach the Philippines made it impossible for the Spaniards to maintain a strong armed force there. "The subjection . . . was chiefly accomplished by the assistance of the monastic orders, whose missionaries were taught to employ extreme prudence and patience. [See also MISSIONS, CHRISTIAN: Islands of the Pacific.] The Philippines were thus principally won by a peaceful conquest. The taxes laid upon the natives were so trifling that they did not suffice for the administration of the colony. The difference was covered by yearly contributions from Mexico. The extortions of un-

conscientious officials were by no means conspicuous by their absence. Cruelties, however, such as were practised in the American mining districts, or in the manufactures of Quito, never occurred in the Philippines.—F. Jagor, *Travels in the Philippines*, ch. 4.

1574.—Attack on Spanish by Limahong.—Opening of trade with China.—Chinese immigration.—Two years after the death of Legaspi, the Spanish settlements in the Philippines were attacked by Chinese, headed by a corsair of the China sea called Limahong. Reports of the prosperous condition of Manila having reached him, he prepared a fleet of sixty-two war junks with four thousand soldiers and sailors. "In the latter part of November, 1574, this powerful fleet came sweeping down the western coast of Luzon and on the 29th gathered in the little harbor of Mariveles, at the entrance to Manila Bay. Eight miles south of Manila is the town of Paranaque, on an estuary which affords a good landing-place for boats entering from the bay. Here on the night following, Limahong put ashore six hundred men, under one of his generals, Sioco, who was a Japanese. . . . From here they marched rapidly up the beach and fell furiously upon the city. Almost their first victim was the field-marshal Goiti. The fort of Manila was at this date a weak affair, without ditches or escarpment, and it was here that the struggle took place. The Spaniards, although greatly outnumbered, were able to drive back the Chinese; but they themselves lost heavily. Limahong then sent ashore heavy reinforcements, and prepared to overwhelm the garrison. The Spaniards were saved from defeat by the timely arrival of Salcedo with fifty musketeers. . . . Although defeated in his attack on Manila, Limahong was yet determined on a settlement in Luzon, and, sailing northward, he landed in Pangasinan and began constructing fortifications at the mouth of the river Lingayen. The Spaniards did not wait for him to strengthen himself and to dispute with them afresh for the possession of the island, but organized in March an expedition of two hundred and fifty Spaniards and fifteen hundred Filipinos under Salcedo. They landed suddenly in the Gulf of Lingayen, burned the entire fleet of the Chinese, attacked the camp of the pirates, and killed a number of them. The rest, though hemmed in by the Spaniards, were able to construct small boats, in which they escaped from the islands. Thus ended this formidable attack which threatened for a time to overthrow the power of Spain in the East. It was the beginning, however, of important relations with China. Before Limahong's escape a junk arrived from the viceroy of Fukien, petitioning for the delivery of the Chinese pirate. Two Augustinian friars accompanied his junk back to China, eager for such great fields of missionary conquest. They carried letters from Labezares inviting Chinese friendship and intercourse."—D. P. Barrows, *History of the Philippines*, pp. 141-143.—"The introduction of trade with China determined the economic history of the Philippines for two and a half centuries. Each year the Chinese brought quantities of silks and other rich commodities from Amoy and other ports to Manila, whence they were forwarded to Mexico by the famous Manila Galleon, or 'China Ship.' But the Chinese trade brought with it probably the most serious problem for the internal administration of the colony. It is the first instance, on any considerable scale, of a Caucasian-Mongolian race question. . . . The Spaniards early realized the peril that accompanied the presence of so many Chinese in the city and

took measures to prevent any disastrous consequences therefrom. For this reason Governor Gonzalo Ronquillo built the *Parian*, or quarter where the Chinese who remained in the city were required to remain. However, before 1628 the Chinese had begun to live outside the *Parian* 'to the great danger of the Spanish population.' At this time Christian Chinese, or those married to Christians, were permitted to live in the quarter of Mindonoc, which, considering the usual motives for conversion, was a dangerous concession. Chinese settled in the provinces surrounding Manila and were even more widely scattered about the islands. Though the law required that the Chinese who came to Manila on the *champans* should return with them as soon as the favorable monsoon arose, after the discharge of the cargoes and their delivery to the *pancada* committee, this was early relaxed. Licenses were then required for permission to stay in Manila, while the number of those who might stay was limited in 1620 to six thousand. The number of those who might come in a single *champan* was also limited. The failure to enforce these restrictions brought about the conditions which led to the extreme and violent expedition of expulsion. By 1583 there were ten thousand Chinese in Manila, and when Morga sent twelve thousand back to China in 1596, he declared that as many more remained in the city. Forty years later Grau y Monfalcón informed the King that there were about thirty thousand Chinese and Japanese in the city. When such numbers are compared with the few hundred Spaniards in Manila the potential gravity of the situation for the latter is evident. Although the Spanish policy throughout was uncertain and inconsistent, they early came to accept as almost a necessary and permanent part of the colony's life the presence of a limited number of Chinese. Their skill and sober industry were needed in the trades and in the shop-keeping business of the city, which they virtually monopolized."—W. L. Schurz, *Chinese in the Philippines* (H. M. Stephens and H. E. Bolton, ed., *Pacific ocean in history*, pp. 214-215).

1581-1598.—Conflicts between secular and religious interests.—Re-establishment of royal audiencia.—"March, 1581, there arrived the first Bishop of Manila, Domingo de Salazar. Almost immediately began those conflicts between the spiritual and civil authorities, and between bishop and the regular orders, which have filled to no small degree the history of the islands. . . . The governor now became a paid officer of the crown, at a salary of ten thousand ducats. For the proper protection of the colony and the conquest of the Moluccas, a regular force of four hundred soldiers accompanied the governor. His powers were extended to those of an actual viceregent of the king, and the Audiencia [the supreme court which limited the power of the governor] was abolished. The man selected to occupy this important post was Don Gomez Dasmariñas, who arrived with the new constitution in May, 1590. So great was the chagrin of the bishop at the abolition of the Audiencia and the increase of the governor's power, that he himself set out for Spain to lay his wishes before the court. . . . Twenty-four Franciscans came with Dasmariñas' arrival, a company of Dominicans attempted to found a mission in China, and, an embassy coming from Japan to demand vassalage from the Philippines, four of the newly arrived Franciscans accompanied the Japanese on their return. . . . Meanwhile the efforts of Salazar at the Spanish court had effected further important changes for the Islands. The reestablishment of the Royal Audiencia was

ordered, and his own position was elevated to that of archbishop, with the three episcopal sees of Ilokos, Cebu, and the Camarines. He did not live to assume this office, and the first archbishop of the Philippines was Ignacio Santibanez, who also died three months after his arrival, on May 28, 1598. . . . The Audiencia was reestablished with great pomp and ceremony. The royal seal was borne on a magnificently caparisoned horse to the cathedral, where a Te Deum was chanted, and then to the Casas Reales, where was inaugurated the famous court that continued without interruption down to the end of Spanish rule."—D. P. Barrows, *History of Philippines*, pp. 140-153.

1593-1625.—Relations with Japan.—Franciscan missionaries. See JAPAN: 1593-1625.

1600.—Spanish power at its height.—Political rule.—Domination by religious orders.—Education.—Charitable foundations and hospitals.—Importance of Manila.—"That the Filipinos on many of these islands bitterly resented their condition is evidenced by the frequent uprisings and rebellions. . . . Revolts were almost continuous during the year 1583, and the condition of the natives very bad, many encomenderos regarding them [the natives] and treating them almost as slaves, and keeping them at labor to the destruction of their own crops and the misery of their families. . . . Before the coming of the Spaniards, it seems unquestionable that the Filipinos suffered greatly under two terrible grievances that afflict barbarous society,—in the first place, warfare, with its murder, pillage, and destruction, not merely between tribe and tribe, but between town and town, such as even now prevails in the wild mountains of northern Luzon, among the primitive Malayan tribes; and in the second place, the weak and poor man was at the mercy of the strong and rich. The establishment of Spanish sovereignty had certainly mitigated, if it did not wholly remedy, these conditions. 'All of these provinces,' Morga could write, 'are pacified and are governed from Manila, having alcaldes—mayores, corregidores, and lieutenants, each one of whom governs in his district or province and dispenses justice.' . . . The archipelago was districted among . . . missionary bands. The Augustinians had many parishes in the Bisayas, on the Ilokan coast, some in Pangasinan, and all of those in Pampanga. The Dominicans, had parts of Pangasinan and all of the valley of Cagayan. The Franciscans controlled the Camarines and nearly all of southern Luzon, and of the region of Laguna de Bay. All of these orders had convents and monasteries both in the city of Manila and in the country round about. The imposing churches of brick and stone, which now characterize nearly every pueblo, had not in those early decades been erected; but Morga tells us that 'the churches and monasteries were of wood, and well built, with furniture and beautiful ornaments, complete service, crosses, candlesticks, and chalices of silver and gold.' Even in these early years there seem to have been some attempts at the education of the natives. The friars had schools in reading and writing for boys, who were also taught to serve in the church, to sing, to play the organ, the harp, guitar, and other instruments. We must remember, however, that the Filipino before the arrival of the Spaniard had a written language, and even in pre-Spanish times there must have been instruction given to the child. The type of humble school, that is found to-day in remote barrios, conducted by an old man or woman, on the floor in the yard of a home, where the ordinary family occupations are proceeding, probably

does not owe its origin to the Spaniards, but dates from a period before their arrival. The higher education established by the Spaniards appears to have been exclusively for the children of Spaniards. In 1601 the Jesuits, pioneers of the Roman Catholic orders in education, established the College of San José. . . . The high mortality which visited the Spaniards in these islands and the frequency of diseases early called for the establishment of institutions for the orphan and the invalid. . . . There was the Royal Hospital; in charge of three Franciscans, which burned in the conflagration of 1603, but was reconstructed. There was also a Hospital of Mercy, in charge of Sisters of Charity from Lisbon and the Portuguese possessions of India. Close by the Monastery of Saint Francis stood then, where it stands to-day, the hospital for natives, San Juan de Dios. It was of royal patronage, but founded by a friar of the Franciscan order, Juan Clemente. 'Here,' says Morga, 'are cured a great number of natives of all kinds of sicknesses, with much charity and care. It has a good house and offices of stone, and is administered by the barefooted religious of Saint Francis. Three priests are there and four lay-brethren of exemplary life, who, with the doctors, surgeons, and apothecaries, are so dexterous and skilled that they work with their hands marvelous cures, both in medicine and surgery.'—D. P. Barrows, *History of the Philippines*, pp. 162, 166, 169-170.

1600-1663.—Devastation by Moros.—Competition of Dutch.—Koxinga's threat.—Troubles with the Dutch, the Portuguese, the Chinese, and the Moros were conspicuous in the history of the Philippines during most of the seventeenth century. "Another source of trouble appeared as early as 1504 with the attempt of the Spanish friars to establish missions in Japan. The Japanese emperor caused the execution of the missionaries as fast as they could be seized, but the Philippine friars were not dismayed by the perils of martyrdom. Many, disobeying the orders of the Spanish governor, escaped to Japan, only to meet their death. Not until fifty years after the first mission was the attempt to convert the Japanese abandoned."—A. E. McKinley, *Island possessions of the United States (History of North America, v. 20, pp. 213-214)*.—"During the early years of the Spanish occupation no attention was paid to Mindanao and the Sulu Archipelago, and the Moros on their part seemed to have refrained from encroaching upon the islands under Spanish control. In 1596 a Portuguese adventurer obtained the royal sanction to attempt the conquest of Mindanao. The expedition, which consisted of one vessel carrying men-at-arms and the invariable complement of priests, ended disastrously. The commander and several of the soldiers were killed and the ship returned to Manila, having accomplished nothing more than arousing the resentment of the Muhammadans. From this time commenced the troubles with the southern natives, which continued over a period of two hundred and fifty years. Hitherto the piracy, which was the chief occupation of those people, had been confined to the waters adjacent to their own territory, but they now began to extend their depredations to the northern islands. The sultans of Mindanao and Sulu entered into an offensive and defensive alliance against the Spaniards and cooperated . . . in the organization of piratical expeditions. . . . No portion of the Archipelago was free from the incursions of the Muhammadans, who swooped, in their war junks, upon coast towns, plundered and burned, and were at sea again before any punitive force could reach the spot. . . . Each

succeeding governor essayed the task of suppressing these marauders. Countless expeditions were despatched against them. . . . All these measures proved ineffectual to suppress the scourge, and it was not until the introduction of gunboats that the Spaniards succeeded in getting the upper hand. The Moros were never, however, subdued by the Spaniards. Some of the chiefs made nominal submission while retaining actual independence, and several campaigns were conducted in Mindanao during the last twenty years of Spanish occupancy of the Philippines."—C. H. Forbes-Lindsay, *America's insular possessions*, pp. 149-151.—The Dutch frequently showed themselves in the vicinity of Manila, and there was a long series of contests between them and the Spaniards in the Philippines. In October, 1600, a notable naval battle was fought between the Spaniards and two Dutch vessels under the command of Admiral Van Noort. The Dutch, who had come through the Straits of Magellan on a voyage around the world, were in great need of food, and had been capturing and plundering several boats. The Spaniards fitted up two galleons, the Cidor Morga himself took charge, and after two days of fighting, Van Noort was defeated and driven from the islands. In 1646 and again in 1647, the Dutch came dangerously near gaining possession of the islands. In 1626 the Spaniards from the Philippines had made a settlement upon the island of Formosa, but in 1642 this fell into the hands of the Dutch. Twenty years later, the Chinese in turn took possession, under the leadership of Koxinga. "Exalted by his success against European arms, Koxinga resolved upon the conquest of the Philippines. He summoned to his service the Italian Dominican missionary, Ricci, who had been living in the province of Fukien, and in the spring of 1662 dispatched him as an ambassador to the governor of the Philippines to demand the submission of the archipelago. Manila was thrown into a terrible panic by this demand, and indeed no such danger had threatened the Spanish in the Philippines since the invasion of Lima-hong. . . . The governor, Don Sabiniano Manrique de Lara, returned a defiant answer to Koxinga, and the most radical measures were adopted to place the colony in a state of defense. All Chinese were ordered immediately to leave the Islands. Fearful of massacre, these wretched people again broke out in rebellion, and assaulted the city. Many were slain, and other bands wandered off into mountains, where they perished at the hands of the natives. Others, escaping by frail boats, joined the Chinese colonists on Formosa. Churches and convents in the suburbs of Manila, which might afford shelter to the assailant, were razed to the ground. More than all this, the Moluccas were forsaken, never again to be recovered by Spaniards; and the presidios of Zamboanga and Cuyo, which served as a kind of bridle on the Moros of Jolo and Mindanao, were abandoned. All Spanish troops were concentrated in Manila, fortifications were rebuilt, and the population waited anxiously for the attack. But the blow never fell. Before Ricci arrived at Tai-wan, Koxinga was dead, and the peril of Chinese invasion had passed. . . . But the Philippines had suffered irretrievable loss. Spanish prestige was gone. Manila was no longer, as she had been at the commencement of the century, the capital of the East. Spanish sovereignty was again confined to Luzon and the Bisayas. The Chinese trade, on which rested the economic prosperity of Manila, had once again been ruined. For a hundred years the history of the Philippines is a dull monotony, quite unrelieved by any heroic

activity or the presence of noble character."—D. P. Barrows, *History of the Philippines*, pp. 210-211.

1700-1800.—Depredations of Malay pirates.—British possession.—During most of the eighteenth century, the depredations of the Moro pirates continued. It is estimated that five hundred captives annually were taken by them. Between 1778 and 1793, a million and a half pesos are said to have been expended on expeditions against them, but the end of the century saw no improvement. The most outstanding event of this period in the history of the Philippines was the capture of the islands by the British. "In 1762 England declared war against France and Spain, and a British fleet was despatched to the Philippines. It arrived in September of that year under Admiral Cornish, with General Draper in command of the troops. The British squadron anchored in Manila Bay and two officers were sent ashore to demand the surrender of the city, which was refused. The entire garrison of Manila at the time consisted of six hundred soldiers with eighty pieces of artillery, whilst the British force numbered three thousand seamen, fifteen hundred European soldiers, and about a thousand Sipahis. Troops were landed from the British vessels and a siege and bombardment of the city commenced. . . . On the 5th of October the British troops entered the walls of the city and upon the following day Manila was given up by the Archbishop, who was acting-Governor at this time. By the terms of this capitulation the entire Archipelago was surrendered and an indemnity of four millions of dollars was agreed upon. The day before the capitulation a judge of the Supreme Court, named Simon de Anda y Salazar, escaped in a native boat and fled to the Province of Bulacan, where he proclaimed himself Governor-General, and affected to ignore the action of the Archbishop. Simon de Anda raised troops among the natives and carried on a guerrilla war until the British evacuated the islands, which they did early in 1764."—C. H. Forbes-Lindsay, *America's insular possessions*, pp. 151-152.

1750.—Portuguese government recognizes Spanish title. See LATIN AMERICA: 1750-1777.

1837-1896.—Economic and social progress.—Opening of ports to foreign trade.—Growth of native journalism.—Growth of public education.—Increase of native wealth.—Spread of liberal ideas.—Cavite revolt.—Spread of secret societies with revolutionary aims.—"We have now come to the last half-century and to the last phase of Spanish rule. In many respects this period was one of economic and social progress, and contained more of promise than any other in the history of the Islands. During this last half-century the Spanish rulers had numerous plans for the development and better administration of the Philippines, and, in spite of a somewhat wavering policy and the continued sore of official peculation, this was a period of wonderful advancement. Revolution and separation from Spain came at last, as revolutions usually do, not because there was no effort nor movement for reform, but because progress was so discouragingly slow and so irritatingly blocked by established interests that desired no change. . . . The opening of the port of Manila to foreign trade, in 1837, was followed by a period of rising industry and prosperity. . . . After 1814 general permission had been given to foreigners to establish trading-houses in Manila, and by 1838 there were fifteen such establishments, of which seven were English and three American. . . . In 1863, Cebu likewise was made an open port. . . . The release from Moro piracy, the opening of

foreign commerce, and the development of agricultural production were rapidly bringing about a great change in the aspirations of the Filipino people themselves. Nearly up to the middle of the nineteenth century the Filipinos had felt the full effect of isolation from the life and thought of the modern world. But the revolutionary changes in Europe and the struggles for constitutional government in Spain had their influence, even in these far-away Spanish possessions. Spaniards of liberal ideas, some of them in official positions, found their way to the Islands, and an agitation began, originating among Spaniards themselves, against the paternal powers of the friars. . . . The growth of periodic literature accelerated this liberalizing movement. The press, though suffering a severe censorship, has played a large part in shaping recent thought in these islands and in communicating to the Filipino people those ideas and purposes which ever inspire and elevate men. The first newspaper to make its appearance in the Philippines was in 1822—'El Philantropo'; but journalism assumed no real importance until the forties, when there were founded 'Semanario Filipino' (1843), and almost immediately after several others—'El Amigo de Pais' (1845), 'La Estrella' (1846), and 'La Esperanza' (1847), the first daily. These were followed by 'Diario de Manila' (1848); in 1853 'El Comercio' appeared. . . . Papers conducted by Filipinos and in the Filipino tongues are of more recent origin, but these early Spanish periodicals had a real effect upon the Filipinos themselves, training up a class familiar with the conduct of journalism and preparing a way for the very influential work of the Filipino press in recent years. . . . But more important than all other influences was the opening of education to Filipinos. In 1852 a royal decree authorized the Jesuits to . . . devote themselves solely to missions in the unoccupied fields of Mindanao, and to the higher education of the Filipinos. . . . In 1863, Concha, the Spanish minister of war and colonies (Ultramar), decreed the system of public primary instruction. A primary school for boys and one for girls was to be established in each pueblo of the Islands. In these schools, instruction was to be given in the Spanish language. A superior commission of education was formed, which consisted of the governor, the archbishop, and seven other members added by the governor himself. The system was not secular, for it primarily was devoted to the teaching of religious doctrine. The Spanish friar, the pueblo curate, was the local inspector of schools and practically directed their conduct. It was not wholly a free system, because tuition was required of all but the poorest children; nor was it an adequate system, because, even when most complete, it reached only a small proportion of the children of a parish, and these very largely were of the well-to-do families. And yet this system for what it accomplished, is deserving of praise. . . . The Filipino had now become embarked upon a new current of intellectual experience—a course of enlightenment which has been so full of unexpected development, and which has already carried him so far from his ancestor of one hundred years ago, that we can not say what advance another generation or two may bring. Throughout all the towns of the Islands a class was rapidly growing up to which the new industries had brought wealth. Their means enabled them to build spacious and splendid homes of the fine, hard woods of the Philippines, and to surround themselves with such luxuries as the life of the Islands permitted. This class was rapidly gaining education. It acquired a knowledge of the Spanish language, and easily assumed that graceful

courtesy which distinguishes the Spaniard. The only misfortune, as regards this class, was that it was very small. It could embrace but a few families in each populous town. Some of these had Chinese and Spanish blood in their veins, but other notable families were pure Filipinos. . . . In 1868, Queen Isabella II. of Spain was deposed, and a little later a revolutionary government, the 'Republic of Spain,' was founded. It was the brief triumph of that reformed and liberal spirit which for so many years had been struggling to free Spain from the burdens of aristocracy and ecclesiasticism. The natural consequence was the sending of a liberal governor to the Philippines and the publication of liberal principles and reforms. This governor was General de la Torre. He was a brave and experienced soldier and a thorough democrat at heart. He dispensed with the formality and petty pomp with which the governors had surrounded themselves; he dismissed the escort of halberdiers, with their mediæval uniforms and weapons which had surrounded the governor-generals since 1581, and rode out in civilian's clothes and without ostentation. His efforts were directed to encouraging the Filipinos and to attaching them to Spain. In the eyes of the Spanish law, for a brief period, Spaniard and colonist had become equal, and La Torre tried to enforce this principle and make no distinction of race or birth. While Filipinos were encouraged and delighted, it is impossible to describe the disgust of the Spanish population and the opposition of the friars. La Torre was attacked and opposed, and the entire course of his governorship was filled with trouble, in which, naturally, liberal ideas gained wider and wider currency among the Filipinos. . . . After the fall of the republic in Spain and the restoration of the monarchy, the administration in the Philippines attempted to extirpate the rising tide of liberal thought; but these ideas had taken root and could not be suppressed. The Filipino party, if so we may call it, continued to plan and work for reform. It numbered not only those of Filipino blood, but many of Spanish descent, born in the Philippines. There is no certain evidence that they were at this time plotting for independence, or that their actions were treasonable; but the fear and hatred felt by the Spaniards resulted frequently in the exile and punishment of known advocates of reform. . . . In 1872 there occurred an important outbreak known as the Cavite Revolt. Two hundred native soldiers at the Cavite arsenal rose, killed their officers, and shouted 'Death to Spain.' They had fellow-conspirators among the troops in Manila, but owing to mistakes in their plans these failed to rise with them and the revolt was easily suppressed. . . . It was immediately followed by the arrest of a large number of Filipinos who had been conspicuous in La Torre's time and who were advocates of reform. . . . New ground for fear was now found in the spread of secret organizations, which were denounced as Free Masonry. . . . In Latin countries Masonry has been charged with political intrigue and the encouragement of infidelity, and this has resulted in clerical opposition to the order wherever found. The first Masonic lodge in the Philippines was established about 1861 and was composed entirely of Spaniards. It was succeeded by others with Filipino membership, and in one way or another seems to have inspired many secret organizations, which were formed some years later. . . . Large numbers of Filipinos were now working, if not for independence, at least for the expulsion of the friars; and while this feeling should have been met by a statesmanlike and liberal policy of reform,

the government constantly resorted to measures of repression, which little by little changed the movement for reformation into revolution. . . . In 1888 the 'Asociación Hispano-Filipina' was formed by a number of the younger Filipino patriots and students in Spain. Their object was Philippine reform. The most famous of this group who gained a supreme place in the hearts of Filipinos and in the history of the islands, was Dr. José Rizal y Mercado."—D. P. Barrows, *History of the Philippines*, pp. 250, 261, 273-275, 277-281.

1896-1898.—Filipino insurrection.—Formation of "Katipunan," a revolutionary league.—Outbreak of revolt at Cavite.—Brutalities of Spanish methods of putting down the revolt.—Execution of Rizal.—Exile of Aguinaldo and other Filipino leaders.—A secret society, called the "Katipunan," or League, was formed, which became a revolutionary organization, and from which sprang the most serious of Filipino rebellions in 1896. The province of Cavite was the center of revolt, and it was there that Emilio Aguinaldo, then the schoolmaster at Silan, came into prominence as a leader. Aguinaldo was personally humane, but fearful atrocities were committed in the first months of the rising by some of the insurgents of his band. The Spaniards, on their side, were equally inhumane in their treatment of captured rebels and "suspects." Provincial governors and parish priests seemed to regard it as a duty to supply the capital with batches of "suspects" from their localities. Thousands of peaceful natives were treated with a ferocity that would have shocked all Europe. Within three months of the outbreak, hundreds of the richest natives and half-castes in Manila were imprisoned for a few days and released conditionally—the condition being a payment of ransom, sometimes said to be as high as \$40,000. But General Blanco, the then governor-general, was not vigorous enough in his measures to satisfy the all-powerful clerical party in the islands, and he was replaced by General Polaveja, who received large reinforcements from Spain, and who succeeded in breaking the strength of the rebellion to a great extent. Apart from the circumstances of legitimate warfare, in which probably neither party was more merciful than the other, he initiated a system of striking terror into the non-combatant population by barbarous tortures and wholesale executions. The most notable victim at this period was Dr. José Rizal, a physician, highly educated in Europe, distinguished as an oculist, and the author of certain novels in which the condition of things in his native country were set forth. On his return to the Islands, Dr. Rizal incurred the enmity of the friars by opposing them, and was pursued by their hostility. From 1893 to 1896 he was kept in banishment, closely watched, at a small town in the island of Mindanao. Then he sought and obtained permission to go to Cuba in the medical staff of the Spanish army; but, just as he arrived at Manila, on his way to Spain, the insurrection of 1896 broke out, and though he was suffered to depart, his enemies pursued him with accusations of complicity in the rising and caused him to be brought back. He was tried by court-martial for sedition and rebellion, condemned and shot; and his memory is cherished in the islands as that of a martyred patriot. Having scotched but not killed the insurrection, Polaveja went home, with broken health, in the spring of 1897, and was succeeded by Gen-

eral Primo de Rivera, who, after some months of continued warfare, opened negotiations with Aguinaldo, the recognized leader of the revolt. The result was a treaty, known as the "Pacto de Biac-nabato," signed December 14. By this treaty the rebels undertook to deliver up their arms and ammunition of all kinds to the Spaniards; to evacuate the places held by them; to conclude an armistice for three years for the application and development of the reforms to be introduced by the other part, and not to conspire against Spanish sovereignty in the islands, nor to aid or abet any movement calculated to counteract the reforms. Emilio Aguinaldo and 34 other leaders undertook to quit the Philippine islands, and not to return to them until so authorized by the Spanish government. On behalf of the Spanish government it was agreed to pay, through the medium of Pedro A. Paterno, to the rebels the sum of \$1,000,000, and to the families who had sustained loss by reason of the war \$700,000, in instalments and conditionally,—the condition being that no renewal of rebellion or conspiracy occur. Aguinaldo and other chiefs of the insurrection left the islands, accordingly; but they are said to have been utterly duped. One instalment, only (\$400,000), of the promised money was ever paid; the promised reforms were not carried out, and persecutions of those who had been in sympathy with the rising was renewed.—Based on J. Foreman, *Philippine islands*, ch. 26.—"Aguinaldo and his associates went to Hongkong and Singapore. A portion of the money, \$400,000, was deposited in banks at Hongkong, and a lawsuit soon arose between Aguinaldo and one of his subordinate chiefs named Artacho, which is interesting on account of the very honorable position taken by Aguinaldo. Artacho sued for a division of the money among the insurgents according to rank. Aguinaldo claimed that the money was a trust fund, and was to remain on deposit until it was seen whether the Spaniards would carry out their promised reforms, and if they failed to do so, it was to be used to defray the expenses of a new insurrection. The suit was settled out of court by paying Artacho \$5,000."—F. V. Greene, *Memoirandum concerning the situation in the Philippines*, Aug. 30, 1898 (*Treaty of Peace and Accompanying Papers: 55th Congress, 3d Session, Senate Document no. 62, pt. 1, p. 421*).

1898 (August-December).—Growing distrust and unfriendliness of the Tagalogs.—General Otis's report.—Character of American occupation.—Of the state of things which followed the departure of General Merritt, August 30, General Otis, who succeeded him in command, reported subsequently as follows: "During my first weeks of duty here I was impressed with the spirit of suspicion and the partially concealed unfriendly feeling manifested by the Tagalos toward the American forces. That they either had very little confidence in our promises or were then forming conclusions to oppose any establishment of United States authority in Luzon was apparent, however loudly they might disclaim hostile intent or declare as an excuse for their attitude fear of the return of Spain. I saw, however, with satisfaction, their ablest men by education and mental equipment taking part in their authoritative deliberations, and I had

GEN. ELWELL STEPHEN OTIS

considerable confidence in the efficacy of their suggestions and advice. Still, after carefully weighing conditions, I was unable to arrive at any satisfactory conclusion. . . . Measures were being applied constantly to improve the sanitary condition of the city, to increase the efficiency of the troops, and to meet any emergency which might develop from an uprising of the inhabitants, or from hasty action by any portion of our or the insurgent forces. . . . The insurgent soldiers had looted extensively the portions of the city to which they gained access, and were greatly disappointed that this privilege over other parts of the same was not accorded them. Their enforced withdrawal to outer lines was the cause of discontent, and augmented any desire which they may have formerly entertained to resist or attack the American troops. . . . My own confidence at this time in a satisfactory solution of the difficulties which confronted us may be gathered from a dispatch sent to Washington on December 7, wherein I stated that conditions were improving and that there were signs of revolution-

ary disintegration; that I had conferred with a number of the members of the revolutionary government and thought that the most of them would favor peaceful submission to United States authority. I had strong reasons for this expressed confidence from assurances made to me by some of the ablest Filipinos who had occupied positions of importance in the insurgent government and had signified their intention to withdraw from it."—*Report of General Otis, Aug. 31, 1899 (Message and Documents: Abridgment, 1899-1900, v. 2, pp. 1048-1052)*.—Varying opinions, many of them uncomplimentary to the manner of the American occupation, were expressed by witnesses of the event. "The tragical side of American unpreparedness is manifest in the state of anarchy in which the whole Archipelago has been plunged by the American unreadiness to occupy the military posts as soon as they were vacated by the Spanish garrisons. A hideous orgy of murder, plunder, and slave-raiding has prevailed in Visayas, and especially in Mindanao. . . . Manila was in the time of the Spaniards a most temperate city; a drunken man was a very rare sight, and would usually be a foreign sailor. Since the American occupation, some hundreds of drinking saloons have been opened, and daily scenes of drunkenness and debauchery have filled the quiet natives with alarm and horror. . . . I venture to think that these occurrences have confirmed many of the Tagals in their resolve rather to die fighting for their independence than to be ruled over by such as these."—F. H. Sawyer, *Inhabitants of the Philippines*, pp. 113-114.—"The conduct . . . of the boisterous, undisciplined individuals who formed a large percentage of the first volunteer contingents sent to Manila had had an ineffaceably demoralizing effect on the proletariat, and has inspired a feeling of horror and loathful contempt in the affluent and educated classes who guide the Philippine public opinion. From the outset it was a mistake to treat the Christian Philippine population like savages ignorant of western civilization, considering that there are thousands of Filipinos mentally equal to the invading forces, and comparable, in intellectual training, with the average middle-class Europeans. Within a fortnight after the capitulation of Manila the drinking saloons had increased fourfold. According to the latest advices, there are at least twenty to one existing in the time of the Spaniards. . . . The situation then during this period was somewhat as follows: The Filipinos, aided by Dewey's victory, had driven the Spaniards from practically the whole Archipelago except the city of Manila, they had established a government of their own, and they looked upon the country as belonging both by nature and by right of conquest to them. We upon the other hand, having destroyed the Spanish fleet and captured the city of Manila, and being in the process of acquiring by treaty the Spanish title to the whole country regarded it as belonging to us. The situation was therefore critical."—J. Foreman, *Will the United States withdraw from the Philippines?* (*National Review*, Sept., 1900).—A somewhat more favorable report was given, by impartial witnesses, of the native government. During October and November, 1898, while the only authority in Luzon, outside of Manila and Cavite, was that exercised by the native government organized under Aguinaldo, two American naval officers, Paymaster W. B. Wilcox and Cadet Leonard R. Sargent, with permission from Admiral Dewey, made a tour of observation through seven provinces of the island, and rendered a report of what they saw and what they experienced, which Admiral Dewey sent to Washington, commending

it to the attention of the government as containing "the most complete and reliable information obtainable in regard to the present state of the northern part of Luzon Island." Subsequently Mr. Sargent wrote articles descriptive of the journey, which were published in *The Outlook* and *The Independent*, and which were reprinted, with the official report, in a document compiled for the United States Senate. The following is from the article in *The Outlook*, September 2, 1890: "Although this government has never been recognized, and in all probability will go out of existence without recognition, yet it cannot be denied that, in a region occupied by many millions of inhabitants, for nearly six months it stood alone between anarchy and order. The military forces of the United States held control only in Manila, with its environs, and in Cavite, and had no authority to proceed further; while in the vast remaining districts the representatives of the only recognized power on the field were prisoners in the hands of their despised subjects. It was the opinion at Manila during this anomalous period in our Philippine relations, and possibly in the United States as well, that such a state of affairs must breed something akin to anarchy. I can state unreservedly, however, that Mr. Wilcox and I found the existing conditions to be much at variance with this opinion. During our absence from Manila we travelled more than 600 miles in a very comprehensive circuit through the northern part of the island of Luzon, traversing a characteristic and important district. In this way we visited seven provinces, of which some were under the immediate control of the central government at Malolos, while others were remotely situated, separated from each other and from the seat of government by natural divisions of land, and accessible only by lengthy and arduous travel. As a tribute to the efficiency of Aguinaldo's government and to the law-abiding character of his subjects, I offer the fact that Mr. Wilcox and I pursued our journey throughout in perfect security, and returned to Manila with only the most pleasant recollections of the quiet and orderly life which we found the natives to be leading under the new régime."

1898 (September-December).—Instructions from the president of the United States to the commissioners for the negotiation of peace with Spain concerning the Philippine archipelago.—Cession of the islands to the United States. See U. S. A.: Historical geography.

1898-1899 (December-January).—Instructions by the president of the United States to General Otis, military governor and commander in the Philippines.—Their proclamation to people of the islands as modified by General Otis.—Counter proclamation of Aguinaldo.—On the twenty-seventh of December, 1898, instructions, signed by the president, were cabled by the Secretary of War to General Otis, in command of the United States forces in the Philippines. These instructions read in part, as follows: "The military commander of the United States is enjoined to make known to the inhabitants of the Philippine Islands that in succeeding to the sovereignty of the islands, in severing the former political relations of the inhabitants and in establishing a new political power, the authority of the United States is to be exerted for the security of the persons and property of the people of the islands and for the confirmation of all their private rights. It will be the duty of the commander of the forces of occupation to announce and proclaim in the most public manner that we come, not as invaders or conquerors, but as friends, to protect the natives in their homes, in

their employments and in their personal and religious rights. All persons who, either by active aid or by honest submission, cooperate with the government of the United States to give effect to these beneficent purposes, will receive the reward of its support and protection. All others will be brought within the lawful rule we have assumed, with firmness if need be, but without severity so far as may be possible. . . . Finally it should be the earnest and paramount aim of the military administration to win the confidence, respect and affection of the inhabitants of the Philippines by assuring to them in every possible way that full measure of individual rights and liberties which is the heritage of free peoples, and by proving to them that the mission of the United States is one of benevolent assimilation, substituting the mild sway of justice and right for arbitrary rule. In the fulfilment of this high mission, supporting the temperate administration of affairs to the greatest good of the governed, there must be sedulously maintained the strong arm of authority, to repress disturbance and to overcome all obstacles to the bestowal of the blessings of good and stable government upon the people of the Philippine Islands under the free flag of the United States. WILLIAM MCKINLEY."—This proclamation was reported to the Filipinos by General Otis on January 4, 1898, and a storm of protest arose followed by revolutionary agitation. Aguinaldo, from his capital at Malolos, issued a counter-proclamation, protesting against the authority of the military governor and against what he termed the "intrusion of the United States Government in the administration of these islands." The Filipinos, through their numerous clubs, began to secret arms in Manila, and the Americans made quiet preparations in the event of hostilities.

1899.—Problem of governing the Philippines.—Arguments for and against entire independence.—Dispute in Senate as to annexation.—Appointment of first commission, a step toward solving the problem.—The problem of governing the islands was one on which there was a great variety of opinion within the Philippines and the United States. Undoubtedly a section of the Filipino people welcomed an American protectorate, inasmuch as it freed them from the fear of invasion by some other powerful state, and promised good commercial and industrial conditions. On the other hand, the revolutionists under Aguinaldo had fought strenuously for their independence and would be content with nothing else. In the United States there were many people who felt that the Americans had no right to the islands; that the acquisition of territory by conquest was contrary to the American political ideals; and that the islands would be more expense and trouble than they were worth. Americans who were familiar with the conditions were divided in their opinions, as may be seen from the following testimonies: "The people are the most enlightened and vigorous branch of the Malay race, and have been Christians for centuries, in fact longer than the principles of the Reformation were established in Great Britain, and are the nearest akin to European people of any alien race, and it is simply ridiculous to imagine that eight to ten millions of such people can be bought and sold as an article of commerce without first obtaining their consent."—H. W. Bray, *Letter to Singapore Free Press*, June 8, 1898.—"The native has no expansive ideas; he cannot go far enough to understand what it is to rule matters for the benefit of the common weal; he cannot get past his own most personal interest, or his town, at the most. . . . I think an attempt at a native

government would be a fiasco altogether.”—J. Foreman, *Testimony before United States Peace Commission at Paris*.—“The excuse that they [the Filipinos] are not ripe for independence is not founded on facts. The Filipinos number more educated people than the kingdom of Servia and the principalities of Bulgaria and Montenegro. They have fewer illiterates than the states of the Balkan peninsula, Russia, many provinces of Spain and Portugal, and the Latin republics of America.”—F. Blumentritt, *Philippine islands*, p. 61.—“They [the natives] would have to be educated up to it [self-government]. They want a protectorate, but they do not exactly understand what that means. Their idea is that they should collect the revenues and keep them in their treasury, and that we should be at the expense of maintaining an army and a navy there for their protection, which is the kind of a protectorate they would like very much.”—General Merritt, *Statement before United States Peace Commission at Paris*, Oct. 4, 1898.—“If the United States should evacuate these islands, anarchy and civil war will immediately ensue and lead to foreign intervention. The insurgents were furnished arms and the moral support of the navy prior to our arrival, and we cannot ignore obligations, either to the insurgents or to foreign nations, which our own acts have imposed upon us.”—General F. V. Greene, *Memorandum concerning the Philippine islands*, Aug. 27, 1898.—“The capability of the Filipinos for self-government cannot be doubted. Such men as Arellano, Aguinaldo, and many others whom I might name are highly educated; nine tenths of the people can read and write, all are skilled artisans in one way or another; they are industrious, frugal, temperate, and, given a fair start, could look out for themselves infinitely better than our people imagine. In my opinion they rank far higher than the Cubans or the uneducated negroes to whom we have given right of suffrage.”—General C. King, *Letter to Milwaukee Journal*, June 22, 1899.—Faced with such a division of opinion, President McKinley compromised by appointing a Philippine commission to investigate conditions in the islands and to pave the way, if possible, for the peaceful solution of the problem of government. The members of this first commission were Jacob G. Shurman, Rear-Admiral George Dewey, Major General Elwell S. Otis, Charles Denby and Dean C. Worcester. The temporary government of the islands was to continue with the military authorities until further action of Congress.—See also U. S. A.: 1899 (January-February).

1899.—Armed opposition to establishment of American government.—Dissatisfaction of Filipinos under Aguinaldo with anything less than independence.—Attempts to make adjustments.—Revolt of Filipinos.—Military movements of Americans.—“It will presumably be admitted that the important question with regard to the Outbreak of Hostilities, February 4, 1899, is not, who fired the first shot, but who was responsible for the conditions that made it evident to every observer weeks before the clash came that a single shot might bring on war. . . . No doubt most Americans believe that left to themselves the Filipinos would soon have lapsed into anarchy, while a few maintain that with temporary assistance in international affairs they would have developed a government better suited to their peculiar needs than we can ever give them. Still others who are familiar with the Filipinos and kindred races believe that their aspiration for an independent national existence was not deep rooted, that had we adopted an affectionate, admiring tone to their leaders, had

we recognized their government and approved of it, we could soon have made their government our government, could have been as sovereign as we pleased, and had the people with us. Whatever view one may hold, it must be admitted that if we were to establish our sovereignty by peaceful methods it was essential to win the confidence and affection of the Filipinos. . . . There is every indication that the Filipinos were prepared, at first, to treat us as friends and liberators. . . . After the very first, however, the cultivation of intimate relations with the Filipino leaders seems to have been considered unimportant or inadvisable. General Merritt states that he never saw Aguinaldo. Social intercourse between our officers and the Filipinos was discouraged by General Otis. In fact after the surrender of Manila General Whittier seems to have been the only one of our superior officers who ever had a personal interview with Aguinaldo. . . . With regard to the actual outbreak of hostilities, there is a sharp difference of opinion. The United States press dispatches announcing the outbreak, and the contemporaneous newspaper statements by the Filipinos . . . are of interest as evidence that from the very first each side claimed the other to be the aggressor. As to which of these opposing claims is borne out by the facts, the editors would say that after careful study of all the accessible evidence they find that according to the most authoritative statements the outbreak occurred as the result of a trespass by four armed Filipinos on territory admitted by the Filipino in command to be within the jurisdiction of the United States.”—Philippine Information Society, *Publications, First series, VII, introduction*.—“With great tact and patience the commanding general had held his forces in check, and he now made a final effort to preserve the peace by appointing a commission to meet a similar body appointed by Aguinaldo and to ‘confer with regard to the situation of affairs and to arrive at a mutual understanding of the intent, purposes, aims, and desires of the Filipino people and of the people of the United States.’ Six sessions were held, the last occurring on January 29, six days before the outbreak of hostilities. No substantial results were obtained, the Filipino commissioners being either unable or unwilling to give any definite statements of the ‘intent, purposes, and aims of their people.’ At the close of the last session they were given full assurances that no hostile act would be inaugurated by the United States troops. The critical moment had now arrived. Aguinaldo secretly ordered the Filipinos who were friendly to him to seek refuge outside the city. The Nebraska regiment at that time was in camp on the east line at Santa Mesa, and was guarding its front. For days before the memorable 4th of February, 1899, the outposts in front of the regiment had been openly menaced and assaulted by insurgent soldiers; they were attempting to push our outposts back and advance their line. They made light of our sentinels and persistently ignored their orders. On the evening of the 4th of February, an insurgent officer came to the front with a detail of men and attempted to pass the guard on the San Juan Bridge, our guard being stationed at the west end of the bridge. The Nebraska sentinel drove them back without firing, but a few minutes before 9 o'clock that evening a large body of insurgent troops made an advance on the South Dakota outposts, which fell back rather than fire. About the same time the insurgents came in force to the east end of the San Juan Bridge, in front of the Nebraska regiment. For several nights prior thereto a lieutenant in the insurgent army had been coming regularly

to our outpost No. 2, of the Nebraska regiment, and attempting to force the outpost back and insisting on posting his guard within the Nebraska lines; and at this time and in the darkness he again appeared with a detail of about six men and approached Private Grayson, of Company D, First Nebraska Volunteers, the sentinel on duty at outpost No. 2. He, after halting them three times without effect, fired, killing the lieutenant, whose men returned the fire and then retreated. Immediately rockets were sent up by the Filipinos, and they commenced firing all along the line, . . . and continued to fire until about midnight; and about 4 o'clock on the morning of February 5 the insurgents again opened fire all around the city and kept it up until the Americans charged them and drove them with great slaughter out of their trenches."—

Preliminary Report of Philippine Commission (Exhibit 1: Report, Jan. 31, 1900, v. 1, pp. 174-175).— "They [the insurgents] were promptly repulsed in a series of active engagements which extended through the night of the 4th, and the 5th, 6th, and 10th days of February. Our lines were extended and established at a considerable distance from the city in every direction. On the 22d of February a concerted rising of the Tagalogs in the city of Manila, of whom there are about 200,000, was attempted, under instructions to massacre all the Americans and Europeans in the city. This attempt was promptly suppressed and the city was placed under strict control. The troops composing the Eighth Army Corps under General Otis's command at that time were of regulars 171 officers and 5,201 enlisted men and of volunteers 667 officers and 14,831 enlisted men, making an aggregate of 838 officers and 20,032 enlisted men. All of the volunteers and 1,650 of the regulars were, or were about to become, entitled to their discharge, and their right was perfected by the exchange of ratifications of the treaty on the 11th of April. . . . The months of the most intense heat, followed by the very severe rainy season of that climate, were immediately approaching, and for any effective occupation of the country it was necessary to await both the close of the rainy season and the supply of new troops to take the place of those about to be discharged. Practically all the volunteers who were then in the Philippines consented to forego the just expectation of an immediate return to their homes, and to remain in the field until their places could be supplied by new troops. They voluntarily subjected themselves to the dangers and casualties of numerous engagements, and to the very great hardships of the climate. They exhibited fortitude and courage, and are entitled to high commendation for their patriotic spirit and soldierly conduct . . . No attempt was . . . made to occupy the country, except in the vicinity of Manila, and at such points as were important for the protection of our lines. Such movements as passed beyond this territory were designed primarily to break up threatening concentrations of insurgent troops, and to prevent undue annoyance to the positions which we occupied. On the 11th day of February the city of Iloilo, on the island of Panay, the second port of the Philippines in importance, was occupied. After the capture of Iloilo the navy took possession of the city of Cebu, on the island of Cebu, and on the 26th day of February a battalion of the 23d Infantry was dispatched to that port for the protection of the inhabitants and property. On the 1st of March a military district comprising the islands of Panay, Negros, and Cebu, and such other Visayan islands as might be thereafter designated, to be known as the 'Visayan Military District,' was established and placed under the super-

vision of Brig. Gen. Marcus P. Miller, commanding 1st Separate Brigade, Eighth Army Corps, with headquarters at Iloilo. . . . By the 10th of October the process of changing armies and the approach of the dry season had reached a point where an advance toward the general occupation of the country was justified. At that time the American lines extended from the Bay of Manila to Laguna de Bay, and included considerable parts of the provinces of Cavite, Laguna, and Morong to the south and east of Manila, substantially all of the province of Manila and the southern parts of Bulacan and Pampanga, dividing the insurgent forces into two widely separated parts. To the south and east

EMILIO AGUINALDO

of our lines in Cavite and Morong were numerous bands occasionally concentrating for attack on our lines, and as frequently dispersed and driven back toward the mountains. On the 8th of October, the insurgents in this region having again gathered and attacked our lines of communication, General Schwan with a column of 1,720 men commenced a movement from Bacoor, in the province of Cavite, driving the enemy through Old Cavite, Noveleta, Santa Cruz, San Francisco de Malabon, Saban, and Perez das Marinas, punishing them severely, scattering them and destroying them as organized forces, and returning on the 13th to Bacoor. On the north of our lines stretched the great plain of central Luzon extending north from Manila about 120 miles. This plain comprises parts of the provinces of Manila, Pampanga, Bulacan,

Tarlac, Nueva, Ecija, and Pangasinan. It is, roughly speaking, bounded on the south by the Bay of Manila; on the east and west by high mountain ranges separating it from the seacoast, and on the north by mountains and the Gulf of Lingayen. Through the northeast and central portion flows the Rio Grande from the northern mountains southwesterly to the Bay of Manila, and near the western edge runs the only railroad on the island of Luzon, in a general southeasterly direction from Dagupan, on the Bay of Lingayen, to Manila. In this territory Aguinaldo exercised a military dictatorship, and with a so-called cabinet imitated the forms of civil government, having his headquarters at Tarlac, which he called his capital, and which is situated near the center of the western boundary of the plain. The operations commenced in October involved the movement of three separate forces: (1) A column proceeding up the Rio Grande and along the northeastern borders of the plain and bending around to the westward across the northern boundary toward the Gulf of Lingayen, garrisoning the towns and occupying the mountain passes which gave exit into the northeastern division of the island. (2) An expedition proceeding by transports to the Gulf of Lingayen, there to land at the northwestern corner of the plain and occupy the great coast road which from that point runs between the mountains and the sea to the northern extremity of the island, and to proceed eastward to a junction with the first column. (3) A third column proceeding directly up the railroad to the capture of Tarlac, and thence still up the road to Dagupan, driving the insurgent forces before it toward the line held by the first two columns. These movements were executed with energy, rapidity, and success, notwithstanding the exceedingly unfavorable weather and deluges of rain, which rendered the progress of troops and transportation of subsistence most difficult. On the 12th of October a strong column under General Lawton, with General Young commanding the advance, commenced the northerly movement up the Rio Grande from Arayat, driving the insurgents before it to the northward and westward. On the 18th the advance reached Cabiao. On the 19th San Isidro was captured, and a garrison established; on the 27th Cabanatuan was occupied, and a permanent station established there. On the 1st of November Aliaga and Talavera were occupied. In the meantime detachments, chiefly of Young's cavalry, were operating to the west of the general line of advance, striking insurgent parties wherever they were found and driving them toward the line of the railroad. By the 13th of November the advance had turned to the westward, and our troops had captured San Jose, Lupao, Humingan, San Quintin, Tayug, and San Nicolas. By the 18th of November the advance had occupied Asingan and Rosales, and was moving on Pozorrubio, a strongly intrenched post about 12 miles east of San Fabian. General Lawton's forces now held a line of posts extending up the eastern side of the plain and curving around and across the northern end to within a few miles of the Gulf of Lingayen. On the 6th of November a force of 2,500, under command of General Wheaton, sailed from Manila for the Gulf of Lingayen, convoyed by ships of the Navy, and on the 7th the expedition was successfully landed at San Fabian with effective assistance from a naval convoy against spirited opposition. On the 12th the 33d Volunteers, of Wheaton's command, under Colonel Hare, proceeded southeasterly to San Jacinto, attacked and routed 1,200 intrenched insurgents, with the loss of the gallant Maj. John A. Logan and 6

enlisted men killed, and one officer and 11 men wounded. The enemy left 81 dead in the trenches and suffered a total loss estimated at 300. In the meantime, on the 5th of November, a column under General McArthur advanced up the railroad from Angeles to Magalang, clearing the country between Angeles and Arayat, encountering and routing bodies of the enemy at different points, and capturing Magalang. On the 11th it took Bamban, Capas, and Concepcion, and on the 12th of November entered Tarlac, from which the enemy fled on its approach. Meantime, parties, mainly of the 36th Volunteers, under Col. J. F. Bell, cleared the country to the right of the line of advance as far east as the points reached by General Lawton's flanking parties. On the 17th of November McArthur's column had occupied Gerona and Panique, to the north of Tarlac. On the 19th, Wheaton's troops, and on the 20th, McArthur's troops, entered Dagupan. On the 24th of November General Otis was able to telegraph to the Department as follows: 'Claim to government by insurgents can be made no longer under any fiction. Its treasurer, secretary of the interior, and president of congress in our hands; its president and remaining cabinet officers in hiding, evidently in different central Luzon provinces; its generals and troops in small bands scattered through these provinces, acting as banditti, or dispersed, playing the rôle of "Amigos," with arms concealed.'—*Annual Report of the Secretary of War, 1899, (Message and Documents: Abridgment, 1899-1900, v. 2, pp. 735-741).*—General Young reported to General Otis from Pozorrubio, on November 17: "Aguinaldo is now a fugitive and an outlaw, seeking security in escape to the mountains or by sea. My cavalry have ridden down his forces wherever found, utterly routing them in every instance, killing some, capturing and liberating many prisoners, and destroying many arms, ammunition, and other war impediments. On the 30th, Major March was sent by General Young, as he expresses it, 'on Aguinaldo's trail,' and encountered the forces of the Filipino General Pilar in the Tila Pass."—*Report of Lieutenant-General commanding the army, 1900, pt. 4, p. 331.*—The Americans made an ascent lasting two hours on a steep zig-zag trail winding up the Tila mountains, during which time the enemy kept up an incessant fire, varied by rolling stones upon the heads of the soldiers. When the Americans gained the crest of the hill, the barricades were soon taken. The loss of the insurgents in the fight was fifty-two, including General Gregorio del Pilar. The Americans suffered two killed and nine wounded. Aguinaldo with his wife and a few men were living in a convent at Cervantes, secure in the belief that Tila Pass could not be taken.

1899.—Beginnings of acceptance of American sovereignty.—Treaty with sultan of Sulu.—While the fight with the insurgents of Luzon was still going on, other islands began to resign themselves to the claims of the United States. Negros was the first island to accept American sovereignty. Its people proclaimed allegiance to the United States, and an arrangement was effected by which the island should be under military authority for the time being, with the expectation of popular government ultimately. Meanwhile, after some delay and difficulty, General Otis made a treaty with the sultan of Sulu which brought a large part of the warlike Moros under American control. "By Article 1 the sovereignty of the United States over the whole archipelago of Jolo [or Sulu] and its dependencies is declared and acknowledged. The United States flag will be used in the archipelago and its dependencies, on land and sea.

Piracy is to be suppressed, and the Sultan agrees to co-operate heartily with the United States authorities to that end and to make every possible effort to arrest and bring to justice all persons engaged in piracy. All trade in domestic products of the archipelago of Jolo when carried on with any part of the Philippine Islands and under the American flag shall be free, unlimited, and undutiable. The United States will give full protection to the Sultan in case any foreign nation should attempt to impose upon him. The United States will not sell the island of Jolo or any other island of the Jolo archipelago to any foreign nation without the consent of the Sultan. Salaries for the Sultan and his associates in the administration of the islands have been agreed upon to the amount of \$760 monthly. Article X provides that any slave in the archipelago of Jolo shall have the right to purchase freedom by paying to the master the usual market value. The agreement by General Bates was made subject to confirmation by the President and to future modifications by the consent of the parties in interest. I have confirmed said agreement, subject to the action of the Congress, and with the reservation, which I have directed shall be communicated to the Sultan of Jolo, that this agreement is not to be deemed in any way to authorize or give the consent of the United States to the existence of slavery in the Sulu archipelago."—*Message of the President, Dec. 5, 1899 (Message and Documents: Abridgment, 1899-1900, v. 2, pp. 47-48)*.—The population of the Sulu archipelago was estimated at 120,000, including 20,000 fighting men.

1899-1900.—**Final defeat of insurgents.**—By the end of November, 1899, the government established by the Philippine insurgents in central Luzon and the organized armed forces by which it was maintained had been destroyed, and the principal civil and military leaders of the insurrection, accompanied by small and scattered bands of troops, were the objects of pursuit in the western and the northern parts of the island. That pursuit was prosecuted with vigor and success, under conditions of extraordinary difficulty and hardship, and resulted in the further and practically complete disintegration of the insurrectionary bands in those regions, in the rescue of nearly all the American prisoners and the greater part of the Spanish prisoners held by the insurgents, in the capture of many of the leading insurgents, and in the capture and destruction of large quantities of arms, ammunition, and supplies. There still remained a large force of insurgents in Cavite and the adjacent provinces south of Manila, and a considerable force to the east of the Rio Grande de Pampanga, chiefly in the province of Bulacan, while in the extreme southeastern portions of Luzon, and in the various Visayan islands, except the island of Negros, armed bodies of Tagalogs had taken possession of the principal seacoast towns, and were exercising military control over the peaceful inhabitants."—*Annual Report of United States Secretary of War, Nov. 30, 1900, pp. 5-10*.—A series of successful movements against these groups finally defeated and dispersed them, leaving only an annoying guerrilla warfare, which was gradually suppressed. As fast as the Americans occupied territory, the policy of aiding the inhabitants in the re-establishment of their local governments was followed, and the protection of the United States was promised. Troops were, therefore, distributed through the Philippine islands in over 400 different posts.

1900.—**Cagayan, Sibuta, and Bachi islands**

sold by Spain to the United States. See U.S.A.: 1898 (July-December).

1900.—**Progress toward civil government.**—**Establishment of municipal governments.**—**Appointment of second commission with legislative powers.**—**Second commission's recommendation of civil government for the islands.**—The year 1900 is marked by steady and rapid progress toward civil government for the islands. The first commission, whose chief function was that of investigation and advice, strongly recommended the establishment of territorial government. Meanwhile the first step toward self-government for the Philippines was taken when the municipal governments were organized. The provisions of the law establishing municipalities were framed by a board of which Don Cayetano Arrellano, chief justice of the Philippines, was president. The law provided for the recognition of the existing towns of the Philippines as municipal corporations under the administration of an alcade and a municipal council, who were to be chosen by the qualified electors of the town. These electors must be male persons over twenty-three who annually pay thirty pesos or more of the established taxes, and can read, write, and speak either English or Spanish. This was the beginning of government by the people. "The Schurman Philippine Commission for some reason had been required to report to the secretary of state. The management of the new dependencies was now transferred to the War Department. Elihu Root became secretary of war in 1899, and thereafter until 1904 Philippine affairs were under his personal direction and control. . . . The government of the Philippines as it exists to-day is largely his creation, and his efficient work in establishing and maintaining peace in the Archipelago was given due weight when, in 1913, he was granted the Nobel prize. The president derived his power to govern the territory from his constitutional authority as commander-in-chief of the army and navy, and this power continued after the ratification of the treaty of peace and until such time as Congress assumed jurisdiction and control of the territory. . . . In April 1900, the president appointed the United States Philippine Commission [the second commission], which was designed to supplement the work of the army and establish a civil government which should exist until Congress assumed charge. The members of the new commission were not so well known to the public as those of the Schurman Commission had been. The president, Mr. William H. Taft, of Ohio, had been solicitor-general of the United States and was well and favorably known to the legal profession as a United States circuit judge. Neither of the other members had more than a local reputation. They were, however, all men of high standing in the states from which they came. Mr. Luke L. Wright had been attorney-general of Tennessee. . . . Mr. Henry C. Ide, of Vermont, was a lawyer and had served creditably as chief justice of Samoa during the period of the joint American, English and German protectorate. Mr. Dean C. Worcester was assistant professor of zoology at the University of Michigan and was the only member who had the advantage of any personal knowledge of the islands, having visited them on two previous occasions on scientific expeditions and recently as a member of the Schurman Commission. Mr. Bernard Moses was professor of history at the University of California, and had written several books on Spanish-American history. All these men served their country and the Philippines faithfully and well. Mr. Taft became civil gov-

ernor, secretary of war and president of the United States. Mr. Wright became the first governor-general of the Philippines, the first American ambassador to Japan, and secretary of war during the last days of President Roosevelt's administration. Mr. Ide became governor-general and minister to Spain. Mr. Worcester remained a member of the commission and secretary of the interior until 1913. Mr. Moses, after serving as commissioner and secretary of public instruction, resigned and returned to the University of California. The Instructions which were prepared by Secretary Root [under the direction of President McKinley] for the guidance of this commission constitute a very noble state paper. The general principles therein announced were such as would naturally control in any government for which America, with her traditions, was responsible. . . . Until September 1, 1890, the commission was to devote its attention to . . . investigations. On that date the part of the power of the government which was of a legislative nature should be transferred from the military governor to the commission and be thereafter exercised by it under rules and regulations prescribed by the secretary of war until the establishment of a complete civil central government, or until Congress should otherwise provide. The legislative power thus conferred included the making of rules and orders having the effect of law for raising revenue by taxation, customs, and imposts; the appropriation and expenditure of such funds; the establishment of an educational system and a civil service; the organization and establishment of courts, of municipal and departmental governments, and all other matters of a civil nature for which the military governor was then competent to provide by rules or orders of a legislative character. . . . The commission was seriously embarrassed in its work by limitations upon its legislative power. Many subjects which required consideration were deemed beyond the war powers of the president. There were some strict constructionists who doubted the validity of many things which were being done, even the action of the president in creating the commission. In order to remove such doubts Congress was urged to confirm what had been done and specifically to authorize the commission to enact laws with reference to public lands, mining, franchises, and other matters deemed necessary for the development of the country."—C. B. Elliott, *Philippines to the end of the military régime*, pp. 489, 490-497, 501-502, 524.—Meanwhile the Filipinos had not lost their last hope of immediate independence. Encouraged by the sympathy of many Americans, especially those of the Democratic party, the citizens of Manila, on July 15, 1900, presented an appeal to Congress. It was signed by 2,006 of the most prominent people of Manila.

1900.—Speech of Senator Hoar against subjugation and retention of the islands by the United States. See U.S.A.: 1900 (April).

1900.—Philippine question in American politics. See U.S.A.: 1900 (May—November).

1900.—Adoption of civil service rules. See CIVIL SERVICE REFORM; United States: 1900.

1900.—Problem of the Spanish friars.—One of the first problems which the commission had to face was the question, whether the Spanish friars should be allowed to return, and, if not, the disposition that was to be made of the great tracts of land owned by them. On this matter the sentiment of the Filipinos themselves was greatly divided. On the one hand there were those who regarded the friars as the head and fountain of oppression.—"Perhaps the most deep-seated cause

of Filipino insurrection against Spanish authority was this unchecked growth of ignorant, cruel, and oppressive ecclesiasticism. It was this which weighed most heavily upon the people. It made the mere question of gaining a livelihood difficult, but especially did it strangle intellectual and moral growth. It not only oppressed the Filipinos, but it overawed and dominated the Spanish authorities. It was the power of the mendicant orders which drove out the just Condé de Caspe, and later the well-disposed and clement Blanco, which stimulated and supported the frightful atrocities of the cruel Polavieja during the revolution of 1896. Archbishop Nozaleda, a Spanish monk of the Dominican order, was a leader in urging wholesale and often wholly unjustifiable arrests, which were succeeded by the torture and execution of hundreds of persons. It is difficult for a mind reared in the freedom and culture of modern Europe, or still freer America, to realize the horrible excesses and actual medieval cruelties which were committed in the prisons of Manila and elsewhere in the islands upon Filipino insurgents, or those accused of being in league with them, during the revolution of 1896."—H. Welsh, *The other man's country*, ch. 1.—On the other hand there was the enormous power of organized Catholicism, in the Philippines and in America, as well as in the world at large, which pointed, with not wholly unjustifiable pride, to the accomplishments of the friars in the islands. "The ideals of civilization for the Spanish missionary priests in the Philippines were substantially the same as those of Bacon and Raleigh, of the founders of New England and the founders of New York. In the mind of all, a civilized people was one which lived under settled laws by steady labor, which was more or less acquainted with the material progress made amongst the races of Europe, and, as all would say, which was Christian. The Spanish friars undertook the task of giving such a civilization to the Malays of the Philippines, and no other body of men of any race or any faith have accomplished what they have done. A task of somewhat similar kind has been attempted by others in our own day in the name of Christian civilization but not the Catholic Church. Hawaii has been under control of missionaries from New England for seventy-five years more completely than the Philippines were ever under that of the Spanish friars. The native kings adopted the new creed and enforced its adoption on their subjects by vigorous corporal punishments. The missionaries were abundantly supplied with such resources of civilization as money could buy, and they have grown wealthy on their mission; but what has been the fate of the natives? They have dwindled in numbers to a fourth of what they were. . . . In the Philippines in a hundred and forty years a million of Catholic natives has grown seven fold. In Hawaii under missioners of the world's manufacture a hundred and forty thousand of the same race has shrunk to thirty-eight thousand. Have the promises of the Spanish friars or those of the American ministers been the most truthfully kept? The actual condition of the Catholic population formed by the work of the religious orders should not be judged by the excesses which have marked the present revolution. Many old Christian nations have gone through similar experiences."—B. J. Clinch (*American Catholic Quarterly Review*, v. 24, p. 15).—The point of view of the commissioners on this vexed subject was expressed in a report by Judge Taft, sent to Washington as part of the general report of the commission, bearing date, November 30, 1900:

"Excepting the Moros, who are Moslems, and the wild tribes, who are pagans, the Philippine people belong to the Roman Catholic Church. The total number of Catholic souls shown by the Church registry in 1898 was 6,559,998. To care for these in that year there were in the archipelago 746 regular parishes, 105 mission parishes and 116 missions, or 967 in all. Of the regular parishes all save 150 were administered by Spanish monks of the Dominican, Augustinian, or Franciscan orders. Natives were not admitted to these orders. There were two kinds of Augustinians in these islands, the shod and the unshod. The latter are called Recoletos, and are merely an offshoot from the original order of St. Augustine. By the revolutions of 1896 and 1898 against Spain, all the Dominicans, Augustinians, Recoletos, and Franciscans acting as parish priests were driven from their parishes to take refuge in Manila. Forty were killed and 403 were imprisoned, and were not all released until by the advance of the American troops it became impossible for the insurgents to retain them. Of the 1,124 who were in the islands in 1896, only 472 remain. The remainder were either killed or died, returned to Spain, or went to China or South America. There were also in the islands engaged in missions and missionary parishes, 42 Jesuits, 16 Capuchins, and six Benedictines, and while many of these left their missions because of disturbed conditions they do not seem to have been assaulted or imprisoned for any length of time. In addition to the members of the monastic orders, there were 150 native secular clergymen in charge of small parishes who were not disturbed. There were also many native priests in the larger parishes who assisted the friar curates and they have remained, and they have been and are acting as parish priests. The burning political question, discussion of which strongly agitates the people of the Philippines, is whether the members of the four great orders of St. Dominic, St. Augustine, St. Francis, and the Recoletos shall return to the parishes from which they were driven by the revolution. Colloquially the term 'friars' includes the members of these four orders. The Jesuits, Capuchins, Benedictines, and the Paulists, of whom there are a few teachers here, have done only mission work or teaching, and have not aroused the hostility existing against the four large orders to which we are now about to refer. . . . The truth is that the whole government of Spain in these islands rested on the friars. . . . The civil and military officers of Spain in the island were here for not longer than four years, and more often for a less period. The friars, priests, and bishops, therefore, constituted a solid, powerful, permanent, well organized political force in the islands which dominated policies. The stay of those officers who attempted to pursue a course at variance with that deemed wise by the orders was invariably shortened by monastic influence. Of the four great orders, one, the Franciscans, is not permitted to own property, except convents and schools. This is not true of the other three. They own some valuable business property in Manila, and have large amounts of money to lend. But the chief property of these orders is in agricultural land. . . . The revolutions against Spain's sovereignty began as movements against the friars. . . . Having in view these circumstances, the statement of the bishops and friars that the mass of the people in these islands, except only a few of the leading men of each town and the native clergy, are friendly to them cannot be accepted as accurate. . . . In the light of these considerations it is not wonderful that the people should regard

the return of the friars to their parishes as a return to the conditions existing before the revolution. The common people are utterly unable to appreciate that under the sovereignty of the United States the position of the friar as curate would be different from that under Spain. This is not a religious question, though it concerns the selection of religious ministers for religious communities. The Philippine people love the Catholic Church. . . . The depth of their feeling against the friars may be measured by the fact that it exists against those who until two years ago administered the sacraments of the Church upon which they feel so great dependence and for which they have so profound a respect: The feeling against the friars is solely political. The people would gladly receive as ministers of the Roman Catholic religion any save those who are to them the embodiment of all in the Spanish rule that was hateful. If the friars return to their parishes, though only under the same police protection which the American Government is bound to extend to any other Spanish subjects in these islands, the people will regard it as the act of that Government. . . . The friars have large property interests in these islands which the United States Government is bound by treaty obligations and by the law of its being to protect. It is natural and proper that the friars should feel a desire to remain where so much of their treasure is. . . . It would avoid some very troublesome agrarian disturbances between the friars and their quondam tenants if the Insular Government could buy these large haciendas of the friars, and sell them out in small holdings to the present tenants, who, forgiven for the rent due during the two years of war, would recognize the title of the Government without demur, and gladly accept an opportunity, by payment of the price in small instalments, to become absolute owners of that which they and their ancestors have so long cultivated. With the many other calls upon the insular treasury a large financial operation like this could probably not be conducted to a successful issue without the aid of the United States Government, either by a direct loan or by a guaranty of bonds to be issued for the purpose. The bonds or loans could be met gradually from the revenues of the islands, while the proceeds of the land, which would sell readily, could be used to constitute a school fund."

1901.—Act of the United States Congress increasing army and authorizing enlistment of native troops.—Rejection of proviso of Senator Hoar. See U.S.A.: 1901 (February).

1901 (March).—Congressional grant of power.—Spooner Act.—"On March 2, 1901, Congress took its first halting step toward the performance of its constitutional duty to provide rules and regulations for the new territory. The Spooner Act, however, did little more than approve what the president had done by virtue of the war power and authorize him to continue governing the islands. It provided that 'all military, civil and judicial powers necessary to govern the Philippine Islands acquired from Spain . . . shall, until otherwise provided by Congress be vested in such person and persons and shall be exercised in such manner as the President of the United States shall direct for the establishment of civil government and for maintaining and protecting the inhabitants of such islands in the free enjoyment of their liberty, property and religion.'"—C. B. Elliott, *Philippines to the end of the military régime*, pp. 524-525.

1901 (July).—Establishment of civil government.—Organization of provincial governments.

—Capitulation of Aguinaldo.—Tariff law.—Industrial depression.—“An executive order was . . . issued by the president directing that on and after the fourth day of July, 1901, until otherwise directed, the executive authority in all civil affairs in the government of the Philippines which had been exercised by the military governor should be exercised by the president of the Philippine Commission. Mr. Taft was named as the first civil governor. The power to appoint all civil officers was transferred from the Philippine Commission to the civil governor with the advice and consent of the commission. Although the military governor was relieved of civil duties in the pacified territory, his authority was continued in districts in which insurrection against the authority of the United States existed and in which public order was not sufficiently restored to enable provincial civil governments to be established. The continuance of military government in certain provinces was necessary for another year, but it was finally terminated by the order of President Roosevelt, issued on July 4, 1902, which recited that the insurrection was ended and that civil government had been established throughout the entire Archipelago not inhabited by Moro tribes. . . . Most interesting to the Filipinos was the announcement that the membership of the Commission had been enlarged and that the president had appointed Dr. T. H. Pardo de Tavera, Senor Don Benito Legarda, and Senor Don Jose Luzuriaga, all natives of the Philippines, to fill the new positions thus created. . . . It was also announced that on the first of the following September, the effectiveness of the insular government would be increased by the organization of four executive departments to be known as the Departments of the Interior, Commerce and Police, Finance, and Justice, and Public Instruction, which would be under the control respectively of Commissioners Worcester, Wright, Ide, and Moses.”—C. B. Elliott, *Philippines to end of commission government*, pp. 4-6.—Early in 1901 provincial governments were organized in Luzon, and Mr. Taft set forth on a journey through the islands, upon the invitation of the Filipinos, to organize provincial governments everywhere. “The commission reached the conclusion that it would aid in the pacification of the country; would make the members of that body very much better acquainted with the country, with the people, and with the local conditions, and would help to educate the people in American methods, if the commission went to the capital of each province and there passed the special act necessary to create the provincial government and made the appointments at that time. Accordingly, the commission visited thirty-three provinces. . . . The policy of the commission in its provincial appointments has been, where possible, to appoint Filipinos as governors and Americans as treasurers and supervisors. The provincial secretary and the provincial fiscal appointed have uniformly been Filipinos. It will be observed that this makes a majority of the provincial board American. The commission has, in several instances, appointed to provincial offices former insurgent generals who have been of especial aid in bringing about peace, and in so doing it has generally acted on the earnest recommendation of the commanding officer of the district or province. We believe the appointments made have had a good effect and the appointees have been anxious to do their duty.”—*Second Report of Second United States Philippine Commission*, Dec. 1, 1900-Oct. 15, 1901, pt. 1, pp. 7-20.—See also TERRITORIES AND DEPENDENCIES OF THE UNITED STATES.—The new tariff

for the islands, which the commission had been long engaged in framing, was submitted, in March, to the government at Washington for approval. “In his letter of transmittal Judge Taft says that the proposed bill follows largely the classification of the Cuban tariff, ‘but has been considerably expanded by the introduction of articles requiring special treatment here by reason of different surroundings and greater distance from the markets.’” —*Report of President to Congress concerning the progress of the work of the commission*, Mar. 18, 1901.—The last obstacle to the transference of all governmental power from military to civil authorities was removed when a stratagem, executed with great daring by Brigadier-General Frederick Funston of the American forces, resulted in the capture of Aguinaldo, March 23, 1901. The years of warfare had, naturally, left the islands in a depleted condition.—“The civil government has assumed responsibility for the preservation of order and the maintenance of law throughout the Christian Filipino territory of this archipelago at a time when the material conditions are most discouraging and present every conceivable obstacle to the successful administration of the affairs of 6,000,000 or 7,000,000 people. The war of six years since 1896 has greatly interfered with the regular pursuit of agriculture, which is almost the only source of wealth in the islands. . . . The greatest blow to agriculture has been the loss of the carabao or water buffalo, upon which the cultivation of rice, according to the mode pursued in these islands, is wholly dependent. The war in some degree, and the rinderpest in a much larger degree, have destroyed about 90 per cent of the carabaos; and the natives—never very active in helping themselves—have simply neglected the rice culture, so that now the islands are compelled to spend about \$15,000,000 gold to buy food upon which to live. . . . The cholera has swept over these islands with fatal effect, so that the total loss will probably reach 100,000 deaths. . . . The bane of Philippine civilization in the past was ladronism, and the present conditions are most favorable for its growth and maintenance. . . . It is true that the ladrones, though they live on nothing but cattle and rice stealing, and never attack American soldiers, and prey only upon their own people, do masquerade as insurgents; but they recognize no authority and have no characteristics other than those of banditti. . . . The picture that I have given of the depressed condition of agriculture, and the tendency to ladronize in the Tagalog provinces and in some of the Visayan provinces, does not apply to those provinces in which hemp is the chief product. They are wealthy and prosperous.”—*Report of Governor W. H. Taft (Report of the Philippine Commission, 1902, pt. 1.)*

Schurman, *Philippine affairs*.—W. H. Taft, *Civil government in the Philippines*.—D. C. Worcester, *Philippine islands and their people*.

1901 (August).—Education.—Immediate efforts.—Public schools organized.—“Within two weeks of the capitulation of Manila to our military forces, General Otis personally had selected and ordered modern text-books as the first step in opening schools in the Islands. Eighteen days after Manila fell, seven schools were opened there under the direction of one of our army chaplains, although it was months before we knew the Philippines were to be transferred to us. These acts

had much effect upon the natives, who were wondering what sort of people we were. Non-commissioned officers of the army were assigned as school-teachers, and the teaching of English especially advanced. . . . We continued to go ahead, even more rapidly when Aguinaldo attacked us in February, 1899. Two months after that event, we had an army officer, a Yale graduate, as superintendent of the Manila schools, of which there were then thirty-nine in active operation. . . . Thus, although we were in the very hottest of the insurrection, our army had about a thousand schools crowded with pupils long before the civil government took over the army's task in June, 1901. By the first of the preceding September, General Otis had expended more than twice as much for text-books and supplies as Spain spent for all school charges of every nature during some entire years just preceding 1898 in all the Islands outside of Manila. In the late summer of 1900, Fred. W. Atkinson, one of the most renowned educational experts in the United States, landed in the Islands with the appointment of general superintendent of public instruction, with no directions except to secure progress. An organizer of the first class, he had the Commission pass an organic act upon January 21, 1901, that laid a broad foundation for a thoroughly modern system of schooling in every corner of the Archipelago. . . . One of the first big things done was to send to the United States for a thousand teachers, who had to meet a high standard of requirement. In 1901 they came over in small numbers up to August, when six hundred arrived in one transport. In twenty days they were on their way to their new work, and from that time English became the only medium of instruction. For this regulation, which has been warmly criticized, there were several reasons, all of which are now so buttressed by later events that probably nobody is to be found who would have it altered. First, English, more than any other language, is that of commerce in the Far East, and its use is becoming more general with each day. That it is bound to be the universal tongue of that part of the world cannot longer be disputed. To those who have felt that Spanish should have been continued, the response is that there was no Spanish that could cause serious consideration, among the mass of people. . . . Then it was evident that it would be a number of years before we could permit these people to try to govern themselves, which meant that English was for a long time to be the language of the official world of the Islands, both written and oral, hence the language by which official employment and favor could be procured. The Islands as a whole not only had no tongue, but, what was worse, had many entirely different dialects. It was necessary therefore that they should have some common language if they ever were to become a homogeneous people; and in view of the fact just presented, English was the best language for them, and the eagerness with which they seized the opportunity to acquire it is further evidence of the wisdom and correctness of this position. . . . Under Spain there was a total enrollment of two hundred and fifty thousand pupils. In 1911 it had risen to six hundred and ten thousand."—F. Chamberlin, *Philippine problem*, pp. 80-83.

1902.—Padre Aglipay's secession from Roman Catholic church.—Gregorio Aglipay, an Ilocano, and an ordained priest of the Catholic church, who had taken part in the insurrection, became the source of some trouble in 1902 by founding an independent Filipino Catholic church. Opposition

to his activities threatened to become violent, and Governor Taft was obliged to take a firm stand, as indicated in the final paragraph of his report on the subject.—"I have taken occasion to say, whenever an opportunity occurred, that the insular government desired to take no part whatever in the religious controversies thus arising; that it would protect Father Aglipay and his followers in worshipping God as they chose just as it would protect the Roman Catholic Church and its ministers and followers in the same rights. But that, if the law was violated by either party, it would become the duty of the government to step in and restrain such lawlessness."—Governor W. H. Taft, *Report*, 1902, pp. 39-40.—In 1922, the members of the Independent Catholic church numbered 1,473,506.

1902-1903.—Purchase of friar lands.—In May, 1902, Governor Taft was directed by the secretary of war to visit Rome to confer with the pope on the question of buying the friars' agricultural lands. As a result of this visit the pope gave his approval to the purchase and appointed an apostolic delegate to represent the church in the transaction. After long and protracted discussions, the price for the lands was fixed at \$7,543,000, and the purchase was completed, 1903.

1903-1913.—Moro province.—Renegades subdued.—"The Act of Congress of July 1, 1902, recognized the long-established distinction, based on religion and different stages of development, between the Filipinos, and the non-Christian tribes and Moros, and the consequent necessity for providing different forms of government for the different groups of people. On July 1, 1903, that part of the Archipelago inhabited by the Moros was by the commission organized as a separate province under the name of the Moro Province, with a form of local government which had been worked out by Brigadier-General Davis while in command of the military department. Prior to that time the government was purely military and thereafter military influence was continued by the detail and appointment of army officers to the civil offices. From the organization of the province until the reorganization in 1913, Generals Wood, Bliss and Pershing in turn were in command of the military department while occupying the civil office of governor of the province. During that time nearly all of the subordinate civil offices were also held by army officers. The number, however, was gradually reduced until in December, 1913, when General Pershing resigned, only the position of health officer was held by an officer of the United States Army. The Moro Province which was thus governed directly or indirectly by military officers during fifteen years included nearly all of the islands of Mindanao, the Sulu Archipelago, the Tawi Tawi group, and the other islands south of the eighth parallel except Palawan, Balabac, and certain small islands adjacent thereto."—C. B. Elliott, *Philippines to the end of commission government*, pp. 02-03.—"On March 6-9, 1906, occurred a desperate battle at Dajo Crater, on Sulu Island, between American forces and renegades. On this occasion, at which the writer was present, the entire native force, numbering between 1200 and 1400 Moros, were slain. This was the most complete defeat the Moros have ever suffered."—H. M. Wright, *Handbook of the Philippines*, p. 155.

1904-1912.—Congressional investigation of friar lands.—"In 1910, . . . charges were made by Representative John A. Martin of Colorado that friar lands had been illegally and corruptly disposed of. On June 25, 1910, the House by reso-

lution ordered an investigation. In November, Secretary Worcester and other officials concerned went to Washington and appeared before the committee. The charges of malfeasance appear to have been very recklessly made and were entirely disproved. Nor had lands been disposed of in a manner contrary to the law. Congress in legislating in 1902 [the Friar Lands Act was finally passed in 1904], had provided that grants from the national domain in the Philippines should be in the form of homesteads of not more than 16 hectares to an individual nor more than 1000 hectares to a single corporation. The Commission in disposing of the friar lands had not felt bound by these limitations. The Philippine public domain was property of the United States and subject to disposal under such conditions as Congress had determined, but the friar lands were entirely distinct and were the possession of the Philippine government. Several large tracts were leased to single individuals, including an official, and the Mindoro estate was sold to an American sugar corporation. If made generally, these large disposals would be inimical to the policy of developing small land-owners, but the situation of the Mindoro estate on an uninhabited and undeveloped coast strongly recommended its sale to a corporation with resources sufficient to develop it and encourage the settlement of that island. In view of the criticism which the sale or lease of large tracts had awakened, the administration at Washington instructed the Philippines government [1912] to seek only small lessees and occupants. The policy of the United States to open the public lands of the Philippines to homesteaders has never been successfully carried out by the Philippine government. The population is not naturally migratory and its ignorance and helplessness has prevented the general pre-emption of vacant lands."—D. P. Barrows, *Decade of American government in the Philippines*, pp. 47-48.—In 1904, Taft was succeeded as governor-general by Luke E. Wright, who continued in that office until 1906.

1905.—Report of committee on methods of dealing with the sale and use of opium. See OPIUM PROBLEM.

1906.—Change in constitution of provincial boards.—"The convention of provincial governors held in Manila in October, 1906, recommended that the then existing law providing that provincial boards shall be composed of a provincial governor elected by the municipal councilors and vice-presidents of the various municipalities of the province and a provisional treasurer and a third member appointed by the executive be so amended as to permit of the election of the provincial governor and third member by direct vote of the people. This recommendation was submitted to the Secretary of War, and on receiving his approval thereof the provincial government act was amended accordingly. This innovation in the constitution and selection of provincial boards has been an advantage both to the insular and to the local government. On the one hand it has removed all cause for friction between the provincial governor elected by the people and the two members of the board named by the executive. On the other it has imposed upon the provincial governor and the third member the responsibility for the well-being of the province and has removed from the insular government much of the responsibility for conditions purely of local concern."—*Report of the Philippine Commission, Dec. 31, 1907 (Message and Documents: Abridgment, 1907, pp. 799-807)*.—In the early part of 1906 Henry C. Ide was made governor-general, serving only until September of

that year, when he was succeeded by James F. Smith, who held the office until 1909.

1907.—First election.—Opening the first legislature.—July 1, 1902, a bill was passed by Congress providing for a Philippine legislature. It was to consist of not less than fifty nor more than one hundred members, and it was to be elected when peace had been established, a census had been taken and two years of peace had elapsed. "On September 8, 1902, the Commission certified to the President that the insurrection, except in the Moro country, had ceased and that 'a condition of general and complete peace had been established.' Thereupon on September 25, President Roosevelt, 'being satisfied of the facts therein stated,' directed that the Commission should take the census in accordance with the provisions of the Act of Congress. It required three years to take the Census and publish the results, the last volume being published on March 27, 1905. On the following day Governor-General Wright [who had succeeded Taft when the latter resigned to become secretary of war] issued a proclamation calling attention to the fact and to the provisions of the Act of Congress which required that the conditions of general and complete peace should continue for two years more before the election could be called. . . . The election was called for July 30, 1907."—C. B. Elliott, *Philippines to the end of commission government*, pp. 16-19.—"In January, 1907, the Philippine Commission passed the Philippine election law. In framing this law the election codes of Massachusetts, New York, the District of Columbia, and California were consulted and features adopted from each, modified in such a way as to meet insular conditions and to avoid the mistakes and abuses that have arisen in some provincial and municipal elections in the islands. The aim has been to provide a law sufficiently explicit and not too complicated for easy comprehension. Every effort has been made to afford the necessary safeguards and machinery to insure purity, secrecy, certainty, and expedition, without causing too great a drain upon the resources of municipal and provincial governments. The prominent features of this law as amended are the divisions of those provinces not inhabited by Moros or other non-Christian tribes into 78 assembly districts, each province to constitute at least one district and the more populous being divided into more districts, in the ratio of 1 to every 90,000 of population and major fraction thereof remaining. In accordance with this apportionment there will be 80 delegates, two of whom will represent the city of Manila, which is considered as a province, within the meaning of the act of Congress, and divided into two districts."—*Report of the Chief of the Bureau of Insular Affairs, Oct. 31, 1907 (Message and Documents: Abridgment, 1907, p. 781)*. It was in accordance with this law that the first Philippine Assembly was elected, July 30, 1907. The two houses of the new Philippine legislature met for the first time on October 11, 1907. Secretary Taft made the journey again to the islands in order to be present at the opening session. "As announced by provincial governors the elections for assemblymen resulted in the election of 32 Nacionalistas, 4 Independistas, 7 Inmediatistas, 16 Progresistas, 20 Independents, and 1 Centro Catolico. The total number of voters registered for the assembly elections was 104,966. . . . The delegates to the Philippine assembly, in accordance with the call of the governor-general as prescribed by the act of Congress, met at the Grand Opera House in the city of Manila on the 16th day of October at 9 o'clock A. M."—*Report of the Philippine Commission, Dec.*

Maps prepared specially for the **NEW LARNED**
under direction of the editors and publishers.

31, 1907 (*Message and Documents: Abridgment*, 1907, pp. 310-811).—Sergio Osmena, a young man who had already shown great ability as a provincial governor, was selected as the first speaker or presiding officer of the assembly. Secretary of War Taft, after his return from the islands where he opened the assembly, made an extended report to the president. He mentioned, in particular, the old Federal party which stood for peace under the sovereignty of the United States; the Nacionalistas which stood for independence; the Independistas, the Immediatistas, Intransigentes, and others with similar aims. In conclusion he stated: "As a shibboleth—as a party cry—immediate independence has much force, because it excites the natural pride of the people; but few of their number have ever worked out its consequences, and when they have done so they have been willing to postpone that question until some of the immediate needs of the people have been met. I may be wrong, but my judgment is that the transfer of real power, by giving to the people part of the legislative control of the Christian provinces, sobers their leaders with the sense of responsibility and teaches them some of the practical difficulties of government. . . . I do not for a moment guarantee that there will not at times be radical action by the Assembly, which cannot meet the approval of those who understand the legislative needs of the Islands, but all I wish to say is that the organization and beginning of the life of the Assembly have disappointed its would-be critics and have given great encouragement to those who were responsible for its extension of political power."—*Special Report of William H. Taft, Secretary of War, to the president, on the Philippines, Jan. 23, 1908 (60th Congress, 1st Session, Senate Document, no. 200)*.

1907-1909.—Free trade for islands.—August 6, 1907, the Payne and Colton Bills became law, and the markets of the United States were opened to the Philippine islands. This came as the culmination of years of determined effort on the part of Mr. Taft as civil governor, secretary of war, and later as president. In 1909, Cameron Forbes became governor-general, serving until 1913.

1911.—Recent volcanic activity.—Destructive typhoons.—"The Philippines are of volcanic formation. Activity has diminished in historic times and losses from eruption and earthquake are seemingly less than in earlier centuries. There are, however, no less than twelve volcanoes still more or less active. Of these the most notable is Mayon, which was in eruption at least twenty-five times in the nineteenth century, and next in activity is Taal. In 1754 this volcano erupted with violence and destroyed the towns of Taal, Lipa and Tanawan, which at that time were built on the shores of the lake in the midst of which the volcano rises. From that date, while constantly active and an object of great interest, Taal volcano inflicted no damage until the night of January 30, 1911, when after some hours of premonitory quaking and exploding it suddenly erupted with terrific force, emitting deadly blasts of gas and dropping masses of scalding mud for miles southward. The light of incandescent gases was witnessed at Manila, 40 miles away, and the explosion was heard at Dagupan, 160 miles distant. Numbers of villages about the lake were utterly destroyed and at least 1300 people perished. The extent of the tragedy was not at first appreciated at Manila, until adventurous officials traversed the locality and discovered hundreds of half buried bodies among the ruined villages. Then relief forces were sent, including constabulary and Red Cross representatives, and attention was given to such injured as survived.

The following year the government established a seismological station on the shore of the lake to observe future phenomena and give warning of danger."—D. P. Barrows, *Decade of American government in the Philippines, 1903-1913*, pp. 47-48, 51.—In 1897, the islands were swept by a typhoon, which destroyed several towns. The loss of life was estimated at 6,000, of whom 400 were Europeans. This was followed on October 12 by a cyclone which destroyed several villages and caused further loss of life.

1913-1917.—Under Democratic administration.—Filipinization.—Jones Act.—The American government in the Philippines had been established by Republicans in the face of Democratic opposition. Throughout the long Republican régime the Democrats had stood as champions of Philippine independence. When, therefore, in 1913, a Democratic administration came into power, there was a thorough overhauling of the Philippine government with a view to the speedy attainment of independence. The first step taken by the Wilson administration in regard to the islands was to allow the Filipinos a majority of the commission, or upper house. The second was the passage of the Jones Act which became the fundamental law of the islands. It was approved in August, 1916. Under its terms the Christian and civilized provinces were permitted to elect both a Senate and a House. The governor-general was authorized to appoint representatives for the non-Christian portions of the islands. The Filipino legislature was given legislative control over the whole archipelago. (See U. S. A.: 1916 [August]: Philippine [Jones] Act.) "For the first time a legislative measure affecting the Filipino-American relationship received Philippine sanction. The Philippine Legislature had time and again petitioned for the enactment of the law. Resolutions after resolutions had been adopted by the Philippine Assembly asking for its passage if no more radical measure could be enacted. The Filipino Resident Commissioners had worked for the same thing. The Filipino people endorsed the measure in numerous public meetings, in resolutions passed by provincial boards and municipalities and ratified that endorsement when they returned the majority party in power.—M. M. Kalaw, *Self-government in the Philippines*, p. 15.—"The Philippine Government Law of 1916 describes itself as an act 'to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands and to provide a more autonomous government for those islands.'" The enacting clause is preceded by the following preamble:

"Whereas it was never the intention of the people of the United States in the incipency of the war with Spain to make it a war of conquest or for territorial aggrandizement, and

"Whereas it is, as it has always been, the purpose of the people of the United States to withdraw their sovereignty over the Philippine Islands and to recognize their independence as soon as a stable government can be established therein, and

"Whereas for the speedy accomplishment of such purpose it is desirable to place in the hands of the people of the Philippines as large a control of their domestic affairs as can be given them without, in the meantime, impairing the exercise of the rights of sovereignty by the people of the United States, in order that, by the use and exercise of popular franchise and governmental powers, they may be the better prepared to fully assume the responsibilities and enjoy all the privileges of complete independence: Therefore, etc.

"This preamble was attached to the statute for

reasons purely political. It has no legal significance. . . . The law makes very substantial changes in the form of the Philippine government and imposes additional responsibilities upon the Filipinos. The appointive power of the president is somewhat restricted, but that of the governor-general is greatly enlarged, although his appointments are subject to confirmation by the Philippine Senate. He has ceased to be the presiding officer of the Upper House of the Legislature. But the principal changes are in the legislative department. The United States Philippine Commission and the Philippine Legislature as constituted under the Civil Government Law of 1902 are abolished and they are succeeded by a new body known as the Philippine Legislature, composed of an elective Senate and House of Representatives, with jurisdiction over the entire Archipelago. An elective Senate slightly diluted by executive appointees to represent the uncivilized regions takes the place of the former upper house of the legislature, which was composed entirely of the appointed members of the Philippine Commission. The old division of the islands into Christian, non-Christian and Moro territory has disappeared. The Archipelago is now divided into twelve senatorial and ninety representative districts. Each senatorial district is entitled to two elective senators who must be qualified electors, over thirty years of age, able to read and write either Spanish or English, residents of the Philippines for at least two years, and of the district for one year immediately prior to the election. Each representative district is entitled to one representative, who must be a qualified elector, over twenty-five years of age, able to read and write Spanish or English, and have been a resident of the district for at least one year immediately prior to the election. Although the entire territory of the islands is brought under the jurisdiction of the new legislature, that part formerly under the exclusive control of the commission is not granted the privilege of electing its representatives. As it would have seemed a trifle too absurd to grant the franchise to the Moros and wild men, Congress provided that the governor-general shall appoint without the consent of the Senate and without restriction as to residence senators and representatives who will in his opinion best represent the districts included in that territory. . . . The members of the first new Philippine Legislature were required to be elected by the electors having the qualifications of voters under the existing Philippine law. But thereafter and until otherwise provided by the Philippine Legislature the right to vote is extended to

“Every male person who is not a citizen or subject of a foreign power, twenty-one years of age or over (except insane and feeble-minded persons and those convicted in a court of competent jurisdiction of an infamous offense since August 13, 1898), who shall have been a resident of the Philippines for one year and of the municipality in which he shall offer to vote for six months next preceding the day of voting, and who is comprised within one of the following classes.

“(a) Those who under existing law are legal voters and have exercised the right of suffrage.

“(b) Those who own real property to the value of 500 pesos, or who annually pay 30 pesos or more of the established taxes.

“(c) Those who are able to read and write either Spanish, English, or a native language.’ . . . The ability to read and write a dialect alone implies such limited educational qualifications as to have no particular value. The extension of the franchise by the new law increases the number of

voters from about two hundred fifty thousand to approximately six hundred thousand and the additions are from those who are too ignorant to qualify under the former law. . . . The Philippine Legislature now has full control over the question of suffrage. The powers of the governor-general are now clearly defined. He is to be appointed by the president of the United States with the advice and consent of the United States Senate, holds office at the pleasure of the president and is vested with the supreme executive power and made responsible for the faithful execution of the laws. He is charged with the duty of supervising and controlling all the departments and bureaus of the government and is commander-in-chief of any locally created armed forces and militia. He appoints, subject to confirmation by the Philippine Senate, all officers whose appointment is not otherwise provided for. He must within ten days after the convening of each regular session of the legislature submit a budget of receipts and expenditures of the government as the basis for the annual appropriation bill. When necessary to prevent or suppress lawless violence or insurrection, or repel invasion, he may summon the *posse comitatus*, call out the militia, or call upon the military and naval forces of the United States. When the public safety requires it, he may suspend the writ of *habeas corpus* or place the islands or any part thereof under martial law. When this power is exercised he must at once inform the president of the United States of the facts and circumstances and the latter may modify or vacate his orders. It is provided that the governor-general shall make an annual report of the transactions of the government through “an executive department of the United States to be designated by the President.” For the first time in the history of the American administration the governor-general is given the power to veto an act of the legislature or any item thereof. Should both houses of the legislature by a two-thirds majority of the members pass a bill over the veto it then goes to the president, whose approval or veto is final. The Philippine Legislature, like its predecessors, is required to report all laws enacted by it to Congress, which reserves the power to annul them. The president must also appoint a vice-governor, an auditor and a deputy auditor. The vice-governor, who must be secretary of public instruction and have control over education and health, is authorized to exercise all the powers of the chief executive in the event of a vacancy, or the disability or temporary absence of the governor-general. . . . During the commission régime there were four executive departments, the heads of which were appointed by the president by and with the advice and consent of the Senate. Under the new law the Department of Public Instruction only is required to be retained and it must contain the Bureaus of Education and Health and such others as may be assigned to it. All the other executive departments are placed under the control of the Philippine Legislature, which may increase the number or abolish any or all of them, or make such changes in the names and duties thereof as it sees fit. All executive functions must be directly under the governor-general or within one of the departments under his supervision. The Act of Congress creates one new bureau to be known as the Bureau of non-Christian Tribes, which shall have general supervision over the public affairs of the inhabitants of the territory represented in the legislature by appointive senators and representatives. The heads of the departments other than that of public instruction are to be appointed by the governor-general instead of the

president, as heretofore, and confirmed by the Philippine Congress. . . . The new legislature is directed to elect two resident commissioners to the United States 'who shall be entitled to an official recognition as such by all departments.' This provision is substantially the same as in the former law and leaves them dependent upon the courtesy of the House of Representatives for the privilege of a seat and the right to speak in the house. . . . The legislature is specifically authorized to modify or repeal all laws relating to revenue or taxation in effect in the islands, with the following limitations as to the tariff. It will be remembered that there are two tariff laws, one an Act of Congress regulating trade between the United States and the Philippines, the other a Philippine tariff law regulating trade between the islands and other countries. The law we have been considering contains the following provision: 'While this act provides that the Philippine government shall have authority to enact a tariff law, the trade relations between the islands and the United States shall continue to be governed exclusively by laws of the Congress of the United States: *Provided*, that tariff acts or acts amendatory to the tariff of the Philippine Islands shall not become law until they shall receive the approval of the President of the United States.' . . . The judicial system is unchanged. But the salary of the chief justice is reduced to eight thousand dollars and that of an associate justice to seven thousand five hundred dollars per annum. The salary of the governor-general is fixed at eighteen thousand dollars, with the right to the use of the official residences. The vice-governor is to receive ten thousand dollars, the auditor six thousand dollars and the deputy auditor three thousand dollars per annum. . . . There is a difference of opinion as to the wisdom of some of the provisions of this law. It seems to me that it was unwise to extend the suffrage, and it would have been safer to vest the appointive power in the governor-general absolutely. . . . A weak and complaisant chief executive will be inclined to win cheap popularity by signing all bills which are presented to him. A strong governor-general who uses his veto power fearlessly and conscientiously will save the country from the consequences of many mistakes, but he will be anathema to the people he serves. It is to be regretted that Congress did not follow the custom of the other powers and fix a definite term of office for the governor-general and vice-governor. Had they been given four-year terms expiring in the middle of the presidential term the government would have been more stable and there would have been less temptation for the president to treat the positions as rewards for political services. The new law has not changed the nature of the government or the legal relation between it and the United States. The Philippines are a possession and, in an international sense, a part of the United States. The government is neither sovereign nor quasi sovereign; it is an agency of Congress and subject to its control. Its authority is derived from the orders of the president before Congress acted and the subsequent Acts of Congress. Within the limits of its authority it is a complete governmental organism with executive, legislative and judicial departments exercising the functions commonly assigned to such departments in a constitutional republic. . . . Governor-General Harrison appointed Hadji Butu of Jolo, one of the advisers of the Sultan of Sulu, a member of the Senate, and Datu Piang, a Moro from Cotabato, and a prominent Igorot from the Mountain Province, members of the House of Representatives, to represent the

districts included in what was formerly called the non-Christian territory. Such appointments seem very absurd, but it must be remembered that these men are in fact recognized leaders of their people. The last time I saw Datu Piang he stood digging up the sand with his toes while soliciting government aid to retrieve one of his wives who had run away from the over-populated home. Nevertheless, he will represent the people in a much more real sense than will many of the elected legislators. What Datu Piang wills is, and for years has been, the law for many Moros who inhabit the Cotabato Valley. The legislature was duly organized on October sixteenth. Quezon became president of the Senate, and Osmena speaker of the House of Representatives. . . . The Act of Congress provided that the existing executive departments should continue until changed by the new legislature. The change was promptly effected. The old departments, with the exception of that of public instruction, which Congress required to be retained, were abolished, and new and additional ones created, under the names of the Departments of the Interior, Commerce, Agriculture, Treasury, Transportation and Communications, and Public Resources. The new office of assistant secretary for each department was created and Filipinos were appointed secretaries and assistant secretaries, the aggregate salaries being about what had been paid formerly. The governor-general, the vice-governor, the auditor and certain members of the Supreme Court are the only Americans who hold high office in the Philippine government. . . . Few members of the upper classes who do not hold or aspire to office seriously claim that the people are ready to govern themselves. But they express their views in a decided undertone. They are very uncertain as to what the future will bring forth, and they are not seeking to qualify as patriots or martyrs. They have a vivid recollection of the confiscations and compulsory contributions which were levied upon them during the brief period of Aguinaldo's ascendancy. . . . There is also reason to believe that some at least of those who have been most active in the independence propaganda do not desire that it be too promptly successful. These men found it a popular party shibboleth and encouraged it until in some localities it got beyond their control. One of the most prominent of the Nationalist leaders once informed me that his constituents were able to grasp the simple idea of absolute independence, but that they could not comprehend the complicated arrangements involved in an autonomous government under American supervision, and that he was advocating independence in the hope of obtaining a government similar to that of Canada. They were aiming at the stars in the hope of reaching the high hills."—C. B. Elliott, *Philippines*, pp. 428-442.

1914-1921.—Recreational facilities. See RECREATION: 1014-1021: Recreational facilities, etc.

1917-1918.—Industrial expansion.—Philippine bank fiasco.—Effect of World War.—The high-water mark of the foreign commerce of the Philippine Islands was reached in 1917. "With 1916 and its abnormal war demands and war prices, a period of febrile business prosperity began; and, in the intoxication of magic profits and unprecedented commerce, part of the government seemed to lose all caution. Sugar was one of the wands of wizardry then making rich every person it touched. The Islands are excellently adapted to the raising of sugar. The government bent itself to encourage sugar production. To build railroad side tracks to this end was well enough, but to lend the funds of the Philippine National Bank, and to deplete the gold reserve for the benefit of ill-considered enter-

prises, was foolish business. From the time when, in the teeth of the foreign bankers, the currency of the Islands had been stabilized and unified, a reserve of \$50,000,000 had been maintained in New York to support the peso at par. The result was that, year after year, Philippine exchange was immovable; a peso was worth fifty cents, as it should be, no more, no less. But when the passion for extending the business of the Islands by encouraging new sugar centrals took hold upon the government, hungry eyes began to be turned upon the \$50,000,000 gold reserve. Why should it lie there all these days idle when capital invested in the Philippine sugar business was bringing 100 per cent. profit and developing the resources of the country? In an evil hour, the management laid hands upon this indispensable ballast and heaved it overboard. In a short time exchange began to go against the Philippines, and by February 1, 1921, the peso was at a discount of 12½ per cent. . . . At first there was a duty on Philippine products sent to the United States, being the surviving ghost of the Spanish galleon idea. For a time this, also, hindered trade. In 1909 most of it was removed; in 1913 the last traces of it vanished; and thereafter, under the stimulus of free trade and with the help of American capital, the commerce of the Philippines shot up to astonishing prosperity, most of it being with the United States. In 1908 there were 123 vessels in the foreign trade that had a Philippine registry. In 1919, 117 foreign trading-vessels with a Philippine registry entered the port of Manila alone. . . . In 1900 the net tonnage of vessels entering Philippine ports from the United States and foreign countries was 670,337; in 1919 it had risen to 1,711,881. . . . When the great commercial revival came, the genius of it was at first all foreign; Americans, British, Germans, Chinese reaped its goodly profits. After 1909 a great change came in the native attitude toward business as a career and great business as a worthy occupation. Young Filipinos were trained to it; Filipino capital came out of its agrarian haunts and went forth with the rest. In ten years (1910-1920) Filipino capital invested in business increased 2000 per cent.—C. E. Russell, *Outlook for the Philippines*, pp. 149, 167-169.—“The influence of the war on Philippine trade was very marked. Not only was there no trade with enemy countries of central Europe, but that with the friendly powers of the Continent was much reduced. . . . On the whole, the trade with oriental countries, where the haul was shorter and the risk to shipping less, showed marked increases. That with China was materially greater than for 1916 and nearly double what it was for 1915. . . . The trade with Australasia, always important, was nearly doubled. At the same time the trade with the British East Indies fell off slightly, with no apparent reason except that shipping conditions were not favorable. Trade with Japanese China, that is, the Kwangtung Territory, underwent some changes, doubtless owing to modifications in administrative policies. Imports from this territory increased somewhat, while the exports declined. Canada took less of Philippine products during the year, but her small import trade with the islands increased more than 100 per cent. . . . Approximately two-thirds of all the exports were sold in the United States and three-fifths of all the imports were purchased there.”—J. F. Boomer, *Philippine islands (Supplement to United States Commerce Reports, Dec. 26, 1918, p. 5)*.—“By cutting off the supply of European laces and embroideries, the world war enabled the dexterous Filipinos to show what they could do. With their ten years of public school training in

lace and embroidery work, the pupils and former pupils began supplying the American demand for hand-made waists and lingerie. Philippine designs became the style, and the export of hand-made waists and lingerie from the Philippine Islands jumped from a few thousand dollars' worth in 1912 to a value of more than \$4,500,000 in 1918. . . . The war also gave a great impetus to the gardening and food-production campaign, which the Bureau of Education, in conjunction with the Bureau of Agriculture, had been pushing since 1908. Corn production was quadrupled, rice production was increased, and the growing of wholesome vegetables became general among the families having children in the public schools. The primary schools, which place special emphasis on practical farming, have been the prime factor in civilizing the Moros and in inducing the mountain peoples to give up their roaming life, to form settled villages, and to become peaceful farmers. The varied diet which now has become general throughout the public-school towns of the archipelago has practically eliminated *beri beri* from these communities. In order to complete the development of this public school system, tried and tested through twenty years of strenuous evolution, Dr. Marquart, the Director of Education, and the Hon. Sergio Osmena, leader of the Filipino people and Premier of the present administration, in 1918 worked out a new educational program and secured a \$30,000,000 appropriation to put it through. By this plan it is contemplated that primary education for every Filipino child of school age will be a realized fact by 1923. This large sum is a continuing appropriation, in addition to the regular public schools appropriation, which averages \$10,000,000 annually. So universal education has been attained, and one of the best school systems of the world developed within twenty-five years of the American entrance into these Islands. It is a miracle of American efficiency, American ideals, and Filipino co-operation. The Philippine public school system is the finest fruit of American democracy produced outside the favoring clime of the United States. It was the marvel of the International Educational Congress at the Panama Pacific Exposition of 1915.”—O. G. Jones, *Uncle Sam's "Mandate" in the Philippines (New York Times Current History, Apr., 1921)*.—Francis Burton Harrison was governor-general in this period. He was appointed by President Wilson in October, 1913, and served until 1921.

1918-1921.—Extension of native rule.—Council of state.—Continued agitation for independence.—General Wood's investigation and report.—“With the consent and co-operation of Governor-General Francis Burton Harrison, and doubtless with the approval of his principal in the White House, the Filipinos promptly began to obtain by interpretation and in practice a control over the executive department greatly in excess of that granted them by law. They did this by restricting the free exercise of the executive powers of the Governor-General to matters which concerned the ‘sovereignty’ of the United States in the Philippines. As to domestic affairs, nine times out of ten, Mr. Harrison accepted, or at least acted in accordance with, the theory that the Governor-General should exercise his legal authority only upon the advice of the representatives of the Filipino people. Eventually this advice was received officially through the medium of a ‘Council of State,’ composed of the heads of both houses of the Legislature, the chiefs of the executive departments, and the Governor-General. The Filipinos practically established the fundamental that all of

the members of this body, save the Governor-General and the Vice-Governor, were responsible to the Legislature and not to the chief executive. In short, so far as internal affairs were concerned, a system of cabinet, or responsible government was erected upon the substructure of the Jones Act. Furthermore, there was established by law a 'Board of Control' composed of the Governor-General and the heads of the two legislative chambers. Into its hands was placed the management of all the economic enterprises in which millions were being invested at that time—the Philippine National Bank, the Manila Railroad, cement plants, coconut oil refineries, sugar centrals, and so forth. This device prevented the enormous executive powers involved from being lodged in the regular departments of the Government, where, legally, they would have been subject to the ultimate control of the chief executive. The Filipino leaders were taking no chances upon the sort of Governor-General who might succeed Mr. Harrison. Whoever he might be, he would find his hands securely tied."—R. Hayden, *Legal power granted Filipinos makes America's position weak* (*Christian Science Monitor*, Aug. 7, 1923).—"On November 1, 1918, the Philippine Legislature created a Commission of Independence selected from among its members to consider and report to the Legislature the ways and means by which immediate independence might be negotiated, the best guarantees of the stability and permanence of independence, and the ways of organizing 'in a speedy, effectual and orderly manner a constitutional and democratic internal government.' The Commission after a time advised that a special mission be sent to the United States to plead for immediate separation. Forty Filipinos, prominent in public life or in business, agriculture or labor, made up the Mission. Manuel Quezon, who had been Commissioner for the Philippines to Washington, was chairman; one of the leading members was the president of the Democratic or Opposition party. About the time it sailed for the United States the Legislature adopted a 'Declaration of Purposes,' to express the reasons for sending it and be a message to the government of the United States. . . . The Mission proceeded to Washington to call upon President Wilson, but he was in Paris at the Peace Conference. He delegated Secretary of War Baker to represent him and to read for him to the Mission a letter in which he expressed sentiments of sympathy and good-will, and asked the Secretary to speak for him. Secretary Baker said: 'I know that I express the feelings of the President—I certainly express my own feelings, I think I express the prevailing feeling in the United States—when I say that we believe the time has substantially come, if not quite come, when the Philippine Islands can be allowed to sever the merely formal tie remaining and become an independent people.'"—C. E. Russell, *Outlook for the Philippines*, pp. 325-326, 328.—President Wilson in his message to Congress, Dec. 7, 1920, called attention to the fact that the Philippines had succeeded in maintaining stable government since the last action of Congress in their behalf and "have thus fulfilled the condition set by the Congress precedent to a consideration of granting independence to the islands." Mr. Wilson expressed his belief that it is "now our liberty and our duty to keep our promise to the people of those islands by granting them the independence they covet." That session of Congress did not act on his suggestion. There was conflicting evidence which could not be ignored; and, hence, on March 20, 1921, President Harding appointed Gen. Leonard Wood, and W. Cameron Forbes as a commis-

sion to go to the Philippine islands, to study the conditions and to report. On March 23, Secretary of War Weeks gave General Wood his instructions, stressing the importance of the mission, as follows: "The decision of the question thus arising is of momentous importance, involving, as it may, the very life of the Filipino people as a people and the reputation and credit of our own country. Even if it were possible hereafter to correct an error now made, it would be difficult to measure the cost of the correction." The special mission arrived in Manila, May 4, 1921. After four months in the islands a report was made, signed Oct. 8, 1921. In this report, the commissioners noted the marvellous capacity for progress shown by the Filipinos, their thirst for education, and other fine qualities; but reported a decided retrogression in efficiency in most of the departments of government during the years of Filipinization (1914-1921). They considered that the blame for this should rest not so much on the Filipinos themselves as on the governor-general (Harrison), for failure to make the right appointments and to exercise proper supervision. In particular, the commissioners mentioned the deterioration of the courts, the inefficiency of the land-office, the need of more American teachers, the retrogression of the Bureau of Science, and the health service, the closing of the School of Tropical Medicine, the increased rate of taxation, and a generally bad financial condition. With the comparative proximity of Japan to the islands, the complications that might ensue from the above conditions were pointed out by many. The report of the commissioners concluded with the following recommendations: "1. We recommend that the present general status of the Philippine Islands continue until the people have had time to absorb and thoroughly master the powers already in their hands. 2. We recommend that the responsible representative of the United States, the Governor General, have authority commensurate with the responsibilities of his position. In case of failure to secure the necessary corrective action by the Philippine Legislature, we recommend that Congress declare null and void legislation which has been enacted diminishing, limiting, or dividing the authority granted the Governor General under Act No. 240 of the Sixty-Fourth Congress, known as the Jones bill. 3. We recommend that in case of a deadlock between the Governor General and the Philippine Senate in the confirmation of appointments that the President of the United States be authorized to make and render the final decision. 4. We recommend that under no circumstances should the American Government permit to be established in the Philippine Islands a situation which would leave the United States in a position of responsibility without authority. LEONARD WOOD, Chairman, W. CAMERON FORBES, October 8, 1921."—*Report of the Special Mission on Investigation of the Philippine islands to the secretary of war (pamphlet)*, p. 46.

1921.—Philippines as a party issue in the United States.—Social problems.—Sanitation.—"Since their acquisition by the United States the Philippine Islands have suffered from an access of politics. Primarily, they have to some extent been the shuttlecock of American party politics, in the sense that they have been used as an issue in attempts to further factional interest in the United States, often without real regard for the interests of the Filipinos. . . . There are two Philippines. One is the Philippines of Manila, Iloilo, and Cebu: which has representation before Congress, on the Commission, on the Insular Supreme Court; which elects its own governors and Assembly, and talks

about independence. The other Philippines contains people of a different race, who practice a different religion, have different manners and customs; who live under a different form of government, and who have never thought of independence in the accepted political meaning of the term. This is that part of the archipelago officially denominated Moro Province."—T. F. Millard, *America and the Far Eastern Question*, pp. 404, 415, 488.

—For much of the race antagonism which has developed in the Philippines, a number of writers blame the social standards of the American women who came there to live after the establishment of peace. "Men who have lived there since the days of Spanish rule, tell of a time, just after the suppression of Aguinaldo's insurrection, when for a few months there existed a feeling of perfect good will. With the horrors of war so fresh in the memory of both, Americans and Filipinos fraternized together. . . . Americans attended parties given by the prominent Filipinos and danced with the wives and daughters of their hosts. For a time they were on a social equality. . . . Enter then, the American woman. Peace had been secured and wives came out to join their husbands. At once another campaign against the Filipino began. The social barriers set up by the American woman were quite as impregnable as those their hero husbands had built against the insurgents. . . . The American man, as usual, allowed his wife to regulate his social affairs, and as a result no Filipino is admitted to the clubs, and there is no place in Manila where the two races can meet socially on an equal footing. . . . Herein lies the task for some American woman in Manila who wants to do her country a real service. Let her turn her attention to breaking down the social barriers which the others have erected. One woman with tact and diplomacy might do a great deal toward bringing the two peoples together. If she could accomplish it, even in a small way, she would have done more than all the American officials in the islands can do toward settling the Philippine question."—C. Crow, *America and the Philippines*, pp. 230-231, 233-234.

—"It can not be said that the Americans in the Philippines have been or are tactful in their manner of dealing with the question of independence or the Filipino people generally. . . . Socially, we have imitated the worst in other ruling white races. We have set up a pale for the Filipino. . . . No Filipino can belong to a Manila club. He may hold Oxford or Harvard degrees and the highest of Anglo-Saxon and Spanish cultures may have gone into his making, but the brown of his skin casts no shadow on the pure white of the Elks Club, social arbiter of Manila's élite. The clerk in a shop on the Escolta—which is, by the way, the very apotheosis of Main Street—who has but freshly got his discharge from army ranks soon enough develops an austere electricism in his social relationships."—N. Peffer, *Our own little Ireland in the Philippines* (*Literary Digest*, June 4, 1921, quoting *New York Tribune*, May 15, 1921).—The Japanese question has entered somewhat into all recent consideration of the Philippines. Although no armed invasion is prophesied, economic and political inroads by Japanese imperialists are near possibilities. "The cleaning of the Augean stables was a slight undertaking in comparison with purifying the Philippines. . . . The cholera and smallpox swept off the natives in Manila by thousands, and the further one went into the country the worse the conditions became. The details of daily life pertaining to the preservation of good health and decency, as observed among civilized people, were, except in rarest instances, entirely lacking from one end of the

Islands to the other. . . . In Manila there had never been any attempt at sanitation so far as can be discovered, through any regulations. No wonder that about three-fifths of all the children in Manila under one year of age were meeting death annually, at the time our civil government went into control. In 1902-1903 the cholera took off more than one hundred thousand of one hundred and sixty-five thousand inhabitants attacked. In Manila eight-two per cent of native cases perished, and about fifty per cent of Americans thus afflicted did not recover. That awakened the American officials as nothing else could have done, and sanitation became the first object of government. . . . In Manila, this part of the problem was attacked by installing a reliable water system, by building public sewers, and by rigid rules respecting the disposition of all refuse and the care of foods at all times. Then the thirty miles of canals within the city limits, choked with the pollution of a century, were dredged out, every stagnant pool was drained, the moat that ran about the ancient wall was filled in and made a park, and each native house was visited by careful inspectors, who saw that their regulations were observed. Hundreds of shacks were burned. No mercy was shown to the delinquent; and to-day Manila, except in the matter of infant mortality, is about as healthy a city as any of its size in the warmer part of America. The problem of drinking water throughout the Islands has been solved by the artesian well. More than any other one agency, this modern method of reaching good water has led to the control of contagious diseases. . . . We organized some thirty boards of health in the more important centers; and, backed by the law, started to enforce garbage collection, sewage disposal, street sweeping, universal vaccination, . . . in short, practically all of the rules so familiar to Americans. The universal vaccination was a tremendous task and one that met with great opposition. . . . Before this was done, records of the million people resident in and near Manila show that six thousand lost their lives annually from smallpox alone. After vaccination was completed in this territory, there was not one death in the subsequent year. [A modern hospital for the insane, the isolation of the lepers on the island of Culion where modern treatment is given, the distribution of quinine free of charge, prison sanitation, and free dispensaries are among American sanitary works.] . . . At Baguio, a summer resort has been created in the high mountains, with a climate that few places in America can surpass, and to that point, by a most beautiful automobile road, that is a model of engineering, the administration forces are moved in the wet, hot season."—F. Chamberlain, *Philippine problem*, pp. 113-117, 173.

1921-1923.—Wood as governor-general.—Demands of Filipinos for independence.—On October 5, 1921, Major-General Leonard Wood was appointed by President Harding, governor-general of the Philippines. "He [Wood] had found the Insular treasury worse than emptied. It was in default. The entire commercial structure of these immensely rich islands was on the verge of ruin. To prevent this disaster the Congress at Washington authorized a loan that made it possible for the Insular government, under a bond issue of \$45,000,000 gold, to rescue the treasury from the consequences of the disastrous operations of the Philippine Bank."—S. Baxter, *Uncle Sam in Cuba and the Philippines* (*American Review of Reviews* Aug., 1923).—"The sentiment there [in the Philippines] is as nearly unanimous in favor of independence as it is possible for any public question to

be in any country. . . . The national consciousness of the Filipinos has been deliberately aroused by the United States. The race pride is now [1922] involved. . . . All that can be done looking into the future is to require that any government shall be able eventually to put down public disorders. That, the Philippine Government will without doubt be able to do, unless interfered with by some outside power. . . . Peace and public order have been excellent in the Philippines during recent years; with every decade that passes, the local jealousies and provincial rivalries are diminishing. . . . They now think nationally,—not as Visayans or Tagalogs.”—F. B. Harrison, *Corner-stone of Philippine independence*, pp. 293, 296, 301, 302.—The agitation for independence has been almost continuous ever since the appointment of General Wood as governor-general. On November 22, 1922, a resolution was adopted by the Philippine House asking the United States to recognize the rights of the Philippine islands to independence. It was supported by the combined Collectivista and Nacionalista parties. On December 7, 1922, General Wood announced his decision to remain at his post in the Philippines, instead of returning to become provost of the University of Pennsylvania, according to his original intention, stating that he could not leave “in justice either to the United States or the Philippines.” On February 16, 1923, a resolution was introduced in the United States Congress by Representative Huck, of Illinois, proposing Philippine independence. “Manual Quezon, President of the Philippine Senate, on July 2 [1923] charged Governor General Leonard Wood with unduly interfering in the domestic affairs of the islands. He took issue with the use of the Executive veto and the Governor’s insistence on closing branches of the national bank. . . . Quezon in a tour of the islands attacked Governor General Wood’s policy of granting large leases on lands for the exploitation of the rubber industry. He maintained that great areas should not be granted either to foreign or Filipino monopolies ‘because the public lands were created by God, not to profit, to hold, but to provide everybody a share. Our policy in this regard is to preserve our natural resources for posterity.’ . . . Quezon has suggested that a promise of full independence in ten or twelve years, when the Philippines are completely English speaking, would satisfy the Filipinos.”—*New York Times Current History*, Aug. 1923, pp. 888-889.—A crisis was reached in July of 1923. Governor Wood had reinstated a secret-service official, after he had been exonerated from charges of wrongdoing. He had not consulted the man’s immediate superiors. Whereupon the cabinet officers resigned in a body, and the governor accepted the resignations, which were followed by an appeal to Washington. The next step was taken by the Filipino legislature which met as the “Philippine Commission of Independence,” demanded the recall of Governor-General Wood, and asked again for independence.

PHILISTINES.—“One small nation alone, of all which dwelt on the land claimed by Israel, permanently refused to amalgamate itself with the circumcised peoples,—namely the uncircumcised Philistines. They occupied the lots which ought to have been conquered by Dan and Simeon, and had five principal cities, Gaza, Askalon [see ASCALON], Ashdod, Gath and Ekron, of which the three first are on the sea-coast. Ashdod and Gaza were places of great strength, capable of long resisting the efforts of Egyptian and Greek warfare. The Philistines cannot have been a populous nation, but they were far more advanced in the arts of peace and war than the Hebrews. Their position commanded the land-traffic between Egypt and Canaan, and gave them access to the sea; hence perhaps their wealth and comparatively advanced civilization. [See CHRISTIANITY: Map of Sinaitic peninsula.] Some learned men give credit to an account in Sanchoniathon, that they came from Crete. [They gave their name to Palestine.]”—F. W. Newman, *History of the Hebrew monarchy*, ch. 2.—“Where the Philistines came from, and what they originally were, is not clear. That they moved up the coast from Egypt is certain; that they came from Kaphor is also certain. But it by no means follows, as some argue, that Kaphor and Egypt are the same region. . . . It appears more safe to identify Kaphor with [Crete]. . . . But to have traced the Philistines to Crete is not to have cleared up their origin, for early Crete was full of tribes from both east and west. . . . Take them as a whole, and the Philistines appear a Semitic people.”—G. A. Smith, *Historical geography of the Holy Land*; ch. 6.—See also JEWS: Conquest of Canaan; Israel under the judges; Kingdoms of Israel and Judah; JERUSALEM: B. C. 1400-700; SYRIA: B. C. 64-63.

PHILOLOGY

1. Definition.—Language and reason.—Origin of language.—“Bow-wow” and “Pooh-pooh” theories.—Speech of primitive man.—Sign language.—Root words.—Onomatopœia.—Philology, according to its original meaning as a word, signified a love of learning and research, of textual criticism and literary history. Philology thus embraced the science of the intellectual life of one or more peoples. Yet another meaning of the term was a fondness for talking, a “love of words.” Since the Renaissance, however, “philology” has gradually become an accepted term to describe linguistic science, the study of languages and investigation of the laws of human speech. The foundations of philology may be traced to the grammarians of Alexandria under the Ptolemies of Egypt. Comparative philology arose during the nineteenth century from the epoch-making researches of Franz Bopp (1791-1867), following in the footsteps of the pioneer in Sanskrit literature, Sir William Jones (1746-1794), who was the first European to reveal the literary treasures of the ancient Hindus to the western world. “Comparative philology is in familiar use in England, to denote linguistic philology, or linguistics, as opposed to literary philology; but continental usage (especially German), restricting *philology* to literary philology, favors a specific term, like *linguistics*, *linguistic science*, *science of language*, *glossology*, etc., for the linguistic. Philology includes the study of language as the word or as speech in order to ascertain its elements and laws.”—F. H. Vizetelly, *Essentials of English speech*, p. 238.—“The history of language is the history of the growth of human reason. And from this point of view the science of language has not only afforded precious information respecting the past history of reason, but it will also, we may hope, deliver us from the indescribable and vexatious blundering which verbal ambiguities and confused thought issuing in the misuse of words, have brought upon the human race.”—L. Noiré, *Die Welt als Entwicklung des Geistes*.—The problem of when language began appears to be as unanswerable as that of the age of writing. The spoken word is obviously older than the art of committing it into script. Writing postulates a certain state of intellectual culture, however crude or primitive the form of script may be. That writing existed in Babylon 5,000 years B. C. is indisputably proved by documentary evidence. Some authorities, indeed, place the beginnings of writing as far back as the seventh millennium before our era. “As to the earlier Mesopotamian records, they date back some 5,000—perhaps 7,000—years B. C.; at least 1,000 before the period assigned by Archbishop Usher’s long-accepted ‘Chronology’ for the creation of the world itself. Solomon, who lived about 1,000 B. C., is accredited with the declaration that ‘of the making of many books there is no end.’ Modern exegesis tells us that it was not Solomon, but a later Alexandrian interloper who actually coined the phrase.”—H. S. Williams, *History of the art of writing*, folio 1, text to plate XI.—“In Egypt, inscriptions on stone have been brought to light lately which supply an actual record of historical names and facts from a time that appears to be hardly less than 7,000 years ago; and relics of workmanship from generations far earlier have been found in the same marvelous land. Further eastward, in the valley of the Euphrates, excavations now (1912) in progress are unearthing an abundance of writings, graven on stone or impressed on tablets and

cylinders of baked clay, which tell of a civilization that flourished in that Babylonian region very nearly fifty centuries before Christ; and nothing yet discovered reaches back to a prehistoric time when no form of writing was known.”—J. N. Larned, *Seventy centuries of the life of mankind*, v. 1, p. 20.—“The childish and anthropomorphic view, that God said to Adam, ‘This is a dog, This is an elephant,’ still held the minds of men captive in the eighteenth century, with the single difference, that the philosophers of that day put human reason in the place of God, and imagined that men by a kind of conventional agreement or pact had given names to things—in short, that they had *invented* language. As if an inventive act of this character did not demand a prodigious power of mind—a degree of intellect and wisdom that must have been infinitely greater than that at present possessed by the whole human race. . . . The first to rise well above this anthropomorphic view was Herder [1744-1803] whose divinatory genius in so many other fields discerned truths that science only later demonstrated by the help of accumulations of material, and who, even where he erred, never failed to give forth the most pregnant suggestions. The fundamental idea of his prize-essay, *Ueber den Ursprung der Sprache* (Upon the Origin of Language), is substantially this: ‘Man,’ says he, ‘gives proof of reflection, when, amid the hovering dream of images that flit before his senses, he collects himself into a moment of wakefulness, to dwell voluntarily upon some particular image, to survey it in a brighter and steadier light, and to abstract from it certain characteristics that establish that *this* is *this* object and no other.’ This he illustrates by the following example: ‘A man sees, for instance, a lamb. It passes, as an image, otherwise before his vision than it does before that of other animals. Whenever man is placed so that he must know a sheep, he is not disturbed by any instinct (as the wolf or the lion); the sheep stands before him exactly and entirely as represented by his senses. White, smooth, woolly. His thoughtfully operating mind seeks a characteristic mark. The sheep bleats. The characteristic is found. The inner sense is at work. The bleating—that which produced the strongest impression upon his mind, that which sprang forth and disengaged itself from all other qualities accessible to sight and touch—that remains in his mind. The sheep, let us say, returns. While, smooth, woolly. Our man looks, touches, meditates, again seeks a characteristic mark. The sheep bleats; and now he recognises it. He feels inwardly: ‘Thou art the Bleating One!’ he has humanly recognised it by, and called it by, a characteristic feature. By a *characteristic*, a *mark*! And what else is this than an inner *mark*-word, a verbal cue? He recognised the sheep by its bleating. This was the comprehended token by which the mind clearly hit upon an idea. What else is this than a word? And what is all human language but a collection of such words?’ This theory Max Müller has called the Bow-wow theory, and rejected it. It cannot be denied that as an hypothesis of the origin of language there is a good deal of truth contained in Herder’s statement of things. The most important points to be noted are, that it (1) explains how a visual image or percept is transformed into the phonetic word; and that (2) it makes the creation of language first appear as attached primarily to single characteristic marks. The weak points of the view lie in the facts (1)

that Herder leaves the origin of the world as a result of the necessity of communication, entirely unnoticed; and it is surely to be assumed that impulse of feeling and the necessity of communication both potently influenced the origin of the first word; and (2) that the so-called onomatopœtic creation of language, that is, the designation of things by the sounds they make, has not yet been confirmed by any extant language. Single words, like *cuckoo*, and the like, prove nothing; and many names that appear to us as imitations can be traced back to other roots that show no imitative origin whatsoever. All the languages we know, on the contrary reveal an inner conceptual connection between words that denote some crying, sounding object, and primitive roots designating some *human* activity. Herder himself, at a later period, gave up his theory of imitations of sound, and again adopted that of the revelation of language. . . . Another attempt at explanation is that which seeks to derive language from interjections, and which Max Müller accordingly calls the *Pooh-pooh* theory. This also possesses a certain degree of probability, for account is taken herein of the necessity of giving vent to inner emotion by sounds and ejaculations, as also of the endeavor to communicate with others, and above all, of the example of animals, whose neighing, barking, roaring, crowing, and so forth, might seem to represent a prototype—an abortive effort to acquire phonetic speech.”—L. Noiré *Origin and philosophy of language*, pp. 2, 3-5.—“Although it has been at various times stated that certain savage tribes are entirely without language, none of these accounts appear to be well authenticated, and they are *à priori* extremely improbable. At any rate, even the lowest races of which we have any satisfactory account possess a language, imperfect though it may be, and eked out to a great extent by signs. I do not suppose, however, that this custom has arisen from the absence of words to represent their ideas, but rather because in all countries inhabited by savages the number of languages is very great, and hence there is a great advantage in being able to communicate by signs. . . . In considering the origin of . . . root-words, we must remember that most of them are very ancient, and much worn by use. This greatly enhances the difficulty of the problem. Nevertheless, there are several large classes of words with reference to the origin of which there can be no doubt. Many names of animals, such as *cuckoo*, *crow*, *peewit*, &c., are evidently derived from the sounds made by those birds. Everyone admits that such words as *bank*, *crack*, *creak*, *crush*, *crash*, *splash*, *dash*, *purr*, *whizz*, *hum*, &c., have arisen from the attempt to represent sounds characteristic of the object they are intended to designate. . . . Another important class of words is evidently founded on the sounds by which we naturally express our feelings. Thus from *Oh! Ah!* the instinctive cry of pain, we get *woe*, *væ* (Latin), *wail*, *ache*; *ἄχος*, Gr. From the deep guttural sound *ugh*, we have *ugly*, *huge*, and *hug*. From *pr*, or *prut*, indicating contempt, or self-conceit, comes *proud*, *pride*, &c. From *fi*, we have *fiend*, *foe*, *feud*, *foul*, Latin *putris*, Fr. *puer*, *filth*, *fulsome*, *fear*. From that of smacking the lips, we get *γλυκὺς*, *dulcis*, *lick*, *like*, which though originally no doubt applied to things eaten, is now used generally. Turner mentions that on presenting some hatchets to the natives of Tauna, they ‘smacked their lips, and made their usual *click*, *click* with the mouth shut, in admiration of the fine new hatchets.’”—J. Lubbock, *Origin of civilisation and the primitive condition of man*, 5th ed., pp. 416, 423, 425.

2. Birth and death of languages.—Dialects.—

Creole language.—Pidgin English.—Yiddish.—Mixed languages.—“Like the leaves of the trees of the forest, the languages of the human race come into existence, bud, blossom, fade away, and fall out of use and are forgotten. Sanskrit, Zend, Hebrew, and Latin had their days before the Christian era, and then died away, their place being taken by younger vernaculars. And this process is always going on. There seems no fixed law, for it is obvious, that some languages, such as the Egyptian and Assyrian and Hebrew, have been dead for many centuries, leaving no descendants. Sanskrit and Latin have indeed died, but left large families of lineal descendants. There is a third category, containing such languages as Arabic and Greek, which have lived on to the present epoch, are still made use of as vehicles of speech, and have produced no offspring, except weak dialects, such as exist in the case of all living forms of speech. I make no allusion to Literature; the life of a language practically dead is sometimes prolonged for liturgical, literary, social, or political purposes. . . . Dialects both precede and follow the existence of their so-called parent-language. A potent dialect may develop into full life as a great conquering language, as English, a dialect of German, and Urdu, a dialect of Hindi, have done. On the other hand, the speakers of a great language, as the result of isolation or neglected culture, or professional idiosyncrasies, develop unconsciously a new dialect such as that current among sailors, or colonists in a distant island, miners in the bowels of the earth, or manufactures in a great business, where the environment is quite peculiar. The sole object of language is communication: all that unites certain classes of individuals with special bodies, with special necessities, tends to create a special form of communication, or a business-dialect. All that diminishes the opportunities of communication, the breaking-up of a tribe into separate and isolated sections, or castes, or classes, produces a rift in the common language, if they ever had one, and generates a local form of language, whether the people like it or not. As a fact they are unconscious of it. . . . I now pass to the subject of ‘Creole Languages.’ . . . In the year 1882 I wrote the following notice in a literary journal: ‘Professor Schuchardt, of the University of Gratz, has undertaken a work of considerable interest and labour. It is notorious that in every part of Asia, Africa, and America, from the contact of European languages with the native languages, new forms of speech are coming into existence, which at first sight may be called jargons, but which may possibly be the germs of new languages. At any rate, English and Urdu must have gradually come into existence in some such way. Most conspicuous among the class of degraded language-types is Pidgin-English [see also INTERNATIONAL LANGUAGE: Natural development], which is, however, represented by a Literature of its own, and Creolese, which is represented by a translation of a portion of the Bible. . . . [Another dialect of this type is Yiddish, *alias* Judaish. There are two varieties: (1) a Spanish dialect, (2) a German dialect. It has been the fashion to call this last, the vernacular of the Jews, a “jargon,” but it is as much a dialect as any other modern dialect. A careful history of it has lately been published; there is a considerable Literature. There are sub-dialects of this dialect in Russia, Poland, and Galicia. (See also JEWS: Language and literature.)] . . . In the Cape Colony there is a settlement of Malays from Asia; they make use of a dialect called Cape Dutch, which has superseded their hereditary language. It is clear that we require more information on this branch of

the subject. Some years back it was laid down as an impossibility, that a mixed language could exist. A mixed word-store was admitted, as it is universal, but it was denied, that there could be any mixture in the grammatical structure of a language. This idea is now abandoned. In the two great vernaculars, English and Urdu, there is a mixture both of word-store and structure. In English the original Teutonic structure has become unrecognizable under the heavy burden of Latin intrusion, and the Urdu vernacular is choked with Arabic and Persian accretions, and the influence of a third language, the English, is now felt.—B. N. Cust, *Linguistic and Oriental essays, series 6, pp. 106, 108, 109.*

3. Historical criticism.—Psychology and anthropology.—Beginnings of comparative philology.—Ethnology and language.—“Aryan” theory.—“An historical criticism of language is alone able to furnish an empirical criticism of human reason. The fact that Max Müller fully recognised the nature of the task he proposed to himself, justified him in the profound utterance which has hitherto been so little understood: ‘All future philosophy will be a philosophy of language.’ . . . In the same way, independently of Max Müller, . . . Lazarus Geiger has expressed with equal definiteness the essential point of future philosophy—‘an empirical criticism of human reason through the criticism of language,’ while the main outlines of the future edifice have been boldly traced in his thoughtful and profound works. . . . In his lectures on psychology Waitz . . . lays down that, ‘the function of psychology, in relation to other philosophic studies, is that of foundation, for the formation of our ideas has a collective history, upon which their substance is dependent. They become scientifically serviceable only when it appears that they are not merely individual or accidental products of an unconscious process, but the necessary results of development, the products of laws of universal application, i.e. of laws to which the cultivation of their inner life must be always and entirely subject.’ Waitz was thus well aware of what was required; he was only uncertain as to the means by which the goal was to be attained. With inexhaustible zeal he turned first to physiology, then to comparative psychology, and lastly to anthropology, as a contribution to which his epoch-making work, ‘*Die Anthropologie der Natur-völker*’ was compiled. But he passed unsuspectingly by the richest, clearest, most trustworthy source upon which the historian of the development of human reason can draw. The discovery of this source was reserved for Max Müller and L. Geiger.”—L. Noiré, *Origin and philosophy of language, pp. 103-106.*—“Let us look at what has been achieved by the masters of comparative philology, and many others, who followed their banners. The East, formerly a land of dreams, of fables, and fairies, has become to us a land of unmistakable reality: the curtain between the West and the East has been lifted, and our old forgotten home stands before us again in bright colours and definite outlines. Two worlds, separated for thousands of years, have been reunited as by a magic spell, and we feel rich in a past that may well be the pride of our noble Aryan family. We say no longer vaguely and poetically *Ex Oriente Lux*, but we know that all the most vital elements of our knowledge and civilization—our languages, our alphabets, our figures, our weights and measures, our art, our religion, our traditions, our very nursery stories—come to us from the East; and we must confess that but for the rays of Eastern light, whether Aryan or Semitic or Hamitic, that called forth the hidden germs of the dark and dreary West, Europe,

now the very light of the world, might have remained for ever a barren and forgotten promontory of the primeval Asiatic continent.”—*Ibid.*, pp. 77-78.—Ethnologists find reason to believe that the variations in the human species, which produced the different stocks or families of mankind now peopling the earth, had their genesis as far back in geologic time as the paleolithic period, and were evolved before the neolithic stage had been reached in any part of the world. Singular differences of opinion are found, however, and singular changes of view have occurred, as to what is and what is not fundamental in the variations of the human race. Color was accepted first, without question, as the basis of classification, and all humanity was divided into five great families, namely: the white or pale-skinned peoples, called Caucasians; the yellow-skinned Asiatics, or Mongolians; the blacks of central Africa and of some South Sea islands; the red aborigines of America, and the brown Malayans of southeastern Asia and the contiguous seas. Then attention was turned to relationships of language, which seemed to have more meaning than the differing colors of skin. Philology, for a time, took ethnology in hand, and grouped the peoples of the globe by their speech. It found one great growth of language in Europe and parts of Asia, branching into many variants, but carrying the same structural form into all; and this Aryan form of speech, as the philologists named it, was taken for a mark of kinship among the many peoples to whose tongues it belonged. Another such development of varied languages having one structural form was found in southwestern Asia, and called Semitic, because supposed to have sprung from the speech of the children of Shem; while a third, very doubtfully distinguished from it, was traced in the neighboring regions of Africa, and attributed to an origin in the family of Ham. The languages in these three divisions—Aryan, Semitic, and Hamitic—are alike in the grammatical feature called ‘inflection,’ and contrasted thereby with a greater multitude of so-called ‘agglutinative’ languages, which were classed together as Turanian in the older philological schemes. Languages of the Aryan group include the Sanscrit and the Zend, with all that came from them in ancient and modern India and Iran, the noble speech of the Greeks, the Latin of Rome, and the many tongues of all the nations known as Celtic, Teutonic and Slavic in modern times. A generation ago there was almost no questioning of the theory of a common ancestry for the peoples—Hindus, Medes, Persians, Greeks, Romans, Italians, Frenchmen, Spaniards, Germans, Scandinavians, Dutchmen, Englishmen, Welshmen, Irishmen, Scots, Russians, Poles, and others,—whose languages grew plainly from the common roots of Aryan speech. They were looked upon as forming one great Indo-European or Indo-Germanic family of mankind, apart from other families, and dominant among them by virtue of some superior quality of race. There was disputation only concerning the primitive Aryan home, where the great race was cradled, and whence it was supposed to have swarmed forth, in successive hosts, at long intervals, to acquire in different lands the different characteristics of the Hindu, the Greek, the Roman, the Celt, the German and the Slav. For a time there was general agreement with Professor Max Müller, who thought it possible to trace the Aryas of antiquity to a first dwelling place on the high plains at the north of the Hindu Kush mountains; but other philologists found reasons equally cogent for looking elsewhere, in northern or eastern Europe, especially; and now there appears to be little hope of tracking the Aryan tongues to their primal

source. Gradually, the whole theory of the undertaking to find relationships of race by relationships of language was shaken by many criticisms. The large and uncertain extent to which languages have been spread in some cases and extinguished in others, by conquest, or by intermixture of peoples, was taken more into account. New schools of anthropology and ethnology have been breaking away from the philological influence, and looking to physical features once more for the marks of racial kinship."—J. N. Larned, *Seventy centuries of the life of mankind*, pp. 25-27.—See also ANTHROPOLOGY: Linguistics; ARYANS: Distribution; EUROPE: Introduction to historic period: Distribution of races; Correlation of race, nationality and language.

4. Revelations of Sanskrit.—Sir William Jones and Bopp.—Indian literature.—European scholarship.—Europeans alleged to originate from Asia.—"Full seventy years have passed since Sir William Jones published [in 1780] his translation of *Sakuntala*, a work which may fairly be considered as the starting-point of Sanskrit philology. . . . [The] scientific interest excited by the language, the literature, the philosophy, and antiquities of India has lasted, and has been increasing ever since. England, France, Germany, Italy, Denmark, Sweden, Russia, and Greece have each contributed their share towards the advancement of Sanskrit philology, and names like those of Sir W. Jones, Colebrooke, Wilson, in England, Burnouf, in France, the two Schlegels, W. von Humboldt, Bopp, and Lassen, in Germany, have secured to this branch of modern scholarship a firm standing and a universal reputation. The number of books that have been published by Sanskrit scholars in the course of the last seventy years is but small. Those works, however, represent large and definite results, important not only in their bearing on Indian antiquities, but, as giving birth to a new system of Comparative Philology, of the highest possible importance to philology in general. In little more than half a century, Sanskrit has gained its proper place in the republic of learning, side by side with Greek and Latin. . . . When our earliest Sanskrit scholars directed their attention to Indian literature, the difficulties they had to struggle with were [very great]. . . . Not to mention the burning and enervating sky of India, and the burden of their official occupations, men like Halhed, Wilkins, and Sir W. Jones could hardly find a single Brahman who would undertake to teach them his sacred idiom. When, after some time, learned Pandits became more willing to impart their knowledge to Europeans, their own views of Indian history and literature were more apt to mislead their pupils than to guide them in a truly historical direction. Thus it happened that, at the beginning of Sanskrit philology, preference was given either to works which still enjoyed amongst the Hindus themselves a great, but frequently undeserved, popularity, or to those which by their poetical beauty attracted the attention of men of taste. Everything Indian, whether Manu's Code of Laws, the *Bhagavadgītā*, *Sakuntala*, or the *Hitopadēsa*, was at that time considered to be of great and extravagant antiquity, and it was extremely difficult for European scholars to form a right opinion on the real merits of Indian literature. . . . There is another circumstance which has retarded the progress of Sanskrit philology: an affectation of that learned pedantry which has done so much mischief to Greek and Latin scholarship. . . .

"The Aryan nations who pursued a north-westerly direction, stand before us in history as the principal nations of north-western Asia and Europe.

They have been the prominent actors in the great drama of history, and have carried to their fullest growth all the elements of active life with which our nature is endowed. They have perfected society and morals, and we learn from their literature and works of art the elements of science, the laws of art, and the principles of philosophy. In continual struggle with each other and with Semitic and Turanian races, these Aryan nations have become the rulers of history, and it seems to be their mission to link all parts of the world together by the chains of civilisation, commerce, and religion. In a word they represent the Aryan man in his historical character."—F. M. Müller, *History of ancient Sanskrit literature*, pp. 1-4, 7, 14-15.—See also HINDU LITERATURE: SANSKRIT.

5. European translations from Sanskrit.—Asiatic Society of Bengal.—Introduction of the study of Sanskrit into Europe.—Jones, Colebrooke, Hamilton, Schlegel and Rosen.—Prakrit.—"Sir William Jones (1746-94) was . . . the pio-

SIR WILLIAM JONES

neer of Sanskrit studies in the West. It was this brilliant and many-sided Orientalist who, during his too brief career of eleven years in India, first aroused a keen interest in the study of Indian antiquity by his unwearied literary activity and by the foundation of the Asiatic Society of Bengal in 1784. Having rapidly acquired an accurate knowledge of Sanskrit, he published in 1780 a translation of *Çakuntalā* [*Sakuntala*], the finest Sanskrit drama, which was greeted with enthusiasm by such judges as Herder and Goethe. This was followed by a translation of the *Code of Manu*, the most important of the Sanskrit law-books. To Sir William Jones also belongs the credit of having been the first man who ever printed an edition of a Sanskrit text. This was a short lyrical poem entitled *Ritusamhāra*, or *Cycle of the Seasons*, published in 1702. We next come to the great name of Henry Thomas Colebrooke (1765-1837), a man of extraordinary industry, combined with rare clearness of intellect and sobriety of judgement. The first to handle the Sanskrit language and literature on scientific principles, he published many texts, translations, and essays dealing with almost every branch of Sanskrit learning,

thus laying the solid foundations on which later scholars have built. While Colebrooke was beginning his literary career in India during the opening years of the century, the romance of war led to the practical knowledge of Sanskrit being introduced on the Continent of Europe. Alexander Hamilton (1765-1824), an Englishman who had acquired a good knowledge of Sanskrit in India, happened to be passing through France on his way home in 1802. Hostilities breaking out afresh just then, a decree of Napoleon, directed against all Englishmen in the country, kept Hamilton a prisoner in Paris. During his long involuntary stay in that city he taught Sanskrit to some French scholars, and especially to the German romantic poet Friedrich Schlegel. One of the results of these studies was the publication by Schlegel of his work *On the Language and Wisdom of the Indians* (1808). This book produced nothing less than a revolution in the science of language by the introduction of the comparative and the historical method. It led to the foundation of the science of comparative philology by Franz Bopp in his treatise on the conjugational system of Sanskrit in comparison with that of Greek, Latin, Persian, and German (1816). Schlegel's work, moreover, aroused so much zeal for the study of Sanskrit in Germany, that the vast progress made since his day in this branch of learning has been mainly due to the labours of his countrymen. In the early days of Sanskrit studies Europeans became acquainted only with that later phase of the ancient language of India which is familiar to the Pandits, and is commonly called Classical Sanskrit. So it came about that the literature composed in this dialect engaged the attention of scholars almost exclusively down to the middle of the [nineteenth] century. Colebrooke had, it is true, supplied as early as 1805 valuable information about the literature of the older period in his essay *On the Vedas*. Nearly a quarter of a century later, F. Rosen, a German scholar, had conceived the plan of making the more ancient literature known to Europe from the rich collection of manuscripts at the East India House; and his edition of the first eighth of the *Rigveda* was actually brought out in 1838, shortly after his premature death. But it was not till Rudolf Roth (1821-95), the founder of Vedic Philology, published his epoch-making little book *On the Literature and History of the Veda* in 1846, that the studies of Sanskritists received a lasting impulse in the direction of the earlier and more important literature of the Vedas. These studies have since been prosecuted with such zeal, that nearly all the most valuable works of the Vedic, as well as the later period, have within the last fifty years been made accessible in thoroughly trustworthy editions. . . . In the oldest period of Prākṛit, that of the Pāli Aṅgika inscriptions and the early Buddhistic and Jain literature, two main dialects, the Western and the Eastern, may be distinguished. Between the beginning of our era and about 1000 A. D., mediæval Prākṛit, which is still synthetic in character, is divided into four chief dialects. In the west we find *Apabhraṃṣa* ('decadent') in the valley of the Indus, and *Çaurasenī* in the Doab, with Mathurā as its centre. Subdivisions of the latter were *Gaurjorī* (Gujarātī), *Avantī* (Western *Rājputānī*), and *Mahārāshtri* (Eastern *Rājputānī*). The Eastern Prākṛit now appears as *Māgadhī*, the dialect of Magadha, now Behar, and *Ardha-Mōgadhī* (Half-Māgadhī), with Benares as its centre. These mediæval Prākṛits are important in connection with Sanskrit literature, as they are the vernaculars employed by the uneducated classes in the Sanskrit

drama. They are the sources of all the Aryan languages of modern India. From the *Apabhraṃṣa* are derived *Sindhī*, Western *Panjābī*, and *Kashmīrī*; from *Çaurasenī* come Eastern *Panjabī* and *Hindī* (the old *Avantī*), as well as *Gujarātī*; while from the two forms of *Māgadhī* are descended *Marāthī* on the one hand, and the various dialects of Bengal on the other. These modern vernaculars, which began to develop from about 1000 A. D., are no longer inflexional languages, but are analytical like English, forming an interesting parallel in their development from ancient Sanskrit to the Romance dialects in their derivation from Latin. They have developed literatures of their own, which are based entirely on that of Sanskrit. The non-Aryan languages of the Dekhan, the Dravidian group, including Telugu, Canarese, Malāyalam, and Tamil, have not indeed been ousted by Aryan tongues, but they are full of words borrowed from Sanskrit, while their literature is dominated by Sanskrit models."—A. A. Macdonell, *History of Sanskrit literature*, pp. 3-5, 27-28.

6. Grimm's law of permutation of consonants.—"So important a part of the history of a language are its special methods of phonetic change, that, in investigating the relations of any dialect with its kindred dialects, the first step is to determine to what sounds in the latter its own sounds regularly correspond. Thus, on comparing English and German, we find that a *d* in the former usually agrees, not with a *d*, but with a *t*, in the latter; as is shown by *Dance* and *tanz*, *day* and *tag*, *deep* and *tief*, *drink* and *trink*, and so on. In like manner, the German counterpart of an English *t* is *s* or *z*: compare *foot* and *fuss*, *tin* and *zinn*, *to* and *zu*, *two* and *zwei*, and the like; and a German *d* answers to our *th*, as in *die* for *the*, *dein* for *thine*, *bad* for *bath*. What is yet more extraordinary is the fact that, if we compare English with the older languages of our family—as with Latin, Greek, and Sanskrit—we discover the precise converse of this relation: as German *t* is English *d*, so English *t* is Latin *d* (compare *two* and *duo*); as German *d* is English *th*, so English *d* is Greek *th* (compare *door* and *thura*, *daughter* and *thugatēr*); as German *s* or *z* is English *t*, so English *th* (the lisped letter instead of the hissed, the spirant for the sibilant) is Latin, Greek and Sanskrit *t* (compare *three* and *tres*, *treis*, *tri*; *that* and *-tud*, *to*, *tad*). In short, taking the series of three dental mutes, surd, aspirate, and sonant, *t*, *th*, and *d*, we find that the Germanic languages in general, including the English, have pushed each of them forward one step, while the High-German dialects, chiefly represented by the literary German, have pushed each of them forward two steps. Thus, in tabular form.

1. <i>t</i>	S. <i>tad</i> (3),		
2. <i>th</i>	E. <i>that</i> (1),	Gr. <i>thura</i> ,	
3. <i>d</i>	G. <i>das</i> (2).	E. <i>door</i> ,	L. <i>dent-em</i> (1),
1. <i>t</i>		G. <i>tor</i> .	E. <i>tooth</i> (2),
2. <i>th</i>			G. <i>zand</i> (3).

[Note.—The writer gives here the Old High-German forms *tor* and *zand*, as illustrating the change more distinctly and fully than the corresponding modern German words, *Thor* and *Zahn*.] And a similar rule of permutation holds good also among the consonants of the two other series, the palatal and labial: *k*, *kh*, *g*; *p*, *ph*, *b*—the whole, with certain variations and exceptions, of which we do not need here to take account. This intricate method of correspondence without identity is generally styled, after its discoverer, 'Grimm's Law of Permutation of Consonants' (in German, simply the *Lautverschiebung*); it is a fact of prime conse-

quence in the history of the group of languages to which ours belongs, and, at the same time, one of the most remarkable and difficult phenomena of its class which the linguistic student finds anywhere offered him for explanation. Nor has any satisfactory explanation of it yet been devised; while, nevertheless, we have no reason to believe it of a nature essentially different from other mutations of sound, of equally arbitrary appearance, though of less complication and less range, which the history of language everywhere exhibits."—W. D. Whitney, *Language and the study of language*, pp. 97-98.—In 1822 Jacob L. C. Grimm published the second edition of his *Deutsche Grammatik*, in which he expounded this "Law of Permutation." "It should be understood, of course, that this is a very general statement of Grimm's Law, and that, as thus expressed, it is open to numerous exceptions and to the qualifications of some important sub-laws. Moreover, it should be remembered in tracing back English words to their cognates in the other Indo-European languages which are not subject to this shifting of consonants, as for example, Latin, that these other languages may also have had each its own peculiar development in its consonant system which may serve to obscure the simple operation of the law. It is also apparent that only those English words which are of native origin, that is, only that half of our bilingual language which is Teutonic and not late borrowed Romance, can be subject to Grimm's Law. Despite its various restrictions and qualifications, however, Grimm's Law is one of the most valuable linguistic principles which we possess. It enables us not only to group the Teutonic languages together, but also often to determine the history and etymology of the vocabularies of the various Teutonic languages, to tell what words are native and what are foreign. Moreover, the study of Grimm's Law has carried in its wake the discovery of many other linguistic laws and principles which are of the greatest interest and importance."—G. P. Krapp, *Modern English, its growth and present use*, pp. 52-53.

7. Phases in growth of Aryan language.—Sanskrit roots in Chinese.—Tibetan.—If we examine "the attempt of Professor [Georg] Curtius [1820-1885] to establish seven distinct chronological periods in the history of the Aryan speech, previous to its separation into Sanskrit, Greek, Latin, Slavonic, Teutonic, and Celtic, I think we shall find two principles clearly established:—1. That it is impossible to distinguish more than three successive phases in the growth of the Aryan language. In the first phase or period the only materials were roots, not yet compounded, still less articulated grammatically, a form of language to us almost inconceivable, yet even at present preserved in the literature and conversation of millions of human beings, the Chinese. In that stage of language, 'king rule man heap law instrument,' would mean, the king rules men legally. The second phase is characterized by the combination of roots, by which process one loses its independence and its accent, and is changed from a full and material into an empty or formal element. That phase comprehends the formation of compound roots, of certain nominal and verbal stems, and of the most necessary forms of declension and conjugation. What distinguishes this phase from the inflectional is the consciousness of the speaker, that one part of his word is the stem or the body, and all the rest its environment, a feeling analogous to that which we have when we speak of *man-hood*, *man-ly*, *man-ful*, *man-kind*, but which fails us when we speak of *man* and *men*, or if we speak of *wo-man*, instead of *wif-man*. The principle of combination

preponderated when inflection was as yet unknown, but inflection itself was the result of combination, and unless it had continued long after inflection set in, the very life of language would have become extinct. The third phase is the inflectional, when the base and the modificatory elements of words coalesce, lose their independence in the mind of the speaker, and simply produce the impression of modification taking place in the body of words, but without any intelligible reason. This is the feeling which we have throughout nearly the whole of our own language, and it is only by means of scientific reflection that we distinguish between the root, the base, the suffix, and the termination. To attempt more than this three-fold division seems to me impossible. 2. The second principle which I tried to establish was that the growth of language does not land itself to a chronological division, in the strict sense of the word. Whatever forces are at work in the formation of languages, none of them ceases suddenly to make room for another, but they work on with a certain continuity from beginning to end, only on a larger or smaller scale. Inflection does not put a sudden end to combination, nor combination to juxtaposition. When even in so modern a language as English we can form by mere combination such words as *man-like*, and reduce them to *manly*, the power of combination cannot be said to be extinct, although it may no longer be sufficiently strong to produce new cases or new personal terminations. We may admit, in the development of the Aryan language, previous to its division, three successive strata of formation, a *juxtapositional*, a *combinatory*, and an *inflectional*; but we shall have to confess that these strata are not regularly superimposed, but tilted, broken up, and convulsed. They are very prominent each for a time, but even after that time is over, they may be traced at different points, pervading the very latest formations of tertiary speech. The true motive power in the progress of all language is combination, and that power is not extinct even in our own time. . . . Attempts have lately been made to point out a number of roots which Chinese shares in common with Sanskrit. . . . Mr. Edkins has . . . clearly shown the great advantage to be derived from an accurate study of Chinese dialects. The same scholar has done still more by pointing out how Chinese should at first be compared with its nearest relatives, the Mongolian of the North-Turanian, and the Tibetan of the South-Turanian class, before any comparisons are attempted with more distant colonies that started during the monosyllabic period of speech."—F. M. Müller, *Chips from a German workshop*, v. 4, pp. 136-138, 105.—See also CHINA: Languages and dialects.

8. Greek and Latin.—Historical grammar.—Etymology.—Phonetic laws.—Development of comparative philology.—Bopp, Burnouf, Benfey and Grimm.—Miklosich, Schleicher, Curtius and Corssen.—"The two classical languages, Greek and Latin, which looked as if they had fallen from the sky or been found behind the hedge, have now recovered their title-deeds, and have taken their legitimate place in that old and noble family which we call the Indo-European, the Indo-Germanic, or by a shorter, if not a better name, the Aryan. In this way not only have their antecedents been cleared up, but their mutual relationship, too, has for the first time been placed in its proper light. . . . When Greek and Latin had once been restored to their true place in the natural system of the Aryan languages, their special treatment, too, became necessarily a different one. In grammar, for instance, scholars were no longer satisfied to give forms and rules, and to place what was irregular

by the side of what was regular. They wished to know the reasons of the rules as well as of the exceptions; they asked why the forms were such as they were, and not otherwise; they required not only a logical, but also an historical foundation of grammar. . . . Instead of indulging in general speculations on the logic of grammar, the riddles of grammar received their solution from a study of the historical development of language. For every language there was to be a historical grammar, and in this way a revolution was produced in philological studies. . . . For instance, instead of attempting an explanation why the genitive singular and the ablative plural of the first and second declensions could express rest in a place—*Romæ*, at Rome; *Tarenti*, at Tarentum; *Athenis*, at Athens; *Gabiis*, at Gabii—one glance at the past history of these languages showed that these so-called genitives were not and never had been genitives, but corresponded to the old locatives in *i* and *su* in Sanskrit. . . . What gigantic steps truly scientific etymology has made in Greek and Latin, every scholar may see in the excellent works of Curtius and Corssen. The essential difference between the old and the new systems consists . . . in this, that while formerly people were satisfied if they knew, or imagined they knew, from what source a certain word was derived, little value is now attached to the mere etymology of a word, unless at the same time it is possible to account, according to fixed phonetic laws, for all the changes which a word has undergone in its passage through Latin, Greek, and Sanskrit. How far this conscientiousness may be carried is shown by the fact that the best comparative philologists decline to admit, on phonetic grounds, the identity of such words as the Latin *Deus*, and the Greek *Θεός*, although the strongest internal arguments may be urged in favor of the identity of these words.”—F. M. Müller, *Chips from a German workshop*, v. 4, pp. 205-210.—“Père Cœurdoux, a French Jesuit, writes in 1767 from Pondichery to the French Academy, asking that learned society for a solution of the question, ‘How is it that Sanskrit has so many words in common with Greek and Latin?’ He presents not only long lists of words, but he calls attention to the still more curious fact, that the grammatical forms in Sanskrit show the most startling similarity with Greek and Latin. After him almost everybody who had looked at Sanskrit, and who knew Greek and Latin, made the same remark and asked the same question. . . . A kind of silent conviction began to spread that there must be in Sanskrit a remedy for all evils; people could not rest till every word in Greek and Latin had . . . been discovered in Sanskrit. Nor were Greek, Latin, and Sanskrit enough to satisfy the thirst of the new discoverers. The Teutonic languages were soon annexed, the Celtic languages yielded to some gentle pressure, the Slavonic languages clamored for incorporation, the sacred idiom of ancient Persia, the Zend, demanded its place by the side of Sanskrit, the Armenian followed in its wake; and when even the Ossetic from the valleys of Mount Caucasus, and the Albanian from the ancient hills of Epirus, had proved their birthright, the whole family, the Aryan family of language, seemed complete, and an historical fact, the original unity of all these languages, was established on a basis which even the most skeptical could not touch or shake. . . . It was the great merit of Bopp that he called the attention away from this tempting field to the more laborious work of grammatical analysis. . . . It was in the nature of things that a comparative study of languages should at first be directed to what is com-

mon to all; nay, without having first become thoroughly acquainted with the general features of the whole family, it would have been impossible to discover and fully to appreciate what is peculiar to each of the members. Nor was it long before a reaction set in. One scholar from the very first, and almost contemporaneously with Bopp’s first essays on Comparative Grammar, devoted himself to the study of one branch of languages only, availing himself, as far as he was able, of the new light which a knowledge of Sanskrit had thrown on the secret history of the whole Aryan family of speech, but concentrating his energies on the Teutonic; I mean, of course, Jacob Grimm, the author of the great historical grammar of the German language; a work which will live and last long after other works of that early period shall have been forgotten, or replaced, at least, by better books. After a time Grimm’s example was followed by others. Zeuss, in his ‘*Grammatica Celtica*,’ established the study of the Celtic languages on the broad foundations of Comparative Grammar. Miklosich and Schleicher achieved similar results by adopting the same method for the study of the Slavonic dialects. Curtius, by devoting himself to an elucidation of Greek, opened the eyes of classical scholars to the immense advantages of this new treatment of grammar and etymology; while Corssen, in his more recent works on Latin, has struck a mine which may well tempt the curiosity of every student of the ancient dialects of Italy. At the present moment [1894] the reaction is complete; and there is certainly some danger, lest what was called a *syncretistic* spirit should now be replaced by an *isolating* spirit in the science of language. It cannot be denied, however, that this isolating, or rather discriminating, tendency has produced already the most valuable results, and I believe that it is chiefly due to the works of Curtius and Corssen, if Greek and Latin scholars have been roused at last from their apathy and have been made aware of the absolute necessity of Comparative Philology, as a subject to be taught, not only in every university but in every school. I believe it is due to their works that a conviction has gradually been gaining ground among the best scholars at Oxford, also, that Comparative Philology could no longer be ignored as an important ingredient in the teaching of Greek and Latin; and while a comparative analysis of Sanskrit, Zend, Armenian, Greek, Latin, Gothic, High-German, Lithuanian, Slavonic, and Celtic, such as we find it in Bopp’s ‘*Comparative Grammar*,’ would hardly be considered as a subject of practical utility, even in a school of philology, it was recognized at last that, not only for sound principles of etymology, not only for a national treatment of Greek and Latin grammar, not only for a right understanding of classical mythology, but even for a critical restoration of the very texts of Homer and Plautus, a knowledge of Comparative Philology, as applied to Greek and Latin, had become indispensable.”—*Ibid.*, pp. 14-18.

9. “Indo-European” versus “Aryan.”—Germanic languages.—Scandinavian and Slavonic.—Celtic, Italic and Rumansh.—Modern Greek or Romaic.—Descendants of Latin.—Umbrian.—Euguvine, or Iguvinian tables.—“We will employ ‘Indo-European,’ as having on the whole the best claim; it was deliberately adopted by Bopp, the great expounder of the relations of the family, and is as widely used as any of the others. Most of Bopp’s countrymen now prefer ‘Indo-Germanic,’ for no other assignable reason than that it contains the foreign appellation of their own particular branch, as given by their conquerors and teach-

ers, the Romans. Others, rejecting both these titles as cumbrously long, say instead 'Aryan,' which also has a wide and perhaps a growing currency; the chief objection is, that it properly belongs only to the Asiatic division, composed of the Iranian and Indian branches, and is still needed and widely used to designate that division. 'Sanskritic,' from the oldest and in some respects the leading language of the family, and 'Japhetic,' from the son of Noah to whom are attributed as descendants in the Genesis some of the people speaking its various dialects, are terms of limited and now obsolescent employment. The Indo-European family, then, is composed of seven great branches: the Indian, the Iranian or Persian, the Greek, the Italic, the Celtic, the Slavonic or Slavo-Lettic, and the Germanic or Teutonic. Taking these up in their inverse order, we have first the Germanic branch, in the four principal divisions already noted: 1. The Moeso-Gothic, or dialect of the Goths of Moesia, preserved only in parts of a Bible-version made by their bishop Ulfilas in the fourth century of our era, being long ago extinct as a spoken language. 2. The Low-German languages, still spoken in the north of Germany, from Holstein to Flanders, and across in the neighboring England, and including two important cultivated tongues, the Netherlandish and the English. English literary monuments go back to the seventh century, Netherlandish to the thirteenth; and there is an 'Old-Saxon' poem, the *Heliant*, or 'Savior,' from the ninth, and Frisian literature from the fourteenth. 3. The High-German body of dialects, represented at the present day by only a single literary language, the so-called German, of which the literature begins with the Reformation, in the sixteenth century; back of this, the New High-German period, lie a Middle and an Old High-German period, with their literatures in various somewhat discordant dialects, reaching back into the eighth century. 4. The Scandinavian division, written in the forms of Danish, Swedish, Norwegian, and Icelandic. The Icelandic monuments go back to the twelfth and thirteenth centuries, and are in point of style and content older than anything in High or Low German: the Edda is the purest and most abundant source of knowledge for primitive Germanic conditions. The Icelandic is also, especially in its phonetic state, the most antique of living Germanic dialects. Besides these literary remains, there are brief Runic inscriptions, generally of but a word or two, going back, it is believed, even to the third or second century. The Slavonic branch has always lain in close proximity to the Germanic, on the east; it has been the last of all to gain historical prominence. Its eastern division includes the Russian, Bulgarian, Servian and Croatian, and Slovenian. The Bulgarian has the oldest records; its version of the Bible, made in the ninth century, in the same region where the Gothic version had been made five centuries earlier, has become the accepted version, and its dialect the church language, throughout the Slavonic division of the Greek church. The Russian is by far the most important language of the whole branch; it has remains from the eleventh century; some of the southern dialects present specimens from a yet remoter date. To the western division belong the Polish, the Bohemian, of which the Moravian and Slovakian are closely kindred dialects, the Serbian, and the Polabian. There is nothing in Polish earlier than the fourteenth century; Bohemian records are believed to go back to the tenth. This branch is often called the Slavo-Lettic, because it is made to include another sub-branch, the Lettic or Lithuanian, which, though considerably further removed from

the Slavonic than any of these from the rest, is yet too nearly related to rank as a separate branch. It is composed of three main dialects: the Old-Prussian, extinct during the past two centuries [see PRUSSIAN LANGUAGE: Old], the Lithuanian, and the Livonian or Lettish; all clustered about the great bend of the Baltic. The Lithuanian is the most important and the oldest, having records from the middle of the sixteenth century. It exhibits in some respects a remarkable conservation of ancient material and form. The Celtic branch is one which from the beginning of history has been shrinking in extent, till it now occupies only the remotest western edges of the immense region of western and central Europe which it formerly possessed. Not enough is known of the ancient Celtic dialects of northern Italy, of Gaul, of Spain, to show what was their place in the sub-classification of the branch. The preserved dialects composed two groups, usually called the Cymric and Gadhelic. The Cymric includes the Welsh, with 'glosses' from the ninth century or thereabouts, and a literature from the twelfth, but of which part of the substance is probably older, even up to the sixth; the Cornish, which became extinct as a vernacular about the end of the last [18th] century, leaving a considerable literature nearly as old as the Welsh; and the Armorican of Brittany, so nearly allied to the Cornish that it is believed to belong to fugitives from that part of England; its earliest records are of the fourteenth century. The Gadhelic group includes the Irish, which has monuments going back to the end of the eighth century, the Scotch Gaelic, of which the earliest remains are attributed to the sixteenth, and the insignificant dialect of the Isle of Man. [See also CELTS: Celtic language.] The Italic branch is represented among living languages only by the Romanic dialects, so called as being all descended from the dialect of Rome, the Latin. . . . They all rose at not far from the same period—namely, the eleventh to the thirteenth centuries—out of the condition of local *patois*, products of the corruption of the popular speech while the Latin continued the language of the learned. Fragments of French are oldest, coming from the tenth century; its literature begins one or two centuries later; the earliest Italian, Spanish, Portuguese, are from the twelfth, or hardly earlier. These four are the conspicuous modern members of the group. But there was also, in the eleventh to the fourteenth centuries, a rich literature of the chief dialect of southern France, the Provençal, which, except for a recent sporadic effort or two, has been ever since unused as a cultivated tongue. There exists, too, in the [former] northern provinces of Turkey, in Wallachia and Moldavia [now Rumania], a broad region of less cultivated Romanic speech, witness to the spread of Roman supremacy eastward: it is destitute of a proper literature. [Since this was written a considerable national literature has arisen.] Moreover, certain dialects of southern Switzerland are enough unlike Italian to be ordinarily ranked as an independent tongue, under the name of Rhaeto-Romanic, or Rumansh, or Ladine. The ancient members of the Italic branch, coördinate with the Latin, were long ago crowded out of existence; but a few remains of them are still left, especially of the Umbrian, north from Rome beyond the Apennines, and of the Oscan of southern Italy. The Latin itself, in its oldest monuments, reaches hardly three centuries beyond the Christian era, appearing there in a form which seems very strange, and is hardly intelligible, to those who have learned only the cultivated dialect of the last century B. C. The Greek branch attains a much greater age, those masterpieces of

human genius, the poems of Homer, being nearly or quite a thousand years older than our era. From about 300 B. C., all Greek is written in the Attic or Athenian dialect, as all modern German literature in the New High-German; but before that time, as in the Old High-German period, each author used more or less distinctly his own local dialect; and in this way, as well as, more widely but less abundantly, by inscriptions and the like, we have a tolerably full representation of the local varieties into which the Greek had divided in prehistoric times. There is, of course, a similar variety of dialects now; but only one is written, and it is called Modern Greek, or Romaic; it is less altered from the classic Greek than is the Italian from the Latin. Notwithstanding the wide sway of Greek civilization, the spread of Greek empire under Alexander and his successors, and the unexcelled character of the language, the latter has had a limited and inconspicuous career as compared with the Latin: out of Greece itself, it is spoken only on the islands and shores of the Aegean, and along the northern and southern edges of Asia Minor."—W. D. Whitney, *Life and growth of language*, pp. 180-185.—"Just as there are in the world great languages such as Chinese or Hebrew, or Arabic, which are not descended from our [Aryan] Mother Tongue, so there are some less important, in Europe, that are outside this family, such, for instance, as the language of the gipsies and of the Basques who live on the coast of the Bay of Biscay, that of the Finns, of the Turks, and of the Hungarians."—A. Chaplin, *Romance of language*, p. 14.—"The remoter relations of the Latin itself receive light from various sources. . . . The Oscan or Opican of southern Italy was the language of the Samnites and their allies, from whose bands Rome wrung after a severe and often doubtful struggle the dominion of the peninsula; it was not disused as the official speech of some of the southern provinces until less than a hundred years before Christ; and coins and inscriptions dating from the two or three preceding centuries still teach us something of its structure and character. The Umbrian, the tongue of north-eastern Italy, is yet more fully represented to us by the Eguvine tablets, inscribed with the prayers and ceremonial rules of a fraternity of priests, and supposed to be as old as the third and fourth centuries before our era. Of the Volscian dialect, also, and the Sabine or Sabellian—the former being more akin with the Umbrian, the latter with the Latin—some exceedingly scanty relics have been discovered. The interpretation and comprehension of all these—resting, as it does, solely upon comparison with the Latin and other more distantly related tongues—is at present, and is likely always to remain, incomplete and doubtful; but they are of essential importance, both in explaining some of the peculiarities of the Latin, and in fixing its position as one of a group of kindred dialects occupying the greater portion of the Italian peninsula, and hence most suitably to be denominated the Italic group. The theory that the Latin was produced by a mixture of somewhat discordant elements—of Roman, Sabine, and Oscan; or of these and Etruscan—brought together by historical circumstances, and finally fused into homogeneity, is one which belonged to a former stage of linguistic science, and is now rejected as uncalled-for and groundless. Yet more untenable, and wanting even a semblance of foundation, is the derivation of Latin from Greek, a favourite dogma of times not long past but at present abandoned by every comparative philologist whose opinion is of the slightest value."—W. D. Whitney, *Language and*

the study of language, pp. 219-220.—"The Eguvine [Eguvine, or Iguvinian] Tablets have recently [1874] been the object of the studies of M. Michel Bréal, the result of which he has begun to communicate to the Académie des Inscriptions. These tablets of bronze, in the Umbrian language, containing the acts of a corporation of priests established at Iguvium (now Gubbio, about 100 miles due north of Rome, in the late Papal States), whose authority seems to have extended over a considerable district round, were, as is well known, discovered at that town in 1444. According to Antonio Concioli, who devoted himself to their history in the seventeenth century, they were originally nine in number; but in 1540 two of them were removed to the Arsenal at Venice, where all trace of them was subsequently lost. It is hoped that they may still exist in some of the Venetian palaces, and M. Bréal asks that the Italian Government should direct a search to be made for them. The text of the remaining seven—the older portion of which is in an alphabet borrowed from Etruria, the more recent in Roman characters—was published as early as 1723, in the work of Dempster, *De Etruria Regali*. It was not, however, till the present [19th] century that any successful attempt was made at deciphering them, and the credit of reading them is chiefly due to Aufrecht and Kirchhoff in their *Umbrische Denkmäler* (1840-51). Notwithstanding the diligence of these scholars there still remain various obscurities, grammatical and lexical, on which M. Bréal promises to throw fresh light. The complete decipherment of the inscriptions is a matter of equal interest to philology and to classical archaeology."—*Academy*, Mar. 28, 1874.

10. Refutation of "Aryan" theory.—Duodecimal theory.—European descent of Aryans claimed.—"In the Later Stone Age there lived somewhere a people or a group of peoples who spoke a tongue from which were descended the languages of the Hindus and the Persians, the Greeks and the Romans, the Slavs, the Celts, and the Teutons, including the Scandinavians and the English, that is, the present speech of perhaps a quarter of a billion people in Asia and of most of the inhabitants of Europe and of North and South America. Comparative study of these various languages has reconstructed to a considerable extent not only the speech but also the daily life, the government, and the religion of that Neolithic people, known as Aryan, Indo-Germanic, or Indo-European, which had split into groups and wandered apart before the dawn of recorded history. Linguistic relationship is not in itself sufficient proof of racial relationship. The conquered may adopt the language of the conquerors, or the conquerors that of the conquered, or there may be peaceful mingling in irregular proportions of race and language. Max Müller's oft-quoted words have become almost an article of philological faith: 'To me an ethnologist who speaks of Aryan race, Aryan blood, Aryan eyes and hair, is as great a sinner as a linguist who speaks of a dolichocephalic (long-headed) dictionary or a brachycephalic (round-headed) grammar.' When we speak of the Indo-Europeans we mean merely the people, whoever they were, that spoke Indo-European, and we imply nothing whatever as to race or racial characteristics. As a matter of cold fact and despite many opinions on the subject, we know very little racially about the ancient Indo-Europeans; we do not even know whether they were one race or a mixture of types. But language is the best evidence of *community of life and culture*, and we can at least assume that at some time and in some more or less definite territory there dwelt

a people or a group of peoples, racially pure or racially mixed, who lived, to a large extent, a common life and who spoke a tongue which was the common ancestor of the languages now spoken by the majority of the civilized peoples of the earth. . . . But where did this ancient people live? That is the so-called 'Aryan Question,' which after nearly a century of philological investigation remains still a question, although it is perhaps in process of solution. [See also ARYANS: Distribution; EUROPE: Introduction to historic period; Distribution of races.] . . . One of the most recent, and perhaps the most widely accepted, of these arguments rests upon the assumption of close contact between early Indo-European and Semitic civilizations. The evidence consists mainly of a mingling in prehistoric times of the Indo-European-duodecimal system and the Babylonian duodecimal or sexagesimal system of numerals. . . . Such elements are widespread in Indo-European speech. The claim is that these facts tend to prove that the Indo-Europeans once lived in or near Babylonian territory and colored their decimal system with its duodecimal system. It is certain that the Indo-European system of numerals was originally, and in all essentials still is, decimal; and it is very probable indeed that the duodecimal admixture is in some way of Babylonian origin. But it is not necessary to assume therefore that the Indo-Europeans must have lived near Babylonia. . . . Indeed, if the Indo-Europeans had ever lived near Mesopotamia in immediate contact with so highly developed and so vigorous a material civilization as the Babylonian, we should expect vastly more Semitic influence upon Indo-European than could possibly be indicated by the rather casual evidences that have been preserved. Furthermore, duodecimal notation appears also in the speech of a non-Indo-European, Finno-Ugrian people in northern Europe and among the Chinese in eastern Asia. That the Chinese or the Finns ever lived near Babylon is unthinkable. The duodecimal argument is a general one, but many scholars have presented claims in behalf of rather particular localities in Asia. Some have laid the home of the Indo-Europeans north of Afghanistan between the Oxus and the Jaxartes rivers, or between the Oxus and the Hindu-Kush Mountains; others have argued for the plateau of Pamir, 'the Roof of the World'; others for Armenia; others for the region north and south of the Caucasus; and still others for the Aralo-Caspian steppe. Most of these special claims have been either disproved or rendered exceedingly improbable. Modern philological research attacks the problem by somewhat different methods from those that were used in the past. First, it reaches a degree of detachment by showing that the Asiatic hypothesis rests upon mere tradition and upon a number of more or less scientific arguments, most of which have faded away in the light of scholarly investigation. Next, it adopts as a principle of method the process of elimination. Many earlier writers erred: (a) In arguing *ab initio* and with special pleading for this or that restricted area, without sufficient regard to the various probabilities of the other parts of the Indo-European field; (b) In basing final conclusions upon one or two quite specific and isolated pieces of evidence. In all likelihood the case never will be decided on the testimony of a single witness or the presentation of a single fact, however material it may be, but a conclusion can, it seems now, be made exceedingly probable through the *preponderance of evidence*. Preponderance of evidence is best obtained by starting, not with a point, but with the entire Indo-European territory, eliminating the parts from

which the Indo-Europeans could not possibly have come, and then searching for the balance of probability in an effort to limit still further their original home. . . . A word found in only two or three Indo-European languages is likely to be original Indo-European if those languages are widely separated geographically. The majority of borrowings can be traced and checked by historical, cultural, or purely phonetic criteria. The giving of an old name to a new thing is not a common process. Even with modern transportation the number of imported products is always small in proportion to the number of native products. And the language of Neolithic man was, for the most part, restricted to the physical world immediately about him. Such evidence as that drawn from vocabulary is cumulative. If a number of Indo-European languages had a word derived in each case from the same stem, and if the literature of each language indicated that the word in that language signified, for example, the same, or approximately the same, animal as in the other languages, and if the animal were familiar enough to make borrowing unlikely, then it would be absurd to deny the probability that the ancient Indo-Europeans knew that animal. And if the floral and faunal words that are more or less common Indo-European property are predominantly those of the temperate rather than the torrid zone, it is only reasonable to suppose that the Indo-Europeans came from the temperate zone. And certainly the flora and fauna of the Indo-Europeans indicate Europe rather than Asia as their original home."—H. H. Bender, *Aryan question: Did the languages of Europe come from Asia? (Princeton Lectures, Oct., 1921)*.—"Professor Bender, after eliminating for ethnological, archeological or philological reasons the rest of Europe, inclines to think that the balance of probability leans toward 'the great plain of Central and Southeastern Europe, which embraces, roughly, the present Poland, Lithuania, Ukraine and Russia south and west of the Volga. . . . Almost every condition is satisfied by the conception of the Indo-Europeans as inhabiting some part of this plain as late as 3000 or 2500 B. C. (they knew at least one metal before the dispersion, certainly copper), early differentiated linguistically into distinct groups and covering a vast territory, a pastoral people just at the beginning of agriculture, but still nomadic enough to change their habitat freely under changing economic or political conditions. In that great plain the Lithuanians, whose actual speech keeps more evidence of the Aryan foretime than any other, seem to have dwelt in their present location for at least 5,000 years, which would approximate the duration of the Indo-European period, so far as it is known. There is probably no other part of Indo-European territory for which there is so much evidence against autochthonous, non-Indo-European predecessors.' Many will believe and many doubt. At least the Poles will never admit this precedence of the Lithuanians."—*New York Times*, Dec. 4, 1921.

11. Geographical boundaries of language.—Monosyllabic, agglutinative and inflected forms of speech.—Ancient European dialects.—Fusion into Romance, Germanic and Slavonic groups.—Racial characteristics of language.—From east to west on the Eurasian land mass the three main forms of language occupy strictly geographical settings. Monosyllabic Chinese lies rigid and lifeless within its barriers of high mountains and vast seas. The static condition of Chinese civilization is reflected in the chanceless form of its language. A new idea requires a new word and a corresponding symbol. In the wild and wide-stretching

steppes of Siberia, communication of thought or feeling is maintained through the medium of agglutinative forms of speech. Grammatically, this marks an improvement over the monosyllabic language. In the case considered here it expresses the restlessness and mobility of steppe life. At the same time inferiority of civilization is revealed by poverty of ideas and consequently of words. In the west, however, whether we consider western Asia or Europe, we deal with the world's best nursery of civilization. In those regions are found the highly inflected and flexible languages of the Aryan and Semitic families. The grammar of these languages—a mere adaptation to superior requirements of order and method—renders them particularly responsive to the constant improvement in thought which characterizes western countries. Aryan languages are spoken all the way from northern India to Europe's westernmost confines. This territory comprises the western extension of the central belt of high Eurasian mountains together with its fringing lowlands. In its elevated portion it is the domain of the Alpine race and of the Nordic in its depressed northern border. On the other hand, that portion of the northern Eurasian grasslands which extends into Europe forms part of the area of Uralo-Altai languages.”—L. Dominian, *Frontiers of language and nationality in Europe*, p. 7.—“Just as the Aryans seem to have crushed out or absorbed all the former peoples of the countries which they invaded and upon whom they imposed their speech, so it has generally happened that the language of the capital has triumphed over all others. *Greek* means the language of Athens, *Latin* that of Rome. In France, of later times, the dialect spoken in the neighbourhood of Paris became the literary language of the country, owing to the accident that the Capets fixed their capital at Paris, and the same thing happened in England when William I chose London as his capital, and it would seem that in each case that dialect has survived which has absorbed most foreign elements. Although for beauty and richness Latin cannot be compared with Greek, the former is in a way of more importance to Europe generally because it has become the parent of so many daughter languages, while Greek has given birth to modern Greek [Romaic] only. These Latin descendants are generally called the *Romance Languages*, which we know separately as *Italian, Spanish, Portuguese, French, and Roumanian*. When the Romans conquered a country or a tribe, they left there a colony of Romans, the organisation of which was Roman, the speech Roman, so that the natives had to learn a certain amount of Latin to get on at all. This Latin, however, which gradually mingled with and, in large part, replaced the various native dialects, was not the classical Latin of Cicero and Horace, but the everyday speech of the soldiers, and of the merchants who soon followed when the country had once been opened up. This everyday or *Popular Latin*, as it is called, thus became the speech of all the countries where Rome was mistress, and these daughter languages resemble their mother in varying degrees, as they came into closer or more distant connection with Rome itself. Thus Italian is, as we should expect, the Romance language most like Latin; then follow Spanish and Portuguese, Provençal spoken in the south of France, colonised by the Romans and called by them ‘*The Province*’; and the farthest off, French. [See FRANCE: LANGUAGE; FRENCH LITERATURE: 5th-15th centuries.] Yet another branch of this large family is the Celtic group, which includes *British*, which survived as Cornish but may now be called ‘dead.’ . . . Another British survival,

Cymric or Welsh, is better preserved and great efforts have been made of late years to encourage the study of this language by means of a large national gathering, the Eisteddfod, held every year, at which prizes are awarded for the best Welsh poem and for the encouragement of Welsh music and literature and the preservation of the national language and customs. There are still to be met Welsh peasants who understand little English, and in Wales church services are held every Sunday in Cymric. A sister speech of Cornish and Welsh is *Breton*, the language of Brittany, and that the two languages have much in common, though separated by the sea, is proved by the fact that the onion-sellers who come over each year from Brittany to Wales can easily understand and be understood in Wales. *Manx*, or the language of the Isle of Man, is fast dying out, being kept alive only in the speech of the peasants, as is the case with *Gaelic* or Scotch, but *Erse* or Irish is more fortunate, for, as in the case of Welsh, great efforts have been made of late years to preserve the national language of Ireland. [See also CELTS: Celtic language.] Last, but not least, comes the group to which our language belongs, the Teutonic, including besides *English, the German, Dutch, and Scandinavian* tongues. *German*, or properly speaking *High German*, is of course the language of a large part of Austria as well as of Germany, whereas *Low German* is a name given to the subdivision of this family which includes English, Dutch, and Frisian, the Low German of North Germany. The Scandinavian group comprises the languages of Norway, Sweden, Denmark, and Iceland, and is interesting as being the language of many of our ancestors, the Vikings, and that in which the old *Sagas* or tales of the northern heroes were written. Of Gothic, the old language of the Goths, we do not know much, though what we do know is of great importance in the early history of English. The manuscripts of greatest value to philologists are those of Ulphilas, bishop of the Goths, who translated into Gothic probably the whole of the New Testament and portions of the Old, though only parts of his work have been preserved.”—A. Chaplin, *Romance of language*, pp. 21-25.—Our early ancestors “did not always stay at home on their plain, wherever it was, but gradually migrated to the neighbouring countries, and from there still farther afield, gradually mixing with other peoples, borrowing words from them, living different lives under different conditions and so becoming less and less like the people they had left at home. And, as the people altered in their way of living and habits, so their language changed—foreign words were adopted, new names were coined to fit the new occupations and objects of a different life, so that by degrees the language they spoke would hardly be recognised as that of their fathers. Now this change took place very slowly and not in one direction only, but in many, so that a number of variations or dialects of the Mother Tongue grew up, not, at first, very different from their parent, and the people from one part of a county could understand the speech of people from other parts. In some lands, however, as in Greece, where the country is cut up naturally into valleys, the people in one valley would gradually come to speak somewhat differently from those in other valleys whom they seldom, if ever, met because of the difficulties of crossing the mountains that divided them. As time went on, the differences between the speech of one valley and another became more and more marked, until, by the time some of the people migrated to another country, they spoke a language very different from that of their

fathers."—*Ibid.*, pp. 11, 13-14.—"Language areas, in common with many other facts of geography, have been largely determined by the character of the surface or climate. Occurrences such as the extension of Polish speech to the Carpathian barrier or the restriction of Flemish to the lowland of northwestern central Europe, are not the work of mere chance. An investigation of linguistic boundaries, therefore, implies recognition of the selective influence of surface features. But the influence of region upon expansion or confinement of language is far from absolute."—L. Dominian, *Frontiers of language and nationality in Europe*, pp. 2-3.

12. Ancient Egyptian language recovered.—Riddle of Rosetta Stone.—Hieroglyphic and Demotic.—Coptic and its dialects.—For about 2,000 years the language of ancient Egypt had been literally dead, not in the sense that ancient Greek, Latin, Sanskrit or Hebrew are termed "dead" languages. Ever since these four ceased to be "living" or spoken tongues, there have at all times been numerous scholars who were more or less thoroughly acquainted with them. But for two milleniums no living person could claim the slightest knowledge of the language spoken in the days of the Pharaohs; that secret lay buried, apparently forever, in the plentifully existent but undecipherable hieroglyphics which adorned the historic monuments of ancient Egypt. In 1798 some of Napoleon's soldiers, digging near the Rosetta mouth of the Nile, unearthed a piece of black basalt, eleven inches thick, three feet nine inches long and two feet four and a half inches wide. It bore three equivalent inscriptions—in hieroglyphic, demotic and Greek characters. The stone was ceded to Great Britain by the treaty of Alexandria and was placed in the British Museum in 1801. "The trustees of the British Museum recognized that the problem of the Rosetta stone was one on which the scientists of the world might well exhaust their ingenuity, and they promptly published to the world a carefully lithographed copy of the entire inscription, so that foreign scholarship had equal opportunity with British to try to solve the riddle. How difficult a riddle it was, even with the key in hand, is illustrated by the fact that, though scholars of all nations brought their ingenuity to bear upon it, nothing more was accomplished for a dozen years than to give authority to three or four guesses regarding the nature of the upper inscriptions, which, as it afterwards proved, were quite incorrect and altogether misleading. This in itself is sufficient to show that ordinary scholarship might have studied the Rosetta stone till the end of time without getting far on the track of its secrets. The key was there, but to apply it required the inspired insight—that is to say, the shrewd guessing power—of genius. The man who undertook the task had perhaps the keenest scientific imagination and the most versatile profundity of knowledge of his generation—one is tempted to say, of all generations. For he was none other than the extraordinary Dr. Thomas Young, the demonstrator of the vibratory nature of light. Young had his attention called to the Rosetta stone by accident, and his usual rapacity for knowledge at once led him to speculate as to the possible aid this tri-lingual inscription might give in the solution of Egyptian problems. Resolving at once to attempt the solution himself, he set to work to learn Coptic, which was rightly believed to represent the nearest existing approach to the ancient Egyptian language. His amazing facility in the acquisition of languages stood him

in such good stead that within a year of his first efforts he had mastered Coptic, had assured himself that the ancient Egyptian language was really similar to it, and had even made a tentative attempt at the translation of the Egyptian scroll. His results were only tentative, to be sure. Yet they constituted the very beginnings of our knowledge regarding the meaning of hieroglyphics. Just how far they carried, has been a subject of ardent controversy ever since. Not that there is any doubt about the specific facts; what is questioned is the exact importance of these facts. For it is undeniable that Young did not complete and perfect the discovery, and, as always in such matters, there is opportunity for difference of opinion as to the share of credit due to each of the workers who entered into the discovery. Young's specific discoveries were these: (1) that many of the pictures of the hieroglyphics stand for the names of the objects actually delineated; (2) that

ROSETTA STONE

(Original in the British Museum, London)

other pictures are sometimes only symbolic; (3) that plural numbers are represented by repetition; (4) that numerals are represented by dashes; (5) that hieroglyphics may read either from the right or from the left, but always from the direction in which the animals and human figures face; (6) that proper names are surrounded by a graven oval ring, making what he called a cartouche; (7) that the cartouches of the preserved portion of the Rosetta stone stand for Ptolemy alone; (8) that the presence of a female figure after such cartouches, in other inscriptions, always denotes the female sex; (9) that within the cartouches the hieroglyphic symbols have a positively phonetic value, either alphabetic or syllabic, and (10) that several different characters may have the same phonetic value. Just what these phonetic values are, Dr. Young pointed out in the case of fourteen characters, representing nine sounds, six of which are accepted to-day as correctly representing the letters to which he ascribed them, and the three others as being correct regarding their essential or consonantal element. It is clear, therefore, that he was on the right track thus far, and on the

very verge of complete discovery. But, unfortunately, he failed to take the next step, which would have been to realise that the phonetic values given to the characters within the cartouches were often ascribed to them also when used in the general text of an inscription; in other words, that the use of an alphabet was not confined to proper names. This was the great secret which Young missed, but which his French successor, Jean François Champollion, working on the foundation that Young had laid, was enabled to ferret out. Young's initial studies of the Rosetta stone were made in 1814; his later publications bore date of 1819. Champollion's first announcement of results came in 1822; his second and more important one in 1824. By this time, through study of the cartouches of other inscriptions, he had made out almost the complete alphabet, and the 'Riddle of the Sphinx' was practically solved."—H. S. Williams, *History of the art of writing*.—See also ROSETTA STONE.—"Hieroglyphic and Coptic literature together allow the Egyptian language to be investigated through a compass of over four thousand years. This is probably the only instance of so lasting a vitality all over the earth,—a ἀπαξ λεγόμενον of philology. Chinese, and even part of Hindoo literature, may reach up nearly to the same age; but Chinese dates are still unexplored by European science, and Hindoo chronology evinces most strongly the characteristics of mythological confusion. Christianity and Christian literature were only transient phenomena in Egypt. When the Arabs conquered the country, the bulk of the inhabitants, being forced to turn Mussulmans, gradually forgot their native tongue. The reading and copying of religious books remaining, however, an obligatory rule in the Christian monasteries, lower Egypt, by many MSS. of the tenth century, is proved not to have lost its language before the beginning of the eleventh. Arabic translations added to Coptic MSS. were introduced from and after this period. In Upper Egypt, according to the Arabian Macrizi's 'History of the Copts,' every man spoke Egyptian in the fifteenth century; in the sixteenth, Leo Africanus tells us, it had disappeared. At the present time Arabic is the exclusive idiom of Egypt, spoken by a Mahometan population of mixed Egyptian, Arabian, Kurdish, Turkish, and Berber blood. By the side of this hybrid race about half a million remain of the ancient and unmixed Egyptian stock. Called Copts, and adhering to monophysitic Christianity to this day, they still mechanically recite prayers in the venerable idiom of their ancestors; but they have long ceased to speak, and at present they hardly understand, a single word of their ancient tongue. Long ago the native name of Egypt, *Chemi*, the black, has given way to the Arabic denomination of 'Kebt.' Like the Greek Αἴγυπτος, however, 'Kebt' is explained as a foreign and abbreviated form of an indigenous name, older, or at least more sacred, than 'Chemi': 'Kabi ptah,' country of Ptah, or land of the Spirit to whom Egypt was specially consecrated. [See also EGYPT: Names.] With the introduction of Christianity the old and autochthonal alphabet of the country began to change. It is not easily determined when the hieroglyphical shorthand was utterly discontinued, and the Greek letters forming the Coptic alphabet became exclusively prevalent. As the Egyptian saint, St. Antonius, who lived about the middle of the third century, and did not understand any language but Egyptian, knew the contents of the Holy Scriptures perfectly well, these must have been translated at the beginning of

the third century at the latest. But although the translation of the Bible involves the introduction of the Greek alphabet, it does not follow that the Demotic form of the hieroglyphic characters was not preserved with it for a while. When Demotic died at last, six hieroglyphical signs, received into the Coptic alphabet to denote as many peculiar Egyptian sounds, were the only trace left of the local and primitive writing, from which neighbours had originally borrowed their letters. There is a moral in this. The more advanced nations, after the lapse of many centuries gratefully returning the gift of the more ancient but less progressive race, the highly-developed Greek alphabet was bestowed upon Egypt a thousand years after the primitive Egyptian characters, in their modified Phœnician form, first initiated Hellenes into the arts of reading and writing. The memorable six Egyptian characters preserved in Coptic, under the pictures of a garden, a snake, a triangle with stick and crescent, an eagle, a crocodile's tail, and a basket, respectively represent *sh, f, kh, h, dj, tsh*. There is a seventh sign for the syllable *ti*. The Coptic separates into slightly differing dialects: the Thebanic or Sahidic of Upper Egypt, the Memphitic of Lower Egypt, and the Bashmuric, so called from a region in the Delta. The Bashmuric being the most degraded, and the Sahidic, both locally and philologically, the more remote, the Memphitic is frequently called Coptic, to the exclusion of the others. Similarity of inflections is more surely illustrative of international relations than likeness of roots. Judging by the inflectional standard, Coptic is found to approach the Semitic much more closely than the Indo-Germanic in the nature and arrangement of its forms. In certain particulars justly considered to bear a nearly deciding witness to original unity, Coptic is all but identical with Hebrew, Arabic, and Ethiopian."—C. Abel, *Linguistic essays*, pp. 207-209.—See also HAMITES, HAMIITIC LANGUAGES; LIBYANS.

13. Persian cuneiform inscription of Behistun.—Ancient Persian language revived.—Rawlinson's solution.—Near the city of Kermanshah, in Western Persia, there stands a massive bluff known as the rock of Behistun. (See BEHISTUN, ROCK OF.) Three hundred feet above the ground, on a polished surface, there is a sculptured bas-relief representing Darius with a string of chained captives taken in war. The tableau is surrounded by columns of cuneiform writing, repeating the same story in three different languages, those of Persia, Assyria and Elam (Susiana). This remarkable monument was scaled in 1835 by the British general, Sir Henry Rawlinson, who at great personal risk made a paper cast of about half the inscription. He returned to the task in 1848 and took a copy of all the remaining parts. "The key to the value of the Behistun inscription lies in the fact that its third language is ancient Persian. It appears that the ancient Persians had adopted the cuneiform character from their western neighbours, the Assyrians, but in so doing had made one of those essential modifications and improvements which are scarcely possible to accomplish except in the transition from one race to another. Instead of building with the arrow-heads a multitude of syllabic characters, including many homophones, as had been, and continued to be, the custom of the Assyrians, the Persians selected a few of these characters, and ascribed to them phonetic values that were almost purely alphabetical. In a word, while retaining the wedge as the basal stroke of their script, they developed an alphabet; making that last wonderful analysis

of phonetic sounds which even to this day has escaped the Chinese, which the Egyptians had only partially effected and which the Phœnicians were accredited by the Greeks with having introduced into the western world. In addition to this all-essential step, the Persians had introduced the minor, but highly convenient, custom of separating the words of a sentence from one another by a particular mark, differing in this regard not only from the Assyrians and the Egyptians, but from the early Greek scribes as well. Thanks to these simplifications, the old Persian language has been practically restored about the beginning of the nineteenth century, through the efforts of the German, Grotefend; and further advances in it were made just at this time by Burnouf in France, and Lassen in Germany, as well as by Rawlinson himself, who largely solved the problem of the Persian alphabet independently. So the Persian portion of the Behistun inscription could at least be partially deciphered. This, in itself, however, would have been no very great aid towards the restoration of the languages of the other portions, had it not chanced fortunately that the inscription is sprinkled with proper names. Now, proper names, generally speaking, are not translated from one language to another, but transliterated as nearly as the genius of the language will permit. It was the fact that the Greek word 'Ptolemaios' was transliterated on the Rosetta stone, that gave the first clew to the sounds of the Egyptian characters. Had the upper part of the Rosetta stone been preserved, on which, originally, there were several other names, Young would not have halted where he did in his decipherment. But fortune, which had been at once so kind, and so tantalising in the case of the Rosetta stone, had dealt more gently with the Behistun inscription; for no fewer than ninety proper names were preserved in the Persian portion, and duplicated, in another character, in the Assyrian inscription. A study of these gave a clew to the sounds of the Assyrian characters. The decipherment of this character, however, even with this aid, proved enormously difficult, for it was soon evident that here it was no longer a question of a nearly perfect alphabet of a few characters, but a syllabary of several hundred characters, including many homophones, or different forms for representing the same sound. But with the Persian translation for a guide on the one hand, and the Semitic languages, to which family the Assyrian belonged, on the other, the appalling task was gradually accomplished, the leading investigators being General Rawlinson, Professor Hincks, and Mr. Fox Talbot, in England; Professor Jules Oppert in Paris; and Professor Eberhard Schrader in Germany; though a host of other scholars soon entered the field. This great linguistic feat was accomplished about the middle of the [19th] century. But so great a feat was it, that many scholars of the highest standing, including Ernest Renan in France, and Sir George Cornwall Lewis in England, declined at first to accept the results, contending that the Assyriologists had merely deceived themselves, by creating an arbitrary language. The matter was put to the test in 1855, at the suggestion of Mr. Fox Talbot, when four scholars, one being Mr. Talbot himself, and the others General Rawlinson, Professor Hincks, and Professor Oppert, laid before the Royal Asiatic Society their independent translations of an hitherto untranslated Assyrian text. A committee of the society, including England's greatest historian of the century, George Grote, broke the seals of the four translations, and reported that they found them unequivocally in

accord as regards their main purport, and even surprisingly uniform as regards the phraseology of certain passages; in short, as closely similar as translations from the obscure texts of any difficult language ever are. This decision gave the work of Assyriologists an official status, so to say, and the reliability of their method has never since been in question. Thus it has come about that these inscribed bricks from the palace of Asshurbanapal, which, when the first of them was discovered, were as meaningless as so many black slabs, have been made to deliver up their message."—H. S. Williams, *History of the art of writing*, text to plate XXI.

14. Pahlavi or Pehevi.—Anquetil-Duperron's translation of the Zend-Avesta.—Burnouf's creation of Avesta philology.—"However loosely the term Pahlavi may have been formerly applied, it has long been practically restricted to the written language of Persia during the Sasanian dynasty, and to the literature of that period and a short time after, of which some fragments have been preserved by the Parsis, in a character resembling that of the Avesta, but very deficient in distinct letters. These Pahlavi writings are of a very peculiar character: instead of presenting us with a pure Iranian dialect (as might be expected in the language of a period commencing with the purely Iranian ancient Persian, and ending with the nearly equally pure Iranian language of Firdausi), it exhibits a large mixture of Semitic words, which increases as we trace it further back, so that the earliest inscriptions of the Sasanian dynasty may be described as being written in a Semitic language, with some admixture of Iranian words, and a prevailing Iranian construction. . . . Since the Mohammedan conquest of Persia, the language has become greatly mixed with Semitic words from the Arabic, but this Semitic admixture is of a totally different character to that we find in Pahlavi. The Arabic element in modern Persian consists chiefly of substantives and adjectives, referring to religion, literature, or science; few particles or verbs have been adopted, except when whole phrases have been borrowed; in fact, the Arabic words, although very numerous, are evidently borrowed from a foreign language. The Semitic element in Pahlavi writings, on the contrary, comprises nearly all kinds of words which are not Arabic in modern Persia; almost all pronouns, prepositions, conjunctions, and common verbs, many adverbs and substantives in frequent use, the first ten numerals, but very few adjectives, are Semitic; while nearly every Arabic word in modern Persian would be represented by an Iranian one in Pahlavi writings. . . . The explanation of this extraordinary compound writing fundamentally Semitic in its words and Iranian in its construction, is that it never literally represented the spoken language of any nation. The Iranians must have inherited their writing from a Semitic people, and although they were acquainted with the separate sounds of each of the letters, they preferred transferring the Semitic words bodily, so as to represent the same ideas in their own Iranian language, and each Semitic word, so transferred, was merely an ideogram, and would be read with the sound of the corresponding Iranian words, without reference to the sounds of the letters composing it; thus the Persians wrote the old Semitic word *malikā*, 'king,' but they pronounced it *shāh*."—M. Haug, *Essays on the sacred language, writings, and religion of the Parsis* (E. W. West, ed.), pp. 81-83 — "The first scholar who made Europeans acquainted with the contents of the sacred books of the

Parsis was the celebrated Frenchman, Anquetil-Duperron. . . . He published (in 1771) . . . in French, *Zend-Avesta, the work of Zoroaster, containing the theological, physical, and moral ideas of this lawgiver, the ceremonies of the divine service which he established, and several important traits respecting the ancient history of the Persians, translated into French from the Zend original, with Notes and several Treatises for illustrating the matters contained in it*, by Anquetil Duperron, 2 vols. 4to. This groundwork for Avesta studies in Europe created an immense sensation when it was published. . . . In these languages [the Avesta and Pahlavi] there are no Arabic words whatever; the Avesta is written in a purely Aryan dialect, the elder sister of Sanskrit, as can be easily seen on comparing it with the language of the Veda; in Pahlavi there are many Chaldee, but no Arabic words, and the greater part of the language has a close connection with modern Persian. . . . Inquiries into the real nature of the Avesta and Pahlavi languages were not made until more than fifty years after Anquetil's work had appeared. The first who attempted to study this difficult subject was the Great Danish scholar Rask, who had himself been in Bombay, and had purchased many valuable Avesta and Pahlavi manuscripts, which are now deposited in the University Library at Copenhagen. He wrote in 1826 a pamphlet 'On the Age and Genuineness of the Zend Language.' In this little book he proved the close affinity of the language of the Zend-Avesta to Sanskrit. This proof was sufficient to remove whatever doubts might have been entertained as to the genuineness of the Avesta language. . . . [However], Rask himself cannot be considered as one of the founders of Avesta philology. This honour was also reserved for a Frenchman. The first who laid the foundation of a real Avesta philology was Eugene Burnouf, Professor of Sanskrit at the Collège de France at Paris, one of the most gifted and talented scholars of his time. . . . He applied his sound and critical knowledge of it to the discovery of the rudiments of Avesta grammar and etymology; and his laborious researches were crowned with success."—*Ibid.*, pp. 18, 20-22.—See also ZOROASTRIANS.

15. Semitic languages.—Phœnician, Hebrew, Syrian and Chaldee.—Aramaic.—Borrowings from Arabic, Persian, Turkish and Hindustani.—Arabic.—"The Phœnicians, inhabiting Tyre, Sidon, and the adjacent parts of the Mediterranean coast, and speaking a dialect so nearly akin with the Hebrew that its scanty remains are read with no great difficulty by the aid of that language, have been wont to be accounted as the first to give the [Semitic] race prominence in general history. The part which they played was of the most honorable and useful character. Their commercial enterprise widely extended the limits of geographical knowledge, and bound together distant peoples by the ties of mutual helpfulness. . . . A significant indication of the far-reaching and beneficent nature of their activity is to be seen in the fact that a large portion of the world's alphabets, including many of those which have the widest range, and have been used by the most cultivated nations, come from the Phœnician alphabet as their ultimate source. . . . Phœnicia has left no literature. . . . The coffin of one of the kings of Sidon, found but a few years since, presents in its detailed inscription a fuller view of the Phœnician tongue than is derivable from all its other known records. A few inscriptions, and a mutilated and obscure fragment in a play of the Roman poet Plautus, whereof the scene is laid

in Carthage, are the only relics left us of the idiom of that qucenly city."—W. D. Whitney, *Language and the study of language*, pp. 297-298.—"Former beliefs as to Phœnician influence on Greek culture in its infancy, and, generally, as to the importance of the part played by the Phœnicians in the development of civilization throughout the Mediterranean world, have been modified by the archaeological discoveries of late years. . . . It is now doubted, and more than doubted, that the Phœnicians were the inventors, as long supposed, of the alphabetical system from which the alphabets of so many ancient and modern languages were derived."—J. N. Larned, *Seventy centuries of the life of mankind*, v. 1, p. 82.—"Last among the Asiatic languages, we come to the Semitic, so called because in the genealogies of the Genesis the Communities which speak them are mostly described as descendants of Shem. They fill the immense, but barren and thinly-populated peninsula of Arabia, with its northern borderlands, of Mesopotamia and Syria and Palestine, and with a district in Abyssinia, lying opposite its southwest corner. The northern division is composed of the Assyrian and Babylonian, the Canaanitic dialects (chief among them the Hebrew and Phœnician), and the Syrian, or Aramaic; the southern division contains the Arabic and Abyssinian dialects. This is their ancient territory: the Phœnician was carried to its colonies, and, as Carthaginian, might perhaps have become the tongue of Mediterranean civilization, but that the long struggle for supremacy ended with the complete overthrow of Carthage by Rome; the Hebrew, replaced in vernacular use, even in its own home, four centuries before Christ, by the Syrian (Chaldee, Aramaic), has led ever since the artificial life of a learned language, scattered among the civilized nations: the Arabic, as the sacred dialect of a conquering people and religion, has been carried, since the seventh century, over a part of the world comparable with that which the Latin came finally to occupy; it is the speech of the whole northern border of Africa; it has crowded out the other Semitic branches, and has filled with its words the Persian, Turkish, and Hindustani, and to a less extent the Malay and Spanish vocabularies. It has given birth, however, to no such group of independent derived languages as the Latin can show. The ancient Hebrew literature is familiar to us far beyond the rest, being our 'Bible'; its earliest parts go back into the second thousand years before Christ. . . . A very recently discovered Moabite tablet (of 900 B.C.) gives us a specimen of another ancient Canaanitic dialect, almost identical with Hebrew. The Aramaic has an abundant Greco-Christian literature, beginning from the second century, besides its share in the Talmudic writings. The Assyrian has a fragmentary literature in the inscriptions and tablets of Ninevah and Babylon, from a period beyond that of the earliest Hebrew. The Arabic begins its record mainly with the rise of Islam; since that time it is one of the richest literatures in the world. In southwest Arabia prevailed a very different body of dialects, usually styled Himyaritic, now preserved only in the jealously-guarded remains of an earlier civilization. With the Himyaritic is most nearly akin the Abyssinian group, which, in two principal literary dialects, the earlier Geëz or Ethiopic and the later Amharic, has a considerable literature, beginning in the fourth century. The Semitic family of languages and races is, after the Indo-European, by far the most prominent in the history of the world. . . . Semitic speech stands more alone in the world than any other, than even the nakedly isolating

Chinese or the indefinitely synthetic American. . . [It] contains two characteristics—the trilateralism of the roots and their inflection by internal change, by variation of vowel—which belong to it alone.”—W. D. Whitney, *Life and growth of language*, pp. 240-248.—See also SEMITIC LITERATURE; JEWS: Language, etc.; MOABITES.—“The oldest monuments belonging to the southern or Arabian branch of Semitic speech are the inscriptions discovered in the southwestern corner of the great peninsula. They represent a language very different from the classical Arabic, as the character and civilization of the Sabæans and Himyarites, from whom they come, appear to have been very unlike those of the Arabs of the desert. Their exact period is hitherto unknown. Language and civilization have alike been almost wholly supplanted, since the rise of Islamism, by the conquering Arabic, only obscure relics of them being left in the Ekkili and other existing idioms of the south. Most nearly akin with the Himyaritic is the speech of the neighbouring region of Africa, which was unquestionably peopled from southern Arabia, by emigration across the Red Sea. The ancient tongue of Abyssinia, the Ethiopic or Geëz, has a literature, wholly of Christian origin and content, coming down from the fourth century of our era: its earliest monument is a version of the Bible. As a cultivated and current language, it has been gradually crowded out of use during the past six centuries by the Amharic, another dialect of the same stock, but of a more corrupt and barbarous character.”—W. D. Whitney, *Language and the study of language*, p. 200.

16.—Modern Indian languages.—Dravidian group.—Annamese and Burmese.—“Indian Society [is] minutely and antagonistically subdivided by differences not only of religion, but of breed. Across these differences lie others, of language and of dress, which, while smoothing in no way the more vital distinctions, give a uniform stamp to the people of a locality. Excluding the hill tribes, thirteen distinct languages are spoken, each with a distinct written character of its own. Eight of them are connected with Sanskrit—that is to say, Sanskrit grew as a classical development out of an early form of one of them. *Hindi* is the most widely spoken. It occupies the Indo-Gangetic plain, apart from its western and eastern extremities, and extends down the centre of the peninsula almost as far as Nagpur. It is used, with dialectic variations, by about 125 millions. Some of its dialects are of independent origin. But throughout this tract colloquial Hindustani is more or less understood. At the western end of the Indo-Gangetic plain, and in Sind, *Lahnda* is spoken by eight millions; at its eastern end *Bengali*, with *Assamese* (akin to Bengali), by fifty-two millions. In the upper portion of the peninsula *Uriya*, on the north-eastern coast, is the language of eleven millions; crossing westwards, *Mahratti*, *Gujarati* and *Rajsthani* are spoken respectively by nineteen, eleven, and twelve millions. On their frontiers these eight languages shade insensibly one into the other in village speech; but a knowledge of one of them would leave the others quite unintelligible. The area of the peninsula further south is divided between four languages which are not related to Sanskrit, *Telugu* (twenty-one millions) and *Tamil* (seventeen millions), towards the east, and *Kanarese* (eleven millions) and *Malayalim* [or Malayalam] (seven millions) on the west. Along the Afghan frontier—*Pushthu*—the language of Afghanistan, is spoken. It is akin to Persian. The language of Burma (spoken by eight millions) belongs to the

Tibetan family. The Mohammedan community of Upper India use Hindustani, a form of Hindi that embellishes its vocabulary by borrowing from Persian. They write this language in the Arabic script. Elsewhere Mohammedans use the tongue of their locality in speaking and writing; but by men of any education Hindustani is more or less understood.”—B. Fuller, *Empire of India*, pp. 135-136.—It has been claimed that the Tamulian or Dravidian group of languages belongs to the Scythian family. [See also DRAVIDIAN RACES.] “Throughout nearly the whole Dekhan [Deccan], these older races still form the predominant population, and speak and write their own languages. Chief among the latter are the Tamil, occupying the south-eastern extremity of the peninsula, along with most of the island of Ceylon; the Telinga

MOABITE STONE

or Telugu, is spoken over a yet more extensive region lying north of this; the Canarese, extending from the interior border of the Tamil and Telugu westward almost to the coast; the Malayam or Malabar, covering a narrow strip of the south-western coast, from Cape Comorin northwards; and the Tulu, filling a still more restricted area to the north of the Malayalam. All these are cultivated tongues, and possess written literatures, of greater or less extent and antiquity; that of the Tamil is the most important and the oldest, parts of it appearing to date back as far as the eighth or ninth century of our era; nothing in Telugu is earlier than the twelfth. The Dravidian races, however, have derived their religion, their polity, and their culture, from the superior race to the north of them, the Hindus; their alphabets are of Hindu descent; their philosophical and scientific terms are borrowed from the rich stores of the Sanskrit; their literary works are in no small

part translations or imitations of Sanskrit authors. . . . The Dravidian languages are not only, like the Scythian, of a generally agglutinate character, but their style of agglutinative structure is sufficiently accordant with that of the Scythian tongues to permit of their being ranked in the same family, provided that material evidence of the relationship, of a sufficiently distinct and unequivocal character, shall also be discovered."—W. D. Whitney, *Language and the study of language*, pp. 326-327.—The Dravidian group comprises the following languages: 1. Tamil; 2. Telugu; 3. Kanarese; 4. Malayalam; 5. Tulu; 6. Kudagu; 7. Toda; 8. Kota; 9. Khond; 10. Gond; 11. Oraon; 12. Rajmahali (or Rajmuhali); 13. Keikadi; 14. Yerukala. "The principal nations of Farther India are the Annamese or Cochín-Chinese, the Siamese, and the Burmese; tribes of inferior numbers, civilization, and importance are the Kwanto, Cambodians, Peguans, Karens, and others. Annamese culture is of Chinese origin; the races of Siam and Burmah emerge from obscurity as they receive knowledge, letters and religion (Buddhism) together from India. Their languages are, like the Chinese, monosyllabic and isolating; but they are as much inferior to that tongue in distinctness of construction and precision of expression as the people that speak them have shown themselves to be inferior to the inhabitants of China in mental activity and reach. Of indicative words, substitutes for the formative elements of more highly developed languages, they make an extended use. Such auxiliary and limiting words are in Siamese always put before, in Burmese always after, the principal root." W. D. Whitney, *Language and the study of language*, pp. 336-337.—See also INDIA: Languages and writing; HINDU LITERATURE; SANSKRIT.

17. English language.—Its antiquity.—Periods of English language.—Period of full inflection.—Early Latin influence.—Scandinavian elements.—"It is within my experience that none but very few Englishmen have the remotest conception of the antiquity of the native element of English, comprising, as it does, the most useful and necessary portion of the language. The usual error is to confuse speech with writing, and to limit the chronology of the spoken word by a consideration of the actual accidental moment when it happened to be written down. Yet there are strange exceptions. Many people are willing to concede at once that Welsh is merely a modern form of ancient British, and, consequently, that the Celtic languages are far older than the date of the existence of Julius Cæsar. According to Prof. Rhys, the oldest Welsh glosses only go back to the ninth century; let us say to about A.D. 800. At this rate, it is at once obvious that, for practical purposes, an old form of Welsh must have been spoken in Britain at least a thousand years before any of it was written down. And this is very much within the mark. When, again, we compare Welsh with Breton, Gaelic, and Irish, and note their divergences, it becomes clear that they must have taken a long time to diverge; before which era the common Celtic language required a long time for its grammatical formation. We are thus carried back into remote prehistoric times; and as a thousand years is quite an insufficient period to produce such developments as must have existed in Cæsar's time, we are very much within the mark when we say that some form of Celtic was being spoken somewhere in the time of King Solomon. We learn from comparative philology that such languages as Sanskrit, Greek, Latin, Germanic, Celtic, and the rest, are (as far as relates to unborrowed primitives) practically coeval. The

fact that the oldest English MS. (viz., the Epinal Glossary, about A. D. 700) is older than any Celtic glossary does not affect the question in the least, nor need we consider the fact that Greek MSS. are older than Sanskrit ones. It is, however, important to learn that a certain Greek inscription can be dated as early as B. C. 474 (Palaëographical Society's 'Facsimiles'), and the Homeric poems must have been composed some centuries earlier. A still higher antiquity is assigned to the 'Rig-Veda.' From all this it follows that Sanskrit, Greek, Celtic and Germanic were already distinct languages in the days of Solomon, and it is further highly probable that, even at that early date, the Celtic and Germanic branches of the Indo-European languages must have been subdivided. We may be sure that a Germanic language essentially the same as English was then being spoken somewhere, though we may not be able to locate the tribe that spoke it. I venture to think that this way of stating the case may seem novel to many, yet the more it is considered the more readily the truth will appear. It must not be forgotten that English sometimes preserves an older form than Greek (as in the case of the word *work*, where Greek lost the initial *w*) or the Sanskrit (as in the case of *star*, where Sanskrit has lost the initial *s*). I observe that Kluge refers to the original Indo-Germanic as existing 'several milleniums' before our era, and suggests the year B. C. 2000 as the latest date for the Aryan division of dialects."—W. W. Skeat, *Antiquity of English (Notes and Queries, Sept. 24, 1898, p. 261)*.—"In the history of the language and its literature there are four periods: (1) The first, commonly spoken of the *Anglo-Saxon period*, and more recently sometimes termed *Old English* or *Oldest English*, dates from the earliest Teutonic speech in England, A. D. 1150. This was the period of full inflection. (2) The second, designated as the *Early Middle English*, during which French words in large numbers were introduced into the language. This period extended from A. D. 1150 to A. D. 1350, which should be divided into two separate periods (a) 1150 to 1250, during which the inflections were broken up; and (b) to 1350, which marked the introduction of French words. (3) The third, or Chaucerian Period, better known as the *Old English* of literature, now commonly called the *Late Middle English*, during which the Saxon and Norman and Angevin French elements were formed into a new literary language. This period extended from 1300 to 1477. (4) The fourth, which dates from 1477 is called *Modern English*, and extends to the present time. During this period foreign words in very large numbers were borrowed and have since been assimilated. The vocabularies of the French, the Spanish, the Portuguese, the Scotch, the Dutch, the Germans, the Italians, the Turks, the Hindus, the Russians, the Persians, the Chinese, the Japanese, the Arabs, and even the Sudanese have been drawn upon for terms with which to enrich the English tongue. Originally merely borrowed, many of these terms have now passed into our language as Anglicized, and it should not be a matter of surprise if this, the present so-called *Modern English* period, is eventually so divided as to mark the dates of each distinct stage of this assimilation."—F. H. Vizetelly, *Essentials of English speech and literature*, pp. 11-12.—See also ENGLISH LITERATURE: Formation; 3rd century; CELTS: Ancient Irish sagas.

"As far back as we can go in the history of the English language we can trace a gradual breaking down of the inflectional system. And even when we arrive at the earliest periods of Old

English, there are sure indications that the language is already in a transitional stage, and that the tendency towards inflectional loss in English is one that goes far back into the prehistoric periods of the language. . . . The development in the English inflectional system has, of course, been altogether unconscious, so far as the users of the language are concerned. . . . Inflections were lost because, in the practical use of the language, men tended to express themselves as briefly as possible. In English, furthermore, the language has developed freely and unrestrainedly from the earliest times down to the Modern English period. This would not have been the case, at least with literary English, if we had had a great classic literature in the Old English period, which was set up and retained as a model for all later periods, as classical Latin literature became the model for all later generations of Romans. If that had taken place our language would now probably have the comparatively elaborate Old English inflectional system, instead of the present Modern English one, which is almost completely devoid of inflection. . . . So few are the inflections of Modern English as compared with those, for example, of Latin or Greek, or even of Old English, the earlier stage of its own language, that it has been characterized as a 'grammarless tongue.' This characterization is approximately true of course only if we think of grammar as meaning the same thing as inflection. In Greek and Latin grammar, inflection, or accidence as it is sometimes called, does play a large part, inflection and the rules of concord being the two important divisions of classical grammar. Through its loss of inflections, however, English has also simplified its rules of concord, and it consequently does not present the same kind of grammatical system as the classical languages. That it is a 'grammarless tongue,' however, in the true sense of the word grammar, is not at all true. The language has its structure and its rules of right and wrong, and it is as necessary to observe them as it was for Greek and Roman to observe their inflectional system and rules of concord. . . . The periods [of inflection] of course pass over into each other gradually, although at the two main dividing lines, at 1100 and 1500, changes took place more rapidly than during the central portions of the periods. There is, therefore, both in the Old English and in the Middle English period, a fairly stable and fixed central or classical form of the language. . . . The Old English is called the period of full inflections because the inflections of the language at that time were not only relatively more numerous than they were in later periods, but were also pronounced with a full and distinct sense of the values of the various vowels in the inflectional endings. Since the inflectional endings bore no accent, it will be seen that this method of pronouncing the inflectional vowels is very different from the tendency of Modern English (or even of Middle English), where we regularly obscure final unaccented syllables in pronunciation."—G. P. Krapp, *Modern English, its growth and present use*, pp. 59-63.—"To . . . [the] early period, while the English were still living on the Continent with their Germanic brethren, belong the first class of loan words. No language is entirely pure; we meet with no nation that has not adopted some loan words, so we must suppose that the forefathers of the old Germanic tribes adopted words from a great many other nations with whom they came into contact; and scholars have attempted to point out very old loan-words from various sources. . . . What . . . were the principal words

that the barbarians learnt from Rome in this period which may be called the pagan or pre-Christian period? . . . In comparing them with later loan-words from the same source we are struck by their concrete character. It was not Roman philosophy or the higher mental culture that impressed our Germanic forefathers; they were not yet ripe for that influence, but in their barbaric simplicity they needed and adopted a great many purely practical and material things, especially such as might sweeten everyday life. . . . They were also short words, mostly of one or two syllables, so that it would seem that the Germanic tongues and minds could not yet manage such long words as form the bulk of later loans. These early words were easy to pronounce and to remember, being of the same general type as most of the indigenous words, and therefore they very soon came to be regarded as part and parcel of the native language, indispensable as the things themselves which they symbolized. We now come to the first of those important historical events which have materially influenced the English language, namely the settlement of Britain by Germanic tribes. . . . Who were the invaders, and where did they come from? This, too, has been a point of controversy. According to Bede, the invaders belonged to the three tribes of Angles, Saxons, and Jutes; and linguistic history corroborates his statement in so far as we have really three dialects, or groups of dialects: the Anglian dialects in the North with two subdivisions, Northumbrian and Mercian, the Saxon dialects in the greater part of the South, the most important of which was the dialect of Wessex (West Saxon), and the Kentish dialect. Kent having been, according to tradition, settled by the Jutes. . . . What language or what languages did the settlers find on their arrival in Britain? The original population was Celtic; but what about the Roman conquest? The Romans had been masters of the country for centuries; had they not succeeded in making the native population learn Latin as they had succeeded in Spain and Gaul? . . . The net result of modern investigation seems to be that not more than half a dozen words did pass over into English from the Celtic aborigines. . . . About 600 A. D. England was christianized, and the conversion had far-reaching linguistic consequences. We have no literary remains of the pre-Christian period, but in the great epic of Beowulf we see a strange mixture of pagan and Christian elements. . . . We must not suppose that people were wholly unacquainted with Christianity before they were actually converted, and linguistic evidence points to their knowing, and having had names for, the most striking Christian phenomena centuries before they became Christians themselves. One of the earliest loan-words belonging to the sphere is Church, *Æ. cirice, cyrice*, ultimately from Greek *kuriakon* '(house) of the lord' or rather the plural *kuriaka*. . . . The number of new ideas and things introduced with Christianity was very considerable. . . . It is worth noting that most of these loans were short words that tallied perfectly well with the native words and were easily inflected and treated in every respect like these. . . . Existing native words were largely turned to account to express Christian ideas, the sense only being more or less modified. . . . Word-composition and other formative processes were resorted to, and in some instances the new terms were simply fitted together from translations of the component parts of the Greek or Latin word they were intended to render. . . . A Scandinavian element, a French element, and a Latin element . . . enter

largely into the texture of the English language, and as each element is characteristically different from the others, we shall treat them separately. First, then, the Scandinavian element. . . . In order rightly to estimate the Scandinavian influence it is very important to remember how great the similarity was between Old English and Old Norse. . . . An enormous number of words were then identical in the two languages, so that we should now have been utterly unable to tell which language they had come from, if we had had no English literature before the invasion; nouns such as man, wife, father, mother, fold, house, thing, life, etc. . . . The consequence was that an Englishman would have no great difficulty in understanding a viking, nay we have positive evidence that Norse people looked upon the English language as one with their own. . . . But there are, of course, many words to which no such reliable criteria apply, and the difficulty in deciding the origin of words is further complicated by the fact that the English would often modify a word, when adopting it, according to some more or less vague feeling of the English sound that corresponded generally to this or that Scandinavian sound. . . . We also see in England a phenomenon, which, I think, is paralleled nowhere else to such an extent, namely the existence side by side for a long time, sometimes for centuries, of two slightly differing forms for the same word, one the original English form and the other Scandinavian. . . . In some cases both forms survive in standard speech; they have then, as a rule, developed slightly different meanings. . . . In other cases, the Scandinavian form survives in dialects only, while the other belongs to the literary language. . . . If . . . we try to find out by means of the loan-word test . . . what were the spheres of human knowledge or activity in which the Scandinavians were able to teach the English, the first thing that strikes us is that the very earliest stratum of loan-words, words which by the way were soon to disappear again from the language, relate to war and more particularly to the navy. . . . Next, we find a great many Scandinavian law-terms; they have been examined by Professor Steenstrup in his well-known work on 'Danelag.' He has there been able, in an astonishing number of cases, to show conclusively that the vikings modified the legal ideas of the Anglo-Saxons, and that numerous new law-terms sprang up at the time of the Scandinavian settlements which had previously been utterly unknown. . . . The Normans became masters of England, and they remained masters for a sufficiently long time to leave a deep impress on the language. The conquerors were numerous and powerful, but the linguistic influence would have been far less if they had not continued for centuries in actual contact and constant intercourse with the French of France, of whom many were induced by later kings to settle in England."—O. Jespersen, *Growth and structure of the English language*, pp. 29-35, 37, 40-44, 59, 64-67, 85.—See also ENGLISH LITERATURE: 6th-11th centuries.—After "the Norman conquest of England in 1066, the English language, though still spoken, . . . was gradually superseded by Latin and Norman French, and by the year 1150 the Old English period drew to a close."—F. H. Vize-telly, *Essentials of English speech and literature*, p. 23.—See also EDUCATION: Medieval: 871-900; BIBLE, ENGLISH: 8th-11th centuries.

18. Middle English period.—Changes in whole structure of language.—French influence.—Modern period.—Influence of printing.—Latin element.—"The language of the Middle English period underwent a great number of changes, affecting not

only inflections, but also vocabulary, sounds, and the whole structure of the language. The causes of this development, this thorough reconstruction of the language, are very complex. So far as inflections go, however, one of the main causes was pretty certainly a change in the way words were accented in the Middle English period. The only kind of word stress which could have preserved the full inflectional endings of the Old English period is a general or distributed stress, spread over the word as a whole. But in the Middle English period apparently the stress of words began to become more like that of Modern English, to be placed strongly and heavily on the first syllables of words, with a consequent obscuring and weakening of the later syllables of the words. A second main cause of inflectional change in the Middle English period was the condition of general social and political unrest which accompanied the period of the Danish Conquest, and, a little later, the Norman Conquest. The result of these two conquests was the complete overthrow of the English social and political system. For a period of several generations there was a time of great confusion; the standards, the traditional rules and habits of the English people of Britain, in speech and in other matters, were forgotten and broken down. The result was that the constraints of a rigid social custom, of conventional education and good breeding, being to a considerable extent removed, the language was allowed to develop in an untrammelled and popular way. The usages of the radical, the ignorant, and uneducated part of the people were not held in check and the result was that when English began to assert itself, it was no longer the English of the Old English period, but an English that had been modified by passing through a period of popular and natural development. . . . The inflections of the Middle English period are largely the inflections of the Old English period in a disappearing stage. Owing to that change in word accent which has just been mentioned, the final syllables of words, especially inflectional syllables, tended to become weak and indistinct in pronunciation. This tendency is already apparent in the late Old English period, manifesting itself first in the ending *um* of the dative plural of nouns and of adjectives, in the time of Aelfric. This ending gradually became vague and uncertain, appearing in the various forms *un*, *on*, *en*, *an*, the last form becoming the predominating one by the end of the old English period. The most important inflectional development, however, of the early Middle English period consisted in the leveling of all unstressed end vowels under the vowel *e* (pronounced like the second syllable of 'sooner,' with the *r* silent, i. e., 'soon-uh'). . . . Several important consequences followed this leveling of the distinctive Old English vowel endings under the vowel *e*. In the first place, the grouping of the nouns into classes, or types, of declension had largely to be given up, for the principle of this classification was the difference in vowel ending. The two classes which remained were the class of the strong and weak nouns, the strong nouns being those that formed their genitive singular and nominative and accusative plurals in *es*, the weak nouns these that used the ending *en* for these and other forms. Moreover, with the breaking down of the different classes of declension passed away also grammatical gender. All inflections being leveled under the general inflections *e*, *es*, *en*, there was no longer any reason, or indeed any means, for keeping up the distinctions of grammatical gender, and words were used as

they are in Modern English, without gender, except in so far as they state, by their logical meaning, the sex of the objects which they designate. . . . The loss of grammatical gender in the noun naturally led to the loss of agreement in inflection between the noun and its adjective, so far as gender is concerned. The same leveling of inflectional endings took place in the adjective as in the noun; the only one which persisted after the loss of those indicative of gender as the vowel *e*, which served to mark the plural number and the weak inflection of the adjective. . . . Inflection of the verb as strong and weak, or irregular and regular, persisted in the Middle English period, but from early Middle English times there was a tendency on the part of strong verbs to become weak, for example, Old English *wēpan*, *wēop*, beside Middle English *wepen*, *wepete*, 'weep,' 'wept.' This tendency, which was developed still further in the Modern English period, and which is still operative, was due to the fact that the weak verbs were the more numerous, as well as being the simpler and more readily apprehended manner of tense formation. The weak verbs thus tended to become the type form, crowding out by analogy to them many old strong verbs and attracting to their class all new verbs that entered the language. . . . Another simplification that tended to take place affected the preterite tenses. In the Old English strong verb, the preterite plural stem was frequently different from the preterite singular, and past participle often different from both. In Middle English the three preterite stems tended to become alike, to simplify under one form, just as the forms of the article all tended to simplify under the type form *the*. Thus the Old English verb *bindan*, *band*, *bundon*, *bunden*, became in Middle English *binde*, *bound*, *bound*. This leveling never became complete, as in the case of the article, and we still have in Modern English verbs like *sing*, *sang*, *sung*; *drive*, *drove*, *driven*; the simplification, however, affected a considerable number of verbs."—G. P. Krapp, *Modern English, its growth and present use*, pp. 74-75, 77-80, 82-83.—"The linguistic influence [of the French] did not begin immediately after the [Norman] conquest, and . . . was strongest in the years 1251-1400, to which nearly half of the borrowings belong (42.7 per cent). [See ENGLISH LITERATURE: 11th-14th centuries; BIBLE, ENGLISH: 8th-11th centuries.] Further it will be seen that the common assumption that the age of Dryden was particularly apt to introduce new words from French is very far from being correct. In a well-known passage, Robert of Gloucester (ab. 1300) speaks about the relation of the two languages in England: 'Thus,' he says, 'England came into Normandy's hand; and the Normans at that time . . . could speak only their own language, and spoke French just as they did at home, and had their children taught in the same manner, so that people of rank in this country who came of their blood all stick to the same language that they received of them, for if a man knows no French people will think little of him. But the lower classes still stick to English and to their own language. I imagine there are in all the world no countries that do not keep their own language except England alone. But it is well known that it is the best thing to know both languages, for the more a man knows the more is he worth.' . . . Nearly all the words taken over before 1350 and not a few of those of later importation, have become part and parcel of the English language, so that they appear to everybody just as English as the pre-Conquest stock of native words. . . . We need only

go through a list of French loan-words in English to be firmly convinced of the fact that the immigrants formed the upper classes of the English society after the conquest, so many of the words are distinctly aristocratic. It is true that they left the old words *king* and *queen* intact, but apart from these nearly all words relating to government and to the highest administration are French. . . . Feudalism was imported from France, and with it were introduced a number of words, such as *fief*, *feudal*, *vassal*, *liege*, and the name of the various steps in the scale of rank. . . . *Court* is French, as well as the adjectives relating to court life, such as *courteous*, *noble*, *fine* and *refined*. *Honour* and *glory* belong to the French and so does *heraldry*, while nearly all English expressions relating to that difficult science are of French origin, some of them curiously distorted. The upper classes, as a matter of course, took into their hands the management of military matters; and although in some cases it was a long time before the old native terms were finally displaced, . . . we have a host of French military words, many of them of very early introduction. . . . Another natural consequence of the power of the Norman upper classes is that most of the terms pertaining to the law are of French origin. . . . As ecclesiastical matters were also chiefly under the control of the higher classes, we find a great many French words connected with the church. . . . To these words, taken from different domains, may be added other words of more general meaning, which are highly significant as to the relations between the Normans and the English, such as *sir* and *madam*, *master* and *mistress* with their contrast *servant* (and the verb to *serve*), further, *command* and *obey*, *order*, *rent*, *rich* and *poor* with the nouns *riches* and *poverty*; *money*, *interest*, *cash*, *rent*, etc. It is a remark that was first made by John Wallis and that has been very often repeated, especially since Sir Walter Scott made it popular in 'Ivanhoe,' that while the names of several animals in their lifetime are English (*ox*, *cow*, *calf*, *sheep*, *swine*, *boar*, *deer*) they appear on the table with French names (*beef*, *veal*, *mutton*, *pork*, *bacon*, *brawn*, *venison*). This is generally explained from the masters leaving the care of the living animals to the lower classes, while they did not leave much of the meat to be eaten by them. But it may with just as much right be contended that the use of the French words here is due to the superiority of the French *cuisine*, which is shown by a great many other words as well, such as *sauce*, *boil*, *fry*, *roast*, *toast*, *pastry*, *pastry*, *soup*, *sausage*, *jelly*, *dainty*; while the humbler *breakfast* is English, the more sumptuous meals, *dinner* and *supper*, as well as *feasts* generally are French. . . . The French led the fashion in the middle ages, just as they do to some extent even now, so we expect to find a great many French words relating to dress. . . . The French were the teachers of the English in most things relating to art; not only such words as *art*, *beauty*, *colour*, *image*, *design*, *figure*, *ornament*, *to paint*, but also the greater number of the more special words of technical significance are French."—O. Jespersen, *Growth and structure of the English language*, pp. 85, 88-90, 94, 98.—"In the meantime the blending of the French and the English tongues had progressed slowly yet steadily from the thirteenth century, when translators began to introduce in their works French words that were currently intelligible. It was not long thereafter that the best of French books issued were translated into English despite the opposition to this course from such men as Robert Grosseteste. Bishop of

Lincoln, who strove, but in vain, to have French retained as the literary language and English relegated to the inferior position of a dialect for use in intercourse with the common people—a language to be shunned by the polite society of his day. . . . Wycliffe's greatest service to literature lies in the fact that he undertook the translation into English of the whole Bible. This he produced between the years 1380 and 1384."—F. H. Vize-telly, *Essentials of English speech and literature*, pp. 35, 38.—See also BIBLE, ENGLISH: 14th-16th centuries.

The modern period in the growth of English "began with the introduction of printing into England. . . . For the reason that printing helped largely to establish the forms our words were to take, the literary language which it produced, since it had attained the almost inflectionless condition of the language of to-day, became known as *Modern English*. This language is commonly divided into two periods, the *Early Modern* or *Tudor English* which extends from Caxton to the close of Shakespeare's literary activity, and the publication of the King James Version of the Bible, or about one hundred and thirty years—1477 to 1611—and *Modern English*, from 1611 onward. The influence of books on the language was immeasurable. As they increased in number and spread throughout the land the study of the people became the art of reading. Printing tended to establish the forms of the written word which, while suited to the eye, differed in sound when pronounced to the ear. Confusion of spelling arose when persons living in different parts of the country endeavored to express the sounds familiar to their ears in writing or printing. To this confusion—modified somewhat as time passed by improvements in printing, by added facilities of communication and the resulting increase of contact between the people—we owe the anomalies to be found in our spelling to-day. Although the inflections had disappeared no system to replace them had been devised, so that a certain looseness in the order of using words prevailed. This was particularly so in the sixteenth century; then the language was the subject of syntactical license which would not be countenanced to-day. Dr. E. A. Abbott, who in his 'Shakespearian Grammar' made a valuable contribution to Tudor English, pointed out that the dropping of the inflections resulted in the use of words in any grammatical relation as long as they conveyed the idea of the speaker. 'For then,' said he, 'clearness was preferred to grammatical correctness and brevity both to correctness and clearness.' So the practise of placing words without any regard to syntax, in the order in which they first came to the thought, became common. This produced a forcible, direct, and clear English such as may be found in the writings of Shakespeare and Jonson."—*Ibid.*, pp. 40, 53-54.—"Altho the Modern English period is called the period of lost inflections, it should be understood that this term is used with relative, and not absolute, meaning. All inflections have not been lost in the Modern English period, altho compared with those of the Middle English or the Old English period they have dwindled to a very small number. Nevertheless the language still remains an inflectional language, and for the expression of certain ideas no other means than inflection has been devised. The developments in the Modern English period arise from the further carrying out of the two tendencies of the Middle English period, first the tendency towards obscuring the vowels of inflectional syllables and second, the tendency towards simplification by the substi-

tution of one type form in the place of a variety of forms. In the passage from the Middle English to the Modern English period, the language did not again become merely a popular dialect which later was elevated to the dignity of a standard literary language, as had occurred in the transition from the Old English to the Middle English period. On the contrary, from the end of the Middle English time to the present day the language has been watched with increasing care and vigilance. It has been systematized, regulated, purified; in short, it has tended to become more and more an established and settled literary and conventional language. The changes, consequently, which have taken place in the Modern English period have been comparatively slow and comparatively few in number. The difference between the English of the year 1900 and the year 1500 is much less than that between the English of the year 1250 and the year 1000. The Modern English has been a regulating, refining, systematizing period, rather than a revolutionizing, reconstructing period."—G. P. Krapp, *Modern English*, pp. 83-84.—"Although Latin has been read and written in England from the Old English period till our own days, so that there has been an uninterrupted possibility of Latin influence on the English language, yet we may with comparative ease separate the latest stratum of loans from the two strata that we have already considered. It embodies especially abstract or scientific words, adopted exclusively through the medium of writing and never attaining to the same degree of popularity as words belonging to the older strata. The words adopted are not all of Latin origin, there are perhaps more Greek than Latin elements in them, if we count the words in a big dictionary. Still the more important words are Latin, and most of the Greek words have entered our language through Latin, or have, at any rate, been Latinized in spelling and endings before being used in English, so that we have no occasion here to deal separately with the two stocks. The great historical event, without which this influence would never have assumed such gigantic dimensions, was the revival of learning. Through Italy and France the Renaissance came to be felt in England as early as the fourteenth century, and since then the invasion of classical terms has never stopped, although the multitude of new words introduced was greater, perhaps, in the fourteenth, the sixteenth and the nineteenth than in the intervening centuries. The same influence is conspicuous in all European languages, but in English it has been stronger than in any other language, French perhaps excepted. . . . It would be idle to attempt to indicate the number of Latin and Greek words in the English language, as each new treatise on a scientific subject adds to their number. But it is interesting to see what proportion of the Latin vocabulary has passed into English. Professors J. B. Greenough and G. L. Kittredge have counted the words beginning with A in Harper's Latin Dictionary, excluding proper names, doublets, parts of verbs, and adverbs in *e*, and *ter*. Of the three thousand words there catalogued, one hundred and fifty-four (or about one in twenty) have been adopted bodily into our language in some Latin form, and a little over five hundred have some English representative taken, or supposed to be taken, through the French. Thus we have in the English vocabulary about one in four or five of all the words found in the Latin lexicon under A. There is no reason to suppose that his proportion would not hold good approximately for the whole alphabet. . . . Latin has influenced

English not only in vocabulary, but also in style and syntax."—O. Jespersen, *Growth and structure of the English language*, pp. 114-115, 118, 126.

19. Influence of Shakespeare, Spenser and the Bible, on the English language.—"Many people who know the preëminent position of Shakespeare in English literature will probably be surprised to hear that his is not the greatest influence on English poetic diction. . . . It must be noted also that none of the words thus traceable to Shakespeare belong now to what might be called the technical language of poetry. Modern archaizing poetry owes its vocabulary more to Edmund Spenser than to any other poet. Pope and his contemporaries made a very sparing use of archaisms, but when poets in the middle of the eighteenth century turned from his rationalistic and matter-of-fact poetry and were eager to take their romantic flight away from everyday realities, Spenser became the poet of their heart, and they adopted a great many of his words which they had to explain to their readers are now perfectly familiar to every educated man and woman. . . . As for the technical grammar of modern poetry, the influence of Shakespeare is not very strong, in fact not so strong as that of the Authorized Version of the Bible."—O. Jespersen, *Growth and structure of the English language*, pp. 227-230.—"The influence of the Authorized Version of the Bible upon the English language can be measured only in part by its influence on the English-speaking peoples. As a literary work it has preserved to us a language peculiarly its own. Of Anglo-Saxon words it contains 97 per cent.—more than any other English book. Biblical English may be archaic in form, but this archaic character was not derived from Elizabethan or Jacobean sources. Hallam has pointed out that it is 'not the English of Daniel, or Raleigh, or Bacon,' but it may be traced back to the language of Wycliffe, and although this 'abounds with obsolete phraseology and with single words long since abandoned or retained only in provincial use' it has given all men so much satisfaction that no other revision which has succeeded it has been received with sufficient favor as to displace the veneration in which the King James Version is held."—F. H. Vizetelly, *Essentials of English speech and literature*, p. 121.—See also BIBLE, ENGLISH: Modern estimates.

19. Possibility of English as a world language. See INTERNATIONAL LANGUAGES: Living versus artificial languages.

20. Scythian family of languages, also known as Altaic, Ural-Altaic, and Turanian.—Ugrian or Finno-Hungarian.—Samoyedic.—Turkish.—Mongolian.—Tungusic.—"As usually constructed . . . [the Scythian family] covers with its branches the whole northern portion of the eastern continent, through both Europe and Asia, together with the greater part of Central Asia, and portions of Asiatic and European territory lying still further south. It is known by many different names: some call it Altaic, or the Ural-Altaic, family, from the chains of mountains which are supposed to have served as centres of dispersion to its tribes; others style it, from one or other of its principal branches, the Mongolian, or the Tartaric; the appellation Turanian has also won great currency within no long time [see TURANIAN RACES AND LANGUAGE], owing to its adoption by one or two very conspicuous authorities in linguistic ethnology, although recommended neither by its derivation nor its original application; . . . Scythian, finally, is a title which it has sometimes received, taken from the name by which the Greeks knew

the wild nomad races of the extreme north-east, which were doubtless in part, at least, of this kindred—and the designation Scythian we will here employ, as, upon the whole, though far from being unexceptionable, best answering our purpose. Five principal branches compose the family. The first of them, the Ugrian, or Finno-Hungarian, is almost wholly European in its position and known history. It includes the language of the Laplanders, the race highest in latitude, but lowest in stature and in developed capacity, of any in Europe; that of the Finns in [formerly] north-western Russia, with related dialects in Esthonia and Livonia; those of several tribes, of no great numbers or consequence, stretching from the southern Ural mountains towards the interior of Russia and down the Volga—as the Permiens, Siryaniens, Wotiaks, Cheremisses, and Mordwins; and the tongue of the Hungarians or Magyars, far in the south, with those of their kindred, the Ostiaks and Woguls, in and beyond the central chain of the Ural—which was the region whence the rude ancestors of the brave and noble race who now people Hungary fought their way down to the Danube, within the historical period, or hardly a thousand years ago. [See also HUNGARY: Origin.] The second branch is the Samoyedic, nearest akin with the Ugrian, yet apparently independent of it. It occupies the territory along the northern coast of Europe and Asia, from the White Sea across the lower Yenisei, and almost to the Lena, one of the most barren and inhospitable tracts of the whole continent; while some of its dialects are spoken in the mountains to the south, about the head waters of the Yenisei—probably indicating the region whence the Samoyed tribes were driven, or wandered, northward, following the river-courses, and spreading out upon the shores of the northern ocean. What is known of them and their speech is mainly the fruit of the devoted labours of the intrepid traveller Castrén. The Samoyed dialects are destitute of literary cultivation and of records. . . . The subdivisions of the branch are numerous, and they cover a territory of very wide extent. . . . They are classed together in three principal groups: first, the northern, of which the Kirghiz, Bashkir, and Yakut are the most important members; they occupy (with the exception of the Yakut in the extreme north-east) southern Siberia and Tartary, between the Volga and the Yenisei; second, the south-eastern, including the Uigurs, Usbeks, Turkomans, etc., and ranging from the southern Caspian, eastward to the middle of the great plateau; third, the western, stretching through northern Persia, the Caucasus, the Crimea, and Asia Minor, to the Bosphorus, and scattered in patches amid the varied populations which fill the [former] European dominions of the Sultan. . . . They compose together a very distinct body of nearly kindred forms of speech, not differing from one another in anything like the same degree as the Ugrian languages. . . . The fourth branch of the Scythian languages is the Mongolian. . . . The Khalkas, Kalmucks, and Buriats are the most notable of their tribes. The fifth and last branch is called the Tungusic. It occupies a broad tract of north-eastern Asia, from the frontier of China on the north to the Arctic Ocean, and from the neighbourhood of the Yenisei almost to Kamchatka. Its most conspicuous dialect, the Manchu, belongs to tribes which have established a claim upon the attention of the world by their conquest of China . . . (1644). . . . The Manchus have written their language during some centuries past; but they have nothing which deserves the name

of a national literature; their books are translations or servile imitations of Chinese works. . . . The Mongol alphabet was the original of the present Manchu, and, in its turn, was derived from that of the Uigur Turks; the latter, again, goes back to the Syriac, having been brought into Central Asia by Nestorian missionaries. . . . The linguistic tie, now, which binds together the widely scattered branches of this great family, is a somewhat loose and feeble one, consisting less in the traceable correspondence of material and forms, the possession of the same roots and the same inflections, than in a correspondence of the style of structure, of the modes of apprehension and expression of grammatical relations. Each great branch forms by itself a group as distinct as is, for instance, the Germanic or the Slavonic in our own family; but there is no such palpable and unmistakable evidence of kinship between Ugrian, Turkish, Mongol, and Manchu, as between German, Russian, Greek, and Sanskrit. It is, to no small extent, those who know least in detail respecting the languages of the family who are most ready to assert and defend their historical connection; and, on the other hand, Castrén, himself a Finn, and whose long and devoted labors have taught us more respecting them than has been brought to light by any other man, ventures to assert with confidence only the demonstrable linguistic relationship of Ugrian, Samoyed, and Turkish, and regards the inclusion of Mongol and Manchu within the same circle as still questionable."—W. D. Whitney, *Language and the study of language*, pp. 308, 309-313, 315.

21. Slavonic languages.—History and distribution.—Baltic group.—Prussian.—Lithuanian and Lettish.—Russian, Polish, Czech and Slovenish.—"History and geography tell us that the Slavonic languages on the whole are spoken to-day [1010] over a far greater area than they were 1000 years ago, but also that the general position and shape of that area have considerably changed. Some of the Slavonic languages have waxed, others have waned; some are moribund, others are obsolete. A language is like any other organism, it cannot remain passive; stagnation means death, it must either grow or decay, expand or recede, and the history of the Slavonic languages furnishes instructive proof of this inevitable law. The principal difference between the position which the Slavonic languages held in the ninth century, and that which they occupy to-day, is the following: The limits reached by the Slav tribes in the ninth century at the close of the era of wholesale migrations show that the direction of their expansion up to that time had been centrifugal; they had radiated west, south, and east from a common centre, the Carpathians and the plains to the north and south of them. The positions held by them at the present day show that their expansion eastwards has continued uninterruptedly; but on the west and south they have either remained stationary, in some places protected from the retaliation of evicted tenants by mountains, in others obstructed from further progress by the sea, or they have receded before nations they had themselves displaced, now claiming to redeem what had once been their own. . . . It is customary in comparative philology, when tabulating the Indo-European family of languages, to speak of them as the Baltic group. Now although it is not reasonable or satisfactory to call a group of languages merely by the name of the ocean in the vicinity of which the people speaking them happen to dwell, still, for want of a better, Baltic serves the purpose, and is at least elastic.

The word itself is one of the few Lithuanian words that have been assimilated by other European languages; '*baltas*' in Lithuanian means 'white.' Now this group is always coupled with that of the Slavonic languages as the Baltic-Slavonic division of the Indo-European family. The reason is that a closer affinity exists between these two groups than between either of them and any other of the main divisions of the Indo-European family, and so, although it is out of the question to postulate a single prehistoric Baltic-Slavonic language, still it is scientifically permissible to treat them as one main division of the Indo-European family, and therefore to include also the Baltic in any tabulation of the Slavonic languages. . . . The so-called Baltic group includes three languages: Prussian, Lithuanian, and Lettish. Prussian was the language spoken by the people who in the ninth century inhabited the lands between the Vistula and Niemen rivers, bounded on the north by the sea and roughly corresponding to the limits of the present German province of East Prussia. The Prussian language in the seventeenth century became extinct, and only meagre fragments of it have been preserved in writing [see also PRUSSIAN LANGUAGE, OLD]; Lithuanian and Lettish are still spoken. The natural phenomena peculiar to the country, which abounds in vast swamps and forests, as well as its remoteness from great trade-routes, have conduced to the preservation of the antique character of these languages, especially of Lithuanian, but at the same time it is largely due to this cause that the earliest records and monuments of these languages go no further back than the sixteenth century. There is greater affinity between Lithuanian and Lettish than between either of them and Prussian, and, generally speaking, Lettish shows a later stage of development than Lithuanian; that is to say, it is the more remote of the two from what can be postulated as the language of their common origin. To what extent Lithuanian was spoken during those early centuries when the country was independent of all foreign influence it is now impossible to determine. . . . It is important to remember that the political boundaries of the mediæval state of Lithuania, which covered an immense area and included at one time all of what is now [1010] Western Russia, always extended far beyond the limits of the area where the Lithuanian language was spoken. At the present day . . . Lithuanian is spoken in the extreme north-eastern corner of East Prussia, in Russia throughout the government of Kovno, and in considerable portions of the governments of Suvalki and Vilna. The territory where Lettish is spoken lies immediately to the north of that occupied by the Lithuanians; it is bounded on the west by the Baltic and on the south by the political boundary dividing the government of Kurland [Courland], the whole of which is Lettish, from that of Kovno, which is purely Lithuanian. Lettish is also the language of the southern half of the government of Livonia and of the western half of that of Vitebsk. It must not be forgotten that the big towns in Kurland and Livonia, such as Mitau, Libau, and Riga, are largely German, and that the landholders in these two governments belong to the same nationality, while the rural population is entirely Lithuanian and Lettish. The main difference between Lithuanians and Letts is that the Lithuanians, except those of East Prussia, are solidly Roman Catholic; and that religion and education have for centuries past filtered through into Lithuania from Poland. The Letts and the Lithuanians of East Prussia, on the other hand, are one and all Lutherans. . . . Accordingly the vocabulary of

Lithuanian betrays Polish, that of Lettish, German influence. Lettish has also been influenced by the proximity of its neighbours of Finnish race, whom the Letts gradually propelled northwards into the extreme northern corner of the promontory of Kurland, where a portion of them still remains, and into Livonia proper. Lithuanian has also been much influenced by White Russian, the dialect current in those provinces which in the Middle Ages formed the lands of the Lithuanian crown, and later with Lithuania became part of Poland. [See also *BALTIC PROVINCES: Original and existing races; TURANIAN RACES AND LANGUAGE.*] . . . Passing from the Baltic to the cognate Slavonic group of languages, the question arises, in which order the latter are to be classified. It is now the established custom to arrange the Slavonic language in three main divisions, the criteria for which are certain phonetic characteristics which need not here be closely considered. These three divisions are called, according to their respective geographical positions, the Western, Southern, and Eastern. It is impossible now to determine to what extent the differences of these languages one from another had already crystallized by the ninth century, that is to say, at the time when the migrations of the Slavonic tribes were complete, before the formation amongst them of separate political states, and before the time to which even the earliest extant fragments of these languages belong. It is, however, probable that many of the characteristics peculiar to each of the Slavonic languages as we know them to-day had already developed in the ninth century, because considerable expansion westwards, southwards, and eastwards of the Slavonic tribes had already taken place, and consequently distinctions of nationality had had time to appear and had acquired space to develop. To the western group, the first to be considered, belong those of the Slavonic languages spoken by the tribes who in the middle of the ninth century were settled north of the Danube and west of the so-called Baltic nationalities; the boundary between the western and eastern group (not accurately to be determined even to-day) roughly corresponds to the watershed between the Vistula and the Dnieper. That between the western and southern group is approximately indicated by the Danube. In the course of their migration westward Slavonic tribes belonging to this western division had penetrated as far as the Elbe and even beyond, and at the moment when our authentic knowledge of their history begins they were in possession of the whole of the country from the mouth of the Vistula to that of the Eider in Holstein, bounded on the north by the Baltic, on the west by the Elbe, the Saal, and the Bohemian Forest (Böhmer Wald). From among the many names of these Western Slavonic tribes that have been preserved, those have acquired greater prominence which correspond to the three important Western Slavonic languages of to-day. These are Lusatian-Wendish, Polish, and Cech. . . . The next of the Western Slavonic languages to be considered is Polish. Enjoying great prominence to-day, with a contemporary literature of extraordinary fertility and of great brilliance, and spoken by a larger number of people than any Slavonic language except Russian, Polish is only one of a group of dialects known in comparative philology as the Lechish group. The designation Lechish is an adaptation of the name by which the Poles were from early times called by their neighbours, but never used of themselves. In Lithuanian a Pole is still called Lenkas, and Poland Lenkai; the Russian equivalent is Lyahi. To the Lechish group belong, besides Po-

lish, all the Slavonic languages, except Lusatian-Wendish, which were at one time spoken throughout what is now Northern Germany from the Eider in Holstein to the Vistula. The unique survivor of these once extensively spoken dialects, besides Polish, is that called Kashubish, spoken by the Kashubs, or, as some of them call themselves, Slovintsi; these now number slightly over 200,000 people inhabiting the country between Danzig and the boundary of the provinces of Western Prussia and Pomerania. This dialect was only identified and classified during the last century, and philologists have concentrated their attention on it none too soon, for emigration to America and erosion at home are causing a rapid diminution in the numbers of this people. As usual disputes have arisen as to whether Kashubish is to be regarded as a separate language, or as a dialect of Polish, the Polish savants maintaining the latter view, while their Russian colleagues naturally seize the opportunity offered of subtracting the Kashubs from the sum total of the Polish nationality. . . . Another Slavonic dialect of the Lechish group has come down to us in the form of a few glossaries, though it is itself extinct since the seventeenth century; this is the dialect known as Polabish, because spoken by the Slavonic tribes settled on the lower Elbe—from 'po' = along, and 'Laba' = the Elbe. [See also *SLAVS.*] . . . The third group of the western division of the Slavonic languages is that known as Cech-Slovak. This rather cumbersome designation is, at any rate, accurate and comprehensive. The term Bohemian is often used synonymously with Cech, but is inexact and ambiguous, as the country known to us as Bohemia, but to the Cechs only as Cechy—a collective plural—contains, besides the Slavs, a large German population. The term Cech-Slovak comprises two closely related Slavonic dialects, whose affinity hardly justifies their being treated as separate languages. . . . The term Slovak is the most general, accurate, and unequivocal designation for the Slavonic people who speak this dialect, but is of comparatively modern origin. . . . The Cechs have from the earliest centuries of our era occupied the quadrilateral known in geography and history as Bohemia. Covered on all four sides by natural barriers in the shape of mountains and forests, the Cechs have, on the whole, maintained their original positions, though in the course of the turbulent Middle Ages, Germans reclaimed large portions of territory to the north and south of them. . . . Passing from the western to the southern division of Slavonic languages, between which the Danube is roughly the line of delimitation, the first to be considered in geographical order is that known as Slovenish. Strictly speaking, Slovenish is only a strongly-marked variation of Serbo-Croatian, just as Slovak is of Cech, and it is more correct to treat all the Slav dialects that are spoken from the Alps to the Balkans as one group, and to call that the Serbo-Croatian-Slovenish group. . . . In earlier times the Sloveoes were known as Chorutane, and are thus mentioned in the early Russian chronicles and by the Cech chronicler Dalimil; this name Chorutane, which is now obsolete, was derived from that part of the country inhabited by the Slovenese, Carantanum, or Goratan, and survives still in the geographical term Carinthia or Kärnten. . . . Although fragments of this language dating from the tenth century have survived, and considerable examples of it from the time of the Reformation in the sixteenth century exist, the real revival of the Slovene nationality and language belongs to the nineteenth century."—N. Forbes, *Position of the Slavonic languages at the present*

day (*pamphlet*), pp. 6-12, 15-16, 19-22.—See also ARYANS: Meaning of term.

22. Great and Little Russian.—Serbo-Croatic.—Bulgarian and Albanian.—“Russian is the most important of the Slavonic languages and is spoken by 103 million people; it is usually and most correctly divided into two groups: Great Russian, of which White Russian is a variation, and Little Russian. It is impossible here to consider the separatist motives which have prompted many Little Russian philologists to treat their own dialect as a language independent of and on a level with Great Russian. Without in any way underrating the peculiar and original beauties of Little Russian, it is from the scientific point of view unjustifiable to regard it as anything but a strongly-marked variation of Great Russian. . . . In the ninth century, when their authentic history may be said to have begun, the territory occupied by the Slavonic tribes of the eastern division was of smaller dimensions than that included in the political Russia of to-day. . . . Great Russian is to-day the language of 65 millions in Russia and Siberia, and is spoken by over 90 per cent. of the population in the seven central governments; in the government of Moscow the proportion of Great Russians to other nationalities is 97 per cent., and in that of Petersburg [Petrograd] 81 per cent. . . . It is noticeable that while the Russian nationality and language have expanded to the north and east and south, its western boundary conterminous with those of the Poles, the Lithuanians, the Letts, and the Finnish Esthonians is almost identical with that existing in the ninth century. The differentiation of Russian into three groups, Great Russian, White Russian, and Little Russian, has occurred within historical times; and these designations themselves, of purely literary origin, and even now seldom used popularly, do not date back further than the fourteenth century, and would seem to have come into use when Western Russia formed a part of Lithuania and Poland.”—N. Forbes, *Position of the Slavonic languages at the present day* (*pamphlet*), pp. 20-31.—“Serbian or Serbo-Croatian, the other member of this group of the southern division, is in point of numbers of the people who speak it the third most important of the Slavonic languages. It is spoken throughout [modern Jugo-Slavia:] Serbia, Montenegro, Bosnia, Hercegovina [Herzegovina], Dalmatia, Croatia, Slavonia, in the Banat in South Hungary, in the southern part of Istria, and also in the Macedonian vilayets of Turkey. It is thus the speech of nearly ten million people, who are distributed in twelve provinces of four political states, Serbia, Montenegro [and before 1018], Turkey and Austria-Hungary. During the period of wholesale migrations the southern Slavs penetrated southwards through Macedonia into Greece, and in the hey-day of their independence in the thirteenth and fourteenth centuries the political boundaries of Serbia would seem to have included most of the Balkan peninsula, but generally speaking the territory occupied by the Croats and Servians to-day is conterminous with that held by them in the ninth century; on their southern border, in Macedonia, they have undoubtedly lost ground before the Albanians, but they have made corresponding gains to the north in Hungary, whither they immigrated in large numbers when the power of the Ottoman Empire was at its height. From the earliest times this race, which is essentially one as far as language is concerned, has been known by two names, the Croats in the western half of the territory, and the Servians in the eastern half. But the difference between the Servians and the Croats is

not merely nominal, it is confessional; it is therefore in one respect fundamental and has always cut the nation in two. The history of each of these two halves of the same race has followed totally different lines, and it is owing to this duality that it has always been impossible to find one name for the language which would be acceptable to both divisions of the people who speak it. . . . The outward and visible sign of the difference between the two confessions, as reflected in the language, is the dissimilarity of the alphabets. The Croats and the Roman Catholic inhabitants of Bosnia, Hercegovina, and Dalmatia use the Latin alphabet, amplified by diacritic signs, the Servians and the Orthodox inhabitants of Bosnia, Hercegovina, Dalmatia, and Montenegro use that known as the Cyrillic, so called after the name of its inventor, the Greek missionary St. Cyril. . . . The duplex name Serbo-Croatian is of course an artificial and purely literary term; it is largely used in scientific works, but is quite unknown to any section of the people to which it is applied. . . . The other member of the southern division of the Slavonic languages is that known as Bulgarian. This curious tongue is the descendant of that old Bulgarian . . . which was the language spoken by the Slavs, who already by the middle of the seventh century had occupied the eastern half of the Balkan peninsula, that is to say, all Moesia, Thrace, and Macedonia, except the maritime territory which was then, as it is now, held by the Greeks. How these Slavonic tribes designated themselves, except by the generic name Slovene, is not known. The Bulgars themselves were not Slavs at all, but a wild people, who came from the neighbourhood of Kazan on the Volga, and in the second half of the seventh century, in the course of one of their several invasions of the Balkan peninsula, succeeded in overcoming, more thoroughly than usual, the Slavs settled between the Danube and the Balkan mountains. . . . Old Bulgarian, the speech comprehended, transmitted into writing, and thus immortalized by the Byzantine missionaries of the ninth century, is the oldest form of any Slavonic language that has survived. But speech is a fickle and elusive thing, and that spoken by the Bulgarian people soon assumed forms different from those of the language familiar to St. Cyril in the ninth century, standardized in the liturgy and translation of the Scriptures used by all Slav adherents of the Orthodox faith, and preserved in a theological literature of considerable extent. In this respect there is a great contrast between the histories of Bulgarian and Serbian as we know them; for although the Cyrillic alphabet, which never exactly corresponded to Serbian phonology, was in use in its original form in Serbia till the nineteenth century, yet it is fortunately possible to control the changes that have from very early times occurred in Serbian and to follow the historical development of that language, owing to the preservation of large quantities of political documents which the Servians used to write in the current vernacular of the day. Again, though both peoples, Serbian and Bulgarian, have been subjected to similar physical and political conditions, have suffered identical historical vicissitudes, and been exposed to the influence of the same neighbours, yet the present condition of the two languages is widely dissimilar. While Serbian is in many respects the most antique of the Slavonic languages in use to-day, and has preserved a wealth of old forms and inflections, Bulgarian, saturated with Rumanian and Albanian influences, has reached an advanced stage of analysis comparable with that of our own. The history of Bulgarian

is unfortunately far less continuous than that of Servian, and though the developments and changes that it underwent can be controlled from the ninth up till the fourteenth century, that is till the Ottoman conquest, yet of the language as spoken from that time till the beginning of the nineteenth century scarcely any specimens exist. The ecclesiastical language, crystallized in the liturgy and Scriptures, has remained much as it was in the ninth century; the speech of the people, apart from changes and peculiarities due to the Rumanian and Albanian influences already mentioned, has, like Servian, adopted an immense stock of Turkish words for use in every-day life; while the language of the literary and national revival dating from the second half of the nineteenth century has borrowed its more elaborate vocabulary wholesale from Russian."—N. Forbes, *Position of the Slavonic languages at the present day* (pamphlet), pp. 22-23, 26-28.

23. Caucasus languages.—Persian, Kurdish, Armenian, Ossete, Turki, Georgian, Circassian, and others.—"There are two or three corners in the world's surface, in which a strange collection of diverse Languages is found, the survivals of extinct Races, once great and strong. . . . In the west of Europe there is one solitary survival, the Basque in the Pyrenées; on the extreme east of Europe we find a cluster of Languages in the Caucasus, which are neither Arian, nor Semitic, nor Altaic. These mysterious Languages of the Caucasus have long had an exaggerated reputation. Herodotus (Book I. 203) remarks, that many and various are the tribes, by which the Caucasus is inhabited, most of them living entirely on the wild fruits of the forest. Strabo informs us (Book XI. 5), that no less than seventy Dialects were spoken in the country, which even then was called the Mountain of Languages. Pliny the Elder (Book VI. cap. 5, 12) quotes Timosthenes, a contemporary of Ptolemy Philadelphus, to the effect, that Dioscurias, on the shores of the Black Sea, was once a famous city, though then deserted, so much so, that three hundred Nations, all of different Languages, were in the habit of resorting to it, and in later times there were one hundred and thirty interpreters for the purpose of transacting business. . . . Shut up in their inaccessible mountains, the tribes had evaded all possibility of inquiry into their Language before the Russian Conquest [since the Crimean War, 1855]. Some few Vocabularies had been picked up from the mouths of stray members of a clan. But the Russians are very active and apt in the work of Surveys and Ethnographic inquiry; indeed, sometimes they anticipate an intended conquest by preparing a Grammar of the Language of the tribe. The Afghans must have felt that some one was walking over their grave, when Prof. Dorn in 1840 published his Pushtu Grammar at St. Petersburg [Petrograd]. As regards the Languages of the Caucasus, in books of such esteem on the general subject of Philology, as those of Max Müller, Whitney, and Hovelacque, there was nothing. In his 'Asia Polyglotta' Klaproth had given a few Vocabularies, and some specimens in his 'Kaukasische Sprachen.' Julg in his 'Litteratur der Grammatiken,' 1847, had referred to all the books available at the time. Max Müller, in his 'Languages of the Seat of War in the East,' 1855, had brought together much valuable information. Latham in his 'Elements of Comparative Philology,' 1862, summed up all that was known at that period, unfortunately giving no references to the authorities quoted, without which a volume of facts collected at second-hand is valueless. Berger, in the Report

of the Third Oriental Congress at St. Petersburg, 1876, gives a full Ethnographic description of the Caucasus, but in the Russian language. . . . [In] 'Grundriss der Sprachwissenschaft' (1884), [Müller] passes under review each of the peculiar Languages of the Caucasus in an exhaustive Grammatical Note. . . . The method, which I adopt, consists of two rules: A. That no Language is to be admitted, unless the locality of the tribe, who use it, can be indicated on a Map, not prepared for the purpose, but independently by competent authorities for strictly Geographical purposes. B. That no Language is to be admitted, unless some sufficient evidence, vouched for at first-hand, such as a Vocabulary, Grammar, or Text, or the personal knowledge of the reporter, can be produced. . . . With a view of carrying out an exhaustive process, all the Languages spoken in the Province of the Caucasus are entered, whether they are members of well-known families, or belong to the peculiar group called the Caucasian group, with regard to which Fredk. Müller remarks ('Alg. Ethn.' 1879, p. 26, Note): 'It is doubtful whether this group can be traced back to one common source. It is probable that the Languages spoken to the North of the Caucasus are quite distinct from those spoken to the South, and that in the Northern Sub-group there are Languages with totally distinct germs from each other.'

"I omit the German, French, Italian, and even Russian Languages, though there are many denizens, and even settled colonies of some of these nationalities of a modern date; but they lie outside this inquiry. I commence from the Southern boundary of the Province and proceed Northward. There is a strange admixture of Race and Language. . . . The great conquering, and commercial, Races are hopelessly intermixed. Of Jews there are none; . . . other Nationalities, such as Greek, Pole, Bohemian, Romanian, are sparsely represented.

"Iranian Branch of Arian Family: I. Persian; II. Kurd; III. Armenian; IV. Ossete. Altaic Family: V. Turki. Caucasian Group—Southern Sub-group: VI. Georgian. Northern Sub-group (West): VII. Abkhás; VIII. Tsherkess [Cherkess, Circassian]; (East): IX. Awár; X. Hurkan; XI. Kasikúmuk; XII. Tabasseran; XIII. Kurin; XIV. Artshi; XV. Ude; (North): XVI. Tshetschen; XVII. Tush. I shall describe each separately; of some Languages there are several Dialects; of others there are several synonyms; others are spoken by clans or tribes bearing tribal names. It is probable, that the more powerful Iranian, or Altaic, Languages may have swallowed up in the struggle for life scores of smaller Languages, as they will no doubt swallow up some of the small ones recorded above; yet these seventeen names represent all that remains of the seventy of Strabo, and the three hundred of Pliny. *Persian*: A few words are sufficient for this celebrated Language. As Trans-Caucasia was until 1826 part of the Persian Kingdom, it is natural to find, that the use of the Language has outlived the political domination; besides, there exists a considerable commerce betwixt the two countries. . . . It is interesting to find amidst the settled population of the Province two Persian colonies, speaking distinctive Persian Dialects: (1) Talish, the Dialect of a small District with a population of 43,000 round a town of that name, and the better-known Caspian Sea-port of Lenkoran; this Dialect has the character of being an ancient one, differing in forms, and words, from modern Persian. (2) Tati, spoken in the District of Baku on the Caspian Sea, and the Peninsula of Aspheron, with a population of 81,000; it is

supposed by some to be only a modern patois, corrupted by Turki, but according to Beresine its name carries the appearance of antiquity, for in the celebrated Tablets of Behistún the word 'Thatiya' occurs repeatedly preceding the name of Darius, meaning 'Darius spake.' This hypothesis seems doubtful. All the Persians are Mahometan, but Shiah, and hostile to the Turks, who are Súni. *Kurd*: Forty-four thousand of this Nation have crossed the frontier, and settled in the Southern portions of Trans-Caucasia. They are all Mahometan. *Armenian*: [They] . . . occupy a large but broken area in Trans-Caucasia, especially in the towns. They speak a different Dialect from that used by their co-religionists in Asiatic Turkey. . . . *Ossete*, called also Iron [æron]: This is one of the Languages spoken within the Range of the Caucasus, but as it belongs to the Iranian Branch of the Arian family, its description follows the other members of that branch. The tribe numbers one hundred and eleven thousand: they occupy a compact territory in the very centre of the Range, and it is traversed by the high road through the Dariel Pass, that leads from Tiflis to Vladikafkas. They hold the upper valley of the River Terek, as well as the mountain-tract to the West as far as the head waters of the Ardou, and the Mamisson Pass. The evidence of their Language is quite decisive as to their origin. *Turki*: Of this important nationality . . . the Azerbaijani are the most important, and spread over the greater part of Trans-Caucasia, and they are homogeneous with the population of the Persian adjoining Province of Tabriz. . . . Of the other varieties of the Turki Language (excepting, of course, the Osmanli) we know little. The Kumik occupy the low-lands betwixt the Caspian Sea and the Eastern slopes of the Caucasus. . . . The New Testament has been translated into Kirghiz, and the Gospel of St. Matthew into Jagatai or Trans-Caspian Turki. . . . *Georgian*: We now arrive at the first of the Languages specially identified with the Caucasus, and belonging to none of the great Language-families of Asia. Fredk. Müller divides the group (for they have no pretence to such affinity among each other as would justify the use of the word 'family') into a Southern and Northern Sub-group, and the Georgian with its Dialects composes the Southern Sub-group. . . . The origin of the name Georgian is presumably the Persian word 'Gurj.' The third Subdivision is unimportant; Tiflis, the Capital of the Russian Province, is the chief town of Grusia, Kutais of Imeritia, and Poti of Mingrelia. Suania is a small mountainous District difficult of access. They are all sometimes called the Kartalinian tribes, from their speaking a Language called by themselves Kartli. The Grusians, or Georgians proper, inhabit the basin of the River Kur, East of the Suram water-shed, and spread up the valley of the Aragwa to the very foot of the main Range, and occupy the valley of Kakhetia. The Imeritians occupy the valley of the River Riou or Phasis, West of the Suram Range. They are separated from the Mingrelians by the River Zenesquali. The Mingrelians extend to the Black Sea. The Gurians are a small Sub-tribe to the South of the Mingrelians, and beyond these are the Lazians, who were known by that name in the time of Strabo, and have lately been annexed to Russia. The Suanians are mentioned by Strabo and Pliny. All these Sub-tribes speak Dialects, more or less distinct, of the common Language, the Georgian; or some may even be called Sister-Languages. All the tribes are Christian, except the Lazian. The Language is essentially non-Arian. It has two Alphabets, both of which derive from

the Armenian Alphabet: one is used for the Bible and religious works, the Kutsuri, or Priest's; the other is the Mekhedsuli Kheli, or Soldier's, which is the ordinary cursive script. The translation of the Bible dates back to the eighth century, and there are other specimens of archaic literature. This is a strong Language with great vitality, and will hold its own and become the vehicle of culture and civilization. In a general way the tribes, which make up the Northern Sub-group, in the Western Regions of the Caucasus have been called the Circassian, in the Central Regions the Mizdzhedzi, and in the Eastern Regions the Lesgian: these are Ethnic terms. *Abkhas or Abas*: This tribe occupies the coast of the Black Sea from the point of Pitzunta to the confines of Mingrelia: they are kindred to the Tsherkess: the population numbers twenty-two thousand. Their Language has been thoroughly studied and described. *Tsherkess*: These are the famous Circassians; their proper name is Adighe. After a prolonged struggle they were subjugated by the Russians in 1864, and emigrated in a body of 400,000 to Turkey in Europe. . . . Their Language has been studied, but it has not been treated grammatically in accordance with the requirements of Philology, either by Schiefner or Fredk. Müller."—R. N. Cust, *Linguistic and Oriental essays, fourth series, pp. 3, 5, 6, 7-9.*—Some of the other languages of the Caucasus are: Awar, Hurkan, Kasikumuk, Tabasseran, Kurin, Artshi, Ude, Tshetschen, and Tush.

24.—African languages.—Bantu group.—East and West African tongues.—Work of missionary philologists.—Swahili.—"An attempt at gathering a number of African languages into one great group was first made in the south of the continent. Here the German Zoölogist Lichtenstein (born 1786) recognized that a whole series of languages had certain very striking peculiarities, their substantives being distinguished by means of prefixes. He saw not only that the system of prefixation was common to them all, but also that the prefixes themselves appeared to be everywhere virtually identical. This discovery was the starting point for the investigation of the *Bantu* languages [a term introduced by Bleek] which has been the chief preoccupation of the students of African linguistics during the last century. It proved on further inquiry that the area of these languages was much larger than Lichtenstein had assumed to be the case. From the limits of the Bushman and Hottentot region it extends beyond the Equator, both on the eastern and western sides of the continent, and forms a gigantic homogeneous group of closely related tongues, only varied at intervals by scanty remnants of those spoken by the Pygmies and Bushmen, or, in the east and south, by the Hamites and Hottentots. After a number of separate inquiries had been carried out in various parts of the field, it was a German scholar, the late Dr. Bleek, who first attempted to sum up the results arrived at in his *Comparative Grammar of South African Languages*, a comprehensive work published at Cape Town in 1860. The work has remained incomplete, owing to the premature death of the author, but it was, nevertheless, of fundamental importance. Bleek not only recognized the great extent of the Bantu area with approximate completeness and selected the most typical languages for detailed treatment, but he showed the unity of the grammar by means of the noun, in a wholly convincing manner, and followed a number of word-stems quite accurately through a series of languages."—C. Meinhof, *Introduction to the study of African languages, pp. 28-29.*—"The next scientific attempt at a classification of African languages

was made by a Viennese scholar, Friedrich Wilhelm Müller, who divided them into six groups. This arrangement was followed by the late Robert Needham Cust, an Indian official who devoted the leisure of a long life to the study of languages."—A. Werner, *Language-families of Africa*, p. 12.—The Müller here referred to must not be confused with Friedrich Max Müller, the celebrated Sanskrit philologist. "Among many others who, by careful study of a single language, have prepared the way for more accurate knowledge (and who, almost without exception, have been Protestant missionaries), we must mention one man who went to the very root of the problem as no one else had succeeded in doing—Endemann, of the Berlin Missionary Society. He acquired the elements of phonetics, in the first instance, from the well-known *Standard Alphabet* of the Egyptologist Lepsius [1855], and then, with indefatigable zeal and patience, took up the study of Sotho (Sesuto), a language extending over a large part of the Transvaal, and including also the dialects spoken by the Bechwana [Bechuanaland] in the Protectorate, Cape Colony, and Orange Free State, and by natives of Basutoland. His careful observation of sounds led him to the discovery of laws so clear and unerring that the phonetic and grammatical structure of *one* Bantu language was now absolutely certain. His book is a masterpiece of linguistic accuracy, and has not yet been superseded; whoever wishes to gain any real knowledge of Bantu must turn to Endemann. . . . [He] has now completed his great work, the *Sotho Dictionary*, which will remain the foundation of all lexicography in the Bantu area. . . . Hugo Hahn [was] the first to supply a grammar and dictionary to the Herero language. Along with him we must mention, as having done excellent work in the same language, Brincker, Kolbe, and Viehe,—missionaries like himself. Thus the number of Bantu grammars written in German increased and multiplied. Brincker's great Herero Dictionary was published with the assistance of the Berlin Academy of Sciences, his manual of Kwanyama and Viehe's Herero Grammar by the Seminary for Oriental Languages at Berlin. Thus scientific circles in Germany gradually began to take an interest in the Bantu languages. In East Africa we have to name in the first place the Englishman Edward Steere, Missionary Bishop of Zanzibar. When Otto Kersten was staying at Zanzibar with his Hamburg friend Ruete, he began, under Steere's tuition, the study of Swahili, that interesting language which to-day is of such importance as the official and trade language of East Africa. The German missionaries Krapf and Rehmman—the same to whom we owe such important geographical discoveries in East Africa—had preceded Steere in taking up the languages of that region, and have left us in their books a great abundance of valuable material. . . . Steere was also the first to take down fables and tales from the mouth of the people, thereby opening for us a way to the understanding of East African life and thought. His *Swahili Tales*, which are accompanied by a good English translation, may be recommended to every lover of folk-lore. . . . From the members of these inland tribes he obtained specimens of their vernaculars, and was thus enabled to compile his *Collections toward a Handbook* of Yao (1871), Nyamwezi (1882), Shambala (Zanzibar, 1867, Magila, 1905), and Makonde (Zanzibar, 1876). . . . Among Steere's successors in Swahili work, one man in particular is pre-eminent—Dr. C. G. Büttner, who lived for some time as a missionary in South-West Africa, issued several publications dealing with the Herero language, and subsequently filled the post of

Swahili Lecturer at the Berlin Oriental Seminary. The information on Swahili literature which we owe to him is clearer and more comprehensive than any previously accessible. He not only succeeded in reading Swahili texts written in Arabic characters, but in giving systematic instruction which enabled others to do so too. At that time such instruction was absolutely necessary, as the Arabic character was in universal use, as the German government has only gradually introduced the Latin alphabet for writing Swahili. Büttner also discovered the means of reading the old Swahili poems which were still to be found in East Africa or had been sent home by Krapf many years before, and lay buried in the library of the German Oriental Society at Halle, waiting for a skilled explorer to bring them to light. . . .

"Mention must be made of one more scholar who has done excellent work in the Swahili—the Rev. W. E. Taylor, formerly of the Church Missionary Society. . . . He has, to a certain extent, done for Swahili what Endemann did for Sotho. In his *African Aphorisms*, a collection of proverbs with notes and illustrations, he has provided us with an excellent means of gaining an insight into African psychology. Following on the work of these pioneers, we have a considerable body of literature, produced by writers of varying ability. Considerations of space prevent my dealing with this in detail, or giving a list of individual Bantu languages, of which about two hundred are known to us. I need only refer to the Zulus and other 'Kafirs,' to Uganda, and to Kamerun, and will confine myself to pointing out a few linguistic works of special importance. Heli Chatelain, of Angola, wrote an excellent grammar of the Mbundu language, and made a very pleasing collection of folk-tales. We owe to him the solution of a problem which had worried every one who had tried to learn a Bantu language—the meaning of place names. They are very numerous, and it is difficult to get at their signification; but since Heli Chatelain's time we have been in possession of the secret. Alfred Saker, a Baptist missionary in Kamerun, was the first to reduce to writing the [west] coast language—Duala—of the [former] German colony; while we are indebted to W. Holman Bentley, a missionary of the same society, for a very full Dictionary and Grammar of the Kongo language (London, 1887). . . . We owe to Christaller a good Duala grammar, and to Blank and others a widely circulated Swahili newspaper (the *Kiongozi*, appearing at Tanga). . . . In Pongwe (Gabun), in Swahili, and in the languages of Portuguese East Africa, some works of considerable extent have in recent times been executed by Roman Catholic missionaries, as well as various minor ones which may be passed over here. One which deserves special notice is the *Comparative Grammar of South African Bantu Languages* (London, 1891), written in English by Father Torrend, a Jesuit missionary in Portuguese East Africa."—C. Meinhof, *Introduction to the study of African languages*, pp. 30, 31-37.

25. African languages.—Classification.—Kabye language.—"Modern Languages of Africa [by R. N. Cust, 1883] was the first book to give English readers a comprehensive and systematic view of the subject, and, though it needs some correcting and supplementing here and there, still remains exceedingly useful. In fact, it is, so far, the only one of its kind. The six divisions adopted by Müller and Cust are as follows:—1. Semitic family. 2. Hamitic group. 3. Nuba-Fula group. 4. Negro group. 5. Bantu family. 6. Hottentot-Bushman group. In this book, the above arrangement has

been to some extent modified [by the present writer]. The Nuba-Fula group consisted of languages which did not seem to belong to any of the other divisions, and had to be placed, provisionally, in a class by themselves, though it was doubtful how far any of them were connected with each other. They comprised Fula, spoken over a large area of West Africa; the 'Nubian' languages of the Upper Nile; Masai in East Africa; Azande (Nyamnyam) and Monbutto (Mangbetu) on the northern edge of the Congo basin. This group is now omitted, as fuller knowledge has shown that Fula and Masai are Hamitic languages, while Nuba and the rest have to be placed in the Negro group. 'Hottentot' (note—This is merely a conventional name, used for convenience. As we shall see later on, it covers several different languages, the most important of which, at the present day, is Nama.) again, has been recognized as essentially a Hamitic language; it has therefore been removed from the sixth division; but the Bushman languages (of which there are several, too distinct and important to rank as mere dialects) are retained for the present in a separate class. . . . Müller called the class in which he placed Berber, Somali, Galla, etc., the 'Hamitic group,' because he did not consider their relationship to each other sufficiently clear to warrant their being entitled a family. The progress of research, however, has since shown that they are certainly connected, and we have accordingly entered them as the 'Hamitic family.' In like manner, 'the Negro group' seemed the only possible designation for a large number of languages, many of them very slightly known, spoken in Western and Central Africa. From the materials at the disposal of Müller and Cust, it seemed to make out a few sets of related languages, but not to trace any relationship between these groups. In fact many languages had to be placed in this division for the sole reason that they were neither Bantu, Hamitic, nor Semitic. It has now become evident, chiefly through the labours of Meinhof and Westermann, that there is a distinct family, comprising most of the West African languages (besides several others which extend in a continuous zone across the continent as far as Abyssinia), and possessing marked characteristics of its own. We therefore substitute for the name 'Negro group' that of 'Sudan family.' Several languages included under the old classification have been removed from this division and others (formerly placed in the 'Nuba-Fula group') added to it. We have also slightly altered the order of the divisions. The Sudan family is placed first, because it appears to be the most primitive; while it is believed by those most competent to judge that the Bantu languages are a later development, possibly arising out of the contact between Sudan and Hamitic speech. We therefore place the Bantu family second and the Hamitic family third, followed by the Bushman language, which for the present at any rate, it is desirable to treat separately. The Semitic family comes last, because it is not really indigenous to Africa. We cannot, indeed, be certain that the other languages—the Hamitic ones at any rate—originated in Africa; but, if not, we do not know when they came in, whereas we do know when Punic and Arabic did. . . . Coming back to the five divisions under which African languages are grouped for the purposes of this book, we find them to stand as follows:—1. The Sudan family. . . . 2. The Bantu family. . . . 3. The Hamitic family. . . . 4. The Bushman group. . . . 5. The Semitic family. . . . I. The Sudan family extends from Cape Verde to Abyssinia and comprises probably over two hundred languages, while fresh ones are

continually being brought to light. Among the best known are Wolof (in Senegambia), Mande, or 'Mandingo' (French Guinea and Ivory Coast), Tshi and Gã (Gold Coast), and Kunama (Abyssinia). . . . II. . . . Geographically, [the Bantu languages] . . . come next to the Sudan languages, the borderline being, in many places, very ill-defined, as for instance, in the northern part of the Congo basin. The Bantu extend over the whole of Africa south of the Congo and Lake Victoria, reaching up to the Tana river on the eastern side of the continent; but their area is not quite continuous, being interrupted by islands or 'enclaves' of Masai and Galla in the east, 'Hottentot' in the south, and a few other tribes or fragments of tribes elsewhere. . . . The Bantu family seems to contain as many languages as the Sudan—possibly more. Over three hundred names have been recorded; and, though some of these may have to disappear on closer examination, as being those of mere dialects, or different names for the same language, yet, on the other hand, fresh ones are continually being added to the list. . . . III. The Hamitic family once extended in an unbroken area right across North Africa. The ancient Egyptians spoke a Hamitic tongue, so did the Libyans and Numidians, whose descendants are now known as Berbers and Kabyles. Wedges were driven into this area by the Greek Colony of Cyrene and the Phœnician one of Carthage, and, later on, by the Roman occupation; while, on its southern fringe, many Hamitic peoples have been forced in among a negro population and mixed with them to such an extent that the contact has influenced their language, as has happened to the Hausa, Nandi and Masai. [See also HAMITES, HAMITIC LANGUAGE.] . . . IV. The *Bushman*—the earliest inhabitants of South Africa of whom we have any knowledge—have now all but disappeared from Cape Colony, but are still to be found in the Kalahari Desert and in some parts of the Transvaal. There are a number of different tribes, speaking quite distinct languages. These seem to have some characteristics in common with the Sudan family; but the peculiar click-sounds, of which there are six, if not more, are not found elsewhere except among the Hottentots and (possibly) the Sandawi in East Africa, of whom very little is known. (The clicks in Zulu were borrowed from the Hottentots). . . . V. The principal Semitic language in Africa is Arabic, which came in with the Muhammadan conquerors in the seventh century, and is now spoken throughout Egypt and North Africa, though it has not quite displaced the native Hamitic speech in Algeria and Morocco. Another Semitic language, now quite extinct, is Punic, spoken by the Tyrian colonists who founded Carthage. Ethiopic, or Ge'ez, the old language of Abyssinia (still used in the liturgies of the Abyssinian Church) and its descendant, Amharic (though some scholars appear to entertain a doubt about the latter), are also Semitic, as well as Harari and three or four minor languages of Abyssinia."—A. Werner, *Language-families of Africa*, pp. 12-13, 15-16, 19-20.—"The Kabyles are a people of Berber origin, inhabiting the Djurdjura mountains in Algeria, and also the country south of Cherchel (the Julia Cæsarea of the Romans), and the borders of the Metidja plain, which stretches away to the foot of the Atlas range. They were named by the Arabs from Arabic *Kabail*, plural of *Kabilah*, tribe, race, family. The Kabyles are quite a different nation from the Arabs, being more fit for social progress, and of more laborious habits. . . . The Kabyle language (*Thakabalth*), is of Berber origin, and is not only spoken in the country inhabited by the Kabyles, but also in the highlands

of Mount Atlas, towards Algiers, and in the province of Constantine. . . . It is an unwritten language [but has been reproduced in Roman characters by missionaries]. . . . [It] varies more or less between tribe and tribe, and between village and village; and even in different parts of the same village different words and expressions are used to denote the same thing. Nevertheless, in spite of these variations and different dialects, the basis of the language is the same, and the different tribes are all able to understand each other. The dialects are named Buji, Shieba, Tamazihl, Beni-Menassar, and Gadamsi. The Kabyle contains some words which have an affinity to the dialects anciently spoken in the islands of Teneriffe, Gran Canaria, Lanzarote, Fuerteventura, Gomera, Palma, and Ferro (Hiero). It has also borrowed or formed a very large number of words from the Arabic. The language has no article. When they borrow a noun from the Arabic, they frequently borrow the Arabic article [al] also, but usually drop the vowel; thus *lkadi* [al kadi], *lkursi*, *lkajfer*. They do the same in borrowing words from the French; *lgââ't'a* [la gazette], *lbureau* [le bureau].—R. S. Charnock, *Notes on the Kabyle language*.

26. Romany or Romanés, Gypsy language.—Mystery of origin.—Appearance in Europe.—Regarded as Egyptian.—Philology indicates derivation from India.—Among the numerous unsolved or half-solved problems presented by the diversity of races, nations and languages, the question of the original home of the ubiquitous gypsy and the derivation of his language is not the least interesting. Wherever they appear on the globe, there the gipsies are invariably considered as being distinct from other nations and races, and are in turn objects of curiosity and aversion, awe and persecution. They were long regarded as too insignificant and contemptible a race to be worthy of literary notice; but during the last 150 years numerous researches have been instituted concerning their origin and history. The oldest and most widely-spread theory was that they came from Egypt. In consequence of this belief, created by the earliest gipsy arrivals themselves in Europe during the 15th century, most countries conferred upon them names denoting "Egyptians." Early in the 9th century they were known in Byzantium (Constantinople); by 1500 they had spread all over Europe, and in a more recent period to Australia and America. Persecution has been their share in almost every country; only in Russia and Hungary are they thoroughly "at home." There is some doubt as to who was the first to discover the Indian origin of the gipsies through the instrumentality of philology. Some attribute the discovery to Ruediger, a German, given variously as 1777 and 1782; Grelmann, also a German, and William Marsden, an Irishman, both in 1783. There is reason to believe that these three investigators, working independently, arrived at the same conclusion about the same time, a not unusual occurrence in the realms of invention and discovery. Marsden had spent some years in India and become acquainted with several Indian languages. In 1783 he addressed a paper to Sir Joseph Banks, president of the Royal Society, entitled "Observations on the Language of the People commonly known as Gypsies," to be read before a meeting of the Society. It runs, in part, thus: "It has long been surmised that the vagrant tribes of people called in this country *Gypsies* . . . were of Eastern origin. The name has been supposed a corruption of *Egyptian*, and some learned persons have judged it not improbable that their language might be traced to the *Coptic*. . . . I was surprised to find

many of the words contained in the specimen familiar to my eye, and pointed out to Sir Joseph Banks (in the latter end of the year 1783) their evident correspondence with terms in the *Hindustanic*, or as it is vulgarly termed in India, the *Moors'* language. . . . Notwithstanding that the resemblance to the Hindostanic is the predominant feature in the Gypsy dialect, yet there are words interspersed which evidently coincide with other languages. Beside the *Mahratta* and *Bengalese*, which I have marked in the comparative specimen, it is not a little singular that the terms for the numerals *seven*, *eight*, and *nine*, are purely Greek, although the first *five*, and that for *ten*, are indisputably *Indian*. It is also a curious observation, that although the Indian term for *seven*, being *saath*, differs from the Gypsy, yet that for a *week*, or *seven* days, is the *Eftan* of the latter. One word only, among those which I have examined, bears a resemblance to the *Coptic*, which is *romi*, the same with *romi*, a man."—*Annual Register*, 1784-1785, pt. 2, pp. 81-83.—Franz Pott's "Die Zigeuner in Europa und Asien" made its first appearance in 1844. This was the first great and authoritative work on the gipsies and their language. "However, perhaps the most scientific contribution to our knowledge of the gipsy language was the learned work of Franz Miklosich, an Austrian philologist, who in 1873 published his 'Über die Mundarten und die Wanderungen der Zigeuner Europas.' On purely philological grounds Miklosich divided the gipsies of Europe into thirteen classes:—1. Greek (including those in the Balkans and Turkish territory); 2. Rumanian; 3. Hungarian; 4. Moravian-Bohemian; 5. German; 6. Polish-Lithuanian; 7. Russian; 8. Finnish; 9. Scandinavian; 10. Italian; 11. Basque; 12. English-Scottish, and 13, Spanish. He made a comparative study of the great geographical varieties of the gipsy dialect in Europe. In the vocabulary of the English-Scottish gipsies he found Greek, Slavonic, Rumanian, Magyar, French and German ingredients, specifying thirty Slavonic and a like number of Greek words which constituted the most important foreign elements in Anglo-Romany, concluding from this evidence that the gipsies entered England after they had sojourned among Greeks, Slavs, Magyars, Germans and the French."—*Notes and queries*, Fourth series, v. 2, p. 462.—See also GYPSIES.

27. Malayo-Polynesian languages.—"The Polynesian races, sometimes called Kanakas, inhabit the islands of the Pacific Ocean. Their relatives are found on the island of Madagascar in Eastern Continental Africa, in that region which may be considered as the Ophir of Solomon, and among the Navajoes living on the western frontier of the United States, between California and Arizona. . . . Between the American and Australian continents, from the Arctic to the Antarctic ice-mountains, more than 10,000 islands are situated. some high, beautiful, rich, of volcanic origin, but most of them small, barren reefs, only yielding cocoa-nut, bananas, bread-fruit, and abundant fish. . . . The immense extent of the water surface between the different island groups and their insulation account for the great variety of dialects in the Polynesian languages, of which there are fifty-nine. . . . Polynesian and Malayan are often grouped together, because they are nearest neighbours on the world's surface. It is true that Malayan words, filtered through Micronesian and Melanesian channels, have been received into Polynesian dialects; but they are foreign words, as are the many which we [the British] had to introduce in our Bible translations, very often for tribes that, with their dialects, are dying away into oblivion. As different as

the Kanaka is from the Malay in form, figure, and complexion, so much is his language different and original, more related to the Aryan family than to any other . . . As a curious incident of Aryan relationship, we may state that Normans and Kanakas call the Ursa Major by the same name, and give it the same signification, though on the low coral islands there never had been a waggon and it is impossible to find the slightest resemblance to a canoe in the constellation. . . The migrating Polynesians, never having seen the original waggon, still brought, in the names of their stars, a remembrance of their old home to these distant islands, thus showing their relationship to their brethren far north."—E. Schneider, *Polynesian races and linguistics* (pamphlet).—"The island of Madagascar may be said to possess one language. Varieties of dialect exist, of course, but are not so numerous that people residing in different parts cannot understand each other, some practice enabling them to sustain a conversation. The principal varieties consist more in a different pronunciation than in an entire change in the words themselves, or in the structure of the sentences. The Malagasy chiefs use in their legislative discussions an ornamental language, consisting of rather high-sounding words that paraphrase the idea, and are easily understood by the context. The Malagasy belongs unquestionably to the stock of languages which have been denominated Malayo-Polynesian, and more particularly to the great Western Branch, which comprehends the languages of the lank-haired races of the Indian Archipelago and the Philippines."—H. N. Van der Tuuk, *Outlines of a grammar of the Malagasy language* (*Journal of the Royal Asiatic Society*, v. 1, p. 419).—See also MALAY, MALAYSIAN OR BROWN, RACE; PACIFIC OCEAN: People; PHILIPPINE ISLANDS: Language.

PHLIUS, Siege of (380 B. C.).—Phlius, the chief city of the small mountain state of Phliasia, in the northeastern corner of Peloponnesus, adjoining Argos and Arcadia, made an heroic effort, 380 B. C., to maintain its liberties against Sparta. Under a valiant leader, Delphion, it endured a siege which lasted more than an entire year. When forced to surrender, in the end, it was treated with terrible severity by the Spartan king, Agesilaus.—E. Curtius, *History of Greece*, bk. 5, ch. 5.

PHOCÆANS, or Phokæans.—“The citizens of Phocæa had been the last on the coast-line of Ionia [see ASIA MINOR: B. C. 1100] to settle down to a condition of tranquillity. They had no building-ground but a rocky peninsula, where they found so little space over which to spread at their ease that this very circumstance made them a thorough people of sailors. In accordance with their local situation they had turned to the waters of the Pontus, established settlements on the Dardanelles and the Black Sea, and taken part in the trade with Egypt. Here however they were unable to hold their own by the side of the Milesians, . . . and the Phocæans accordingly saw themselves obliged to look westward and to follow the direction of Chalcidian navigation. . . . It was thus that the Ionian Phocæans came into the western sea. Being forced from the first to accustom themselves to long and distant voyages, instead of the easy summer trips of the other maritime cities, they became notably bold and heroic sailors. They began where the rest left off; they made voyages of discovery into regions avoided by others; they remained at sea even when the skies already showed signs of approaching winter and the observation of the stars became difficult. They built their ships long and slim, in order to increase their agility; their merchant vessels were at the same time men-of-war. . . . They entered those parts of the Adriatic which most abound in rocks, and circumnavigated the islands of the Tyrrhenian sea in spite of the Carthaginian guard-ships; they sought out the bays of Campania and the mouths of the Tiber and Arnus; they proceeded farther, past the Alpine ranges, along the coast as far as the mouth of the Rhodanus, and finally reached Iberia, with whose rich treasures of precious metals they had first become acquainted on the coast of Italy. . . . During the period when Ionia began to be hard pressed by the Lydians, the Phocæans, who had hitherto contented themselves with small commercial settlements, in their turn proceeded to the foundation of cities in Gaul and Iberia. The mouth of the Rhodanus [the Rhone] was of especial importance to them for the purposes of land and sea trade. . . . Massalia [modern Marseilles], from the forty-fifth Olympiad [B. C. 600] became a fixed seat of Hellenic culture in the land of the Celts, despite the hostility of the piratical tribes of Liguria and the Punic fleet. Large fisheries were established on the shore; and the stony soil in the immediate vicinity of the city itself was converted into vine and olive plantations. The roads leading inland were made level, which brought the products of the country to the mouth of the Rhone; and in the Celtic towns were set up mercantile establishments, which collected at Massalia the loads of British tin, of inestimable value for the manufacture of copper, while wine and oil, as well as works of art, particularly copper utensils, were supplied to the interior. A totally new horizon opened for Hellenic inquiry.”—E. Curtius, *History of Greece*, bk. 2, ch. 3.—See also ASIA MINOR: B. C. 724-530.

PHOCAS (d. 610), Roman emperor (Eastern), 602-610.

PHOCAS, Nicephorus. See NICEPHORUS II.

PHOCIANS.—“The Phokians [in ancient Greece] were bounded on the north by the little territories called Doris and Dryopis, which separated them from the Malians,—on the north-east, east and south-west by the different branches of Lokrians,—and on the south-east by the Bœotians. [See GREECE: Map of ancient Greece.] They touched the Eubœan sea . . . at Daphnus, the point where it approaches nearest to their chief town, Elateia; their territory also comprised most part of the lofty and bleak range of Parnassus, as far as its southerly termination, where a lower portion of it, called Kirphis, projects into the Corinthian Gulf, between the two bays of Antikyra and Krissa; the latter, with its once fertile plain, was in proximity to the sacred rock of the Delphian Apollo. Both Delphi and Krissa originally belonged to the Phokian race. But the sanctity of the temple, together with Lacedæmonian aid, enabled the Delphians to set up for themselves, disavowing their connexion with the Phokian brotherhood. Territorially speaking, the most valuable part of Phokis consisted in the valley of the river Kephissus. . . . It was on the projecting mountain ledges and rocks on each side of this river that the numerous little Phokian towns were situated. Twenty-two of them were destroyed and broken up into villages by the Amphiktyonic order after the second Sacred War.”—G. Grote, *History of Greece*, pt. 2, ch. 3.

PHŒNICIAN ALPHABET AND LANGUAGES. See ALPHABET: Theories of origin and development; PHILOLOGY: 15.

PHŒNICIANS: Origin and early history.—Commerce.—Colonies.—“The traditions of the Phœnicians collected at Tyre itself by Herodotus; . . . those of the inhabitants of Southern Arabia preserved by Strabo; and, finally, those still current in Babylonia during the first centuries of the Christian era, when the Syro-Chaldee original of the book of ‘Nabathæan Agriculture’ was revised—all agree in stating that the Canaanites at first lived near the Cushites, their brethren in race, on the banks of the Erythræan Sea, or Persian Gulf, on that portion of the coast of Bahrein designated El Katif on our modern maps of Arabia. Pliny speaks of a land of Canaan in this neighbourhood, in his time. . . . According to Trogus Pompeius, the Canaanites were driven from their first settlements by earthquakes, and then journeyed towards Southern Syria. The traditions preserved in ‘Nabathæan Agriculture’ state, on the contrary, that they were violently expelled, in consequence of a quarrel with the Cushite monarchs of Babylon of the dynasty of Nimrod; and this is also the account given by the Arabian historians. . . . The entry of the Canaanites into Palestine, and their settlement in the entire country situated between the sea and the valley of Jordan, must . . . be placed between the period when the twelfth dynasty governed Egypt and that when the Elamite

king, Chedorlaomer, reigned as suzerain over all the Tigro-Euphrates basin. This brings us approximately between 2400 and 2300 B. C. . . . The Sidonians formed the first settlement, and always remained at the head of the Phœnician nation, which, at all periods of its history, even when joined by other peoples of the same race, called itself both 'Canaanite' and 'Sidonian.' . . . The Greek name, Phœnicians, of unknown origin, must not be applied to the whole of the nations of the race of Canaan who settled in Southern Syria; it belongs to the Canaanites of the sea coast only, who were always widely separated from the others. Phœnicia, in both classical history and geography, is merely that very narrow tract of land, hemmed in by mountains and sea, extending from Aradus on the north to the town of Acco on the south."—F. Lenormant, *Manual of ancient history of the East*, bk. 6, ch. 1.—"Renan sums up the evidence when he says: 'The greater number of modern critics admit it as demonstrated, that the primitive abode of the Phœnicians must be placed on the Lower Euphrates, in the centre of the great commercial and maritime establishments of the Persian Gulf, conformably to the unanimous witness of antiquity.' The date, the causes, and the circumstances of the migration are involved in equal obscurity. The motive for it assigned by Justin is absurd, since no nation ever undertook a long and difficult migration on account of an earthquake. If we may resort to conjecture we should be inclined to suggest that the spirit of adventure gave the first impulse, and that afterwards the unexampled facilities for trade, which the Mediterranean coast was found to possess, attracted a continuous flow of immigrants from the sea of the Rising to that of the Setting Sun."—G. Rawlinson, *Story of Phœnicia*, ch. 2.—Idem, *History of Phœnicia*, ch. 3.—"The campaigns which the Pharaohs undertook against Syria and the land of the Euphrates after the expulsion of the Shepherds could not leave these cities [Sidon and others] unmoved. If the Zemar of the inscriptions of Tuthmosis III. is Zemar (Simyra) near Aradus, and Arathutu is Aradus itself, the territories of these cities were laid waste by this king in his sixth campaign (about the year 1580 B. C.) ; if Arkatu is Arka, south of Aradus, this place must have been destroyed in his fifteenth campaign (about the year 1570 B. C.). Sethos I. (1440-1400 B. C.) subdued the land of Limanon (i. e. the region of Lebanon), and caused cedars to be felled there. One of his inscriptions mentions Zor, i. e. Tyre, among the cities conquered by him. The son and successor of Sethos I., Ramses II., also forced his way in the first decades of the fourteenth century as far as the coasts of the Phœnicians. At the mouth of the Nahr el Kelb, between Sidon and Berytus, the rocks on the coast display the memorial which he caused to be set up in the second and third year of his reign in honour of the successes obtained in this region. In the fifth year of his reign Ramses, with the king of the Cheta, defeats the king of Arathu in the neighbourhood of Kadeshu on the Orontes, and Ramses III., about the year 1310 B. C., mentions beside the Cheta who attack Egypt the people of Arathu, by which name in the one case as in the other, may be meant the warriors of Aradus. If Arathu, like Arathutu, is Aradus, it follows, from the position which Ramses II. and III. give to the princes of Arathu, that beside the power to which the kingdom of the Hittites had risen about the middle of the fifteenth century B. C., and which it maintained to the end of the fourteenth, the Phœnician cities had assumed an independent position. The

successes of the Pharaohs in Syria come to an end in the first decades of the fourteenth century. Egypt makes peace and enters into a contract of marriage with the royal house of the Cheta. . . . The overthrow of the kingdom of the Hittites, which succumbed to the attack of the Amorites soon after the year 1300 B. C., must have had a reaction on the cities of the Phœnicians. Expelled Hittites must have been driven to the coast-land, or have fled thither, and in the middle of the thirteenth century the successes gained by the Hebrews who broke in from the East, over the Amorites, the settlement of the Hebrews on the mountains of the Amorites [see JEWS: Conquest of Canaan; Early Semitic migrations], must again have thrown the vanquished, i. e. the fugitives of this nation, towards the coast. With this retirement of the older strata of the population of Canaan to the coast is connected the movement which from this period emanates from the coasts of the Phœnicians, and is directed towards the islands of the Mediterranean and the Ægean. It is true that on this subject only the most scanty statements and traces, only the most legendary traditions have come down to us, so that we can ascertain these advances only in the most wavering outlines. One hundred miles to the west off the coast of Phœnicia lies the island of Cyprus. . . . The western writers state that before the time of the Trojan war Belus had conquered and subjugated the island of Cyprus, and that Citium belonged to Belus. The victorious Belus is the Baal of the Phœnicians. The date of the Trojan war is of no importance for the settlement of the Phœnicians in Cyprus, for this statement is found in Virgil only. More important is the fact that the settlers brought the Babylonian cuneiform writing to Cyprus. . . . The settlement of the Sidonians in Cyprus must therefore have taken place before the time in which the alphabetic writing, i. e., the writing specially known as Phœnician, was in use in Syria, and hence at the latest before 1100 B. C. . . . In the beginning of the tenth century B. C. the cities of Cyprus stood under the supremacy of the king of Tyre. The island was of extraordinary fertility. The forests furnished wood for shipbuilding; the mountains concealed rich veins of the metal which has obtained the name of copper from this island. Hence it was a very valuable acquisition, an essential strengthening of the power of Sidon in the older, and Tyre in the later period. . . . As early as the fifteenth century B. C., we may regard the Phœnician cities as the central points of a trade branching east and west, which must have been augmented by the fact that they conveyed not only products of the Syrian land to the Euphrates and the Nile, but could also carry the goods which they obtained in exchange in Egypt to Babylonia, and what they obtained beyond the Euphrates to Egypt. At the same time the fabrics of Babylon and Egypt roused them to emulation, and called forth an industry among the Phœnicians which we see producing woven stuffs, vessels of clay and metal, ornaments and weapons, and becoming pre-eminent in the colouring of stuffs with the liquor of the purple-fish which are found on the Phœnician coasts. This industry required above all things metals, of which Babylonia and Egypt were no less in need, and when the purple-fish of their own coasts were no longer sufficient for their extensive dyeing, colouring-matter had to be obtained. Large quantities of these fish produced a proportionately small amount of the dye. Copper-ore was found in Cyprus, gold in the island of Thasos, and purple-fish on the coasts of Hellas. When the fall of the kingdom of the Hittites and the overthrow of the

Amorite princes in the south of Canaan augmented the numbers of the population on the coast, these cities were no longer content to obtain those possessions of the islands by merely landing and making exchanges with the inhabitants. Intercourse with semi-barbarous tribes must be protected by the sword. Good harbours were needed. . . . Thus arose protecting forts on the distant islands and coasts, which received the ships of the native land. . . . In order to obtain the raw material necessary for their industry no less than to carry off the surplus of population the Phenicians were brought to colonise Cyprus, Rhodes, Crete [see CRETE: Government], Thera, Melos, Oliarus, Samothrace, Imbros, Lemnos and Thasos. In the bays of Laconia and Argos, in the straits of Eubœa, purplefish were found in extraordinary quantities. . . . We may conclude that the Phenicians must have set foot on Cyprus about the year 1250 B. C., and on the islands and coasts of Hellas about the year 1200 B. C. Thucydides observes that in ancient times the Phenicians had occupied the promontories of Sicily and the small islands lying around Sicily, in order to carry on trade with the Sicels. [See also SICILY: Phœnician and Greek colonies.] Diodorus Siculus tells us that when the Phenicians extended their trade to the western ocean they settled in the island of Melite (Malta), owing to its situation in the middle of the sea, and excellent harbours, in order to have a refuge for their ships. [See MALTA, ISLAND OF: Importance of history.] . . . On Sardinia also, as Diodorus tells us, the Phenicians planted many colonies. The mountains of Sardinia contained iron, silver, and lead. . . . The legend of the Greeks makes Heracles, i. e. Baal Melkarth, lord of the whole West. As a fact, the colonies of the Phenicians went beyond Sardinia in this direction. Their first colonies on the north coast of Africa appear to have been planted where the shore runs out nearest Sicily; Hippo was apparently regarded as the oldest colony. In the legends of the coins mentioned above Hippo is named beside Tyre and Citium as a daughter of Sidon. . . . Ityke (atak, settlement, Utica), on the mouth of the Bagradas (Medsherd), takes the next place after this Hippo, if indeed it was not founded before it. Aristotle tells us that the Phenicians stated that Ityke was built 287 years before Carthage, and Pliny maintains that Ityke was founded 1,178 years before his time. As Carthage was founded in the year 846 B. C. [see CARTHAGE: Founding of] Ityke, according to Aristotle's statement, was built in the year 1133 B. C. With this the statement of Pliny agrees. He wrote in the years 52-77 A. D., and therefore he places the foundation of Ityke in the year 1126 or 1100 B. C. About the same time, i. e. about the year 1100 B. C., the Phenicians had already reached much further to the west. . . . When their undertakings succeeded according to their desire and they had collected great treasures, they resolved to traverse the sea beyond the pillars of Heracles, which is called Oceanus. First of all, on their passage through these pillars, they founded upon a peninsula of Europe a city which they called Gadeira. . . . This foundation of Gades, which on the coins is called Gadir and Agadir, i. e. wall, fortification, the modern Cadiz, and without doubt the most ancient city in Europe which has preserved its name, is said to have taken place in the year 1100 B. C. [See also CANTZ: B. C. 1130.] If Ityke was founded before 1100 B. C. or about that time, we have no reason to doubt the founding of Gades soon after that date. Hence the ships of the Phenicians would have reached the ocean about the time when Tiglath Pilezar I. left the Tigris with his army, trod the north of Syria,

and looked on the Mediterranean."—M. Duncker, *History of antiquity*, v. 3, bk. 3, ch. 3.—See also CANAAN; COMMERCE: Ancient: B. C. 1000.—"The typical Phœnician colony was only a trading station, inhabited by dealers, who had not ceased to be counted as citizens of the parent State. . . . In Phœnicia itself the chief object of public interest was the maintenance and extension of foreign trade. The wealth of the country depended on the profits of the merchants, and it was therefore the interest of the Government to encourage and protect the adventures of the citizens. Unlike the treasures or curiosities imported by the fleets of royal adventurers, Phœnician imports were not intended to be consumed within the country, but to be exchanged for the most part for other commodities. The products of all lands were brought to market there, and the market people, after supplying all their own wants in kind, still had commodities to sell at a profit to the rest of the world. The Government did not seek to retain a monopoly of this profit; on the contrary, private enterprise seems to have been more untrammelled than at any time before the

PHŒNICIAN SILVER PLATE

(Original in the Kircher Museum at Rome)

present century. But individuals and the State were agreed in desiring to retain a monopoly of foreign traffic as against the rest of the world, hence the invention of 'Phœnician lies' about the dangers of the sea, and the real dangers which 'Tyrian seas' came to possess for navigators of any other nation. . . . Phœnician traders were everywhere first in the field, and it was easy for them to persuade their barbarous customers that foreigners of any other stock were dangerous and should be treated as enemies. They themselves relied more on stratagem than on open warfare to keep the seas, which they considered their own, free from other navigators. . . . Silver and gold, wool and purple, couches inlaid with ivory, Babylonish garments and carpets, unguents of all sorts, female slaves and musicians, are indicated by the comic poets as forming part of the typical cargo of a Phœnician merchantman, the value of which in many cases would reach a far higher figure than a small ship-owner or captain could command. As a consequence, a good deal of banking or money-lending business was done by the wealthy members of the great Corporation of Merchants and Ship-owners. The Phœnicians had an evil reputation with the other nations of the Mediterranean for sharp practices, and the custom of lending money at interest was

considered, of course wrongly, a Phœnician invention, though it is possible that they led the way in the general substitution of loans at interest for the more primitive use of antichretic pledges. . . . To the Greeks the name Phœnician seems to have called up the same sort of association as those which still cling to the name of Jew in circles which make no boast of tolerance; and it is probable enough that the first, like the second, great race of wandering traders was less scrupulous in its dealings with aliens than compatriots. . . . So far as the Punic race may be supposed to have merited its evil reputation, one is tempted to account for the fact by the character of its principal staples. All the products of all the countries of the world circulated in Phœnician merchantmen, but the two most considerable, and most profitable articles of trade in which they dealt were human beings and the precious metals. The Phœnicians were the slave-dealers and the money-changers of the Old World. And it is evident that a branch of trade, which necessarily follows the methods of piracy, is less favourable to the growth of the social virtues than the cultivation of the ground, the domestication of animals, or the arts and manufactures by which the products of nature are applied to new and varied uses. Compared with the trade in slaves, that in metals—gold, silver, copper and tin—must seem innocent and meritorious; yet the experience of ages seems to show that, somehow or other, mining is not a moralizing industry. . . . Sidon was famous in Homer's time for copper or bronze, and Tyre in Solomon's for bronze (the 'brass' of the Authorized); and the Phœnicians retailed the work of all other metallurgists as well as their own, as they retailed the manufactures of Egypt and Babylonia, and the gums and spices of Arabia. [See ARABIA: Ancient succession, etc.] . . . Two things are certain with regard to the continental commerce of Europe before the written history of its northern countries begins. Tin and amber were conveyed by more than one route from Cornwall and the North Sea to Mediterranean ports. In the latter case the traders proceeded up the Rhine and the Aar, along the Jura to the Rhone, and thence down to Marseilles; and also across the Alps, by a track forking off, perhaps at Grenoble, into the valley of the Po, and so to the Adriatic. . . . Apart from the Phœnician sea trade, Cornish tin was conveyed partly by water to Armorica and to Marseilles through the west of France; but also to the east of England (partly overland by the route known later as the Pilgrims' Way), and from the east of Kent, possibly to the seat of the amber trade, as well as to a route through the east of France, starting from the short Dover crossing."—E. J. Simcox, *Primitive civilizations*, v. 1, pp. 397-402.—See also COMMERCE: Ancient: B. C. 1000-600; B. C. 1000-200.—"The epigraphic texts left us by the Phœnicians are too short and dry to give us any of those vivid glimpses into the past that the historian loves. When we wish to make the men of Tyre and Sidon live again, when we try to see them as they moved in those seven or eight centuries during which they were supreme in the Mediterranean, we have to turn to the Greeks, to Herodotus and Homer, for the details of our picture; it is in their pages that we are told how these eastern traders made themselves indispensable to the half-savage races of Europe. . . . The Phœnicians carried on their trade in a leisurely way. It consisted for the most part in exchanging their manufactured wares for the natural produce of the countries they visited; it was in conformity with the spirit of the time, and, although it inspired distrust, it was regular enough in its methods. Stories

told by both Homer and Herodotus show them to us as abductors of women and children, but in the then state of the world even deeds like those described would soon be forgotten, and after a time the faithless traders would be readmitted for the sake of the wares they brought. . . . Seeing how great their services were to the civilization of Greece and Rome, [see EUROPE: Ancient: Greek civilization] and how admirable were those virtues of industry, activity, and splendid courage that they brought to their work, how is it that the classic writers speak of the Phœnicians with so little sympathy? and why does the modern historian, in spite of his breadth and freedom from bias, find it difficult to treat them even with justice? It is because, in spite of their long relations with them, the peoples of Greece and Italy never learnt to really know the Phœnicians or to understand their language, and, to answer the second question, because our modern historians are hardly better informed. Between Greece and Rome on the one hand and Phœnicia and Carthage on the other, there was a barrier which was never beaten down. They traded and fought, but they never concluded a lasting and cordial peace; they made no effort to comprehend each other's nature, but retained their mutual, ignorant antipathy to the very end. . . . That full justice has never been done to the Phœnicians is partly their own fault. They were moved neither by the passion for truth nor by that for beauty; they cared only for gain, and thanks to the condition of the world at the time they entered upon the scene, they could satisfy that lust to the full. In the barter trade they carried on for so many centuries the advantage must always have been for the more civilized, and the Phœnicians used and abused that advantage. Tyre and Sidon acquired prodigious wealth; the minds of their people were exclusively occupied with the useful; they were thinking always of the immediate profit to themselves in every transaction; and to such a people the world readily denies justice, to say nothing of indulgence. . . . No doubt it may be said that it was quite without their goodwill that the Phœnicians helped other nations to shake off barbarism and to supply themselves with the material of civilized life. That, of course, is true, but it does not diminish the importance of the results obtained through their means. Phœnicia appropriated for herself all the inventions and recipes of the old eastern civilizations and by more than one happy discovery, and especially by the invention of the alphabet she added to the value of the treasure thus accumulated. Whether she meant it or not, she did, as a fact, devote her energies to the dissemination of all this precious knowledge from the very day on which she entered into relations with those tribes on the Grecian islands and on the continent of Europe which were as yet strangers to political life. . . . At the time of their greatest expansion, the true Phœnicians numbered, at the very most, a few hundreds of thousands. It was with such scanty numbers that they contrived to be present everywhere, to construct ports of refuge for their ships, factories for their merchants and warehouses for their goods. These 'English of antiquity,' as they have been so well called, upheld their power by means very similar to those employed by England, who has succeeded for two centuries in holding together her vast colonial empire by a handful of soldiers and a huge fleet of ships. The great difference lies in the fact that Tyre made no attempt to subjugate and govern the nations she traded with."—G. Perrot and C. Chipiez *History of art in Phœnicia*, v 2, ch. 6.—The ascendancy among Phœnician cities passed at some

early day from Sidon to Tyre, and the decline of the former has been ascribed to an attack from the Philistines of Ascalon, which occurred about 1250 or 1200 B. C.—Based on G. Rawlinson, *History of Phœnicia*, ch. 14.—See also COLONIZATION: Ancient Greek, Roman and Phœnician.

B. C. 850-538.—Subjection to Assyria and Babylonia.—About 850 B. C. "the military expeditions of the Assyrians began to reach Southern Syria, and Phœnician independence seems to have been lost. We cannot be sure that the submission was continuous; but from the middle of the ninth till past the middle of the eighth century there occur in the contemporary monuments of Assyria plain indications of Phœnician subjection, while there is no evidence of resistance or revolt. . . . About B. C. 743 the passive submission of Phœnicia to the Assyrian yoke began to be exchanged for an impatience of it, and frequent efforts were made, from this date till Nineveh fell, to re-establish Phœnician independence. These efforts for the most part failed; but it is not improbable that finally, amid the troubles under which the Assyrian empire succumbed, success crowned the nation's patriotic exertions, and autonomy was recovered. . . . Scarcely, however, had Assyria fallen when a new enemy appeared upon the scene. Nechoh of Egypt, about B. C. 608, conquered the whole tract between his own borders and the Euphrates. Phœnicia submitted or was reduced, and remained for three years an Egyptian dependency. Nebuchadnezzar, in B. C. 605, after his defeat of Nechoh at Carchemish, added Phœnicia to Babylon; and, though Tyre revolted from him eight years later, B. C. 598, and resisted for thirteen years all his attempts to reduce her, yet at length she was compelled to submit, and the Babylonian yoke was firmly fixed on the entire Phœnician people. It is not quite certain that they did not shake it off upon the death of the great Babylonian king; but, on the whole, probability is in favour of their having remained subject till the conquest of Babylon by Cyrus, B. C. 538."—G. Rawlinson, *Manuel of ancient history*, bk. 1, pt. 1, sect. 6.—"It appears to have been only a few years after Nebuchadnezzar's triumphant campaign against Neco that renewed troubles broke out in Syria. Phœnicia revolted under the leadership of Tyre; and about the same time Jehoiakim, the Jewish king, having obtained a promise of aid from the Egyptians, renounced his allegiance. Upon this, in his seventh year (B. C. 598), Nebuchadnezzar proceeded once more into Palestine at the head of a vast army, composed partly of his allies, the Medes, partly of his own subjects. He first invested Tyre; but finding that city too strong to be taken by assault, he left a portion of his army to continue the siege, while he himself pressed forward against Jerusalem. . . . The siege of Tyre was still being pressed at the date of the second investment of Jerusalem. . . . Tyre, if it fell at the end of its thirteen years' siege, must have been taken in the very year which followed the capture of Jerusalem, B. C. 585. . . . It has been questioned whether the real Tyre, the island city, actually fell on this occasion (Heeren, *As Nat.* vol. ii. p. 11, E. T.; Kenrick, *Phœnicia*, p. 300), chiefly because Ezekiel says, about B. C. 570, that Nebuchadnezzar had 'received no wages for the service that he served against it.' (Ezek. xxix. 18.) But this passage may be understood to mean that he had had no sufficient wages. Berosus expressly stated that Nebuchadnezzar reduced all Phœnicia."—Idem, *Five great monarchies: Babylonia*, ch. 8, and footnote.

B. C. 604-500.—Later commerce.—"The commerce of Phœnicia appears to have reached its

greatest height about the time of the rise of the Chaldean power at Babylon. Its monopoly may have been more complete in earlier times, but the range of its traffic was more confined. Nebuchadnezzar was impelled to attempt its conquest by a double motive—to possess himself of its riches and to become master of its harbours and its navy. The prophet Ezekiel (ch. 27), foretelling his siege of Tyre, has drawn a picture of its commerce, which is the most valuable document for its commercial history that has come down to us. . . . Directly or indirectly, the commerce of Tyre, in the beginning of the sixth century before Christ, thus embraced the whole known world. By means of the Arabian and the Persian gulfs it communicated with India and the coast of Africa towards the equator. On the north its vessels found their way along the Euxine to the frozen borders of Scythia. Beyond the Straits of Gibraltar, its ships, or those of its colony of Gades, visited the British isles for tin, if they did not penetrate into the Baltic to bring back amber. Ezekiel says nothing of the voyages of the Tyrians in the Atlantic ocean, which lay beyond the limits of Jewish geography; but it is probable that they had several centuries before passed the limits of the Desert on the western coast of Africa, and by the discovery of one of the Canaries had given rise to the Greek fable of the Islands of the Blessed."—J. Kenrick, *Phœnicia*, ch. 6.

PHRYGIANS.—The land of Phrygia in Asia Minor had varying limits in ancient times. At first it was bounded by the river Halys on the east; probably by the Taurus and the Pisidian mountains on the south; the Hellespont and the Propontis on the north; and probably controlled the Troas and Mysia on the west. The country was divided into Little Phrygia and greater Phrygia by the invasion from Thrace, and further territorial changes took place as a result of the Gallic invasions during the third century B.C. Under Roman rule the northeastern part of Phrygia was attached to the province of Galatia while the western part was incorporated into the province of Asia. The principal cities were located in the most beautiful part of the country, namely, in the southwest. Phrygia was famous for its marble, and is known at present as it was in ancient times for sheep raising and the fine quality of wool which it produces. "When the Assyrians in the thirteenth century [B.C.] advanced past the springs of the Euphrates into the western peninsula [of Asia Minor], they found, on the central table-land, a mighty body of native population—the Phrygians. The remains of their language tend to show them to have been the central link between the Greeks and the elder Aryans. They called their Zeus Bagalus ('baga' in ancient Persian signifying God; 'bhaga,' in Sanscrit, fortune), or Sabazius, from a verb common to Indian and Greek, and signifying 'to adore.' They possessed the vowels of the Greeks, and in the terminations of words changed the 'm' into 'n.' Kept off from the sea, they, it is true, lagged behind the coast tribes in civilization, and were regarded by these as men slow of understanding and only suited for inferior duties in human society. Yet they too had a great and independent post of their own, which is mirrored in the native myths of their kings. The home of these myths is especially in the northern regions of Phrygia, on the banks of the springs which feed the Sangarius, flowing in mighty curves through Bithynia into Pontus. Here traditions survived of the ancient kings of the land, of Gordius and Midas."—E. Curtius, *History of Greece*, v. 1, bk. 1, ch. 3.—"As far as any positive opinion can be formed respecting nations of whom we know so little, it would appear that the Mysians and Phrygians are a sort of connecting link between Lydians and Karians on one side, and Thracians (European as well as Asiatic) on the other—a remote ethnical affinity pervading the whole. Ancient migrations are spoken of in both directions across the Hellespont and the Thracian Bosphorus. It was the opinion of some that Phrygians, Mysians and Thracians had immigrated into Asia from Europe. . . . On the other hand, Herodotus speaks of a vast body of Tenkrians [see **TEUKRIANS**] and Mysians who, before the Trojan war, had crossed the strait from Asia into Europe. . . . The Phrygians also are supposed by some to have originally occupied an European soil on the borders of Macedonia, . . . while the Mysians are said to have come from the north-eastern portions of European Thrace south of the Danube, known under the Roman empire by the name of Mœsia. But with respect to the Mysians there was also another story, according to which they were described as colonists emanating from the Lydians. . . . And this last opinion was sup-

ported by the character of the Mysian language, half Lydian and half Phrygian."—G. Grote, *History of Greece*, pt. 2, ch. 10.—The Mysians occupied the north-western corner of Asia Minor, including the region of the Troad. "In the works of the great Greek writers which have come down to us, notably, in the histories of Herodotus and Thucydides, the Phrygians figure but little. To the Greeks generally they were known but as the race whence most of their slaves were drawn, as a people branded with the qualities of slaves, idleness, cowardice, effeminacy. . . . From the Phrygians came those orgiastic forms of religious cult which were connected with the worship of Dionysius and of the Mother of the Gods, orgies which led alike to sensual excess and to hideous self-mutilations, to semi-religious frenzy and bestial immoralities, against which the strong good-sense of the better Greeks set itself at all periods, though it could not deprive them of their attractions for the lowest of the people. And yet it was to this race sunk in corruption, except when roused by frenzy, that the warlike Trojan stock belonged. Hector and Aeneas were Phrygians; and the most manly race of the ancient world, the Romans, were proud of their supposed descent from shepherds of Phrygia."—P. Gardner, *New chapters in Greek history*, ch. 2.—See also **GREECE**: Indo-European migrations; **CHRISTIANITY**: A D. 35-60.

PHUT, ancient Hamitic race of northern Africa. See **LIBYANS.**

PHYLÆ, PHRATRIÆ, GENTES.—"In all Greek states, without exception, the people was divided into tribes or Phylæ, and those again into the smaller subdivisions of Phratriæ and gentes, and the distribution so made was employed to a greater or less extent for the common organisation of the State."—G. F. Schömann, *Antiquities of Greece: The State*, pt. 2, ch. 4.—The four Attic tribes were called, during the later period of that division, the Geleontes, Hopletes, Ægikoreis, and Argadeis. "It is affirmed, and with some etymological plausibility, that the denominations of these four tribes must originally have had reference to the occupations of those who bore them,—the Hopletes being the warrior-class, the Ægikoreis goat-herds, the Argadeis artisans, and the Geleontes (Teleontes or Gedeontes) cultivators. Hence some authors have ascribed to the ancient inhabitants of Attica an actual primitive distribution into hereditary professions or castes, similar to that which prevailed in India and Egypt. If we should even grant that such a division into castes might originally have prevailed, it must have grown obsolete long before the time of Solon; but there seem no sufficient grounds for believing that it ever did prevail. . . . The four tribes, and the four names (allowing for some variations of reading), are therefore historically verified. But neither the time of their introduction, nor their primitive import, are ascertainable matters. . . . These four tribes may be looked at either as religious and social aggregates, in which capacity each of them comprised three Phratries and ninety Gentes; or as political aggregates, in which point of view each included three Trittyes and twelve Naukraries. Each Phratry contained thirty Gentes; each Tritty comprised four Naukraries; the total numbers were thus 360 Gentes and 48 Naukraries. Moreover, each gens is said to have contained thirty heads of families, of whom therefore there would be a total of 10,800. . . . That every Phratry contained an equal number of Gentes, and every Gens an equal number of families, is a supposition hardly admissible without better evidence than we possess. But apart from this questionable precision of numeri-

cal scale, the Phratries and Gentes themselves were real, ancient and durable associations among the Athenian people, highly important to be understood. The basis of the whole was the house, hearth or family,—a number of which, greater or less, composed the Gens, or Genos. This Gens was therefore a clan, sept, or enlarged, and partly factitious, brotherhood. . . . All these phratric and gentle associations, the larger as well as the smaller, were founded upon the same principles and tendencies of the Grecian mind—a coalescence of the idea of worship with that of ancestry, or of communion in certain special religious rites with communion of blood, real or supposed. The god, or hero, to whom the assembled members offered their sacrifices, was conceived as the primitive ancestor, to whom they owed their origin. . . . The revolution of Kleisthenes in 509 B. C. abolished the old tribes for civil purposes, and created ten new tribes,—leaving the Phratries and Gentiles unaltered, but introducing the local distribution according to demes or cantons, as the foundation of his new political tribes. A certain number of demes belonged to each of the ten Kleisthenean tribes (the demes in the same tribes were not usually contiguous, so that the tribe was not coincident with a definite circumscription), and the deme, in which every individual was then registered, continued to be that in which his descendants were also registered. . . . The different Gentes were very unequal in dignity, arising chiefly from the religious ceremonies of which each possessed the hereditary and exclusive administration, and which, being in some cases considered as of pre-eminent sanctity in reference to the whole city, were therefore nationalized. Thus the Eumolpidae and Kerykes, who supplied the Hierophant and superintended the mysteries of the Eleusinian Demeter—and the Butadae, who furnished the priestess of the Athene Poliaus as well as the priest of Poseidon Erechtheus in acropolis—seem to have been revered above all the other Gentes. When the name Butadae was selected in the Kleisthenean arrangement as the name of a deme, the holy Gens so called adopted the distinctive denomination of Eteobutadae, or 'The true Butadae.'—G. Grote, *History of Greece*, pt. 2, ch. 10.

PHYSIOCRATS, group of French economists and philosophers of the eighteenth century. "Besides Rousseau and the philosophers, there were other men whose minds were of a more practical cast and whose opinions soon affected the policy of the government. They are sometimes grouped together as the Economists, and sometimes separated into two groups, one interested primarily in advocating freer trade, the other engaged in propagating the view that agriculture is the sole source of increase in a nation's wealth. This second group was occasionally referred to as the 'sect of the Physiocrats.' Its leader was Quesnay, physician in ordinary of the King. His principal work, the *Tableau économique*, was printed on the royal press at Versailles in 1758, and it is said that Louis

XV took a personal interest in the enterprise. Quesnay divided society into three classes: the productive, or farming population; the proprietary, or owners of the soil; and the sterile, or artisans, traders, and professional men. He argued that industry did not add to the real wealth of the country, because it simply changed the forms of things which already existed. As land was the sole origin of riches, the net product of agriculture was the only thing properly taxable. Quesnay's chief disciple was the Marquis de Mirabeau. Another follower was a young man named Dupont de Nemours, who was to have a share in the reform movements of the next quarter century and of the Revolution. Quesnay said of him, 'We must take care of this young man, for he will still speak after we are dead.' The great service which this school of thinkers rendered was to call attention to the importance of agriculture as a source of national wealth."—H. E. Bourne, *Revolutionary period in Europe*, p. 43.—The contribution of the Physiocrats to economic thought may be summarized as follows: 1. Economics was placed on a scientific basis by separating it from other sciences, notably jurisprudence, and by applying scientific methods. 2. Important contributions to the theory of taxation were made as a result of the controversies excited by the publications of the Physiocrats. 3. A dim foreshadowing of the later concepts of capital and rent is to be found in their works.—See also ECONOMICS: 18th century: Physiocrats; TARIFF: 18th century; SINGLE TAX: History of the idea.

PI-BESETH. See BUBASTIS.

PICARDS.—"The reforming movement of Bohemia [fifteenth century] had drawn thither persons from other countries whose opinions were obnoxious to the authorities of the church. Among these, the most remarkable were known by the name of Picards,—apparently a form of the word 'beghards' [see BEGUINES], which . . . was then widely applied to sectaries. These Picards appear to have come from the Low Countries."—J. C. Robertson, *History of the Christian church*, v. 8, p. 24.—See also PAULICIANS.

PICARDY, ancient government of northern France corresponding to the present department of Somme and parts of Pas-de-Calais, Oise and Aisne. The capital was Amiens.

Origin of name.—Whimsical enough is the origin of the name of Picards, and from thence of Picardie, which does not date earlier than 1200. It was an academical joke, an epithet first applied to the quarrelsome humour of those students in the university of Paris who came from the frontier of France and Flanders."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 58, foot-note 1.

PILLERSTORF CONSTITUTION. See SUFFRAGE, MANHOOD: Austria.

PILLNITZ, Declaration of.—In August, 1791, a conference of European monarchs was held in Pillnitz to determine upon plans for aiding the French monarchy against the revolution. "At this conference the King's brothers, Monsieur, the Comte de Provence, afterwards Louis XVIII, who had escaped from France at the time of the flight to Varennes, and the Comte d'Artois, afterwards Charles X, who had fled in July 1789, at the epoch of the capture of the Bastille, were present. They had their own aims to serve. They were disgusted at the weak conduct, as they termed it, of Louis XVI in yielding so far as he had done to the popular wishes; they desired to undo the whole effect of the Revolution and to restore the Bourbon monarchy in its ancient authority by the arms of the monarchs of Europe. But Leopold did not care about the French princes or the Bourbon monarchy. He cared rather for the safety of his sister, Marie Antoinette, and the maintenance through her of the Franco-Austrian alliance. In the Declaration of Pillnitz, which was signed by the Emperor and the King of Prussia on 27th August 1791, the two sovereigns declared that the situation of the King of France was an object of interest common to all European monarchs, and that they hoped other monarchs would use with them the most efficacious means to put the King of France in a position to lay in perfect liberty the bases of a monarchical government, suited alike to the rights of sovereigns and the happiness of the French nation. Provided that other powers would co-operate with them they were willing to act promptly, and had therefore placed their armies on foot. These threats exasperated but did not terrify the French people. Leopold had no intention of entering upon hostilities, and found a loophole by which to escape from declaring war in the acceptance by Louis XVI of the completed Constitution on 21st September 1791. He then solemnly withdrew his pretensions to interfere in the internal affairs of France."—H. M. Stephens, *Revolutionary Europe*, p. 103.—See also AUSTRIA: 1790-1797; FRANCE: 1791 (July-September).

PILLOW, Fort, on the Mississippi river, about forty miles north of Memphis, Tennessee. It was a scene of fighting during the Civil War. See U.S.A.: 1862 (June: On the Mississippi); 1864 (April: Tennessee).

PILTDOWN MAN. See ANTHROPOLOGY: Physical; EUROPE: Prehistoric: Earliest remains, etc.: Piltown man.

PILUM.—The Roman spear was called the pilum. "It was, according to [Polybius], a spear having a very large iron head or blade, and this was carried by a socket to receive the shaft. . . . By the soldiers of the legions, to whom the use of the pilum was restricted, this weapon was both

hurled from the hand as a javelin, and grasped firmly, as well for the charge as to resist and beat down hostile attacks."—P. Lacombe, *Arms and armour*, ch. 4.

PIMAN FAMILY, North American Indians. "Only a small portion of the territory occupied by this family is included within the United States, the greater portion being in Mexico, where it extends to the Gulf of California. The family is represented in the United States by three tribes, Pima alta, Sobaipuri, and Papago. The former have lived for at least two centuries with the Maricopa on the Gila River about 160 miles from the mouth. The Sobaipuri occupied the Santa Cruz and San Pedro Rivers, tributaries of the Gila, but are no longer known. The Papago territory is much more extensive and extends to the south across the border."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, pp. 98-99.—See also **INDIANS, AMERICAN**: Cultural areas in North America: Southwest area; **PUEBLOS**.

PIRÆUS, or Peiræus, commercial city and port of Athens. The harbor was constructed and fortified during and after the Persian wars, a work which the Athenians owed to the genius of Themistocles. The name was sometimes applied to the whole peninsula in which the Piræus is situated, which contained two other harbors—Munychia and Zea. (See **ATHENS**: Map of ancient Athens.) Phalerum, which had previously been the harbor of Athens, lies to the east. The walls built by Themis-

toes "were carried round the whole of the peninsula in a circumference of seven miles, following the bend of its rocky rim, and including the three harbour-bays. At the mouths of each of the harbours a pair of towers rose opposite to one another at so short a distance that it was possible to connect them by means of chains: these were the locks of the Piræus. The walls, about 16 feet thick, were built without mortar, of rectangular blocks throughout, and were raised to a height of 30 feet by Themistocles, who is said to have originally intended to give them double that height."—E. Curtius, *History of Greece*, bk. 3, ch. 2.—See also ATHENS: B. C. 479-476; B. C. 87-86.

PIROT, Battle of (1877). See SERBIA: 1875-1885.

PIRU, tribe of South American Indians. See ANDESIANS.

PISA, province of Tuscany, Italy, and a city of the same name, on the Arno, seven miles from the Mediterranean. The city is the center of flourishing cotton manufactures, and oil and alabaster trade. It is the seat of the University of Pisa, founded in 1338, and endowed by Grand Duke Leopold in 1808. In 1015 the population of the province was 351,841, and of the city, 67,285.

Origin of the city.—Early growth of its commerce and naval power.—Conquest of Sardinia.—Strabo and others have given Pisa a Grecian origin. "Situated near the sea upon the triangle formed in past ages, by the confluence of the two rivers, the Arno and the Serchio; she was highly adapted to commerce and navigation; particularly in times when these were carried on with small vessels. We consequently find that she was rich and mercantile in early times, and frequented by all the barbarous nations. . . . Down to the end of the fifteenth century, almost all the navigation of the nations of Europe, as well as those of Asia and Africa, which kept a correspondence and commerce with the former, was limited to the Mediterranean, Adriatic, Archipelago, and Euxine seas; and the first three Italian republics, Pisa, Genoa, and Venice, were for a long time mistresses of it. Pisa, as far back as the year 925, was the principal city of Tuscany, according to Luitprand. In the beginning of the eleventh century, that is, in the year 1004, we find in the Pisan annals, that the latter waged war with the Lucchese and beat them; this is the first enterprise of one Italian city against another, which proves that she already acted for herself, and was in great part, if not wholly, liberated from the dominion of the Duke of Tuscany. In the Pisan annals, and in other authors, we meet with a series of enterprises, many of them which are obscurely related, or perhaps exaggerated. Thus we find that in the year 1005, in an expedition of the Pisans against the maritime city of Reggio, Pisa being left unprovided with defenders, Musetto, King, or head, of the Saracens, who occupied Sardinia, seized the opportunity of making an invasion; and having sacked the city, departed, or was driven out of it. . . . It was very natural for the Pisans and Genoese, who must have been in continual fear of the piracies and invasions of the barbarians as long as they occupied Sardinia, to think seriously of exterminating them from that country: the pope himself sent the Bishop of Ostia in haste to the Pisans as legate, to encour-

age them to the enterprise: who, joining with the Genoese, conquered Sardinia [1017] by driving out the Saracens; and the pope, by the right he thought he possessed over all the kingdoms of the earth, invested the Pisans with the dominion; not however without exciting the jealousy of the Genoese, who, as they were less powerful in those times, were obliged to yield to force. The mutual necessity of defence from the common enemy kept them united; the barbarians having disembarked in the year 1020 in Sardinia under the same leader, they were again repulsed, and all their treasure which remained a booty of the conquerors, was conceded to the Genoese as an indemnity for the expense."—L. Pignotti, *History of Tuscany*, v. 1, ch. 7.

1063-1293.—Architectural development.—Disastrous war with Genoa.—Great defeat at Meloria.—Count Ugolino and his fate.—War with Florence and Lucca.—"The republic of Pisa was one of the first to make known to the world the riches and power which a small state might acquire by the aid of commerce and liberty. Pisa had astonished the shores of the Mediterranean by the number of vessels and galleys that sailed under her flag, by the succor she had given the crusaders, by the fear she had inspired at Constantinople, and by the conquest of Sardinia and the Balearic Isles. Pisa was the first to introduce into Tuscany the arts that ennoble wealth; her dome, her baptistery, her leaning tower, and her Campo Santo, which the traveller's eye embraces at one glance, but does not weary of beholding, had been successively built from the year 1003 to the end of the 12th century. These chefs-d'œuvre had animated the genius of the Pisans; the great architects of the 13th century were, for the most part, pupils of Nicolas di Pisa. But the moment was come in which the ruin of this glorious republic was at hand; a deep-rooted jealousy, to be dated from the conquest of Sardinia, had frequently, during the last two centuries, armed against each other the republics of Genoa and Pisa: a new war between them broke out in 1282. It is difficult to comprehend how two simple cities could put to sea such prodigious fleets as those of Pisa and Genoa. In 1282, Ginecel Sismondi commanded 30 Pisan galleys, of which he lost the half in a tempest, on the 9th of September; the following year, Rosso Sismondi commanded 64; in 1284, Guido Jacia commanded 24, and was vanquished. The Pisans had recourse the same year to a Venetian admiral, Alberto Morosini, to whom they intrusted 103 galleys; but whatever efforts they made, the Genoese constantly opposed a superior fleet. This year [1284], however, all the male population of the two republics seemed assembled on their vessels; they met on the 6th of August, 1284, once more before the Isle of Meloria, rendered famous 43 years before by the victory of the Pisans over the same enemies [when the Ghibelline friendship of Pisa for the Emperor Frederick II induced her to intercept and attack, on the 3d of May, 1241, a Genoese fleet which conveyed many prelates to a great council called by Pope Gregory IX with hostile intentions towards the Emperor, and which the latter desired to prevent]. Valor was still the same, but fortune had changed sides; and a terrible disaster effaced the memory of an ancient victory. While the two fleets, almost equal in number, were engaged, a reinforcement of 30 Genoese galleys, driven impetuously by the wind, struck the Pisan fleet in flank: 7 of their vessels were instantly sunk, 28 taken. 5,000 citizens perished in the battle, and 11,000 who were taken prisoners

to Genoa preferred death in captivity rather than their republic should ransom them, by giving up Sardinia to the Genoese. This prodigious loss ruined the maritime power of Pisa; the same nautical knowledge, the same spirit of enterprise, were not transmitted to the next generation. All the fishermen of the coast quitted the Pisan galleys for those of Genoa. The vessels diminished in number, with the means of manning them; and Pisa could no longer pretend to be more than the third maritime power in Italy. While the republic was thus exhausted by this great reverse of fortune, it was attacked by the league of the Tuscan Guelphs; and a powerful citizen, to whom it had intrusted itself, betrayed his country to enslave it. Ugolino was count of the Gherardesca, a mountainous country situated along the coast, between Leghorn and Piombino: he was of Ghibeline origin, but had married his sister to Giovan di Gallura, chief of the Guelphs of Pisa and of Sardinia. From that time he artfully opposed the Guelphs to the Ghibelines." The Pisans, thinking him to be the person best able to reconcile Pisa with the Guelph league "named Ugolino captain-general for ten years: and the new commander did, indeed, obtain peace with the Guelph league; but not till he had caused all the fortresses of the Pisan territory to be opened by his creatures to the Lucchese and Florentines. . . . From that time he sought only to strengthen his own despotism." In July, 1288, there was a rising of the Pisans against him; his palace was stormed and burned; and he, his two sons and two grandsons, were dragged out of the flames, to be locked in a tower and starved to death—as told in the verse of Dante. "The victory over count Ugolino, achieved by the most ardent of the Ghibelines, redoubled the enthusiasm and audacity of that party; and soon determined them to renew the war with the Guelphs of Tuscany. . . . Guido de Montefeltro was named captain. He had acquired a high reputation in defending Forli against the French forces of Charles of Anjou; and the republic had not to repent of its choice. He recovered by force of arms all the fortresses which Ugolino had given up to the Lucchese and Florentines. The Pisan militia, whom Montefeltro armed with cross-bows, which he had trained them to use with precision, became the terror of Tuscany. The Guelphs of Florence and Lucca were glad to make peace in 1293."—J. C. L. de Sismondi, *History of the Italian republics*, ch. 5.—In 1290, when Pisa was in her greatest distress, Genoa suddenly joined again in the attack on her ancient rival. She sent an expedition under Conrad d'Oria which entered the harbor of Pisa, pulled down its towers, its bridge and its forts, and carried away the chain which locked the harbor entrance. The latter trophy was only restored to Pisa in recent years.—J. T. Bent, *Genoa*, ch. 4.

1494-1509.—Delivered by the French.—Faithlessness of Charles VIII.—Thirteen years of struggle against Florence.—Final surrender.—"The Florentine conquest was the beginning of 90 years of slavery for Pisa—a terrible slavery, heavy with exaggerated imports, bitter with the tolerated plunder of private Florentines, humiliating with continual espionage. . . . Pisa was the Ireland of Florence, captive and yet unvanquished. . . . At last a favourable chance was offered to the Pisans. . . . In the autumn of 1494, the armies of Charles VIII poured into Italy [see ITALY: 1494-1496]. It had been the custom of the Florentines, in times of war and danger, to call the heads of every Pisan household into Florence, as hostages for the good behaviour of their families and fellow citizens. But in the autumn of 1494, Piero de' Medici who forgot everything, who had forgotten to garrison his frontier, forgot to call the Pisan hostages to Florence, although the French were steadily advancing on Tuscany, and the Pisans eager to rebel. . . . The French army and the hope of liberty entered the unhappy city hand in hand [November 8, 1494]. . . . That night the Florentines in Pisa—men in office, judges, merchants, and soldiers of the garrison—were driven at the sword's point out of the rebellious city. . . . Twenty-four hours after the entry of the French, Pisa was a free republic, governed by a Gonfalonier, six Priors, and a Balia of Ten, with a new militia of its own, and, for the first time in eight and eighty years, a Pisan garrison in the ancient citadel." All this was done with the assent of the King of France and the promise of his protection. But when he passed on to Florence, and was faced there by the resolute Capponi, he signed a treaty in which he promised to give back Pisa to Florence when he returned from Naples. He returned from Naples the next summer (1495), hard pressed and retreating from his recent triumphs, and halted with his army at Pisa. There the tears and distress of the friendly Pisans moved even his soldiers to cry out in protestation against the surrender of the city to its former bondage. Charles compromised by a new treaty with the Florentines, again agreeing to deliver Pisa to them, but stipulating that they should place their old rivals on equal terms with themselves, in commerce and in civil rights. But Entragues, the French governor whom Charles had left in command at Pisa, with a small garrison, refused to carry out the treaty. He assisted the Pisans in expelling a force with which the Duke of Milan attempted to secure the city, and then, on the 1st of January, 1496, he delivered the citadel which he held into the hands of the Pisan signory "During thirteen years from this date the shifting fortunes, the greeds and jealousies of the great Italian cities, fostered an artificial liberty in Pisa. Thrown like a ball from Milan to Venice, Venice to Maximilian, back again to Venice, and thence to Cæsar Borgia, the unhappy Republic described the whole circle of desperate hope, agonized courage, misery, poverty, cunning, and betrayal."—A. M. F. Robinson, *End of the Middle Ages: French at Pisa*.—In 1509 the Pisans

reduced to the last extremity by the obstinate siege which the Florentines had maintained, and sold by the French and Spaniards who took pay from Florence (see VENICE: 1508-1509) for abandoning their cause, opened their gates to the Florentine army.—Based on H. E. Napier, *Florentine history*, v. 4, bk. 2, ch. 8.

ALSO IN: T. A. Trollope, *History of the Commonwealth of Florence*, bk. 8, ch. 6; bk. 9, ch. 1-10.

1509-1551.—History merged with that of Florence.—From 1509 the history of Pisa became merged in the history of Florence, and through Florence in that of the duchy of Tuscany. After the disastrous events of 1509 the population, which is said to have once been 150,000, steadily declined until it reached 8,500 in 1551. Thence forward the prosperity of the city and with it the growth of population slowly revived. See FLORENCE: 1502-1509, and after.

1512.—Attempted convocation of a council by Louis XII of France. See ITALY: 1510-1513.

PITTSBURG LANDING, or SHILOH, Battle of. See U.S.A.: 1862 (February-April: Tennessee).

PITTSBURGH, situated at the junction of the Allegheny and Monongahela rivers, which form the Ohio. It is the second city in Pennsylvania, one of the most important cities of the United States, and the largest steel manufacturing center in the world. Its population in 1920, was 588,343. The city occupies an important place in the history of iron and steel. Its strategic position in the midst of the Pennsylvania coal fields, and oil and gas districts, has given it an unrivalled opportunity as a manufacturing city. It is now the greatest iron and steel producing center in the world, and uses up the larger part of the iron brought from Lake Superior. Pig iron, wrought iron, Bessemer, open hearth, crucible steel and the various high speed steels are all produced in the city and its environs, and are manufactured into steel rails, structural steel, armor plate, machinery, wire, nails. But though iron and steel form the chief output of the Pittsburgh mills, the city has many other industries of the first importance. What are said to be the largest tin plate works in the world are at McKeesport. Coke for the furnaces and producer gas are manufactured in immense quantities. The largest cork manufacturing plant in the world is in Pittsburgh; the Westinghouse air brake plant is located here, and rolled brass, copper, glass, and pickles are produced. The city is a great railroad center, while fleets of boats and barges bring coal from the mines into the city down the Allegheny and the Monongahela, and carry manufactured products from the city by way of the Ohio river.

1754.—Fort Duquesne built by the French. See OHIO: 1754.

1755.—Braddock's defeat. See OHIO: 1755.

1758.—Fort Duquesne abandoned by the French, occupied by the English, and named in honor of Pitt. See CANADA: 1758.

1763.—Siege of Fort Pitt by the Indians.—Bouquet's relieving expedition. See PONTIAC'S WAR.

1794.—Whiskey Rebellion. See PENNSYLVANIA: 1704.

1804-1816.—Steel industry founded.—Incorporation of city.—The first bank was established in Pittsburgh in 1804. By 1806, the manufacture of iron was well under way; and the next few years saw rapid development in all lines. In 1811, the first steamboat for western rivers was launched at Pittsburgh; and in 1816 the city was chartered.

1877.—Railway riots.—A passionate and widespread strike of railway employees, in July, 1877, led to fierce riots in several parts of the country, but nowhere else so seriously as at Pittsburgh. There some two thousand freight cars, besides ware-houses, machine shops, and other property, to the estimated value of \$10,000,000, were pillaged

or burnt, with heavy loss of life in the conflicts that occurred.

1892-1907.—Homestead strike.—Carnegie library opened.—Greater Pittsburgh.—The next serious riot in the history of this region took place many years later, in 1892, at Homestead, eight miles southeast of Pittsburgh and the site of large steel works. A labor strike, lasting 143 days, was marked by a battle in which ten men were killed. In 1895, the Carnegie library was opened, the first of a now large and notable group of educational buildings in Pittsburgh, bearing the same name. (See LIBRARIES: Modern: Carnegie library gifts; United States: University libraries; Administration: Administration of some great libraries.) In 1901, the city charter was changed to abolish the office of mayor, and invest the executive powers in the recorder. But in 1903, the title of recorder was changed back to mayor. In 1906, the cities of Pittsburgh and Allegheny voted to combine in Greater Pittsburgh. In spite of an appeal to the courts made by Allegheny, the consolidation was effected Dec. 9, 1907.

1906.—Election of Mayor Guthrie.—Municipal reforms.—The first mayor of the consolidated city was George W. Guthrie who assumed charge in 1906. "When Mayor Guthrie went into office there was no merit system in Pittsburgh; but he soon established an effective one of his own, and at the 1907 session of the Pennsylvania Legislature effectively cooperated with the Pennsylvania Civil Service Reform Association and similar bodies, with Mayor Dimmick, of Scranton, and the business bodies of second-class cities, to secure a law which would permanently establish the merit system in them. He and his colleagues succeeded."—C. R. Woodruff, *Mayor with an ideal* (*Outlook*, April 25, 1908).—During his administration Mayor Guthrie effected great economies.

1908.—University renamed.—Filtration plant installed.—In 1908, the University of Western Pennsylvania was renamed University of Pittsburgh. The university developed from the old Pittsburgh Academy, founded in 1787, and can make good claim to be the oldest educational institution west of the Alleghenies. In 1908 a new filtration plant, which had been installed at a cost of \$7,675,000, was put into operation. The first year of its use resulted in cutting down deaths from typhoid one-third; and the disease has since been practically eliminated.

1909.—Defeat of Mayor Guthrie.—Discovery of political corruption.—Although nominated for reelection in 1909, he was defeated by the nominee of a corrupt party "machine"; but this put no check on the efforts of the voters' league behind him to hunt down the corrupting influences and agencies which had mastered the city once more. A fortunate accident gave the league a single clue to the hidden labyrinth of rascality, resulting in the conviction and sentencing to the penitentiary of many prominent men, including bank officials and ex-councilmen. The group that received and divided the bribe money was known as the "Big Six."

1909-1917.—Civic commission initiates reforms.—The Pittsburgh Civic Commission, established in 1909, is a splendid example of what can be accomplished by public-spirited citizens through organization for the betterment of conditions. Its purpose, as stated in its first publication (1917) is "to plan and promote improvements in civic and industrial conditions which affect the health, convenience, education, and general welfare of the Pittsburgh industrial district; to create public opinion in favor of such improvements; and thus to

establish such living and working conditions as may set a standard for other American industrial centers."

"One of the great thoroughfares which now carries the principal vehicle traffic to the East End of our city with a new, beautiful and artistic bridge will be found suggested and outlined by the commission. The art commission, which is adding so much to the artistic beauty of public work in Pittsburgh was created by a bill drawn in the offices of the civic commission in every particular through the legislature until the governor's signature made it a law. The ordinance making it possible for our present excellent traffic regulations was drawn up in conjunction with the officers and engineers of the commission. The initiative for a commission form of government was initiated through a meeting of prominent business men called by the civic commission, which in turn called a mass meeting. . . . The proposed wall for keeping out floods and the filling in of many of the principal streets was suggested by the civic commission. The wall has received the endorsement of the flood commission, and a large number of streets were filled in by the last administration. The great work, however, was for comprehensive city planning by an outside commission. B. J. Arnold, John R. Freeman and Frederick Law Olmsted, three of the leading experts in the country, were retained [by the civic commission] to outline constructive investigation into 'the needs and limitations of the Pittsburgh industrial district in so far as its physical development can be effectively controlled by the action of the community.'"—H. D. W. English, *Pittsburgh Civic Commission* (*National Municipal Review*, Jan., 1915).

1911.—Council of Nine.—Non-partisan ballot effects improvement.—May 31, 1911, an important change was made in the city charter, abolishing ward representation and two council bodies, and substituting one Council of Nine, elected at large for four years on a non-partisan basis. The members of the council have legislative power, and are salaried. Additional members will be added to the council as the population increases. "When Lincoln Steffens wrote his 'Shame of the Cities' and described the government of the various municipalities of this union, he said Pittsburgh was not controlled by the bosses, but the boss was the city, and that was a correct statement of the situation at that time [1904]. Absolutely uncontrolled, they did what they liked. That was but a few years ago. What is the condition to-day? We have an administration elected upon a non-partisan ballot—a non-partisan ballot framed under an act, in which the election of municipal officers cannot take place even the same year with the election of either state or national officials. It must be a separate and distinct election, the ballots having no party designation. It has been on trial a few years. The result has been that the candidates of the respective offices are not such because they are Republicans or Democrats. The greatest contests so far have been between those of the same political faith, even between candidates who had been prominent in the same party for many years. Each was supported by his particular friends, or by factions or by organizations of various character, but none of them by the national political party. . . . Since the introduction of this system now after several years' trial, there is not even a suspicion on the part of the people of Pittsburgh that we have not an honest administration. The man who have been elected for the respective positions are, as a rule, far superior in every way to those who prior to that time occupied those same offices."

—A. L. Weil, *Non-partisan ballot in Pittsburgh* (*National Municipal Review*, Mar., 1917).

1911.—Convention of legal aid societies. See LEGAL AID: United States: Conferences and conventions.

1919.—Recent improvements.—In 1919 the city authorized a bond issue of \$20,000 to build a subway, create a connecting boulevard, to be known as the Boulevard of the Allies, and to make other improvements.

1921.—Partisan elections.—Separate assessments.—The Pennsylvania legislature, in 1921, abolished non-partisan elections for cities of the second class, that is, Pittsburgh and Scranton. In the same year the legislature passed a law authorizing these two cities to adopt a system of separate assessments on land and improvements respectively, in order that the heavier burden of taxation might be placed on land.

PITTSBURGH PROCLAMATION. See INTERNATIONAL: 1872-1886.

PIUS I, pope, c. 141-154.

Pius II (1405-1464), pope, 1458-1464. Celebrated in literature as Æneas Silvius, particularly for his "Commentaries," a history of his life and times.

Pius III (1430-1503), pope, September-October, 1503.

Pius IV (1499-1565), pope, 1559-1565. Reconvened the Council of Trent, 1562, and issued a bull confirming its decisions, 1564.

Pius V (1504-1572), pope, 1556-1572. Had been grand inquisitor; allied himself with the king of Spain against the Turks and Protestants. See TURKEY: 1566-1571.

Pius VI (1717-1799), pope, 1775-1799. Lost part of his dominions to the French, 1791-1796; and the remainder, 1798; imprisoned in France, 1798, where he died. See ROME: Modern city: 1773; FRANCE: 1797-1798 (December-May).

Pius VII (1740-1823), pope, 1800-1823. Concluded the "Concordat" with France, 1801; crowned Napoleon Bonaparte emperor, 1804; imprisoned in Italy and in France, 1800-1814; returned to Rome, 1814. See PAPACY: 1808-1814; FRANCE: 1804-1805; 1805-1806 (December-September); Jesuits: 1769-1871; ROME: Modern city: 1808-1814; VATICAN: 1800-1850.

Pius VIII (1761-1830), pope, 1829-1830.

Pius IX (1792-1878), pope, 1846-1878. Held convocation of Vatican Council which declared dogma of infallibility; fled on the proclamation of the republic, 1848; returned by France, 1850; lost part of his dominions to Victor Emmanuel, 1860; deprived of his temporal power, 1870. See PAPACY: 1854; 1869-1870; ITALY: 1848-1849; ROME: Modern city: 1815-1840.

Pius X (1835-1914), pope, 1903-1914. See PAPACY: 1903 (July-August); 1903-1910; 1906 (February); 1907 (September); 1907-1909; 1908; 1911-1914; 1914; ITALY: 1914: Death of pope; ECCLESIASTICAL LAW: 1545-1904.

Pius XI (1857-), became pope, 1922. See PAPACY: 1922.

PIUTES, North American Indian tribe. See SHOSHONEAN FAMILY.

PIZARRO, Francisco (c. 1471-1541), Spanish soldier, conqueror of Peru. With Balboa at discovery of the Pacific, 1513; explored south of Panama, 1524-1527; received concession from Spain to conquer Peru, 1529; conquered and governed Peru, 1535-1541. See PERU: 1528-1541; 1531-1533; 1533-1548; AMERICA: 1509-1511; 1524-1528; ECUADOR: Aboriginal kingdom of Quito; LATIN AMERICA: 1504-1524.

PIZARRO, Gonzalo (c. 1505-1548), Spanish soldier. Accompanied his half-brother, Francisco,

during the conquest of Peru. See PERU: 1533-1548; AMAZON RIVER: Discovery and naming.

PIZZIGHITONE CASTLE, Italy, scene of the incarceration of Francis I of France after the defeat of the French by the armies of the Emperor Charles V, 1525. See FRANCE: 1525-1526.

PLACE, Francis (1771-1854), English political economist and reformer. Though a tailor and self-educated, he was the associate of Bentham, Mill and Godwin, and took a leading part in the organization and management of trade unions in London; was a factor in procuring the passage of the Reform Bill of 1832, and in the repeal of the law forbidding workmen's combinations.

B. C. 405-375.—Repeated ravages among the Carthaginians.—"Within the space of less than thirty years [from 405 B. C.] we read of four distinct epidemic distempers, each of frightful severity, as having afflicted Carthage and her armies in Sicily, without touching either Syracuse or the Sicilian Greeks. Such epidemics were the most irresistible of all enemies to the Carthaginians."—G. Grote, *History of Greece*, pt. 2, ch. 83.

A. D. 78-266.—Plague after the destruction of Herculaneum and Pompeii.—Plagues of Orosius, Antoninus, and Cyprian.—"On the cessation of the eruption of Vesuvius, which began on the 23d of August, 78, and which buried Herculaneum, Stabia and Pompeii in ashes, there arose . . . a destructive plague, which for many days in succession slew 10,000 men daily." The plague of Orosius (so called because Orosius, who wrote in the 5th century, described it most fully) began in the year 125. It was attributed to immense masses of grasshoppers which were swept by the winds, that year from Africa into the Mediterranean Sea, and which were cast back by the waves to putrefy in heaps on the shore. "In Numidia, where at that time Micipsa was king, 800,000 men perished, while in the region which lies most contiguous to the seashore of Carthage and Utica, more than 200,000 are said to have been cut down. In the city of Utica itself, 30,000 soldiers, who had been ordered here for the defence of all Africa, were destroyed. . . . The plague of Antoninus (164-180) visited the whole Roman Empire, from its most eastern to its extreme western boundaries, beginning at the former, and spreading thence by means of the troops who returned from putting down a rebellion in Syria. In the year 166 it broke out for the first time in Rome, and returned again in the year 168. . . . The plague depopulated entire cities and districts, so that forests sprung up in places before inhabited. . . . With regard to the character of this plague, it has been considered sometimes small-pox, sometimes petechial typhus, and again the bubo-plague. The third so-called plague, that

of Cyprian, raged about 251-266. . . . For a long time 500 died a day in Rome. . . . After its disappearance Italy was almost deserted. . . . It has been assumed that this plague should be considered either a true bubo-plague, or small-pox."—J. H. Baas, *Outlines of the history of medicine*, pp. 180-190.—"Niebuhr has expressed the opinion that 'the ancient world never recovered from the blow inflicted upon it by the plague which visited it in the reign of M. Aurelius.'"—C. Merivale, *History of the Romans*, ch. 68, footnote.

ALSO IN: P. B. Watson, *Marcus Aurelius Antoninus*, ch. 4.

542-594.—During the reign of Justinian.—"The fatal disease which depopulated the earth in the time of Justinian and his successors first appeared in the neighbourhood of Pelusium, between the Serbonian bog and the eastern channel of the Nile. From thence, tracing as it were a double path, it spread to the east, over Syria, Persia, and the Indies, and penetrated to the west, along the coast of Africa, and over the continent of Europe. In the spring of the second year, Constantinople, during three or four months, was visited by the pestilence. . . . It was not till the end of a calamitous period of fifty-two years [542-594] that mankind recovered their health, or the air resumed its pure and salubrious quality."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 43.

ALSO IN: T. Hodgkin, *Italy and her invaders*, bk. 5, ch. 17.—J. B. Bury, *History of the later Roman empire*, v. 1, bk. 4, ch. 6.

6th-13th centuries.—Spread of small-pox.—"Nothing is known of the origin of small-pox; but it appears to have come originally from the East, and to have been known in China and Hindostan from time immemorial. . . . 'It seems to have reached Constantinople by way of Egypt about the year 560.' From Constantinople it spread gradually over the whole of Europe, reaching England about the middle of the 13th century."—R. Rollo, *Epidemics, plagues, and fevers*, p. 271.

744-748.—World-wide pestilence.—"One great calamity in the age of Constantine [the Byzantine emperor Constantine V, called Copronymus], appears to have travelled over the whole habitable world; this was the great pestilence, which made its appearance in the Byzantine empire as early as 745. It had previously carried off a considerable portion of the population of Syria, and the caliph Yezid III perished of the disease in 744. From Syria it visited Egypt and Africa, from whence it passed into Sicily. After making great ravages in Sicily and Calabria, it spread to Greece; and at last, in the year 747, it broke out with terrible violence in Constantinople, then probably the most populous city in the universe. It was supposed to have been introduced, and dispersed through Christian countries, by the Venetian and Greek ships employed in carrying on a contraband trade in slaves with the Mohammedan nations, and it spread wherever commerce extended."—G. Finlay, *History of the Byzantine empire, from 716 to 1057*, bk. 1, ch. 1, sec. 3.

1321.—Persecution of lepers. See JEWS: 1321.

1348-1351.—Black Death. See BLACK DEATH; also BRISTOL: 1349; ENGLAND: 1348-1349; FLORANCE: 1348; FRANCE: 1347-1348; JEWS: 1348-1349.

1360-1363.—Children's plague.—"The peace of Brétigni [England and France, 1360], like the capture of Calais, was followed by a pestilence that turned the national rejoicings into mourning. But the 'Children's Plague,' as it was called, from the fact that it was most deadly to the young, was fortunately not a return of the Black Death, and

did not approach it in its effects."—C. H. Pearson, *English history in the 14th century*, ch. 7.

1485-1593.—Sweating sickness in England.—Plague, small-pox and grippe in Europe.—"For centuries no infection had visited England, which in fearful rapidity and malignancy could be compared with the 'sudor Anglicus,' as it was first called, from the notion that its attacks were confined to Englishmen. People sitting at dinner, in the full enjoyment of health and spirits were seized with it and died before the next morning. An open window, accidental contact in the streets, children playing before the door, a beggar knocking at the rich man's gate, might disseminate the infection, and a whole family would be decimated in a few hours without hope or remedy. Houses and villages were deserted. . . . [It appeared in 1485, 1506, 1517, and again in 1528.] It never entered Scotland. In Calais, Antwerp and Brabant it generally singled out English residents and visitors."—J. S. Brewer, *Reign of Henry VIII*, v. 1, ch. 8.—See also SWEATING SICKNESS.—"In the middle of the 16th century the English sweating sickness disappeared from the list of epidemic diseases. On the other hand, the plague, during the whole 16th century, prevailed more generally, and in places more fatally, than ever before. . . . In 1500-1507 it raged in Germany, Italy, and Holland, in 1528 in Upper Italy, 1534 in Southern France, 1562-1568 pretty generally throughout Europe. . . . Small-pox (first observed or described in Germany in 1493) and measles, whose specific nature was still unknown to the physicians of the West, likewise appeared in the 16th century. . . . The Grippe (influenza), for the first time recognizable with certainty as such, showed itself in the year 1510, and spread over all Europe. A second epidemic, beginning in 1557, was less widely extended. On the other hand, in 1580 and 1593 it became again pandemic, while in 1591 Germany alone was visited."—J. H. Baas, *Outlines of the history of medicine*, pp. 438-439.

ALSO IN: J. F. Hecker, *Epidemics of the Middle Ages*.

1665.—Great Plague in London. See LONDON: 1665.

18th century.—More serious epidemics.—"The bubo-plague, 'the disease of barbarism,' and especially of declining nations, in the 18th century still often reached the north of Europe, though it maintained its chief focus and headquarters in the south-west [south-east?]. Thus from 1703 forward, as the result of the Russo-Swedish war, it spread from Turkey to Sweden, Denmark, Poland and Prussia, so that in 1709, the coldest year of the 18th century, more than 300,000 human beings died in East Prussia in spite of the intense cold, and in Dantzic alone more than 30,000. Obliquing to the west, the plague reached Styria and Bohemia, and was carried by a ship to Regensburg in 1714, but by means of strict quarantine regulations was prevented from spreading to the rest of Germany. A hurricane swept the disease, as it were, out of all Europe. Yet six years later it appeared anew with devastating force in southern France" and was recurrent at intervals, in different parts of the continent, throughout the century. "Epidemics of typhus fever . . . showed themselves at the beginning of the century in small numbers, but disappeared before the plague. . . . La Grippe (influenza) appeared as a pandemic throughout almost all Europe in the years 1709, 1729, 1732, 1742, and 1788; in almost all America in 1732, 1737, 1751, 1772, 1781, and 1798; throughout the eastern hemisphere in 1781, and in the entire western hemisphere in 1761 and 1789; throughout Europe and America in 1767. It prevailed as an epidemic

in France in the years 1737, 1775, and 1779; in England in 1758 and 1775, and in Germany in 1800. . . . Diphtheria, which in the 17th century had showed itself almost exclusively in Spain and Italy, was observed during the 18th in all parts of the world. . . . Small-pox had attained general diffusion. . . . Scarlet fever, first observed in the 17th century, had already gained wide diffusion. . . . Yellow fever, first recognized in the 16th century, and mentioned occasionally in the 17th, appeared with great frequency in the 18th century, but was mostly confined, as at a later period, to America."—J. H. Baas, *Outlines of the history of medicine*, pp. 727-730.

19th century.—Visitations of Asiatic cholera.—Cholera "has its origin in Asia, where its ravages are as great as those of yellow fever in America. It is epidemic or permanent in the Ganges delta, whence it generally spreads every year over India. It was not known in Europe until the beginning of the [19th] century; but since that time we have had six successive visitations. . . . In 1817 there was a violent outbreak of cholera at Jessore, India. Thence it spread to the Malay Islands, and to Bourbon (1819); to China and Persia (1821); to Russia in Europe, and especially to St. Petersburg and Moscow (1830). In the following year it overran Poland, Germany, and England [thence in 1832 to Ireland and America], and first appeared in Paris on January 6, 1832. . . . In 1849, the cholera pursued the same route. Coming overland from India through Russia, it appeared in Paris on March 17, and lasted until October. In 1853, cholera, again coming by this route, was less fatal in Paris, although it lasted for a longer time—from November, 1853, to December, 1854. The three last epidemics, 1865, 1873, and 1884, . . . came by the Mediterranean Sea."—E. L. Trouessart, *Microbes, ferments and moulds*, ch. 5, sec. 8.—A seventh visitation of cholera in Europe occurred in 1892. Its route on this occasion was from Punjab, through Afghanistan and Persia into Russia and across the Mediterranean to Southern France. Late in the summer the epidemic appeared in various parts of Austria and Germany and was frightfully virulent in the city of Hamburg. In England it was confined by excellent regulations to narrow limits. Crossing the Atlantic late in August, it was arrested at the harbor of New York, by half-barbarous but effectual measures of quarantine, and gained no footing in America.—Based on *Appleton's Annual Cyclopadia*, 1892.

ALSO IN: C. Macnamara, *History of Asiatic cholera*.—A. Stillé, *Cholera*, pp. 15-31.

19th century.—Bubonic epidemic.—For years the plague has "continued to breed in various inner parts of Asia, and in 1894, coming from the Chinese province of Yunnan, it invaded Canton, taking there 60,000 victims in a few weeks. Thence it spread to Hong Kong, reached next year the island of Hainan and Macao, invaded Formosa in 1896, and in the autumn of the same year appeared at Bombay. In the big city of India it found all necessary conditions for breeding, unchecked, for several months in succession: famine, overcrowding, and the absence of all preventive measures; and from Bombay it was carried by rail and road, to different parts of India."—P. Kropatkin, *Recent science (Nineteenth Century, July, 1897)*.—This outbreak furnished the incentive and the opportunity for scientists to search for the cause of this plague. In 1894 Kitasato, a Japanese bacteriologist, and Yersin, a Frenchman, "isolated a small bacillus in a large number of cases and proved it to be the cause. It enters the body by means of wounds of the skin, and through bites of fleas

from infected rats, which are said to be one of the chief factors in spreading this dread malady. . . . Prophylactic inoculations have been made on a large scale in India, with a certain measure of success."—*Progress of the century*, pp. 187, 197.—Also the antitoxin, or serum, first prepared by professor Haffkine, and called Haffkine's prophylactic has been used with good results. "In the present epidemic [1900], plague-spots are scattered over the whole face of the globe from Sydney to Santos and Hongkong, and recently from San Francisco suspicious cases have been reported. The annual pilgrimage of Moslems to worship at the shrines of Mecca and Medina is now, as in the past, of all human agencies, the most active in spreading the pest. . . . Since Egypt is nearest, plague first appears there in the seaport towns, particularly Alexandria. Sanitary conditions have improved vastly, like economics, under British control; and, last year, what in other times might have been a devastating epidemic was limited to relatively a few scattered cases."—*American Review of Reviews*, May, 1900.—See also FORMOSA: 1874-1910.

20th century.—Slight bubonic outbreaks.—Modern control.—"The presence of bubonic plague at New Orleans two years ago [1915] and the recent outbreaks of cholera which have followed upon the progress of the war in Austria are striking reminders of two of the most terrible pestilences which have ever scourged the human race. They are of special interest to the student of history and geography because in the past these two diseases furnished admirable examples of the manner in which infection travels along trade routes in the wake of commerce and migration. The security which civilized countries may enjoy against their attacks is a brilliant demonstration of the triumphs of modern sanitary science. Bubonic plague, the Black Death of the Middle Ages, with which our National Health Service has successfully grappled at New Orleans, is one of the most virulent diseases known to sanitarians; and, if not immediately recognized and attacked, would claim victims without number. . . . The plague very recently discovered at New Orleans would have brought consternation a decade ago, but to-day with the efficient protection of our ports no fear is entertained. Our knowledge of the rat as the carrier of the germ of plague has made it possible to keep this disease from spreading, to any considerable extent, anywhere outside of Asia. By enforcing quarantine laws, by disinfecting all ships suspected of harboring infected rats, by preventing the rat from landing, and by the comparative freedom of civilized cities from vermin, we have been able to keep plague from extending beyond the ports at which it has sporadically appeared. It is due to a thorough knowledge of these facts and to the careful sanitary precautions based on this knowledge, that we are not at present suffering from a Black Death similar to the one that ravaged and devastated Europe and Asia in the fourteenth century."—D. Greenberg, *Two historic world-pestilences robbed of their terrors by modern sanitation (Scientific Monthly, June, 1917)*.—"A most encouraging sign of our enlightenment on the subject of pestilential diseases became visible in the past year [1920] when bubonic plague appeared at several of our seaports on the Gulf of Mexico. There was no great alarm felt; no quarantine was imposed and no ill-judged methods of eradication such as the burning of infested quarters of cities, which once was regarded as a desirable method of fighting plague, were employed. Doubtless the confidence which the public has in its sanitary officers to control epidemics accounted for the rela-

tive indifference with which the announcement of the presence of plague was received."—E. G. Spaulding, *Notes on science in America (Scientific American Monthly, Jan., 1921)*.—See also PUBLIC HEALTH: China; MANCHURIA: 1910-1911.

20th century.—Influenza.—Previously identified.—War-time ravages.—"Although the term influenza was not formally adopted by the Royal College of Physicians of London till 1782, the disease was known to Hippocrates and other ancient physicians, and a formidable list of epidemics in various parts of the world between the years 1173 and 1875 is given by Hirsch in his 'Handbook of Geographical and Historical Pathology.' . . . Towards the end of the eighteenth century influenza swept over nearly the whole world."—*Science, Feb. 28, 1919, p. 216*.—See also above: 18th century.—From 1890-1892, there was an epidemic of influenza in the United States, attaining its height in 1891, but this was inconsiderable compared with the outbreak of the disease which took place during the World War and which traveled literally around the world. August 28, 1918, is given by Lieut. Keegan as the beginning of the influenza in the First Naval District where the disease was first recognized in the United States naval hospital at Chelsea, Massachusetts. "According to the annual mortality statistics of the Census Bureau the death rate in the United States was higher in 1918 than in any other recorded year. This was wholly the result of the influenza epidemic which caused more than 244,000 deaths. Influenza and pneumonia together caused nearly one-third of all deaths reported in the United States. A study of the figures of the epidemic recently published by the Bureau of Vital Statistics of the Department of Commerce places the death rate traceable to the influenza epidemic at 4.2 per thousand. If the whole world has suffered in the same degree as the United States this would mean about 7,000,000 deaths; a number approximately equal to all the deaths in battle during the whole of the world war. The actual number is probably greater yet, since some populous countries suffered more heavily than the United States. India, for example, lost some 5,000,000 inhabitants and the death rate in India from influenza and pneumonia alone was greater than the American death rate from all causes combined. The most remarkable fact about the great influenza epidemic was its extent. No important American city escaped, and no country in Europe was unaffected. Altho the epidemic took the name of 'Spanish' influenza, Germany had almost as high a death rate as Spain, and Canada, England, Japan, Mexico and the islands of the Pacific also numbered victims by the hundred thousand. The present outbreak [1920] also has spread from one part of the continent to the other with alarming speed, but very fortunately the death rate is much below that of last winter."—*Great plague (Independent, Feb. 21, 1920)*.

PLATINA, Bartholomew de' Sacchi (1421-1481), Italian historian. Became librarian of the Vatican library, 1475; author of the "History of the Popes." See **LIBRARIES: Modern: Administration:** Early methods.

PLATO (427-347 B.C.), Athenian philosopher. The founder of the first great philosophical school in the groves of Academus, the Academy. (See **ACADEMY.**) Among his pupils was Aristotle. (See **ARISTOTLE.**) "The problem of the meaning of human life, human knowledge, human conduct, and human institutions depended, for its complete answer, on the answer to the problem of the meaning of reality at large. It was the greatest pupil of Socrates, Plato, who undertook the task at hand; he offered not only a theory of knowledge, a theory of conduct, and a theory of the State but crowned his work with a theory of the universe. . . . He speculates on the method and meaning of truth, and outlines a theory of method, or dialectics, or logic, in which he discusses the art of forming and combining concepts, or the logical operations by means of which truth is reached. We have here the beginnings of a theory of knowledge and formal logic. Plato is not content, however, with telling how true concepts and judgments may be obtained; his chief object is to obtain them, to know reality in all its phases,—physical, mental, and moral,—to comprehend it in its unity and completeness. Indeed, it is plain to him that the knowledge problem itself cannot be solved without an understanding of the nature of the world. To this end he develops a universal system, in the spirit of the teachings of the great thinker who became his ideal. Although Plato did not explicitly divide philosophy into logic, metaphysics (physics), and ethics (practical philosophy including politics), he makes use of such a division in his works."—F. Thilly, *History of philosophy*, pp. 58, 60.—Notable among his writings are: the "Dialogues," "Apology," "Phaedrus," "Symposium," "Phaedo," "Sophist," "Statesman," "Laws," and the "Republic."—See also **NEOPLATONISM;** **DEMOCRACY:** During the classical period; **ECONOMICS:** Greek theory; **EDUCATION:** Ancient: B.C. 7th-A.D. 3rd centuries: Greece; **ETHICS:** Greece, Ancient; B.C. 4th century; **EUROPE:** Ancient: Greek civilization; **Philosophy;** **GREEK LITERATURE:** Development of philosophical literature; **SOCIALISM:** Utopias.

PLEBEIANS, or Plebs, Roman.—"We are now prepared to understand the origin of a distinct body of people which grew up alongside of the patricians of the Roman state during the latter part of the regal period and after its close. These were the plebeians (plebs, 'the crowd,' cf. 'pleo,' to fill) who dwelt in the Roman territory both within and without the walls of the city. They did not belong to the old clans which formed the three original tribes, nor did they have any real or pretended kinship with them, nor, for that matter, with one another, except within the ordinary limits of nature. They were, at the outset, simply an ill-assorted mass of residents, entirely outside of the orderly arrangement which we have described. There were three sources of this multitude: I. When the city grew strong enough, it began to extend its boundaries, and first at the expense of the cantons nearest it, between the Tiber and the Anio. When Rome conquered a canton, she destroyed the walls of its citadel. Its inhabitants were sometimes permitted to occupy their villages as before, and sometimes were removed to Rome. In either case, Rome was henceforth to be their place of meeting and refuge, and they themselves, instead of being reduced to the condition of slaves, were attached to the state as non-citizens. II. The relation of guest-friendship so called, in ancient times, could be entered into between individuals with their families and descendants, and also between individuals and a state, or between two states. Provision for such guest-friendship was undoubtedly made in the treaties which bound together Rome on the one side and the various independent cities of its neighborhood on the other. . . . The commercial advantages of Rome's situation attracted to it, in the course of time, a great many men from the Latin cities in the vicinity, who remained permanently settled there without acquiring Roman citizenship. III. A third con-

stituent element of the 'plebs' was formed by the clients ('the listeners,' 'cluere') [see CLIENTES]. . . . In the beginning of the long struggle between the patricians and plebeians, the clients are represented as having sided with the former. . . . Afterward, when the lapse of time had weakened their sense of dependence on their patrons, they became, as a body, identified with the plebeians."—A. Tighe, *Development of the Roman constitution*, ch. 3.—Originally having no political rights, the Roman plebeians were forced to content themselves with the privilege they enjoyed of engaging in trade at Rome and acquiring property of their own. But as in time they grew to outnumber the patricians, while they rivalled the latter in wealth, they struggled with success for a share in the government and for other rights of citizenship. In the end, political power passed over to them entirely, and the Roman constitution became almost purely democratic, before it perished in anarchy and revolution, giving way to imperialism.—H. G. Liddell, *History of Rome*, ch. 7, 8, 10, 35.—See also **ROME**: Ancient kingdom: Early character and civilization; Republic: B. C. 494-492; 456; 445-400; CIVIL LAW: B. C. 471.

PNYX.—"The place of meeting [of the general assemblies of the people in ancient Athens] in earlier times is stated to have been in the market; in the historical period the people met there only to vote on proposals of ostracism, at other times assembling in the so-called Pnyx. As regards the position of this latter . . . the indications given by the ancient authorities appear to settle this much at any rate with certainty, that it was in the neighbourhood of the market, and that of the streets running out of the market one led only into the Pnyx."—G. F. Schömann, *Antiquities of Greece: The State*, pt. 3, ch. 3.—"The Pnyx was an artificial platform on the north-eastern side of one of the rocky heights which encircled Athens on the west, and along the crest of which is still traced the ancient enclosure of the Asty." At one angle rose the celebrated bema, or pulpit, a quadrangular projection of the rock, eleven feet broad. "The area of the platform was capable of containing between 7,000 and 8,000 persons, allowing a square yard to each."—W. M. Leake, *Topography of Athens*, app. 11. POCAHONTAS (c. 1595-1617), Indian princess, daughter of Powhatan. See VIRGINIA: 1607-1610; 1609-1616.

POCKET VETO.—When a bill is submitted to the president, he may either sign it, veto it, or take no action whatsoever. If he assumes the last course, the bill becomes law within ten days, unless Congress adjourns before the end of that period. This situation is sometimes taken advantage of by the president, who, disapproving a bill submitted to him in the last days of the session, takes no action, whereupon the bill is automatically killed by the adjournment of Congress. This is called a pocket veto. It was first used by President Madison in 1812 to kill a naturalization act.

PODEBRAD, or Podiebrad, George (1420-1471), king of Bohemia, 1458-1471. See AUSTRIA: 1437-1516; 1438-1493; BOHEMIA: 1434-1457; 1458-1471; HUNGARY: 1442-1458.

PODESTAS.—"About the end of the 12th century a new and singular species of magistracy was introduced into the Lombard cities. During the tyranny of Frederic I. [Frederick Barbarossa] he had appointed officers of his own, called podestas, instead of the elective consuls. . . . From experience, as we must presume, of the partiality which their domestic factions carried into the administration of justice, it became a general practice to elect, by the name of podesta, a citizen of some neighbouring state as their general, their criminal judge, and preserver of the peace. . . . The podesta was sometimes chosen in a general assembly, sometimes by a select number of citizens. His office was annual, though prolonged in peculiar emergencies. . . . The authority of these foreign magistrates was not by any means alike in all cities. In some he seems to have superseded the consuls, and commanded the armies in war. In others, as Milan and Florence, his authority was merely judicial."—H. Hallam, *Middle Ages*, v. 1, ch. 3, pt. 1—See also SUFFRAGE, MANHOOD: 1000-1300.

POISON GAS: First use in war.—Condemnation by the Hague conferences.—"The first recorded use of suffocating gases in warfare was about 431 B. C., sulphur fumes having been used in besieging the cities of Plataea and Belium in the war between the Athenians and the Spartans. Similar uses of toxic substances are recorded during the Middle Ages. In August, 1855, the English Admiral Lord Dundonald, having observed the deadly character of the fumes of sulphur in Sicily, proposed to reduce Sebastopol by sulphur fumes, and worked out the details of the proposition. The English Government disapproved of the proposition on the ground that 'the effects were so horrible that no honorable combatant could use the means required to produce them.' That the probable use of poison gases was still in the minds of military men is evidenced by the fact that at The Hague conference in 1899 several of the more prominent nations of Europe and Asia pledged themselves not to use any projectiles whose only object was to give out suffocating or poisonous gases. [See HAGUE CONFERENCES: 1899: Convention with respect to laws, etc.] Many of the Powers did not sign this declaration until later. Germany signed and ratified it on September 4, 1900, but the United States never signed it. Further, this declaration was not to be binding in case of a war in which a non-signatory was or became a belligerent. Admiral Mahan, a United States delegate, stated his position in regard to the use of gas in shell, at that time an untried theory, as follows: 'The reproach of cruelty and perfidy addressed against these supposed shells was equally uttered previously against firearms and torpedoes, although both are now employed without scruple. It is illogical and not demonstrably humane to be tender about asphyxiating men with gas, when all are prepared to admit that it is allowable to blow the bottom out of an ironclad at midnight, throwing four or five hundred men into the sea to be choked by the water, with scarcely the remotest chance to escape.' The Second Hague Peace Congress in 1907 adopted rules for land warfare, and among them was article 23 which read as follows: 'It is expressly forbidden to employ poisons or poisonous weapons.'—B. Crowell, *America's munitions*, p. 305.

First employment at Ypres.—Different varieties of gas.—First defensive measures.—It was in April, 1915, that the Germans launched their first gas attack. Large cylinders filled with compressed chlorine were installed in the trenches, from which bent tubes extended over the parapets. A light wind was blowing toward the Allies, the valves were opened, and the cloud of stifling gas rolled on. In spite of having learned a week before from a deserter, of the preparations the Germans were making, to the English the whole scheme was so unbelievable that no protection had been thought of. The Germans claimed in this attack 6,000 dead and as many more prisoners. Possibly the numbers are not overestimated. Thus began gas warfare. (See also WORLD WAR: 1915: II. Western front: c, 1; c, 2; c, 13, iii.) The Allies at once began devising protection against gas, which took the form first of simple pads saturated with a solution of soda and thio-sulphate, commonly known as "hypo." Then came phosgene gas, a compound of chlorine and carbonic oxide, and sodium carbolate to combat it. Between the end of May and December, 1915, there were no gas attacks, and in this period the gas mask de-

veloped in its earlier forms. Chlorine and phosgene appear to be the only gases which lend themselves to successful gas cloud effects; but a new device was at hand, that of shells loaded with poisonous gases and liquids, which are liberated when the shell explodes. The whole range of the chemical laboratory was scrutinized in search of suitable materials. Poison gases, corrosive liquids, tear gases, sneeze gases, altogether twenty different gases and liquids, have been used by the Germans. The amount of material in a single shell averages six pounds. "The first types of smoke helmet were made of flannel and had a window for seeing through which was made of mica or celluloid. The helmets were soaked in the same kind of solution—hypo, carbonate of soda and glycerine—that had been employed for the respirators. Helmets of this kind were capable of standing up against really considerable concentrations of chlorine, and they were quickly recognized both by the troops and by experts as being a very big improvement on the old respirator."—S. J. M. Auld, *Gas and flame in modern warfare*, p. 35.

T-shells and K-shells.—"It does not appear certain whether the use of lachrymatory liquids for putting men out of action by making their eyes water is in itself contrary to The Hague Convention, as the vapours need not actually be poisonous. This was the case with the first German gas shell, as it was found that the liquid contained consisted only of a material known chemically as 'xylyl bromide.' The vapour of this liquid and of many similar substances has a most powerful effect on the eyes, like that of onions but much stronger. Except in very high concentrations it cannot be regarded as poisonous—at any rate not in the sense that chlorine is poisonous. . . . The lachrymatory shell was known by the Germans as 'T-Shell,' and the xylyl bromide as 'T-Stoff,' and instructions were laid down for the use of this material. Another kind of shell was known as 'K-Shell,' which up to that time had not been used against us, or at any rate had not been recognised. . . . The T-Shell was particularly to be used against positions which it was not intended to occupy immediately, the reason for this being that T-Stoff hangs about for a long time. . . . The K-Shell, on the other hand, was intended to be used against infantry positions and strong points which it was hoped to assault and capture within an hour or two of the bombardment."—S. J. M. Auld, *Gas and flame in modern warfare*, pp. 78, 80-81.

Description of a gas-shell.—Colored cross shells.—Mustard gas.—"The fact of the matter is that the gas shell is not really a gas shell at all. It is nearly always a 'liquid' shell and sometimes even a 'solid' shell. The term 'gas shell' is used because the liquid or solid contents are atomised by the explosion of the bursting charge or are distributed round in the form of such tiny particles or droplets, as the case may be, that they act almost as a gas. In the latter case they form what might be described as a mist or smoke, but with this difference from ordinary smoke—that the gas mist or smoke is generally, though not always, invisible. . . . [In 1917 the Germans began sending over a new series of shell, all distinctly marked with colored crosses and named accordingly. The first to arrive was the Green Cross Shell.] Chemical analysis of the blind Green Cross Shell showed the contents to be a colourless liquid known to chemists by the extensive name of 'trichlormethylchloroformate.' Its effects are just as ferocious as the name implies, and experience showed it to be very poisonous. . . . There was no separate lead container and the 'gas' was filled straight into the body of the shell, as the

new material was unacted on by iron or steel. . . . As very little explosive was needed to open them up and spread the contents round the noise made by the burst of the Green Cross Shell was little more than a pop—at any rate when compared with the high-explosive shell or the old tear shell. The result was that at first men were apt to regard them as duds and to delay the putting on of respirators until it was too late. . . . The chief effects of the mustard gas are on the eyes and lungs. The first thing you notice is the smell—which is slightly of garlic or mustard—and irritation of the nose and throat. Neither effect is enough to make you feel gassed, and the chief symptoms develop later on. . . . With the Green Cross and similar gases a man either protects himself or dies. But with the mustard gas, though the smell and irritation may be perfectly apparent, the effect is not such as to force a man to don his mask. Yet if he does not do so and continues to live in the vapour unprotected he will certainly become a casualty. The mustard gas is known officially by the Germans as Yellow Cross gas, and the shells are marked on the sides with bright yellow crosses and bands. The paint used for these bands changes colour in contact with the mustard-gas liquid, so that if a shell should leak it at once becomes apparent and can be taken away and buried. . . . The other new material that was introduced by the Germans in the summer of 1917 and which, like mustard gas, has been in use ever since is the German 'sneezing gas.' . . . This sneezing material, or sternutator, to give it its scientific name, in this case was a solid which is atomised into tiny particles when the shell bursts. Chemically speaking, it is called diphenylchlorarsine. . . . Such shells are called Blue Cross Shells, and are marked accordingly. This is the third of the trilogy of the German coloured-cross gas shell."—S. J. M. Auld, *Gas and flame in modern warfare*, pp. 128, 132, 138, 171-173, 180-181.

Protected shelters.—Gas masks.—The allies resorted to various means to protect themselves against the shells. Chief among their devices were shelters and respirators. In the former, a damp blanket was depended on to keep out the gas. "The principle of the respirator is to have a box filled with chemicals and attached by a flexible tube to a face piece or mask, which fits closely to the face. All air breathed by a man must therefore pass through the chemicals, and these are so chosen that they will absorb any and every poison that may be present in the atmosphere at the time. . . . The box respirator is contained in a haversack and is carried slung on the shoulder until such time as the soldier comes into the forward areas, where it must be carried tied up on the chest ready for instant adjustment in case of need. . . . It can be put on in six seconds from the word 'go,' and once a man is practiced in wearing it he can walk, run, shoot, dig, speak or do anything but eat and smoke in it; and this for long stretches at a time."—S. J. M. Auld, *Gas and flame in modern warfare*, p. 154.

New means of throwing gas.—Livens projector.—With the development of gas warfare, the Allies were obliged to develop new means of throwing toxic gases. The gas was sent over to the enemy in shell shot from the big guns, in hand grenades, and, most successfully, by a British invention called the "Livens projector." "The Livens projector was deadly in its effect, since it could throw suddenly and in great quantity gas bombs, or drums, into the enemy's ranks. It is notable that although the British used this device with great success throughout much of the latter period of the war, and

though the French and Americans also adopted it and used it freely, the Germans were never able to discover what the device was that threw such havoc into their ranks, nor were they ever able to produce anything that was similar to it. . . . Without going into details of the construction of the Livens projector it may be said that it was usually fired by electricity in sets of 25 or multiples thereof. . . . At the throwing of an electric switch a veritable rain of these large shells, as many as 2,500 of them sometimes, with their lethal contents, would come hurtling down upon the enemy. The Livens projectors could throw their gas drums nearly a mile."—E. S. Farrow, *American guns in the war with Germany*, pp. 82-83.

America's part in gas warfare.—Shipments of poison gas.—"Because of the nature of toxic gas it is impossible to store it up in any large quantities. Early in the summer of 1918 large amounts were shipped in bulk overseas and there loaded into shell. Later we received instructions to stop all shipments in bulk except a limited amount of chlorine, and thereafter our production was limited to the number of shell and boosters available. . . . We therefore shipped to Europe in bulk 3,662 tons of gas or its equivalent, which was largely loaded in shell and used by the United States troops or those of the allies. This quantity was sufficient to load 1,600,000 shell, two-thirds of them being of the 75-millimeter caliber and the other one-third 155-millimeter, the total number being thought to be at least equal to the total number of gas shell fired by American troops in action. Thus while American gas was not actually fired in American shell against the Germans, American gas was used against the enemy and America furnished at least as much gas as she fired. In addition to this we shipped 18,600 Livens drums loaded with phosgene. These contained 279 tons of gas, and some of them were fired at the enemy. We began producing loaded gas shell in the summer of 1918 and by August 9 had shipped 75,000 loaded 75-millimeter shell."—B. Crowell, *America's munitions*, pp. 407-408.

Recent developments.—Coast defense demonstrated.—Use of poison gas prohibited by the Washington conference.—Experiment stations.—"From the time of the first gas attack upon the Canadians until the close of the war, chemical warfare had progressed so rapidly that in the American Army alone 4,066 commissioned officers and 44,615 enlisted men were assigned to this branch of the service. Military experts state to-day that when the armistice was signed the war was 55 per cent. chemical. Twenty-eight different chemicals were being used by the belligerents and sixteen combinations of poisons, making a total of forty-four varieties of poisonous and suffocating gases. Of this number the Germans used seventeen, the French thirteen, the British six and our own army five different kinds of gases, not to mention TNT and 'common smoke' used in smoke screens. When it is recalled that in one night alone, late in the war, 50,000 gas shells were fired into Nieuport, some containing as much as three gallons of mustard gas, it is possible to realize the extent to which poisonous gases will be used in a future war."—C. W. Ackerman, *Introduction to A. A. Fries, Future of poison gas*, (*New York Times Current History*, Dec., 1921).—"War is to-day at the beginning of a complete change in armament. New forces discovered in coal-tar products and the application of these to military and naval strategy have produced new agencies of warfare which are causing a revolution in armaments. Greater progress has been made since the

close of the war in perfecting and developing poison gas bombs than any nation foresaw three years ago. Poison gas, in this very brief period of time, has become the biggest potential military and naval problem of the world, and some of its future possibilities were indicated by the recent bombing tests off the Atlantic coast. These tests demonstrated that our coasts are almost impregnable against a foreign enemy who has to cross the ocean. If bombs containing poison gases can be dropped from airplanes upon or around enemy warships, if submarines can lay mines containing gases, and if gases in solid form, which will burn on water as well as on land, can be utilized to protect our coasts, chemical warfare is bound to have a great influence upon our methods of defense."—A. A. Fries, *Future of poison gas* (*New York Times Current History*, Dec., 1921).—The conference on the limitation of armament, at its last session, in Washington, Feb. 6, 1922, adopted resolutions against the use of submarines as commerce destroyers and poison gas in warfare. These resolutions were embodied in a treaty signed by the following powers: United States, Great Britain, France, Italy, and Japan. The section referring to poison gas reads as follows: "Article 5.—The use in war of asphyxiating, poisonous or other gases, and all analogous liquids, materials and devices having been justly condemned by the general opinion of the civilized world, and a prohibition of such use having been declared in treaties to which a majority of the civilized powers are parties, the signatory powers, to the end that this prohibition shall be universally accepted as a part of international law, binding alike the conscience and practice of nations, declare their assent to such prohibition, agree to be bound thereby as between themselves and invite all other civilized nations to adhere thereto." (See also WASHINGTON CONFERENCE.) Nevertheless the United States continues to maintain an elaborate experimental plant in war gases at Edgewood, Maryland. "It is apparent that any future conflicts will be won as much with poison gas as with bullets and bayonets, or with airplanes and battle-ships. And yet these same poison gases which are so effective in war have a peace-time value even more significant. . . . Chlorine [the first poison gas used in battle by the Germans] has come into almost universal use for purifying the water supply of cities."—H. A. Mount, *Peace-time jobs for poison gas* (*Scientific American*, May, 1922).

POISSY, town in France, ten miles northwest of Paris. It was the scene of the famous colloquy, or conference, of 1561, between Catholics and Protestants. See FRANCE: 1560-1563.

POITIERS, town of western France, in the department of Vienne. In 1911 its population was 41,242. It was originally Limonum, a town of the Gauls, and acquired later the name of Pictavi, which has become in modern times Poitiers.

732.—Successful battle of Charlemagne against the Saracens. See GERMANY: 687-800.

1356.—Battle during Hundred Years' War.—A battle was fought Sept. 19, 1356, near the city of Poitiers, in France, by the English, under the "Black Prince," the famous son of Edward III, with the French commanded personally by their king, John II. The advantage in numbers was on the side of the French, but the position of the English was in their favor, inasmuch as it gave little opportunity to the cavalry of the French, which was their strongest arm. The English archers won the day, as in so many other battles of that age. The French were sorely beaten and their king was taken prisoner.—Froissart, *Chronicles* (Johnes tr.), bk. 1, ch. 157-166.—See also FRANCE: 1337-1360.

1569.—Siege by Huguenots. See FRANCE: 1563-1570.

1577.—Edict. See FRANCE: 1577-1578.

POITOU, former province of western France, now included within the departments of Vienne, Deux-Sèvres, and Vendée. See FRANCE: Geographic description.

POLAND

Geographical description.—**Population.**—**Area.**—**Education.**—**Industries.**—"The New Poland is the fifth largest country in Europe, containing a total area of about 200,000 square miles [see RUSSIA: Map of Russia and the new border states], and a population of a little over 27,000,000 inhabitants, of whom apparently more than 10 per cent. are Jews. About half of the country is arable and about 25 per cent. of it is wooded. In this great area and population, however, there are only four cities with inhabitants exceeding 200,000; the most important of these are Warsaw, with nearly a million, and Lodz, the great textile center, with 420,000. The Peace Confer-

ence, while it re-united the Poles in Russia, German and Austrian territory, inevitably included a proportion of other nationalities. Out of the population of 27,000,000 it is stated that 18,500,000 are genuine Poles, two or three million are Jews, and the balance Germans, Lithuanians and Ruthenians. However, the vast majority of the inhabitants of modern Poland are Polish by tradition, for even the Jews, the most conspicuous non-Polish element, have been there for centuries, and in the time of Poland's former greatness enjoyed exceptional privileges. . . . The Polish language and the Catholic religion are predominant; the Polish farmer and workman are hard working

and intelligent, and the country is rich. The difficulties of the new republic—aside from the problems bequeathed to it by the Treaty of Versailles—have been practical. The Poles have not managed their own affairs for over a hundred years. . . . When released to their own resources, they have been hampered not only by inexperience, but by difference in training. . . . Poland is now [1923] producing a surplus of foodstuffs, and her general foreign trade situation is one of the favourable items which should operate in stabilizing the general economic and financial conditions of the country. The figures themselves are sufficiently striking. In 1920 Poland's exports were a little less than one-sixth of her visible imports. In the first half of 1922, the exports were four-fifths of the imports, and by the end of the year had drawn level. It is equally interesting that nearly half of these growing exports are manufactured articles."—B. Miles, *Report on the present situation in Poland, Apr., 1923 (Poland, July, 1923)*.—"The territories of Poland are bounded by the frontiers of seven nations: Latvia and Lithuania on the north; Germany on the north and west; Czecho-Slovakia and Rumania on the south; the Ukraine and Soviet Russia on the East. The boundaries between Poland on the one hand and Germany, Czecho-Slovakia and Rumania on the other, are fixed by the Treaties of Versailles and St. Germain and the . . . decision on Upper Silesia by the Council of the League of Nations. The present eastern boundary was set by an agreement between Marshal Pilsudski for Poland and Ataman Petlura for the Ukraine (April, 1920), and the Treaty of Riga (March, 1921) with the Soviet Government. . . . Geographically Poland is a plain serving as a transition from the smaller German plain on the west to the larger Russian plain on the east. The Polish plain is practically unbroken except by rivers, which are the main geographical feature of the country. [See WORLD WAR: 1915: III. Eastern front: a, 4, to a, 7.] . . . Poland was long celebrated for its forests, its wealth of pines, oaks and larches. . . . Twenty-five per cent of Polish territory is covered by forests. . . . The biggest and finest . . . [of which] are in the eastern part of Poland. . . . The government itself owns there several million acres, to the value of half a billion dollars. . . . One-half of the total area of Poland is located in the drainage basin of the Vistula River, one of the most important waterways in Europe. . . . It is because of its location at the mouth of Poland's greatest river that Danzig is of such importance to the nation's commercial life. Being navigable for fair sized craft as far as Cracow, the Vistula is an important transportation route for the mineral and agricultural products of Poland as well as for all imports from overseas. . . . There are at present six universities and two national polytechnical institutes in Poland. The University of Vilna, established by King Stefan Batory in 1578, is second only to Krakow in age. The University at Lwow (Lemberg), founded in 1661 by King John Casimir, is third in point of years. The University of Warsaw, which . . . has the largest enrollment, dates from 1816. The remaining two universities, located at Poznan and Lubin, . . . [have been] established only . . . since the restoration of Poland. The Polytechnic Institutes are located at Lwow and Warsaw, and were established in 1844 and 1896, respectively. . . . At present Poland has about 10,000 public schools. . . . Fifty-eight per cent. of the population of Poland is engaged in agriculture; eighteen per cent.

in mining and industry; nine per cent. in commerce and traffic, and the remaining fifteen per cent. in other professions. . . . Sugar beet is grown extensively [and other important crops of industrial importance are flax, hops, hemp, and chicory]. . . . There are also grown in Poland clover, alfalfa, vetch, poppy, and a small amount of tobacco. . . . One of the most important of the Polish agricultural industries is the manufacture of beet sugar. There are in Poland 90 sugar factories producing annually about 575,000 tons of raw sugar. . . . In 1921 eighty to ninety thousand tons of sugar . . . [were] available for export. . . . Coal is found in the Dabrowa-Cracow-Silesian Basin, an area of 2,107 square miles lying across the Polish-Czech Silesian border; . . . 1,216 square miles of the rich coal district lie in the province of Upper Silesia. . . . This area is one of the most important coal basins in the entire world. . . . Iron is found in Poland over large areas and in connection with various geological formations. The main deposits are in the province of Radom. . . . Poland is one of the two countries in Europe which possesses rich deposits of rock oil. The oil-bearing land is a strip in Galicia 375 miles long and 31 miles wide. The reserve of the Polish oil fields is estimated at one and a half billion barrels. . . . The Polish cotton mills are among the largest, best equipped and most thoroughly organized on the Continent. . . . The iron industry is the second industry in size and importance. . . . Poland has three distinct railway systems, Russian, German and Austrian. . . . In 1921 about 7,000 miles of railroad were being operated by the Polish Government. These tracks, affected by the wear and tear of the war and a great deficiency in locomotives and cars, made the transportation problem acute. . . . Poland has received, since June 1, 1921, through the Reparations Commission, a number of cars and 350 locomotives from the former German stock. . . . Soviet Russia has also delivered 155 locomotives, 435 passenger cars and 8,850 freight cars in accordance with the Treaty of Riga."—*Handbook of Poland, pp. 6-7, 9-12, 14-15, 18, 21, 23, 24*.—"The allocation to Poland in virtue of the decision of the League of Nations of the southeastern part of Upper Silesia, with its exceptionally rich mineral deposits and highly developed industries, has very considerably increased the economic wealth of the Polish State. The more important industries in Polish Upper Silesia are the coal, the iron and steel and zinc industries. Of the 62 coal mines in this district 49 became Polish, 11 mines remained in Germany while two mines were partly German and partly Polish. The proportion of the production in 1920 was 24,101,007 and 7,508,430 tons, respectively. Moreover, it is estimated that 90 per cent. of the undeveloped coal fields is in Polish territory. Poland has received all the Upper Silesian zinc works, 24 in number, and 11 out of 14 zinc mines with a production of 81.10 per cent of the total output of zinc ore. The iron and steel industries are highly developed."—*Economic notes (Poland, Sept., 1923)*.

Name.—"The word Pole is not older than the tenth century, and seems to have been originally applied, not so much to the people as to the region they inhabited; 'polska' in the Slavonic tongue signifying a level field or plain."—S. A. Dunham, *History of Poland, introduction*.

Ancestors of the race. See LYGIANS.

Beginnings of national existence.—"The Poles were a nation whose name does not occur in history before the middle of the tenth century; and

we owe to Christianity the first intimations that we have regarding this people. Miecziſlaus I., the first duke or prince of the Poles of whom we possess any authentic accounts, embraced Christianity (966) at the solicitation of his spouse, Dambrowka, sister of Boleslaus II., duke of Bohemia. Shortly after the first bishopric in Poland, that of Posen was . . . founded by Otho the Great. Christianity did not, however, tame the ferocious habits of the Poles, who remained for a long time without . . . progress in mental cultivation. Their government, as wretched as that of Bohemia, subjected the great body of the nation to a debasing servitude. The ancient sovereigns of Poland were hereditary. They ruled most despotically, and with a rod of iron; and, although they acknowledged themselves vassals and tributaries of the German emperors, they repeatedly broke out into open rebellion, asserted their absolute independence, and waged a successful war against their masters. Boleslaus, son of Miecziſlaus I., took advantage of the troubles which rose in Germany on the death of Otho III., to possess himself of the Marches of Lusatia and Budissin, or Bautzen, which the Emperor Henry II. afterwards granted him as fiefs. This same prince, in despite of the Germans, on the death of Henry II. (1025) assumed the royal dignity. Miecziſlaus II., son of Boleslaus, after having cruelly ravaged the country situate between the Oder, the Elbe, and the Saal, was compelled to abdicate the throne, and also to restore those provinces which his father had wrested from the Empire. The male descendants of Miecziſlaus I. reigned in Poland until the death of Casimir the Great (1370). This dynasty of kings is known by the name of the Piasts, or Piasses, so called from one Piast, alleged to have been its founder."—C. G. Koch, *History of revolutions in Europe*, p. 06.—"Boleslav [III] the Wrymouthed (1102-1138) . . . succeeded . . . in conquering Pomerania and extending the Polish possession on the Baltic Seaboard, far across the Oder up to and including the island of Rugia. . . . [He] divided the country [for his five sons] into five principalities—Silesia, Great Poland, Mazovia, Sandomir, and Cracow. . . . [By] the treaty of Trenczyn in Hungary, the new Polish King Kazimir, 1333-1370, acknowledged the right of Bohemia to suzerainty over Silesia and Mazovia. Kazimir, however, succeeded in retaining Polish spiritual influence over the Silesia, and Mazovia soon reverted [1355] into the fold of the Polish state as a feudatory of the Crown"—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 27, 30, 53.—Pomerania, after a brief period of independence became a fief of the German empire.

11th-17th centuries.—Treatment of Jews. See JEWS: Poland: 11th-13th centuries; 14th-17th centuries.

1241.—Mongol invasion.—Battle of Liegnitz.—"It will . . . not be amiss to explain very briefly the plan and execution of the Mongol campaign. The nominal commander-in-chief was Batu, but there is no doubt that the management of the expedition was in the hands of Subutai. . . . Strategically the invasion of Poland was subsidiary to the invasion of Hungary, and the northern army, when its work was done, was to meet the southern or main army on the Danube. . . . The northern army advanced in three divisions. The main force under Baidar marched through the dominions of Boleslaw the Chaste, and took Cracow; then

bearing north-westward it reached Oppeln on the Oder, where it defeated prince Miecziſlaw; and descended the Oder to Breslau. At the same time Kaidu advanced by a more northerly route through the land of Conrad, prince of Mosovia and Cujavia; while on the extreme right a force under Ordu terrified the Lithuanians and Prussians and crossed the Lower Vistula. The three divisions reunited punctually at Breslau, the capital of Henry II. of Lower Silesia; and all took part in the battle of Liegnitz (April 9), for which King Wenzel of Bohemia arrived . . . just one day too late. The Mongol generals had skilfully managed to force . . . Henry to fight before his arrival. Wenzel discreetly withdrew beyond the mountains into Bohemia; all he could hope to do was to defend his own kingdom. Saxony now lived in dread that its turn had come. But it was no part of the plan of Subutai to launch his troops into Northern Germany. They had annihilated the forces of Poland; it was now time for them to approach the main army in Hungary."—J. B. Bury, *Note* (E. Gibbon, *History of the decline and fall of the Roman empire*, p. 331).—Here "a great battle was fought, in which the Tartars were not indeed defeated, but were obliged to pay so dearly for victory that they retired from Poland as well as from Hungary. They left behind them a devastated country, ruined towns and a population so diminished that colonists were necessary if the life of the country was to go on."—J. S. Orvis, *Brief history of Poland*, p. 20.—See also MONGOLIA: 1220-1294; LIEGNITZ.

14th century.—Peaceful penetration by German colonists.—Growth of commercial relations and of cities.—Medieval commerce.—Introduction of the Inquisition.—During the fourteenth century Poland encouraged the peaceful penetration of German immigrants—craftsmen and tradesmen—men who were capable of building and defending strong cities and who were accustomed to law and order. As inducements to settle, the cities they established were given "Magdeburg rights," that is, administrative independence and freedom from taxation. These new citizens established many important industries and for a time their influence counterbalanced the disintegrating tendencies of the Polish gentry. "The cities and towns of early Poland served chiefly as stations for transitory foreign commerce. Such was the original character of Kruszwica, Cracow, Lemberg, Posen and Breslau. In a later period when the German settlers changed the mode of Polish urban life and made them the foci of various crafts and industries, the cities became more closely fused with the entire social and economic fabric of the state. . . . The Polish cities had merchants who engaged in foreign commerce. They acted as intermediaries between the north and south, and the east and the west. . . . Cities like Lemberg were important commercial centres for foreign trade. . . . The earliest exports of grain went to Holland, England and France. At the initiative of Emperor Emanuel Paleolog, regular exports of Polish grain to Constantinople began in the fourteenth century. . . . The difficulties put in the way of the Polish merchants by the Order of the Cross controlling the Baltic seacoast, were relieved after the Jagiellon victory at Grünwald, in 1410, as considerable concessions were then obtained. In 1466 Prussia, with its seaports, became a part of Poland, and the whole course of the Vistula came back under the control of Poland. It afforded a great boon to commerce and agriculture. . . . All navigable rivers were declared the

PETER VLAST DUNIN INTRODUCING THE CISTERCIAN ORDER INTO POLAND

(After painting by Jan Matejko)

property of the Crown and therefore public property, free for general use. . . . The acquisition of Danzig and such other ports as Klaypeda (Memel) and Krolewiec (Königsberg) resulting in an enormous increase in exports, caused a revolution in the economic and political life of the country."—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 108-109, 111-112.—"Owing to the tolerations of all religions, previous to the 14th century the Waldensians and Hussites found refuge in Poland in spite of the opposition of the papacy. . . . The inquisition did not make its appearance in [Poland] . . . until late, the first inquisitors being appointed in 1318. There is hardly any record of what they did. . . . [In] 1335 Benedict XII made fresh efforts, and between 1350 and 1380 there was considerable activity against heretics."—A. S. Tuberville, *Mediæval heresy and the Inquisition*, pp. 174-175.

1333-1572.—Union with Lithuania and reign of Jagellon dynasty.—Conquest of Prussia and its grant to Grandmaster Albert.—Casimir III, or Casimir the Great, the last Polish king of the Piast line, ascended the throne in 1333. "Polish historians celebrated the good deeds of this king for the internal prosperity of Poland—his introduction of a legal code, his just administration, his encouragement of learning, and his munificence in founding churches, schools, and hospitals. The great external question of his reign was that of the relations of Poland to the two contiguous powers of Lithuania and the Teutonic Knights of Prussia and the Baltic provinces. [See LITHUANIA: 1240-1377.] On the one hand, Poland, as a Christian country, had stronger ties of connexion with the Teutonic Knights than with Lithuania. On the other hand, ties of race and tradition connected Poland with Lithuania; and the ambitious policy of the Teutonic Knights, who aimed at the extension of their rule at the expense of Poland and Lithuania, and also jealously shut out both countries from the Baltic coast, and so from the advantages of commerce, tended to increase the sympathy between the Poles and the Lithuanians. A happy solution was at length given to this question. Casimir, dying in 1370, left no [male heirs] . . . and the Crown of Poland passed to his nephew Louis of Anjou, at that time also King of Hungary. [See HUNGARY: 1301-1442.] Louis, occupied with the affairs of Hungary, neglected those of Poland, and left it exposed to the attacks of the Lithuanians. He became . . . unpopular among the Poles; and, after his death in 1384, they proclaimed Hedvige [a grand daughter of Casimir] Queen of Poland. In 1386, a marriage was arranged between this princess and Jagellon, Duke of Lithuania—Jagellon agreeing to be baptized, and to establish Christianity among his hitherto heathen subjects. Thus Poland and Lithuania were united [see also RUSSIA: 1350-1480], and a new dynasty of Polish kings was founded, called the dynasty of the Jagellons. The rule of this dynasty, under seven successive kings (1386-1572) constitutes the flourishing epoch of Polish history. . . . Poland and Lithuania were two distinct states under one crown, each retaining its own rights and its own constitutions. . . . The effect of the union of Poland and Lithuania was at once felt in Europe. The first Jagellon, who on his baptism took the name of Uladislaw II. . . . spent his whole reign (1386-1434) in consolidating the union and turning it to account. He defended Lithuania against the Tartar hordes then moving westward before the impulse of the conquering Tamerlane. But his chief activity was

against the Teutonic Knights. . . . He engaged in a series of wars against the knights, which ended in a great victory gained over them at Tannenburg [Grünwald] in 1410. By this victory the power of the knights was broken for the time, and their territories placed at the mercy of the Poles. During the reign of Uladislaw III., the second of the Jagellons (1434-1444), the knights remained submissive, and that monarch was able to turn his arms, in conjunction with the Hungarians, against a more formidable enemy—the Turks—then beginning their invasions of Europe. Uladislaw III. having been slain in battle against the Turks at Varna, the Teutonic Knights availed themselves of the confusion which followed, to try to recover their power. By this time, however, their Prussian subjects were tired of their rule; Dantzic, Elbing, Thorn, and other towns, as well as the landed proprietors and the clergy of various districts, formed a league against them, and, on

CASIMIR THE GREAT

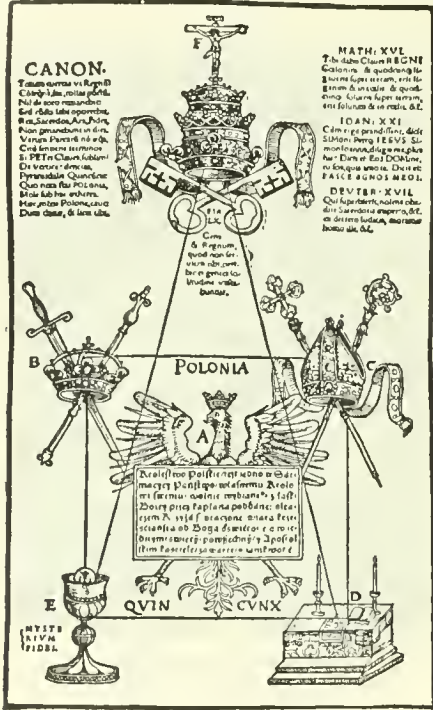

(After the painting by Jan Matejko)

the accession of Casimir IV., . . . to the Polish throne (1447), all Western Prussia revolted from the knights and placed itself under his protection. A terrific war ensued, which was brought to a close in 1400 by the peace of Thorn. By this notable treaty, the independent sovereignty of the Teutonic order in the countries they had held for two centuries was extinguished—the whole of Western Prussia, with the city of Marienburg, and other districts, being annexed to the Polish crown, with guarantees for the preservation of their own forms of administration; and the knights being allowed to retain certain districts of Eastern Prussia, only as vassals of Poland. . . . Thus Poland was once more in possession of . . . a seaboard on the Baltic. . . . Casimir IV. died in 1402; and, though during the reigns of his successors—John Albertus (1402-1501), and Alexander (1501-1506)—the Polish territories suffered some diminution in the direction of Russia, the fruits of the treaty of Thorn were enjoyed in peace."—*Poland: Her history and prospects* (West-

minster Review, v. 63).—"During the reign of John Olbracht . . . (the son of Casimir IV) the nobles secured extraordinary privileges and economic advantages. . . . John Olbracht organized a campaign against Turkey to reconquer the coast of the Black Sea and to overawe the vacillating Hospodars of Moldavia. The campaign resulted in a complete collapse of the plans of the king and the annihilation of an army. . . . At the time of the king's death Lithuania was in . . . a war of her own with Moscovy. . . . Nine years of independence had convinced the Lithuanians of their error in striving to sever the bonds uniting them to Poland, hence the election of Alexander, Grand Duke of Lithuania, to the throne of Poland, was received with great joy. . . . The elec-

nik privilege. By the provisions of this act the Senate could, in the name of the people, refuse obedience to the king in instances of 'tyrannical behavior,' on his part. The nobility, disorganized through great losses in their ranks suffered in the war with Turkey, was unable to resist the return to power of the magnates. . . . These circumstances led to . . . almost complete disorganization . . . of internal administration. . . . The Order of the Cross ceased to pay homage to the king, the Tartars and Wallachians were ravaging the southern provinces of the country. . . . The king convoked the Diet which met regularly every year until order was restored and conditions regulated. In order to offset the extraordinary powers of the Senate the nobility forced through, at the Diet held at Piotrkow in 1504, a law called the 'Incompatibilia,' which defined the powers and duties of the various crown offices and specified which of these were 'incompatible,' i.e., which of them could not be held by the same person at the same time. The next year at the Diet which met at Radom, a statute was passed known by its two initial words as 'Nihil novi.' This statute provided that nothing new could be undertaken without the unanimous consent of the three estates: the King, the Senate and the representatives of the land assemblies of the nobility. This statute also provided that no nobleman should engage in trade or commerce, under the penalty of forfeiting his right to nobility. The nobility opposed the establishment of a regular army, fearing that it might become a powerful weapon in the hands of the king, but solemnly declared their duty and readiness, as land owners, to defend the country from foreign enemies. . . . Soon after the signing of the new statute Alexander died, and his brother Zygmunt I [Sigismund II], the youngest son of Kazimir Jagiellonczyk, was elected King of Poland and Lithuania. . . . It was in his reign that the nobility finally established itself as the dominant factor in Polish life to the detriment of the cities and peasantry. . . . In the first part of his reign the king distinguished himself by his ability and character. Many intricate problems were satisfactorily solved, the exchequer was replenished, jurisdiction regulated, a state mint established, and a large number of the mortgaged crown estates redeemed. In the second part of his reign . . . corruption crept into public life; high offices were given to incompetent favorites and state revenues used to swell private fortunes. . . . The complete fusion of Mazovia with Poland in 1529 took place after the extinction of the Piast Mazurian dynasty. Previously Mazovia had been a vassal principality with an autonomous government, completely independent of the Polish government. The entrance into Polish political life of the Mazurs, who at that time were much inferior in education and economic and political development to the rest of Poland, made itself felt immediately because of their steadfast adherence to the Church and ancient custom and their aversion to progressive tendencies."—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 123-124, 126-127, 129, 131.—"In the reign of the sixth of the Jagellonidæ, however—Sigismund I. (1506-1548)—the Teutonic Knights made an attempt to throw off their allegiance to Poland. . . . The grand-master of the Teutonic order at this time was Albert of Brandenburg. . . . Albert . . . refused homage for the Prussian territories of his order to the Polish king Sigismund, and even prepared to win back what the order had lost by the treaty of Thorn. Sigismund, who was uncle to Albert,

TYPVS POLONIÆ REGNI.

ALLEGORY ON THE KINGDOM OF POLAND

tions of the king were to be held in common, all alliances and privileges were to be made binding for the two countries, the money was to be the same, and Polish kings were to become automatically, upon their election, Grand Dukes of Lithuania. The separatist tendencies among the Lithuanians came to an end with the death of John Olbracht and the ascent of Alexander. The new king . . . was favorably inclined toward the oligarchy. Upon his becoming Grand Duke of Lithuania in 1492, he had granted a privilege to the Lithuanian potentates by which all the activities of the Grand Duke came under the control of the Council of Magnates. Upon his coronation as King of Poland, in 1501, the Polish magnates obtained from him a similar privilege. By this act the . . . powers of the king were in a large measure obliterated, and his role was reduced to that of the President of the Senate. This important grant is known as the Miel-

defeated his schemes . . . [and] Albert found it the best policy to submit. . . . The Reformation was then in the first flush of its progress over the Continent, and the Teutonic Order of Knights, long a practical anachronism in Europe, was losing even the slight support it still had in surrounding public opinion, as the new doctrines changed men's ideas. What was more, the grand-master himself imbibed Protestant opinions and was a disciple of Luther and Melancthon. He resolved to construct for himself a secular principality out of its ruins. Many of the knights shared or were gained over to his views . . . all becoming Protestants together, with the exception of a few tough old knights who transferred their chapter to Mergentheim in Würtemberg, where it remained . . . till the time of Napoleon. The secularization was formally completed at Cracow in April, 1525. There, in a square before the royal palace, on a throne emblazoned with the arms of Poland and Lithuania—a white eagle for the one, and a mounted knight for the other—the Polish king Sigismund received . . . the banner of the order, the knights standing by and agreeing to the surrender. In return, Sigismund embraced the late grand-master as Duke of Prussia, granting to him and the knights the former possessions of the order, as secular vassals of the Polish crown. The remainder of Sigismund's reign was worthy of this beginning; and at no time was Poland more flourishing than when his son, Sigismund II., the seventh of the Jagellonidæ, succeeded him on the throne. During the wise reign of this prince (1548-1572), whose tolerant policy in the matter of the great religious controversy then agitating Europe is not his least title to credit, Poland lost nothing of her prosperity or her greatness; and one of its last transactions was the consummation of the union between the two nations of Poland and Lithuania by their formal incorporation into one kingdom at the Diet of Lublin (July 1, 1569). . . . This seventh of the Jagellonidæ was also the last, and, on his death in 1572, Poland entered on . . . [a] career of misery and decline."—*Poland: Her history and prospects* (*Westminster Review*, v. 63).—"The union of Lithuania and Poland was . . . manifestly to the advantage of both countries, but in one important respect it had a specifically beneficial effect on Poland. Lithuania and Poland differed constitutionally in regard to the sovereign. In the former the Grand Duke was hereditary, while in the latter the King was elected. Obviously if the union of the crowns was to be maintained the Grand Duke who succeeded must be elected King. . . . Previous to the union of Lublin both countries enjoyed complete autonomy under their own Diets, which usually . . . met at Cracow and Vilna. It was now resolved that both Diets should be united, and form an imperial Diet which should legislate for the whole Commonwealth. It was composed of the King, the members of the Senate, and the Nuncios [representing the *szlachta*, or gentry]. The Senators were nominated by the King and held office for life. . . . The Nuncios, who numbered about four hundred, were elected by provincial Diets, or Dietines as they were termed. . . . The Diet met for a few weeks every two years, but it might be summoned at any time when urgent need arose. The Diet elected a Council of State composed of fifteen Senators, four of whom were in constant attendance on the King . . . and Warsaw was chosen as the new capital."—N. Hill, *Poland and the Polish question*, pp. 29-30.

1492-1548.—Economic and commercial conditions.—Reduction of peasantry to serfdom.—Representation of cities eliminated.—During the reign of John (I) Albert the laws were amplified so that "the nobility were exempted from tariff duties and other fiscal burdens, the peasants were restricted in their right to leave their villages, and the landlords were given the power to represent their peasants in the courts. Thereafter no peasant could appear in court unaccompanied by his landlord. This last provision, amplified by further statutes, finally threw the whole peasantry into complete dependence upon the private jurisdiction of the landowners. The peasants lost their right to leave their settlements without the permission of the landowners, and the family could send but one of their boys to study in a city. By a further regulation they were not permitted to leave the country for seasonal work in neighboring states, where higher wages prevailed. . . . This movement to restrict the peasants coincides with the opening of the Baltic and the accession of the large Hanseatic port of Gdansk (Danzig), through which a great opportunity presented itself for selling Polish grain and other agricultural products in Europe. To be able to produce grain for export the landowners needed a reliable and cheap labor force. Even prior to this time, as a result of the enormous depreciation of currency that took place in Poland, . . . a tendency had arisen among the landlords to demand rent in the form of services and produce rather than in specie, as had been the custom since the days of the first German settlements. Payment in services and other restrictions formed the foundation of serfdom. The year 1496 is regarded as the beginning of legal serfdom in Poland, leading to a patrimonial form of agrarian life, with the manor as the centre of every economic unit, and the landlord the source of supreme law and power. The same year ushered in the era of gradual decline of Polish cities. . . . The causes of the decline of the Polish cities were numerous. The fall of Constantinople and the discovery of sea routes to the Orient [were important factors]. . . . The heterogeneous character of the population, which, in addition to economic differences, created class and racial struggles within the municipalities . . . was another important factor. This disintegration of municipal harmony was taken advantage of by the powerful magnates and by the officers of the Crown, who had jurisdiction over the Jews and over those parts of the community which were not within the corporate limits, to extend their powers and prerogatives. With the disruption of

the patriarchal relations between the masters of the guilds and the journeymen and apprentices, the cities witnessed many strikes and riots. The municipal government became demoralized and its competence gradually curtailed. The artisans were too much concerned with their trades and class struggles, and the merchants too much absorbed in their commercial transactions, to pay much attention to the political events that were taking place in the country and to the concentration of power in the hands of the nobles. [All through the reigns of Alexander (1501-1506) and Sigismund I (1506-1548) added burdens were put upon the peasants, and henceforth serfdom became more strongly entrenched.]—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 107-108, 117-118.—See also SERFDOM: 16th-19th centuries: Poland.

16th century.—Army organization.—Mercenaries. See MILITARY ORGANIZATION: 36.

1569.—Effect of Union of Lublin.—Polish nobility.—Position of knights.—Aristocratic Parliament.—“By the union of Lublin in 1569, Lithuania was incorporated into Poland and certain parts of her territory came under direct rule of the Polish Crown, among others being Ukraina which comprised the ancient principalities of Kiev, Poltava, and part of Tchernigoo. From this time on, Polish influence became paramount, and Polishisation in manners and customs was introduced, [as well as a common basis of law and government].”—S. E. Howe, *Thousand years of Russian history*, p. 332.—Throughout “Poland, the scientific, literary, and religious movement of the fifteenth and sixteenth centuries . . . influenced political ideas. . . . Only men of a certain class were accounted full-citizens—namely, the nobility. This principle, however, was applied very differently in Poland as compared with other European countries. Feudalism was unknown. At the outset there was an attempt on the part of the more influential aristocracy to take the government of the country into its hands through the agency of the Crown, but this venture met with stout resistance from the knighthood. The conflict was short. Owing to the stronger position of the knights as defenders of the country, the aristocracy had even to abandon its special rights and influence and merge into the knighthood. From the coalescence of these two classes the Polish nobility arose. Within it all were equal. There were no titles. The only distinction in rank depended on executive offices, to which any noble could aspire. But, . . . both burghesses and villeins were looked upon as citizens without full rights. . . . The dominant class was also able to secure for itself rights and privileges which practically placed the government of the country in its hands. By the end of the fifteenth century the Polish Parliament, called in Polish ‘Sejm,’ was organized, and, by securing the power of voting supplies and controlling the military service of the Knights, became virtually the Government. Parliament consisted of two Chambers: the Upper Chamber or the Senate, composed of higher officials of the State, and the Lower Chamber, consisting of members elected by constituencies. The powers of the King were subject to constitutional limitations. . . . The State was called a Republic, and the King’s position became that of *Primus inter pares*.”—A. Zaleski, *Poland’s case for independence*, pp. 26-27.

1573.—Election of Henry of Valois.—“*Pacta Conventa*.”—“Three years after the establishment of the union, Zygmunt II August died, and the distinguished royal family of the Jagiellons came

to an end . . . [in] 1572. . . . In the span of that reign, Poland grew from a relatively unimportant principality into one of the greatest powers of Europe. . . . [In the interregnum pending the election of the new king, the archbishop of Gniezno was elected primate.] The election was held in April 1573 at Warsaw. . . . Over forty thousand voters assembled. There were many candidates . . . [but] the French candidate carried the election . . . and Henri of Valois was made king.”—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 164, 166.—On the election of Henry of Valois, duke of Anjou, to the Polish throne (see FRANCE: 1573-1576), he was required to subscribe to a series of articles, known as the *Pacta Conventa* (and sometimes called the *Articles of Henry*), which were intended to be the basis of all future covenants between the Poles and their elective sovereigns. The chief articles of the *Pacta Conventa* were the following: “1. That the king should not in the remotest degree attempt to influence the senate in the choice of a successor; but should leave inviolable to the Polish nobles the right of electing one at his decease. 2. That he should not assume the title of ‘master’ and ‘heir’ of the monarchy, as borne by all preceding kings. 3. That he should observe the treaty of peace made with the dissidents. 4. That he should not declare war, or dispatch the nobles on any expedition, without the previous sanction of the diet. 5. That he should not impose taxes or contributions of any description. 6. That he should not have any authority to appoint ambassadors to foreign courts. 7. That in case of different opinions prevailing among the senators, he should espouse such only as were in accordance with the laws, and clearly advantageous to the nation. 8. That he should be furnished with a permanent council, the members of which (16 in number; viz. 4 bishops, 4 palatines, and 8 castellans) should be changed every half year, and should be selected by the ordinary diets. 9. That a general diet should be convoked every two years, or oftener, if required. 10. That the duration of each diet should not exceed six weeks. 11. That no dignities or benefices should be conferred on other than natives. 12. That the king should neither marry nor divorce a wife without the permission of the diet. The violation of any one of these articles, even in spirit, was to be considered by the Poles as absolving them from their oaths of allegiance, and as empowering them to elect another ruler.”—S. A. Dunham, *History of Poland*, bk. 2, ch. 1.

1574-1590.—Abandonment of the throne by Henry of Valois.—Election of Stephen Batory.—His successful wars with Russia, and his death.—Election of Sigismund III of Sweden.—Henry of Valois, crowned at Cracow, on February 21, 1574, “soon sighed for the banks of the Seine: amidst the ferocious people whose authority he was constrained to recognize, and who despised him for his imbecility, he had no hope of enjoyment. To escape their factions, . . . he shut himself up within his palace, and, with the few countrymen whom he had been permitted to retain near his person, he abandoned himself to idleness and dissipation. . . . By the death of his brother [Charles IX king of France], who died on the 30th of May, 1574, he had become heir to the crown of the Valois. His first object was to conceal the letters which announced that event, and to flee before the Poles could have any suspicion of his intention. The intelligence, however, transpired through another channel. His senators advised him to convoke a diet, and, in conformity with the laws, to solicit permission of a short

absence while he settled the affairs of his new heritage, . . . but he feared the ambition of his brother the duke of Alençon, who secretly aspired to the throne; and he resolved to depart without it . . . [stealing away from his kingdom like a thief, on the night of June 18]. Some letters found on a table in his apartment attempted to account for his precipitate departure by the urgency of the troubles in his hereditary kingdom; yet he did not reach Lyons till the following year. In a diet assembled at Warsaw, it was resolved that if the king did not return by the 12th of May, 1575, the throne should be declared vacant. Deputies were sent to acquaint him with the decree. . . . After the expiration of the term, the interregnum was proclaimed in the diet of Stenzyca, and a day appointed for a new election. After the deposition of Henry [now become Henry III of France], no less than five foreign and two native princes were proposed as candidates for the crown. . . . The primate, many of the bishops, and several palatines, declared in favour of an Austrian prince; but the greater portion of the diet (assembled on the plains opposite to Warsaw) were for the princess Anne, sister of Sigismund Augustus, whose hand they resolved to confer on Stephen Batory, duke of Transylvania. Accordingly, Stephen was proclaimed king by Zamoyski, starost of Belz. . . . On the other hand, Uchanski the primate nominated the emperor Maximilian, who was proclaimed by the marshal of the crown: this party, however, being too feeble to contend with the great body of the equestrian order, despatched messengers to hasten the arrival of the emperor; but Zamoyski acted with still greater celerity. While his rival was busied about certain conditions, which the party of the primate forced on Maximilian, Batory arrived in Poland, married the princess, subscribed to every thing required from him, and was solemnly crowned. A civil war appeared inevitable, but the death of Maximilian happily averted the disaster. . . . But though Poland and Lithuania thus acknowledged the new king, Prussia, which had espoused the interests of the Austrian, was less tractable. The country, however, was speedily reduced to submission, with the exception of Dantzic, which not only refused to own him, but insisted on its recognition by the diet as a free and independent republic. . . . [Fortunately the inhabitants] had to deal with a monarch of extraordinary moderation. . . . Their submission [1577] disarmed his resentment, and left him at liberty to march against other enemies. During this struggle of Stephen with his rebellious subjects, the Muscovites had laid waste Livonia. To punish their audacity, and wrest from their grasp the conquests they had made during the reign of his immediate predecessors, was now his object. . . . Success everywhere accompanied him. Polotsk, Sakol, Turowla, and many other places, submitted to his arms. The investiture of the duchy (Polotsk) . . . he conferred on Gottard, duke of Courland. . . . Stephen now directed his course towards the province of Novogorod, . . . and, with amazing rapidity, reduced the chief fortified towns between Livonia and that ancient mistress of the North. But his troops were thinned by fatigue, and even victory; reinforcements were peremptorily necessary; and though in an enfeebled state of health, he again returned to collect them. . . . The succeeding campaign promised to be equally glorious, when the tsar, by adroitly insinuating his inclination to unite the Greek with the Latin church, prevailed on the pope to interpose for peace. To the wishes of the papal see the king was ever ready to pay the utmost deference. The

conditions were advantageous to the republic. If she surrendered her recent conquests—which she could not possibly have retained—she obtained an acknowledgment of her rights of sovereignty over Livonia; and Polotsk, with several surrounding fortresses, was annexed to Lithuania. [Stephen Batory died in 1586, having vainly advised the diet to make the crown hereditary, and avert the ruin of the nation. The interregnum which ensued afforded opportunity for a fierce private war between the factions of the Zborowskis and the Zamoyskis. Then followed a disputed election of king, one party proclaiming the archduke Maximilian of Austria, the other Sigismund, prince royal of Sweden—a scion of the Jagellonic family—and both sides resorting to arms. Maximilian was defeated and taken prisoner, and only regained his freedom by relinquishing his claims to the Polish crown.]—S. A. Dunham, *History of Poland*, bk. 2, ch. 1.

1578-1652.—Anarchy organized by the nobles.
—Extraordinary constitution imposed by them

JAN ZAMOYSKI

on the country.—“*Liberum veto*” and its effects. —“On the death of [Sigismund II] the last Jagellon, 1573, at a time when Bohemia and Hungary were deprived of the power of electing their kings, when Sweden renounced this right in favour of its monarchs, Poland renewed its privilege in its most comprehensive form. At a time when European monarchs gradually deprived the great feudal barons of all share in the administration of the law, . . . the Polish nobles destroyed the last vestiges of the royal prerogative. . . . In the year 1578, the kings lost the right of bestowing the patent of nobility, which was made over to the diet. The kings had no share in the legislation, as the laws were made in every interregnum. As soon as the throne became vacant by the death of a king, and before the diet appointed a successor, the nobles of the provinces assembled to examine into the administration of the late king and his senate. Any law that was not approved of could be repealed and new arrangements proposed, which became law if the votes of the diet were unanimous. This unanimity was most easily obtained when a law threatened the individual or when the royal prerogative was to be decreased. . . . The king had no share in the administration,

and even the most urgent circumstances did not justify his acting without the co-operation of the senate. . . . If there was a hostile invasion, war became a matter of course, but it was carried on, on their own account, by the palatines most nearly concerned, and often without the assistance of the king. . . . Bribery, intrigue and party spirit were the only means of influence that could be employed by a king, who was excluded from the administration, who was without domains, without private property or settled revenue, who was surrounded by officers he could not depose and by judges who could be deposed, and who was, in short, without real power of any sort. The senate itself was deprived of its power, and the representatives of the nobles seized upon the highest authority. . . . They alone held the public offices and the highest ecclesiastical benefices. They filled the seats of the judges exclusively, and enjoyed per-

SIGISMUND III

(After the painting by Jan Matejko)

fect immunity from taxes, duties, &c. . . . Another great evil from which the republic suffered was the abuse of the *liberum veto*, which, dangerous as it was in itself, had become law in 1652. . . . [This gave the power of veto to every single voice in the assemblies of the nobles, or in the meetings of the deputies who represented them. Nothing could be adopted without entire unanimity. The members] received definite instructions as to the demands they were to bring forward and the concessions they were to make. . . . One step only was wanting before unanimity of votes became an impossibility, and anarchy was completely organized. This step was taken when individual palatines enjoined their deputies to oppose every discussion at the diet, till their own proposals had been heard and acceded to. Before long, several deputies received the same instructions, and thus the diet was in fact dissolved before it was opened. Other deputies refused to consent to any proposals, if those of their own province were not accepted; so that the veto of one deputy in

a single transaction could bring about the dissolution of the entire diet, and the exercise of the royal authority was thus suspended for two years [since the diet could only be held every other year, to last no longer than a fortnight, and to sit during daylight, only]. . . . No law could be passed, nothing could be resolved upon. The army received no pay. Provinces were desolated by enemies, and none came to their aid. Justice was delayed, the coinage was debased; in short, Poland ceased for the next two years to exist as a state. Every time that a rupture occurred in the diet it was looked on as a national calamity. The curse of posterity was invoked on that deputy who had occasioned it, and on his family. In order to save themselves from popular fury, these deputies were accustomed to hand in their protest in writing, and then to wander about, unknown and without rest, cursed by the nation."—H. von Moltke, *Poland: An historical sketch*, ch. 3.—"It was not till 1652 . . . that this principle of equality, or the free consent of every individual Pole of the privileged class to every act done in the name of the nation, reached its last logical excess. In that year, the king John Casimir having embroiled himself with Sweden, a deputy in the Diet was bold enough to use the right which by theory belonged to him, and by his single veto, not only arrest the preparations for a war with Sweden, but also quash all the proceedings of the Diet. . . . From that time every Pole walked over the earth a conscious incarnation of a power such as no mortal man out of Poland possessed—that of putting a spoke into the whole legislative machinery of his country, and bringing it to a dead lock by his own single obstinacy; and, though the exercise of the power was a different thing from its possession, yet every now and then a man was found with nerve enough to put it in practice. . . . There were, of course, various remedies for this among an inventive people. One, and the most obvious and most frequent, was to knock the vetoist down and throttle him; another, in cases where he had a party at his back, was to bring soldiers round the Diet and coerce it into unanimity. There was also the device of what were called confederations; that is, associations of the nobles independent of the Diet, adopting decrees with the sanction of the king, and imposing them by force on the country. These confederations acquired a kind of legal existence in the intervals between the Diets."—*Poland: Her history and prospects* (*Westminster Review*, v. 63).

1586-1629.—Election of Sigismund of Sweden to the throne.—His succession to Swedish crown and his deposition. See SWEDEN: 1523-1604; 1611-1629.

1590-1648.—Reigns of Sigismund III and Ladislaus IV.—Wars with the Muscovites, the Turks and the Swedes.—Domestic discord in the kingdom.—Sigismund III, "who was elected out of respect for the memory of the house of Jagiello (being the son of the sister of Sigismund Augustus), . . . was too indolent to take the reins of government into his own hands, but placed them in those of the Jesuits and his German favourites. Not only did he thereby lose the affections of his people, but he also lost the crown of Sweden, to which, at his father's death, he was the rightful heir. This throne was wrested from him by his uncle Charles [see SWEDEN: 1523-1604], . . . causing a war between Sweden and Poland, which, although conducted with great skill by the illustrious generals Zamoyski and Chodkiewicz, terminated disastrously for Poland, for, after this war, a part of Livonia remained in the hands of the

Swedes." During the troubled state of affairs at Moscow which followed the death, in 1584, of Ivan the Terrible, Sigismund sent an army which took possession of the Russian capital and remained in occupation of it for some time. (See *RUSSIA: 1533-1682.*) "The Muscovites offered the throne of the Czar to Ladislas, the eldest son of the King of Poland, on condition that he would change his religion and become a member of 'the Orthodox Church.' Sigismund III., who was a zealous Catholic, and under the influence of the Jesuits, wishing rather to convert the Muscovites to the Catholic Church, would not permit Ladislas to change his faith [and] . . . refused the throne of the Czar for his son. . . . By the peace concluded at Moscow, 1610, the fortress of Smolenski and a considerable part of Muscovy remained in the hands of the Poles. . . . Sigismund III., whose reign was so disastrous to Poland, kept up intimate relations with the house of Austria. The Emperor invited him to take part with him . . . in what is historically termed 'the Thirty Years' War.' Sigismund complied with this request, and sent the Emperor of Austria some of his Cossack regiments. . . . Whilst the Emperor was on the one hand engaged in 'the Thirty Years' War,' he was on the other embroiled with Turkey. The Sultan, in revenge for the aid which the Poles had afforded the Austrians, entered Moldavia with a considerable force. Sigismund III. sent his able general Zolkiewski against the Turks, but as the Polish army was much smaller than that of the Turks, it was defeated on the battlefield of Cecora [1621], in Moldavia [its] general killed, and many of his soldiers taken prisoners. After this unfortunate campaign . . . the Sultan Osman, at the head of 300,000 Mussulmans, confident in the number and valour of his army, marched towards the frontier of Poland with the intention of subjugating the entire kingdom. At this alarming news a Diet was convoked in all haste, at which it was determined that there should be a 'levée en masse,' in order to drive away the terrible Mussulman scourge. But before this levée en masse could be organized, the Hetman Chodkiewicz, who had succeeded Zolkiewski as commander-in-chief, crossed the river Dniester with 35,000 soldiers and 30,000 Cossacks, camped under the walls of the fortress of Chocim [or Kotzim, or Khotzim, or Choczim] and there awaited the enemy, to whom, on his appearance, he gave battle [Sept. 28, 1622], and, notwithstanding the disproportion of the two armies, the Turks were utterly routed. . . . After this brilliant victory a peace was concluded with Turkey, and . . . by this victory, the whole of Western Europe was saved from Mussulman invasion. . . . While these events were taking place in the southern provinces, Gustavus Adolphus, who had succeeded to the throne of Sweden, marched into the northern province of Livonia, where there were no Polish troops to resist him (all having been sent against the Turks) and took possession of this Polish province. [See *SWEDEN: 1611-1620.*] . . . Gustavus Adolphus, however, proposed to restore it to Poland on condition that Sigismund III. would renounce all claim to the crown of Sweden, to which the Polish sovereign was the rightful heir. But in this matter, as in all previous ones, the Polish king acted with the same obstinacy, and the same disregard for the interests of the kingdom . . . and by his refusal Poland lost the entire province of Livonia with the exception of the city of Dynabourg." Sigismund III died in 1632, and his eldest son, Ladislaus IV, "was immediately elected King of Poland, a proceeding which spared the kingdom all the miseries attendant on an in-

terregnum. In 1633, after the successful campaign against the Muscovites, in which the important fortified city of Smolensk, as well as other territory, was taken, a treaty advantageous to Poland was concluded. Soon afterwards, through the intervention of England and France, another treaty was made between Poland and Sweden by which the King of Sweden restored to Poland a part of Prussia which had been annexed by Sweden. Thus the reign of Ladislaus IV. commenced auspiciously with regard to external matters. . . . Unhappily the bitter quarrels of the nobles were incessant; their only unanimity consisted in trying to foil the good intentions of their king. [Ladislaus IV died in 1648, and was succeeded by his brother, John Casimir, who had entered the order of the Jesuits some years before, and had been made a cardinal by the pope, but who was now absolved from his vows and permitted to marry.]"—K. Wolski, *Poland, lectures 11-12.*—See also *BRANDENBURG: 1640-1688.*

1610-1612.—Intervention in Russia.—Occupation of and expulsion from Moscow. See *RUSSIA: 1533-1682.*

1648.—Political and religious reaction.—"The principle of freedom was carried to such excess that every law passed by the Chamber of Deputies required a unanimous vote. A single veto threw out a Bill. This made legislation by Parliament almost impossible; the main power passed into the hands of local councils, which became almost autonomous. These councils, called 'sejmik,' were composed of the local nobility, and began to pass laws special to the area in which they acted without reference to national requirements. This system divided the country into a number of small provinces too loosely connected, and thus greatly diminished the coherence of the State as a whole. As electors of the Kings, the nobles were in a position to curtail the centralized authority until it almost disappeared. The fact that the King could be elected not merely from among the Polish nobility but from one of the foreign royal families, gave foreign monarchs the opportunity to interfere in the internal affairs of the country. . . . Two other factors tended to weaken Poland. In the first place, the Roman Catholic reaction which affected all Europe in the seventeenth century was very marked in Poland. The admirable laws of the sixteenth century, granting perfect freedom of conscience to all inhabitants of Poland and resulting in an inflow of Protestants from many European countries, were forgotten. Indeed, in 1733, all non-Catholics were deprived of the right of entering Parliament and the Civil Service. The second factor was the limitation of the franchise to the nobility. . . . The governing class, fearing an increase of the prerogatives of the Crown, would not vote supplies for the maintenance of an Army, and still clung to the old system of mobilizing the whole nobility in case of war. As an outcome, Poland suffered severe losses. Not only was she deprived of a part of her territory, but also lost her status as a great power."—A. Zaleski, *Poland's case for independence, pp. 31-32, 34.*

1648-1654.—Revolt of the Cossacks.—Their allegiance transferred to the Russian tsar.—Since 1320, the Cossacks of the Ukraine had acknowledged allegiance, first, to the grand duke of Lithuania, and afterwards to the king of Poland on the two crowns becoming united in the Jagellon family. (See *COSSACKS.*) They had long been treated by the hostile Poles with harshness, and in the time of the hetman Bozdan Khmelnitski (or Chmielnicki), who had personally suf-

ferred grievous wrongs at the hands of the Poles, they were ripe for revolt (1648). "His standard was joined by hordes of Tatars from Bessarabia and the struggle partook to a large extent of the nature of a holy war, as the Cossacks and Malo-Russians generally were of the Greek faith, and their violence was directed against the Roman Catholics and Jews. . . . Bogdan succeeded in taking Lemberg, and became master of all the palatinate, with the exception of Zamosc, a fortress into which the Polish authorities retreated. On the election of John Casimir as king of Poland, he at once opened negotiations with the successful Cossack, and matters were about to be arranged peacefully. Khmelnitski accepted the 'bulava' of a hetman which was offered him by the king. The Cossacks demanded the restoration of their ancient privileges, the removal of the detested Union—as the attempt to amalgamate the Greek and Latin Churches was called—the banishment of the Jesuits from the Ukraine, and the expulsion of the Jews,

JOHN SOBIESKI
(Original in the Louvre)

with other conditions. They were rejected, however, as impossible, and Prince Wisniowiecki, taking advantage of the security into which the Cossacks were lulled, fell upon them treacherously and defeated them with great slaughter. All compromise now seemed hopeless, but the desertion of his Tatar allies made Bogdan again listen to terms at Zborow. The peace, however, was of short duration, and on the 28th of June, 1651, at the battle of Beresteczko in Galicia, the hosts of Bogdan were defeated with great slaughter. After this engagement Bogdan saw that he had no chance of withstanding the Poles by his own resources, and accordingly sent an embassy to Moscow in 1652, offering to transfer himself and his confederates to the allegiance of the Tsar. The negotiations were protracted for some time, and were concluded at Pereiaslavl [in 1654], when Bogdan and seventeen Malo-Russian regiments took the oath to Buturlin, the Tsar's commissioner."—W. 1668-1696.—Abdication of John II Casimir.—War with the Turks.—Election and reign of John III Sobieski.—"In 1668 John Casimir, whose disposition had always been that of a monk rather than that of a king, resigned his throne, and retired to France, where he died as Abbe de St. Germain in 1672. . . . For two years after the abdication . . . the country was in a state of turmoil . . . and confusion. . . . In 1669 a powerful faction of the inferior nobles secured the election of Michael Wisniowiecki, an amiable but silly young man. . . . When John Casimir abdicated the throne Sobieski retained his office of grand hetman under his successor, the feeble Wisnowitzki. . . . [Sobieski] was commander-in-chief of the Polish forces against the Turks . . . [and] in the campaigns of 1671 and 1672 his successes against this powerful enemy were almost miraculous. . . . In 1673 he was sent on an expedition against the Turks and at Khotin the Polish army scored a splendid victory. The Turkish army was almost completely annihilated. But all his exertions were insufficient, in the existing condition of the republic, to deliver it from the terror of the impetuous Mussulmans. In 1672 . . . a disgraceful truce was concluded between the Polish diet and the sultan. The republic was now racked by internal convulsions; nobles, serfs, and clergy, contending with each other, and a large faction of the nobility being inclined to dethrone Wisnowitzki, and attempt a complete revolution in the government. . . . The revolutionary party . . . had formed themselves . . . into a body called the Royal Confederation, and were proceeding to carry out their plans for remodelling the constitution. Before this self-elected body, some private enemy of Sobieski impeached him as a traitor. They summoned him to Warsaw to defend himself. Sobieski came—accompanied, however, by a retinue of the highest nobles, and some regiments of horse. The court and the accuser were abashed. Sobieski, acting in his capacity as grand marshal of Poland, denounced the Royal Confederation as illegal, and insisted on its being changed into a constitutional diet. The demand was complied with. . . . He was triumphantly acquitted of all the charges that had been brought against him. . . . When, in conclusion, Sobieski, as grand hetman, advised the immediate rupture of the dishonourable treaty with the Turks, their approval was unanimous and enthusiastic. Raising an army . . . Sobieski marched against the Turks. He laid siege to the fortress of Kotzim. . . . The Fortress was taken; the provinces of Moldavia and Wallachia yielded; the Turks hastily retreated across the Danube. . . . While the Poles were preparing to follow up their victory, intelligence reached the camp that Wisnowitzki was dead. . . . The diet had already met when Sobieski, and those of the Polish nobles who had been with him, reached Warsaw. The electors were divided respecting the claims of two candidates, both foreigners—Charles of Lorraine, who was supported by Austria; and Philip of Neuburg, who was supported by Louis XIV. of France. Many of the Polish nobility had become so corrupt, that foreign gold and foreign influence ruled the diet. In this case, the Austrian candidate seemed to be most favourably received; but as the diet was engaged in the discussion, Sobieski entered. . . . A stormy discussion ensued, in the midst of which the cry of 'Let a Pole rule over Poland,' was raised by one of the nobles, who further proposed that John Sobieski should be elected. The proposition went with the humour of the as-

sembly, and Sobieski, under the title of John III., was proclaimed king of Poland (1674). Sobieski accepted the proffered honour, and immediately set about improving the national affairs, founding an institution for the education of Polish nobles, and increasing the army. . . . After several battles of lesser moment with his Turkish foes, Sobieski prepared for a grand effort; but before he could mature his plans, the pasha of Damascus appeared with an army of 300,000 men on the Polish frontier, and threatened the national subjugation. With the small force he could immediately collect, amounting to not more than 10,000 soldiers Sobieski opposed this enormous force, taking up his position in two small villages on the banks of the Dniester, where he withstood a bombardment for twenty days. Food and ammunition had failed; but still the Poles held out . . . against the faces of the Turks, who surrounded them on all sides. . . . At length, early in the morning of the 14th of October, 1676, they saw the Poles issue slowly out of their entrenchments in order of battle, and apparently confident of victory. A superstitious fear came over them at such a strange sight. No ordinary mortal, they thought, could dare such a thing; and the Tartars cried out that it was useless to fight against the wizard king. The pasha himself was superior to the fears of his men; but knowing that succours were approaching from Poland, he offered an honourable peace, which was accepted, and Sobieski returned home in triumph. [See also HUNGARY: 1668-1683.] Seven years of peace followed. . . . In 1683, a threatened invasion of Christendom by the Turks called him again to the field. . . . After completely clearing Austria of the Turks, Sobieski returned to Poland, again to be harassed with political and domestic annoyances. . . . He died suddenly on Corpus Christi Day, in the year 1696; and 'with him,' says the historian, 'the glory of Poland descended to the tomb.' On the death of Sobieski, the crown of Poland was disposed of to the highest bidder. The competitors were James Sobieski, the son of John; the Prince of Conti; the Elector of Bavaria; and Frederick Augustus, Elector of Saxony. The last was the successful candidate, having bought over one half of the Polish nobility, and terrified the other half by the approach of his Saxon troops. . . . Augustus entertained a great ambition to be a conqueror, and the particular province which he wished to annex to Poland was Livonia, on the Baltic—a province which had originally belonged to the Teutonic Knights, for which the Swedes, Poles, and Russians had long contended; but which was now . . . in the possession of Sweden."—*History of Poland (Chambers's Miscellany, v. 4, no. 29)*.

1696-1698.—Disputed election of a king.—Crown gained by Augustus of Saxony.—On the death of Sobieski (1696), Louis XIV of France, put forward the Prince of Conti as a candidate for the vacant Polish throne. "The Emperor, the Pope, the Jesuits and Russia united in supporting the Elector Augustus of Saxony. The Elector had just abjured, in view of the throne of Poland, and the Pope found it quite natural to recompense the hereditary chief of the Lutheran party for having reëntered the Roman Church. The Jesuits, who were . . . powerful in Poland, feared the Jansenist relations of Conti. As to the young Czar Peter, he wished to have Poland remain his ally, his instrument against the Turk and the Swede, and feared lest the French spirit should come to re-

organize that country. . . . The financial distress of France did not permit the necessary sacrifices, in an affair wherein money was to play an important part, to be made in time. The Elector of Saxony, on the contrary, exhausted his States to purchase partisans and soldiers. The Prince de Conti had, nevertheless, the majority, and was proclaimed King at Warsaw, June 27, 1697; but the minority proclaimed and called the Elector, who hastened with Saxon troops, and was consecrated King of Poland at Cracow (September 15). Conti, retarded by an English fleet that had obstructed his passage, did not arrive by sea till September 26 at Dantzic, which refused to receive him. The Prince took with him neither troops nor money. The Elector had had, on the contrary, all the time necessary to organize his resources. The Russians were threatening Lithuania. Conti, abandoned by a great part of his adherents, abandoned the undertaking, and returned to France in the month of November. . . . In the following year Augustus of Saxony was recognized as King of Poland by all Europe, even by France."—H. Martin, *History of France: Age of Louis XIV, v. 2, ch. 4*.

1732-1733.—Election to the throne, a European question.—France against Russia, Austria and Prussia.—Triumph of the three powers.—Crown renewed to the House of Saxony.—"It became clear that before long a struggle would take place for the Crown of Poland, in which the powers of Europe must interest themselves very closely. Two parties will compete for that uneasy throne: on the one side will stand the northern powers, supporting the claims of the House of Saxony, which was endeavouring to make the Crown hereditary and to restrict it to the Saxon line; on the other side we shall find France alone, desiring to retain the old elective system, and to place on the throne some prince, who, much beholden to her, should cherish French influences, and form a centre of resistance against the dominance of the northern powers. England stands neutral: the other powers are indifferent or exhausted. With a view to the coming difficulty, Russia, Austria, and Prussia, made a secret agreement in 1732, by which they bound themselves to resist all French influences in Poland. With this pact begins that system of nursing and interferences with which the three powers pushed the 'sick man of the North' to its ruin; it is the first stage towards the Partition-treaties. Early in 1733 Augustus II of Poland died: the Poles dreading these powerful neighbours, and drawn, as ever, by a subtle sympathy towards France, at once took steps to resist dictation, declared that they would elect none but a native prince, sent envoys to demand French help, and summoned Stanislaus

Leczinski to Warsaw. Leczinski had been the protégé of Charles XII, who had set him on the Polish throne in 1704; with the fall of the great Swede the little Pole also fell (1712); after some vicissitudes he quietly settled at Weissenburg, whence his daughter Marie went to ascend the throne of France as spouse of Louis XV (1725). Now in 1733 the national party in Poland re-elected him their king, by a vast majority of votes. There was, however, an Austro-Russian faction among the nobles, and these, supported by strong armies of Germans and Russians, nominated Augustus III of Saxony to the throne: he had promised the Empress Anne to cede Courland to Russia, and Charles VI he had won over by acknowledging the Pragmatic Sanction. [See also AUSTRIA: 1718-1738.] War thus became inevitable: the French majority had no strength with which to maintain their candidate against the forces of Russia and Austria; and France, instead of affording Stanislaus effective support at Warsaw, declared war against Austria. The luckless King was obliged to escape from Warsaw, and took refuge in Danzig, expecting French help: all that came was a single ship and 1,500 men, who, landing at the mouth of the Vistula, tried in vain to break the Russian lines. . . . Danzig capitulated, and Stanislaus, a broken refugee, found his way, with many adventures, back to France; Poland submitted to Augustus III."—G. W. Kitchin, *History of France*, v. 3, bk. 6, ch. 2.

1755-1756.—In alliance against Prussia.—Seven Years' War. See GERMANY: 1755-1756.

1763-1790.—First partition and events which led to it.—Respective shares of Russia, Austria and Prussia.—Reforms.—"In 1762, Catherine II. ascended the throne of Russia . . . bent on playing a great part in the affairs of Western Europe. Poland lay between Europe and her empire; she was bound, therefore, to get a firm footing in Poland. . . . On the death of Augustus III., . . . [in 1763], she would permit no foreign prince to mount the throne of Poland, but selected a native Polish nobleman, . . . Stanislaus Poniatowsky, a former lover of her own. Above all things she desired to perpetuate the chronic anarchy of Poland, so as to ensure the weakness of that kingdom. . . . A further desire in Catherine's mind arose from her own peculiar position in Russia at that time. . . . She desired to render herself popular, and "could find nothing more in accordance with the disposition of the Russians . . . than the protection of the Greek Catholics in Poland. Incredible as it may seem, the frantic fanaticism of the Polish rulers had begun, in the preceding twenty or thirty years, to limit and partially to destroy, by harsh enactments, the ancient rights of the Nonconformists. . . . In the year 1763 a complaint was addressed to Catherine by Konisky, the Greek bishop of Mobelev, that 150 parishes of his diocese had been forcibly Romanised by the Polish authorities. The Empress resolved to recover for the dissenters in Poland at least some of their ancient rights, and thus secure their eternal devotion to herself, and inspire the Russian people with grateful enthusiasm. At this time, however, King Augustus III. was attacked by his last illness. A new king must soon be elected at Warsaw, upon which occasion all the European Powers would make their voices heard. Catherine, therefore, in the spring of 1763, first sounded the Cabinets of Vienna and Berlin, in order, if possible, to gain common ground and their support for her diplomatic action. The reception which her overtures met with at the two courts was such as to influ-

ence the next ten years of the history of Poland and Europe. . . . At Vienna, ever since Peter III. had renounced the Austrian alliance, a very unfavourable feeling towards Russia prevailed. . . . The result was that Austria came to no definite resolution, but returned a sullen and evasive reply. It was far otherwise with Frederick II. of Prussia. He agreed with Catherine in desiring that Poland should remain weak. On the other hand, he failed not to perceive that an excessive growth of Russia, and an abiding Russian occupation of Poland, might seriously threaten him. Nevertheless, he did not waver a moment. . . . He needed a powerful ally. . . . Russia alone was left, and he unhesitatingly seized her offered hand. . . . It was proposed to him that six articles should be signed, with certain secret provisions, by which were secured the election of a native for the throne of Poland, the maintenance of the *Liberum Veto* (i.e., of the anarchy of the nobles), and the support of the Nonconformists; while it was determined to prevent in Sweden all constitutional reforms. Frederick, who was called upon to protect the West Prussian Lutherans, just as the aid of Catherine had been sought by the Greek Bishop of Mobelev, made no objection. After the death of King Augustus III. of Poland, in October, 1763, Frederick signed the above treaty, April 11th, 1764. This understanding between the two Northern Powers caused no small degree of excitement at Vienna. It was immediately feared that Prussia and Russia would at once seize on Polish provinces. . . . This anxiety, however, was altogether premature. No one at St. Petersburg wished for a partition of Poland, but for increased influence over the entire Polish realm. Frederick II., for his part, did not aim at any territorial extension, but would abandon Poland for the time to Russia, that he might secure peace for his country by a Russian alliance. . . . Meanwhile, matters in Poland proceeded according to the wishes of Catherine. Her path was opened to her by the Poles themselves. It was at the call of the Czartoriskys [a wealthy and powerful Polish family] that a Russian army corps of 10,000 men entered the country, occupied Warsaw, and put down the opposing party. It was under the same protection that Stanislaus Poniatowsky was unanimously elected King, on September 1st, 1764. But the Czartoriskys were too clever. They intended, after having become masters of Poland by the help of Russia, to reform the constitution, to establish a regular administration, to strengthen the Crown, and finally to bow the Russians out of the kingdom." The Czartoriskys were soon at issue with the Russian envoy, who commanded the support of all their political opponents, together with that of all the religious Nonconformists, both in the Greek Church and among the Protestants. The king, too, went over to the latter, bought by a Russian subsidy. But this Russian confederation was speedily broken up, when the question of granting civil equality to the Nonconformists came up for settlement. The Russians carried the measure through by force and the act embodying it was signed March 5, 1768. "It was just here that the conflagration arose which first brought fearful evils upon the country itself, and then threatened all Europe with incalculable dangers. At Bar, in Podolia, two courageous men, Pulawski and Krasinski, who were deeply revolted at the concession of civil rights to heretics, set on foot a new Confederation to wage a holy war for the unity and purity of the Church. [See BAR, CONFEDERATION OF.] . . . The Roman Catholic population of

every district joined the Confederation. . . . A terrible war began in the southern provinces. . . . The war on both sides was carried on with savage cruelty; prisoners were tortured to death; neither person nor property was spared. Other complications soon arose. . . . When . . . the Russians, in eager pursuit of a defeated band of Confederates, crossed the Turkish frontier, and the little town of Balta was burnt during an obstinate fight, . . . the Sultan, in an unexpected access of fury, declared war against Russia in October, 1768, because, as he stated in his manifesto, he could no longer endure the wrong done to Poland. [See TURKEY: 1768-1774.] Thus, by a sudden turn of affairs, this Polish question had become a European question of the first importance; and no one felt the change more deeply than King Frederick II. He knew Catherine well enough to be sure that she would not end the war now begun with Turkey, without some material gain to herself. It was equally plain that Austria would never leave to Russia territorial conquests of any great extent in Turkey. . . . The slightest occurrence might divide all Europe into two hostile camps; and Germany would, as usual, from her central position, have to suffer the worst evils of a general war. Frederick II. was thrown into the greatest anxiety by this danger, and he meditated continually how to prevent the outbreak of war. The main question in his mind was how to prevent a breach between Austria and Russia. Catherine wanted to gain more territory, while Austria could not allow her to make any conquests in Turkey. Frederick was led to inquire whether greater compliance might not be shown at Vienna, if Catherine, instead of a Turkish, were to take a Polish province, and were also to agree, on her part, to an annexation of Polish territory by Austria." When this scheme—put forward as one originating with Count Lynar, a Saxon diplomatist—was broached at St. Petersburg, it met with no encouragement; but subsequently the same plan took shape in the mind of the young Emperor Joseph II., and he persuaded his mother, Maria Theresa, to consent to it. Negotiations to that end were opened with the Russian court. "After the foregoing proceedings, it was easy for Russia and Prussia to come to a speedy agreement. On February 17, 1772, a treaty was signed allotting West Prussia to the King, and the Polish territories east of the Dnieper and Duna to the Empress. [See RUSSIA: Map: Growth of Russia in Europe: 1300-1796.] The case of Austria was a more difficult one. . . . The treaty of partition was not signed by the three Powers until August, 1772. [See also RUSSIA: 1768-1796.] . . . The Prussian and Austrian troops now entered Poland on every side, simultaneously with the Russians. The bands of the Confederates, which had hitherto kept the Russians on the alert, now dispersed without further attempt at resistance. . . . A Diet was convened, in order at once to legalise the cession of the provinces to the three Powers by a formal compact, and to regulate the constitutional questions which had been unsettled since the revolt of the Confederation of Bar. . . . The act of cession was unanimously passed. . . . The Liberum Veto, the anarchy of the nobles, and the impotence of the Sovereign, were continued."—H. von Sybel, *First partition of Poland* (*Fortnightly Review*, July, 1874).—"One's clear belief . . . is of two things: First, that, as everybody admits, Friedrich had no real hand in starting the notion of Partitioning Poland;—but that he grasped at it with eagerness as the one

way of saving Europe from War: Second, what has been much less noticed, that, under any other hand, it would have led Europe to War; and that to Friedrich is due the fact that it got effected without such accompaniment. [Carlyle's statement of the sharing of the Polish territory in the several partitions is incorrect. The following, from Witzleben, is more trustworthy: Russia, 8,782 German square miles; Prussia, 2,641; Austria, 2,205.] . . . Friedrich's share . . . as filling up the always dangerous gap between his Ost-Preussen and him, has, under Prussian administration, proved much the most valuable of the three; and, next to Silesia, is Friedrich's most important acquisition. September 13th, 1772, it was at last entered upon,—through such waste-weltering confusions, and on terms never yet unquestionable. Consent of Polish Diet was not had for a year more; but that is worth little record."—T. Carlyle, *History of Frederick the Great*, v. 6, bk. 21, ch. 4.—Regardless of the fact that the king was powerless, and despite the disturbances created by the "Liberum Veto" (see above: 1578-1652), and the confusion caused by the lawlessness of the nobles "early in the last half of the eighteenth century, a strong regenerating movement had begun. At first this was the work of individual men, but shortly it widened . . . to a great national movement; . . . sweeping reforms on a democratic basis were initiated, but unfortunately they came too late. . . . The regenerating movement in Poland was gaining ground when King August III died in 1763. . . . Parliament began by introducing reforms to . . . [strengthen] the Executive; to facilitate the proceedings of the House; . . . to improve the position of burgesses and peasants; to strengthen the economic condition of the country; and, finally, to increase the military power of the State. Several of these reforms were carried into effect, but the most salient never reached the Statute Book because [of the attitude of] Prussia and Russia. . . . In 1773 the so-called Commission of Education was formed, and all business concerning public education fell to it. This was the first Board of Education established in Europe. . . . In 1787 . . . the international situation was greatly changed. Turkey declared war on Russia; Austria, according to her treaty with Russia, in her turn declared war on Turkey. Profiting by this situation, Sweden broke off diplomatic relations with Russia and began hostilities. England, Holland, and Prussia were ready to back Turkey. The Poles had two roads open to them; to enter into an alliance with Russia and Austria, or to join the other Powers standing by Russia. King Frederick William II made very profitable offers to Poland, promising her to free her from the influence of Russia. On March 20, 1790, a defensive and offensive treaty was signed between Poland and Prussia, by which each Power was bound to intervene should the other be attacked."—A. Zaleski, *Poland's case for independence*, pp. 34, 36-38.

1791-1792.—Civic constitution of April 18, 1791.—Stanislavian constitution of May 3, 1791.

—Constitution overthrown by Russia.—"After the first Partition of Poland was completed in 1776, that devoted country was suffered for sixteen years to enjoy an interval of more undisturbed tranquillity than it had known for a cen-

tury. Russian armies ceased to vex it. The dispositions of other foreign powers became more favourable. . . . Attempts were not wanting to seduce him [Frederick II] into new enterprises against Poland. . . . As soon as Frederic returned to counsels worthy of himself, he became unfit for the purposes of the Empress [Catherine II of Russia] who, in 1780, refused to renew her alliance with him, and found a more suitable instrument of her designs in the restless character, and shallow understanding, of Joseph II, whose unprincipled ambition was now released from the restraint which his mother's scruples had imposed on it. . . . Other powers now adopted a policy, of which the influence was favourable to the Poles. [See GERMANY: 1791-1792.] Prussia, as she receded from Russia, became gradually connected with England, Holland, and Sweden; and her honest policy in the care of Bavaria placed her at the head of all the independent members of the Germanic Confederacy. Turkey declared war against Russia; and the Austrian Government was disturbed by the discontent and revolts which the precipitate innovations of Joseph had excited in various provinces of the monarchy. A formidable combination against the power of Russia was in process of time formed. . . . In the treaty between Prussia and the Porte, concluded at Constantinople in January, 1790, the contracting parties bound themselves to endeavour to obtain from Austria the restitution of those Polish provinces to which had been given the name of Galicia. During the progress of these auspicious changes, the Polish nation began to entertain the hope that they might at length be suffered to reform their institutions, to provide for their own quiet and safety, and to adopt that policy which might one day enable them to resume their ancient station among European nations. . . . A national spirit was slowly reviving. The nobility patiently listened to plans for the establishment of a productive revenue and a regular army; a disposition to renounce their dangerous right of electing a king made perceptible advances; and the fatal law of unanimity had been so branded as an instrument of Russia policy, that in the Diets of these ten years no nuncio was found bold enough to employ his negative. . . . In the midst of these excellent symptoms of public sense and temper, a Diet assembled at Warsaw in October 1788, from whom the restoration of the republic was hoped, and by whom it would have been accomplished, if their prudent and honest measures had not been [later] defeated by [an act of treachery]. . . . The Diet applied itself with the utmost diligence and caution to reform the State. They watched the progress of popular opinion, and proposed no reformation till the public seemed ripe for its reception." —J. Mackintosh, *Account of the partition of Poland* (*Edinburgh Review*, Nov., 1822).—"All this time the Diet was . . . labouring to frame . . . a constitution corresponding to the needs of the country—and the wishes of the nation. . . . The two questions which agitated the Chamber the most were the 'Civic Constitution' which aimed at restoring to the burgesses the franchise of which they had been . . . deprived . . . and the conversion of the Government from an electoral into an hereditary monarchy. . . . This question of the 'Civic Constitution' had been forced upon the attention of the House as early as 1780. The initiative was taken by Jan Deckert, Burgomaster of Warsaw, who induced no fewer than 141 Polish towns to send deputies to the Diet with a petition of rights. . . . and compelled an absolute monarch to comply

with their demands. . . . On December 2, 1789, 200 delegates from the Polish boroughs . . . proceeded . . . to present their petition to the King [Stanislaus II Augustus]. . . . It [demanded the] . . . restoration of the privileges enjoyed by the municipalities in 1569; personal security; the right to possess landed property; eligibility to all civil and ecclesiastical appointments; freedom from the jurisdiction of the aristocratic tribunals; and the possession of the parliamentary franchise. . . . The Burgesses departed with the comfortable conviction that Stanislaus was . . . their friend. The Diet was far less obliging. It affected to regard 'the Black Procession,' as it called the civic deputation to the King, as seditious agitators; refused to receive the Burgesses personally. . . . After a three days' debate (December 16-18) the whole question was referred to a special committee . . . and nothing more was heard of the matter for eighteen months. Finally (April 5, 1791) [there was] . . . presented to the Diet the draft of a new 'Civic Constitution,' revised and amended by the King. It was, virtually, a recapitulation, with some amplifications and improvements, of [the] . . . original petition. . . . But the Opposition . . . succeeded . . . in striking out the clause which restored to the Burgesses the right of representation in the Diet, a right they had possessed as early as the reign of King Alexander (1501-1506). As this was the vital clause of the 'Civic Constitution' the political prospects of the Burgesses now seemed hopeless indeed, when, to the general amazement, the reactionary deputy, Pan Suchorzewski, one of the two notorious parliamentary 'spouters' . . . suddenly presented to the Chamber 'a draft civic law' framed by himself. . . . The King [Stanislaus] . . . declared that he would accept with pleasure a project so much better than his own and, there and then, submitted the Suchorzewski amendment to the judgment of the Chamber, which adopted it unanimously. . . . The tidings of the passing of this memorable reform . . . speedily spread through Warsaw. On the following day [April 18, 1791] three hundred of the most eminent burgesses of the City, headed by their Burgomaster, proceeded to the Palace and petitioned for an audience. When the King appeared, the whole deputation fell at his feet and thanked him with tears of joy. . . . Nevertheless, . . . the 'Civic Constitution' had only [just] been carried through the House. . . . The . . . important question of the hereditary succession proved to be absolutely insoluble by legislative methods. It could only be settled . . . by the drastic expedient of a *coup d'etat*. . . . In the Diet itself, the party in favor of 'Hereditary Monarchy' was the more popular and patriotic; but the 'Free Election' party was the more numerous and violent. Fortunately, it had no capable leaders and therefore lacked cohesion. The King was obliged, officially, to remain neutral as the *pacta conventa* which he had signed . . . at his coronation, precluded him from having any opinion on such a fundamental question. Both parties were already under arms when, on September 26, 1790, the Marshal of the Diet moved that a 'Universal' or Manifesto, should be submitted to the local Diets, . . . which elected the deputies to the Grand Diet, on this single question: shall the Elective Monarchy of Poland be converted into a Hereditary Monarchy? . . . Stanislaus himself wound up the debate. He began by reminding the House . . . [that] he had not many more years to live, and that, after his death, the throne, in the circumstances, could not fail to become an apple of discord among those whose

DIET AT WARSAW, 1773

The democratic leader, Thaddæus Reytan, throws himself before the Diet in order to prevent the entry of Szczęsny, Potocki, Pominski and Branicki, the leaders of the Russian party (After Matejko's painting in the Vienna Court Museum)

ambition might covet so dangerous a prize. In that case the country would be plunged into civil war . . . simply because an obsolete prejudice required that all their decisions should be unanimous on the point in question. . . . On September 30, the Elector of Saxony was chosen by the Diet, suddenly, . . . but unanimously, as the fittest successor to Stanislaus. . . . Only in the distant palatinates of Volhynia and Braclaw, where reactionary influences were strongest, was there any determined opposition. . . . On December 20, 1790, the session was re-opened; but it soon became evident to the more perspicacious that the Diet was unequal to the task of reforming the Constitution. . . . The Volhynians would not hear of a radical reform of the Constitution and as, according to the fundamental laws, every constitutional question could only be decided by a unanimous vote of the Legislature, the whole business of the House soon came to a deadlock. . . . Stanislaus's own position was now very much stronger than it had been six months before. . . . As, however, experience had demonstrated the futility of the Diet's own efforts at constitution-making, they now begged the King himself to draw up a new form of Constitution suitable to the peculiar circumstances of the case. . . . He immediately set to work and presented his rough draft, written in French, on the model of the English Constitution. . . . Kollontaj at once proceeded to translate the King's French draft into excellent Polish, at the same time expanding its provisions so as to make it still more susceptible of sweeping reforms in the near future. . . . At the last moment, the conspirators were obliged to reconsider their plans. At a meeting held . . . on April 28, (1791) . . . it was agreed to carry out the *coup d'état* on the 3rd instead on the 5th of May, and to adopt a number of precautionary measures to facilitate its success. The King's nephew . . . General, Prince Joseph Poniatowski, was to surround the Palace with troops to protect the Estates from the violence of the reactionaries, while Kollontaj undertook, by means of his various agents, to secure beforehand, the burgesses of Warsaw for the revolution. . . . The Hall of Session was already full to overflowing. . . . In front of the Marshal's barrier sat Prince Joseph Poniatowski with the King's adjutant, General Golkowski. . . . [When] the King entered the Hall of Session . . . he was greeted with loud applause. . . . The deputies [were reminded] of the disasters which had already befallen the Republic, [and] . . . warned . . . that still more terrible disasters might momentarily be expected. . . . The Secretary of State for Foreign Affairs . . . read aloud the latest despatches from the Polish Ambassadors abroad. . . . From Vienna, Paris, Dresden, and the Hague came reports of Prussian intrigues aiming at a fresh partition of Poland. Still more alarming was the news from St. Petersburg. . . . Stanislaus immediately . . . declared that after what they had just heard it was obvious that any further delay in establishing a new stable Constitution must be fatal to Poland. . . . The draft of the new Constitution was then read. It was received [by] . . . Malachowski, on behalf of the Diet. . . . The Chamber supported the petition of its Marshal."—R. N. Bain, *Last king of Poland and his contemporaries*, pp. 217-231.—The new Constitution of May 3, 1791, "confirmed the rights of the Established Church, together with religious liberty, as dictated by the charity which religion inculcates and inspires. It established an hereditary monarchy in the Electoral House of Saxony; reserving to the nation

the right of choosing a new race of Kings, in case of the extinction of that family. The executive power was vested in the King, whose ministers were responsible for its exercise. The Legislature was divided into two Houses, the Senate and the House of Nuncios, with respect to whom the ancient constitutional language and forms were preserved. The necessity of unanimity [the "Liberum Veto"] was taken away, and with it, those dangerous remedies of Confederation and Confederate Diets which it had rendered necessary. Each considerable town received new rights, with a restoration of all their ancient privileges. The burgesses recovered the right of electing their own magistrates. . . . All the offices of the State, the law, the church, and the army, were thrown open to them. The larger towns were empowered to send deputies to the Diet, with a right to vote on all local and commercial subjects, and to speak on all questions whatsoever. All these deputies became noble, as did every officer of the rank of captain, and every lawyer who filled the humblest office of magistracy, and every burgess who acquired

JOSEPH PONIATOWSKI

a property in land paying £5 of yearly taxes. . . . Numerous paths to nobility were thus thrown open. Every art was employed to make the ascent easy. . . . Having thus communicated political privileges to hitherto disregarded freemen, . . . the constitution extended to all serfs the full protection of law, which before was enjoyed by those of the Royal demesnes; and it facilitated and encouraged voluntary manumission. . . . The storm which demolished this noble edifice came from abroad. . . . On the 9th of January, 1702, Catharine concluded a peace with Turkey at Jassy; and, being thus delivered from all foreign enemies, began once more to manifest intentions of interfering in the affairs of Poland. [See RUSSIA: 1768-1706.] . . . A small number of Polish nobles furnished her with that very slender pretext with which she was always content. Their chiefs were Rzewuski [Rejewuski] . . . and Felix Potocki. . . . These unnatural apostates deserted their long-suffering country at the moment when, for the first time, hope dawned on her. . . . On the 12th of May, 1702, they formed a Confederation at Targowitz. On the 18th, the Russian minister at Warsaw declared that the Empress, "called on by many distinguished Poles who had confederated

against the pretended constitution of 1791, would, in virtue of her guarantee, march an army into Poland to restore the liberties of the Republic.' [The hope, meantime, of help from Prussia, which had been pledged to Poland by a treaty of alliance in March, 1790, was speedily and cruelly annihilated.] 'Assured of the connivance of Prussia, Catharine now poured an immense army into Poland, along the whole line of frontier, from the Baltic to the neighbourhood of the Euxine. The spirit of the Polish nation was unbroken. . . . A series of brilliant actions [especially at Polonna and Dubienka] occupied the summer of 1792, in which the Polish army [under Poniatowski and Kosciuszko], alternately victorious and vanquished, gave equal proofs of unavailing gallantry. Meantime Stanislaus . . . on the 4th of July published a proclamation declaring that he would not survive his country. But, on the 2d of the same month . . . [he] declared his accession to the Con-

TADEUSZ KOSCIUSZKO

federation of Targowitz; and thus threw the legal authority of the republic into the hands of that band of conspirators. The gallant army, over whom the Diet had intrusted their unworthy King with absolute authority, were now compelled, by his treacherous orders, to lay down their arms."—J. Mackintosh, *Account of the partition of Poland* (Edinburgh Review, Nov., 1822).—See also GERMANY: 1791-1792.

1793-1796.—Second and third partitions.—Extinction of Polish independence.—"In January, 1793, a treaty was signed by which Prussia was to have Danzig and Thorn, so long desired, all that was left of Great Poland, and parts of Cujavia and Masovia—briefly the vast region known to-

day as South Prussia. The treaty gave Russia those parts of Podolia and the Ukraine not already hers, together with parts of both Volhynia and Podlesia. By the two partitions she had now acquired all of Little Russia, all of White Russia, and part of Lithuania. To force Poland to ratify these arrangements was the final step, and one of the Empress's first official acts after her return to power in Poland was to convene the Polish Diet for this purpose. The Diet met at Grodno, June 17, 1793, but its coercion proved an unexpectedly difficult task. The Russian representative, Baron von Sievers, had spent large sums of money on this election, with the result that the great majority of the deputies were ready to vote for Russia. There were, however, some honest, patriotic men in this melancholy assembly, the so-called 'Zealots,' who opposed themselves uncompromisingly to a partition or even to a discussion of 'indemnity' with Russia and Prussia. . . . The King at first took a . . . position on their side. In his opening speech he said he had acceded to the Confederation of Targowica, because in so doing he thought to assure the integrity and independence of Poland, and declared that he had 'resolved under no conditions to sign any treaty depriving the Republic of even the smallest part of its possessions.' . . . Finally, however, after four weeks of opposition to Russian violence, knowing themselves without the means of defense, and wishing to avoid useless bloodshed, the Diet by a large majority agreed to the treaty with Russia. The treaty with Prussia, whose perfidy had brought them to this pass, they absolutely refused to accept. . . . Finally, on September 23, [1793] the meeting-place of the Diet was surrounded with soldiers and cannon, a Russian general and twelve officers took seats in the Diet, and that body was informed that they were prisoners until the treaty with Prussia was passed. Having tried in vain every other means of resistance, the Diet lapsed into complete silence. For four hours the famous 'Dumb Session' continued, the silence broken only by the threats and blusterings of the Russian general. At last, near four in the morning, [of September 25] at the insistence of the impatient Russians the Marshal of the Diet put the question. It was twice repeated without response, whereupon the Marshal declared that, since silence was a sign of consent, and no one had spoken, the motion was unanimously carried! The session was then declared closed, and, still in silence, the members left the hall. . . . The Empress wished to take no chances regarding its submissiveness, and before the Diet of Grodno was dissolved she forced it to ratify a treaty with Russia. This treaty, as one of the deputies of the Diet remarked, made Poland a Russian province. This same Diet also was obliged to annul all of the acts of the Four Years' Diet, and to reenact all the evil features of the old constitution—the *liberum veto*, the elective kingship, the privileges of the *szlachta*, and the serfdom of the peasantry. . . . At first the Poles were stunned by the enormity of this latest calamity which had befallen them. . . . As all open means of protest were denied them, they resorted to conspiracy. Secret societies were formed, plots for an insurrection hatched . . . and the plotters at home were in constant correspondence with exiles abroad, particularly a group in Saxony which included Kosciuszko and the leaders of the Four Years' Diet. These patriots did their best to find support for a Polish insurrection among the states of Europe. . . . Meanwhile [the Russian] General Igelström, knowing that there were plots, but unable to discover them, resolved to disband the greater part of the Polish army, upon which the

Poles must chiefly rely in any insurrection. Despair at this move led a brigade commanded by General Madalinski to refuse when ordered to disband. Instead, they marched toward Cracow, where the citizens, encouraged by this news, rose *en masse* and expelled the Russian garrison. Kosciuszko, who had hurried into Poland upon receiving news of the rising, was proclaimed Commander-in-Chief by the nobles in Cracow, and issued a manifesto calling on all patriots to rally to his standard and to send him arms and provisions. . . . All classes rallied to Kosciuszko's standard, even the peasants coming in great numbers, armed, where they had nothing else, with their scythe-blades. The King set the example of giving all his plate and a large part of his income to the national cause, and the nobles followed his example to such an extent that the army was soon abundantly supplied. At Raslawice, Kosciuszko met and defeated the Russian detachment sent after Madalinski, and Warsaw responded to General Igelström's attempt to disarm the Polish troops there by a rising which obliged Igelström to evacuate the city (April 18 [1794]). The insurgents then set up a provisional government under the Constitution of the 3d of May, and recognized Kosciuszko as Dictator. Five days later Wilna, the capital of Lithuania, expelled its Russian garrison, other lesser towns followed its example, and soon the Russians were in full retreat to the frontier. . . . The moment of triumph was . . . brief. . . . The King of Prussia was already on his way to Poland with an army, and Catharine of Russia was collecting, for the same destination, every soldier that could be spared from south, where preparations were on foot for a great Turkish war. Catharine was determined this time to be done with Poland. . . . Against such antagonists Kosciuszko's position was hopeless from the first, but he made a splendid fight. His army was small, badly equipped, and badly disciplined. That unanimity in the cause of freedom which the nation had shown in the first weeks of the rising had given way to the old suspicions and dissensions so characteristic of the Poles and so fatal to their cause. The democratic party in the towns, disciples of the French Jacobins, who wanted to set up a Reign of Terror in Poland, the peasants who wanted to be freed from serfdom, and the nobles, conservative to the core, who felt they had already gone too far in agreeing to the provisions of the Constitution of the 3d of May, all suspected one another, and agreed only in their suspicions of Kosciuszko. The King had from the beginning been a negligible factor. Though kept under constant surveillance for fear he would try to escape to Russia, he was otherwise treated with respect, but on the understanding that he should take no part in public affairs. Kosciuszko was the real ruler of the country. The arrival of the Russian troops from the south meant a speedy end to his power and to all his hopes. Swiftly, surely, and ruthlessly the Russian general, Suvárov, cut to pieces the Polish forces who opposed his march to Warsaw. Arrived there, he demanded the surrender the city, and, being refused, the Russians captured Praga, a suburb on the right bank of the river, massacred practically all the inhabitants, and burned the town. On November 8 they entered Warsaw. . . . Kosciuszko had been wounded and taken prisoner in a last vain attempt at Maciegowice, October 10, to check the advancing Russians. After his wound was healed he was sent to St. Petersburg, where he was kept a prisoner until the death of the Empress in 1796. . . . Meanwhile Russia, Prussia, and Austria divided the remaining territories of Poland between them [Oct. 24, 1795].

Russia took in the south what remained of Volhynia and Podlesia, thus extending her boundary to the Bug; in the north Courland and Samogitia (thus giving her all the southeastern Baltic coast), and all of Lithuania east of the river Niemen. This partition, with the two earlier ones, thus restored to Russia all the territories conquered from her by Lithuania during the fourteenth and fifteenth centuries, and gave her in addition the greater part of Lithuania itself. [See RUSSIA: Map: Growth of Russian in Europe: 1300-1706.] Poland proper was divided between the German Powers. Prussia secured what remained of Podlachia and of Masovia, including the city of Warsaw, and all of Lithuania west of the Niemen—the territories which to-day make up New East Prussia and New Silesia. Austria acquired the district between the rivers Pilica, Vistula, and Bug, a region comprising all of Little Poland (the palatinates of Cracow, Sandomir, and Lublin), as well as parts of Red Russia (the Palatinate of Chelm) and Podlachia. The formal abdication of King Stanislaus on November 25, 1795, completed the process by which Poland was wiped off the map of Europe."—J. S. 1830-1832.—Rising against Russian oppressor.—Courageous struggle for independence.—Early victories and final defeat.—Barbarity of the conqueror.—Poland, like Belgium and the Romagna, had felt the invigorating influence of the Revolution of July [in France]. . . . Constantine, who had abdicated the crown of Russia in his brother's favour, was Viceroy of Poland. . . . He was residing at Warsaw when the news of the glorious days of July reached Poland. The Poles were naturally affected by the tidings of a revolution which had expelled autocracy from France. Kosciuszko—the hero of 1794—was their favourite patriot. . . . [The economic crisis which followed the Targowica venture, the second dismemberment, and the brutality of the Russian and Prussian troops, brought about a condition of affairs which was ripe for social conflagration. When the new Russian ambassador requested that the Polish army be reduced to half its size, Brigadier General Madalinski refused to submit.] Every circumstance which could justify revolt existed in Poland. The Constitution provided for the regular assembly of the Diet; the Diet had not been assembled for five years. The Constitution declared that taxes should not be imposed on the Poles without the consent of

their representatives: for fifteen years no budget had been submitted to the Diet. The Constitution provided for the personal liberty of every Pole: the Great Duke seized and imprisoned the wretched Poles at his pleasure. The Constitution had given Poland a representative government; and Constantine, in defiance of it, had played the part of an autocrat. [The immediate cause of the revolt was an order of Nicholas I to prepare a war against France.] Eighteen young men, armed to the teeth, entered the Grand Duke's palace and forced their way into his apartments. Constantine had just time to escape by a back staircase. His flight saved his life. . . . The insurrection, commenced in the Archduke's palace, soon spread. Some of the Polish regiments passed over to the insurgents. Constantine, who displayed little courage or ability, withdrew from the city; and, on the morning of the 30th of November [1830], the Poles were in complete possession of Warsaw. They persuaded Chlopicki, a general who had served with distinction under Suchet in Spain, to place himself at their head. . . . Raised to the first position in the State, his warmest counsellors urged him to attack the few thousand men whom Constantine still commanded. Chlopicki preferred negotiating with the Russians. The negotiation, of course, failed. . . . Chlopicki—his own well-intentioned effort having failed—resigned his office; and his fellow countrymen invested Radziwil with the command of their army, and placed Adam Czartoryski at the head of the Government. In the meanwhile Nicholas was steadily preparing for the contest which was before him. Diebitsch, who had brought the campaign [against Turkey] of 1829 to a victorious conclusion, was entrusted with the command of the Russian army. . . . Three great military roads converge from the east upon Warsaw. The most northerly of these enters Poland at Kovno, crosses the Narew, a tributary of the Bug, at Ostrolenka, and runs down the right bank of the first of these rivers; the central road crosses the Bug at Brzesc and proceeds almost due west upon Warsaw; the most southerly of the three enters Poland from the Austrian frontier, crosses the Vistula at Gora, and proceeds along its west bank to the capital. Diebitsch decided on advancing by all three routes on Warsaw. . . . Diebitsch, on the 20th of February, 1831, attacked the Poles; on the 25th he renewed the attack. The battle on the 20th raged round the village of Grochow; it raged on the 25th round the village of Praga. Fought with extreme obstinacy, neither side was able to claim any decided advantage. The Russians could boast that the Poles had withdrawn across the Vistula. The Poles could declare that their retreat had been conducted at leisure, and that the Russians were unable or unwilling to renew the attack. Diebitsch himself, seriously alarmed at the situation into which he had fallen, remained for a month in inaction at Grochow. Before the month was over Radziwil, who had proved unequal to the duties of his post, was superseded in the command of the Polish army by Skrzynecki. On the 30th of March, Skrzynecki crossed the Vistula at Praga, and attacked the division of the Russian army which occupied the forest of Waver, near Grochow. The attack was made in the middle of the night. The Russians were totally defeated. . . . Crippled by this disaster, Diebitsch fell back before the Polish army. Encouraged by his success, Skrzynecki pressed forward in pursuit. The great central road by which Warsaw is approached crosses the Kostczyn, a tributary of the Bug, near the little village of Iganie, about halfway between Russia and Warsaw. Eleven days

after the victory of the 30th of March the Russians were again attacked by the Poles at Iganie. The Poles won a second victory. The Russians, disheartened at a succession of reverses, scattered before the attack; and the cause of Poland seemed to have been already won by the gallantry of her children and the skill of their generals. Diebitsch, however, defeated at Grochow and Iganie, was not destroyed. . . . Foregoing his original intention of advancing by three roads on Warsaw, he determined to concentrate his right on the northern road at Ostrolenka, his left, on the direct road at Siedlice. It was open to Skrzynecki to renew the attack, where Diebitsch expected it, and throw himself on the defeated remnants of the Russian army at Siedlice. Instead of doing so he took advantage of his central situation to cross the Bug and throw himself upon the Russian right at Ostrolenka. . . . Skrzynecki had reason to hope that he might obtain a complete success before Diebitsch could by any possibility march to the rescue. He failed. . . . On the 26th of May, Skrzynecki found himself opposed to the whole Russian army. Throughout the whole of that day the Polish levies gallantly struggled for the victory. When evening came they remained masters of the field which had been the scene of the contest. A negative victory of this character, however, was not the object of the great movement upon the Russian right. The Polish general, his army weakened by heavy losses, resolved on retiring upon Warsaw. Offensive operations were over: the defensive campaign had begun. Victory with the Poles had, in fact, proved as fatal as defeat. The Russians . . . could afford to lose two men for every one whom Poland could spare. . . . It happened, too, that a more fatal enemy than even war fell upon Poland in the hour of her necessity. The cholera, which had been rapidly advancing through Russia during 1830, broke out in the Russian army in the spring of 1831. The prisoners taken at Iganie communicated the seeds of infection to the Polish troops. Both armies suffered severely from the disease; but the effects of it were much more serious to the cause of Poland than to the cause of Russia. . . . A fortnight after the battle of Ostrolenka, Diebitsch, who had advanced his head-quarters to Pultusk, succumbed to the malady. In the same week Constantine, the Viceroy of Poland, and his Polish wife, also died. . . . Diebitsch was at once succeeded in the command by Paskievitch, an officer who had gained distinction in Asia Minor. . . . On the 7th of July, Paskievitch crossed the Vistula at Plock, and threatened Warsaw from the rear. . . . Slowly and steadily he advanced against the capital. On the 6th of September he attacked the devoted city. Inch by inch the Russians made their way over the earthworks which had been constructed in its defence. On the evening of the 7th the town was at their mercy; on the 8th it capitulated. . . . On the 26th of February, 1832, Nicholas promulgated a new organic statute for the government of Poland, which he had the insolence to claim for Russia by the right of conquest of 1815. A draft of the statute reached Western Europe in the spring of 1832. About the same time stories were received of the treatment which the Russians were systematically applying to the ill-fated country. Her schools were closed; her national libraries and public collections removed; the children of the Poles were carried into Russia; their fathers were swept into the Russian army; whole families accused of participation in the rebellion were marched into the interior of the empire; columns of Poles, it was stated, could be seen on the Russian roads linked man to man by

bars of iron; and little children, unable to bear the fatigues of a long journey, were included among them; the dead bodies of those who had perished on the way could be seen on the sides of the Russian roads. The wail of their wretched mothers—'Oh, that the Czar could be drowned in our tears!'—resounded throughout Europe."—S. Walpole, *History of England*, v. 3, ch. 16.—See also *RUSIA*: 1825-1855.

1863-1869.—Last insurrection.—"In 1860 broke out the last great Polish insurrection, in all respects a very ill-advised attempt. On the 29th of November of that year, on the occasion of the 30th anniversary of the revolution of 1830, national manifestations taking a religious form, took place in the Warsaw churches. . . . On the 25th of February, 1861, on the anniversary of the battle of Grochow, the Agricultural Society of that city, presided over by Count Zamojski, held a meeting for the purpose of presenting a petition to the Emperor to grant a constitution. Although the Tsar did not concede this demand, he decreed by an ukase of the 26th of March a council of state for the kingdom, elective councils in each government, and municipal councils in Warsaw and the chief cities. Moreover, the Polish language was to be adopted in all the schools of the kingdom. . . . On the 8th of April the people appeared in crowds in front of the castle of the Viceroy, and when they refused to disperse, were fired upon by the soldiers. About 200 persons were killed in this unfortunate affair, and many more wounded. The viceroyalty of Count Lambert was not successful in conciliating the people; he was succeeded by Count Lüders, who was reactionary in his policy. An attempt was made in June, 1862, on the life of the Count in the Saxon Garden (Saksonski Sad), and he was soon afterwards recalled; his place being taken by the Grand Duke Constantine, who was chiefly guided by the Marquis Wielopolski, an unpopular but able man. Two attempts were made upon the life of the Grand Duke, the latter of which was nearly successful; the life of Wielopolski was also several times in danger. . . . On the night of Jan. 15, 1863, a secret conscription was held, and the persons considered to be most hostile to the Government were taken in their beds and forcibly enlisted. Out of a population of 180,000 the number thus seized at Warsaw was 2,000; soon after this the insurrection broke out. Its proceedings were directed by a secret committee, styled Rzad (Government). . . . The Poles fought under enormous difficulties. Most of the hands consisted of undisciplined men, unfamiliar with military tactics, and they had to contend with well-organised troops. Few of them had muskets; the generality were armed only with pikes, scythes, and sticks. . . . The bands of the insurgents were chiefly composed of priests, the smaller landowners, lower officials, and peasants who had no land, but those peasants who possessed any land refused to join. Many showed but a languid patriotism on account of the oppressive laws relating to the poorer classes, formerly in vogue in Poland, of which the tradition was still strong. The war was only guerilla fighting, in which the dense forests surrounding the

towns were of great assistance to the insurgents. The secret emissaries of the revolutionary government . . . [carried on a guerilla warfare, in the course of which] they succeeded in killing many persons who had made themselves obnoxious to the national party. . . . No quarter was given to the chiefs of the insurgents; when captured they were shot or hanged. . . . When the Grand Duke Constantine resigned the viceroyalty at Warsaw he was succeeded by Count Berg."—W. R. Morill, *Story of Poland*, ch. 12.—"The energetic General Berg [was] placed at the head of the administration, October 31st, 1863. The whole land was full of Russian soldiers. In Poland, Podolia, and the Ukraine the nobles were rendered harmless by imprisonment; an extraordinary income tax was laid on the Roman Catholic clergy; and the peasants were won by bestowing their farms on them as their own private property. In Lithuania General Muravieff waged a war of extermination against the Polish element. The insurrection was quelled at the end of the year 1863, and the Russian chancellor, Prince Alexander Gortschakoff, was able to inform the French cabinet that there was no further occasion whatever for political notes. Napoleon had endeavored to utilize this opportunity, also, to act as arbiter of Europe. But he got no father than identical notes . . . from France, England, and Austria, to which Gortschakoff replied that the rebellion would be quelled the more quickly the more energetically those powers held down the revolutionary party in their own lands, and the less they encouraged it in others."—W. Müller, *Political history of recent times*, pp. 260-270.—"In the meantime a provisional government had been set up. "Altogether about ten thousand men rallied around the revolutionary banner. . . . To deal with these ill-armed bands the government had at its disposal a well trained army of ninety thousand men under General Ramsay in Poland, sixty thousand troops in Lithuania, and forty-five thousand in Volhynia. It looked as if the rebellion would be crushed in a short while. . . . [The provisional government] now issued a manifesto in which it pronounced 'all sons of Poland free and equal citizens without distinction of creed, condition and rank.' It declared that 'land cultivated by the peasants, whether on the basis of rent-pay or service, henceforth should become their unconditional property, and compensation for it would be given to the landlords out of the general funds of the State.' The revolutionary government did its very best to supply and provision the unarmed and scattered guerrillas, who, during the month of February [1863], met the Russians in eighty bloody encounters. Meanwhile, it issued an appeal to the nations of western Europe, which was received everywhere with a genuine and heartfelt response. . . . The provisional government counted on a revolutionary outbreak in Russia. . . . It also counted on the active support of Napoleon III, particularly after Prussia . . . [had] made friendly overtures to Russia and offered her assistance in suppressing the Polish uprising. On the 14th day of February [1863] arrangements had already been completed, and the British Ambassador in Berlin was able to inform his government that a Prussian military envoy 'has concluded a military convention with the Russian Government . . . for the suppression of the insurrectionary movements which have lately taken place in Poland. . . . The Prussian railways are also to be placed at the disposal of the Russian military authorities for the transportation of troops through Prussian territory from one part of the Kingdom of Poland to another.' . . . This step of Bismarck's led to pro-

tests on the part of several governments and roused the Polish nation. The result was the transformation of the insignificant uprising into another national war against Russia. . . . Encouraged by the promises made by Napoleon III, the whole nation . . . took to arms. Indicating their solidarity with the nation, all the Poles holding office under the Russian Government . . . resigned their positions and submitted to the newly constituted Polish Government. . . . An army of thirty thousand men was soon organized and new additions were made. . . . The rich elements in the cities as well as in the country districts offered large sums of money. The nobility of Galicia and the Duchy of Posen supported the war with money, supplies and men. Lithuania rose and soon the flame of war spread over Livonia, White Russia, Volhynia, Podolia, and even in some places in Ukraine. The diplomatic intervention of the Powers in behalf of Poland . . . alienated Austria which hitherto had maintained a friendly neutrality with reference to Poland and had not interfered with the Polish activities in Galicia. . . . How Muravieff, the Hangman, proceeded in Lithuania, is too weird to describe. . . . Whole villages and towns were burned to the last beam; all activities were suspended and the gentry was ruined by confiscation and exorbitant taxes. Count Berg, the newly appointed Governor-General of Poland, followed in Muravieff's footsteps, employing inhumanly harsh measures against the country. . . . The Russian government had already been working among the peasants, . . . giving them liberal parcels of land for the mere asking. They were completely satisfied, and though not interfering with the revolutionaries to any great extent, became lukewarm to them. Fighting continued intermittently for several months . . . [and ended] in the latter half of 1864, having lasted for eighteen months. . . . After the collapse of the uprising . . . according to Russian official information, three hundred and ninety-six persons were executed and eighteen thousand six hundred and seventy-two were exiled to Siberia. Large numbers of men and women were sent to the interior of Russia and to Caucasus, Ural and other sections. Altogether about seventy thousand persons were imprisoned, and subsequently taken out of Poland and stationed in the remote regions of Russia. The government confiscated sixteen hundred and sixty large estates in Poland and seventeen hundred and ninety-four in Lithuania. A ten per cent income tax was imposed on all estates as a war indemnity. Only in 1869 was this exorbitant and ruinous tax reduced to five per cent on all incomes. Besides the land granted to the peasants, the Russian Government gave them additional forest, pasture and other privileges (known under the name of 'servitudes') which have proven to be a source of incessant irritation between the landowners and peasants, and of serious difficulty to rational economic development. The government took over all the church estates and funds, and abolished monasteries and convents. With the exception of religious instruction, all other studies in the schools were ordered to be in Russian. Russian also became the official language of the country, used exclusively in all offices of the general and local government. All traces of the former Polish autonomy were removed and the kingdom was divided into ten provinces, each with an appointed Russian military governor and all under complete control of the Governor-General at Warsaw. All the former government functionaries were deprived of their positions, and in Poland alone about fourteen thousand Poles were thrown out to care

for themselves and their families as well as they could. . . . As long as Russian rule lasted the Poles could not acquire land in two sections of the former Polish Republic. The impoverished Polish nobles who did not own any real estate were ordered to leave the country and were forcibly settled in Russia. Polish speech was prohibited in public places. Severe punishment was prescribed for teaching reading or writing outside of school buildings. Polish display signs over stores, Polish posters or advertisements of any kind came under the ban of the law. . . . The names of the cities were Russified and Russian colonization was strongly encouraged. Particularly severe limitations were imposed upon the Roman Catholic Church. . . . Meetings of priests were prohibited, as were also public prayers, processions, renovation of church buildings or displays of crosses. A very strict police control was exercised over the priests. As in Poland Roman Catholic religious orders were abolished. Thousands of Catholic communicants were forced to join Greek Orthodox churches and many Roman churches were transformed into Orthodox places of worship. Efforts were made to supplement the prayers in Polish by special prayers in the Russian tongue. . . . As a result of these Russian iniquities with reference to the Roman Catholic Church in Poland, . . . Pope Pius IX severed diplomatic relations with Russia in 1865. The Poles were removed from all government positions, from service on railways, banks and similar public institutions. The publishing of books and periodicals in . . . the Polish . . . language was made illegal."—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 487-490, 493-494, 496.

1867-1910.—Austrian Poland.—Quarrel with Ruthenians.—Suffrage.—“After her defeat in 1866 Austria lost Venetia, and ceased to be a member of the German federation. Every nationality in the Empire seized the opportunity to press its demands upon the Government. The Government was no longer strong enough to choose its own policy. It was forced to seek support from the parties whose enmity would be most dangerous. It was impossible to defy the Magyars, and in 1867 the Emperor was crowned King of Hungary. This was the opening of a new era in Galician political history. The Polish party had felt its strength and its demands continued to grow. In 1868 the Diet submitted the ‘Galician Resolution’ to the Reichsrat. It asked for full autonomy, for the appointment of a Galician minister in the Austrian State Council, and asserted the retention of the principle of election to the Reichsrat through the Diet and not by direct voting. These desires were not granted fully or immediately. Local autonomy was increased, but the ministerial appointment, on which the Poles laid great stress, was not made till 1871, and in spite of their strong protests direct voting was introduced in 1873. The Polish politicians who wrung this measure of concession from the Government were all members of the nobility. . . . The unity of class interest which was thus secured to the Polish party gave them power to carry out their programme, which was simply to rule Galicia as an aristocracy, relying for support solely on the Crown and the Government. . . . It had won some degree of autonomy for the whole race of Galician Poles. [See GALICIA: 1861-1914.] . . . The supporters of the dynasty prevailed, and the triumph gained for the Poles [was] complete power over the Ruthenes. . . . [These people had been antagonistic to Poland since long before the first partition.] There was no desire for separation

among the Ruthenes [or Little Russians] in Galicia until after the first Partition . . . [which occurred in 1772], when Illicz and Lodomeria fell to Austria. . . . In Galicia the Ruthenian nobility . . . [had] long since been Polonized, and . . . the same process was going on . . . amongst the Ruthenian clergy when the new movement interrupted it. The clergy, however, were the class amongst whom anti-Polish feeling was still strongest, and they became the leaders in transforming a movement which . . . [had] at first been purely literary, into a political force. In 1829 a group of enthusiasts for nationality (which included some young Poles) organized the circulation of books and translation in order to raise Ruthenian to the rank of a literary language. . . . After 1862 a split occurred in the Ruthenian party. By that date a Ruthenian *intelligentsia* . . . [had] arisen who represented a nationalist party desiring some form of union with Little Russians outside Galicia (i.e. in the Ukraine). This Ukrainian National Party was not fully organized, nor known by this name, until 1892, but during the previous thirty years the cleavage between it and the Old Ruthenian party had been growing wider. The difference was fundamentally one of attitude towards Austria. The Old Ruthenians, desiring a united Ruthenia, wished to keep Eastern Galicia outside Austrian politics. The Young Ruthenians, or Ukrainian nationalists, pending the full accomplishment of their wider hopes, were prepared to work for the autonomy of Eastern Galicia under Austria. Both sides, however, united in fighting for the claims of their own people against the oppression of the Poles. . . . Another of the chief causes of friction has been the dispute over the language of instruction in Lemberg University. . . . In 1907 it led to the murder of the Polish Governor Potocki by a Ruthenian student, Sycinski. In the rioting that followed a great number of Ruthenians were arrested. The effect produced in Austria by the Russian revolution of 1905 forced the Government to introduce universal suffrage throughout the Monarchy. . . . The Ruthenian hopes of at last getting equality of representation were frustrated, [for] the Poles used their power in the Reichsrat to introduce a system of voting by districts which applied only to Eastern Galicia . . . so as to give preponderance to the Poles. In spite of this inequality, however, the extension of the franchise in 1907 gave the Ruthenes more political power than they had ever possessed before. . . . In 1908 the Ukrainian National [or Young Ruthenian] Party gave new proof of their anti-Russian standpoint by abstaining from sending delegates to the Pan-Slav Congress at Prague. . . . The Germans saw that the Ukrainian movement might become a menace to Russia, and fostered it in every way they could. They supplied money for propaganda, and kept in touch with the leaders of the party in Galicia. Moreover, the large seasonal migration of Ruthenian peasants from Galicia to Prussia was used by Germany as a means of spreading discontent against the Poles. . . . The bitterness with which the Poles viewed these proceedings caused a friendly feeling to arise between them and the Old Ruthenian Party, who continued to be Russophil in sympathy. This went so far as to produce an agreement between the Old Ruthenians and the Polish Parliamentary Club with regard to the elections of 1908, with object of defeating the Ukrainian Party at the polls."—*Austrian Poland (Great Britain Foreign Office, Historical section, pp. 24-32)*.—An illustration of this "large seasonal migration" of peasants into Germany occurred in Leipzig, to which was added between 1880

and 1910, 180,000 inhabitants by the annexing process.

1872-1910.—Pan-Slavism and the Poles in Prussia.—Relations of the two nationalities.—Ruthlessness of government authority.—School strike of 1906-1907.—Boycott of Germans.—Another stimulus to the Polish cause was the rise of Pan-Slavism. This movement which sprang up in opposition to a united and all too prosperous Germanism, immediately caught the Poles and was transformed by them into a Greater Polish movement. [See PAN-SLAVISM.] . . . The growth of this idea went hand in hand with the growth of Polish culture: its bearers were not merely the nobility and clergy but the newly created middle class as well. Under the stimulus of this movement . . . in Thorn and Graudenz and Danzig and Stargard, as well as in the cities of the province of Posen, Polish newspapers arose and soon found wide circulation. After 1890 these became the leaders of the radical wing of the Greater Poland party, carrying on a restless propaganda, not only by razor edged articles of agitation, but also by the issuance of reading books on Polish history and literature and of Polish song books, and by constant appeals to the national idea. The hatred which . . . [had] been slowly growing up between Pole and German in the eastern marches for a hundred years was fanned into a bright flame in this propaganda. . . . The leadership of this movement . . . [remained] in the hands of the clergy. . . . A general Polonizing of the eastern marches seemed on the way when in 1880 Bismarck went before the Landtag with propositions for strengthening the German element. How far the process had already gone in the province of Posen was shown by figures cited in that year. In the twenty-five years preceding, the Poles had increased by two hundred thousand while the German growth was only four thousand. . . . Once thoroughly convinced of the danger, the Prussian government went vigorously to work to meet it. . . . They settled . . . peasant farmers into the districts where a massing of Poles seemed imminent. For this purpose the Royal Colonization Commission was formed, with an initial appropriation of twenty-five million dollars for the purchase of land in the provinces of Posen and West Prussia, and the settlement of Germans thereon. . . . The greater part of the land purchased came from German owners, less than 30 per cent was acquired by the Commission from Polish owners. . . . Much of this Polish land had to be bought at a high figure and . . . a part of the purchase money was used by the sellers to buy still greater tracts of land for their compatriots in the other eastern provinces. . . . In spite of the work of the Royal Commission, the Poles . . . [had acquired] more land from the Germans in the two provinces than the Commission was able to purchase from Poles. . . . Naturally the Poles opposed the work of the Commission and [tried] every device which national solidarity and religious zeal could suggest. The Pole who sold his land to a German must be prepared to face the anathema of the village priest and the boycott of his Polish neighbors. The watchful correspondent of the nearest Polish paper reported his name to be published for general execration; no neighbor would lend a hand or horse to move his effects; curses and perhaps a broken head awaited his visit to the village tavern. [See also GERMANY: 1000-1900.] . . . One necessary but unfortunate result of the colonization policy was the fanning of the hatred between Germans and Poles in the eastern marches to white heat. To this feeling another circumstance made a noteworthy contribution, the

founding in 1864 of the 'Association of the Eastern Marches,' the *Deutscher Ostmarken Verein*. The impetus for this organization came from the gathering of a number of Germans from Posen around the aged Bismarck, then living in retirement on his Pomeranian estates. Under the ring of the old Chancellor's eloquence the Association immediately began a vigorous campaign to support the German element in the East. . . . By group meetings and by its annual 'day,' held in one of the large eastern cities, it awakened enthusiasm and strengthened weak knees in the Polish districts. It published a monthly, *The Eastern Marches*, issued from time to time historical and statistical pamphlets, organized lectures, inspired newspaper articles and sought in every way to foster German culture in the 'fighting district.' Supported by this and other patriotic societies, the government received from the Landtag new weapons for fighting the Slavic advance. In 1904 the right to settle permanently in the disputed territory was made dependent on the approval of the provincial authorities, who might naturally be expected to exclude Polish invaders. The object of the law, however, so far as it related to the acquisition of land; was largely nullified by the ingenuity of the Polish 'parcellation banks,' which bought up great estates and sold them in small lots to the adjoining Polish proprietors. This move and the rising price of land were met by the 'Expropriation Law' of 1908, borrowed from the British procedure in Ireland, which authorized the condemnation of land for colonization purposes. To these measures the Poles opposed an organization which grew more solid each year. . . . Its press spread by degrees a network of agitation centres over the eastern marches and the whole Rhine-Westphalian industrial district . . . [and] to the efforts of a strong and aggressive press . . . [were] added those of the Polish clergy. . . . The Polish youth were enrolled in the Sokol ('Falconi'), athletic clubs with strongly patriotic spirit. . . . Rural workers were organized into hundreds of rural clubs. The Rolnik (associations leagued among themselves for the purchase and sale of agricultural products and for supplying the farmers with their necessities), made the Polish peasant largely independent of the German middleman. There . . . [were] also merchants' associations, [and] large landholders' associations. . . . Their deadliest weapon [was] . . . the boycott, an arm before which the Germans . . . [were] comparatively helpless, partly from a lack of organization and partly because their fighting spirit . . . [had] awakened so slowly. The Poles . . . [were] past masters in the use of the boycott, and . . . worked therewith the greatest damage to German trade and industry in the smaller towns. . . . Up to 1872 Polish and German had fought with varying success for predominance in the schools of the Polish provinces. . . . By a regulation of the Prussian Department of Education, adopted during the *Kulturkampf*, it was provided that all children capable of understanding German to a sufficient degree should receive their religious instruction in that language. In practice it came about that the children of Polish families who had been permitted to learn the catechism in the language of their fathers in the lower classes, were transferred with increasing years to religious classes in German. Constant irritation was the result, . . . the Polish clergy taking a leading part against requiring the little ones to 'learn the sacred religion in the hateful German language.' This agitation reached its climax in the fall of 1906, when . . . children in a number of schools in the Polish provinces under instruction from their par-

ents refused to answer questions on the catechism in German or to learn German hymns. Beginning directly after the long vacation in 1906, the strike was vigorously fanned by the Polish press and clergy until it involved in the provinces of Posen and West Prussia over one thousand schools, including some 60,000 scholars. The tone of the Polish press and clergy became exceedingly bitter. The Prussian officials were compared to Herod and Pharaoh; they were charged with misusing religious instruction for political purposes, the enforced instruction in German was a 'sinful desecration' of the Catholic religion. . . . The children were heralded as martyrs to faith and nation; the parents were promised the special protection of the saints for their fight against the Germanizing and Lutherizing of their children. Prayers were said for the striking boys and girls, who on more than one occasion marched directly from the school to church, where a mass was said for them. Under such urging, the youngsters left nothing to be desired in the ardor of their opposition, greeting the religious teacher with Polish songs and adjurations and strewing the roadsides with the fragments of their German catechisms. The Prussian school administration proceeded against the strike with all of the vigor which its strongly centralized system makes possible. The school regulations discourage corporal punishment; but the youngsters were 'kept back,' deprived of all privileges and threatened with loss of promotion; and when that did not avail, the temporal arm was invoked against their parents. Fines were imposed, and parents who, to save their children from threats and strenuous treatment by the teachers had kept the youngsters at home, received in some cases considerable terms in prison. As a final resort, the ministry turned to a measure which . . . on more than one occasion reduced refractory school districts in Prussia to obedience: additional teachers were appointed, whose pay fell heavily upon the taxpayers in rural and smaller urban communities. As a result of this vigorous treatment, the strike began to give way in a few months; and by the Easter holidays of 1907 was practically suppressed, leaving behind a bitter heritage of hate. . . . The community . . . [now was obliged] to support education . . . [but in] all of the states a sharp control [was] exercised by the government authorities. . . . The provincial school boards, under the chairman of the provincial president . . . [brought] all of the schools in direct dependency on the crown. . . . Under these provincial boards the elementary schools (were) regularly inspected by [a] district inspector, of whom about 30 per cent (1910) gave all of their time to school affairs. Prussia . . . [provided] a large part of the pensions and backed up the weaker communities financially in the maintenance of the schools, . . . especially in the districts of the eastern marches where that work in the Germanization of the Poles [was] of such importance."—R. H. Fife, *German empire between two wars*, pp. 245-267.

1877-1905.—Industrialization of Russian Poland.—Secret political developments.—Independent parties.—"When, in the seventies, Russia, needing additional funds to finance the war with Turkey, considerably raised the custom duties and built a high protective wall, Polish manufacturers found themselves practically without foreign competition and with enormous markets in the east. Agents of the industrial countries arrived in considerable numbers and established large factories taking advantage of the great natural resources of the country, its abundance of coal, iron, zinc and

lead and of the immense supply of relatively cheap labor. The small peasant landowners were unable to eke out enough from their farms to meet the high Russian taxes, and tens of thousands of them flocked to the cities. In a decade or two, the country's economic basis of existence swung from agriculture to industry. In 1909 over a million and a quarter tons of iron ore were extracted and about four and a half million tons were smelted. The annual production of calamine was 100,000 tons and that of coal was estimated as sufficiently large to supply all France. Poland became one of the most highly developed industrial countries of Europe with a density of population surpassed by Belgium alone. Warsaw, on account of its central geographic position, grew by leaps and bounds, and reached, including the population of its suburbs, the million mark. New cities sprang up and small towns, like Lodz, developed prodigiously. . . . Fearing lest the Polish industries supplant the Russian manufactures, the government so regulated railways tariffs that it was much cheaper to ship the same kind of goods from points in Russia to destinations in Poland, than from the same places in Poland to points in Russia. Factory regulations were made more cumbersome in Poland than in Russia and taxation higher. The purposeful undevelopment of railway facilities in Poland interfered with proper local distribution and tended . . . to thwart the development of those industries of the preceding period which had been producing exclusively for the Polish market and to specialize in exports to the Empire. This led to centralization of capital in certain industries like the textile and steel and iron, and deterred diversification of production. . . . In spite of the industrial expansion of the country, hundreds of thousands of manual workers were impelled to seek work abroad, especially in the United States, and also in Germany, whither they flocked in large numbers every spring for work in the fields. . . . Many thousands among the young Polish engineers and chemists were induced to go to Russia and many of them, attracted by the very high compensation professional service commands because of its scarcity, settled there permanently. . . . A powerful . . . Socialist Party arose and found tens of thousands of sympathizers among the intellectual elements of the cities who were attracted to the organization not only because of their sympathy with the exploited workman and their love for democracy, but also because of the fact that the more important wing of the Polish Socialist Party, known as the P.P.S., . . . inscribed in its platform the blunt demand for Poland's independence. . . . As a consequence, the break from internationalism was precipitous and popular. Only a small minority refused to follow the general current and banded together under the name of the 'Social Democratic Party of Poland and Lithuania.' The only other party which, like the socialist, stood on a basis of complete national independence, was the People's Party which . . . comprised mainly the lower elements of the urban and the rural populace. . . . The leaders of the People's Party in Russian Poland . . . distorted the movement, narrowed its scope and breadth, turned it into a jingo mould and made it subservient to Russian interests under the name of the National Democratic Party. . . . In recent years large numbers of former adherents realized that they had been misguided by the National Democratic leaders and went over to the independence organizations."—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 514-516, 518, 521.

1905-1914.—Revolutionary movement in Lithuania.—Joseph Pilsudski and the Polish legions.—“The defeat of Russia in the Japanese war was the immediate cause of revolutionary outbreaks . . . throughout the whole Empire. . . . In Lithuania the most important incident of the revolutionary period was the meeting of the first National Lithuanian Assembly. Two thousand delegates sat at Vilna, and passed resolutions demanding autonomy for the four governments of Vilna, Kovno, Grodno and Suwalki (this last lying in the Kingdom of Poland, adjoining Lithuania, and containing a solidly Lithuanian population in its northern half. They asked for a Diet at Vilna, whose members should be elected by equal, direct and secret voting, without regard to race, nationality, or religion [an] autonomous centre, with the addition of such neighbouring countries as should be drawn to her for economic, cultural, national, or historical reasons. The Assembly desired federation with Russia for the Lithuania so constituted. This . . . brought into being an organized Lithuanian National Party with a definite programme, which remained unaltered until after the Russian Revolution of 1917, when the idea of complete independence was substituted for federation. . . . The electoral Statute of 1905, granted under pressure of fear, imposed no special nationality distinctions. The franchise was based on a four-class system (land-owners, peasants, townmen and workmen), which was arranged so as to favour the rural population. Only Poles were returned at the elections held in Lithuania under this Statute, for the first Duma in 1906. The system was altered by Imperial ukase, in defiance of the Constitution at the same time that the second Duma was dissolved in June, 1907. The new franchise favoured the great land-owners, and would of course have put more power into Polish hands if it had been allowed to work in Lithuania; but there a nationality clause was introduced providing that the number of electors in each class should be in proportion to the amount of land possessed by the respective nationalities in the district. . . . The Lithuanian Nationalists got no support from any of the parties in the Duma, for none even of those progressives who favoured autonomy for Poland were disposed to grant it to Lithuania. At the third Duma the five delegates allotted to the non-Russian population of the Vilna Government were all Poles; of the five allotted to the Kovno Government one was a Pole, three were Lithuanians, and one a Jew. The Polish delegates from Lithuania made common cause in the Duma with the Polish party, although their interests were not always the same; and thereby they escaped the isolation in which the Lithuanians found themselves.”—*Russian Poland, Lithuania and White Russia (British Foreign Office, Historical section, pp. 46, 48, 49)*—“Pilsudski was born amid the insurrection of 1863. . . . Of aristocratic origin himself, his sympathies were socialistic. . . . In 1887 [he] was condemned to five years' deportation to Siberia. . . . On his return from exile in 1892 he settled at Lodz, and joined the newly-formed 'Polish Socialist Party,' the primary object of which was the emancipation of Poland from her Russian oppressors. [The strength of the party was in the workmen of the towns, but there was a large sprinkling of intelligentsia.] Pilsudski became the

leading spirit in the new movement. . . . Secret societies sprang up in every considerable village, and behind all this political activity was always the brilliant young leader Pilsudski. . . . At the outbreak of the Russo-Japanese War he conceived the idea of forming a Polish legion to help the Japanese. . . . Pilsudski was convinced that Poland would never be freed from the Russian yoke except by force. . . . He succeeded . . . in eventually carrying his point, and in 1908 the first Rifle Exercise Corps was founded in Galicia under the auspices of the Polish Socialist Party. . . . Pilsudski, meanwhile, devoted himself feverishly to the study of practical warfare and strategy. By secret visits across the border he kept up the courage of his fellow workers in Poland. . . . Later on he formed the different Polish corps into a union. . . . In the beginning of the year 1914 the prospect of a

drafted into the three foreign armies and lined upon opposite sides of the battlefield. . . . And immediately all the tragic difficulties of the Polish situation became apparent, complicated as they were by the differences in the political status of the three sections and by the multiplicity of economic and social interests and aspirations among the various classes of the people. Those of the Prussian part of Poland, exasperated by the inhuman treatment to which they have been subjected, had but one desire: to be rid as soon as possible and forever of the Prussian curse. In Russian Poland, likewise, it was the ardent desire of the people to free themselves from Russian shackles, and the vast majority hoped for a complete severance of all the bonds uniting Poland with Russia. . . . In 1912 the representatives of all the Independence parties of the Kingdom of Poland and of Galicia [had] met and formed a Temporary Committee of the Confederated Independence Parties, known by their Polish initials as K. S. S. N., charged with the definite task of mapping out a detailed plan of procedure in case of a world war, and of making military preparations for such a contingency. It was the common agreement that in the event of war between Russia and Austria, Poland was to take an active part against Russia, even if hated Germany should join Austria. [See AUSTRIA-HUNGARY: 1914-1915.] . . . It was in Galicia that military preparedness began to be organized, at first secretly and then openly. Numerous books and pamphlets were published bearing on war questions and technique. Schools were started for training Polish officers to command the Polish army in event of war with Russia, and the organizers were in close touch with the revolutionary societies of Russian Poland and Lithuania. The bulk of the army was to be composed of Russian Poles, who, it was reckoned, would be available at the outbreak of a war on account of the anticipated hasty withdrawal of the Russian armies from Poland for well known strategic reasons. This actually occurred. Because, however, of Germany's decision to throw the weight of her armies first to the west to crush the republican France, Russia was able to come back too early to make possible a considerable conscription of the Russian Poles into the Legions which came into official existence on August 16, 1914, when the Supreme National Committee, the civic counterpart of the Legions, was organized in Cracow with Professor Wladyslaw Leopold Jaworski as President and a membership of forty Galician deputies to the Parliament at Vienna and the Provincial Diet at Lemberg, representing all political parties. . . . Six days after the declaration of war Joseph Pilsudski, a Lithuanian Pole, following the command of the Revolutionary National Government which was set up in Warsaw, . . . established headquarters at Kielec in Russian Poland, where his small army was swelled to considerable proportions. . . . Meanwhile, on August 14th, Grand Duke Nicholas, Commander-in-Chief of the Russian armies, . . . issued his manifesto . . . in which he promised the unification of Poland in territory, language and religion. . . . The appeal served its purpose. The masses in Russian Poland . . . received the manifesto with almost puerile enthusiasm. It was not, however, love of Russia or faith in Russian promise, but hatred of Prussia which caused this outburst. . . . It was confidently expected that France and England would soon issue guarantees of the Russian pledges. . . . The friendly attitude of a great number of Poles toward Russia after the manifesto was caused also by the belief that the Allies would

JOSEPH PILSUDSKI

European War was already in the air. Pilsudski thought it would be confined to Russia and Austria, and that France and Germany would remain neutral. If strong enough, the Legion he was creating would be able to sell its support for the emancipation of Poland."—T. Barclay, *Garibaldi of Poland* (*English Review*, v. 30, June 1920, pp. 540-542).

1913.—Claims in eastern Galicia. See GALICIA: 1913.

1914-1917.—Attitude towards Prussia and Russia at the outbreak of the World War.—Formation of the Polish legions.—"Although Poland had no part in precipitating the gigantic world conflict which opened on the first day of August, 1914, yet, by reason of her geographic position, she became one of the greatest theatres of the war where whole nations met in a terrible death grapple. The country was devastated and plunged into a sea of blood. Scores of cities and towns, thousands of villages were ruined. . . . About two million Poles of military age were

soon overpower the Teutonic Empires."—R. Butler, *New eastern Europe*, pp. 571, 573, 575-576, 578-579.—"The misrule of Galicia during the occupation served to cool the original enthusiasm for Russia, which had been exhibited by certain elements in Poland after the publication of the Grand Duke's manifesto. When the Russian government, desirous of offsetting the international status of the Polish Legions, resolved to organize counter legions with the aid of a Polish Committee composed chiefly of National Democratic leaders, it found no response on the part of the country in spite of all the efforts of the Committee. . . . Meanwhile, the Teutonic Eastern sweep was coming on and early in August, 1915, Warsaw fell. [See *WORLD WAR: 1915: III. Eastern front: i, 3*] . . . The hopes of the Poles who . . . [had] counted on the active and forceful intervention of France and England . . . [had] been shattered by various discouraging pronouncements of eminent Frenchmen and Englishmen. The greatest blow . . . came on January 12, 1917, when in their joint reply to President Wilson's note of December 18, 1916, referring to Poland the Allies said: 'the intentions of His Majesty the Emperor of Russia regarding the Poles have been clearly indicated in the proclamation which he just addressed to his armies.'"—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 588-589.

1915.—*World War: Campaigns in Galicia*. See *WORLD WAR: 1915: III. Eastern front: g, 8*.

1915-1918.—*German occupation and government*.—*Government of von Beseler*.—*Attitude of Socialists*.—"In quick succession cities and fortresses fell [before the Germans] and by the end of the year 1915 the whole of Poland and large areas of Lithuania, Volhynia and Podolia came under the joint occupancy of the Teutonic allies, but no announcement concerning the status of Poland was forthcoming. For months not a word could be had from Vienna in response to the insistent inquiries and protests of the Supreme National Committee. Meanwhile, the whole civil administration of the conquered territory was taken over by the officials of the Central Powers, and severe requisitions were made. The Germans were particularly inconsiderate in depriving the people of their foodstuffs down to the bare bone. The Prussian Colonization Commission . . . [squeezed] the maximum amount of food, metals and coal out of Poland and . . . [organized] the economic conditions of the occupied territory. The result of their labors was disastrous for the country. They impoverished the people to the point of starvation and forced thousands of workmen to go to Germany to work in the fields and factories. At the same time the Germans granted a number of concessions to the Poles, such as the right to establish Polish schools and other educational institutions, to open the University and the Polytechnic Institute, to take over the administration of justice in the lower courts and to organize home rule for cities. They turned the administration of the Warsaw postal service over to the city authorities and left a considerable amount of leeway to the Warsaw City Council in organizing the police and public health work as well as other administrative policies. They imposed, however, a severe censorship over the press. . . . In spite of the asseverations made by Chancellor Bethmann-Hollweg that 'the Polish question must and will be solved by Germany and Austria-Hungary,' negotiations were going on between the Central Powers and the Russian government. And Poland was to constitute one of the prizes to Russia for a separate peace. While these negotiations

were being carried on, the Polish press was completely muzzled. Adverse criticism of the Tsar was not permitted and even the mere mention of the Legions was prohibited, much less advertisement for recruits. . . . These acts by Germany led to the formation of a secret military organization, in close touch with the Legions and with the avowed aim of an uprising in the event of a separate peace between the Central Empires and Russia. The conditions in the Austrian area of occupation were considerably better. The administration of the territory was entrusted to Poles and the rights of the people were recognized and respected. The requisitions were not as heavy. In Galicia, however, after the retreat of the Russians many of the old home-rule liberties were temporarily suspended and an Austrian was appointed Governor General of the Province. Since 1866 this was the first appointment of anyone but a Pole to the position. . . . While efforts were being made to secure for Poland the desired political status, the immediate economic, social and educational needs of the country were not neglected. Citizens' committees sprang up all over the land to organize self-help and relief measures, and with the scanty means at their disposal they accomplished marvelous results. . . . Pilsudski's resignation of his position as Brigadier General of the Legions in the Autumn of 1916, probably more than anything else, was responsible for the recognition of Poland's independence on the part of the Central Powers. Seeing that all the negotiations of the Supreme National Committee and other political organizations were powerless to secure this recognition, he determined to force the issue. . . . As a counterpart of Pilsudski's resignation came the resignation of the powerful Socialist deputy, Ignace Daszynski, from the Polish Parliamentary Club at Vienna. It was a dramatic way of serving notice on the governments of the Central Powers that the Polish people had ceased to believe in the sincerity of the indefinite promises. . . . It served its purpose. The two governments became more willing to negotiate. . . . As a result of the negotiations came the manifesto of November 5th read in the name of the two emperors by the military representatives at Warsaw and Lublin, . . . that they 'have resolved to form of these territories an independent State with an hereditary monarch and a constitutional government, the exact frontiers of [which] will be outlined later. . . . The allied monarchs express the confident hope that Polish wishes for the evolution of a Polish State and for the national development of a Polish kingdom will now be fulfilled, taking due consideration of the general political conditions prevailing in Europe, and of the welfare and the safety of their own countries and nations.' . . . The proclamation was received with great enthusiasm in Poland but it failed to include certain of the points insisted upon by the Poles. . . . The first few weeks following the proclamation justified the existing apprehensions. There was considerable open opposition to it in many quarters in Germany. Nothing was done about the appointment of a Regent and no immediate plans were laid for formation of a State Council and the drafting of a constitution. Subsequently, when a plan was presented on the part of the German government for the organization of the State Council and for raising an army, many of its features were promptly disapproved by the Poles. . . . Evidently no agreement could be reached between Berlin and Vienna and, as a result, no Regent was appointed. The proposal that the Council of State be presided over during the course of the war by the German Governor Gen-

eral, . . . [had to be] withdrawn in the face of the unanimous opposition which arose. Another serious clash came over the question of the organization of the army. The Central Powers proposed that recruiting stations be set up immediately all over Poland to raise an army. Pilsudski and the majority of the political leaders of the country objected to such a procedure, pointing out that Poland alone . . . through a properly and legally chosen Diet . . . [could] decide this question. The Polish demands in this as well as in other matters, were finally granted by the Central Powers. A Polish Provisional Regent, known as the Marshal of the Crown, was appointed in the person of Waclaw Niemoyowski, a grandson of Bonawentura Niemoyowski, the last president of the Polish government of 1831. This choice was made to emphasize the illegality of the annexation of the Congressional Kingdom by Russia in 1831 and to recognize the status of Poland as it existed from 1815 to 1831 by virtue of the Treaty of Vienna. Pending the convocation of the Diet, a Council of State was organized, composed of twenty-five representatives from all parts of the country, [with] . . . Germany and Austria each . . . [having] ex-officio representatives in the Council. On January 15, 1917, the Council met for the first time and adopted rules and by-laws. . . . The Council issued an appeal to the nation, in which it promised to arrange for a convocation of a legislative assembly in the near future, to prepare a draft of a constitution 'based on the principle of civic equality of all citizens and adapted to modern needs, to establish a strong government and to organize the finances of the State.' . . . By a decree of November 26, 1916, the Central Powers placed credits at the service of the State Council and gave full authority to the Council to raise funds by either taxation or loans. The Polish Legions, which were released by the Austrian Emperor from their former oath of allegiance, swore fealty to the Provisional Polish Government and became the nucleus of the Polish army. They . . . [were] stationed in the various cities to replace the troops of the Central Empires, which had hitherto garrisoned the country. Similarly, all political, civic and religious bodies in Poland pledged themselves to support the Provisional Government. . . . Following an official Russian declaration March 30, 1917, in favor of Polish independence, the Polish deputies in the Duma resigned, recognizing that they ceased to represent districts forming a part of the Russian Empire."—E. H. Lewinski-Corwin, *Political history of Poland*, pp. 591-593, 601, 603, 605, 607, 600.—"The German Governor, General von Beseler, was an enlightened and agreeable personality with many Polish sympathies; and the mailed hand of the Occupation was for long hidden in a velvet glove. . . . [Under his rule] the powers of the Council of State were fairly extensive, perhaps as extensive as they could be in a country under military occupation. Education and Justice were handed over to the . . . [Council] practically without reserve; and for the first time for many years the native tongue was again heard in the schools and in the courts of law. Local representative bodies were called into being in the towns and in the country; and in Warsaw the municipality received control of all the public services, including police, prisons, posts (municipal), public sanitation, and hygiene. In certain towns the German military authorities reserved to themselves the control of this last department, on the ground that the conditions found on their entry were prejudicial to the health of the troops. . . . Of the

purely civil branches of the administration, only the railways and the posts remained wholly in the hands of the Occupying Powers. A member of the Council of State was deputed to act as Finance Minister; but the Germans in handing over the finances made the reservation, . . . 'except in so far as the costs of the Occupation are concerned.' Similarly, a Minister of Political Affairs was appointed, but he was permitted to hold official relations only with the Central Powers. . . . Early in February 1917 the Council of State decided against conscription. The outbreak of the Russian Revolution a month later still further weakened the chances of a Polish Army. . . . The subsequent collapse of the Russian armies signified the end of the common menace which had held the parties in Warsaw together. . . . Some of the Socialist legionaries refused to take a new oath of allegiance. Various arrests were made by the German authorities, among the arrested being Pilsudski."—R. Butler, *New eastern Europe*, pp. 113-117.—"On Armistice Day [Nov. 11, 1919], Pilsudski, released from his Magdeburg prison, assumed supreme power. Within three months of Armistice Day a Constituent Assembly composed of delegates elected from all parts of Poland began its session. A provisional cabinet, resting upon this Constituent Assembly, and a Chief of State, existing prior to, but confirmed by, the Assembly, were the repositories of Executive authority until a constitution could be framed and adopted. This form of pre-constitutional government served Poland from 1919 to 1922."—W. J. Kelley, *Poland entering upon normal parliamentary life (Poland, July, 1923)*.

1918.—Freedom from Russia.—Independence.—Fall of Council of Regency.—Pilsudski's government.—Affairs in Poland during the year 1918 were extremely complicated. In September, 1917, a Regency Council had been appointed to govern the new semi-independent Polish state which had been set up by the Central Powers, and a cabinet and diet established. The Central Powers, however, did not propose to include all of the old kingdom in the new state. Prussian Poland was to be retained by Prussia, and although Galicia might have been included, by the treaty with Ukraine the district of Kholm was assigned to that state. Protests from Poland on this subject, induced Germany in April 1918 to declare their intention of revising the Ukrainian Treaty so as to give part of Kholm to Poland. Russian Poland was certain to be included. The Petrograd provisional government has already (in 1917) addressed the Poles in the following words: "The Russian nation, which has shaken off its yoke, recognizes also the absolute right of the brother nation of Poles to decide its own fate by the exercise of its own free will. . . . The Polish nation, liberated and unified, will settle for itself the nature of its own government, expressing its will by means of a Constituent Assembly convoked on the basis of universal suffrage in the capitol of Poland." At the beginning of November, the breakdown of the Central Powers gave the Poles the opportunity of seizing the independence which had been acknowledged by the Allies in 1916. A Polish People's Republic was proclaimed in Cracow on November 6. The freedom given by the armistice (see also EUROPE: Modern: New balance of powers) was

immediately availed of to invade the districts which the Poles believed to be theirs of right. Western Galicia was seized, but the advance into Eastern Galicia was vigorously opposed by the Ukrainians. "Left to itself, the first act of the Regency was to demand the liberation of General Joseph Pilsudski, who had been incarcerated at Magdeburg since July, 1917. In this demand the Council, which had failed to gain the confidence of the people, was actuated by the double desire to recover popularity and to preserve its authority, already menaced by the foundation of a socialist Government at Lublin at the instance of M. Daszynski. The Germans . . . were quite ready to return Pilsudski to Poland. On his arrival the leaders of the National Democratic Party offered to join him in forming a Coalition Government. But he repelled these advances on the excuse that he must wait to ascertain the will of the people. . . . A few days later, however, General Pilsudski accepted the supreme power from the hands of the Regency Council, which then realized that its dissolution was inevitable. His first attempt to form a Cabinet, with M. Daszynski recalled from Lublin, failed owing to the hostility of the Poznanians, who refused to join a purely Socialist combination. But though they persisted in their refusal, a provisional cabinet was formed under M. Moraczewski. After passing an electoral law granting universal suffrage and a decree limiting the working day to eight hours, its manifest incapacity combined with the scarcity of food began to arouse murmurs of discontent. General Pilsudski, fearing that in the absence of all organized government this discontent might develop into anarchy, assented to the proposal pressed upon him by the National Democrats that M. Paderewski . . . should be offered the premiership of a new Ministry. In return for this concession it was agreed that Pilsudski himself should be elected to the office of Chief of the State by a unanimous vote of all parties in the Diet. So far Poland was free only in name. The German forces in Poznan, civil as well as military, were animated by a very different spirit from that of the invaders in the Congress Kingdom. Their expulsion by [the] rising of the whole Polish population in the Grand-Duchy did not take place till the end of 1918. About the same time the Ruthenians, or as they are called in Western Europe the Ukrainians . . . commenced an offensive against the Poles in Galicia. . . . It was not, however, until the end of 1918 that Polish troops had cleared the country of its enemies and occupied the principal towns. Meanwhile M. Paderewski had not fulfilled the hopes born at the time of his venture into the quicksand of political life."—R. Devereux, *Poland reborn*, pp. 57-59.—"Pilsudski's government publicly claimed Vilna, the capital of Lithuania, and some districts of White Russia. The Lithuanians and White Russians called upon the Bolsheviks of Russia to support them against the aggression of Poland. . . . [One of Pilsudski's first acts, was to arrest the ring leaders of the Bolshevik movement.] The arrival of Paderewski [who had been one of the leading exiles in Paris, who had set up the Polish National Committee] in Poland, in the last days of 1918, caused a crisis between the conservative and radical elements in the country. Paderewski was one of the conservative leaders who was in strong opposition to the dictatorship of the radical Pilsudski. The former even made an effort to overthrow Pilsudski's government, but failed."—I. D. Levine, *Resurrected nations*, pp. 128, 129-130.—"The city itself [Danzig] . . . is overwhelmingly German (over 90%), and so is the

small district surrounding it. On the other hand, economically and geographically, Danzig belongs to Poland. . . . [It had been supremely prosperous during the best days of its union with Poland, but had decayed and stagnated under Prussian rule.] The city derives its importance almost wholly from the fact that it is the natural port of the Vistula valley. . . . Poland is essentially the valley of the Vistula. That river has always been the main artery of the country's economic life, and scarcely any other European nation has its settlements concentrated in one river valley in like degree. The Vistula is a magnificent river system, a basin of 60,000 square miles with 3,100 miles of navigable streams, and a possibility of opening good and easy connections with the Dnieper, the Dniester, and the Niemen—i. e., with half of eastern Europe. But the utilization and proper development of this unique system of transcontinental waterways by Poland depends on her control of the great port at the mouth of the Vistula. . . . [According to the arrangement, Danzig and its territory were entirely separated from Germany and organized as a free city under the protection of the League of Nations. (See below: 1922.) Posen, part of West Prussia and the Danzig territory were the only regions which were definitely taken from Germany by the Peace Treaty and added to Poland. In three other territories, however, plebiscites were ordered to be held to determine whether the inhabitants desired to remain with Germany, or to be united to Poland.] The first of these plebiscite areas was the Marienwerder district on the right bank of the Vistula in the northeastern corner of West Prussia . . . [a] small territory . . . of much importance to Poland. . . . [In German hands, however, it might menace the right bank of the Vistula, and moreover] . . . the most direct and convenient railway from Danzig to Warsaw runs across this territory. . . . [Another plebiscite zone was the East Prussian province of Mazuria, in which there is a large Polish speaking majority.] To sum up, by the terms of the treaty, Germany definitely lost about 17,500 square miles of territory and about 2,000,000 subjects, . . . [exclusive of the losses imposed by the results of the plebiscites.]"—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, pp. 170-186.

1919.—Paderewski made premier.—Recognition of provisional government by Allied powers.—Dispute with Lithuania over Vilna.—The difficult political situation which existed in

Poland, at the close of 1918, was complicated by the existence not only of two governments within the country (see above: 1918) but also by the Polish National Council which had been established in Paris since 1916, and had been recognized by the Allied powers. This council, of which Ignace Paderewski was the most prominent member, was not exactly in accord with the Pilsudski government in Warsaw. But this state of affairs could not continue. In order to end it Paderewski went to Poland, Pilsudski sent Dr. Casimir Dluski at the head of a mission to the Polish organization there to Paris and an agreement was reached in January, 1919. Under this agreement Pilsudski retained office as provisional president, the National Council was increased to

IGNACE JAN PADEREWSKI

twenty-four, including ten from Warsaw, and the labor government which Pilsudski had formed under Moraczewski gave way to a coalition ministry under Paderewski, in which he held the portfolio of foreign affairs himself, and retained several of Moraczewski's old ministers, notably in the departments of finance, the interior and war. The economic situation was at this time as bad as possible. The country was in the grip of famine; the treasury might be said to have been non-existent; the railway systems, which had never been coordinated, were completely disrupted by war, and the government was faced by the probability of invasion by Russia over the tempting eastern frontiers which were left open by the German evacuation. The first steps taken to find a way out of this maze of trouble were the organization of an established government as stated above. This was followed by the election of a

constituent assembly on February 10, in which the ministerial party was upheld by a clear majority of over 300. The government was thereupon accorded recognition by the Allied powers, on February 21. The United States had already, on January 20, sent a message to Paderewski, which amounted to recognition. During this time Dmowski, who had been approved by the Pilsudski government, was chief delegate for Poland at the Peace conference. Later on, Paderewski went back to lay the claims of Poland before the conference, and in July he returned to Warsaw to lay the treaties before parliament. (See below: 1919 [June-August]). Strenuous objection was made to the plebiscites, the Minority Treaty, and the recognition of Danzig as a free city; but in spite of this the treaties were ratified on August 1 by a majority of 285 out of 326. Constant disputes with Czecho-Slovakia over the question of Austrian Silesia gave rise during the year to an acute conflict between the governments of Prague and Warsaw (see below: 1919-1920). The result was an estrangement between the two nations, which gravely endangered the political development of the newly constituted states of central and eastern Europe. The Poles claimed the frontier of 1772 as well as Silesia; the Czechs insisted upon the possession of the railway which runs from Oderberg through Teschen into Slovakia, and also the coal fields between Oderberg and Karvin. During the year, Pilsudski had also to lead his armies against the Ukrainians who disputed possession of territory in Galicia. (See UKRAINE: 1914-1921; 1919.) At the same time a much more serious war was waged with the Bolsheviki, who had entered the east almost on the heels of the German troops. The Russians accused the Poles of commencing this war in order to satisfy imperialistic tendencies. The Poles pointed to the financial and industrial state of the country and argued that they were in no position to commence an aggressive war without great provocation. The internal situation in the beginning of 1919 was extremely serious. The danger of Bolshevism grew daily. The Social Democratic party, while ostensibly hostile to Bolshevism, in fact hampered every effort to introduce order, hoping thus to create a situation which would make them appear in the eyes of the people as Poland's only salvation. But the Socialists had their followers only in towns and large industrial centres, and formed a comparatively small part of the population. The bulk of the population of Poland, which is an agricultural country, still remains the "chlop"—the poor, oppressed peasant class, which gained nothing by the new order of things, and which in consequence was very easily accessible to Bolshevism agitation. The fact also remains that, so far as literacy, education and the general view of life are concerned, the Polish peasant is made of the same stuff as the Russian "muzhik," on whom the Bolshevism idea worked so easily. The country was full of Bolshevism agents coming from Russia and Germany, who turned their attention from the towns to the peasants. The peasants refused to surrender foodstuffs to the troops sent to requisition them, and manifested a growing opposition to conscription and to the army. They demanded land, which the landed gentry refused to give, and threatened not merely not to work land but to prevent the noble proprietors from working it with the help of others. The Socialists were without practical influence among these people; the government lost ground steadily and, to save the situation declared a

state of siege all over Poland, hoping thus to get the work done in the fields, provide the towns with food, help on conscription, and rid the country of Bolshevik agitators. The peasant was the most tragical disappointment for M. Paderewski, who had declared that the "chlop" was the surest foundation of the Polish state, but who a few days later was forced to sign a decree for a three months' state of siege. The Bolshevik danger appeared more serious because of the army of unemployed. And while the government could not meet the enormous expense of maintaining this great army the farmers could not get labourers for field work, and industry suffered from lack of workmen. People prefer to take the "unemployment allowance" paid by the government rather than work for wages which were sometimes lower than this allowance.—Based on *Polish political currents (New Europe, May 8, 1919)*.—In 1919 a long continued dispute began with Lithuania over Vilna. "The dispute arose out of a declaration of the Supreme Council on December 8, 1919, provisionally establishing the frontier between Northeastern Poland and Lithuania. After the armistice with Germany, the Lithuanian government had established itself at Kovno. The Russian Bolsheviki, however, still retained and occupied Vilna. From the former Lithuanian capital the Bolsheviki were later driven out by the warring Poles."—*Poland and the Vilna settlement (New York Times Current History, Oct., 1921)*.—See also LITHUANIA: 1919-1920.

1919 (June).—Settlement of boundaries by the Treaty of Versailles.—Danzig and the plebiscite regions.—"The Allied statesmen met at Paris already committed to the programme of the restoration of a 'united and independent Poland.' President Wilson in the Fourteen Points had laid down the principle that 'an independent Polish state should be created which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea and whose political and economic independence and territorial integrity should be guaranteed by international covenant.' The prime ministers of Great Britain, France and Italy, in their declaration of June 3, 1918, had also affirmed that 'the creation of a united and independent Polish state with free access to the sea constitutes one of the conditions of a solid and just peace and of the rule of right in Europe.' . . . and the outcome was a settlement of the Polish territorial problems. But this settlement was necessarily incomplete because the conference could make definite arrangements only with regard to Prussian and Austrian Poland.] . . . It was possible to assume that Russia had renounced all claims to Warsaw and to the so-called Congress Kingdom, because the government of Prince Lvov, in March, 1917, had spontaneously accepted the principle of 'an independent Polish state including all regions with an indisputable Polish ethnic majority.' But . . . it [was] impossible down to the present [1920] to assign definite limits to this state on the east, in those debatable regions where the ethnographic situation and the wishes of the population [were] so doubtful, and where Polish, Russian, Lithuanian, and Ukrainian claims all [came] into collision. Hence Poland's . . . boundaries were fixed [by the conference] only on the west, northwest, and south. . . . The treaty incorporates a good many Germans into the new Polish state. In the provinces ceded outright to Poland, the ratio is about 1,000,000 Germans to 1,800,000 Poles. . . . A large

number of these Germans have, so to speak, no right to be there. . . . In addition, the host of government functionaries and servants in these provinces, the administrative, judicial, financial, railroad, telegraph, postal, forest, school officials and employees, have been recruited almost exclusively from the Germans, and very largely from Germans brought in from the west by the promise of higher pay and other special privileges. . . . No large compact blocks of German population . . . [were] annexed to Poland. No territories . . . [were] awarded to Poland simply on the basis of historic rights. What the Peace Conference attempted to do was to disentangle two inextricably interlocked races, as far as that could be done; to define what might be considered . . . the area of Polish majorities; and then to make the political boundary coincide with this ethnographic one, as far as was practicable. Since this ethnographic frontier presents an extraordinarily jagged and tortuous contour, some deviations from it had to be made in order to obtain a relatively strait and simple boundary; and . . . to avoid cutting railway lines too frequently. . . . But what was most characteristic of the desire to be completely fair to the Germans, is the fact that two large areas of incontestably Polish majority were not transferred to Poland, as they might well have been according to the Fourteen Points. Since there was a possibility of doubt as to the wishes of their populations, their fate . . . [was] left to popular vote. . . . Five sixths of the old province of the Posen, . . . the cradle of the Polish race and of the Polish state, [was ceded to Poland]. The province belonged to Poland uninterruptedly down to the Second Partition in 1793; it has always retained a strong Polish majority; and that majority has furnished the most conclusive proof of its Polish patriotism and its detestation of German rule. . . . In West Prussia the problem was much more simple. . . . West Prussia falls into three zones. . . . The central zone and the southeast are predominantly Polish. There thus exists to the west of the Vistula an unbroken corridor of Polish-speaking territory extended through to the Baltic. In the collision . . . between the two streams of colonization, the south to north movement . . . [was] the stronger. The Germans . . . [had] not succeeded in bridging the gap between the old German lands of the west and the isolated German colony in East Prussia. This is the first and principal reason for the establishment of the much discussed Polish *couloir* to the Baltic. . . . [The question of this Polish corridor is closely bound up with the thorny problem of Danzig.] Historically Danzig has in the main passed through the same vicissitudes as West Prussia, of which it is the capital. It is an old Polish city, transformed into a German-speaking one since the fourteenth century. Nevertheless, German Danzig distinguished itself in the past by its loyalty to Poland. It took the lead and fought gallantly to effect the reunion of West Prussia with Poland in the fifteenth century. During the ensuing period of Polish rule, it was prosperous and contented. The whole seaborne trade of Poland passed through its hands; it ranked as well nigh the first port of the Baltic; and the wide measure of autonomy which Poland allowed it drew Danzig to her by affection as well as by interest. It was not without staunch resistance that the city surrendered to the Prussian usurpation in 1793, and as late as 1813 the City Council besought the Powers of Europe to reunite Danzig to Poland and not to incorporate

it with Prussia. . . . The ancestors of these Poles were called into the country in the thirteenth and fourteenth centuries by the Teutonic Knights to replace the original Prussian population, which the Knights had largely exterminated. The Mazurian Poles have remained politically separated from the rest of their nation for six hundred years; since the sixteenth century they have become Protestants, while almost all the other Poles are Catholics; and because of these facts and also because of their economic, intellectual, and spiritual dependence on their German landlords, teachers, and pastors, the Mazurian Poles have long been completely estranged from the rest of the Polish nation. They have on the whole shown no very marked signs of Polish national consciousness, and there was room to doubt whether they desired reunion with Poland. Hence, a plebiscite was clearly in order here. The third plebiscite area . . . [was] in Upper Silesia, in this case there was an indisputable Polish-speaking majority; 65.6% of Poles for the region as a whole, and in many districts 80 or even 90. So strong was the Polish claim that the original decision of the Peace Conference was to award Upper Silesia to Poland outright, . . . [but] as a result of the vehement objections raised by the German delegation at Versailles, this decision was ultimately modified. The territory in question is extraordinarily rich in minerals and important industrially. In the period just before the outbreak of the War, its coal production was 44,000,000 tons a year—23% of Germany's total output of coal. It also furnished 34% of her production of lead ore; and 81% of her zinc."—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*.—See also PARIS, CONFERENCE OF: Outline of work; Course of discussion; VERSAILLES, TREATY OF: Conditions of peace; Part III: Section VIII; Part III: Section XI.

1919 (June 28).—Minority Treaty.—Another important treaty was signed on the same day that the German delegates signed the treaty ending the great World War. This was the treaty with Poland, the terms of which follow:

The United States of America, the British Empire, France, Italy, and Japan, the principal allied and associated powers, on the one hand; and Poland, on the other hand: . . .

Chapter I

Article 1.—Poland undertakes that the stipulations contained in Article 2 and 8 of this chapter shall be recognized as fundamental law, and that no law, regulation, or official action shall conflict or interfere with these stipulations, nor shall any law, regulation, or official action prevail over them.

Art. 2.—Poland undertakes to assure full and complete protection to life and liberty to all inhabitants of Poland, without distinction of birth, nationality, language, race, or religion. All inhabitants of Poland shall be entitled to the free exercise, whether public or private, of any creed, religion, or belief whose practices are not inconsistent with public order or public morals.

Art. 3.—Poland admits and declares to be Polish nationals *ipso facto* Hungarian or Russian nationals habitually resident, at the date of the coming into force of the present treaty, in territory which is or may be recognized as forming part of Poland under the treaties with Germany,

Austria, Hungary, or Russia, respectively, but subject to any provisions in the said treaties relating to persons who became resident in such territory after a specified date. Nevertheless, the persons referred to above who are over 12 years of age will be entitled under the conditions contained in the said treaties to opt for any other nationality which may be open to them. Option by a husband will cover his wife and option by parents will cover their children under 18 years of age. Persons who have exercised the above right to option must, except where it is otherwise provided in the treaty of peace with Germany, transfer within the succeeding twelve months their place of residence to the State for which they have opted. They will be entitled to retain their immovable property in Polish territory. They may carry with them their movable property of every description. No export duties may be imposed upon them in connection with the removal of such property.

Art. 4.—Poland admits and declares to be Polish nationals, *ipso facto* and without the requirement of any formality, persons of German, Austrian, Hungarian, or Russian nationality who were born in the said territory of parents habitually resident there, even if at the date of the coming into force of the present treaty they are not themselves habitually resident there. Nevertheless, within two years after the coming into force of the present treaty, these persons may make a declaration before the competent Polish authorities in the country in which they are resident, stating that they abandon Polish nationality, and they will then cease to be considered as Polish nationals. In this connection a declaration by a husband will cover his wife, and a declaration by parents will cover their children under 18 years of age.

Art. 5.—Poland undertakes to put no hindrance in the way of the exercise of the right which the persons concerned have, under the treaties concluded or to be concluded by the allied and associated powers with Germany, Austria, Hungary, or Russia, to choose whether or not they will acquire Polish nationality.

Art. 6.—All persons born in Polish territory who are not born nationals of another State shall *ipso facto* become Polish nationals.

Art. 7.—All Polish nationals shall be equal before the law and shall enjoy the same civil and political rights without distinction as to race, language, or religion. Differences of religion, creed, or confession shall not prejudice any Polish national in matters relating to the enjoyment of civil or political rights, as for admission to public employments, functions, and honors, or the exercise of professions and industries. No restriction shall be imposed on the free use by any Polish national of any language in private intercourse, in commerce, in religion, in the press, or in publications of any kind, or at public meetings. Notwithstanding any establishment by the Polish Government of an official language, adequate facilities shall be given to Polish nationals of non-Polish speech for the use of their language, either orally or in writing, before the courts.

Art. 8.—Polish nationals who belong to racial, religious, or linguistic minorities shall enjoy the same treatment and security in law and in fact as the Polish nationals. In particular they shall have an equal right to establish, manage, and control at their own expense charitable, religious, and social institutions, schools and other educational establishments, with the right to use their

own language and to exercise their religion freely therein.

Art. 9.—Poland will provide, in the public educational system in towns and districts in which a considerable proportion of Polish nationals of other than Polish speech are residents, adequate facilities for insuring that in the primary schools instruction shall be given to the children of such Polish nationals through the medium of their own language. This provision shall not prevent the Polish Government from making the teaching of the Polish language obligatory in the said schools.

In towns and districts where there is a considerable proportion of Polish nationals belonging to racial, religious, or linguistic minorities, these minorities shall be assured an equitable share in the enjoyment and application of the sums which may be provided out of public funds under the State, municipal, or other budgets, for educational, religious, or charitable purposes. The provisions of this article shall apply to Polish citizens of German speech only in that part of Poland which was German territory on Aug. 1, 1914.

Art. 10.—Educational committees appointed locally by the Jewish communities of Poland will, subject to the general control of the State, provide for the distribution of the proportional share of public funds allocated to Jewish schools in accordance with Article 9, and for the organization and management of these schools. The provision of Article 9 concerning the use of language in schools shall apply to these schools.

Art. 11.—Jews shall not be compelled to perform any act which constitutes a violation of their Sabbath, nor shall be placed under any disability by reason of their refusal to attend courts of law or to perform any legal business on their Sabbath. This provision, however, shall not exempt Jews from such obligations as shall be imposed upon all other Polish citizens for the necessary purposes of military service, national defense, or the preservation of public order. Poland declares her intention to refrain from ordering or permitting elections, whether general or local, to be held on a Saturday, nor will registration for electoral or other purposes be compelled to be performed on a Saturday.

Art. 12.—Poland agrees that the stipulations in the foregoing articles, so far as they affect persons belonging to racial, religious, or linguistic minorities, constitute obligations of international concern, and shall be placed under the guarantee of the League of Nations. They shall not be modified without the assent of a majority of the Council of the League of Nations. The United States, the British Empire, France, Italy, and Japan hereby agree not to withhold their assent from any modification in these articles which is in due form assented to by a majority of the Council of the League of Nations. Poland agrees that any member of the Council of the League of Nations shall have the right to bring to the attention of the Council any infraction of any of these obligations, and that the council may thereupon take such action and give such direction as it may deem proper and effective in the circumstances. Poland further agrees that any difference of opinion as to question of law or fact arising out of these articles, between the Polish Government and any of the principal allied and associated powers, or any other power a member of the Council of the League of Nations, shall be held to be a dispute of an international character under Article 14 of the Covenant of the League

of Nations. The Polish Government hereby consents that any such dispute shall, if the other party thereof demands, be referred to the Permanent Court of International Justice. The decision of the Permanent Court shall be final and shall have the same force and effect as an award under Article 13 of the covenant.

Chapter II

Art. 13.—Each of the principal allied and associated powers, on the one part, and Poland on the other shall be at liberty to appoint diplomatic representatives to reside in their respective capitals, as well as Consul Generals, Consuls, Vice Consuls, and Consular Agents, to reside in the towns and ports of their respective territories. Consul Generals, Consuls, Vice Consuls, and Consular Agents, however, shall not enter upon their duties until they have been admitted in the usual manner by the Government in the territory of which they are stationed. Consul Generals, Consuls, Vice Consuls, and Consular Agents shall enjoy all the facilities, privileges, exemptions, and immunities of every kind which are or shall be granted to Consular offices of the most favored nation.

Art. 14.—Pending the establishment of a permanent tariff by the Polish Government, goods originating in the allied and associated States shall not be subject to any higher duties on importation into Poland than the most favorable rates of duty applicable to goods of the same kind under either the German, Austro-Hungarian, or Russian customs tariffs on July 1, 1914.

Art. 15.—Poland undertakes to make no treaty, convention, or arrangement, and to take no other action, which will prevent her from joining in any general agreement for the equitable treatment of the commerce of other States that may be concluded under the auspices of the League of Nations within five years from the coming into force of the present treaty. Poland also undertakes to extend to all the allied and associated States any favors or privileges in customs matters which they may grant during the same period of five years to any State with which, since August, 1914, the Allies have been at war, or to any State which may have concluded with Austria special customs arrangements as provided for in the treaty of peace to be concluded with Austria.

Art. 16.—Pending the conclusion of the general agreement referred to above, Poland undertakes to treat on the same footing as national vessels, or vessels of the most favored nation, the vessels of all the allied and associated States which accord similar treatment to Polish vessels. By way of exception from this provision, the right of Poland or any other allied or associated State to confine her maritime coasting trade to national vessels is expressly reserved.

Art. 17.—Pending the conclusion, under the auspices of the League of Nations, of a general convention to secure and maintain freedom of communications and of transit, Poland undertakes to accord freedom of transit of persons, goods, vessels, carriages, wagons, and mails in transit to or from any allied or associated State over Polish territory, including territorial waters, and to treat them at least as favorably as the persons, goods, vessels, carriages, wagons, and mails respectively of Polish or of any other more favored nationality, origin, importation, or ownership, as re-

gards facilities, charges, restrictions, and all other matters. All charges imposed in Poland on such traffic in transit shall be reasonable, having regard to the conditions of the traffic. Goods in transit shall be exempt from all customs or other duties. Tariffs for transit traffic across Poland and tariffs between Poland and any allied or associated power, involving through tickets or waybills, shall be established at the request of that allied or associated power. Freedom of transit will extend to postal, telegraphic, and telephonic services. It is agreed that no allied or associated power can claim the benefit of these provisions on behalf of any part of its territory in which reciprocal treatment is not accorded with respect to the same subject matter. If within a period of five years from the coming into force of the present treaty no general convention as aforesaid shall have been concluded under the auspices of the League of Nations, Poland shall be at liberty at any time thereafter to give twelve months' notice to the Secretary General of the League of Nations to terminate obligations of this article.

Art. 18.—Pending the conclusion of a general convention on the international régime of waterways, Poland undertakes to apply to the river system of the Vistula (including the Bug and the Narest) the régime applicable to international waterways set out in Articles 332 to 337 of the treaty of peace with Germany. . . .

Art. 10.—[Relates to certain existing international conventions—telegraphic and radio-telegraphic, railway, sanitary and other—as to which Poland is to take action.]

Art. 20.—[Extends the rights and privileges accorded in the foregoing articles to all States members of the League of Nations.]

Art. 21.—Poland agrees to assume responsibility for such proportion of the Russian public debt and other Russian public liabilities of any kind as may be assigned to her under a special convention between the principal allied and associated powers on the one hand and Poland on the other, to be prepared by a commission appointed by the above States. In the event of the commission not arriving at an agreement, the point at issue shall be referred for immediate arbitration to the League of Nations.

—J. S. Guernsey, *Reference history of the war*, pp. 363-366.

1919 (June-August 1).—**Reception and ratification of the treaties.**—"The Poles were far from being satisfied with the terms of the Peace Treaty affecting Poland, or with the special Polish treaty guaranteeing protection to national minorities within the new Polish State, especially to the Jews. The Poles, first of all, were dissatisfied at what they considered the loss of the City of Danzig, made an autonomous commune by the treaty terms; they were also displeased by the decision to hold a plebiscite in Polish Silesia, forcibly colonized by the Germans. . . . Concerning the Polish treaty, the Diet on June 11 passed a resolution which denied that Poland had ever countenanced religious persecution, and which declared that the rights of religious minorities would continue to be respected. Special objection was made to Article 93 of the German treaty, which placed Poland under international engagements concerning the just claims of minorities; these measures were declared to be a restriction on the sovereign rights of the Polish Republic and an indication of an unmerited lack of confidence on

the part of the allied powers."—*New York Times Current History*, Aug., 1919.

1919 (September).—**Settlement of boundaries by the treaty of St. Germain.**—Eastern Galicia allotted to Poland.—Eastern Galicia "was originally settled by a population historically known, and still commonly known as Ruthenians. They are a branch of that little Russian race for which the general name Ukrainian is now coming into use. After belonging to various Ruthenian principalities in the early middle ages, Eastern Galicia was conquered by Poland in 1340; it remained a part of the Polish state down to 1772; and even under the Austrian rule the Poles . . . continued to be the dominant nation. . . . Socially and intellectually there is a striking contrast between the two rival races. [See also GALICIA: Agriculture.] The Ruthenians are almost entirely a peasant population, with only a small educated class of priests, lawyers, doctors, etc. The Poles are fairly evenly and normally divided among the various occupations and social classes. . . . In other words, the Poles are socially, economically, and intellectually the strongest element in the country, although in numbers they are considerably inferior to their rivals. . . . In the nineteenth century, . . . a nationalist movement grew up among the Ruthenians, which assumed a marked anti-Polish tendency and . . . led to a rather bitter racial feud. . . . At the moment of Austria's spontaneous dissolution, one Ruthenian party hastened to set up a 'Republic of the Western Ukraine,' and, with the aid of certain Ruthenian units in the old Austrian army, attempted to seize possession of all Eastern Galicia. This led to a prolonged and unhappy struggle with the Poles, who were not disposed to submit to such a settlement of the question. For many months the fighting centered around the city of Lemberg, which long defended itself almost single-handed and with great heroism against superior Ukrainian forces. When at last the Polish government was in a position to send large reinforcements, the issue was quickly decided. In June, 1919, the Ukrainian resistance collapsed, and the Poles occupied the whole country as far as the Zbrucz. . . . The Ruthenian majority was not at all agreed as to what it wanted. The Ukrainophiles among them were for an independent Ukrainian state; but the other party was altogether opposed to such an idea. This second party, however, had no more practicable program to offer than that the Allied governments should occupy and administer Eastern Galicia until such time as Russia was on her feet again and in condition to take over the country. . . . It was rather doubtful, moreover, whether the Ruthenians were capable of taking over the government of the country. They had had no independent state for nearly six hundred years, and their national development had been so retarded and unsatisfactory that it was not easy to believe that they were fitted for independent statehood today. The intellectuals had already given the measure of their ability; for six months they had tried to run a government; and the result—nearly all the many Allied officers who were sent in to study the situation were unanimous in the opinion that this Ukrainian government had been, . . . a sorry failure; and that the majority of the population—Poles, Jews, and Ruthenians alike—were relieved when this government collapsed and the Polish troops came in."—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, pp. 189-

190, 192-194.—“In spite of the protest of the Ukrainian National Committee the Supreme Council allotted the province of Eastern Galicia to Poland as a mandate for a 25-year period; a subsequent modification gave Poland control for an unlimited time.”—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, 194-195.

1919-1920.—Paderewski's acquiescence in boundary terms.—Dispute with Czecho-Slovakia.—Resignation of Paderewski.—“Although Premier Paderewski, in addressing the Polish Diet on July 31, on the occasion of the ratification of the Peace Treaty, painted an optimistic picture for the future, Poland . . . passed through a stormy year. Strikes, unemployment, shortage of food, and resultant starvation, lack of transport, currency depreciation and fever epidemics, coupled with critical boundary disputes and almost ceaseless warfare, sapped the energies of the reborn state. The strained relations with Czecho-Slovakia for possession of the rich Teschen mineral region [were] continued.”—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 127.—“Poland had an unhappy dispute with Czecho-Slovakia over the duchy of Teschen and the small territories of Zips and Arva, which lie south of the Carpathians. After two weeks of fighting and nine months of negotiation, it was settled [Sept. 11] that the populations of these districts . . . [should] decide by plebiscite to which of the two new republics they . . . [were] to belong.”—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, pp. 188.—“Inability to cope with the pressing internal problems and failure to maintain the support of the Diet resulted in the resignation of the Paderewski government on December 7. After various attempts to form another ministry, a coalition cabinet, with N. Skulski as Premier, was announced on December 15. . . . Grave labor troubles in Galicia and Warsaw during March 1920, culminated in a demand for a general revolutionary strike, provoked by the alleged imperialism of the government. The danger, although narrowly averted by the efforts of the Socialist party, was not eliminated, and protests against the existing order continued; finally the government resigned on June 10. After a cabinet crisis of fifteen days, during which several leaders, including former Premier Skulski, failed in their efforts to bring about a reorganization of the old ministry, a new Cabinet was announced on June 24 . . . non-political in character and [to] be directed by resolutions accepted by the Diet.”—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 120.

1919-1920.—War with Russia.—Armistice negotiations.—In 1919 “the Bolshevik forces advanced almost to the borders of Congress Poland: [in 1920] after a certain amount of fighting, the Poles . . . [had] thrust them back almost to the Dnieper . . . and were in possession of most of the old Russian provinces of Grodno, Wilna, Minsk, and Volhynia: i. e., of a very large part of those eastern territories which belonged to the old Polish republic and which have been the object of an age-long dispute between Poland and Russia.”—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, pp. 105-106.—“Against Soviet Russia the Poles with Allied sanction waged almost incessant war; by September 18 they had driven the Bolsheviks to the Dvina and had advanced northward approximately 100 miles into Russian territory; at the same time

they had penetrated into Lithuania, in some instances to a depth of six miles. To the east they had advanced on a wide front of 200 miles. Believing that the Bolsheviks had been pushed back to a safe distance, and perhaps alarmed at Poland's apparent desire for additional territory, the Supreme Council attempted to check the Poles from further invasion of Russian territory. With the withdrawal of General Denikine from the Ukraine, the Polish government announced on January 9 that it would send troops to occupy the evacuated territory and thus prevent Bolshevism from gaining a foothold there. Meanwhile M. Tchitcherin, Bolshevik Minister of Foreign Affairs, had on December 22 made a proposal to the Polish government for immediate peace negotiations. This was renewed during the last week in January [1920], when the Soviet authorities expressly stated that their government had from the first recognized the independence and sovereignty of the Polish republic and further declared that there was no question, territorial, economic or otherwise, which could not be solved peacefully by negotiation. In answer to these proposals the Polish government on February 24 submitted the terms upon which it would undertake peace; these included self-determination for all peoples west of the frontier of 1772, and a demand for war indemnity for devastations committed by the Russian army in Poland as well as for damages done to Polish citizens in Russia during the Bolshevik régime. Poland's insistence upon embodying in her peace terms control of the territories as they existed prior to the first Polish partition of 1772 elicited a protest from the Supreme Council on February 28, in which the Warsaw government was reminded that Poland's eastern boundary as agreed upon on November 25, 1919 [the “Curzon line”], lay far to the westward of the districts over which she now endeavored to establish permanent claim. Failing to agree on the question of an armistice, military operations were renewed with vigor early in March, 1920. The Poles, while victorious at first, became more exacting in their peace demands, and finally negotiations were broken off.”—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 128.—“The conclusion of Pilsudski's spring offensive, undertaken to anticipate a Bolshevik blow which was known to be in preparation for the early summer, saw the Polish front advanced to the line of the Dnieper, the Beresina and the Dvina, with a bridgehead covering Kiev. On this front, far more favourable for defensive purposes than that formerly held in the middle of the White Russian plains, which had been buttressed by no natural obstacle, the Poles from the middle of May to the end of June resisted all their adversary's efforts to advance, and threw back in complete defeat a counter-offensive on a large scale against the northern sector of the line between the Dvina and the Pripiet marshes. By this time, however, the Soviet Higher Command had assembled on its Western front overwhelmingly superior forces and renewed the attack on a large scale. The operation as planned by them was to be in two parts—the prelude, a holding attack by the crack cavalry corps of Budienny in the gap between the Dnieper and the Dniester; the main act, a drive by two armies against the already weakened sector of the Polish battlefield north of the Pripiet marshes. The actual course of events fell out rather differently. . . . Budienny managed to work his way into the rear of the Polish lines southwest of Kiev; those units which

held firm had to be withdrawn in conformity with those going back, and presently the whole front in the south melted away westwards. Kiev was evacuated . . . and though the forces holding it were successfully extricated, all the gains of the recent offensive had to be abandoned, and the Polish units were not able to regroup themselves for a renewed stand until fresh reinforcements reached them on the eastern frontier of Galicia. Meanwhile, to the north the Polish High Command had decided that to await the imminent Red attack in their ill-prepared advanced positions south of the Dvina would be folly, and a 'Hindenburg retreat' was planned, which should bring them back onto the old German lines of defence covering Vilna, Lida and Pinsk. This movement was actually commenced a day before the Grand Soviet attack was timed to open, and the latter thus became a blow in the air. For some days the retiring Polish columns lost contact with their pursuers and regrouped themselves in the German entrenchments as they had intended. But the prolonged retreat, for which there seemed at the moment no need, demoralized the troops, disorganized the supply services, and caused the commanders of the higher formations to lose touch with the situation. In fact, the army had proved itself unequal to the physical and moral strain of the withdrawal, and was in no fit state to make a serious stand in its new positions. . . . [On July 14, Vilna] fell into the hands of the Reds with little resistance; a treaty of peace signed a few days before with Lithuania assigned it to that country, but the Lithuanian army was not strong enough to be a match for the Reds, who settled themselves in Vilna for the present and pushed their advance guards and cavalry at full speed upon Grodno [which was captured on July 22]. The Polish line being now entirely outflanked, . . . the army streamed away to the westward. . . . By the middle of July the Polish armies in the north were no longer a fighting force, as we understand the term, and the Bolshevik advance was being carried out practically without opposition. In the south, however, . . . Poles and Ukrainians, fighting shoulder to shoulder, had checked the attacks of the Bolsheviks and inflicted heavy losses on them, first on the Zbrucz, then on the Sereth, then on the Strypa; . . . and it became clear to the Bolsheviks . . . that they had not the forces at their command both to carry through their main attack against Warsaw in the north and to break the resistance of the reinforced Polish armies in East Galicia. Accordingly, the Soviet Higher Command decided to push on with the first of these two operations. Their plan was an ambitious one enough, for it involved not only the capture of Warsaw by direct assault, but also the severance of the communications between Poland and the outside world by the blocking of the Danzig corridor, so as at once to deal her a knockdown blow and to destroy any possibility of the arrival of reinforcements or material which might enable her to retrieve her desperate position. The Bolshevik right wing, reinforced by cavalry, which had already gained a favourable advantage by its outflanking of the Polish left, was therefore pushed out along the East Prussian frontier towards Thorn, while the centre drove straight upon Warsaw. Little resistance was met with; by the end of July the Bolshevik right had cut the eastern railway to Danzig by its occupation of Mława, and was continuing its advance without halt.

Their centre, after some stiff fighting for the passages of the Lower Bug and in front of Brest Litovsk, had forced their way forward and were approaching the north-eastern suburbs of the enemy's capital. To the Bolsheviks, as to the rest of the world, their complete triumph, in a few days, seemed as inevitable as sunrise after dawn; the Polish armies appeared so broken and demoralized as to be unable to stand even behind impassable rivers and powerful fortifications; the attitude of the Danzig workmen had cut off any hope of assistance coming from outside. . . . Yet even at this moment of triumph and rejoicing, the fate of the battle had trembled and fallen against the invaders. The Polish people, united in the hour of danger as they had never been in the days of good fortune, had rallied to their flag in unprecedented numbers and with boundless enthusiasm, old as well as young: women as well as men . . . enrolled themselves in the ranks of the new volunteer regiments."—K., *How Poland saved herself* (*National Review*, Oct., 1920).—The British, French and Italian missions kept in constant touch with the Polish authorities. French officers, including General Weygand arrived; but at first their advice was not accepted by the Polish command. General Haller, who had been placed in command, was being steadily pushed back on Warsaw. Meantime, sorely needed munitions were arriving from France and England, at Danzig, where the British high commissioner compelled the dock laborers to unload them, and forwarded them to Warsaw as rapidly as possible. But the fork between the Bug and the Narew, the key to the capital, had been lost, and the city itself seemed doomed. Almost too late, General Weygand was asked to take command, and even as the enemy came in sight of the towers of Warsaw an heroic attempt to save it was made. Unexpectedly, the attempt proved successful. "The Poles massed their forces around Warsaw and organized counter attacks on both the left and right wings. The offensive on the left wing was led by the French generals, Henry and Billotte. By Aug. 18 it had placed the Poles again in possession of the key to the Warsaw defenses—the fork between the Narew and Bug Rivers. Other forces marching toward Mława at this time made considerable headway toward reopening the direct railway line to Danzig and drove the Bolsheviks eastward from the Fortress of Thorn. Meantime the offensive on the right wing, between the Vistula and the Bug, threatened the communications of the main Bolshevik forces. This movement gained rapid headway and drove the Bolsheviks back from twenty five to fifty miles all along the line."—*Poland's military crisis* (*New York Times Current History*, Sept., 1920).—By the last of September the Bolsheviks had been completely defeated. General Wrangel's drive northward from the Crimea was continued with success and by September 27 Kharkov and Ekaterinoslav had been captured, while, with the aid of the Ukrainian leader General Makno, Wrangel controlled the Donetz coal basin and the wheat fields of southern Ukraine. (See RUSSIA: 1920 [October-November].) Early in July while the Bolsheviks were still advancing victoriously into Poland, Great Britain proposed an armistice, through the agency of the allies, which the Russians refused; but stated their willingness to treat direct with Poland. Poland consented, and a delegation was appointed to meet the Bolshevik commissioners. The date of the armistice was three times deferred, and

finally when the representatives met the Russians declined to enter into negotiations until the Polish delegates had received full power to sign a treaty of peace. This necessitated further delays; but at length the delegates met at Minsk, and peace negotiations were resumed on August 17 with a much better outlook for Poland.

1919-1920.—Status of Jews.—An internal problem peculiar to Poland arises from "the concentration in her towns and villages during many generations . . . before the war of large numbers of Jews. . . . This created a problem by reason of the relatively few occupations permitted to them under the old imperial governments. While relieved of these disabilities since the restoration of the Polish Republic, the Jews can hardly be expected to change suddenly from their long established occupations."—A. B. Barber, *Problems of Polish reconstruction (Poland, Sept., 1923)*.—In 1919 and 1920 the problem was much more than an economic one. Reports of systematized persecution of the Jews by the Poles were widely circulated. These reports were strenuously denied by the government, and requests were made to the United States and Great Britain to investigate the matter. "A Mission consisting of Mr. Henry Morgenthau, Brigadier General Edgar Jadwin, and Mr. Homer H. Johnson was appointed by the American Commission to Negotiate Peace to investigate Jewish matters in Poland. . . . On June 30, 1919, Secretary Lansing wrote to the mission: 'It is desired that the Mission make careful inquiry into all matters affecting the relations between the Jewish and non-Jewish elements in Poland. This will, of course, involve the investigation of the various massacres, pogroms and other excesses alleged to have taken place, the economic boycott and other methods of discrimination against the Jewish race.' . . . The Mission reached Warsaw on July 13, 1919, and remained in Poland until September 13, 1919. All the places where the principal excesses had occurred were visited. . . . Investigations of the excesses were made mostly in the presence of representatives of the Polish Government and of the Jewish communities. There were also present in many cases military and civil officials, and wherever possible officials in command at the time the excesses occurred were conferred with and interrogated. . . . The Jews entered Poland in large numbers during the twelfth and thirteenth centuries, when they migrated from Germany and other countries as the result of severe persecutions. Their language was German, which subsequently developed into a Hebrew-German dialect, or Yiddish. As prior to this immigration only two classes or estates had existed in Poland (the owners and the tillers of the soil) the Jewish immigrant became the pioneer of trade and finance, settling in the towns and villages. As time went on it became generally known throughout Europe that Poland was a place of refuge for the Jews, and their numbers were augmented as the result of persecutions in Western Europe. Still more recently as a result of the expulsion of the Jews from Russia on account of the enforcement of the Pale of Settlement and of the May laws of 1882, their number was further increased. . . . [It has been stated that at one time nine-tenths of the Jewish people lived in Poland.] When in November, 1918, the Austrian and German armies of occupation left Poland there was no firm government until the arrival of General Pilsudski, . . . and it was during this period, before the Polish Republic came

into being, that the first of the excesses took place. The use of the word 'pogrom' has purposely been avoided, as the word is applied to everything from petty outrages to premeditated and carefully organized massacres. . . . [According to the report there were eight principal excesses committed; at Kielce, November 11, 1918; Lemberg, November 21-23, 1918; Pinsk, April 5, 1919; Lida, April 17, 1919; Wilna, April 19-21, 1919; Kolbussowa, May 7, 1919; Czestochowa, May 27, 1919; Minsk, August 8, 1919.] . . . These excesses were apparently not premeditated, for if they had been part of a preconceived plan, the number of killed would have run into the thousands instead of amounting to about 280. It is believed that these excesses were the result of a widespread anti-Semitic prejudice aggravated by the belief that the Jewish inhabitants were politically hostile to the Polish State. . . . Besides these excesses there have been reported to the Mission numerous cases of other forms of persecutions. Thus, in almost every one of the cities and towns of Poland, Jews have been stopped by the soldiers and have had their beards either torn out or cut off. As the Orthodox Jews feel that the shaving of their beards is contrary to their religious belief, this form of persecution has a particular significance to them. . . . Whereas it has been easy to determine the excesses which took place and to fix the approximate number of deaths, it was more difficult to establish the extent of anti-Jewish discrimination. This discrimination finds its most conspicuous manifestation in the form of the economic boycott. The National Democratic Party has continuously agitated the economic strangling of the Jews. Through the press and political announcements, as well as by public speeches, the non-Jewish elements of the Polish people are urged to abstain from dealing with the Jews. Landowners are warned not to sell their property to the Jews, and in some cases where such sales have been made the names of offenders have been posted within black bordered notices, stating that such vendors were 'dead to Poland.' . . . [In 1919 this campaign was still] being waged by most of the non-Jewish press, which constantly . . . [advocated] that the economic boycott be used as a means of ridding Poland of its Jewish element. Non-Jewish laborers . . . in many cases refused to work side by side with Jews. The percentage of Jews in public office, especially those holding minor positions, such as railway employees, firemen, policemen, and the like, has been materially reduced since the present Government has taken control. . . . In considering the causes for the anti-Semitic feeling, which has brought about the manifestations described above, it must be remembered that ever since the partition of 1795 the Poles have striven to be reunited as a nation and to regain their freedom. This continual effort to keep alive their national aspirations has caused them to look with hatred upon anything which might interfere with their aims. This has led to a conflict with the nationalist declarations of some of the Jewish organizations which desire to establish cultural autonomy financially supported by the States. In addition, the position taken by the Jews in favor of Article 93 of the Treaty of Versailles, guaranteeing protection to racial, linguistic, and religious minorities in Poland, has created a further resentment against them. Moreover, Polish national feeling is irritated by what is regarded as the 'alien' character of the great mass of the

Jewish population. . . . Since the Jews form separate political groups, it is probable that some of the Polish discrimination against them is political rather than anti-Semitic in character. The dominant Polish parties give to their supporters Government positions and Government patronage."—H. Morgenthau, *Morgenthau Report on Poland (American Hebrew, Jan. 30, 1920, pp. 295, 302, 304, 325)*.—This report was objected to by many Jews, on the ground that it did not lay a sufficient amount of blame at the door of the Polish authorities. The report of Sir Stuart Samuel, head of the English mission is much more severe in its indictment. It says, in part: "In England, the word 'pogrom' has become associated with excesses organised by the Government against a portion of the population, or when the authorities took no steps to restrain those perpetrating the excesses, or intervened at a period too late to be effective in preventing the loss of human life. The result of my enquiries brought me to the conclusion that the occurrences at Lemberg, Lida and Vilna come under the head of pogroms in the sense generally understood in England. The awful massacre at Pinsk partook more of the character of a military murder. During the outbreaks which took place in the two other towns a certain number of Jews were assaulted and plundered, but the military authorities endeavoured to restrict the action of the soldiers as much as possible. . . . The Polish Government has been confronted with the problem of maintaining order in those portions of the German, Russian and Austrian Empires which have been incorporated within the present Republic of Poland. The establishment of order was entrusted to a semi-military force known as the field gendarmerie, corresponding somewhat to a military police force. This body was recruited from a not very desirable class, and is practically independent of any but the highest civil authority. The gendarmerie has almost unlimited powers, and is in the habit of entering the houses, chiefly of the Jews, at any time of the day or night upon the pretext of searching for arms, and robs and beats the Jews. This is done quite openly, and the Jews may be said to have no means of redress. . . . There is thus really no security for the Jewish population. . . . In addition, the junior authorities of justice and of civil administration are also of inferior standing and *moral*, taking advantage of their position not only to persecute the Jews, but also to exact bribes upon an astonishing scale. . . . Almost as soon as the Polish Government was established, ill-feeling became manifest against the Jews. Public opinion had been aroused against them by the institution of a virulent boycott. This boycott dates from shortly after the bye-election for the Duma, which took place in Warsaw in 1912. . . . [The defeated candidate, M. Dmowski] set out on a campaign to break the Jewish influence, and . . . pursued a policy with the object of driving the Jews from Poland, a step which can only be fraught with disaster to the country. During the war, owing to the scarcity of almost everything, the boycott diminished, but with the armistice it revived with much of its original intensity. . . . [In concluding Sir Stuart said] it is very difficult to ascertain the number of lives lost through these painful occurrences, but, taking the lowest figure in cases of doubt, the total cannot be less than 348. These figures, terrible though they be, fail to convey an impression of the terrible condition of apprehension and anxiety under which the Jews

labour. . . . On several occasions the resentment of the soldiery and civil population was aroused by the Zionists' claim to Jewish nationality as opposed to Polish nationality. The same claim was declared to me by Government officials to be the reason for the non-admission of Jews into the Post Office and other Government offices, but no evidence was adduced to me that Jews not so declaring themselves of separate nationality were able to secure appointments. . . . At present the Jews are considerably under represented in the Polish Parliament (Sejm), having only 11 out of 390 seats." A minority report was presented by Captain Peter Wright, a member of the English mission, who, in an effort to explain the cause of the trouble traced the history of the Jews in Poland, and their distinctive language which he states is not, as claimed, a debased jargon, but a mediæval German dialect comparable to the English of Chaucer. He states that Polish Jews from their advent in Poland have been a nation within a nation. "From the documents of the thirteenth century, which do not create new but register existing conditions, they are seen at their first real appearance as a semi-autonomous corporation or community. . . . Even in the twelfth century they are evidently an independent political organism in mediæval Poland, and as Poland remained mediæval till it perished, . . . so the mediæval organisation of the Jews lasted to the end. The Jews were ruled by their commissioners (*władim*), and the Polish kings dealt only with those commissioners and not directly with the individual Jews. . . . Economically, the Jews appear at the very outset as dealers; . . . in course of time the whole business and commerce of Poland became theirs, and they did nothing else. The Poles were knights and ploughmen who fought and tilled, and the merchants were Jews, and this monopoly lasted till the present generation. . . . Mediæval men, seeing this independence, this prosperity . . . called Poland the Paradise of the Jews. . . . This mediæval autonomy, enduring as it did through modern times . . . was the shell within which the Orthodox Jews . . . preserved their ancient and peculiar civilisation untouched by the flow and change of the world until the nineteenth century. And this is why they are so different, even now, to the Poles. . . . The Polish Government says it will admit Jews as field officers if they will sign a declaration that they are of Polish nationality. This they refuse to do. Various causes have contributed to make this difference, which is fundamental and deserving of the fullest analysis. French, English, and American Jews are, or protest they are, French, English, or American (100 per cent. American, as they say). Polish Jews [who number about a seventh of the population] protest they are not Poles; they are only Jews, but Polish subjects. This is not only a legal point: the legal attitude expresses the real attitude. . . . At present [1919] the doctrine of the Zionists or Nationalists (the names are interchangeable) is 'We Jews have race, religion and language . . . therefore we are a nation. All we need is a country. Our country is Palestine and until we can have it as a national home we want to be organised as a nation in Poland.' . . . Their party programme in Poland is to have all Jews on a separate register. The Jews thus registered are to elect a representative body of Jews, with extensive powers of legislation and taxation; e.g., it could tax for purposes of emigration, this body to be handed over by the Polish State a pro-

portionate amount of money to spend on Jewish charitable and financial institutions. Besides this separate organisation, a number of seats proportionate to their numbers to be set aside in every local and in the national legislature. A sixth or a seventh of the Polish Diet to be occupied only by Jews to be elected only by Jews. Some Jews also demand separate law courts, or at least the right to use Yiddish as well as Polish in legal proceedings. . . . A sort of boycott still continues, and undoubted instances were laid before the Commission. But now the Poles are in power they have other arms to attack them with, and therefore rely less or little on the boycott as it was. . . . It was with Jews that Germans set up their organisation to squeeze and drain Poland—Poles and Jews included—of everything it had. . . . [The Poles declare] that all the troubles between them and the Jews are tricks and inventions of the Germans. They have no more loyalty to Germany—the home of anti-Semitism—than to Poland. The East Jews are Jews and only Jews. But this is too fine a distinction for the ordinary Pole, who looks on all Jews as the allies of his worst enemy—'once a Jew, always a German.' But the Jewish political leaders never went to Berlin to pay their court to the Kaiser like so many Polish party leaders and grandees, lay and clerical. The Jews, and especially those to whom it was so profitable, naturally welcomed the arrival of the Germans, and at the Armistice there were Jewish demonstrations in favour of the Germans and against the 'Polish goose,' as they termed the newly-arisen Polish White Eagle. The very day the German garrison was disarmed, in November, 1918, the excesses against the Jews began all over Warsaw; everywhere assaults on them took place."—See also JEW: Poland; 1914-1920; 1920-1922.

1919-1921.—Land laws.—The Witos government began in 1919 to pass drastic legislation to provide for division of the land among the rural population. "Polish laws on land reform are the following: a first law of 10th July 1919 sets forth the fundamental principles of the reform; a law of 15th July 1920 which regulates the execution; one of 16th July 1920 regarding the organization of land offices; and finally one of 17th December 1920 which provides for the grant of a certain quantity of land to ex-soldiers. Land destined for agriculture must be divided and distributed to farmers, and for providing such lots various categories of land are assigned; viz., State land, land belonging to the members of the late dynasty; mortmain property, but only in agreement with the Holy See; property acquired during the war through usurious gain, and that belonging to persons given to land speculation; and finally property belonging to private individuals through expropriation and against compensation in accordance with the provisions of the law. The present landed proprietors have the right to retain of the land belonging to them, only sufficient to form a medium sized farm that is of varying size, according to the district, of from sixty to a hundred and eighty hectares. The land divided into lots is granted by preference to those agricultural labourers who, in consequence of the division of large estates, find themselves without occupation, to cultivators of farms so small as to be insufficient for the needs of their families; to soldiers of the Polish army freed from military service; and finally to people who do not possess land, who have no profession, but who are capable of devoting themselves to agriculture. The opera-

tions for the carrying out of land reform are confided to special district land offices. Before proceeding to expropriation, the competent land office will advise the proprietor concerned, who within a period of thirty days has the faculty to voluntarily cede his land on payment of compensation to be arranged according to the rules for compulsory expropriation. . . . The division of estates is carried out by the care of the district land officers who will prepare the relative projects and establish the sale price of each parcel taking into account the value of the land, calculated on the base of the expropriation indemnity, and value of buildings and other improvements of the land. If the holders of the land are men disabled by war or ex-soldiers without means, the State will furnish them with means through long term loans to acquire the land and for the necessary works. For the formation of the fund necessary to this end the State will deduct from the expropriation indemnity a varying percentage of from 5 to 30% according to the total. Lots ceded to private individuals can neither be transferred, nor divided, even in case of death, until they have been freed from the mortgage guarantee for the price of purchase and in any event not within 25 years of their formation. The law of the 17th December 1920 contains the rules and arranges the form for the concession of land in the form of grants to soldiers of the Polish army who have rendered themselves worthy during the war."—*International Yearbook of Agricultural Legislation*, Aug., 1920, pp. xi, xli.—"According to a report . . . published by the Polish Chief Statistical Office on the progress that had been made in carrying out the Land Reform provisions adopted by the Constituent Assembly in 1920, a total of 650,000 acres of land (not including the eastern provinces) had been parceled out before the end of 1921. Of this total, 270,000 acres were assigned to the Polish Land Distribution Offices, while the remaining 380,000 acres were distributed by private individuals and private institutions. In addition, 295,000 acres of land had been distributed among 5,000 war settlers, who took up their homes in the eastern provinces."—*Polish economic conditions in March, 1923* (Poland, June, 1923, p. 277).—"The Witos Ministry in Poland resigned in September, 1921. The new Cabinet, headed by Antoni Ponikowski, was appointed on Sept. 23, and on Sept. 27 the Premier made a statement of his program before the Diet, at the same time announcing that Dr. Michalski had accepted the all-important office of Minister of Finance."—F. E. Ackerman, *Poland's financial dictator* (New York Times Current History, Apr., 1922, p. 53).

1920.—Zeligowsky takes Vilna.—In July, 1920, when Vilna was evacuated by the Poles, in the course of their retreat before the Bolshevik forces, it was taken possession of by Lithuania. In a few days, however, it was surrendered to the Russians, who held it until in turn they were compelled to retreat before the Polish army. Lithuanian troops then took possession of the city which was claimed as Lithuanian territory. These troops were driven out on October 7, by General Zeligowski, with a force of White Russians. Zeligowski, who was ostensibly acting independently of the Polish government, refused to evacuate. To prevent further dispute, the League of Nations proposed a plebiscite, pending which an armistice was arranged, and an international force of occupation was sent to keep order. At this time, Zeligowski's troops, numbering about 200,000 occupied the region around Vilna, a region which

was claimed by the Poles as essentially Polish. The Lithuanian government, in a cablegram sent from Kovno stated their fear that Zeligowski's troops would find a way to participate in the plebiscite. "The Lithuanian government," the cable ran, "feels the serious disadvantage of its position as compared with that of Poland. Lithuania is not a member of the League of Nations . . . is not even recognized by the United States. . . . The Lithuanian government therefore fears that the choice placed before the voters . . . will be . . . 'Do you wish to be under the Polish government, or will you go back to Russia.'"—See also LITHUANIA: 1920-1922.

1920.—Resumption of peace negotiations with Russia.—"Russian terms, presented on the 19th and refused on the 23rd, included recognition of the independence of the Poles and their right to their own form of government; a frontier following the Supreme Council's line of December 3, 1919,—the so-called Curzon line—but with more territory east of Cholm and Bielystok; the reduction of the Polish army and the formation of a civil militia, made up of workers organized to preserve order and the security of the population. In a response to a note from Lloyd George and Giolitti from Lucerne, August 23, informing the Soviet Government that its demand for a civic militia could not be approved, Moscow announced its willingness to withdraw this condition. On August 21, a note from the United States to Poland set forth the view that offensive action against Soviet Russia beyond Poland's ethnographic frontier would not be approved; Poland's reply [to this] on September 1, was evasive. . . . On August 25, Poland asked for the transfer of negotiations to neutral territory and on September 21, her representatives met M. Joffe with the Soviet delegation at Riga. On the 24th Joffe announced armistice terms, based on a frontier east of the Curzon line and allowing eastern Galicia to Poland. The same day Dombiski presented his terms, which were accepted by Russia and which included the recognition of Poland's sovereignty; no interference in domestic affairs; the determination of boundaries on a basis of just consideration and vital interests; renunciation of restitution in any form by Poland of the expenses of the Polish-Soviet war; no obligations to devolve upon Poland because of its former connection with the Russian Empire; and reciprocal renouncement of rights of government property. On the 26th four commissions—territorial, legal, economic and financial, and general—were chosen from the delegations to prepare the armistice and preliminary peace terms, which were signed October 12, and which went into effect October 18, being ratified by Poland on the 25th and by Soviet Russia on the 26th. The conference for the settlement of the final peace . . . resumed its negotiations at Riga by November, and agreed that the withdrawal of Polish troops to the new frontier should be begun not later than midnight, November 19. . . . The terms of the peace . . . [defined] the frontier between Poland, Russia and the Ukraine, giving Poland a corridor between Lithuania and Russia to the border of Lettonia; and . . .

[obliged] each party to refrain from interference in the internal affairs of the other."—*Journal of International Relations*, Jan., 1921, pp. 482-483.

1921.—Peace treaty with Russia.—German-Polish convention.—Polish-Rumanian treaty.—Commercial treaty with Czecho-Slovakia.—"Poland's long negotiations at Riga for a permanent peace treaty with Soviet Russia [which were begun in 1920] were rewarded on Feb. 10, [1921] when, according to a Moscow announcement, the treaty was completed to the satisfaction of both sides. The negotiations had been marked by many disagreements, chiefly over the question of how much of the Russian gold reserves should be handed over to compensate Poland for war damages. The Polish demand was for 300,000,000 gold rubles. . . . Other questions involved were: The return of prisoners, amnesty for political offenders and the return of equipment taken from Polish factories [during the World War]. . . . It was announced from Riga, on Jan. 18, that all the political clauses had been finally determined, including mutual recognition of sovereignty and Soviet pledges not to conduct propaganda. Vice Minister Dombiski, chief of the Polish Peace Delegation, reported to the Warsaw Foreign Office toward the end of January that the work of the conference was proceeding rapidly and that the final treaty would be signed early in February. M. Dombiski was to go to Moscow at the head of his commission to complete arrangements for the execution of the treaty after it was signed."—*Poland on a firmer footing* (*New York Times Current History*, Mar., 1921).—"The treaty of peace . . . with the Soviet Ukrainian Government as a minor signatory, was signed at Riga, the capital of Latvia, on March 18, 1921. . . . Moscow ratified the document on March 22. The Polish Diet formally ratified it on April 15, thus coming within the thirty days' time limit set for ratification. The ratification of the Ukraine was included in that of the Soviet Government . . . and the Moscow Government ceded to Poland some 3,000,000 square kilometers of territory near Minsk, and also the Ukrainian district of Polesia, by the signing of peace with Soviet Russia. . . . Over and above the Curzon line established by the Peace Conference [Poland secured] fifteen counties of the Provinces of Volhynia, Grodno, Vilna and Minsk in their entirety, and also portions of eleven counties in the Provinces of Volhynia, Minsk, Vilna and Vitebsk. . . . M. Dombiski, the chief of Polish delegates to Riga, declared after the signing of the treaty that it would be Poland's aim to give freedom and the exercise of all civic rights to the people of non-Polish stock to be incorporated with Poland under the Riga Treaty."—*Peace treaty between Poland and Russia* (*New York Times Current History*, June, 1921).—"One important settlement affecting relations between Poland and Germany reached by the Polish-German Commission sitting in Paris on Jan. 20, . . . concerned German transit to East Prussia across the so-called Danzig corridor. The terms under which Germany was to have such a right of way were finally drafted. Germany gains the right to use two types of trains, one 'privileged,' the other ordinary. 'Privileged' trains carrying both passengers and goods are to be permitted to cross from Germany to East Prussia without Polish inspection, but the trains are to be sealed before entering Poland, and must proceed through to East Prussia without stopping. Ordinary trains are to be subjected to customs and passport regulations at the frontier. . . . [By February 1] the

POLAND, DECEMBER, 1920
(Drawn by H. Arcetowski)

Poles were encouraged by news from Paris that Germany had agreed before the Polish-German Commission to return to Poland 1,000 locomotives and 100,000 freight and passenger cars which the Germans took when Posen and other former German districts were incorporated with re-established Poland."—*Poland on a firmer footing* (*New York Times Current History*, Mar., 1921).—Polish and Rumanian delegates met at Bucharest on March 3, 1921, to draw up a treaty for the defense of their boundaries. By this agreement, which was ratified by the Polish diet on July 1, each of the two contracting nations pledged itself to come to the aid of the other in case of any attack from a third nation on its eastern frontier. Though not specifically stated, this alliance was directed against the possibility of any sudden onslaught from Bolshevik Russia, on the one hand, and from Bulgaria, on the other. (See also RUMANIA: 1920-1921.) The first payment "from the Russian Soviet Government under the Riga Peace Treaty signed in March [1921, was received in December]. The payment was in the form of gold and jewels to the value of 50,000,000,000 Polish marks, . . . [and] gave Poland its first substantial gold reserve. . . . Polish foreign trade (in 1921) improved month by month. Trade with the Ukraine became active, and a special commission composed of Polish economic leaders was formed in Warsaw for the double purpose of developing trade relations between Poland and Soviet Russia and improving the transportation conditions between them. . . . The political and economic treaty concluded by Poland with Czecho-Slovakia (Nov. 7) was communicated to the League of Nations toward the middle of December. Under this treaty, all future disputes are to be settled by compulsory arbitration under an appeal to the Permanent Court of International Justice recently set up by the League. . . . The inter-allied commission for the division of former German property in Danzig . . . assigned virtually all the material of the arms factories to Poland. . . . The Free City [of Danzig gave] . . . all Germans one year in which to exercise their option of citizenship under the Danzig-German Treaty, which Poland refused to ratify."—*New York Times Current History*, Feb., 1922, p. 873.

1921.—Upper Silesian complication.—German plebiscite victory.—Polish invasion of Silesia by Korfanty.—Danzig question.—Repatriates.—"It was expected by the allied Premiers that the plebiscite held in Upper Silesia under the auspices of the League of Nations in March would bring a solution to the vexed problem of apportioning this rich mining territory between Germany and Poland. The returns from the plebiscite showed that although the district, in general, had voted to remain with Germany, the richest coal-mining areas of the Southeast had elected to unite with Poland. This complicated the situation, the Germans at once demanding, on the ground of the general result, that all Upper Silesia be allotted to them, the Poles insisting that the districts which had voted for Poland be incorporated in the Polish boundaries. The granting of this demand, however, meant to Germany that she had lost rather than won the plebiscite, inasmuch as she especially desired to gain possession of the coal fields. While the Plebiscite Commission was still considering in Paris the most equitable policy of reconciling the vote in full justice to both parties, the whole situation was thrown into confusion by the irruption across the Polish frontier into Silesia of a large Polish force, directed by Adalbert Kor-

fanty, who had but recently given up his post as Polish High Commissioner of the Plebiscite. This force, estimated at 50,000 men, was highly organized, and possessed machine guns, bombs, firethrowers and even airplanes. The allied forces, outnumbered and outought, retreated, and the Polish adventurers, acting on the conviction that the Allies intended to give the mining districts to Germany, moved forward and occupied the whole of the mining area, even spreading toward the North."—*New York Times Current History*, June, 1921, p. 389.—It was the "intention of the Pan Poles to gain absolute possession of Upper Silesia before the ratification of the Peace Treaty. The elections which took place in November, 1919, resulted in a sweeping victory for the Poles; on the basis of this result, the Polish Government asked the Supreme Council to accept this as decisive, without the holding of a plebiscite. This solution the allied Ministers rejected. It was decided on Nov. 4 that the Chairmanship of the Interallied Plebiscite Commission should be given to France, and General Lerond was ultimately appointed to this post. The Commission, including the British and Italian members, reached Upper Silesia on Feb. 12. . . . The Commission took over all the German and Prussian powers, and issued a proclamation declaring its firm intention to maintain peace and order and to insure a free vote upon both sides. . . . The date of the plebiscite, long deferred, was at first fixed for March 20. Mutual complaints from both elements against the acts and attitude of others drew from the Council of Ambassadors on March 18 an official note to both Governments, reminding them that the task of keeping order in Upper Silesia during the plebiscite period was solely the affair of the Interallied Commission, and that any intervention by troops of either side would be undertaken at the responsibility of the offending party. The plebiscite occurred at the date set, and was attended with no disorders, though the Poles bitterly complained that the Germans, availing themselves of the allied sanction, had imported fully 200,000 Germans from Germany and from all corners of the earth on the ground that they had been born in Silesia and had the right to participate in the vote. The result, as Germany expected, was a victory for the Germans. Fully two-thirds of the district had elected to remain with Germany. The area on the Polish border, however, including most of the coal mines, cast an estimated vote of 53 per cent. for Poland, notwithstanding the German vote given by the towns. . . . Early in May, while the decision was still pending, the Polish workmen who form the population of the mining districts of Rybnik and Pless, misled by a false announcement, . . . that the Allies had decided to give these as well as other coal-mining districts to Germany, declared a general strike. This was followed by news that lawless Polish bands had appeared and were terrorizing the country. These uprisings had resulted in fighting between the French and the Polish rebels at Beuthen, Kattowitz and Tarnowitz. The conflagration spread, and on May 4 came the news that organized Polish forces numbering many thousands had occupied all of Upper Silesia south of a line running from Kosel to Tarnowitz, with the exception of a few large towns, and were moving further northward. Colonel Bond, the British control officer at Gross Strehlitz, opened fire on some 3,000 Polish insurgents who were striving to take the city. Italian troops at Rybnik were surrounded, but were putting up a spirited fight against superior numbers.

The fighting continued for four days, during which the allied forces, numbering about 15,000, found themselves impotent to stem the tide, and the Polish rebels, directed by Korfanty in person, attained all their objectives. Korfanty, who, the Germans declared, had been preparing this coup for months, at once set up a government of his own, and issued proclamations defending the movement, and stating that he had taken over full power as Governor. . . . Though both the Inter-allied Commission and the Council of Ambassadors issued statements assuring the Polish elements that no decision of any kind had been reached, the situation remained disquieting in the extreme. . . . At this date it developed that the German Government on May 5 had sent an identical note to Paris, London and Rome charging that the Polish bands were committing wholesale murder and other atrocities, that the allied powers were responsible for maintaining order, and demanding that more allied troops be sent to control the situation. It then made a formal offer to aid the Allies in this task by sending its own troops, composed of German Reichswehr. To this suggestion the French Government returned a categorical refusal. Premier Lloyd George, speaking before the House of Commons on May 13, declared that the situation created by the Korfanty coup was menacing in the extreme. He declared for fair play for Germany, even to the point of allowing her to offer armed resistance if the Poles insisted on defying the provisions of the Treaty of Versailles and the plebiscite held under it. He censured the Polish Government bitterly for not restraining Korfanty and his 'insurgents,' and declared that the Polish population under Korfanty had tried to rush the allied decision and to confront the Supreme Council with a *fait accompli*. Upper Silesia, as a matter of fact, he declared, had not been Polish for 600 years, and the Polish claim was based wholly upon the mining population. This speech created a commotion in Paris and greatly disturbed the French Premier [M. Briand], who in a public interview outlined the French position. France, he implied, was taking no orders from any other power regarding her policy. He defended Poland, saying that she had fulfilled her duty and had closed her frontier to prevent further Polish recruits from joining the insurgents. He also asserted that France had likewise done her full duty, and registered a formal protest against Lloyd George's statements."—*New York Times Current History*, June, 1921, pp. 380-391.—On November 18 "the Danzig problem was definitely settled. . . . At the request of the Council of Ambassadors, measures were taken by both Poles and Germans to avoid demonstrations on Nov. 15, the day when the Constitution was declared. Meanwhile the joint discussions interrupted in Paris, were resumed in Warsaw and rapid progress toward an agreement was made. The joint commission finally drew up a new convention. It modified the former agreement, which the Poles had refused to sign, in a manner satisfactory to both sides. The convention was signed in Paris by M. Paderewski—acting for Poland—on Nov. 18; it had already been signed by the representatives from Danzig. The Council of Ambassadors decided to appoint a commission, composed of British, French and Italian delegates, to divide between Poland and Danzig—in conformity with Article 107 of the Versailles Treaty—the German property in the free city. The Constituent Assembly of Danzig on Dec. 7 proclaimed itself the Parliament of the free city under the title of

'Folkstag,' with powers to enact legislation until 1923."—*Cementing the Russo-Polish peace* (*New York Times Current History*, Jan., 1921, p. 80.)—See also SILESIA: 1919-1921.—The number of Polish refugees from Russia who arrived daily at Baranowice after the signing of the Riga treaty was estimated in December, 1921, to be 6,000. They continued to pour over the frontier all the next year, and "when one pictures hundreds of thousands of repatriates swarming across the Russian frontier in Poland, for the most part from the famine-stricken areas of Russia, it should not be hard to understand their lot. They returned with no money, weak from hunger and disease, to find their homes destroyed and their lands a waste. . . . Up to June 1, 1922, about 1,000,000 repatriates . . . [had come] to Poland before the Riga treaty and 491,649 after it. From 25 to 30 per cent. are children under 15 years of age. . . . Practically all the repatriates are Polish citizens."—P. S. Baldwin, *Poland's refugee problem*. (*New York Times Current History*, Sept., 1922).

1921.—Result of 1920 agricultural reform program.—In 1920 a "far-reaching program of agricultural reform was drawn up at a meeting of representatives of Polish agricultural organizations held in Warsaw under the auspices of the Minister of Agriculture. The meeting was opened on September 20th [1920] by Mr. Witos, President of the Cabinet. . . . After two sessions an agreement was reached on questions of a financial nature affecting the future of agriculture, and a number of definite measures were recommended to the government. It was agreed that all the economic policies of the state should be adapted to the demands of agricultural production. . . . For the reconstruction of agriculture the labor supply was declared to be sufficient. There was reported, however, a lack of capital, and it was urged that expenditures be restricted to those aims which assure the most certain speedy results in agriculture. . . . In constructing plans for the increase of production in the whole of Poland, it was recommended that a special commission of experts should supervise the division of the country into agricultural districts based on differences of natural and economic conditions. . . . A special sitting was devoted to the matter of the cultivation of ground lying fallow, and the maintenance of the existing productive standard."—M. P. Ewen, *Agricultural reform in Poland* (*Journal of American-Polish Chamber of Commerce and Industry*, Nov., 1920).—"As agriculture is the most important industry in Poland, approximately two-thirds of the agricultural population being engaged in it, its improvement is of basic importance for the general betterment of economic conditions. Before the war the territories now united in the Polish State produced a surplus of food, exporting particularly large quantities of potatoes, potato alcohol, and sugar, chiefly to Germany. The World War resulted in a great reduction of agricultural output. Extensive areas were devastated, the number of work animals was

reduced, and the country was almost entirely deprived of artificial fertilizers, which had formerly been used very extensively in Prussian Poland and to some extent in other parts of the country. The requisitions by the German and Austrian armies tended to discourage production. These conditions resulted in a serious food shortage in Poland and necessitated the importation of large quantities of breadstuffs during the first three years of the existence of the new Polish State. The war with the Bolsheviks hindered the restoration of agriculture. . . . During 1919 and the first half of 1920 the grain imports were largely furnished on credits from the United States Government. The acreage planted for the crop of 1920 showed a considerable increase over the two preceding years; but the Bolshevik invasion, which occurred just about the time of harvest and covered more than one-third of the area of Poland, materially reduced the output. . . . The grain crop which . . . [was] harvested in Poland . . . [in 1921 was] decidedly larger than that of 1920. The area planted, according to official statistics, was about 10 per cent greater than [1921].”—E. D. Durand, *Survey of economic conditions in Poland (Journal of American-Polish Chamber of Commerce and Industry, Oct., 1921)*.

1922.—Polish-Danzig convention.—Internal affairs.—Occupation of Upper Silesia.—New constitution.—In October, 1921, an agreement was reached with the free city of Danzig, which provided for a customs union. The convention was ratified on January 11, 1922, and went into effect immediately. “This executive Treaty is the true Polish-Danzig Convention, for it alone determines the means of executing the Treaty of Versailles. . . . [See above: 1919 (June).] The most important financial provisions of the Treaty are the creation of a Money Exchange in Danzig, the agreement with regard to establishing a Polish State Bank in Danzig, and, most important of all, an equalization of Polish marks with the Danzig currency within the confines of the Free City of Danzig in all liabilities incurred in Polish marks. For the time being Danzig . . . [retained] the German currency. [Under the treaty customs frontiers between Poland and Danzig were abolished in April 1922.] . . . From the moment that the customs frontiers were abolished, the Polish Customs tariff and regulations, as applied by the Danzig Customs Board under the control of Polish authorities . . . [became] valid. Nevertheless, if the Free City of Danzig does not concur in certain import and export restrictions that Poland imposes in joint relations with a foreign country, Danzig has the right to inform Poland, within 20 days, of the quantity of goods she deems it necessary to import within the confines of the Free City of Danzig or to export across its frontiers in order to supply the needs of its own inhabitants, industry, agriculture or trade. Poland . . . [must] acknowledge the validity of such a statement.”—*Latest Polish international treaties (Polish Economic Bulletin, v. 3, no. 1, Jan., 1922, pp. 5-6)*.—“Under the treaty of Versailles the ancient city of Danzig was constituted a Free State. She was to be independent henceforth both of her former mistress Germany and, to a lesser degree, of Poland, to fly her own flag, and to regulate her internal affairs in accordance with the terms of a constitution approved by the League of Nations. A British Commissioner, moreover, was to take up his residence within her walls to superintend the working of the new administration as well as to act as a connecting link between . . . the Dan-

zig Senate, the Government of the Polish Republic, and Geneva. . . . Economically, Danzig has become a part of Poland. Her customs certificates are printed in both German and Polish. German goods . . . are subject to import duty. . . . [Poland] . . . represents the Free City abroad, her own interests are . . . safeguarded in the new Danzig constitution, the port of Danzig is to be at her disposal (on certain conditions), she . . . nominates one half of the ‘harbour commissioners’ (Hafenausschuss) . . . as well as . . . shares the control of the railway and transport services with the Danzig Senate. . . . Leaving out of consideration affairs of this minor character there remain several issues deserving of fuller treatment. One of these concerns the control of the railway and transport facilities centred in and serving the Free State. Under the terms of the Peace Treaty these are . . . equally divided between Danzig and Poland. An arrangement has accordingly been sanctioned by the High Commissioner under which the main lines, including the stations belonging thereto, i. e., the bulk of the long-distance traffic, are to be administered by Poland while the local lines known as the Kleinbahn and the electric tramways service fall to the Free City.”—M. F. Liddell, *Danzig in 1922 (Contemporary Review, Dec., 1922)*.—See also DANZIG: 1920.—George Michalski “consented to take over the management of the finances of Poland as Minister of Finance on conditions which gave him an arbitrary power probably never before possessed by a Minister of Finance; in fact . . . he was the nearest approach to a dictator . . . extant in Europe outside of Russia. Dr. Michalski’s powers . . . [were] conferred on him by the Polish Diet, and the progress which he . . . made toward withdrawing Poland’s huge issue of paper currency and creating new taxes . . . [was] amazing. He . . . accomplished what the best-informed experts declared to be impossible. He . . . [wrote] and obtained the passage of laws imposing huge taxes on capital, and, what is more, he . . . collected these taxes. He . . . reduced Government bureaus and the number of employees in the remaining bureaus. Under his direction an inventory of the resources of the country . . . [was] undertaken, and committees of bankers, manufacturers, merchants and agriculturists in the provinces, cities and hamlets . . . coöperated in reducing national expenditures. . . . The Diet, at his request, . . . passed legislation which placed in his hands full control of all national expenditures and of Government bureaus and their functions. He had the power of veto over all appropriation measures, and in his hands rested full responsibility for the imposition and collection of taxes.”—F. E. Ackerman, *Poland’s financial dictator (New York Times Current History, Apr., 1922, pp. 53-54)*.—“Polish troops . . . completed their occupation of the second and third zones of Upper Silesia by June 24, [1922] including Beuthen and Gleiwitz. The transfer of authority . . . [was] affected without disorders. The Polish Government on July 4 pledged itself to return to the United States all Polish-Americans of General Haller’s army still remaining in Poland. These men were recruited in the United States, took part in the World War, and later fought in the Polish campaigns against Russia.”—*Poland’s new cabinet crisis (New York Times Current History, Aug., 1922)*.—“The union of Upper Silesia in the second half of June, 1922, within the Polish customs boundaries . . . had a deciding influence on the figures relating to Poland’s foreign trade. . . . Instead of being a coun-

try importing coal, the union of Upper Silesia . . . brought an entire change in this respect and Poland now . . . [in 1922 exported] this commodity, besides exporting petroleum, cotton, woolen textures, and metal goods."—*Polish Economic Bulletin*, Jan., 1923.—"The Constitution, although adopted in May, 1921, was not put completely into effect until the following year. Before the Government contemplated in the Constitution could be installed, it was necessary to erect an administrative system for the selection of representatives to the bi-cameral legislature created in the Constitution. This Legislature under the Constitution was to elect the President, who in turn was to select the cabinet. The Electoral Law was enacted in July, 1922, and the Constituent Assembly gave way, on November 27th, to the first regular constitutional Polish Parliament. With the election of the first President in due form, a few days later, Poland seemed on the eve of achieving a normal parliamentary government. But before the new President, Gabriel Narutowicz, could form a parliamentary cabinet, he was shot down by an irresponsible maniac. At this time, when there was naturally a fear of political excitement and national strain, the acting President, Rataj, Speaker of the Chamber, felt it advisable, pending the regular election of a second President, to call to the Premiership General Sikorski, Chief of the Polish General Staff. . . . Poland proceeded in orderly fashion to follow the method prescribed in the Constitution for the election of its second President. The National Assembly (the two chambers sitting as one) elected Stanisław Wojciechowski as the successor of the martyred Narutowicz. The reasons which had dictated the temporary placing of power in the hands of General Sikorski still seemed to prevail as the new President took office within a week of the assassination of his predecessor. The Sikorski Cabinet was asked to retain the executive reins. . . . To understand Polish political developments [at this time], it must be borne in the mind that the 444 members of the Chamber of Deputies are divided into nearly a score of parties which in turn [1922] are grouped into three main divisions. Roughly, the parties of the Right count 163 members; those of the Left, 185; while the seven non-Polish (Jews, Germans, etc.) parties form a national minority bloc totaling 88 members. Of these three large groups the Right is by far the most homogeneous. . . . For five months, therefore, the Sikorski Cabinet continued in power as an extra-parliamentary government, holding over from the crisis attendant upon the assassination of President Narutowicz and the transition to a Constitutional Government. From December on, the Right Bloc consistently opposed the Sikorski Government as a gesture of its own ambition to form a cabinet. In the alignments after debates on particular government bills, the Sikorski Cabinet was sustained in general by the Left and by all of the minority racial clubs except the Jews. . . . Ever since the first sessions of the Constituent Assembly in 1919, politicians had been searching for a parliamentary combination which would give a stable majority on which a cabinet might rest. . . . During May the efforts of the Right Bloc to ally with itself the Polish Populist Party headed by Witos, former coalition premier, were successful. The Witos Party, representing the more prosperous peasants, should really be classified as a Center Party. . . . Without Witos the Right was helpless to form a government, a fact which the peasant leader, with the experience of more than a year of premiership

behind him, was naturally quick to capitalize by attaining for himself the headship of the new Cabinet. . . . The Witos Ministry, therefore, resting upon parliamentary support of the three parties of the Right (163), the Polish Populist Party less than 13 seceding members under Dombiski (56), and the National Workers Party (18), may be considered as a Right Center Government. . . . Perhaps it was inevitable that the non-Polish representatives should organize in the Diet entirely on racial lines, but . . . [having done so they could] hardly expect to be asked to help form a base for a Polish cabinet. It would not help the status of national minorities in Poland to have their parliamentary clubs holding the balance of power between two main Polish groups. If the racial minorities have a right to representation, the right of the great Polish majority to control the Polish government is beyond question."—W. J. Kelley, *Poland entering upon normal parliamentary life (Poland, July, 1923)*.—"After several stormy months of struggle the government of M. Witos resigned on September 9, 1921. . . . The new ministry, headed by M. Ponikowski, Director of the Warsaw Polytechnical College, was as follows: Foreign Affairs, M. Skirmunt; Finance, M. Michalski; Transportation, M. Sikorski; Public Works, M. Narutowicz; War, M. Sosnkowski; Commerce and Industry, M. Strasburger; Agriculture, M. Raczynski; Posts and Telegraphs, M. Steslowicz; Health, M. Chodsko; Justice, M. Sobolewski; Provisions, M. Wyczolkowski; Internal Affairs, M. Downarowicz; Public Welfare, M. Darowski; German Poland, Dr. Trzcinski. The new government made excellent progress in stabilizing the economic conditions of the country and its withdrawal, in connection with the Vilna episode, proved to be only temporary, all the former ministers being recalled with three exceptions: M. Zagorny-Marynowski became Minister of Transportation; M. Ossowski, Minister of Commerce and Industry, and M. Kamienski, Minister of Internal Affairs. Serious differences of opinion within the cabinet itself over the question of procedure to be adopted in forthcoming elections for a new and regular parliament, together with the feeling that it had completed its task in the field of international affairs, led to the resignation of the Ponikowski government on June 6. It was succeeded on June 29 by a new government headed by Arthur Sliwinski."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, Supplement, pp. 112, 113, 114.

1922.—Relief work among Jews. See INTERNATIONAL RELIEF: Jewish relief.

1922.—Represented at Genoa conference. See GENOA CONFERENCE (1922).

1922-1923.—Reconstruction of industries.—Financial situation in 1922.—Recognition of northern and eastern frontiers.—Budget for 1923.—Change of ministry.—"The Armistice found Polish industry flat on its back, its transportation system disorganized and many railway bridges destroyed, its supply of live-stock depleted. . . . The country is primarily agricultural. It is therefore remarkable that [reports in 1922 showed] . . . that practically 100 per cent. of the pre-war acreage . . . [had] been restored to cultivation. The coal production . . . [was] well over 80 per cent. of pre-war production, and the Poles . . . [had] undertaken with energy and success the operation of the Upper Silesian district given to them by the Peace Treaty. . . . [and were] amalgamating some of the German-owned enterprises in the district with related Polish industries. The Peace Treaty also gave Poland some of the rich salt

mines of Galicia which were formerly in Austrian territory. The salt production in 1922 was apparently 160 per cent. of that before the war, and aggregated nearly 300,000 tons. . . . At the end of 1922 [Poland was not only self-sufficing; but was exporting food stuffs]. . . . The weakness in the present situation is that hitherto, in the face of the staggering burdens and enormous obstacles it had to face, the Polish Government has failed to cope with the financial situation. The present government has apparently decided to face the music, and has already outlined a fiscal program which promises to balance the budget in six years and establish a sound and extensive system of taxation. The process will no doubt be painful, and its success or failure will have a very great influence on Poland's future development."—B. Miles, *Revival of Poland (Poland, July, 1923)*.—The production of crude oil in Poland during the year 1922 exceeded 700,000 tons, or approximately 5,000,000 barrels. In 1921, 704,874 tons had been produced, representing 63.3 per cent. of the 1913, or last normal pre-war year, production. In the eastern part of the country which had been crossed and recrossed ten times by the imperial Russian army, Germans, Poles and the Bolshevik Russian army, over 7,000 bridges and culverts had been destroyed. Of these over forty per cent. had been replaced by the close of 1922. "The cotton industry, centered at Lodz and Bielsk, is the most important branch of the Polish textile industry. . . . War operations, which took place on the territory of former Russian Poland, naturally suspended the activity of textile plants, but it was not until the occupational period under German troops that the situation became almost desperate. Through requisitions and expropriations carried out in a systematic way, the forces of occupation succeeded in carrying away every stock of raw material as well as a large part of the technical and mechanical equipment. Much of the machinery was crippled through the removal of copper parts. . . . Every attempt made since the war, aiming to reconstruct Poland's textile industry and to restore it to normal production, was bound to be confronted with immense difficulties. . . . State assistance became indispensable owing to the inability of the manufacturers to effect large purchases abroad. . . . Stocks of raw cotton were soon acquired by the Government, and on May 9, 1919, the Diet voted a law providing for a 20 million mark State guarantee to cover the purchase of raw materials and technical equipment to re-start operation. This, and other energetic moves intended to rehabilitate this practically ruined branch of the Polish industry, resulted towards the end of 1919, in the operation of 34 per cent. of the total number of the country's cotton spindles, of 20.5 per cent. of the looms; and in the employment of 25.4 per cent. of the pre-war force of cotton mill workers. . . . [In April, 1922, 87 per cent. of the pre-war workers were employed. . . . According to reports in 1922 wool spinners were operating 48 per cent. of the pre-war spindling, and weavers were operating 31 per cent. of the pre-war number of looms.]"—P. L. Tallac, *Polish textile industry (Poland, Jan., 1923)*.—According to a report issued by the Department of Reconstruction of the Ministry of Public Works in Warsaw for 1922, 52.7 per cent. of the houses destroyed during the war had been rebuilt, in spite of the lack of capital which retarded the progress of reconstruction. During the years 1919-1921, 674,037 buildings were rebuilt (46.3 per cent. of the total destroyed), and by the end of 1922 the total

was 881,660. "(The Government finances of Poland during the first half of 1922 showed a great improvement over the preceding year, but this was due chiefly to the collection of an extraordinary tax. The deficit rose to large proportions throughout the second half of the year, necessitating great issues of paper currency, with consequent great decline in the exchange value and the purchasing power of the Polish mark.) . . . The ordinary receipts in 1921 . . . amounted to 71,048,000,000 Polish marks, or 31 per cent of the expenditures. For the first six months of 1922 they amounted to 191,458,000,000 marks, while for the first six months of 1922 it fell to 70,343,000,000. . . . This decided improvement in the budget situation was due chiefly to the collection of the extraordinary direct taxes known as the 'budget balancing contribution.' Of the total receipts from all sources (101,458,000,000 marks) about three-fourths (146,864,000,000) were from taxes, and of these taxes two-fifths (58,473,000,000) were from the extraordinary contribution. However, there was also a considerable increase in the revenues from indirect taxes and monopolies. The revenue from these sources during 1921 had been 41,386,000,000 marks, while during the first six months of 1922 it amounted to 67,781,000,000—or, after allowing for the decline in the value of the currency, a sum equal to about four-fifths of that for the 12 months preceding. . . . The Polish financial situation during the latter six months of 1922 was extremely unsatisfactory. Internal political conditions prevented the passage of needed tax legislation. The extraordinary contribution had been once-for-all levy, with no provision for repetition. While about 80 per cent of the entire sum expected from this source was actually collected, the bulk of the collections had fallen during the first half year."—E. D. Durand, *Eastern Europe and Levant (United States Weekly Commerce Reports, Feb. 26, 1923, no. 9, pp. 575-576)*.—In March, 1922, official recognition was made "by the Great Powers of the . . . [existing] northern and eastern frontiers of Poland, resulting in the final inclusion of Wilno and Eastern Galicia within the Republic's boundaries. [See LITHUANIA: 1920-1922.] . . . In the meantime the Polish Government had sent to the Council of Ambassadors a note requesting official recognition, on the part of the Great Powers, of the actual frontiers of Poland in the north and the east. Following the dispatch of the note, the Allied Ministers in Warsaw declared to the Polish Minister of Foreign Affairs that the Council of Ambassadors at its meeting, on February 21st, had examined the question of the recognition of Poland's frontiers, both between Poland and Lithuania and between Poland and Russia. The Council had also taken up the matter with the various Allied Governments. On March 14th, the Council of Ambassadors finally rendered its decision, in the name of the Allied Powers, formally recognizing the borders as already laid down. This includes the boundary between Poland and Russia as originally fixed by the Treaty of Riga with Soviet Russia, signed in 1921. As to the line between Poland and Lithuania, drawn by the League of Nations on February 2, which definitely placed Wilno in Poland, it also received the Ambassadors' approval [and this officially ended one of the most bitter feuds which had disturbed eastern Europe]. . . . Much satisfaction was evinced by the Polish people when it was, at last, announced that those two irritating problems had finally been settled. The approval of the Ambassadors' Council of the . . . [existing] Polish-

Russian boundary means that Eastern Galicia is definitely awarded to Poland."—*Recent administrative and political developments in Poland* (Poland, Apr., 1923).—"Mr. Grabski, the . . . Minister of Finance early in March [1923] introduced into the Polish Diet measures looking to a general reorganization of the budget and ultimate balancing of it, which it . . . [was] aimed to achieve in the course of three years. . . . The State budget . . . [was] to be divided into an administrative budget and a series of budgets for Government enterprises and monopolies. For the years 1924 and 1925 the ordinary expenditures in the administrative budget . . . [was not to] exceed 90 per cent. of the sums voted for 1923, except in the case of elementary school expenditures. . . . For the purpose of assuring that the income of the Treasury . . . [should] not shrink as a consequence of a fall in the value of Polish currency a nominal gold unit . . . [was to be] used as a standard of expenditures and receipts—this to be known as the 'zloty,' equivalent to the Swiss franc (19.3c). . . . One of the most important proposals . . . [was that government enterprises and monopolies must operate on separate budgets as independent business entities, paying their own way; that each of them be required to produce a fixed standard amount of clear income, which it was expected] to turn into the State Treasury during each of the three years. . . . The project . . . [provided] for an increase of direct and indirect taxes and charges for Government services to the pre-war level. As an important means of balancing the budget, the general State property tax commonly called 'capital levy,' [was] to be renewed. A tax of this character was collected during 1922, but without provision for continuance. In order to make sure that this tax [should] produce the required sum, it . . . [was] not fixed as a percentage on the value of property but as a specified sum—totaling 600,000,000 zloties [to be collected] in three years."—*Polish economic conditions in March, 1923* (Poland, June, 1923).—"The re-grouping of parties in the Polish Parliament resulted, on May 27, [1923] in the resignation of Premier Sikorski and of his cabinet. The new cabinet officially formed under the premiership of Vincent Witos, on May 29, again included Ladislas Grabski, as Minister of Finance. It was announced that his budget-balancing programme would be carried out.—See also BALANCE OF POWER; Modern application; EDUCATION; AGRICULTURAL: Poland; FLAGS: Poland; GALICIA; Jews: Poland; MILITARY ORGANIZATION: 36; PHILOLOGY: 21; PRESIDENT: Comparative: SLAVS. ALSO IN: J. C. Welliver, *Poland's story* (Century Magazine, May, 1915).—N. O. Winter, *Poland of to-day and yesterday*.—W. A. Philips, *Poland*.—F. E. Whitton, *History of Poland*.

POLAND, Constitution of.—"The new Polish constitution was adopted in its final form on March 17, 1921, after the Constituent Assembly had been sitting with intervals for two years. The document which sets up the framework of the government for the new Republic embodies most of the liberal features of western European and American constitutions while at the same time steering clear of all taint of bolshevism or communism. The Constitution declares that Poland is a Republic and that the sovereign power belongs to the nation of which the organs are, in legislation, the Sejm (Assembly), and the Senate; in matters of executive power, the President and the Ministers; and in the administration of justice, the courts. The Sejm is elected on the basis of proportional representation by universal suffrage,

and the Senate mainly by electors of thirty years or more. *President Not Elected by Regular Vote:* The President is elected by the National Assembly for seven years by both houses in joint sessions and subject to their impeachment. The government is conducted by Ministers responsible to the legislature, but appointed by the President. Although sovereign power rests in the national government a large degree of local self-government is provided for. The independence of the judiciary is safeguarded although they are not permitted to pass on the legality of statutes. *Extensive Bill of Rights:* The bill of rights follows that of other western nations. Freedom of conscience is granted and the rights of the racial, religious, and linguistic minorities are assured. Foreigners in Poland enjoy on condition of reciprocity rights equal to those of citizens of the Polish state. *Private Property Protected:* On the subject of property the constitution declares that Poland recognizes all property as one of the most important bases of social organization and guarantees to all citizens protection to their property, permitting only in case provided by law the abolition and limitation of property for reasons of general welfare in which case the owners must be compensated. The regulation of the exploitation of the natural resources of the country is left for statutes to determine. Other clauses of special interest are Article 118, which makes elementary instruction of children compulsory; Article 105, which guarantees freedom of the press and forbids the closing of the mails to newspapers or printed matter, and Article 96 in which titles of nobility and coats of arms are deprived of "recognition by the state."—*Poland adopts new constitution* (Journal of American-Polish Chamber of Commerce and Industry, Apr., 1921).

The following is the text of the constitution:

Prologue

In the name of Almighty God!

We, the Polish Nation, thankful to Providence for freeing us from a servitude of a century and a half; remembering gratefully the courage and steadfastness of the self-sacrificing struggle of generations which have unceasingly devoted their best efforts to the cause of independence; taking up the glorious tradition of the memorable Constitution of the Third of May; having in mind the weal of our whole united and independent mother-country, and desiring to establish her independent existence, power, safety and social order on the eternal principles of right and liberty; desirous also of ensuring the development of all her moral and material forces for the good of the whole of renescent humanity, and of securing to all citizens of the republic, equality, and to Labor, respect, due rights and the special protection of the State—do enact and establish in the Legislative Sejm [Diet or Assembly] of the Republic of Poland, this constitutional law.

Section I.—The Republic

Article 1—The Polish State is a republic.

Art. 2—Sovereignty in the Republic of Poland belongs to the nation. The legislative organs of the nation are: in the domain of legislation, the Sejm and the Senate; in the domain of executive power, the President of the republic, jointly with the responsible Ministers; in the domain of the administration of justice, independent courts.

Section II.—Legislative Power

Art. 3—The domain of State legislation comprises the establishment of all public and private laws and the manner of their execution.

There can be no statute without the consent of the Sejm, expressed in a manner conforming to standing orders.

A statute voted by the Sejm comes into force at the time determined in the statute itself.

The Republic of Poland, basing its organization on the principle of broad territorial self-government, will delegate to the bodies representing this self-government the proper domain of legislation, especially in administrative, cultural and economic fields, to be defined more fully by statutes of the State.

Ordinances by public authorities, from which result rights or duties of citizens, have binding force only if issued by the authority of a statute and with a specific reference to the same.

Art. 4—A statute of the State will determine annually the budget of the State for the ensuing year.

Art. 5—The establishment of the numerical strength of the army, and permission for the annual draft of recruits, can be determined only by statute.

Art. 6—The contracting of a State loan, the alienation, exchange or pledging of improvable property of the State, the imposition of taxes and public dues, the determination of customs duties and monopolies, the establishment of the monetary system and the taking over by the State of a financial guarantee can take place only by the authority of a statute.

Art. 7—The Government will present annually, for parliamentary consideration, the accounts of the State for the last year.

Art. 8—The manner of exercising parliamentary control over the debts of the State will be defined by a special statute.

Art. 9—The control of the whole State Administration as regards finances: the examination of the accounts of the State; the annual submission to the Sejm of its motion for the granting or refusing of its absolutorium to the Government, are in the hands of the Supreme Board of Control, which is organized on the basis of collegiality and judicial independence of its members, the latter being removable only by a vote of the Sejm representing a majority of three-fifths of those actually voting. The organization of the Supreme Board of Control and its method of procedure will be defined in detail by a special statute.

The President of the Supreme Board of Control enjoys a position equal to that of a Minister, but is not a member of the Council of Ministers and is directly responsible to the Sejm for the exercise of his office and for the officials who are his subordinates.

Art. 10—Measures can originate either with the Government or with the Sejm. Motions and bills which involve expenditure from the State Treasury must state the manner of their raising and expenditure.

Art. 11—The Sejm is composed of deputies elected for a term of five years, to be counted from the day of the opening of the Sejm, by secret, direct, equal and proportional voting.

Art. 12—The right to vote belongs to every Polish citizen without distinction of sex, who, on the day of the proclamation of the elections, is 21 years of age, is in full possession of civil rights, and is a resident of the electoral district at least

from the day preceding the proclamation of the elections in the Journal of Laws. The right to vote can be exercised only in person. Members of the army in active service do not possess the right to vote.

Art. 13—Every citizen having the right to vote is eligible for election to the Sejm, independently of his place of residence, if he is at least 25 years of age, not excepting members of the army in active service.

Art. 14—Citizens convicted of offenses which the Law of Elections may define as involving temporary or permanent loss of the right to vote, eligibility, or of being a Deputy, may not enjoy the electoral right.

Art. 15—Administrative, revenue and judicial officials of the State may not be elected in the districts in which they are performing their official duties. This rule does not apply to officials employed in the Central Departments.

Art. 16—State and self-government employes obtain leaves of absence at the moment of being elected Deputies. This rule does not apply to Ministers, Under Secretaries of State and Professors in academic schools. The years spent in the exercise of the duties of a Deputy are considered as years of service.

Art. 17—A Deputy loses his seat on being appointed to a paid office of the State. This rule does not apply to appointment as Minister, Under Secretary of State or Professor in an academic school.

Art. 18—The Law of Elections will define the manner of electing Deputies to the Sejm.

Art. 19—The validity of unprotested elections is verified by the Sejm. The validity of protested elections is decided upon by the Supreme Court.

Art. 20—The Deputies are representatives of the whole nation and are not bound by any instructions given by the voters.

The Deputies make to the Marshal the following vow in the presence of the Chamber: "I do solemnly vow, as Deputy to the Sejm of the Republic of Poland, to work honestly, according to the best of my understanding and in conformity with my conscience, for the sole good of the Polish State as a whole."

Art. 21—Deputies cannot be made responsible, either during their term of office or after it has expired, for their activities in or out of the Sejm appertaining to the exercise of their office as Deputies. For their speeches, utterances and manifestations in the Sejm, Deputies are responsible only to the Sejm. For violation of the rights of a third person, they may be made to answer before a court of law, if the judicial authority obtains the consent of the Sejm thereto.

Criminal, penal-administrative or disciplinary proceedings instituted against a Deputy before his election may, at the demand of the Sejm, be suspended until the expiration of his term of office.

Prescription in criminal proceedings against a Deputy does not run while he retains his office. While he retains his office, a Deputy may not, without the permission of the Sejm, be made to answer before a criminal court, penal-administrative authority or a disciplinary court, or be deprived of his freedom. If a Deputy is caught in the act of committing a common felony, and if his arrest is necessary to insure the administration of justice, or to avert the consequences of the offense, the court is bound to notify immediately the Marshal of the Sejm in order to obtain the consent of the Sejm to his arrest and to further criminal

proceedings. Upon demand of the Marshal, the arrested Deputy must be liberated at once.

Art. 22—A Deputy may not, either in his own name or in the name of another, buy, or acquire the lease of any real property of the State, contract for public supplies or Government works, or obtain from the Government any concessions or other personal benefits.

A Deputy is also debarred from receiving from the Government any decorations other than military.

Art. 23—A deputy may not be the responsible editor of a periodical publication.

Art. 24—The Deputies receive compensation, the amount of which is determined by the standing orders, and are entitled to the free use of the State means of communication for traveling over the whole territory of the republic.

Art. 25—The President of the republic convokes, opens, adjourns and closes the Sejm and Senate. The Sejm must be convoked to assemble on the third Tuesday after election day, and every year, *at the latest in October*, to an ordinary session for the purpose of voting the budget, the numerical strength and recruiting of the army, and other current affairs.

The President of the republic may, at his own discretion, convoke the Sejm to an extraordinary session at any time, and is bound to do this within two weeks upon request of one-third of the total number of Deputies.

Other cases in which the Sejm assembles in extraordinary session are determined by this Constitution.

An adjournment requires the consent of the Sejm if a previous adjournment has taken place during the same ordinary session, or if the interruption is to last for more than thirty days.

The Sejm, when convoked in October for its ordinary session, may not be closed before the budget has been voted.

Art. 26—The Sejm may be dissolved by its own vote, passed by a majority of two-thirds of those voting. The President of the republic may dissolve the Sejm with the consent of three-fifths of the statutory number of members of the Senate in the presence of at least one-half of the total membership. In both cases the Senate is automatically dissolved at the same time.

Elections will take place within forty days from the date of dissolution, the precise date to be determined either in the resolution of the Sejm or in the message of the President, on the dissolution of the Sejm.

Art. 27—The Deputies exercise all their rights and duties in person.

Art. 28—The Sejm elects from among its members, the Marshal, his Deputies, the secretaries and committees.

The Marshal and his Deputies continue in office after the dissolution of the Sejm until the new Sejm shall have elected its officers.

Art. 29—The standing rules of the Sejm define the mode and order of the proceedings of the Sejm, the type and number of the committees, the number of Marshals and secretaries, the rights and duties of the Marshal. The employés of the Sejm are appointed by the Marshal, who is responsible to the Sejm for their actions.

Art. 30—The meetings of the Sejm are public. On the motion of the Marshal, of a Government representative, or of thirty Deputies, the Sejm may vote the secrecy of its meetings.

Art. 31—No one may be called to account for

a truthful report of an open meeting of the Sejm or a committee of the Sejm.

Art. 32—A vote is valid only when carried by an ordinary majority in the presence of at least one-third of the total statutory number of Deputies, in so far as provisions of this Constitution do not contain other rules.

Art. 33—The Deputies have the right of addressing interpellations to the Government or to individual Ministers, in the manner prescribed by the standing rules. A Minister is bound to answer within six weeks, orally or in writing, or submit a statement wherein he justifies his failure to give an answer to the point. At the request of those addressing the interpellation, the answer must be communicated to the Sejm. The Sejm may make the answer the subject of debate and vote.

Art. 34—The Sejm may form and appoint, for the investigation of individual cases, extraordinary committees empowered to hear the interested parties, as well as to summon witnesses and experts. The competence and powers of such committees will be determined by the Sejm.

Art. 35—Every bill passed by the Sejm will be submitted to the Senate for consideration. If the Senate, within thirty days from the day on which a passed bill has been delivered to it, does not raise any objections to the bill, the President of the republic will direct the publication of the statute. Upon the motion of the Senate, the President of the republic may direct the publication of the statute before the lapse of the thirty days.

If the Senate decides to alter or reject a bill passed by the Sejm, it must announce this to the Sejm within the aforesaid thirty days, and must return the bill to the Sejm with the proposed changes within the following thirty days.

If the Sejm votes by an ordinary majority, or by a majority of eleven-twentieths of those voting, the changes proposed by the Senate, the President of the republic will direct the publication of the statute in the wording determined by the second vote of the Sejm.

Art. 36—The Senate is composed of members elected by the individual Voyerodships, by universal, secret, direct, equal and proportional voting. Every Voyerodship forms one constituency, and the number of Senators is equal to one-fourth of the number of members of the Sejm, in proportion to the number of inhabitants. The right of electing to the Senate is enjoyed by every elector for the Sejm who, on the day of the proclamation of the elections, is thirty years of age and has on that day been a resident of the electoral district for at least one year; the right of voting is not lost by newly settled colonists who have left their former place of residence, availing themselves of the agrarian reform; neither is that right lost by workmen who have changed their place of residence as a result of changing their place of occupation, or by State officials transferred by their superior authorities. Eligibility is enjoyed by every citizen who has the right of voting for the Senate, not excluding members of the army in active service, provided that citizen is 40 years of age on the day of the proclamation of the elections.

The term of the Senate begins and ends with the term of the Sejm.

No one may be at the same time a member of the Sejm and of the Senate.

Art. 37—The provisions contained in Articles 14, 15, 16, 17, 19, 20, 21, 22, 23, 24, 27, 28, 29, 30, 31, 32 and 33 have analagous application to the Senate and to its members, respectively.

Art. 38—No statute may be in opposition to this Constitution or violate its provisions.

Section III.—Executive Power

Art. 39—The President of the republic is elected for seven years by the absolute majority of the votes of the Sejm and the Senate united in National Assembly. The National Assembly is convoked by the President of the republic in the last three months of his seven years' term of office. If the convocation has not taken place thirty days before the end of the seven years' term, the Sejm and the Senate, upon the invitation of the Marshal of the Sejm and under his Chairmanship, unite automatically in National Assembly.

Art. 40—Should the President of the republic be unable to perform the duties of his office, or should the office of the President of the republic become vacant through death, resignation, or some other reason, the Marshal of the Sejm will act as his Deputy.

Art. 41—In case the office of the President of the republic becomes vacant, the Sejm and the Senate, upon the invitation of the Marshal of the Sejm and under his Chairmanship, at once unite automatically in a National Assembly for the purpose of electing a President.

Should the Sejm be dissolved at the moment when the office of President of the republic becomes vacant, the Marshal of the Sejm will direct without delay new elections to the Sejm and the Senate.

Art. 42—If the President of the republic does not perform the duties of his office for three months, the Marshal will without delay convoke the Sejm and submit to its decision the question whether the office of the President of the republic is to be declared vacant.

The decision to declare the office vacant is taken by a majority of three-fifths of the votes in the presence of at least one-half of the statutory number of Deputies; that is, the number prescribed by the Law of Elections.

Art. 43—The President of the republic exercises the executive power through Ministers responsible to the Sejm and through officials subordinated to the Ministers.

Every official of the republic must be subordinate to a Minister, who is responsible to the Sejm for the former's actions.

The President of the Council of Ministers countersigns the appointment of officials of the civil Cabinet of the President of the republic, and is responsible for their actions to the Sejm.

Art. 44—The President of the republic signs the statutes jointly with the competent Ministers, and directs the publication of the statutes in the Journal of the Laws of the republic.

The President of the republic has the right to issue, for the purpose of executing the statutes and with reference to the statutory authorization, executive ordinances, directions, orders and prohibitions, and to insure their execution by the use of force.

The Ministers and the authorities subordinate to them have the same right in their respective fields of jurisdiction.

Every governmental act of the President of the republic requires for its validity the signature of the President of the Council of Ministers and of the competent Minister, who, by countersigning the act, assume the responsibility therefor.

Art. 45—The President of the republic appoints and recalls the President of the Council of Min-

isters; on the latter's motion he appoints and recalls Ministers, and on the motion of the Council of Ministers makes appointments to the civil and military offices reserved by statutes.

Art. 46—The President of the republic is at the same time the supreme head of the armed forces of the State, but he may not exercise the chief command in time of war.

The Commander-in-Chief of the armed forces of the State, in case of war, is appointed by the President of the republic, on the motion of the Council of Ministers, presented by the Minister of Military Affairs, who is responsible to the Sejm for the acts connected with the command in time of war, as well as for all affairs of military direction.

Art. 47—The right to reprieve and to mitigate punishment, and to abolish the consequences of criminal conviction in individual cases, belongs to the President of the republic.

The President may not exercise this right in the case of Ministers convicted upon impeachment by the Sejm.

Amnesty may be granted only by statute.

Art. 48—The President of the republic, in foreign relations, receives diplomatic representatives of foreign States and sends diplomatic representatives of the Polish State to foreign States.

Art. 49—The President of the republic makes treaties with other States and brings them to the notice of the Sejm.

Commercial and customs treaties, as well as treaties which impose a permanent financial burden on the State, or contain legal rules binding on the citizens, or change the frontiers of the State, also alliances, require the consent of the Sejm.

Art. 50—The President of the republic may declare war and conclude peace only after obtaining the consent of the Sejm.

Art. 51—The President of the republic is not responsible either to Parliament or at civil law.

For betraying the country, violating the Constitution, or for criminal offenses, the President of the republic may be made responsible only by the Sejm by a vote of a majority of three-fifths in the presence of at least one-half of the statutory number of Deputies. The cause is heard and the sentence given by the Court of State, according to the rules of a special statute. Immediately upon his impeachment before the Court of State, the President of the republic is suspended from office.

Art. 52—The President of the republic receives a salary according to the rules of a special statute.

Art. 53—The President of the republic may not hold any other office or be a member of the Sejm or the Senate.

Art. 54—Before assuming office the President of the republic takes his oath in the National Assembly, in the following terms:

"I swear to Almighty God, One in the Holy Trinity, and I vow to Thee, Polish nation, that while holding the office of President of the republic I will keep and defend faithfully the laws of the republic and above all the constitutional law; that I will serve devotedly, with all my power, the general good of the nation; that I will avert, watchfully, from the State all evil and danger; that I will guard steadfastly the dignity of the name of Poland; that I will hold justice toward all citizens without distinction as the highest virtue; that I will devote myself undividedly to the duties of office and service. So help me God and the Holy Martyrdom of His Son. Amen."

Art. 55—The Ministers form the Council of

Ministers under the Chairmanship of the President of the Council of Ministers.

Art. 50—The Council of Ministers bears the joint constitutional and parliamentary responsibility for the general direction of the activities of the Government.

Apart from that, each Minister is individually responsible, in his domain, for his activities in office; that is, as well for their conformity with the Constitution and the other statutes of the State, and for the activities of the subordinate organs, as for the direction of his policies.

Art. 57—Within the same limits, the Ministers are jointly and individually responsible for the governmental acts of the President of the republic.

Art. 58—The parliamentary responsibility of the Ministers is enforced by the Sejm by an ordinary majority. The Council of Ministers or any individual Minister will resign at the request of the Sejm.

Art. 59—The constitutional responsibility of the Ministers and the way of its realization will be determined by a special statute.

The decision to impeach a Minister can be made only in the presence of at least one-half the statutory number of Deputies and by a majority of three-fifths of the votes cast.

The causes are heard and judgment is passed by the Court of State. A Minister cannot evade his constitutional responsibility by resigning his office. Immediately upon his impeachment, the Minister is suspended from office.

Art. 60—The Ministers and officials delegated by them, have the right to take part in the meetings of the Sejm, and to speak out of the turn of those figuring on the list of speakers; they may take part in the vote if they are Deputies.

Art. 61—The Ministers may not hold any other office or participate in the governing or controlling bodies of societies and institutions which work for profit.

Art. 62—Should the office of a Minister be held by a provisory head of the Ministry, he will be subject to all the rules concerning the office of a Ministry.

The President of the Council of Ministers will, in case of need, appoint one of the Ministers his deputy.

Art. 63—A special statute will determine the number, competence, and mutual relation of the Ministers, as well as the competence of the Council of Ministers.

Art. 64—The Court of State is composed of the First President of the Supreme Court as Chairman, and of twelve members, eight of whom are elected by the Sejm and four by the Senate from outside their own membership.

To membership in the Court of State are eligible persons who do not hold any State office and are in full possession of civil rights.

The election of the members of the Court of State is carried out by the Sejm and the Senate immediately upon the election of their officers for the whole term of the Sejm.

Art. 65—For administrative purposes, the Polish State will be divided by statute into *Voyevodships*, districts, and urban and rural communes, which will at the same time be the units of territorial self-government.

The units of self-government may combine into unions in order to accomplish tasks which belong to the domain of self-government.

Such unions may obtain the character of bodies of public law only by special statute.

Art. 66—The administration of the State will

be organized on the principle of decentralization, organs of State administration in the individual territorial units being, as far as possible, joined in one official body under one superior, and on the principle that within the limits determined by statutes, citizens elected for this purpose shall participate in the discharge of the duties of such official bodies.

Art. 67—The right of determining affairs belonging to the domain of self-government rests with elected councils. The executive functions of *Voyevodship* and district self-government rest with organs formed by adding to boards elected by representative bodies, representatives of State administrative authorities, under the Chairmanship of the latter.

Art. 68—A special statute will create, in addition to territorial self-government, economic self-government; for the individual fields of economic life—namely, Chambers of Agriculture, Commerce, Industry, Arts and Crafts, Hired Labor, and others, united into a Supreme Economic Council of the republic, the collaboration of which with State authorities, in directing economic life and in the field of legislative proposals, will be determined by statutes.

Art. 69—The sources of revenue of the State and of self-government organizations respectively will be strictly delimited by statutes.

Art. 70—The State will exercise supervision over self-government activities through superior self-government boards; such supervision may, however, be partially delegated by statute to administrative courts.

Statutes will determine the cases in which decisions of self-government organs may exceptionally require confirmation by superior self-government organs or by Ministries.

Art. 71—An appeal from decisions of State and self-government organs will be allowed only to one superior body, unless other provisions are made by statutes.

Art. 72—Statutes will put into effect the principle that from penal decisions of administrative authorities, made in the first instance, the parties concerned will have the right to appeal to the competent court.

Art. 73—For the purpose of passing upon the legality of administrative acts in the field of State, as well as of self-government administration, a special statute will create Administrative Courts, basing their organization on the co-operation of (lay) citizens and (professional) Judges, and culminating in a Supreme Administrative Court.

Section IV.—Judiciary

Art. 74—The courts administer justice in the name of the Republic of Poland.

Art. 75—The organization, jurisdiction and procedure of all courts will be defined by legislation.

Art. 76—The President of the republic appoints the Judges, unless a different provision is made by statute, but Justices of the Peace are as a rule elected by the population.

Judicial office is accessible only to persons who possess the qualifications required by law.

Art. 77—In the exercise of their judicial office, the Judges are independent and subject only to statutes.

Judicial decisions may not be changed either by the legislative power or by the Executive power.

Art. 78—A Judge may be removed from office, suspended from office, transferred to a different place of office, or pensioned, against his own will,

by judicial decision only, and only in cases provided by statute.

This rule does not apply in the case of the transfer of a Judge to a different place, or his pensioning owing to a change in the organization of the courts decided upon by statute.

Art. 79—Judges may not be criminally prosecuted or be deprived of their freedom without the previous consent of the court assigned by statute, unless they are caught in the act, but even in this last case the court may demand that the arrested Judge be freed without delay.

Art. 80—A special statute will define the peculiar position of the Judges, their rights and duties, as well as their compensation.

Art. 81—The courts have not the right to inquire into the validity of duly promulgated statutes.

Art. 82—The hearings before a determining court, as well in civil as in criminal cases, are public, except when statutes provide otherwise.

Art. 83—Courts with juries will be called upon to determine cases of felonies entailing more severe punishment, and cases of political offenses. Statutes will define in detail the jurisdiction of courts with juries, the organization of such courts, and their procedure.

Art. 84—A Supreme Court for judicial causes, civil and criminal, is hereby created.

Art. 85—Special statutes will define the organization of military courts, their jurisdiction, procedure, and the rights and duties of the members of such courts.

Art. 86—A special Competence Court [Tribunal of Conflicts] will be created by a statute to determine conflicts of jurisdiction between the administrative authorities and the courts.

Section V.—General Duties and Rights of Citizens

Art. 87—A Polish citizen may not be at the same time a citizen of another State.

Art. 88—Polish citizenship is acquired: (a) by birth if the parents are Polish citizens; (b) by naturalization granted by the competent State authority. Special statutes define other rules as to Polish citizenship, its acquisition and loss.

Art. 89—Fidelity to the Republic of Poland is the first duty of a citizen.

Art. 90—Every citizen has the duty of respecting and obeying the Constitution of the State and other valid laws and ordinances of the State and self-government authorities.

Art. 91—All citizens are subject to military service; the character and manner, order and term of service, exemption from such duty, and any duties, contributions or services for military purposes, will be defined by legislation.

Art. 92—It is the duty of all citizens to submit to any public burdens services and duties imposed by virtue of statute.

Art. 93—All citizens are bound to respect legitimate authority and to facilitate the performance of its duties, as well as to perform conscientiously public duties to which they may be appointed by the nation or the proper authority.

Art. 94—It is the duty of citizens to bring up their children as righteous citizens of the mother country, and to secure to them at least elementary education.

This duty will be defined more in detail by a special statute.

Art. 95—The Republic of Poland guarantees on its territory, to all, without distinction of extrac-

tion, nationality, language, race or religion, full protection of life, liberty and property.

Foreigners enjoy, on condition of reciprocity, rights equal to those of citizens of the Polish State, and have duties equal to those of such citizens, unless statutes expressly require Polish citizenship.

Art. 96—All citizens are equal before the law. Public offices are accessible in equal measure to all, on conditions prescribed by the law.

The Republic of Poland does not recognize privileges of birth or of estate, or any coats of arms, family or other titles, with the exception of those of learning, office or profession. A Polish citizen may not accept foreign titles or orders without the permission of the President of the Republic.

Art. 97—Limitations of personal liberty, especially search of person and arrest, are admissible only in cases prescribed by law, and in the manner defined by statutes, by virtue of an order from judicial authorities.

In case a judicial order cannot be issued immediately, it should be served, at the latest, within forty-eight hours, with a statement of the reasons of the search or arrest.

Arrested persons who have not been served within forty-eight hours with a written statement of the cause of arrest, signed by a judicial authority, regain their freedom at once.

The means of compulsory serving by which the administrative authorities may enforce their orders are determined in statutes.

Art. 98—No one may be deprived of the court to which he is subject by law. Exceptional courts are admissible only in cases determined by statutes, which statutes must have been issued before the offense was committed. A citizen may be prosecuted and punishment inflicted only by virtue of a statute actually in force. Punishment involving physical suffering is not permitted and no one may be subjected to such punishment.

No statute may deprive a citizen of access to the courts for the purpose of demanding reparation for injury or damage.

Art. 99—The Republic of Poland recognizes all property, whether belonging personally to individual citizens or collectively to associations of citizens, institutions, self-government organizations, and the State itself, as one of the most important bases of social organization and legal order, and guarantees to all citizens, institutions and associations protection of their property, permitting only in cases provided by a statute the abolition or limitation of property, whether personal or collective, for reasons of higher utility, against compensation. Only a statute may determine what property—and to what extent, for reasons of public utility—shall form the exclusive property of the State, and in how far rights of citizens and of their legally recognized associations to use freely land, waters, minerals and other treasures of nature, may be subject to limitations for public reasons.

The land, as one of the most important factors of the existence of the nation and the State, may not be the subject of unrestricted transfer (commerce). Statutes will define the right of the State to buy up land against the will of the owners, and to regulate the transfer of land, applying the principle that the agrarian organizations of the Republic of Poland should be based on agricultural units capable of regular production, and forming private property.

Art. 100—The home and hearth of the citizen

are inviolable. Infringements of this right by entering the home, searching it and taking papers or movables may, apart from the necessity of executing administrative orders based on a specific statutory authorization, take place only by order of judicial authorities, in the manner and in the cases prescribed by the statute.

Art. 101—Every citizen has the liberty of selecting on the territory of the State his place of residence and abode, to move about and to emigrate, as well as to choose his occupation and profession, and to transport his property.

These rights may be restricted only by statute.

Art. 102—Labor is the main basis of the wealth of the republic, and should remain under the special protection of the State.

Every citizen has the right to State protection for his labor, and in case of lack of work, illness, accident or debility, to the benefits of special insurance which will be determined by a special statute.

The State has the duty of making accessible also moral guidance and religious consolation to citizens under its immediate care in public institutions, such as educational institutions, barracks, hospitals, prisons and charitable homes.

Art. 103—Children without sufficient parental care, neglected with respect to education, have the right to State aid within the limits to be determined by statute.

Parents may not be deprived of authority over their children except by judicial decision.

Special statutes determine the protection of motherhood.

Children under 15 years of age may not be wage earners; neither may women be employed at night, or young laborers be employed in industries detrimental to their health.

Permanent employment of children and young people of school age for wage earning purposes is forbidden.

Art. 104—Every citizen has the right to express freely his ideas and convictions in so far as he does not thereby violate legal provisions.

Art. 105—Freedom of the press is guaranteed. Censorship of the system of licensing printed matter may not be introduced. Daily papers and other matter printed in the country may not be debarred from the mails nor may their dissemination on the territory of the republic be restricted.

A special statute will define the responsibility for the abuse of this freedom.

Art. 106—The secrecy of letters and other correspondence may be infringed upon only in cases provided by law.

Art. 107—Citizens have the right of presenting individual or collective petitions to all State and self-government representative bodies and public authorities.

Art. 108—Citizens have the right of combining, meeting and forming associations and unions. The exercise of these rights is defined by statutes.

Art. 109—Every citizen has the right of preserving his nationality and developing his mother-tongue and national characteristics.

Special statutes of the State will guarantee to minorities in the Polish State the full and free development of their national characteristics, with the assistance of autonomous minority unions, endowed with the character of public law organizations, within the limits of unions of general self-government.

The State will have in regard to their activity the right of control and of supplementing their financial means in case of need.

Art. 110—Polish citizens belonging to national, religious or linguistic minorities, have the same right as other citizens of founding, supervising and administering at their own expense, charitable, religious and social institutions, schools and other educational institutions, and of using freely therein their language, and observing the rules of their religion.

Art. 111—Freedom of conscience and of religion is guaranteed to all citizens. No citizen may suffer a limitation of the right enjoyed by other citizens, by reason of his religion and religious convictions.

All inhabitants of the Polish State have the right of freely professing their religion in public as well as in private, and of performing the commands of their religion or rite, in so far as this is not contrary to public order or public morality.

Art. 112—Religious freedom may not be used in a way contrary to statutes. No one may evade the performance of public duties by reason of his religious beliefs. No one may be compelled to take part in religious activities or rites unless he is subject to parental or guardian's authority.

Art. 113—Every religious community recognized by the State has the right of organizing collective and public services; it may conduct independently its internal affairs; it may possess and acquire movable and immovable property, administer and dispose of it; it remains in possession and enjoyment of its endowments and funds, and of religious, educational and charitable institutions. No religious community may, however, be in opposition to the statutes of the State.

Art. 114—The Roman Catholic religion, being the religion of the preponderant majority of the nation, occupies in the State the chief position among enfranchised religions. The Roman Catholic Church governs itself, under its own laws. The relation of the State to the Church will be determined on the basis of an agreement with the Apostolic See, which is subject to ratification by the Sejm.

Art. 115—The churches of the religious minorities and other legally organized religious communities govern themselves by their own laws, which the State may not refuse to recognize unless they contain rules contrary to law.

The relation of the State to such churches and religions will be determined from time to time by legislation after an understanding with their legal representatives.

Art. 116—The recognition of a new or hitherto not legally recognized religion may not be refused to religious communities whose institutions' teachings and organizations are not contrary to public order or public morality.

Art. 117—Learned investigations and the publication of their results are free. Every citizen has the right to teach, to found a school or educational institution and to direct it if he complies with the requirements laid down by statute concerning the qualifications of teachers, the safety of the child intrusted to him, and a loyal attitude toward the State. All schools and educational institutions, public as well as private, are subject to supervision by State authorities within the limits prescribed by statutes.

Art. 118—Within the limits of the elementary school, instruction is compulsory for all citizens of the State. A statute will define the period, limits and manner of acquiring such education.

Art. 119—Teaching in State and self-government schools is gratuitous.

The State will insure to pupils who are exceptionally able, but not well-to-do, scholarships for

their maintenance in secondary and academic schools.

Art. 120—Instruction in religion is compulsory for all pupils in every educational institution, the curriculum of which includes instruction of youth under 18 years of age, if the institution is maintained wholly or in part by the State, or by self-government bodies. The direction and supervision of religious instruction in schools belongs to the respective religious community, reserving to the State educational authorities the right of supreme supervision.

Art. 121—Every citizen has the right to compensation for damage inflicted upon him by civil or military organs of State authorities, by an official act not in accordance with the right or duties of the service. The State is responsible for the damage, jointly with the guilty organs; action may be brought against the State and against officials, independently of any permission by public authority. Communes and other self-government bodies, as well as their organs, are responsible in the same manner. Special statutes will define the application of this principle.

Art. 122—The rules as to citizens' rights apply also to persons belonging to the armed force. Special military statutes define exceptions to this principle.

Art. 123—Armed force may be used only by request of a civil authority under strict obedience to statutes, for the purpose of putting down disturbances or of enforcing the execution of legal rules. Exceptions to this principle are admissible only by virtue of statutes on the state of siege and of war.

Art. 124—A temporary suspension of citizens' rights; of personal liberty (Article 97), of inviolability of home and hearth (Article 100), of freedom of the press (Article 105), of secrecy of correspondence (Article 106), of the right of combining, meeting and forming associations (Article 108), may take place for the whole territory of the State or for localities in which it may prove necessary for reasons of public safety.

Such suspension may be directed only by the Council of Ministers, by permission of the President of the republic, during a war or when an outbreak of war threatens, as well as in case of internal disturbances or of widespread conspiracies which bear the character of high treason and threaten the Constitution of the State or the safety of the citizens.

Such a decision of the Council of Ministers, if made while the Sejm is in session, must be immediately submitted to the Sejm for confirmation. If such a decision, to apply on a territory which comprises more than one *Voyevodship* be issued during an interval between meetings of the Sejm, the Sejm meets automatically within eight days from the publication of the decision in order to take the proper step.

Should the Sejm refuse confirmation, the state of siege immediately loses its binding force. If the Council of Ministers directs a state of siege after the expiration of the term of the Sejm, or after dissolution of the Sejm, the decision of the Government must be submitted to the newly elected Sejm without delay, at its first meeting.

These principles will be defined more in detail by a statute on the state of siege.

A statute on the state of war will define the principles of a temporary suspension of the above enumerated rights of citizens in time of war on the territory affected by war operations.

Art. 125—A change in the Constitution may

be voted only in the presence of at least one-half the statutory number of Deputies or Senators respectively, by a majority of two-thirds of the votes.

The motion to change the Constitution must be signed by at least one-fourth of the total statutory number of Deputies and notice of such a motion must be given at least fifteen days in advance.

The second Sejm, which will meet on the basis of this Constitution, may revise this constitutional law by its own vote, taken by a majority of three-fifths in the presence of at least one-half the statutory number of Deputies.

Art. 126—This Constitution has binding force from the day of its publication, or in so far as the realization of its individual provisions is dependent on the issuing of special statutes on the day of their going into force. All legal rules and institutions now in force which do not agree with the rules of this Constitution, will, within a year from the voting of this Constitution, be submitted to the legislative body in order to be brought into harmony with the Constitution by legislation.

POLAVEJA, or *Polavieja*, **Camilo Garcia de** (b. 1838-), Filipino general. See PHILIPPINE ISLANDS: 1806-1808.

POLE, Reginald (1500-1558), English Roman Catholic prelate. Became cardinal, 1536; legate-president of the Council of Trent, 1545; archbishop of Canterbury, 1557-1558. See EUROPE: Renaissance and Reformation; Catholic Reformation.

POLEMARCH, official of ancient Athens, with the special duty of safeguarding the rights of resident aliens. See ATHENS: B. C. 753-650.

POLESIA, county of eastern Poland. Formerly a part of the Russian empire, it was ceded to Poland in 1921. The population in 1921 was 865,035. See POLAND: 1921: Peace treaty with Russia.

POLETÆ, POLETERIUM.—"Every thing which the state [Athens] sold, or leased; revenues, real property, mines, confiscated estates, in which is to be included also the property of public debtors, who were in arrear after the last term of respite, and the bodies of the aliens under the protection of the state, who had not paid the sum required for protection, and of foreigners who had been guilty of assuming the rights of citizenship, or of the crime called apostasy; all these, I say, together with the making of contracts for the public works, at least in certain cases and periods, were under the charge of the ten *poletæ*, although not always without the coöperation of other boards of officers. Each of the tribes appointed one of the members of this branch of the government, and their sessions were held in the edifice called the *Poleterium*."—A. Boeckh, *Public economy of Athens* (tr. by Lamb), bk. 2, ch. 3.

POLETERIUM. See POLETÆ.

POLI, early kingdom on the island of Borneo. See BORNEO: 518-1374.

POLICE. See MUNICIPAL GOVERNMENT: Police defined.

POLICE JURY, administrative and legislative body of the Louisiana parish or county. See LOUISIANA: 1874-1921.

POLICE STRIKE, Boston. See BOSTON: 1919.

POLIOMYELITIS. See MEDICAL SCIENCE: Modern: 20th century: Infantile paralysis.

POLISH GREY SAMARITAN COMMITTEE. See YOUNG WOMEN'S CHRISTIAN ASSOCIATION: 1918: Continuation war work.

POLISH LANGUAGE. See PHILOLOGY: 21.

POLISH LEGION, body of troops made up largely of Americans of Polish extraction, which fought in France in the World War on the side of the Allies. See POLAND: 1914-1917.

POLISH-DANZIG CONVENTION. See POLAND: 1922.

POLITICAL ECONOMY. See ECONOMICS.

POLITICAL SCIENCE. See CIVICS.

POLITIQUES, French moderate party during the reign of Charles IX. See FRANCE: 1573-1576.

POLITIS, Nicolas, Greek statesman. Minister of foreign affairs, 1917-1921; representative at the Paris Peace Conference, 1919. See VERSAILLES, TREATY OF: Conditions of peace.

POLIZIANO, or Politianus, Angelo (Angelo Ambrogini) (1454-1494), Italian scholar and poet. See ITALIAN LITERATURE: 1450-1595.

POLK, Frank Lyon (1871-), American lawyer. Counsellor of the state department of the United States, 1915-1919; became under-secretary of state, 1919. See U.S.A.: 1919-1920.

POLK, James Knox (1795-1849), eleventh president of the United States. Member of the House of Representatives, 1825-1839; speaker, 1835-1839; governor of Tennessee, 1839-1841; president of the United States, 1845-1849. See TENNESSEE: 1834-1856; U.S.A.: 1844; 1845: Polk's cabinet meetings; 1845-1846.

Attitude on Monroe Doctrine. See MONROE DOCTRINE: 1827-1867.

Instrumental in conquest of California. See CALIFORNIA: 1846; 1846-1847.

War with Mexico. See MEXICO: 1846; 1846-1847; 1848.

POLKI, Cossack troops. See UKRAINE: 1700-1721.

POLKOS, Mexican political faction. See MEXICO: 1846-1847.

POLL TAX, direct per capita or head tax. It was a source of considerable revenue in colonial days, and is still levied in some states, though its use is decreasing. See TAXATION: Local taxation in the United States.

POLLAIUOLO, Antonio (1429-1498), Florentine painter and sculptor. See PAINTING: Italian: Early Renaissance.

POLLARD, William Jefferson (1860-1913), American lawyer and prohibition advocate. See LIQUOR PROBLEM: International movements.

POLLENTIA, Battle of (402). See GÖTHS: 400-403.

POLLICES.—The Roman unit of measurement, the pes, or unciæ (whence our word "inch"), was divided into twelve pollices, or thumb-joint lengths.

POLLOCK, Sir George (1786-1872), British field marshal. Fought in Mahratta and Burmese Wars, 1803-1805, 1824-1826; commanded British forces in Afghanistan, 1842; became field marshal, 1870. See AFGHANISTAN: 1838-1842; 1842-1860.

POLLOCK VS. FARMERS' LOAN AND TRUST COMPANY. See U.S.A.: 1895 (April-May).

POLO, Marco (c. 1254-1324), Venetian traveler. Entered the service of Kublai Khan, 1275; left China, 1292, and after traveling through Sumatra, India and Persia, arrived in Venice, 1295; taken prisoner by the Genoese in the battle of Curzola, 1298; dictated during his imprisonment an account of his adventures which became widely popular. See TRAVELS OF MARCO POLO.

POLONNA, Battle of (1792). See POLAND: 1791-1792.

POLOTSK, Battle of (1811). See AUSTRIA: 1809-1814.

POLOTSKY, or Polotzki, Simeon (1628-1680), Russian dramatist. See RUSSIAN LITERATURE: 1400-1689; 1650-1800.

POLTAVA, or Pultova, government and capital of the same name in the Ukraine. The city is located in the Vprskla, 88 miles southwest of Khar-kov. See RUSSIA: 1918-1920.

POLYBIUS (c. 204-122 B.C.), Greek historian. See GREEK LITERATURE: First part of Greco-Roman period; HISTORY: 15; 16.

POLYCLITUS, or Polycleitos (fl. latter half of 5th century B.C.), Greek sculptor. See SCULPTURE: Greek: B.C. 5th century.

POLYCLITUS, or Polycleitos (fl. 4th century B.C.), Greek sculptor and architect. Built the famous theater of Epidauros.

POLYCRATES, tyrant of Samos, c. 535-515 B.C. See SAMOS.

POLYGNOTUS (fl. middle of 5th century B.C.), Greek painter. See PAINTING: Greek; EDUCATION, ART: Greece.

POLYGON WOOD, position four miles east of Ypres, Belgium. It was taken by the Allies in 1917 during the Allied offensive. See WORLD WAR: 1917: II. Western front: d, 18; d, 19.

POLYNESIA, term applied to all the islands of the central and western Pacific, particularly to the eastern of the three divisions, comprising Hawaii, Ellice, Phoenix, Union, Manihiki, Marquesas, Cook, Society, Tubuai and Tuamotu groups, Samoa, Tonga, and lesser islands. See PACIFIC OCEAN: Geographical description; People; B.C. 2500-A.D. 1500; HAWAIIAN ISLANDS; TONGA, OR FRIENDLY ISLANDS.

Art. See ART: Distribution.

Language. See PHILOLOGY: 27.

Mythology. See MYTHOLOGY: Oceanic: Polynesian myths.

POLYPOTAMIA, Proposed state of. See NORTHWEST TERRITORY OF THE UNITED STATES: 1784.

POLYSPERCHON, or Polyperchon (died c. 303 B.C.), Macedonian general. Served under Alexander the Great; became regent of Macedonia, 319 B.C.; expelled by Cassander, 317 B.C. See MACEDONIA: B.C. 323-316; GREECE: B.C. 321-312.

POMAKS.—"Many of the Bulgars who inhabited the wildest parts of the Rhodope mountains became converts to the Moslem religion during the reign of Mahammed IV (1648-1687). They retained the habits, customs, and language of the Bulgars, but were henceforth known as Pomaks. The adoption of the Creed of Islam made them a privileged class in the conquered country."—W. S. Monroe, *Bulgaria and her people*, p. 30. See BULGARIA: 1013; Attempted conversion of Pomaks; THRACE: 1918-1921.

POMARE, name given to the kings of Tahiti. See TAHITI.

POMBAL, Sebastião José de Carvalho e Mello, Marquess of (1600-1782), Portuguese statesman. Envoy extraordinary to London, 1738-1745; to Vienna, 1745-1749; minister for foreign affairs and war, 1740-1750; prime minister, 1750-1777; reduced the power of the Inquisition, reorganized education, finance, the army and navy, ex-

pelled the Jesuits from the land, and freed the Indians from slavery. See PORTUGAL: 1656-1777; JESUITS: 1757-1773.

POMERANIA, province of Prussia, on the Baltic, east of Mecklenburg. (See GERMANY: Map.) It has an area of 11,654 square miles, and the population, in 1910, was 1,787,103. Originally occupied by the Vandals, it passed into the possession of the Slavic Wends, who divided it into several principalities. In 1170 two of the ruling princes took the title of duke, which Frederick Barbarossa recognized in 1181. Shortly after, the margrave of Brandenburg was given suzerainty over Pomerania. See BRANDENBURG: 1168-1417.

1243.—Bishopric formed. See PRUSSIA: 13th century.

14th century.—Conquest by Boleslav of Poland. See POLAND: Beginnings of national existence.

behind the wall, where the city auspices were taken, over which the augurs had full right, and which could never be moved without their first consulting the will of the gods. The pomerium which encircled the Palatine appears to have been the space between the wall and the foot of the hill." —H. M. Westropp, *Early and imperial Rome*, p. 40.

POMEROY, Seth (1706-1777) American soldier. Served in the French and Indian Wars, 1745-1760; in the American Revolution. See U. S. A.: 1774-1775; 1775 (May-August).

POMMERN, German battleship. It was sunk on May 31, 1916, at the battle of Jutland.

POMPADOUR, Jeanne Antoinette Poisson le Normant d'Étiolles, Marquise de (1721-1764), mistress of Louis XV and a most influential figure in the politics of her time. She was a patron of arts and numbered among her circle Voltaire and Quesnay. See FRANCE: 1723-1774; 1745-1763.

STRADA DELLA FORTUNA, POMPEII

1627.—Occupied by Wallenstein. See GERMANY: 1627-1629.

1630.—Occupied by Gustavus Adolphus. See GERMANY: 1630-1631.

1648.—Divided between Brandenburg and Sweden by Treaty of Westphalia. See WESTPHALIA, PEACE OF (1648); GERMANY: Map: At Peace of Westphalia; 1648: Peace of Westphalia; BRANDENBURG: 1640-1688.

1675-1679.—Controlled by Brandenburg. See BRANDENBURG: 1640-1688.

1679.—Recovered by Sweden at Peace of St. Germain. See SWEDEN: 1644-1697.

1720.—Part ceded to Prussia.

1812.—Extent. See EUROPE: Modern: Map of central Europe in 1812.

1815.—Remainder ceded to Prussia by Congress of Vienna. See VIENNA, CONGRESS OF.

POMERIUM, Roman.—"The pomerium was a hallowed space, along the whole circuit of the city,

POMPÆ, solemn processions of the ancient Athenians, on which they expended great sums of money.

POMPEII, situated in Campania, overlooking the Bay of Naples. "Pompeii was a maritime city at the mouth of the river Sarnus, the most sheltered recess of the Neapolitan Crater. Its origin was lost in antiquity, and the tradition that it was founded by Hercules, together with the other spot [Herculaneum] which bore the name of the demigod, was derived perhaps from the warm springs with which the region abounded. The Greek plantations on the Campanian coast had been overrun by the Oscans and Samnites; nevertheless the graceful features of Grecian civilization were still everywhere conspicuous, and though Pompeii received a Latin name, and though Sulla, Augustus, and Nero had successively endowed it with Roman colonists, it retained the manners and to a great extent the language of the settlers from beyond the sea."—

C. Merivale, *History of the Romans*, ch. 60.—Pompeii, and the neighboring city of Herculaneum, were overwhelmed by a volcanic eruption from Mount Vesuvius, on August 23, 79 A. D. They were buried, but did not perish; they were death-stricken, but not destroyed; and by excavations, which began at Pompeii, 1748, they have been extensively uncovered, and made to exhibit to modern times the very privacies and secrets of life in a Roman city of the age of Titus.—Pliny the Younger, *Letters*, bk. 6, *epistles* 16 and 20.

PONTIAC (c. 1720-1769), chief of the Ottawa Indians, and leader of the "Conspiracy of Pontiac," 1763-1764. See **PONTIAC'S WAR; OSWEGO: 1728-1830.**

PONTIAC'S WAR (1763-1764).—"With the conquest of Canada and the expulsion of France as a military power from the continent, the English colonists were abounding in loyalty to the mother country, were exultant in the expectation of peace, and in the assurance of immunity from Indian wars in the future; for it did not seem possible that, with the loose system of organization and government common to the Indians, they could plan and execute a general campaign without the co-operation of the French as leaders. This feeling of security among the English settlements was of short duration. A general discontent pervaded all the Indian tribes from the frontier settlements to the Mississippi, and from the great lakes to the Gulf of Mexico. The extent of this disquietude was not suspected, and hence no attempt was made to gain the good-will of the Indians. There were many real causes for this discontent. The French had been politic and sagacious in their intercourse with the Indian. They gained his friendship by treating him with respect and justice. They came to him with presents, and, as a rule, dealt with him fairly in trade. They came with missionaries, unarmed, heroic, self-denying men. . . . Many Frenchmen married Indian wives, dwelt with the native tribes, and adopted their customs. To the average Englishman, on the other hand, Indians were disgusting objects; he would show them no respect, nor treat them with justice except under compulsion. . . . The French had shown little disposition to make permanent settlements; but the English, when they appeared, came to stay, and they occupied large tracts of the best land for agricultural purposes. The French hunters and traders, who were widely dispersed among the native tribes, kept the Indians in a state of disquietude by misrepresenting the English, exaggerating their faults, and making the prediction that the French would soon recapture Canada and expel the English from the Western territories. Pontiac, the chief of the Ottawas, was the Indian who had the motive, the ambition, and capacity for organization which enabled him to concentrate and use all these elements of discontent for his own malignant and selfish purposes. After the defeat of the French, he professed for a time to be friendly

with the English, expecting that, under the acknowledged supremacy of Great Britain, he would be recognized as a mighty Indian prince, and be assigned to rule over his own, and perhaps a confederacy of other tribes. Finding that the English government had no use for him, he was indignant, and he devoted all the energies of his vigorous mind to a secret conspiracy of uniting the tribes west of the Alleghanies to engage in a general war against the English settlements. ["The tribes thus banded together against the English comprised, with a few unimportant exceptions, the whole Algonquin stock, to whom were united the Wyandots, the Senecas, and several tribes of the lower Mississippi. The Senecas were the only members of the Iroquois confederacy who joined in the league, the rest being kept quiet by the influence of Sir William Johnson."—F. Parkman, *Conspiracy of Pontiac*, v. 1, p. 187.] . . . His scheme was to make a simultaneous attack on all the Western posts in the month of May, 1763; and each attack was assigned to the neighboring tribes. His summer home was on a small island at the entrance of Lake St. Clair; and being near Detroit, he was to conduct in person the capture of that fort. On the 6th of May, 1763, Major Gladwin, in command at Detroit, had warning from an Indian girl that the next day an attempt would be made to capture the fort by treachery. When Pontiac, on the appointed morning, accompanied by 60 of his chiefs, with short guns concealed under their blankets, appeared at the fort, and, as usual, asked for admission, he was startled at seeing the whole garrison under arms, and that his scheme of treachery had miscarried. For two months the savages assailed the fort, and the sleepless garrison gallantly defended it, when they were relieved by the arrival of a schooner from Fort Niagara, with 60 men, provisions, and ammunition. Fort Pitt, on the present site of Pittsburg, Pa., was in command of Captain Ecuyer, another trained soldier, who had been warned of the Indian conspiracy by Major Gladwin in a letter written May 5th. Captain Ecuyer, having a garrison of 330 soldiers and hackwoodsmen, immediately made every preparation for defence. On May 27th, a party of Indians appeared at the fort under the pretence of wishing to trade, and were treated as spies. Active operations against Fort Pitt were postponed until the smaller forts had been taken. Fort Sandusky was captured May 16th; Fort St. Joseph (on the St. Joseph River, Mich.), May 25th; Fort Quatanon (now Lafayette, Ind.), May 31st; Fort Michillimackinac (now Mackinaw, Mich.), June 2d; Fort Presqu' Isle (now Erie, Pa.), June 17th; Fort Le Bœuf (Erie County, Pa.), June 18th; Fort Venango (Venango County, Pa.), June 18th; and the posts at Carlisle and Bedford, Pa., on the same day. No garrison except that at Presqu' Isle had warning of danger. The same method of capture was adopted in each instance. A small party of Indians came to the fort with the pretence of friendship, and were admitted. Others soon joined them, when the visitors rose upon the small garrisons, butchered them, or took them captive. At Presqu' Isle the Indians laid siege to the fort for two days, when they set it on fire. At Venango no one of the garrison survived to give an account of the capture. On June 22d, a large body of Indians surrounded Fort Pitt and opened fire on all sides, but were easily repulsed. . . . The Indians departed next day and did not return until July 26th," when they laid siege to the fort for five days and nights, with more loss to themselves than to the garrison. They "then disappeared, in order to intercept the expedition of Colonel Bouquet,

which was approaching from the east with a convoy of provisions for the relief of Fort Pitt. It was fortunate for the country that there was an officer stationed at Philadelphia who fully understood the meaning of the alarming reports which were coming in from the Western posts. Colonel Henry Bouquet was a gallant Swiss officer who had been trained in war from his youth, and whose personal accomplishments gave an additional charm to his bravery and heroic energy. He had served seven years in fighting American Indians, and was more cunning than they in the practice of their own artifices. General Amherst, the commander-in-chief, was slow in appreciating the importance and extent of the Western conspiracy; yet he did good service in directing Colonel Bouquet to organize an expedition for the relief of Fort Pitt. The promptness and energy with which this duty was performed, under the most embarrassing conditions, make the expedition one of the most brilliant episodes in American warfare. The only troops available for the service were about 500 regulars recently arrived from the siege of Havana, broken in health." At Bushy Run, 25 miles east of Fort Pitt, Bouquet fought a desperate battle with the savages, and defeated them by the stratagem of a pretended retreat, which drew them into an ambuscade. Fort Pitt was then reached in safety. "On the 29th of July Detroit was reinforced by 280 men under Captain Dalzell, who in June had left Fort Niagara in 22 barges, with several cannon and a supply of provisions and ammunition. The day after his arrival, Captain Dalzell proposed, with 250 men, to make a night attack on Pontiac's camp and capture him. Major Gladwin discouraged the attempt, but finally, against his judgment, consented. Some Canadians obtained the secret and carried it to Pontiac, who waylaid the party in an ambuscade [at a place called Bloody Bridge ever since]. Twenty of the English were killed and 39 wounded. Among the killed was Captain Dalzell himself. Pontiac could make no use of this success, as the fort was strongly garrisoned and well supplied. . . . Elsewhere there was nothing to encourage him." His confederation began to break, and in November he was forced to raise the siege of Detroit. "There was quietness on the frontiers during the winter of 1763-64. In the spring of 1764 scattered war parties were again ravaging the borders. Colonel Bouquet was recruiting in Pennsylvania, and preparing an outfit for his march into the valley of the Ohio. In June, Colonel Bradstreet, with a force of 1,200 men, was sent up the great lakes," where he made an absurd and unauthorized treaty with some of the Ohio Indians. He arrived at Detroit on the 26th of August. "Pontiac had departed, and sent messages of defiance from the banks of the Maumee." Colonel Bouquet had experienced great difficulty in raising troops and supplies and it was not until September, 1764, that he again reached Fort Pitt. But before two months passed he had brought the Delawares and Shawnees to submission and had delivered some 200 white captives from their hands. Meantime, Sir William Johnson, in conjunction with Bradstreet, had held conferences with a great council of 2,000 warriors at Fort Niagara, representing Iroquois, Ottawas, Ojibways, Wyandots and others, and had concluded several treaties of peace. By one of these, with the Senecas, a strip of land four miles wide on each side of Niagara River, from Erie to Ontario, was ceded to the British government. "The Pontiac War, so far as battles and campaigns were concerned, was ended; but Pontiac was still at large and as untamed as ever. His last hope was the

Illinois country, where the foot of an English soldier had never trod [and there he schemed and plotted without avail until 1765. In 1769 he was assassinated, near St. Louis].—W. F. Poole, *The West, 1763-1783* (*Narrative and critical history of America*, v. 6, ch. 9).

PONTUS, in ancient geography, a tract of country in northeastern Asia Minor. Originally a Persian province, it acquired independence about 400 B. C., which it held until 63 B. C., when its king, Mithradates the Great, was conquered by the Romans.—See also GREECE: B. C. 3rd century; MITHRADATIC WARS.

PONTUS EUXINUS, or Euxinus pontus, Greek name for the Black sea.

PONY EXPRESS.—"The Pony Express was the first rapid transit and the first fast mail line across the continent from the Missouri River to the Pacific Coast. It was a system by means of which messages were carried swiftly on horseback across the plains and deserts, and over the mountains of the far West. It brought the Atlantic Coast and the Pacific slope ten days nearer to each other. It had a brief existence of only sixteen months and was supplanted by the trans-continental telegraph. Yet it was of the greatest importance in binding the East and West together at a time when overland travel was slow and cumbersome, and when a great national crisis made the rapid communication of news between these sections an imperative necessity. The Pony Express marked the highest development in overland travel prior to the coming of the Pacific railroad, which it preceded nine years. . . . The operation of the Pony Express was a supreme achievement of physical endurance on the part of man and his ever faithful companion, the horse. . . . While a majority of the people of California were loyal to the Union, there was a vigorous minority intensely in sympathy with the southern cause and ready to conspire for, or bring about by force of arms if necessary, the accession of their state. As the Civil War became more and more imminent, it became obvious to Union men in both East and West that the existing lines of communication were untrustworthy. Just as soon as trouble should start, the Confederacy could, and most certainly would, gain control of the southern mail routes. Once in con-

trol, she could isolate the Pacific Coast for many months and thus enable her sympathizers there the more effectually to perfect their plans of secession. Or she might take advantage of these lines of travel, and, by striking swiftly and suddenly, organize and reinforce her followers in California, intimidate the Unionists, many of whom were apathetic, and by a single bold stroke snatch the prize away from her antagonist before the latter should have had time to act. To avert this crisis some daring and original plan of communication had to be organized to keep the East and West in close contact with each other; and the Pony Express was the fulfillment of such a plan, for it made a close coöperation between the California loyalists and Federal Government possible until after the crisis did pass. . . . It was organized and operated by a private corporation after having been encouraged in its inception by a United States Senator who later turned traitor to his country. . . . All this happened early in the year 1860. The first step was to form a corporation, the more adequately to conduct the enterprise; and to that end the Central Overland California and Pike's Peak Express Company was organized under a charter granted by the Territory of Kansas."—G. D. Bradley, *Story of the Pony Express*, pp. 1-2, 16-18, 21.—The new corporation laid out the route, established relay stations, hired riders, and bought ponies. Early in April, 1860, the Pony Express started. From St. Joseph, Missouri, to Sacramento, California, the first trip took nine days and twenty-three hours. But within a year the coast to coast telegraph system had put an end to the Pony Express. The company failed in 1861.—See also U. S. A.: 1865-1885.

POONA, or Puna, district and city in British India. (See INDIA: Map.) The district was a part of the Mohammedan kingdom of Ahmednagar during the seventeenth century. Holkar was reinstated as ruler in 1802, after he had put himself under British protection, but lost his kingdom when he attacked the British at Kirkee in 1817. (See INDIA: 1816-1819.) The city of Poona is situated near the juncture of the Mutha and Mula rivers. In 1921 it had a population of 214,706. The first mention of it is in the 16th century. In 1750 Poona became the capital of the Mahrattas. It was taken and destroyed by Nizan Ali thirteen years later.

Treaty of (1817). See AHMEDNAGAR.

POOR, Enoch (1736-1780), American general. Served in the American Revolution. See U. S. A.: 1777 (July-October).

PORT ROYAL AND THE JANSENISTS: 1602-1700.—Monastery under Mère Angélique.—Hermits of Port Royal valley.—Acceptance of doctrines of Jansenius.—Conflict with the Jesuits.—"The monastery of Port Royal . . . was founded in the beginning of the 13th century, in the reign of Philip Augustus; and a later tradition claimed this magnificent monarch as the author of its foundation and of its name. . . . But this is the story of a time when, as it has been said, 'royal founders were in fashion.' More truly, the name is considered to be derived from the general designation of the fief or district in which the valley lies, Porrois—which, again, is supposed to be a corruption of Porra or Borra, meaning a marshy and woody hollow. The valley of Port Royal presents to this day the same natural features which attracted the eye of the devout solitary in the seventeenth century. . . . It lies about eighteen miles west of Paris, and seven or eight from Versailles, on the road to Chevreuse. . . . The monastery was founded, not by Philip Augustus, but by Matthieu, first Lord of Marli, a younger son of the noble house of Montmorency. Having formed the design of accompanying the crusade proclaimed by Innocent III. to the Holy Land, he left at the disposal of his wife, Mathilde de Garlande, and his kinsman, the Bishop of Paris, a sum of money to devote to some pious work in his absence. They agreed to apply it to the erection of a monastery for nuns in this secluded valley, that had already acquired a reputation for sanctity in connection with the old chapel dedicated to St. Lawrence, which attracted large num-

bers of worshippers. The foundations of the church and monastery were laid in 1204. They were designed by the same architect who built the Cathedral of Amiens, and ere long the graceful and beautiful structures were seen rising in the wilderness. The nuns belonged to the Cistercian order. Their dress was white woollen, with a black veil; but afterwards they adopted as their distinctive badge a large scarlet cross on their white scapulary, as the symbol of the 'Institute of the Holy Sacrament.' The abbey underwent the usual history of such institutions. Distinguished at first by the strictness of its discipline and the piety of its inmates, it became gradually corrupted with increasing wealth, till, in the end of the sixteenth century, it had grown notorious for gross and scandalous abuses. . . . But at length its revival arose out of one of the most obvious abuses connected with it. The patronage of the institution, like that of others, had been distributed without any regard to the fitness of the occupants, even to girls of immature age. In this manner the abbey of Port Royal accidentally fell to the lot of one who was destined by her ardent piety to breathe a new life into it, and by her indomitable and lofty genius to give it an undying reputation. Jacqueline Marie Arnauld—better known by her official name, La Mère Angélique—was appointed abbess of Port Royal when she was only eight years of age. She was descended from a distinguished family belonging originally to the old noblesse of Provence, but which had migrated to Auvergne and settled there. Of vigorous healthiness, both mental and physical, the Arnaulds had already acquired a merited position and name in the annals of France. In the beginning of the sixteenth century it found its way to Paris in the person of Antoine Arnauld, Seigneur de la Mothe, the grandfather of the heroine of Port Royal. . . . Antoine Arnauld married the youthful daughter of M. Marion, the Avocat-général. . . . The couple had twenty children, and felt, as may be imagined, the pressure of providing for so many. Out of this pressure came the remarkable lot of two of the daughters. The benefices of the Church were a fruitful field of provision, and the avocat-général, the maternal grandfather of the children, had large ecclesiastical influence. The result was the appointment not only of one daughter to the abbey of Port Royal, but also of a younger sister, Agnès, only six years of age, to the abbey of St. Cyr, about six miles distant from Port Royal. . . . At the age of eleven, in the year 1602, Angélique was installed Abbess of Port Royal. Her sister took the veil at the age of seven. . . . The remarkable story of Angélique's conversion by the preaching of a Capucin friar in 1608, her strange contest with her parents which followed, the strengthening impulses in different directions which her religious life received, first from the famous St. Francis de Sales, and finally, and especially, from the no less remarkable Abbé de St. Cyran, all belong to the history of Port Royal."—J. Tulloch, *Pascal*, ch. 4.—"The numbers at the Port Royal had increased to eighty, and the situation was so unhealthy that there were many deaths. In 1620 they moved to Paris, and the abbey in the fields remained for many years deserted. M. Zamet, a pious but not a great man, for a while had the spiritual charge of the Port Royal, but in 1634 the abbé de St. Cyran became its director. To his influence is due the position it took in the coming conflict of Jansenism, and the effects of his teachings can be seen in the sisters, and in most of the illustrious recluses who attached themselves to the

monastery. St. Cyran had been an early associate of Jansenius, whose writings became such a fire-brand in the Church. As young men they devoted the most of five years to an intense study of St. Augustine. It is said Jansenius read all of his works ten times, and thirty times his treatises against the Pelagians. The two students resolved to attempt a reformation in the belief of the Church, which they thought was falling away from many of the tenets of the father. Jansenius was presently made bishop of Ypres by the Spanish as a reward for a political tract, but he pursued his studies in his new bishopric. . . . In 1640, the *Augustinus* appeared, in which the bishop of Ypres sought, by a full reproduction of the doctrines of St. Augustine, to bring the Church back from the errors of the Pelagians to the pure and severe tenets of the great father. The doctrine of grace, the very corner-stone of the Christian faith, was that which Jansenius labored to

JANSENIUS

revive. Saint Augustine had taught that, before the fall of our first parents, man, being in a state of innocence, could of his own free will do works acceptable to God; but after that his nature was so corrupted, that no good thing could proceed from it, save only as divine grace worked upon him. This grace God gave as He saw fit, working under his eternal decrees, and man, except as predestined and elected to its sovereign help, could accomplish no righteous act, and must incur God's just wrath. But the Pelagians and semi-Pelagians had departed from this doctrine, and attributed a capacity to please God, to man's free will and the deeds proceeding from it—a belief which could but foster his carnal pride and hasten his damnation. The Jesuits were always desirous to teach religion so that it could most easily be accepted, and they had inclined to semi-Pelagian doctrines, rather than to the difficult truths of St. Augustine. Yet no one questioned his authority. The dispute was as to the exact interpretation of his writings. Jansenius claimed to have nothing in his great book save the very word of Augustine, or its legitimate result. The

Jesuits replied that his writings contained neither the doctrine of Augustine nor the truth of God. They appealed to the Pope for the condemnation of these heresies. Jansenius had died before the publication of his book, but his followers, who were soon named after him, endeavored to defend his works from censure."—J. B. Perkins, *France under Mazarin*, v. 2, ch. 20.—"The syndic Cornet laid before the Sorbonne seven theses from the *Augustinus* (1649). Eight-and-eighty bishops now demanded a condemnation of the first five, whilst eleven bishops requested a delay, or at least that the theses should receive due consideration. The five theses were ultimately condemned as heretical by Innocent X in the Bull *Cum occasione*.

The five propositions read as follows:—(1) Some of God's commandments, owing to the absence of the needful Grace, cannot be fulfilled even by the just. (2) Man is unable to withstand inward Grace. (3) Merit and demerit presuppose freedom from physical compulsion, but not freedom from necessity. (4) The Semi-Pelagians erred in teaching that the human will is able to resist or to follow Grace. (5) It is Semi-Pelagian to hold that Christ died for all men. It had been hoped that the Pope's decision would end the controversy; as a matter of fact it made it more acute. The Jansenists themselves, indeed, respected the judgment to the extent of admitting the falsehood of the censured propositions, but they did not hold themselves defeated. Arnauld, for instance, denied that the propositions really represented the teaching of Jansenius; in other words, whilst admitting that the *questio iuris* was definitely solved, he raised the *questio facti*, justifying his conduct by the assertion that in questions of fact the Church's decisions could lay no claim to inward assent, but only to a respectful silence. Simultaneously an assault was led on the Jesuits' system of morality, to which Pascal devoted the larger portion of his *Lettres provinciales* (1656-57). Alexander VII indeed rejected the subterfuge (1656), but without bringing the controversy to an end. A formulary, which was offered for subscription by the General Assembly of the Clergy (1657), was rejected by many on the pretext that it was disapproved by Rome. Even the formulary drawn up by the Holy See (1665) was not accepted everywhere unconditionally, though the king had again threatened to withdraw their benefices from all who refused to sign it. Four bishops (of Alet, Angers, Beauvais, and Pamiers) issued pastoral letters in which they recommended the observance of a discreet silence on the question of fact. Their manifesto threatened further complications, but soon after the accession of Clement IX (1667-69) a compromise was reached. The four bishops signed the formulary, at the same time giving private expression to their own convictions in a separate protocol, and the Pope declared himself satisfied. The peace was generally kept until the end of the century, though trifling conflicts were not wanting. The edition of the works of St. Augustine, undertaken by the Benedictines of St. Maur (1679-1700), was made a subject of severe strictures by the Jesuits and their allies, but the quarrel did not spread, for the attention of the French was then concentrated on the question of the Regalia (182)."—F. X. Funk, *Manual of church history*, pp. 156-157.—"The members of the Port Royal adopted the Jansenist cause. Saint Cyran had been a fellow worker with Jansenius, and he welcomed the *Augustinus* as a book to revive and purify the faith of the Church. . . . The rigid predestinarianism of Jansen had a natural attraction for the

stern zeal of the Port Royal. The religion of the convent and of those connected with it bordered on asceticism. They lived in the constant awe of God, seeking little communion with the world, and offering to it little compromise. . . . An intense and rigorous religious life adopts an intense and rigorous belief. The Jansenists resembled the English and American Puritans. They shared their Calvinistic tenets and their strict morality. A Jansenist, said the Jesuits, is a Calvinist saying mass. No accusation was more resented by those of the Jansenist party. They sought no alliance with the Protestants. Saint Cyran and Arnauld wrote prolifically against the Calvinists. They were certainly separated from the latter by their strong devotion to two usages of the Catholic Church which were especially objectionable to Protestants—the mass and the confessional. . . . In 1647, Mother Angelique with some of the sisters returned to Port Royal in the Fields. The convent at Paris continued in close relations with it, but the abbey in the fields was to exhibit the most important phases of devotional life. Before the return of the sisters, this desolate spot had begun to be the refuge for many eminent men, whose careers became identified with the fate of the abbey. 'We saw arrive,' writes one of them, 'from diverse provinces, men of different professions, who, like mariners that had suffered shipwreck, came to seek the Port.' M. le Maitre, a nephew of Mother Angelique, a lawyer of much prominence, a counsellor of state, a favorite of the chancellor and renowned for his eloquent harangues, abandoned present prosperity and future eminence, and in 1638 built a little house, near the monastery, and became the first of those who might be called the hermits of the Port Royal. Not taking orders, nor becoming a member of any religious body, he sought a life of lonely devotion in this barren place. . . . Others gradually followed, until there grew up a community, small in numbers, but strong in influence, united in study, in penance, in constant praise and worship. Though held together by no formal vows, few of those who put hand to the plough turned back from the work. They left their beloved retreat only when expelled by force, and with infinite regret. The monastery itself had become dilapidated. It was surrounded by stagnant waters, and the woods near by were full of snakes. But the recluses found religious joy amid this desolation. . . . As their numbers increased they did much, however, to improve the desolate retreat they had chosen. . . . Some of the recluses cultivated the ground. Others even made shoes, and the Jesuits dubbed them the cobblers. They found occupation not only in such labors and in solitary meditation, but in the more useful work of giving the young an education that was sound in learning and grounded in piety. The schools of the Port Royal had a troubled existence of about fifteen years. Though they rarely had over fifty pupils, yet in this brief period they left their mark. Racine, Tillemont, and many others of fruitful scholarship and piety were among the pupils who were watched and trained by the grave anchorites with a tender and fostering care. . . . The judicious teachers of the Port Royal taught reading in French, and in many ways did much to improve the methods of French instruction and scholarship. The children were thoroughly trained also in Greek and Latin, in logic and mathematics. Their teachers published admirable manuals for practical study in many branches. 'They sought,' says one, 'to render study more agreeable than play or games.' The jealousy of the Jesuits, who

were well aware of the advantages of controlling the education of the young, at last obtained the order for the final dispersion of these little schools, and in 1660 they were closed for ever. Besides these manuals for teaching, the literature of the Port Royal comprised many controversial works, chief among them the forty-two volumes of Arnauld. It furnished also a translation of the Bible by Saci, which, though far from possessing the merits of the English version of King James, is one of the best of the many French translations. But the works of Blaise Pascal were the great productions of the Port Royal, as he himself was its chief glory. The famous Provincial Letters originated from the controversy over Jansenism, though they soon turned from doctrinal questions to an attack on the morality of the Jesuits that permanently injured the influence of that body." —J. B. Perkins, *France under Mazarin*, ch. 20.— See also EDUCATION: Modern 17th century: France: Jansenist schools.

1702-1715. — Renewed persecution. — Suppression and destruction of the monastery. — Bull *Unigenitus* and its enforcement. — "The Jesuits had been for some time at a low ebb, in the beginning of the 18th century, the Cardinal de Noailles, Archbishop of Paris, then ruling the King through Madame de Maintenon, and himself submitting to the direction of Bossuet. The imprudence of the Jansenists, their indefatigable spirit of dispute, restored to their enemies the opportunity to retrieve their position. In 1702, forty Sorbonne doctors resuscitated the celebrated question of fact concerning the five propositions of Jansenius, and maintained that, in the presence of the decisions of the Church on points of fact and not of dogma, a respectful silence sufficed without internal acquiescence. Some other propositions of a Jansenistic tendency accompanied this leading question. Bossuet hastened to interfere to stifle the matter, and to induce the doctors to retract. . . . Thirty-nine doctors retracted out of forty. The King forbade the publication thenceforth of anything concerning these matters, but, in his own name, and that of Philip V. [of Spain, his grandson], entreated Pope Clement XI. to renew the constitutions of his predecessors against Jansenism. . . . Clement XI. responded to the King's wishes by a Bull which fell in the midst of the assembly of the clergy in 1705. Cardinal de Noailles, who presided, made reservations against the infallibility of the Church in affairs of fact. The assembly, animated with a Gallican spirit, accepted the Bull, but established that the constitutions of the Popes bind the whole Church only 'when they have been accepted by the bodies of the pastors,' and that this acceptance on the part of the bishops is made 'by way of judgment.' The court of Rome was greatly offended that the bishops should claim to 'judge' after it, and this gave rise to long negotiations: the King induced the bishops to offer to the Pope extenuating explanations. The Jesuits, however, regained the ascendancy at Versailles, and prepared against Cardinal de Noailles a formidable engine of war." The Cardinal had given his approval, some years before, to a work—"Moral Reflections on the New Testament"—published by Father Quesnel, who afterwards became a prominent Jansenist. The Jesuits now procured the condemnation of this work, by the congregation of the Index, and a decree from the Pope prohibiting it. "This was a rude assault on Cardinal de Noailles. The decree, however, was not received in France,

through a question of form, or rather, perhaps, because the King was then dissatisfied with the Pope, on account of the concessions of Clement XI. to the House of Austria. The Jansenists gained nothing thereby. At this very moment, a terrible blow was about to fall on the dearest and most legitimate object of their veneration." The nuns of Port-Royal of the Fields having refused to subscribe to the papal constitution of 1705, the Pope had subjected them to the Abbess of Port-Royal of Paris, "who did not share their Augustinian faith (1708). They resisted. Meanwhile, Father La Chaise [the king's confessor] died, and Le Tellier succeeded him. The affair was carried to the most extreme violence. Cardinal de Noailles, a man of pure soul and feeble character, was persuaded, in order to prove that he was not a Jansenist, to cruelty, despite himself, towards the rebellious nuns. They were torn from their monastery and dispersed through different convents (November, 1709). The illustrious ab-

BLAISE PASCAL

bey of Port-Royal, hallowed, even in the eyes of unbelievers, by the name of so many great men, by the memory of so much virtue, was utterly demolished, by the order of the lieutenant of police, D'Argenson. Two years after, as if it were designed to exile even the shades that haunted the valley, the dead of Port-Royal were exhumed, and their remains transferred to a village cemetery (at Magny). Noailles, while he entered into this persecution, took the same course, nevertheless, as the nuns of Port-Royal, by refusing to retract the approbation which he had given to the 'Moral Reflections.' Le Tellier caused him to be denounced to the King. . . . The King prohibited Quesnel's book by a decree in council (November 11, 1711), and demanded of the Pope a new condemnation of this book, in a form that could be received in France. The reply of Clement XI. was delayed until September 8, 1713: this was the celebrated *Unigenitus* Bull, the work of Le Tellier far more than of the Pope, and which, instead of the general terms of the Bull of 1708, expressly condemned 101 propositions extracted from the 'Moral Reflections.' . . . The Bull dared condemn the very words of St. Augustine and of St. Paul

himself; there were propositions, on other matters than grace, the condemnation of which was and should have been scandalous, and seemed veritably the triumph of Jesuitism over Christianity; for example, those concerning the necessity of the love of God. It had dared to condemn this: 'There is no God, there is no religion, where there is not charity.' This was giving the pontifical sanction to the Jesuitical theories most contrary to the general spirit of Christian theology. It was the same with the maxims relative to the Holy Scriptures. The Pope had anathematized the following propositions: 'The reading of the Holy Scriptures is for all. Christians should keep the Sabbath-day holy by reading the Scriptures; it is dangerous to deprive them of these.' And also this: 'The fear of unjust excommunication should not prevent us from doing our duty.' This was overturning all political Gallicanism." The acceptance of the Bull was strongly but vainly resisted. The King and the King's malignant confessor spared no exercise of their unbridled power to compel submission to it. "It was endeavored to stifle by terror public opinion contrary to the Bull: exiles, imprisonments, were multiplied from day to day [and still, when Louis XIV died, on September 1, 1715, the struggle was not at an end]."—H. Martin, *History of France: Age of Louis XIV*, v. 2, ch. 6.—"It is now time that I should say something of the infamous bull Unigenitus, which by the unsurpassed audacity and scheming of Father Le Tellier and his friends was forced upon the Pope and the world. I need not enter into a very lengthy account of the celebrated Papal decree which has made so many martyrs, depopulated our schools, introduced ignorance, fanaticism, and misrule, rewarded vice, thrown the whole community into the greatest confusion, caused disorder everywhere, and established the most arbitrary and the most barbarous inquisition; evils which have doubled within the last thirty years. I will content myself with a word or two, and will not blacken further the pages of my Memoirs. . . . It is enough to say that the new bull condemned in set terms the doctrines of St. Paul, . . . and also those of St. Augustin, and of other fathers; doctrines which have always been adopted by the Popes, by the Councils, and by the Church itself. The bull, as soon as published, met with a violent opposition in Rome from the cardinals there, who went by sixes, by eights, and by tens, to complain of it to the Pope. . . . He protested . . . that the publication had been made without his knowledge, and put off the cardinals with compliments, excuses, and tears, which last he could always command. The constitution had the same fate in France as in Rome. The cry against it was universal."—Duke of Saint Simon, *Memoirs* (abridged tr. by St. John), v. 3, ch. 6.—"Jansenism . . . laid hold upon all ecclesiastical bodies with very few exceptions, it predominated altogether in theological literature all public schools that were not immediately under the Jesuits, or, as in Spain, under the Inquisition, held Jansenist opinions, at least so far as the majority of their theologians were concerned. In Rome itself this teaching was strongly represented amongst the cardinals." Fenelon declared "that nobody knew—now that the controversy and the condemnations had gone on for sixty years—in what the erroneous doctrine exactly consisted; for the Roman court stuck fast to the principle of giving no definition of what ought to be believed, so that the same doctrine which it apparently rejected in one form, was unhesitatingly accepted at Rome itself when ex-

pressed in other though synonymous terms. . . . The same thing which under one name was condemned, was under another, as the teaching of the Thomists or Augustinians, declared to be perfectly orthodox. . . . Just because nobody could tell in what sense such propositions as those taken from the works of Jansenius or Quesnel were to be rejected, did they become valuable; for the whole question was turned into one of blind obedience and submission, without previous investigation. The Jesuit D'Aubenton, who as Tellier's agent in Rome had undertaken to procure that the passages selected from Quesnel's book should be condemned, repeatedly informed his employer that at Rome everything turned upon the papal infallibility; to get this passed whilst the king was ready to impose, by force of arms, upon the bishops and clergy the unquestioning acceptance of the papal constitution, was the only object."—J. J. I. von Döllinger, *Studies in European history*, ch. 12.

PORT SAID, seaport and important coaling station of Egypt, at the Mediterranean end of the Suez canal. (See AFRICA: Map.) It was founded in 1859 and is the residence of the governor-general for the Suez canal. With Ismailia it had a population of about 91,000 in 1917. See EGYPT: 1921-1922.

PORT SUNLIGHT, "garden city" in Cheshire, England, built by Lord Leverhulme. See CITY PLANNING: Great Britain.

PORT TREATY (1921). See NEW YORK CITY: 1919-1923.

PORTA, Giovanni Battista della (c. 1538-1615), Italian natural philosopher. See INVENTIONS: 18th century; Photography.

PORTA MARINA, one of the ancient gates of Zara, Dalmatia. See ZARA.

PORTAGE DES SIOUX, village in St. Charles county, Missouri, fourteen miles northeast of St. Charles. A peace conference was held here with the Indians after the War of 1812. See MISSOURI: 1812-1815.

PORTALIS, Jean Étienne Marie (1746-1807), French jurist. Leader of the Moderate party in the Council of Ancients, 1795-1797; assisted in preparing the Concordat, 1801.

PORT-AU-PRINCE, or Port Républicain, capital and chief seaport of Haiti, on the west coast of the island. The population in 1923 was about 20,000. See HAITI: 1804-1880; 1902; 1911-1916.

PORTE. See SUBLIME PORTE.

PORTE ST. ANTOINE, Battle of (1652). See FRANCE: 1651-1653.

PORTEOUS RIOT. See EDINBURGH: 1736.

PORTER, David Dixon (1813-1891), American admiral. Entered the navy, 1829; served in the Mexican War; commanded a squadron under Farragut on the Mississippi, 1862; aided Grant at Vicksburg; commanded naval forces attacking Fort Fisher, 1864-1865. See U.S.A.: 1862 (April: On the Mississippi); (December: On the Mississippi); 1863 (January-April: On the Mississippi); 1864 (March-May: Louisiana); 1864-1865 (December-January: North Carolina).

PORTER, David Rittenhouse (1788-1867), governor of Pennsylvania, 1839-1845. See PENNSYLVANIA: 1838-1845.

PORTER, Horace (1837-1921), American soldier and diplomat. Served in the Civil War; executive secretary to President Grant, 1869-1873; ambassador to France, 1897-1905; delegate to the Hague Peace Conference, 1907. See HAGUE CONFERENCES: 1907.

PORTER, James Davis (b. 1828), governor of Tennessee, 1875-1879. See TENNESSEE: 1870-1884.

PORTER, Joseph Yates (1847-), American physician. Noted for his work in preventing the spread of yellow fever. See FLORIDA: 1888-1905.

PORTER, Peter Buel (1773-1844), American soldier and political leader. Member of the House of Representatives, 1808-1812; 1815-1816; served in War of 1812; secretary of war, 1828-1829. See U.S.A.: 1814 (July-September).

PORTLAND, William Henry Cavendish Bentinck, 3rd Duke of (1738-1809), English statesman. Member of House of Commons, 1761-1762; entered House of Lords, 1762; lord chamberlain, 1765-1766; lord lieutenant of Ireland, 1782; prime minister, 1783; 1807-1809; home secretary, 1794-1801. See ENGLAND: 1806-1812.

PORTLAND, Maine, seaport and largest city in Maine, on Casco bay. The population in 1920 was 69,196. It is an important railway and steamship terminus. It was settled by the English in 1632, the original name being Falmouth. The name was changed to Portland in 1786. Its Indian name was Machigonne.

1814.—Naval battle. See MAINE: 1812-1814.

PORTLAND, Oregon, largest city in Oregon, one of the principal ports of the United States, on the Pacific coast, and a terminus for seven of the transcontinental railroad systems. The city has an area of seventy square miles, and a population, 1920, of 258,288. It is situated on the confluence of the Willamette and the Columbia rivers, with the Cascade mountains as a background, and is noted for its parks and sunken gardens. Portland is the chief outlet of the rich Columbia and Willamette valleys, and the home of important manufacturing industries, such as lumber and timber products, food products, fish, fruit and vegetable canning and fruit packing, foundries, machine shops, railway cars, and cordage and twine.

1845.—Founding of city.—The city was founded in 1845 by F. W. Pettygrove and A. L. Lovejoy, and named in honor of Portland, Maine.

1905.—Lewis and Clark exposition.—“The Lewis and Clark Centennial and American Pacific Exposition and Oriental Fair” (to give its full official title), conducted at Portland from the beginning of June until the middle of October, 1905, in commemoration of the first exploration of the American continent from the Mississippi to the Pacific, was one of the most interesting and attractive of the undertakings of its kind in the last decade. Specially as an exhibit of the wonderful natural resources of the great Northwest, and of the more wonderful rapidity of their exploitation, it seemed wholly satisfying to all who visited it. The reclamation work of the United States government, shown elaborately by models and otherwise in the Irrigation Building of the extensive national exhibit, afforded a feature of uncommon attractiveness. The associated Forestry Building, with its walls of mighty logs and its grand pillars of firs and cedars, six and seven feet in diameter, was a piece of unique architecture that drew all eyes. “The Oregon Cathedral,” it came to be called. It is now used as a museum. In metals, minerals, fruits and grains, the wealth of the Northwest was astonishingly displayed; and the

Japanese from the farther side of the Pacific made the most of the opportunity to spread their artistic wares before American buyers. The scenic setting of the Exposition grounds, on the border of a lake and with a background of hill rising from Willamette river, was a theme of praise in all reports of it.

PORTMORE, Siege of (1598). See ULSTER: 1585-1608.

PORTO NOVO, Battle of (1781). See INDIA: 1780-1783.

PORTO RICO: Area.—Population.—Geography.—“Porto Rico, forming the southern extremity of the chain of islands known as the Greater Antilles, is 1,380 miles from New York, in a southeasterly direction, and about 450 miles to the East of Cuba. It lies between 17° 54' and 18° 30' N. latitude, and 65° 35' and 67° 15' W. longitude. It is fourth in size, and is the easternmost, of the four larger Antilles (Cuba, Haiti, Jamaica, and Porto Rico). In general outline, the island forms an irregular parallelogram, its length east and west being a little less than 100 miles, and its breadth north and south about 35 miles. It has an area of 3,606 square miles, or about 2,300,000 acres [and a population, 1920, of 1,209,800]. To the rugged conformation of the island, owing to a series of mountains of volcanic origin, with summits over 3,000 feet in height, are due not only the varied scenery, but also the great fertility of the valleys and coastal plains and, to a large extent, the healthfulness of the country. . . . The main divide ascends rapidly from the west coast to a height of about 3,000 feet and continues toward the center of the island at an average elevation of 2,500 feet, terminating in the Luquillo Range, in which is El Yunque, the highest mountain in the island (3,700 feet). The second highest elevation in the island is El Guillarte Mountain, with a height of 3,600 feet.”—Insular Government Board of Information, *Porto Rico, the Riviera of the West*, p. 10.—The island, about three times the size of Long Island, is one of the most densely populated areas of 3,000 or 4,000 square miles on the face of the earth, approximating the density of population of Belgium. Several small adjacent islands are regarded as belonging to Porto Rico and were included in the cession to the United States. One of these, named Viequez, about twenty-one miles long and six miles wide, is very fertile, and has about 10,000 inhabitants. On another, called Culebra, there are some 600 or 700 people. The remaining islands are smaller and unimportant. The name, Porto Rico, meaning “rich port,” is significant of its wealth in mineral and agricultural resources.

Resources.—The total area of cultivated land in Porto Rico (1920), was 2,022,404 acres of which 1,303,547 acres were improved land. The chief products of the island are sugar, tobacco, coffee, fruits, vegetables, textile fibres, and sea island cotton; the principal industries are the manufacture of hats, cigars and cigarettes. In 1921, the sugar exported amounted to 400,407 tons valued at \$72,440,924; leaf and scrap tobacco amounted to over 14,000,000 tons, were cigars to 152,323,016 tons and cigarettes to 780,902 tons. The trade balance in favor of the island rose from a previous maximum of \$27,780,417 (1916), to \$54,422,015, in 1920. Trade relations are very close with the United States, which receives about 80 per cent of all the exports from, and sells 03 per cent of the imports into Porto Rico.—Based on Insular Government Board of Information, *Porto Rico, the Riviera of the West*.

Government under Spanish rule.—“The civil

government of the island was the Governor-General, and the Governor-General was the civil government. All power was lodged in his hands and he was accountable only to Madrid. He was at once the executive, the legislative, and the judicial head. As Captain-General, he had chief command of the military forces, and made such disposition of them as he chose; as Governor-General, he conducted civil affairs, whether insular or municipal, according to his own pleasure. . . . If, as occasionally happened, he was a wise and good man, seeking the welfare of the people rather than his own personal enrichment or the advancement of his political friends, there was less cause for complaint from the people, who were completely ignored. As the position was one of great power and of large opportunities for pecuniary profit, it not infrequently went to those who were prepared to exploit it in their own interests."—H. K. Carroll (Special Commissioner), *Report on Porto Rico*, 1899, p. 15.—In 1536, legislation was enacted for changing the method of government and for the regulation of public property and common pasturages; but notwithstanding all this, for many years the form of control alternated between alcaldes selected by the inhabitants and annual governors appointed by the council of the Indies.

Aborigines.—Character of present population.—"The origin of the primitive inhabitants of the West Indian archipelago has been the subject of much learned controversy, ending, like all such discussions, in different theories and more or less veri-similar conjecture. It appears that at the time of the discovery these islands were inhabited by three races of different origin. . . . The larger Antilles, Cuba, Santo Domingo, and Puerto Rico, were occupied by a race which probably originated from some part of the southern division of the northern continent. The chronicles mention the Guaycures and others as their possible ancestors, and Stahl traces their origin to a mixture of the Phœnicians with the aborigines of remote antiquity. The information which we possess with regard to the habits and customs of the inhabitants of Boriquén [Porto Rico] at the time of discovery is too scanty and too unreliable to permit us to form more than a speculative opinion of the degree of culture attained by them. Friar Abbad, in the fourth chapter of his history, gives a description of the character and customs of the people of Boriquén taken wholly from the works of Oviedo, Herrera, Robertson, Raynal, and others. Like more of the aboriginal inhabitants of America, the natives of Boriquén were copper-colored, but somewhat darker than the inhabitants of the neighboring islands. They were shorter of stature than the Spaniards, but corpulent and well-proportioned, with flat noses, wide nostrils, dull eyes, bad teeth, narrow foreheads, the skull artificially flattened before and behind so as to give it a conical shape, with long, black coarse hair, beardless and hairless on the rest of the body. . . . Their whole appearance betrayed a lazy, indolent habit, and they showed extreme aversion to labor or fatigue of any kind. They put forth no exertion save what was necessary to obtain food, and only rose from their 'hamácas' or 'Jamácas,' or shook off their habitual indolence to play a game of ball (batey) or attend the dances (areytos) which were accompanied by rude music and the chanting of whatever happened to occupy their minds at the time. Notwithstanding their indolence and the unsubstantial nature of their food, they were comparatively strong and robust, as they proved in many a personal tussle

with the Spaniards."—R. A. Van Middledyk, *History of Puerto Rico* (M. G. Brumbaugh, ed., *Expansion of the Republic Series*, pp. 191-193).—"Generally speaking, the Porto Rican of today may be said to be descended from three distinct races—the Indian, the Spaniard and the negro. . . . The Spaniard . . . brought no women with him, so that there sprang up wherever he went a mixed race, *pur sang* on the one hand and aboriginal on the other—the *mestizo*, hybrid both physically and morally. The negro slave imported early in the sixteenth century . . . introduced a new racial element, and by the side of the *mestizo* there developed the *zambo*, common offspring of the two. Later, . . . negro women from Santo Domingo and other islands added the mulatto to an already heterogeneous condition of race. It was not until very late in the history of the island that corrective features and elements were introduced by a new influx of prosperous Spanish settlers and their families driven from Venezuela and the mainland by the incessant revolutions in those countries."—F. P. Delgado, *Life in picturesque Porto Rico* (*New York Times Current History*, May, 1920).—The present "inhabitants are mostly of Spanish origin—emigrants from Spain during the last 400 years and their descendants. There is a large representation from the Canary Islands and the Balearic group in the Mediterranean, a large number of Corsicans and their descendants, and consequently they are French subjects, a few Germans, a few English, and very few Americans before the occupation; a few Venezuelans, a few from Santo Domingo, and a few Cubans, but the most of the population is Spanish. [Distribution according to color, 1920, was as follows: White, 948,799; black, 49,246; mulatto, 335,192; Chinese, 12; Japanese 8.]"—*56th Congress, 1st Session, Senate Document no. 147, p. 1.*

1493-1798.—Discovery.—Spanish domination.—Attacks by European invaders.—"It was on his second voyage [1493] to the new world that Columbus, while sailing cautiously among the uncharted reefs and unknown isles of the Antilles, sighted a large and luxuriant island, which the natives called 'Borinquen' [Porto Rico]. Coasting around the southern shores of this new land, the discoverer put into a large calm bay on the north-western coast where a beautiful spring gushed from the hills and flowed in a good-sized stream to the bay. In commemoration of this event the admiral christened the place 'Aguadilla,' and named the new island San Juan Bautista. . . . Continuing on his voyage to Santo Domingo, Columbus left Porto Rico astern and never again revisited it. [See AMERICA: 1493-1496.] On board his ship, however, was a romantic and adventurous 'Conquistador' called Juan Ponce de Leon, and filled with admiration at the wonderful luxuriance and fertility of the new island, he set sail from Santo Domingo in 1508 and landed at the bay of Aguada. From this spot he travelled eastward and discovered an almost land-locked bay, which he named 'Puerto Rico.' He was received hospitably by the natives and especially by Agueynaba, the cacique, and greatly pleased at the richness of the island, he returned to Santo Domingo and related the story of his explorations to Governor Ovando. The latter thereupon furnished additional supplies and men, and in 1509 De Leon again landed at Puerto Rico Bay, and at a spot known as Caparra built a settlement, which was later abandoned [1520] in favour of the more desirable . . . [place] of San Juan, the present capital. From here Ponce de Leon set

forth on his famous voyage in search of the Fountain of Youth, which resulted in the discovery of Florida. . . . From the very first Ponce de Leon realised the natural advantages which San Juan possessed for fortifications, and every energy and resource was devoted to erecting a complicated and extensive series of walls, forts, castles, and moats about the city. At the entrance to the harbour, upon a precipitous bluff, was built the massive Morro, which was not completed until 1584 and which still stands, grim and forbidding. . . . For a long time after the Spaniards settled on the island, the Indians were peaceful and hospitable, and while often oppressed, were restrained from acts of violence by their belief in the immortality of the Europeans. . . . Convinced that their oppressors were mere men, a general rebellion and massacre was planned, and the town of Aguada was burned, sacked, and the inhabitants murdered. One of the inhabitants escaped the slaughter and, reaching Caparra, related his story to Ponce de Leon, who, with a strong body of troops, at once commenced an active warfare on the savages, so many of whom were slain or seized for slaves that there was no further danger of an uprising. The Indians were, however, the least of Porto Rico's troubles, and from 1516 until 1798 the island was constantly attacked and harassed by invaders, and the people were kept busy defending their island from capture and devastation. In 1535 and 1543 French privateers sacked and burned several of the smaller towns, and in 1565 Sir John Hawkins swept down upon the island, to be followed in 1572 by Sir Francis Drake, but the powerful forts and stubborn defence of the inhabitants were too much for the buccaneers, who sullenly sailed away, to return in 1595, when they learned that a galleon with vast treasure was in San Juan Harbour. Better had it been for the dreaded freebooters to have left Porto Rico alone, for Hawkins died when off the eastern end of the island, and Drake, beaten and nearly annihilated by the heavy fire of the forts, sailed off towards South America, and died ere he reached Porto Bello. It was a heart-breaking defeat for the doughty Englishman, for the Spaniards removed over four million dollars from the ships in the harbour and secreted it ashore, so that Drake, who had helped destroy the Armada a few years before, was obliged to leave unlooted more gold than he had taken from the famous fleet. Once more in 1597 the English returned to Porto Rico, this time with a fleet of 20 ships, under Lord Cumberland. Landing at Santurce, the British defeated the Spaniards at San Antonio bridge and marched into San Juan. The English were on the verge of victory, and Morro had capitulated, when disease broke out among the invaders and they were compelled to abandon the island. In 1625 Morro was again under fire, for a fleet of Dutch war vessels invaded the city and trained their guns on the fortress. The bombardment was ineffectual however, and after burning a large portion of the town, the Dutch sailed away, leaving one of their ships behind. From this time until 1702 French, Dutch, and English buccaneers, privateers and men-of-war were a constant menace to the Porto Ricans, but one and all were defeated and driven off. Then for nearly one hundred years the island was left in peace until in 1707, when Sir Ralph Abercromby landed a large force at Santurce, threw up trenches, and placed batteries on Miramar Hill and prepared for a long and tedious siege. After two weeks of cannonading and ferocious hand-to-hand fighting, the British were

obliged to abandon the attack, and retreated with a loss of nearly two hundred and fifty men and many prisoners, guns, ammunition, and supplies." —A. H. Verrill, *Porto Rico past and present and San Domingo of to-day*, pp. 1-8.

1800-1897.—Insular representation.—Revenues.—"Diputación Provincial."—Liberation of slaves.—Local government granted.—In 1800, the free inhabitants of Porto Rico numbered 155,000, and the population was steadily increasing. Trade with countries other than Spain was permitted by the home Government, and resulted at once in an increased industrial activity in the island and a material expansion of its commerce. . . . The revenues of the island from import taxes were increased by the creation of ports of entry at Aguadilla, Cabo Rojo, Ponce, and Fajardo and the establishment there of custom-houses through which cargoes from foreign ports might be entered. On July 6, 1808, the Cortes authorized Porto Rico to send its first representative to the mother country. In accordance with the provisions of the Spanish Constitution of 1812, drawn up by the Cortes, Porto Rico's Diputación Provincial, a body possessing a few legislative powers, but whose functions were chiefly executive, met in 1813. When Fernando VII became King in 1814 he abolished the Cortes, withdrawing from Porto Rico the constitutional privileges it had just commenced to enjoy. Nevertheless, along other lines he adopted a comparatively liberal policy with regard to Porto Rico, encouraging the extension of its colonization and permitting trade with foreign countries, including the United States, the Government of which had been recognized by Spain, but limiting commerce to Spanish ships. The rebellion of his subjects, however, soon forced the King to recognize the Constitution of 1812 and restore the Cortes, whereupon Porto Rico was again allowed the privilege of a representative therein. Under the same Constitution, 45 municipal councils, delegates to the Insular Assembly, and judges were elected. The publication of newspapers was resumed and a movement was instituted advocating public instruction, the few schools in existence up to that time having been conducted by the church. In 1821 a wave of rebellion passed over the West Indies, and on December 1 of that year Santo Domingo declared its independence and offered to cooperate with Porto Rico in a similar movement, but the majority of public sentiment in the latter island proved loyal to the Crown and the project was abandoned. Piracy was still being carried on in the vicinity of the West Indies, and in 1823 had become such a menace to commerce that the United States Government sent vessels in command of Commodore Porter with orders to clear the seas of all suspected craft. He secured the coöperation of officials in Porto Rico and captured several vessels in adjacent waters. Porter's activities resulted in clearing the South Atlantic and the Caribbean Sea of the pirates with which it had been infested. Porto Rico benefited greatly by the removal of the danger, and 1,240 vessels are recorded as having entered its ports in 1834. Imports increased from 2,000,000 in 1823 to nearly \$4,000,000 in 1835, while exports showed a corresponding development. A new source of revenue was established in 1820 in the form of a Government lottery. The population of the island had increased to 315,000. Santo Domingo again submitted to the Government of Spain in 1861, but continued uprisings in that dependency resulted in its abandonment in 1805. Much sympathy and aid were accorded the Do-

minicans by persons in Porto Rico, and the fear that the rebellion might spread to Porto Rico led to the decree of November 29, 1865, calling commissioners from Cuba and Porto Rico to Spain for conference with a view to carrying out the promise of special laws for the colonies. The commissioners to Spain, among other recommendations, advocated the abolishment of slavery in Porto Rico without indemnity to owners. This was one of the paramount issues of the day and was stimulated by concurrent events in the United States. The efforts of the commissioners in Spain were not successful. Much discontent followed, and the situation was assuming a critical aspect when, in 1868, Isabella, in cooperation with the Cortes, turned her attention to the trend of affairs in Porto Rico. During 1869 the home Government authorized a general election for the selection of nine delegates to the Cortes. Representations of this delegation were rewarded by promises of wider liberties. A local governing body, known as the 'Diputación Provincial,' with limited powers of legislation subject to the approval of the Governor, was elected and began its sessions on April 1, 1871. The efforts of the party favoring the abolition of slavery resulted in the decree of June 23, 1870, liberating all slaves over sixty years of age and children under three years of age. It was not until 1873, and the establishment of a Republic in Spain, that all slaves were freed, the owners being indemnified by means of a loan guaranteed by insular revenues. No disorder of any kind followed this act, although 34,000 slaves are said to have been liberated, nor was the result unfavorable to commercial conditions, as is apparent from the value of exports to and after 1873, which increased during the ten years from 1867 to 1877 from \$6,022,502 to \$10,460,959. The value of the import trade also shows a development during the same period from \$8,551,892 to \$13,119,847. In 1870 an English cable company established a landing in Porto Rico, thereby connecting the island by wire with other parts of the world. From 1870 to 1873 Porto Rico was ruled by six successive Governors. Political parties in the island were affiliated with similar parties in Spain, and as the political complexion of Spain varied, so did that of Porto Rico. A municipal law containing certain provisions and other favorable measures were extended to Porto Rico, schools of higher education were established and a new era seemed about to dawn, when in 1874 the republican form of Government in Spain was discontinued and substituted by a provisional Government. The island legislature and city councils were dissolved. Constitutional guarantees were suspended, and the censorship of the press reestablished. The 'Instituto Civil,' a school established in 1873, was closed, and the local militia abolished. Later in the year Alfonso XII became King, and the local assembly, the town councils, and the 'Instituto Civil' were restored. A popular assembly was held in Ponce in 1887, which, while acknowledging allegiance to Spain demanded measures of autonomy, the decentralization of administration, and the right to vote on the island budget. Gradually the cause of autonomy gained popularity under the leadership of men still prominent in the political life of the island to-day. The party eventually became divided into two factions, one advocating complete independence from the political parties on the Peninsula, and the other favoring a compact with the dominant political party in Spain in return for local autonomy. A revolutionary 'junta' was established in New York which laid plans for an

invasion of the island, with Santo Domingo as a base of operations. Revolution in Cuba was gradually bringing affairs there to a crisis. The Cuban insurgents were planning an expedition against Porto Rico, to be joined in that island by sympathizers with the Cuban cause. This situation and the necessity of insuring the loyalty of Porto Rico led to the decree . . . granting [in 1897] to Porto Rico local government in so far as internal affairs, the formation of budgets, treaties of commerce and fixing duties were concerned. . . . On February 10, 1898, a cabinet consisting of five heads of departments of the government, and a president, was appointed, and on March 27 of the same year elections were held; but before the members of the legislative bodies had time to act, or the new plan had been tried, events occurred which were to change the destinies of the island government."—Insular Government Board of Information, *Porto Rico, the Riviera of the West*, pp. 87, 89-91.—"The system of autonomy, which was proclaimed November 25, 1897 [see CUBA: 1895-1898], was never fully installed. . . . The provincial legislature, which was its most important feature, was dissolved when Sampson's fleet appeared, and the Governor-General conducted the government practically on the old plan, except that the ministry, as provided by the autonomistic law, was retained, as follows: Secretary of government or of state, secretary of the treasury, secretary of the fomento or interior, including public works, public instruction, public lands, mines, etc., agriculture and commerce, and secretary of justice and worship. The last three secretaries were subordinate to the secretary of government, through whom all orders from the Governor-General and all communications to or from him must pass. The autonomist law allowed the secretaries or ministers to be members of one or the other of the two legislative chambers. The Governor-General with his council constituted the executive power. No act of his was valid unless approved by one of the secretaries, and the secretaries could issue no order which he had not countersigned. He had the power to convoke or dissolve the chambers, to refer objectionable bills to Madrid for approval or disapproval, and to appoint or remove the secretaries. All matters of a diplomatic character were in his hands exclusively, and, constituted by the Pope patronato real, he was the head of the church in the island and practical director of ecclesiastical affairs. The legislature consisted of two chambers, the council and the house of representatives. The council was composed of fourteen members, eight of whom were elected, and six appointed by the Crown; the house of representatives of one representative for each 25,000 inhabitants, elected by the people. The liberality of this law is further indicated by the fact that it gave the right of suffrage to all males of 25 years of age and over. The two chambers were empowered to legislate on all insular questions, such as the estimates, which must be adopted by the Cortes at Madrid, public instruction, public works, sanitation, charities, etc."—H. K. Carroll (Special Commissioner), *Report on Porto Rico*, 1899, pp. 15-16.

1898 (May).—American bombardment of forts at San Juan. See U. S. A.: 1898 (April-June).

1898 (July-August).—American conquest. See U. S. A.: 1898 (July-August: Porto Rico).

1898 (July-December).—Suspension of hostilities.—Cession to the United States. See U. S. A.: 1898 (July-December).

1898-1899 (August-July).—Popular feeling in the island on American occupation.—Expectations and desires of the people.—Their character.—Extent of illiteracy.—“All classes of natives of the island welcomed the American Army, American occupation, and American methods, and accepted without hesitation the Stars and Stripes in place of the red and yellow bars. They had not been disloyal to the old flag; but it had come to represent to them, particularly during the present century, in which a class feeling developed between the insular and the peninsular Spaniard, partiality and oppression. In the short war, some of the natives occupying official positions made demonstrations of loyalty to the Crown of Spain, as was perfectly natural, but they were among the first to submit to American rule when the protocol promised cession of the island to the United States. . . . Porto Ricans generally complained that the former Government discriminated in favor of the Spaniard, who, in the distribution of the offices, was preferred to the native, and who, aided by the powerful influence of the authorities, prospered in business as banker, merchant, manufacturer, or agriculturist. They also insist that the internal improvement of the island was neglected; that agriculture bore more than its share of the burden of taxation; that the assessments were very inequitable and unequal; that education was not fostered, and that in general the welfare of the people was not the first concern of their rulers. . . . The largest and most representative gathering, since American occupation, was held in San Juan, October 30, 1898, without distinction of party or class with the object of consultation and formulation of a programme for the future. In brief, the propositions of the congress as submitted to the commissioner for presentation to the President of the United States were these: Immediate termination of military and inauguration of civil government; establishment of the Territorial system, with laws common to other Territories of the Union; a legislature in two branches; suffrage for all male citizens of 21 years of age or over, the right to be surrendered at the end of the first two years by those who do not then know how to read and write; judicial reform; introduction of the jury system; autonomy for municipal governments; taxation on the basis of valuation; free and reciprocal commerce with the ports of the United States; aid for agriculture; obligatory and universal education; trade schools; savings banks. . . . Many Porto Ricans urged the commissioner to represent them as desiring that the military régime be made as short as possible, not because the military governors were in any way objectionable or their rule oppressive, but because the civil status of the island should be fixed with no unnecessary delay. There was no other opinion except among foreign subjects, many of whom thought that the people were not yet ready for self-government, and that the firm hand of military power would be needed for probably two years. . . .

“If the desire to assume the burdens of local self-government may be taken as indicating some degree of capacity for self-government, the people of Porto Rico certainly have the desire. . . . Apart from such qualifications as general education and experience constitute, the commissioner has no hesitation in affirming that the people have good claims to be considered capable of self-government. . . . The unswerving loyalty of Porto Rico to the Crown of Spain, as demonstrated by the truth of history, is no small claim to the confidence and trust of the United States. The people were

obedient under circumstances which provoked revolt after revolt in other Spanish colonies. The habit of obedience is strong among them. Their respect for law is another notable characteristic. They are not turbulent or violent. Riots are almost unknown in the island; so is organized resistance to law; brigandage flourished only for a brief period after the war and its object was revenge rather than rapine. They are not a criminal people. The more violent crimes are by no means common. Burglary is almost unknown. There are many cases of homicide, but the number in proportion to population is not as large as in the United States. Thievery is the most common crime, and petty cases make up a large part of this list of offenses. The people as a whole are a moral, law-abiding class, mild in disposition, easy to govern, and possess the possibilities of developing a high type of citizenship.”—H. K. Carroll (Special Commissioner), *Report on Porto Rico, 1899*, pp. 55-57.—“On the 25th day of July, 1899, an election was held in Adjuntas for municipal officers, and the registration was made in conformity to General Orders, No. 112, c. s., Headquarters Department of Puerto Rico. The order imposed the following qualifications for electors: Men over 21 years old, able to read and write, or who were taxpayers of record, who had been actual residents of the island for at least two years, and of the municipality for six months preceding the date of the election. The number who proved these qualifications before the board of registration was 906, out of a population, according to the census of 1897, of 18,505; that is, less than 5 per cent could vote under the conditions stated. There was much public interest in this election, and it is believed that about all who were eligible were registered. This incident indicated that in the whole island there may be approximately 45,000 who could vote under the conditions of the order above referred to. The class who can not fulfill these conditions, say 75 per cent of the males over 21 years of age, are usually in a state of abject poverty and ignorance, and are assumed to include one-fifth of the inhabitants. They are of the class usually called peones. This word in Spanish America, under old laws, defined a person who owed service to his creditor until the debt was paid. While those laws are obsolete, the condition of these poor people remains much as before.”—George W. Davis, *Report on the civil government of Puerto Rico, Sept. 30, 1899 (Message and documents: Abridgement, 1899-1900, v. 2, pp. 1293-1294)*.—“The educated class of Porto Ricans are as well educated and accomplished as the educated men of any country. They have had the benefit of a liberal education, a few in the United States, a good many in France, and a great many in Madrid and Habana, where they have passed through the universities. The lawyers and doctors are all graduates of either the university in Habana or some university in Spain, with very few exceptions. The merchants are largely Spanish, many of whom will probably preserve their nationality under the provision of the Treaty of Paris which gives them that right. . . . The schools of Puerto Rico conducted under the Spanish system were few in number. The amount allotted for education by the insular budget was something like 300,000 pesos a year. . . . The teachers were officers of the government, holding life positions and receiving pensions when superannuated. They belong to a civil-service class which is not dependent upon any change of administration, only being removed for cause. The lawyers, or judges, rather,

of the island, occupy a similar position."—George W. Davis, *Testimony before Senate Committee (56th Congress, 1st Session, Senate Document no. 147)*.

1898-1899 (October-October).—Military government instituted by the United States.—After Captain-General Macias embarked for Spain, General Ricardo Ortega was governor from Oct. 16 to 18, 1898. The United States government placed the island under military control. This control was under the successive direction of Generals John R. Brooke, Guy Henry, and George W. Davis and lasted until May 1, 1900. "The government of the island, its various civil institutions, its codes and its courts, the systems of taxation, etc., have been modified in very important particulars since the American occupation began, October 18, 1898. It will be useful, perhaps, to indicate the more important changes. Under General John R. Brooke [in command of the department, October 18 to December 5, 1898] orders were issued declaring—(1) That the political relations of Porto Rico with Spain were at an end; that provincial and municipal laws were in force in so far as not incompatible with the changed conditions, and that they would be enforced substantially as they were before. (2) Abolishing the use of all stamped paper and stamps of every kind for documents, public and private. (3) Exempting all conveyances and contracts from the payment of royal dues. (4) Discontinuing the diputación provincial, and distributing its duties among the secretaries or ministers. (5) Directing that appeals should not be sent to the supreme court in Madrid, but should be heard by the superior court at San Juan. (6) Abolishing the subdelegation of pharmacy which gave degrees to pharmacists. (7) Making the fisheries free to all. Appropriations for the support of the church ceased with American occupation, and the Government lottery was discontinued. Under the military government of Gen. Guy V. Henry [December 6, 1898 to May 8, 1899], orders were issued—(1) Appointing military commissions to try cases of arson and murder which had accumulated in the civil courts. (2) Closing public offices on Sunday, as far as possible. (3) Suspending the municipal tax on fresh beef for use of the Army. (4) Making Christmas and New Year's holidays. (5) Forbidding grants or concessions of public or corporate rights or franchises without the approval of the commanding general and the Secretary of War. (6) Abolishing the municipal consumo tax on articles of food, fuel, and drink, and providing for additional assessments on the sale of liquors and tobacco. (7) Separating the collection of customs duties from that of direct taxes. (8) Establishing a new system of land taxation, by which agricultural lands should be taxed according to the several classes instituted, from 1 peso down to 25 centavos per cuerda, and levying 50 per cent additional on lands whose owners reside abroad. (9) Providing for the free vaccination of the people of the island. (10) Prohibiting the exhumation of bodies in the cemeteries, recognizing the right of priests to control burials in consecrated grounds, and requiring municipalities to keep cemeteries in repair. (11) Reducing notarial fees from \$1.88 to \$1, from \$4.50 to \$1, from \$11 to \$1, and from \$1 to 50 cents, according to class of document, and canceling others. (12) Reorganizing the cabinet, so as to make all the secretaries directly responsible to the governor-general. (13) Suspending the foreclosure of mortgages on agricultural property and machinery for one year. (14) Appointing February

22 a holiday. (15) Prohibiting the sale of liquor to children under 14 years of age. (16) Modifying the civil marriage law. (17) Declaring that eight hours shall constitute a day's work. (18) Creating an insular police [also organizing a postal system, retiring Spanish currency and replacing it with American money].

"Under the military government of Gen. George W. Davis [May 8, 1899, to May 1, 1900], orders were issued—(1) Modifying the order of General Henry concerning hours of labor, so as to allow agreements between employer and employee for longer or shorter hours. (2) Naming May 30 as a holiday. (3) Allowing the writ of habeas corpus to be issued. (4) Constituting a board of prison control and pardon. (5) Continuing the observance as a holiday of June 24. (6) Creating a provisional court on the basis of circuit and district courts of the United States for the hearing of cases not falling within the jurisdiction of local insular courts. (7) Creating a superior board of health for the island. (8) Reorganizing the bureau of public instruction and the system of education. (9) Relieving the judiciary from all control by the department of justice, discontinuing the office of secretary of justice, and appointing a solicitor-general. (10) Abolishing the sale at auction of the privilege of slaughter of cattle, and making it free. (11) Reorganizing the judicial system of the island, with a supreme court in San Juan and district courts in San Juan, Ponce, Mayaguez, Arecibo, and Humacao, and with modifications of civil and criminal procedure. (12) Discontinuing the departments of state, treasury, and interior, and creating bureaus of state and municipal affairs, of internal revenue, and of agriculture, to be placed under the direction of a civil secretary, responsible to the governor-general, and continuing the bureaus of education and public works, with an insular board of nine members to advise the governor-general on matters of public interest referred to them.

"The reductions in the budget of expenditures have been extensive. That of 1898-99, adopted in June, 1898, amounted to \$4,781,920, native money. The appropriations for 'general obligations,' which went to Madrid, \$498,502, for the clergy, \$197,945; for the army, \$1,252,378; for the navy, \$222,668, making a total of \$2,171,493, ceased to be obligations, leaving \$2,610,428 for the fiscal year. A new budget was adopted for the calendar year 1899, which still further reduces expenditures, calling only for \$1,462,276. This budget, if carried out, would have involved a reduction from the proposed budget of 1898-99 of \$3,310,644; but a new budget was formed, as already stated, for 1899-1900, which appears to call for an increase over this very moderate sum. The revenues were reduced by the abolition of stamped paper, personal passports, export duties, royal dues on conveyances, the lottery system, and other sources of income, amounting, all told, to less probably than a million of pesos."—H. R. Carroll (Special Commissioner), *Report on Porto Rico, Oct. 6, 1899, pp. 53-55.*

1899 (August).—Destructive cyclone.—"On the morning of the 7th of August, 1899, the United States Weather Bureau, through its branch establishment here, announced the approach of a cyclonic disturbance, and the danger signal was ordered to be hoisted at substations of the Bureau at Ponce and Mayaguez. . . . There had been no serious or destructive storm in Puerto Rico since 1867, and the inhabitants had ceased to feel great concern on account of tropical tempests. . . . The

vortex of the cyclone appears to have traversed the island throughout its whole length, from about Humacao to Mayaguez, and its path was a scene of very great devastation. . . . The gale struck the island at Humacao about midnight of August 7, and furiously blew all the rest of that night and well into the next day, while at Mayaguez the violence was not great until 9 o'clock on the morning of the 8th. . . . Most of the habitations in the track of the center of the cyclone were entirely smashed and the débris strewn all over the country. The full reports of the loss of life bring the number of deaths up to 2,700. . . . Besides the mortality, which was appalling, the material damage was almost beyond belief. But the greatest loss of life resulted, not from the wind, but from the terrible downfall of rain that immediately followed. . . . Added to the horror of the situation there came with the gale on the southern coast a tidal wave, which submerged large areas. . . . The material loss to the coffee growers [places] this year's crop at one-third of the normal. . . . Regard being had to the fact that five years must elapse before the coffee trees and their shade can be replanted and reach a normal bearing condition, the total loss can not be safely placed below 25,000,000 pesos for Puerto Rico on account of this hurricane."—George W. Davis, *Report (Message and Documents: Abridgement, 1899-1900, v. 2, pp. 1343-1344)*.

1899 (October).—Census of the island taken under the direction of the war department of the United States.—"The population of Porto Rico shown by the schedules of the . . . census taken with reference to the date of October 16, 1899, was 953,243. This was about nine-tenths of the population of Maryland in 1800, the State whose population is nearest to that of Porto Rico. . . . If the figures for . . . earlier censuses may be accepted, it appears that the population of Porto Rico has been growing through the last twelve years with greater rapidity than before since 1860. . . . It appears that the average increase of population in the interior has been more rapid than that on the coast. If the figures for the coast cities of San Juan, Ponce, and Mayaguez had been excluded, the difference would be yet more marked. The depressed condition of sugar-cane growing in the West Indies of recent years may have played an important part in producing this difference, for the growing of sugar cane is prevalent in the coast plains of Porto Rico."—*Census of Porto Rico, Bulletin No. 1, 1899*.—The area of Porto Rico, including the adjacent and dependent islands of Vieques, Culebra, Mona, and Muertos, was measured in connection with the census and found to be 3,606 square miles. But owing to the imperfect surveys on which all maps of Porto Rico were based there must have been a considerable and indeterminate margin of possible error in any such measurement.

1899-1900.—Question of the tariff treatment of its new territory by the United States government.—Writing in "The Forum," November, 1899, Mr. H. K. Carroll, who had investigated the conditions in Porto Rico as a special commissioner of the United States government, described the obligation which, in his view, they imposed on the latter as follows: "The only free market the Puertorican has for his products is the island market. All the rest of the world is closed to him. He cannot even buy in a free market; everything he buys as well as everything he sells being subject to duties. This is the penalty of independence; but Porto Rico is not, and does

not want to be independent. She wants such commercial relations with us as Alaska, New Mexico, and Arizona have, and desires a territorial form of government. They look to the President to recommend, and to Congress to adopt, a system of government which will make the island a Territory, equal in rank and rights and privileges to existing Territories. . . . Three reasons are mentioned in opposition to the granting of territorial government to Puerto Rico. First, admission as a Territory implies ultimate admission to statehood; and statehood for islands separated as Hawaii and Puerto Rico are by from 1,200 to 2,500 miles from the United States is not to be thought of for a moment. Second, territorial organization involves the relinquishment of customs duties; and the cane- and tobacco-growers of our West India possession would have free access to the markets of the United States, and thus come into injurious competition with our own farmers. Third, the people of Puerto Rico are not competent for the measure of self-government which the territorial system provides." This most reasonable and just view of the duty of the American people to their new fellow citizens received strong endorsement from higher official authority in the subsequent annual report of the secretary of war, who said: "It is plain that it is essential to the prosperity of the island that she should receive substantially the same treatment at our hands as she received from Spain while a Spanish colony, and that the markets of the United States should be opened to her as were the markets of Spain and Cuba before the transfer of allegiance. Congress has the legal right to regulate the customs duties between the United States and Porto Rico as it pleases; but the highest considerations of justice and good faith demand that we should not disappoint the confident expectation of sharing in our prosperity with which the people of Porto Rico so gladly transferred their allegiance to the United States, and that we should treat the interests of this people as our own; and I wish most strongly to urge that the customs duties between Porto Rico and the United States be removed."—*Message and documents: Abridgement, 1899-1900, v. 2, p. 757*.—And, finally, the president of the United States (McKinley), in his message to Congress, December 5, 1899, gave his high authority to the declaration that this duty of his government to Porto Rico was "plain": "It must be borne in mind," he said, "that since the cession Porto Rico has been denied the principal market she had long enjoyed and our tariffs have been continued against her products as when she was under Spanish sovereignty. The markets of Spain are closed to her products except upon terms to which the commerce of all nations is subjected. The island of Cuba, which used to buy her cattle and tobacco without customs duties, now imposes the same duties upon these products as from any other country entering her ports. She has therefore lost her free intercourse with Spain and Cuba, without any compensating benefits in this market. Her coffee was little known and not in use by our people, and therefore there was no demand here for this, one of her chief products. The markets of the United States should be opened up to her products. Our plain duty is to abolish all customs tariffs between the United States and Porto Rico and give her products free access to our markets."—*Ibid., v. 1, p. 53*.—Notwithstanding all which high official acknowledgments and declarations of obligation and duty, on the part of the republic of the United States to the people of the island which it had wrested from Spain, certain interests in the former

that objected to competition from the latter were able to secure legislation which deferred the performance of the "plain duty" required. A tariff of fifteen per cent of the duty on imports from foreign countries was imposed on all imports from Porto Rico into the United States by the Act of Congress, passed in 1900, which provided for the temporary civil government of the dependency.

1900 (April).—Act providing temporarily for civil government of the island.—The fundamental provisions of the act of the Congress [Foraker Act] of the United States to provide temporarily for the civil government of Porto Rico, which the president approved April 12, 1900, are the following:

Sect. 6. That the capital of Porto Rico shall be at the city of San Juan and the seat of government shall be maintained there.

Sect. 7. That all inhabitants continuing to reside therein who were Spanish subjects on the eleventh day of April, eighteen hundred and ninety-nine, and then resided in Porto Rico, and their children born subsequent thereto, shall be deemed and held to be citizens of Porto Rico, and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain on or before the eleventh day of April, nineteen hundred, in accordance with the provisions of the treaty of peace between the United States and Spain entered into on the eleventh day of April, eighteen hundred and ninety-nine; and they, together with such citizens of the United States as may reside in Porto Rico, shall constitute a body politic under the name of The People of Porto Rico, with governmental powers as hereinafter conferred, and with power to sue and be sued as such.

Sect. 8. That the laws and ordinances of Porto Rico now in force shall continue in full force and effect, except as altered, amended, or modified hereinafter, or as altered or modified by military orders and decrees in force when this Act shall take effect, and so far as the same are not inconsistent or in conflict with the statutory laws of the United States not locally inapplicable, or the provisions hereof, until altered, amended, or repealed by the legislative authority hereinafter provided for Porto Rico or by Act of Congress of the United States: Provided, That so much of the law which was in force at the time of cession, April eleventh, eighteen hundred and ninety-nine, forbidding the marriage of priests, ministers, or followers of any faith because of vows they may have taken, being paragraph four, article eighty-three, chapter three, civil code, and which was continued by the order of the secretary of justice of Porto Rico, dated March seventeenth, eighteen hundred and ninety-nine, and promulgated by Major-General Guy V. Henry, United States Volunteers, is hereby repealed and annulled, and all persons lawfully married in Porto Rico shall have all the rights and remedies conferred by law upon parties to either civil or religious marriages: And provided further, That paragraph one, article one hundred and five, section four, divorce, civil code, and paragraph two, section nineteen, of the order of the minister of justice of Porto Rico, dated March seventeenth, eighteen hundred and ninety-nine, and promulgated by Major-General Guy V. Henry, United States Volunteers, be, and the same hereby are, so amended as to read: "Adultery on the part of either the husband or the wife." . . .

Sect. 14. That the statutory laws of the United States not locally inapplicable, except as herein-

before or hereinafter otherwise provided, shall have the same force and effect in Porto Rico as in the United States, except the internal-revenue laws, which, in view of the provisions of section three, shall not have force and effect in Porto Rico.

Sect. 15. That the legislative authority hereinafter provided shall have power by due enactment to amend, alter, modify, or repeal any law or ordinance, civil or criminal, continued in force by this Act, as it may from time to time see fit.

Sect. 16. That all judicial process shall run in the name of "United States of America, ss: the President of the United States," and all criminal or penal prosecutions in the local courts shall be conducted in the name and by the authority of "The People of Porto Rico"; and all officials authorized by this Act shall before entering upon the duties of their respective offices take an oath to support the Constitution of the United States and the laws of Porto Rico.

Sect. 17. That the official title of the chief executive officer shall be "The Governor of Porto Rico." He shall be appointed by the President, by and with the advice and consent of the Senate; he shall hold his office for a term of four years and until his successor is chosen and qualified unless sooner removed by the President; he shall reside in Porto Rico during his official incumbency, and shall maintain his office at the seat of government; he may grant pardons and reprieves, and remit fines and forfeitures for offenses against the laws of Porto Rico, and respites for offenses against the laws of the United States, until the decision of the President can be ascertained; he shall commission all officers that he may be authorized to appoint, and may veto any legislation enacted, as hereinafter provided; he shall be the commander in chief of the militia, and shall at all times faithfully execute the laws, and he shall in that behalf have all the powers of governors of the Territories of the United States that are not locally inapplicable; and he shall annually, and at such other times as he may be required, make official report of the transactions of the government in Porto Rico, through the Secretary of State, to the President of the United States: Provided, That the President may, in his discretion, delegate and assign to him such executive duties and functions as may in pursuance with law be so delegated and assigned.

Sect. 18. That there shall be appointed by the President, by and with the advice and consent of the Senate, for the period of four years, unless sooner removed by the President, a secretary, an attorney-general, a treasurer, an auditor, a commissioner of the interior, and a commissioner of education, each of whom shall reside in Porto Rico during his official incumbency and have the powers and duties hereinafter provided for them, respectively, and who, together with five other persons of good repute, to be also appointed by the President for a like term of four years, by and with the advice and consent of the Senate, shall constitute an executive council, at least five of whom shall be native inhabitants of Porto Rico, and, in addition to the legislative duties hereinafter imposed upon them as a body, shall exercise such powers and perform such duties as are hereinafter provided for them, respectively, and who shall have power to employ all necessary deputies and assistants for the proper discharge of their duties as such officials and as such executive council. . . .

Sect. 27. That all local legislative powers hereby granted shall be vested in a legislative assembly

which shall consist of two houses; one the executive council, as hereinbefore constituted, and the other a house of delegates, to consist of thirty-five members elected biennially by the qualified voters as hereinafter provided; and the two houses thus constituted shall be designated "The legislative assembly of Porto Rico."

Sect. 28. That for the purposes of such elections Porto Rico shall be divided by the executive council into seven districts, composed of contiguous territory and as nearly equal as may be in population, and each district shall be entitled to five members of the house of delegates.

Sect. 29. That the first election for delegates shall be held on such date and under such regulations as to ballots and voting as the executive council may prescribe. . . . At such elections all citizens of Porto Rico shall be allowed to vote who have been bona fide resident for one year and who possess the other qualifications of voters under the laws and military orders in force on the first day of March, 1900, subject to such modifications and additional qualifications and such regulations and restrictions as to registration as may be prescribed by the executive council. . . .

Sect. 32. That the legislative authority herein provided shall extend to all matters of a legislative character not locally inapplicable, including power to create, consolidate, and reorganize the municipalities, so far as may be necessary, and to provide and repeal laws and ordinances therefor; and also the power to alter, amend, modify, and repeal any and all laws and ordinances of every character now in force in Porto Rico, or any municipality or district thereof, not inconsistent with the provisions hereof: Provided, however, That all grants of franchises, rights, and privileges or concessions of a public or quasi-public nature shall be made by the executive council, with the approval of the governor, and all franchises granted in Porto Rico shall be reported to Congress, which hereby reserves the power to annul or modify the same.

Sect. 33. That the judicial power shall be vested in the courts and tribunals of Porto Rico as already established and now in operation, including municipal courts. . . .

Sect. 34. That Porto Rico "shall constitute a judicial district to be called 'the district of Porto Rico.'" The President, by and with the advice and consent of the Senate, shall appoint a district judge, a district attorney, and a marshal for said district, each for a term of four years, unless sooner removed by the President. The district court for said district shall be called the district court of the United States for Porto Rico.

Sect. 35. That writs of error and appeals from the final decisions of the supreme court of Porto Rico and the district court of the United States shall be allowed and may be taken to the Supreme Court of the United States in the same manner and under the same regulations and in the same cases as from the supreme courts of the Territories of the United States. . . .

Sect. 39. That the qualified voters of Porto Rico shall, on the first Tuesday after the first Monday of November, anno Domini nineteen hundred, and every two years thereafter, choose a resident commissioner to the United States, who shall be entitled to official recognition as such by all Departments, upon presentation to the Department of State of a certificate of election of the governor of Porto Rico, and who shall be entitled to a salary, payable monthly by the United States, at the rate of five thousand dollars per annum: Provided, That no person shall be eligible to such

election who is not a bona fide citizen of Porto Rico, who is not thirty years of age, and who does not read and write the English language.

Sect. 40. That a commission, to consist of three members, at least one of whom shall be a native citizen of Porto Rico, shall be appointed by the President, by and with the advice and consent of the Senate, to compile and revise the laws of Porto Rico; also the various codes of procedure and systems of municipal government now in force, and to frame and report such legislation as may be necessary to make a simple, harmonious, and economical government, establish justice and secure its prompt and efficient administration, inaugurate a general system of education and public instruction, provide buildings and funds therefor, equalize and simplify taxation and make all other provisions that may be necessary to secure and extend the benefits of a republican form of government to all the inhabitants of Porto Rico.

1900 (May).—**Organization of civil government.—Appointment of Governor Allen.**—Under the Act to establish civil government in Porto Rico, Hon. Charles H. Allen, formerly a representative in Congress from Massachusetts, and lately assistant-secretary of the navy, was appointed to the governorship of the island. J. H. Hollander, of Maryland, was appointed treasurer, and John R. Garrison, of the District of Columbia, auditor. Governor Allen was inducted into office with considerable ceremony, at San Juan, on May 1.

1900 (August-October).—**First steps in the creation of a public school system.**—"The report of M. G. Brumbaugh, commissioner of education, on education in Porto Rico, dated October 15, 1900, shows what has been accomplished in the short time that elapsed after the commissioner entered upon his duties on August 4, 1900. . . . In 1890, 616 schools were opened in Porto Rico. In 1900 the department will maintain at least 800 schools, an increase of 30 per cent, which will provide for nearly 6,000 additional pupils. In 1899 there were 67 Americans in the teaching force of the island. Since October 1, 1900, the number has increased to 100. . . . The newly selected American teachers have some knowledge of Spanish and are graduates of universities, colleges, and normal schools in the States, and are for the most part young men and women of ability and discretion. . . . The new normal and industrial school at Fajardo, which was to have been established by the joint efforts of the local municipality and the American Government, was only so far advanced that the land had been purchased by the end of September, 1900. The normal department was opened October 1, in a rented building, while the industrial department cannot be opened until suitable quarters are provided. The commissioner recommends that the United States make this place the site of an agricultural experiment station for which it is pre-eminently fitted. . . . As to the school accommodation, the commissioner states that there are no public school buildings in Porto Rico. The schools are conducted in rented houses or rooms which are often unfit for the purpose, and the hygienic conditions are bad. There is a . . . demand, for improvement in this direction, as well as in the school equipment and material. In 1890, \$33,000 was expended for school-books, and in 1900, \$20,000 will be expended for books and supplies, which shall be free. . . . In Porto Rico the books and supplies will be free to the pupils without expense to the local boards. A pedagogical museum and library has been established for the benefit of teachers and others. About 300 volumes have been

contributed to the library from friends in the States, and the Department will make the number up to 500 by purchase. A library of 5,000 volumes of standard Spanish and American literature was found in a building in San Juan, which has been installed in suitable rooms as a public library. Many of the leading institutions of the United States have responded cordially to the application of the Department of Education on behalf of young Porto Ricans who wish to prosecute their studies in colleges and universities. . . . There are now 800 schools in Porto Rico, and 38,000 pupils attending them, while there are 300,000 children of school age for whom there are no accommodations. . . . The total expenditure for education in Porto Rico from the 1st of May to the end of September was \$91,057.32."—*United States, Secretary of the Interior, Annual Report, Nov. 28, 1900, p. 116.*

1900 (November-December).—First election under United States law.—Meeting of the legislative assembly.—The first election in the island under the provisions of the act recited above occurred on November 6, simultaneously with the elections in the United States. It seems to have been almost entirely a one-sided vote. "About two weeks before election day," says a despatch from San Juan, November 7, "the Federal Party, which carried the island at the election of less than a year ago by a majority of 6,500 votes, suddenly withdrew from the electoral contest. The Federal leaders sent instruction to their followers not to appear at the polls, but the Federal Election Judges were instructed to appear and watch the proceedings until the elections were concluded in order to gather evidence of any unfairness in the registration and any irregularity in the voting. The Federal Party intends to institute court proceedings after the election in the hope of nullifying it, claiming that gross irregularities in the registration and voting will be shown, and alleging that the districting was not done according to law." Only about 200 Federals voted, it is stated, while some 60,000 votes were cast for the candidates of the Republicans. Governor Allen cabled the following announcement of the election to President McKinley: "I am gratified and delighted. The outcome in Porto Rico is a guarantee of the island's future. To bring people who had long been under different rules and conditions to their first general election, to have the election pass off as quietly and orderly as in any State of the North conducted by the people without let or hindrance, and without a soldier or armed force of any sort, and to have nearly 60,000 men march to the polls to deposit their first ballot for self-government in such a manner, are good reasons for congratulation, not only to the people of the island, but to the painstaking members of the Administration, who had worked diligently and patiently to this end. This overwhelming Republican victory also means legislation for the good of the island in line with the American Administration. It means stable government and the protection of property interests, with which prospective investors in Porto Rico are deeply concerned. It means education, public works, and all the beneficent works which follow legislation wisely and conscientiously undertaken. It is an emphatic declaration of unqualified loyalty to the United States." The newly elected legislative assembly met and the House of Delegates was organized December 3. A correspondent of the *New York Tribune*, writing a week later, said: "Already nineteen bills have been introduced. . . . It is known that the five Porto Rican members of

the Council, when considering the question of franchises, etc., often vote contrary to their own ideas in order that the Council may continue harmonious. But it is not likely that the heads of departments will be able to control the thirty-five members of the House. The House, although regularly elected, is not representative of the island; the Federals refraining from voting kept over half the natives from the polls. The Federal party, it is asserted, is made up of the richest and best element of Porto Rico. The Republicans, though in power, do not feel that they are able to run things alone, so the majority is willing to be dictated to by the Council. Nevertheless there is a certain element in the House which will not be dictated to."

1900-1901.—Question of status discussed in Congress. See U.S.A.: 1900-1901.

1901 (January).—Close of first session of the legislative assembly.—The first session of the first legislative assembly of the island came to a close on January 31, 1901, and the following remarks on its work were made in a newspaper despatch of that date from San Juan: "Over one hundred bills have been introduced in the House of Delegates, and dozens have been passed by both houses, and are awaiting the Governor's approval. . . . There are only thirty-five members altogether, and the island is small, yet twenty-six has been the average attendance. A full attendance for even one day is not recorded. . . . A bill has been passed providing for the education of certain young Porto Rican men and women in the United States, about two hundred of them having petitioned the House of Delegates to be sent north at the island's expense. . . . The island expends about \$400,000 yearly on education, and excellent educational facilities are offered. But the people, in a way, seem to discredit the value of the opportunities at hand."

1901 (April).—Distress of workingmen of the island.—Their appeal to the president of the United States.—The following petition, signed by 6,000 of the workingmen of Porto Rico, was brought to the United States by a delegate from the Federation of Labor in Porto Rico and presented to President McKinley on April 15: "The undersigned, workers of Porto Rico, without distinction of color, political or religious creed, have the honor to bring to your attention the following facts: Misery, with all its horrible consequences, is spreading in our homes with wonderful rapidity. It has already reached such an extreme that many workers are starving to death while others, that have not the courage to see their mothers, wives, sisters and children perish of hunger, commit suicide by drowning themselves in the rivers or hanging themselves from branches of trees. All this, honorable sir, is due to the scarcity of work, which keeps us in enforced idleness, the mother of our misery. Our beautiful estates are idle; our lands are not being cultivated; our shops remain closed; and our Chambers do absolutely nothing to prevent our misery on this once so rich an island. The Government and municipality do not undertake any public works to keep us out of idleness. The emigration of workers, unknown in this island before, increases day by day, in proportion as misery increases. Under these trying conditions we are no longer a happy and contented people. We therefore, beg of you, honorable sir, to interest yourself in our cause, leading us, as the father of our country, in the path that will bring us work, and with it the means of subsistence. We want work; nothing but work. We want to earn the means of subsistence by the sweat of our brows;

and nobody better than our Chief Magistrate can help us by lending ear to our appeals."

1901-1905.—Change of qualifications for elective franchise.—The Act of Congress, of 1900, under which the government of Porto Rico as a dependency of the United States was organized (see above: 1900 [April]), was subsequently amended and received one important organic change. The Executive Council which was created by the act was authorized to fix the qualifications of voters for the first election of a legislative assembly. The suffrage in that election, held in 1900, was conferred by the council on every male citizen of twenty-one years, resident in the island for one year and for six months in his municipal district, "who is able to read and write, or who, on September 1, 1900, owned real estate in his own right and name, or who on said date was a member of a firm or corporation or partnership, or who on September 1, 1900, owned personal property in his own right or name not less in value than twenty-five dollars."

"At its second session, in 1902, the Legislative Assembly availed itself of the power given to it by the organic act and passed a law for the government of future elections. This act followed closely the provisions of the orders that had been issued by the executive council. The system created is similar to that in the American States which have adopted the Australian ballot. As regards the franchise, the only change made was that the provision which gave the right to vote to persons owning personal property to the value of twenty-five dollars was dropped and in its place was substituted the provision conferring the franchise upon those persons meeting the conditions, as regards age and residence, who on the day of registration are able to produce to the board of registry tax receipts showing the payment of any kind of taxes for the last six months of the year in which the election is held. The law also provided that all persons who were registered during the year 1900 would not be required to register anew or have to meet the new requirements of the law. This was the law under which the second election in 1902 was held. In 1904 the law underwent a very important alteration as regards the qualifications for the enjoyment of the electoral franchise. By this new law the three conditions—ability to read and write, ownership of real estate, or payment of taxes—any one of which qualified a male citizen of Porto Rico who had resided in the island one year and in the district in which he offered to register for six months immediately preceding, to vote, were until July 1, 1906, wiped out, leaving only the conditions regarding sex, age and residence to be met in order to qualify a voter. After that date the additional qualification of being able to read and write must be met. The result of this amendment to the law is to provide for universal manhood suffrage until July 1, 1906, after which no new name can be added to the registration list unless its owner is able to read and write. Those persons, however, who are properly registered before that date are not required to offer themselves for registration, but continue to enjoy the full rights of the franchise."—W. F. Willoughby, *Territories and dependencies of the United States*, p. 95.

1901-1907.—Gubernatorial changes.—"Governor Allen's administration was followed on September 15, 1901, by that of Governor William H. Hunt, who held the office until July 4, 1903, when he was succeeded by Hon. Beckman Winthrop. Governor Winthrop was followed by Governor Regis H. Post, who assumed the office on April 18, 1907."

—A. H. Verrill, *Porto Rico past and present and San Domingo of to-day*, p. 11.

1903-1914.—Educational progress.—"Fourteen million dollars have been wisely expended for educational purposes since civil government was established in 1900. Instead of one schoolhouse, erected for that purpose, as was the case in 1899, the people of Porto Rico own to-day [1914] 105 graded school buildings, many of which are of fine construction and compare favourably with the better class of school buildings in the cities of the United States, and 264 rural school buildings, distributed throughout the country districts of the island, while 1,180 separate schools are maintained and 1,072 teachers employed in the service. The public school enrolment has been increased from 26,000 to 161,785. The percentage of illiteracy in the whole population has been reduced from 80 per cent to 66 per cent, and of all persons between 10 and 20 years of age, to 53. A considerable reduction in illiteracy among persons over 21 years of age has been accomplished by public night schools. . . . The task of extending the public school system met the obstacle of limited funds available for that purpose. . . . The Legislative Assembly had from year to year generously increased the allotments of funds for educational purposes, until in 1913 it found itself in a position where, to make further increases in these appropriations to the extent that the demand for additional educational facilities required an increase in the treasury receipts was necessary, and to accomplish this, new revenue laws were passed. . . . The Common-school system of Porto Rico comprises the rural and graded schools. During the school year of 1912-13 a total of 1,064 rural schools were allotted to the municipalities of the island, whereas there were but 785 graded schools. . . . The course of study for the rural schools covers a six-year period. . . . The course of study for the rural schools differs from that of the graded schools in that practically all of the work is given in Spanish, English being taught as a special subject in all grades after the first. . . . The course of study of the graded schools covers the full eight grades of the common-school course. . . . The instruction in the grade-school system is given in the English language in all subjects with the exception of Spanish. . . . Due to the increased number of pupils graduating from eighth grades and to the fact that many of these wished to continue their studies but were unable to do so, since high schools were maintained in but three or four towns of the island, the department established continuation schools in some of the larger centres of population. . . . [The University of Rio Piedras was established by act of the insular legislature, 1903, but by 1910 only two departments had been organized, the insular normal school and the department of agriculture.] During the school year 1912-13 nine special teachers of agriculture were assigned, one to each of the following districts: Carolina, Humacao, Barros, Juana Diaz, San German, Anasco, Utuado, Tao Baja, and Bayamon. . . . Generally speaking, the teachers of agriculture devoted three days a week to the children in the graded schools and two days to those of the rural schools. The interest of the farmers is shown by the fact that in many instances where the school boards did not own a sufficient amount of land about the school buildings to permit of practical work in agriculture half an acre or more has been loaned in order that the children might receive the practical instruction."—A. H. Verrill, *Porto Rico past and present and San Domingo of to-day*, pp. 170-183, 185, 187, 198-199.

1905.—Extension of local government asked for.—A convention of municipal delegates, chosen by the elective municipal councils of the island, assembled at San Juan in July, 1905, formulated a request to the government of the United States for a broadening of the fundamental law of 1900, which "would largely transfer the control of the local government to their own people. The Governor would remain a Presidential appointee, but the appointments by the Governor would be subject in many cases to revision by a locally elected Senate, except the courts, which would remain as now, for the most part, under our direct control. In other words, the legislative, and largely the administrative functions, subject to the limitations of the Organic Act, would be exercised by the Porto Ricans. The courts, of our own choosing, would construe limitations on these powers, and the Governor, with his police and militia, would be solely responsible for order and the lawful execution of lawful mandates."

1908.—Telegraph and telephone service. See TELEGRAPHS AND TELEPHONES: 1908: United States.

1909.—Modification of Foraker Act.—In a special message to Congress, May 10, 1909, President Taft called attention to the failure of the legislative assembly of Porto Rico to pass the usual appropriation bills, leaving the government of the island without support after the 30th of next June. In his opinion, the situation indicated that the United States had proceeded too fast in extending political power to the Porto Ricans, and that the full control of appropriations should be withdrawn from those "who have shown themselves too irresponsible to enjoy it." He suggested, therefore, an amendment of the fundamental act, known as the Foraker Act. The act known as the Olmsted Act was passed July 15, 1909. Porto Rican affairs were placed under the jurisdiction of an executive department, the war department being subsequently designated. Provision was also made that if the legislature failed to pass the appropriation bill for an ensuing fiscal year, the sums authorized for the current year should be deemed to have been appropriated and might be lawfully expended.

1909.—Change in governorship.—In September, 1909, Governor Regis H. Post resigned his office, and was succeeded by George R. Colton, who had had previous experience, both civil and military, in the Philippines and in Santo Domingo.

1910-1918.—Legislation.—Part played in the World War.—"In legislation much constructive work has been done and three most important things accomplished: An effective, nonpartisan Sanitation Service, with all the branches usually comprising such activities, has been established throughout the Island, under the direct control of an independent health board, a director of service and the Executive Department of the Insular Government; the election laws were so amended as to insure the secrecy of the ballot, to provide minority representation from each legislative district in the House of Delegates and to acquire a new registration of the voters of the Island; and the establishment of a Bureau of Labor, the duties of which are to collect and collate information upon the subject of labor, its relations to the industries of the country, hours of labor, the earnings of laboring men and women, and the means of promoting their material, social, intellectual and moral welfare; to investigate the causes of and facts relating to such controversies and disputes between employers and employés as may occur from time to time, and to exercise its good offices for the maintenance of satisfactory relations between employ-

ers and employés, and in general to perform the duties developing upon such bureaus. . . . In the administration of municipal affairs increased efficiency and less partisanship in the exercise of official authority is generally noticeable."—G. R. Colton, *Extracts from the Annual Report of G. R. Colton, governor of Porto Rico, for the fiscal year ending June 30, 1912 (pamphlet), pp. 10-11.*—"A law was passed [1914] regulating the work of children, and protecting them against dangerous occupations. This law provides that no child under 13 years of age who has not received a certificate from the department of education to the effect that he has finished the work required of the third grade of the rural or the eighth grade of the graded schools, according to whether he lives in the country or in town, can be employed in any lucrative occupation during the hours public schools are in session. Exception is made, however, of those children who reside in a community in which there is no school within a reasonable distance wherein accommodation can be furnished and of any orphan child or one who for any other reason depends on his own efforts for support, as well as any child whose parents are invalids and depend exclusively on the work of the child for their maintenance. In these cases the child must obtain a certificate from the mayor of the town where he resides, authorizing him to secure employment. These children are, nevertheless, required to attend a night school when such a school is within one kilometre of their residence."—A. H. Verrill, *Porto Rico past and present and San Domingo of to-day, pp. 195-196.*—In November, 1913, Arthur Yager became governor and held office until 1921. During the World War Porto Rico furnished 16,538 men or .44 per cent of the whole United States Expeditionary Force.

1917.—Jones Act.—"Until Friday, March 2 [1917], when President Wilson signed what is known as the Porto Rican Civil Government Bill, Porto Ricans have been, since virtually the close of the Spanish-American War, a people without a country. . . . On April 12, 1900, the Congress of the United States passed a law providing for a civil government. Under this government there was a House of Delegates elected by the voters on the island and an Executive Council of eleven members, five native inhabitants of Porto Rico, the other six Americans in charge of the various executive departments, and all appointed by the President of the United States. This law deprived the people of Porto Rico of their allegiance to the King of Spain, but it did not provide for transferring their allegiance to the sovereignty of the United States. . . . During these seventeen years this state of expatriation has bred strife and discontent. . . . For several years there has been an attempt to change this state of affairs; but it has been objected . . . that it is not wise to force so valuable a possession as citizenship upon an unappreciative, unwilling, or indifferent people *en masse*. On the other hand, it has been argued that under present circumstances it is essential that certain elections should take place at once, that no one could vote at these elections but American citizens, and that therefore it was necessary to make American citizenship obligatory upon all Porto Ricans. There was, however, . . . a provision in the new bill granting leave to any one on the island to renounce his citizenship providing his disavowal be made within one year from the date of the passage of the Act. Thus, though citizenship has been granted in full, the individual Porto Rican has not been deprived of his liberty of choice, which,

after all, is the essential thing in this question of citizenship. According to this new bill, every male of twenty-one years or over among those 'who have heretofore been known as the people of Porto Rico' is a voter. . . . This new Act (which, . . . is an amalgamation of three bills fathered respectively by Representative Jones, of Virginia, Senator Shafroth, of Colorado, and Senator Saulsbury, of Delaware), also contains a bill of rights for the Porto Rican people. Politically, this new Act has given Porto Ricans a status which is much more satisfactory to them than the one which it supplants."—*Porto Ricans mïde Americans (Outlook, Mar. 14, 1917)*.—This act of congress known as the "Jones Act" extends citizenship to the Porto Ricans and provides an elective senate composed of nineteen members and a house of representatives of thirty-nine members all of whom, senators and representatives alike, are elected for a term of four years. The governor, attorney-general, and the judges of the supreme court are appointed by the president, while the governor appoints the judges and officials of the lower courts. The dependency is represented in Congress by a resident commissioner, who is also elected for a term of four years. Six executive departments were constituted: justice, finance, interior, education, agriculture, labor, and health. Acts of the legislature may be vetoed by the governor; but his veto may be over-ridden by a two-thirds vote. The president of the United States may nevertheless impose a final veto.

1917.—German industrial interests. See U. S. A.: 1917 (October): Trading with the Enemy Act.

1919-1921.—Status of the island.—Supreme Court decisions.—Colonial representation.—"The most important judgment in all the Insular Cases so far as a determination of the present status of Porto Rico is concerned [is that of Downes vs. Bidwell]. It is interesting because in it the now famous doctrine of non-incorporation is developed. It will be well, however, to state at the outset that in this case there was no majority opinion of the court and that the decision was reached merely by the concurrence of a majority of the judges in what is styled in the syllabus of the case as the conclusion and judgment of the court. . . . The ostensible purpose of the case under consideration was to test the constitutionality of the Foraker Act, and to recover back certain duties exacted and paid under protest upon merchandise brought into the port of New York from Porto Rico after the passage of the Act. The duties in question were exacted under Section 3 of the Act, which provided 'that on and after the passage of this Act all merchandise coming into the United States from Porto Rico and coming into Porto Rico from the United States shall be entered at the several ports of entry upon payment of fifteen per centum of the duties which are required to be levied, collected and paid upon like articles of merchandise imported from foreign countries,' and the question briefly stated, was whether Article I, Section 8, of the Constitution of the United States, providing that 'all duties, imports and excises shall be uniform throughout the United States' was applicable to this case; that is to say, whether this particular provision of the Constitution must be considered as controlling the action of Congress when legislating on the subject for a territory situated as Porto Rico was. This case differs from the other two already considered in that here the test is not, as there, whether Porto Rico was or was not a foreign country, either in the international or in the constitutional sense, but rather whether the Island had become an integral

part of the United States, so as to be included within the purview of the constitutional provision aforementioned, and the question therefore involved, in substance, a determination of the judicial status of the Island from the point of view of constitutional law."—P. Capó-Rodrigues, *Relations between the United States and Porto Rico (American Journal of International Law, July, 1919)*.—"It has been asserted by many Porto Ricans, contrary to the contention of the Attorney General of the island, that Porto Rico is an incorporated Territory of the United States. This interpretation was strengthened . . . by the decisions of the Supreme Court of Porto Rico and the District Court of the United States for Porto Rico in two important cases (The People of Porto Rico vs. Carlos Tapia and The People of Porto Rico vs. José Muratti, 245 U.S., 639). Recently, however, the Supreme Court of the United States reversed these decisions, and upheld the opinion maintained by the Attorney General. Referring to it in a recent [1920] report he said: 'The Supreme Court followed precedent to the effect that the question of the political status of a Territory was to be determined by Congress, and depends upon the expression of Congressional intent. The new 'Organic act' conferred American citizenship upon Porto Ricans, but the question of the incorporation of a Territory does not depend upon citizenship alone.' Legally the island is thus an organized but not incorporated Territory of the United States. It enjoys many of the same rights which an incorporated Territory has, including the fundamental guarantees of the United States Constitution, the privilege of the Grand Jury, a Public Service Commission and the regulation of its own internal commerce. Furthermore, it is largely exempt from both Federal and war taxes. By this new act all internal revenue laws, unless specifically made applicable to Porto Rico, do not apply there, and such revenue already collected there is to be given back, a ruling applicable to no other Territory. . . . Governor Yager has declared that 'all the hopes of Porto Rico for improvement in political, social and economic conditions rest upon the general education of its people.'"—F. P. Delgado, *Life in picturesque Porto Rico (New York Times Current History, May, 1920)*.—"In section 5 of the organic act for Porto Rico, approved by President Wilson on November 2, 1917, it was provided: 'That all citizens of Porto Rico . . . are hereby declared and shall be deemed and held to be, citizens of the United States.' And President Harding in a recent speech made in New York at the unveiling of the statue of Simon Bolivar in Central Park, said: 'We do not forget that in the United States to-day we have Latin-American devotion to the Stars and Stripes. Porto Rico is a part of us, under a permanent policy aimed at her prosperity and progress, and we see in our Latin-American state the splendid agency to help interpret the Americans to one another.' . . . Previous to the breaking out of the great European War in 1914, there were still in this country some distinguished statesmen and diplomats who thought that the wisest and most practical and probable solution of the Porto Rican problem would be to establish Porto Rico as a new republic, after the fashion of Cuba, under a virtual protectorate by the United States; conditions have changed to such an extent during and since that war all over the world, that such a solution would hardly find support today among responsible Americans. . . . The practical results of the present system of colonial representation of the United States, as

exemplified in the case of Porto Rico, are indeed to subject the colonies and their people to a system of congressional dictation and imposition which is not at all promotive of good understanding and harmony, but may be a cause of future disagreement and embarrassment. . . . The problem of colonial representation, at least in so far as it refers to Porto Rico, can not be easily eliminated, and much less satisfactorily solved by investing that island with the status because the people of Porto Rico have already outgrown the expediency of that solution. If account is taken of the present state of development and progress of Porto Rico, as well as of the rising sentiment there for a larger participation in its government by its people, the conclusion is inevitable that Porto Rico is where, sooner or later, the United States will be confronted with the unavoidable necessity of solving the problem of colonial representation. . . . It may be said that Porto Rico looms up as a big national problem of the first magnitude, the principal elements of which are indeed its geographical position, the character and present development of its inhabitants, and the national and international implications of the situation. Commonly the suggestion is made that there are two straight solutions to this problem: one is independence; the other is statehood, on an equal footing with the other States. As to the former, public sentiment and the policy of the Government in this country would seem to manifest an ever-increasing opposition to the establishment of any new little republic in the Caribbean. As to the solution of statehood on an equal footing with the other States, it may be said that public opinion has not as yet crystallized in this country in favor of that solution, for there is indeed some apparently insurmountable prejudice among the people as to the expediency and advisability of admitting into the Union a people fundamentally different from the people of the United States."—P. Capó-Rodríguez, *Colonial representation in the American empire (American Journal of International Law, Oct., 1921)*.

1921-1923.—Appointment of E. Mont Reily as governor.—Agitation against him.—Appointment of his successor.—In 1921, E. Mont Reily succeeded Arthur Yager as governor. "Opposition to his administration was expressed, first, by the majority party of Porto Rico, the Unionists, when he declared in his inaugural address against any agitation for the independence of the islands. The unionists later reversed their stand, but in November of the same year [1921] launched a campaign against the Governor. . . . The attacks on Governor Reily brought several delegations from the island to protest before Secretary Weeks and President Harding. . . . Charges of maladministration constituted the major complaints of the Porto Ricans, who were led in their fight against the Governor by Antonio R. Barcelo, President of the Porto Rican Senate, and . . . Felix Cordova-Davila resident Commissioner from Porto Rico."—*New York Times, Feb. 17, 1923, p. 6*.—On Feb. 16, 1923, Governor Reily tendered his resignation, and on Feb. 28 Horace M. Towner was appointed his successor.

PORTO SANTO ISLAND, one of the Madeira islands, twenty-six miles northeast of Madeira. See MADEIRA ISLANDS.

PORTOBELLO.—"Porto Bello is about twenty miles north of Colon, on the Caribbean Sea . . . [and] the northern terminus of the old royal highway, built by the Spaniards in the sixteenth century. . . . About the beginning of the seventeenth century Porto Bello enjoyed one of the largest export trades in the then commercial world. Professor William R. Shepherd, of Columbia University, estimates that the bullion shipped from Porto Bello [during this period] amounted to about forty-two million dollars (\$42,000,000) per year. . . . Drake in his last expedition attempted to capture Porto Bello. He was repulsed in his attempt to storm the forts, but succeeded in capturing the Spanish fleet in the harbor. He died in the harbor of Porto Bello a few days after the fight, January 28, 1596. His followers placed his body in the flagship of the Spanish fleet, took the ship to the mouth of the harbor and there scuttled her. The island at the mouth of the harbor is still known locally as Drake's Island."—W. C. Gorgas, *Sanitation in Panama, pp. 160-162*.—See also PERU: 1550-1816.

PORTOROSA CONFERENCE (1921).—A conference of the so-called "Succession States" which had succeeded to the heritage of the old Hapsburg monarchy [Czecho-Slovakia, Jugoslavia, Rumania, Poland, Italy, Austria, and Hungary] was held during October and November, 1921, at Portorosa. "The idea of it was due to the American Colonel [Clarence Browning] Smith, who, as the representative of his country on the Reparations Commission in Vienna, had realized that the economic separation and isolation of the various successor States not only dealt a fatal blow at the vital interests of Austria, but also inflicted the greatest injury on all collectively and each separately. It was, therefore, he held, essential that a rapprochement should be effected between them, with the removal of the senseless and in many cases annoying restrictions on commerce and intercourse; and the Great Powers should take the lead in bringing about an understanding."—*Annual Register, 1921, p. 189*.—"Its results . . . deal with real problems in a constructive, practical spirit. They laid the foundations of the economic edifice of South Eastern Europe which had been ruined by the war. The delegations of the various Powers . . . were made up as follows: Italy, 10 delegates; France, 4; Britain, 3; Yugoslavia, 6; Czechoslovakia, 6; Roumania, 4; Poland, 2; Austria, 6; Hungary, 5; United States, an observer [Col. C. B. Smith] and an assistant observer. The representatives of France and Great Britain were there mainly to see that their interests as set forth in Peace Treaties were not injured by the proposed arrangements. The agenda included the following points: the question of compensation treaties between the Succession States regarding the exchange of essential products; the improvement of postal, telegraphic and telephonic communication; agree-

ments in regard to inter-state traffic; and arrangements for obviating difficulties involved in the licensing system, and the export and import prohibitions."—J. J. Shotwell, *Portorose conference (International Conciliation, no. 176)*.—"The work of the Portorose Conference may be discussed under three heads: [a] Commercial relations.—At the end of the war the Austro-Hungarian Monarchy, which had formed one economic whole, was divided into separate parts . . . [which] created economic barriers between themselves. They all issued import prohibitions in order to exclude imports which they thought superfluous and therefore damaging to their exchange; and export prohibitions in order to keep in the country the quantities of food-stuffs, raw materials and manufactured products considered necessary for home consumption, and to have for disposal articles which might serve as compensation for obtaining foreign goods. . . . In the Protocol concluded at the . . . Conference it was agreed in principle that import and export prohibitions shall be abolished between the Succession States. . . . In the period of transition, until prohibitions shall have been completely abolished, no new prohibitions shall be issued. . . . [b] Railway traffic.—Railway traffic between the Succession States in the past has been most difficult by reason of the creation of the new States, and for the lack of proper facilities at frontier stations for expediting through traffic, as well as a lack of confidence between the Succession States themselves. At the . . . Conference a number of practical measures were agreed to which will improve the traffic situation. . . . [c] Posts and telegraphs.—The arrangement concerning the amelioration of the telegraphic and telephonic communications concluded at Portorose are based upon Article IV of the International Telegraphic Convention of St. Petersburg, to which the United States is not a party. These arrangements concern the mutual telegraphic and telephonic communications between the seven Succession States. The Administrations of these countries have engaged themselves to carry on the traffic by means of the existing telegraphic and telephonic net, according to the general regulations for international traffic, and to complete the existing net by constructing new lines of communication, especially between industrial and commercial centers of the different countries. . . . Special arrangements were made also in order to make it possible that the tariffs, the fixation of which is so difficult on account of the monetary exchange conditions, should be regulated for the interstate traffic according to the interest of the collecting country and in order to facilitate and accelerate the mutual accounts. For the liquidation of the mutual payments, all the Administrations have accepted in analogy the regulations for the Postal Union; the gold franc on the basis of one franc being equal to 0.102057 dollars. They have furthermore agreed to regulate the outstanding debts between themselves within a short time."—C. B. Smith, *Account of the Portorose conference (International Conciliation, no. 176)*.

PORTSMOUTH, Treaty of.—The Treaty of Peace agreed upon at Portsmouth was duly ratified by the Emperors of Russia and Japan, at St. Petersburg and at Tokyo simultaneously, on the 14th of October, 1905. The following is the text of the Treaty in full:

THE TREATY OF PEACE SIGNED AT PORTSMOUTH

By the helping grace of God, we, Nicholas II, Emperor and Autocrat of all the Russias, etc., hereby declare that, in consequence of a mutual agreement between us and His Majesty, the Emperor of Japan, our plenipotentiaries concluded and signed at Portsmouth, August 23, 1905, a treaty of peace which, word for word, reads as follows:

His Majesty, the Emperor of all the Russias, on the one hand, and His Majesty, the Emperor of Japan, on the other hand, being animated by the desire to restore the benefits of peace for their countries and their peoples, have decided to conclude a treaty of peace and have appointed for this purpose their plenipotentiaries, to wit:

His Majesty the Emperor of Russia:—His Excellency, Mr. Sergius Witte, his secretary of state and president of the committee of ministers of the Empire of Russia, and His Excellency, Baron Roman Rosen, master of the Imperial Court of Russia and his ambassador extraordinary and plenipotentiary to the United States of America;

And his Majesty, the Emperor of Japan:—His Excellency, Baron Komura Iutaro, Iusammi, knight of the Imperial Order of the Rising Sun, his minister of foreign affairs, and His Excellency, Mr. Takahira Kogoro, Iusammi, knight of the Imperial Order of the Sacred Treasure, his envoy extraordinary and minister plenipotentiary to the United States of America;

Who, after having exchanged their full powers, found in good and due form, concluded the following articles:

Article 1. There shall be in the future peace and friendship between Their Majesties the Emperor of all the Russias and the Emperor of Japan, as well as between their respective nations and subjects.

Art. 11. The Imperial Government of Russia, recognizing that Japan has predominant political, military, and economic interests in Korea, agrees not to interfere or place obstacles in the way of any measure of direction, protection, and supervision which the Imperial Government of Japan may deem necessary to adopt in Korea. It is agreed that Russian subjects in Korea shall be treated in exactly the same manner as the citizens of other foreign countries; that is, that they shall be placed on the same footing as the citizens of the most-favored nation. It is likewise agreed that, in order to avoid any cause of misunderstanding, the two high contracting parties shall refrain from adopting, on the Russo-Korean frontier, any military measures which might menace the security of the Russian or Korean territory.

Art. 111. Russia and Japan mutually engage: 1. To completely and simultaneously evacuate Manchuria, with the exception of the territory over which the lease of the peninsula of Liao-tung extends, in accordance with the provisions of additional Article 1 annexed to this treaty, and 2. To entirely and completely restore to the exclusive administration of China all parts of Manchuria now occupied by Russian and Japanese troops, or which are under their control, with the exception of the above-mentioned territory. The imperial Government of Russia declares that it has no territorial advantages or preferential or exclusive con-

cessions in Manchuria of such a nature as to impair the sovereignty of China or which are incompatible with the principle of equal opportunity.

Art. iv. Russia and Japan mutually pledge themselves not to place any obstacle in the way of general measures which apply the way equally to all nations and which China might adopt for the development of commerce and industry in Manchuria.

Art. v. The Imperial Government of Russia cedes to the Imperial Government of Japan, with the consent of the Government of China, the lease of Port Arthur, of Talien, and of the adjacent territories and territorial waters, as well as the rights, privileges, and concessions connected with this lease or forming part thereof, and it likewise cedes to the Imperial Government of Japan all the public works and property within the territory over which the above-mentioned lease extends. The high contracting parties mutually engage to obtain from the Government of China the consent mentioned in the foregoing clause. The Imperial Government of Japan gives on its part the assurance that the property rights of Russian subjects within the above-mentioned territory shall be absolutely respected.

Art. vi. The Imperial Government of Russia obligates itself to yield to the Imperial Government of Japan, without compensation and with the consent of the Chinese Government, the Chan-chun (Kwan-Chen-Tsi) and Port Arthur Railroad and all its branches, with all the rights, privileges, and property thereunto belonging within this region, as well as all the coal mines in said region belonging to this railroad or being operated for its benefit. The two high contracting parties mutually pledge themselves to obtain from the Chinese Government the consent mentioned in the foregoing clause.

Art. vii. Russia and Japan agree to operate their respective railroads in Manchuria for commercial and industrial purposes exclusively, but by no means for strategic purposes. It is agreed that this restriction does not apply to the railroads within the territory covered by the lease of the Liao-tung peninsula.

Art. viii. The Imperial Governments of Russia and Japan, with a view to favoring and facilitating relations and traffic, shall conclude, as soon as possible, a separate convention to govern their operations of repair on the railroads in Manchuria.

Art. ix. The Imperial Government of Russia cedes to the Imperial Government of Japan, in perpetuity and full sovereignty, the southern part of the island of Saghalin, and all the islands adjacent thereto, as well as all the public works and property there situated. The fiftieth parallel of north latitude is adopted as the limit of the ceded territory. The exact boundary line of this territory shall be determined in accordance with the provisions of additional Article II annexed to this treaty. Japan and Russia mutually agree not to construct within their respective possessions on the island of Saghalin, and the islands adjacent thereto, any fortification or similar military work. They likewise mutually agree not to adopt any military measures which might hinder the free navigation of the Straits of La Perouse and Tartary.

Art. x. The right is reserved to Russian subjects inhabiting the territory ceded to Japan to sell their real property and return to their country; however, if they prefer to remain in the ceded territory, they shall be guarded and protected in the full enjoyment of their property rights and the exercise of their industries, provided they submit to the laws and jurisdiction of Japan. Japan shall have perfect

liberty to withdraw the right of residence in this territory from all inhabitants laboring under political or administrative incapacity, or to deport them from this territory. It pledges itself, however, to fully respect the property rights of these inhabitants.

Art. xi. Russia obligates itself to reach an understanding with Japan in order to grant to Japanese subjects fishing rights along the coast of the Russian possessions in the Seas of Japan, Okhotsk, and Bering. It is agreed that the above-mentioned obligation shall not impair the rights already belonging to Russian or foreign subjects in these regions.

Art. xii. The treaty of commerce and navigation between Russia and Japan having been annulled by the war, the Imperial Governments of Russia and Japan agree to adopt as a basis for their commercial relations, until the conclusion of a new treaty of commerce and navigation on the basis of the treaty in force before the present war, the system of reciprocity on the principle of the most favored nation, including import and export tariffs, custom-house formalities, transit and tonnage dues, and the admission and treatment of the agents, subjects, and vessels of one country in the territory of the other.

Art. xiii. As soon as possible, after the present treaty takes effect, all prisoners of war shall be mutually returned. The Imperial Governments of Russia and Japan shall each appoint a special commissioner to take charge of prisoners. All prisoners in the custody of one of the governments shall be delivered to the commissioner of the other governments or to his duly authorized representative, who shall receive them in such number and in such suitable ports of the surrendering nation as the latter shall notify in advance to the commissioner of the receiving nation. The Governments of Russia and Japan shall present to each other, as soon as possible after the delivery of the prisoners has been completed, a verified account of the direct expenditures made by them respectively for the care and maintenance of the prisoners from the date of capture or surrender until the date of their death or return. Russia agrees to refund to Japan, as soon as possible after the exchange of these accounts, as above stipulated, the difference between the actual amount thus spent by Japan and the actual amount likewise expended by Russia.

Art. xiv. The present treaty shall be ratified by Their Majesties the Emperor of all the Russias and the Emperor of Japan. This ratification shall, within the shortest possible time and at all events not later than fifty days from the date of the signature of the treaty, be notified to the Imperial Governments of Russia and Japan, respectively, through the ambassador of the United States of America at St. Petersburg and the minister of France at Tokyo, and from and after the date of the last of these notifications this treaty shall enter into full force in all its parts. The formal exchange of the ratifications shall take place at Washington as soon as possible.

Art. xv. The present treaty shall be signed in duplicate, in the French and English languages. The two texts are absolutely alike; however, in case of difference of interpretation the French text shall prevail.

In witness whereof the respective plenipotentiaries have signed the present treaty of peace and affixed thereto their seals.

Done at Portsmouth, New Hampshire, the twenty-third day of August (fifth of September)

of the year one thousand nine hundred and five, corresponding to the fifth day of the ninth month of the thirty-eighth year of Meiji.

IUTARO KOMURA (L. S.)
K. TAKAHIRA (L. S.)
SERGIUS WITTE (L. S.)
ROSEN (L. S.)

In conformity with the provisions of Articles II and IX of the treaty of peace between Russia and Japan under this date, the undersigned plenipotentiaries have concluded the following additional articles:

I. To Article III: The Imperial Governments of Russia and Japan mutually agree to begin the withdrawal of their military forces from the territory of Manchuria simultaneously and immediately after the entrance into force of the treaty of peace; and within a period of eighteen months from this date the armies of the two powers shall be entirely withdrawn from Manchuria, with the exception of the leased territory of the peninsula of Liao-tung. The forces of the two powers occupying advanced positions shall be withdrawn first. The high contracting parties reserve the right to maintain guards for the protection of their respective railroad lines in Manchuria. The number of these guards shall not exceed 15 men per kilometer, and within the limit of this maximum number the commanders of the Russian and Japanese armies shall, by mutual agreement, fix the number of guards who are to be employed, this number being as low as possible and in accordance with actual requirements. The commanders of the Russian and Japanese forces in Manchuria shall reach an understanding regarding all the details connected with the evacuation, in conformity with the principles herein above set forth, and shall, by mutual agreement, adopt the measures necessary to carry out the evacuation as soon as possible and at all events within a period not exceeding eighteen months.

II. To Article IX: As soon as possible after the present treaty takes effect, a boundary commission composed of an equal number of members appointed respectively by the two high contracting parties shall mark on the spot and in a permanent manner the exact line between the Russian and Japanese possessions on the island of Saghalin. The commission shall be obliged, as far as topographical conditions permit, to follow the 50th parallel of north latitude for the line of demarcation, and in case any deviations from this line are found necessary at certain points compensation shall be made therefor by making corresponding deviations at other points. It shall also be the duty of said commission to prepare a list and description of the adjacent islands which are comprised within the cession, and finally the commission shall prepare and sign maps showing the boundaries of the ceded territory. The labors of the commission shall be submitted to the approval of the high contracting parties.

The additional articles mentioned hereinabove shall be considered as being ratified by the ratification of the treaty of peace, to which they are annexed.

Portsmouth, August 23 (September 5), 1905, corresponding to the 5th day, 9th month and thirty-eighth year of Meiji.

SERGIUS WITTE
ROSEN

[The ratification by the Tsar in the following terms:]

Therefore, after mature consideration of this treaty and the two additional articles, we approved, confirmed, and ratified them, and do hereby approve, confirm, and ratify them in their full purport, pledging our imperial word for ourselves, our successors, and our heirs that everything set forth in the above-mentioned acts shall be inviolably observed. In witness whereof we, having signed this, our imperial ratification, with our own hand, have ordered affixed thereto our imperial seal.

Given at Peterhoff, the first day of October, in the year of our Lord one thousand nine hundred and five and of our reign the eleventh.

[On the original is written in His Imperial Majesty's own hand:]

"NICHOLAS."

PORTUGAL: Location.—Origin of name.—Portugal, one of the smaller European states occupying the western part of the Iberian peninsula, has a continental area of 34,254 square miles. The Azores and Madeira, regarded as a part of the republic, have an area of 1,236 square miles, making the total area 35,490 square miles. The estimated population, 1911, was 5,060,056. Portugal derives its name from the city of Oporto, "The Port," at the mouth of the river known in Greek and Roman times as Portus caele. The county in which the city was situated was known as "comitatus Portucalensis," whence the name later extended to the whole of the medieval kingdom. See below: Early history.—See also AZORES; PORTUGUESE EAST AFRICA; PORTUGUESE INDIA.

Resources.—Of the whole area of continental Portugal only 26.2 per cent is under cereals and pasturage; 3.5 per cent under vineyards; 3.9 per cent under fruit trees; and 17.3 per cent under forest. The total cereal (wheat, rye, oats and barley) production for 1919 amounted to 10,601,114 bushels; the vintage amounted to 96,641,160 gallons; the olive oil produced totaled 12,760,000 gallons; and the wool-clip amounted to 6,244,684 pounds. The republic has considerable mineral wealth consisting mostly of wolfram, iron, copper manganese, antimony, lead, tin, and gold, but because of the lack of fuel and cheap transport valuable mines remain unworked. The sardine and tunny fisheries constitute another industry the value of which amounted to 20,205,006 escudos in 1918; but the characteristic industry is the manufacture of Azulejos or porcelain tiles, an inheritance from the Moors.

Early history.—Mistaken identification with ancient Lusitania.—Roman, Gothic, Moorish and Spanish conquests.—County of Henry of Burgundy.—"The early history of the country, which took the name of Portugal from the county which formed the nucleus of the future kingdom, is identical with that of the rest of the Iberian peninsula, but deserves some slight notice because of an old misconception, immortalized in the title of the famous epic of Camoens, and not yet entirely eradicated even from modern ideas. Portugal, like the rest of the peninsula, was originally inhabited by men of the prehistoric ages. . . . There seems to be no doubt that the Celts, the first Aryan immigrants, were preceded by a non-Aryan race, which is called by different writers the

Iberian or Euskaldunac nation, but this earlier race speedily amalgamated with the Celts, and out of the two together were formed the five tribes inhabiting the Iberian peninsula, which Strabo names as the Cantabrian, the Vasconians, the Asturians, the Gallicians and the Lusitanians. It is Strabo, also, who mentions the existence of Greek colonies at the mouth of the Tagus, Douro, and Minho, and it is curious to note that the old name of Lisbon, Obispo, was from the earliest times identified with that of the hero of the Odyssey, and was interpreted to mean the city of Ulysses. . . . The Carthaginians, though they had colonies all over the peninsula, established their rule mainly over the south and east of it, having their capital at Carthagera or Nova Carthago, and seem to have neglected the more barbarous northern and western provinces. It was for this reason that the Romans found far more difficulty in subduing these latter provinces. . . . In 189 B. C. Lucius Æmilius Paullus defeated the Lusitanians, and in 185 B. C. Gaius Calpurnius forced his way across the Tagus. There is no need here to discuss the gradual conquest by the Romans of that part of the peninsula which includes the modern kingdom of Portugal, but it is necessary to speak of the gallant shepherd Viriathus, who sustained a stubborn war against the Romans from 140 B. C. until he was assassinated in 139 B. C., because he has been generally claimed as the first national hero of Portugal. This claim has been based upon the assumed identification of the modern Portugal with the ancient Lusitania [see LUSITANIA], an identification which has spread its roots deep in Portuguese literature, and has until recently been generally accepted. . . . The Celtic tribe of Lusitanians dwelt, according to Strabo, in the districts north of the Tagus, while the Lusitania of the Latin historians of the Republic undoubtedly lay to the south of that river, though it was not used as the name of a province until the time of Augustus, when the old division of the peninsula into Hispania Citerior and Hispania Ulterior was superseded by the division into Bætica, Tarraconensis, and Lusitania. Neither in this division, nor in the division of the peninsula into the five provinces of Tarraconensis, Carthaginensis, Bætica, Lusitania, and Gallicia, under Hadrian, was the province called Lusitania coterminous with the modern kingdom of Portugal. Under each division the name was given to a district south of the Tagus. . . . It is important to grasp the result of this misconception, for it emphasizes the fact that the history of Portugal for many centuries is merged in that of the rest of the Iberian peninsula, and explains why it is unnecessary to study the wars of the Lusitanians with the Roman Republic, as is often done in histories of Portugal. Like the rest of the peninsula Portugal was thoroughly Latinized in the days of the Roman Empire; Roman 'coloniæ' and 'municipia' were established in places suited for trade, such as Lisbon and Oporto. . . . Peaceful existence under the sway of Rome continued until the beginning of the 5th century, when the Goths first forced their way across the Pyrenees [see GOths: 410-419]. . . . The Visigothic Empire left but slight traces in Portugal." The Mohammedan conquest by the Arab-Moors, which began early in the eighth century, extended to Portugal, and for a general account of the struggle in the peninsula between Christians and Moslems during several succeeding centuries the reader is referred to SPAIN: 711-713, and after. "In 997 Bermudo II., king of Gallicia, won back the first portion of modern Portugal from the Moors by seizing

Oporto and occupying the province now known as the Entre Minho e Douro. . . . In 1055 Ferdinand 'the Great,' king of Leon, Castile, and Gallicia, invaded the Beira; in 1057 he took Lamego and Viscu; and in 1064 Coimbra, where he died in the following year. He arranged for the government of his conquests in the only way possible under the feudal system, by forming them into a county, extending to the Mondego, with Coimbra as its capital. The first count of Coimbra was Senando, a recreant Arab vizir, who had advised Ferdinand to invade his district and had assisted in its easy conquest. . . . But though Senando's county of Coimbra was the great frontier county of Gallicia, and the most important conquest of Ferdinand 'the Great,' it was not thence that the kingdom which was to develop out of his dominions was to take its name. Among the counties of Gallicia was one called the 'comitatus Portucalensis,' because it contained within its boundaries the famous city at the mouth of the Douro, known in Roman and Greek times as the Portus Cale, and in modern days as Oporto, or 'The Port.' This county of Oporto or Portugal was the one destined to give its name to the future kingdom, and was held at the time of Ferdinand's death by Nuno Mendes, the founder of one of the most famous families in Portuguese history. Ferdinand 'the Great' was succeeded in his three kingdoms of Castile, Leon, and Gallicia, by his three sons, Sancho, Alfonso, and Garcia, the last of whom received the two counties of Coimbra and Oporto as fiefs of Gallicia, and maintained Nuno Mendes and Senando as his feudatories." Wars between the three sons ensued, as the result of which "the second of them, Alfonso of Leon, eventually united all his father's kingdoms in 1073, as Alfonso VI." This Alfonso was now called upon to encounter a new impulse of Mohammedan aggression, under a new dynasty, that of the Almoravides. (See ALMORAVIDES.) "The new dynasty collected great Moslem armies, and in 1086 Yusuf Ibn Teshfin routed Alfonso utterly at the battle of Zalaca, and reconquered the peninsula up to the Ebro. . . . Alfonso tried to compensate for this defeat and his loss of territory in the east of his dominions by conquests in the west, and in 1093 he advanced to the Tagus and took Santarem and Lisbon, and made Sueiro Mendes count of the new district. But these conquests he did not hold for long. . . . In 1093 Seyr, the general of the Almoravide caliph Yusuf, took Evora from the Emir of Badajoz; in 1094 he took Badajoz itself, and killed the emir; and retaking Lisbon and Santarem forced his way up to the Mondego. To resist this revival of the Mohammedan power, Alfonso summoned the chivalry of Christendom to his aid. Among the knights who joined his army eager to win their spurs, and win dominions for themselves, were Count Raymond of Toulouse and Count Henry of Burgundy. To the former Alfonso gave his legitimate daughter, Urraca, and Gallicia; to the latter, his illegitimate daughter Theresa, and the counties of Oporto and Coimbra, with the title of Count of Portugal. The history of Portugal now becomes distinct from that of the rest of the peninsula, and it is from the year 1095 that the history of Portugal commences. The son of Henry of Burgundy was the great monarch Affonso Henriques, the hero of his country and the founder of a great dynasty."—H. M. Stephens, *Story of Portugal*, ch. 1.

1095-1325.—County made independent and raised to rank of a kingdom.—Completion of conquests from the Moors.—Limits of the kingdom established.—Founding of University of

Lisbon.—Count Henry of Burgundy waged war for seven years with his Moorish neighbors; then went crusading to Palestine for two years. On his return in 1105 he made common cause with his brother-in-law and brother-adventurer, Count Raymond of Galicia, against the suspected intention of King Alfonso to declare his bastard, half-Moorish son, Sancho, the heir to his dominions. "This peaceful arrangement had no result, owing to the death of Count Raymond in 1107, followed by that of young Sancho at the battle of Uclés with the Moors, in 1108, and finally by the death of Alfonso VI himself in 1109. The king's death brought about the catastrophe. He left all his dominions to his legitimate daughter, Urraca, with the result that there was five years of fierce fighting between Henry of Burgundy, Alfonso Raimundes, the son of Count Raymond, Alfonso I. of Aragon, and Queen Urraca. . . . While they fought with each other the Mohammedans advanced. . . . On May 1, 1114, Count Henry died, . . . leaving his wife Theresa as regent during the minority of his son Afonso Henriques, who was but three years old. Theresa, who made the ancient city of Guimaraens her capital, devoted all her energies to building up her son's dominions into an independent state; and under her rule, while the Christian states of Spain were torn by internecine war, the Portuguese began to recognize Portugal as their country, and to cease from calling themselves Gallicians. This distinction between Portugal and Galicia was the first step towards the formation of a national spirit, which grew into a desire for national independence." The regency of Theresa, during which she was engaged in many contests, with her half-sister Urraca and others, ended in 1128. In the later years of it she provoked great discontent by her infatuation with a lover to whom she was passionately devoted. In the end, her son headed a revolt which expelled her from Portugal. The son, Afonso Henriques, assumed the reins of government at the age of seventeen years. In 1130 he began a series of wars with Alfonso VII of Castile, the aim of which was to establish the independence of Portugal. These wars were ended in 1140 by an agreement, "in consonance with the ideas of the times, to refer the great question of Portuguese independence to a chivalrous contest. In a great tournament, known as the Tourney of Valdevez, the Portuguese knights were entirely successful over those of Castile, and in consequence of their victory Afonso Henriques assumed the title of King of Portugal. This is the turning-point of Portuguese history, and it is a curious fact that the independence of Portugal from Galicia was achieved by victory in a tournament and not in war. Up to 1136, Afonso Henriques had styled himself Infante, in imitation of the title borne by his mother; from 1136 to 1140 he styled himself Prince, and in 1140 he first took the title of King." A little before this time, on July 25, 1139, Afonso had defeated the Moors in a famous and much magnified battle—namely that of Orik or Ourique—"which, until modern investigators examined the facts, has been considered to have laid the foundations of the independence of Portugal. Chroniclers, two centuries after the battle, solemnly asserted that five kings were defeated on this occasion, that 200,000 Mohammedans were slain, and that after the victory the Portuguese soldiers raised Afonso on their shields and hailed him as king. This story is absolutely without authority from contemporary chronicles, and is quite as much a fiction as the Cortes of Lamego, which has been invented as sitting in 1143 and passing the constitutional laws

on which Vertot and other writers have expended so much eloquence. . . . It was not until the modern school of historians arose in Portugal, which examined documents and did not take the statements of their predecessors on trust, that it was clearly pointed out that Afonso Henriques won his crown by his long struggle with his Christian cousin, and not by his exploits against the Moors." —H. M. Stephens, *Story of Portugal*, ch. 2-3.— "The long reign of Afonso I., an almost uninterrupted period of war, is the most brilliant epoch in the history of the Portuguese conquests. Lisbon, which had already under its Moorish masters become the chief city of the west, was taken in 1147, and became at once the capital of the new kingdom. The Tagus itself was soon passed. Large portions of the modern Estremadura and Alemtejo were permanently annexed. The distant provinces of Algarve and Andalusia were overrun; and even Seville trembled at the successes of the Portuguese. It was in vain that Moorish vessels sailed from Africa to chastise the presumption of their Christian foes: their ships were routed off Lisbon by the vessels of Afonso; their armies were crushed by a victory at Santarem [1184], the last and perhaps the most glorious of the many triumphs of the King. . . . Every conquest saw the apportionment of lands to be held by military tenure among the conquerors; and the Church, which was here essentially a militant one, received not only an endowment for its religion but a reward for its sword. The Orders of St. Michael and of Avis [St. Benedict of Avis] which were founded had a religious as well as a military aspect. Their members were to be distinguished by their piety not less than by their courage, and were to emulate the older brotherhoods of Jerusalem and of Castile. . . . Sancho I. [who succeeded his father Afonso in 1185], though not adverse to military fame, endeavoured to repair his country's wounds; and his reign, the complement of that of Afonso, was one of development rather than of conquest. . . . The surname of El Povoador, the Founder, is the indication of his greatest work. New towns and villages arose, new wealth and strength were given to the rising country. Afonso II. [1211] continued what Sancho had begun; and the enactment of laws, humane and wise, are a testimony of progress, and an honourable distinction to his reign." But Afonso II provoked the hostility of an arrogant and too powerful clergy, and drew upon himself a sentence of excommunication from Rome. "The divisions and the weakness which were caused by the contest between the royal and ecclesiastical authority brought misery upon the kingdom. The reign of Sancho II. [who succeeded to the throne in 1223] was more fatally influenced by them even than that of his father. . . . The now familiar terrors of excommunication and interdict were followed [1245] by a sentence of deposition from Innocent IV.; and Sancho, weak in character, and powerless before a hostile priesthood and a disaffected people, retired to end his days in a cloister of Castile. The successor to Sancho was Afonso III. He had intrigued for his brother's crown; he had received the support of the priesthood, and he had promised them their reward in the extension of their privileges"; but his administration of the government was wise and popular. He died in 1270. "The first period of the history of Portugal is now closed. Up to this time, each reign, disturbed and enfeebled though it may have been, had added something to the extent of the country. But now the last conquest from the Moors had been won. On the south, the impassable barrier of the ocean; on the

east, the dominions of Castile, confined the kingdom. . . . The crusading days were over. . . . The reign of Denis, who ruled from 1279 to 1325, is at once the parallel to that of Afonso I. in its duration and importance, the contrast to it in being a period of internal progress instead of foreign conquest. . . . That Denis should have been able to accomplish as much as he did, was the wonder even of his own age. [It was during the reign of Denis that the University of Lisbon was founded (1290); in 1308 it was transferred to Coimbra.] . . . Successive reigns still found the country progressing."—C. F. Johnstone, *Historical abstracts*, ch. 4.—Alfonso IV, who succeeded Denis, defended his kingdom against Castilian and Moslem.

1383-1385.—Founding of new dynasty of the House of Avis.—"The legitimate descent of the kings of Portugal from County Henry, of the house

JOHN I

of Burgundy, terminated with Ferdinand (the son of Peter I.) . . . in 1383. After wasting the resources of his people in the vain support of his claims to the crown of Castile, exposing Lisbon to a siege, and the whole country to devastation, this monarch gave his youthful daughter in marriage to the natural enemy of Portugal, John I, at that time the reigning king of Castile. . . . It was agreed between the contracting parties that the male issue of this connection should succeed to the Portuguese sceptre, and, that failing, that it should devolve into the hands of the Castilian monarch. Fortunately, however, the career of this Spanish tyrant was short, and no issue was left of Beatrix, for whom the crown of Portugal could be claimed; and therefore all the just pretensions of the Spaniard ceased. The marriage had scarcely been concluded, when Ferdinand died. It had been provided by the laws of the constitution, that in a case of emergency, such as now occurred, the election of a new sovereign should immediately take place. The legal heir to the crown, Don Juan [the late king's brother], the son of Pedro and Ignes de Castro, whose marriage had been

solemnly recognised by an assembly of the states, was a prisoner at this time in the hands of his rival, the king of Castile. The necessity of having a head to the government appointed without delay, opened the road to the throne for John, surnamed the Bastard, the natural son of Don Pedro, by Donna Theresa Lorenzo, a Galician lady. Availing himself of the natural aversion by which the Portuguese were influenced against the Castilians, he seized the regency from the hands of the queen-dowager, . . . successfully defended Lisbon, and forced the Spaniards to retire into Spain after their memorable defeat on the plain of Aljubarota. . . . This battle . . . completely established the independence of the Portuguese monarchy. John was, in consequence, unanimously elected King by the Cortes, assembled at Coimbra in 1385. . . . In aid of his natural talents John I. had received an excellent education from his father, and during his reign exhibited proofs of being a profound politician, as well as a skilful general. . . . He became the founder of a new dynasty of kings, called the house of 'Avis,' from his having been grand master of that noble order. The enterprises, however, of the great Prince Henry, a son of John I, form a distinguishing feature of this reign."—W. M. Kinsey, *Portugal illustrated*, pp. 34-35.

1409.—Represented at Council of Pisa. See PAPACY: 1377-1417.

1415-1460.—Taking of Ceuta.—Exploring expeditions of Prince Henry the Navigator down the African coast.—"King John [the First] had married an English wife, Philippa Plantagenet—a grand-daughter of our King Edward III, thoroughly English, too, on her mother's side, and not without a dash of Scottish blood, for her great-great-grand-mother was a Comyn of Broghan. King John of Portugal was married to his English wife for twenty-eight years, they had five noble sons and a daughter (who was Duchess of Burgundy and mother of Charles the Bold); and English habits and usages were adopted at the Portuguese Court. We first meet with Prince Henry and his brothers, Edward and Peter, at the bed-side of their English mother. The king had determined to attack Ceuta, the most important seaport on the Moorish coast; and the three young princes were to receive knighthood if they bore themselves manfully, and if the place was taken, Edward the eldest, was twenty-four, Peter twenty-three, and Henry just twenty-one. He was born on March 4th, 1394. There were two other brothers, John and Ferdinand, but they were still too young to bear arms. Their mother had caused three swords to be made with which they were to be girt as knights; and the great fleet was being assembled at Lisbon. But the Queen was taken ill, and soon there was no hope. Husband and sons gathered round her deathbed. When very near her end she asked: 'How is the wind?' she was told that it was northerly. 'Then,' she said, 'You will all sail for Ceuta on the feast of St. James.' A few minutes afterwards she died, and her husband and sons sailed for Ceuta on St. James's day, the 25th of July, 1415, according to her word. . . . Ceuta was taken after a desperate fight. It was a memorable event, for the town never again passed into the hands of the Moors unto this day. . . . From the time of this Ceuta expedition Prince Henry set his mind steadfastly on the discovery of Guinea and on the promotion of commercial enterprise. During his stay at Ceuta he collected much information respecting the African coast. . . . His first objects were to know what was beyond the farthest cape hitherto

reached on the coast of Africa, to open commercial relations with the people, and to extend the Christian faith. Prince Henry had the capacity for taking trouble. He undertook the task, and he never turned aside from it until he died. To be close to his work he came to live on the promontory of Sagres, near Cape St. Vincent, and not far from the seaport of Lagos. He was twenty-four years old when he came to live at this secluded spot, in December, 1418; and he died there in his sixty-seventh year. . . . He established a school at Sagres for the cultivation of map-drawing and the science of navigation. At great expense he procured the services of Mestre Jacome from Majorca, a man very learned in the art of navigation, as it was then understood, and he erected an observatory. . . . During the time of the Crusades a great order of knighthood was established, called the Templars, which became very rich and powerful, and held vast estates in most of the countries of Europe. At last the kings became jealous of their prosperity and, in the days of our Edward II. and of the French Philip IV., their wealth was confiscated, and the order of Knights Templars was abolished in all countries except Portugal. But King Dionysius of Portugal refused either to rob the knights or to abolish the order. In the year 1319 he reformed the order, and changed the name, calling it the Order of Christ, and he encircled the white cross of the Templars with a red cross as the future badge of the knights. They retained their great estates. Prince Henry was appointed, by his father, Grand Master of the Order of Christ in the year 1419. He could imagine no nobler nor more worthy employment for the large revenues of the Order than the extension of geographical discovery. Thus were the funds for his costly expeditions supplied by the Order of Chivalry of which he was Grand Master. When Prince Henry first began to send forth expeditions along the coast of Africa, the farthest point to the southward that had been sighted was Cape Bojador. The discovery of the extreme southern point of Africa, and of a way thence to India, was looked upon then . . . [as impossible]. Nevertheless, Prince Henry said that it could be done, and that, moreover it should be done. . . . In 1434 he considered that the time had come to round Cape Bojador. He selected for the command of the expedition an esquire of his household named Gil Eannes, who was accompanied by John Diaz, an experienced seaman of a seafaring family at Lagos, many of whose members became explorers. Prince Henry told them that the current which they feared so much was strongest at a distance of about three to five miles from the land. He ordered them, therefore, to stand out boldly to sea. 'It was a place before terrible to all men,' but the Prince told them that they must win fame and honour by following his instructions. They did so, rounded the Cape, and landed on the other side. There they set up a wooden cross as a sign of their discovery. . . . The Prince now equipped a larger vessel than had yet been sent out, called a varinel, propelled by oars as well as sails. Many were the eager volunteers among the courtiers at Sagres. Prince Henry's cup-bearer, named Alfonso Gonsalves Baldaya, was selected to command the expedition, and Gil Eannes—he who first doubled Cape Bojador—went with it in a smaller vessel. . . . They sailed in the year 1436, and, having rounded Cape Bojador without any hesitation, they proceeded southward along the coast for 120 miles, until they reached an estuary called by them Rio d'Ouro. . . . During the five following years Prince

Henry was much engaged in State affairs. The disastrous expedition to Tangiers took place, and the imprisonment of his young brother Ferdinand by the Moors, whose noble resignation under cruel insults and sufferings until he died at Fez, won for him the title of the 'Constant Prince.' But in 1441 Prince Henry was able to resume the despatch of vessels of discovery. In that year he gave the command of a small ship to his master of the wardrobe, Antam Gonsalves. . . . He [Gonsalves] was followed in the same year by Nuño Tristram. . . . Tristram discovered a headland which, from its whiteness, he named Cape Blanco. . . . The next discovery was that of the island of Arguin, south of Cape Blanco, which was first visited in 1443 by Nuño Tristram in command of a caravel. . . . The next voyage of discovery was one of great importance, because it passed the country of the Moors, and, for the first time, entered the land of the Negroes. Dinis Diaz,

PRINCE HENRY. THE NAVIGATOR

(From a rare engraving made in Holland about three hundred years ago)

who was selected for this enterprise by the Prince, sailed in 1446 with the resolution of beating all his predecessors. He passed the mouth of the river Senegal, and was surprised at finding that the people on the north bank were Moors, while to the south they were all blacks; of a tribe called Jaloffs. Diaz went as far as a point which he called Cabo Verde. In the following years several expeditions, under Lanzarote and others, went to Arguin and the Senegal; until, in 1455, an important voyage under Prince Henry's patronage was undertaken by a young Venetian named Alvise (Luigi) Cadamosto. . . . They sailed on March 22, 1455, and went first to Porto Santo and Madeira. From the Canary Islands they made sail for Cape Blanco, boldly stretching across the intervening sea and being for some time quite out of sight of land. Cadamosto had a good deal of intercourse with the Negroes to the south of the Senegal, and eventually reached the mouth of the Gambia whence he set out on his homeward voyage. The actual extent of the discoveries made during the life of Prince Henry was from Cape Bojador to beyond the mouth of the Gambia. But this was

only a small part of the great service he performed, not only for his own country, but for the whole civilised world. He organised discovery, trained up a generation of able explorers, so that from his time progress was continuous and unceasing. . . . Prince Henry, who was to be known to all future generations as 'the Navigator,' died at the age of sixty-six at Sagres, on Thursday, the 13th of November, 1460."—C. R. Markham, *Sea fathers*, ch. 1.—See also COMMERCE: Era of geographic expansion: 15th-17th centuries: Leadership of the Portuguese.

1463-1498.—Pope's gift of title to African discoveries.—Slow southward progress of exploration.—Rounding of the Cape of Good Hope.—Vasco da Gama's voyage.—Effect of Portuguese maritime enterprise in the development of modern Europe.—"In order to secure his triumphs, Prince Henry procured a bull from Pope Eugenius IV., which guaranteed to the Portuguese all their discoveries between Cape Nun, in Morocco, and India. None of his commanders approached within six or eight degrees of the equator. . . . By the year 1472, St. Thomas, Annobon, and Prince's Islands were added to the Portuguese discoveries, and occupied by colonists; and at length the equator was crossed. Fernando Po having given his name to an island in the Bight of Biafra, acquired possession of 500 leagues of equatorial coast, whence the King of Portugal took the title of Lord of Guinea. The subsequent divisions of this territory into the Grain Coast, named from the cochineal thence obtained, and long thought to be the seed of a plant, Gold Coast, Ivory Coast, and Slave Coast, indicate by their names the nature of the products of those lands, and the kind of traffic. Under King John II., after an inactive period of eight or ten years, Diego Cam (1484) pushed forward fearlessly to latitude 22° south, erecting at intervals on the shore, pillars of stone, which asserted the rights of his sovereign to the newly-found land. For the first time, perhaps, in history, men had now sailed under a new firmament. They lost sight of a part of the old celestial constellations, and were awe-struck with the splendours of the Southern Cross, and hosts of new stars. . . . Imaginary perils, which had frightened former sailors, spurred the Portuguese to greater daring. Bartholomew Diaz, in 1486, was sent in command of an expedition of three ships, with directions to sail till he reached the southernmost headland of Africa. Creeping on from cape to cape, he passed the furthest point touched by Diego Cam, and reached about 20° south latitude. Here driven out of his course by rough weather, was dismayed on again making land to find the coast trending northward. He had doubled the Cape without knowing it, and only found it out on returning, disheartened by the results of his voyage. Raising the banner of St. Philip on the shore of Table Bay, Diaz named the headland the Cape of Tempests, which the king, with the passage to India in mind, changed to that of the Cape of Good Hope. By a curious coincidence in the same year Covillan [see ABYSSINIA: 15th-16th centuries] . . . learnt the fact that the Cape of Good Hope, the Lion of the Sea, or the Head of Africa, could be reached across the Indian Ocean."—J. Yeats, *Growth and vicissitudes of commerce*, pt. 2, ch. 4.—"Pedro de Covilho had sent word to King John II from Cairo, by two Jews, Rabbi Abraham and Rabbi Joseph, that there was a south cape of Africa which could be

doubled. They brought with them an Arabic map of the African coast. . . . Covilho had learned from the Arabian mariners, who were perfectly familiar with the east coast, that they had frequently been at the south of Africa, and that there was no difficulty in passing round the continent that way. . . . Vasco de Gama set sail July 9, 1497, with three ships and 160 men, having with him the Arab map. King John had employed his Jewish physicians, Roderigo and Joseph, to devise what help they could from the stars. They applied the astrolabe to marine use, and constructed tables. These were the same doctors who had told him that Columbus would certainly succeed in reaching India, and advised him to send out a secret expedition in anticipation, which was actually done, though it failed through want of resolution in its captain. Encountering the usual difficulties, tempestuous weather and a mutinous crew, who conspired to put him to death, De Gama succeeded, November 20, in doubling the Cape. On March 1 he met seven small Arab vessels, and was surprised to find that they used the compass, quadrants, sea-charts, and 'had divers maritime mysteries not short of the Portugals.' With joy he soon after recovered sight of the northern stars, for so long unseen. He now bore away to the north-east, and on May 10, 1498, reached Calicut, on the Malabar coast. The consequences of this voyage were to the last degree important. The commercial arrangements of Europe were completely dislocated; Venice was deprived of her mercantile supremacy [see VENICE: 15th-17th centuries]; the hatred of Genoa was gratified; prosperity left the Italian towns; Egypt, hitherto supposed to possess a pre-eminent advantage as offering the best avenue to India, suddenly lost her position; the commercial monopolies so long in the hands of the European Jews were broken down. The discovery of America and passage of the Cape were the first steps of that prodigious maritime development soon exhibited by Western Europe. And since commercial prosperity is forthwith followed by the production of men and concentration of wealth, and, moreover, implies an energetic intellectual condition, it appeared before long that the three centres of population, of wealth, of intellect, were shifting westwardly. The front of Europe was suddenly changed; the British Islands, hitherto in a sequestered and eccentric position, were all at once put in the van of the new movement."—J. W. Draper, *History of the intellectual development of Europe*, ch. 19.—See also ASIA: 1500-1600; CEYLON; LIBERIA: Portuguese exploration; SOUTH AFRICA, UNION OF: 1486-1806.

out flattery, admire his sprightly wit, his manly form, his daring spirit, and his superior address, in all the accomplishments of a martial age. But the hopes which these splendid qualities inspired were clouded by an intemperate thirst of fame. . . . He had early cherished the frantic project of transporting a royal army to India, and of rivalling the exploits of Alexander; but from this design he was diverted, not by the difficulties that opposed it, nor by the remonstrances of his counsellors, but by the distractions of Africa, which promised to his ambition a nearer and fairer harvest of glory. On the death of Abdalla, King of Morocco, his son, Muley Mahomet, had seized upon the crown, in contempt to an

1579-1580.—Disastrous invasion of Morocco by Sebastian.—His death in battle.—Disputed succession to the throne.—Claim of Philip II of Spain established by force of arms.—“Under a long succession of Kings who placed their glory in promoting the commerce of their subjects and extending their discoveries through the remotest regions of the globe, Portugal had attained a degree of importance among the surrounding nations, from which the narrow limits of the kingdom, and the neighbourhood of the Spanish monarchy, seemed for ever to exclude her. . . . John III., the last of those great monarchs under whose auspices the boundaries of the known world had been enlarged, was succeeded in the throne of Portugal [1557] by his grandson Sebastian, a child of only three years old. As the royal infant advanced to manhood, his subjects, might, with-

established law of succession, that the kingdom should devolve to the brother of the deceased monarch. A civil war ensued, and Mahomet, defeated in several battles, was compelled to leave his uncle Muley Moluc, a prince of great abilities and virtues, in possession of the throne.” Mahomet escaped to Lisbon, and Sebastian espoused his cause. He invaded Morocco (see Morocco: 647-1800) with a force partly supplied by his uncle, Philip II, of Spain, and partly by the Prince of Orange, engaged the Moors rashly in battle (the battle of Alcazar, or the Three Kings, 1570), and perished on the field, his army being mostly destroyed or made captive. “An aged and feeble priest was the immediate heir to the unfortunate Sebastian; and the Cardinal Henry, the great uncle to the late monarch, ascended the vacant throne. [He lived about a year, dying in 1580, leaving the crown in dispute among a crowd of claimants.]”—J. Adams, *History of Spain*, v. 2, pp.

406-408, 411.—“The candidates were seven in number: the duchess of Braganza, the king of Spain, the duke of Savoy, Don Antonio, prior of Crato, the duke of Parma, Catherine of Medicis, and the sovereign pontiff. The four first were grand-children of Emanuel the Great, father of Henry. The duchess of Braganza was daughter of Prince Edward, Emanuel's second son; Philip was the son of the Empress Isabella, his eldest daughter; the duke of Savoy, of Beatrix, his younger daughter; and Don Antonio was a natural son of Lewis, who was a younger son of Emanuel, and brother to the present king [cardinal Henry]. The duke of Parma was great-grandson of Emanuel, by a daughter of the above-mentioned Prince Edward. The Queen-mother of France founded her claim on her supposed descent from Alphonso, who died about 300 years before the present period; and the Pope pretended that Portugal was feudatory to the see of Rome, and belonged to him, since the male heirs in the direct line were extinct.” The other candidates held small chances against the power and convenient neighborhood of Philip of Spain. “Philip's agents at the court of Lisbon allowed that if the duchess of Braganza's father had been alive, his title would have been indisputable; but they maintained that, since he had died without attaining possession of the throne, nothing but the degree of consanguinity to Emanuel ought to be regarded; and that, as the duchess and he were equal in that respect, the preference was due to a male before a female. And they farther insisted, that the law which excludes strangers from inheriting the crown was not applicable to him, since Portugal had formerly belonged to the kings of Castile.” Promptly on the death of the cardinal-king Henry, the Spanish king sent an army of 35,000 men, under the famous duke of Alva, and a large fleet under the Marquis of Santa Croce, to take possession of what he claimed as his inheritance. Two battles sufficed for the subjugation of Portugal:—one fought on the Alcantara, August 25, 1580, and the other a little later on the Douro. The kingdom submitted, but with bitter feelings, which the conduct of Alva and his troops had intensified at every step of their advance. “The colonies in America, Africa, and the Indies, which belonged to the crown of Portugal, quickly followed the example of the mother country; nor did Philip find employment for his arms in any part of the Portuguese dominions but the Azores, [which, supported by the French, were not subdued until the following year.]”—R. 1637-1668.—Crisis of discontent with Spanish rule.—Successful revolution.—National independence recovered.—House of Braganza placed

on the throne.—“A spirit of dissatisfaction had long been growing amongst the Portuguese. Their colonies were neglected; a great part of Brazil, and a yet larger portion of their Indian empire, had fallen into the hands of the Dutch; Ormus, and their other possessions in the Persian Gulph, had been conquered by the Persians; their intercourse with their remaining colonies was harassed and intercepted; their commerce with the independent Indian states, with China and with Japan, was here injured and there partially destroyed, by the enterprising merchants and mariners of Holland; whilst at home the privileges secured to them as the price of their submission, were hourly, if not flagrantly, violated by their Spanish masters. The illegal imposition of a new tax by the king's sole authority, in 1637, had provoked a partial revolt in the southern provinces, where the duke of Braganza, grandson of Catherine [whose right to the throne was forcibly put aside by Philip II of Spain in 1580 [see above: 1579-1580], was proclaimed king. He refused the proffered dignity, and assisted in quelling the rebellion. He was thanked by Philip and at once recompensed, and, as it was hoped, ensnared, by an appointment to be general-in-chief of Portugal. But the flame was smothered, not extinguished.

. . . The vice-queen, Margaret, duchess-dowager of Mantua, a daughter of Philip II.'s youngest daughter, Catherine, saw the gathering tempest, and forewarned the court of Madrid of the impending danger. Her information was treated, like herself, with contempt by Olivarez. One measure, however, he took, probably in consequence; and that one finally decided the hesitating conspirators to delay no longer. He ordered a large body of troops to be raised in Portugal, the nobles to arm their vassals, and all, under the conduct of the duke of Braganza, to hasten into Spain, in order to attend the king, who was about to march in person against the rebellious Catalans. Olivarez hoped thus at once to overwhelm Catalonia and Roussillon, and to take from Portugal the power of revolting, by securing the intended leader, and draining the country of the warlike portion of its population. The nobles perceived the object of this command, and resolved to avoid compliance by precipitating their measures. Upon the 12th of October, 1640, they assembled to the number of 40 at the house of Don Antonio d'Almeida. At this meeting they determined to recover their independence, and dispatched Don Pedro de Mendoza as their deputy, to offer the crown and their allegiance to the duke of Braganza, who had remained quietly upon his principal estate at Villa Viçosa. The duke hesitated, alarmed, perhaps, at the importance of the irrevocable step he was called upon to take. But his high-spirited duchess, a daughter of the Spanish duke of Medina-Sidonia, observing to him, that a wretched and dishonourable death certainly awaited him at Madrid; at Lisbon, as certainly glory, whether in life or death, decided his acceptance. Partisans were gained on all sides, especially in the municipality of Lisbon; and the secret was faithfully kept, for several weeks, by at least 500 persons of both sexes, and all ranks. During this interval, the duke of Braganza remained at Villa Viçosa, lest his appearance at Lisbon should excite suspicion; and it seems that, however clearly the vice-queen had perceived the threatening aspect of affairs, neither she nor her ministers entertained any apprehension of the plot actually organized. The 1st of December was the day appointed for the insurrection. Early in the

morning the conspirators approached the palace in four well-armed bands," and easily mastered the guard. From the windows of the palace they "proclaimed liberty and John IV." to a great concourse of people who had speedily assembled. Finding Vasconcellos, the obnoxious secretary to the vice-queen, hidden in a closet, they slew him and flung his body into the street. The vice-queen, seeing herself helpless, submitted to the popular will and signed mandates addressed to the Spanish governors and other officers commanding castles and fortifications in Portugal, requiring their surrender. "The archbishop of Lisbon was next appointed royal-lieutenant. He immediately dispatched intelligence of the event to the new king, and sent messengers to every part of Portugal with orders for the proclamation of John IV., and the seizure of all Spaniards. . . . Obedience was prompt and general. . . . John was crowned on the 15th of December, and immediately abolished the heavy taxes imposed by the king of Spain, declaring that, for his own private expense, he required nothing beyond his patrimonial estates. He summoned the Cortes to assemble in January, when the three estates of the kingdom solemnly confirmed his proclamation as king, or 'acclamation,' as the Portuguese term it. . . . In the islands, in the African settlements, with the single exception of Ceuta, which adhered to Spain, and in what remained of Brazil and India, King John was proclaimed, the moment intelligence of the revolution arrived, the Spaniards scarcely any where attempting to resist. . . . In Europe, the new king was readily acknowledged by all the states at war with the house of Austria." The first attempts made by the Spanish court to regain its lost authority in Portugal took chiefly the form of base conspiracies for the assassination of the new king. War ensued, but the "languid and desultory hostilities produced little effect beyond harassing the frontiers. Portugal was weak, and thought only of self-defence; Spain was chiefly intent upon chastizing the Catalans. [The war was prolonged, in fact, until 1668, when it was terminated by the treaty of Lisbon which recognized the independence of Portugal, but ceded Ceuta to Spain. The only considerable battles of the long war were those of Estremos, or Ameixal, in 1663, and Villa Viçosa, 1665, in which the Portuguese were victors, and which were practically decisive of the war.]—M. M. Busk, *History of Spain and Portugal*, bk. 2, ch. 10-12.—See also SPAIN: 1640-1642.

1656-1777.—Accessions to the throne.—Earthquake of 1755.—Extent of its destruction.—Administration of Pombal.—His foreign policy.—"The reign of John IV., . . . it is true, marked a great event in the history of Portugal, but . . . cannot be said to have made the nation happy. A weakness and a want of self-assertion characterised his whole career as king, which was brought to an end by his death in the year 1656. The years immediately following the death of John IV were years of grave anxiety. Very troubled was the Regency of the Queen, whose policy had involved Portugal in a war with Spain which, fortunately, had resulted in a series of victories over the Spaniards; and the accession of the boy, Alfonso VI, proved a source of terrible calamity to the country and created new difficulties in the

way of her political development. . . . This debauched youth in 1662 declared himself of age, and presumed himself fit to assume the responsibility of the government of his country. He was, however, fortunate enough to avail himself of the services of Castello Melhor, an eminent statesman. . . . But Castello Melhor was not irreproachable in his policy. He arranged the marriage of Alfonso VI with the French Princess, daughter of Duke of Nemours and granddaughter of Henry IV of France. . . . And Dom Pedro, whose gallant and romantic nature contrasted with that of Alfonso VI, placing himself at the head of the revolution, bridled his brother's licentiousness by shutting him in the Palace; and having received, on the first day of the year 1668, the oath of allegiance of the Cortes, he assumed regency of the kingdom. . . . Dom Pedro, who ascended the throne after his brother's death, was a good-natured king, and the nation seemed to have hoped that his good qualities would find pleasure in giving the monarchy its old aspect. His reign, so memorable for the treaty of Methuen, . . . did not disappoint the nation. In a situation of great difficulty, when Portugal had to keep time with the foreign policies of Spain, France, and England respectively, he availed himself of the good services of Ericeira, his minister, and conducted the affairs of his country with prudence and some degree of foresight. . . . [When, in 1706, John V] succeeded his father, Dom Pedro II, on the throne, though he found the kingdom involved, through the Methuen treaty, in the war of Spanish Succession, [he] saw his country growing in wealth, and he was so misled by the appearances of the hour as to imagine the nation so well advanced along the road of material prosperity as to revive the extravagances of Claudian Cæsars and the last Flavian. . . . The splendour of John V's Court, which was the most brilliant in Europe, disappeared with that improvident monarch. John V died in 1750, leaving a debt of three millions sterling. The country was on the verge of bankruptcy, yet the proud bankrupt Portugal retained as much love for display in those times of destitution as if it were still a wealthy nation. . . . Such was also the fate of Lisbon. The earthquake of 1st November of the year 1755, which laid Lisbon in ruins, came as a destruction from Heaven. That earthquake, which extended its work of desolation over an area of 4000 miles in diameter, swallowed up in six minutes sixty-one churches and convents, thirty-two palaces of nobility, a newly built quay, and destroyed at least sixty thousand lives. It was on the morning of All Saints' Day that Lisbon was shattered to pieces. Churches were overwhelmed with crowds of worshippers that were buried with the churches under the weight of their walls and steeples that had suddenly collapsed. Thousands staggered and lost their lives in the floods of the Tagus that had burst upon the city. Fires broke out in every part of the city; prisoners fled and pillaged those who had escaped death. The effects of this catastrophe, which called forth a vivid description by Voltaire in his *Candide*, were terrible. The city became desolate, for her beauty was withered away, her monuments and her art treasures had vanished, and her population perished. [See also LISBON: 1755.] And it delivered the country into the hands of a tyrant. In other words, it produced the Marquis de Pombal, the famous minister of Joseph I, whose twenty-seven years of administration form one of the many interesting incidents in the his-

tory of Portugal. . . . It is true that he aimed at improving the financial conditions of his country, that he tried to establish a national system of technical education, that he reorganised the army and decreed the abolition of slavery. But what of the measures and methods to enforce his policy? His economic policy, which suggests how badly he copied the policy of Colbert, has, fortunately, almost unanimously been condemned as vicious in principle and disastrous in its results. Pombal, with tendencies for a system in which he might have most power of direction, circumscribed commerce in every branch by the erection of extensive monopolies. The Minister, in the name of the King, was a kind of first manufacturer, who compelled the nation to purchase her commodities at the price set by him. He decreed highly protectionist, at times prohibitive, custom-house regulations with the intention of erecting in Portugal model manufactures and securing to her the production of such articles as she obtained from abroad—regulations which naturally engendered reprisals and seriously hindered the Portuguese commerce. As a necessary corollary to this madhouse legislation, he reinforced an ancient law existing in Portugal and issued an edict prohibiting gold and precious stones that were annually imported from Brazil and other colonies to be exported without his permission! In the decree constituting the General Company of Grand Pará and Maranhão he pushed the monopoly to the farthest extreme, with the result that it put their trade in the most distressing condition. The results were disastrous. The commerce of Brazil had greatly diminished. . . . His foreign policy was not in any way better than his economic policy. There is not a single alliance or negotiation that can be pointed out to have given Portugal the least advantage, and this notwithstanding the fact of his sending Ministers to all the Courts of Europe. But those representatives of the nation abroad, deprived of all initiative, were kept as mere automata upon whom Pombal might put the blame for all unsuccess as far as his dictatorial policy was concerned. Pombal, throughout his twenty-seven years of administration, had a distinct motive that guided all his acts—so distinct that, amidst the deviation which the other motive forces produce in him, one can recognise it still. His greatest object was to exalt his Royal master's prerogatives. He wanted to make the King more absolute than ever, because he knew that the King in return would maintain him in power. He did not hang noblemen to avenge the people from the wrongs they suffered, but to consolidate the power of an absolute monarch. When he aimed at the equalisation of all classes by doing away with the distinction between the old and the new Christians, by which the descendants of the converted Jews and Moors were given equal rights and considered eligible for civil, military, and ecclesiastical offices; when he decreed the abolition of slavery and attempted to free the Indians of Brazil—it was not to defend the people's liberties. He who had asserted by his acts that the people as a body politic had been annulled by the Crown cannot be said to have worked for the cause of liberalism. He was fashioning events in his own way, and at the same time impressing falsely the world with his so-called liberal measures; and Pombal acted this part with as much detriment to his own reputation as prejudice to the advancement of liberalism. Such is the summary of Pombal's administration which rests on racks, gibbets, and dun-

geons. The opinion that has condemned him is not only confined to those whose obtuse prejudice is said to have denied to Pombal the fame he deserves. It has the support of men like Camillo Castello Branco, Latino Coelho, Luiz Soriano, Ramalho Ortigão, and Theophilo Braga, who may claim recognition as authoritative representatives of Portuguese historical criticism. The career of Pombal closed with the reign of Joseph I, who died in 1777. Pombal was tried, and the tribunal found him guilty."—V. de Braganca Cunha, *Eight centuries of Portuguese monarchy*, pp. 80-84, 87-88, 98-102.

1703.—Methuen Treaty with England.—Portugal joined the Grand Alliance against France and Spain, in the War of the Spanish Succession, in 1703, and entered at that time into an important treaty with England. This is known as the Methuen Treaty—"called after the name of the ambassador who negotiated it—and that treaty, and its effect upon the commerce of England and the habits of her people lasted through five generations, even to the present time. The wines of Portugal were to be admitted upon the payment of a duty 33 1/3 per cent. less than the duty paid upon French wines; and the woolen cloths of England, which had been prohibited in Portugal for twenty years, were to be admitted upon terms of proportionate advantage. Up to that time the Claret of France had been the beverage of the wine-drinkers of England. From 1703 Port established itself as what Defoe calls 'our general draught.' In all commercial negotiations with France the Methuen Treaty stood in the way; for the preferential duty was continued till 1831. France invariably pursued a system of retaliation. It was a point of patriotism for the Englishman to hold firm to his Port."—C. Knight, *Popular history of England*, v. 5, ch. 17.—See also SPAIN: 1703-1704; TARIFF: 15th-17th centuries.

1807.—Napoleon's designs against the kingdom.—His delusive treaty for its partition with Spain.—French invasion and flight of royal family to Brazil.—“One of the first steps taken by Napoleon, after his return to Paris . . . [after the Peace of Tilsit (see GERMANY: 1807: June-July) was, in the month of August, to order the French and Spanish ambassadors conjointly, to declare to the prince-regent of Portugal, that he must concur in the continental system, viz. shut his ports against English commerce, confiscate all English property, and imprison all English subjects to be found within his dominions, or they were instructed immediately to leave Lisbon. The prince and his ministers dared not openly resist the French emperor's will, even whilst the wiser part of the cabinet were convinced that the very existence of the country depended upon British commerce. In this extremity, and relying upon the friendly forbearance of England, they strove to pursue a middle course. Don John professed his readiness to exclude British ships of all descriptions from his ports, but declared that his religious principles would not allow him to seize the subjects and property of a friendly state in the midst of peace, and that prudence forbade his offending England until a Portuguese squadron, then at sea, should have returned safely home. . . . Napoleon punished this imperfect obedience, by seizing all Portuguese vessels in ports under his control, and ordering the French and Spanish legations to leave Lisbon. The Portuguese ambassadors were, at the same time, dismissed from Paris and Madrid. A French army was, by this time, assembled near the foot of the Pyrenees, bearing the singular title of army of observation of the Gironde; and General Junot . . . was appointed to its command. . . . Spain was endeavouring to share in the spoil, not to protect the victim. A treaty, the shameful iniquity of which can be paralleled only by the treaties between Austria, Russia, and Prussia for the partition of Poland, had been signed at Fontainebleau, on the 27th of October. [See FRANCE: 1807-1808 (August-November).] . . . By this treaty Charles surrendered to Napoleon his infant grandson's kingdom of Etruria (King Louis I. had been dead some years), over which he had no right whatever, and bargained to receive for him in its stead the small northern provinces of Portugal, Entre Minho e Douro and Tras os Montes, under the name of the kingdom of Northern Lusitania, which kingdom the young monarch was to hold in vassalage of the crown of Spain. The much larger southern provinces, Alemtejo and Algarve, were to constitute the principality of the Algarves, for Godoy, under a similar tenure. And the middle provinces were to be occupied by Napoleon until a general peace, when, in exchange for Gibraltar, Trinidad, and any other Spanish possession conquered by England, they might be restored to the family of Braganza, upon like terms of dependence. The Portuguese colonies were to be equally divided between France and Spain. In execution of this nefarious treaty, 10,000 Spanish troops were to seize upon the northern, and 6,000 upon the southern state. . . . On the 18th of October, Junot, in obedience to his master's orders crossed the Pyrenees, and, being kindly received by the Spaniards, began his march towards the Portuguese frontiers, whilst the Spanish troops were equally put in motion towards their respective destinations. . . . The object of so much haste was, to secure the persons of the royal family, whose removal to Brazil had not only been talked

of from the beginning of these hostile discussions, but was now in preparation, and matter of public notoriety. . . . The reckless haste enjoined by the emperor, and which cost almost as many lives as a pitched battle, was very near attaining its end. . . . The resolution to abandon the contest being adopted, the prince and his ministers took every measure requisite to prevent a useless effusion of blood. A regency, consisting of five persons, the marquess of Abrantes being president, was appointed to conduct the government, and negotiate with Junot. On the 26th a proclamation was put forth, explaining to the people that, as Napoleon's enmity was rather to the sovereign than the nation, the prince-regent, in order to avert the calamities of war from his faithful subjects, would transfer the seat of government to Brazil, till the existing troubles should subside, and strictly charging the Portuguese, more especially the Lisbonians, to receive the French as friends. On the 27th the whole royal family proceeded to Belem, to embark for flight, on the spot whence, about three centuries back, Vasco de Gama had sailed upon his glorious enterprise. . . . The ships set sail and crossed the bar, almost as the French advance guard was entering Lisbon. Sir Sidney Smith escorted the royal family, with four men-of-war, safely to Rio Janeiro, the capital of Brazil, leaving the remainder of his squadron to blockade the mouth of the Tagus.”—M. M. Busk. *History of Spain and Portugal*, bk. 4, ch. 7.—See also BRAZIL: 1808-1822; SPAIN: 1807-1808.

1820-1824.—Revolution and Absolutist reaction.—Separation and independence of Brazil.—“Ever since 1807 Portugal had not known a court. On the first threat of French invasion the Regent had emigrated to the Brazils, and he had since lived and ruled entirely in the great Transatlantic colony. The ordinary conditions of other countries had been reversed. Portugal had virtually become a dependency of her own colony. The absence of the court was a sore trial to the pride of the Portuguese. An absent court had few supporters. It happened, too, that its ablest defender had lately left the country. . . . In April 1820 [Marshal] Beresford sailed for the Brazils. He did not return till the following October; and the revolution had been completed before his return. On the 24th of August the troops at Oporto determined on establishing a constitutional government, and appointed a provisional Junta [council] with this object. The Regency which conducted the affairs of the country at Lisbon de-

nounced the movement as a nefarious conspiracy. But, however nefarious the conspiracy might be, the defection of the army was so general that resistance became impossible. On the 1st of September the Regency issued a proclamation promising to convene the Cortes. The promise, however, did not stop the progress of the insurrection. The Junta which had been constituted at Oporto marched at the head of the troops upon Lisbon. The troops at Lisbon and in the south of Portugal threw off their allegiance, and established a Junta of their own. The Junta at Lisbon were, for the moment, in favour of milder measures than the Junta of Oporto. But the advocates of the more extreme course won their ends. The Oporto troops, surrounding the two Juntas, which had been blended together, compelled them to adopt the Spanish constitution; in other words, to sanction the election of one deputy to the Cortes for every 30,000 persons inhabiting the country. . . . When the revolution of 1820 had occurred John VI., King of Portugal, was quietly ruling in his transatlantic dominions of Brazil. Portugal had been governed for thirteen years from Rio de Janeiro; and the absence of the Court from Lisbon had offended the Portuguese and prepared them for change. After the mischief had been done John VI. was persuaded to return to his native country, leaving his eldest son, Dom Pedro, Regent of Brazil in his absence. Before setting out on his journey he gave the prince public instructions for his guidance, which practically made Brazil independent of Portugal; and he added private directions to the prince, in case any emergency should arise which should make it impracticable to preserve Brazil for Portugal, to place the crown on his own head, and thus save the great Transatlantic territory for the House of Braganza. Leaving these parting injunctions with his son, John VI. returned to the old kingdom which he had deserted nearly fourteen years before. He reached Lisbon, and found the Constitutionalists in undisputed possession of power. He found also that the action of the Constitutionalists in Portugal was calculated to induce Brazil to throw off the authority of the mother country. The Cortes in Portugal insisted on the suppression of the supreme tribunals in Brazil, on the establishment of Provincial Juntas, and on the return of the Regent to Portugal. The Brazilians declined to adopt measures which they considered ruinous to their dignity, and persuaded the Regent to disobey the orders of the Cortes. A small body of Portuguese troops quartered in Brazil endeavoured to overawe the prince, but proved powerless to do so. In May, 1822, the prince was persuaded to declare himself Perpetual Defender of the Brazils. In the following September the Brazilians induced him to raise their country to the dignity of an empire, and to declare himself its constitutional emperor. The news that the Brazilians had declared themselves an independent empire reached Europe at a critical period. Monarchs and diplomatists were busily deliberating at Verona on the affairs of Spain and of the Spanish colonies. No one, however, could avoid comparing the position of Portugal and Brazil with that of Spain and her dependencies. . . . The evident determination of France to interfere in Spain created anxiety in Portugal. The Portuguese Cortes apprehended that the logical consequence of French interference in the one country was French interference in the other. . . . The position of a French army on the Spanish frontier roused the dormant spirits of the Por-

tuguese Absolutists. In February, 1823, a vast insurrection against the Constitution broke out in Northern Portugal. The insurgents, who in the first instance obtained considerable success, were with difficulty defeated. But the revolt had been hardly quelled before the Absolutists recovered their flagging spirits. Every step taken by the Duc d'Angoulême in his progress from the Bidassoa to Madrid [see SPAIN: 1814-1827] raised their hopes of ultimate success. The king's second son, the notorious Dom Miguel, fled from his father's palace and threw in his lot with the insurgents. For a moment the king stood firm and denounced his son's proceedings. But the reaction which had set in was too strong to be resisted. The Cortes was closed, a new Ministry appointed, and autocracy re-established in Portugal. The re-establishment of autocracy in Portugal marked the commencement of a series of intrigues in which this country [England] was deeply interested. One party in the new Government, with M. de Palmella at its head, was disposed to incline to moderate measures and to listen to the advice which it received from the British Ministry and from the British Ambassador, Sir Edward Thornton. Another party, of which M. de Subserra was the representative, was in favour of an intimate union with France, and ready to listen to the contrary counsels of M. de Neuville, the French Minister at Lisbon. M. de Palmella, despairing of founding a settled form of government amidst the disorders which surrounded him on every side, applied to the British Ministry for troops to give stability to the Administration. The demand arrived in London in July, 1823. . . . The demand for troops was refused, but a British squadron was sent to the Tagus, with a view of affording the King of Portugal the moral support of the British nation and a secure asylum in the event of any danger to his person. Many months elapsed before the King of Portugal had occasion to avail himself of the possible asylum which was thus afforded to him. . . . The evident leanings of M. de Palmella towards moderate measures, however, alarmed the Portuguese Absolutists. Ever since the revolution of 1823 Dom Miguel had held the command of the army; and, on the night of the 29th of April, 1824, the prince suddenly ordered the arrest of the leading personages of the Government, and, under the pretext of suppressing an alleged conspiracy of Freemasons, called on the army to liberate their king, and to complete the triumph of the previous year. For nine days the king was a mere puppet in the hands of his son, and Dom Miguel was virtually master of Lisbon. On the 9th of May the king was persuaded by the foreign ministers in his capital to resume his authority; to retire on board the 'Windsor Castle,' a British man-of-war; to dismiss Dom Miguel from his command, and to order his attendance upon him. The prince, 'stricken with a sudden fatuity,' obeyed his father's commands, and was prevailed upon to go into voluntary exile. The revolution of 1824 terminated with his departure, and Portugal again enjoyed comparative tranquillity."—S. Walpole, *History of England from 1815, v. 2, ch. 9*.—See also BRAZIL: 1808-1822.

1824-1889.—Return of John VI to Brazil.—

Abdication of Portuguese throne by Dom Pedro, after granting a constitution.—Usurpation of Dom Miguel.—Civil war and factious conflicts.—Rise of the Setembristas and Cartistas.—Establishment of parliamentary government.—“At the close of 1824 the king returned to Brazil to spend his last days in peace. On reaching Rio de Janeiro, he recognized Dom Pedro as Emperor of Brazil, and on the 6th of March, 1826, John VI. died in the country of his choice. By his will, John VI. left the regency of Portugal to his daughter Isabel Maria, to the disgust of Dom Miguel, who had fully expected in spite of his conduct that Portugal would be in some manner bequeathed to him, and that Dom Pedro would be satisfied with the government of Brazil. The next twenty-five years are the saddest in the whole history of Portugal. The establishment of the system of parliamentary government, which now exists, was a long and difficult task. . . . The keynote of the whole series of disturbances is to be found in the pernicious influence of the army. . . . The army was disproportionately large for the size and revenue of the country; there was no foreign or colonial war to occupy its energies, and the soldiers would not return to the plough nor the officers retire into private life. The English Cabinet at this juncture determined to maintain peace and order, and in 1826, a division of 5,000 men was sent under the command of Lieutenant-General Sir William Clinton to garrison the chief towns. The accession of Pedro IV. to the throne was hailed with joy in Portugal, though looked on with suspicion in Brazil. He justified his reputation by drawing up a charter, containing the bases for a moderate parliamentary government of the English type, which he sent over to Portugal, by the English diplomatist, Lord Stuart de Rothesay. [This constitution provided for a bicameral legislature with a hereditary House of Peers and an elective House of Deputies, its legislative powers being subject to the king’s sanction.] Then to please his Brazilian subjects, he abdicated the throne of Portugal in favour of his daughter, Donna Maria da Gloria, a child seven years old, on condition that on attaining a suitable age she should marry her uncle, Dom Miguel, who was to swear to observe the new constitution. The Charter of 1826 was thankfully received by the moderate parliamentary party; Clinton’s division was withdrawn; Palmella remained prime minister; and in the following year, 1827, Dom Pedro destroyed the effect of his wise measures by appointing Dom Miguel to be regent of Portugal in the name of the little queen. Dom Miguel was an ambitious prince, who believed that he ought to be king of Portugal; he was extremely popular with the old nobility, the clergy, and the army, with all who disliked liberal ideas, and with the beggars and the poor who were under the influence of the mendicant orders. He was declared Regent in July, 1827, and in May, 1828, he summoned a Cortes of the ancient type, such as had not met since 1607, which under the presidency of the Bishop of Viseu offered him the throne of Portugal. He accepted, and immediately exiled all the leaders of the parliamentary, or, as it is usually called, the Chartist, party, headed by Palmella, Saldanha, Villa Flor, and Sampaio. They naturally fled to England, where the young queen was stopping on her way to be educated at the court of Vienna, and found popular opinion strongly in their favour. But the Duke of Wellington and his Tory Cabinet refused to countenance or assist them.”—H. M. Stephens,
