Story of Portugal, ch. 18.—“Since the famous emigration of 1828-32, . . . the great Constitutional Party had split into two groups. These had degenerated into mere factions, and the groups had ceased to represent any principles. When the great Constitutional struggle was over, the two groups were led, one by the Marquis de Palmella, and the other by the Duke de Saldanha, the latter being then in the opposition.”—V. de Braganca Cunha, *Eight centuries of Portuguese monarchy, p. 143.*—“Meanwhile the reign of Dom Miguel had become a Reign of Terror; arrests and executions were frequent; thousands were deported to Africa, and in 1830 it was estimated that 40,000 persons were in prison for political offences. He ruled in absolute contempt of all law, and at different times English, French, and American fleets entered the Tagus to demand reparation for damage done to commerce, or for the illegal arrest of foreigners. The result of this conduct was that the country was hopelessly ruined, and the chartist and radical parties, who respectively advocated the Charter of 1826 and the Constitution of 1822, agreed to sink their differences, and to oppose the bigoted tyrant. . . . Dom Pedro, who had devoted his life to the cause of parliamentary government, resigned his crown in 1831 [see BRAZIL: 1825-1865] to his infant son, and left Brazil to head the movement for his daughter’s cause. . . . In July, 1832, the ex-emperor with an army of 7,500 men arrived at Oporto, where he was enthusiastically welcomed, and Dom Miguel then laid siege to the city. European opinion was divided between the two parties; partisans of freedom and of constitutional government called the Miguelites ‘slaves of a tyrant,’ while lovers of absolutism, alluding to the loans raised by the ex-emperor, used to speak of the ‘stock-jobbing Pedroites.’ The siege was long and protracted.” The Miguelites finally sustained several heavy defeats, both on land and at sea, and Lisbon was triumphantly entered by the Chartists in July, 1833. “The year 1834 was one of unbroken success for the Chartists. England and France recognized Maria da Gloria as Queen of Portugal, and the ministry of Queen Isabella of Spain, knowing Dom Miguel to be a Carlist, sent two Spanish armies under Generals Rodil and Serrano to the help of Dom Pedro. . . . Finally the combined Spanish and Portuguese armies surrounded the remnant of the Miguelites at Evora Monte, and on the 26th of May, 1834, Dom Miguel surrendered. By the Convention of Evora Monte, Dom Miguel abandoned his claim to the throne of Portugal, and in consideration of a pension of £15,000 a year promised never again to set foot in the kingdom. . . . Dom Pedro, who had throughout the struggle been the heart and soul of his daughter’s party, had thus the pleasure of seeing the country at peace, and a regular parliamentary system in operation, but he did not long survive, for on the 24th of September, 1834, he died at Queluz near Lisbon, of an illness brought on by his great labours and fatigues, leaving a name, which deserves all honour from Portuguese and Brazilians alike. Queen Maria da Gloria was only fifteen, when she thus lost the advantage of her father’s wise counsel and steady help, yet it might have been expected that her reign would be calm and prosperous. But neither the queen, the nobility, nor the people, understood the principles of parliamentary government.”—H. M. Stephens, *Story of Portugal, ch. 18.*—“The throne being without an heir, the Queen consented to marry. She married, in January 1835, the Duke of Leuchtenberg, second son of Eugène de Beau-

harnais by Princess Augusta of Bavaria, who, to her misfortune, died within two months. Pressed by the nation, she married, a year after, Prince Ferdinand of Saxe-Coburg-Gotha. But the nomination of Prince Ferdinand to the post of Commander-in-Chief was the theme of discussion in the Parliament that had already refused the chief command of the army to the Queen's first husband. The onslaught made by the opposition on the Government and the Crown proved strongly that the exigencies of parliamentary life in those days needed things to fight over, not things to do. . . . Meantime, the politicians, with views and passions utterly irreconcilable, had suffered their prejudices to run riot with their judgment. This rancorous hostility manifested itself in the long series of pronunciamentos that characterised the first period of democracy, which began with the famous revolution of September, 1836, when Francisco Soares da Caldeira, encouraged by the military insurrection in Spain in the beginning of August, raised in Lisbon the cry for the abolition of the Charter and the re-establishment of the Constitution of 1822 resembling the Cadiz Constitution. That pronunciamento, which was followed by violent struggles, resulted in the temporary adoption of the New Constitution of 1838, which was no other but that of 1822. And it gave rise to the two parties—parties that had to play an important part in the history of the country: the *Setembristas*, who, having drawn their inspiration from the theories of the first French Revolution, were extremely democratic in their views, and supported the Liberal Constitution of 1838; and the *Cartistas*, with moderate and Conservative views, who insisted upon the prerogatives of a sovereign, an hereditary chamber, and certain property qualifications in case of Members of Parliament. But the motives which led the leaders of the revolution of September 'were not the merits of either of the two Constitutions,' as Count of Taipa, one of the leaders of that movement, declared some time after in the Cortes. The Charter had been abused to the full extent of all its powers by the ministry in power. A spirit of faction had prevailed in every act of the Government. The finances were tottering on the verge of bankruptcy. The Bank of Lisbon had already given notice that they would no longer receive paper money at eighty, *i.e.* at twenty per cent discount. The Minister of Finance had been at a loss how to raise, immediately, about £2,100,000 to pay the dividends on the foreign and domestic debt to the 30th June of that year. The pay of the Army and Navy, as well as civilians in Government service, was in arrears. All this served the purposes of the political agitators. They employed all means to inflame the passions of the mob, and thus subverted a political oligarchy whose corrupt and oppressive system, let it be said, was not in any way compatible with the genius of the Charter. The period that followed the revolution of September was a period of democracy, but of democracy in its worse form. . . . This political insecurity, which retarded all legislative enterprise, continued for some years. In 1842, however, Costa Cabral, who, three years later, was created Count of Thomar, declared himself for the Charter of 1826, and he was supported by the Duke of Terceira, who issued a pronunciamento in Lisbon in favour of that Charter. No sooner had Costa Cabral attained power than he set his face resolutely against empty demagogism and disorder. But, in his attempt to do battle against the danger threatening the stability of

the monarchy, he miscalculated the direction of public opinion. Hot in his temper and harsh to his opponents, in his efforts to muzzle the demagogue he tampered with public liberties. The opposition gained by it. A clamour was raised on the ground that Cabral was attempting to smother the freedom of the people to make the Queen absolute; and the nation, excited to madness, thinking it was no longer a contest between the competing parties, but a trial of strength between the throne and the people, sternly protested against Cabral's administration. This movement, which resulted in many deeds of violence, was followed by the revolt known as the war of Maria da Fonte, or 'Patuleia'. . . . In May 1846 Cabral was driven from power, and he fled in disguise to Spain. In the meantime, the *Setembristas* and the *Chartists*, in the heat of conflict, thinking only of immediate party victories, never of remote issues, had lost sight of partisans of Dom Miguel, who were dexterously availing themselves of every opportunity to make capital out of the situation created by the two parties. This distressing state of affairs made it necessary, in 1847, for Saldanha to demand of England and Spain, in conformity with the terms of the Quadruple Alliance, an armed intervention in the internal affairs of the country. Thus a remedy, distasteful enough in happier circumstances, had to be applied for the suppression of disorder. On the 29th June 1847, the Convention of Granido was signed, and Queen Maria II maintained Saldanha in power. But Saldanha, who, when entrusted with the government was a *Cartista*, changed his political opinions and turned a *Setembrista*. . . . In 1849, however, Cabral returned to active political life, and succeeded in bringing about Saldanha's resignation in June of that year. Cabral's rise naturally caused great excitement throughout the country. The excitement was such that a British Minister in Lisbon went so far as to suggest to the Queen the dismissal of Cabral, but Queen Maria II did not yield to the influence of Sir Hamilton Seymour. But Saldanha, who was all fire and hope, gave the sign of alarm by raising a revolutionary movement at Cintra on the 7th April 1851. After organising a successful *complot* that drove Cabral, his greatest and personal foe, from power in ignominy, and compelled him to take refuge on board an English vessel, Saldanha entered Lisbon triumphantly on the 15th May. At this time, in these circumstances, Saldanha proclaimed himself Commander-in-Chief of the Army and assumed dictatorship, which led to that movement of 'Regeneration,' as it was named, when all parties sunk differences and rallied enthusiastically to the support of a policy that was to shape the future of the Parliament which had been an evil almost organic in the working of the Constitution. The dictatorship afforded Saldanha's ministry an opportunity of ending a financial situation that could subsist no longer and of promoting the welfare of the people. Saldanha, however, was fortunate in having in his ministry a man like Rodrigo da Fonseca Magalhães, who threw himself with all his energy into that movement of political regeneration in the hope of advancing the Constitutional cause. It was he who brought about the change that resulted in the passing, in the Cortes specially assembled for that purpose, of the celebrated 'Acto Adicional' of 1852, which may be said to have marked the close of the epoch of pronunciamentos."—V. de Braganca Cunha, *Eight centuries of Portuguese monarchy*, ch. 143-150.—"In 1852 the Charter was revised

to suit all parties; direct voting, one of the chief claims of the radicals, was allowed, and the era of civil war came to an end. Maria da Gloria did not long survive this peaceful settlement, for she died on the 15th of November, 1853, and her husband the King-Consort, Ferdinand II. assumed the regency until his eldest son Pedro V. should come of age. The era of peaceful parliamentary government, which succeeded the stormy reign of Maria II., has been one of material prosperity for Portugal. . . . The whole country, and especially the city of Lisbon, was during this reign, on account of the neglect of all sanitary precautions, ravaged by cholera and yellow fever, and it was in the midst of one of these outbreaks, on the 11th of November, 1801, that Pedro V., who had refused to leave his pestilence-stricken capital, died of cholera, and was followed to the grave by two of his younger brothers, Dom Ferdinand and Dom John. At the time of Pedro's death, his next brother and heir, Dom Luis, was travelling on the continent, and his father, Ferdinand II., who long survived Queen Maria da Gloria . . . assumed the regency until his return; soon after which King Luis married Maria Pia, younger daughter of Victor Emmanuel, king of Italy. . . . The reign of King Luis was prosperous and peaceful, and the news of his death on October 9, 1880, was received with general regret. . . . Luis I. was succeeded on the throne by his elder son, Dom Carlos, or Charles I., a young man of twenty-six, who married in 1886, the Princess Marie Amélie de Bourbon, the eldest daughter of the Comte de Paris. His accession was immediately followed by the revolution of the 15th of November, 1880, in Brazil, by which his great uncle, Pedro II., Emperor of Brazil, was dethroned and a republican government established in that country."—H. M. Stephens, *Story of Portugal*, ch. 18.—See also BRAZIL: 1880-1891.

1861-1889.—Domestic difficulties.—Administrative reforms.—Coup d'état of Saldanha.—Fontes Pereira de Mello and ministry of Regeneradores.—Lourenço Marques Treaty.—Sampaio ministry.—Constitutional reform bill.—"The political events of the beginning of the new reign [Louis I] relate chiefly to the Loulé-d'Avila ministry that King Louis I maintained in power. The ministry, Loulé-d'Avila, continued in power till April, 1865, when it was replaced by a new ministry presided over by Sá de Bandeira. . . . Domestic difficulties pressed hard upon the new Government. Parties ran into extremes in their attempt to seize the helm of State, instead of helping those who held it to steer in the right direction. . . . During the years that followed, Parliament met only to raise every other question which can embarrass a Government. Ministries were driven from power, one after another, without removing from the nation her grievances. This state of affairs precipitated a financial crisis, and the ministry of Joaquim Antonio d'Aguiar, in order to procure funds for the payment of State creditors, had to adopt new administrative reforms. It even enforced food taxes, which provoked a revolution in Lisbon in January, 1868, after which Aguiar had to tender his resignation. Avila, who then was called to power, proposed in the Parliament an abrogation of those laws of his predecessor which had given rise to disorders and more than once threatened internal peace.

But the Opposition did all it could to defeat the Government's proposals, with the result that the Cortes were dissolved and the laws arbitrarily suspended by the Government. Avila, however, who thought he held the solution in his hands, resolutely put before the new Cortes new proposals to improve a financial administration that was ruinously vicious and inefficient. The new Cortes, when summoned to discuss these proposals, refused to sanction them. To meet such a situation Avila demanded of the King a dissolution of the Cortes, which, being refused, the ministry had to resign. . . . After the resignation of Avila's ministry, it is almost unnecessary to add, the gravity of the internal situation had become still more accentuated. Soon after, the Duke de Saldanha, who a few years before held the political destinies of Portugal in his hands, and who had long been waiting for his turn at the wheel, put himself at the head of some troops, surrounded the Royal Palace on the 10th May 1870, and compelled the King to dismiss the ministry of the Duke de Loulé that was in power; and he assumed Premiership; but the Cortes refusing to accept the octogenarian marshal's dictatorship. Saldanha had to leave power on the 30th August of that year. That bold *coup d'état*, however, was only a flicker of the old enthusiasm for pronunciamientos, which disappeared with Saldanha, who was soon after appointed to the most important diplomatic mission which Portugal sends forth—that of Portuguese Minister in London, where he died in 1876. The situation now required a prompt and effectual solution, and it pleased King Louis to call to his counsels Fontes Pereira de Mello, who organised a ministry of Regeneradores and took upon himself the responsibility of the ministry of finance. . . . But the question of questions was whether the Opposition would consent to contribute towards the solution of such a crisis. The great ferocity with which the Opposition had assailed the decree of December 1878, issued during the administration of Fontes, had painfully convinced the country of the impossibility of any compromise between the Government and the Opposition. That decree had sanctioned for twenty years a grant including all gold and other mines belonging to the State in Eastern Africa to Captain Paiva d'Andrade and the Companies he might form for their exploration, on condition that, besides the usual taxes, he should pay to the State five per cent. of the gold obtained. But the Progressistas had violently opposed the decree, and tried to justify their panic mongering on the ground that the Government was endangering the safety of the colonies by opening out chances for foreigners and foreign capital. Experience had therefore shown that, under the circumstances, it was impossible for Fontes to remedy the financial situation. To meet a deficit of nearly £665,000 in the Budget of the year, he had shown how a sum of £122,000 might be raised by increasing the duties on tobacco; but the ministry, being assailed and obstructed at every turn, had to abandon power in May, 1870. The ministry which under Anselmo José Braamcamp—who, on the death of Loulé, had been elected leader of the Progressistas—attained power later, was not to enjoy a longer tenure of office. Its Bills, which aimed to create new sources of revenue and cover the deficit of about £1,100,000 shown in the Budget of the year, and the proposal of an income tax—undertaken with the most excellent motives, as nearly all such legislation was, but which was thought to be a great hardship to

the nation—gave the Opposition an opportunity to stir up the country's wrath against the Government. Meanwhile, the Lourenço Marques Treaty, arranged between England and Portugal by the late Cabinet, but signed by the Portuguese Plenipotentiary after the Cabinet had resigned, forced the struggle between the two parties to an immediate issue. The Progressistas who were in power had raised objection to the concessions made by that treaty, for which they thought Portugal had received no adequate return from her ally; and to relieve their ministry of responsibility in that treaty, they protested against the article 4, sec. 2, 'giving the British Government right to land and embark troops at Lourenço Marques with free passage from there across Portuguese territory,' article 5, sec. C., 'respecting the rights to maintain English bonded houses there,' and article 12, sec. 4, 'giving discretionary powers to the Governor of Mozambique to authorise British cruisers to act independently in Portuguese territorial waters for the suppression of slavery.' Accordingly, the Government considered a renewal of the treaty necessary, and the negotiations carried on between the two Governments from August till December 1880 resulted in an Additional Act, signed 31st December, whereby its former perpetuity ceased and twelve years were stipulated as the duration of the treaty. But when the Government met the Cortes with the announcement of the alterations the treaty had undergone, and it came for discussion in the Chamber of Deputies, the Regeneradores opposed its provisions so violently that, when the time came for voting, they left the House in a body. Soon after, the Government submitted the treaty to the Chamber of Peers, where the Regeneradores held the majority, and it was rejected. Under the circumstances the Prime Minister asked the King for an adjournment of the Cortes, which being refused, the ministry of Braamcamp, unable to stand the severity and violence of the Opposition, resigned in March 1881. This ministry was replaced by a Regenerator ministry under Antonio Rodrigues Sampaio, twice Home Minister, which lived till November of that year. The troubles of these ministries by no means ended with them. The great African problem manifestly accelerated a crisis in the affairs of Portugal and inflamed more than ever the partisan spirit. When Fontes Pereira de Mello came again to power, the Congo affair and the treaty concluded in London on 26th February 1884 occupied the attention of the nation to the exclusion of everything else; and soon after the politicians resumed their discussion on the Conference of Berlin, convened through a foreign minister who was sent on a mission to the Courts of London, Paris, Berlin, and Hague, and which defined the rights of Portugal and settled her position in Congo. To Fontes Pereira de Mello, however, who was a statesman of large views, the financial state of the country had become the subject of utmost importance. He was eager to devise means for lightening the national burden. But this chance had been denied to him by the Opposition; and Fontes, in order to weaken the Opposition, had even deemed it convenient to realise the desires of Radical Reformers by bringing in, in 1883, the Constitutional Reform Bill, which was published as law on 24th July 1885, its most important feature being the abolition of the hereditary principle in the Chamber of Peers. It is interesting, however, to note that this Bill formed a part of the Progressista programme. But what the Regenerator Prime Minister wanted

was not so much to outbid the rival party in her promises to the country, as to maintain himself in power and win the support of a new party led by Dias Ferreira, the famous legislator, Pinheiro Chagas, and Manuel Vas Preto—a party that adhered to the Constitution of 1838, with an elective Senate and Council of State. It was therefore no special desire for special reform. The debate on this bill, however, was highly interesting. The Government thought it had made a great stroke of policy in the Parliament; but as the details oozed out, it became evident that the Progressistas, though believing in the principles of that Bill, only saw in the provisions of the Act materials for protracted discussion. The case for the Opposition against the Reform Bill was the part of that Bill by which it was provided that four years had to pass before any further proposal or reform could be made. Thus the ministry of Fontes, unable to face such an Opposition, and consequently unable to meet the most pressing needs of the Exchequer, resigned in February, 1886. After him came José Luciano de Castro, who, on the death of Braamcamp, had been elected, in 1885, leader of the Progressistas. He attained power with a ministry that achieved an inspiring success in endeavouring to settle some of the African difficulties by signing a number of treaties of delimitation [1889].—V. de Braganca Cunha, *Eight centuries of Portuguese monarchy*, pp. 165-167, 170-176.

1906-1909.—"Rotative" system of party government and its results.—King Carlos assumes dictatorial authority.—His minister, Senhor Franco.—Murder of the king and crown prince.—Succession of King Manuel.—Rise of republicanism.—For many years prior to 1906 Portugal had been governed by two political parties, calling themselves the Regeneradores and the Progressistas, who, it has been said, "relieved one another in office, and in the spoils of office, at decent intervals, by a tacit arrangement between their leaders." This regular ministerial rotation led to the popular nickname of Rotativos, applied to both parties, and significant of the contempt in which they were held. The rotative system of party government, "while ensuring a comfortable livelihood to a class of professional politicians, was of no conspicuous benefit to the country, and it was with a view to ending it that King Carlos summoned Senhor João Franco, in May, 1906, to form a ministry. Senhor Franco, who belonged to neither of the recognized parties, set his hand

jealously to the work of reform, but his attempts to purge the Administration soon brought him into conflict with powerful vested interests; and in May, 1907, the politicians whose livelihoods he was reforming away united against him in a policy of obstruction which made Parliamentary government impossible. He then dissolved the Cortes, and with the approval of the King assumed the position of dictator. His work of reform thenceforth proceeded apace. Drastic decrees, each aimed at some abuse, followed one another with amazing rapidity. Strong in the support of the King and of the best elements in the country, execrated by the politicians whom he had spoiled, and by the Press which he had done nothing to conciliate, he continued on his headlong course, and at the end of January, 1908, he signed a decree practically amounting to a suspension of civil liberties.—*Lisbon correspondence (The Times [London])*.—"The fortress of Caxias and the State prisons were full to overflowing. Alpoim, the leader of the Dissident Progressistas, had to take refuge in Spain to escape arrest for being implicated in a conspiracy. . . . The dictator, with a recklessness positively criminal, was enforcing new measures of repression. Thus the King was made to sign a decree by which any political offender could be transported to Africa at a moment's notice. . . . The *Diario do Governo* of Saturday, the 1st February, published the decree. But this law of 'public security,' the most arbitrary law Portugal had ever known, was too glaring an attack upon the liberties of the land to be received in silence. In the afternoon of that same Saturday the King and Queen, with their two sons, Princes Luis Filipe and Manuel, were expected to be returning from Villa Viçosa. . . . Owing to a slight breakdown on the railway at Casa Branca, the ferry-boat *Dom Luis*, in which the King and his family crossed from Barreiro to the Terreiro do Paço, did not get to the landing place till after five. On leaving the boat the Royal Family was met by the members of the Cabinets and Court dignitaries. King Carlos seems to have had a presentiment of what was coming a little later. . . . As usual, crowds lined the royal route; but amongst them there were some political fanatics who had come under the pretext of looking at the King, but in reality to imbue their hands in Royal blood. They carried loaded firearms, which were not noticed by the crowd or the police until the royal carriage was about to turn the corner of the Praça do Commercio up the street of the Arsenal, when a young man jumped up behind the vehicle and fired a revolver, hitting King Carlos in the left side of the neck. Seizing a bouquet presented to her a few moments before, the Queen vainly endeavoured to prevent the assassin from again firing by striking him in the face with the flowers. In spite of this courageous attempt, the murderer succeeded in pulling the trigger a second time, mortally wounding the King. A struggle ensued, in the course of which the assassin was killed by a police bullet. In the confusion a tall black-bearded man sprang from behind the pillars of the arcade of the Ministry of the Interior and, pulling a gun from under his cloak, leapt towards the royal carriage and fired at the Crown Prince, who, notwithstanding that the Queen Mother heroically interposed her own person to save him, fell, struck by two bullets, one in the face and the other in the breast. The assassin was about to fire another shot when the police at once dispatched him. He was afterwards proved to be a certain Buiça, an

ex-sergeant of cavalry and dismissed school teacher. . . . When the carriage was driven into the Arsenal, the King was dead and the Crown Prince died a few moments after. . . . Soon after his accession to the throne King Manuel II published a general amnesty in favour of all political prisoners and abolished dictatorship. On 7th February, the day before the funeral of King Carlos and the Crown Prince, all political prisoners under detention were set free, and the dictatorial decrees of the 20th June, the 21st November 1907, and the 31st January 1908 were revoked. The decree of the 20th June was the one that had put the liberty of the press at the mercy of administrative authorities, and that of the 21st November had empowered the *juiz da instrucção criminal* to decide all political crimes. The third decree—and the most arbitrary of all—was, of course, that of the 31st January, 1908, by which the Government could transport to Africa or expel from the kingdom any political offender. The decrees increasing the King's Civil List and reorganising the House of Peers were also repealed. The municipal councils that had been suppressed by the dictator were restored, and the so-called administration commissions appointed by Franco were dissolved. It was, of course, only right that the dictatorship which had disturbed all sources of national tranquillity should have been repealed, and it was next in order and equal in importance that most of the political prisoners who had withstood the oppressive measures of the dictator should have been released. . . . But amidst all this weakness and confusion there was one force steadily pressing forward to a definite aim. . . . In spite of the electoral system, with its anomalies and iniquities, the Republicans had succeeded in returning fourteen members to Parliament, Lisbon alone having placed the Republican list at the head of the poll."—V. de B. Cunha, *Eight centuries of Portuguese monarchy*, pp. 234-237, 241-242, 252.—The unpopularity incurred by the government caused the resignation of the premier and his two "Independents," and the cabinet was reconstituted under Senhor Campos Henriques, who together with Senhor Wenceslao de Lima, minister of foreign affairs, continued to represent the Regenerador party. The late Premier's "Independents" made way for the Progressistas, who thus held five seats in the cabinet to two held by the Regeneradores. Senhor Vilhena, who had brought about the fall of the late government, was not offered a seat in the new one, and he immediately resumed his opposition; but on this occasion he only carried two-thirds of his party with him, twenty-two members deciding to support the government. This defection of the Regeneradores under Senhor Vilhena, the first serious indication of a return to the old system of "rotativism," was shortly followed by that of the late premier and his "Independents," so that when the Cortes met on March 1, 1909, the imposing government majority of a year before had dwindled to ten or fifteen.

1907.—Represented at second Hague conference. See HAGUE CONFERENCES: 1907.

1909 (April).—Earthquake at Lisbon.—Lisbon and the country surrounding it were shaken violently on the evening of Friday, April 23, 1909. There were no fatalities in the city, but the outlying districts suffered severely, especially the towns of Benavente, Samora, and Santo Estevan. Reports three days after the disaster announced 46 killed and 38 injured at Benavente and Samora. Both villages were completely destroyed, and their

6000 inhabitants, starving and homeless, were encamped in the fields.

1909-1912.—Attempted suppression of religious orders.—Separation of church and state.—Free-thinkers from all political parties in Portugal, represented by a Liberal committee, on Aug. 3, 1909, presented to the Cortes a petition for the suppression of the religious orders in Portugal and the abrogation of the existing laws against freedom of conscience. This step was an outcome of the meeting held in Lisbon, August 2. The committee was accompanied to the Houses of Parliament by an immense crowd, and some wild scenes ensued. Among other things the petitioners asked for the abrogation of the recent law permitting religious associations to acquire landed property, a procedure which up to that time had been illegal. Senhor Camacho moved the consideration of the subject, and when the motion was voted down the galleries broke out in protestation. There was considerable violence on the floor of the House. The Deputies engaged in a struggle in which desks and chairs were overturned, and the Chamber had to be cleared twice. The tumult was continued in the streets, but without serious results. "In 1911 the Portuguese Republic passed a law separating the state and church and abolishing diplomatic relations with the Holy See. In 1912 the state voted to take over all church properties, many of which were owned or controlled by Roman Catholic religious orders. Foreign governments objected to the treatment of properties owned by the religious of their nationalities established in Portugal. As a consequence, the arbitral tribunal is, by the compromise, 'charged with passing upon the claims relative to the properties of French, British and Spanish nationals expropriated by the government of the Portuguese Republic after the proclamation of the Republic.'" —Based on E. Krehbiel, *Nationalism, war and society*, p. 261.

1910.—Republican revolution.—Republic proclaimed.—Flight of former royal family.—"But the respite given to the Crown was no long one. In the autumn of 1910 a ministry under Teixeira da Sousa had been in power since June, the seventh ministry in eighteen months, and the elections held in August had returned 89 Ministerialists, 41 Royalist opposition, and 14 Republican opposition. On September 23 King Manuel opened Parliament with a programme of reforms which left little to be desired other than some prospect of their being realized; and he later attended a review at Busaco on the anniversary of Wellington's battle, where he was fairly well received by the army. . . . On October 3 Dr. Bombarda, a recent recruit to Republicanism from Royalism, was assassinated by a half-witted fanatic. The Republicans had by this time won over the greater part of official and industrial Lisbon, the guardships, and the Marines, together with the First Artillery and 16th Infantry Regiments of the garrison. . . . The insurrection was started that same day under the command of Admiral Candido dos Reis and, meeting with more opposition than had been expected, was that evening assumed to have failed. The admiral, in despair at the supposed disaster, committed suicide that same night, and several of the political leaders went into hiding. But the gunboats in the river having thrown a few shells in the course of the night over the palace, the young king, deserted by his advisers, who on their part had assumed the success of the Revolution, and ignorant of the real course of events, fled from the palace early in the morning of the fourth, and with the queen and

the Duke of Oporto, his uncle, boarded the royal yacht at Ericeira, and steamed straight off to Gibraltar, [and the House of Braganza 'ceased to reign' for the third time]. Meantime the small Republican force under Lieutenant Machado Santos had held out in a building in the town called the Rotunda until the flight of the king became known, with the result that the further resistance to the Revolution that was being organized never materialized. The Republican political leaders then reappeared and resumed command; whereas the king was beyond all possibility of recall by those still in arms in his cause. . . . The Republic was proclaimed on the morning of October 5, 1910, and welcomed by the population of Lisbon as the opening of a new era. . . . Such a feat could never have been accomplished except by rulers representing a new national energy and enthusiasm, and to this extent the Republic of Portugal has justified its claim to be a national renaissance."—G. Young, *Portugal: An historical study*, pp. 275-278.—"The Portuguese monarchy was dead; and the causes of death, as disclosed by the autopsy, were moral bankruptcy and intellectual inanition. It could not point to a single service that it rendered to the country in return for the burdens it imposed. . . . The suspicion that royal caprice was responsible for the tragedy may have been unfounded; but at any rate the incident showed that the Court was no wholesome environment for heroes. The monarchy could boast neither of good deeds nor of good intentions. Its cynicism was not tempered by intelligence. It drifted towards the abyss without making any reasonable effort to save itself; for the dictatorship was scarcely an effort of reason. 'The dictatorship,' said Bernardino Machado, . . . Foreign Minister, 'left us only one liberty—that of hatred.' And again, 'The monarchy had not even a party—it had only a clientèle.' That one word explains the disappearance of Royalism."—W. Archer, *Portuguese republic (Fortnightly Review, Feb., 1911)*.

1910-1912.—Establishment of republican government.—Provisional government.—First presidential elections.—Promulgation of constitution.—"On October 5, [1910] there was established at Lisbon a provisional government composed of nine ministers and presided over by . . . Theophile Braga [as the provisional president (October 5, 1910 to August 24, 1911)]. The members of this government were drawn principally from the group of Republican deputies representing the Lisbon constituencies. A few had held high office under the monarchy, but most of them, including Braga, were men of little or no experience in administrative work. The flight of the king and the collapse of the monarchist cause cleared the way for a speedy establishment of the new order, and without awaiting a formal remodelling of the constitution, the Braga government proceeded to carry into execution a number of features of the Republican programme. October 7 it promised amnesty to political and press exiles, the revocation of various illiberal press and judicial laws, the suppression of summary magisterial powers, and a long list of other administrative and judicial reforms. October 18 it abolished the monarchy and proscribed forever the royal house of Braganza. On the same day it abolished likewise the Council of State and the House of Peers, together with all hereditary titles and privileges. In the course of further measures of reform relating to public finance, agriculture, education, religion, and social welfare, it issued a new elec-

toral law and effected arrangements for the convening of a national assembly to which should be committed the task of framing a republican constitution. The electoral decree of March 15, 1911, conferred the franchise upon all Portuguese citizens of the age of twenty-one who under the monarchy were entitled to its exercise, and upon all, in addition, who were able to read and write, barring soldiers, bankrupts, and ex-convicts. The two cities, Lisbon, and Oporto, were created electoral districts in each of which eight members were to be chosen by *scrutin de liste* [vote by ticket] after the Belgian, or d'Hondt, plan of proportional representation, and the remainder of the country (including the colonies) was divided into districts in each of which four members were to be chosen, also with provision for the representation of minorities. The elections to the Constituent Assembly took place May 28, 1911. There were no monarchist candidates and, there having been neither time nor occasion for the appearance of serious differences among the Republicans, the event was attended by little excitement and by no disorder. In many districts the candidates approved by the Provisional Government were unopposed. The Assembly was convened June 19. By unanimous vote of its 192 members the decree by which the monarchy had been abolished and the Braganza dynasty banished was enacted into law, whereupon the body addressed itself to the framing of a budget and the adoption of organic laws relating to the nature and manner of exercise of the political powers of the republic. A draft of the constitution, framed by the Republican leaders, was read to the delegates July 3, and August 18 it was voted, amid general acclamations, almost without modification. The presidential election was fixed for August 23. Of the two principal candidates, Dr. Manoel Ariaga represented the more moderate wing of the Republic element, Dr. Machado Santos (the provisional president) the more radical. Dr. Ariaga was elected by a vote of 121 to 86, [and held office until May 27, 1915]. August 24 the Assembly terminated its proceedings and the new constitution was put in operation. The first cabinet, presided over by João Chagas, was announced at the beginning of September. It was at this point that France, Spain, and a number of other European powers for the first time recognized officially the republic's existence."—F. A. Ogg, *Governments of Europe*, pp. 641-642.—In June, 1912, a new ministry was constituted under Leite. —See also LISBON: 1911-1912.

1911-1914.—Difficulties of new republic.—Political factions.—Economic and colonial questions.—Royalist uprisings.—Syndicalism.—Disintegration of republican party.—“During the autumn of 1911 the Moderates split into two rival groups, and the more important of them, led by Dr. Almeida, definitely withdrew its support from the Government. The result was a ministerial crisis, and November 7 the Chagas cabinet resigned. . . . The lines of party cleavage have tended to be accentuated and the stability, if not the existence, of the republic to be increasingly menaced.”—F. A. Ogg, *Governments of Europe*, p. 642.—“The chief debates in the Chambers were concerned with economic and colonial questions. The proposed creation of free ports at Lisbon, at Leixoes, near Oporto, and at Madeira, drew energetic protests from the representatives of the higher ranks of Commerce; the Ministry postponed the plan for such a port at Madeira, but passed the Bill establishing one at Lisbon. It did not per-

sist in its demand for the discussion of that projected at Leixoes, where the works would involve expenditure that certain companies holding concessions were prepared to undertake on condition of receiving certain privileges regarding which an agreement had not yet been fully reached. As regarded the Colonies, the Ministry once more (in February) contradicted the rumours of a cession of Angola to Germany and to Great Britain.”—*Annual Register*, 1913.—“While reforming decrees gave almost daily evidence of the activity of the Revolution and their rigid enforcement gave satisfactory assurance of its reality, there were forces at work which seriously embarrassed the progress of the Republic and prejudiced its prestige. . . . Of these enemies the least formidable but the most difficult to deal with was the annual Royalist rising. The proclamation of the Republic had caused a general exodus of the aristocracy and courtiers. . . . The first of these [uprisings] was the incursion in September 1911 into North Portugal of a Royalist force under Pablo Couceiro. Both in the character of its leader—a soldier of the crusader type, in its object—the restoration of King Manoel, and in its operations—the raising of provinces known to be predominantly Royalist in sentiment—this first insurrection commands respect as a legitimate gamble of double or quits. Its complete failure, however, due to the inefficiency of its own arrangements, the indifference of the population, the complete . . . control of the situation by the ‘Carbonario’ intelligence organization and the unexpected administrative and military strength exhibited by the Republican Government, convinced all patriotic Portuguese, among them Couceiro himself, that the Royalist cause was for the time hopeless. . . . Unfortunately, the Royalists, for the most part, went the way of all *émigrés* who having lost contact with their own countrymen, associate themselves with foreign governments against that of their own country. The later risings accordingly show a difference both in motive and in method. They now become obscure in their object other than that of weakening the Republican Government, and rely more and more on the support of Spain and the Central Powers—a support that became more subterranean as the Republic of Portugal secured abroad first official and finally public recognition. For this reason the ‘Miguelists’ who looked to Spain and the Central Powers took the lead of the ‘Manoelists,’ who . . . relied on the sympathy of the English upper class; and there were even factions in favour of annexation to Spain or of becoming a German protectorate under a Prussian prince. At the same time the procedure of open invasion over the Spanish frontier by a fighting force for the purpose of raising the country, tended to become mere plotting of mutinies in garrisons and secret tampering with the troops, for the purpose of embarrassing the Government. These plots had never any prospect of success, and the principals ran little risk, while the ignorant participants were invariably ruined. The rising of the summer of 1912 was more insurrection than incursion, and the principal, João d’ Almeida, a Portuguese under Austrian protection, was caught and imprisoned. In October, 1913, a Royalist plot centring round one Azevedo Coutinho, broke out in small provincial disorders, the ringleaders, as usual, making dramatic escapes abroad while the rank and file of ignorant peasants were left to pay. So insignificant were the results and so complete the Government control of the situation that the Royalist press showed an inclination to repudiate foreign responsibility and ascribe it to *agents provocateurs*. . . . The chief embarrassment to the

Republic from these risings lay in the resentment they caused among the Radicals, in the consequent repressive measures forced on the Government, and in the resulting reaction on a foreign press pre-possessed against the Republic. . . . The moderate Government did its best to restrain the damaging activities of its zealots and correct the bad impression they caused. No penalties were enforced worse than a short imprisonment, even against revolutionaries taken under arms. . . . On the third anniversary of the Republic, October 1913, a decree released all persons prepared to ask for it, just in time to make room for the 'suspects' of the October rising. A second amnesty in February, 1914, the first act of the ministry of Dr. Bernardino Machado, was unconditional and complete, all political prisoners being released and only eleven ringleaders banished for ten years, and even this sentence was repealed a year later. . . . If the Royalists were indirectly a difficulty to the Republic, the 'Reds' were for a time a direct danger to it. Their activities in strikes not only disturbed the peace but disorganized the whole economy of the country. . . . An industrial proletariat had for a generation been developing in Portugal under a Government that not only afforded it no protection against exploitation but did not even allow it to protect itself by organization and strikes. Before the revolution the rights of labour were regulated in Portugal by the Civil Code, based on Roman law and the Code Napoléon. Trade unions had obtained bare toleration under a decree of 1891, but strikes were still a contravention of the penal code. Portugal was at this time with one exception, Russia, the only country in Europe where striking was a crime. . . . Consequently, when the Republican Provisional Government legalized striking the result was naturally enough an excessive and exaggerated use of the new liberty by labour organizations. . . . The great increase of labour troubles that immediately followed the revolution was only indirectly a result of it. . . . One most serious feature in this phenomenon was the extraordinarily rapid growth of Syndicalism. . . . In 1911, the difficult first year of the Republic, Lisbon was threatened with a general strike, and local strikes were epidemic everywhere. . . . In January, 1912, a revolutionary strike in Lisbon was only quelled by the declaration of martial law and the arrest of over a thousand Syndicalists. . . . Afonso Costa, . . . by a free use of troops ended the syndicalist control of the railways, and with the help of the 'Carbonarios' succeeded in . . . breaking up their organization. The third difficulty of the Republic was more intimate than either of these. It lay in the complete disintegration of the Republican party as a political factor the moment it had the political field to itself. This disintegration did not become obvious until the provisional government, under the presidency of . . . Dr. Theophile Braga, had given way to the constitutional Republic with Dr. Manoel de Arriaga as President, in August 1911. The constitution was unfortunately devised to meet what the example of the constitutional monarchy and of the South America republics had shown to be the most serious dangers in principle, with the result that it contained certain practical disadvantages. Thus the president is elected for four years only, not being re-eligible; and Congress cannot be dissolved for three years, senators being elected for six years, one-half renewable at each election. An electoral law was to secure independence of the election from the Government of the day, but its passage was repeatedly postponed. Under this régime the Premier or President of the Council, as he is called, can make

himself all-powerful, while the President is scarcely powerful enough. . . . The proceedings of Congress in fact, were resumed much at the stage where the development of the old monarchical Cortes had been broken off. The leading politicians each had his group of partisans and his party name, and his object was to lobby and log-roll with other groups until there was an aggregation large enough to get a majority and form a government. But there was now even less reality underlying this game than before, because the Royalists and 'Reds,' the only real opposition, were not represented, and there was in fact . . . only one political party that had any existence in the country outside Congress—the 'Carbonario' organization, now transformed into the Democratic party under Dr. Afonso Costa. The other groups consisted of 'Evolutionists' under J. A. de Almeida, of 'Unionists' under Brito Comacho, and 'Independents' under Machado Santos. The 'Democrats,' having monopolized the full progressive programme of Republican radicalism, the 'Evolutionists' were compelled to adopt a more moderate colour, while the 'Unionists' stood for little more than the personality of Brito Comacho, the 'Cato' of the Republic, and a policy of holding the balance between the two larger groups. The 'Independents' and their leader came nearer to a real opposition, as they were dissatisfied with the political situation in general and that of their own party in particular. Republican dissatisfaction with the political situation was legitimate, for the political training and traditional procedure that were necessary for successful parliamentary government were conspicuously wanting, and it looked as though the Republican Congress was going to be as hopeless a machine for reform as the monarchist Cortes. The first necessity of efficient government was an adequate period of power for the ministry; but whereas during the ten years that preceded the revolution there were ten changes of government, during the five years that succeeded it there were twelve. . . . The new Government, that of João Chagas, was not radical enough for the Democrats, and lasted only ten weeks. The first Royalist rising and the growing labour troubles reconsolidated factions a little, and another coalition ministry, of Augusto de Vasconcellos, lasted from November 1911 to June 1912. . . . The Democrats got restive again, and another coalition combination came in under Duarte Leite in June. This was no better than its predecessor. . . . In January, 1913, Afonso Costa became Premier and held office for just a year in which term he undoubtedly succeeded in getting the Republic out of the worst of its difficulties. . . . He could not have done this had his power been any less than that of a dictatorship. . . . His constructive success in reform was so sensational and stimulating that it would have justified more drastic action with Congress than he ever attempted. . . . The constitutional relations between the Senate and the Chamber were strained by a controversy between Costa and a crypto-royalist Senator João de Freitas, and those between President and Premier by a circular letter sent by the former in excess of his powers to the Premier and leaders of the Opposition calling for a release of all political prisoners, a revision of the Law of Separation, and a non-partisan regulation of the elections. This programme, good in itself, and better as removing the grievances of Royalists and of Reds, of the clergy and of the politicians, was adopted by Costa, and in January 1914 Dr. Bernardino Machado, who, with great prudence, had kept out of the early chaos of the congressional cosmogony as ambassador to Brazil, was summoned by Costa, . . . to deal with the situation. . . . His services as Premier during this

critical year, in keeping the machinery of government oiled and operating, are not inferior to those of Dr. Costa, who first raised steam enough to move it. It was, fortunately for Portugal, this combination of its strongest administrator and its most skilful statesman that had to face the crisis in which Portugal was plunged by the European War."—G. Young, *Portugal: An historical study*, pp. 279-291.

1914-1918.—Part in the World War.—Coöperation with the Allies previous to entering the war.—German declaration of war on Portugal.—Internal conditions.—"Dr. Bernardino Machado took office in February 1914 and at once began his work of reconciliation. Under his diplomatic direction of affairs the crisis in Congress was tidied over, while the release of all the imprisoned Royalists by a general amnesty should have terminated the civil warfare. Thereby, at some cost to the radical reconstruction in social and financial reform, the political position of Portugal, both at home and abroad, was greatly improved. The Revolution had thus entered its last chapter and was reaping the first fruits of its success when the European War again put the whole situation in question. . . . The 'Democrats' were for instant and insistent belligerency, whereas the other Republican factions were either for postponing action until . . . asked for it or for a benevolent neutrality. On the other hand, the 'Miguelites' made no concealment of their pro-Germanism, and carried with them into the German camp the whole fighting force of royalism with a programme of a restoration under German protection, or even under a German prince. The 'Manuelites' and a small moderate section resident in England were professedly pro-ally, though without severing connexions with their pro-German *confères*. Finally, those Royalists who had rallied to the Republic saw the best interests of Portugal in neutrality. It was evident from the first that the insistence of the Radicals on belligerency would impose a severe strain on the whole structure of the new régime. The call to a crusade on behalf of the lesser nations was popular with the press and reading public, . . . but as the full force of the enemy's war-engine developed . . . public opinion turned more to a benevolent neutrality, such as by its benevolence would maintain the British alliance and by its neutrality would prevent a breach with Germany, or at least postpone it until it could be of some practical use to the allied cause. . . . When Congress was summoned, on August 7, in special session, the emergency produced an enthusiasm and a unanimity which was somewhat deceptive, and the Premier easily secured full powers on a pronouncement of policy that was pro-ally though unprovocative. The first instalment of support . . . was pacific enough, being no more than the signing of . . . the long-delayed Treaty of Commerce, which put us [Great Britain] more or less on an equality with Germany; though even so it only came into force in September 1916. We on our part renewed a popular relationship interrupted since the Revolution to the detriment of our prestige in Portugal, by sending a cruiser on a visit of courtesy to Lisbon in September. The next Portuguese measure, though military, was still non-committal, and consisted in increasing the garrisons of the African colonies contiguous to German territory. More marked was the next step—our acceptance in October, for use in France, of an offer, as a free gift, of a considerable portion of the Portuguese artillery; which led to a definite invitation in November from the British Government to take part in the war. Congress, summoned in a second

special session on November 23 to consider this invitation, again gave its unanimous support to the pro-Ally policy of the Premier, and sanctioned the mobilization of a division apart from colonial reinforcements; but the moment for sweeping the country into war was past. The enemy had had time to develop his strength, and with his usual strategic insight had already carried the war into Portugal. . . . The entire first months of the war passed in the belligerents of the Government trying to carry the neutralists with them into some act that would provoke a German declaration of war—while the neutralists and pro-Germans outside the Government were doing what they could to embarrass this policy. As early as October 20 small military mutinies had been excited by Royalists in Mafra and other garrisons, which in spite of their futility postponed belligerency while proving by their failure that the people would not purchase neutrality at the price of Royalism. . . . On December 7 [1917] was published an army order, dated November 23, definitely committing Portugal to co-operation on the Western Front, and by December 9, Dr. Bernardino Machado had been forced out of office. The dissent of his neutralist colleagues from the principle of his belligerent policy and the distrust of the Democratic congressional majority for his cautious procedure, combined with the defection of President Arriaga, created a crisis no diplomacy could longer defer. He was succeeded by a purely Democratic Government under V. H. de Azevedo Coutinho, and thereupon all semblance of national unity disappeared. By December 18 all the opposition factions had left the Chamber and the Unionists, under Brito Comacho, had renounced their seats. It became evident that it would require a civil war to carry Portugal into the war for civilization. . . . It has already been said that the passion of loyalty to the Crown, once strong in Portugal, was replaced by a passion of loyalty to the State as represented by Congress; and this feeling survived the disappointment when Congress failed to embody the high ideals of the national renascence, even as the older feeling could survive a bad king. . . . The Democrats having secured a majority at the elections, under conditions such as gave their opponents no ground for complaints, Dr. Costa returned to power in November [1915], and could resume a belligerent policy with general consent, or at any rate without the possibility of opposition. But Germany met these Portuguese belligerents half way, for the British blockade had by now made Portugal useless as a source of supply, while the course of the campaigns in Europe gave Berlin hopes of an early settlement in which Portuguese Africa might conveniently be included. The sixty ships in Portuguese ports were the only consideration in favour of peace, and when these were seized by Portugal, in February, 1916, to fill the gaps in the Allies' shipping caused by the first submarine campaign, little deference was paid to the formulae by which the Portuguese Government did their best to legalize and alleviate the blow. On March 9 [1916] came the German declaration of war—a long denunciation of Portugal's breaches of neutrality."—G. Young, *Portugal: An historical study*, pp. 293-300.—Although Portugal was only a small country and not very rich, the Allies received the announcement of its accession to their side with enthusiasm. The following account of the new ally's action appeared in England: "At a time when they [the Portuguese] were less rich in munitions than at present she sent whatever stores were available, and despatched her cannon, as a free gift, to the Flanders trenches,

generally assisting in every way she could, while Herr Rosen, the German Minister at Lisbon, poured his daily hate of protests into the Ministry for Foreign Affairs. She also sent a considerable force to protect her African colonies against their German neighbours, with whom the Portuguese troops repeatedly came into conflict. More recently they had been able to co-operate with the British and the Belgians in the conquest of the German East Africa, and their rapid advance north of the Rovuma river over a difficult country is a minor but a spirited chapter of the war. Finally, at the beginning of 1916, Portugal set an excellent example to other countries by deciding to utilise the German shipping lying idle in the Tagus, whereupon Germany, seeing that Portugal was one of her favourite enemies, a small country, immediately declared war. This declaration was received with much enthusiasm when it was read out in the Portuguese Parliament on March 10th, and Portugal at once set herself to train her troops."—A. F. E. Bell, *Portugal's effort (Contemporary Review, Jan., 1917)*.—At the end of 1919 it was announced that Portugal had mobilized 200,000 men, of whom 8,367 had been killed. The total cost of the Portuguese expeditionary force was stated to have been \$140,000,000. (See WORLD WAR: Miscellaneous auxiliary services: XIV. Cost of war: b, 3.) About 60,000 men were sent to France and 35,000 European troops served in Angola and Mozambique, rendering good service in the conquest of Germany's African colonies.—See also WORLD WAR: 1916: VII. African theater: a, 21; 1917: VII. East African campaign: a; 1918: II. Western front: d, 5.

1915-1920.—*Changing governments*.—The second president of the republic was Theophile Braga, who was elected to fill out the term of the first president, Manoel de Arriaga (May 29 to October 5, 1915). The third president was Bernardino Machado who held office from October 5, 1915, to December 8, 1917, when the revolution swept away the existing government and substituted a revolutionary junta under the leadership of Sidonio Paes, who on December 12, 1917, was appointed premier, and on December 28, 1917, became acting president. On April 28, 1918, he was elected president by direct suffrage under the provision of the new constitution, and held office until December 14, 1918, whereupon João de Canto e Castro Silva Antunes became provisional president and held office until the election of Antonio José de Almeida, August 6, 1919. The Liberal ministry under the premiership of Fernando Costa lost the support of parliament and a coalition cabinet was formed, March 30, 1919, under the leadership of Dominigo Pereira which in turn was overthrown March 6, 1920, on account of the railway strike. A new government under Antonio Baptista was organized March 12, 1920, on a platform of order and lowered living costs. Colonel Baptista died June 6, and was succeeded by Ramos Petro, who, in turn gave way to Liberato Pinto.

1919.—*Royalist uprising crushed*.—Leader a

prisoner.—"The attempt at a Royalist revolution which began in Northern Portugal on Jan. 19 [1917], with the proclaimed idea of restoring Dom Manuel failed on Feb. 14, when the citizens of Oporto, assisted by the republican troops, dispersed the last of the revolutionists and captured their leader, Paiva Couceiro. Certain preceding events appeared to many to have led to the uprising, particularly the assassination of President Sidonio Paes on Dec. 14 [1918], and the anarchist riots in Lisbon and Oporto in the middle of January. On Dec. 17 Admiral Canto y Castro, who had been a Colonial Governor under the old régime, and, during the war, Minister of Marine and in active control of the coast defense, was elected by Parliament to fill the late President's unexpired term [and the ministry reorganized under T. Barbosa]. When the Royalist uprising took place his Government had sufficiently investigated the assassination and the riots to enable it to make the following official statement in regard to the uprising: 'A revolutionary movement broke out on Jan. 19, at 1 P. M., at Oporto, Braga, and Vizeu. The movement is restricted to these three localities. Forces loyal to the Government are marching against the revolutionaries. All the garrisons of the country have declared their loyalty to the Government and to the republic. At Lisbon and in all the rest of the country order has not been disturbed. The present political strifes in Portugal are not to be attributed to Bolshevism; they are all fought on questions of party politics, and do not aim at any social reform.' Although the revolution first proclaimed itself behind the ægis of Dom Manuel, there is evidence to show that other hands held that protecting shield. Dom Manuel himself formally denounced the revolution, and his representative in Portugal, Senhor Ornellas, the head of the Royalist Party there, did the same by pledging his support to the Government of Admiral Canto y Castro and ordering all Royalists to refrain from disturbing the public peace. It is believed that Couceiro's movement, although appropriated by the rank and file of the Dom Manuel faction as their own, was really instituted for Dom Miguel, the pretender."—*New York Times Current History, Mar., 1919, p. 418*.

1921-1922.—*Insurgent movement*.—*Revolutionary junta*.—*Introduction of budget system*.—*Agreement of April 17*.—Since the proclamation of the republic on October 5, 1910, there have been no fewer than seven revolutions, or attempted revolutions, in Portugal. Two of these have been monarchical for the restoration of the deposed King Manuel II, now living in England—the rest have been due to one faction of the Republican party attempting to oust its rivals. In consequence of insurgent movement among the military and professional classes the Pinto ministry resigned February 18, 1921, and a new ministry was appointed under Bernardino Machado, February 24. This government was succeeded May 23, by a ministry under Thomé Barros Queiroz. The July elections gave the Queiroz faction sixty-five seats in the parliament where its financial reform won the additional support of fifty-seven Democrats but

the Liberals revolted with the result that the Queiroz ministry was overthrown. On August 30, Senhor Antonio Granjo formed a coalition ministry. The "Carbonario, or professional revolutionary elements, had long cherished the idea of punishing all the partisans of the Moderate President, Sidonio Paes, who had not already been accounted for, as well as other Conservative Republicans. The revolution of Oct. 19 gave them their . . . opportunity. . . . A deputation of the revolutionary junta . . . waited upon President Almeida and demanded the dismissal of the Granjo Government and the dissolution of the July Parliament. . . . The proposal of the junta was accepted, and a Cabinet was announced, headed by Colonel Coelho. The first act of the new Government was to issue a proclamation, on the morning of Oct. 20, repudiating the events of the previous night. . . . Senhor Granjo . . . was arrested and taken with the other prisoners to the naval arsenal, [where he was shot]. . . . The new Government was kept busy cleaning its hands of the charges of being responsible for the assassinations, but public opinion was so aroused that on Nov. 4 Colonel Manuel Maria Coelho thought it best to withdraw in favor of Senhor Pinto, who then assumed the the Premiership and portfolio of the Interior, and reconstructed the Cabinet."—*Another revolution in Portugal (New York Times Current History, Dec. 15, 1921, pp. 513-514)*.—On Dec. 15 a new government was elected with the premiership passing to Cunha Leal. "It was generally recognized in Portugal that the fall of Cunha Leal as Premier on Feb. 3 [1922] was due to no fault of his own, but that he was a victim of the democratic landslide in the general elections. . . . Antonio da Silva, . . . head of the new Government . . . took office on Feb. 7. . . . The National Guard, from which most of the revolutionary movement emanated, was reduced and dispersed throughout the country, to do purely police work under control of the Minister of the Interior. . . . That the revolutionary movement was still formidable was proved by the precipitate departure of Senhor da Silva with all his Cabinet soon after he assumed power. On his return, his first step was to clip the wings of the Republican Guard. Having thus removed the main danger from the capital, the Government turned its attention to the deplorable state of the republic's finances. For the first time since 1918 a budget was introduced. Though it showed a deficit of about \$6,000,000 (revenue about \$25,000,000, as against expenditure about \$31,000,000), it was an earnest of the Government's desire to carry out the long-promised program for retrenchment and reform. Another hopeful sign was the securing of a loan from Great Britain for £3,000,000, the first foreign loan the republic has ever received. This sum was obtained under the Export Credit scheme, and marked, according to the statement of the Minister of France (Senhor Duraõ), 'the re-entry of Portugal into the financial comity of nations.' While the small republic still struggles to win for itself a permanent position, the expelled monarchists, like the monarchist exiles of Russia, are counting confidently on an eventual return to power. On May 5 the *Correio de Manha*, the press organ of ex-King Manoel, published an agreement signed in Paris on April 17 by Senhor Ayres d'Oruellas and by the Conde de Almada e Avranche on behalf of the young Dom Duarte Nuno, in whose favor Dom Miguel renounced his succession right to the Portuguese throne in 1920. This agreement, consisting of only three clauses, and based on a restoration of the monarchy, recognizes King Manoel as the rightful King of Por-

tugal, and binds him, in case he has no direct heir, to accept the successor to be chosen by the restored Cortes, and to consult the latter on the Constitution and respecting a new concordat with the Vatican. This ended the century-old feud between the throne and the 'Miguelist' pretenders, which convulsed Portugal in the '20s and '30s of the nineteenth century."—*Checking revolution in Portugal (New York Times Current History, July, 1922, pp. 608)*.—The Silva ministry was attacked in the Chamber, October 23, for interference with the liberty of the press; and was obliged to resign November 8, whereupon a reconstructed cabinet under Silva was effected November 30, only to be threatened by a crisis over the question of public school instruction. On December 30, bomb outrages were reported at Lisbon.

PORTUGAL, Constitution of: Principal provisions.—A new constitution was adopted, Aug. 20, 1911. An abstract of the principal provisions follows: "Aside from five articles of a temporary nature, the constitution of 1911 is arranged in eighty-two articles, grouped in seven 'titles' or divisions. The two divisions or principal lengths are those which relate to the rights and liberties of the individual and the organs and exercise of sovereign power. The guarantees extended the individual comprise a bill of rights hardly paralleled in comprehensiveness among the constitutions of European nations. To Portuguese citizens and to aliens resident in the country are pledged full liberty of conscience, freedom of speech, freedom of the press, liberty of association, inviolability of domicile and of property, the privileges of the writ of habeas corpus, privacy of correspondence, and freedom of employment and of trade save only when restriction is required for the public good. Law is declared to be uniform for all and no public privilege may be enjoyed by reason of birth or title. No one may be required to pay a tax which has not been levied by the legislative chambers or by an administrative authority specifically qualified by law, and, save in case of enumerated offenses of serious import, no one may be imprisoned except upon accusation according to the forms of law. No one may be compelled to perform an act, or to refrain from the performance of an act, except by warrant of law. The constitution is subject to amendment under regulations of a somewhat curious character. Revision of the fundamental law may be undertaken normally by Congress at the end of every decennial period, the Congress whose mandate coincides with the period of revision being endowed automatically with constituent powers and the process of revision differing in no respect from that of ordinary legislation. At the end of a five-year period from the date of promulgation, however, amendment may be undertaken, providing two-thirds of the members of the chambers sitting jointly vote favorably. Under all circumstances amendments must be specific rather than general, and in no case may an amendment be received or debated which bas for

its object the abolition of the republican form of government. Sovereignty is lodged in the nation, and the organs of the sovereign will are the independent but supposedly harmonious executive, legislative and judicial authorities. The powers of the executive are exercised by the President and the ministers. The President is chosen by the two houses of Congress assembled in joint session sixty days prior to the expiration of the presidential term. Voting is by secret ballot and a two-thirds majority is required for election, although in default of such a majority choice is made on the third ballot by simple plurality between the two candidates receiving the largest number of votes. If the office falls vacant unexpectedly the chambers choose in the same manner a president to complete the unexpired term. The term is four years, and after retiring from office and ex-president may not be re-elected for a full term prior to the lapse of four more years. Only native Portuguese citizens at least thirty-five years of age are eligible. Without the permission of Congress the President may not absent himself from the national territory, and he may be removed from office by the vote of two-thirds of the members of the chambers sitting jointly. The duties of the President are, among other things, to negotiate treaties and to represent the nation in its external relations generally, to appoint and dismiss the ministers and public officials, to summon the Congress in extraordinary session, to promulgate the laws of Congress, together with the instructions and regulations necessary for their enforcement, and to remit and commute penalties. If two-thirds of the members of the chambers so request, projected treaties of alliance must be laid before Congress, and the appointment and suspension of public officials may be effected only on proposal of the ministers. Every act of the President must be countersigned by at least one minister, and every minister is responsible politically and legally for all acts which he countersigns or executes. One member of the ministerial group, designated by the President, exercises the functions of premier. Ministers may be members of Congress, and in any case they are privileged to appear in the chambers to defend their acts. Among offenses for which ministers may be held to account in the ordinary tribunals the constitution specifies all acts which tend to subvert the independence of the nation, the inviolability of the constitution and of the republican form of government, the political and legal rights of the individual, the internal peace of the country, or the probity of administrative procedure. The penalty imposed for guilt in respect to any of these offenses is removal from office and disqualification to hold office thereafter. The exercise of legislative power is vested exclusively in Congress. There are two houses, the Council of Municipalities, or senate, and the National Council or chamber of deputies. The members of both are chosen by direct vote of the people. Senators are elected for six years, one-half of the body retiring triennially. Each district returns three members, but to assure the representation of minorities electors are permitted to vote for but two. Members of the Chamber of Deputies are chosen for three years. Senators must be at least thirty-five years of age and deputies twenty-five. Congress is required to meet in regular session each year on the second day of December. The period of a session is four months, and a prorogation or an adjournment may be ordered only by the chambers themselves. Extraordinary sessions may be convoked by one-fourth of the members or by the President. Each chamber is authorized to judge the qualifications of its

members, to choose its president and other officers, and to fix its rules of procedure. The presiding official at joint sessions is the elder of the two presidents. Members are accorded the usual privileges of speech and immunities from judicial process, and they are guaranteed compensation at rates to be regulated by law. The functions and powers of the chambers are enumerated in much detail. Most important among them is the enactment, interpretation, suspension, and abrogation of all laws of the republic. Still more comprehensive is the power to supervise the operation of the constitution and of the laws and 'to promote the general welfare of the nation.' More specifically, the chambers are authorized to levy taxes, vote expenditures, contract loans, provide for the national defense, create public offices, fix salaries, regulate tariffs, coin money, establish standards of weights and measures, emit bills of credit, organize the judiciary, control the administration of national property, approve regulations devised for the enforcement of the laws, and elect the President of the republic. To the Chamber of Deputies is accorded the right to initiate all measures relating to taxes, the organization of the forces on land and on sea, the revision of the constitution, the prorogation or adjournment of legislative sessions, the discussion of proposals made by the President, and the bringing of actions against members of the executive department. Initiative in respect to all other matters may be taken by any member of either branch of Congress or by the republic. A measure which is adopted by a majority vote in each of the two houses is transmitted to the President to be promulgated as law. The President possesses not a shred of veto power. He is required to promulgate within fifteen days any measure duly enacted; if he fails to do so, the measure takes effect none the less. When the chambers fall into disagreement regarding proposed changes in a bill, or when one chamber rejects a bill outright, the subject is debated and a decision is reached in joint session. The organs of judicial administration comprise courts of first instance, courts of appeal, and a supreme tribunal sitting at the capital. Judges are appointed for life, but may be removed from office in accordance with procedure to be established by law. The employment of the jury is optional with the parties in civil cases but obligatory in all criminal cases of serious import. With respect to local government the constitution goes no further than to lay down certain general principles and to enjoin that the actual working arrangements be regulated by subsequent legislation. Among the principles enumerated are the immunity of the local authorities from intervention on the part of the central executive power, the revision of the acts of the public officials in administrative tribunals, the fiscal independence of the local governmental units, and, finally, the employment for local purposes of both proportional representation and the referendum."—F. A. Ogg, *Governments of Europe*, pp. 643-645.

PORTUGUESE EAST AFRICA, comprises three colonies on the southeast coast of Africa: Mozambique (295,000 square miles), Companhia de Mocambique (59,840 square miles), and Companhia do Nyassa (73,202 square miles). These colonies were acquired by Portugal in the fifteenth century as trading posts on the way to India. Their estimated population in 1922 was 3,011,600. The chief products are sugar, coconuts, beeswax, and mining products. Coal deposits and gold bearing reefs have been discovered recently. See AFRICA: Modern European occupation: 1914; 1914-1920: Lack of railway and industrial developments.

PORTUGUESE GUINEA, on the coast of West Africa, is entirely surrounded on the land side by French territories. Its boundaries were fixed by the convention of 1886 with France. In 1923 the estimated population was 289,000. The capital, Bolama, is situated on an island of the same name. The chief port is Brissau and its commercial products are rubber, ivory, hides, wax, and oil seeds. See AFRICA: Modern European occupation: Early 19th century; 1914.

PORTUGUESE INDIA.—“The Portuguese territories in India now consist of Goa, conquered by Albuquerque (1510) and capital of Portuguese India, Daman, and Diu, acquired 1535 as trading posts. The settlement of Goa lies about 250 miles south-southeast from Bombay on the coast and extends between 14° 53' and 15° 48' N. latitude, and between 73° 45' and 74° 24' E. longitude. . . . Its extreme length from north to south is 62 miles; its greatest breadth from east to west 40 miles; and the total area 1,469 square miles. The population in 1910, including Anjediva, was 515,772 persons. The inhabitants may be divided into three classes, viz., Europeans, the descendants of Europeans, and natives. The last class may be again divided into Christians and Pagans. The native Christians, who constitute a little more than half the population, are the descendants of Hindus converted to Christianity on the subjugation of the country by the Portuguese, and can still trace the caste to which they originally belonged. All classes of the people, except Europeans, use the Konkain language with some admixture of Portuguese words, but the official language is Portuguese, which is principally spoken in the capital and the chief towns, as well as by all educated persons. The majority of the population profess the Roman Catholic religion. . . . The Hindus and Mohammedans enjoy perfect liberty in religious matters. . . . Daman is a town and settlement in the Province of Gujarat, Bombay Presidency, situated [on the coast] about 100 miles north of Bombay. . . . The portion of Daman proper contains an area of twenty-two square miles, and 20 villages; it lies at the entrance of the Gulf of Cambay, and is divided by the river Daman-Ganga into the two separate tracts known as Daman Grande (Great Daman) and Daman Pequeno (Little Daman). . . . Diu is an island forming a portion of the Portuguese possessions in Western India, situated in latitude 20° 43' 20" N. and longitude 71° 2' 30" E., and separated by a narrow channel through a considerable swamp from the southern extremity of the Peninsula of Káthiáwár, in the Bombay Presidency. Its extreme length from east to west is about seven miles, and its greatest breadth from north to south, two miles.”—F. C. Danvers, *Portuguese in India*, pp. xli-xliii; xlvii-li.—The population of Daman and Diu was estimated in 1910 as 32,700. Manganese is exported to the United States for the steel industry. Other exports of commercial importance to the country are salt, coconuts, and copra.

PORTUS ITIUS, port on the French coast from which Cæsar sailed on both his expeditions to Britain. Boulogne, Ambleteuse, Witsand and Calais have all contended for the honor of representing it in modern geography; but the serious question seems to be between Boulogne and Witsand, or Wissant.—Based on T. Lewin, *Invasion of Britain*.—See also Britain: B. C. 55-54.

PORTUS LEMANIS, important Roman port in Britain, at the place which still preserves its name, Lymne.

PORTUS MAGNUS, important Roman port in Britain, the massive walls of which are still seen at Porchester or Portchester.

PORUS (d. 317 B. C.), Indian king. Conquered by Alexander the Great, but restored to his kingdom with added territory on recognition of the overlordship of Macedonia; assassinated by a Macedonian satrap.—See also INDIA: B. C. 327-312.

POSEIDON. See NEPTUNE.

POSEN, or Posnania, capital and fortress of the province of the same name in Poland, at the confluence of the Warthe and the Cybina rivers. (See GERMANY: Map.) It was the cradle of the Polish race. During the tenth century the city became the seat of a bishopric and was the capital of the early Polish kings. A member of the Hanseatic League, Posen reached the height of its prosperity in the sixteenth century, after which it began to decline. The Germans founded the western part of the city in 1253, which was governed as a separate municipality until Posen was annexed to Prussia in 1793. It reverted to Poland by the Treaty of Versailles in 1910. (See POLAND: 1919 [June].) Its chief manufactures are furniture, sugar, cigars, and machinery. The inhabitants of the city are chiefly Catholics. Its population in 1921 was 156,601.

POST OFFICE DEPARTMENT, United States: Development.—"The Post Office Department originated in a central, or general, post office at the seat of Government. The legislation of 1782, passed under the Articles of Confederation, provided for a Postmaster-General and a small administrative office, separate and distinct from the post office. The Postmaster-General was at first an officer of the Treasury Department, and Samuel Osgood, the first to hold the office under the constitution, made his reports to Alexander Hamilton, Secretary of the Treasury. . . . William T. Barry, . . . Postmaster-General in 1829, . . . was called by President Jackson to be a member of the Cabinet. From that time the administrative offices of the postal service in Washington were regarded as constituting a coordinate Executive Department of the Federal Government, altho legislation recognizing that fact was not passed until 1872. . . . [There are four assistant postmasters-general]. . . . The First Assistant Postmaster-General has charge of the establishment of post offices and the appointment of postmasters, and the conduct of the service at post offices. The Second Assistant Postmaster-General controls the transportation of the mails between post offices, the railway mail service, and the mail service with foreign countries. The Third Assistant Postmaster-General controls the classification of mail, the finances of the service, the banking facilities maintained at post offices, and the registry service. The Fourth Assistant Postmaster-General controls the supplies and equipment for post offices and the service performed by rural carriers. The officers reporting directly to the Postmaster-General are the Solicitor (who is carried on the rolls of the Department of Justice and detailed to the Post Office Department), the Chief Inspector, the Purchasing Agent, the Chief Clerk of the Department, the Appointment Clerk, and the Disbursing Clerk. The Chief Clerk of the Department exercises some vicarious control over these officers and is also charged by the Postmaster-General with supervision over the personnel and quarters of the Post Office Department. The largest bureau in the Post Office Department is not controlled in any way by the Postmaster-General, or any of his subordinates. It is the office of the Auditor for the Post Office Department, who is an officer of the Treasury Department. The office of the Auditor is the largest accounting-house in the world. Postmasters' accounts aggregating a million in number, and representing transactions in excess of two and one-quarter billion dollars, are received and audited each year. [In 1921 there were 52,168 post offices in the United States, doing a total business of \$15,179,424,018.]"—D. C. Roper,

United States post office, pp. 294-295, 297-298.—See also CIVIL SERVICE REFORM: United States; 1902-1903; 1908; 1913-1920. During the World War an added function of the Post Office Department was that of censorship. See CENSORSHIP: World War; ESPIONAGE ACT: United States; Trials, etc.

POSTAL SAVINGS BANKS: Origin.—The system of postal savings banks originated in England in 1861 and was adopted by all the leading countries within fifty years, the United States being the last large country to put the system into operation.

1861.—United Kingdom.—Sir Rowland Hill, the father of the English postal system, introduced a bill in 1861 providing for postal savings banks. The postal savings banks were a success from the day when they opened, September 16, 1861. During the first year 2,535 depositors deposited £2,000,000 with the government. The government did not receive deposits of less than one shilling but to encourage thrift among children and the very poor people, blanks were furnished containing spaces for twelve penny stamps, the depositor affixing stamps until the blanks were filled when he could open an account. Until 1895 only £30 annually could be deposited by any one person but this was disadvantageous to workmen who were not allowed to save in season of great prosperity against time of want, so the limit was advanced to £50.—Based on W. H. Handy, *Banking systems of the world*, pp. 162, 176.—Interest was to be at the rate of 2½ per cent per annum, none being paid on deposit exceeding £50, and £200 was the maximum limit of deposit. The government was to buy and sell consols for depositors, charging 1d on each transaction of less than £25. Facilities to depositors also included insurance for not less than £5 nor more than £100 and the purchase of annuities. Depositors might include benevolent and charitable societies, penny banks, registrars of county courts, schools, registered trades unions, and soldiers wherever in service. Transfer of accounts was established in 1904.

1865-1869.—Belgium.—Legislation for postal savings was begun in Belgium in 1865. The minimum deposit was fixed at one franc; stamps might be used for smaller amounts until they aggregated one franc; no maximum limit was set, but the bank, after notifying the depositor, might convert into public Belgian securities any sum necessary to reduce his deposit to 3,000 francs, or in case of a society it might thus invest all over 20,000 francs. Interest was to be at the rate of 3 per cent per annum up to 3,000 francs, any larger deposit receiving 2 per cent per annum on the whole amount of the deposit. Opportunities were to be afforded to depositors to purchase government securities (rentes) at 2, 2½, and 3 per cent.

1868.—Canada.—Postal savings banks were opened in Canada in 1868. The minimum deposit was to be one dollar; no more than \$1,000 might be deposited at one time, and the maximum deposit was set at \$3,000. Interest was to be 3½ per cent, and none was to be paid on \$3,000 or more. The centralized system was adopted, deposits at local offices being transmitted to the

treasury, and a certificate of deposit returned to the depositor who must leave his application at his local post office; this was to be forwarded to Montreal, and a check returned.

1875.—Italy.—Italy adopted the postal savings system in 1875. The minimum deposit was to be one lire; stamps were accepted for smaller amounts; the maximum deposit was limited to 1000 lira. Interest was to be 2.04 per cent. Deposits were to be convertible into government bonds at $3\frac{1}{4}$ per cent. This line of investment became more popular in Italy than elsewhere because of the higher rate of interest on state securities. Collecting dividends on these securities and converting them into deposits was begun in 1878. The bank also was to collect lottery prizes and deposit them in the banks, thus partially, at least, converting gamblers into savings bank depositors.

1875.—Japan.—Postal savings banks were opened in 1875 in Japan. The minimum deposit was to be 10 yen, the maximum deposit, 1000 yen. Interest was at $4\frac{1}{5}$ per cent. Deposits exceeding 1000 yen were to be invested in national loan bonds if the depositor's account were not reduced after notification. Withdrawals were to be made by 'ordinary' and 'special' methods. The first required that notification of partial withdrawal of funds must be written, signed, and addressed to the postal savings banks, while total withdrawal would necessitate sending a formal application to the post office. Under the second method, withdrawals were in no instance to be allowed to exceed 30 yen per day or 100 yen per month.

1881.—France.—France also provided for a postal savings system in 1881. The minimum deposit was to be one franc, with stamps for less; and the maximum limit, 1500 francs for individuals, and 15,000 francs for associations. Interest was originally 3 per cent per annum, but was reduced in 1895 to $2\frac{1}{2}$ per cent. Deposits and withdrawals might be effected at any post office, and withdrawals might be made by telegraph and, in Paris, by pneumatic tube. A reserve fund was provided for, the funds to be invested in government securities, and in negotiable obligations of the departments, communes, in the chamber of commerce, in real estate or in the *credit foncier*. Minors might deposit in their own names and withdraw after they were sixteen years old. Married women might make deposits and withdrawals except in the case of opposition of their husbands. Branch banks were established on French warships where naval service men could deposit, withdraw, send money away, or buy government securities.

1881.—Netherlands.—The postal savings bank was established in the Netherlands in 1881. Minimum deposit was fixed at 25 Dutch cents; stamps could be used for smaller amounts. No maximum limit of deposit was determined. A fee of 5 cents was to be paid to the postmaster for every new account. Interest was to be 2.64 per cent per annum. Funds were to be invested in state and municipal securities and such other securities as the Bank of the Netherlands would accept. Withdrawals might be made at any post office, and by post or wire.

1882.—India.—India introduced postal savings in 1882. The minimum deposit was to be 4 annas, the maximum deposit, 5000 rupees. Interest was to be 3 per cent per annum on sums less than 2000 rupees; $3\frac{1}{2}$ per cent, on fixed deposits. Funds might be invested in government securities.

1883.—Austria.—The first postal savings bank established in Austria was in 1883. The minimum

deposit was to be one crown; post office savings cards could be used for smaller amounts; the maximum deposit was 2000 crowns. Deposits exceeding that amount were to be invested in government securities. In 1898 the reserve fund was 4,000,000 crowns. The system was in use on ships of the royal and imperial navy. After 1901 the bank granted loans on title deeds at $4\frac{1}{2}$ to 5 per cent interest, accepting as collateral security government consols, stocks, title deeds, and shares and securities of the Austro-Hungary Bank. Rural postmen were authorized to collect deposits not exceeding 1000 crowns.

1884.—Sweden.—Sweden established postal savings in 1884. The minimum deposit was to be one krone, while stamps could be used for smaller amounts. Interest was to be 3.6 per cent per annum and none was to be paid on deposits exceeding 2000 crowns. The banks were to invest deposits in government securities free of charge. Deposits might be made in money, in coupons of state securities, or the special savings stamp. Withdrawals might be made at any post office. Minors might deposit in their own names, and withdraw after the age of fifteen years. Married women were given the unlimited right to deposit and withdraw.

1886.—Hungary.—Postal savings banks were established in Hungary in 1886. The interest rate was 3 per cent per annum. Deposits exceeding 2000 crowns were to be invested in government securities. The stock transactions became of large importance. Differing from other nations, the Hungarian post office savings bank was authorized of itself to invest the sums at its disposal.

1889.—Russia.—Russia adopted a postal savings system in 1880. The minimum deposit was to be 25 kopecks, and the maximum for individuals was made 1000 rubles. Churches and monasteries were allowed to deposit without limit, interest to be paid on the entire account. Interest was to be 4 per cent per annum. Deposits were invariably invested in government notes and bonds, and deposited with the Imperial Bank of Russia. Unlike other nations, Russia made no provision for the permanent investment of a depositor's funds when they reached the maximum limit.

1901.—Egypt.—Postal savings banks were established in Egypt in 1901. The minimum deposit was to be 50 millimes. The maximum deposit in one year was set at \$247.15 and maximum deposit for any one depositor was to be \$688.60. Interest was to be $2\frac{1}{2}$ per cent. Funds were to be invested in bonds of the Egyptian debt. Benevolent, charitable, and other organizations could be depositors on the same terms as individuals. Withdrawals could be made on demand but only at the post-office where the deposit book was issued.—Based on *Senate Document no. 658, 61st Congress*.

1910.—United States.—"On June 25, 1910, the bill creating the United States postal savings system was signed by President Taft. After nearly forty years of discussion, [against the active opposition of the American Bankers Association], after eight Postmasters-General had recommended the establishment of postal savings banks and ten times as many bills had been introduced into Congress for this purpose, the United States found itself in line with most of the other great nations of the world in this matter. . . . This was not, however, the first experience of the United States with postal savings banks. To be exact, this is the third postal savings bank to exist under the American flag; the first being the Hawaiian postal savings bank, and the second being the Philippine

postal savings bank. For 'the control, supervision, and administration of the postal savings depository offices' and of the funds received on deposit, the act created a Board of Trustees consisting of the Postmaster-General, the Secretary of the Treasury and the Attorney-General. . . . Accounts may be opened by persons ten years of age or over. The minimum deposit is one dollar, the maximum deposit for one month is \$100 and the maximum limit is \$500. To encourage petty savings, particularly among children, postal savings stamps in denominations of ten cents could be sold, which when pasted upon a card provided for the purpose could be deposited in sums of one dollar. . . . The interest rate is 2 per cent., the lowest rate paid on savings deposits by any postal savings bank in the world. When it is remembered that the prevailing rate of interest was normally higher in the United States than in most countries of Europe, it is clear that Congress did not err in the direction of too high a rate. The most difficult problem which Congress had in formulating its postal savings bank plan in 1910 was that of the investment of the deposited funds. Investment in the national debt, as in most other countries, was not feasible because the U. S. debt was small and not regarded as permanent. It was finally decided that postal savings funds should be divided in three parts: a five per cent. reserve to be kept in lawful money in the U. S. Treasury; a sum not exceeding 30 per cent. of the amount of postal savings funds, which "may at any time be withdrawn by the trustees for investment in bonds or other securities of the United States; and a sum, normally not less than 50 per cent. of the total postal savings deposits, to be kept on deposit in solvent banks, this residual deposit to be a working balance and a fund which might "be withdrawn for investment in bonds or other securities of the United States; but only by direction of the President, and only when, in his judgment, the general welfare and the interests of the United States so require. Postal savings funds deposited in banks were to bear interest at not less than 2½ per cent. It was provided that the depositor could convert his account, in sums from \$20 to \$500 (in multiples of \$20) into United States coupon or registered bonds at the interest rate of 2½ per cent. payable semi-annually, to be redeemable one year from date and payable twenty years from date, such bonds to be issued only when there are outstanding U. S. bonds subject to call, or when the government desires to issue bonds for the purpose of replenishing the treasury. The question of raising the maximum limit of deposit was early in arising and in 1913 a bill to that effect was introduced by Representative Moon of Tennessee. It was vetoed in 1914 because one of its provisions authorized the deposit of postal savings funds in banks not members of the Federal reserve system. A new bill was introduced by Representative Moon in the next session of Congress, and, as the American Bankers Association had by this time withdrawn its opposition to the legislation, the bill became law in 1916, raising the limit of deposit to \$1000. The effect of the liberalizing legislation was an immediate and pronounced increase in postal savings deposits.—Based on E. W. Kemmerer, *Postal savings, an historical and critical study*.—During the participation of the United States in the World War, an especial campaign was conducted by the government to interest people in saving their money through the postal savings banks. On June 30, 1917, the deposits had increased by \$45,934,811 over the previous year. But after the war, patronage mark-

edly declined. The figures of 1921 showed a loss of \$4,886,419 over the previous year.

1923.—Statistics.—In 1923 the volume of business in the postal savings banks of these respective countries was as follows: Canada, 116,541 depositors, \$41,054,920 total deposits; Egypt, 224,760 depositors, \$3,961,419 total deposits; France, 6,908,854 depositors, \$194,110,692 total deposits; Italy, 6,273,500 depositors, \$547,211,842 total deposits; Japan, 20,088,713 depositors, \$301,832,170 total deposits; Netherlands, 1,887,362 depositors, \$107,811,734 total deposits; Sweden, 661,686 depositors, \$22,607,418 total deposits; United Kingdom, 15,215,842 depositors, \$89,174,810 total deposits; United States, 466,109 depositors, \$152,389,993 total deposits. Other countries which have adopted the postal savings system are Argentina, Finland, Spain, Union of South Africa, British India, and the Philippines. Reliable statistics for Austria and Russia are not available since the World War.

POSTAL SYSTEMS: Origin and development.—The need of communication was doubtless one of the earliest activities of the ancient world, not for public use, but for government use. There are evidences that the Assyrians and Persian nations established posts a day's journey apart at which horses were kept ready saddled with waiting couriers. The Romans employed couriers for the promulgation of military and public orders, private letters being sent by slaves. Their great post roads connecting the vast empire facilitated delivery.—Based on L. Melius, *American postal service*, p. 11.

476-1600.—Decay of Roman posts.—Beginnings of national posts in Germany, France, Italy, and England.—"The first attempt of any importance, to rescue postal communication from the well-nigh hopeless condition into which it had fallen [after the fall of Rome] was made in Germany in 1380, by the order of Teutonic Knights, who established properly equipped post-messengers for home and international service."—*Postal communication, past and present (Living Age, July 30, 1887)*.—"As early as the thirteenth century the need of personal communication was recognized and the University of Paris arranged for the employment of foot-messengers to bear letters from its thousands of students to the various countries in Europe from . . . [which] they came. . . . The real beginning of letter posts for private . . . purposes dates from . . . 1516 when the Emperor Charles V. made . . . riding posts general throughout his dominions."—L. Melius, *American postal service*, p. 12.—"It is to Francis von Thaxis that must be accorded the title of the first postal reformer. So eager was his interest in the work he had undertaken, that, in order to gain the right of territorial transit through several of the small states of Germany where his plans were strongly opposed, he actually agreed for a time to carry the people's letters free of charge, an instance of generosity, for a parallel of which we look in vain in the history of the Post Office. The mantle of this reformer seems, strangely enough, to have fallen in turn upon many of his descendants, who not only in Germany, but also in Spain, Austria, Holland, and other countries, obtained concessions for carrying on the useful work started by Francis von Thaxis."—*Postal communication, past and present (Living Age, July 30, 1887)*.

1600-1800.—Further development and improvement of postal systems.—Throughout western Europe the postal system continued to develop and improve. By 1627 France had originated a system for transmitting money by post, and for registering letters cheaply. A private penny post

was started in Paris in 1653. Between 1682 and 1790 the postmastership was sold to the highest bidder, who himself profited by the revenues. Napoleon thoroughly remodeled the system in 1802 and it is his organization, with extensive adaptations and improvements, that still obtains to-day. In Germany a government post was established from Cleves to Memel in 1640. Previous to 1803 the family of Thaxis held the hereditary office of postmaster. In Austria a parcels post system on a prepayment basis was in operation in 1772. In England "James I established a regular post for inland letters, and Charles I, recognizing, no doubt, the financial importance of the Post Office, declared it in 1637, by royal proclamation, to be State property. It was, however, during the Protectorate, twenty years later, that the first act of Parliament relating to the formation of a State Post Office was passed. This statute was entitled, 'An Act for the settling of the postage of England, Scotland, and Ireland.' . . . The first trace which can be found of a regular tariff of postal charges is in the reign of Charles I, and even regarded by the light of to-day these charges cannot be held to be exorbitant; for example, a single letter from London, for any distance under eighty miles, was charged twopence; fourpence up to one hundred and forty miles; sixpence for any greater distance in England, and eightpence to all parts of Scotland."—*Postal communication, past and present (Living Age, July 30, 1887)*.—"A penny post was established in London, in 1683, two years before the death of Charles II, for the conveyance of letters and parcels within the City, by Robert Murray, an upholsterer by trade, who, like a great many others, was dissatisfied with the Government, which, in its anxiety to provide for the postal requirements of the country, had entirely neglected the City and suburbs. The post, established by Murray at a vast expense, was ultimately handed over to a William Doewray, whose name is now well known in the annals of Post Office history. The arrangements of the new penny post were simple, and certainly liberal enough. All letters or parcels not exceeding a pound weight, or any sum of money not exceeding £10 in value, or parcel not worth more than £10, could be conveyed at a cost of one penny; or within a radius of ten miles from a given centre, for the charge of twopence. Several district offices were opened in various parts of London, and receiving houses were freely established in all the leading thoroughfares. . . . The deliveries in the City were from six to eight daily, while from three to four were found sufficient to supply the wants of the suburbs. The public appreciated and supported the new venture, and it soon became a great commercial success, useful to the citizens, and profitable to the proprietor. No sooner, however, did a knowledge of this fact reach the ears of those in authority over the General Post Office, than the Duke of York, acting under instructions, and by virtue of the settlement made to him, objected to its being continued, on the ground that it was an invasion of his legal rights. . . . The authorities . . . applied to the court of King's Bench, wherein it was decided that the new or so-called penny post was an infraction of the privileges of the authorities of the General Post Office, and the royal interest, and that consequently it, with all its organization, profits, and advantages, should be handed over to, and remain the property of, the royal establishment."—W. Tegg, *Posts and telegraphs*, pp. 21-23.—The first postal system in the American colonies was privately established in New England in 1676, by

John Heyward, under authority from the General Court of the colony of Massachusetts. "In 1683 the government of Penn established a postal system for the Colony of Pennsylvania. In 1700 Col. J. Hamilton organized 'his postal establishment for British America' including all the English colonies, but soon after disposed of his right to the English crown. In 1710 the English Parliament established by law the first governmental postal system with the general office at New York, which continued until in 1776 the Continental Congress adopted and set in action the postal system proposed by Franklin, who was appointed the first Postmaster General. The first law of the Federal Congress continued this system in operation as sufficient for the public wants, but the postal service was not finally settled until the act of 1792. This law (1792) fixed a tariff which with unimportant changes remained in force until the adoption of the system of Uniform Postage in the United States. Single, double and triple letters were charged 8, 16 and 24 cents respectively when sent to other countries, and four cents plus the internal postage when arriving from foreign countries. The internal postage between offices in the United States was 6, 8, 10, 15, 17, 20, 22 and 25 cents for distances of 30, 60, 100, 150, 200, 250, 350, or 400 miles respectively for single letters and double, triple, etc., this for double, triple, etc. letters. A single letter was defined by the law to be a single sheet or piece of paper, a double letter, two sheets or pieces of paper, etc. . . . The earliest letters which we have seen, consist of single sheets of paper folded and addressed upon the sheet. An envelope would have subjected them to double postage."—J. K. Tiffany, *History of the postage stamps, introduction*.

1803-1914.—Progress in communication.—The chief phenomena of the development of postal systems in the nineteenth and early twentieth centuries are: (1) the great increase in speed through the use of railroads and steamships for conveying mail; (2) the extension of the European and American postal systems to all parts of the world with which occidentals hold communication; and (3) the progressive decrease in the price, and increase in the volume, of mail carried. The development of Great Britain and America, in this respect, is cited as typical of the progress of the postal system everywhere. The method of prepaying the passage of a letter by the use of prepaid stamps was suggested in England by "Mr. Charles Whiting in 1830, and the eminent publisher, the late Mr. Charles Knight, also proposed stamped covers for papers. Dr. T. E. Gray, of the British Museum, claimed the credit of suggesting that letters should be prepaid by the use of stamps as early as 1834."—W. Tegg, *Posts and telegraphs*, pp. 100-101.—"On the morning of the 10th of January, 1840, the people of the United Kingdom rose in the possession of a new power—the power of sending by the post a letter not weighing more than half an ounce upon the prepayment of one penny, and this without any regard to the distance which the letter had to travel. . . . To the sagacity and the perseverance of one man, the author of this system, the high praise is due, not so much that he triumphed over the petty jealousies and selfish fears of the post-office authorities, but that he established his own convictions against the doubts of some of the ablest and most conscientious leaders of public opinion. . . . Mr. Rowland Hill in 1837 published his plan of a cheap and uniform postage. A Committee of the House of Commons was appointed in 1837, which continued its inquiries throughout the ses-

sion of 1838, and arrived at the conviction that 'the mode recommended of charging and collecting postage, in a pamphlet published by Mr. Rowland Hill,' was feasible, and deserving of a trial under legislative sanction. . . . Lord Ashburton, although an advocate of Post Office Reform, held that the reduction to a penny would wholly destroy the revenue. Lord Lowther, the Postmaster-General, thought twopence the smallest rate that would cover the expenses. Colonel Maberly, the secretary to the post office, considered Mr. Hill's plan a most preposterous one, and maintained that if the rates were to be reduced to a penny, the revenue would not recover itself for forty or fifty years. . . . Public opinion, however, had been brought so strongly to bear in favour of a penny rate, that the Chancellor of the Exchequer, Mr. Spring Rice, on the 5th of July, 1839, proposed a resolution, 'that it is expedient to reduce the postage on letters to one uniform rate of a penny postage, according to a certain amount of weight to be determined—that the parliamentary privilege of franking should be abolished, and that official franking be strictly limited—the House pledging itself to make good any deficiency that may occur in the revenue from such reduction of the postage.' A Bill was accordingly passed to this effect in the House of Commons, its operation being limited in its duration to one year, and the Treasury retaining the power of fixing the rates at first, although the ultimate reduction was to be to one penny. This experimental measure reduced all rates above fourpence to that sum, leaving those below fourpence unaltered. With this complication of charge the experiment could not have a fair trial, and accordingly on the 10th of January, 1840, the uniform half-ounce rate became by order of the Treasury one penny. . . . In 1840 the number of letters sent through the post had more than doubled, and the legislature had little hesitation in making the Act of 1839 permanent, instead of its duration being limited to the year which would expire in October. A stamped envelope, printed upon a peculiar paper, and bearing an elaborate design, was originally chosen as the mode of rendering prepayment convenient to the sender of a letter. A simpler plan soon superseded this attempt to enlist the Fine Arts in a plain business operation. The plan of preparing letters by affixing a stamp bearing the head of the ruler of the country, came into use here in May, 1840 [see also ENGLAND: 1840]. The habit of prepayment by postage stamps has now become so universal throughout the world, that in 1861 the system was established in eighty different countries or colonies."—C. Knight, *Popular history of England*, v. 8, ch. 24.—The postal money order system was instituted in 1859. Penny post cards, which had been introduced in Austria in 1860 appeared in Great Britain in 1876. In the United States "a summary of historical data covering some of the principal features of postal progress may be given in chronological order as follows: Postal stamps first issued at New York, July, 1847; stamped envelopes first issued, June, 1853; letters registered, July, 1855; [railway mail service, 1861;] newspaper wrappers, Act of Congress, February, 1861; Free City Delivery, July, 1863; Money Order System, November, 1864; International Money Orders, October, 1867; Postal Cards, May, 1873; Postage reduced to 2 cents, October, 1883; Special Delivery, October, 1885; Rural Delivery, October, 1896; Postal Savings, January, 1911 [see POSTAL SAVINGS BANKS]; Parcel Post [see PARCEL POST], January, 1913."—L. Melius, *American postal service*, pp. 16, 20.—See also Post

OFFICE DEPARTMENT, UNITED STATES: Development; RAILROADS: 1862-1911.—In the Europeanization of the world through colonization, commerce, and conquest during the 19th century, a postal system on the European plan has followed everywhere in the steps of the white men. In Japan, after the Restoration in 1868, Frenchmen were employed to organize the postal system on the modern occidental pattern. In China, where ex-territorial rights are still held by Europeans, post-offices were established by different nationalities for their own mail. In Shanghai, for instance, there is a British, an American, and a Japanese post-office, in addition to the Chinese post-office. In the European colonies from Tsingtau to Cape Town postal systems developed as fast as white men appeared. For inland points not reached by rail, courier systems are still employed, sometimes by municipalities, or local governments, sometimes by groups of individuals.

1873-1875.—Union with telegraph system. See TELEGRAPHS AND TELEPHONES: 1867-1875; 1873; Belgium; Rumania; Serbia; Spain.

1874-1901.—Postal union.—The Postal Union, which embraces most of the civilized and semi-civilized countries of the world, was formed originally by a congress of delegates, representing the principal governments of Europe, and the United States of America, which assembled at Berne, Switzerland, in September, 1874. A treaty was concluded at that time, which established uniform rates of postage (25 centimes, or 5 cents, on half-ounce letters), between the countries becoming parties to it, and opening the opportunity for other states to join in the same arrangement. From year to year since, the Postal Union has been widened by the accession of new signatories to the treaty, until very few regions of the globe where any postal system exists lie now outside of it. The late accessions to the Postal Union have been North Borneo, the German East African Protectorate, and the British Australasian Colonies, in 1891; Natal and Bosnia-Herzegovina in 1892; the South African Republic (Transvaal) in 1893. By the action of an international postal congress, held at Vienna, in 1891, a kind of international clearing-house for the Postal Union was established at Berne, Switzerland, and the settlement of accounts between its members has been greatly facilitated thereby. In 1901 a two cent postage between Great Britain and the United States was agreed upon by treaty.

1898.—Imperial penny postage. See BRITISH EMPIRE: Colonial and imperial conferences: 1898.

1914-1921.—World War and its effects.—Seventh International Postal Union Congress.—At the opening of the World War, practically the whole civilized world was bound together by the postal means of communication, and this civilizing agency remained one of the soundest influences for morale for those at the front and at home. "The new postage stamps issued in 1910 were more numerous and of greater variety than those of any other year since the first adhesive stamp came into existence. About 2,500 of these appeared in 1910 as part of the aftermath of the war. Many of these were issued by new States [Czecho-Slovakia, Poland, Jugo-Slavia, Latvia, Lithuania, Estonia, Russia]. The stamps of 1910 are in themselves a vivid chronicle of great events."—*New postage stamps—thousands of them* (*New York Times Current History*, v. 11, p. 468).—In 1921, at the Seventh International Postal Union Congress, held at Madrid, domestic rates were established between all the states of the Pan-American Union.—See also U.S.A.: 1921: Pan-American Postal Union.

1917-1919.—Increase of rates during World War. See U.S.A.: 1917-1919: Taxation and expenditures.

POST-IMPRESSIONISTS. See PAINTING: Europe (19th century).

POSTLIMINIUM.—“The term ‘postliminium’ is originally one of Roman law derived from *post* and *limes* (i.e., boundary). According to Roman Law the relations of Rome with a foreign State depended upon the fact whether or not a treaty of friendship existed. If such a treaty was not in existence, Roman individuals coming into the foreign State concerned could be enslaved, and Roman goods coming there could be appropriated. Now, *jus postliminii* denoted the rule, first, that such an enslaved Roman, should he ever return into the territory of the Roman Empire, became *ipso facto* a Roman citizen again with all the rights he possessed previous to his capture, and, second, that Roman property, appropriated after entry into the territory of a foreign State, should at once revert to its former Roman owner *ipso facto* by coming back into the territory of the Roman Empire. Modern International and Municipal Law have adopted the term for the purpose of indicating the fact that territory, individuals, and property, after having come in time of war under the sway of the enemy, return either during the war or with the end of the war under the sway of their original Sovereign. . . . Although a territory and the individuals thereon come through military occupation in war under the actual sway of the enemy, neither such territory nor such individuals fall, according to the rules of International Law of our times, under the sovereignty of the invader. They rather remain, if not acquired by the conqueror through subjugation, under the sovereignty of the other belligerent, although the latter is in fact prevented from exercising his supremacy over them. Now, the moment the invader voluntarily evacuates such territory, or is driven away through a levy *en masse*, or by troops of the other belligerent or of his ally, the former condition of things *ipso facto* revives, the territory and individuals concerned being at once, as far as International Law is concerned, considered to be again under the sway of their legitimate Sovereign. For all events of international importance taking place on such territory the legitimate Sovereign is again responsible towards third States, whereas during the time of occupation the occupant was responsible for such events. . . . Postliminium has no effect upon such acts of the former military occupant connected with the occupied territory and the individuals and property thereon as were legitimate acts of warfare. On the contrary, the State into whose possession such territory has returned must recognise all such legitimate acts of the former occupant, and the latter has by International Law a right to demand such recognition.

. . . If the occupant has performed acts which are not legitimate acts of warfare, postliminium makes their invalidity apparent. Therefore, if the occupant has sold immovable State property, such property may afterwards be claimed from the acquirer, whoever he is, without any indemnity. If he has given office to individuals, the latter may afterwards be dismissed. If he has appropriated and sold such private or public property as cannot legitimately be appropriated by a military occupant, it may afterwards be claimed from the acquirer without payment of damages.”—L. Oppenheim, *International law*, v. 2, p. 203.

POSTMASTER-GENERAL. See POST OFFICE DEPARTMENT, UNITED STATES: Development.

POSTS, Frontier. See FRONTIER POSTS.

POSTUMIAN ROAD, one of the great Roman roads. It led from Genoa to Aquileia, by way of Placentia, Cremona and Verona.

POTEMKIN, Gregor Alexandrovitch, Prince of Taurida (1739-1791), Russian statesman. Took part in the plot to dethrone Peter III; instrumental in the southern expansion of Russia, notably in the annexation of the Crimea, 1783, and in the development of Sebastopol.

POTESTAS.—The civil power with which a Roman magistrate was invested was technically termed *potestas*.—W. Ramsay, *Manual of Roman Antiquities*, ch. 5.

POTESTAS TRIBUNITIA.—The powers and prerogatives of the ancient tribunitian office, without the office itself, being conferred upon Augustus and his successors, became the most important element, perhaps, of the finally compacted sovereignty of the Roman emperors.—Based on C. Merivale, *History of the Romans*, ch. 30.—See also ROME: Republic: B. C. 404-402.

POTIDÆA, Siege of.—The city of Potidæa, a Corinthian colony founded on the long peninsula of Pallene which projects from the Macedonian coast, (see GREECE: Map of ancient Greece), but which had become subject to Athens, revolted from the latter 432 B. C., and was assisted by the Corinthians. This was among the quarrels which led up to the Peloponnesian War. The Athenians reduced the city and expelled the inhabitants after a siege of three years.—Thucydides, *History*, bk. 1-2.—See also GREECE: B. C. 432; B. C. 431-420.

POTOCKI, Count Stanislaw Felix (1752-1805), Polish statesman. See POLAND: 1701-1792.

POTOMAC, river in the eastern part of the United States, having its source in the Alleghany mountains and flowing southeast into Chesapeake bay. It was considered an advantageous site for the national capital. See U.S.A.: 1780-1792.

Army of the. See U.S.A.: 1861 (July-November); 1862 (March-May), and after.

POTOSÍ, southwestern department of Bolivia, bordering on Chile and Argentina. (See LATIN AMERICA: Map of South America.) The area is 45,031 square miles. Its estimated population in 1915 was 530,748, composed, in great part, of Indians. It contains the richest silver mines in South America and also produces gold and tin. The capital is Potosí. See ARGENTINA: 1580-1777; CHARCAS, LAS.

POTOWOTAMIES, North American Indian tribe. See SACS.

POTREROS, South American Indian tribe. See PAMPAS TRIBES.

POTSDAM, capital of a district of the same name in the province of Brandenburg, Germany, sixteen miles southwest of Berlin. It was a royal residence from the reign of Frederick William I until the abdication of William II. Its population in 1919 was 50,400.

POTSDAM, Alleged Imperial Council of (1014). See **WORLD WAR**: Diplomatic background: 9; 71 (xxii); 76.

POTSDAM AGREEMENT.—The negotiations between Germany and Russia in 1910 regarding the project of the Berlin-Bagdad railroad were conducted at Potsdam, where the Tsar Nicholas II visited William II of Germany. It was there agreed that Russia should not oppose Germany's Bagdad railroad scheme.

POWHATAN (c. 1550-1618), North American Indian chief. See **POWHATAN CONFEDERACY**.

POWHATAN CONFEDERACY.—"At the time of the first settlement by the Europeans, it has been estimated that there were not more than 20,000 Indians within the limits of the State of Virginia. Within a circuit of 60 miles from Jamestown, Captain Smith says there were about 5,000 souls, and of these scarce 1,500 were warriors. The whole territory between the mountains and the sea was occupied by more than 40 tribes, 30 of whom were united in a confederacy under Powhatan, whose dominions, hereditary and acquired by conquest, comprised the whole country between the rivers James and Potomac, and extended into the interior as far as the falls of the principal rivers. [See **INDIANS, AMERICAN**: Cultural areas in North America: Eastern woodlands area.] Powhatan was a remarkable man; a sort of savage Napoleon, who, by the force of his character and the superiority of his talents, had raised himself from the rank of a petty chieftain to something of imperial dignity and power. He had two places of abode, one called Powhatan, where Richmond now stands, and the

other at Werowocomoco, on the north side of York River, within the present county of Gloucester. . . . Besides the large confederacy of which Powhatan was the chief, there were two others, with which that was often at war. One of these, called the Mannahoacs, consisted of eight tribes, and occupied the country between the Rappahannoc and York rivers; the other, consisting of five tribes, was called the Monacans, and was settled between York and James rivers above the Falls. There were also, in addition to these, many scattering and independent tribes."—G. S. Hillard, *Life of Capt. John Smith (Library of American Biography)*, ch. 4.—"In his younger days Powhatan had been a great warrior. Hereditarily, he was the chief or werowance of eight tribes; through conquest his dominion had been extended. . . . The name of his nation and the Indian appellation of the James River was Powhatan. He himself possessed several names."—E. Eggleston and L. E. Seelye, *Pocahontas*, ch. 3.—"His good will was much influenced by his daughter Pocohontas, who probably saved the life of Smith, made many visits to Jamestown, and finally married Rolfe, one of the colonists. In 1618 Powhatan died, and his able brother, Opechancanough, who disliked the English and wished to expel them before it was too late, began to plot war. In March, 1622, the tribes generally went on the warpath, and swept through the outlying plantations with a trail of blood. Nearly 400 persons perished, and the planters who survived the first attack fled to the older settlements. . . . As soon as the spring crops were planted the whites divided in bands and took a terrible vengeance. For twenty-two years there was peace. But Opechancanough, at last the head chief, only waited an opportunity. In 1644 there was civil war in England, and he thought the expected moment was at hand. Old and blind as he was, he acted with energy, and in two days over 300 settlers were slain. Again the whites took up arms, and in 1646 the aged head chief himself was taken and killed."—J. S. Bassett, *Short history of the United States*, p. 52.—See also **ALGONQUIAN FAMILY**.

POYNINGS' LAW. See **IRELAND**: 1485-1500; **JAMAICA**: 1655-1706.

POZIÈRES, village four miles northeast of Albert, northeastern France, on the road to Ba-paume. In 1916 it was taken from the Germans by the Australians. See **WORLD WAR**: 1916: II. Western front: d, 7; d, 9.

PRADO, Mariano Ignacio (1826-1901), Peruvian soldier. Became president of Peru in 1867, but was overthrown the next year; president, 1875-1879. See **PERU**: 1826-1876; 1872-1883.

PRADO, Museo del, Madrid.—The museum, begun 1785 during the reign of Charles III, was not completed until the reign of Ferdinand VII. The treasures of Charles V, a large number of French pictures of the seventeenth and eighteenth centuries belonging to Philip II and Philip IV and V, a collection of pictures from the palaces of Ferdinand VII, and the addition in 1840 of the pictures of the "Museo Nacional de la Trinidad," combined to make the Prado one of the most valuable collections in Europe. The museum is especially famous for its old paintings. It contains representative works of almost every school of painting, notably that of the Spanish school. Unrivalled is its collection of the paintings of Velasquez. There is also a sculpture gallery, comprising

works brought to Spain by Isabella Farnese which were originally collected in Rome by Queen Christina of Sweden.

PRÆTORIAN GUARDS, PRÆTORIANS.—"The commander-in-chief of a Roman army was attended by a select detachment, which, under the name of 'Cohors Prætoria,' remained closely attached to his person in the field, ready to execute his orders, and to guard him from any sudden attack. . . . Augustus, following his usual line of policy, retained the ancient name of 'Prætoriae Cohortes,' while he entirely changed their character. [See **MILITARY ORGANIZATION: 11.**] He levied in Etruria, Umbria, ancient Latium, and the old Colonies, nine or ten Cohorts, consisting of a thousand men each, on whom he bestowed double pay and superior privileges. These formed a permanent corps, who acted as the Imperial Life Guards, ready to overawe the Senate, and to suppress any sudden popular commotion."—W. Ramsay, *Manual of Roman antiquity*, ch. 12.—The Prætorian Guard had been quartered, during the reign of Augustus, and during the early years of the reign of Tiberius, in small barracks at various points throughout the city, or in the neighboring towns. Sejanus, the intriguing favorite of Tiberius, being commander of the formidable corps, established it in one great permanent camp, "beyond the north-eastern angle of the city, and between the roads which sprang from the Viminal and Colline gates." This was done A. D. 23.—C. Merivale, *History of the Romans*, ch. 45.—See also **ROME: Empire: 14-37**.

A. D. 41.—Their elevation of Claudius to the throne. See **ROME: Empire: 41**.

193.—Murder of Pertinax and sale of the empire. See **ROME: Empire: 192-284**.

193.—Reconstitution by Severus.—Severus, whose first act on reaching Rome had been to disarm and disband the insolent guard which murdered Pertinax and sold the empire to Julianus, had no thought of dispensing with the institution. There was soon in existence a new organization of Prætorians, increased to four times the ancient number and picked from all the legions of the frontiers.—Based on E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 5.

238.—Murder of Balbinus and Pupienus. See **ROME: Empire: 192-284**.

312.—Abolition by Constantine.—"By the prudent measures of Diocletian, the numbers of the Prætorians were insensibly reduced, their privileges abolished, and their place supplied by two faithful legions of Illyricum, who, under the new titles of Jovians and Herculians, were appointed to perform the service of the imperial guards. . . .

They were old corps stationed at Illyricum; and, according to the ancient establishment, they each consisted of 6,000 men. They had acquired much reputation by the use of the plumbatic, or darts loaded with lead."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 13, with foot-note.—Restored and augmented by Maxentius, during his brief reign, the Prætorians were finally abolished and their fortified camp destroyed, by Constantine, after his victory in the civil war of 312.

PRÆTORIAN PRÆFACTS.—"As the government degenerated into military despotism, the Prætorian præfect, who in his origin had been a simple captain of the guards, was placed not only at the head of the army, but of the finances, and even of the law. In every department of administration he represented the person, and exercised the authority, of the emperor. The first præfect who enjoyed and abused this immense power was Plautianus, the favourite minister of Severus. . . . They [the Prætorian præfects] were deprived by Constantine of all military command as soon as they had ceased to lead into the field, under their immediate orders, the flower of the Roman troops; and at length, by a singular revolution, the captains of the guards were transformed into the civil magistrates of the provinces. According to the plan of government instituted by Diocletian, the four princes had each their Prætorian præfect; and, after the monarchy was once more united in the person of Constantine, he still continued to create the same number of four præfects, and intrusted to their care the same provinces which they already administered. 1. The Præfect of the East stretched his ample jurisdiction" from the Nile to the Phasis and from Thrace to Persia. "2. The important provinces of Pannonia, Dacia, Macedonia, and Greece, acknowledged the authority of the Præfect of Illyricum. 3. The power of the Præfect of Italy" extended to the Danube, and over the islands of the Mediterranean and part of Africa. "4. The Præfect of the Gauls comprehended under that plural denomination the kindred provinces of Britain and Spain, and . . . to the foot of Mount Atlas. . . . Rome and Constantinople were alone excepted from the jurisdiction of the Prætorian præfects. . . . A perfect equality was established between the dignity of the two municipal, and that of the four Prætorian præfects."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 5 and 17.—See also **ROME: Empire: B. C. 31-A. D. 14; A. D. 102-284; 323**.

PRÆTORIUM.—"In the very early days of Rome, before even Consuls had a being, the two chief magistrates of the republic bore the title of Prætors. Some remembrance of this fact lingering in the speech of the people gave always to the term Prætorium (the Prætor's house) a peculiar majesty, and caused it to be used as the equivalent of palace. So in the well-known passages of the New Testament, the palace of Pilate the Governor at Jerusalem, of Herod the King at Caesarea, of Nero the Emperor at Rome, are all called the Prætorium. From the palace the troops who surrounded the person of the Emperor took their well-known name, 'the Prætorian Guard.'"—T. Hodgkin, *Italy and her invaders*, v. 1, bk. 1, ch. 3.

PRAGMATIC SANCTION.—"No two words convey less distinct meaning to English ears than those which form this title: nor are we at all prepared to furnish an equivalent. Perhaps 'a well considered Ordinance' may in some degree represent them: i. e. an Ordinance which has been fully discussed by men practised in State Affairs. But we are very far from either recommending or being satisfied with such a substitute. The title was used in the Lower [the Byzantine] Empire, and Ducange ad v. describes 'Pragmaticum Rescriptum seu Pragmatica Sanctio' to be that which 'adhibitâ diligente causæ cognitione, ex omnium Procerum consensu in modum sententiæ lecto, a Principe conceditur.'"—E. Smedley, *History of France*, pt. 1, ch. 15, footnote.—"Pragmatic Sanction being, in the Imperial Chancery and some others, the received title for Ordinances of a very irrevocable nature, which a sovereign makes, in affairs that belong wholly to himself, or what he reckons his own rights."—T. Carlyle, *History of Frederick II*, bk. 5, ch. 2.—"This word [pragmatic] is derived from the Greek 'pragma,' which means 'a rule.'"—E. de Bonnechose, *History of France*, v. 1, epoch 2, bk. 1, ch. 5, footnote.

PREMISLAUS, king of Poland, 1280-1296.

PREMONSTRATENSIAN ORDER.—This was the most important branch of the Regular Canons of St. Augustine, founded by St. Norbert, a German nobleman, who died in 1134. It took its name from Pré-montré, in Picardy, where the first house was established.—E. L. Cutts, *Scenes and characters of the Middle Ages*, ch. 3.—See AUSTIN CANONS; MONASTICISM: 9th-13th centuries.

PRÉMONT, town in northern France, about thirteen miles northeast of St. Quentin. It was taken by American troops in 1918. See WORLD WAR: 1918: II. Western front: 1.

PREMPEH, king of Ashanti, 1888-1896. Overthrown by the British, 1896. See ASHANTI: 1895-1900.

PREMUDA, island in the Adriatic sea, off the coast of Dalmatia. It was promised to Italy by the Treaty of London, in 1915, but was assigned to Jugo-Slavia in 1919. See LONDON, TREATY OR PACT OF.

PRE-RAPHAELITE BROTHERHOOD, term properly signifying the Italian painter before Raphael, now commonly applied to a school of art and literature that arose in England about the middle of the nineteenth century. See ENGLISH LITERATURE: 1833-1909; PAINTING: Europe (19th century).

PRESBURG. See PRESSBURG.

PRESBYTER. See BISHOP: His character, etc.

PRESBYTERIAN CABAL. See MASSACHUSETTS: 1646-1651.

PRESBYTERIAN CHURCHES: Definition and claims of Presbyterianism.—"Presbyterianism is a system of church government by presbyters. It is thereby distinguished from the other systems of church government, the papal, the prelatical, the consistorial, and the congregational. . . . In the presbyterian system all ecclesiastical authority is in the body of presbyters. . . . Presbyterianism does not claim that the presbyters of any branch of the Church of Christ have

the exclusive authority over the church. It recognizes the ordained presbyters of the congregational and consistorial systems. It recognizes that the pope and the prelates are presbyters, but declines to recognize them as of a higher order than presbyters."—C. A. Briggs, *American Presbyterianism*, pp. 1-2.

Theory of origin.—"An attempt has sometimes been made to trace a continuous line of Presbyterian history from the apostolic period to the organization of the Church in the time of the Swiss Reformation. . . . But Presbyterianism as an organized form of church life dates from the time of the Reformation."—C. L. Thompson, *Presbyterians*, p. 10.—"As the Lutheran churches represent those features of the Reformation emphasized by Luther, so the Presbyterian and Reformed churches represent those emphasized by Calvin [1509-1564]. The doctrinal and ecclesiastical system developed at Geneva, modified somewhat in Holland and in France, and transferred to Scotland, became solidified there largely under the influence of John Knox in 1560."—United States Census, *Religious bodies*, 1916, pp. 2, 549.

1557-1646.—Struggle and victory of early Presbyterianism in Scotland.—First Covenant.—Confession of Faith.—National Covenant.—Act of 1592.—Charles I and the National Covenant.—Westminster Assembly.—"In 1557 a number of the Scottish reformers, buoyed up in their waning enthusiasm by the written exhortations of the absent Knox, met in Edinburgh and 'Signed a Covenant.' . . . [See SCOTLAND: 1547-1557; 1557; 1568-1572.] The Confession of Faith was ratified by Parliament on 17th August, 1560. . . . The first General Assembly of the Reformed or Protestant Church of Scotland met in Edinburgh on 20th December, 1560. . . . In the beginning of 1581, a second Confession of Faith, commonly called the King's Confession and known by the name of the National Covenant was signed by the King and his household. [See SCOTLAND: 1581.] . . . The Act of Parliament, 15th June, 1592, may be regarded as the constitutional charter of the Presbyterian Church government in Scotland. . . . For many years following the passing of this Act the Presbyterian Church of Scotland was in a flourishing condition."—J. Macpherson, *History of the church in Scotland*, pp. 101-102, 111, 117, 131, 152.—The attempt of Charles I to impose on the church a book of canons and a liturgy [1637] was met by a renewal of the National Covenant and the restoration of Presbyterian forms [see SCOTLAND: 1638], coming to a logical conclusion in the Westminster confession of faith in 1646 [see ENGLAND: 1643 (July-September); 1646 (March)], which, with the catechism, was a chief part of the work of the Westminster Assembly which met in London 1645-1640.—See also ENGLAND: 1638-1640; 1643 (July); WESTMINSTER ASSEMBLY.

1649-1919.—Effect of Westminster Assembly on later history of non-conformity.—Final establishment of Presbyterianism in Scotland.—Disruption.—Resulting divisions.—"This [the Westminster Assembly] was not a distinctively Presbyterian body. Called by act of Parliament to consider the state of the entire country in matters of religion, it represented in its membership all English-speaking Christians, although the Anglicans took no active part in its deliberations. It had no ecclesiastical authority, yet its deliverances on doctrine have furnished the basis both for Presbyterian and many non-Presbyterian bodies, and the form of ecclesiastical government it recommended has gone far beyond the country

where it was formulated, and has had a marked influence not only on church life but in civil and national development. In England it fostered the development of the Independents who afterwards became the Congregationalists. In Scotland in the eighteenth and nineteenth centuries, it resulted in the development of several Presbyterian bodies each insisting upon some specific administrative phase, and one of its strongholds was the north of Ireland where so many Scotch found a more congenial home for the time being until they should cross the Atlantic."—United States Census, *Religious bodies*, 1916, pt. 2, p. 549.—"At the Restoration [see ENGLAND: 1658-1660; 1661] the church again became Episcopal [see SCOTLAND: 1660-1666], but Presbyterianism was reestablished by the Scotch Parliament in 1690. [See SCOTLAND: 1688-1690.] The final treaty of union between England and Scotland (1706) provided for the securing of the Presbyterian forms in the Church of Scotland [see SCOTLAND: 1707-1708] and the first official act of a new British sovereign is his oath to preserve this settlement. Early in the nineteenth century the Evangelical movement in the established Church of Scotland led to the disruption. The Free Church thus came into existence in 1843. In 1847 the formation of the United Presbyterian Synod marked the consolidation of the dissenting Presbyterianism of Scotland. These events had their effect in England when in 1876 the English section of the synod united with the older Presbyterian body in England and brought a needed vigor into its ranks. Of the 353 congregations of the Presbyterian Church of England, twenty-eight originated in the seventeenth century, forty-two in the eighteenth and 283 have been established in the last 118 years."—*New Hazell Almanac*, 1921, p. 319.—"The several subdivisions today of Scottish Presbyterianism and its development in the British Empire are the United Free Church of Scotland, formed by the union in 1900 of the Free Church of Scotland and the United Presbyterian Church [see SCOTLAND: 1900-1905]; the Calvinistic Methodist (Presbyterian) Church of Wales which is in federation with the United Free Church of Scotland and the Presbyterian Church of England; the Presbyterian Church in Ireland formed in Ulster by Scottish settlers during the reign of James I; the Presbyterian church of England; and several less numerous divisions such as the remnant of the Free Church of Scotland, the Reformed Presbyterian Synod, the Eastern Reformed Synod, the United Original Seceders, the Secession Presbytery in Ireland, and the Synod of the Church of Scotland in England. In December, 1919, the established Church of Scotland had 728,329 members, the United Free Church 528,084 members, the Welsh Presbyterian Church 184,604 members, the Irish Presbyterian Church 104,778 members."—*Ibid.*, p. 319.—In 1918 the Presbyterian church in England had 85,551 members.

1683-1789.—Presbyterianism in America.—Colonial churches.—"Old Side" and "New Side" parties.—Reunion in 1758.—First general assembly in 1789.—"The earliest Presbyterian churches in . . . [the United States] go back to the first half of the seventeenth century. The elements composing them were chiefly English Puritans and Scotch and Irish immigrants. On Long Island a church was organized as early as 1640 by a Puritan minister named John Young. Another church was founded at Hempstead two years later. Presbyterian services were held on Manhattan Island in 1643 by Francis Doughty, and a Presbyterian church was established at Newark, N. J., in 1667. The claim has recently been

advanced that the oldest Presbyterian church is the First Church of Norfolk, Va., which was established as a congregation on Elizabeth River in the first quarter of the seventeenth century. Rev. Francis Makemie, generally regarded as the father of American Presbyterianism, came to this country in 1683 from Ireland. . . . He organized a Presbyterian church at Snow Hill, Md., at the close of the century, and in 1706, with John Hampton, an Irishman, and George McNish, a Scotchman, and four other ministers . . . organized the first presbytery in America, the Presbytery of Philadelphia. . . . In 1716, the number of ministers having increased to seventeen and covering an extensive territory, a synod, the Synod of Philadelphia, was formed, and the presbytery was divided into three 'subordinate meetings, or presbyteries.' In 1741 there was a division in the synod in consequence of differences respecting subscription to the profession of faith and doctrines and practices, which an extensive revival movement brought into prominence. Those contending for a strict subscription and opposing what they regarded as errors of doctrine in the revival movement were known as Old Side, and the other party as New Side, Presbyterians. The latter organized the Synod of New York. In 1758 the two bodies were reunited as the Synod of New York and Philadelphia. At the opening of the Revolutionary War, in 1775, there were in connection with the synod 17 presbyteries and 170 ministers. The church suffered severely in the war for independence, but it became prosperous after peace was declared, and in 1788 the synod decided to organize a general assembly with four synods. It revised and adopted the Westminster Confession and Larger Catechism, form of government, book of discipline, and directory of worship. The first meeting of the general assembly was held in Philadelphia in 1789."—H. K. Carroll, *Religious forces of the United States*, pp. 279-280.—See also SOUTH CAROLINA: 1680.

1792-1837.—Plan of union with Congregationalists.—"Old School" and "New School."—"The first important movement in the church after the adoption of the constitution was the formulation of a Plan of Union with the Congregational associations of New England. [See CONGREGATIONAL CHURCH: 1800-1916.] . . . This plan allowed Congregational ministers to serve Presbyterian churches and vice versa; and also allowed to churches composed of members of both denominations the right of representation in both presbytery and association. It remained in force until 1837, and was useful to both denominations in securing the results of the great revivals of religion throughout the country, and also in furthering the causes of home and foreign missions. What is known as the Cumberland separation took place during this period."—United States Census, *Religious bodies*, 1916, pt. 2, p. 552.—"The Cumberland Presbyterian Church . . . owes its existence to a revival which began among the Presbyterian churches within the bounds of the Presbytery of Transylvania, Ky., in 1800. The awakening was first manifested in the congregation of the Rev. James McGready, at Gasper River, Logan County, and soon extended throughout the Cumberland Valley, in Kentucky and Tennessee. . . . Some of the ministers looked upon the revival with disfavor, and opposed the licensing and ordaining of laymen to preach. . . . The outcome of the matter was the organization of an independent presbytery in 1810, which was called the Cumberland Presbytery. . . . In 1813 . . . the Cumberland Synod was constituted. The synod authorized an expression of dissent from the

teaching of the Westminster Confession as to reprobation, a limited atonement, infant salvation, and the calling of the elect only. The new church was rapidly extended."—H. K. Carroll, *Religious forces of the United States*, p. 289.—"In this period also the first theological seminary of the church was founded at Princeton, N. J. (1811), and most of the missionary and benevolent boards were established. About the year 1825 controversies arose respecting the Plan of Union and the establishment of denominational agencies for missionary and evangelistic work. . . . The party . . . opposed to united work was known as the 'Old School,' and that favoring the continuance of the plan as the 'New School.' . . . The Old School majority in the assembly of 1837 brought the matters at issue to a head by abrogating the Plan of Union, passing resolutions against the interdenominational societies, excising . . . [certain] synods . . . and establishing the Presbyterian Board of Foreign Missions. . . . The excised synods met . . . setting forth the views of the New School . . . and elected commissioners to the assembly in 1838. When that assembly met, the New School commissioners protested, . . . organized an assembly of their own. . . . and then withdrew."—United States Census, *Religious bodies*, 1916, p. 552.

1810.—Action on liquor problem. See LIQUOR PROBLEM: United States; 1810-1826.

1838-1869.—Two schools.—Divisions caused by Civil War.—Reunion of schools.—Both schools or branches of the church grew steadily though slowly, until disruption caused by the slavery discussion, when the southern presbyteries of each school formed new organizations. The United Synod, New School, and the Presbyterian Church in the Confederate States (also New School), joined forces in 1864, and upon the cessation of hostilities in 1865 became known as the Presbyterian Church in the United States, the official name of the northern body being the Presbyterian Church in the United States of America. On account of the resemblance of titles these two churches are generally referred to as the Northern and the Southern Churches. It was during this period that the United Presbyterian Church of North America came into existence. "This body is not historically connected with the United Presbyterian Church of Scotland, though it was formed in a similar way and of similar elements. The Scottish body was organized in 1847 of Secession or Associate Burgher, and Relief Presbyterians. The American branch was constituted in 1858 of Associate and Associate Reformed Presbyterians. The Associate Presbyterians included both Burghers and Secession Presbyterians, and the Associate Reformed, Associate and Reformed Presbyterians. All these divisions were brought to the United States by Scotch immigrants. In 1858 most of the Associate and Associate Reformed Presbyterians agreed to unite, and the United Presbyterian Church in North America was the result. A number of each of the bodies, however, refused to enter the union, and hold still a separate existence."—H. K. Carroll, *Religious forces of the United States*, p. 298.—The most important event of this period for the Presbyterian churches, however, was the reunion of the New School and the Old School which came about at a conference meeting at Pittsburgh, Pa., on November 12, 1860 on "the doctrinal and ecclesiastical basis of our common standards." At the same time a memorial fund of \$7,883,083 was raised in connection with the reunion movement.

1870-1920.—Movement towards church union.

—Divisions of Presbyterian and Calvinistic churches in the United States.—"Since 1870 the church has made steady progress along all lines. . . . The controversy (1891-1894) as to the sources of authority in religion and the authority and credibility of the Scriptures . . . terminated in the adoption by the General Assembly . . . 1890, of a unanimous deliverance affirming the loyalty of the church to its historic views on these subjects. In the year 1903 a movement for the revision of the Confession of Faith came to a successful close. This year was also noteworthy for the beginnings of the movement for union with the Cumberland Presbyterian Church. This union was brought about in 1906 (although a minority refused to accept it and retained the old name and constitution). . . . In 1907 the Council of the Reformed Church in the United States holding the Presbyterian System was organized, bringing into cooperative relations seven of the churches of the Presbyterian family in the country. The Presbyterian Church in the United States of America has been identified with every movement for international fellowship and church union. It was an important factor in 1905 and 1908 in the preliminary arrangements for, and the organization of, the Federal Council of the Churches of Christ in America; and is represented on the Advisory Committee of the World Conference on Questions of Faith and Order."—United States Census, *Religious bodies*, 1916, p. 553.—Besides those branches of Presbyterianism already mentioned "the Calvinistic Methodists' of Wales are represented by the Welsh Calvinistic Methodist Church [Presbyterian in all but name]. Five Presbyterian denominations are directly connected with the Secession and Relief movement of the Church in Scotland in the eighteenth century: The United Presbyterian Church of North America; the Associate Synod of North America, known also as the Associate Presbyterian Church; the Associate Reformed Presbyterian Church, formerly the Associate Reformed Synod of the South; the Synod and the General Synod of the Reformed Presbyterian Church. In close harmony with these distinctively Presbyterian churches are the Reformed churches traceable to the influence of immigration from the continent of Europe; the Reformed Church in America (Dutch) and the Christian Reformed Church, both of which originated in Holland; the Reformed Church in the United States (German) whose beginnings were in Switzerland and Germany; and the Hungarian Reformed Church in America, representing the State Reformed Church of Hungary."—United States Census, *Religious bodies*, 1916, p. 549.—"Statistics available in 1920 report 10,066 churches with 2,243,678 members of Presbyterian bodies and 2,770 churches with 535,040 members of Reformed Calvinistic bodies in the United States."—S. R. Warburton, ed., *Year book of the churches*, p. 201.

1919-1920.—Interchurch and New Era Movements.—The various Presbyterian bodies in the United States took part in the Interchurch World Movement during 1919-1920, a movement which was initiated by the proposals of the Foreign Missions Board of the Southern Presbyterian Church in 1918. (See INTERCHURCH WORLD MOVEMENT.) In 1910 the Presbyterian church inaugurated its "New Era Movement," partly to provide an organization for promoting its part in the Interchurch World Movement, partly as the means of a general awakening of the denomination throughout the United States. The movement included a drive for funds for home and foreign missions, after-war relief work, etc. "The seven-fold de-

partmental organization of the New Era Movement . . . [included] the Departments of Spiritual Resources, Stewardship, Social Service, Gospel Extension, Missionary Education, Every Member Mobilization and Publicity. . . . Through a thoroughly organized Field Department these seven departments of creative or suggestive activity carry their plans and programs to the individual church."—*Second Annual Report of Committee on New Era Movement, 1920, p. 6.*—Dissatisfied with the policy of the Interchurch movement, which was undergoing a severe strain due to the vastness of its program, the Presbyterian Church (North) withdrew during the summer of 1920.

Presbyterianism outside the United States and Great Britain.—In Australia a Presbyterian church was built in New South Wales as early as 1803, a congregation organized in Queensland in 1840, one in Victoria in 1841 and presbyteries established in various other colonies and districts of the country about the middle of the century. "In 1885 a federation of all Australian churches was created. . . . The Australian church has no synods, nor any courts between its presbyteries and the general assembly. This church has discussed the question of union with some of the other denominations. . . . The church reports [1911] 43 presbyteries, about 500 congregations with about 60,000 communicant members. In New Zealand, in 1855, the presbytery of Otago was formed in the South. In the north a large settlement was made at Auckland, where a presbytery was organized in 1856. Other presbyteries were soon nucleated from the union of which there came, in 1862, the General Assembly of the Presbyterian Church of New Zealand, embracing not only all the congregations and presbyteries on the north island but five presbyteries that had been formed in the northern portion of the southern island. . . . A large portion of the southern church from the very beginning desired union with those of the north, but an influential minority successfully resisted. . . . By degrees, however, this party softened its attitude, so that an organic union was formed between the two churches in 1901, the United church taking the name of the General Assembly of the Presbyterian Church of New Zealand. The synod of Otago provided that it should continue its separate existence for the sake of preserving its interest in the control of the endowment it had received [on settlement] from the company. . . . At the census of 1906 . . . more than one-fifth of the whole population called themselves Presbyterians. As organized the Presbyterian Church reports 16 presbyteries, 215 congregations with a communicant church roll of some 32,000 persons. . . . There is now but one Presbyterian Church in the Dominion of Canada, comprising eight synods and sixty-seven presbyteries [1911]. . . . An interesting movement has been going on since 1903 with the view of forming a union between the Methodist, Congregational, and Presbyterian Churches in the Dominion. . . . Numerous bodies of Presbyterians organized or unorganized are found in many other countries."—S. M. Jackson, ed., *New Schaff-Herzog religious encyclopedia, v. 9, pp. 223-225, 237, 239.*

PRESIDENT.—The title *praeses*, or president, was given in classical Latin to all provincial governors. Later it was confined to the procurators who governed the smaller provinces. In Charlemagne's time *praeses provinciae* was applied to counts, and later, *praeses* or *praesidens* was used to refer to royal seneschals and other royal officials. In this sense—as a lieutenant of the crown—the word persisted in England till late in the Middle Ages. In colonial New Hampshire, Pennsylvania and South Carolina there was a president of the council, and even after Pennsylvania and New Hampshire became states, one member of the Executive Council was called president. Delaware, South Carolina, and New Hampshire had a single executive head known as the president. During the period of the Revolution the Continental Congress was presided over by an officer known as the president and it was natural, when the Constitution of the United States was framed (1787) that the already familiar title should be applied to the head of the Federal government. The South American republics copied the United States' title for their chief executives, as did also France (in 1849) and the Swiss republic (in 1848). "A century ago there was in the Old World only one spot in which the working of democracy could be studied. In 1914 there were five republics. Within a few months the number has been trebled. It has been a remarkable period of constitution drafting. . . . [But for these new governments created since the World War], the rigid system of the United States apparently had no attractions. Jugoslavia is the only instance in which the titular executive is a king. Czechoslovakia and Poland took for their models the French constitution; they have presidents elected by the chambers but with powers somewhat greater than those of the President of France. Germany has a President elected by the people but a cabinet responsible to the legislature. Most interesting of all, however, is the arrangement in Esthonia and in the German states (Länder). The ceremonial executive is dispensed with; the Swiss collegial executive is the model that is most closely followed, with the important difference that it is responsible to the legislature, and that, in determining the result of conflicts the people are to be consulted directly."—H. McBain and L. Rogers, *New constitutions of Europe, pp. 4, 28.*

France.—"When the executive of France is spoken of, in connection with legislation, it is not the President who is intended, but the ministers. [See CABINET: French.] In fact his position with reference to the ministers of state is exactly opposite to that of an American president in relation to the members of his cabinet. . . . Following the example of England, in 1875, the Republic decided that its President should be responsible only in the event of high treason, and that, on the other hand, the ministers, appointed by him to direct the great public services, should be responsible to the Chambers as a solidarity in matters of General policy and individuality for their personal actions. This division of responsibilities is the great characteristic of the constitutional sys-

tem which is today that of France, and which is known as the parliamentary system. . . . The ministers, in fact, being alone responsible, are those who actually exercise authority; the President presides, but does not govern; he can form no decision save in agreement with his ministers, and the responsibility is theirs. . . . The President therefore exercises no power alone. Each of his proclamations must be countersigned by a minister.' (Note—Raymond Poincaré, 'How France is Governed' (1914), p. 172.) The third article of the Constitution of 1875 declares that 'the President of the Republic shall have the initiative of laws concurrently with the members of the two chambers.' But in practice this has come to mean not a direct and personal initiative on the part of the President, but an initiative exercised by him in conjunction with one or more of the ministers, or perhaps, rather, nothing more than his formal assent to an initiative exercised by a minister. For any projected law put forward in the name of the President must be countersigned by a minister, and this minister must therefore appear in person before the Chambers to explain and defend the measure. The President has no personal access to Parliament and cannot take part in the debates. It might easily result that the President of the French Republic should be only a figure-head, a mere puppet in the hands of his ministers. Historically it is the fact that this does result when he is a man of mediocre gifts. It was Casimir-Perier retiring from office who said that he had been 'nothing but a master of ceremonies,' and Grevy who described the presidency as merely 'an honorable retreat for an old servant of the country.' But it . . . [was] far otherwise with M. Raymond Poincaré."—H. C. Black, *Relation of the executive power to legislation*, pp. 47-48.—See also FRANCE: 1875-1889.

Switzerland.—"By the constitution of the Swiss Confederation the legislative power is vested in the Federal Assembly. 'The supreme directive and executive authority of the Confederation shall be exercised by a Federal Council, composed of seven members,' and which is presided over by the President of the Confederation. Also it is declared that the Federal Council 'shall introduce bills or resolutions into the Federal Assembly, and shall give its opinion upon the proposals submitted to it by the councils or by the cantons.' It will be seen, therefore, that the executive branch of the government is possessed of something more than a mere advisory authority, having a direct right of initiative; and it is customary practice for the legislature to invite the executive to prepare and submit drafts of bills upon important subjects of legislation."—H. C. Black, *Relation of the executive power to legislation*, pp. 49-50.—See also SWITZERLAND: 1848-1890.

United States.—"No person except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President [See U.S.A.: Constitution]; neither shall any person be eligible to that office who shall not have attained to the

age of thirty-five years, and been fourteen years a resident within the United States. . . . The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several States, when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment. He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments. The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session. He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States. The President, Vice-President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors."—*Constitution of the United States, Art. 2, and Art. 12 of Amendments*.—"The provisions of the Constitution regarding the Presidential succession, in case of the death or resignation of both President and Vice-President, are: 'In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed or a President shall be elected.' (Article II, Section 6.) In pursuance of the power thus granted to it in the last half of this section, Congress in 1792 passed an act declaring that in case of the death, resignation, etc., of both the President and Vice-President, the succession should be first to the President of the Senate and then to the Speaker of the House. This order was changed by the act of 1886, which provided that the succession to the presidency should be as follows: 1. President. 2. Vice-President. 3. Secretary of State. 4. Secretary of the Treasury. 5. Secretary of War. 6. Attorney General. 7. Postmaster General. 8. Secretary of the Navy. 9. Secretary of the Interior. In all cases the remainder of the four-years' term shall be served out. This act also regulated the counting of the votes of the electors by Congress, and the determination of who were

legally chosen electors."—*Statutes of the United States passed at 1st Session of 40th Congress*, p. 1.

United States: Need of a single strong executive.—Discussions in the Constitutional Convention.—"We know that every plan of government proposed or presented to the [constitutional] convention embodied in some form as a prominent feature of the establishment of an effective Executive; and I think it can be safely said that no subject was submitted which proved more perplexing and troublesome. We ought not to consider this as unnatural. Many members of the convention, while obliged to confess that the fears and prejudices that refused executive power to the Confederacy had led to the most unfortunate results, were still confronted with a remnant of those fears and prejudices, and were not yet altogether free from the suspicion that the specter of monarchy might be concealed behind every suggestion of executive force. Others less timid were nevertheless tremendously embarrassed by a lack of definite and clear conviction as to the manner of creating the new office and fixing its limitations. Still another difficulty, which seems to have been all-pervading and chronic in the convention, and which obstinately fastened itself to the discussion of the subject, was the jealousy and suspicion existing between the large and the small States. I am afraid, also that an unwillingness to trust too much to the people had its influence in preventing an easy solution of the executive problem. The first proposal made in the convention that the President should be elected by the people was accompanied by an apologetic statement by the member making the suggestion that he was almost unwilling to declare the mode of selection be preferred, 'being apprehensive that it might appear chimerical.' Another favored the idea of popular election, but thought it 'impracticable'; another was not clear that the people ought to act directly even in the choice of electors, being, as alleged, 'too little informed of personal characters in large districts, and liable to deception;' and again, it was declared that 'it would be as unnatural to refer the choice of a proper character for Chief Magistrate to the people as it would to refer a trial of colors to a blind man.' This imperfect review of the incidents that led up to the establishment of the office of President, and its rescue from dangers which surrounded its beginning, if not otherwise useful, ought certainly to suggest congratulatory and grateful reflections. The proposition that the selection of a President should rest entirely with the Congress, which came so near adoption, must, I think, appear to us as something absolutely startling; and we may well be surprised that it was ever favorably considered by the convention."—G. Cleveland, *Presidential problems*, pp. 7-10.—"Inasmuch as Senators are elected by the State legislatures [changed in 1913 by the Seventeenth Amendment], Representatives in Congress by the votes of districts or States, and judges are appointed by the President, it is only in the selection of the President that the body of the American people can by any possibility act together and directly in the equipment of their national Government. Without at least this much of participation in that equipment, we could hardly expect that a ruinous discontent and revolt could be

long suppressed among a people who had been promised a popular and representative government."—G. Cleveland, *Presidential problems*, pp. 7-10, 12.

United States: Salary and allowances.—The President's salary is \$75,000 a year. He is given additional funds for traveling expenses, the maintenance of the White House, etc. See WHITE HOUSE.

United States: Presidential powers and functions.—Executive power in the early national government.—"The national constitution provided for a President, in whom the executive power should be vested. . . . The meaning of those words . . . in 1787 . . . was that the President was to have a military and political power rather than an administrative power. The meaning of these words is further explained by the enumeration of the specific powers which were granted to the President by the constitution. These are the same powers possessed by the governors of the commonwealths. They are the power of military command, the diplomatic power, the limited veto power, the power of pardon, the power to call an extra session of Congress, to adjourn it in case of a disagreement between the houses, and the power to send a message to the Congress. The general grant of the executive power to the President means little except that the President was to be the authority in the government that was to exercise the powers afterwards enumerated as his. The only other enumerated power is an administrative power, and is also the only purely administrative power that is mentioned clearly in the constitution. This is the power of appointment. Finally it is to be noted that, in accordance with the American conception of the executive power, the President did not have any power to issue general ordinances, even to supplement existing law, which would bind the citizen. The only ordinance power which the President had at the beginning of our history, and indeed now, is the power to issue ordinances when the legislature has specifically delegated to him the power to regulate a given subject. The only possible exception to this rule is that in times of war the war power which is generally recognized as belonging to the President is susceptible of very great extension and may be construed, indeed in the past has been construed, as giving to the President quite an ordinance power. . . . But American development has completely changed this conception of the power possessed by the President. In the first place the duty imposed upon him by the constitution, to see that the laws are faithfully executed, has been construed by the Congress as giving it the power of imposing duties and conferring powers upon the President by statute, and has led to the passage of almost innumerable laws which have greatly increased the importance of the President's position, and have given him powers and duties relative to the details of many administrative branches of the national government. . . . The second cause of the change in the position of the President is to be found in the interpretation of the constitution made by the first Congress relative to the power of removal. The constitution gave the power of removal to no authority expressly. The question came up before the first Congress in the discussion of the act

organizing the department of foreign affairs. Although there was a difference of opinion in the Congress as to who under the constitution possessed this power, it was finally decided by a very small majority that the power of removal was a part of the executive power and therefore belonged to the President. This was the recognized construction of the constitution for a great number of years, although it did not meet with the approval of some of the most eminent statesmen. After more than three-quarters of a century Congress deliberately reversed this decision and by the tenure-of-office acts of 1867-1869 (later incorporated in the Revised Statutes as sections 1767-1769) decided that the constitution had not impliedly or expressly settled this point, and that Congress was therefore the body to decide who possessed the power of removal. Congress then decided that the power of removal of senate appointments belonged to the President and the senate. For twenty years this was the law of the land though no one was able to explain exactly what the tenure-of-office acts meant, on account of the obscurity of their wording; but finally in 1887 Congress repealed them. The result is that the early interpretation of the constitution must be regarded as the correct one at the present time. That is, the President alone has the power of removal of even senate appointments. . . . From this power of removal has been evolved the President's power of direction and supervision over the entire national administration. . . . The power of direction and control over the administration through which the President has become the chief of administration is hardly recognized in the constitution. The only provision from which it might be derived is that which permits him to 'require the opinion in writing of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices.' . . . [By 1885] it was pretty well recognized that the President had a power of direction over all of the departments regardless of the fact whether the law organizing the department had made mention of such a power or not. . . . The effect of giving to the President these powers of removal and direction has been to give him the administrative power, and to make him the chief of administration."—F. J. Goodnow, *Comparative administration law*, v. 1, 2, pp. 62-66, 69-70.—See also U. S. A.: 1021; Budget Act.

ALSO IN: B. Harrison, *This country of ours*.—W. H. Taft, *Presidency*.—C. A. Beard, *American government and politics*, pp. 187-193.—J. A. Fairlie, *National administration of the United States*, ch. 1-2.

United States: War powers of the president.—"The power to declare war is vested in Congress, but the President may so conduct negotiations as to make war inevitable, as did President Polk in 1846. He may, as commander-in-chief of the army and navy, and in pursuance of his duty 'to take care that the laws be faithfully executed,' employ forces abroad to protect the rights of American citizens, as was done by President Pierce in the case of Martin Koszta, 1856, and by President McKinley in the Boxer rebellion of 1900. He may also employ the forces to execute treaties, as was done by President Roosevelt in restoring order in Cuba in 1906 as required by the Cuban treaty of 1903, and for defense. Thus Jefferson, the man of peace, opened his administration by a defensive war against Tripoli which was not sanctioned by Congress until after the principal engagement. The President makes war subject to congressional approval. He decides

independently when it is proper to employ the forces in measures short of war, subject always to the power of Congress to withhold supplies. He terminates war, subject, unless there is complete conquest, or protracted suspension of hostilities, to approval by two-thirds of the Senate."—Q. Wright, *Control of foreign relations (American Political Science Review, Feb., 1921)*.—See also WAR POWERS OF THE UNITED STATES: Distribution of power; Power of the president; WAR DEPARTMENT, UNITED STATES.

ALSO IN: C. A. Beard, *American government and politics*, pp. 194-195.—A. Berdahl, *War powers of the executive in the United States*.—F. G. Caffey, *Federal executive power (Central Law Journal, July 7, 1922)*.

United States: President and foreign affairs.—"The power to make treaties belongs to the President acting with the advice and consent of two-thirds of the Senate, but since Washington's administration the President has seldom sought the advice of the Senate prior to or during negotiations. He has negotiated and signed treaties independently and submitted the completed work to the Senate for consent to ratification. . . . In only ten later cases has such prior advice been sought, though informal conferences with individual senators or with the Senate committee on foreign relations have been frequent. The Senate under the Constitution must give its advice and consent to the appointment of officers of the United States and has asserted that all persons authorized to negotiate treaties are thus included. [See CONGRESS OF THE UNITED STATES: Senate: Powers.] However, the President has often negotiated treaties in person or through agents appointed by himself alone. The practice began with Washington's commission to John Paul Jones to treat with Algiers; was followed in Nicholas Trist's mission, resulting in the treaty of Guadalupe Hidalgo, ending the Mexican war; in Perry's famous mission to Japan in 1852; in the missions which concluded the treaty of peace with Spain in 1898; the Hague Conventions of 1899 and 1907; and the Algeciras General Act of 1906. A Senate report of 1887 stated that 438 special agents had been appointed by the President without consent of the Senate, and the majority report of the Senate in 1893, upon Blount's mission to Hawaii, stated: 'Precedents show that the Senate of the United States, though in session, need not be consulted as to the appointment of such agents.' The Senate may, however, refuse consent to ratification of treaties as it has done in 17 of about 650 negotiated treaties. Among the more important treaties thus vetoed may be mentioned commercial reciprocity treaties with Switzerland, 1835; with the German Zollverein, 1844; with Great Britain for Canada in settlement of the fisheries question, 1888; and the Kasson reciprocity treaties of 1800; annexation treaties with Texas, 1844; Hawaii, 1853; San Domingo, 1860; and Denmark for the Virgin Islands, 1868; arbitration and claims treaties including the Johnson-Clarendon treaty for settlement of the Alabama claims, 1868; and the Olney-Pauncefote general arbitration treaty with Great Britain, 1897. It is to be noticed that in most of these cases, the end sought was eventually achieved, though in the matter of annexing Hawaii and the Virgin Islands, and in the settlement of the Canadian fisheries question, not until many years later. The Senate's right to qualify its consent to ratification by reservations, amendments, and interpretations was established through a reservation to the Jay treaty of 1794 and has been exercised in about seventy cases. In fifteen of

these the President has objected to the Senate conditions and refused to ratify. Among the number may be mentioned the Roosevelt and Taft arbitration treaties of 1904 and 1911. There seems to be no doubt but that the final act of ratification belongs to the President, and he may withdraw a treaty from the Senate at any time or refuse to ratify even after the Senate has consented to the treaty without qualification. The other party to the treaty may refuse to accept Senate amendments or reservations in which case the treaty fails. Thus, in 1803, after Senate alteration, Great Britain rejected a boundary settlement treaty; in 1824, a slave trade convention; and in 1900, the first Hay-Pauncefote Canal treaty. The claim, occasionally asserted by the House of Representatives, of a right to participate in treaty making has not been sustained in practice. It is true that action by Congress may be necessary to execute a treaty, as when an appropriation is necessary; but in such a case, as President Washington explained in his message on the Jay treaty in 1796, Congress is under a moral obligation to act. Though formal treaties must gain the positive consent of the Senate, less formal agreements may be made by the President alone. Of this character were the preliminary peace protocol with Spain of 1808, the Boxer indemnity agreement of 1900, the executive agreement under which President Roosevelt authorized the administration of San Domingan customs houses in 1904, and the preliminaries of peace and the armistice with Germany of November 5, and 11, 1918. Commitments to permanent policies have also been made under the sole authority of the President. Such were the exchanges of notes establishing the Hay open door policy in 1900, the Root-Takahira, and Lansing-Ishii agreements for a far eastern policy in 1908 and 1917. Practice seems to sanction independent initial negotiation and denunciation of treaties by the President. The power of the Senate is confined to a qualified or unqualified veto of formal treaties; and that of Congress is limited to their impairment or termination as municipal law. . . . In 1906, Democratic senators, led by Senator Bacon of Georgia, disapproved of President Roosevelt's participation, without consulting the Senate, in the Algeciras conference on Morocco. 'The Constitution,' said Senator Spooner of Wisconsin, defending the President, 'vests the power of negotiation and the various phases—and they are multifarious—of the conduct of foreign relations exclusively in the President. And . . . he does not exercise that constitutional power, nor can he be made to do it, under the tutelage or guardianship of the Senate or of the House or of the Senate and House combined.' Presidents themselves have displayed no less jealousy in guarding their prerogative in foreign negotiations. 'Sympathizing as I do,' wrote President Grant as he vetoed a congressional resolution in response to Argentinian congratulations upon our centennial exposition, 'in the spirit of courtesy and friendly recognition which has prompted the passage of these resolutions, I cannot escape the conviction that their adoption has inadvertently involved the exercise of a power which infringes upon the constitutional rights of the executive.' Perhaps the language of these statements is extreme. Our Constitution recognizes no 'mysteries of state' excluded from congressional examination. The constitutional powers of the Senate and Congress justify them in requesting information and exercising a very real check on presidential foreign policies. Yet practice in recognition, treaty making and war making accords to the President the initiative,

and much independence in carrying out foreign policies."—Q. Wright, *Control of foreign relations* (*American Political Science Review*, Feb., 1921). ALSO IN: E. S. United States; Pardoning power.—Message to Congress.—Veto.—"In judicial matters the President has the power to pardon any offences except in cases of impeachment."—A. B. Hart, *Actual government*, p. 270.—"The President presents a message at the opening of each annual or special session, and at such other times as he may desire to make a communication. Besides a discussion of the routine affairs of the Government, such messages may include reports from heads of departments, the promulgation of the ratification of constitutional amendments, communications or petitions from foreigners, and letters impeaching the conduct of federal civil officials. Presidents Washington and John Adams, flanked by the Vice-President and Speaker, presented their annual messages in person. Subsequently the Vice-President, attended by the Speaker and members of the two Houses, proceeded to the President's audience chamber and presented a joint address in reply. President Jefferson preferred to communicate in writing, a custom which continued until President Wilson (1913) revived the earlier practice. Although one way is as proper as the other, the applause which greets the Chief Executive, especially after he has appeared several times in person, is likely to be confined to one side of the chamber, giving the ceremony something of a partisan character, which occasions a subtle embarrassment. If a message be transmitted in writing, it is promptly received by the House, the Committee of the Whole, if it be in session at the time, informally rising for the purpose. If presented before the organization of the House, it remains in the custody of the clerk. If of a confidential character, a rule of the House, though not invoked since 1843, provides for a secret session. An annual message is formally laid before the House at a time prescribed by the order of business. It is then read in full, entered in the Journal, printed in the *Congressional Record*, and referred to the Committee of the Whole House on the State of the Union, which, on motion of the chairman of Ways and Means, distributes the various topics to appropriate standing or select committees with or without instructions. Special messages, however, even when relating to matters of great importance, are ordinarily referred to committees by the Speaker without reading or debate. To lay a communication from the President on the table, other than a veto message, is considered a mark of disapprobation. All enrolled bills and such resolutions as are legislative in effect, except those proposing amendments to the Constitution, go to the President for his approval, and, if signed, are deposited with the Secretary of State for preservation and publication.

If not signed or returned within ten days, they become laws, unless in the meantime Congress expires. It is doubtful, however, if adjournment for a recess invalidates. A bill returned with the President's objections is privileged, and if a quorum be present it is usually considered at once. It cannot be postponed indefinitely, but if returned too late in the session for consideration because of the absence of a quorum, it may be acted upon at the next session of the same Congress. To lay it on the table, or to refer it, is equivalent to agreeing to the President's objections. If passed in both Houses by two-thirds of those present it goes directly to the Secretary of State. As a rule Presidents have used the veto sparingly. In a measure this has been due to the watchfulness of Congress and the frankness of the Chief Executive, for members not infrequently obtain the President's views in advance. On more than one occasion President Roosevelt publicly announced a veto if a pending measure passed. The original purpose of the veto was to safeguard the Executive against the encroachments of Congress, but for many years it has been exercised to defeat measures objectionable in principle or in probable results. President Lincoln, speaking of executive influence, said: 'By the Constitution, the Executive may recommend measures which he may think proper, and he may veto those he thinks improper, and it is supposed he may add to these certain indirect influences to affect the action of Congress. My political education strongly inclines me against a very free use of any of these means by the Executive to control the legislation of the country. As a rule I think that Congress should originate as well as perfect its measures without external bias.' President Cleveland regarded the right of veto as intended 'to invoke the exercise of executive judgment and invite executive action.' Of two hundred and sixty-five private pension bills heretofore vetoed by all the Presidents he disapproved two hundred and sixty. Washington used the veto but twice, and Adams, Jefferson, John Quincy Adams, Van Buren, William Henry Harrison, Taylor, Fillmore, and Garfield, not at all. Lincoln vetoed three. Johnson was not so modest. He thought ten bills unconstitutional and many others inadvisable. McKinley disapproved fourteen bills; Roosevelt, forty."—D. S. Alexander, *History and procedure of the House of Representatives*, pp. 350-350.

United States: Limitations of president's powers.—"There is little danger to the public weal from the tyranny or reckless character of a President who is not sustained by the people. The absence of popular support will certainly in the course of two years withdraw from him the sympathetic action of at least one House of Congress, and by the control that that House has over appropriations, the Executive arm can be paralyzed, unless he resorts to a coup d'état, which means impeachment, conviction and deposition. . . . The Constitution does give the President wide discretion and great power, and it ought to do so. It calls from him activity and energy to see that within his proper sphere he does what his great responsibilities and opportunities require. He is no figurehead, and it is entirely proper that an energetic and active, clear-sighted people, who, when they have work to do, wish it done well, should be willing to rely upon their judgment in selecting their Chief Agent, and having selected

him, should entrust to him all the power needed to carry out their governmental purpose, great as it may be."—W. H. Taft, *Our chief magistrate and his powers*, pp. 156-157.

United States: Impeachment proceedings.—"The Constitution alone governs cases of impeachment. It provides that 'the President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for, and conviction of, treason, bribery, and other high crimes and misdemeanors.' It further provides that 'the House shall have the sole power of impeachment,' and 'the Senate shall have the sole power to try all impeachments.' In other words, the House indicts as a grand jury and prosecutes as a district attorney; the Senate hears and pronounces judgment as a court. . . . If the President be tried, the Chief Justice presides. . . . Whenever the House indicts it appoints a committee, usually of two members, to notify the Senate of its action. A committee is also appointed to prepare articles of impeachment. After their adoption five or more members are selected by ballot or designated by the Speaker to act as managers, upon whom rests the entire responsibility of conducting the prosecution. The House, if it attends the trial, appears as in Committee of the Whole. During the trial of Justice Chase, of the Supreme Court (1804), and of President Johnson (1868), it appeared daily in the Senate. Preliminary to the trial of President Johnson, the Senate, perhaps fearing the influence of Chief Justice Chase, manifested a disposition to rid itself of the character of a judicial body. The claim that the ordinary restrictions of judicial process had not more application than the guarantees accorded to the accused in jury trials was strengthened by the fact that no right existed to challenge a member of the Senate for any cause, or to appeal to any court, or to any law save the Constitution. Others argued that the presence of the Chief Justice fixed its status as a court. Moreover, the Constitution, by empowering the Senate to 'try' impeachments, contemplated the form of a judicial action. The peculiar character of the oath administered to Senators, as well as an adherence to the technical terminology of the law in the use of the words 'conviction' and 'judgment,' contributed to this conclusion. Precedent, too, had established its judicial character. The Senate, however, decided that it sat as a 'constitutional tribunal' convened 'to inquire into and determine whether Andrew Johnson, because of malversation in office, is longer fit to retain the office of President, or hereafter to hold any office of honor or profit.' Having settled its status the Senate declined to require the Chief Justice to be sworn. It also questioned his right to decide on the admissibility of evidence. Some maintained that he acted not as a presiding judge, but simply as the mouthpiece of the Senate. He could decide nothing. No one not a senator could take any part in the trial save as a ministerial agent. This view did not satisfy the more conservative, and by a vote of 31 to 10 the Chief Justice received permission not only to decide all questions of law and evidence, subject to appeal if any senator demanded a roll-call, but to give the casting vote in case of a tie. It emphasized the judicial character of the body, too, when the Chief Justice, arrayed in his robe, appeared at the door of the Senate, attended by an Associate Justice, who subsequently administered the oath to him"—D. S. Alexander, *History and procedure of the House*, pp. 331-337.

Comparative powers of presidents.—"Many divergencies appear [in the powers of presidents].

In the first place the manner of election is various. The President of the United States is elected by an indirect election, which, through the purely mechanical nature of the electoral college, has become practically direct. In France the president is elected by the two houses of the legislature sitting together as a 'national assembly.' . . . The system of election varies among the republics of Central America and Southern America. Some of them, as Mexico, the Argentine Republic, and Chili, choose their presidents by indirect election. In others, as for example in Peru, in Brazil, and in Bolivia, the election is made directly by the people. Another difficult problem presents itself in the matter of the duration of the executive term of office. . . . The presidents of the different American republics hold office for terms varying from four to six years. . . . In France the president is elected for seven years and is reëligible."—S. Leacock, *Elements of political science*, pp. 189-191.—"The countries of Latin America offer a most interesting field for the study in which we are engaged, because they have generally tried, in their constitutions, to combine the essential features of the North American or 'presidential system' of government with some important details of the European or 'parliamentary' system. That is, while they have set up a chief executive vested with powers and duties corresponding with those of the President of the United States, and holding office for a fixed term and practically irremovable, they have also bestowed upon him (acting either personally or through his ministers) a direct access to the legislative bodies and the right of initiative therein, with the necessary result that his control over legislation is always a factor of serious importance, and may at any time become formidable. Both South American and European writers have seen in this attempt to blend two incompatible systems the chief cause of the conspiracies and revolutions which have too often disgraced the history of those countries. For, in their view, it leads to such a hypertrophy of the executive power—especially when the prestige of the president and his most powerful ministers is based upon military exploits or maintained by the army—as cannot fail to be a constant menace to the state. That it may make possible a self-perpetuating and absolutistic dictatorship (benevolent or otherwise) is abundantly shown by the history of Porfirio Diaz in Mexico. The following may suffice as a brief summary of the constitutional provisions on this point to be found in Central and South America: In the Argentine, Haiti, and Paraguay, the right of initiative is given to the members of the two houses of the legislature and also to 'the executive' or 'the executive power.' In Chile, 'laws may be initiated in the Senate or in the House of Deputies upon the motion of any member or by message of the President of the Republic,' and the same provision is found in Bolivia, with additional requirement that a bill submitted by the President 'shall be supported in the debates by at least one of the cabinet ministers, but he shall have no vote.' In Costa Rica and Uruguay, in addition to the initiative of the members of the legislature, laws may originate on the proposal of the executive power through the medium of the secretaries of state.' In Columbia and Panama, the initiative is not given directly to the President, but it is given to the cabinet ministers or secretaries of state. In Ecuador, 'the laws, decrees, and resolutions of Congress may originate in either of the chambers on the proposal of any of its members, or of the executive power, or of the Supreme Court in so far as con-

cerns the administration of justice,' and substantially the same provision is found in the constitutions of Guatemala, Peru, the Dominican Republic, Salvador, Nicaragua, and Honduras, except that in the three last-named countries a bill may be introduced not directly by the President but through a minister or secretary of state. In Mexico, 'the right to originate legislation pertains to the President of the Republic, to the representatives and senators of the Congress, and to the state legislatures. Bills submitted by the President of the Republic, by state legislatures, or by delegations of the states, shall be at once referred to committees. Those introduced by representatives or senators shall be subject to the rules of procedure.' Brazil and Cuba have more directly followed the example of the United States, and do not permit the direct initiation of legislation by the executive or the ministers."—H. C. Black, *Relation of the executive power to legislation*, pp. 52-54.—"In France, the President presides, but does not govern. In such parliamentary governments, however, there is a real ruler who exercises in some important respect a greater power than the President of the United States. He is the leader of the majority in the popular house and remains in office only as long as he has that majority behind him. He is the premier, and exercises both executive and legislative functions. The executive head of the state, whether King or President or Governor-General, follows his recommendation in executive work, and he with his colleagues in the Cabinet, as responsible Ministers so-called, controls the legislation."—W. H. Taft, *Our chief magistrate and his powers*, pp. 9-10.—"In Germany it was no doubt advisable to have a rather powerful chief of state. Not only were the people accustomed to authoritarianism, but during the revolutionary transition a strong executive authority was almost indispensable. The President of the Reich has larger powers than the President of the French Republic, particularly with regard to legislation. He has no direct veto power, but when a law has been passed he may, before promulgation, order a referendum upon it. In cases of disagreement between the Reichstag and Reichsrat he may order a referendum; and under Article 72 he may promulgate a law that the Reichstag and Reichsrat have declared urgent even if a third of the Reichstag has demanded that the promulgation be deferred in order to allow a referendum. The President, moreover, has the right to dissolve the Reichstag, although this is not the only way in which dissolution may be effected. But the President's power in this regard may be a very material factor in preventing such frequent Cabinet changes as occur in France; for the authority to dissolve the Reichstag, coupled with the discretion that he has with regard to a referendum, will probably give the German President a dominating position with respect to the responsibility of the Cabinet to the Reichstag. In Austria the President appears to have much less authority, and the general adjustment of relationships is such that ministries will probably not enjoy great stability. Poland's President, on the other hand, more nearly resembles the French executive. He has no right of veto, nor may he, like the President of France, initiate legislation and demand a reconsideration of a law to which he objects. There is ministerial responsibility, but the power of dissolution is much more limited than in Germany. The Assembly (Sejm) may dissolve itself by a two-thirds majority vote; or it may be dissolved by the President with the consent of three-fifths of the statutory number of

members of the Senate, *which is dissolved at the same time* (Article 26). This penalty which the Senate must suffer if it exercises its prerogative may be an effectual deterrent. It seems likely, therefore, that these constitutional adjustments in Poland will allow a legislative dominance over the ministry similar to that which prevails in France. In Czechoslovakia the advantage is with the executive. The President is the strongest executive of any of the new states. He may dissolve the Chamber of Deputies, and he also appoints and dismisses the ministers, who, however, are responsible to the Chamber. His powers of veto and of patronage, together with this power of dissolution, are likely to constitute an adequate protection of the Cabinet against the caprice of the legislature. As has been mentioned, however, the most novel arrangements are found in Esthonia and the German states. Esthonia has the simplest of the new constitutions—a unicameral legislature with a collegial executive responsible to it, and with the initiative and referendum to determine conflicts between the two branches. . . . Prussia's constitutional arrangements, which with minor differences are found in most of the other members of the German Reich, provide for the Swiss collegial executive; but they seek to approach Great Britain in allowing an adequate power of dissolution as a complement to ministerial responsibility. Dissolution may be effected in any one of three ways: by a committee consisting of the Minister President, the President of the Landtag, and President of the Staatsrat; by a referendum initiated by the people or by the Staatsrat; or by a decision of the Landtag itself. This gesture of self-abnegation will probably be made only when the Landtag is reasonably confident of its support in the country or when it sees that dissolution is to be forced upon it by one of the other available methods. But the ability of the Minister President to threaten dissolution if he can secure the coöperation of one of the legislative presidents seems likely to make for a measure of ministerial stability."—H. McBain and L. Rogers, *New constitutions of Europe*, pp. 30-33.

PRESTER JOHN, Kingdom of.—"About the middle of the eleventh century stories began to be circulated in Europe as to a Christian nation of north-eastern Asia, whose sovereign was at the same time king and priest, and was known by the name of Prester John. Amid the mass of fables with which the subject is encumbered, it would seem to be certain that, in the very beginning of the century, the Khan of the Kerait, a tribe whose chief seat was at Karakorum, between Lake Baikal and the northern frontier of China, was converted to Nestorian Christianity—it is said, through the appearance of a saint to him when he had lost his way in hunting. By means of conversation with Christian merchants, he acquired some elementary knowledge of the faith, and, on the application of Ebed-Jesu, metropolitan of Maru, to the Nestorian patriarch Gregory, clergy were sent, who baptized the king and his subjects, to the number of 200,000. Ebed-Jesu consulted the patriarch how the fasts were to be kept, since the country did not afford any corn, or anything but flesh and milk; and the answer was, that, if no other Lenten provisions were to be had, milk should be the only diet for seasons of abstinence. The earliest western notice of this nation is given by Otho of Freising, from the relation of an Armenian bishop who visited the court of pope Eugenius III. This report is largely tinged with fable, and deduces the Tartar chief's descent from the Magi who visited the Saviour in His cradle. It would seem that the Nestorians of Syria, for the sake of vying with the boasts of the Latins, delighted in inventing tales as to the wealth, the splendour, and the happiness of their convert's kingdom; and to them is probably to be ascribed an extravagantly absurd letter, in which Prester John is made to dilate on the greatness and the riches of his dominions, the magnificence of his state and the beauty of his wives, and to offer the Byzantine emperor, Manuel, if he be of the true faith, the office of lord chamberlain in the court of Karakorum. In 1177 Alexander III. was induced by reports which a physician named Philip had brought back from Tartary, as to Prester John's desire to be received into communion with the pope, to address a letter to the king, recommending Philip as a religious instructor. But nothing is known as to the result of this; and in 1202 the Kerait kingdom was overthrown by the Tartar conqueror Genghis Khan. In explanation of the story as to the union of priesthood with royalty in Prester John, many theories have been proposed, of which two may be mentioned here; that it arose out of the fact of a Nestorian priest's having got possession of the kingdom on the death of a khan; or that, the Tartar prince's title being compounded of the Chinese 'wang' (king) and the Mongol 'khan,' the first of these words was confounded by the Nestorians of Syria with the name John, and the second with 'cohen' (a priest). . . . The identification of Prester John's kingdom with Abyssinia was a mistake of Portuguese explorers some centuries later."—J. C. Robertson, *History of the Christian church*, v. 5, bk. 6, ch. 11, with footnote.

PREVENTION OF CORRUPTION ACTS.

—Various laws to supplement the common law have been enacted in the effort to eliminate dishonest methods of influencing public elections. British statutes of this sort were passed in 1729, 1809, 1827, 1842, 1854, 1868, and 1883. (See also CRIMINAL LAW: 1906.) The most important of these are, the "Corrupt Practices Prevention Act" of 1854, which repealed previous legislation, and dealt especially with bribery; the "Parliamentary Elections Act" of 1868; and the "Corrupt and Illegal Practices Prevention Act" of 1883, by which severe penalties were fixed for corrupt practices. A candidate for a seat in Parliament found guilty of committing or consenting to corrupt practices is forever debarred from representing his district in Parliament. In the United States, Congress, in 1907, passed an act forbidding corporations to contribute to campaign funds in federal elections. An act of 1910 provided for publicity of political contributions. On August 10, 1911, the foregoing act was amended to apply to individual candidates as well as to committees, and candidates for the House of Representatives were limited to a maximum election expenditure of \$5,000, while for senatorial candidates the maximum was fixed at \$10,000. All of the states and territories, whose governments control most of the election machinery, have enacted corrupt practices acts. Their earlier laws related chiefly to bribery, but later laws go into the subject of expenditures by party candidates in detail. Canada has notably strict laws, applying both to voter and candidate. The latter, if proved guilty of corruption, may be disqualified from voting or office-holding for seven years.

PRIBILOV, or PRIBILOF, ISLANDS, group of islands in Bering sea, belonging to the United

States. They are situated about 200 miles north of the Aleutian islands and 320 miles west of Bristol bay, and have a total area of about 180 square miles. In 1919 there was a population of about 600 permanent residents. The islands are of great importance as the breeding place of the fur seal, as well as the sea bear, otter, and blue fox. "Enwrapped in constant summer sea mists, which concealed them almost absolutely from chance observation, the breeding grounds of the Alaskan fur-seal were finally discovered by a patient and persistent fur-hunter, Gerassim Pribilof [a Russian], in 1786, after whom the group of four islands is named. The principal islands, St. George and St. Paul, are 30 miles apart, and near by are the lesser islet of Otter and the waterless ledges of Walrus. St. Paul has an area of some 35 square miles, its highest elevation is 600 feet, and the population numbers about 300; St. George has an area of 27 square miles, its elevation is 930 feet, and the population about 100; uninhabited Otter Islet has an area of about 4 sq. m., while the flat-topped Walrus reef scarcely measures a tenth of a square mile. . . . [The others are islets of volcanic origin. The isolation of the region], the character of the frequented beaches, and the humidity of its almost sunless climate are elements that . . . [did] much to conserve . . . [the] immense herds of fur-seal as a limitless source of wealth, until the introduction of the exterminating pelagic or open-sea hunting, which presents another example of reckless commercial exploitation that is utterly regardless of the welfare of future generations. . . . The present method of rookery sealing was introduced by Pribilof in 1786, which speedily led to fierce rivalries and the settlement of the Pribilof group by 137 natives from Unalaska and Atka. The preservation of the herds from utter destruction was due to the monopoly granted the Russian Trading Company in 1799. Then the policy was adopted, which remains unchanged to-day, of restricting the killing of seals to agents of the leasing company. [The United States acquired the group with Alaska in 1867.] In 1868 Congress made them a fur-seal reservation, and in the Act of June, 1870, for the preservation of fur-bearing animals, provisions were made for the leasing of the islands for a term of years. The first lease was made in 1870 for twenty years to the Alaska Commercial Company, under well-guarded restrictions to insure the preservation of the seal and to guard the welfare of the inhabitants of the islands. . . . The high value of sealskins caused Canadian fishermen to attack the seals passing to and from the Pribilofs and to shoot them outside the three-mile limit, often killing both male and female; three-fourths were females. As this industry was equally important to Great Britain, where the skins are dressed and dyed, an arbitration conference was eventually held at Paris in 1893. Under the regulations there formulated, Great Britain and the United States agreed to limit pelagic sealing by prohibiting it at any time within sixty miles of the Pribilof Islands, and permitting it to be followed in the rest of Bering Sea only between May 1 and July 31 of each year. Sealers were to be licensed, and forbidden to use firearms or explosives in fur-sealing."—A. W. Greely, *Handbook of Alaska*, pp. 118-122.—See also BERING SEA QUESTION.—Pelagic, or open sea hunting means annihilation, as many so killed are mothers, and only a small proportion of those shot are saved. "Japan, Russia and China were not parties to the Tribunal and so their seal hunters continued to enjoy the freedom of waters that were forbidden to Americans, Canadians and

Britons. In the six years from 1890 to 1895, inclusive, we spent over a million and a half patrolling the Pacific. . . . In 1910 the Camp Fire Club started a movement as a result of which, in 1912, England, Russia and Japan agreed to stop pelagic sealing in consideration of a share in our gains through legitimate killing on the Pribilof Islands. Japan receives 15 per cent. and England 10 per cent. of all net profits, and for each close season which we see fit to establish each country receives \$10,000."—*New York Times*, Aug. 5, 1920.—In 1807, there were 5,000,000 seals at the Pribilof islands; in 1873, the number had dwindled to 3,200,000; in 1905, 200,000; and in 1920, the effect of the new agreement was evident in the recuperation to 525,000.

PRICE, Sterling (1809-1867), American general. Served in the Confederate army during the Civil War. See U.S.A.: 1862 (January-March: Missouri-Arkansas); 1864 (March-October: Arkansas-Missouri).

PRICE CONTROL: Ancient and medieval.—"Agitation against speculation and the middleman is not new; neither is the attempt to prevent the first and to control the latter by means of legislative enactments. As far back as 301 A.D. Diocletian undertook to fix the price of certain commodities, but his attempt proved a failure. In the thirteenth century public authorities in England 'felt themselves bound to regulate every sort of economic transaction in which individual self-interest seemed to lead to injustice.' Forestalling, engrossing and regrating [chief meaning of all three terms is, buying with intent to sell at the higher prices resulting], practices roughly corresponding to the more modern speculation and to the 'evil practices' of the present day middlemen, were punishable by law. By the command of the king, no forestaller was 'suffered to dwell in any town'; such a man was branded as 'an oppressor of the poor, the public enemy of the whole community and country.' Trade regulations were guided by the general principle that a just and reasonable price only should be paid, and only such articles be sold as were of good quality and of correct measure. Not only the state, but also guilds and municipalities acted as price fixers in the Middle Ages. Most enactments were promulgated at that time for the purpose of preventing some particular form of fraud in some particular commodity. But there were a number of measures passed more general in character. . . . An attempt to control both the wholesale and the retail price of wine by fixing a maximum was made by the British Government in 1109. The measure failed and in 1330, after a long period of ineffectiveness, a new law was passed, which required the merchants to sell at a 'reasonable' price, the latter to be based on import price plus expenses. This new measure of control proved as futile as the old one, and in a few years, because of changed conditions of production and trade, the price of wine went up far beyond what it had been, as well as beyond the government expectations. A result similar to this followed the many efforts to regulate the prices of wheat and bread. In this instance the government endeavored to fix not a maximum price but a sliding scale. The first attempt was made as early as 1202. The most important ordinance on the matter was 51 Henry III. This ordinance fixed changing weight or the farthing loaf to correspond to six penny variations in the price of the quarter of wheat from twelve pence to twelve shillings. The law was enforced locally on sundry occasions, but fell gradually into disuse."—S. Litman, *Prices and price*

control in Great Britain and the United States during the World War, pp. 5-6.

1462.—Food regulation in Scotland. See **FOOD REGULATION**: 1462.

1630.—Attempts in colonial New England.—"Many difficulties were sometimes created, sometimes aggravated, by the artificial efforts—common at that time [1630]—to control prices, and to force trade out of its natural courses. Beaver was an essential factor in all their commercial calculations. In the previous year the governor and council, in their correspondence, had estimated beaver in New England at 6s. in fair exchange for English goods at thirty per cent. profit, with the freight added. This was a normal value, as they estimated it. But Dudley, in his letter to the Countess of Lincoln, says that, in the scarcity of corn, which, whether English or Indian, sold at 10s. 'the strike,' they forbade the sale of the precious food to the Indians. Under this pressure, beaver advanced to 10s. and 20s. per pound; 'no corn, no beaver,' said the native. The Court was obliged to remove the fixed rate, and the price ruled at 20s. . . . One of the first difficulties encountered by the new society was in the adjustment of labor and wages. The conditions of European life were so much changed by the supply of land in the new world opened to every willing laborer that the employers of the Bay [Massachusetts] found great difficulty in carrying on their business. . . . The problem was further complicated by the prevailing ideas of government, which would extend its powers into the regulation of every function of society, whether political, religious, or economical. . . . The Court made at once a fruitless attempt to regulate the price of labor. Carpenters, joiners, bricklayers, sawyers, and thatchers were limited to two shillings per day. If any one paid more or received more, he was to be fined ten shillings. Sawyers could take 4s. 6d. for one hundred feet of boards, at 'six score to ye hundred,' if the wood is felled and squared for them; one shilling extra if they fell and square their own timber. Again, master carpenters, masons, joiners, bricklayers, were limited to sixteen pence per day, and the 'second sort' at twelve pence; at these prices board was furnished. These regulations lasted about six months and were repealed."—W. B. Weedon, *Economic and social history of New England*, v. 1, pp. 97-99.

1793-1798.—**French Revolution.**—**Law of the maximum.**—"Of particular interest is the . . . experience with maximum prices which France underwent at the close of the eighteenth century. The first law establishing a maximum passed on May 3, 1793. It was one of the extraordinary measures adopted by the Committee of Public Safety, along with a progressive tax on the rich and forced loans. Spurious decrees of the National Assembly, ordering the people not to pay more than one sou for a pound of bread, were circulated as early as March and April, 1790. The May law was passed in order to curb speculation and profiteering, as well as to assure comfort to the poor. The Committee promulgated it under the pressure of public opinion. The necessity for passing such a law of maximum had been hinted at by Saint Just in the latter part of 1792. As a result of over issue of paper money and the blockade, an intolerable economic situation gripped the country and led to widespread dissatisfaction; many petitions had been presented to the government, requesting it to take some definite action in order to stop the rapid rise in prices. The decree of May, 1793, applied to grain and flour, and it provided that in each department the price should be the average of local

market prices which prevailed from January to May. It was made a penal offense for the farmers to distinguish between payments in assignats and in coin. Thanks to an abundant harvest, the proletariat of the cities was in a measure supplied with bread, but the difficulties grew from day to day; farmers were inclined to keep their grain away from the markets, and in several departments the enforcement of the law was abandoned by the close of August, 1798, it being generally recognized that this first experiment with the maximum was a failure. Popular uprisings were taking place in different parts of France. [See FRANCE: 1795 (April).] In Saint Etienne-en-Forez the people killed one of the monopolists and appointed a new municipality, which was compelled to lower the price of bread; but thereupon the middle classes armed themselves and arrested many of the rebels. The Paris Commune was paying to the holders of wheat high prices at the expense of the state. To obtain bread at the low price, people were compelled to stand in a long line for hours, often through the night, at the baker's door. When it came to the reconsideration of the May measure, the Girondins declared themselves as opposed to any price fixing scheme, but their opposition was swept aside by the Montagne [the Mountain] party, who considered that the salvation lay not in the retraction of the measure but in its expansion, so that it should include all primary necessities. The extremists (Varlet, Jacques Roux) were agitating for the communalization and nationalization of all commerce, and for the organization of an exchange of all goods at cost price. On September 11, 1793, a plan was adopted of fixing a uniform price for commodities for the whole country making allowances for the cost of transportation. This plan was soon abandoned and the law of September 29 promulgated, decreeing that prices should be local prices of 1790, plus one-third. This system also proved unworkable, and on November 1 the convention decided that prices should be based upon those of 1790 at the place of production. To these prices were to be added one-third plus a rate per league for carriage and five per cent for the wholesaler and ten per cent for the retailer. Public authorities had a right to compel farmers to bring grain to the market, where it could be bought at the maximum price. A study of the situation shows that by means of such commandeering or requisitioning, French cities were kept provisioned with grain during the last half of 1793 and the larger part of 1794. It is obvious that such a system of force could be successful for but a short period. Commandeering of supplies was not conducive to keeping farmers at work, neither was the provision of the law setting definite margins to distributors conducive to their staying in business. The merchants had no interest in buying at the maximum in one place and transporting commodities to another when they were obliged to sell at the same price. Thus the accusation brought against farmers that their greed defeated the law was not wholly justified. Many of them after they brought their grain to market were not able to find any one willing to buy it. In criticizing the law of maximum, it is well, however, to remember that at the time of its promulgation the economic condition of France was most wretched. . . . Although proven untenable for any length of time, the maximum seems to have at least partially succeeded in alleviating the misery of the urban proletariat. It is true that food was scarce and of poor quality and that many unfortunate farmers and dealers who refused to put their goods on sale at legal prices

were dragged by *sans culottes* before the Revolutionary Tribunal and put to death, but it is difficult to say how many of them would have met a similar fate without the law and how far the infuriated mobs would have gone in their work of vengeance and destruction if no maximum was on the statute books. . . . One of the results of the maximum was the growth of contraband trade, which reached enormous proportions. Butter, eggs and meat, particularly, were peddled in small quantities by resellers, and it was practically impossible to control the prices charged by such persons, who 'made their way into alleys, to the doors of apartments and to the service entrances of the rich.' The growth of the contraband trade was one of the contributing causes which made the law unpopular. With the defeat of the extremists in the convention the measure was doomed. It was repealed in December, 1794."—S. Litman, *Prices and price control in Great Britain and the United States during the World War*, pp. 7-10.

1914-1916.—Methods of price control during the World War.—In an interview with George Creel, Joseph E. Davis, a member of the federal trade commission and previously United States Commissioner of Corporations, gave the following summary of methods of price control in use during the World War: "Generally speaking, these government activities have been developed along five different lines. First, an attempt to fix by law the maximum price of articles. Germany took the lead in this method. [See FOOD REGULATION: 1914-1918: German food policy; Rationing in Germany.] France, Greece, Italy, the Netherlands, Russia, and Spain followed the German example, making provision that municipal authorities alone, or else in cooperation with the military authorities, might fix maximum prices. In Egypt this power was delegated to a commission. Denmark fixed by law a maximum price for flour. Turkey passed laws setting fixed prices for petroleum, sugar, and flour. The home secretary of the British Government met with representatives of retail federations, and a standing committee was appointed to advise as to the maximum retail prices of food-stuffs. Bulgaria empowered municipalities to place maximum prices on all table and other living necessities. The difficulties entailed in such a scheme are of course the great diversity of conditions in different localities and the tremendous detail in administration to compel performance. Second, the direct entrance of the government into the business of producing in order to provide competition and to control prices in some degree. Certain of the states of Australia and New Zealand have engaged in the baking of bread, the slaughtering of cattle, and the furnishing of meats to their respective communities. Great success is claimed for this method. Third, government control of the processes of distribution by way of eliminating the profits of the middlemen. Great Britain bought large quantities of meat and sugar . . . for direct sale to the consumer. By royal decree Italian officials were empowered to acquire foods of which there was a scarcity either by requisitioning the foods or the factories in which they were produced. The Dutch Government took possession of the whole stock of wheat and handled its distribution. Switzerland ground and sold rye flour. Germany and Australia authorized the regulation of food supplies, providing for government seizure, and sale at fair prices. France took similar action. Fourth, tariffs and embargoes. Denmark, Great Britain, Egypt, Italy, Russia, Spain, and Turkey have removed all customs duties on

certain food-stuffs and have passed an embargo on other exports. Holland refuses to let butter and cheese go out of the country, and Norway and Sweden also adopted limited embargoes. Fifth, the Canadian method. On November 10, 1916, the Dominion Government entered an order in council that struck at the root of the artificial conditions that jump prices. It provides that no persons shall combine or conspire to limit the production or distribution, or to enhance the price, of any necessity of life, also that no person shall accumulate, or withhold from sale, any necessity of life beyond that required for the consumption of his own household or that the ordinary uses of his business require. If such business is a commission business, only so much can be stored as may reasonably be required, and the excess must be sold at prices that are fair and just. The minister of labor is empowered to procure from all cold-storage, packing, or similar plants full information with reference to quantities held therein, for whom held, and the prices paid therefor. Each municipality is clothed with power similarly to investigate any local combinations or conditions affecting prices, and it is up to the attorney-general to prosecute. Violation of the act is a felony."—G. Creel, *Can a democratic government control prices?* (*Century Magazine*, Feb., 1917).

1914-1918.—World War.—Great Britain.—“After the declaration of war there was a sudden and rapid rise in prices of necessities, particularly of foodstuffs. The reasons for this rise may be summarized as follows: (1) With the mobilization of the British army and navy large governmental orders had to be immediately filled. (2) Many householders with cash at their command rushed to the stores and began laying in supplies for weeks, sometimes for months in advance of their actual needs. . . . Some dealers took advantage of conditions to realize as much as possible on the merchandise which they had on hand. The situation was aggravated by a temporary disorganization of shipping and by the use of railway facilities for war purposes; this made it difficult for dealers to get new supplies in order to keep up stocks. Poorer classes of the population who could purchase only from day to day as they needed the commodity were thus placed in an extremely difficult position. That the rise in prices was due largely to a panic and that it was not warranted by the conditions existent at the time, is apparent from the fact that the English and Scottish cooperative wholesale societies after a study of the situation sent out reassuring messages to all their local store committees; they advised them not to raise prices, but to restrict sales to individuals in accordance with their previous average rate of purchases. After the most urgent needs of the government, as well as the demands of selfish, thoughtless or overprudent private buyers were satisfied, prices receded from their high levels. It was soon recognized that there was enough food in stock or in store for some time to come. . . . When the panic was at its height, the government, in response to an urgent demand for some immediate action, made an interesting attempt to influence prices without taking upon itself the responsibility of fixing them. On August 5, 1914, a Cabinet committee on food supplies, under the chairmanship of the Home Secretary, met ‘the representatives of certain great companies owning 3,000 distributing shops and grocers’ federation owning 14,000 shops. It was decided that a standing committee should be formed to advise as to maximum retail prices for staple articles of food. These prices were not

compulsory, but represented the opinion of experts, acting under governmental sanction, as to what purchasers might reasonably regard as the highest figures they ought to pay. The first list of prices was issued August 7, to be effective through the 10th. These prices gave rise to complaint that the committee was acting in the interest of dealers rather than of purchasers.’ . . . The committee continued to issue price lists for about three weeks, by which time prices had become fairly stable, though at a higher level than that prevailing in July. The issue of price lists for meat was resumed early in 1915. On August 10, 1914, the presidents of the Board of Trade and the Board of Agriculture and Fisheries met a number of representative millers to discuss the price of flour, and it was arranged to have a standing committee of the millers to confer with the government from time to time. A conference was also held with representatives of the Meat Traders’ Association. The prices of flour were fixed August 17, 1914, by an agreement between the President of the Board of Trade and the millers’ committee. A weapon to protect the public from hoarding and from corners in food-stuffs, was provided by the passage on August 10, 1914, of the ‘Unreasonable Withholding of Food Supplies Act’ (4 and 5 Geo. V, ch. 51). The Act was repealed by the Articles of Commerce Act, which became law on August 28, 1914 (4 and 5 Geo. V, ch. 65). This latter act, similar in nature to the first one, authorized the Board of Trade, if authorized by proclamation, to take possession of any articles of commerce unreasonably withheld, upon payment of a reasonable price determined by agreement with the owners or by the arbitration of a judge selected by the Lord Chief Justice. By a proclamation of September 17, 1914 (No. 1403) the Board of Trade was given authority to exercise the power described in this act with respect to ‘any article of commerce.’ . . . Among other steps taken by the government on the outbreak of the war was the setting up of a Cabinet Committee on Food Supplies. Returns of stocks of all foodstuffs in the country were obtained, and arrangements made for the periodical collection of this information. Soon after the outbreak of the war export of foods was prohibited except under license. A similar action was taken a couple of months later with regard to feeding stuffs for animals. . . . Among the other early steps taken by the government in connection with the control of food were the appointment of the Royal Sugar Commission and the establishment of agencies entrusted with the purchase, shipment, storage and distribution of meat, wheat and flour. Excepting these measures, the government, during the first two years of war, followed largely the plan of not interfering with production, distribution and prices of foods. Toward the end of 1916 the poor harvests in North America, South America and Europe, the increasing shortage of tonnage due to commandeering by the government and losses by submarines, the growing discontent of the people with what they considered government negligence, the rapidly expanding indebtedness and the necessity to pay high prices for all that the government was buying, the inability to forecast how long the war would last and the certainty that if it lasted much longer Great Britain would experience great difficulties in bringing food into the country, all influenced the government to change its policy for that of strict measures of control. Accordingly, on November 16, December 5, and December 22, 1916, Orders in Council were issued which . . . gave the Board of Trade wide powers to control any ‘articles of commerce, the maintenance of which is

important as being part of the food supplies of the country, or as being necessary for the wants of the public. . . . The *Board of Trade Journal* of December 14, 1916, speaks of the appointment of Lord Devenport as Food Controller. Upon him fell the responsibility of administering the new regulations adopted for the purpose of controlling supplies and prices of food. For a short time after his appointment the Food Controller was dependent upon the Board of Trade for the issuance of orders; he lacked the necessary authority, arrangements not having been completed for the transfer to him of the powers of the Board of Trade. This was done on December 22, 1916, when the New Ministries and Secretaries Act (6 and 7 Geo. V, ch. 687) was passed. The act authorized the King for the purpose of economizing and maintaining the food supply of the country to appoint a Food Controller, the latter to 'hold office during His Majesty's pleasure.' Upon the Food Controller [was] . . . placed the duty to regulate the supply and consumption of food as well as to encourage its production. . . . The new regulations . . . gave the Controller large discretionary powers with respect to the issue of orders regulating the production, manufacture, treatment, storage, distribution, supply, sale or purchase of any article (including orders as to maximum and minimum prices). . . . There does not seem to have been any definite rule of conduct, any thought out plan of action in what Lord Devenport did during his tenure of office in the first part of 1917. Order after order was promulgated, only to be amended and hastily reamended. . . . [He] resigned because of ill health in the latter part of May, 1917, and Lord Rhondda was appointed Food Controller in his stead. Whatever may be one's opinions regarding price fixing, one must admit that Lord Rhondda's handling of the problem from the very first day of his appointment was much more careful, thorough and systematic than that of his predecessor. His idea was to fix prices of those articles of prime necessity over the supply of which he could obtain effective control at all stages from the producer down to the retailer; in this determination of prices he followed as far as possible the principle of allowing a reasonable pre-war profit for those engaged in the production and distribution. Issuing one order after another, Lord Rhondda gradually tightened his grip on business, and established a far reaching and rigid supervision of all food articles; the work of manufacturers and merchants became regulated, maximum prices were established and for certain products (sugar, meat) rationing cards were issued. . . . Arrangements [were made] as rapidly as possible for securing control of all imports of food-stuffs in cooperation with the American and Canadian food controllers. An Order in Council, dated June 28 [1917], amended the Defense of the Realm Regulations. Among other amendments, it conferred on the Food Controller the same powers as were previously granted to the Admiralty, Army Council and Ministry of Munitions regarding the requisitioning of goods and the controlling of prices. This amendment gave Lord Rhondda the authority to requisition the whole or part of the output of any factory and to pay a price based on the cost of production, with an addition of a pre-war rate of profit, without regard to the price ruling on the market. . . . Lord Rhondda's decentralization scheme led to the passage, on August 22, 1917, of the Food Control Committees Order, 1917 (No. 860). This order requested local authorities to appoint food control committees, whose functions would be to administer a new scheme of sugar

distribution, to continue the campaign for food economy, to deal with other food supplies such as bread and meat, and to assume special responsibilities with regard to food prices. The appointment of food control committees was a step towards decentralization preparatory to the fixing of a general scale of prices on many necessary food-stuffs. The committees were entrusted with the enforcement of this scale; they were also asked to advise on any modification of it that may be shown to be necessary in their districts."—S. Litman, *Prices and price control in Great Britain and the United States during the World War*, pp. 104-112. —See also FOOD REGULATION: 1914-1918: Legislative enactments in Great Britain.

1917-1919.—Price fixing committee in the United States.—Coal prices.—Licensing system.—Australian and Canadian measures.—One "exceedingly important branch of the work of the War Industries Board was that of determining the prices that should be paid for commodities the inadequate supply of which prevented the adjustment of prices upon a fair basis through the working of competitive forces. This work was performed by a Price Fixing Committee, composed of Robert S. Brookings as Chairman, Bernard M. Baruch, Chairman of the War Industries Board, W. B. Colver, Chairman of the Federal Trade Commission, F. W. Taussig, Chairman of the Tariff Commission, H. A. Garfield, Fuel Administrator, Hugh Frayne, representing labor, War Industries Board, Lieutenant-Colonel Robt. H. Montgomery, representing the Army, Commander John M. Hancock, representing the Navy, and former Governor Henry C. Stuart of Virginia, representing agriculture. . . . One important class of commodities after another was taken up for consideration and the basic prices were determined and submitted to the President for approval. Among the articles the prices of which were thus fixed were iron and steel products, wool, foreign and domestic hides, aluminum, domestic manganese ores, retail prices for certain classes of lumber, sulphuric and nitric acid, copper, hemp, and Portland cement, and wholesale prices for certain dry goods. In general, the Committee did not seek to fix retail prices. Its work was limited to the fixing of prices of raw materials and in the wholesale trade and, on the basis of these, the working out of differential prices. In many cases the prices fixed were the result of a formal agreement entered into between the Committee and associations representing the trades affected. The Council of National Defense . . . early in May, 1917, appointed a Committee on Coal Production with Francis S. Peabody as Chairman. This Committee at a conference with coal operators held in Washington June 28, 1917, at which members of the Council of National Defense and the Federal Trade Commission were present, reached an agreement fixing the price at which bituminous coal should be furnished at \$3 a ton. This agreement was immediately repudiated by the Secretary of War, who, as Chairman of the Council of National Defense, wrote under date of June 30, 1917, to the Director of the Council calling attention to the fact that the Council was a purely advisory body and as such had no power to fix prices or to perform any other act of an administrative character, and stating that in his opinion the price agreed upon was 'exorbitant, unjust and oppressive.' . . . By executive order of August 21, 1917, the price of bituminous coal at the mine was provisionally fixed in each of the coal districts of the United States. This was followed by an order issued on the same day that the Fuel Administration was created, August 23, 1917,

fixing provisionally the price of anthracite coal and jobbers' margins. The matter of fixing the price of coal to consumers was, by an order of the Fuel Administrator of September 7, 1917, turned over to the local fuel administrators and coal committees, provision for the creation of which was made by this order. . . . The price of coke was fixed by orders issued on November 9, 17, and 24, 1917. In fixing prices the Fuel Administration proceeded upon the principle of first fixing the price of coal at the mine as determined by the cost of production plus a fair profit and then of determining the additions or margins that should be permitted to jobbers, wholesalers, and retailers in order to meet their costs and give them a reasonable profit. In determining the cost of production of coal at the mine the Fuel Administration availed itself of the large volume of data that had lately been collected and compiled by the Federal Trade Commission, and also made use currently of the services of the large staff of cost accountants and other experts of that body. The Federal Trade Commission in tact constituted the technical agent of the Fuel Administration in the performance of this important part of its duties. Another feature of the policy in respect to price fixing was that of immediately fixing prices according to the best information available and then permitting appeal for rehearing when claim was made that injustice was done by such prices. Although it was not until August 10, 1917, that the Food Administration was established on a definite legal basis, Mr. Hoover as early as May 19, 1917, had been requested by the President to act as Food Administrator for the purpose of doing what he could under then existing laws to mobilize the food resources of the country for war purposes. . . . Although much could be, and was, done in the way of increasing production, on the one hand, and restraining consumption, on the other, the fact still remained that the supply of certain classes of food products was inadequate to meet all demands. This being so, it became necessary for the Food Administration to take action that would prevent the prices of these articles being run up to excessive figures and insure that the supply that was available should be properly distributed. The basis for a system of control that would accomplish these purposes was laid in the establishment of a licensing system that was gradually extended until it included almost all classes of dealers and agents handling food products. In accordance with the provisions of the law this system was established through proclamations issued by the President. . . . The establishment of the license system was . . . the first step in the establishment of control by the Food Administration. This act was followed by the formulation and promulgation of the conditions to be observed by each class of food importers, manufacturers, storage men, or dealers. These regulations were in all cases worked out so far as possible in conference with representatives of the interests affected. . . . An important feature of this licensing system was the establishment, through the rules and regulations governing the issue of licenses, of a control over profits. Although no power was granted to the President except in the case of wheat, . . . to fix prices directly, he was given authority to prevent the making of excessive profits and thus indirectly to regulate prices. . . . The exercise of this power the President by executive order of November 27, 1917, vested in the Food Administrator. . . . Although the cost of food products to the consumer increased greatly during the war, the rise was due primarily to increased cost of production and cost in transporting and handling these articles, and only in small part to unwarranted profit-

teering on the part of food producers, manufacturers, and dealers. It can hardly be doubted that had this control not been exercised, prices would have advanced far more than they did and that profiteering would have been rampant. The Food Administration, however, came close to fixing the price of food products to consumers, through the inauguration in June, 1918, of a plan by which standardized 'fair price lists' were to be prepared periodically by local boards or committees composed of representatives of the wholesalers, retailers, and consumers in each community, which lists were to be posted by all dealers where they could be easily seen by their customers. . . . This system worked with great efficiency. It did not keep down rising prices, but it did insure equality of treatment of dealers and consumers and undoubtedly prevented excessive charges and profits by dealers inclined to make all they could out of the public needs. . . . So acute was the situation in regard to the supply of wheat at the time the Food and Fuel Control Act was passed, that Congress wrote into the Act provisions conferring extraordinary powers upon the President to promote the production and to control the distribution of this commodity. . . . On August 30, 1917, the President announced that he had fixed a basic price of \$2.20 a bushel for standard wheat at Chicago, the prices of other grades and at other markets being adjusted to this basic price. . . . On February 25, 1918, the President announced that this price had been continued for the 1918 harvest with no essential alteration, and a similar announcement was made on September 2, 1918, in respect to the 1919 harvest. . . . On August 14, 1917, the President . . . issued an executive order directing the organization of a corporation, under the laws of the State of Delaware, to be known as the Food Administration Grain Corporation, to engage in this work of buying, storing, transporting, and selling grain. On the same day the incorporation of the Corporation was affected. . . . It is hardly necessary to say that with the signing of the armistice the need for rigid control over the distribution and consumption of food products in the United States largely passed away, with the result that the Food Administration at once entered upon the work of cancelling the restrictions in force. On February 25 [1919], the Secretary of Commerce announced that, having secured the approval of the President, he had created an Industrial Board of the Department of Commerce whose duty it would be 'to put into practical effect a programme for the readjustment of prices for basic materials in such a fashion as to create a firm foundation on which the consumer can base his future purchases. . . . This Board at once entered upon the performance of its duties and on March 22, 1919, was able to announce that, as a result of conferences held with Judge Elbert H. Gary of the United States Steel Corporation and other large producers of iron and steel, a schedule of prices for iron and steel products had been agreed upon which represented a reduction from existing prices and was one to which iron and steel producers were willing to adhere. To the surprise of the public Walker D. Hines, the Director-General of Railroads, almost immediately announced that in making his purchases of steel rails and other iron and steel products he did not consider himself bound by the schedule of prices that had been agreed upon. . . . This attitude on the part of the Railroad Administration not only defeated the attempt of the Industrial Board to fix iron and steel prices, but discredited the entire effort to stabilize prices through a Government agency working in connection with

the voluntary cooperation of producers. As a result the Secretary of Commerce a few days after the stand of the Railroad Administration was made known announced the dissolution of the Board and the abandonment of the undertaking. Immediately afterwards publicity was given to an opinion of the Attorney-General declaring that the attempted action of the Board was illegal as being in violation of the Sherman Act and statutes regulating the purchase of supplies by Government agencies."—W. F. Willoughby, *Government organization in war time and after*, pp. 110, 112-113, 295, 303, 305, 269, 273, 277-285, 290, 118-120.—See also FOOD REGULATION: 1917-1918: Food control in the United States.—"An act passed in Victoria (Australia) on 30th December 1919 contains measures to restrict excessive profits and to regulate the trade in food-stuffs. A special board is appointed for this purpose to be known as the Fair Profit Board which will examine all complaints submitted to it by consumers as to excessive profits made by producers or traders. Should the Board deem, after enquiry, that said profits are really excessive it may fix prices such as to ensure a fair profit and require the seller to return to the plaintiff any amount received over and above said sum. . . . Two Canadian laws of 7th July, 1919, aim at preventing excessive prices being charged for necessary commodities. The first enacts measures for preventing industrial and trade combinations and lays down rules to be observed in fixing fair prices; the second establishes a committee whose duty it is to enforce these measures."—*International Year Book of Agricultural Legislation*, 1919, v. 9, pp. xxii-xxiii.

1919-1920.—Post-war legislation.—"A French law of the 6th May 1919 requires all cultivators to declare to their respective communal officers, before the 15th June 1919, the area of land sown with cereals. A Swiss law of the 27th May 1919 enacts that on the 10th July 1919 a general Census of land under cereals, fruits, hoed plants, vegetables and industrial plants shall be taken. . . . A British act of 19th August 1919 contains measures to control the excessive rise in prices. The Minister of Labor is authorised to make enquiries into prices, cost and profits of all producers and middlemen. Should such an enquiry convince the Minister that certain profits are excessive the producer or middleman making such profits may be brought before a magistrate who may sentence him to fine or imprisonment as the case may be. An Italian law No. 1349 of the 30th Sept. 1920 contains provisions against excessive rise in prices. The law provides heavy penalties for producers and traders who succeed in any way in interfering with or preventing free competition in the sale of raw material and food stuffs. The law also provides that in every capital of a Province, the Prefect shall set up an arbitration commission, with power to receive all claims relating to unjust or excessive prices, placed on food stuffs or articles of primary necessity; to enquire into the general level of prices; to make suitable proposals to the responsible Prefect regarding limitation of the number of shops for the sale of general and current goods should such be necessary to insure the better and more economical distribution of same. . . . A law of the United Kingdom of Great Britain and Ireland of 23rd December 1920 (Agricultural Acts, 1920) contains various provisions intended to insure the intensification of agricultural production in the country. . . . The first part of the law provides in the first instance for the continuance in force of the law of 1917 on the production of cereals; it goes on to lay down that there must be a fixed minimum price for cereals; on the basis of information furnished

by the Board of Agriculture, by the Board of Agriculture for Scotland, and by the Department of Agriculture and Technical Instruction in Ireland. In the first part, the Board has also power to impose on proprietors and tenants of land the execution of the necessary work to insure a larger agricultural production, if the land in question is not cultivated in accordance with the rules of rural economy, or if the food stuffs produced by said land might be considerably increased. . . . A law of Ontario (Canada) of 4th June 1920 gives power to the Municipal authorities to grant authority for the occupation of land available for cultivation, for a period not greater than the current year, for the purpose of cultivation, and on conditions which shall be set up by said authorities from time to time. An Italian decree of 22nd April 1920 . . . sets up that applications to occupy insufficiently cultivated land must be presented to special arbitration committees, constituted in the various provinces. On the advice of these committees the Prefects will take steps for the requisition of land and for its renting to groups of cultivators who give serious promise of being able to insure adequate cultivation of said land."—*International Year Book of Agricultural Legislation*, 1920, v. 10, pp. xviii, xxii.—See also FOOD REGULATION: 1918-1920.

PRIDEAUX, John (1718-1759), British general. See CANADA: 1759 (July-August).

PRIDE'S PURGE, forcible expulsion of all members of the House of Commons, December 6, 1648, who favored a compromise with the Royalists. See ENGLAND: 1648 (November-December).

PRIESTHOOD: Derivation of term.—Definition.—The word priest comes to us from the Greek *πρεσβύτερος*, the elder. "A priest is a person commissioned by the community or its head to conduct the sacrificial service and related services connected with shrines. Such a person differs in two respects from the religious official of the simplest times, the magician (shaman, or medicine man): the latter acts in his own name and by his own authority, and the methods he employs are magical—they are based on the belief that the supernatural Powers are subject to law and may be controlled by one who knows this law; the priest acts in the name and by the authority of the community, and his methods are dictated by the friendly social relation existing between the community and the Powers. He differs, further, from those religious ministrants (chiefs of clans, fathers of families, and other prominent men) who acted by virtue of their social or political positions in that his functions are solely religious and are in that regard distinct from his civil position. He represents a differentiation of functions in an orderly nonmagical religious society. Such an office can arise only under a tolerably well-organized civil government and a fairly well-defined sacrificial ritual. It is doubtless a slow growth, and there may be, in a community, a period of transition from one grade of religious ministers to another when the distinction between the priest and the magician or between the priest and the headman is hardly recognizable; the distinction comes, however, to be well marked, and then indicates an important turning-point in religious history. It may be, also, that at certain times under certain circumstances the civil ruler may have priestly functions or the priest may exercise civil authority; but these exceptional cases do not affect the specific character of the sacerdotal office."—C. H. Toy, *Introduction to the history of religions*, pp. 512-513.—By the term priest, in Catholic opinion, is meant a man called to the service of the Deity, and

authorized to hold public worship and to offer sacrifice. Often the priest is regarded as the religious mediator between God and man, or as a teacher of religious truths.

Among primitive peoples.—"The original priest or spiritual authority was, according to circumstances, an oracle, a diviner, a singer (of incantations, *carmen* means a charm), or a leech, sometimes combining these functions. In many savage religions he was first of all a dancer and as such was recognized as a diviner or oracle. Another common function was that of making fine weather; a priest who could not do this was discredited; a good priest was supposed to be influential with the powers that give rain. In all these cases, the priest was recognized as an intermediary between human and spiritual powers, sometimes to tell what spirits know, sometimes to influence the spirits. Again, the keeper of a holy place or guardian of religious relics might become director of ritual and so take upon himself a priestly office. But usually among primitive peoples the priest is accepted as such only in consequence of some special individual faculty or inherited power or as the recipient of spiritual blessings. A savage priest must prove by ecstatic and hysterical speech and action that he is inspired; he dances himself into a frenzy, ejaculates meaningless syllables; or he effects cures or foretells events or sees what is unknown to other people (discovers crimes, etc.). Among American and African tribes a dream may reveal a chosen man as priest; he becomes one of the elect. In both countries also the practice was known of forming priests from boyhood; they were regularly trained for the priesthood. Often in the higher religions, and occasionally in the lower, the office of priest was hereditary and the priesthood was kept in a caste, which controlled religious matters. Yet this control, even in India where the priestly caste had charge of all public religious services, was still retained in domestic rites by the family head. Such a family head might become head of a clan and yet officiate in religious matters, so that in many races we find a sort of rivalry between chief and priest, each of whom is guardian of religion."—E. W. Hopkins, *Origin and evolution of religion*, pp. 204-205.

Pagan priesthood.—Development in religions of India.—Tibetan system.—The oldest and the most fully developed of the pagan religions are found in India. The leading divisions of the religions in that country comprise; Vedism, Brahmanism, and Hinduism. In Vedism, there were three classes of priests, for sacrificing, singing, and praying. In Brahmanism, "as the letter usurped authority over the spirit, and the due observance of the rites of religion became of more importance than the moral character and life of the worshipper, there arose an order of men whose business it was to master the letter of the religious law, and to be able for themselves and for others efficiently and faultlessly to conduct its ritual and sacrifice. It will readily be seen how such a class would tend to advance into the possession of exclusive rights and privileges. In their hands was the practical control not only of the destiny of a man after death, but also of his well-being in the present life. They wielded all the terrors of divine threatened vengeance for the nonfulfilment of religious obligations. An unlearned and ignorant man could not so sacrifice as to be well-pleasing to heaven. If he did not sacrifice, or if he erred in his sacrifice, the gods would assuredly visit him with pains and penalties, both temporal and eternal. He must therefore employ a member of the learned enlightened class to perform the sacrifice in his name and stead. There is abundant evidence to prove that

it was by these or similar means that the great caste of the Brahmins gained in India its unique ascendancy and sacred inviolable character. Originally a hereditary priesthood, set apart for the study of the sacred books and the due performance of religious rites and ceremonies, the members of this caste used the spiritual influence and authority thus placed in their hands as a stepping-stone to temporal dignity and power. . . . The most characteristic external feature of Buddhism was the *Sangha*, or Order of Monks, which, modified and controlled by circumstances and by the disposition and habits of the people, has maintained itself in a more or less distinct form in every country in which the Buddhist faith has taken root. . . . The *Sangha* also formed with the Buddha himself and the Dharma or sacred Law a kind of Buddhist triad, sculptured representations of which have been found, wherein the Sangha is depicted as a man holding a lotus, the symbol of perfection and purity. This triad is the familiar Buddhist *triratna*, the 'three jewels,' or 'three honoured ones.' . . . The members of the Sangha were termed *Bhikshus* or beggars; a name that amongst the Brahmins was already employed technically to denote one who had entered upon the fourth *asrama* or period of life, and was dependent entirely upon alms. . . . By the side of the monks was established an order of nuns, or *Bhikshunis*; the foundation of which, although carried back by tradition to Gautama himself, must probably be ascribed to a later age. Outside of both was the community of laymen. Thus the whole ecclesiastical system existed for and was subservient to the monk. . . . The most wealthy Buddhist communities are found in Tibet, where the monasteries are in possession of great wealth. . . . That the striking resemblance of Tibetan ritual, with its altars, processions and incense, to the forms of the Roman Catholic and Greek churches, is due to early Nestorian missionaries, is now generally recognised. . . . The monks in Tibet bear the name of *Lamas*, 'lofty' or 'superior ones.' It is said that from 12 to 20 per cent. of the population are members of a monastic order. The highest Lamas are believed to be reincarnations of the Buddha himself; and on the death of one of these his spirit enters into some little child, who is then sought out, and brought to the monastery with much pomp and ceremony. There are two chief or 'Grand' Lamas."—A. S. Geden, *Studies in eastern religions*, pp. 77-78, 308-310, 315-317.—See also LAMAS, LAMATISM.—"Ritual propriety was a dominant idea in India, and the influence of the priesthood on the religious life of the people was correspondingly great. Priests did not attempt to interfere in the civil government, but their religious instruction may sometimes have affected the policy of civil rulers. On the other hand, the Hindu priesthood, by its poetical productions and its metaphysical construction, has become a permanent influence in the world. . . . [Among the kindred religions of the Iranians there was always a special priestly caste.] The early (pre-Zoroastrian) history of the Mazdean priesthood is obscure. In the Avestan system, however, a great rôle is assigned the priests, as is evident from the vast number of regulations concerning ceremonial purity, of which they had charge. It does not appear that the early sacerdotal organization was elaborate or strict. There were various classes of ministrants at every shrine, but they differed apparently rather in the nature of their functions than in rank."—C. H. Toy, *Introduction to the history of religions*, p. 523.—"Under the Achæmenians the Magi, originally a Median tribe, gradually attained power through royal patronage and

became the priests of Zoroastrianism. It was probably due to their influence that during the closing decades of the Achaemenian Dynasty the Avesta was completed by the addition of the Yashts and the Vendidad. By these additions the ethical system of Zoroaster was grafted into a mass of nature-myths and ritual with which it originally had little in common. The ritual is as arid as that connected with any Semitic religion."—G. A. Barton, *Religions of the world*, p. 129.—See also MAGIANS; ZOROASTRIANS.

In Greece and Rome.—"The Greek priestly class had the democratic tone of the Greek people. There was little general organization; every priest was attached to a particular deity except the Athenian King Archon, who had charge of certain public religious ceremonies. The mutual independence of the Greek States made the creation of a Hellenic sacerdotal head impossible. In Sparta the priestly prerogatives of the king were long maintained; usually, however, there was a separation of civil and religious functions. Generally in Greece priests were chosen by lot, or were elected by the priestly bodies or by the people, or were appointed by kings or generals. They were usually taken from good families, were held in honor, and were housed and fed at the public expense (their food came largely from sacrificial offerings). It was required that they should be citizens of the place where they officiated, and should be pure in body and of good conduct. They seem to have been simply citizens set apart to conduct religious ceremonies, and their influence on the general life was probably less than that of civil officers, poets, and philosophers. Greek educated thought moved at a relatively early period from the conventional religious forms toward philosophical conceptions of the relations between the divine and the human. The minute details of the Roman ritual might seem to give great importance to priests; and the flamens (the ministers of particular deities) were of course indispensable in certain sacrifices. But the organization of Roman society was not favorable to the development of specifically sacerdotal influence. Religion was a department of State and family government. For the manifold events of family life there were appropriate deities whose worship was conducted by the father of the family. The title *rex* (like the Greek *Basileus*), in some cases given to priests, was a survival from the time when kings performed priestly functions. Later the consul was sometimes the conductor of public religious ceremonies. There was hardly a religious office, except that of the flamen, that might not be filled by a civilian. In the Augustan revival membership in the College of the Arval Brothers was sought by distinguished citizens. It was thought desirable that the Pontifex Maximus, the most influential of the priests, should be a jurist; and the office was held by such men as Julius Caesar and Augustus. The increase of temples and priests by Augustus did not materially change the religious condition. The adoption of foreign cults was accompanied by ideas that did not belong to the Roman religion proper. In general, if we except the augurs, who represent the lowest form of the sacerdotal office, the priest was relatively unimportant in Rome."—C. H. Toy, *Introduction to the history of religions*, pp. 523-524.—See also AUGURS.

Among the Germans and Celts.—"The most venerated priests among the Celts were the Druids. . . . The Teutons had priests and priestesses, though there appears to have been no organized priesthood among them like that of the Druids among the Celts. The priesthood appears to have

been exercised by a sort of nobility. It exerted a powerful influence from the time of Tacitus onward. Customs varied in different localities. The goddess Nerthus had a male priest, while the god Freyr at Upsala was attended by a priestess."—G. A. Barton, *Religions of the world*, pp. 296, 308.—See also DRUIDS.

In China and Japan.—"The oldest religion of the Chinese, Sinism, a pure monotheism, possessed no real priesthood, and the reformer, Confucius, made no alteration in this respect. "Society, according to the Chinese view, is competent to manage relations with the supernatural Powers—it needs no special class of intermediaries. This thoroughgoing conception of civic autonomy in religion connects itself with the supreme stress laid on conduct in the Confucian system, which represents the final Chinese ideal of life: man constructs his own moral life, and extrahuman Powers, while they may grant physical goods, are chiefly valued as incidents in the good social life. The great speculative systems of thought, Confucianism [see CONFUCIANISM] and Taoism, gradually gave rise to definite sacerdotal cults; but the priests of the Confucian temples serve mainly to keep before the people the teaching of the Master, and the Taoist priests have become largely practitioners of magic and charlatans. Chinese religious practice remains essentially nonsacerdotal."—C. H. Toy, *Introduction to the history of religions*, p. 525.—The native religion of the Japanese is Shintoism, in which the Mikado is considered a son of the Deity, and as such is high priest.—See also JAPAN: Religions.

In Egypt.—A special priestly caste developed in Egypt as early as 3,400 B. C. The priests "were exempt from taxes and had a public allowance of food; the temples at the capitals, Memphis and Thebes, became enormously wealthy; the priests exercised judicial functions (but under the control of the king); they cultivated astronomy and arithmetic, and controlled the general religious life of the people; as early as the thirteenth century B. C. they had attained a political power with which the kings had to reckon, and still earlier (ca. 1,400 B. C.) the Theban priests were able to overthrow the religious reformation introduced by Amenhotep IV; the departments of sacerdotal functions were multiplied, and the high priest of the Theban Amon, whose office became hereditary, controlled the religious organization of the whole land, set himself up as a rival of the Pharaoh in dignity, and finally became the head of a sacerdotal theocracy."—C. H. Toy, *Introduction to the history of religions*, p. 521.—See also EGYPT: B. C. 1379; About B. C. 1200-670.

In Semitic religions (non-Jewish).—"The priesthood [in Babylonia] was divided into several classes with distinct functions; one class had to do particularly with the offerings; another intoned hymns or wailed lamentations; a third knew the rites and incantations by which evil spirits, especially the demons of disease, were exercised and malicious magic thwarted, as well as the manifold purifications and piacula that went with them; while a fourth was expert in divination and the interpretation of omens and portents. All these, except perhaps the sacrificial priests, possessed their own collections of texts, and the last two, at least, had a highly elaborated traditional art to master. . . . While the gods . . . sank into obscurity, the arts of the Babylonian magicians and diviners were celebrated in all lands, and the adepts found new and lucrative fields for their practice in the West. Hoary antiquity, mystifying hocus-pocus, and elaborate pretence of method conspired to give these Chaldeans, or 'mathematicians,' or whatever

else they were called, a great vogue. Divination from astronomical phenomena, in particular, was an imposing pseudo-science, which formed the basis of astrology."—G. F. Moore, *History of religions*, v. 1, pp. 219, 230.—See also BABYLONIA: Early (Chaldean) monarchy.—Among the Syrians there was the voluptuous cult of Astarte, known as the "Syrian Goddess." Among the Phoenicians, Amonites, and Philistines too, Moloch and Astarte were worshipped; and their priests offered human sacrifices.

Priestless religions.—"More markedly un-priestly than the state religion of China, which eventually countenanced Confucian priests (teachers) and Taoist magicians, is Islam, which recognizes neither the priest nor the temple. Buddhism also did away with the priest as spiritual controller and with the priestly caste as ministrants of religion (not, however, as a social order): but it really replaced the priests with superior 'brethren,' who controlled the religious organization. . . . Practically also the monks became to the laity a special priestlike order and in some Buddhistic sects there was formed a spiritual hierarchy of Patriarchs, which acted as intermediary between man and the spiritual powers of earth and air."—E. W. Hopkins, *Origin and evolution of religion*, p. 206.

Hebrew priesthood.—Levites.—Civil importance of high priest.—"In early times the assistance of a priest was not necessary to the offering of sacrifice. The most important function of the priesthood was divination, which they practised by means of a specific apparatus, apparently a form of divination by lot. They had also an expert knowledge of the rules of clean and unclean and of the appropriate purification and expiations. This knowledge, as well as the art of manipulating the oracle, was transmitted by tradition in certain families, but these families formed no exclusive caste, though at an early time 'Levite' priests—whether Levi by the name of a guild or a clan—were regarded as a superior kind. The ancient customs of Israel, which were under the sanction of religion, fell naturally into their province; they gave decisions on questions of customary law as well as of ritual. The priesthoods of such sanctuaries as Shiloh, Dan, Bethel, Gilgal, doubtless had much influence in shaping custom and making it uniform throughout the land, and in harmonizing and consolidating tradition. . . . At the head of the priesthood [in the age of the prophets] was a chief priest, whose importance was much greater than that of his predecessors in the days of the Judæan monarchy, because there was no king over him. The local governor, when a native, had only coördinate authority; and when, as commonly, a foreigner filled the office, the high priest was not only the religious head of his people but in many ways their political representative before the Persian administration. Like other Syrian high priests, he customarily wore the purple and the tiara of a ruler instead of sacerdotal vestments. The common priests were numerous; there were among them several families, without, so far as appears, a corresponding differentiation of function. The inferior ministry of the temple was performed by Levites, who, according to Ezekiel, were descendants of the old priests of the high places; there were also musicians and singers, guards, doorkeepers, and menial servants. The relations of these classes evidently changed in many ways in the course of the centuries; fortunately it is not necessary for our purpose to reconstruct this obscure history."—G. F. Moore, *History of religions*, v. 2, pp. 9, 39-40.

ALSO IN: H. P. Smith, *Priest, priesthood (Encyclopaedia of religion and ethics*, v. 10, pp. 307-311).

Christian conceptions.—All the faithful as ministrants.—Second century rites.—Later elaboration.—In the early Christian church all of the faithful were conceived as priests, a "universal priesthood," as the doctrine was called. "The organization of the primitive societies of believers was very simple. There were missionaries ('apostles') who were sent out from the principal centres—Jerusalem or Antioch—to preach the gospel or visit other churches, sometimes taking helpers with them. The local societies were called 'assemblies' like the Jewish Synagogues. The affairs of the society were managed by the seniors (presbyters, elders), whether by the tacit recognition or choice of the community, or appointed by the missionaries. Paul's letter to the Philippians is addressed 'to all the saints (*áyloí*, initiates) in Christ Jesus who are in Philippi, with the overseers and helpers.' There were also prophets who spoke as they were inspired; but prophecy was an occasional gift, not an office. A more advanced stage of organization is reflected in the instructions for missionaries in the Epistles to Timothy and to Titus, where the qualifications of overseers, and the duties of helpers, both men and women, especially in the administration of the charities of the churches, are defined. We learn that the elders were at the head of the community, and that some of them preached and taught in its gatherings; what the peculiar function of the overseers was, if indeed they are to be distinguished from the elders, we are not informed. The letters of Ignatius, bishop of Antioch, written early in the second century to churches in Asia Minor, show that each church was ruled by a single overseer (bishop), with a plurality of elders (presbyters) and helpers (deacons) under him. A society in which these three orders are not found, Ignatius says, is not called a church. . . . The main features of Christian worship were always the same, but in time the simple rites described by Justin in the middle of the second century were elaborated into a stately cultus. This tendency, inherent in all ritual, was greatly furthered by the influence of the Old Testament when the Christian clergy came to be regarded as succeeding to the place of the priesthood of the former dispensation. The gorgeous raiment of the high priest, the ceremonial vestments of the other priests, the solemn processions, the choirs of Levitical singers intoning psalms, the clouds of incense from swinging censers—all seemed a divine model of religious worship, which warranted the church in rivalling the pomp of the ancient cults. . . . The hierarchical organization of the church is as old at least as the early second century; and the bishops, elders, and deacons of the New Testament had always been taken as the Apostolic institution of the three orders of the ministry till the exegesis of some of the humanists made bishops and presbyters the same order, an interpretation in which the reformed churches followed them. On these points, therefore, the council [of Trent 1545] stood fast in the Catholic tradition and gave it formal dogmatic authority. And it was here, over the church and the sacraments, rather than on points of theology or morals, that the real issue lay."—G. F. Moore, *History of religions*, pp. 140, 215-216, 348-340.

PRIESTLEY, Joseph (1733-1804), English chemist. See CHEMISTRY: General: Phlogiston period.

PRIESTS' LANE, unsecularized prince bishoprics in Germany. See GERMANY: 1631-1632.

PRIEUR DE LA MARNE, Pierre Louis (1756-1827), French revolutionist. Member of the States-General and National Assembly; became vice president of the criminal tribunal of Paris, 1791; member of the Convention, 1792, member of the Committee of Public Safety, 1793; established the "terror" in Brittany; president of the Convention, 1794.

PRIEUR-DUVERNOIS, Claude Antoine, Comte (1763-1832), French revolutionist. Sent by the Côte d'Or to the legislative assembly, 1791, and to the Convention, 1792; member of the Committee of Public Safety in charge of munitions, 1793; contributed to the founding of the Ecole Polytechnique and to the establishment of the metric system; one of the Council of Five Hundred under the Directory.

PRILEP (Turkish Perlepe), town of Macedonia, about twenty miles north of Monastir. As a result of the Balkan wars, 1912-1913, it was ceded by Turkey to Serbia. In the World War, it was taken by the Bulgarians in 1916, but the Allies recaptured it in 1918. See TURKEY: 1912-1913; WORLD WAR: 1916; V. Balkan theater: b, 1; 1918; V. Balkan theater: a.

PRIM, Juan, Marquis de los Castillejos, Count de Reus (1814-1870), Spanish soldier and statesman. See SPAIN: 1833-1846; 1854-1868; 1868-1873.

PRIMARIES IN THE UNITED STATES.—"Primaries or caucuses, are meetings of the party members to determine the candidates of the party, the delegates to the next higher party convention, and the party officials. Originally they were extralegal meetings, unregulated by statute, and laws unto themselves."—E. Kimball, *National government of the United States*, pp. 119-120.

Differentiation from caucus. See CAUCUS: Application of term.

Old conditions.—Corrupt operation by powerful machine. See CORRUPT AND ILLEGAL PRACTICES AT ELECTIONS: United States.

State laws controlling parties.—Necessity for determining party membership.—"The first necessity in the nomination of candidates is to insure that Democratic voters do not take part in Republican primaries and *vice versa*, since they would seek to nominate the weakest possible candidates

to their opponents' ticket. Legislation to this effect is difficult because it is unfair to require a voter to reveal his party affiliations and thus destroy the secrecy of ballot; nor can anything in the nature of a party pledge be exacted in advance of election. Under the New York system enrolment on the party lists takes place at the same time as registration for the polls. When the voter appears before the Board of Registration, if he desires to take part in the next primaries, he must cause his name to be entered in the enrolment books. He then enters a booth and marks on a blank provided by the Board the party with whose principles he is 'in general sympathy' and whose nominees he intends 'to support generally.' No pledge is given, but he must declare that he has enrolled with no other party during that year. A week after the next election the enrolment blanks are opened, and the lists composed therefrom serve as the criterion of party membership at the ensuing primaries. The primaries themselves are held at dates varying with the importance of the offices to be filled at the coming election. Until the advent of direct primaries the vote at the primaries was always cast, not for party candidates, but for delegates to a nominating convention. On a day duly announced in the newspapers the voter went to the polls assigned to his party. If his name was found on the enrolment book, he was given one of each of the ballots which had been furnished by the Custodian of Primary Records, printed upon papers of distinctive colors. Entering a booth the voter selected the list of delegates he wished to support and folded it without a mark of any kind. This ballot was deposited in the ballot box, while the rest were placed in the box provided for waste ballots. Few voters realize the crucial importance of the primaries to a really liberal franchise. Regulation is of little value unless the honest citizens grasp the political bull by the horns by turning out in large numbers at the primaries."—C. Seymour and D. P. Frary, *How the world votes, v. 1*, pp. 275-277.

ALSO IN: E. Kimball, *National government of the United States*, pp. 120-122.—F. W. Dallinger, *Nominations for elective office*.

Functions of primaries.—Selection of candidates for office, officials for party organizations, and delegates to higher party organizations.—"Primaries . . . are more than party meetings to nominate candidates for office. They are meetings for the selection of the officials of the party organizations. In precincts and wards and generally in cities the primaries have long been used for the purpose of choosing the members of the party committees. In larger political divisions the convention has generally been the place of choice. But . . . the convention was believed to be the field which the boss most firmly controlled. In the attempt to weaken this control and to democratize the party organization, the selection of the county and state committees in many states has been taken from the convention and given to the primaries. . . . The third duty of the primaries is to choose delegates to some higher party organization which is intrusted with the nomination of the party candidates, or, in the case of the nomination of the president, with the selection of delegates to the national nominating convention."—E. Kimball, *National government of the United States*, pp. 122-123.

Origin of direct primary system.—Rapid progress.—"A brief outline of how direct nominations originated and how the system has been extended until it has been substituted for the con-

vention system by a majority of the American people furnishes a strong argument in its favor. It is an American system, and a product of the struggle of the American people for the control of their government. Direct primaries originated in Crawford County, Pennsylvania, where the so-called Crawford County System was established by action of a Republican County Committee in 1860 and has been in force ever since. On two occasions, the question of whether it should be retained was put before the Republican voters and overwhelmingly decided in the affirmative, the last of these votes being taken after the system had been in force for nineteen years. Its popularity led to its adoption throughout the entire Congressional district for all nominations. The Minnesota direct primary law for the city of Minneapolis, Hennepin County, was enacted in 1899. After it had been tried in the city for two years, public sentiment, because of the excellent results achieved under the new law in Minneapolis, insisted upon its being extended, and other localities were brought within its provisions. . . . The newspapers of Minneapolis all declared for it, and no man of prominence in the state took a stand against it after it had been tried in the city. Michigan adopted direct primaries in 1903 for use in Grand Rapids, Kent County. The result was the defeat for re-nomination of the Mayor under whose administration the so-called water scandal had developed. Two years later, candidates in Kent County were requested to go on record as to whether they favored a general direct primary law for the state. All who recorded their positions declared for such a law, and it was commonly reported in the newspapers that opposition to direct primaries would mean defeat for any candidate who took so unpopular a stand. Thereafter direct nominations spread rapidly through the middle western states. Mandatory laws were substituted for optional laws, and state-wide laws for laws applying to certain localities or offices."—*Citizens' Union of New York (pamphlet, 1909)*.—"So rapid was the progress of democratic opinion that before the movement toward reform of the old primaries and the convention had reached its height, direct nomination had been adopted in several states. Illinois, Iowa, and Pennsylvania passed almost abruptly from the unregulated convention system to direct primaries. Various forms of popular nomination existed in Pennsylvania in the 60's and in many states of the West and the South. The main factors in the spread of the institution were the growing tendency toward complete popular control and the disclosure in the 80's and 90's of gross scandals in the primaries and in party government. This zeal for purification and for responsible government which spread like wildfire during the Rooseveltian epoch, seized upon the direct primary as an agency to its purpose, and before 1917 it was in use in all but six of the states. The course of direct primary legislation has been similar to that of primary reform, already traced. An optional law for certain cities or counties was followed within a very few years by a mandatory, state-wide enactment. For example, North Dakota in 1905 established direct primaries for all but state offices, but in 1907 it passed a sweeping law covering practically all offices. In the Southern states the system has been adopted with very meager regulation. While therefore the genus of direct primary legislation is fundamentally the same throughout the country, the species differ widely in the method of nominating candidates, the majority required, the question of the preferential vote, the arrangement of

the ballot, and the drawing up of a platform."—C. Seymour and D. P. Frary, *How the world votes*, v. 1, pp. 281-282.

Primary election law in New York. See *NEW YORK*: 1898.

Different methods.—Petitions.—Majority required.—"The names of the aspirants are generally placed upon the primary ballot upon petition of a number of electors. The number of signatures required differs. Procuring a widely signed petition is expensive business, requiring the help of a political machine. A rich or widely known aspirant is at an undue advantage, while neither the quality nor the quantity of the names on the ballot benefits. Later laws have recognized this fact by reducing the number of names demanded and by fixing a maximum as well as a minimum number to prevent expensive competition. The usual figure is put at five per cent of the party voters. In certain states the signatures must be distributed generally through the constituency. It became common for aspirants to seek signatures months in advance of the primaries and to commute the use of the name into a pre-campaign pledge. Some states therefore prohibit the soliciting of names prior to a fixed date. All these measures tend in the common direction of making the primary ballot a democratic instrument. As to the majority required for a choice, there is great diversity of practice, particularly between the northern and the southern states. In the North and the West nomination is commonly by a simple plurality, though several states provide that, if no candidate receives a certain percentage of the votes cast, the selection shall be made by a convention or a second primary. The compromise between direct primaries and a convention is not wholly successful, for a large number of candidates may be presented on purpose to split up the vote and throw the choice over to an old-fashioned convention. The southern states on the other hand require a majority and provide that a second primary election between the two highest shall be held in case none is obtained. Ballotage is simple in the South, where party conditions are such that victory in the second primary of one of the parties really signifies victory in the election. The attendance at the former is much larger than at the election itself. In the North the number of elections is already so great that the vote is neither large nor fairly representative, and it would be unwise to pile on another election in the form of a second primary."—C. Seymour and D. P. Frary, *How the world votes*, v. 1, pp. 282-283.—See also OREGON: 1902-1915; SOUTH DAKOTA: 1918.

Preferential primaries.—Oregon, in 1910, passed a law allowing voters to express their preference for presidential candidates. Delegates to the national convention must, to the best of their ability, carry out the wishes of the voters as expressed in this preferential vote. This same system was adopted by New Jersey, Nebraska, California (see CALIFORNIA: 1911), North Dakota and Wisconsin in 1911, and by Massachusetts, Illinois and Maryland in 1912. Illinois does not make it compulsory for the delegates to follow the advice of the voters. The preferential vote is merely for their guidance. By 1916, twenty-three states had adopted either the presidential preference primary or the election of delegates by direct vote. "To

avoid the necessity of a convention or a ballotage, resort is sometimes had to the preferential vote. This is designed to remedy one of the faults of nomination by plurality. A reform movement is often burdened with multiplicity of counsels and candidates. Three reform candidates may each poll twenty per cent of the votes cast and yet all be defeated by a Machine nominee with twenty-five per cent, and the reform policy of a large majority of the voters frustrated by a division as to candidates. Under the preferential system the voter names both a first and a second choice, and if no candidate is elected by the first choices, the second choices are then distributed. In the instance just cited the voters by exchanging second choices could confine the election to the three reform candidates to the entire exclusion of the Machine. The preferential system is a strong weapon against the Boss, but it is still little known to the public because of its complexity."—C. Seymour and D. P. Frary, *How the world votes*, v. 1, p. 283.

Arrangement of primary ballots.—Statement of party policies.—"As each name stands on its own merits on the direct primary ballot, there is controversy for the most favorable place on the list. Arrangement in the order of the time of filing nominating petitions is the least satisfactory method, resulting in an undignified scramble for the initial place. Some states print the names in alphabetical order. This system favors Mr. Abbott and handicaps Mr. Zimmerman in proportion to the length of the ballot, though the extent of the handicap has been exaggerated. To obviate this injustice other states arrange the names in rotation so that each appears at the head of the list an equal number of times. Another important question raised by the system of direct nominations is the construction of the party platform in state elections, where there are often serious issues toward which the party's attitude must be known. Various alternatives to platform writing in a convention have been tried. In many states the candidate makes his own platform in his campaign speeches, much as did Lincoln in his debates with Douglas. A law of 1904 in Oregon allows the candidate to state his principles in not more than one hundred words for publication in a campaign handbook under state auspices, and to present a statement of twelve words to appear on the ballot as his platform. In states where a convention is held in default of the necessary percentage at the primaries, this gathering also draws up a statement of the party's policies. A Wisconsin law of 1903 provides for the formation of a platform by the party nominees together with the holdover party members of the legislature. This method insures responsibility on the part of those who will be in a position to carry out the party's agreements by executive and legislative action. The method which approaches nearest to the spirit of the direct primary is in use in Texas. On application of ten per cent of the party voters any question of party policy must be submitted to the voters at the primaries. In fact, all demands for specific legislation must receive the endorsement of a majority at the primaries. When one remembers that the platform framed by the convention was a perfunctory and rhetorical document, rarely destined to fulfillment,

it must be admitted that the direct primary is a leavening influence rather than an impediment in platform making. Certain aspects of the direct primary have become plainly evident . . . which must not be overlooked in adjudging the institution a failure, or a success. It is clear that direct primaries are more expensive than indirect. A publicity campaign must be carried on, not within the limits of a hall, but throughout the constituency. In a close fight the expense for advertising, stump speaking, workers, and conveyances equals that in a regular election. Yet if this expenditure is directed toward the education of the public, the outlay is on the whole desirable, provided the sum necessary is not so great as to exclude or unduly obligate the poor man. Any reasonable expenditure which breaks the lethargy of the public and makes government a vital and engrossing interest to the individual citizen is money well spent. The number of aspirants to the party ticket is not so large as was anticipated. Generally the contest narrows to two or three rivals, for few desire the fame gained by finishing a poor sixth or seventh in the primaries. Furthermore the time and money required bar out political dilettantes. Racial and geographical prejudices do not have such an influence as was predicted by the opponents of reform. We have the German-American candidate and the Lower California candidate, but in general a man's popularity depends upon other qualities than his birth and birthplace. Most disappointing to the friends of the new order has been the effect on parties. The direct primary has manifestly not done the party to death. Party organization flourishes, and the Machine candidate presents himself with the independents for nomination. . . . True it is, however, that the independent voter has a check upon the Ring. While a party slate may be made up in advance of the primary, it is so easily broken that the quality of the nominations has of necessity improved. . . . The system does not of necessity obtain good officials; Curley was nominated for Mayor of Boston while in jail for fraud. The quality of the party slate is precisely as high as the sense of civic responsibility. The *sine qua non* of success in the direct primaries is sufficient public interest in good nominations to bring a majority of the electorate to exercise the franchise. On this point the evidence seems to be clearly in favor of the direct system. It does draw out a larger vote than took part in the choice of delegates. The personal nature of the contest, the increase in zealous campaigning, the added importance of the individual vote, all further the general participation in elections, which must be the basis of all democratic rule. While therefore the direct primary has not fulfilled all that was predicted for it, it constitutes a great advance in educative influence, in making the party machine responsive to the voters, in increasing the independent vote, and in procuring more efficient officers."—C. Seymour and D. P. Frary, *How the world votes*, v. 1, pp. 283-287.—One of the defects of the direct primary which has not yet been mentioned is the possibility it affords of a choice by minority vote. When there are many candidates for an office it is very likely that the successful candidate will be chosen by a plurality of all the votes cast and not by a majority.

Repeal of New York primary law.—When the

Republicans came into control of the state government of New York in 1920, they proceeded to repeal the primary law of 1913. Under the new election law which passed the legislature early in 1921, the primary is not entirely abandoned, as it still applies to city and national elections, but the convention system is restored for the nomination of state officials and Supreme Court justices. Party representatives are still to be chosen by primaries. In his message to the New York legislature, January 4, 1923, the democratic governor, Alfred E. Smith, recommended the restoration of the direct primary. A number of bills to that effect were introduced in the legislature in the early part of 1923. The most important of these, the Walker Bill, passed the Senate, March 14, but was voted down in the Assembly.

Control by Congress. See SUPREME COURT: 1921.

PRIMATES, METROPOLITANS, PATRIARCHS.—In the early organization of the Christian church, the bishops of every province found it necessary "to make one of themselves superior to all the rest, and invest him with certain powers and privileges for the good of the whole, whom they therefore named their primate, or metropolitan, that is, the principal bishop of the province. . . . Next in order to the metropolitans or primates were the patriarchs; or, as they were at first called, archbishops and exarchs of the diocese. For though now an archbishop and a metropolitan be generally taken for the same, to wit, the primate of a single province; yet anciently the name archbishop was a more extensive title, and scarce given to any but those whose jurisdiction extended over a whole imperial diocese, as the bishop of Rome, Alexandria, Antioch, etc."—J. Bingham, *Antiquities of the Christian church*, v. 1, bk. 2, ch. 16-17.—See also CHRISTIANITY: 312-337.

PRINCEPS SENATUS.—"As the title of imperator conferred the highest military rank upon Augustus and his successors, so did that of princeps senatus, or princeps (as it came to be expressed by an easy but material abridgement), convey the idea of the highest civil preëminence consistent with the forms of the old constitution. In ancient times this title had been appropriated to the first in succession of living censorii, men who had served the office of censor; and such were necessarily patricians and senators. The sole privilege it conferred was that of speaking first in the debates of the senate; a privilege however to which considerable importance might attach from the exceeding deference habitually paid to authority and example by the Roman assemblies. . . . The title of princeps was modest and constitutional; it was associated with the recollection of the best ages of the free state and the purest models of public virtue; it could not be considered beyond the deserts of one who was undoubtedly the foremost man of the nation. . . . The popularity which the assumption of this republican title conferred upon the early emperors may be inferred from the care with which it is noted, and its constitutional functions referred to by the writers of the Augustan age and that which succeeded it. But it was an easy and natural step in the progress of political ideas to drop the application of the title, and contract it from prince of the senate, to prince merely. The original character of the appellation was soon forgotten, and the proper limits of its privileges confounded in the more vague and general prerogative which the bare designation of first or premier seemed to imply."—C. PRINTING AND THE PRESS

Development in connection with other inventions.—Statistics.—The development of printing, which more than one authority has called the greatest of all the arts, is so closely interwoven with all modern invention and modern thought, that its story, if fully told, would be a narrative of the world's progress. Since the invention of the printing press, that is printing by movable type, in the middle of the fifteenth century, there has been a marvelous spread of the printed word throughout the world. Great inventions in the mechanism of printing which came at the end of the 19th century, united with the improved means of communication and transportation wrought by steam and electricity, made possible the enormous output of printed matter which has distinguished the twen-

decisive—because distinctive—thing is the manner in which the Teufons came to invent cast movable type and so practical printing, and this again is bound up with their recognition of the value of paper. For in its origin, printing is an application of paper. As soon as paper—*i. e.*, a suitable, cheap material for reproduction—was found, the industrious, ingenious Teutons began . . . to seek a practical solution of the old problem, how to print books mechanically. . . . Those industrious utilitarians, the Chinese, first hit upon the idea of making a cheap, convenient and universally suitable medium for writing (in place of expensive parchment, still more expensive silk, comparatively rare papyrus, Assyrian bricks for writing on, &c.). . . . The Chinese, who themselves used papyrus per-

tieth century. Estimates made in 1921 give the total number of newspapers published in the world as 56,000. Of these the United States and Canada are credited with 24,000; Great Britain and the British colonies with the exception of Canada, with 9,800; Germany, with 8,000; France, with 4,600; Japan, with 2,000; Italy, with 1,600; Austro-Hungary, with 1,200; Asia, with 600; Spain, with 900; Russia, with 850; Australia, with 600; Greece, with 600; Switzerland, with 450; Belgium, with 250; and Holland, with 300.

Before the 14th century.—Ancient origins.—Chinese and Iranian paper.—Teuton inventiveness.—Books printed in fifteenth century.—First newspaper.—“The idea of printing is very ancient; every stamp, every coin is a manifestation of it; the oldest copy of the Gothic translation of the Bible, the so-called *Codex argenteus* is ‘printed’ on parchment by means of hot metal types; the

fectly similar to our own, and knew its disadvantages, discovered how to make by artificial process from suitable plant fibres a writing material analogous to paper: that is their contribution to the invention of paper. [See also CHINESE LITERATURE: Literature after B. C. 478.] Chinese prisoners of war then brought this industry (roughly speaking, in the seventh century) to Samarkand, a city which was subject to the Arabian Khalif, and mostly ruled by almost independent Turkish princes, the inhabitants of which, however, consisted at that time of Persian Iranians. The Iranians . . . ‘almost immediately’ invented the making of paper from rags. . . . In the year 795 Harun-al-Raschid (a contemporary of Charlemagne) sent for workmen from Samarkand and erected a factory in Bagdad. The preparation was kept a State secret; but wherever Arabs went, paper accompanied them, particularly to Moorish Spain, . . . where paper

can be proved to have been in use from the beginning of the tenth century. . . . In the course of the Crusades the secret of the manufacture, guarded with such intellectual poverty, was revealed. What the poor Iranian, wedged in between Semites, Tartars and Chinese, had invented, was now taken over by the free Teuton. In the last years of the twelfth century exact information concerning the making of paper reached Europe. . . . In the year 1290 the first regular paper-mill was erected in Ravensburg; it was scarcely one hundred years [thereafter] before block-printing (or whole books even) had become common, and in fifty years more printing with movable letters was in full swing. . . . From the thirteenth century onwards the Bible, especially the New Testament, translated into the languages of the various nations, had been spread by paper through many parts of Europe. . . . The demand for reading and knowledge grew day by day; there were as yet no books (in our sense), but there were already booksellers who travelled from fair to fair and sold enormous quantities of clean, cheap copies printed on paper; the invention of printing was rendered inevitable. . . . At the same time as Gutenberg is experimenting with the casting of letters in Mayence, others are doing the same in Bamberg, Haarlem, Avignon, and Venice. And when the great German had finally solved the riddle his invention was at once understood and imitated; it was improved and developed, because it met a universal and pressing need. In 1450 Gutenberg's printing press was set in motion, and twenty-five years from that time there were presses in almost all the cities of Europe. Indeed in some of the cities of Germany—Augsburg, Nürnberg, Mayence—there were twenty or more presses at work. . . . The number of separate works printed between 1470 and 1500 is estimated at ten thousand; all the then known Latin authors were printed before the end of the century; in the next twenty years all the available Greek poets and thinkers followed. . . . Johannes Müller of Königsberg in Franconia, called Regiomontanus, founded between 1470 and 1475 a special press in Nürnberg to print mathematical works; numerous German, French, and Italian mathematicians were thereby stimulated to work in mechanics and astronomy; in 1525 the great Albrecht Dürer of Nürnberg published the first geometry in the German language, and soon after there also appeared in Nürnberg the *De Revolutionibus* of Copernicus. In other branches of discovery men had not been idle, and the first newspaper, which appeared in 1505, 'actually contains news from Brazil.'—H. S. Chamberlain, *Foundations of the nineteenth century*, v. 2, pp. 337-343.—See also EUROPE: Renaissance and Reformation: Various Italian humanists; BASEL: 1460-1500; BIBLE, ENGLISH: 14th-16th centuries.

1430-1456.—Invention of movable type.—Rival claims for Coster and Gutenberg.—First printed book.—'It is certain that long before Gutenberg a means was found of cutting wood and metal in relief and reproducing by application the image traced. . . . Remembering that the numerous guilds of 'tailleurs d'images,' or sculptors in relief, had in the Middle Ages the specialty of carving ivories and of placing effigies on tombs, it can be admitted without much difficulty that these people one day found a means of multiplying the sketches of a figure often asked for, by modelling its contour in relief on ivory or wood, and afterwards taking a reproduction on paper or parchment by means of pressure. When and where was this discovery produced? We cannot possibly say; but it is certain that playing cards were

produced by this means, and that from the year 1423 popular figures were cut in wood, as we know from the St. Christopher of that date [in the Spencer collection]. . . . It is a recognised fact that the single sheet with a printed figure preceded the xylographic book, in which text and illustration were cut in the same block. This process did not appear much before the second quarter of the 15th century, and it was employed principally for popular works which were then the universal taste. The engraving also was nothing more than a kind of imposition palmed off as a manuscript; the vignettes were often covered with brilliant colours and gold, and the whole sold as of the best quality. . . . An attempt had been made to put some text at the foot of the St. Christopher of 1423, and the idea of giving more importance to the text was to the advantage of the book-sellers. . . . At the epoch of St. Christopher, in 1423, several works were in vogue in the universities, the schools, and with the public. . . . To find a means of multiplying these treatises at little cost was a fortune to the inventor. It is to be supposed that many artisans of the time attempted it; and without doubt it was the booksellers themselves, mostly mere dealers, who were tempted to the adventure by the sculptors and wood-cutters. But none had yet been so bold as to cut in relief a series of blocks with engravings and text to compose a complete work. That point was reached very quickly when some legend was engraved at the foot of a vignette, and it may be thought that the 'Donatus' [i.e., the Latin Syntax of Ælius Donatus] was the most ancient of books so obtained among the 'Incunabuli,' as we now call them, a word that signifies origin or cradle. The first books then were formed of sheets of paper or parchment, laboriously printed from the xylographic blocks, that is to say wooden blocks on which a 'tailleur d'images' had left in relief the designs and the letters of the text. He had thus to trace his characters in reverse, so that they could be reproduced as written; he had to avoid faults, because a phrase once done, well or ill, lasted. It was doubtless this difficulty of correction that gave the idea of movable types. . . . This at least explains the legend of Laurent Coster, of Haarlem, who, according to Hadrian Junius, his compatriot, discovered by accident the secret of separate types while playing with his children. And if the legend of which we speak contains the least truth, it must be found in the sense above indicated, that is in the correction of faults, rather than in the innocent game of a merchant of Haarlem. . . . Movable type, the capital point of printing, the pivot of the art of the Book, developed itself little by little, according to needs, when there was occasion to correct an erroneous inscription; but, in any case, its origin is unknown. Doubtless to vary the text, means were found to replace entire phrases by other phrases, preserving the original figures; and thus the light dawned upon these craftsmen, occupied in the manufacture and sale of their books. According to Hadrian Junius, Laurent Jansoon Coster (the latter name signifying 'the discoverer') published one of the celebrated series of works under the general title of 'Speculum' which was then so popular, . . . the 'Speculum Humane Salvationis.' . . . Junius, as we see, attributes to Laurent Coster the first impression of the 'Speculum,' no longer the purely xylographic impression of the 'Donatus' from an engraved block, but that of the more advanced manner in movable types [probably between 1430 and 1440]. In point of fact, this book had at least four editions, similar in engravings and body of letters, but of different text.

It must then be admitted that the fount was dispersed, and typography discovered. . . . All the xylographic works of the 15th century may be classed in two categories: the xylographs, rightly so called, or the block books, such as the 'Donatus,' and the books with movable types, like the 'Speculum,' of which we speak. . . . Hadrian Junius positively accuses one of Laurent Coster's workmen of having stolen the secrets of his master and taken flight to Mayence, where he afterwards founded a printing office. According to Junius, the metal type was the discovery of the Dutchman, and the name of the thief was John. Who was this John? Was it John Gaensefleisch, called Gutenberg, or possibly John Fust? But it is not

lems presented themselves to him. He wanted types less fragile than wooden types and less costly than engraving. He wanted a press by the aid of which he could obtain a clear impression on parchment or paper. He desired also that the leaves of his books should not be anopistograph, or printed only on one side. . . . Until then, and even long after, the xylographs were printed 'an frotton' or with a brush, rubbing the paper upon the *forme* coated with ink, thicker than ordinary ink. He dreamed of something better. In the course of his work John Gutenberg returned to Mayence. The idea of publishing a Bible, the Book of books, had taken possession of his heart. . . . The cutting of his types had ruined

(After a drawing by Adolf Menzel)

at all apparent that Gutenberg, a gentleman of Mayence, exiled from his country, was ever in the service of the Dutch inventor. As to Fust, we believe his only intervention in the association of printers of Mayence was as a money-lender, from which may be comprehended the unlikelihood of his having been with Coster, the more so as we find Gutenberg retired to Strasbourg, where he pursued his researches. There he was, as it were, out of his sphere, a ruined noble whose great knowledge was bent entirely on invention. Doubtless, like many others, he may have had in his hands one of the printed works of Laurent Coster, and conceived the idea of appropriating the infant process. In 1439 he was associated with two artisans of the city of Strasbourg, ostensibly in the fabrication of mirrors, which may be otherwise understood as printing of 'Speculums,' the Latin word signifying the same thing. . . . Three prob-

him. . . . In this unhappy situation, Gutenberg made the acquaintance of a financier of Mayence, named Fust, . . . who put a sum of 1,100 florins at his disposal to continue his experiments. Unfortunately this money disappeared, it melted away, and the results obtained were absolutely ludicrous. . . . About this time a third actor enters on the scene. Peter Schoeffer, of Gernsheim, a writer, introduced into the workshop of Gutenberg to design letters, benefited by the abortive experiments, and taking up the invention at its dead-lock, conducted it to success. John of Trittenheim, called Trithemius, the learned abbot of Spanheim, is the person who relates these facts; but as he got his information from Schoeffer himself, too much credence must not be given to his statements. Besides, Schoeffer was not at all an ordinary artisan. If we credit a Strasbourg manuscript written by his hand in 1449, he was a student of the 'most

glorious university of Paris.'” How much Schoeffer contributed to the working out of the invention is a matter of conjecture; but in 1454 it was advanced to a state in which the first known application of it in practical use was made. This was in the printing of copies of the famous letters of indulgence which Pope Nicholas V. was then selling throughout Europe. Having the so far perfected invention in hand, Fust and Schoeffer (the latter now having married the former’s granddaughter) wished to rid themselves of Gutenberg. “Fust had a most easy pretext, which was to demand purely and simply from his associate the sums advanced by him, and which had produced so little. Gutenberg had probably commenced his Bible, but, in face of the claims of Fust, he had to abandon it altogether, types, formes, and press. In November, 1455, he had retired to a little house outside

imagine his fame to have spread everywhere as the real inventor. As a master in the art of printing, Gutenberg’s name was known in Paris as early as 1472. . . . Mr. Hessels . . . believes that the Coster mentioned in the archives as living in Haarlem, 1436-83, was the inventor of types, and that, taken as a whole, the story as told by Junius is substantially correct. Personally I should like to wait for more evidence. There is no doubt that the back-bone of the Dutch claim lies in the pieces and fragments of old books, . . . which give support to, at the same time that they receive support from, the Cologne Chronicler. . . . These now amount to forty-seven different works. Their number is being added to continually now that the attention of librarians has been strongly called to the importance of noting and preserving them. They have been catalogued with profound insight by

The most valuable piece of printing in the world, sold for \$50,000

the city, where he tried his best, by the aid of foreign help, to establish a workshop, and to preserve the most perfect secrecy. Relieved of his company, Fust and Schoeffer were able to take up the impression of the Bible and to complete it without him. . . . One thing is certain: that the Bible of Schoeffer, commenced by Gutenberg or not, put on sale by Fust and Schoeffer alone about the end of 1455 or beginning of 1456, proves to be the first completed book. . . . It is now called the Mazarine Bible, from the fact that the copy in the Mazarine Library was the first to give evidence concerning it. [See also BIBLE, ENGLISH: 14th-16th centuries.] The book was put on sale at the end of 1445 or beginning of 1456.”—II. Bouchot, *Printed book*, ch. 1.—“The general consent of all nations in ascribing the honour of the invention of printing to Gutenberg seems at first sight a very strong argument in his favour; but if Gutenberg were not the first to invent and use movable types, but the clever man who brought to perfection what already existed in a crude state, we can quite

Mr. Hessels, and for the first time classified by internal evidence into their various types and classes. But, it may well be asked, what evidence is there that all these books were not printed long after Gutenberg’s press was at work? . . . The earliest book of Dutch printing bears date 1473, and not a single edition out of all the so-called Costeriana has any printer’s name or place or date. To this the reply is, that these small pieces were school-books or absies and such-like works, in the production of which there was nothing to boast of, as there would be in a Bible. Such things were at all times ‘sine ulla nota,’ and certain to be destroyed when done with, so that the wonder would be to find them so dated and the very fact of their bearing a date would go far to prove them not genuine. These fragments have been nearly all discovered in 15th-century books, printed mostly in various towns of Holland. . . . Mr. Hessels quotes forty-seven different books as ‘Costeriana,’ which include four editions of the *Speculum*, nineteen of Donatus, and seven of Doc-

trinale. The Donatases are in five different types, probably from five different Dutch presses. Compared with the earliest dated books of 1473 and onwards, printed in Holland, they have nothing in common, while their brotherhood to the Dutch MSS. and block-books of about thirty years earlier is apparent. Just as astronomers have been unable to explain certain aberrations of the planets without surmising a missing link in the chain of their knowledge, so is it with early typography. That such finished works as the first editions of the Bible and Psalter could be the legitimate predecessors of the Costeriana, the Bruges, the Westminster press, and others, I cannot reconcile with the internal evidence of their workmanship. But admit the existence of an earlier and much ruder school of typography, and all is plain and harmonious."—W. Blades, *Books in chains, and other bibliographical papers*, pp. 140-158.

1457-1489.—Progress and diffusion of the art.—"In 1462, on the 28th of October, Archbishop Adolph of Nassau captured the city of Mayence and gave it over to his soldiers for plunder. The typesetters and printers, with all the other artisans whose work depended upon the commerce of the city, were driven to flight and it appeared for the moment as if the newly instituted printing business had been crushed. The result of the scattering of printers was, however, the introduction of the new art into a number of other centres where the influences were favourable for its development. The typesetters of Mayence, driven from their printing offices by the heavy hand of the Church, journeyed throughout the world and proceeded to give to many communities the means of education and enlightenment through which the great revolt against the Church was finally instituted. An important influence in securing for the work of the early printer-publishers of Germany a greater freedom from restriction than was enjoyed by their contemporaries in France was the fact that, in Germany, the beginning of printing, or at least its development, took place, not in a university centre but in a commercial town and was from the outset carried on not by scholars but by workers of the people. This brought the whole business of the distribution of the books in Germany into closer relations with the mass of the people than was in the case of France. The direct association with the university of the first printers in France (who were themselves the immediate successors of the official university scribes) brought the printing-press under the direct control of the university and rendered easy the establishment by the university authorities, and particularly by the theologians, of a continued censorship. Hegel, in his *Philosophy of History*, refers to the renewed interest in the writings of the ancients which was brought about through the service of the printing-press. He points out, further, that the Church felt at the outset no anxiety concerning the influence of the pagan literature and that the ecclesiastical authorities evidently had no understanding of the new elements of suggestion and enquiry that this literature was introducing into the minds of men. It may be considered as one of the fortunate circumstances attending the introduction of the art of printing that the popes of the time were largely

men of liberal education and intellectual tastes, while one or two, such as Nicholas V, Julius II, and Leo X, had a keen personal interest in literature and were themselves creators of books. . . . An earnest and narrow-minded head of the Church could, during the first years of the 16th century, have retarded not a little the development of the work of producing books for the community at large."—G. H. Putnam, *Censorship of the Church of Rome*, pp. 275-277.—After the Mazarine Bible, "then follows the Kalendar for the year 1457, most probably printed at the end of 1456. Then again the printed dates, August 14, 1457 and 1459, with place (Mentz) in the colophons of the Psalter issued by Fust and Schoeffer; the printed year 1460 (with Mentz added) in the Catholic [a Latin Grammar and Dictionary], etc., etc. So that, with the exception of 1458, there is no interruption in Mentz printing from the moment that we see it begin there. . . . Assuming then, for a moment, that Mentz is the starting-point, we see printing spread to Strassburg in 1460; to Bamberg in 1461; to Subiaco in 1465; in 1466 (perhaps already in 1463) it is established at Cologne; in 1467 at Eltville, Rome; in 1468 at Augsburg, Basle, Marienthal; in 1469 at Venice; 1470 at Nuremberg, Verona, Foligno, Trevi, Savigliano, Paris; 1471 at Spire, Bologna, Ferrara, Florence, Milan, Naples, Pavia, Treviso; 1472 at Esslingen, Cremona, Mantua, Padua, Parma, Monreale, Fivizzano, Verona; 1473 at Laugingen, Ulm (perhaps here earlier), Merseburg, Alost, Utrecht, Lyons, Brescia, Messina; 1474 at Louvain, Genoa, Como, Savona, Turin, Vicenza; 1475 at Lubeck, Breslau, Blaubeyren, Burgdorf, Modena, Reggio, Cagli, Caselle or Casale, Saragossa; 1476 at Rostock, Bruges (here earlier?), Brussels; 1477 at Reichenstein, Deventer, Gouda, Delft, Westminster; 1478 at Oxford, St. Maartensdyk, Colle, Schussenried, Eichstadt; 1479 at Erfurt, Würzburg, Nymegen, Zwolle, Poitiers; 1480 at London[?], Oudenaarde, Hasselt, Reggio; 1481 at Passau, Leipzig, Magdeburg, Treves, Urach; 1482 at Reutlingen, Memmingen, Metz, Antwerp; 1483 at Leiden, Kulenburg, Ghent, Haarlem; 1484 at Bois-le-Duc, Siena; 1485 at Heidelberg, Regensburg; 1486 at Munster, Stuttgart; 1487 at Ingolstadt; 1488 at Stendal; 1489 at Hagenau, etc."—J. H. Hessels, *Haarlem the birth-place of printing, not Mentz*, ch. 4.

1469-1515.—Early Venetian printers.—Aldine press.—"One of the famous first race of German printers, John of Spire, arrived at Venice in the year 1460, and immediately brought his art into full play; producing within the first three months his fine edition of the 'Letters of Cicero,' a masterpiece of early printing. . . . The success of John of Spire as a printer was at once recognized by the Venetian Republic; and Pasquale Malipiero, the reigning Doge, granted a patent conferring upon him the sole right of printing books within the territory of Venice. . . . But the enterprising printer did not live to enjoy the privilege," and it was not continued to any of his family. "On the withdrawal of the monopoly several new printers set-up their Presses in the city, among whom was the celebrated Jenson, the ingenious Frenchman who was sent by Charles VII to acquire the art at Mayence. . . . Nicholas Jenson was the most renowned of those who followed the earliest German printers in Venice, until his works were partially eclipsed by those of the Aldi. . . . In 1470 he [Jensen] had . . . completed his preparations, and the first four works which issued from his Venetian press appeared in that year. . . . These works were printed with Roman characters of his own engraving, more perfect in form than those of any

previous printer. His types are in fact the direct parents of the letters now in general use, which only differ from them in certain small details dependent solely on fashion. . . . This celebrated printer died in September of the year 1481. . . . Andrea Torresani and others continued Jensen's Association, making use of the same types. Torresani was eventually succeeded in the same establishment by the celebrated Aldo Manuccio, who, having married his daughter, adopted the important vocation of printer, and became the first of those famous 'Aldi,' as they are commonly termed, whose fame has not only absorbed that of all the earlier Venetian printers, but that of the early printers of every other Italian seat of the art. . . . It was Manuccio who, among many other advances in this art, first invented the semi-cursive style of character now known as 'Italic'; and it is said that it was founded upon a close imitation of the careful handwriting of Petrarch, which, in fact, it closely resembles. This new type was used for a small octavo edition of 'Virgil,' issued in 1501, on the appearance of which he obtained from Pope Leo X. a letter of privilege, entitling him to the sole use of the new type which he had invented." The list of the productions of the elder Aldus and his son Paul "comprises nearly all the great works of antiquity, and of the best Italian authors of their own time. From their learning and general accomplishments, the Aldi might have occupied a brilliant position as scholars and authors, but preferred the useful labour of giving correctly to the world the valuable works of others. The Greek editions of the elder Aldus form the basis of his true glory, especially the 'Aristotle,' printed in 1495, a work of almost inconceivable labour and perseverance."—H. N. Humphreys, *History of the art of printing*, ch. 8.—"Aldus and his studio and all his precious manuscripts disappeared during the troubled years of the great Continental war in which all the world was against Venice [see VENICE: 1508-1500]. In 1510, 1511, and 1512, scarcely any book proceeded from his press. . . . After the war Aldus returned to his work with renewed fervour. 'It is difficult,' says Renouard, 'to form an idea of the passion with which he devoted himself to the reproduction of the great works of ancient literature. If he heard of the existence anywhere of a manuscript unpublished, or which could throw a light upon an existing text, he never rested till he had it in his possession. He did not shrink from long journeys, great expenditure, applications of all kinds.' . . . It is not in this way however that the publisher, that much questioned and severely criticised middleman, makes a fortune. And Aldus died poor. His privileges did not stand him in much stead, copyright, especially when not in books but in new forms of type, being non-existent in his day. In France and Germany, and still nearer home, his beautiful Italic was robbed from him, copied on all sides, notwithstanding the protection granted by the Pope and other princes as well as by the Venetian Signoria. His fine editions were printed from, and made the foundation of foreign issues which replaced his own. How far his princely patrons stood by him to repair his losses there seems no information. His father-in-law, Andrea of Asola, a printer who was not so fine a scholar, but perhaps more able to cope with the world, did come to his aid, and his son Paolo Manutio, and his grandson Aldo il Giovane, as he is called, succeeded him in turn."—Mrs. Oliphant, *Makers of Venice*, pt. 4, ch. 3.—Aldus died in 1515. His son Paul left Venice for Rome in 1562.

1476-1491.—Introduction in England.—Caxton

press.—"It was probably at the press of Colard Mansion, in a little room over the porch of St. Donat's at Bruges, that William Caxton learned the art which he was the first to introduce into England. A Kentish boy by birth, but apprenticed to a London mercer, Caxton had already spent thirty years of his manhood in Flanders as Governor of the English gild of Merchant Adventurers there, when we find him engaged as copyist in the service of Edward's sister, Duchess Margaret of Burgundy. But the tedious process of copying was soon thrown aside for the new art which Colard Mansion had introduced into Bruges. . . . The printing-press was the precious freight he brought back to England in 1476 after an absence of five-and-thirty years. Through the next fifteen, at an age when other men look for ease and retirement, we see him plunging with characteristic energy into his new occupation. His 'red pale' or heraldic shield marked with a red bar down the middle invited buyers to the press he established

WILLIAM CAXTON

in the Almonry at Westminster, a little enclosure containing a chapel and almshouses near the west front of the church, where the alms of the abbey were distributed to the poor. . . . Caxton was a practical man of business, . . . no rival of the Venetian Aldi or of the classical printers of Rome, but resolved to get a living from his trade, supplying priests with service books and preachers with sermons, furnishing the clerk with his 'Golden Legend' and knight and baron with 'joyous and pleasant histories of chivalry.' But while careful to win his daily bread, he found time to do much for what of higher literature lay fairly to hand. He printed all the English poetry of any moment which was then in existence. His reverence for that 'worshipful man, Geoffrey Chaucer,' who 'ought to be eternally remembered,' is shown not merely by his edition of the 'Canterbury Tales,' but by his reprint of them when a purer text of the poem offered itself. The poems of Lydgate and Gower were added to those of Chaucer. The Chronicle of Brut and Higden's 'Polychronicon' were the only available works of an historical

character then existing in the English tongue, and Caxton not only printed them but himself continued the latter up to his own time. A translation of Boethius, a version of the *Eneid* from the French and a tract or two of Cicero, were the stray first-fruits of the classical press in England. Busy as was Caxton's printing-press, he was even busier as a translator than as a printer. More than four thousand of his printed pages are from works of his own rendering. . . . He was still . . . busy translating when he died [in 1491]. All difficulties . . . were lightened by the general interest which his labours aroused. . . . Caxton profited in fact by the wide literary interest which was a mark of the time."—J. R. Green, *History of the English people*, v. 2, bk. 5, ch. 1.—"Contemporary with Caxton were the printers Lettou and Machlinia, . . . who carried on business in the city of London, where they established a press in 1480. Machlinia had previously worked under Caxton. . . . Wynkyn de Worde . . . in all probability . . . was one of Caxton's assistants or workmen, when the latter was living at Bruges, but without doubt he was employed in his office at Westminster until 1491, when he commenced business on his own account, having in his possession a considerable quantity of Caxton's type. Wynkyn de Worde, who was one of the founders of the Stationers' Company, died in 1534, after having printed no less than 410 books known to bibliographers, the earliest of which bearing a date is the 'Liber Festivalis,' 4to, 1493."—J. H. Slater, *Book collecting*, ch. 9.

ALSO IN: C. Knight, *William Caxton*.—C. H. Timperley, *Encyclopedia of literary and typographical anecdote*, pp. 138-194.—T. C. Hansard, *History and process of printing* ("The five black arts," ch. 1).—*Gentleman's Magazine Library: Bibliographical notes, and literary curiosities*.

1496-1598.—Estienne or Stephanus press in Paris.—"With the names of Aldus and Elzevir we are all acquainted; the name of Estienne, or Stephanus, has a less familiar sound to English ears, though the family of Parisian printers was as famous in its day as the great houses of Venice and Leyden. The most brilliant member of it was the second Henry, whose story forms a melancholy episode in French literary history of the 16th century. . . . The Estiennes are said to have come of a noble Provençal family, but nothing is exactly known of their descent. The art of printing was not much more than fifty years old when Henry Estienne, having learnt his trade in Germany, came to Paris, and set up his press [about 1496] in the Rue Saint Jean de Beauvais, opposite the school of Canon Law. There for some twenty years he laboured diligently, bringing out in that time no less than 120 volumes, chiefly folios. The greater number of these are theological and scholastic works; among the few modern authors on the list is the name of Erasmus. Henry Estienne died in 1520 leaving three sons. Robert, the second of them, was born probably in 1503. The boys all being minors, the business passed into the hands of their mother, who in the following year married Simon de Colines, her late husband's foreman, and perhaps partner. . . . Robert worked with De Colines for five or six years before he went into business on his own account in the same street." It was he who first gave celebrity to the name and the press. "The spell of the Renaissance had early fallen upon the young printer, and it held him captive almost till the end of his life." He married "the daughter of the learned Flemish printer Jodocus Badius, notable for her culture and her beauty. Latin was the ordinary language of the household. The chil-

dren learned it in infancy from hearing it constantly spoken. . . . At one time ten foreign scholars lived in Estienne's house to assist him in selecting and revising his manuscripts and in correcting his proofs. . . . Both Francis [King Francis I] and his sister Marguerite of Navarre had a great regard for Robert, and often visited the workshop; to that royal patronage the printer was more than once indebted for his liberty and his life. [His danger came from the bigoted Sorbonne, with whom he brought himself into collision by printing the Bible with as careful a correction of the text as he had performed in the case of the Latin classics. After the death of Francis I., the peril of the printer's situation became more serious, and in 1550 he fled to Geneva, renouncing the Roman Catholic faith. He died there in 1550.]—H. C. Macdowall, *Old French printer* (*Macmillan's Magazine*, Nov., 1892).—The second Henry Estienne, son of Robert, either did not accompany his father to Geneva, or soon returned to Paris, and founded anew the press of his family, bringing to it even more learning than his father, with equal laboriousness and zeal. He died at Lyons in 1598.—Based on E. Greswell, *View of the early Parisian Greek press*.

1535-1709.—Introduction in America.—First Spanish printing in Mexico.—Early Massachusetts press.—"Davila Padilla, Archbishop of St. Domingo about the beginning of the seventeenth century, expressly declares that the first book printed in Mexico was a Spanish translation of the 'Spiritual Ladder' of St. John Climacus, made in New Spain by Fray Juan de Estrada, and published in 1532. Señor Icazbalceta points out that this date is impossible, he having himself demonstrated that type cannot have been imported into Mexico before 1536, nor the book printed before 1537. [The date for it has usually been set at 1535.] . . . The second book known to have issued from the Mexican press, a 'Manual de Adultos' for the instruction of the natives, printed in 1540, writhes in the very jaws of annihilation, but still survives to the extent of at least three leaves, formerly in the library of Señor Pascual de Gayangos. . . . The next specimen of the Mexican press is believed to be a narrative of the earthquake which destroyed the city of Guatemala in 1541. . . . It is a black-letter tract of four leaves, which certainly existed in Madrid when Icazbalceta's bibliography was published in 1886, the notice of the only known copy having been communicated to him from Madrid by Señor Gonzalez de Vera. The possessor, however, is not indicated. . . . Not more than three American books, then, can at present be proved to have preceded Bishop Zumarraga's 'Doctrina breve muy provechosa de las cosas que pertenecen á la fe católica y á nuestra cristiandad,' etc., Mexico, 1543. One of these is a fragment, another is not producible, and the present locality of the third has not been made public. The British Museum, then, may well be proud of its ability to exhibit, in the King's Library, the fourth book printed on the American continent, as the earliest at all likely to be seen. Though so precious for its antiquity, the 'Doctrina' is less rare than many Mexican books of more recent date. . . . Among the Mexican printers mentioned by Mr. Winship is Antonio Ricardo (Ricciardi?), an Italian, who began to print at Mexico in 1577, but whose glory it is to have been the first printer in South America, having removed to Lima in 1579, and printed there, in 1584, the first South American book. . . . The British Museum . . . acquired at a stroke the first three typographical productions of South America, though

it wants, and probably always will want, the corresponding three of the northern half of the continent."—R. Garnett, *Early Spanish-American printing* (Library, 1900, v. 1).—"In January, 1639, printing was first performed in that part of North America which extends from the Gulf of Mexico to the Frozen ocean. For this press . . . [the] country is chiefly indebted to the Rev. Mr. Glover, a nonconformist minister, who possessed a considerable estate. . . . Another press, with types, and another printer, were, in 1660, sent over from England by the corporation for propagating the gospel among the Indians in New England. This press, &c., was designed solely for the purpose of printing the Bible, and other books, in the Indian language. On their arrival they were carried to Cambridge, and employed in the printing house already established in that place. . . . The fathers of Massachusetts kept a watchful eye on the press; and in neither a religious nor civil point of view were they disposed to give it much liberty. . . . In 1662, the government of Massachusetts appointed licensers of the press; and afterward, in 1664, passed a law that 'no printing should be allowed in any town within the jurisdiction, except in Cambridge'; nor should anything be printed there but what the government permitted through the agency of those persons who were empowered for the purpose. . . . In a short time, this law was so far repealed as to permit the use of a press at Boston. . . . It does not appear that the press, in Massachusetts, was free from legal restraints till about the year 1755 [see below: 1704-1729]. . . . Except in Massachusetts, no presses were set up in the colonies till near the close of the 17th century. Printing then [1686] was performed in Pennsylvania [by William Bradford], 'near Philadelphia' [at Shackamaxon, now Kensington], and afterward in that city, by the same press which, in a few years subsequent, was removed to New York [see below: 1685-1603; also PENNSYLVANIA: 1692-1606]. The use of types commenced in Virginia about 1681; in 1682 the press was prohibited. In 1700 a press was established at New London, in Connecticut."—I. Thomas, *History of printing in America*, 2d ed., v. 1, pp. 1-17 (*Transactions and Collections of the American Antiquarian Society*, v. 5).

1564-1580.—**Printing in Russia.** See RUSSIAN LITERATURE: 1400-1689.

1564-1581.—**Index Expurgatorius in various countries.**—**Effect on printing.**—One of the most important of catalogues of prohibited books, published by papal authority, and known as indices, was the Tridentine Index. It was mainly the work of the Council of Trent, and it "secured a much wider distribution and more general acceptance than had been obtained by the first of the papal Indexes or than could have been expected for the comparatively local Indexes of Louvain, Venice, or Valladolid. The Index was printed in 1564, either separately or in connection with the record of the Decrees of the Council of Trent, in Bologna, Modena, Florence, Cremona, Venice, Cologne, and Dillingen, and during the remaining years of the century, in a great number of editions. Within the next thirty years, there were no less than ten issues from the presses of Venice (which was still one of the most important centres of the printing industry) and four from Cologne. Throughout the Catholic world, the interest was active and continued in the proceedings and conclusions of the council which had

undertaken the task of cleansing the Church from its inner evils and of fortifying its institutions against the assaults of the heretics without. The deliberate policy of the Church in regard to the supervision of books was expressed in the Ten Rules of its Index and in the accompanying lists of prohibited books and of condemned authors, and these rules and lists now came to the eyes of thousands of readers (or were cited to them by their teachers and confessors) who had never before known of ecclesiastical censorship. According to the understanding of the Curia, no formal acceptance or confirmation was required to make binding in the lands acknowledging the authority of the Church either the Bull or the Index, but this was not the view generally taken. In Belgium, Bavaria, and Portugal, the regulations of the Index were formally adopted under royal edicts. Spain adhered to the policy of leaving in the hands of the Spanish Inquisition the responsibility for the preparation, and for the enforcement of, the successive Indexes, and neither the Index of Trent nor any other issued under papal authority was ever accepted as binding within the Spanish dominions. The Ten Tridentine Rules were however adopted in the Spanish Indexes appearing after 1504. In France and in Germany (outside of Bavaria) the Index of Trent was confirmed and promulgated only by one or two provincial synods. It is evident that in these countries the Rules secured no general acceptance or authority. . . . The decrees in regard to book-production issued during the succeeding twenty years by the provincial synods of Italy repeated in substance the regulations of Trent, with an occasional addition. In Milan for instance, in 1583, the synod ordered that printers and booksellers must, before securing permission to begin business, make a confession of faith to the bishops and take an oath to conduct their business according to the regulations of the Index. In a number of the dioceses of France, similar edicts were issued, but these made no reference to the papal Indexes. In 1566, King Henry II ordered (at the instance of the theological faculty of the Sorbonne) that no books prohibited by said faculty should be printed, owned, or read. Further, he authorised the Sorbonne to make personal examination of the stock of the booksellers. The supervision exercised by the Sorbonne over the production and distribution of books worked to the detriment of the book-trade of Paris, and to the advantage of the printers and dealers of Lyons, Montpellier, and other provincial centres, where it proved to be impracticable to enforce the regulations of the Paris theologians. It was also a factor in building up in Holland (which was practically free from censorship) the business of producing books for the students of Europe. In Germany, notwithstanding repeated efforts by successive popes, Pius V, Gregory XIII, and others, and edicts by Maximilian II and Rudolf II, it was evidently impracticable to keep control or supervision over the productions of the rapidly increasing printing-presses, presses which, instead of being concentrated as at Paris, were distributed through a great number of widely separated towns. . . . The Dominican Bernardo Castiglione writes, in 1581: 'In Rome, there is at present much watchfulness concerning the books coming into Italy. The Inquisitors are charged with the duty of prohibiting or destroying copies of this work or that. As a result, the booksellers dare not give orders, and are often unable to sell the books they have received. I understand that there are now lying in the Roman shops unsalable books to the value of many thousand scudi.'—

G. H. Putnam, *Censorship of the Church of Rome*, pp. 193-196.—See also PAPACY: 1559-1595.

1583-1680.—The Elzevirs.—“Just as the house of Aldus waned and expired, that of the great Dutch printers, the Elzevirs, began obscurely enough at Leyden in 1583. The Elzevirs were not, like Aldus, ripe scholars and men of devotion to learning. Aldus laboured for the love of noble studies; the Elzevirs were acute, and too often ‘smart’ men of business. The founder of the family was Louis (born at Louvain, 1540, died 1617). But it was in the second and third generations that Bonaventura and Abraham Elzevir began to publish at Leyden their editions in small duodecimo. Like Aldus, these Elzevirs aimed at producing books at once handy, cheap, correct, and beautiful in execution. Their adventure was a complete success. The Elzevirs did not, like Aldus, surround themselves with the most learned scholars of their time. Their famous literary adviser, Heinsius, was full of literary jealousies, and kept students of his own calibre at a distance. The classical editions of the Elzevirs, beautiful, but too small in type for modern eyes, are anything but exquisitely correct. . . . The ordinary marks of the Elzevirs were the sphere, the old hermit, the Athena, the eagle, and the burning faggot. But all little old books marked with spheres are not Elzevirs, as many booksellers suppose. Other printers also stole the designs for the tops of chapters, the Aegipan, the Siren, the head of Medusa, the crossed sceptres, and the rest. In some cases the Elzevirs published their books, especially when they were piracies, anonymously. When they published for the Jansenists, they allowed their clients to put fantastic pseudonyms on the title pages. But, except in four cases, they had only two pseudonyms used on the titles of books published by and for themselves. These disguises are ‘Jean Sambix’ for Jean and Daniel Elzevir, at Leyden, and for the Elzevirs of Amsterdam, ‘Jacques le Jeune.’ The last of the great representatives of the house, Daniel, died at Amsterdam, 1680. Abraham, an unworthy scion, struggled on at Leyden till 1712.”—A. Lang, *Library*, ch. 3.

1585-1921.—Works issued by Vatican press. See VATICAN: 1585-1921.

1612-1650.—Origin of printed newspapers.—Earliest appearance in Germany and Italy.—“Lally-Tollendal, in his ‘Life of Queen Elizabeth,’ in the ‘Biographie Universelle’ (vol. xiii, published in 1815, p. 56) . . . remarks that ‘as far as the publication of an official journal is concerned, France can claim the priority by more than half a century; for in the Royal Library at Paris there is a bulletin of the campaign of Louis XII in Italy in 1500.’ He then gives the title of this ‘bulletin,’ from which it clearly appears that it is not a political journal, but an isolated piece of news—a kind of publication of which there are hundreds in existence of a date anterior to 1588 [formerly supposed to be the date of the first English newspaper (see below: 1622-1702)], and of which there is no doubt that thousands were issued. There is, for instance, in the British Museum a French pamphlet of six printed leaves, containing an account of the surrender of Granada to Ferdinand and Isabella on the ‘first of January last past’ (le premier jour de janvier dernièrement passé), in the year 1492; and there are also the three editions of the celebrated letter of Columbus, giving the first account of the discovery of America, all printed at Rome in 1493. Nay, one of the very earliest productions of the German press was an official manifesto of Diether, Archbishop of Co-

logne, against Count Adolph of Nassau, very satisfactorily proved to have been printed at Mentz in 1492. There is among the German bibliographers a technical name for this class of printed documents, which are called ‘Relations.’ In fact, in order to arrive at a satisfactory conclusion with regard to the origin of newspapers, it is requisite, in the first place, to settle with some approach to precision what a newspaper is. Four classes of publications succeeded to each other from the 15th to the 19th century, to which the term has by different writers been applied: 1st. Accounts of individual public transactions of recent occurrence. 2nd. Accounts in one publication of several public transactions of recent occurrence, only connected together by having taken place about the same period, so as at one time to form the ‘news of the day.’ 3rd. Accounts similar to those of the second class, but issued in a numbered series. 4th. Accounts similar to those of the second class, but issued not only in a numbered series, but at stated intervals. The notices of the surrender of Granada and the discovery of America belong to the first class, and so also do the last dying speeches, which are in our own time cried about the streets. These surely are not newspapers. The Times and Daily News [London] belong to the fourth class, and these, of course, are newspapers. . . . Are not, in fact, all the essentials of a newspaper comprised in the definition of the second class? . . . Let us take an instance. There is preserved in the British Museum a collection of several volumes of interesting publications issued in Italy between 1640 and 1650, and containing the news of the times. They are of a small folio size, and consist in general of four pages, but sometimes of six, sometimes only of two. There is a series for the month of December, 1644, consisting entirely of the news from Rome. The first line of the first page runs thus:—‘Di Roma,’ with the date, first of the 3rd, then of the 10th, then the 17th, then the 24th, and lastly the 31st of December, showing that a number was published every week, most probably on the arrival of the post from Rome. The place of publication was Florence, and the same publishers who issued this collection of the news from Rome, sent forth in the same month of December, 1644, two other similar gazettes, at similar intervals, one of the news from Genoa, the other of the news from Germany and abroad. That this interesting series of publications, which is well worthy of a minute examination and a detailed description, is in reality a series of newspapers, will, I believe, be questioned by very few; but each individual number presents no mark by which, if separately met with, it could be known to form part of a set. . . . The most minute researches on the history of newspapers in Germany are . . . those of Prutz, who has collected notices of a large number of the ‘relations,’ though much remains to be gleaned. . . . There was in the possession of Professor Grellman a publication called an ‘Aviso,’ numbered as ‘14,’ and published in 1612, which has been considered by many German writers as their earliest newspaper, but Prutz denies that honour to it, on the ground of there being no proof that it was published at stated intervals. In the year 1615 Egenolph Emmel, of Frankfort-on-the-Main, issued a weekly intelligencer, numbered in a series, and this, according to Prutz, is the proper claimant. Its history has been traced with some minuteness in a separate dissertation by Schwarzkopf, who has also the credit of having published in 1795 the first general essay on newspapers of any value, and to have followed up the subject in a series of

articles in the *Allgemeine Litterarische Anzeiger*. . . . The claims of Italy have yet to be considered. Prutz dismisses them very summarily, because, as he says, the Venetian gazettes of the sixteenth century, said to be preserved at Florence, are in manuscript, and it is essential to the definition of a newspaper that it should be printed. . . . The existence of these 'gazettes' in so many languages furnishes strong ground for supposing that the popularity of newspapers originated in Italy."—T. Watts, *Fabricated "Earliest English newspaper" (Gentleman's Magazine, 1850, reprinted in the Gentleman's Magazine Library: Bibliographical notes, pp. 140-150)*.

1622-1702.—**First printed newspaper and first daily newspaper in England.**—"Up to 1839 (when Mr. Watts, of the British Museum, exposed the forgery) the world was led to believe that the first English newspaper appeared in 1588." Mr. Watts "ascertained that 'The English Mercurie,' which Mr. George Chalmers first discovered on the shelves of the British Museum, and which was said to have been 'imprinted in London by her highness's printer, 1588,' was a forgery, for which the second Earl of Hardwicke appears to be answerable." As to the actual date of the appearance of the first printed newspaper in England, "Mr. Knight Hunt, in his 'Fourth Estate,' speaks confidently. . . . 'There is now no reason to doubt,' he says, 'that the puny ancestor of the myriads of broad sheets of our time was published in the metropolis in 1622; and that the most prominent of the ingenious speculators who offered the novelty to the world, was one Nathaniel Butter.' As the printing press had then been at work in England for a century and a half, Caxton having established himself in Westminster Abbey in 1471, and as manuscript news-letters had been current for many years previous to 1622, one cannot help wondering that the inventive wits of that age should have been so slow in finding out this excellent mode of turning Faust's invention to profitable account. Butter's journal was called—'The Weekly Newes,' a name which still survives, although the original possessor of that title has long since gone the way of all newspapers. The first number in the British Museum collection bears date the 23rd of May, 1622, and contains 'news from Italy, Germanie,' &c. The last number made its appearance on the 9th of January, 1640; a memorable year, in which the Short Parliament, dismissed by King Charles 'in a huff,' after a session of three weeks, was succeeded by the Long Parliament, which unlucky Charles could not manage quite so easily. . . . It was nearly a century after 'The Weekly Newes' made its first appearance, before a daily newspaper was attempted. When weekly papers had become firmly established, some of the more enterprising printers began to publish their sheets twice, and ultimately three times a week. Thus at the beginning of . . . [the eighteenth] century we find several papers informing the public that they are 'published every Tuesday, Thursday, and Saturday morning.' One of the most respectable looking was entitled 'The New State of Europe,' or a 'True Account of Public Transactions and Learning.' It consisted of two pages of thin, coarse paper . . . and contained altogether about as much matter as . . . a single column of the 'Times' of 1855. The custom at that period was to publish the newspaper on a folio or quarto sheet, two pages of which were left blank to be used for correspondence. This is expressly stated in a standing advertisement in the 'New State of Europe,' in which the names of certain booksellers are given 'where any person

may have this paper with a blank half sheet to write their own private affairs.' . . . The first number of the 'Daily Courant' [the first daily newspaper in England] was published on the 11th of March, 1702, just three days after the accession of Queen Anne. . . . As regards the form and size of the new journal, the 'author' condescends to give the following information, with a growing remark at the impertinence of the 'Postboys,' 'Postmen,' 'Mercuries,' and 'Intelligencers' of that day:—"This 'Courant' (as the title shows) will be published Daily, being designed to give all the Material News as soon as every Post arrives, and is confined to half the compass to save the Publick at least half the Impertinences of ordinary Newspapers.' In addition to the Prospectus we have quoted, the first number of the 'Daily Courant' contains only nine paragraphs, five of which were translated from the 'Harlem Courant,' three from the 'Paris Gazette,' and one from the 'Amsterdam Courant.' They all relate to the war of the Spanish Succession then waging, or to the attempts being made by diplomats to settle the affairs of the Continent at some kind of Vienna or Utrecht Conference. After adhering for several weeks to the strict rule of giving only one page of news, and those entirely foreign, the 'Courant' begins to show certain symptoms of improvement. The number for April 22, contains two pages of news and advertisements. . . . The alteration in the getting-up of the 'Courant' was owing to a change of proprietorship. The paper had now come into the hands of 'Sam Buckley, at the Dolphin, Little Britain.' . . . Mr. Samuel Buckley, who continued to publish and conduct the 'Daily Courant' for many years, was a notable man among London publishers, as we find from various references to him in the fugitive literature of that age."—*London daily press (Westminster Review, Oct., 1855)*.

1631.—**First printed newspaper in France.**—**Dr. Renaudot and his "Gazette."**—"The first Frenchman to found a printed newspaper was Dr. Théophraste Renaudot, who obtained the King's privilege for the 'Gazette de France' in 1631. . . . He was a shrewd man, born at London in 1567, brought up in Paris, but graduate of the Faculty of Montpellier. In 1612, being then twenty-six, he returned to the capital, and some how got appointed at once doctor to the King. But there was no salary attached to this post, which was in his case purely honorary, and so Renaudot opened a school. . . . This extraordinary man not only inaugurated in France an Estate, Professional and Servants' Agency, as well as an office for private sales and exchanges, but further laid the basis of the Poste Restante, Parcels Delivery, Post-Office Directory, Tourist's Guide and Money Order Office; besides affording an outlet to troubled spirits like those who correspond through the agony column of 'The Times.' It is not surprising that his office in the Rue de la Calandre should soon have been all too small for its multifarious duties and that his original staff of six clerks should, in less than three months, have swelled to fifty. Richelieu, in sheer admiration at the man, sent for him and thanked him for the services he was rendering the King's subjects. He also offered him money to extend his offices, and this Renaudot accepted, but only as a loan. It was his custom to levy a commission of six deniers per livre (franc) on the sales he effected, and by means of these and other receipts he soon repaid the Cardinal every penny that had been advanced to him. But he did more than this. Finding that his registers were not always conve-

nient modes of reference, by reason of the excessive crowds which pressed round them, he brought out a printed advertiser. . . . It was called 'Feuille du Bureau d'Adresses,' and appeared every Saturday, at the price of 1 sou. Opinions differ as to whether this paper preceded the 'Gazette de France,' or was issued simultaneously with it. Probably it was first published in manuscript form, but came out in print at least six months before the 'Gazette,' for a number bearing the date of June 14th, 1631, shows a periodical in full organisation and containing indirect references to advertisements which must have appeared several weeks before. At all events this 'Feuille' was purely an advertisement sheet—a forerunner of the 'Petites Affiches' which were reinvented in 1746—it was in no sense a newspaper. . . . It is clear that from the moment he started his 'Feuille du Bureau d'Adresses,' Renaudot must have conceived the possibility of founding a news-sheet. . . . The manuscript News Letters had attained, by the year 1630, to such a pitch of perfection, and found such a ready sale, that the notion of further popularising them by printing must have suggested itself to more than one man before it was actually put into practice. But the great bar was this, that nothing could be printed without the King's privilege, and this privilege was not lightly granted. . . . Renaudot, who had no wish to publish tattle, had no reason to fear censorship. He addressed himself to Richelieu, and craved leave to start a printed newspaper under royal patronage. The politic Cardinal was quite shrewd enough to see how useful might be to him an organ which would set information before the public in the manner he desired, and in that manner alone; so he granted all Renaudot wished, in the form of 'letters patent,' securing him an entire monopoly of printing newspapers, and moreover he conferred on his protégé the pompous title of Historiographer of France. The first number of the 'Gazette de France' appeared on Friday, May 30, 1631. Its size was four quarto pages, and its price one sol parisien, i. e. ½d., worth about 1½d. modern money. . . . The first number contained no preface or address, nothing in the way of a leading article, but plunged at once in medias res, and gave news from nineteen foreign towns or countries, but oddly enough, not a line of French intelligence. . . . The bulk of the matter inserted was furnished direct by Richelieu from the Foreign Office, and several of the paragraphs were written in his own hand. . . . The publication of the 'Gazette' was continued uninterruptedly from week to week, but the press of matter was so great that Renaudot took to issuing a Supplement with the last number of every month. In this he condensed the reports of the preceding numbers, corrected errors, added fresh news, and answered his detractors. . . . At the end of the year 1631 he suppressed his monthly Supplement, increased the 'Gazette' to eight pages, and announced that for the future he would issue Supplements as they were needed. It seems they were needed pretty often, for towards the beginning of the year 1633 Renaudot published Supplements, under the title of 'Ordinaries and Extraordinaries,' as often as twice, and even three times in one week. In fact whenever a budget of news arrived which would nowadays justify a special edition, the indefatigable editor set his criers afoot with a fresh printed sheet, shouting, 'Buy the "Extraordinary," containing the account of the superb burial of the King of Denmark!' or, 'Buy and read of the capture of the beautiful island of Curaçoa in the Indies by the Dutch from the Spaniards!' Renaudot understood the noble

art of puffing. He dressed his criers in red, and gave them a trumpet apiece to go and bray the praises of the 'Gazette' on the off days, when the paper did not appear. . . . On the death of Renaudot, he was succeeded by his sons Eusèbe and Isaac, who in their turn bequeathed the 'Gazette' to Eusèbe junior, son of the elder brother, who took orders and consequently left no progeny. After this the 'Gazette' became Government property. . . . In 1762 the 'Gazette' was annexed to the Foreign Office Department. . . . The 'Gazette de France' continued to appear under royal patronage until May 1st, 1792, when its official ties were snapped and it came out as a private and republican journal with the date 'Fourth Year of Freedom.'—*French press (Cornhill Magazine, June, 1873)*.

1637.—Archbishop Laud's Star-Chamber restriction of printing.—On the 11th of July, 1637, "Archbishop Laud procured a decree to be passed in the star chamber, by which it was ordered, that the master printers should be reduced to twenty in number; and that if any other should secretly, or openly, pursue the trade of printing, he should be set in the pillory, or whipped through the streets, and suffer such other punishment as the court should inflict upon him; that none of the master printers should print any book or books of divinity, law, physic, philosophy, or poetry, till the said books, together with the titles, epistles, prefaces, tables, or commendatory verses, should be lawfully licensed, on pain of losing the exercise of his art, and being proceeded against in the star chamber, &c.; that no person should reprint any book without a new license; that every merchant, bookseller, &c., who should import any book or books, should present a catalogue of them to the archbishop or bishop, &c., before they were delivered, or exposed to sale, who should view them, with power to seize those that were schismatical; and, that no merchant, &c., should print or cause to be printed abroad, any book, or books, which either entirely or for the most part, were written in the English tongue, nor knowingly import any such books, upon pain of being proceeded against in the star chamber, or high commission court. . . . That there should be four founders of letters for printing, and no more. That the archbishop of Canterbury, or the bishop of London, with six other high commissioners, shall supply the places of those four as they shall become void. That no master founder shall keep above two apprentices at one time. That all journeyman founders be employed by the masters of the trade; and that all the idle journeyman be compelled to work upon pain of imprisonment, and such other punishment as the court shall think fit. That no master founder of letters shall employ any other person in any work belonging to casting and founding of letters than freemen and apprentices to the trade, save only in putting off the knots of metal hanging at the end of the letters when they are first cast; in which work every master founder may employ one boy only, not bound to the trade."—C. H. Timperley, *Encyclopædia of literary and typographical anecdote*, p. 400.

1644.—"Areopagistica."—Under this title, John Milton published in 1644 an eloquent plea for unlicensed printing in England. It was, however, of no avail in promoting freedom at that time.—See also CENSORSHIP: England.

1647.—Renewed ordinance, in England, against printers.—"An ordinance of parliament passed the house of lords on this day [September 30, 1647], that no person shall make, write, print, sell, publish or utter, or cause to be made, &c., any

book, pamphlet, treatise, ballad, libel, sheet, or sheets of news whatsoever (except the same be licensed by both or either house of parliament,) under the penalty or 40s. and an imprisonment not exceeding forty days, if he can not pay it: if a printer, he is to pay a fine of only 20s., or suffer twenty days' imprisonment, and likewise to have his press and implements of printing broken in pieces. The bookseller, or stationer, to pay 10s., or suffer ten days' imprisonment,—and, lastly, the hawker, pedlar, or ballad-singer, to forfeit all his printed papers exposed to sale, and to be whipped as a common rogue in the parish where he shall be apprehended. Early in the following year, the committee of estates in Scotland passed an act prohibiting the printing under the pain of death, any book, declaration, or writing, until these were first submitted to their revival. . . . One of the consequences of these persecutions was the raising up of a new class of publishers, those who became noted for what was called 'unlawful and unlicensed books.' Sparkes, the publisher of Prynne's *Histriomastix*, was of this class. The presbyterian party in parliament, who thus found the press closed on them, vehemently cried out for its freedom; and it was imagined, that when they ascended into power, the odious office of a licenser of the press would have been abolished; but these pretended friends of freedom, on the contrary, discovered themselves as tenderly alive to the office as the old government, and maintained it with the extremest vigour. Both in England and Scotland, during the civil wars, the party in power endeavoured to crush by every means the freedom of the press."—C. H. Timperley, *Encyclopædia of literary and typographical anecdote*, p. 506.

1654-1694.—Freedom of the press under Cromwell.—Censorship under restored Stuarts.—Roger L'Estrange and the first news reporters.—"During the Protectorate of Cromwell [beginning in 1654] the newspaper press knew . . . what it was to enjoy the luxury of freedom. The natural result was that a very great increase took place in the number of new political journals. . . . But, as might have been expected, from what was known of the antecedents of Charles II., the freedom of the press, which previously existed, came to an immediate end on his ascending the throne. Hardly had he done so, than an edict was issued, prohibiting the publication of any journal except the London Gazette, which was originally printed at Oxford, and called the Oxford Gazette,—the Court being then resident there on account of the plague raging in London at the time, 1665, when it was commenced, and for some time afterwards. This was an act of pure despotism. But Government at this time reserved to itself the right—a right which there was none to dispute—to publish a broad sheet in connexion with the London Gazette, whenever they might deem it expedient, which should contain either foreign or domestic matters of interest,—of the knowledge of which some of the King's subjects might wish to be put in early possession. . . . The newspapers of the seventeenth century were permitted, until the time of Charles II., to be published without being licensed by the Government of the day; but in the reign of that despotic sovereign, a law was passed [1662] prohibiting the publication of any newspaper without being duly licensed. . . . Sir John Birkenhead, . . . one of the three men whom Disraeli the elder called the fathers of the English press, was appointed to the office of Licensor of the Press. But he was soon succeeded by Sir Roger l'Estrange."—

J. Grant, *Newspaper press*, v. 1, ch. 2.—Roger L'Estrange "is remarkable for having been the writer of the best newspapers which appeared before the age of Queen Anne, and, at the same time, a most bitter enemy to the freedom of the press. He was appointed licenser or censor in 1663, and in the same year was given authority to publish all newspapers, periodicals, and pamphlets, not exceeding two sheets in size. He appears to have looked upon his newspaper as a noxious thing, suffered to exist only that an income might be created for him in return for the labour of purging the press. Yet he spared no pains to make his Public Intelligencer readable, and if we may trust his letters now preserved at the State Paper Office, expended in the first year more than £500 on 'spyes for collecting intelligence.' Three years afterwards he estimated the profits at £300 a year. . . . He sent paid correspondents, or 'spyes' as they were called, to all parts of the country, and even induced some respectable persons, under promise of concealing their names, to contribute occasional paragraphs; these persons were for the most part repaid by sending to them their newspapers and letters free of postage. Another set of 'spyes' was employed in picking up the news of the town on Paul's Walk or in the taverns and coffee-houses. L'Estrange printed about sixteen reams of his Intelligencer weekly, which were for the most part sold by the mercury-women who cried them about the streets. One Mrs. Andrews is said to have taken more than one-third of the whole quantity printed. . . . Advantage was taken of a slip in the weekly intelligence to deprive L'Estrange of his monopoly in favour of the new Oxford Gazette, published in the winter of 1665 and transferred to London in the ensuing spring. The Gazette was placed under the control of Williamson, then a rising under-Secretary of State, under whose austere influence nothing was suffered to appear which could excite or even amuse the public. . . . L'Estrange has not been a favourite with historians, and we confess that his harsh measures towards the press are apt to raise a feeling of repugnance. . . . But he was certainly an enthusiastic and industrious writer, who raised the tone of the press, even while taking pains to fetter its liberty. When he lost his monopoly, that era of desolation began which Macaulay has so forcibly described. The newspapers became completely sterile, omitting events even of such importance as the trial of the seven bishops, and were supplanted in popular favour by the manuscript news-letters, which were, in fact, the only journals of importance. On the day after the abdication of James II. three fresh newspapers appeared, and many more burst out after the appearance of the official journal under the style of the Orange Gazette. But it was not until 1694 that the king was induced to abolish the censorship and to permit free trade in news; 'he doubted much,' says Hume, 'of the salutary effects of such unlimited freedom.' The newspapers increased and multiplied exceedingly for the eighteen years between the abolition of the office of licenser and the passing of the Stamp Act, in 1712, by which a halfpenny tax was laid on every half-sheet of intelligence."—*Early English newspapers* (*Cornhill Magazine*, July, 1868).

1685-1693.—William Bradford and his press in Philadelphia and New York.—William Bradford, a young printer, of the Society of Friends, came to Philadelphia in the autumn of 1685, and established himself in business. "His first publication was 'Kalendarium Pennsilvaniense, or Amer-

ica's Messenger; Being an Almanack for the Year of Grace 1686.' This brought him a summons before the Governor and Council, for referring to the Proprietary, in the table of chronology, as 'Lord Penn;' and, on his appearance, he was ordered to blot out the objectionable title, and forbidden to print anything without license from the Provincial Council. In 1687 he was cautioned by the Philadelphia meeting not to print anything touching the Quakers without its approval. Two years later he was again called before the Governor, and Council—this time for printing the charter of the province. . . . Disappointed at the non-fulfilment of Penn's promise of the government printing and the failure of his scheme for printing an English Bible, which, although indorsed by the meeting, found few subscribers, and harassed by both the civil and religious authorities, Bradford determined to leave the province," which he did, with his family, sailing to England in 1689. He was induced, however, by promises of increased business and a yearly salary of £40, to return. In 1692, having become one of the supporters of George Keith, and having printed Keith's "Appeal" (see PENNSYLVANIA: 1692-1696), he was arrested and imprisoned. This occurred in August, and his trial followed in December. The jury disagreed, and he was held for appearance at the next court. "In the meantime the dissensions in the province aroused by the Keithian schism had led to the abrogation of Penn's charter by the crown, and the appointment of Benjamin Fletcher to be Royal Governor of Pennsylvania as well as New York." This change led to the dropping of proceedings against Bradford, and to his removal from Philadelphia to New York, whither he seems to have been invited. His removal was undoubtedly prompted by a resolution which the Provincial Council of New York adopted on the 23d of March, 1693: "That if a Printer will come and settle in the city of New York for the printing of our Acts of Assembly and Publick Papers, he shall be allowed the sum of £40 current money of New York per annum for his salary and have the benefit of his printing besides what serves the publick."—Based on C. R. Hildeburn, *Printing in New York in the seventeenth century (Memorial History of the City of New York, v. 1, ch. 15.)*

Also in: I. Thomas, *History of printing in America, 2d ed., v. 1.*

1695.—Expiration of censorship law in England.—Quick multiplication of newspapers.—"While the Licensing Act was in force there was no newspaper in England except the 'London Gazette,' which was edited by a clerk in the office of the Secretary of State, and which contained nothing but what the Secretary of State wished the nation to know. There were indeed many periodical papers: but none of those papers could be called a newspaper. Welwood, a zealous Whig, published a journal called the *Observer*; but his *Observer*, like the *Observer* which Lestrange had formerly edited, contained, not the news, but merely dissertations on politics. A crazy bookseller, named John Dunton, published the *Athenian Mercury*; but the *Athenian Mercury* merely discussed questions of natural philosophy, of casuistry and of gallantry. A fellow of the Royal Society, named John Houghton, published what he called a *Collection for the Improvement of Industry and Trade*: but his *Collection* contained little more than the prices of stocks, explanations of the modes of doing business in the City, puffs of new projects, and advertisements of books,

quack medicines, chocolate, Spa water, civet cats, surgeons wanting ships, valets wanting masters, and ladies wanting husbands. If ever he printed any political news, he transcribed it from the *Gazette*. The *Gazette* was so partial and so meagre a chronicle of events that, though it had no competitors, it had but a small circulation. . . . But the deficiencies of the *Gazette* were to a certain extent supplied in London by the coffee-houses, and in the country by the news-letters. On the third of May 1695 the law which had subjected the press to a censorship expired. Within a fortnight, a staunch old Whig, named Harris, who had, in the days of the Exclusion Bill, attempted to set up a newspaper entitled *Intelligence Domestic and Foreign*, and who had been speedily forced to relinquish that design, announced that the *Intelligence Domestic and Foreign*, suppressed fourteen years before by tyranny, would again appear. Ten days later was printed the first number of the *English Courant*. Then came the *Packet Boat* from Holland and Flanders, the *Pegasus*, the *London Newsletter*, the *London Post*, the *Flying Post*, the *Old Postmaster*, the *Postboy*, and the *Postman*. The history of the newspapers of England from that time . . . is a most interesting and instructive part of the history of the country. At first they were small and mean-looking. . . . Only two numbers came out in a week; and a number contained little more matter than may be found in a single column of a daily paper of our time."—T. B. Macaulay, *History of England, ch. 21.*

1704-1729.—First newspapers in America.—"There was not a newspaper published in the English colonies, throughout the extensive continent of North America, until the 24th of April, 1704. John Campbell, a Scotchman, who was a bookseller and postmaster in Boston, was the first who began and established a publication of this kind. It was entitled 'The Boston Newsletter.' . . . It is printed on half a sheet of pot paper, with a small pica type, folio. The first page is filled with an extract from 'The London Flying Post,' respecting the pretender. . . . The queen's speech to both houses of parliament on that occasion, a few articles under the Boston head, four short paragraphs of marine intelligence from New York, Philadelphia, and New London, and one advertisement, form its whole contents. The advertisement is from Campbell, the proprietor of the paper." In 1710, a rival paper was started in Boston, called the "*Gazette*," and in 1721, a third, founded by James Franklin, took the name of "*The New England Courant*." Meantime there had appeared at Philadelphia, on the 22nd of December, 1710,—only one day later than the second of the Boston newspapers—"The American Weekly Mercury," printed by Andrew Bradford, son of William Bradford. The same printer, Andrew Bradford, removing to New York, brought out "*The New York Gazette*," the first newspaper printed in that city, in October, 1725.—I. Thomas, *History of printing in America, v. 2, p. 12, and after.*—"In 1740, the number of newspapers in the English colonies on the continent had increased to eleven, of which one appeared in South Carolina, one in Virginia, three in Pennsylvania—one of them being in German—one in New York, and the remaining five in Boston. . . . The *New England 'Courant'*, the fourth American periodical, was, in August 1721, established by James Franklin as an organ of independent opinion. Its temporary success was advanced by Benjamin, his brother and apprentice, a boy of

fifteen, who wrote for its columns, worked in composing the types as well as printing off the sheets, and, as carrier, distributed the papers to the customers. The sheet satirized hypocrisy, and spoke of religious knaves as of all knaves the worst. This was described as tending 'to abuse the ministers of religion in a manner which was intolerable.' . . . In July 1722, a resolve passed the council, appointing a censor for the press of James Franklin; but the house refused its concurrence. The ministers persevered; and, in January 1723, a committee of inquiry was raised by the legislature. Benjamin, being examined, escaped with an admonition; James, the publisher, refusing to discover the author of the offence, was kept in jail for a month; his paper was censured as reflecting injuriously on the reverend ministers of the gospel; and, by vote of the house and council, he was forbidden to print it, 'except it be first supervised.' Vexed at the arbitrary proceedings, Benjamin Franklin, then but seventeen years old, in October 1723, sailed clandestinely for New York. Finding there no employment, he crossed to Amboy; went on foot to the Delaware; for want of a wind, rowed in a boat from Burlington to Philadelphia; and bearing marks of his labor at the oar, weary, hungry, having for his whole stock of cash a single dollar, the runaway apprentice—the pupil of the free schools of Boston, rich in the boundless hope of youth and the unconscious power of modest genius—stepped on shore to seek food and occupation. On the deep foundations of sobriety, frugality and industry, the young journeyman built his fortunes and fame; and he soon came to have a printing-office of his own. . . . The assembly of Pennsylvania chose him its printer. He planned a newspaper [the 'Pennsylvania Gazette']; and, when [1729] he became its proprietor and editor, he defended freedom of thought and speech, and the inalienable power of the people."—G. Bancroft, *History of the United States of America*, v. 2, pt. 3, ch. 15.

1709-1752.—Periodicals of the essayists.—The "Tatler," "Spectator," and their successors.—"In the spring of 1709, Steele [Sir Richard] formed a literary project, of which he was far indeed from foreseeing the consequences. Periodical papers had during many years been published in London. Most of these were political; but in some of them questions of morality, taste, and love-casuistry had been discussed. The literary merit of these works was small indeed; and even their names are now known only to the curious. Steele had been appointed gazetteer by Sunderland, at the request, it is said, of Addison; and thus had access to foreign intelligence earlier and more authentic than was in those times within the reach of an ordinary news-writer. This circumstance seems to have suggested to him the scheme of publishing a periodical paper on a new plan. It was to appear on the days on which the post left London for the country, which were, in that generation, the Tuesdays, Thursdays, and Saturdays. It was to contain the foreign news, accounts of theatrical representations, and the literary gossip of Will's and of the Grecian. It was also to contain remarks on the fashionable topics of the day, compliments to beauties, pasquinades on noted sharpers, and criticisms on popular preachers. The aim of Steele does not appear to have been at first higher than this. . . . Isaac Bickerstaff, Esquire, Astrologer, was an imaginary person, almost as well known in

that age as Mr. Paul Pry or Mr. Pickwick in ours. Swift had assumed the name of Bickerstaff in a satirical pamphlet against Partridge, the almanac-maker. Partridge had been fool enough to publish a furious reply. Bickerstaff had rejoined in a second pamphlet still more diverting than the first. All the wits had combined to keep up the joke, and the town was long in convulsions of laughter. Steele determined to employ the name which this controversy had made popular; and, in April, 1709, it was announced that Isaac Bickerstaff, Esquire, Astrologer, was about to publish a paper called the 'Tatler.' Addison had not been consulted about this scheme; but as soon as he heard of it, he determined to give it his assistance. The effect of that assistance cannot be better described than in Steele's own words. 'I fared,' he said, 'like a distressed prince who calls in a powerful neighbour to his aid. I was undone by my auxiliary. When I had once called him in, I could not subsist without dependence on him.' 'The paper,' he says elsewhere, 'was advanced indeed. It was raised to a greater thing than I intended it.'"—T. B. Macaulay, *Life and writings of Addison (Essays)*.—"Steele, on the 12th of April 1709, issued the first number of the 'Tatler.' . . . This famous newspaper, printed in one folio sheet of 'tobacco paper' with 'scurvy letter,' ran to 271 numbers, and abruptly ceased to appear in January 1711. It enjoyed an unprecedented success, for, indeed, nothing that approached it had ever before been issued from the periodical press in England. . . . Of the 271 'Tatlers,' 188 were written by Steele, 42 by Addison, and 36 by both conjointly. Three were from the pen of John Hughes. . . . These, at least, are the numbers usually given, but the evidence on which they are based is slight. . . . Less than two months after the cessation of the 'Tatler' there appeared the first number of a still more famous common enterprise, the 'Spectator,' on the 1st of March 1711. It was announced to appear daily, and was to be composed of the reflections and actions of the members of an imaginary club, formed around 'Mr. Spectator.' In this club the most familiar figure is the Worcester-shire Knight, Sir Roger de Coverley, the peculiar property of Addison. . . . The 'Spectator' continued to appear daily until December 1712. It consisted of 555 numbers, of which Addison wrote 274, Steele 230, Hughes 19, and Pope 1 ('The Messiah,' 'Spectator' 378). Another contributor was Eustance Budgell (1685-1736), Addison's cousin. . . . The 'Spectator' enjoyed so very unequivocal a success that it has puzzled historians to account for its discontinuance. In No. 517 Addison killed Sir Roger de Coverley 'that nobody else might murder him.' This shows a voluntary intention to stop the publication, which the Stamp Act itself had not been able to do by force."—E. Gosse, *History of eighteenth century literature*, ch. 6.—"After this, in 1713, came the 'Guardian'; and in 1714 an eighth volume of the 'Spectator' was issued by Addison alone. He was also the sole author of the 'Freeholder,' 1715, which contains the admirable sketch of the 'Tory Foxhunter.' Steele, on his side, followed up the 'Guardian' by the 'Lover,' the 'Reader,' and half-a-dozen abortive efforts; but his real successes, as well as those of Addison, were in the three great collections for which they worked together. . . . Between the 'Guardian' of 1713 and the 'Rambler' of 1750-2 there were a number of periodical essayists of varying merit. It is scarcely necessary to recall the names of these now forgotten 'Intelligencers.'

'Moderators,' 'Remembrancers,' and the like, the bulk of which were political. . . . Another of Fielding's enterprises in the 'Spectator' vein was the 'Covent Garden Journal' 1752. . . . Concurrently with the 'Covent Garden Journal' appeared the final volume of Johnson's 'Rambler,' a work upon the cardinal defect of which its author laid his finger, when, in later life, he declared it to be 'too wordy.' . . . In the 'Idler,' however, which belongs to a later date, when its author's mind was unclouded, and he was comparatively free from the daily pressure of necessity, he adopts a simpler and less polysyllabic style."—A. Dobson, *Eighteenth century essays, introduction*.

1712.—**First Stamp tax on newspapers in England.**—The first stamp tax on newspapers in England went into effect on the 12th day of August, 1712. "An act had passed the legislature, that 'for every pamphlet or paper contained in half a sheet, or lesser piece of paper so printed, the sum of one halfpenny sterling: and for every such pamphlet or paper being larger than half a sheet, and not exceeding one whole sheet, so printed, a duty after the rate of one penny sterling for every sheet printed thereof.' This act, which was to curb the licentiousness of the press, was to be in force for the space of thirty-two years, to be reckoned from the 10th day of June, 1712. Addison, in the 'Spectator' of this day, says, 'this is the day on which many eminent authors will probably publish their last works. . . . The stamp mark upon the newspapers was a rose and thistle joined by the stalks, and enclosing between the Irish shamrock, the whole three were surmounted by a crown. . . . It is curious to observe what an effect this trifling impost had upon the circulation of the most favourite papers. Many were entirely discontinued, and several of those which survived were generally united into one publication. The bill operated in a directly contrary manner to what the ministers had anticipated; for the opposition, who had more leisure, and perhaps more acrimony of feeling, were unanimous in the support of their cause. . . . For some reason, which we have not been able to trace, the stamp-duties were removed shortly after their imposition, and were not again enforced until 1725. In order to understand how so small a duty as one halfpenny should operate so strongly upon these periodical publications, we must look at the price at which they were vended at that period. The majority of them were published at a penny, many at a halfpenny, and some were even published so low as a farthing."—C. H. Timperley, *Encyclopædia of literary and typographical anecdote*, pp. 601-602.

1723.—**End of newspaper monopoly in France.**—"Until Louis XVI. was dethroned, Paris was officially supposed to possess but three periodicals: the 'Gazette de France' for politics, 'Le Journal des Savants' for literature and science, and the 'Mercure de France' for politics, literature, and social matters mingled. For a time these monopolies were respected, but only for a very short time. . . . During the Regency of the Duke of Orleans (1715-23), the 'Gazette de France,' 'Mercure,' and 'Journal des Savants' combined to bring an action for infringement against all the papers then existing, but they were non-suited on a technical objection; and this was their last attempt at asserting their prerogative."—*French press (Cornhill Magazine, Oct., 1873)*.

1777.—**First daily newspaper in France.**—"In 1777 there appeared the 'Journal de Paris,' which only deserves notice from its being the first daily paper issued in France."—*Westminster Review, July, 1860, p. 210*.

1784-1813.—**Earliest daily newspapers in the United States.**—"The first daily newspaper published in the United States was the 'American Daily Advertiser.' It was issued in Philadelphia in 1784, by Benjamin Franklin Bache, afterwards of the Aurora. When the seat of national government was in Philadelphia, it shared the confidence and support of Jefferson with the 'National Gazette.' It was strong in its opposition to the Federal section of the administration of Washington, and to all the measures originating with Hamilton. Zachariah Poulson became its proprietor and publisher in 1802, and it was known as 'Poulson's Advertiser,' and we believe he continued its publisher till October 28, 1830, when the establishment was sold to Brace and Newbold, the publishers of a new paper called the 'North American.' The name after that was the 'North American and Daily Advertiser.' . . . The 'New York Daily Advertiser,' the second real journal in the United States, was published in 1785. It was commenced on the 1st of March by Francis Childs & Co. . . . On the 29th of July, 1786, the 'Pittsburg (Penn.) Gazette,' the first newspaper printed west of the Alleghany Mountains, appeared, and in 1796 the 'Post' was issued. . . . 'The United States Gazette' was started in New York in 1780 by John Fenno, of Boston. Its original name was 'Gazette of the United States.' It was first issued in New York, because the seat of the national government was then in that city. When Congress removed to Philadelphia in 1790, the 'Gazette' went with that body. In 1792 it was the special organ of Alexander Hamilton. . . . Noah Webster, the lexicographer of America, was a lawyer in 1793, and had an office in Hartford, Connecticut. Washington's administration was then violently assailed by the 'Aurora,' 'National Gazette,' and other organs of the Republican Party, and by the partisans of France. Jefferson was organizing the opposition elements, and Hamilton was endeavoring to strengthen the Federal party. Newspapers were established on each side as the chief means of accomplishing the objects each party had in view. Noah Webster was considered, in this state of affairs, the man to aid the Federalists journalistically in New York. He was, therefore, induced to remove to that city and take charge of a Federal organ. On the 9th of December, 1793, he issued the first number of a daily paper, which was named the 'Minerva.' According to its imprint, it appeared 'every day, Sundays excepted, at four o'clock, or earlier if the arrival of the mail will permit.' . . . With the 'Minerva' was connected a semi-weekly paper called the 'Herald.' . . . The names of 'Minerva' and 'Herald' were shortly changed to those of 'Commercial Advertiser' and 'New York Spectator.' . . . The first prominent daily paper issued in New England was the Boston Daily Advertiser, the publication of which was commenced on the 3d of March, 1813. There was a daily paper begun in that city on the 6th of October, 1796, by Alexander Martin, and edited by John O'Leary Burk, one of the 'United Irishmen.' It lived about six months. It was called the Polar Star and Boston Daily Advertiser. Another was attempted on the 1st of January, 1798, by Caleb P. Wayne, who was

afterwards editor of the United States Gazette of Philadelphia. This second daily paper of Boston was named the Federal Gazette and Daily Advertiser. It lived three months. The third attempt at a daily paper in the capital of Massachusetts was a success. It was published by William W. Clapp, afterwards of the Saturday Evening Gazette, and edited by Horatio Biglow."—F. Hudson, *Journalism in the United States*, pp. 175-194, 378.

1785-1812.—Founding of "The Times" in London.—"Morning Chronicle" and leading articles.—"The [London] newspaper afterwards famous as 'The Times' was started, in 1785, under the name of the 'Daily Universal Register,' and did not adopt the title of 'The Times' until the 1st of January, 1788."—J. Grant, *Newspaper press*, v. 1, ch. 16.—"All the newspapers that can be said to have been distinguished in any way till the appearance of the 'Times' were distinguished by some freak of cleverness. . . . The 'Times' took up a line of its own from the first day of its existence. The proprietors staked their fortunes upon the general character of their paper, the promptitude and accuracy of its intelligence, upon its policy, upon the frank and independent spirit of its comments on public men. . . . The chief proprietor of the 'Times' was John Walter—a man who knew nothing or next to nothing of newspaper work, but who knew precisely what the public wanted in a newspaper, and possessed, with this instinct and intelligence, the determination and enterprise which constitute the character of a successful man of business. . . . 'The Times,' in its original shape, consisted merely of the day's news, a few advertisements, some market quotations, perhaps a notice of a new book, a few scraps of gossip, and in the session, a Parliamentary report. The 'Morning Chronicle' had the credit . . . of inventing the leading article, as it had the credit of inventing Parliamentary reporting. The 'Morning Chronicle,' on the 12th of May, 1791, published a paragraph, announcing that 'the great and firm body of the Whigs of England, true to their principles, had decided on the dispute between Mr. Fox and Mr. Burke, in favor of Mr. Fox, as the representative of the pure doctrines of Whiggery,' and that in consequence of this resolution Mr. Burke would retire from Parliament. It was very short, but this paragraph is the nearest approximation that is to be found in the newspapers of that time to a leading article. . . . The idea soon became popular; and in the 'Morning Post' and the 'Courier' the leading article, developed as it was by Coleridge and Macintosh into a work of art, often rivalling in argument, wit, and eloquence the best speeches in Parliament, became the object of quite as much interest as the Parliamentary reports themselves. The 'Times,' knowing how to appropriate one by one all the specialties of its contemporaries, and to improve upon what it appropriated, was one of the first newspapers to adopt the idea of leading articles, and in adopting that idea, to improve upon it by stamping its articles with a spirit of frankness and independence which was all its own. . . . The reign of John Walter, practically the founder of the 'Times,' ended in the year 1812, and upon his death his son, the second John Walter, took possession of Printing House Square, and, acting in the spirit of his father, with ampler means, soon made the 'Times' the power in the State that it has been from that day to this."—C. Pebody, *English journalism*, pp. 92-99.

1830-1833.—First penny papers in the United States.—"The Penny Press of America dates from 1833. There were small and cheap papers published in Boston and Philadelphia before and about that time. The Bostonian was one. The Cent, in Philadelphia, was another. The latter was issued by Christopher C. Cornwall in 1830. These and all similar adventures were not permanent. Most of them were issued by printers when they had nothing else to do. Still they belonged to the class of cheap papers. The idea came from the Illustrated Penny Magazine, issued in London in 1830. . . . The Morning Post was the first penny paper of any pretensions in the United States. It was started on New-Year's Day, 1833, as a two-cent paper, by Dr. Horatio David Shepard, with Horace Greeley and Francis V. Story as partners, printers, and publishers. . . . After one week's trial, with the exhaustion of the capital, the original idea of Dr. Shepard, his dream of the previous year 1832 was attempted, and the price reduced to one cent; but it was too late. . . . This experiment, however, was the seed of the Cheap Press. It had taken root. On Tuesday, the 3d of September, in the same year 1833, the first number of the Sun was issued by Benjamin H. Day."—F. Hudson, *Journalism in the United States*, pp. 416-417.

1850-1922.—Growth of publishing houses in America.—"Before the Revolution there were not in the [American] Colonies any publishers who were not also printers and booksellers, and it was only gradually thru later years that publishing came to be a distinct and specialized calling. Benjamin Franklin, tho he has long been adopted into the publishers' guild, was in fact a printer rather than a publisher. Up to 1820, Isaiah Thomas and Matthew Carey were the only names of first importance and wide activity in the annals of American publishing. Isaiah Thomas for many years issued from his great publishing house in Worcester, most of the Bibles and school-books and other general literature in New England; he imported the first font of music type that was used in . . . [the United States]; he wrote the first American history of printing; and he founded the American Antiquarian Society and endowed it with large bequests. Matthew Carey had a career even more active and influential. . . . Carey was what we would call to-day an enterprising general publisher. He had a vision for aims and methods far ahead of his day, for he sought to organize and stimulate the book-trade, was first president of the short-lived American Company of Booksellers, and planned the 'literary fairs,' of which one was held in New York in 1802, much like the Marshall Field and Wanamaker's and other book-trade fairs of the present [1922]. . . . Until 1817 he had no rivals; but in that year a sturdy Methodist farmer lad from Long Island set up a small printing press in a narrow brick house in old New York; his three sturdy young Methodist farmer brothers joined him there; and by 1820, when Sydney Smith swept the American horizon with a glance and found it void, the infant firm of Harper Brothers was vigorously at work for the future transformation of the landscape. Within fifteen years from 1822 the Harpers had been reinforced

by Charles Wiley; . . . by Daniel Appleton; by the indefatigable young George Palmer Putnam; by Moses Dodd; and in Boston by the new fledged firm of Little and Brown—and the foundations of modern American book production had been firmly laid. To present in a brief comprehensive survey so great a subject needs broad strokes of generalization. We may, . . . in such generalization, consider the beginnings of modern American book production as coming within the fifty years, 1800 to 1850; and its development as falling in two broad divisions, pre-international copyright, which brings us to 1890; and post-international copyright, from 1890 to the present [1922]. . . . In 1801, after nearly thirty years of effort, the first international copyright law was enacted by Congress, and American book-making entered upon its second period of development. In the long struggle for copyright the publishing world had been divided into two opposing camps, the Putnam firm heading the advocates of this step toward honesty and justice and the House of Harper leading the opposition, with commercial and educational arguments. By the 1891 act, copyright protection was extended to transatlantic authors whose countries gave reciprocal protection to American authors. . . . The effect of international copyright upon American book production was a stimulating one. It encouraged native literature, giving a fairer field and greater prospects of reward to American writers. It developed the mechanical side of book-making, in its greater control of the market. It greatly increased the price of books; and of course it checked and finally exterminated the cheap paper reprints of current English literature. . . . Then came the war years, 1914 to 1918—a strange and terrible period to look back upon now, with their increasing tensivity, their transformation of our world, at first gradually, then holding us in unescapable grip. American book production dropped over two thousand volumes in 1915, the first full war year. It regained a little ground in the two following years, but in 1917 when the United States entered the war it fell still lower. . . . The probably a dozen new general firms of importance have come into the field since 1914, there has been more intensification than extension of activities. Our leading general publishers are still those whose names are part of American book history—Harper; Little, Brown; Holt; Houghton; Macmillan; Dodd, Mead; Appleton; Scribner; and the rest of the familiar company. None of these have been discontinued. In spite of economic difficulties there has been no serious failure in the publishing world for nearly a quarter-century. The general firms of more recent development—Dutton, Doran, Doubleday, Knopf, Boni and Liveright, Harcourt—have found stability and success. Publishing is centering more and more in New York in its literary activities, but on the mechanical side the great book-making plants are being transferred to suburban locations. . . . Another factor in this development is the rise of the university presses. Few of us realize that the first of these was the Chicago University Press, founded in 1892, in which year it issued two books and a few pamphlets. At present it has a list of 900 publications; and its work is paralleled or exceeded by a dozen other American university presses.”—H. E. Haines, *Books and book-making in the United States* (*Library Journal*, Sept. 1, 1922).

1853-1870.—Extinction of taxes on newspapers in England.—Penny papers.—Rise of the

provincial daily press.—“In 1853 the advertisement duty was repealed; in 1855 the obligatory newspaper stamp was abolished, and in 1861, with the repeal of the paper duty, the last check upon the unrestrained journalism was taken away. As a matter of course, the resulting increase in the number of newspapers has been very great as well as the resulting diminution in their price. . . . When it was seen that the trammels of journalism were about to be loosed the penny paper came into existence. The ‘Daily Telegraph,’ the first newspaper published at that price, was established in June, 1855.”—T. G. Bowles, *Newspapers* (*Fortnightly Review*, July 1, 1884).—“With the entire freedom from taxation began the modern era of the daily press. At this time [1861] London had nine or ten daily newspapers, with the ‘Times’ in the lead. . . . Up to the time of the abolition of the stamp duties, London was the only city [in England] which had a daily press; but between 1855 and 1870 a large number of newspapers published in the provincial cities, which had hitherto been issued in weekly or bi-weekly form, made their appearance as daily journals.”—E. Porritt, *Englishman at home*, ch. 13.

1861-1865.—Censorship of newspapers during American Civil War.—“From the outset of the [Civil] war a censorship existed. Its habitat varied, for at different times it resided with the Treasury, War, and State departments. Though this censorship was so partial and feeble as to be ineffective, yet the . . . newspaper men complained of unreasonable strictness in the censoring of their despatches, of an unequal policy which benefited some papers at the expense of others, and of an occasional looseness which resulted in unfortunate ‘leaks.’ . . . In harmony with complaints . . . from the newspaper world, the Judiciary Committee of the House of Representatives, charged with an investigation of the telegraphic censorship, reported that wholesome political discussion and criticism were restrained, that numerous despatches were suppressed, that the censor was unequal to his position, and that censorship had been carried too far. As early as August 2, 1861, an attempt was made to obviate the necessity of undue official interference by the establishment of a sort of ‘gentlemen’s agreement’ between the government and the press. . . . After considerable experimentation, an administrative policy of news control was ultimately evolved. The censoring function was transferred from the State to the War Department, and it was ordered that, beginning with February 2, 1862, the President, by virtue of congressional authorization, would establish a military supervision of all telegraphic lines in the United States. All telegraphic communications touching military matters not authorized by the Secretary of War, or the commanding general of the district, were forbidden. . . . In the sifting of news the American Telegraph Company co-operated with the government, requiring oaths of secrecy and allegiance from employees and allowing no access to the messages or the operating rooms except to those duly authorized by the government telegraph manager. No unofficial messages conveying military information were transmitted by wire, and news-writers were forced to bring in their war stories in person, to employ a messenger, or to use the mails. As a further precaution communications were sent in code, the cipher operator constituting at all times an important medium between officers. . . . When abuse of the government was in question, there seemed to be no adequate way of

securing action by judicial process against offending journals. There was, it is true, a law which severely punished anyone who resisted the draft or counselled resistance, and the Treason Act of July 17, 1862 (*ie.*, the second confiscation act), was sufficiently comprehensive to include those who gave aid and comfort to the enemy through the expression of disloyal sentiments. The occasional grand jury indictments against editors, however, brought no results, as none of the cases reached the point of a judicial conviction. . . . Considering these limitations upon judicial and legislative action, it became necessary for the Executive to resort to extraordinary constitutional grounds and to the plea of military necessity whenever newspaper abuse reached such a pass as to call for really vigorous action. Though the arrest of editors and the suppression of papers would have been appropriate under a régime of martial law, or in a district under military occupation, yet such action under the actual circumstances was hard to justify, except on the principle that the supremacy of the government was an imperative necessity. The protection under the Indemnity Act of officers who acted under the President's orders amounted to a recognition of the unusual character of these proceedings. The difficulty of enforcing such measures was well illustrated in the case of the suppression of the *New York World* in May, 1864. The *World* had published on May 18, in company with other papers, a bogus proclamation of the President which implied an admission of Union disaster in recent military operations, set a day for fasting, and called for a draft of 400,000 men. General Dix, under orders from Washington, seized the offices of the *World* and *Journal of Commerce*, and their publication was suspended for three days. The editors protested against this measure of military repression in a district not under martial law, and a chorus of indignant denunciation of the act arose in the editorial columns of other newspapers in New York and elsewhere. Proceedings in the city court were instituted against General Dix, and Governor Seymour intervened to have these proceedings quashed. Here was an interesting conflict between state and federal authority, an attempt by a state to hold a high officer of the nation to judicial accountability for what was regarded as a usurpation and an infringement upon private rights. The order of the President, however, was pleaded by the defendant and the case never resulted in a conviction. So strong was the opposition to the suppression that the precedent could hardly be regarded as a fortunate one to follow. . . . One of the prominent arrests was that of F. Key Howard, editor and proprietor of the *Baltimore Exchange*, which was open in its sympathy for the cause of secession. With other Baltimore editors Howard was seized and placed in confinement with the 'prisoners of state' in Fort Lafayette. After some months of confinement he was released by order of the War Department. On the morrow of Howard's arrest the *Exchange* declared in an indignant editorial that the unrestricted right of the press to discuss and condemn the war policy of the government is identical with the freedom of the people to do the same thing, and continued to express its disapproval of the war. The attack upon the paper caused it to gain rather than lose in the popular estimation. A study of the various instances of governmental repression in the case of newspapers will reveal not so much that the penalties were excessive in view of the offense committed as that the means were ill adapted to

the end desired. Popular pressure, rather than governmental repression was, after all, the most effective method by which the journals could be kept within bounds. . . . Viewing the whole period of the war [1861-1865], and taking account of all parts of the country, it appears that the actual governmental interference with the freedom of the press was comparatively slight. . . . There was during the war no real suppression of opinion."—J. G. Randall, *Newspaper during the Civil War* (*American Historical Review*, Jan., 1918).—See also CENSORSHIP: United States.

1861-1917.—Rapid growth of newspapers in the United States.—News instead of opinion.—Great editors.—"Only when free thought went into partnership with steam and electricity did the modern newspaper become possible. It is not strange, therefore, that the United States surpasses all other lands in the number, the excellence, the influence, and the prosperity of its newspapers. . . . One might almost name the day that saw Fort Sumter fired upon. The civil war made the Americans a nation of newspaper readers. . . . Since the moment when this new era began, there has never been a time when mechanical invention failed to keep pace with the increasing demands of practical journalism. . . . Not until 1704 did a newspaper become established in the New World. . . . It required nearly thirty years to increase these four papers to nine. In 1776 the number was thirty-seven, including one semi-weekly. The revolution was fought and independence won without a single daily newspaper. . . . At the opening of the nineteenth century there were two hundred newspapers in the United States, with daily editions in only four or five cities. After another decade the number had increased to three hundred and sixty, of which more than twenty were dailies. By 1830 the number was one thousand, in spite of the fact that there were as yet no railroads, and no power presses. It is interesting to note how the railroads and the newspapers kept pace with each other in the successive decades. . . . The first noteworthy departure from old-time methods was made by the *New York Herald*, founded by the elder James Gordon Bennett in 1835 on a nominal cash capital of \$500. In his first issue Mr. Bennett announced that his paper would be independent and not a party organ. From the beginning he worked on the theory that the people wanted news rather than views. . . . He secured for his paper the first European news service. He was the first to use illustrations as a news feature. . . . Up to 1861 mechanical invention had followed editorial enterprise with laggard steps, but from that time forward, invention kept pace with all the demands of circulation. The telegraph suddenly came into general use for the transmission of news. . . . War brought great increase of subscriptions. . . . The collection of news was reduced to a system—almost to an exact science—until to-day every event of importance in the world is recorded daily by the press."—E. L. Shuman, *Practical journalism*, pp. 1-2, 4-5, 7-8.—The *Sun* (New York), which in 1833 had appeared as the first one-cent daily, soon attained a circulation of 60,000. The *New York Herald* was also a one-cent paper. It was followed in 1841 by the *New York Tribune*, founded by Horace Greeley; in 1850 by the *New York Times*, founded by Henry J. Raymond; and in 1860 by the *World* (New York). No Sunday editions were issued until 1868. As the output of the daily press has continually increased, so, too, has its character changed.

Whereas, in the days of Greeley, the newspaper reflected the personal views of its editor, it has come to express the views of a party rather than of any one man. Among the great names associated with American journalism are those of James Gordon Bennett, of the *New York Herald*; Charles A. Dana, founder of the *Sun*; Edwin Lawrence Godkin, of the *New York Evening Post*; Horace Greeley, founder of the *New York Tribune*; Joseph Pulitzer of the *World*; Henry Jarvis Raymond, of the *New York Times*; George William Childs of the *Philadelphia Public Ledger*; Henry Woodfin Grady, of the *Atlanta Constitution*; Whitelaw Reid, of the *New York Tribune*; Carl Schurz, of the *New York Evening Post*; Thurlow Weed, of the *Albany Evening Journal*; and many other including names which are also written large in literature. "January 1, 1835, there were 1258 daily, semi-weekly and weekly newspapers issued, with the semi-monthly, monthly, and quarterly papers and magazines; the circulation of periodical literature in 1835 must have reached ninety-five million copies."—F. Hudson, *Journalism in the United States*, p. 770.—By 1870, there were in the United States 574 dailies, and 5,871 periodicals of all kinds, compared with 7,642, estimated to be the number issued in all other parts of the world. In 1920 there were in the United States 2,398 daily newspapers, 14,008 weeklies, 487 semi-weeklies, 3,156 monthlies, 293 semi-monthlies, and 670 other periodicals. The total number of United States periodicals in 1900 was 20,806; in 1911, 22,800; in 1916, 23,024; and in 1918, 22,842.

1865-1917.—Associated news services.—American, English, and European agencies.—Supreme Court decisions governing ownership of news.—"Although there are many news agencies of all kinds, which are out and out commercial concerns, buying news and selling it at a profit, it is remarkable that on both sides of the water the leading news supply company is in each case a co-operative concern. In America it is the Associated Press, in the United Kingdom it is the Press Association and they are both organized on similar lines. It was the excessively daring and competitive spirit of American journalism, which in the early forties, brought about the first attempt at co-operation. At that time years before an Atlantic cable was laid competition for European news was limited to sending out fast sailing vessels to meet incoming ships and take the latest news from them. Newspapers vied with one another as to who should sail out the farthest and catch the news soonest, until at last it came to sending fast vessels all the way over to Europe to get the news at its source. Such competition had a sufficiently ridiculous aspect to bring about its own collapse and somewhere about 1850 the New York papers organized a joint service, which while primarily covering European news grew slowly to cover both general news and practically all but the internal news of each city, as subject for competition among newspapers. This was the germ of the Associated Press, which numbers about 700 papers as subscribers and regular members and is certainly the largest newsgathering concern in the world. It is both a news gatherer and a news-trader and also a news exchange between its own members. As an exchange it receives news free from its members and retails it at a low charge. As a trader it buys from the great international foreign news-gatherer, Reuter's Telegram Company and hands over the telegrams to its subscribers. Finally it has its own supplementary

corps of editors and reporters in all important centres. . . . The Press Association [in England] . . . is almost as dominant as the Associated Press in America, but it does not include the London papers. It has for the provinces the same partnership with Reuter, as its cousin in America. The term P. A. is as much in the mouths of newspaper men on the one side as the A. P. is on the other. But it has one feature, as some people think, of superiority over the American organization in that it is a truly co-operative body; it welcomes any new member which wishes to join its membership and except for the London press, which remained voluntarily outside its scope, it includes every newspaper of any position in the country. Reuter . . . was founded by the late Baron Julius de Reuter as a telegraph and foreign news agency business and was turned into a public company in 1865 for the purpose of raising sufficient capital to equip a telegraph cable from England to Germany. This direction of development was subsequently altered and the cable sold and Reuter's name became the trade-mark for semi-official foreign news all over the world. . . . The chief rival [in England] of the Press Association and Reuter is the Central News covering both domestic and foreign intelligence."—G. B. Dibblee, *Newspaper*, pp. 75-76, 78-79.—"There is no more romantic chapter in the history of the 'Street of Ink' than that which treats of the great news agencies. . . . It would be impossible to cite a better proof of this than the rise of the world-famous Reuter Agency. . . . The founder was a young bank clerk, later to become Baron Julius de Reuter. He conceived the idea of anticipating the news which was conveyed by means of mail coaches, and of supplying an accelerated service of information concerning the daily changes in the financial markets to those who cared to subscribe for it, realizing that numbers of people would be only too glad to have such news, so that they could buy and sell with advance information in their possession. There were no cables or telegraphs in those days, and Mr. Reuter purchased a number of carrier pigeons in order to establish communication between Brussels and Aix la Chapelle, where he made his start. The system was extended to other centres as the scheme developed. When the local bourses were closed, the latest prices of bonds, stocks and shares in which the two markets dealt were rapidly copied on to thin sheets of tissue paper. These were placed in silken bags, which were then attached to the necks of the pigeons, and the birds, being thrown into the air, made for their own dovecotes. The bags were at once opened, and the news was copied out and distributed to the subscribers, who received it some hours in advance of the arrival of the mail. Mrs. Reuter used to help her husband in the work of writing out the quotations. When the telegraph was being brought into practical use, Mr. Reuter at once supplemented his pigeon service with the new invention, using the telegraph where possible, and linking up spaces between the telegraphs with the pigeons and relays of horses. . . . Ere long every capital of the Continent was directly connected, and soon after the first cable between Calais and Dover was laid, Mr. Reuter became a naturalised British subject, and transferred his head office to London, which has been the headquarters of the service ever since. . . . As the organization grew so did the possibilities of further expansion present themselves, and about 1857 Mr. Reuter, having to utilise the services of his agents

for collecting and transmitting news of interest to the general public, made his historic overtures to Mr. Walter, the proprietor of *The Times*."—H. Simonis, *Street of ink*, pp. 157-159.—"The Associated Press [in America] during the Period of Reconstruction was not an incorporated body, being simply a combination of smaller associations loosely held together through a written agreement for the exchange of news. The New York City Association, as during the Civil War Period [1865], was the clearing house for the smaller branches. . . . The exclusive features of the Associated Press led to the organization of a rival company, the American Press Association, which sold its news to any newspaper on payment of stated weekly charges. . . . At various times discrepancies arose between a local branch and the general association. On one occasion the Western Associated Press withdrew from the general association and tried to maintain an independent and rival news-gathering organization. After a short period of competition, however, the differences were compromised and the Western Associated Press came back into the fold. With a development of new telegraph companies, and with the foundation of new newspapers unable to secure the news service of the Associated Press, came a more formidable competitor known as the United Press. Competition between these two organizations became extremely keen until an agreement was reached by which they worked in harmony and refrained from competing with one another in gathering and distributing the news. In 1892 the Western Associated Press again withdrew from the organization with headquarters at New York and the New York Associated Press was absorbed by the United Press. . . . Later, the Western Associated Press succeeded in obtaining the exclusive use of the news gathered by the Reuter Agency and the United Press was put under a severe handicap in the gathering of European news, so much so that several of the New York, Philadelphia, and certain New England newspapers left the United Press to join the Western Associated Press. The depletion was so great that on April 8, 1897, the United Press was forced to discontinue its services, and between two hundred and three hundred of its members joined the Western Associated Press. Other members formed a bureau, headed by *The New York Sun*, which practically supplanted the old United Press. The Western Associated Press was incorporated under the Laws of Illinois and had its headquarters at Chicago. Its general manager was Melville E. Stone. . . . On May 23, 1900, the State of New York issued a charter to a corporation known as the Associated Press. The new organization was virtually a continuance of the Western Associated Press which had its headquarters at Chicago. This change was doubtless made because the Supreme Court of Illinois, after a suit had been brought against the Associated Press by *The Chicago Inter-ocean* to secure the news service of the Association, had handed down a decision . . . [to the effect that the business of the Associated Press has become so charged with public interest, that 'it must submit to be controlled by the public, for the common good'; and that as 'the sole purpose for which news was gathered was that the same should be sold, . . . all newspaper publishers desiring to purchase such news for publication are entitled to purchase the same without discrimination against them]. The Associated Press secured in 1917 a court decision which established the legality of its claims to ownership of its own

story of the news. . . . While the present United Press was organized in June, 1907, it really dates back to the breaking up of the old United Press in 1897, though between the two organizations there is not direct connection. At the time, however, that the discontinuance of the service of the old United Press was announced, several of its members were unable to join the Associated Press and others refused to do so. Among the latter was E. W. Scripps, one of the owners of the Scripps-McRae string of newspapers, published in the Middle West, which had been organized around a nucleus of *The Cincinnati Post*, the *Cleveland Press*, and *The St. Louis Chronicle*. Probably the reason that Scripps did not care to join the Associated Press was the fact that he thought that any papers which his company was planning to establish in other cities would be unable to secure franchises. So he started his own news-gathering organization at about the same time that the newspapers in the East, who were not members of the Associated Press, organized the Publishers' Press, with headquarters in New York. The latter organization was prepared to furnish its service to both morning and evening papers while the former limited its field to the evening dailies. A little later another organization came into existence which furnished a brief 'pony' report of the news to a string of small dailies stretching from Chicago to San Francisco. The three organizations after about ten years saw that strength was in union and organized the present United Press. . . . The United Press differs from the Associated Press in that its services are available to any newspaper which can pay the necessary charges for a leased wire, etc. There is no 'power of protest' such as belongs to the Associated Press."—J. M. Lee, *History of American Journalism*, pp. 344, 385-386, 415-417.—"A German agency was founded on January 11, 1849 by Dr. Bernard Wolff. It has been and now is popularly known as the Wolff Agency. Wolff developed chiefly service between Berlin and Vienna and Amsterdam. A little later the French news-gathering company, the Agence Havas, named after its founder, was established to distribute news throughout France. And in 1854 the Stefani Agency was set up in Turin by Guglielmo Stefano, and the Fabra Agency in Madrid. There followed quickly like organizations in almost every European country, and all of them entered into exclusive exchange agreements with each other and with the New York Associated Press. . . . In addition to those mentioned, there were established the Danske Agency in Denmark, the Norsky Agency in Norway, the Svensky Agency in Sweden, the Russian Agency in St. Petersburg, the Agency Balconique in the Balkan states, the Correspondenz Bureau in Vienna. . . . Thus it happens that there is not a place of moment in the habitable globe that is not provided for."—M. E. Stone, *News-gathering*, pp. 16-17, 22.

1871-1900.—Mechanical development of printing.—Early progress slow.—Industry transformed by multiple press, linotype, and wood pulp paper.—"Originally the printer did everything except to make his paper and his press. He designed and cast his type, he made his ink, he edited his manuscript, printed his books, bound them, and, for a time, sold them. . . . He got rid of his type casting about one hundred years after the invention. The type foundry of Guillaume Le Bé, established about 1551, seems to have been the beginning of type founding as a separate industry, although in later years some very large establish-

ments maintained type foundries and even paper mills as incidents of the business; but the printer from this time on began to get his type outside. Bookbinding came to be regarded as a separate industry at about the same time. . . . The ink balls which were used for distributing the ink on types were made by the printers themselves until the ink ball was superseded by the roller with the coming in of modern presses. Even then rollers were made in the shops for a long time. . . . The early paper was hand-made and was thick, with a rough, furrowed surface. It was grayish or yellowish in color and was very strongly water-marked. It was very costly, but very durable. It was heavy and hard to handle, especially as it was handled without mechanical appliances. The early types were irregular in

tive and durable than the old wooden screw), tympan, and frisket were added in 1550, and the so-called Dutch press, which did away with the necessity of raising the platen by a reverse motion of the screw by substituting leverage for it, was introduced in 1620. These were the only improvements of any note which were made before the introduction of the Stanhope press about 1800. Of course, the presses were worked by hand power and it will be seen that the setting up of the screw or the throwing of a lever with sufficient force to insure a good impression was an extremely laborious task."—F. W. Hamilton, *Brief history of printing*, pt. 2, pp. 53-54.—"The story of the mechanical side of the evolution of the newspaper is fully as interesting as that of the intellectual side. . . . Each decade in the latter

INTERIOR OF A SIXTEENTH CENTURY PRINTING ESTABLISHMENT

face and body as the natural result of being cast in hand moulds from hand cut dies. The early types were cast on large bodies and were used without leads. The point system, which reduced type to uniformity and did away with the annoying irregularity in size of the old types, did not come into existence until the middle of the eighteenth century, three hundred years after the invention of printing. Of course, all composition throughout this period was done by hand. Women were employed as compositors as early as 1500, but they apparently disappeared from the industry before long, as we find no evidence of their presence after the reorganization of 1613 or for some time before that. The press was substantially the old screw press of Gutenberg in which the platen was forced down onto the bed by the direct pressure of a screw. A few improvements had been made. A sliding bed was introduced in 1500. A copper screw (more effec-

part of the nineteenth century brought more improvements in printing than all the previous centuries combined. At the time when the elder Bennett started his paper, in 1835, nearly all the newspapers in the country still were printed on hand-presses, one side at a time. . . . Newspaper work has been revolutionized repeatedly by new inventions in the last two-thirds of a century. The chief agencies that did it were the cylinder press, the railroads and telegraph-lines, the multiple press, the stereotyping process, the perfecting press, wood-pulp paper, and the typesetting machine. The first important advance came with the ordinary cylinder press. This was not introduced to any extent until 1832 [though invented in 1811]. It is still in use for the printing of books and country newspapers, though in a greatly improved form. In this the type stands on a flat bed and the paper is printed by passing between it and a heavy roller. With steam-power hitched to such

a press the possibilities of journalism already were becoming great. But the advent of railroads about this time increased the area of circulation a thousandfold. There was need of a swifter machine, and it came in the form of Hoe's 'lightning press' in 1846. It is no exaggeration to say that Richard M. Hoe created a new era in journalism when he showed how type could be placed on a revolving cylinder so that half a dozen men could feed in sheets of paper against it at the same time. With this multiple press came the possibility of addressing many thousands, at the moment of their keenest interest, on the events of the hour. Almost at the same time Morse's electric telegraph had come into existence. Before 1844 a fast pony express service, with relays, had carried the news from Washington to New York in two days. The first telegraph-line to be used for news purpose was that from Washington to Wilmington, which reduced the time between Washington and New York to one day. Hoe's 'lightning press' is antiquated now. Even that machine could not supply the millions of eager readers in the days of the civil war and in the era of industrial and railway expansion that followed. Under this enormous stimulus the mechanical experts bethought themselves of the stereotyping process, which had been discovered many years before but never put into extensive use. By this process the type page is duplicated in solid metal within a few minutes, and any number of plates may be made, so that the same matter can be set to running on a dozen presses at the same time. Here, at last, was the possibility of supplying a circulation of a million if necessary. That possibility took definite shape in Mr. Hoe's wonderful web-perfecting press. The machine was invented in 1871, and has been improved marvelously since then, especially by the application of the multiple principle, which combines six or eight presses in one machine. In its latest form this may justly be regarded as the greatest piece of machinery that the ingenuity of man has created. The octuple press devours the blank paper in four continuous ribbons, prints both sides, and folds, cuts, pastes, and counts out the completed copies at the incredible rate of 96,000 eight-page papers an hour. It requires eighteen months to build one of these presses, and the cost of one machine exceeds the total value of all the newspaper presses in the United States at the beginning of the nineteenth century. To keep pace with such a press the typesetting machine was sure to come. After innumerable experiments, involving infinite toil and wasted fortunes, the chief prize finally fell to Ottmar Mergenthaler's linotype, a machine of amazing ingenuity. Instead of setting type it sets the molds for casting type, dropping them into place as fast as the operator fouches the keys, until the line is completed, when the moving of a lever forces molten type metal against the matrices and casts a solid line. The molds distribute themselves automatically and are ready to be used again when the next line is set. With such a machine one man can do the work of five ordinary printers. In fact, an expert can do a week's work in a day."—E. L. Shuman, *Practical journalism*, pp. 9-13.—"In 1887, typesetting was essentially the same art as in the sixteenth century. While other branches of the printing trade had been revolutionized, the compositor had not advanced in his processes beyond the point he had reached four hundred years before. Probably no other handicraft employing such a large number of persons underwent as little change during this period, so full of industrial reconstruction. Since

1890, machine composition has been rapidly supplanting typesetting by hand. The machine is still constantly encroaching on the field of the hand compositor, but the period of introduction may be properly considered as concluded with the year 1900."—G. E. Barnett, *Introduction of the linotype* (*Yale Review*, Nov. 1904).—"Few readers stop to think that if print paper were still made of rags the modern press could not exist, and we could have no penny papers such as we have. There came a time when even the old cylinder-press began eating up paper at such a rate that all the rags in America and Europe could not keep it going. Paper became costly, and it looked as if a large part of the population would have to go without newspapers. Then came the application of the chemical pulp method to wood, and the presses have been devouring spruce forests at a terrific rate ever since. Now all newspapers are printed on wood-pulp paper, and that is why we can have a daily paper for one or two cents and a Sunday paper weighing a pound for five cents."—E. L. Shuman, *Practical journalism*, p. 13.

1877-1922.—Development of modern English journalism.—"The causes which have been most powerfully operative for the development of newspapers [in Great Britain] were in part economic and in part legislative, and came successively into being during the second decade of the latter half of the Century. They were three in number. The first was the repeal of paper duties by the legislation of 1861, following on the abolition of the newspaper stamp a few years earlier; the second was the vast extension of telegraphic communication with the world beyond seas; the third was the passing of the Education Act of 1870. By the first of these events the commercial conditions of newspaper enterprise, theretofore severely hampered by the cost of materials, were absolutely transformed; by the second the facilities of the newspaper proprietor for filling his cheapened sheet with matter of interest to the community were immensely extended; by the third the newspaper-reading public received—not, of course, immediately, but eventually and progressively in something like a geometric ratio—an enormous increment. Almost on the morrow of the repeal of the paper duties several of the great dailies reduced their price; and the newly founded and painfully struggling penny newspapers sprang almost at once into vigorous life. The brisk competition for news which set in among them from the date of the first permanently successful laying of the Atlantic cable in 1866 has continued with ever-increasing keenness and with the most excellent results for the public. . . . The results of the Education Act of 1870 were, of course, much longer in showing themselves. More than two generations of children, allowing say ten years for each, had to pass through . . . [the] elementary schools before the increment of new readers began to reveal its existence in any very conspicuous way."—H. D. Traill, *Newspaper* (*Graphic*, v. 61, Mar. 3, 1900).—"The general reader . . . [was] served by . . . [a] class of writers in the nineteenth century in a manner and to a degree quite unparalleled before. There is nothing in the history of British literature as sudden, as brilliant and as clearly marked as the flourishing of journalists in the noon of the Victorian era. Journalism, as the term was understood by its practitioners . . . [in the nineteenth century] was recruited from the foremost writers, and included—in the sense of contributors to the periodical press—men of letters as eminent as Ruskin and statesmen as distinguished as Glad-

stone. The greater novelists, Thackeray, Trollope, George Meredith, and the rest, regularly published instalments in the monthly reviews, and the titles of many collected works, such as Froude's *Short Studies on Great Subjects* and Stephen's *Hours in a Library*, bear witness to their resuscitation from the magazines. It was essentially an epoch of great editors. John Thaddeus Delane (1817-79) was editor of *The Times* from 1841 till 1877, and raised it to the height of its power and influence as 'The Thunderer.' . . . *The Daily News* was founded in 1846, with Charles Dickens as its first editor, and *The Daily Telegraph* in 1855. The *Pall Mall Gazette* evening newspaper was the creation of George Smith (1824-01), the head of the publishing-house of Smith, Elder & Co., who founded in 1859 the *Cornhill Magazine*, first edited by Thackeray, and afterwards by his son-in-law, Sir Leslie Stephen. Stephen was likewise the first editor—afterwards associated with and succeeded by Dr. Sidney Lee—of a later enterprise (1882) of George Smith, *The Dictionary of National Biography*. Frederic Chapman (1823-95), another London publisher, the head of Chapman and Hall, started the *Fortnightly Review* of 1865, and John Morley (now Viscount Morley) and George Meredith have been among its editors. James Anthony Froude (1818-04) edited *Fraser's Magazine* from 1860 till 1874. Walter Bagehot (1826-77) was editor at various times of *The Inquirer*, *The Economist* and the *National Review*. *The London Review* (to be distinguished from *The London Magazine* of De Quincey's generation) was founded in 1835 by John Stuart Mill, as an organ of philosophic radicalism, not very distant in its views from Jeremy Bentham's *Westminster Review*, established in 1824. *Punch* was founded in 1841, and attracted from the start the services of the most distinguished humourists. Mark Lemon (1800-70) was its first editor, and among past Knights of its Round Table have been Douglas Jerrold (1803-57), Richard Doyle (1824-83), who designed the cover, Thackeray, John Leech (1817-64), George du Maurier (1834-96). . . . *The Spectator*, revived from the eighteenth century, was founded in 1828, and its chief Victorian editor (1861-07) was Richard Holt Hutton (1826-97). *The Athenæum* was established in the same year, *The Guardian* in 1846, and *The Saturday Review* in 1855. Sir James Knowles (1831-1908) founded *The Nineteenth Century* in 1877, with a sonnet by Tennyson to send it off.—L. Magnus, *English literature in the nineteenth century*, pp. 301-394.—“At the time of writing [1922] there are 2,366 papers published in the United Kingdom, England and Wales producing 1,458, Scotland 254, Ireland 186, British Isles 17, and London (postal district) 451.”—L. Warren, *Journalism*, p. 31.

1889-1900.—Printing as a fine art.—Kelmscott press.—Recent progress.—Work of William Morris.—His influence in America.—Oxford University press.—German presses.—In the seventeenth century the Elzevirs had preserved a tradition of craftsmanship; but in general the artistic level was very low throughout Europe, and especially in England. With the opening of the eighteenth century, Caslon, Foulis, and Baskerville made various experiments and innovations in types and inaugurated in England a movement which found recognition elsewhere, especially in the work of Bodoni at Parma, the family of Didot in France, and Goeschen at Leipzig. In the early nineteenth century Charles Whittingham the younger, and the publisher William Pickering, combined to revive the style of the sixteenth century. “A fully decorated Chiswick Press book during

the rule of the younger Whittingham represented an adaptation, with some change of tone, of the style of the best French books of the period 1530 to 1560. William Morris, when he devoted his wonderful gifts of craftsmanship to the making of books, went some two generations further back, to the ideals of the fifteen years 1476 to 1490. We may wonder a little that he did not go further back still to the Fust and Schoeffer books of 1457 to 1462, or through these to the manuscripts of the thirteenth and fourteenth centuries, which he himself loved so well. To Fust and Schoeffer a fine book meant a book, if possible on vellum, printed in black and red, and with capitals and headlines added in red and blue. They themselves tried for five years to bring their books to this perfection with the least possible aid from the rubricators, and presumably had to give up the struggle because it made their books too expensive when cheaper methods were in use by other firms at Mainz and Strassburg. But the ideal of colour remained, though the method of attaining it altered; and in most towns of Germany, and almost in every non-German town to which printing was introduced, spaces were systematically left for capitals to be supplied in colour. After 1490 the spaces diminish, and printed capitals were used, or capitals were abjured altogether. But it is noteworthy that Aldus left spaces rather than use printed capitals in his italic octavos; and in his still smaller books Simon Colines left spaces as late as 1543. Nearly twenty years before 1490 what we may call the ‘all-black’ school asserted itself at Augsburg and Ulm, and in one or two stray printing houses at Basel, Strassburg, and Nuremberg. . . . Now, the Augsburg and Ulm books were great favourites with Morris; and when he started printing it was to the woodcut capitals in black and white that he gave his adhesion, not to the red and blue of Fust and Schoeffer. In a few instances he printed a capital in red; in two of his books he experimented with small capitals in blue. But for the elaborate designs which he drew with such mastery black and white were more effective than any colour; and the general scheme of his books is that of black for text and ornaments, lit up by red rubrics and shoulder notes. It was doubtless to give himself free scope for decoration that Morris arranged his books on the plan in vogue in Italy about 1490, with one notable improvement. Instead of the full title-page, which only took shape in the sixteenth century, he put only a mere label, like a modern half-title, on his first printed page and lavished his decoration on the beginning of the text. The old printers had followed this plan, but for all their cunning they had not fully mastered the principle, cardinal with Morris, that the unit in bookmaking is not the single page but the two pages which face each other when the book lies open. The decorated first pages of the fifteenth century as a rule are faced by the end of a table of contents or preface, or by blanks; Morris carried a border also round the page facing the beginning of the text, enclosing in it sometimes a woodcut picture, often a repetition of the short title in decorative letters standing out from some wonderful background. To harmonize with the splendour of his ornament Morris designed three types; the first a roman letter with some gothic touches, called, from its use in his reprint of Caxton's version of the ‘*Legenda Aurea*,’ the Golden type; the second, the Troy type, a magnificent round gothic made for his reprint of Caxton's ‘*Recuyell of the Hystories of Troy*’; the third, a reduction of this, called after his

great Chaucer, in the double columns of which it is seen at its best. The roman type was only a partial success; the gothic ones rank with the very finest of the fifteenth century, and the whole series of Kelmscott Press books, into which was poured a wealth of designs regardless of all expense, eclipses the work of any fifteenth century printer who ever lived. Experiments in printing were in the air when Morris started the Kelmscott Press. A few words may be said as to the efforts to provide good printing with only a minimum of ornament as contrasted with more luxurious ideals. Three years before the issue of the first Kelmscott book Mr. Herbert Horne was at work with this object in the Century Guild Hobby Horse, and Morris himself (helped, as was also Mr. Horne, by Mr. Emery Walker) devoted much trouble to getting two of his books, the 'House of the Wolfings' and the 'Roots of the Mountains,' printed according to his ideas in 1888 and 1889. For these two books a new type was cast, modelled on an old Basel Fount. New founts were wanted, and are still wanted, in order that there may be a sufficient variety, each good of its kind, for every sort of book. But there were good types in existence before 1888, only (with one or two honourable exceptions) printers had economized too much on their ink to do them justice, and had also forgotten the secret of the due proportions of the different margins. . . . Very real improvements have been made; but there are still problems to be solved in book-building, and they cannot all be surmounted by an appeal to the practice of Jenson. The one thing necessary for their solution is that book buyers should take a real interest in the problems; and this, as the result of a quarter of a century of propaganda, they now do to a far greater extent than formerly."—*The Times* (London), Sept. 10, 1912.

—America now has several presses which follow intelligently the inspiration of Morris, and others which lavish the same care on adaptations of the French and Italian work of the sixteenth and seventeenth centuries. Not only are the artistic phases carefully studied, but emphasis is placed on technical perfection, and accuracy of text. The press which Elbert Hubbard established at East Aurora, New York, and which was at the height of its prosperity in 1900, did much to popularize a demand for good printing and binding in America. In accuracy, there is probably no organization which can rival the *Oxford University press* of England, which has had a continuous existence since 1585, and possesses a corresponding tradition and a valuable heritage of old type. Since 1861 it has more than tripled in size. It has a great variety of founts, and can print more than 150 different languages. It manufactures its own paper, of a very excellent quality, and is almost a self-sufficing unit. But its most famous achievement is its almost absolute accuracy. In Germany a revival took place, coincident with the increasing wealth of the nineties, which effected a tremendous change in German life. This entire movement, of which the Secessionist movement in painting and sculpture is a part, was to a great extent an arts-and-crafts development like that of Morris, stressing honesty and individuality of technique. The *Insel Verlag* and its rival publishers undoubtedly raised the general standard of excellence and taste, and helped to create a small class who are willing to pay almost anything for really beautiful books.

1900.—Modern European newspapers.—Italy's political press.—Great French journalists.—"The political press of Italy really dates from the

advent of Pius IX. The reform movement which this pontiff provoked throughout Italy, and which soon gained a momentum which took it beyond his control and his desire, had much to do with modifying legislation regarding the press; and in 1846 there appeared in Rome, with his authorization, the first of the truly political Italian journals, the *Bilancia* and the *Contemporaneo*, the latter of which became under Sterbini the organ of the radicals. In the Revolution of 1848 the last restraints were swept away, the famous 'statute' of Charles Albert specifically providing that 'the press will be free, but the law will be empowered to punish any abuse of its liberty.' In Turin they were quick to avail themselves of their new found liberty, although how much power was embodied in the modifying clause, and how effective subsequent legislation has retained it, was well illustrated [in 1898], . . . when, as a result of the Milan bread riots, no less than nineteen Milanese editors were arrested and sentenced

WILLIAM MORRIS

to terms of imprisonment of varying lengths. The year 1848 witnessed the founding of a host of journals, many of which, such as Cavour's organ, the *Risorgimento*, Guerrazzi's *Corriere Livornese* or Mazzini's *Italia del Popolo*, are of considerable historic interest; but, unfortunately, they do not come within the scope of the present discussion, since with two notable exceptions the liberal journals of 1848 have none of them survived. . . . It is interesting to note that, old as its traditions are, the really influential part of the Italian press is of recent development. The leading papers, such as the *Secolo* of Milan, the *Tribuna* of Rome, and the *Stampa* of Turin, are all the product of united Italy. Italian journalism [at the end of the nineteenth century], . . . came to be modelled more or less upon English and American lines, as regards telegraphic intelligence, and it is noteworthy that these costly methods have been adopted in spite of the fact that the established price of an Italian daily is extremely low—not exceeding five *centesimi*—and that owing to the configuration of the country and the strong sectional feeling which still prevails, the circulation in the majority of cases is

limited to their respective provinces. A natural consequence of this local pride is that, just as Italy has no one literary centre toward which the best writers all gravitate, as toward London or Paris, in the same way she has no single city in which the press is as authoritative as the London or Parisian press. Milan, Turin, Rome, and Naples, each have several dailies of first importance, while many of the smaller cities have enterprising and well-edited papers, such as the *Resto del Carlino* of Bologna, and the *Gazetta di Catania*, which are extensively quoted."—F. T. Cooper, *Great newspapers of continental Europe* (Bookman, June, 1900).—"Among the newspapers that . . . are . . . making real progress, setting aside their entire lack of commercial morality, are some of the French journals. They have always been noted for their high literary excellence. The anonymous editorial has never been a particularly strong feature of the French newspaper. On the other hand, pure literature, in the shape of fiction or criticism, has been one of its chief characteristics. Nearly every French man of letters since the Revolution—and to some extent before—has been a regular or occasional writer for the Press. One has only to mention, among noted French journalists, such men as Marat, Mirabeau, Brissot, Camille Desmoulins, Sainte-Beuve, and, in more recent days, Thiers, Lemaître, Sandeau, Zola and M. Brunetière, to call to the reader's mind the names of many others that might be enumerated."—A. Harmsworth, *Simultaneous newspapers of the twentieth century* (North American Review, Jan., 1901).—*Le Petit Journal*, a one-cent Parisian paper, was estimated to have, in 1921, a circulation of nearly one million copies, the largest in the world. Leading political and literary French newspapers include the *Journal des Debats*, the *Temps*, the *Siècle*, and the *Presse*, while the *Figaro* is popular in the fashionable world. The newspapers which have occupied leading positions in Germany during the twentieth century are: the *Norddeutsche Allgemeine Zeitung*, the *Kölnische Zeitung*, the *Allgemeine Zeitung, Berliner Tageblatt, Frankfurter Zeitung*, the *Volkszeitung* and the *Vorwärts*.

1910.—Development of the American magazine.—"In January, 1741, three days apart and in the small city of Philadelphia, were published the first two magazines of this country. . . . One was published by Andrew Bradford, the other by Benjamin Franklin. . . . Between this and the end of the century there were at least forty-five magazines started. . . . 'The special character of the American cheap magazine as we now know it'—wrote the keen and reflective English observer, Mr. William Archer, in 1910—'is mainly due to one man, Mr. S. S. McClure. He invented and developed the particular type. The style of article which has made its fame is a richly documented, soberly worded study in contemporary history, concentrating into ten or twelve pages matter which could much more easily be expanded into a book ten or twelve times as long. Its method is to present, without sensationalism, or exaggeration, facts skillfully marshaled and sternly compressed and let them speak for themselves.' . . . Magazines have now become so numerous as to defy any account of them beyond mere classified enumeration. . . . Thanks to them, history will for the

first time possess a complete record of human thought and activity. . . . Nor does this tell the entire story. 'I desire to confess frankly,' writes Mr. H. M. Alden of *Harper's* 'that in literature the book and not the magazine is the supreme thing; but the first encouragement of the greatest writers has come from the magazine ever since the time of Poe, and the magazine has been participant of such glory as literature has shown.' That the magazine has a hundred times multiplied the audience of authors is apparent to everybody. . . . And, finally, one cannot reiterate too often the material debt of American literature to the magazine. The lives and letters of authors cry it in and between all the lines—but for the magazine very few could have lived to tell the tale. 'It is only with the modern development of the newspaper and the magazine,' says the House of Harper, 'that authorship may be said to have become a lucrative profession.' We are apt to think of our literary hand-to-mouth period as long ago—so radical and immediate was the change wrought by the International Copyright Act. But that past is not so shadowy as shady. So late as 1881 the *Century* was saying 'Not many prominent American novels have of late years reached the reader in the first instance between book-covers.' And if this might be said of novels, what of the rest of books? Before the Committee of Congress appointed to inquire whether any real need existed for the proposed copyright, Mr. Dana Estes said in 1886: 'For two years past, though I belong to a publishing house (Estes and Lauriat) which emits nearly one million dollars' worth of books per year, I have absolutely refused to entertain the idea of publishing an American manuscript. It is impossible to make the books of most American authors pay unless they are first published and acquire recognition through the columns of the magazines.'"—A. Tassin, *Magazine in America*, pp. 1-3, 347, 367-369.—"In 1882 a single volume of 1,442 pages sufficed for the titles of articles published up to that time in the important magazines of the English-speaking world. But so rapid was the development of magazines thereafter that the years 1905-9 alone required a book of 2,491 pages, and the greater part of this increase had been in America. A mere list of the newspapers and magazines published in the United States, together with a few facts concerning their character, management, and circulation, filled in 1917 more than 1,000 large, closely printed pages."—P. L. Haworth, *United States in our time, 1865-1920*, p. 519.

1914-1920.—Effects of World War.—Revival of editorial page.—Increased cost.—"The great struggle had scarcely begun [1914] when the French papers began either to suspend publication or to reduce their size, and those which continued publication for the most part confined themselves to a single edition a day and abolished all headline display. Americans who subscribe for London dailies noticed an immediate reduction in size as soon as war had been declared. A cablegram from Amsterdam announced that over eight-hundred and fifty German newspapers, according to statistics gathered by the Postal Department, had suspended the first year of the war. Belgian

THE PROLOGUE OF THE TALE OF THE MANNE OF LAURE.

DIRMI CONDICION OF POVERTE!
 With thurst, with coold, with hunger so confoundid!
 To asken help thee shameth in thyn herte;
 If thou noon aske, so soore artow ywoundid,
 That verrey nede unwrappeth al thy wounde hid!
 Maugree thyn heed, thou most for indigence
 Or stele, or begge, or borwe thy despence!

Thow blamest Crist, and seist ful bitterly,
 He mysdeparteth richesse temporal;
 Thy neighebor thou wytest synfully,
 And seist thou hast to lite, and he hath al.
 Parfay, seistow, somtyme he rekene shal,
 When that his tayl shal brennen in hire gleede,
 for he noght helpeth needfulle in hire nede.

Herkne what is the sentence of the wise:
 Bet is to dyen than have indigence;
 Thyselfe neighebor wol thee despise;
 If thou be povre, farwel thy reverence!
 Yet of the wise man take this sentence:
 Alle the dayes of povre men been wikke;
 Be war therfore, er thou come to that prikke!

If thou be povre, thy brother hateth thee,
 And alle thy frendes fleen from thee, alas!
 O riche marchaunts, ful of wele been yee,
 O noble, o prudent folk, as in this cas!
 Your bagges been nat filld with ambes as.
 But with svis cynk, that renneth for youre chaunce;
 At Christemasse myrie may ye daunce!

Ye seken lond and see for yowre wynnynge;
 As wise folk ye knowen al thestat
 Of regnes; ye been fadres of tidynge

journalism soon became a thing of the past, save that conducted under German supervision. . . . The most immediate effect of the war [in America] was noticed in the rapid advance in cable tolls, which not only the news-gathering organization but also the newspapers themselves were forced to pay, for the special war dispatches. So high were these tolls that newspapers pooled their interests. In New York City, for example, *The World*, *The Times*, and *The Tribune*, used a joint cable service which reduced the tolls to one third for each newspaper. . . . The war from the start did much to revive the interest in the editorial page, the influence of which had declined very much in the period of financial readjustment. Unfamiliar with European geography, unacquainted with the economic and political situations in the warring countries, readers found they must have the news interpreted through the editorial. . . . The increase in the cost of white paper later [1917-1920] made space more valuable. The result was that there was noticeable condensation of news in all departments."—J. M. Lane, *History of American journalism*, pp. 410-422.

1920.—Development of journalism in China. See CHINA: 1920: Development of journalism.

1920.—British imperial conference for better communication. See BRITISH EMPIRE: Colonial and imperial conferences: 1920 (August).

1920.—Influence of advertising.—"The newspaper . . . is a business rather than a profession; but it is unlike any other manufacturing business in this respect: that while every other manufacturer must sell his wares at a price to include the cost of raw materials, overhead charges, and profits,—and this principle runs through all business whether the plant turns out pins or battleships,—the newspaper manufacturer sells his output at a loss, for the one or two cents paid for a newspaper does not cover the cost of production. Yet the newspaper owner cannot publish his journal at a loss and remain in business, and, as we know, newspapers make large profits from their advertising. Out of this anomalous state of affairs a peculiar relation has grown up between the newspaper and the advertiser. The bulk of advertising is furnished by merchants who cater to the masses and who use mediums having large general circulations. To obtain this circulation the newspaper prints what will appeal not to a limited circle but to the public at large. Moreover, since the larger the circulation the more valuable the paper is to the advertiser, the constant effort of the newspaper proprietor is to increase his circulation and to convert more white paper into his finished product. The reader, therefore, is largely the decoy—and I use the term in no offensive sense—for the advertiser; and as it is the advertisers, and not the reader, who pay the expenses and profits of the newspaper, the advertiser must be treated with the same deference that an expectant nephew shows his rich uncle; for he who holds the purse strings in a commercial age is master. The result is that the newspaper is no longer a free agent. It cannot, as a matter of business, print matter that would offend or injure its large advertisers, even to do good to the community as a whole; it may not champion an unpopular cause, for that would be to risk the loss of readers, which would lessen its value as an advertising medium and diminish profits. . . . Demagogues have encouraged the belief that the newspaper is dishonest; that it is in the pay of, or in league with, those mysterious and maleficent powers of darkness known as the 'interests'; and that this control by the 'interests'

makes it impossible for the poor or friendless to obtain justice. That, I am convinced, wrongs the newspaper proprietor. He is neither dishonest nor is he open to bribe; but like every other man engaged in business, he must consider the source whence his profits come and shape his course accordingly."—A. M. Low, *Modern newspaper as it is* (*Yale Review*, Oct., 1912).—"An honest newspaper which does not sell news to other publications has only two sources of income. One source is the public, which buys the paper for its news, its editorials, or maybe its pictures. From this the return is comparatively small; but upon the numerical strength of a paper's readers and their financial standing as a class, depends the size of the income which flows from the other source—the advertisers."—J. L. Given, *Making a newspaper*, p. 307.

PRISAGE, in old English law, the right of the crown to take one tun of wine from every ship importing from ten to twenty tuns.

PRISCILLIANISM, Manichean doctrines held by a sect, the followers of Priscillian, bishop of Avila, in Spain, during the fourth century. The sect was condemned by a synod held at Saragossa in 380 for its ascetic and separatist tendencies, and Priscillian was excommunicated. This did not end the controversy, and some years later Priscillian was put to death at the command of the emperor, but the heresy survived throughout the fifth century, and was not altogether extinct at the date of the Council of Braga.

PRISHTINA, town in Serbia, just east of the plain of Kossova. The town was taken by the Germans in 1915 and again in 1916 by the Austro-Bulgarian forces. Its population in 1910 was 18,174. See WORLD WAR: 1915: V. Balkans; b, 4.

PRISON, Mamertine. See MAMERTINE PRISON. PRISON ACT (1877). See PRISON REFORM: England.

PRISON REFORM: Beginnings.—"The Hebrew prophet ascribed to the Almighty the question: 'Have I any pleasure at all that the wicked should die?' Seneca said that punishment is designed to protect society by removing the offender, to reform its subjects, and to render others more obedient. Plato held that the proper end of pun-

ishment is not merely to render to the guilty their due, but at the same time to make them better. He so far anticipated the course of modern reform in his dream of an ideal as to propose the construction of three grades of prisons—one for persons under arrest, one for minor offenders, and one for great criminals. The intermediate prison he would have named *Saphranisterion*, because it was to be a place for teaching wisdom and continence. Aristotle defined punishment to be 'the specific of the soul,' and said that law should be 'wisdom without passion.' Saint Augustine, the venerable bishop of Hippo, in pleading for mercy to certain heretics, who had murdered two priests, declared that, however atrocious crime may be, it should not awaken anger and the desire for revenge, but should rather be looked upon as an inward malady which it is our duty to heal. Pope Boniface VIII. anticipated the famous dilemma

placed the inscription, '*Parum est coercere improbos pena nisi probas efficias disciplina,*' which Howard thus renders: 'It is of little advantage to restrain the bad by punishment unless you render them good by discipline.' This was a formal and official admission, by the highest authority, that the entire system of retribution and repression had proved a practical failure. The erection of this juvenile reformatory institution, therefore, is the landmark which divides two civilizations or two historical epochs. But Saint Michael's was not a prison pure and simple. It contained a department for two hundred orphan boys, and other departments for aged and infirm men and women, of whom there were over five hundred, while the number of criminal boys was only fifty. For the latter the plan of the institution provided sixty single cells, in three tiers, one above the other, ten cells in each row, on the two sides of a spacious hall lighted by three large windows, one at the end and one at each side. This corridor was used as a common work-room by day; in the centre hung a placard with one word, 'Silence!' These were the essential features of what, a century later, was called the Auburn system."—F. H. Wines, *Punishment and reformation*, p. 121-123.

JOHN HOWARD

Howard and Beccaria.—Early Efforts.—"In the history of prison reform, the two greatest names are those of Howard and Beccaria; one an Englishman, one an Italian; one a Protestant, the other a Catholic; one a commoner, the other a nobleman. Beccaria was younger than Howard by about ten years, but he launched his book against torture ten years before Howard's first publication. Beccaria was a thinker, a student, who worked among his books; and, though not a lawyer, his attack was directed against criminal law. Howard left his home and his native land, to pursue his studies in the field; his knowledge of the subject was gained by original observation, and his attack was aimed at the practical abuses in the administration of the law. . . . Both were sincere, courageous, and undaunted by danger or opposition. They had many views and sentiments in common. Both condemned the needless infliction of pain, and disapproved of the death penalty, of life imprisonment, of imprisonment for debt, and of long imprisonment awaiting trial. Both saw the utility and necessity for labor and of education for convicts."—F. H. Wines, *Punishment and reformation*, pp. 126-127.—In 1764, Cesare Beccaria published his brilliant treatise, "On Crimes and Punishments." The book had a great success, passing through six editions within eighteen months, and appearing in several languages. An English translation was published in 1768. In the same year, Beccaria was appointed to the chair of law and economy in the Palatine College of Milan. "Prison reform in England began with the efforts of John Howard (1726-90), who was appointed sheriff at Bedford in 1773, and made a personal investigation of English prisons. Between 1775 and 1783 Howard travelled on the Continent, finding the prisons there on the whole superior to those of England. At Augsburg he found instruments of torture and dungeons for people convicted of witchcraft. In Russia he saw the different instruments of death and torture: the axe and block, a machine for breaking arms and legs, a knife for slitting noses, the cat, knout, etc. Of the prison at Venice, the best he could say was 'Mercifully there were no irons, happily there was no fever.' Holland was in advance in reform, and Howard writes, 'I know not which to admire most: the neatness and cleanliness ap-

of Mr. Frederick Hill, 'reformation or incapacitation,' in one of his edicts, in which he said that, while the prison is to be regarded as a place of detention rather than of retribution, yet the Church would not disapprove the incarceration of confessed or convicted clerical offenders for life or until they should give evidence of repentance. But these were the utterances of individuals. They were in direct opposition to the heathen spirit; and the Christian spirit has never made more than a partial impress upon social and legislative institutions, even in so-called Christian lands. Yet it is the reformatory idea which distinguishes the penitentiary era of criminal jurisprudence. The honor of having inaugurated that era is generally accorded to Pope Clement XI., who, when he founded the Hospital of Saint Michael, at Rome, in 1704, inscribed over the door: 'For the correction and instruction of profligate youth, that they who when idle were injurious, may, when taught, become useful, to the State.' And in the hall where the boys were at work he

pearing in the prisons, the industry and regular conduct of the prisoners, or the humanity and attention of the magistrates and governors.' Howard died at Kherson, southern Russia, on his way to Constantinople. Of English prisons at this period, Joseph Kingsmill, chaplain of the Pentonville prison, says: 'The state of prisons in England when the illustrious Howard began his work of inspection was in the highest degree disgraceful to the nation. A committal to prison was, in fact, equivalent in many cases to a sentence of death by some frightful disease; and in all, to the utmost extremes of hunger and cold.'—J. H. Willsey and C. T. Lewis, *Harper's book of facts*, p. 661.—Howard is credited with so improving English prison conditions, that the terrible scourge of jail fever entirely disappeared.

European prisons.—General characteristics.—Distinguishing features in various countries.—“Inspection of prisons in Europe . . . [leads to the conclusion] that each continent has something to learn from the other. . . . On the subject of prison construction, we [Americans] can greatly profit by European models. . . . 1. Europe has adopted most generally a form of prison structure with more abundant cell room than is furnished in the United States, and with large windows in every cell. 2. The best European jails are superior to our own in providing a complete separation of jail prisoners in well lighted cells. 3. All European jails and prisons are furnished with exercise yards and prisoners are permitted and required to take exercise once or twice a day from thirty minutes to an hour. . . . 4. In a number of European countries, prisoners awaiting trial may work and receive compensation for their labor.”—S. J. Barrows, *Charities*, Dec. 7, 1907.—The cell system which prevails through most of the European prisons has variations in different countries. In France, for instance, where a good deal of attention has been devoted to the subject of prisons, the cell isolation is only part of the treatment. At the other extreme is the system of transportation of criminals. In Austria, cell separation is inflicted only for comparatively short periods, the maximum being three years. Prisoners in that country have been largely employed in the execution of public works. The Denmark system passes all convicts through several stages from cell isolation to conditional liberty, and a similar plan is in force in Norway and Sweden. The cell system is in favor in Prussia. Portugal, since 1884, has been installing prisons built for separate confinement. The system of transportation which was one of the regrettable characteristics of the Russian penal code was first mentioned in a law of 1648. It was then regarded as a means of getting rid of crippled prisoners.

Belgium.—Prison laboratories in “anthropology.”—Colony for vagrants.—“There are today, in nine of the chief prisons of Belgium, anthropological laboratories under the direction of specialists in criminal psychiatry, the establishment of which has put into practice the decisions of the recent congresses devoted to criminal anthropology and penitentiary science. . . . In 1907, under the impulse of modern scientific theories, a laboratory of penitentiary anthropology was started in the prison at Brussels. The term ‘Anthropology’ is here used in its most general sense. It comprehends all the vital activities of man, which are studied successively in the course of the examination of delinquents. Until 1920 the object of the examination and observation of convicts was only to acquire accurate criminal, sociological and anthropological data of the delinquents of Belgium. Since

that time the anthropological examination has become the starting point for various therapeutic measures. Some of these measures have been legal; others have led to modification in the penal system itself, adapting it to the biological and psychiatric individualities of the delinquents. Thus, at Brussels, there was carried on a practical experiment as to the usefulness of research in criminal anthropology in the prisons. After ten years the proof seemed conclusive, and Mr. Vandervelde, the minister of justice, decided to extend to all the prisons of Belgium the system of anthropological laboratories, and empowered the psychiatrists in charge to direct the penal treatment of the inmates. The observation of delinquents is now characterized by the method, the exactness and the eclecticism which are the bases of science. In connection with each of the nine laboratories are several less important prisons which are thus assured of anthropological service. In order to facilitate the examination of the prisoners who are mentally affected, there have also been added to each of the main prisons a psychiatric annex for convicts who should not be kept in prison—that is, for those who are either mentally deranged or suspected of being so; drug fiends, for example—and an annex for abnormals of all kinds, especially ‘irresponsibles.’ The aim of the penal anthropological service is to create with the least possible delay a series of special therapeutic establishments. It has now been decided to start a special psychiatric section for epileptics, an agricultural division for those mentally defective, and a penal sanatorium for the tuberculous. Later there will be set up a hospital and penal home for old, infirm, or incurable prisoners; a prison asylum for nervous cases and abnormals of all kinds; a prison asylum for alcoholics and drug fiends; an establishment for the treatment of venereal diseases; and a group of prisons with strict regime for habitual criminals, so that the other prisons may be relieved of these recidivists, and the cost of their maintenance be reduced. The organization of these special therapeutic annexes will leave the prisons themselves for incoming prisoners and for normal convicts who are capable of working and becoming useful members of society. It will therefore be possible to concentrate, on the inmates who are most interesting and important from the social point of view, the educational and moral activities of the directors, the doctors, the institute chaplains and certain other employes of the penal institutions. By ministerial decree of June 10, 1920, all first offenders undergoing a sentence of not less than three months and all recidivists must be examined in the laboratories and be subjected to the anthropological treatment. The examination of the prisoners follows a questionnaire that is the same in all prisons. After examination at the laboratories prisoners are sent back to their original prisons with the data of their examinations and anthropological reports outlining broadly their penal treatment. The anthropological report, which broadly outlines the treatment of the prisoners while in the penitentiary, is sent first to the director of the prison, who in turn transmits it to the different members of the personnel whom it concerns from either an administrative or legal point of view. These all meet at a weekly conference presided over by the director of the prison. The anthropological specialists present their statements and develop their findings and proposals for the treatment of the convicts, and the course to be pursued is decided upon by the common agreement.”—F. Delbaste, *Prison reform*

in Europe (Survey, Mar. 4, 1922).—Belgium is also credited with a highly successful colony for vagrants, Merxplas. Like Veenhuizen in Holland, it is not regarded as a strictly penal institution. "Merxplas . . . is a village in itself, with administration buildings, great dormitories and refectories, shops, church, hospital, farm buildings, sheds, and a population of from 6,000 to 7,000 colonists, with a staff of over 100 employees. Some miles distant are the colonies of Wortel, for first offenders (vagrants and mendicants), and Hoogstraeten for incapacitated persons of the same class. . . . The colonies were founded in 1823 by Dutch benevolent societies as colony homes for indigent families. In 1870, Belgium, then long separated nationally from Holland, bought the colonies and concentrated here at Merxplas, Wortel and Hoogstraeten the 'human derelict heaps' that for many years had been increasing in population through ineffectual treatment of mendicants and vagrants in many local *dépôts de mendicité*. . . . The Belgian penal code of 1867, still in use today, defines vagabondage in the same terms as the French penal code, as follows: 'Vagabondage is a misdemeanor. Vagabonds are those without known residence, or means of support, who habitually have neither occupation nor trade.' . . . From 1870 to 1890 begging and vagabondage continued to increase until in 1891 Belgium adopted a comprehensive law 'for the repression of vagabondage and mendicity.' . . . In short, intentional vagrancy and mendicancy, in the case of able-bodied persons, has been punishable since 1891 in Belgium by compulsory segregation in a beggar colony for from two to seven years. To cover the case of the occasional or the unintentional vagrant or beggar, the law provides that the court may discharge the less serious case or commit the offender to a *maison de refuge*. . . . Habitual mendicancy or vagabondage in those under 18 years is punished by sentence to a reform school, with the age of majority as maximum. Children under thirteen in such schools are separated from older children. . . . Belgium possesses at Brussels a very complete central registration bureau for records of mendicants and vagrants. . . . At Merxplas, approximately two-thirds of the population are able-bodied and work at varied trades. . . . Among them are the following: Weaving, spinning, printing, tailoring, tanning, foundry work, blacksmithing, mat making, trunk making, shoemaking and cobbling, carpet making, the manufacture of cement blocks, concrete, bricks, furniture, wagons, carriages, pearl buttons, preparation of tobacco. Great shops accommodate the more generally practiced trades."—*Treatment of the offender (Sixty-seventh Annual Report of the Prison Association of New York, 1911, pp. 86-88, 91)*.

China.—Prisons for punishment.—Prisons for reformation.—"Our prison reformers in America think that they have found the worst conditions on the globe, but they would have been surprised . . . if they could have gone with the writer and a foreign friend to one of the prisons of China's capital. . . . After going through several courts, we came to a great iron door. It was opened by the judge's servant. Inside was a long, narrow court, ten by twenty feet. We saw no one as we entered, but were nearly overcome by the odor. On the left side, on closer observation, we discovered a dirty little room with a black, smoking stove, which was the kitchen for the prisoners. Two cooks, bare to the waist and with their feet chained together, were preparing the evening meal. The next room, we were told, was used by a few of the prisoners, whose offences

were of a lighter kind, for industrial work. Four rule-weaving machines were being slowly run by chained prisoners. On the other side of the court was a building occupied by a large number of men seated on the wooden floor. We were told that they were seventy in number, and that each one must serve a term of from three years to the life sentence. I have never seen human beings who looked less like men than did these. Their dirty faces were absolutely expressionless; their hair had not been cut for many months. They were bare to the waist, and some of them wore handcuffs as well as chains on their feet. . . . Driving in a carriage to the other end of the city, down past the walls of the great Temple of Agriculture, one comes to a high white-washed wall surrounding an area of fifteen to twenty acres. . . . We were ushered into the central prison rotunda, from which we could look down the five wings. Along the sides of these wings were the rows of cells. As we walked up and down, we saw outside each door neat little cards giving the name and the offence and the term of service of each occupant. We were told that the worst prisoners were put by themselves, and that the others were in rooms in groups of from two to seven prisoners. We went into several of the larger rooms. They were forty by thirty-five paces. Each cell was spotlessly clean and lighted by electricity. Each corridor had its own washroom, which was also a model of cleanliness. At the end of each of these long corridors are the larger rooms, where the industrial work was going on. . . . The rooms were well aired and well lighted. We were next shown to the immense dining room, where a large proportion of the 500 prisoners could sit down to meals together. The warden went quite into detail about the menu, which was certainly most substantial and graded in amount according to the behavior of the prisoner. He next conducted us to the large bathroom, which each prisoner uses at least once a week; and to the dispensary, where we interviewed the Chinese doctor, trained in Japan, who reported intelligently on the health conditions of the prison. We had not expected to find religious instruction as well as general education provided in a Chinese prison, but on the second story of the main building we were ushered into a large assembly room, with rows of seats elevated gradually to the rear after the fashion of a college chemistry lecture room. Each bench was surrounded on three sides by wooden partitions, so that the prisoner, when seated, could look only in one direction and that straight forward, over the head of the man in front of him. On the wall which the prisoners faced were five paintings. The middle painting was of Confucius, in robes of blue. At his right were Buddha, in yellow, and Laotze, in white, while at his left was Jesus, in a brown robe, and Mohammed, in green. The warden explained that these paintings had been made by one of the prisoners, at the warden's own request. Every Sunday there is a lecture on Confucianism lasting half an hour. Then the prisoners are left in silence. They are expected to gaze at the religious leader they may choose and to fix their thoughts on his teachings. The warden explained that he believed there is good in all religions and that each prisoner ought to get as much good as he can from the religious leader in whom he trusts. On the same floor was a series of school rooms, where the usual subjects are taught to all inmates under eighteen years of age. . . . As we went out of the last doorway, the warden said: 'Just step into this room and I will show you the way China used

to conduct her prisons.' He produced three or four of the old, long execution knives and various instruments of torture reminiscent of the Spanish Inquisition. He spoke, of course, as if these were relics of the far past. . . . Here, in the same city, we have two institutions, one of old China, similar to those which she has had for hundreds of years, and one which the late Charles R. Henderson, the great prison reformer, said was comparable to the best prisons of Europe. There seems to the Chinese mind little inconsistency in having these two so near together."—J. S. Burgess, *China's social challenge* (Survey, Dec. 15, 1917).

Czecho-Slovakia.—Instruction for warders.—"Simultaneously with the introduction of an amended criminal code which will abolish capital punishment as well as some of the severer species of confinement in vogue under the old Austro-Hungarian regime, the reforms proposed by the present [1922] government of Czecho-Slovakia apply especially to two aspects of prison life. . . . Since December 1920, every applicant for the position of warder or official in a jail and all warders appointed since 1918 are required to have attended a four-months' course of instruction which is provided by the government. . . . The government is determined to break away from Austrian tradition [by which the prison staffs were recruited from ex-army officers], and aims at securing a prison personnel possessing sympathy and understanding. . . . The second part of the reform refers to prisoners themselves. The incorrigible criminals are to be confined away from those who are capable of improvement, while youthful offenders and first offenders are also to be treated separately. The prisoners are to be better supplied with reading matter and libraries; reading rooms are to be provided, indoor games such as chess and draughts are to be permitted, and lectures by first class lecturers are to be given. Prisoners will also be encouraged to work by payment for what they do. . . . Those who have previously followed no occupation will be given the opportunity of learning some handicraft during their terms of confinement."—*Prison reform in Europe: Czecho-Slovakia* (Survey, Apr. 1, 1922).

England.—Early nineteenth century efforts.—Centralization.—Probation.—Borstal system.—"Twenty years after Howard's death [1700] a Quaker humanitarian, Elizabeth Gurney Fry, began her work among the horribly treated women prisoners in London. In this same generation following 1775 there were distinct advances in certain local English jails which definitely anticipated the modern prison system. Little could be done in England, however, to produce a prison system until, between 1815 and 1835, Romilly, Mackintosh, Peel and Buxton had succeeded in having repealed the barbarous English Criminal laws and in securing a substitution of imprisonment for corporal punishment or banishment as the most approved method of dealing with the criminal."—H. E. Barnes, *Some leading phases of the evolution of modern penology* (*Political Science Quarterly*, June, 1922, p. 250).—The erection of Millbank Prison, which was commenced in 1813, was really the result of Howard's recommendation that confinement prisons be established in place of the old detention jails. In the twentieth century the English prison system is characterized by order and centralization of authority. "At the head of the prison system is the secretary of state; under him the prison commissioners, . . . salaried officials, giving their entire time. They

appoint all subordinate officials, from the governor of the prison down. The tenure of office of officials is during good behavior, and is remarkably permanent. Worry about loss of position is practically eliminated, so far as political influences are concerned. Inspectors of prisons are appointed by the secretary of state. A visiting committee of magistrates is appointed for each prison annually by quarter sessions, to be a kind of 'watchdog for the public.' The present administrative system came into existence in 1877, through the prison act. In 1876 there were 113 local prisons, governed by local authorities. . . . There was no standard of architecture, administration, punishment, promotion or privileges. The prison act of 1877 at one stroke centralized the control and conduct of all English prisons under the prison commission, although for a time there was great objection to such a drastic change. . . . No one would urge in Parliament a return to the old conditions. Not only are the English prisons managed at present satisfactorily to the English public in general, but the number of prisons has been reduced from 113 in 1877 to 57 [in 1911]. . . . In England the steps are slow and sure. . . . In 1898 an English prison act passed, providing that prisoners not sentenced to hard labor might be further classified according to the gravity of the offense and the character of the offender, and that the labor of prisoners in local prisons might, under due supervision be in association instead of cellular. . . . Corporal punishment, by the terms of the prison act of 1898, was to be awarded less frequently, and for few offenses; ordinary prisoners might earn a remission of a portion of their sentences; boards of visiting magistrates were appointed; there were provided increased opportunities for school instruction, increased privileges as to letters, visits and library books; and in the later stages of imprisonment the privilege of talking might be awarded to certain deserving prisoners. What had been the results up to 1900? In the classification of prisoners and in the development of associated labor, good. The cellular system of confinement still remained the law, but prisoners whose conduct was good might be associated if practicable. The two years between 1898 and 1900 brought a reduction of cases of corporal punishment; the remission of a certain part of the sentence in the cases of prisoners whose sentences exceeded six months brought great stimulus, as did the chance to pay off a portion of the fine, in lieu of which payment imprisonment had been imposed. . . . These innovations, . . . will seem to Americans extremely conservative, but they furnish a background upon which to consider the changes that . . . occurred in the decade 1900-1910. The principal improvement . . . has been undoubtedly the treatment of so-called juvenile adults, children less than 21 years of age. . . . Just at the beginning of the century a census of convicts was taken in English prisons, which showed that no less than 50 per cent had been previously convicted five times or more. . . . In 1908 a law, entitled the prevention of crime act, was passed which not only provided for the reformatory treatment of juvenile adults, but also—and most strikingly—for the preventive detention of habitual criminals after the sentence for which they should be imprisoned had been served. In other words, England has given the courts power to declare a man who has been persistently leading a dishonest and criminal life to be an habitual criminal; and where a person is so proved, a subsidiary sentence may be passed, ordering that on the termination of the sentence of penal servi-

tude—not less than three years—he may be kept for a further period not exceeding ten nor less than five years in a state of 'preventive detention.'—*Treatment of the offender (Sixty-seventh Annual Report of the Prison Association of New York, 1911, pp. 151-154).*—In 1907, the law known as the "Probation of Offenders Act" was passed. This law gives to the court the power, under certain circumstances, to discharge an offender conditionally "on his entering into a recognizance, with or without sureties, to be of good behaviour and to appear for sentence when called on at any time during such period, not exceeding three years, as may be specified in the order." The act also provided for probation officers for adult and juvenile offenders. The "Prevention of Crime Act," which was passed in 1908, not only provided for the detention of habitual criminals, but laid the basis for the juvenile detention homes known as "Borstal institutions." Borstal is the English Elmira. "Borstal as a location is the village of Borstal, on the hills above Rochester in the southeast of England, near the sea. Borstal as a system is found at the Borstal institutions of Borstal, in Feltham (in the valley of the Thames), in Aylesbury (for girls), and in a wing of Canterbury prison (for unsatisfactory cases). The Borstal system is the . . . [twentieth century] treatment of young convicted persons between 16 and 23 years of age. There is also a 'modified Borstal' treatment, maintained in local prisons for young persons called 'juvenile adults,' who receive thus a semi-reformatory course of physical and industrial education that incidentally is quite superior to the attention paid in American local or county or even in many state prisons to young prisoners, in distinction to older prisoners. . . . The Borstal association is a prisoners' aid society, founded by Sir Evelyn Ruggles-Brise. . . . This society embodies the belief of Sir Evelyn that the corner-stone of any system for dealing with juvenile adults must be a well organized after-care association, which will be in possession of sufficient funds to give the needful assistance. The society . . . [was] founded under the patronage of some of the best known and most distinguished persons in English public life."—*Treatment of the offender (Sixty-seventh Annual Report of the Prison Association of New York, 1911, pp. 168, 175).*—A paper, written after the World War, by Stephen Hobhouse, who, as a conscientious objector, served a prison term, accuses the English prison system of certain dehumanizing factors, chiefly the general contempt shown for the prisoner as a human being.

France.—**Cleanliness and system.**—**Educational labor.**—**Transportation.**—"The famous prison reformer, John Howard, we are told in an article in the *Contemporary Review* for October, 1894, made three tours of inspection of the prisons of the French capital and reported that they were 'the cleanest places in Paris.' He was there in 1776, 1778 and 1783. As far back as 1753 Paris had a Prison Society, founded by the Abbe Breton, supported by great people, for that was the time of kindly intervention for the poor and distressed. The State gave the prisoners bread and water, charity supplied food, clothing and assistance. . . . The French always have a system and it is well to see how they apply it to the difficult subjects of prisons and their inmates. French prisons are under the jurisdiction of the Minister of the Interior, who has a Department for this special purpose. There are five classes of prisons in France: 1st, For long sentences—the property of the State. 2nd, For short sentences—these since 1811 have

been made the property of the departments in which they are situated. 3rd, Correctional establishments for the young; Metray, the oldest and best known belongs to the Philanthropic Society of Paris, but is supported in part by the State, which also exercises careful supervision. The State has five Agricultural Penitentiary Colonies, Farm Reformatories, maintained mainly by voluntary contributions, although the State, the Departments and the Communes all give a per capita allowance for the girls and boys sent by them for reformation. 4th, Lock-ups, maintained at the cost of the towns or communes in which they are situated. 5th, Depots for convicts, sentenced to the penal colonies and hard labor. The State pays all the expenses of its own penitentiary service and controls the organization of private correctional homes and colonies. Although the law of 1875 directs that the cellular system should be universally enforced, yet even now there are only 23 cellular prisons out of a total of 365 departmental prisons. . . . There has been since 1886, a Commission for the classification of habitual criminals, composed of seven members, representing the various departments, Justice, Penitentiary and Penal Colonies. This Committee examines each case and decides as to its destination. In all French prisons and reformatories for little children, girls and women, there are women inspectors. The labor and occupations of the prisoners are all intended to be useful after the inmates are discharged, at one they are taught printing, at all there are schools where the convicts are both teachers and pupils, and the subjects taught include mathematics and foreign languages. In some prisons there is a brass band and a music room, and in all there are occasional readings, singing and concerts. Physical exercise is always enforced, and the yards of many of the prisons are planted with trees and flowers, cared for by the prisoners in their leisure time."—J. G. Rosen-garten, *Prisons at home and abroad (pamphlet), pp. 1-3.*—"By a provision of the penal code of 1791, criminals convicted a second time were ordered to be transported for life. By an act of the 24th Vendémiaire, in the year II., the Convention extended this order to include vagrants; and by the law of the 11th Brumaire, in the same year, the island of Madagascar was designated as the site of the proposed penal colony. The naval war between France and England prevented the execution of this design. In 1810, the project having remained in abeyance, the Code Napoléon abrogated the former code and so put an end to the project. In 1851, it was revived, during the reign of terror that succeeded the *coup d'état* of December 2, and by an unconstitutional ministerial decree, transportation was established. The decree named Guiana and Algiers as colonies to which prisoners might be sent; but it was modified, the year following, so as to apply only to Guiana. In May, 1854, an act legalizing transportation was passed, and this penalty was substituted for hard labor in the *bagnes*, which were suppressed, though at Toulon continued to exist, until nearly twenty years later, as a depot for convicts awaiting passage across the sea. New Caledonia, an island in the South Pacific Ocean, about seven hundred miles east of Australia, was made a penal colony in 1863, at first merely as an experiment. Guiana and New Caledonia are now the only French penal settlements, though some military prisoners are still sent to Algiers. . . . French transportation is sustained by two powerful motives, the desire to be rid of dangerous criminals, and the wish to found colo-

nies."—F. H. Wines, *Punishment and reformation*, pp. 177-178, 180.

Germany.—Efficient methods.—Medieval relics.—Revolution and reform.—"Prussian county compulsory workhouses seem to be managed with a German thoroughness, efficiency, and integrity, that make these county institutions, . . . fully comparable to the management of the German state prisons and penitentiaries. . . . In all European countries visited [there is] a most admirable absence of political influences. . . . Politics play no deleterious part in the appointments of correctional officials, high or low. To be sure, each country has its political parties, but the integrity of men in office is . . . rarely questioned. Positions such as . . . that of the head of the Prussian prison system . . . are practically of life tenure, during good behavior. Governors and directors of prisons, and subordinate officials as well, hold office without fear of removal for any cause except dereliction of duty, incompetency or immorality."—*Treatment of the offender (Sixty-seventh Annual Report of the Prison Association of New York, 1911, pp. 81-85)*.—The largest women's prison in Berlin was, in 1916, "a grim, heavily-barred structure in a poor district. . . . The equipment put America to shame. There were wonderful blue and white tiled corridors, spotlessly clean. The cells were as complete as a *cabin de luxe* on a steamer. The walls were soft buff color. All the corners were rounded. There were no cracks, no places for dust. Each cell had a neat little bed, a chair, complete sanitary arrangements, and two rows of shelves on which were toilet and eating utensils. These articles in brass and tin shone with newness and cleanliness. The effect was that of a sanitary dairy in white for cows. It demonstrated that a perfect existence of eating and sleeping could be carried on in a room 8 ft. by 6 ft. But cows so cared for produce pure milk. These convicts created nothing. They probably weren't even thinking good thoughts, for the windows were of ground glass. No speck of sky was visible, nor was there even a barred door to look through. The door was of solid wood, locked day and night. The small bull's-eye in the center could only be opened from the outside, and was for the use of the matron. The convict in her retreat was shut off from the world as though at the bottom of a well. No human sight or sound penetrated these walls. Even the half-hour of exercise brought little respite. The convicts, 5 ft. apart, filed round a cement court. On every side rose the high prison walls. Only above was there a tent of blue."—M. Doty, *Little commonwealth (Living Age, Jan. 29, 1916)*.—"The German revolution and the beginnings of democratic government make possible prison reform, a field in Germany where modern social ideas had least penetrated before the war. . . . There is still [1922] the executioner of the Middle Ages with his axe to carry out capital punishment; whipping is still permitted by law; but the old spirit is rapidly changing. . . . [The prison at Fuhlsbüttel, Hamburg, is the largest in Europe and is now one of the most progressive.] The director, Mr. Koch, is a keen student of prison reform in other countries. . . . The obstacle which confronted him, and which he still finds in most German prisons . . . is the popular idea that the prison is primarily a place for punishment. He would make it, on the contrary, a sort of hospital for the morally sick. He decided to introduce the system of collaboration between the psychopath and social helper. . . . At present [1922] there are

at Fuhlsbüttel three . . . assistants picked from civil life on their merits as practical social workers. . . . Aside from ordinary prison duties, they act as advisers to the men, helping them in their relations with their families and with the outside world. They see to it that the men's families have some sort of livelihood. . . . The idea of making the prison more like a large hospital, a place to live in rather than to rot in, is becoming a reality through extensive modern improvements. There are new kitchens, washrooms, a smithy and table factory, and, in construction, new hardware and soap factories. Gardens and playgrounds are also being planned. In place of the lockstep, prisoners are learning sports. . . . There is a prisoners' orchestra of twelve pieces, and a choir. . . . The men have been divided into three categories according to the length of their terms."—S. Griffith, *Prison reform in Europe: Germany (Survey, May 29, 1922)*.

Holland.—Vagrancy and Veenhuizen.—"From the end of the sixteenth century, when Holland founded its 'Rasp-houses' and 'Spin-houses' for the repression especially of beggars and mendicants, to the present day, when the vagrancy colony at Veenhuizen stands as an example of thousands of acres of land reclaimed not from the seas but from the desert heath, the little kingdom of Holland, numbering only about a million more inhabitants than live in greater New York, has given much attention to the reduction of vagrancy. . . . Far in the northern part of Holland, some thirty miles east of the Zuyder Zee, is situated Veenhuizen, the celebrated vagrancy labor colony. About eight miles from Assen, it is surrounded by uncultivated heath. . . . Veenhuizen has a long history. In 1818, the Dutch Society of Beneficence, having organized with 20,000 members within one year, founded several agricultural colonies for dependent families, called Frederiksoord, Willemsoord and Wilhelminasoord. Two years later, in 1820, a colony of about 1,900 acres for mendicants and vagrants, was established at Ommen, and was christened Ommerschanz (Ommen barracks or fort). A second colony, called Veenhuizen (fen-dwellings), of 2,380 acres was also founded some eight miles west of Assen. . . . In 1859 the Dutch government took over both the beggar colonies (Ommerschanz and Veenhuizen), when the Dutch Society of Beneficence was over two million dollars in debt. By decrees the government concentrated the beggars and vagrants at Veenhuizen. Begging became almost without exception the charge upon which the colonists were committed. At no time have the beggar colonies been self-supporting. . . . In 1800 the colony of Ommerschanz was discontinued. In 1910, Dr. Albert Wilson of Edinburgh, in a study of tramps and beggars, wrote of Veenhuizen that "they get encouraging results, for the system rewards and stimulates industry in lazy non-workers. Many of these recover and get into honest work again. Many of the drunkards recover. But, as in all such discouraging, hopeless undertakings, there are many failures and some return two or three times" . . . The colonists are fed much less liberally than in American correctional institutions. Apart from the supplementary use of the canteen as a stimulus to work, the European prison administrations believe that their dietaries are sufficient, and that ours are too liberal."—*Treatment of the offender (Sixty-seventh Annual Report of the Prison Association of New York, pp. 102-105, 107, 110)*.

Italy.—Positivist reform of Italian penal code.—Italy was one of the first nations to abolish capital punishment; but the modern prison reform

movement has been slow in developing there. One of the most eminent names in the history of Italian prison reform, after Beccaria, is that of the Marchesa Giulia Falletti di Barola, who in the early half of the nineteenth century labored earnestly for the amelioration of prison conditions. "The nomination of a commission, presided over by Henry Ferri, for the reform of the Penal Code of 1889, by royal decree, September 14, 1919, is an event of great scientific importance and of real satisfaction to all who struggled and worked for the affirmation of criminological positivism. The Italian Positive School began in 1878 with the second edition of 'The Delinquent,' by Cæsar Lombroso; with the 'Theory of Imputability' and 'New Horizons of Penal Rights,' by Henry Ferri; with the 'Positive Criterion of Penalties,' by Raffaele Garofalo. . . . Forty years of research, of experience, of proposals, of scientific propaganda—the chief instigator of which was Henry Ferri—had shown up the defects of the Italian Code of 1889. . . . The Royal Decree of September 14, 1919, N. 1743, published in the *Official Gazette* of September 29th, N. 231, reads: 'Art. 1. At the Ministry of Justice is instituted a commission appointed to suggest the necessary reforms in the system of penal legislation to obtain, in harmony with the principles and rational methods for the defense of society against crime in general, a more efficacious and sure defense against habitual delinquency.' . . . Mr Ferri proposed, and the commission discussed and approved, the proposal to nominate four fundamental sub-commissions, which should show the principal types of criminals and allot the relative measures to each category of these. Then the expediency of the nomination of two other sub-commissions is conceded, which should respectively work on the co-ordination of the penal legislation of the restored territory with that of Italy and with the reforms at the institution of judicial police.

"The sub-commissions, numbering six in all, will be composed thus: I. Study of Occasional Criminals. . . . II. Study of the Habitual Criminals. . . . III. Study of Abnormal Criminals (lunatics, inebriates) . . . IV. Study of Criminals Under Age. . . . V. Co-ordination of the Legislation of the Restored Lands to the Italian Legislation. . . . VI. Reform of Judicial Police."—E. Ferri, *Journal of American Institute of Criminal Law and Criminology*, May, 1920, pp. 67, 70, 71, 76.—There are seventy-seven penal establishments in Italy. Agricultural labor for convicts has been largely tried.

Japan.—Light punishments.—Slow reform.—"It is one of the most noteworthy facts in the history of our prison system that, in 1903, four prisons for the young were established at Kawagoe, Kumagai, Karatsu, and Nanao, where every effort has been made to correct and convert criminals under age, by making them work at farming and various handicrafts as well as by giving them a sound education. More recently, in 1906, the new building of the Odawara branch prison belonging to the Yokohama Prison office has been completed. This prison is a house of correction appropriated to the confinement of young prisoners, where they are treated according to the most up-to-date principles. . . . Our prison system, though it originated more than a thousand years ago, made no considerable progress during a great part of that long period. It underwent some changes when the Tokugawa family came into the office of Shōgun, but its fundamental principles remained essentially the same as they had been. That there was no outcry for prison reform, as there was in Western countries, may

probably be attributed to the fact that the modes of punishment were comparatively mild in our country. At the time of the Restoration, when every evil practice in the country began to be cleared away, the prison rules then in operation were reformed, personal rights and liberties were asserted to an extent before unknown, and the prospect suddenly became bright and promising so far as matters relating to the administration of justice were concerned. Thus came about the tour of inspection through the British settlements, and later, the mission to Europe. But for some time afterwards, little of importance happened in the way of prison reform, until in 1890 Herr Seebach was invited here from a famous model Moabit-Prison in Germany, and a gaolers' training school was established in Tōkyō and placed under his care. Since then the public have turned their attention more and more closely to the work of bettering the police and prison system; and of all the workers in the field, there stands at the head Prince Yamagata, who, when Minister of Home Affairs, contributed much to the reform, with the cordial assistance of his able subordinate, Viscount Kéigo Kiyoura, then Chief of the Police Bureau of the Home Department. In conclusion, there is one thing we must not forget for a moment, namely, the important part played by Christianity in these reforms. Before the introduction of enlightened German ideas concerning prisons in our country, it was an American missionary, Dr. Bayley by name, who first taught us how to manage prison affairs in a proper manner."—S. Okuma, *Fifty years of new Japan*, v. 1, pp. 317-318.

New South Wales.—Convict transportation abolished. See NEW SOUTH WALES: 1831-1855.

Spain.—Model prison at Valencia.—School of criminology.—"With regard to the logical and effective treatment of the criminal class, Spain is showing herself well in advance of the times. The Spanish Press has had a great deal to say about a new prison which is being run on entirely individual lines—at Valencia. . . . The aim of this Model Prison is thoroughly to educate those who are in sore need of instruction: to give them a new interest in life and to ensure their being able to support themselves honestly on their release. All sorts of trades are taught in airy and comfortable workrooms: such as grass-weaving, cabinet-making, etc.: and the whole atmosphere is not one of depression and unhappiness but rather of cheerful energy. . . . In connection with the really valuable work which Spain is to-day doing in the field of Criminal Anthropology, I quote at length from a most interesting article—from the pen of Señor A. Aguilera y Arjona—which was recently published in the *Nuevo Mundo*—'The School of Criminology in Madrid is installed in the same building as the prison. It is on the ground floor and consists of two lecture rooms, a library, a museum, a room for the professors, and a few smaller rooms. With this modest installation and the generous collaboration of a nucleus of *savants*, the immensely important work of penitentiary reform is being begun. . . . The pupils of the School of Criminology, having terminated their course of studies, will be sent out to direct prisons and penal establishments. . . . If, as is expected, the Madrid School of Criminology realises its ambitions, the probable result will be the entire reformation of Spanish prisons and the establishment of a new Penal Legislation to replace the antiquated system now in vogue.' . . . In the person of Don Rafael Salillas, Spain possesses an anthropologist of the first order: one who, in

many respects, walks in line with Cesare Lombroso."—Mrs. Villiers-Wardell, *Spain of the Spanish*, pp. 18-21.

Sweden.—Half a century of reform.—Conditional release.—"The Swedish prison system in its present form [1914] is the result of about half a century's persistent and thorough work of reformation. The initiative to these reforms was taken by the Crown Prince of that day, afterwards King Oscar I., through his well-known work: *On Punishments and Prisons*, published in 1840. In this work he advocates the Philadelphian system (that of separate confinement) as the most suitable basis for the treatment of prisons in general. . . . The work of building provincial prisons according to the separate confinement system was immediately undertaken, and most of the läns of the Kingdom had prisons of this kind when the prison law of 1857 was promulgated. Through this law the separate confinement system was made obligatory for all sentenced to penal servitude for a term of two years or less. Separate confinement of *prisoners under trial* was completely realized. The separate confinement system was very considerably extended through the prison laws of July 20, 1892 and June 22, 1906. These laws provide that each prisoner sentenced to penal servitude shall, as far as possible, be kept in separate confinement for the whole time, if this does not exceed three years; but when the term is longer, for the first three years. . . . The prisons of the Kingdom—except for several jails in the towns and hundreds—amount to forty, with more than 3,000 solitary cells in all. . . . For those sentenced for vagrancy or mendicity or to compulsory work by the poor-law, there are four *penal workhouses*, two for men, viz. at *Svartsjö* and in *Karlskrona* each with room for 300, and two for women: in *Norrköping* for about 150, and *Landskrona*, 100; compulsory labour is done in common, but the nights are passed in solitary confinement. . . . Only the relatively few prisoners sentenced to penal servitude for a term exceeding three years and those sentenced for life are transferred, after three years of separate confinement, to work together in large workshops, but are carefully kept apart while not working, and spend the night in solitary cells. . . . In the application of the *separate confinement system*, the aim has always been, as far as possible, to prevent results of isolation injurious to the prisoners. . . . Various means are employed for this, such as systematic and regular work which demands assiduous attention from the foremen; daily exercise in the prison yards for at least half an hour; rational physical exercise and gymnastics, both in the cells and under supervision outside in the grounds; libraries chosen with discrimination (about 50,000 vols. altogether); instruction in religion and school-subjects; and by visits in the cells by the prison officials, as well as by other voluntary visitors; absolutely strict obedience to rules and regulations is required, and all means for self-indulgence, as for instance tobacco and snuff, are totally forbidden for those sentenced to penal servitude or to imprisonment in default of payment of fines. . . . All penitentiaries and penal workhouses are governed by the *Royal Board of Prisons*."—V. Almquist, *Prison system* (J. Guinchard, ed.), *Sweden*, pt. 1, pp. 268-270, 272.—"By the terms of a law passed in 1906 the principle of *conditional release* was introduced into Swedish criminal law. By that measure a Swedish court of justice is empowered to order that the execution of a penalty imposed shall be postponed, the delinquent in the meantime being under probation. Should he pass

through that period satisfactorily, the penalty he was sentenced to undergo is cancelled once for all. The privilege of the conditional release is only accorded to first offenders who had not been guilty of crimes involving severer penalties than three months' hard labour, six months' imprisonment, or a fine which it may be concluded the delinquent will be compelled to discharge by serving a term in gaol. Full *responsibility* with respect to criminal acts commences at the age of fifteen, but for those between the ages of fifteen and eighteen a special scale of reduced punishments is applicable."—F. P. Wetter, *Criminal law* (J. Guinchard, ed.), *Sweden*, pt. 1, pp. 313-314.

United States: Historical development in connection with European progress.—"While prisons, for the holding of human beings in confinement, have existed since the days of primitive cannibalism, the prison, as a distinct institution for the confinement of persons convicted of crime, is an institution which has developed almost entirely within the last hundred and forty years. Down to about 1780, in both Europe and America, the jails or prisons existed primarily for the confinement of heretics and debtors or for the safe-keeping of those accused of crime and pending their trial. Such as were convicted were normally sentenced either to corporal punishment, or, as became common after the colonial expansion began, to deportation. To speak with strict historical accuracy, the introduction of the notion of employing confinement within a prison, as the general method of punishing crime [in place of capital punishment], was due to William Penn and the Quakers of West Jersey, who provided for a system of workhouses in the penal code they drew up in 1681. Four years later William Penn introduced the same system into his Pennsylvania colony. . . . The real center from which the modern prison and its accompanying system of discipline and administration has spread was the system introduced in Philadelphia by the Quakers following 1776. In 1776 the Philadelphia Friends formed an association, entitled the Philadelphia Society for Assisting Distressed Prisoners, for the purpose of relieving the conditions of the debtors and accused persons confined in the jail at Third and High Streets. After the Revolutionary War this society was reorganized in the German School House at Philadelphia, as the Philadelphia Society for Alleviating the Miseries of Public Prisons. Between 1786 and 1795 the Society had secured the abolition of the barbarous criminal laws of Pennsylvania and the substitution of imprisonment for corporal punishment in the case of all crimes except murder. This necessitated the provision of a system of penal institutions which would make the confinement of the offender possible, and there was thus produced the modern prison. The Quakers . . . conceived the notion that the prevention of further depravity through evil association, as well as the probable future reformation of the culprit, would be most surely obtained through the solitary confinement of the convict. . . . To provide such a beneficial moral environment the Philadelphia reformers were able to persuade the Pennsylvania legislature to remodel the Walnut Street jail in 1790-91, so as to permit of the solitary confinement of the worst types of offenders. With the growth of the population of the state it became necessary to provide more commodious penal institutions, and, in 1818-21, laws were enacted authorizing the erection of two state penitentiaries on the system of solitary confinement. The Western Penitentiary was opened at Pittsburgh in 1826, and the Eastern Penitentiary at Philadel-

phia in 1829. This Eastern, or Cherry Hill Penitentiary, immediately became the world's most famous penal institution, visited by prison reformers from every point of the Western World. . . . The reason for the relative lack of popularity of the Pennsylvania system in America was primarily the rise in this country of another and a rival system of prison administration, namely, the Auburn system of combined isolation and association which, owing mainly to the indefatigable labors of Louis Dwight, came generally to dominate American penal administration until its popularity was threatened by the introduction of the Elmira system a half-century later. . . . Imitating the precedent of Pennsylvania by substituting imprisonment for corporal punishment, New York state reformed its penal code in the last decade of the eighteenth century and thereby created the necessity for a system of prisons. The older in-

formatory type of prison discipline ought to be substituted for the contemporary repressive prison system. It was a long time, however, before this aspiration was adequately realized. It was only achieved, and then imperfectly, in the Elmira Reformatory system introduced into New York State following 1870. A number of significant currents of reform in penology converged in producing this system. An important element was contributed by the new methods of prison discipline introduced in the British penal colony in Australia. Captain Alexander Maconochie came to Norfolk Island in Australia in 1840, and was able to bring about a tremendous improvement in penal methods by eliminating the old flat-time sentence and introducing the beginnings of commutation of sentence for good behavior. Every convict, according to the seriousness of his offense, instead of being sentenced to a given term of years, had a certain num-

STATE PRISON AND RAILROAD BUILDINGS, AUBURN, NEW YORK, IN 1849

stitutions proving so unequal to the task of housing the larger number of prisoners confined under the new method of punishment that by 1810 the Governor had to pardon as many prisoners annually as were committed, the legislature, in 1816, authorized the building of a new prison at Auburn. Between 1817 and 1824, the system of discipline here enforced alternated between the old congregated system and the solitary or Pennsylvania system, but, by 1824, under the guidance of Elam Lynds, Gershom Powers and John Cray, the Auburn system of solitary confinement by night and associated labor by day had come into existence. This type of discipline and administration was soon introduced in the new Sing Sing prison, and into the state prisons of Connecticut and Massachusetts at Wethersfield and Charlestown, respectively. . . . In his two works, *The Penitentiary Systems of Europe and America* (1828) and *The Theory of Imprisonment* (1836) that wise and progressive French penologist, M. Charles Lucas, had clearly taken the advanced position that a curative re-

number of marks set against him which he had to redeem before he was liberated. . . . At about the same time the notion of an indeterminate time sentence was originated and given popularity through the writings of Archbishop Whately of Dublin, the Scotchman George Combe, and especially the English reformers, Frederick and Matthew Davenport Hill. Its supplement, the famous parole system, while anticipated by a number of other reformers, was most systematically and effectively advocated by the French publicist, Bonneville de Marsangy. Maconochie's system of determining the period of incarceration upon the basis of the behavior of the convict was combined with the notion of the indeterminate sentence and parole in the famous Irish system of prison administration, which was introduced by Sir Walter Crofton in the decade following 1853. To these earlier progressive innovations he added the practice of classifying convicts in graded groups, through which each convict had to pass before obtaining his freedom on parole, his ad-

vancement being determined by his conduct. The notion of productive and instructive prison labor, which goes back to the Pennsylvania Quakers, was also developed by a number of progressive penologists during the second quarter of the nineteenth century, especially by Montesinos in Spain and Obermaier in Bavaria. All of these liberal and progressive innovations . . . attracted the attention of the leading American reformers, most notably Theodore W. Dwight and E. C. Wines of the New York Prison Association, F. B. Sanborn of Concord, Massachusetts, Z. R. Brockway, Superintendent of the Detroit House of Correction, and Gaylor Hubbell, Warden of Sing Sing Prison. All of these men prepared able, vigorous and widely read public reports or private monographs, urging the adoption of these advanced methods in the American prison system, but they were able only to secure the introduction of these innovations for the treatment of younger first offenders. A law authorizing the creation of such an institution at Elmira, New York, was passed in 1869, and the institution was opened in 1877, with Mr. Brockway as its first superintendent. A decent preliminary approximation to the principle of the indeterminate sentence was secured, and the inmates were divided into classes or grades through which they might advance to ultimate parole by virtue of good conduct, if they did not desire to remain in the institution for the maximum sentence. The great advance which the Irish and Elmira systems mark over Pennsylvania and Auburn systems, was the fact that in these later types of penal discipline the term of incarceration was at least roughly made to depend upon the observable progress made by the prisoner on the road to ultimate reformation. . . . One of the most conspicuous and significant phases of the progress of prison administration in the last century has been the development of a scientific differentiation in the institutions designed to treat the criminal class. . . . The rise of the Pennsylvania and Auburn systems marked a great step in the way of progress. The accused were separated from the convicted, and separate portions of the prison were assigned to the male and female prisoners. The next step came in the creation of Houses of Refuge for young offenders. . . . The movement reached its highest early development in Holland, where, by the seventeenth century, a famous system of such institutions for the neglected and delinquent youth had developed. . . . The first House of Refuge for juvenile delinquents in this country was opened at Madison Square in New York City on January 25, 1825. It was built far north of the center of the city, in the hope that a century of municipal expansion would not disturb it. The second institution of the kind was opened in Boston in 1826, and the third in Philadelphia in 1828. But these were private institutions, though in part open to the use of the commonwealth. The first state institution for juvenile delinquents was opened at Westboro, Massachusetts, in 1847. These early Houses of Refuge, however, were nothing more than prisons for young offenders. . . . The origination of the more modern and humane method of handling juvenile delinquents in the cottage or family arrangement was due to the work of the French publicist and reformer, Frederick Auguste Demetz . . . [who] opened at Mettray in 1840, his first agricultural colony for juvenile delinquents administered according to the 'Family system.' His system spread rapidly, being first introduced into this country at the state reform school in Lancaster, Ohio, in 1855. . . . The progress has been a long and gradual one from

these early 'cottage institutions' to such a system as that of the George Junior Republic or that now practiced in such a reform school as the girls' institution at Sleighton Farms in Pennsylvania, where inmate self-government and an extremely close approximation to normal family life prevail. . . . About the same time, there began a movement for transferring the insane and idiotic from penal institutions and poor-houses to the first crude hospitals for the insane. This important advance owes its origin almost wholly to the great work of Dorothea Lynde Dix, a name little known to-day, but one which is worthy to rank with any in the history of the nineteenth-century philanthropy. For a generation following 1830 she labored incessantly in the cause of a better and more scientific method of handling the insane. . . . Our prisons started at the close of the eighteenth century either with no labor at all, or else with merely the crudest forms of tasks, such as breaking stone, grinding meal, or even manipulating a treadmill. With development of the merchant capitalists in this country in the 1830's, there arose a demand for prison labor, and these men very generally contracted for the services of such convict labor as they desired, according to the 'lease' system, whereby they took complete charge of the prisoners during working hours. This method became remarkably popular during the period of abnormal demand for prison labor in the Civil War. This crude lease system obviously possessed certain oppressive features, and it was gradually supplanted by the so-called 'piece-price' variety of the contract system, according to which the contractor did not lease the bodies of the convicts, but agreed to pay for the product of their labor at a stipulated price per piece. Where willing contractors did not exist or where their methods were obnoxious, the 'public-account' system was introduced, and the products made by the prisoners were sold by the state agents in the public market. But, after the rise of the labor organizations in the 70's, violent opposition to convict labor arose on the part of the laborers outside the prison walls. Prison labor was branded an unfair type of competition, and free labor demanded a cessation of both the contract and public-account systems. Where the labor organizations were strong they either brought about the abolition of practically all prison labor, producing great suffering on the part of the prison population, as in Pennsylvania since 1897, or forced the states to adopt the 'state-use' system, in which prison-made products were not sold to the public at all, but were used in various state institutions. More recently the progress of a more liberal attitude towards the criminal has allowed him to be employed outside the prison on roads or public improvements, and in this way there has developed that variant of the state-use system known as the 'public works and ways' system. Particularly significant has been the recent movement to purchase large prison farms and to put the convicts at agricultural labor. Some feeble beginnings have been made toward instituting a system of compensation or wages for convicts."—H. E. Barnes, *Some leading phases of the evolution of modern penology* (*Political Science Quarterly*, June, 1922).—See also NEW HAMPSHIRE: 1876-1884.

United States: Jail system. — Antiquated features.—"Very little change has occurred in the constitution or management of the jail in this country, since the days of our forefathers. The county and municipal jails still [written in 1921] exist. The cost of erecting and maintaining the jail is borne by the county or the municipality. The

sheriff is usually the official in charge, though in some states keepers are appointed. Prisoners, it is true, do not now pay for their board and lodging; counties and municipalities must meet that expense out of the general taxes. In many counties, however, the board is in the nature of a fee which is paid to the sheriff or keeper on a per diem basis. In several places, there is still the fee for unlocking the jail doors, a political rakeoff of considerable value. Jails continue to serve as houses of detention and places of punishment. Little or no work is done in any of them, and while the sanitation has improved with the general progress of that science throughout the world, there is still the general atmosphere of seventeenth century slovenliness and neglect. Grand juries inspect on occasion with the same result that attended their efforts in the distant past. Most states have, however, now established state inspection, and in some states this policy has borne good fruit. The only change of any importance that has taken place has come through the establishment of juvenile reformatories and the development of the probation system. . . . Our jail has been very severely handled by critics. All, foreigners and Americans alike, have proclaimed in no uncertain tones that it is a disgrace to the nation. . . . The food is often inadequate and the rations improperly balanced. As a result, a man comes out of jail little fitted to take his part in the fierce competitive struggle which is now going on. In spite of all laws to the contrary, there is often intimate association of the prisoners; juvenile offenders are frequently thrown in with adults and hardened criminals. Proper provision for the separation of the convicted and the unconvicted is not made, and in many jails female prisoners are even denied that privacy which every instinct of decency demands. Few jails have adequate workrooms. Idleness is thus the rule, and work the exception. Supported at public expense and living a life of vicious ease, is it any wonder that prisoners suffer in health and morals from imprisonment in the jail? . . . Prison reformers are turning more and more to the plan of eliminating the jails rather than reforming them. The reasons which have influenced men to work for the abandonment of jails as places of detention for sentenced prisoners are two in number. In the first place the county is entirely too small a unit of prison administration. . . . The majority of the jails are . . . limited in population. Some indeed have no inmates; others have three or four. It is, therefore, useless to expect county authorities to establish a modern prison for the detention and reformation of criminals. Nor would it be wise for them to do so. . . . One such institution would easily suffice for several counties. The second reason for this attempt to replace the jails by state institutions is closely akin to the first. Just as the county is not able, on account of its size, to provide the kind of prison which public opinion now demands, so also it fails and will continue to fail, to solve the question of management because a good superintendent is not to be had for the money which the county authorities, having in mind the small number of prisoners in the jail, are willing to offer. . . . The experience, moreover, of England supports this view. . . . A steady growth of supervision and control by the central government . . . finally terminated in 1878 in the assumption by the state of the entire control of the jails. At once an enormous reduction in the number was made. In the United States the same movement is well under way. . . . In view of the fact that the change from local jails to state institutions will

be slow in coming, it will be well to consider briefly some of the schemes for a better utilization of the present jails. . . . In Washington County, Vt., the prisoners are allowed to work for private individuals on the outside, going to and from the jail to work as ordinary workmen from a boarding house, without guards and dressed in citizen clothes. They pay to the jail a certain proportion of their wages, sufficient to cover the cost of the institution, and the remainder they are allowed to keep for themselves. A similar arrangement is also in force in Wisconsin. Through legislation, many states have made it possible to employ jail prisoners on the roads. In the South, this is done almost universally, and the jail serves merely as a house of detention, the prisoners being sent, immediately after being sentenced, to road camps. In the North, it is more customary to bring the men back to the jail at the close of the day's work. Everywhere in the South it has been found that far better conditions prevail where the road work is carried on by the state than where it is directly under the oversight of local authorities, thus indicating the superiority of state control as compared with that of local authorities. Indeed, conditions in some of the local road camps have been and are now unspeakable. In addition to road work, the jail prisoners have carried on other kinds of public work of a minor nature, such as caring for public laws. They have also done some farming. All of these efforts to get the men out of jail at work in the open air are to be encouraged. They do not, however, constitute an ideal solution of the problem. The jail still remains on account of the smallness of its size generally incapable of making any positive contribution to a prisoner's character, and, while its evils may be mitigated, they cannot be eradicated in any of these ways."—L. N. Robinson, *Penology in the United States*, pp. 39-47, 50-51.

United States: National Prison Congress, 1870.—Local associations.—The establishment of the first prison association in Philadelphia in 1776, inaugurated an important method of reform. New York's prison association was founded in 1844, and received its charter from the state in 1846. "Conspicuous among the many results in which the Association shared were the campaign for the establishment of Elmira Reformatory; the study of the Jukes family by Mr. Dugdale, one of the managers of the Association; the development of probation in New York State; the development through many years of the parole system in New York City for the State reformatories and State Prisons; the establishment of the National Prison Association (now the American Prison Association) through the activity of Dr. E. C. Wines, corresponding secretary of the Association in 1870; the organization of the International Prison Congress by Dr. Wines. . . . The most conspicuous militant activity of the Association has been . . . the campaign under the slogan: 'Sing Sing Must Go.' . . . One of the most important branches of the work of the Prison Association is its Parole Bureau. . . . A special bureau of the Prison Association is devoted to the charitable assistance of the families of men who are imprisoned."—*Treatment of delinquents (Seventy-third Annual Report of the Prison Association of New York, 1917, pp. 17-19, 90)*.—"Each year the association carries on legislative activities at Albany during the sessions of the Assembly and Senate. In 1916 a prison exhibit was opened in New York, consisting of fourteen divisions, devoted to such subjects as prison industries, the released prisoner, parole and probation, correctional needs, etc. "The most complete

and authoritative compendium of American belief with reference to all the elements that enter into the prison question is the 'Declaration of Principles,' which was adopted by the National Prison Congress of Cincinnati [in 1870]. It was formulated by Dr. E. C. Wines, but slightly, though not materially, modified by the committee to which it was referred for revision. Every section of this paper was separately voted upon by the Congress. . . . The supreme aim of prison discipline [according to the documents of this Congress] is the reformation of criminals, not the infliction of vindictive suffering. . . . But neither in the United States nor in Europe, as a general thing, has the problem of reforming criminals yet been solved. . . . It is evident, therefore, that our aims and our methods need to be changed. . . . Since hope is a more potent agent than fear, it should be made an ever present force in the minds of the prisoners, by a well devised and skilfully applied system of rewards for good conduct, industry, and attention to learning. Such reward should consist of: 1. A diminution of sentence. 2. A participation by prisoners in their earnings. 3. A gradual withdrawal of prison restraints. 4. Constantly increasing privileges, as they shall be earned by good conduct. Rewards, more than punishments, are essential to every good prison system."—C. R. Henderson, ed., *Correction and prevention*, pp. 46-47.

United States: Indeterminate sentence.—Origin in Massachusetts.—"Probation arose in Massachusetts. Officially, it dates from a law of 1878 authorizing the mayor of Boston to appoint a probation officer for Suffolk County. For some six years prior to this the work had, however, been carried on unofficially. About the year 1872, a large hearted man, Father Cook by name, began his ministry in the criminal courts of Boston. He succeeded in gaining the good will of the judges, and, where it seemed that the offender stood in more need of a wise and sympathetic friend than a sentence, the case would be *continued* and the offender turned over to Father Cook. . . . Though probation in Massachusetts had met with a fair degree of success, it was not until 1899, twenty-one years after the first law had been placed on the statute books, that the system ceased to be a purely Massachusetts institution. In that year, Rhode Island passed a law providing for both adult and juvenile probation, and in the same year Minnesota and Illinois embarked on the scheme of juvenile probation. . . . By January 1, 1921, thirty-five states and the District of Columbia had adopted adult probation, but forty-seven states plus Alaska, Porto Rico, Hawaii, and the District of Columbia had probation for juveniles. The year 1903 was very favorable for the spread of Juvenile probation, nine states having made provision for its use in that year. Similarly the year 1909 can be considered the banner year for adult probation as it was then that eight states put it into their penal system. . . . The paroling of prisoners is now [1921] quite general in the United States. State after state has rapidly provided some method of doing this, and now there is no state that does not release a large proportion of its prisoners from state prisons and penitentiaries in this way."—L. N. Robinson, *Penology in the United States*, pp. 195-197, 217.—The law of 1889 in New York state introduced the principles of indeterminate sentence and parole which were extended by laws passed in 1901, 1902, and 1907. "Chapter 738, Laws of 1907, changed the penalty for murder second degree from life imprisonment to an indeterminate term having a minimum of 20 years and

a maximum of life. . . . It is the intent of this law that the man who has demonstrated the fact that he is a persistent criminal shall be kept under supervision during life. . . . If at any time after he has served his minimum term there is a reasonable probability that he will remain at liberty without violating the law, the Board may parole him."—*Report of the Board of Parole for State Prisons*, 1907.

United States: George Junior Republic.—Much attention has been turned from many directions, within the last few years, upon the reformatory experiment which bears the name of the George Junior Republic. From an ordinary undertaking to give a few summer weeks of country fresh air to a group of neglected, roughly-bred boys, out of the slums of the city of New York, it has grown into a unique institution, which remolds character and refashions life for hundreds of the young of both sexes, who had been given the wrong start in the world by the circumstances into which they were born. It has done this by the simple method of organizing them into a self-governing community—a republic in which they are citizens, invested with all the responsibilities, duties, and cares that go with republican citizenship in its larger spheres. This remarkable organization was not framed up by its architect, Mr. William R. George, on the lines of a preconceived theory, but took its shape slowly from suggestions of experience as they came. He began in 1890 to take companies of boys of the hoodlum class from New York city to his place of summer residence, at Freeville, a few miles from Ithaca and not far from Auburn, New York. Step by step, from year to year the fabric of self-government and self-supporting industry was constructed, until the Junior republic emerged, with its president and other executive officers, its representative legislature, its courts, its police, its own monetary system and bank,—a political and industrial commonwealth of boys and girls (for both sexes have been included), taken out of a derelict class for treatment by this simple inoculation with social responsibilities.

United States: Correctional institutions.—"The Board of Parole of the City of New York was organized in 1905. At the same time an institution for youthful offenders was located on Hart's Island, to be known as the New York City Reformatory for Misdemeanants. . . . The New Hampton Farms colony was established to relieve Hart's Island and the younger boys were transferred in March, 1914. The boys are chosen because of their trustworthiness and are put on honor. They have erected such buildings as were necessary, have plowed sixty acres of the farm, and planted over forty. . . . San Diego in 1912 organized a 7,000-acre farm for delinquents. Duluth conducts a farm of 1,000 acres, to which drunks and similar offenders are sent for ten to twenty days. The so-called farm is chiefly of second-growth timber which is being cleared by the prisoners. The men are not only working in the open air; the foremen are unarmed guards. Cincinnati is engaged in humanizing its correctional institutions. Its Houses of Refuge for boys and girls are now located on farms. A farm of 300 acres was purchased in Glendale in 1913, and 'Boyland' was established. Another farm of 135 acres in Wyoming, Ohio, was bought for the girls. . . . The girls are taught domestic occupations, but the inmates of the workhouse do the laundry work for these two houses and other public institutions.

Thus the women are given occupation with the use of modern conveniences, and, at the same time, serve the community profitably. Juvenile correctional institutions are usually located in the country. Cleveland has gone beyond any other city in the concentration of its correctional institutions under one administration, while keeping them in the country. The Cooley Farms, a tract of 2,000 acres, named in honor of Doctor Harris R. Cooley, Tom Johnson's original appointee to take charge of Cleveland's dependents and delinquents, houses the Colony Farm for almshouse inmates, the Correction Farm for vagrants, the Girls' and Boys' Farms, and the Overlook Farm for tuberculosis patients. The purpose of these farms is to afford a refuge where offenders may work out their own salvation, living in the open air and paying their own way. Doctor Cooley has humanized the almshouse. The old couples, who were formerly segregated, are now allowed to live together on this big farm and work their own little garden patches. Over the door of the poorhouse is this inscription, 'It is better to lose money than to lose love.' The petty offenders, who are sent to the Correction Farm, have been so invigorated that they have organized a Brotherhood of Prisoners which finds employment for the released prisoners."—C. Zueblin, *American municipal progress*, pp. 162-163.

United States: Paid prison labor in New Jersey.—An important extension of the wage payment system has been introduced in New Jersey. "Men are selected for training, for shop work, for road construction work, for work upon farms, and are moved from one type of work to another through the application of the United States Army Group and Industrial Tests. . . . The payment of a wage is reserved for those who actually turn out products that are marketable or work that saves the State a definite amount of money expenditure. . . . A wage payment is made for clearing land, for growing crops and for caring for live stock at the State Prison Farm at Leesburg. . . . Under contracts for road construction with the Highway Department, the State receives, for men working on the roads, the prevailing rate of wages of the locality for the grade of labor to which they belong, less extra cost of supervision, if any, and less allowance for their inefficiency as contrasted with free labor, if any. When the remainder is received in the department, a deduction is made to cover the average cost of maintenance and the remainder is paid to the man himself as his own cash payment. This is in accordance with the principles laid down by President Wilson in his proclamation, pursuant to which the War Labor Policies Board, during the war, fixed the wages paid for the employment of New Jersey State prisoners upon the reconstruction of soldiers' shoes."—G. Lewis, *New York Times*, Aug. 19, 1920.

United States.—Results of prison reform movement.—Percentages of real reformation.—New methods of Thomas Mott Osborne.—Education: Renewed interest.—"The movement, which began in the first twenty-five years of our national life, to establish state institutions in which the more serious offenders should be imprisoned, has become a permanent feature of our nation. With the exception of Delaware, each state now

[1921] has at least one state prison or state penitentiary; several of the states have two, and New York has four. The total combined number of state prisons and state penitentiaries is fifty-eight. In 1910, the number of criminals committed to these fifty-eight prisons was 20,981; the number of prisoners enumerated within the prisons on January 1, 1910, was 56,896. . . . Unlike the population of the country, these state institutions are moving from the city to the country. The drift is unmistakable; so much so that it is extremely doubtful if any new ones will be built in or on the outskirts of a city. Even those well established institutions, now located in a city, are buying large farms and transferring to these a sufficient number of trustees to work the place. Minnesota, for example, now has 965 acres; Wisconsin over 2,000; and the new Penitentiary at Rockview, Pennsylvania, about 5,000 acres. In the report of nearly every state prison, not already equipped with a farm, there is an insistent demand on the part of the warden for land on which to work part of his men. Though this movement from the city to the country is taking place all over the United States, it has reached its greatest development in the South where climatic conditions make farming the year around a genuine possibility. The huge size of some of the southern prison farms is almost beyond belief. South Carolina has 4,168 acres; Florida has 17,000 acres; Texas, 73,461 acres; Louisiana, 15,600 acres; and Mississippi 28,750 acres. . . . The Elmira [reformatory] idea spread rapidly. By 1921, there were, all told, twenty-nine reformatories for adults—eighteen for men and eleven for women—located in eighteen different states. . . . Outside of New York not a single reformatory for women was established before 1900. . . . Since that time, progress has been rapid, accentuated greatly by the World War which has brought the problem of the proper treatment of prostitutes very much into the foreground. Six more states have either built or are building reformatories for women. . . . Mr. Brockway states that in 1888 a searching investigation of all the paroled prisoners of the Elmira reformatory was made and that 78.5 per cent were found to be living self-supporting and orderly lives. The following paragraphs, quoted from a report of the former warden of the Ohio State Reformatory, Mr. Leonard, give a somewhat more detailed picture of the outgoing stream: 'From the best information obtainable, I would give as my best judgment and belief after making liberal deductions, that sixty-five per cent (65%) of the young men who go out on parole from this institution, live free from crime and their success in life and usefulness as citizens is above the average of the people of their class and circumstances; this because of the education and industrial training received at the Reformatory. 'Another twenty-five per cent (25%) are weak in character and of low value as citizens and liable, under special temptation, to stumble into delinquency. The remaining fifteen per cent (15%) recommit crime of varying degrees, and upon the whole are of little value in the social fabric and should be classed as delinquents and a burden upon society. . . . If there is any mistake in this estimate it is in placing too high the number that revert to criminal conduct.' From figures in the report of the Pennsylvania Industrial Reformatory for 1917-18, it would appear, taking the average for the last eighteen years, that 14.44 per cent of those paroled each year violate their parole during the year. Thirty-five per cent of the one hundred and sixty women paroled from the Clinton Farms Reformatory,

New Jersey, since its beginning had by 1917 violated their parole. The superintendent of the Illinois State Reformatory says in his biennial report for the period of 1914-1916 that ninety per cent of those paroled during this period made their parole, that is, obtained their final releases. . . . From such information as is available, from ten to forty per cent of those paroled violate their parole within the period of supervision. Considering the class of offenders sent to the reformatories, this does not seem to the writer a discouragingly large average.—L. N. Robinson, *Penology in the United States*, pp. 76, 88, 120, 123, 126-127, 149-150.—The most important contribution of the twentieth century to prison reform has been the system of self-government, inaugurated by Thomas Mott Osborne, first at Auburn and then at Sing Sing, in 1914. "Mr. Osborne, who is in the middle fifties, is an alumnus of Harvard and a man of affairs. He retired from business with a fortune, and has held more than one public office. . . . In 1913 [he] was made chairman of the State Commission on Prison Reform. During his entire public life he has been known to politicians as an eager obstructor of political schemes and an aggressive enemy of Tammany Hall and all its works. He was little known to the general public, however, until September, 1913, when he attracted attention that was world-wide by undergoing a week's voluntary confinement under the name of 'Tom Brown,' in Auburn prison, during which period he lived the life of the other prisoners, worked with them in the shops, subsisted on their food, and slept in a cell at night. . . . His animating purpose was to ascertain actual conditions in a state prison; to learn at first hand some of the evils of the existing prison system. It was his prison 'partner' Jack Murphy, as is told in the narrative of Mr. Osborne's underworld experiences, 'Within Prison Walls,' who conceived the idea of the Mutual Welfare League, the system of self-government by the inmates themselves [as distinct from the honor system] that has revolutionized all previous notions of prison discipline, and which was adopted in Auburn in February [1914]. . . . Mr. Osborne began the work of organizing the league soon after his release from his self-imposed prison term, and from the beginning sought to have the men evolve its principles and pledges among themselves—not through him nor through officers of the prison. . . . An inmate of the prison is eligible to membership in the league; . . . The men elect their own officers, without the slightest suggestion by prison officers, and this condition automatically ended the 'stool pigeon,' or spy, system at Auburn, for the companies of prisoners and their officers instinctively aimed to adjust themselves to secure the minimum of trouble at chapel, in the shops, and at recreation."—F. M. White *Prisons of freedom* (C. Bacon, ed., *Prison reform*, pp. 113-114).—"When, on that day momentous in prison annals, the first Sunday in December, 1914, Mr. Osborne [then warden of Sing Sing] revolutionized Sing Sing's system of government and gave the men privileges hitherto unheard of in penal institutions, he warned them that they held their fate largely in their own hands. 'What the average man outside of prison will have in mind when the time comes to consider whether our experiment is a success,' he said, in effect, will not be whether you have been benefited, but whether he has. Therefore the best argument I can advance to the Legislature when I ask for a new prison and additional privileges for you will be that under the new system you have done more and better work. Let me impress upon every one of you that the work

you accomplish will be the measure of the success of our experiment in the public mind.' That the men realized that the warden spoke the truth is indicated by a comparison of the statement of the prison's industries for the fiscal year of 1913-14, under the old conditions, with that of 1914-15, under the new. The gross sales of the products of Sing Sing in 1913-14 amounted to \$318,733.59, and in 1914-15 to \$354,327.89, showing an increase under the Osborne régime of \$60,722.56, or about twenty-one per cent. The profit goods manufactured at Sing Sing in 1913-14 was \$282,093.83, and in 1914-15 \$342,816.39, showing an increase under the Osborne régime of about one hundred per cent. The per centage of profit on the production of 1913-14 was fourteen per cent; under the Osborne régime in 1914-15 it was twenty-four per cent. The per capita cost of officers' salaries at Sing Sing for the last fiscal year was far less than at any of the other three State prisons. At Great Meadow, with an average daily population of 712, the per capita cost of officers' salaries was \$64.14; at Clinton, with an average daily population of 1,447, it was \$88.35; and at Auburn, with an average daily population of 1,420, it was \$88.53. At Sing Sing, with an average daily population of 1,616, the per capita cost of officers' salaries was only \$80.85. One of the most striking results of the operation of the machinery of the Mutual Welfare League in Sing Sing has been its beneficial effect upon prison discipline."—F. M. White, *True Sing Sing* (C. Bacon, ed., *Prison reform*, pp. 122-123).—"The full history of the Mutual Welfare League is still to be written; but the experiences of the last ten years at Auburn and Sing Sing prisons and the United States Naval Prison at Portsmouth, New Hampshire, are full of instruction for those who wish to learn. Unfortunately, the League no longer exists at Portsmouth, it has been crushed out of recognition at Auburn, and it was badly mutilated some years ago at Sing Sing, where, however, it still survives, having converted two wardens who took office as skeptics. But what has been done once can be done again."—T. M. Osborne, *Prisons and common sense* (*Atlantic Monthly*, Sept., 1923).—In the California State Prison at San Quentin, correspondence courses are conducted by the extension division of the University of California. "San Quentin is not a model prison. It has many faults, but its health and educational activities are real contributions to the prison problem. There I found a genuine interest in education; and an ambition to attempt the experiment of turning the prison into an educational institution. Some nine hundred men were registered in eleven hundred individual courses. The chaplain who is in charge of the work, has, with the coöperation of the University of California made a genuine beginning of what is the most interesting and promising education experiment in the American prisons."—F. Tannenbaum, *Facing the prison problem* (*Atlantic Monthly*, Feb., 1922).—The Kansas penitentiary at Lansing also offers prisoners the chance to take the extension courses given by the agricultural college of the state. The crime wave which followed the World War caused a renewal of interest in prisons and prison reform. Political prisoners also directed attention to the prison. "More intelligence, probably, has been locked up in our prisons during the past three years [written in 1920] than ever before at one time. The political and war-time offenders of several kinds—persons convicted under the Espionage act for expression of opinion, conscientious objectors, members of the I. W. W., and others have brought to their cell life a faculty for critical

analysis and a power of statement that probably excel, at least in amount, anything of the sort heretofore possessed by people behind the bars."—*Survey*, Apr. 24, 1920, p. 151.—Kate Richards O'Hare, Evan Thomas, and Frank Tannenbaum in America and Stephen Hobbhouse in England are among the political prisoners who have written of inside conditions. "A whole new literature on reform of the penal system has arisen in England. . . . In Belgium, Austria, Germany, Czecho-Slovakia and other continental countries a prison reform movement is under way that is inspired largely by a new-born public sentiment to bring the penal institutions into line with modern democratic thought."—*Survey*, Mar. 4, 1922, p. 883.

International conferences.—Coöperation of experts.—The International Prison Association, which has had a wide influence, was organized in 1871. "Its existence was due primarily to the initiative of an eminent American penologist, the late Rev. E. C. Wines, and to the official encouragement and support given to the enterprise by the Government of the United States. Dr. Wines was not the first to secure international consideration of penological problems. As early as 1846 several eminent penologists of Europe, among them Aubanel, Ducpetiaux, and Mittermaier, organized a congress of persons in different countries interested in the prevention of crime and in the study of penological questions. The congress was held in Frankfort-on-the-Main in that year, in Brussels in 1847, and again in Frankfort in 1857. These congresses were due entirely to private initiative and activity. No governments were officially represented, and they were not organized on a permanent basis. Dr. Wines was able, however, to unite private interest and activity with official power and influence. Both are necessary in a work of this kind. . . . Dr. Wines was fortunate in securing the coöperation of the heads of governments, of the directors of prison administration, and of some of the most prominent criminalists in Europe. At the first Congress, held in London in 1871, twenty governments were represented. Then it became necessary to insure the life of the congress and to provide for its continued activity. This was done by the establishment of a permanent commission composed of a representative from each government subscribing to its constitution and also to its treasury. The International Prison Commission, which is the executive and permanent arm of the Congress, endeavors to maintain some relation not only between the governments which are united for this object, but between experts in every land. Valuable as are the quinquennial meetings and discussions, a phase of its work still more valuable is the preparation of reports by experts and competent writers, in different countries, concerning questions and problems submitted by the Commission. It is thus able to secure the coöperation of a large number of experts who are not able to attend the Congress in person."—S. J. Barrows, *Progress in penology* (C. Bacon, ed., *Prison reform*, pp. 23-24).—See also CRIME AND CRIMINOLOGY.

Prisoners of war; YOUNG MEN'S CHRISTIAN ASSOCIATION: World War activities: 1914-1918: Work among prisoners.

PRISONS AND PRISON-PENS, Confederate: Libby. — Belle Isle. — Andersonville. — Libby prison, best known of the Confederate prisons during the Civil War, was generally used for officers, although some private soldiers were also confined there. It was situated in Richmond, Virginia, and consisted of a row of brick buildings, formerly a tobacco warehouse. "The prison did not seem to be under any general and uniform army regulations, but the captives were subject to the caprices of Major Turner, the officer in charge, and Richard Turner, inspector of the prison. It was among the rules that no one should go within three feet of the windows, a rule which seems to be general in all Southern prisons of this character. . . . Often by accident, or unconsciously, an officer would go near a window, and be instantly shot at without warning. . . . The daily ration in the officers' quarter of Libby prison was a small loaf of bread about the size of a man's fist, made of Indian meal. Sometimes it was made from wheat flour, but of variable quality. It weighed a little over half a pound. With it was given a piece of beef weighing two ounces. . . . Belle Isle [where private soldiers were confined] is a small island in the James River opposite the Tredegar Iron-works, and in full sight from the Libby windows. . . . The portion on which the prisoners are confined is low, sandy, and barren, without a tree to cast a shadow, and poured upon by the burning rays of a Southern sun. Here is an enclosure, variously estimated to be from three to six acres in extent, surrounded by an earthwork about three feet high, with a ditch on either side. . . . The interior has something of the look of an encampment, a number of Sibley tents being set in rows, with 'streets' between. These tents, rotten, torn, full of holes,—poor shelter at any rate,—accommodated only a small proportion of the number who were confined within these low earth walls. The number varied at different periods, but from 10,000 to 12,000 men have been imprisoned in this small space at one time, turned into the enclosure like so many cattle, to find what resting place they could. . . . Thousands had no tents, and no shelter of any kind. . . . They were fed as the swine are fed. A chunk of corn-bred, 12 or 14 ounces in weight, half-baked, full of cracks as if baked in the sun, musty in taste, containing whole grains of corn, fragments of cob, and pieces of husks; meat often tainted, suspiciously like mule-meat, and a mere mouthful at that; two or three spoonfuls of rotten beans; soup thin and briny, often with worms floating on the surface. None of these were given together, and the whole ration was never one-half the quantity necessary for the support of a healthy man."—V. Mott, and others, *Report of the United States Sanitary Commission, Commission of inquiry on the sufferings of prisoners of war in*

the hands of the rebel authorities, ch. 2-3.—The little hamlet of Anderson, so named, in 1853, after John W. Anderson, of Savannah, but called Andersonville by the Post Office Department, is situated in the heart of the richest portion of the cotton and corn-growing region of Georgia, on the Southwestern Railroad, 62 miles south from Macon and 9 miles north of Americus. "Here, on the 27th day of November, 1863, W. S. Winder, a captain in the rebel army, and who was selected for the purpose, came and located the grounds, for a 'Confederate States Military Prison.' . . . When the site was definitely established, it was found to be covered with a thick growth of pines and oaks. . . . The trees were leveled to the ground, and the space was cleared. . . . No buildings, barracks, houses, or huts of any kind were built. The canopy of the sky was the only covering." In March, 1864, John H. Winder, father of the W. S. Winder mentioned above, became commandant of the post, and with him came Henry Wirz, as superintendent of the prison. "From Colonel Chandler's Inspection Report [the report of a Confederate official] dated August 5th, 1864, I quote the following: 'A railing around the inside of the stockade, and about 20 feet from it, constitutes the 'dead line,' beyond which prisoners are not allowed to pass. A small stream passes from west to east through the inclosure, about 150 yards from its southern limit, and furnishes the only water for washing accessible to the prisoners. Bordering this stream, about three quarters of an acre in the centre of the inclosure are so marshy as to be at present unfit for occupation, reducing the available present area to about 23½ acres, which gives somewhat less than six square feet to each prisoner'; and, he remarks, 'even this is being constantly reduced by the additions to their number.' . . . At the close of the war, Wirz was tried before a military commission, over which General Lew. Wallace presided, was condemned, and was hanged at Andersonville, November 10, 1865."—A. Spencer, *Narrative of Andersonville, ch. 1, 4, 5, 13, 15.*—On the part of the Confederate authorities, Gen. Robert E. Lee, writing to Dr. Carter, of Philadelphia, April 17, 1867, said: "Sufficient information has been officially published, I think, to show that whatever sufferings the Federal prisoners at the South underwent were incident to their position as prisoners, and produced by the destitute condition of the country, arising from the operations of war. The laws of the Confederate Congress and the orders of the War Department directed that the rations furnished prisoners of war should be the same in quantity and quality as those furnished enlisted men in the army of the Confederacy, and that the hospitals for prisoners should be placed on the same footing as other Confederate State hospitals in all respects. It was the desire of the Confederate authorities to effect a continuous and speedy exchange of prisoners of war; for it was their true policy to do so, as their retention was not only a calamity to them, but a heavy expenditure of their scanty means of subsistence, and a privation of the services of a veteran army."—*Southern Historical Society Papers, v. 1, p. 122.*—In his book on "The War between the States," Alexander H. Stephens wrote as follows: "Large numbers of them [Federal prisoners] were taken to Southwestern Georgia in 1864, because it was a section most remote and secure from the invading Federal armies, and because, too, it was a country of all others then within the Confederate limits not thus threatened with an invasion, most abundant with food, and all resources at command for the health and comfort of prisoners.

They were put in one stockade for the want of men to guard more than one. The section of country, moreover, was not regarded as more unhealthy, or more subject to malarious influences than any in the central part of the State. The official order for the erection of the stockade enjoined that it should be in 'a healthy locality, plenty of pure water, a running stream, and, if possible, shade trees, and in the immediate neighborhood of grist and saw mills.' The very selection of the locality, so far from being, as you suppose, made with cruel designs against the prisoners was governed by the most humane considerations. Your question might, with much more point, be retorted by asking, Why were Southern prisoners taken in the dead of winter with their thin clothing to Camp Douglas, Rock Island, and Johnson's Island—icy regions of the North—where it is a notorious fact that many of them actually froze to death? As far as mortuary returns afford evidence of the general treatment of prisoners on both sides, show nothing to the disadvantage of the Confederates, notwithstanding their limited supplies of all kinds, and notwithstanding all that has been said of the horrible sacrifice of life at Andersonville. It now appears that a larger number of Confederates died in Northern, than of Federals in Southern prisons, or stockades. The report of Mr. Stanton, as Secretary of War, on the 19th of July, 1866, exhibits the fact that, of the Federal prisoners in Confederate hands during the war, only 22,576 died; while of the Confederate prisoners in Federal hands 26,436 died."—A. H. Stephens, *The War between the States, v. 2, col. 22.*—These statistics differ seriously from the following. "There can be no accurate count of the mortality in rebel prisons. The report made by the War Department to the 40th Congress shows that about 188,000 Union soldiers were captured by the Confederates; that half of them were paroled, and half confined in prison; of this number 36,000 died in captivity. The Union armies, on the other hand, captured 476,000 Confederates; of these 227,000 were retained as prisoners, and 30,000 died. While the percentage of mortality in Northern prisons was 13 in the hundred, that in Rebel prisons was 38."—J. G. Nicolay and J. Hay, *Abraham Lincoln, v. 6, pp. 407-414.*—J. F. PRISON-SHIPS, British: At New York. See U.S.A.: 1776-1777; PRISONERS AND EXCHANGES.

PRISREND, or PRIZREN, city of Jugo-Slavia, on the Rieka river, about forty miles west of Uskub. Its population, in 1910, was 21,244. Prisrend was formerly included in European Turkey, and was the capital of Kossovo. By the Treaty of Bucharest, in 1913, Kossovo became a part of Serbia. Prisrend was captured in 1910, by the Central powers, but, under the peace treaty of 1919, it was included in the territory of the new republic of Jugo-Slavia. See WORLD WAR: 1915; V. Balkans: b, 4.

PRISSAC, town in Alsace. It was taken by the French in September, 1703. See GERMANY: 1703.

PRIVATE WARFARE, Right of. See LAND-FRIFOE.

PRIVATEERING: Letters of marque.—A private armed vessel or privateer is a vessel owned and officered by private persons, but acting under a commission from the state usually called letters of marque. . . . The commission on both elements, alone gives a right to the thing captured and insures good treatment from the enemy. A private vessel levying war without such licence, although not engaged in a piratical act, would fare hardly in the enemy's hands.—Based on T. D. Woolsey, *Introduction to the study of international law*, p. 207.—Privateers of powers recognized as belligerents are not pirates by the law of nations. "A privateer cannot be regarded as a pirate because she is manned and operates under an ordinance authorizing foreigners to fit out and take commissions as privateers from the state issuing the ordinance, and to take enemy's property out of neutral ships."—J. Q. Adams, *Memoirs*, p. 38.

Distinction between privateers and letters of marque.—"There is a distinction between a privateer and a letter of marque in this, that the former are always equipped for the sole purpose of war, while the latter may be a merchantman, uniting the purposes of commerce to those of capture. In popular language, however, all private vessels commissioned for hostile purposes, upon the enemy's property, are called letters of marque."—F. H. Upton, *Law of nations affecting commerce during war*, p. 186.—See also PARIS, DECLARATION OF; RE-TORSION.

Use of privateers.—"The practice of privateering was adopted in the Napoleonic wars; and it was recognised generally that the whole system encouraged abuse and misconduct, so that in course of time public opinion turned against it."—F. Smith (Lord Birkenhead), *International law*, p. 203.—"The war [of 1812-14] lasted about three years, and the result was, as near as I have been able to ascertain, a loss to Great Britain of about 2,000 ships and vessels of every description, including men-of-war and merchantmen. . . . I have found it difficult to ascertain the exact number of our vessels taken and destroyed by the English; but I should judge they would not amount to more than 500 sail. It must be recollected that the most of our losses occurred during the first six months of the war. After that period, we had very few vessels afloat, except privateers and letters-of-marque."—G. Coggeshall, *History of American privateers, 1812-14*, pp. 394-395.—"A notable departure was made in the case of the Crimean War, 1854, by Great Britain and France, who agreed to discontinue the issue of letters of marque to private owners. On the resumption of peace, the Declaration of Paris, 1856, was signed whereby privateering may no longer be practised by the signatory powers when at war with one another. The United States, Spain, Mexico, Venezuela, Bolivia and Uruguay did not assent to the prohibition, the power first named basing its refusal on the convenience of privateers to a state without a powerful navy, as long as the right of capturing private property on the seas survives: an amendment exempting private property from such capture having been rejected. In the American Civil War of 1861, the President was authorised by Congress to issue letters of marque, but he did not make use of the authority thus granted to him. The Confederates offered licences to foreign vessels, but they were not accepted, owing to the restrictive legislation of the maritime powers and the threat of the United

States to treat privateers as pirates. In the Spanish-American War, 1898, the United States declared her intention to accept the Declaration of Paris; but Spain claimed the right to issue letters of marque though she did not put the claim into practice. The United States acted thus in accordance with a definitely proclaimed policy, Spain without prejudice to her right to issue letters of marque if she so desired. However, at the Hague Conference in 1907, both Spain and Mexico proclaimed their adhesion to the Declaration of Paris, as Japan had done in 1886; so that privateering may be said to have been, in fact, abolished. The Declaration of Paris may now be regarded as part of international law and as possessing binding force generally, though a few states have not yet formally signified their adhesion to it. In the Great War of 1914, proposals were made in certain quarters that the practice of privateering should be resumed for various reasons; but none of the belligerents paid any attention to such suggestions. Moreover, so far as Great Britain is concerned, in a case that came before the Prize Court soon after the commencement of hostilities, the President declared that the Court would deem the Declaration of Paris to be part of international law and to possess binding force."—F. Smith, (Lord Birkenhead), *International law*, pp. 203-204.—See also BUCCANEERS: Privateering, etc.

PRIVY COUNCIL: Origin.—Great development under the Tudors.—Decadence in modern times.—"The period of three centuries following the Norman Conquest was a formative one for English institutions. The circumstances of the Conquest brought immense authority to the Crown. This authority was certain to be controlled and limited as English liberties were secured. The original nucleus of royal power was the *curia regis*. The early history of this body would involve an account of the gradual and complicated process by which judicial, executive, legislative and political functions were separated, one from another, and assigned to different organs. Out of the *curia regis* there developed the King's Council. 'At no time,' says a recent writer, 'did English kings fail to have particular counsellors, known as *consiliarii*, *consil-tors*, *familiares*, *domestici*, or *aulici*, including men of the exchequer. In this they were like other kings (most notably the King of France), other princes, and even bishops and barons who possessed councils of uncertain composition.' Just when the King's personal advisers began to have a recognized position as a distinct and organized body it is not easy to say. The view of Bishop Stubbs that this council can be traced only from the minority of Henry III can no longer be accepted because of the discovery of good evidence that the King's Council was already distinct and organized in the reign of John. It seems possible that it may yet be distinguished as early as Henry II's reign. But there is no positive proof. We know that the Common Council of the realm claimed under Henry III the right to nominate as well as to confirm great officers, and thus to force the King to choose worthy associates as his personal advisers. But the problem presented numberless practical difficulties, especially as there was at the

time no developed or clearly defined legislative power apart from the King—no Parliament with acknowledged prerogatives. The historic process of the thirteenth and fourteenth centuries brought the King's Council to its maturity by the close of the Plantagenet period. It was then the one sworn council of the King. Not large in numbers, it possessed, nevertheless, real power and efficiency as well as great dignity. Devoted to the work of legislation as well as administration, touching at times on the domain of a jealous and watchful Parliament, it was the mainspring of government. The powerful status to which it had attained was the result of the cumulative effect of custom rather than of statutory regulation. In the fifteenth century under the house of Lancaster the Council, now coming to be known as the Privy Council, reached its greatest power. Through force of many circumstances it was able to over-shadow alike the Crown, Parliament, and the people. It had fallen from its great traditions and its prestige by the time of Henry VII's accession; but it afforded the later Tudors, intent upon building up a great system of centralization, a royal instrument by means of which they were enabled to establish organized and efficient rule throughout the kingdom. Under their sway the Privy Council gathered together and held all the threads of administration and diplomacy. In its effectiveness as a Tudor organ, it has been characterized as 'practically the predecessor of the modern Cabinet of Ministers.'—H. B. Learned, *President's cabinet*, pp. 9-10.—"It was in the reign of Henry VI. that the King's Council first assumed the name of the 'Privy Council,' and it was also during the minority of this King that a select Council was gradually emerging from out of the larger body of the Privy Council, which ultimately resulted in the institution of our modern Cabinet. [See CABINET: English: Origin of term.] From the accession of Henry VII. to the reign of Charles I. the Privy Council was wholly subservient to the royal will, and the instrument of unconstitutional and arbitrary proceedings. The first act of the Long Parliament was to deprive the Council of most of its judicial power, leaving, however, its constitution and political functions unchanged. Since the Revolution of 1688 the Privy Council has dwindled into comparative insignificance, when contrasted with its original authoritative position. Its judicial functions are now restrained within very narrow limits. The only relic of its ancient authority in criminal matters is its power of taking examinations, and issuing commitments for treason. It still, however, continues to exercise an original jurisdiction in advising the Crown concerning the grant of charters, and it has exclusively assumed the appellate jurisdiction over the colonies and dependencies of the Crown, which formerly appertained to the Council in Parliament. Theoretically, the Privy Council still retains its ancient supremacy, and in a constitutional point of view is presumed to be the only legal and responsible Council of the Crown. . . . As . . . [the Sovereign] can only act through her privy councillors, or upon their advice, all the higher and more formal acts of administration must proceed from the authority of the Sovereign in Council, and their performance be directed by orders issued by the Sovereign at a meeting of the Privy Council specially convened for that purpose. No rule can be laid down defining those political acts of the Crown which may be performed upon the advice of particular ministers, or those which must be exercised only 'in Council'—the distinction de-

pends partly on usage and partly on the wording of Acts of Parliament. . . . The ancient functions of the Privy Council are now performed by committees, excepting those formal measures which proceed from the authority of . . . [the Sovereign] in Council. The acts of these committees are designated as those of the Lords of the Council. These Lords of Council (who are usually selected by the Lord President of the Council . . .) constitute a high court of record for the investigation of all offences against the Government, and of such other extraordinary matters as may be brought before them. . . . If the matter be one properly cognizable by a legal tribunal, it is referred to the Judicial Committee of the Privy Council. This committee, which is composed of the Lord President, the Lord Chancellor, and such members of the Privy Council as from time to time hold certain high judicial offices, has jurisdiction in appeals from all colonial courts: it is also the supreme court of maritime jurisdiction, and the tribunal wherein the Crown exercises its judicial supremacy in ecclesiastical cases. [See also COURTS: England: Supreme Court of Judicature Act; BRITISH EMPIRE: Colonial federation: Privy council as supreme court.] The Privy Council has also to direct local authorities throughout the kingdom in matters affecting the preservation of the public health. A committee of the Privy Council is also appointed to provide 'for the general management and superintendence of Education,' and subject to this committee is the Science and Art Department for the United Kingdom. . . . Formerly meetings of the Council were frequently held, but they now seldom occur oftener than once in three or four weeks, and are always convened to assemble at the royal residence for the time being. The attendance of seven Privy Councillors used to be regarded as the quorum necessary to constitute a Council for ordinary purposes of state, but this number has been diminished frequently to only three. No Privy Councillor presumes to attend upon any meeting of the Privy Council unless specially summoned. The last time the whole Council was convoked was in 1839. Privy Councillors are appointed absolutely, without patent or grant, at the discretion of the Sovereign. Their number is unlimited. . . . Since the separate existence of the Cabinet Council, meetings of the Privy Council for purposes of deliberation have ceased to be held. The Privy Council consists ordinarily of the members of the Royal Family, the Archbishops of Canterbury and York, the Bishop of London, all the Cabinet Ministers, the Lord Chancellor, the chief officers of the Royal Household, the Judges of the Courts of Equity, the Chief Justices of the Courts of Common Law, and some of the Puisne Judges, the Ecclesiastical and Admiralty Judges and the Judge-Advocate, the Lord-Lieutenant of Ireland, the Speaker of the House of Commons, the Ambassadors and the Chief Ministers Plenipotentiary, the Governors of the Chief Colonies, the Commander-in-Chief, the Vice-President of the Committee of Council for Education, certain other officials I need not particularize, and occasionally a Junior Lord of the Admiralty, though it is not usual for Under Secretaries of State or Junior Lords of the Treasury or Admiralty to have this rank conferred upon them. A seat in the Privy Council is sometimes given to persons retiring from the public service, who have filled responsible situations under the Crown, as an honorary distinction. A Privy Councillor is styled Right Honourable, and he takes precedence of all baronets, knights, and younger sons of viscounts and barons."

PROBULI, board of ten provisional councillors instituted at Athens during the later period of the Peloponnesian War, after the great calamity at Syracuse. It was intended to introduce a conservative agency into the too democratic constitution of the state; to be "a board composed of men of mature age, who should examine all proposals and motions, after which only such among the latter as this board had sanctioned and approved should come before the citizens. This new board was, at the same time, in urgent cases itself to propose the necessary measures."—E. Curtius, *History of Greece*, bk. 4, ch. 5.—See also ATHENS: B. C. 413-411.

PROCONSUL AND PROPRAETOR, Roman.—"If a Consul was pursuing his operations ever so successfully, he was liable to be superseded at the year's close by his successor in the Consulship; and this successor brought with him new soldiers and new officers; everything, it would seem, had to be done over again. This was always felt in times of difficulty, and the constitutional usages were practically suspended. . . . In the year 328 B. C. the Senate first assumed the power of decreeing that a Consul or Praetor might be continued in his command for several successive years, with the title of Proconsul, or Propraetor, the power of these officers being, within their own district, equal to the power of the Consul or Praetor himself. The Proconsul also was allowed to keep part of his old army, and would of course continue his Tribunes and Centurions in office. . . . Almost all the great successes of Marcellus and Scipio were gained in Proconsular commands."—H. G. Liddell, *History of Rome*, bk. 4, ch. 35.

PROGRESSIVE PARTY: Russia. See RUSSIA: 1915-1916.

United States.—The Progressive party was founded by the followers of Theodore Roosevelt in August, 1912, after his failure to secure the nomination for the presidency at the Republican National convention in June, 1912. Among the leading principles of the party were the initiative, recall, referendum, woman suffrage, and the extension of government control of interstate business. (See INITIATIVE AND REFERENDUM: Development in the United States; RECALL: Recall of judicial decisions.) Although polling a larger vote in the first year of its existence than the Republican party (an electoral vote of 88 to 8), the new party rapidly declined and never again nominated a presidential candidate. Many of its policies, however, were appropriated by other parties and were subsequently enacted into law.—See also U.S.A.: 1910 (August-November); 1911-1912 (January-June); 1912: Formation of Progressive party; 1912-1916.

PROLETARIAN DICTATORSHIP.—"In his [Marx's] letter criticising the Gotha party programme, written in May, 1875, it is stated: 'Between capitalist and communist society lies the period of the revolutionary transformation of the one into the other. This requires a political transition stage, which can be nothing else than the revolutionary dictatorship of the proletariat.' Marx had unfortunately omitted to specify more exactly what he conceived this dictatorship to be. Taken literally, the word signifies the suspension of democracy. But taken literally it also means the sovereignty of a single person, who is bound by no laws. A sovereignty which is distinguished from a despotism by being regarded as a passing phase, required by the circumstances of the moment, and not a permanent institution of the State. The expression 'Dictatorship of the Proletariat,' that is the dictatorship not of a single person, but of a class, excludes the interference that Marx thought of dictatorship in the literal sense. He speaks in the passage above quoted not of a

form of government, but of a condition which must everywhere arise when the proletariat has conquered political power. That he was not thinking of a form of government is shown by his opinion that in England and America the transition might be carried out peacefully. Of course, Democracy does not guarantee a peaceful transition. But this is certainly not possible without Democracy. However, to find out what Marx thought about the dictatorship of the proletariat, we need not have recourse to speculation. If in 1875 Marx did not explain in detail what he understood by the dictatorship of the proletariat, it might well have been because he had expressed himself on this matter a few years before, in his study of the Civil War in France. In that work, he wrote: 'The Commune was essentially a government of the working class, against the appropriating class, the political form under which the freedom of labour could be attained being at length revealed.' Thus the Paris Commune was, as Engels expressly declared in his introduction to the third edition of Marx's book, 'The Dictatorship of the Proletariat.' . . . The dictatorship of the lower classes opens the way for the dictatorship of the sword. Should it be said, after the example of the middle-class revolutions, that the Revolution is synonymous with civil war and dictatorship, then the consequences must also be recognised, and it must be added the Revolution would necessarily end in the rule of a Cromwell or a Napoleon. This is, however, by no means the necessary upshot of a proletarian revolution where the proletariat forms the majority of the nation, which is democratically organised, and only in such cases do the conditions for Socialist production exist. By the dictatorship of the proletariat we are unable to understand anything else than its rule on the basis of democracy."—K. Kautsky, *Dictatorship of the proletariat*, pp. 42-44, 58.—See also SPARTACIST MANIFESTO; RUSSIA: 1917 (September-November), and after.

PROPHESYINGS.—In the early part of the

reign of Queen Elizabeth, among those English reformers who were subsequently known as Puritans, "the clergy in several dioceses set up, with encouragement from their superiors, a certain religious exercise, called prophesyings. They met at appointed times to expound and discuss together particular texts of Scripture, under the presidency of a moderator appointed by the bishop, who finished by repeating the substance of their debate, with his own determination upon it. These discussions were in public, and it was contended that this sifting of the grounds of their faith, and habitual argumentation, would both tend to edify the people, very little acquainted as yet with their religion, and supply in some degree the deficiencies of learning among the pastors themselves. [The prophesyings, however, were suppressed by the queen and Archbishop Parker.]"—H. Hallam, *Constitutional history of England*, v. 1, ch. 4.

PROPHETS, Greek. See ORACLES.

Hebrew.—"The Hebrew word 'Nabi' is derived from the verb 'naba.' . . . The root of the verb is said to be a word signifying 'to boil or bubble over,' and is thus taken from the metaphor of a fountain bursting forth from the heart of man, into which God has poured it. Its actual meaning is 'to pour forth excited utterances,' as appears from its occasional use in the sense of 'raving.' Even to this day, in the East, the ideas of prophet and madman are closely connected. The religious sense, in which, with these exceptions, the word is always employed, is that of 'speaking' or 'singing under a divine afflatus or impulse,' to which the peculiar form of the word, as just observed, lends itself. . . . It is this word that the Seventy translated by a Greek term not of frequent usage in classical authors, but which, through their adoption of it, has passed into all modern European languages; namely, the word . . . Propbet. . . . The English words 'prophet,' 'prophecy,' 'prophesying,' originally kept tolerably close to the Biblical use of the word. The celebrated dispute about 'prophesyings,' in the sense of 'preachings,' in the reign of Elizabeth, and the treatise of Jeremy Taylor on 'The Liberty of Prophesying,' i. e. the liberty of preaching, show that even down to the seventeenth century the word was still used, as in the Bible, for 'preaching,' or 'speaking according to the will of God.' In the seventeenth century, however, the limitation of the word to the sense of 'prediction' had gradually begun to appear. . . . The Prophet then was 'the messenger or interpreter of the Divine will.'"—Dean Stanley, *Lectures on the history of the Jewish church*, v. 1, lecture 10.—See also JEWS: Religion and the prophets.

PROPORTIONAL REPRESENTATION: General principles.—Four means of giving representation to minorities.—Objections to the principle.—"The problem of representation of minorities in a democracy is vitally related to a fundamental principle of democratic government. 'No real democracy, nothing but a false show of democracy, is possible without it,' wrote John Stuart Mill. 'Nothing is more certain than that the vir-

tual blotting out of the minority is no necessary consequence of freedom, but instead is diametrically opposed to the first principle of democracy: representation in proportion to numbers.' Parliament should be composed of the same elements as the nation; but everyday experience goes to show that under the simple rule of numbers a considerable minority, if broken up among different districts, can be wholly blocked from access to the legislature. If it obtains any seats, they are stray, chance ones, not those to which it is entitled. To quote again from Mill: 'A majority of the electors should always have a majority of the representatives; but a minority of the electors should always have a minority of the representatives. Man for man they should be as fully represented as the majority, and unless they are, there is not equal government, but a government of inequality and privilege,—contrary to all just government, but above all contrary to the principle of democracy which professes equality as its very root and foundation.' The chief schemes devised to give representation to minorities are four in number. First, there is the incomplete vote, which is practicable only in districts where there are several deputies to be chosen. Supposing that there are three names on the ticket, each elector may vote for two only, rendering it possible for the minority party by concentration to elect one representative. This system is in vogue in parliamentary elections in Spain and Portugal. It has the disadvantage that it is merely limited, without being proportional, and therefore does not necessarily correspond to the division of the electorate. It also provides only for two parties. The second system is the cumulative vote. The voter may cast as many votes as there are names on the ticket and may distribute them as he pleases. Members of a minority can cast all their ballots for one or two names and run up a total sufficient to place their candidate beside those of the majority. Even a small minority can usually win at least one seat. This is the system employed in Cape Colony, and Chile. In practical experience the result is sometimes upsetting, for two popular candidates of a minority may win to one of a majority, because of the wastage of votes by the latter. The majority must therefore fall back upon strong party government, and the system leads to an accentuation of 'organization' rule. Third, we have the preferential system, known from its inventor as the Hare system. Each voter votes for his first, second, and third choices, etc. The total number of votes cast is divided by the number of seats to find the minimum number which a candidate must receive in order to be elected. The first choices are counted first, and those who have received a number of these equal to the electoral quotient are declared elected. The first choices remaining to the winners are then counted for the other candidates in the order of preference indicated, and as the latter are brought up to the necessary quota they are awarded places, until the seats have been filled. The system has been put into practice only on a small scale and in limited areas [see MICHIGAN: 1920]; and its complexity will probably debar it from adoption in large electoral districts. It furnishes nevertheless an accurate index of the wishes of the voters. Fourthly, the list system, more generally known as the d'Hondt system, furnishes the most practical scheme of proportional representation yet devised. The main features of the system have already been described as they have been applied in Belgium. It is in use also in Cuba, Sweden, Denmark, certain of the Swiss cantons, Würtem-

berg, Serbia, Bulgaria, and Holland, and is gaining headway among the western states in the United States. The chief advantages of the list system are its simplicity, its compatibility with the party system of government and with large constituencies, and the accuracy with which it reflects shades of opinion in the electorate. It is argued against proportional representation that it will lead to class distinctions and legislation, if small groups are encouraged to form with the certainty that they can acquire a footing in the legislature. Majority rule is open to abuse, but in most countries it has not been abused to such an extent that it is necessary to throw over the idea of a legislature of breadth and unity for one of a legislature tuned, or perhaps untuned, to a great variety of discordant notes. Esmein declares that proportional representation will organize disorder, make cabinets unstable, and vitiate party life. It will produce legislatures constitutionally unable to agree upon any constructive program. These objections in theory have not been entirely realized in the countries where the system has been employed; and it is probable that the steady progress of the last two decades in the introduction of minority representation will continue."—C. Seymour and D. P. Frary, *How the world votes*, v. 2, pp. 317-320.—See also APPORTIONMENT; GERRYMANDER.

ALSO IN: H. G. Wells, *In the fourth year*, pp. 120-130.—J. H. Humphreys, *Proportional representation: A study in methods of election*.—J. F. Williams, *Reform of political representation*.

Belgium.—"The proportional system was accepted in 1899 only after a long struggle. It compelled a change in the districting of the kingdom, for large constituencies are a necessity for R. P. (*Représentation Proportionnelle*), as the Belgians call it. To apportion the seats to minorities there must be enough to go around. The smaller voting districts were bunched into *arrondissements*, naming from three to twenty-one deputies by *scrutin de liste*. At the same time the voters choose substitutes, so that bye-elections are unnecessary. The party lists, with the candidates arranged in a chosen order, are presented to the officials who prepare the ballots fifteen days before election. Seldom does a party make out a full list, since it rarely happens that a party captures all the deputies. As seats are allotted to candidates in the order in which they stand on the party list, that order is of great importance. It must not be left wholly to the discretion of the sponsors, who turned in the list. Every elector can vote in one of two ways. He may mark the square at the head of the column, thus approving both the list and the arrangement of its candidates. Or he may blacken the square opposite *one* name to indicate that, while he favors the party, he prefers to have another person its first, perhaps its only, nominee to be elected. This affords him a check on the power of the local party organization, but it has produced little more independent voting than we have in the United States. At the end of the polling the seats are allotted according to a mathematical calculation devised by Professor Victor d'Hondt of the University of Ghent, the most perfect scheme yet invented. . . . Apparently complicated, the proportional system is in practice very simple, and even the large cities usually finish their calculations during the evening of election day. The mathematical reckoning is done by expert accountants, so that the system offers no difficulties to the voter. Belgian electors are diligently educated up to the business of voting without confusion or mistake,

and the number of spoiled ballots is small. Proportional representation has not increased the number of small parties as was feared before its adoption. The four great parties continue to poll the largest part of the votes. Public interest in politics has been enlivened by reviving vigorous and effective party activity, and preventing the tyranny of the majority. Most salutary of all the effects of proportional representation has been the closing of the rift which was rapidly widening between the Walloons and the Flemish, when the Catholics and the Socialists were left face to face with no mediators after the introduction of universal suffrage. Its desirability is no longer open to serious question. The leaders of all the chief parties and the bulk of the voters seek, not to abolish proportional representation, but to make it more perfect."—C. Seymour and A. P. Frary, *How the world votes*, v. 2, pp. 198-199, 201-202.

Denmark.—"The system employed in Denmark is as follows. Before the seats have been allotted, the total number of votes cast is divided by the number of deputies to obtain the electoral quotient. The total vote of each party is divided by this quotient to see how many of the deputies it should have. It is then calculated how many seats each party actually won in the separate constituencies, and how many additional ones it needs to fill out its proper quota. Parties which returned no deputies at all from the constituencies get none of the additional seats, nor do those which returned their full quota. The additional seats which the other parties gain are awarded within the party to those candidates who polled the highest number of votes and yet failed of election on the first distribution of seats."—C. Seymour and A. P. Frary, *How the world votes*, v. 2, pp. 179-180.

ALSO IN: J. R. Commons, *Proportional representation*.

England.—"The practicability and desirability of proportional representation was under investigation in the United Kingdom, during 1909, by a Royal Commission, which had frequent sessions for hearings at Whitehall. At a hearing in October Lord Hugh Cecil, who represented Oxford in the House of Commons, argued with great force in favor of proportional representation, as a means of moderating the constraint exercised over independent opinion by party ties. He said that the present system was not satisfactory. It greatly hindered free discussion in the House of Commons, and tended to exaggerate there the intensity of feeling and the rigidity of the party system. Majorities were generally large, and often it was merely a trial of endurance. The empty condition of the House on many occasions proved that discussion never influenced divisions, and there was an elimination of independent opinion. Decisions were on party issues, except when new subjects such as the fiscal question, were brought forward. With smaller majorities independent opinion—specific rather than general—would have more opportunity, and that would be a gain. There was a growing tendency to lift foreign politics, and to a lesser degree, colonial politics beyond party, and to a large extent the government could count on the support of moderate opponents when foreign and colonial matters were considered. He did not think the effect of proportional representation would be to form any more groups than they had at present, but his desire was that there should be members who were not absolute party men, and independent members would have more chance of getting returned. He considered that desirable, and did not apprehend

the return of faddists. Even now faddists were easily elected to Parliament, where for the most part they were disregarded. He did not agree that practically all sections of the community were represented under the existing system. A very large and important section between the two parties was never represented, having always to choose between one or the other extreme. Under the British Representation of the People Act of 1918 proportional representation is used in the election of the eleven university members of the Commons. This act also proposes to apply the scheme to one hundred parliamentary seats; but this provision has not yet been put into effect.—See also ENGLAND: 1918: Representation of the People Act.

ALSO IN: G. Wallas, *Human nature in politics*, pp. 217-226.—H. Cecil, *Proportional representation* (*Contemporary Review*, Dec., 1919, pp. 609-620).

South Africa.—"The principle of proportional representation was brought into practice in the municipal elections of the Transvaal in October, 1909. The Constitution of the Union of South Africa applies it, also, to the election of senators in the Union Parliament. "The proportional method chosen is, in each case, that of the single transferable vote, and the Johannesburg elections will furnish an example of the use of this system on a larger scale than any hitherto attempted, whilst the senatorial elections will furnish examples of its application to very small electorates. The duty of the voter, both in the senatorial and in the municipal elections, will be the same. He must place the figure 1 against the candidate for whom he desires to vote, and, in addition, he may and should place the figures 2, 3, 4, 5, 6, 7, and so on against the names of the other candidates in the order of his preference. The numbering of additional preferences, if not so vital as that of marking the first choice, is of extreme importance, and the elector should continue to indicate preferences until he has exhausted his powers of choice. The object, in marking preferences, is to prevent the waste of voting power. For, if the elector's first choice has obtained more votes than are necessary to secure his election, or if his first choice has obtained so few votes as to be hopelessly out of the running, the returning officer will carry forward these votes in accordance with the wishes expressed by the electors, as indicated by the preferences marked. . . . The vote is always credited to the first choice and is not transferred save in the contingencies named. If, however, no effective use can be made of the vote in the return of the elector's first choice the returning officer, in the absence of any instructions from the voter, will be unable to carry the vote forward, and the vote will therefore have no influence in determining the result of the election. Electors should therefore exercise to the full their privilege of marking preferences."—*The State* (*South African National Magazine*, Oct., 1909).

Sweden.—"Proportional representation in Sweden offers an interesting variant from the system in other countries, although in the main it is similar to the method employed in Belgium. In order to preserve the fullest liberty to the elector there are no official ballots or nominations. Party organizations print their own ballots, which are accepted by the returning officers; but the voter is free to change these at will. The voter may or may not indicate at the top of his ballot the party to which he belongs. The names on the ballot prepared by the voter must appear in vertical succession, and must not exceed the number to be elected by more than two. In counting, the papers with indications

as to party are grouped together, and the others are put in a 'free group.' The votes obtained by each party list are reckoned up, and the proper number of seats allotted to the list according to the Hondt rule. In Sweden, however, the seats are distributed one at a time, the first to the highest candidate, whose list must wait until the number represented by one-half its total vote is reached; the second highest candidate next; and so on."—C. Seymour and D. P. Frary, *How the world votes*, v. 2, p. 184.

United States.—In the United States proportional representation is making its chief appeal to the cities. In 1894, the Proportional Representation Society addressed the members of the New York constitutional convention as follows:—"At present instead of representative men 'available' candidates are nominated. These are often selected because their opinions are neutral and for that reason they will be opposed by the smallest number of voters. If candidates have any decided views on important public questions they are too often compelled to secure their election by the sacrifice of their independence. . . . The principle of proportional representation appeals with special cogency to those considerable classes of voters, like farmers, mechanics and laboring men who have interests which they feel should be represented, but whose numbers and influence frequently do not permit them to control majorities. It would generally enable any of these classes of people consisting of a considerable fraction of all, to select and elect one or more candidates of their own, in whose ability, integrity and wisdom they would have confidence. The complaint is a very old one that the workingmen are not adequately represented in our legislative bodies. . . . Proportional representation requires (1) the abolition of districts from which single representatives are to be elected (2), the creation of large districts from which several representatives shall be elected, and (3) the adoption of some method of election which will enable voters to concentrate their support on a single candidate. . . . In 1870 the people of Illinois revised their state constitution and adopted the following article: 'The House of Representatives shall consist of three times the number of the members of the senate, and the term of office shall be two years. These representatives shall be elected in each senatorial district at the general election in the year A. D. 1872, and every two years thereafter. In all elections of representatives aforesaid, each qualified voter may cast as many votes for one candidate as there are representatives to be elected, or may distribute the same or equal parts thereof among the candidates as he shall see fit, and the candidates highest in votes shall be declared elected.' The effect of this provision has been that if any body of voters in a district has more than a fourth of the votes, by giving all of them or 'plumping,' as it is called, for one candidate they can elect him, no matter how the majority who are opposing them may combine. On the other hand, the majority, by dividing their votes equally between two candidates—that is each voter giving $1\frac{1}{2}$ votes to each candidate—can elect both. Thus, both the majority and the minority in the district are represented—the majority by two representatives and the minority by one. This method of electing representatives in 1892 gave every district in the state one or two representatives of each of the dominant parties in the House of Representatives. . . . The practical result of the Illinois system is to give the minority party in *all* the districts of the state

a representation in the legislature, and it thus obviates some of the evils resulting from the election of single representatives in each district by a mere majority of the voters. This system has been adopted in Illinois for more than twenty years and its operation has been generally satisfactory to the people of that state. It at any rate has accomplished its original purpose, that of giving minorities representation. With two parties in the field there are always three candidates, sometimes four, to select from, three of whom can be elected. Consequently the voter has considerably more freedom of choice and freedom of voting than under the old system, when only one member is elected. It also favors independent voting because any number of voters in a district, greater than a fourth, who unite, can always elect a candidate. For the reason that it gives electors much greater freedom in the election of candidates, the system was very appropriately called by the late Senator Buckalew, of Pennsylvania, who was its great advocate—"Free Voting." . . . The aim of this system is to give a nearly complete representation of the qualified voters, so that not merely the part which is victorious at the polls shall be represented in the representative chamber; that is to say, not a majority in single constituencies who succeed in electing their representatives, but also the minority in all those constituencies who have unavailingly cast their votes for defeated candidates, are to find proper representation by this improved system of voting, and that the question to be decided at the polls is not which party is to be represented, but how many are to represent the various opinions. It has been explained that the general principle upon which the system of free voting is based is, first, the enlargement or consolidation of the districts and the election of *more* than two members from each, then by allowing each voter to distribute his votes among the candidates as he shall see fit, it places it in the power of a fraction of *much less than a majority* of the voters in a district to elect a candidate. Thus, in Illinois, when three members of the House of Representatives are elected from each district, any number of voters greater than a fourth who unite on a candidate can elect him, no matter how their opponents may combine their votes against them. The effect of this is that whenever a minority of citizens consisting of more than a fourth of the voters combine they can secure a representative, even though the political managers have complete control of a portion or all the rest of the voters. The influence which they exert is thus very much lessened, and the corrupt 'remnant' are powerless to get complete control of elections. If five members were elected in a district, then any number of voters greater than a sixth can elect a candidate; if seven are chosen the elective quota would be one more than an eighth of all the voters."—Proportional Representation Society, *Address to members of the constitutional convention of the state of New York*, pp. 4-7, 10, 13-15.—In 1896 the commission which framed the charter for the greater city of New York declared it, a source of sincere regret that "under the constitution of the State as it now stands, it has appeared to be impossible to provide for minority or proportional representation in the charter of Greater N. Y., without making a vital part of the charter depend upon a provision of uncertain constitutionality." In 1915, the city of Ashtabula, Ohio, adopted a charter which provided for city-manager government and for the election of the council by the Hare or Single transferable vote system. A similar system was

adopted in Boulder, Colorado, in 1915; in Kalamazoo, Michigan, in 1918; in Sacramento, California, in 1920; and in Cleveland, Ohio, in 1921; but the provisions of the Kalamazoo charter were soon declared void.

PROTECTORATES AND SPHERES OF INFLUENCE: Protected independent states.—"These States retain their domestic autonomy, and in general their right of control over their foreign relations with such exceptions, however, as the treaties they have entered into with the protecting State or States happen to call for. . . . A few are under the protection of Great Powers as a body, while others are under the protection of single States. Morocco was recognized by the general act of the Algeciras Conference as an independent State, but the provisions made for reforms in the administration of the country and in the disposition of its commercial facilities amount to the creation of an international protectorate over it. Albania was recognized as autonomous by the London Ambassadorial Conference of 1912, and given a special form of government under international control. In the case of China a number of treaties have been entered into between the State and the Great Powers by which a variety of restrictions have been placed upon the exercise of functions belonging to the normal State, but they are not to be regarded as placing China in the position of a protected State. . . . The extraterritorial jurisdiction of foreign powers in China, the foreign concessions or settlements in a number of its cities, and the administration by foreigners of certain services, such as the salt tax and the maritime customs, . . . [are] restrictions to which China is subject. . . . Cuba represents perhaps the best example of an independent State under the protection of a single power. The restrictions placed upon Cuba by the Platt Amendment have not been regarded as an infringement of its international personality and have not excluded that State from a place within the family of nations or deprived it of representation at international conferences. What is to be the ultimate position of the Dominican Republic and of Haiti in consequence of the treaties entered into by those countries with the United States in 1907 and 1915 it is difficult to determine at present. So also the position of Persia, which, in 1907, was forced to submit to having 'spheres of influence' inscribed within its territory by Great Britain and Russia, is for the present uncertain. Abyssinia still

remains nominally independent under the joint guaranty and protection of Great Britain, France, and Italy."—W. W. Willoughby and C. G. Fenwick, *Types of restricted sovereignty and of colonial autonomy*, p. 7.

Guaranteed states.—"There are now in force a number of treaties in which the signatory powers have undertaken to guarantee the independence and territorial integrity of a particular State without at the same time imposing such restrictions upon it as to amount to placing it in the condition of a protected State. Such is the character of the treaty of 1907 by which Great Britain, Germany, France, and Russia agreed among themselves to respect the integrity of Norway and to protect it against attacks by others, but without making any demands upon Norway in return. This agreement falls short of putting Norway in the position of a neutralized State, but it at least assures Norway of protection as an independent State. Cuba, by contrast with Norway, has received a guaranty of its independence from the United States, but the restrictions accepted by Cuba upon its free conduct in certain matters actually place it in the status of a protectorate, though it is not thereby excluded from membership within the family of nations. The independence of Panama has been guaranteed by the United States without imposing upon it any formal restrictions other than those involved in the right of the United States to maintain order in the cities of Panama and Colon in case the Republic of Panama should be unable to do so. Montenegro, Serbia, and Roumania received an informal guaranty of their independence when they were 'recognized as independent' by the Congress of Berlin. In return for this recognition the signatory powers imposed upon those States certain restrictions upon the exercise of their new sovereignty which had in view the maintenance both of the domestic peace of those States and of the general peace of the Balkan Peninsula. . . . This category applies for the most part to semi-civilized or at least politically undeveloped communities which are not members of the family of nations. Though called States, and possessing a greater or less degree of nominal independence, they are virtually dependencies of the protecting power. Their relations to the protecting power are fixed by treaties, a fact which distinguishes their position from that of colonies possessing a similar degree of control over their domestic affairs. The best examples of this category are exhibited by the so-called native or protected States of India in their relation to the British Empire. They do not hold political intercourse with other powers, and they admit a certain amount of interference by Great Britain in their domestic affairs."—W. W. Willoughby and C. G. Fenwick, *Types of restricted sovereignty and of colonial autonomy*, pp. 7-9.

Colonial protectorates.—"These are regions of territory in which there is no organized State recognized as such by international law and over which the protecting power undertakes to exercise control with the formal consent of the native chiefs or tribes in occupation of the territory. [They are usually African or Asiatic territories of a very primitive character.] In fact, however, in practically all cases the protectorate itself has had no say with regard to the status imposed upon it. The use of the term 'protectorate' by the protecting power is simply one of convenience, and when first applied indicates that the territory has not been effectively occupied so as to give title by right of occupation but that no other State may make any claims to jurisdiction or deal with the region in question except through the protecting State. 'Co-

lonial protectorate' is thus a term invented to give control over an area to a State before it is ready actually to annex it. Technically the inhabitants are not citizens or subjects of the protecting State, and the protectorate would not ipso facto cease to be neutral should its protecting State go to war."—*Ibid.*, p. 9.

Spheres of influence.—"A 'sphere of influence,' as distinguished from a colonial protectorate, does not involve occupation of the territory or the establishment there of any machinery of government. It is more in the nature of a claim of first option to the exercise of commercial, industrial, and possibly of political rights within the region in question and operates as a caveat, informing other powers that an attempt on their part to extend their influence into that region will be regarded as an unfriendly act. In some cases the claim of this sphere of influence is founded upon treaties between the powers claiming it and the State having sovereignty over the territory, and in other cases upon treaties between that power and other powers that have bordering interests."—*Ibid.*, p. 10.

Administered states or provinces.—"The history of international relations furnishes a number of instances in which political areas, while remaining under the nominal sovereignty of one State, have been placed under the exclusive administrative control of one or more other States. The chief instances are to be found in connection with certain provinces of the Turkish Empire which the powers wish to detach from the control of Turkey without formally repudiating its sovereignty over the said provinces. For example, Bosnia and Herzegovina were placed by the treaty of Berlin in 1878 under the administrative control of Austria-Hungary, though still nominally under the sovereignty of the Porte. Cyprus, under the treaty of 1878 between Turkey and Great Britain, was placed under the Administrative control of the latter State. Egypt during the period from 1883 to 1914 came so largely under the administrative control of Great Britain as to approximate to the status of an administered province, although nominally it remained a vassal state of Turkey. During the period from 1899 to 1902, when the United States remained in military occupation of Cuba pending the organization of a stable national government, the administration of the island bore a resemblance to that of an administered province, the United States acting as trustee for the future Cuban state whose existence it had guaranteed. [See also CUBA: 1898-1899 (December-October), to 1901-1902.] At the present time Haiti and the Dominican Republic, although sovereign States in other respects, are being substantially administered by the United States."—*Ibid.*, p. 11.—See also HAITI, REPUBLIC OF: 1911-1916.

Autonomous colonies and dependencies.—"The self-governing 'dominions' of Great Britain furnish the best illustrations of autonomous colonial government, but other less fully autonomous colonies of Great Britain are included in this study by way of comparison. [See BRITISH EMPIRE: Governments of the empire.] For the same reason the reorganization of the Porto Rican Government, under the act of 1917, is included, although it marks a step toward the inclusion of that dependency within the Federal Government of the United States. On the other hand the act of 1916 providing for the reorganization of the Government of the Philippine Islands, provides a more autonomous government for that dependency with the object of preparing the islands for ultimate independence. British India presents a more

difficult problem. Under its present form of government British India is neither autonomous nor self-governing, for, while the British Parliament rarely legislates directly for India, the administration of India is entirely within British control, and the delegation of power entrusted to the governor general in council is the result of an unilateral act on the part of Great Britain. The interest of British India in connection with the present report arises from the fact that the British Government has now before it a Report on Constitutional Government for India, which presents a comprehensive scheme of reforms in the direction of 'the progressive realization of responsible government.' Should this report be adopted by Parliament, British India would at once assume a unique and most instructive position among the autonomous colonies and dependencies of the Great Powers."—*Ibid.*, pp. 11-12.

PROTESTANT EPISCOPAL CHURCH: 1607-1776.—Part of the Church of England.—"The beginnings of the Church of England in this country [United States] reach back into the seventeenth century, although the Protestant Episcopal Church was not formally organized as an independent branch until 1785. [The name refers only to that branch of the Church of England in America.] Clergymen of the Church of England accompanied the early colonists . . . across the sea. . . . In 1607 worship according to the Anglican ritual was established in the new colonies at Jamestown, Va., and Kennebec, Me. It was soon discontinued in Maine, but in Virginia it was not interrupted. An Episcopal congregation was gathered in New Hampshire in 1631, and parishes were formed in other parts of New England and the Middle States in the early colonial days, Trinity parish, New York City, being constituted in 1693, and Christ Church parish, in Philadelphia, in 1695. The church became the established church in New York, New Jersey, Maryland, Virginia, South Carolina, and Georgia. In Virginia, for a considerable period, no other form of worship was tolerated. In Massachusetts, on the other hand, the Anglican service was not allowed until liberty for it was secured by royal proclamation in 1662. The Episcopal Church received considerable assistance from England, particularly from the Society for the Propagation of the Gospel, organized in 1701, which sent over many missionaries. It is said that at the beginning of the Revolutionary War the society was maintaining about eighty missionaries in the colonies."—H. K. Carroll, *Religious forces of the United States*, p. 317-318.

1776-1789.—Confusion and disorganization.—Results of the Revolutionary War.—Attempts to organize.—"The close of the war found the Episcopal churches thoroughly disorganized. . . . The Maryland churches elected Dr. William Smith bishop and the Connecticut churches, Dr. Samuel Seabury. No steps were taken by Dr. Smith toward consecration, but Dr. Seabury went to England and applied to the Archbishop of Canterbury. The latter received him cordially but could not see his way clear to accede to his request under the existing political conditions. Dr. Seabury, therefore, applied to the non-juring Scottish

bishops, who, after some hesitation, performed the office, in November, 1784. As it became evident that the Episcopal churches of the different states were organizing independently, a movement to constitute an Episcopal Church for the whole United States was inaugurated, largely by the initiative of Dr. William White. . . . The project of a general convention aroused varying sentiments. In the South it was feared that too much ecclesiastical authority would be assumed by it, while in the North it was feared that too much would be conceded to it. . . . While no serious disposition to question the validity of Bishop Seabury's consecration was manifested, yet the desire was general to be connected with the Church of England rather than with that of Scotland. . . . In 1789 a union of the different forces was effected. . . . Two houses were constituted in the General Convention, and the constitution and Book of Common Prayer were adopted. Thus the same year that saw the complete organization of the Federal Government witnessed also the full equipment of the Protestant Episcopal Church. . . . Four bishops . . . united in 1792 in the ordination of Dr. Thomas John Claggett, Bishop of Maryland, and thus was inaugurated the distinctively American Episcopate."—United States Census, *Religious bodies*, 1916, pt. 2, pp. 609-610.

1789-1811.—Period of suspended animation.—"The Protestant Episcopal Church, notwithstanding its new home and constitution, was popularly regarded as an English institution, and distrusted or hated accordingly. . . . The church . . . was misunderstood in its temper and spirit; and had it been at that time understood, it would not have been better liked. The religious sentiment of the day demanded more fervor of personal expression in worship. . . . The prevailing religious temper was largely subjective. The liturgical tone of the church was largely objective. . . . Its own faults, as well . . . hindered its advance. It was nowhere a type of vigorous earnestness or aggressive spirituality. . . . The departure of the Methodists of the South had left the church there in a sort of respectable torpor; and the Congregationalists and Presbyterians of the Western and Middle States stood aloof on both patriotic and ecclesiastical grounds. . . . The records of the General Conventions of this period show the paucity of growth by the slender representation of the churches."—C. C. Tiffany, *History of the Protestant Episcopal church*, pp. 386-387.

1811-1836.—Aggressive leadership and polity.—"The period which now comes before us marks a distinct advance in the history of the Protestant Episcopal Church. It is distinguished at the outset by the consecration to the Episcopate of a group of three men who had a formative influence over its life and character. . . . The . . . group of bishops who shaped its destinies were John Henry Hobart, Alexander V. Griswold, and Richard Channing Moore. . . . Bishop Hobart . . . was the originator of many societies for the advancement of the church. . . . He was earnest in missionary enterprises. . . . Bishop Griswold . . . recreated the Episcopal Church in all New England outside of Connecticut . . . [while] the episcopate of the Rev. Richard Channing Moore . . . for Virginia and the South was as epoch-making as that of Bishop Hobart in New York and Bishop Griswold in New England. . . . The Domestic and Foreign Missionary Society was formally inaugurated . . . in 1821. . . . The great hindrance before this time to planting missions in the new States and Territories had been the identity of the state with the diocese. It was not until 1838 that the word

'State' was replaced by the word 'Diocese' in the constitution. . . . There thus existed for years many dioceses which were represented in the General Convention only in the House of Clerical and Lay Deputies, because there was no bishop. . . . At this last Convention [1835] before the death of Bishop White the clergy list, which in 1811 had contained one hundred and sixty-nine names (Virginia not included), had grown to include seven hundred and sixty-three. The two bishops . . . who were in attendance then, were now represented by fourteen bishops. . . . Nine States were represented in 1811; in 1835 twenty-one."—C. C. Tiffany, *History of the Protestant Episcopal church*, pp. 410, 416, 424, 444-445, 453.

1836-1874.—Internal dissensions.—As in the Church of England, two parties developed in the American church, the high-church party and the evangelicals. "The Oxford movement was discussed in pulpits and from the press at the session of the diocesan Conventions, and at length became the absorbing topic of debate at the meeting of the General Convention of 1844. . . . The opponents of the 'Tractarian' school were in earnest in their efforts to withstand the inroads of that which they characterized as 'another gospel.' The alterations which had been made in the conduct of the services of the Church; the new interpretations of our doctrinal standards which were proposed; the changed attitude which the Church was called upon to take before the Christian world, aroused a fierce opposition on the part of those whose sympathies were with the 'Evangelical' school; . . . the whole church was in arms. . . . It was felt by numbers . . . that 'Anglo-Catholic teachings seemed to lead to Roman Catholic conclusions.' The reaction from any tendency of this nature came when . . . defections abroad were followed by the perversion of one and another of our own Church, laymen and lay-women, deacons, priests, and finally, a bishop of the American Church. The shock was great. But with this culminating act . . . the tide, which had seemed at one time setting toward Rome, turned. Another cause of division in the ranks of the church during this period was the outbreak of the Civil War. With the close of the war, however, the different dioceses became again members of the General Convention and the breach was immediately healed."—W. S. Perry, *History of the American Episcopal church*, v. 2, pp. 270-272.—The old ritualist controversy was renewed soon after the close of the war, reaching its height in 1873 when certain of the extreme evangelicals led by Bishop George D. Cummins, of Kentucky withdrew and organized the Reformed Episcopal Church. In 1874 a canon limiting communion ritual was enacted (repealed in 1904), and after that time the excitement of the controversy cooled down.

1873-1910.—Toleration and harmony.—Soon after the secession of Bishop Cummins and his followers was "the introduction of a church congress, which gave to churchmen of different types opportunity to compare views and present ideals. Dominated largely by what became known as the broad church doctrine, it has served to emphasize harmony rather than diversity and has formed a strong factor in church life. Similar influence has been exerted by the Brotherhood of St. Andrew, founded in 1880, while the increasing emphasis on missionary work, both at home and abroad, has called forth many latent energies and at the same time has brought the church into sympathetic and cooperative relations with other Chris-

tian bodies."—United States Census, *Religious bodies*, 1916, pt. 2, p. 611.

1910-1920.—Question of church unity.—"At the General Convention of the Protestant Episcopal Church held in Cincinnati, in 1910, a movement was inaugurated to bring about a World Conference on Faith and Order to be participated in by all Christian Communions, throughout the world, both Catholic and Protestant which confess . . . Jesus Christ as God and Saviour. In spite of the great difficulties arising from the war the work of preparation for this gathering has steadily proceeded. Almost all the great Communions of the world including the Eastern and Anglican Churches have identified themselves with the movement and the assembling of the Conference at no distant day seems now to be an assured fact. An important preliminary Conference for the furtherance of this undertaking . . . [has recently been] held at Geneva. In England the preparatory work for the World Conference has brought forth two remarkable Interim Reports signed jointly by leading representatives of the Free Churches and of the Church of England. The second of these reports . . . marks notable advance in the movement towards unity. . . . At the . . . General Convention, held in Detroit, in 1919, a Proposal was presented providing for approach toward unity between the Protestant Episcopal Church and the Congregational Church. . . . The plan suggested by the Bishop of London for approach between the Church of England and the Wesleyan Methodist Church and that suggested by the Bishop of Zanzibar as a basis for the union of the Churches in East Africa are, in principle, the same as the proposed Concordat between the Congregational and Episcopal Churches in the United States. . . . If the Anglican church will now follow out to their full implications the principles embodied in her formularies she may play a great part in the reunion of Christendom. Approach toward Rome at this time is not possible. But reunion between the Anglican and the Eastern Churches seems to be near at hand. And there is today in the Protestant Churches an eager, almost passionate, desire for unity."—W. T. Manning, *Call to unity*, pp. 49-50, 53-56, 118.—"In 1920 the Protestant Episcopal Church in the United States reported 8,103 churches and 1,065,825 members. The Reformed Episcopal Church had 65 churches and 11,800 members."—*Federal Council of Churches of Christ in America, Year Book of the Churches*, 1920, p. 201.—See also BISHOP: Since the Reformation.

PROVENCE, Comte de. See LOUIS XVIII.

PROVENCE: Roman origin.—"The colonization of Narbo [Narbonne, 118 B. C.] may be considered as the epoch when the Romans finally settled the province of southern Gallia, which they generally named Gallia Provincia, and sometime simply Provincia. From the time of Augustus it was named Narbonensis Provincia, and sometimes Gallia Braccata. It comprehended on the east all the country between the Rhone and the Alps. The most northeastern town in the Provincia was Geneva in the territory of the Allobroges; Massilia, the ally of Rome, remained a free city. On the west side of the Rhone, from the latitude of Lugdunum (Lyon), the Cevenna, or range of the Cévennes, was the boundary of the Provincia. . . . The limits of the Provincia were subsequently extended to Carcaso (Carcassone) and Tolosa (Toulouse); and it will appear afterwards that some additions were made to it even on the other side of the Cévennes. This country is a part of France which is separated by natural boundaries from the rest of that great empire, and in climate and products it is Italian rather than French. In the Provincia the Romans have left some of the noblest and most enduring of their great works."—G. Long, *Decline of the Roman republic*, v. 1, ch. 22.—The Provincia of the Romans became the Provence of medieval times. See FRANCE: Maps of Medieval period: 1154-1360.

Cession to Visigoths.—"The fair region which we now call Provence, nearly the earliest formed and quite the latest lost 'Provincia' of Rome, that region in which the Latin spirit dwelt so strongly that the Roman nobles thought of migrating thither in 401, when Alaric first invaded Italy, refused to submit to the rule of the upstart barbarian [Odoacer, or Odovacar, who subverted the Western em-

pire in 476]. The Provençals sent an embassy to Constantinople to claim the protection of Zeno for the still loyal subjects of the Empire." But Zeno "inclined to the cause of Odovacar. The latter, however, who perhaps thought that he had enough upon his hands without forcing his yoke on the Provençals, made over his claim to Euric king of the Visigoths, whose influence was at this time predominant in Gaul."—T. Hodgkin, *Italy and her invaders*, v. 3, bk. 4, ch. 4.—See also ARLES: 508-510.

493-526.—Embraced in Ostrogothic kingdom of Theodoric. See ROME: Medieval city: 488-526.

536.—Cession to Franks.—Out of the wreck of the Visigothic kingdom in Gaul, when it was overthrown by the Frank king, Clovis, the Ostrogothic king of Italy, Theodoric, seems to have secured Provence. Eleven years after the death of Theodoric and on the eve of the subversion of his own proudly planted kingdom, in 536, his successor Witigis, or Vitigis, bought the neutrality of the Franks by the cession to them of all the Ostrogothic possessions in Gaul, which were Provence and part of Dauphiné.—T. Hodgkin, *Italy and her invaders*, v. 3, bk. 4, ch. 9 and v. 4, bk. 5, ch. 3.

877-933.—Kingdom. See BURGUNDY: 843-933.

943-1092.—Kings become counts.—Spanish connection.—Development of chivalry and poetry as a prelude to medieval art and civilization.—"Southern France, . . . after having been the inheritance of several of the successors of Charlemagne, was elevated in 870 to the rank of an independent kingdom by Bozon, who was crowned at Mantes under the title of King of Arles, and who reduced under his dominion Provence, Dauphiny, Savoy, the Lyonnaise, and some provinces of Burgundy. The sovereignty of this territory exchanged, in 943, the title of King for that of Count, under Bozon II.; but the kingdom of Provence was preserved entire, and continued in the house of Burgundy, of which Bozon I. was the founder. This noble house became extinct in 1092, in the person of Gilibert, who left only two daughters, between whom his possessions were divided. One of these, Faydide, married Alphonso, Count of Toulouse; and the other, Douce, became the wife of Raymond Berenger, Count of Barcelona. . . . The accession of Raymond Berenger, Count of Barcelona and husband of Douce, to the throne of Provence, gave a new direction to the national spirit by the mixture of the Catalans with the Provençals. . . . Raymond Berenger and his successors introduced into Provence the spirit both of liberty and chivalry, and a taste for elegance and the arts, with all the sciences of the Arabians. The union of these noble sentiments gave birth to that poetical spirit which shone out, at once, over Provence and all the South of Europe, like an electric flash in the midst of the most palpable darkness, illuminating all things by the brightness of its flame."—J. C. L. S. de Sismondi, *Literature of the South of Europe*, v. 1, ch. 3.—See also BURGUNDY: 1032.

1179-1207.—Age of chivalry.—Refinement of life.—Luxury.—Courts of love.—"At the accession of Philippe Auguste [crowned as joint-king of France, 1179, succeeded his father, 1180], the greater part of the south of France was holden, not of him, but of Pedro of Arragon, as the supreme suzerain. [See SPAIN: 1035-1258.] To the Arragonese king belonged especially the counties of Provence, Forcalquier, Narbonne, Beziers, and Carcassonne. His supremacy was acknowledged by

the Counts of Bearn, of Armagnac, of Bigorre, of Cummings, of Foix, of Roussillon, and of Montpellier; while the powerful Count of Toulouse, surrounded by his estates and vassals, maintained with difficulty his independence against him. To these extensive territories were given the names sometimes of Provence, in the larger and less exact use of that word, and sometimes of Languedoc, in allusion to the rich, harmonious, picturesque, and flexible language which was then vernacular there. [See LANGUEDOC.] They who used it called themselves Provençaux or Aquitanians, to indicate that they were not Frenchmen, but members of a different and indeed of a hostile nation. Tracing their descent to the ancient Roman colonists and to the Gothic invaders of Southern Gaul, the Provençaux regarded with a mixture of contempt, of fear, and ill will, the inhabitants of the country north of the Loire, who had made far less progress than themselves, either in civil liberty, or in the arts and refinements of social life. . . . Toulouse, Marseilles, Arles, Beziers, and many other of their greater cities, emulous of the Italian republics, with whom they traded and formed alliances, were themselves living under a government which was virtually republican. Each of these free cities being, however, the capital of one of the greater lords among whom the whole of Aquitaine was parceled out, became the seat of a princely and luxurious court. A genial climate, a fertile soil, and an active commerce, rendered the means of subsistence abundant even to the poor, and gave to the rich ample resources for indulging in all the gratifications which wealth can purchase. . . . They lived as if life had been one protracted holiday. Theirs was the land of feasting, of gallantry, and of mirth. . . . They refined and enhanced the pleasures of appetite by the pleasures of the imagination. They played with the stern features of war in knightly tournaments. They parodied the severe toils of justice in their courts of love. They transferred the poet's sacred office and high vocation to the Troubadours, whose amatory and artificial effusions posterity has willingly let die, notwithstanding the recent labours of M.M. Raynouard and Fauriel to revive them."—J. Stephen, *Lectures on the history of France*, lecture 7.—"In the south of France, more particularly, peace, riches, and a court life, had introduced, amongst the nobility, an extreme laxity of manners. Gallantry seems to have been the sole object of their existence. The ladies, who only appeared in society after marriage, were proud of the celebrity which their lovers conferred on their charms. They were delighted with becoming the objects of the songs of their Troubadour; nor were they offended at the poems composed in their praise, in which gallantry was often mingled with licentiousness. They even themselves professed the Gay Science, 'el Gai Saber,' for thus poetry was called; and, in their turn, they expressed their feelings in tender and impassioned verses. They instituted Courts of Love, where questions of gallantry were gravely debated and decided by their suffrages. They gave, in short, to the whole south of France the character of a carnival, affording a singular contrast to the ideas of reserve, virtue, and modesty, which we usually attribute to those good old times."—J. C. L. S. de Sismondi, *Literature of the South of Europe*, v. 1, ch. 3.—See also TROUBADOURS.

PRUSSIA: Original country and its name.—"Five-hundred miles, and more, to the east of Brandenburg, lies a Country then [10th century] as now called Preussen (Prussia Proper), inhabited by Heathens, where also endeavours at conversion are going on, though without success hitherto. . . . Part of the great plain or flat which stretches, sloping insensibly, continuously, in vast expanse, from the Silesian Mountains to the amber-regions of the Baltic; Preussen is the seaward, more alluvial part of this,—extending west and east, on both sides of the Weichsel (Vistula), from the

regions of the Oder river to the main stream of the Memel. [See also AUSTRIA: Birthplace.] 'Bordering-on-Russia' its name signifies: Bor-Russia, B'ussia, Prussia; or—some say it was only on a certain inconsiderable river in those parts, river Reussen, that it 'bordered,' and not on the great Country, or any part of it, which now in our days is conspicuously its next neighbour. Who knows?—In Henry the Fowler's time, and long afterwards, Prussen was a vehemently Heathen country; the natives a Miscellany of rough Serbic Wends, Letts, Swedish Goths, or Dryasdust knows not what;—very probably a sprinkling of Swedish Goths, from old time, chiefly along the coasts. Dryasdust knows only that these Preussen were a strong-boned, iracund herdsman-and-fisher people; highly averse to be interfered with, in their religion especially. Famous otherwise, through all the centuries, for the amber they had been used to fish, and sell in foreign parts. . . . Their knowledge of Christianity was trifling; their aversion to knowing anything of it was great."—T. Carlyle, *Fredrick the Great, bk. 2, ch. 2.*

13th century.—Conquered and Christianized by Teutonic Knights.—The first Christian missionary who ventured among the savage heathen of Prussia proper was Adalbert, bishop of Prague, who fell a martyr to his zeal in 997. For two centuries after that tragedy they were little disturbed in their paganism; but early in the 13th century a Pomeranian monk named Christian succeeded in establishing among them many promising churches. The heathen party in the country, however, was enraged by the progress of the Christians and rose furiously against them putting numerous converts to the sword. "Other agencies were now invoked by Bishop Christian, and the 'Order of Knights Brethren of Dobrin,' formed on the model of that which we have already encountered in Livonia, was bidden to coerce the people into the reception of Christianity. But they failed to achieve the task assigned them, and then it was that the famous 'Order of Teutonic Knights,' united with the 'Brethren of the Sword' in Livonia, concentrated their energies on this European crusade. Originally instituted for the purpose of succouring German pilgrims in the Holy Land, the 'Order of Teutonic Knights,' now that the old [Palestinian] crusades had become unpopular, enrolled numbers of eager adventurers determined to expel the last remains of heathenism from the face of Europe. After the union of the two Orders had been duly solemnized at Rome, in the presence of the Pope, in the year A. D. 1238, they entered the Prussian territory, and for a space of nearly fifty years continued a series of remorseless wars against the wretched inhabitants. Slowly but surely they made their way into the very heart of the country, and secured their conquests by erecting castles, under the shadow of which rose the towns of Culm, Thorn, Marienwerder, and Elbing, which they peopled with German colonists. The authority of the Order knew scarcely any bonds. Themselves the faithful vassals of the Pope, they exacted the same implicit obedience, alike from the German immigrant, or colonist, and the converted Prussians. . . . In 1243 the conquered lands were divided by the Pope into three bishoprics, Culm, Pomerania, and Ermeland, each of which was again divided into three parts, one being subject to the bishop, and the other two to the brethren of the Order."—G. F. Maclear, *Apostles of mediæval Europe, ch. 16.*—"None of the Orders rose so high as the Teutonic in favour with man-

kind. It had by degrees landed possessions far and wide over Germany and beyond, . . . and was thought to deserve favour from above. Valiant servants, these; to whom Heaven had vouchsafed great labours and unspeakable blessings. In some fifty or fifty-three years they had got Prussian Heathenism brought to the ground; and they endeavoured to tie it well down there by bargain and arrangement. But it would not yet lie quiet, nor for a century to come; being still secretly Heathen; revolting, conspiring ever again, ever on weaker terms, till the Satanic element had burnt itself out, and conversion and composure could ensue."—T. Carlyle, *Frederick the Great*, v. 1, bk. 2, ch. 6.—See also LIVONIA: 12-13th centuries.

1466-1618.—Conquest and annexation to Polish crown.—Surrender by Teutonic Knights.—Erection into a duchy.—Union with electorate of Brandenburg. See POLAND: 1333-1572; BRANDENBURG: 1417-1640.

1618-1700.—Protestant religions of every denomination favored in Hohenzollern state.—"The whole territory of the new duchy of Prussia was alienated ecclesiastical land; the pope's anathema and the emperor's ban fell on the head of the renegade prince. Never was the Roman See willing to recognize such robbery. In uniting the ducal crown of their Prussian cousins with their own electoral hat the Hohenzollerns of the Mark broke forever with the Roman-church. Their state stood and fell henceforward with the fortunes of Protestantism. At the same time John Sigismund adopted the reformed creed. . . . At the same time of thus gaining a firm footing on the Baltic John Sigismund acquired the [Rhenish] duchy of Cleve together with the counties of Mark and Ravensberg,—a territory narrow in circumference but highly important for the internal development as well as for the European policy of the state. They were lands which were strongholds of old and proven peasant and civic freedom, richer and of higher capacities for culture than the needy colonies of the East, outposts of incalculable value on Germany's weakest frontier. In Vienna and Madrid it was felt as a severe defeat that a new evangelical power should establish itself there on the Lower Rhine where Spaniards and Netherlanders were struggling for the existence or non-existence of Protestantism—right before the gates of Cologne which was the citadel of Romanism in the empire. . . . A power so situated could no longer have its horizon bounded by the narrow circle of purely territorial policy; it was a necessity for it to seek to round off its widely scattered provinces into a consistent whole; it was compelled to act for the empire and to strike for it, for every attack of strangers on German ground cut into its own flesh. . . . For the House of Brandenburg, too, tempting calls often sounded from afar. . . . but a blessed Providence, which earnest thinkers should not regard as a mere chance, compelled the Hohenzollerns to remain in Germany. They did not need the foreign crowns, for they owed their independent position among other states to the possession of Prussia, a land that was German to the core, a land the very being of which was rooted in the mother country, and yet at the same time one that did not belong to the political organization of the empire. Thus with one foot in the empire, the other planted outside of it, the Prussian state won for itself the right to carry on a European policy which could strive for none but German ends. It was able to care for Germany without troubling itself about the empire and its

superannuated forms. . . . The state of the Hohenzollerns . . . was on the sure road to ruin so long as John Sigismund's successor looked sleepily into the world out of his languid eyes. . . . It was at this juncture that the elector Frederick William, the greatest German of his day, entered the chaos of German life as a prince without land, armed only with club and sling, and put a new soul into the slumbering forces of his state by the power of his will. From that time on the impulse of the royal will, conscious of its goal, was never lost to the growing chief state of the Germans. One can imagine English history without William III, the history of France without Richelieu; the Prussian state is the work of its princes. . . . [The "Great Elector" created one of the first standing armies. (See MILITARY ORGANIZATION: 27.)] Already in the first years of the rule of the Great Elector, the peculiar character of the new political creation shows out sharply and clearly. The nephew of Gustavus Adolphus who leads his army to battle with the old protestant cry of 'with God' resumes the church policy of his uncle. He it is who first among the strife of churches cries out the saving word and demands general and unconditional amnesty for all three creeds. This was the program of the Westphalian peace. And far beyond the provisions of this treaty of peace went the tolerance which the Hohenzollerns allowed to be exercised within their lands. . . . While Austria drives out its best Germans by force, the confines of Brandenburg are thrown open with unequalled hospitality to sufferers of every creed. How many thousand times has the song of praise of the Bohemian exiles sounded forth in the Marks! . . . When Louis XIV revokes the Edict of Nantes the little Brandenburg lord steps forth boldly against him as the spokesman of the protestant world, and offers through his Potsdam Edict shelter and protection to the sons of the martyred church. . . . Thus year after year an abundance of young life streamed over into the depopulated East Marks; the German blood that the Hapsburgs thrust from them fructified the land of their rivals, and at the death of Frederick II about a third of the inhabitants of the state consisted of the descendants of immigrants who had come there since the days of the Great Elector. . . . The particularism of all estates and of all territorial districts heard with horror how the Great Elector . . . supported his throne on the two columns of monarchical absolutism: the miles perpetuus and permanent taxation. In the minds of the people troops and taxes still passed for an extraordinary state burden to be borne in days of need. But Frederick William raised the army into a permanent institution and weakened the power of the territorial estates by introducing two general taxes in all his provinces. On the country at large he imposed the general hide-tax (*generalhufenschoss*), on the cities the *accise*, which was a multiiform system of low direct and indirect imposts calculated with full regard for the impoverished condition of agriculture and yet attacking the taxable resources at as many points as possible. In the empire there was but one voice of execration against these first beginnings of the modern army and finance system. Prussia remained from the beginning of its history the most hated of the German states; those imperial lands that fell to this princely dynasty entered, almost all of them, with loud complaints and violent opposition into this new political combination. All of them soon afterwards blessed their fate. . . . Frederick William's

successor by acquiring the royal crown gained for his house a worthy place in the society of the European powers and for his people the common name of Prussians. Only dire need, only the hope of Prussia's military aid, induced the imperial court to grant its rival the new dignity. A spasm of terror went through the [Roman] theocratic world: the electorate of Mainz entered a protest; the Teutonic Order demanded back again its old possession, which now gave the name to the heretical monarchy, while the papal calendar of states, for nearly a hundred years to come, was to know only a 'margrave of Brandenburg.'—H. von Treitschke, *Deutsche Geschichte im 19ten Jahrhundert* (tr. from the German), v. 1, pp. 26-36.—See also GERMANY: Map: At peace of Westphalia.

1700.—Dukedom erected into a kingdom.—In the last year of the seventeenth century, Europe was on the verge of the great War of the Spanish Succession. The emperor was making ready to contest the will by which Charles II of Spain had bequeathed his crown to Philip, duke of Anjou, grandson of Louis XIV of France. (See Spain: 1698-1700.) "He did not doubt that he would speedily involve England, Holland and the Germanic diet in his quarrel. Already several German princes were pledged to him; he had gained the Duke of Hanover by an elector's hat, and a more powerful prince, the Elector of Brandenburg, by a royal crown. By a treaty of November 16, 1700, the Emperor had consented to the erection of ducal Prussia into a kingdom, on condition that the new King should furnish him an aid of 10,000 soldiers. The Elector Frederick III apprised his courtiers of this important news at the close of a repast, by drinking 'to the health of Frederick I, King of Prussia'; then caused himself to be proclaimed King at Königsberg, January 18, 1701."—H. 1850-1918.—Constitution of 1850 and its operation.—"Prussia has, since 1850, had a Constitution and a Parliament. What are they like? The Constitution was granted by the King, and nowhere does it recognize the sovereignty of the people. What the monarch has granted he can alter or withdraw. All the restriction the Constitution imposes upon the monarchical principle is that henceforth it shall be exercised and expressed in certain forms, with a certain procedure. Prussian statesmen and Prussian jurists maintain with practical unanimity that this does not mean any diminution of the power of the monarch, that the fact that he creates a Legislature does not for an instant mean that he divelves upon it part of the sovereignty. The Legislature of Prussia is the Landtag, which consists of two chambers, the House of Lords and the House of Representatives. The Legislature does not initiate much legislation. Most of the bills passed by it have been proposed by the Government; that is, by the King. The Legislature has practically no control over the administration; that is, over the powerful and permanent bureaucracy. It can in this sphere express opinions and practically nothing more. The Constitution does not determine the composition of the House of Lords, but leaves that to the King to determine by royal ordinance. As a matter of fact, this House is really overwhelmingly dominated by the land-owning nobility, the famous

Junkers, men frequently more royalist than the King, conservative and militaristic to the marrow of their bones. The House is subject to the absolute control of the monarch through his unrestricted power to create peers. It is really a sort of royal council, an extension or variation of the royal power. It is a body that in no sense represents the people of Prussia. It has a veto upon all legislation, and the King has an absolute veto also. Yet there exists another House in this Legislature which enacts the laws that govern 40,000,000 Prussians—the so-called House of Representatives; and marvelous, indeed, is the construction and composition of that body. Every Prussian man who has attained his twenty-fifth year has the vote. Is Prussia, therefore, a democracy? Not exactly, for the exercise of this right is so arranged that the ballot of the poor man is practically annihilated. Universal suffrage has been rendered illusory. And this is the way it has been done: The voters are divided in each electoral district into three classes according to wealth. The amount of taxes paid by the district is divided into three equal parts. Those taxpayers who pay the first third are grouped into one class; those, more numerous, who pay the second third, into another class; those who pay the remainder, into still another class. The result is that a very few rich men are set apart by themselves, the less rich by themselves, and the poor by themselves. Each of these groups, voting separately, elects an equal number of delegates to a convention, which convention chooses the delegates of that constituency to the lower house of the Prussian Parliament. This system gives an enormous preponderance of political power to the rich. The first class consists of very few men, in some districts of only one. The second is sometimes twenty times as numerous, the third sometimes a hundred, or even a thousand times. Thus though every man has the suffrage, the vote of a single rich man may have as great weight as the votes of a thousand workmen. Universal suffrage is manipulated in such a way as to defeat democracy decisively and to consolidate a privileged class in power in the only branch of the Government that has even the appearance of being of popular origin. Bismarck, no friend of Liberalism, once characterized this electoral system as the worst ever created. Its shrieking injustice is shown by the fact that in 1900 the Social Democrats, who actually cast a majority of the votes, got only 7 seats out of nearly 400. It is one of the most undemocratic systems in existence. The voters do not choose their representatives directly. The suffrage is indirect, and is, moreover, as we have seen, grossly unequal. As this system is in vogue for municipal elections as well as for State elections, it throws power, whether in the municipality or in the nation, into the hands of men of wealth. In 1908 there were 203,000 voters in the first class, 1,065,240 in the second, 6,324,070 in the third. The first class represented 4 per cent., the second 14 per cent., the third 82 per cent. of the population. In Cologne the first class comprised 370 electors, the second 2,584, while the third had 22,324. The first class chose the same number of electors as the third. Thus, 370 rich men had the same voting capacity as 22,324 proletarians. In Saarbrücken, the Baron von Sturm, formed the first class all by himself, and announced complacently that he did not suffer from his isolation. In one of the Berlin districts Herr Heffte, a manufacturer of sausages, formed the first class. This system would seem to be monstrous enough by reason of the monstrous

plutocratic cast. But this is not all. This reactionary edifice is appropriately crowned by another device, oral voting. Neither in the primary or the secondary voting is a secret ballot used. As a matter of fact, a large number of voters prefer to forego their miserable privilege entirely and stay at home. In 1903, 23.6 per cent. only of them voted for the Prussian House of Representatives, while the same year 75 per cent. voted in the elections for the Reichstag, where the secret ballot is used. Of those who failed to vote, much the larger percentage is from the third class, whose members evidently feel the nullity of the privileges they enjoy in this 'people's kingdom of the Hohenzollern,' as the Kaiser alluringly describes it. An additional evidence as to the perfection of the 'people's kingdom' is this. With the exception of a thoroughly insignificant measure passed in June, 1906, there has been no change in the electoral districts since 1858. No account has been taken of the changes in the population, and there are the same or worse disparities than there are in the case of the Reichstag, as previously stated. It thus happens that 3,000,000 inhabitants of four large Prussian districts return 9 representatives, while three other million, divided among forty smaller districts, return 66. Here again the natural result of the change of the population owing to the economic evolution has inordinately increased the influence of the rural districts, prevalently Conservative. In 1903 under this system 324,157 Conservative votes elected 143 representatives; but 314,140 Social Democratic votes did not secure the election of a single member."—C. D. Hazen, *Germany, last stronghold of autocratic monarchy* (New York Times, July 1, 1917).

1882.—Rescript of King William.—In connection with Article 44 [of the Constitution of 1850] the course of domestic and parliamentary politics drew forth the following Declaratory Rescript from the German Emperor and King of Prussia, in 1882:

"The right of the King to conduct the Government and policy of Prussia according to his own discretion is limited by the Constitution (of January 31, 1850), but not abolished. The Government acts (documentary) of the King require the counter-signature of a Minister, and, as was also the case before the Constitution was issued, have to be represented by the King's Ministers; but they nevertheless remain Government acts of the King, from whose decisions they result, and who thereby constitutionally expresses his will and pleasure. It is

therefore not admissible, and leads to obscuration of the constitutional right of the King, when their exercise is so spoken of as if they emanated from the Ministers for the time being responsible for them, and not from the King himself. The Constitution of Prussia is the expression of the monarchical tradition of this country; whose development is based on the living and actual relations of its Kings to the people. These relations, moreover, do not admit of being transferred to the Ministers appointed by the King. Their preservation, too, is a political necessity for Prussia. It is, therefore, my will that both in Prussia and in the Legislative Bodies of the realm (or Reich), there may be no doubt left as to my own constitutional right and that of my successors to personally conduct the policy of my Government; and that the theory shall always be gainsaid that the [doctrine of the] inviolability of the person of the King, which has always existed in Prussia, and is enunciated by Article 43 of the Constitution, or the necessity of a responsible counter-signature of my Government acts, deprives them of the character of Royal and independent decisions. It is the duty of my Ministers to support my constitutional rights by protecting them from doubt and obscuration, and I expect the same from all State servants (Beamten) who have taken to me the official oath. I am far from wishing to impair the freedom of elections, but in the case of those officials who are intrusted with the execution of my Government acts, and may, therefore, in conformity with the disciplinary law forfeit their situations, the duty solemnly undertaken by their oath of service also applies to the representation by them of the policy of my Government during election times. The faithful performance of this duty I shall thankfully acknowledge, and I expect from all officials that, in view of their oath of allegiance, they will refrain from all agitation against my Government also during elections.—Berlin, January 4, 1882.—WILHELM. VON BISMARCK. To the Ministry of State."

1908.—Suffrage reform.—Socialist successes.—Speech from the throne.—"It was expected, when the Diet elections approached in June, that the Prussian people would be awakened by a violent agitation in favor of more liberal election laws, but nothing of the kind happened. The Socialists, indeed, made this their chief issue, and they carried a half-dozen districts, thus securing for the first time a foothold in the Diet; and the Radicals, too, gave out manhood suffrage as their watchword, but pressed it so feebly as to awaken the suspicion that their demand was not seriously meant. Nevertheless, the King's speech from the throne in October surprised the country by announcing that a reform of the election laws was a fundamental necessity and would be undertaken during the present session. This announcement affected the country-squire element like tapping on a hornet's nest. The Conservative party immediately gave it to be plainly understood that it would brook no tampering with the election laws, the stronghold of its power."—W. C. Dreher, *Year in Germany (Atlantic Monthly, Jan., 1909)*.

1919.—Survival of Prussian aristocracy.—"There remains the most powerful of these aristocracies, the most redoubtable for the peace of the world, but also the most modern—the Prussian aristocracy. This has succeeded in making itself, if not loved, at least respected, by the workers whom it employs, because it does not limit itself, like almost all the others, to consuming its revenues in castle life or to trusting to land agents the management of its estates. The Prussian Junker is not an idler; he directs in person the management of his land, and very often conducts an industrial enterprise as well, such as a distillery or brewery. The peasants on his domain are not tenants; they are agricultural laborers, working under the proprietor's direction. The revolution which has overthrown the Hohenzollern has not yet touched the Prussian nobility. It seems difficult to understand that this nobility should be able to survive alone in Europe amid the universal collapse of landed aristocracies. And yet is it not strange that the 'Socialist' Government of the new 'Reich-Republik,' which has announced its intention of socializing coal and potash, should not yet have proposed any measure for the expropriation of the Junkers or the assignment of their vast lands to the laboring class."—C. Seignobos, *Aristocracy's downfall (New Europe, July 14, 1919)*.

1919-1920.—Election of constituent assembly.

—Adoption of a constitution.—"When Prussia led the other German states into imperial union, she herself was operating under her constitution of January 31, 1850. Under this instrument she continued to operate. Not a single change of importance was made prior to the opening of the war. Especially was the reactionary three-class system of voting preserved in the face of frequently voiced criticism and denunciation. . . . In November, 1918, the imperial government collapsed. The revolution in the Empire was accompanied by more or less distinct revolutions in each of the several states. Because of her position in the Empire the revolution in Prussia was practically identical with the revolution in the Empire. The flight of the German Emperor was also flight of the Prussian King. There was established in Berlin not only a provisional government of the Empire, but also a provisional government of Prussia. For several months these governments weathered the storms of revolution. In January, 1919, the Prussian provisional government called for the election of a constituent assembly. The election of delegates was held on January 26, 1919, under the system of proportional representation provided by the Decree of November 30, 1918, which regulated elections to membership in the constituent assembly of the Reich. The Prussian constituent assembly came together on March 5. On March 20 the assembly enacted a law setting up a provisional government. Complete power was reserved to the assembly itself, but for the exercise of executive power

ministers were provided, each minister being directly responsible to the assembly. . . . A definite draft of the constitution was not presented to the assembly until February 25, 1920. [A commission was appointed to consider the draft.] . . . In October the commission made its report and in November the assembly adopted the constitution by a vote of 280 to 60."—H. L. McBain and L. Rogers, *New constitutions of Europe*, pp. 214-217.—See also GERMANY: 1919 (January-June).

1920.—Junker counter-revolution. See GERMANY: 1920 (March-April).

PRUSSIA, Constitution of: Principal provisions and text.—"To the student of comparative constitutional law the new Prussian constitution of November 30, 1920, is of scarcely less interest than that of the reconstituted German Empire itself. In sharp contrast to American state constitutions, the instrument is of moderate length, about four thousand words, and is limited to the bare outlines of a frame-work of government. All doctrinaire elements are lacking. There is even no bill of rights. One is particularly impressed by its business-like character. It contains eighty-eight sections, grouped into eleven articles, as follows: the State; the Public Powers; the Diet; the Council of State; the Ministry; Legislation; Finances; Autonomous (local) Administration; Religious Communities; Public Functionaries; and Regulations regarding the Transition. The principle of popular sovereignty is fundamental and determining throughout. The constitution is asserted to have emanated from the people, and they are declared to be the depository of the public powers. The popular will is revealed directly through the suffrage by means of the initiative, the referendum and elections, and indirectly through the organs of government established by the constitution. . . . The Diet is the supreme legislative authority. . . . One of the most interesting and novel features of the constitution is that which provides for a dissolution of the Diet. . . . When the Diet is not in session, the rights of popular representation are safe-guarded against possible encroachment by the Ministry by a permanent committee which possesses the same rights as those of a committee of investigation. The fourteen provinces into which Prussia is now divided are represented as such in the Council of State. . . . The Council of State's relation to the Diet is not that of coordinate legislative chamber. Its position is comparable to that of the British House of Lords. . . . The Ministry is the supreme executive authority. There is no president of the republic of Prussia. The prime minister, in consequence, is the highest official in the state, and performs many of the functions of a permanent chief executive as well as those of a responsible minister. It is interesting to observe that, though Prussia is only a member state in the Empire, the constitution makes the Ministry the representative of the state in foreign affairs. . . . It submits proposals of law to the Diet which must, however, have first been submitted to the Council of State for its advice. . . . The Ministry also submits an annual budget to the Diet. The failure of the Diet to vote the budget does not bring the wheels of government to a stand, as the Ministry is authorized to make expenditures necessary to continue services and undertakings legally established and to issue bonds to the extent of one-third of the budget of the preceding year to supply the necessary funds. . . . The Ministry is collectively and individually responsible to the Diet, which can

enforce its control through votes of lack of confidence. . . . In case the veto of lack of confidence is directed against the prime minister, he may appeal to the people through a dissolution of the Diet. . . . On analysis it will be seen that the Prussian constitution provides for a government of a parliamentary type, but with certain important departures from the British and French models. There is evidence that the framers were influenced to a considerable extent by the government of Switzerland, and have modified the principles of the pure ministerial or parliamentary type of government in the direction of the Swiss system. There is also more than a suggestion of 'checks and balances.' Fundamentally it is intended to be a thorough-going democracy."—W. J. Shepard, *Foreign government and politics* (*American Political Science Review*, Nov., 1922).

The following is the text of the constitution of the Free State of Prussia:

The Prussian people by its Constituent Assembly gives itself the following constitution, which is hereby promulgated:

Section I. The State

Article 1. (1) Prussia is a republic and a member of the German Reich. (2) The consent of Prussia, required by the constitution of the Reich for territorial alterations, shall be given by law. (3) The Prussian colors are black and white. (4) The language used in public business and negotiations shall be German.

Section II. The Powers of the State

Art. 2. The sovereignty of the state resides in the whole people.

Art. 3. In accordance with the provisions of this constitution and of the constitution of the Reich, the people shall express their will directly through popular suffrage (popular initiative, popular referendum, and popular election) and indirectly through the agencies established by the constitution.

Art. 4. (1) All German citizens, men and women, over twenty years of age, who are domiciled in Prussia, are qualified to vote. (2) The right to vote shall be universal and equal and shall be exercised secretly and directly. Election day must be a Sunday or a public holiday. (3) Detailed regulations shall be prescribed by law.

Art. 5. The following persons shall be denied the right to vote: (a) Those who are under interdiction or who have been placed under temporary guardianship or are under tutelage by reason of mental incapacity; (b) those who do not possess civil rights.

Art. 6. (1) Popular initiative may be used for: (a) constitutional amendments; (b) enactment, amendment, or repeal of laws; (c) dissolution of the Landtag. (2) Initiative proposals must be addressed to the Ministry of State and shall immediately be submitted by the latter to the Landtag with a statement of the Ministry's views. A complete draft of law must be the basis of an initiative proposal in cases (a) and (b). The initiative proposal shall be valid only if it is supported in case (b) by one-twentieth and in cases (a) and (c) by one-fifth of the qualified voters. (3) An initiative proposal shall not be admissible concerning questions of finance, tax laws, and salary regulations. (4) A popular referendum shall be held

upon an initiative proposal and in such other cases as are provided for in the constitution; it shall be valid only if a majority of the qualified voters participate therein. (5) A popular referendum shall not be held if the Landtag has adopted the initiative proposal. (6) Proposals for amendment of the constitution, or for a dissolution of the Landtag require for acceptance the consent of a majority of all qualified voters. In other cases a simple majority of the valid votes polled shall determine. The vote may be only by 'yes' or 'no.' (7) The procedure of popular initiative and popular referendum shall be regulated by law.

Art. 7. The Ministry of State shall be the supreme executive and directing authority of the state.

Art. 8. (1) The judicial power shall be exercised by independent courts, subject only to law. (2) Judgments shall be rendered and executed in the name of the people.

Section III. The Landtag

Art. 9. (1) The Landtag shall consist of deputies of the Prussian people. The deputies shall be representatives of the entire people and shall be elected by them according to the principles of proportional representation. (2) Qualified voters who are twenty-five years of age are eligible for election.

Art. 10. The deputies shall vote according to their independent convictions, with consideration only for the public welfare; they shall not be bound by orders or instructions.

Art. 11 (1) Officials, employees, and workers of the state and of public corporations shall not be required to obtain leave to sit as deputies. (2) If they seek election to the Landtag, leave necessary to carry on their campaign shall be granted to them. (3) Payments of their salaries or wages shall be continued. (4) The above mentioned provisions shall not affect the rights conferred upon religious associations by Article 137 of the constitution of the Reich. . . .

Art. 14. (1) A dissolution of the Landtag may take place upon its own motion or by the action of a committee consisting of the Minister President and of the Presidents of the Landtag and of the Staatsrat, or by popular referendum. A popular referendum [on a question of dissolution] may also be had by resolution of the Staatsrat. (2) The dissolution of the Landtag upon its own motion shall require the consent of a majority of all the legal members.

Art. 15. A new election must be held within sixty days after a dissolution of the Landtag.

Art. 16. In case of a dissolution of the Landtag the legislative term of the new Landtag shall begin on the day of the new election; in all other cases it shall begin with the expiration of the legislative term of the old Landtag.

Art. 17. (1) The Landtag shall meet at the seat of the Ministry of State. (2) After each new election the Landtag shall assemble for its first session thirty days after the beginning of its legislative term, unless the Ministry of State convokes it at an earlier date. (3) Thereafter the Landtag shall meet on the second Tuesday in November of each year. The President of the Landtag must call an earlier meeting, if the Ministry of State or not less than one-fifth of the members of the Landtag demand it. (4) The Landtag shall elect its own President, its Vice-Presidents, and its other officers. . . .

Art. 20. The President shall administer all the business affairs of the Landtag within the limits laid down by the state budget law and with the powers of a minister of state. It shall be his duty to supervise the work of all officials and employees of the Landtag, to engage and dismiss all paid employees, and also, in conjunction with the other officers of the Landtag, to appoint and dismiss the civil service officials of the Landtag. He shall represent the state in all legal business and legal actions involved in his administration. He shall exercise powers of discipline and police within the Landtag building.

Art. 21. (1) There shall be quorum of the Landtag when a majority of the legal membership are present. . . .

Art. 24. The Landtag and each member of its committees may demand the presence of every minister. The ministers and their deputies shall have access to the sittings of the Landtag and of its committees. They may speak in the Landtag at any time regardless of the order of the day. They are subject to the rulings of the presiding officer.

Art. 25. (1) The Landtag shall have the right to, and upon the proposal of one-fifth of its members must, set up committees of investigation. These committees shall in public sitting inquire into such evidence as they or the petitioners consider necessary. The public may be excluded by a two-thirds majority vote. The rules of procedure shall regulate their business and determine the number of their members. (2) The courts and administrative authorities are required to submit evidence requested by these committees; upon their demand the records of the authorities shall be laid before them. (3) The provisions of the criminal code shall apply, as far as may be, to the inquiries of committees and of the authorities assisting them; nevertheless, the secrecy of the postal, telegraph and telephone services shall remain unaffected.

Art. 26. The Landtag shall appoint a standing committee for the protection of the rights of the representatives' body over against the Ministry of State, for the period between sessions, and between the expiration of a legislative term or a dissolution of the Landtag and the convening of a new Landtag. This committee shall have the powers of a committee of investigation. Its composition shall be regulated by the rules of procedure.

Art. 27. The Landtag may transmit memorials, addressed to it, to the Ministry of State and may demand from the Ministry information concerning petitions and remonstrances that are filed with it.

Art. 28. (1) Members of the Landtag shall have the right of free transportation on all German railways included within the former Prussian-Hessian railroad system, as well as the right to compensation. In addition to this the President [of the Landtag] shall receive an allowance for official expenses during his term of office. (2) Refusal of compensation shall not be permitted. (3) Detailed regulations shall be prescribed by law.

Art. 29. (1) The Landtag shall have legislative authority within the limits prescribed by the constitution; it shall approve the budget of revenues and expenditures; it shall determine the principles according to which state affairs shall be administered, and shall supervise their execution. State treaties (Staatsverträge) require the consent of the Landtag if such treaties relate to matters within the scope of its legislative power. (2) The Landtag shall determine its own rules of procedure within the limits of this constitution. . . .

Section IV. The Staatsrat

Art. 31. A Staatsrat shall be established to represent the provinces in the legislation and administration of the state.

Art. 32. (1) The Staatsrat shall be composed of representatives of the provinces. The following are recognized as provinces: East Prussia, Brandenburg, City of Berlin, Pomerania, the Posen-West-Prussian Mark, Lower Silesia, Upper Silesia, Saxony, Schleswig-Holstein, Hanover, Westphalia, the Rhine Province, and Hessen-Nassau. (2) For each 500,000 inhabitants a province shall be entitled to one representative, but each province shall have at least three representatives in the Staatsrat. A fraction of more than 250,000 inhabitants shall be counted as equal of 500,000 inhabitants. (3) In addition, the Hohenzollern Territories shall have one representative. (4) The number of representatives from the provinces shall be redetermined by the Ministry of State after each general census and after any alterations of the territory of the provinces.

Art. 33. (1) The members of the Staatsrat and their deputies shall be elected by the provincial diets (in Berlin by the municipal council, in the Hohenzollern Territories and in the Posen-West-Prussian Mark by the communal diets). In the Hohenzollern Territories election shall be by majority vote; in all other cases according to the principles of proportional representation. All qualified voters over twenty-five years of age who have been domiciled in the province for one year shall be eligible for election. (2) No person may be a member of the Landtag and the Staatsrat at the same time. Deputies to the Landtag must resign therefrom upon acceptance of election to the Staatsrat. Members of the Staatsrat must resign therefrom upon acceptance of election to the Landtag. (3) Members of the Staatsrat shall exercise the functions of their office until their successors have qualified. (4) A new election of members of the Staatsrat shall take place immediately after a new election of any provincial diet (municipal council, commune diet).

Art. 34. The members of the Staatsrat shall vote according to their independent convictions, with consideration only for the public welfare; they shall not be bound by orders or instructions. . . .

Art. 37. The Staatsrat shall elect its presiding officer and its secretaries and their deputies, and shall regulate its order of business by rules of procedure.

Art. 38. (1) The Staatsrat shall be convened for the first time by the Ministry of State. Thereafter it shall convene upon the call of its presiding officer as often as its business requires. The presiding officer shall convene the Staatsrat if one-fifth of its members or all the representatives of one province or the Ministry of State demand it. (2) The provisions of Article 24 shall apply. (3) The Staatsrat may submit bills to the Landtag through the Ministry of State. . . .

Art. 40. . . . (4) The Ministry of State must consult the Staatsrat or a competent committee thereof, before issuing decrees for the execution of laws of the Reich and the state or before issuing general administrative ordinances. . . .

Art. 42. (1) Laws enacted by the Landtag shall be subject to veto by the Staatsrat. (2) The veto must be communicated to the Ministry of State within two weeks after the final vote in the Landtag and within two additional weeks must be supported by reasons. (3) In case of veto the law

must be presented to the Landtag for reconsideration. If the Landtag reaffirms its original resolution by a two-thirds majority vote, this resolution shall be final. If, however, in the reconsideration of the Landtag only a simple majority vote is obtained for the original resolution, the resolution shall be invalid, unless it be approved by a popular referendum initiated by the Landtag. (4) The approval of the Staatsrat is necessary if the Landtag desires to vote expenditures which are in excess of the amounts proposed or approved by the Ministry of State. If the Staatsrat refused consent, the resolution of the Landtag shall be valid only in so far as it agrees with the proposal or approval of the Ministry of State. A popular referendum shall not be applicable in such circumstances. . . .

Section V. The Ministry of State

Art. 44. The Ministry of State shall consist of the Minister President and the Ministers of state.

Art. 45. The Landtag shall elect the Minister President without debate. The Minister President shall appoint the other ministers of state.

Art. 46. The Minister President shall determine the general principles of governmental policy and shall be responsible for them to the Landtag. Within these principles each minister of state shall independently carry on the branch of administration entrusted to him, and shall himself be responsible to the Landtag.

Art. 47. (1) The Minister President shall be chairman of the Ministry of State and shall conduct its business. (2) The Ministry of State shall determine the jurisdiction of each minister of state in so far as this has not been regulated by legislative enactment. Such determinations shall be immediately submitted to the Landtag and must be altered or repealed at the request of the Landtag. (3) Differences of opinion in respect to matters pertaining to the scope of the authority of the several ministers of state must be submitted to the Ministry of State for consideration and decision. . . .

Art. 49. The Ministry of State shall represent the state in external affairs.

Art. 50. The Ministry of State shall pass on bills which shall be presented to the Landtag. . . .

Art. 54. (1) The Ministry of State shall exercise the pardoning power in the name of the people. (2) In the case of a minister who has been condemned for malfeasance in office this power may be exercised only at the instance of the Landtag. . . .

Art. 55. If the maintenance of public safety or the meeting of an unusual emergency urgently requires it, the Ministry of State may, when the Landtag is not in session, in conjunction with the standing committee provided for in Article 26, issue ordinances not in conflict with this constitution, which shall have the force of laws. Such ordinances must be submitted to the Landtag for approval at its next session. If approval is refused, the ordinance must be immediately declared void by publication in the Law Gazette.

Art. 56. The ministers of state upon their induction into office, shall take an oath to perform their duties impartially and for the public welfare, and in accordance with the constitution and the laws.

Art. 57. (1) The Ministry of State as such and each individual minister of state must possess, in order to retain office, the confidence of the people, which is expressed through the Landtag. The

Landtag may withdraw its confidence in the Ministry of State or in an individual state minister by express resolution. Such resolution shall not be valid if a popular referendum to dissolve the Landtag is legally invoked. (2) A petition which initiates such a resolution must be signed by at least thirty deputies. (3) Such petition shall be voted upon no earlier than the second day after its consideration. It must be acted upon within fourteen days after its introduction. (4) A recorded vote must be taken on a question of lack of confidence. (5) A resolution of lack of confidence shall be valid only if approval is given by at least one-half of the total membership of the Landtag at the time. (6) If the resolution is passed, the ministers affected thereby must resign, but the Minister President must resign only if he does not avail himself of his privilege of requesting a dissolution of the Landtag or if such request is denied by the committee. . . .

Art. 58. (1) The Landtag shall have the right to bring an action before the State Supreme Court (Staatsgerichtshof) against any minister for having willfully violated the constitution or the laws. The bill to initiate such an action must be signed by at least one hundred members of the Landtag and shall require the consent of such a majority as has been designated for changes in the constitution. (2) The composition of the State Supreme Court, its procedure, and the decisions to be rendered by it shall be regulated by law.

Art. 59. (1) Any state minister may resign his office at any time. (2) In the event of a resignation of the entire Ministry of State, the resigning ministers shall carry on current business until it is taken over by the new ministers.

Section VI. Legislation

Art. 60. The Ministry of State shall publish in the Prussian Law Gazette laws constitutionally enacted and state treaties approved by the Landtag.

Art. 61. (1) A law shall be binding when it has been constitutionally enacted and has been published by the Ministry of State in the form prescribed. The publication shall indicate whether the law was enacted by the Landtag or by a popular referendum. Article 13 of the constitution of the Reich shall not be affected hereby. (2) If the law does not otherwise specify it shall go into effect on the fourteenth day after its publication in the Law Gazette. (3) The laws must be published within a month.

Art. 62. Bills which are rejected by the Landtag shall not be introduced again during the session, unless a valid popular initiative so demands.

Section VII. Finance

Art. 63. (1) The Landtag shall vote the necessary current funds to meet the needs of the state. (2) All revenues and appropriations of the state must for each fiscal year be estimated and incorporated in the budget. The budget must be adopted by law before the beginning of the fiscal year. . . .

Art. 64. If before the end of a fiscal year the budget for the following year has not been determined by law, the Ministry of State shall be empowered until a budget goes into effect: (a) To make all expenditures which are necessary in order: (i) To maintain legally existing institutions and to execute legally adopted measures. (ii) To fulfill the lawful obligations of the state. (iii) To continue building operations, contracts, and other un-

dertakings for which appropriations have already been granted in the budget of a previous year, as well as to continue under the same conditions subsidies for building operations, contracts and other undertakings. (b) To issue, for periods of three months, treasury notes to the amount of one-fourth of the total of the previous budget, in so far as revenues derived by special laws from taxes, duties, and other sources do not cover the expenditures under clause (a).

Art. 65. Funds may be procured upon credit only for extraordinary needs and as a rule only for expenditures for productive works. Such a procurement as well as the assumption of any liability by the state may be undertaken only by authority of a law. . . .

Art. 67. (1) Expenditures in excess of amounts granted by, or not included in, the budget must be approved by the Landtag within the next fiscal year. (2) Expenditures in excess of amounts granted by, or not included in, the budget require the approval of the Minister of Finance. Such consent shall be given only in case of an unforeseen and unavoidable emergency. . . .

Section VIII. Local Autonomy

Art. 70. Municipalities and groups of municipalities have the right of local autonomy in their affairs under the supervision of the state as may be determined by law.

Art. 71. (1) The state shall be divided into provinces. (2) The division of the provinces into circles, cities, rural municipalities and other groups of municipalities as well as the constitution, rights, and duties thereof shall be regulated by law. . . .

Section XI. Transitional and Final Provisions

Art. 82. (1) The powers which according to previous laws, ordinances, and treaties were vested in the King are hereby transferred to the Ministry of State.—H. L. McBain and L. Rogers, *New constitutions of Europe*, pp. 217-231.

PRUSSIAN INDUSTRIAL CODE (1845). See SOCIAL INSURANCE: Details for various countries: Germany: 1845-1876.

PRUSSIAN LANGUAGE, Old.—“The Old Prussian, a member of the Lithuanic family of languages, was spoken here as late as the 16th century, remains of which, in the shape of a catechism, are extant. This is the language of the ancient *Æstyī*, or ‘Men of the East,’ which Tacitus says was akin to the British, an error arising from the similarity of name, since a Slavonian . . . would call the two languages by names so like as ‘Prytskaia’ and ‘Brytskaia,’ and a German . . . by names so like as ‘Pryttisc’ and ‘Bryttisc.’ The Guttones, too, of Pliny, whose locality is fixed from the fact of their having been collectors of the amber of East Prussia and Courland, were of the same stock.”—R. G. Latham, *Ethnology of Europe*, ch. 8.—See also PHILOLOGY: 21.

PRUTH, Treaty of (1711). See SWEDEN: 1707-1718.

PRYTANES, PRYTANEUM.—The Council of Four Hundred, said to have been instituted at Athens by Solon, “was divided into sections, which, under the venerable name of prytanes, succeeded each other throughout the year as the representatives of the whole body. Each section during its term assembled daily in their session house, the prytaneum, to consult on the state of affairs, to receive intelligence, information, and suggestions,

and instantly to take such measures as the public interest rendered it necessary to adopt without delay. . . . According to the theory of Solon's constitution, the assembly of the people was little more than the organ of the council, as it could only act upon the propositions laid before it by the latter."—C. Thirlwall, *History of Greece*, ch. 11.—"Clisthenes . . . enlarged the number of the senate, 50 being now elected by lot from each tribe, so as to make in all 500. Each of these companies of 50 acted as presidents of both the senate and the assemblies for a tenth part of the year, under the name of Prytanis; and each of these tenth parts, of 35 or 36 days, so as to complete a lunar year, was called a Prytany."—G. F. Schömann, *Dissertation on the assemblies of the Athenians*, p. 14.—See also ATHENS: B. C. 594.

PRYTANIS.—A title frequently recurring among the Greeks was that of Prytanis, which signified prince, or supreme ruler. "Even Hiero, the king or tyrant of Syracuse, is addressed by Pindar as Prytanis. At Corinth, after the abolition of the monarchy, a Prytanis, taken from the ancient house of the Bacchiadae, was annually appointed as supreme magistrate. [See CORINTH: B. C. 745-725.] . . . The same title was borne by the supreme magistrate in the Corinthian colony of Corcyra. . . . In Rhodes we find in the time of Polybius a Prytany lasting for six months."—G. Schömann, *Antiquities of Greece: The state*, pt. 2, ch. 5.—See also GREECE: B. C. 4th century.

PUBLIC DEFENDER: Purpose.—"The law recognizes the necessity for counsel, that right being a constitutional guarantee to the accused. The suggestion for a public defender, means the substitution of a sworn public counsel, possessing integrity, ability, experience and power, for the incompetent, uncompensated, or indifferent lawyer who is often assigned to a helpless and impecunious prisoner. . . . The public defender should be an elected officer. . . . His duty should be to protect the innocent—not to acquit the guilty. He should see that the guilty is fairly punished—not over-punished. His office should be represented in every phase of the proceedings wherein the district attorney appears, commencing at the preliminary hearing before the magistrate. The public defender idea is neither revolutionary, novel,

nor impracticable. It is amply justified by historical precedent, and by the procedure in foreign countries."—M. C. Goldman, *Public defender*, pp. 5-6, 9.

In foreign countries.—"There was such an official in Spain in the 15th century. 'In the cortex of Madrigal (1496) and still more in the celebrated one of Toledo (1480) many excellent provisions were made for the equitable administration of justice, as well as regulating the tribunals. The judges were to ascertain every week, either by personal inspection or report, the condition of the prisons, the number of the prisoners, and the nature of the offenses for which they were confined. They were required to bring them to a speedy trial and afford every facility for their defense. An attorney was provided at *public expense*, under the title of *advocate for the poor*, whose duty it was to defend the suits of such as are unable to maintain them at their own costs. . . . Severe penalties were enacted against venality in the judges, a gross evil under the preceding reigns, as well as against such counsel as took exorbitant fees, or even maintained actions that were manifestly unjust.'—([W. H.] Prescott's *History of [the reign of] Ferdinand and Isabella*, vol. 1, p. 194.)—The Spanish law now provides for the employment of counsel to represent indigents in both civil and criminal cases ('Las leyes de enjuiciamiento civil y penal'). In every district, a lawyer is registered who takes charge of the cases of indigents in turn. The criminal code of Hungary provides specifically for the public defender in certain cases, viz: 'An attorney duly listed or the professor of a law university may be selected as defenders. (Sec. 55.) Without the public defender there cannot be had a final hearing or trial if the accused has no separate attorney. (Sec. 412.) The presence of the public defender is always obligatory except when the defendant has a separate defender.' (Sec. 414.) In the *Argentine Republic*, the defense of accused persons unable to employ counsel is entrusted to the 'Defensores de Pobres y Ausents' (defenders of poor and absents). These counsel are lawyers appointed by the Supreme Court of Argentina, for life, at a monthly salary. There are also public defenders for infants and insane persons. In *France*, there exists an organization called 'L'Assistance Judiciaire,' through which persons without sufficient means are entitled to avail themselves of the protection of the courts. The bar in that country is unified into an order, assignments to the defense of indigent prisoners are made by the executive head of the order, from the bar in general, and accepted as obligatory. This insures to the defendant dignified and competent counsel. In *Belgium*, in accordance with the law of July 30, 1880, covering judicial assistance to the poor, an indigent person has the right to choose a lawyer, who gives his services gratuitously. He is called a 'Pro Deo' lawyer. A petition for such free procedure must be sent to the judge, who has the right to dismiss the petition or allow the 'Pro Deo' lawyer's appointment, according to what his investigation as to the prisoner's circumstances develops. The procedure has this advantage, that the prisoner, by selecting his own attorney, cannot complain that he was dependent upon counsel who is unsatisfactory to him for any reason. The Constitution of *Mexico* provides for the free public defense of its citizens, through the 'Defensores de Oficio,' the number of whom is stipulated in the 'Ley Organica de Ministerio Publico.' The

constitution of each one of the Mexican states provides also, within the jurisdiction of the state, for the 'Defensores de Oficio,' whose number is specified in the 'Codigo de Procedimientos Penales' in some jurisdictions, and in the 'Ley Organica,' in others. The same general principle is followed, although the various states have different forms and laws. The *Norwegian* act of May 22, 1902, concerning 'procedure in criminal cases,' prescribes that a lawyer must be assigned by the court for the defense of any person who is being tried for crime, the expense thereof to be borne by the state. This method of compensation insures a more adequate defense than a system of free counsel. In *England*, counsel assigned to the defense of an accused person is paid by the government. Under the criminal system in *Denmark*, the court appoints, in each case, a prosecutor and a defender for the accused person. Both of these are selected from a staff of public attorneys in the particular city or district, who have been appointed beforehand by the king to handle public cases. The *German* criminal law marks an important advance over the criminal systems of other countries, in that it recognizes the right of an innocent person unjustly punished, to be *compensated by the state*. The two laws bearing upon this subject are worthy of note, viz.: 'Those defendants who have been acquitted upon a re-trial, may demand damages or compensation from the state if their punishment pronounced at the first trial has been put in operation, in whole or in part. Innocent persons who have been detained in custody before trial and who have been acquitted in criminal cases, may demand damages from the state, if the trial has established their innocence.' According to the 'Wetboek von Strafvordering' (Code for administering Penal Law) of The Netherlands, any person accused of crime may have counsel assigned to him, and that the privilege is not restricted to indigent persons. This counsel is chosen by the president of the court among the lawyers in his district."—M. C. Goldman, *Public defender*, pp. 9-14.

Adoption in the United States.—"In March, 1912, the first public official designated as a 'Public Defender' was established in the United States. Miss Kate Barnard, then Commissioner of Charities and Corrections in the state of Oklahoma, designated Dr. John H. Stolper as 'General Attorney for the Commissioner of Charities and Corrections and as Public Defender of the state of Oklahoma.' [See OKLAHOMA: 1915.] . . . During the year 1913, the people of Los Angeles County adopted a charter (subsequently ratified by the State Legislature) providing for the appointment of a public defender. It provides among other things: 'Upon request by the defendant or upon order of the court, the public defender shall defend, without expense to them, all persons who are charged in the Superior Court with the commission of any contempt, misdemeanor, felony, or other offense.' On January 6, 1914, Hon. Walton J. Wood became the first public defender in the United States of the type generally advocated, and he has served in such office with great distinction and ability. His conduct of the office has amply justified the necessity and reasons for its existence. In June, 1915, a separate public defender was appointed for the police courts of Los Angeles. A voluntary public defender was appointed for Houston, Texas, in June, 1914. In May, 1914, a voluntary public defender was appointed at Portland, Oregon, through the co-

operation of one of the judges and the bar associations. During March, 1915, Mr. David Robinson was appointed the first official public defender for Portland, pursuant to a resolution of the City Council, which created the office. In November, 1914, a voluntary public defender was appointed at Evansville, Ind., by the Mayor. In September, 1914, a voluntary public defender was established at the city of Temple, Texas. Mr. Richard S. Horton, of Omaha, became public defender for Douglas County (Omaha), Nebraska, pursuant to an act of the State Legislature, in July, 1915. On December 1, 1915, Mr. Rollo H. McBride, was appointed public defender of Pittsburg, Pa., by the Mayor of that city. In February, 1915, the Municipal Council of the city of Columbus, Ohio, appointed Mr. Cecil J. Randall as public defender of the city of Columbus. . . . During the year 1915, there were 12 public defender bills introduced in various state legislatures."—M. C. Goldman, *Public defender*, pp. 81-84.

PUBLIC DEPOSITORY LAW (1907). See INDIANA: 1905-1907.

PUBLIC HEALTH: Definition.—"Public health is a term which includes all knowledge and all measures tending to (a) foster health or (b) to prevent disease. . . . Public health may be divided into hygiene and sanitation. Hygiene deals with the individual and his physical perfection. The causes and sources of those diseases which come from the outside, from the surroundings of the individual are dealt with under the term sanitation."—H. W. Hill, *New public health*, p. 1.—"Hygiene was one of the branches least cultivated in the middle ages. Even in the capitals of European states no laws existed for keeping the streets and houses clean, the free circulation of air, the soundness of the food used by the people, and the practice of cleanly personal habits. This was an almost universal opinion, received as an article of faith, that there was no better way of enlarging the dominion of the soul, than by mortifying the body. The rules of most of the religious orders had no other object than to obtain sanctification by the mortification of the body. . . . The seventeenth century marks the date of the establishment of hygiene, public and private, on a rational systematic, and scientific basis. Previous to that time there were lazarettos for lepers, and to some extent, isolation for syphilites. In England the Royal medical society gave a strong impulse to public hygiene, by its reports and correspondence with physicians in all countries, who furnished observations on everything pertaining to public health. Thereafter individuals, municipalities, and governments forwarded the work. In the latter part of the eighteenth century Lady Montague imported from Constantinople the practice of inoculation. . . . Perhaps the first great impulse among English speaking peoples especially in matters pertaining to 'state medicine', or sanitation can be traced to Dr. William Farr and to the establishment through his efforts of the British registrar-general's office in 1832. Within the last thirty-five years knowledge gained by the study of bacteria, especially as regards the cause and na-

ture of infectious diseases, has furnished a wealth of facts for the foundation of a science lasting and secure."—A. G. Drury, *History of hygiene*, p. 10.—"Even forty years ago much of the teaching was based upon views antedating the scientific era, and it was not till Pasteur's triumph in vaccinating against anthrax in 1881, Koch's discovery of the germ of tuberculosis in 1882, and Löffler's discovery of the germ of diphtheria in 1884, with Pasteur's crucial experiment with rabies in 1885, that public health took its place among the exact sciences."—P. H. Bryce, *Story of public health in Canada*, p. 66.—"What has already been done is shown by the following statistics: from an annual death rate in England and Wales from 1862 to 1871 inclusive, of 22 per 1000, it fell in 1881 to 18 per 1000 and in 1899 it was 17 per 1000. The death rate of the seven principal infectious diseases from 4+ in 1862-71, per 1000, to 2+40 in 1885. In this country a like improvement has been made. In New York the death rate has been reduced from 25+32 in 1880, to 18+41 in 1899; in Philadelphia from 19+14 to 18+78; in Boston from 23 to 20 per 1000."—A. G. Drury, *History of hygiene*, p. 11.—"The rate 14.1 . . . is a convenient one to remember, representing, as it does, the average death-rate of a group constituting three-fifths of the population of the United States at the present time; it is the most nearly representative national death-rate that we have. It strikes an average among all kinds of communities and between extremes of healthfulness and unhealthfulness."—J. S. MacNutt, *Manual for health officers*, p. 71.—See STATISTICS: Vital statistics.—"The world wide movement for the conservation of human life has expressed itself in many ways—in medical research; in societies for preventing tuberculosis, infant mortality, social diseases, alcoholism and vice; in the growth of sanatoria, dispensaries, hospitals and other institutions; in an immense output of hygienic literature, not only technical books and journals, but also popular articles in the magazines and daily newspapers; in the constant agitation for purer foods, milk supply, meat supply and water supply; in the movement to limit the labor of women and children, and to improve factory sanitation; in the establishment of social insurance in Germany, England, Denmark and other countries; in the improvement of departments of health; in the spread of gymnastics, physical training and school hygiene; in the revival of the Olympic games and the effort to revive the old Greek ideals of physical perfection and beauty, and last and most important, in the sudden development of the science of eugenics."—I. Fisher, *Public health movement* (*Survey*, Dec. 21, 1912).

Australia.—School inspection. See CHILD WELFARE LEGISLATION: 1901-1918.

Canada.—Department of health.—"It is true that for many years the progress of public health in Canada seemed slow, but it maintained a pace at least equal to that in neighboring states. With her remarkable expansion from 1000 onward, when Canada in ten years increased 34% in her population public health had many new demands laid upon it, while with the increased provincial revenues various new duties were undertaken. One of the most notable grew out of the Ontario Sanatorium Act of 1000 providing for provincial aid and supervision of county sanatoria. Different provinces have erected provincial sanatoriums whose work was notably increased owing to the militia department subsidizing them for the care

of tuberculous soldiers during the war. There can be no doubt that the remarkable results of modern preventive medicine in the various war areas, necessitating huge expenditures for health purposes as a routine war measure, have served greatly to advance public health work as an ordinary function of government. Thus, in the province of Ontario the first annual grant in 1882 was only \$4,000 and provided for a part-time health officer. This has grown to an expenditure of \$550,000 annually and the staff numbers 50 officers. Those who had long been in the active work of public health in Canada had, as seen in a resolution adopted at Quebec in 1867, worked and waited patiently, hoping for the union of federal and provincial forces in the campaign against disease. Old theories regarding the limited jurisdiction of the federal government under the British North America Act, which for fifty years had been made to do service by the opportunist politician, were seen to be readily disproved when the essential need for united effort after the war was made apparent. Hence, during the session of parliament of 1919 a bill for establishing a federal department of health was passed providing that a physician become the deputy minister of health. A number of existing services had been placed under the department of health and new branches dealing with the various phases of public health are being developed. The parliamentary grant for the fiscal year 1920-1921 was \$750,000."—P. H. Bryce, *Story of public health in Canada (American Public Health Association)*, pp. 64-66. —"The act [of 1919] aims at placing health as a foundation of government, thereby assuring to the people that the vital problems of health which concern a nation and upon which depends its very existence, continuity, and efficiency are those which will hereafter receive serious and constant attention. It provides for the establishment of a department of health, for a minister of health, a deputy minister, and an advisory council. The duties and powers of the minister extend to and include all matters and questions relating to the promotion or preservation of the health of the people of Canada over which the parliament of Canada has jurisdiction. 'Whereas it is expedient for the preservation of the health and the promotion of the social welfare of the people of Canada, that a Department of Health be established in the Dominion: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows: 1. This Act may be cited as *The Department of Health Act*. . . . 3. *Deputy Minister*: (1) The Governor in Council may appoint an officer, who shall be called "the Deputy Minister of Health," who shall be the deputy head of the Department and who shall hold office during pleasure. . . . 7. *Provincial or municipal boards not affected*: Nothing in this Act or in any regulation made thereunder shall authorize the Minister or any officer of the Department to exercise any jurisdiction or control over any Provincial or Municipal Board of Health or other health authority operating under the laws of any province. 8. *Annual report*: The Minister shall annually lay before Parliament, within fifteen days after the meeting thereof, a report and statement of the transactions and affairs of the Department during the year then next preceding.—Assented to June 6, 1910."—United States Public Health Service, *A department of health for Canada (Public Health Reports, Aug. 29, 1919, pp. 1973-1976)*.

ALSO IN: *Annual Report of Hygiene and Statistics Department, Montreal, Canada, 1920-1922*.

Caucasus.—Lack of sanitation. See CAUCASUS: Lack of sanitation.

Central America.—Superior board of health in Honduras.—Bureau of public health in Salvador.—"An Executive decree of May 4th, 1920, provides for the organization of a Superior Board of Health [in Honduras]. . . . Another Executive decree provides for a public health police under the orders of the superior board of health. This police is composed of a director, 27 agents, and an office force."—*Bulletin of the Pan American Union, Aug., 1920, p. 219*.—"In Salvador a pernicious kind of malaria is the dominating disease, and shows itself in different phases and manifestations. The council of health has recommended several measures to minimize its effects, but the result achieved does not altogether correspond to the efforts of the authorities, because, besides the heavy expenses of the sanitation works in many parts of the country, the majority of the people are opposed to all hygienic measures, and through poverty are condemned to live in small dwellings, which are badly ventilated and damp, and consequently unhealthy."—P. F. Martin, *Salvador of the twentieth century, p. 269*.—"The President of the Republic has issued a decree containing rules and regulations governing the bureau of public health. The principal object of the bureau, whose officials consist of a director general, chiefs of sections, and other employees, is to transact the business connected with the public health in the manner prescribed by law and in accordance with the most approved and up-to-date methods."—*Bulletin of The Pan-American Union, Mar., 1921, p. 314*.

China.—High death rate.—Promotion of public hygiene.—"China is generally considered the real home of influenza, so that close acquaintance has conferred some degree of immunity on its people. A former epidemic originating in China was known in Russia as 'Chinese influenza,' passing into Europe it was known as 'Russian influenza,' from Europe it spread to America and was known as 'European influenza,' finally it reached Japan, where it was called 'American influenza,' having circled the globe and reached its original home, China, whose many millions constitute the fountain head of epidemic disease. As communications are increased it becomes ever more necessary for the safety of the whole world to develop modern public health administration throughout China. A table giving the death rates in Shanghai during 24 years, 1895 to 1918 inclusive, reveals the curiously interesting fact that in 1908 there was a definite reversal of the relation between the death rate of the Chinese and that of the foreign resident population. Up to 1908 the death rate among the Chinese population was continuously higher than that among the foreign resident population, excepting the year 1906 when the rate was the same for both classes; while for 11 years, from and including 1908 up to and including 1918, excepting the year 1912, the death rate among the Chinese population was continuously lower than that among the foreign resident population. The population is given in the report as 21,000 foreign and 650,000 Chinese. The death rates for the year 1918 were: Foreign, 16.5 per 1,000; Chinese, 12.3 per 1,000 of population. The density of population is given as 122 persons per acre."—United States Public Health Service, *Public Health Reports, Sept. 12, 1919, pp. 2071-2072*.—"The era in modern preventive medicine may be

said to have commenced in 1911 when the Chinese government and people noticed the great superiority of accurate scientific methods as compared with crude haphazard methods for the suppression of the pneumonic plague in Manchuria. . . . In November, 1913, a presidential mandate was issued authorizing the dissection of dead bodies in China. This together with the imperial sanction of cremation of cadavers for the plague in 1911, has undoubtedly paved the way for further medical progress in China. On September 30, 1915, an important mandate was issued recognizing Western medicine as the proper standard of medical practice in China. Anyone practicing in the country will henceforth be required to produce a certificate from the police. . . . As a result of the second visitation of the pneumonic plague in Shansi, China, 1918, the central government devoted the balance of the one million loan (obtained for the suppression of the epidemic) to the establishment of the Institute for infectious diseases. . . . Over forty experts, mostly graduates of Japan, are connected with the institute. During last summer when cholera threatened Peking and the vicinity, the institute distributed vaccine made in its laboratories for use among the troops. The institute is connected with the ministry of the interior and comes directly under the department of sanitation. . . . It is generally acknowledged that until the poorer classes practice hygiene as well as the educated classes, infectious and other communicative diseases will not be stamped out. Knowledge of simple laws of health is therefore essential among high and low. With a view to carrying out such work, the joint council of public health education was formed in 1916, consisting of representation from the Y. M. C. A., national medical association and medical missionary association. . . . [The] method of work consists in preparing travelling exhibits of automatic models, plans, lantern slides, moving pictures and other methods by which the attention of the audience may be arrested and retained. Besides the above hundreds of thousands of pamphlets and booklets have been issued and sold at cost price. Among the titles of these books may be found: 'How to live,' 'First aid in the home,' 'Sanitation of a Chinese city,' 'Tuberculosis,' 'Infant hygiene,' 'Plague,' 'Smallpox,' 'Venereal disease,' 'Care of teeth,' 'Care of eyes,' 'Cholera,' 'Sexual hygiene for young men,' etc. These books have had an enormous sale, showing that the public are interested in promoting hygiene."—*China Year Book*, 1923, p. 913.

Denmark.—Government health service.—Organization, administration, laws.—"The administration of the public health service, the enforcement of the specific regulations having legal power for the whole Kingdom, and the supervision that the laws are followed is the duty of the ordinary civil administrative authorities, but these are assisted by medical officers (*embedslaeger*) who are State officials, and by unsalaried boards (committees) appointed by the communal councils. The establishment of special superior supervising councils (salaried by the State) and the appointment of special inspectors has been made necessary by certain of the laws, such as the laws on the protection of workmen, compulsory accident insurance, State-subsidized medical aid societies, the regulation of factory work and inspection of the same, and by the law on aid to the unemployed. To enforce the medical and sanitary by-laws and to see that they are obeyed is the duty of the local sanitary committees appointed by the communal

councils. In boroughs the local chief of police (State official) is *ex officio* chairman of the board of health and the medical officer a member of the same. The supreme authority in the public health service is the ministry of justice, which is at the head not only of the department of justice but also of the police service. With the exception of the ministry of war, this is the only one having at its disposal special experts on medical and sanitary matters. . . . Ranking immediately under the ministry of justice is the State board of health (*sundhedsstyrelse*), which superintends all matters concerning sanitation and the care of patients, supervises the public medical officers and the medical practitioners, dental surgeons, apothecaries, midwives, and subordinate medical and pharmaceutical assistants in the performance of their professional duties, and all hospitals and sanatoria, all institutions under the poor laws, insane asylums, prisons, schools, nurse children, factories, workshops, etc., as to their sanitary conditions. . . . Cases of the rarer and more serious diseases—cholera, plague, smallpox, dysentery, and exanthematous typhus—are at once submitted to compulsory public treatment; that is to say, the patient is at once treated at public expense, and he, as well as his surroundings, must submit to the isolation and disinfection which the committee prescribes and carries out. During compulsory public treatment everyone is compelled to notify the 'epidemic doctor' (*Epidemiologen*) of any suspicious case of illness arising in his household, and the private medical practitioners are obliged to immediately notify the district medical officer of each case of the diseases mentioned above, giving the name and address of the patient. The patients can be treated in their homes, which must then be isolated, but most frequently they are admitted to the isolation buildings. . . . The working of this law, first enacted in 1888, later on revised, and in 1900 considerably extended, has been very beneficent. The more endemic diseases have decreased yearly in frequency, and smallpox occurs only now and then, not even every year; typhoid fever has become a very rare disease. . . . The fight against the infectious venereal diseases is conducted in conformity with a special act of 1906. The principal regulation of this law is that every case of infectious venereal disease is, on the application of the patient, entitled to free treatment at public expense, regardless of whether the patient is rich, or poor or whether the case can be treated as an out-patient or must be admitted to a hospital; and, on the other hand, every patient seeking the aid of a medical man, whether he accepts free treatment at public expense or has himself treated privately, is enjoined to continue the treatment under direction of a medical practitioner or at a hospital until he can be declared cured. . . . In case the patient refuses to enter the hospital, the matter is decided by the governor of the county (*amtmand*) or the minister of justice, and the assistance of the police can be resorted to."—A. Johansen, *Joint session of sections 6 and 7, Sept. 24, 1912*, pp. 407-409, 502, 503. (*Transactions of the Fifteenth International Congress on Hygiene and Demography*, 1912, v. 1, pp. 485-486).

France.—Bureaus of public health.—High standards of sanitation.—"The French regard the foundation of the Royal Society of Medicine in 1776 as the first step taken in France towards the establishment of a public sanitary service. Although this association of medical men could not be regarded as a consultative authority, indepen-

dent of the public authorities, it nevertheless exercised a very great influence on all sanitary questions on which the government requested their cooperation. . . . Thus *Conseils d'Hygiène Publique* were established in Paris in 1802, in Lyons 1802, Marseilles 1825, Lille and Nantes 1828, Troyes 1830, Rouen and Bordeaux 1831. These councils accomplished all that was then possible. It is only in recent times that the provisions of the old laws have been profitably used, by the creation in many towns, as Nancy, Rheims, Lille, Havre, Pau, etc., of Bureaux d'Hygiène analogues to those in Brussels. In 1822 the *Conseil Supérieur de Santé* was created under the control of the Minister of the Interior; but this council does not appear to have displayed much activity. The Revolution of 1848 gave France its present sanitary organization by the decree of the 10th August, 1848, signed by Cavaignac, and countersigned by Thouret. This decree suppressed the *Conseil Supérieur de Santé*, and replaced it by the *Comité Consultatif d'Hygiène Publique de France* under the Minister of Commerce. The supreme control of public health was transferred on 1st January, 1880, to the Minister of the Interior. On the 18th December, 1848, the establishment for each department and district of a *Conseil d'Hygiène Publique et de Salubrité* was decreed.—A. Palmberg (tr. from French edition and section on England, ed. by A. Newsholme), *Treatise on public health and its applications in different European countries*, pp. 263-264.—In the first quarter of the twentieth century, "France was almost certainly the only country in Europe in which the highest standards of general sanitation and healthy living prevailed; [a condition due to] a higher standard of housing, the comparative absence of slums, and the splendid open spaces which characterize many of the cities of France."—W. A. Brend, *Health and the state*, pp. 215-216.

Germany.—Sanitation.—Social law of 1911.—Effect of World War.—"The struggle against diseases which unnaturally end the life of man prematurely has been conducted in Germany with greatest tenacity and with good results. In the years from 1871 to 1880, for every one thousand population the death rate was 27.1; at the close of the century, it was only about 20; in the year 1913, only 15; therefore continued increase in the average longevity [was] clearly shown. To bring about this result, the constant sanitary development of the whole country [was] necessary. . . . Particularly in the years 1886 to 1900 the improvement of the conditions of living in Germany may be traced to decrease in mortality among those in the age of greatest productiveness. The law on sickness insurance prevents hardship resulting from sickness. Every patient is assured of a physician, treatment in a hospital, and the most necessary means for his subsistence as well as for the subsistence of the family. . . . A prophylactic was developed, in which the national insurance institutions, which are the legal holders of invalid insurance and sick benefits, took a part. This occurred after the composite social law of 1911, which prevented such an appropriation of beneficial funds, had been replaced by the establishment of the new national insurance regulation. Also city communities and country districts, as well as many beneficial organizations, placed themselves at the service of this modern prophylactic endeavor. . . . In the last twenty years before the war the population of Germany . . . increased from 100 to 132 per cent. . . . [But] German national health [was greatly] impaired by the war. . . . [A marked in-

crease of tuberculosis appeared.] . . . The shortage of soap and laundry [gave] decided increase to venereal disease. . . . Mortality among children from two to ten years . . . increased extraordinarily. . . . In many families . . . three or four children [were] unable to walk [due to rachitis]."—A. Schlossman, *Social and industrial conditions in the Germany of today* (tr. by Karl Schloz in *Annals of American Academy of Political and Social Science*, Nov., 1920).

Great Britain.—Public health acts.—Board of health.—Ministry of health.—"English towns of the Industrial Revolution brought with them the great modern problem of the public health, and at first nothing was done to meet that problem. A series of epidemics, culminating in the outbreak of cholera which began in 1831, forced the problem into prominence, and tardy action at last produced a board of health in 1848."—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, p. 92.—The Public Health Act of 1848 made less generous provision for the needs of the time than the reception of the reports would lead one to anticipate. A General Board of Health was established, but the opposition forced the Government to limit its existence to five years, a device which gave factious opposition an unfortunately strong point of vantage in attacking the Board. Local Boards of Health might be set up in towns of more than three thousand inhabitants, in places showing an annual mortality in excess of twenty-three deaths per thousand. The General Board was given power to require the locality to acquire the sanitary powers provided in the act for Local Boards. . . . The medical fraternity furnished in these years a mass of technical knowledge concerning the prevalence of disease, and the causes of endemic and epidemic diseases. They began to form a body of statistical knowledge and to develop a technique in the collection and interpretation of statistics that was fundamental in health administration. . . . The known deficiencies of the local authorities in carrying out sanitary reforms resulted in the appointment of a Royal Commission in 1868 to investigate conditions and to recommend new legislation. The report emphasized the utter inadequacy of laws that merely created opportunities for the acquisition of powers by local authorities, and the ineffective administration of powers acquired was likewise pointed out."—A. P. Usher, *Introduction to industrial history of England*, pp. 398, 400-401.—"In 1871, there came into existence the Local Government Board, soon one of the most important of government departments. Its separate identity dates from then, though it was really an amalgamation of three different bodies—the Board of Public Health, the Poor Law Commissioners Board, and the Local Government department of the Home Office. The central department co-ordinated the work of local government by issuing orders and directions, and by sending inspectors to view asylums, workhouses, etc. . . . The Local Government Board has now [1920] been swallowed up in the Ministry of Health."—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, p. 255.—"The laws relating to public health were revised and codified by the Statute of 1875; so all the external appearance of final achievement was given to the legislation of the period. The details of correlation between central and local authorities had been worked out, and the development of grants from the revenues of the Central Government in aid of local rates had removed the chief complaint of

local interests. They could no longer plead in extenuation of their conduct an inability to provide financially for the schemes of improvement imposed upon them by the central health authorities. These were, indeed, substantial accomplishments, but it is none the less important to recognize that opportunities were lost of creating an administrative jurisdiction that would have been better able to accomplish the primary ends of social improvements in these directions. . . . One cannot feel that the legislation of the years 1871-75 was in any adequate sense a fulfillment of the preparatory work of reform that had been accomplished with distinction under the direction of Chadwick in the forties and under the leadership of the most public-spirited members of the medical fraternity in the years following the retirement of Chadwick from office. The progress in combating preventable disease has been slower than might have been anticipated. The shortcomings of the work of 1871 were peculiarly unfortunate because the departmental organization became sufficiently fixed at that time to render further reform especially difficult."—A. P. Usher, *Introduction to the industrial history of England*, pp. 402-403.—Although it was not until 1919 that a ministry of health was created (see CHARITIES: Great Britain: 1909-1919), the Education Act of 1902, the Children Act of 1908 (see CHILD WELFARE LEGISLATION: 1903-1920) and the Fisher Act of 1918 contained many provisions which did much to advance the cause of public health. "More than ever before, the state by the Act of 1918 [Fisher Act] makes itself responsible for the physical well-being of the children and associates this closely with education. . . . In the continuation schools, physical training is to form a definite part of the programme and local authorities are authorised to provide gymnasia, playing fields, swimming baths, and similar facilities and even to arrange holiday camps. In elementary schools, local education authorities are accustomed to care for the health of the children in their charge, especially in respect to physical cleanliness, dental troubles, and defective vision, and for this purpose they employ staffs of school medical officers, qualified practitioners, who inspect, report, and give treatment regularly and systematically. This duty is imposed by the Acts of 1902-3 and is extended by the Act of 1918 to apply to all provided schools, continuation schools and secondary schools as well as elementary. Infant care becomes part of the educational scheme under the last Act, and local education authorities may provide nursery schools for children between two and five years of age (or six years if the local authority raises the age for beginning school attendance to six) where attention will be given to their health, nourishment, and physical welfare."—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, pp. 286-287.—"The recent approval [1919] of the Ministry of Health Act by the King brings into effect an act that establishes a new office under the British Government, the incumbent being entitled 'Minister of Health.' Dr. Christopher Addison, who has been active in promoting the movement for such a law, has been appointed as the first minister, and by an order in council the act came into operation on July 1 of the current year. In its original effect the act takes over for the new ministry the powers and duties of the Local Government Board and of the insurance commissioners of England and Wales. It also transfers to the ministry all the powers of the Board of Education with respect to

attending to the health of expectant and nursing mothers and of children who have not reached the age of five years and are not in attendance in schools recognized by the board of education; also the subject of midwives under acts of 1902 and 1918, and powers exercised by the Secretary of State with regard to infant life protection under Part I of the Children Act, 1908. Further transfers are authorized of the powers of the board of education with respect to the medical inspection and treatment of children and young persons, powers of the Minister of Pensions with regard to the health of disabled officers and men after they have left the service, powers of the Secretary of State with regard to persons insane or mentally deficient, and other powers that seem to relate to the health of the people, either directly or indirectly. It will be noted that this last group of powers is merely authorized and not accomplished, while in the first group the transfer is actually made. In order to limit the functions of the Ministry of Health strictly to the duties properly incumbent upon it, any powers and duties transferred under this blanket provision which are not strictly in line with the purposes of the ministry may be taken away from it and placed elsewhere. The effect of the order is to clarify the whole situation with regard to provisions for health for women, children both in and out of school, pensioners from the Army and Navy, and persons mentally deficient. Thus far the act is only a consolidation of existing powers. An added feature is the authority given the King by an order in council to establish 'consultative councils,' whose duty shall be to give advice and assistance in connection with matters affecting the health of the people; these councils are to include persons of both sexes who have had practical experience in the matters to be considered. The act contains provisions for its operation in Scotland and Ireland as well as in England and Wales. A provisional order issued for the purpose of enlarging upon the plan for consultative councils directs that they shall consist of any number of persons not exceeding 20 as the ministry may determine, who shall be appointed for terms of three years, with an annual appointment of one-third of the membership, no member to serve continuously for more than six years. This draft order indicates the purposes of not only giving these councils consultative powers but of authorizing them to make suggestions on their own initiative."—*Ministry of Health Act of Great Britain (Monthly Labor Review, Aug., 1919)*.—It is fully appreciated that bad housing means diminished personal cleanliness and physique; increases the sickness rates, particularly the risks of infectious and contagious diseases, and lowers the general expectation of life. As well as the Housing Department, a large section of the Ministry is devoted to dealing with such subjects as infectious diseases, tuberculosis and venereal diseases. "The infant death rate for England and Wales for the year of 1920, namely 80 per 1000 births (the lowest hitherto recorded), was slightly exceeded in 1921, when the rate was 83 per 1000 births. The lowest rate previous to 1920 was 80 in the year 1910, and the rates of these three years affords a striking comparison with the average rate of about 150 at the beginning of the century. . . . Important developments have taken place . . . in connection with the welfare of the blind by reason of the application of the blind persons' act, 1920, [according to which] 'blind persons who had attained the age of 50 were

entitled to receive such pensions as they would have been entitled to receive under the old age pensions acts if they had attained the age of 70. On the first of March, 1922, 9,107 blind persons in England and Wales between the ages of 50 and 70 were in receipt of old age pensions.'—*Third Annual Report of the Ministry of Health, 1921-1922, p. 17.*

United States: Origin of public health service.—"The origin of the Public Health Service dates back to the end of the eighteenth century when, in 1796, steps were taken for providing medical and surgical relief to merchant seamen. At first this was financed by a per capita tax collected from the seamen, the funds being handled by the collectors of customs in the various ports. Subsequently this was changed into a tonnage tax, collected through the same channels. This explains why the marine hospital work (the precedent of the present United States Public Health Service), came to be lodged in the Treasury Department, for the collections of customs was naturally a branch of the Treasury Department's work. . . . The government . . . established 'marine hospitals' at various important points. . . . For a short period, 1878-1883, a terrible epidemic of yellow fever in the Mississippi valley caused the establishment of a National Board of Health (U. S. Statutes at Large, Vol. 20, page 484, Mar. 3rd, 1879). This attempt to turn Federal health authority over to another group apparently failed to meet the condition. And so we find several years later the idea of a National Board of Health, distinct from the Marine Hospital Service, abandoned, and the work again entrusted to the Marine Hospital Service. More and more, therefore, this Service began to undertake Federal public health activities, a fact which was recognized by Congress, when in 1902 (U. S. Statutes at Large, Vol. 32, page 712, Act of July 1st, 1902), it changed the name of the service to the United States Public Health Service and Marine Hospital Service, and later by an act approved August 14th, 1912, the name was changed to its present designation, the United States Public Health Service, and the power to 'study and investigate the diseases of man and conditions influencing the propagation and spread thereof, including sanitation and sewage and the pollution, either directly or indirectly of the navigable streams and lakes of the United States.' . . . Under the Constitution and existing statutes, the Federal Public Health Service is restrained from assuming duties that properly devolve upon State and municipal authorities. But their relations are so intimate that Congress made provision not only for coöperation, but for conferences on public health matters. By Act of Congress, July 1st, 1902 (U. S. Statutes at Large, Vol. 32, page 712), provision was made for an annual conference with all or a part of the State health organizations, and upon application of not less than five State health authorities, a special conference must be called. The deliberations pertain particularly to administrative matters. In effect, there is thus provided an advisory council on administrative matters, which in its development will insure coöperation and be an arbiter on vexed sanitary questions, and in which each State

is entitled to representation."—A. Doyle, *Development of federal public health functions in United States (Public Health Nurse, Sept., 1920)*.—"The United States has at the present time no unified national bureau or department of health analogous to the Comité Consultatif d'Hygiene of France, the Imperial Gesundheitsamt of Germany or the Local Government Board of England. The activities carried on by the Federal government for the furtherance of hygiene and sanitation are distributed among several separate and distinct bureaus. In the treasury department the *Public Health Service* has charge of the administration of the national maritime quarantine and of the national laws pertaining to medical inspection of immigrants; conducts investigations, in the various states, on infectious diseases, maintaining in this connection a hygienic laboratory [see BIOLOGY: Application]; and regulates the purity and potency of vaccines, antitoxins and serums manufactured for sale in interstate traffic. Each year it calls into conference representatives of the state boards of health for discussion of scientific and administrative questions and the promotion of coöperation. It publishes weekly *Public Health Reports* for circulation among health authorities and others, setting forth statistical and other data relating to national quarantine, communicable disease and mortality throughout the country, and other related subjects."—J. S. MacNutt, *Manual for health officers, p. 54*.—In the Department of Agriculture, the *Bureau of Chemistry* investigates the adulteration of foods, drugs and liquors, and the administration of the Federal Pure Food Act; the *Bureau of Animal Industry* contains the *dairy division*, which carries on sanitary and economic investigations of the milk industry, and the *meat inspection division*, which inspects slaughter-houses, and meat entering into interstate traffic. (See AGRICULTURE, DEPARTMENT OF, UNITED STATES.) In the Department of Commerce, the *Bureau of the Census* includes the *division of vital statistics*, which collects, analyzes and publishes statistics of population, births and deaths, for the country as a whole and for its various cities and towns. In the Department of Labor the *Children's Bureau*, instituted in 1912, conducts investigations and disseminates information dealing with the protection of child life, particularly as regards prevention of infant mortality.

Numerous unofficial organizations promote public health in various ways. "The American public health association is the oldest and the leading organization of the country devoted to the advancement of public hygiene. It was founded in 1872, and draws its members from the United States, Canada, Mexico, and Cuba. Its aims are: 'the development and advancement of public hygiene; the correlation of principles and practice; and the promotion of public hygiene as a distinct profession.' The association holds an annual meeting. . . . Important work, especially in the collection of data and the formulation of standards, is performed by the committees of the association. All persons engaged in official or technical work in public health lines or interested in public health work are eligible for membership. The official organ of the association is the *American Journal of Public Health*, published monthly. The Journal is a running library on public health work and sanitary engineering, and its volumes for completed years are indispensable works of reference to the health officer. . . . *The National Association for the Study and Prevention of Tuberculosis, . . . acts*

as a central bureau of exchange for information regarding tuberculosis, conducts investigations, manages the sale of Red Cross Seals for the tuberculosis campaign, [and] publishes books and pamphlets."—J. S. MacNutt, *Manual for health officers*, p. 60.—Other leading national unofficial organizations for the promotion of the public health are the American Association for Study and Prevention of Infant Mortality, the National Housing Association, and the American Medical Association.

United States: National health council.—"A conference of a number of the leading national voluntary health agencies was held in Washington on December 10, 1920, at which meeting a constitution and by-laws were adopted. . . . The Council was the outgrowth of many efforts in past years to co-ordinate national voluntary health organizations, initiated by the American Public Health Association, the American Medical Association, and other agencies. These measures culminated in a special health co-ordination study carried out during the summer of 1920, under the direction of Dr. Charles J. Hartfield, Dr. Watson Rankin and Dr. Livingston Farrand, with the financial aid of the American Red Cross. This investigation was conducted by Dr. D. B. Armstrong. At a preliminary conference in Washington, at the call of Dr. Farrand, on October 18, 1920, the need for such a co-ordinating body was fully discussed, and a temporary organization perfected. The conference on December 10th approved of the following list of activities, as indicating the legitimate field in which the Council might function: 1. A special information bureau. 2. A legislative bureau. 3. The co-ordination of health activities. 4. Periodic joint conferences. 5. A statistical bureau. 6. The development of educational health material."—*National Health Council* (*Public Health Nurse*, Mar., 1921, p. 138).—"The National Health Council, organized on December 10, 1920, is composed at present [May, 1921] of ten member organizations, divided into two groups,—direct participating members, and conference or advisory members. . . . A national headquarters office has been established at . . . Washington, D. C., in addition to the cooperative office in New York. . . . The membership of the Council at present . . . is as follows: Direct Participating Members, American Public Health Association, American Red Cross, American Social Hygiene Association, Conference of State and Provincial Health Authorities of North America, Council on Health and Public Instruction of the American Medical Association, National Child Health Council, National Committee for Mental Hygiene, National Organization for Public Health Nursing [see RED CROSS: American National Red Cross:

1922], National Tuberculosis Association, Conference or Advisory Member, United States Public Health Service."—*Pamphlet issued by National Committee for Mental Hygiene*, pp. 3-4.—Affiliated with the National Health Council, through the Child Health Council, are the American Child Hygiene Association, the Child Health Organization of America, and the National Child Labor Committee. "The present status of education for a public-health career is in a formative and experimental stage. . . . There is only one school separately endowed, namely, the School of Hygiene and Public Health at Johns Hopkins, which is now in the third year of its existence. Through the generosity of the Rockefeller Foundation [see ROCKEFELLER FOUNDATION], another school of public health . . . is now [1922] being organized at Harvard University. . . . The Harvard School of Public Health is an outgrowth, in fact a direct continuation, of the School of Public Health of Harvard University and the Massachusetts Institute of Technology, which was organized in 1913. . . . The University of Pennsylvania announced courses leading to a degree or certificate in public health in 1906, but the first of these awards was not made until 1912. Prior to this time (June 22, 1910), the Harvard Medical School offered the degree of doctor of public health and the first student was graduated with this degree in June, 1911. The School of Public Health of Harvard University and the Massachusetts Institute of Technology was opened in September, 1913, and the first class was graduated in June, 1914. Long before any medical school offered courses or degrees in public health, the Massachusetts Institute of Technology trained men and women for careers in sanitation in its department of Biology and Public Health, under the pioneer efforts of Prof. William T. Sedgwick."—W. J. Rosenau, *Present status of education for a public-health career* (*United States Public Health Service, Bulletin no. 126*, 1922, pp. 8-9, 17-18).—"Only recently has physical education been considered as an aspect of public health. . . . But following the memorable date of 1914, and in particular since the revelations of the selective service act of 1917, physical education has been viewed in the light of national needs. As typical of the newer point of view comes the report of the commission for the study of secondary education in which health and physical education are ranked first in a statement of 'cardinal principles.' The presence of the topic on a program for public-health specialists indicates a new emphasis in public health on physical education."—J. F. Williams, *Physical education* (*United States Public Health Service, Bulletin no. 126*, 1922, p. 38).

League of Nations.—“In the field of health work the League accomplished a good deal. The Council of the League . . . [was] instrumental in bringing together the League of Red Cross Societies and the International Committee of the Red Cross in a Joint Council [see RED CROSS: 1919-1920] in order to prevent overlapping and confusion and the more effectively to conduct their work of succouring the underfed and disease-stricken populations in Central and Eastern Europe. . . . The Council . . . in May 1920 set up the temporary Epidemic Commission, a small committee attached to the Health Section of the League Secretariat, for the purpose of cooperating with the health authorities of Russia and the new states of East Europe in their campaign against epidemics. . . . As the epidemic situation . . . became worse again in the winter of 1921-22, owing to the effect of the Russian famine on the health of the population, and the consequent pressure on Russia's neighbours, the Polish Government, with the approval of the League Council and in reliance on the support of the League Health Organisation and Secretariat, summoned an All-European Sanitary Conference in Warsaw, March 20th-28th, 1922. This conference was attended by, in addition to the European members of the League, Germany, Hungary (at that time not yet a member of the League), Soviet Russia, Soviet Ukraine and Turkey. . . . In December 1921 the Health Organisation [which had been organized in September] held a conference in London on the standardisation of sera and serological tests, as the starting-point of a general inquiry undertaken conjointly with the Office International. . . . Results of the work on anti-pneumococcus, anti-meningococcus and anti-dysentery sera, as well as the sero-diagnosis of syphilis, were examined and a . . . programme of research work adopted at a second general conference held at the Pasteur Institute in Paris from November 20th to 26th. . . . At the second conference there were not only more countries represented—Austria, Belgium, Denmark, France, Germany, Great Britain, Japan, Poland, Roumania, Russia, Switzerland and the U. S. A.—but the delegations were more numerous and contained bigger men representing more weighty institutions. French, British and German medical science was particularly strongly represented. . . . [By an agreement concluded August, 1922, the Rockefeller Foundation] endows two special branches of the League's work—epidemiological intelligence and the interchange of sanitary staff—to the extent of \$30,000 a year for five years for the former and \$60,000 a year for three years for the latter. . . . On November 3rd the Health Committee, in view of the increase of sleeping-sickness and tuberculosis in Africa since the war, appointed a small expert committee from the three countries—Belgium, France, Great Britain—having colonial interests in tropical Africa. . . . On November 3rd the Health Committee, at the suggestion of its Japanese member and with the approval of the governments concerned, sent a small mission of two members on a six-months' tour of investigation of the chief ports in the Far East, for the purpose of studying the different methods in force for sanitary, anti-epidemic and quarantine regulation, with particular attention to the necessity for preventing the spread of diseases by seaborne traffic.”—R. Williams, *League of Nations to-day*, pp. 87-89, 90, 91-92, 95.

PUEBLO.—The Spanish word pueblo, meaning town, village, or the inhabitants thereof, has acquired a special signification as applied, first, to the sedentary or village Indians of New Mexico and Arizona, and then to the singular villages of communal houses which they inhabit.—Based on D. G. Brinton, *American race*, p. 113.—“The purely civic colonies of California were called pueblos to distinguish them from missions or presidios. The term pueblo, in its most extended meaning, may embrace towns of every description, from a hamlet to a city. . . . However, in its spe-

cial significance, a pueblo means a corporate town."—F. W. Blackmar, *Spanish institutions of the Southwest*, ch. 8.—See also PUEBLOS.

PUEBLO LOOM. See INVENTIONS: Ancient and medieval; Early industrial processes.

PUEBLOS.—"The non-nomadic semi-civilized town and agricultural peoples of New Mexico and Arizona . . . I call the Pueblos, or Townspeople, from pueblo, town, population, people, a name given by the Spaniards to such inhabitants of this region as were found, when first discovered, permanently located in comparatively well-built towns. Strictly speaking, the term Pueblos applies only to the villagers settled along the banks of the Rio Grande del Norte and its tributaries between latitudes 34° 45' and 36° 30', and although the name is employed as a general appellation for this division, it will be used, for the most part, only in its narrower sense. In this division, besides the before mentioned Pueblos proper, are embraced the Moquis, or villagers of eastern Arizona, and the non-nomadic agricultural nations of the lower Gila river,—the Pimas, Maricopas, Papagos, and cognate tribes. The country of the Townspeople, if we may credit Lieutenant Simpson, is one of 'almost universal barrenness,' yet interspersed with fertile spots; that of the agricultural nations, though dry, is more generally productive. The fame of this so-called civilization reached Mexico at an early day . . . in exaggerated rumors of great cities to the north, which prompted the expeditions of Marco de Niza in 1539, of Coronado in 1540, and of Espejo in 1586 [1583]. These adventurers visited the north in quest of the fabulous kingdoms of Quivira, Tontontecac, Marata and others, in which great riches were said to exist. The name of Quivira was afterwards applied by them to one or more of the pueblo cities. The name Cibola, from 'Cibolo,' Mexican bull, 'bos bison,' or wild ox of New Mexico, where the Spaniards first encountered buffalo, was given to seven of the towns which were afterwards known as the Seven Cities of Cibola. But most of the villages known at the present day were mentioned in the reports of the early expeditions by their present names. . . . The towns of the Pueblos are essentially unique, and are the dominant feature of these aboriginals. Some of them are situated in valleys, others on mesas; sometimes they are planted on elevations almost inaccessible, reached only by artificial grades, or by steps cut in the solid rock. Some of the towns are of an elliptical shape, while others are square, a town being frequently but a block of buildings. Thus a Pueblo consists of one or more squares, each enclosed by three or four buildings of from 300 to 400 feet in length, and about 150 feet in width at the base, and from two to seven stories of from eight to nine feet each in height. . . . The stories are built in a series of gradations or retreating surfaces, decreasing in size as they rise, thus forming a succession of terraces. In some of the towns these terraces are on both sides of the building; in others they face only towards the outside; while again in others they are on the inside. These terraces are about six feet wide, and extend around the three or four sides of the square, forming a walk for the occupants of the story resting upon it, and a roof for the story beneath; so with the stories above. As there is no inner communication with one another, the only means of mounting to them is by ladders which stand at convenient distances along the several rows of terraces, and they may be drawn up at pleasure, thus cutting off all unwelcome intrusion. The outside walls of one or more of the lower stories are entirely solid, having no openings

of any kind, with the exception of, in some towns, a few loopholes. . . . To enter the rooms on the ground floor from the outside, one must mount the ladder to the first balcony or terrace, then descend through a trap door in the floor by another ladder on the inside. . . . The several stories of these huge structures are divided into multitudinous compartments of greater or less size, which are apportioned to the several families of the tribe."—H. H. Bancroft, *Native races of the Pacific states*, v. 1, ch. 5.—"There can be no doubt that Cibola is to be looked for in New Mexico. . . . We cannot . . . refuse to adopt the views of General Simpson and of Mr. W. W. H. Davis, and to look at the Pueblo of Zuñi as occupying, if not the actual site, at least one of the sites within the tribal area of the Seven Cities of Cibola. Nor can we refuse to identify Tusayan with the Moqui district, and Acuco with Acoma."—A. F. PULLANI.—The descendants of the first Crusaders who remained in the East and married Asiatic women are represented as having been a very despicable half-breed race. They were called the Pullani. Professor Palmer suggests a derivation of the name from "fulani," anybodies. Mr. Keightley, on the contrary, states that before the crusading colonists overcame their prejudice against Oriental wives, women were brought to them from Apulia, in Italy. Whence the name Pullani.—Based on W. Besant and E. H. Palmer, *Jerusalem*, ch. 7.

PUNIC.—The adjective Punicus, derived from the name of the Phœnicians, was used by the Romans in a sense which commonly signified "Carthaginian,"—the Carthaginians being of Phœnician origin. Hence "Punic Wars," "Punic faith," etc., the phrase "Punic faith" being an imputation of faithlessness and treachery.

PUNIC WARS: First (264-241 B. C.).—When Pyrrhus quitted Italy he is said to have exclaimed, "How fair a battle-field are we leaving to the Romans and Carthaginians." He may easily have had sagacity to foresee the deadly struggle which Rome and Carthage would soon be engaged in, and he might as easily have predicted, too, that the beginning of it would be in Sicily. Rome had just settled her supremacy in the whole Italian peninsula; she was sure to covet next the rich island that lies so near to it. In fact, there was bred quickly in the Roman mind such an eagerness to cross the narrow strait that it waited only for the slenderest excuse. A poor pretext was found in the year 264 B. C. and it was so despicably poor that the proud Roman senators turned over to the popular assembly of the Comitia the responsibility of accepting it. There came to Rome from Messene, in Sicily—or Messina, as the Romans called the city—an appeal. It did not come from the citizens of Messene, but from a band of freebooters who had got possession of the town. These were mercenaries from Campania (lately made Roman territory by the Samnite conquest) who had been in the pay of Agathocles of Syracuse. Disbanded on that tyrant's death, they had treacherously seized Messene, slain most of the male inhabitants, taken to themselves the women, and settled down to a career of piracy and robbery, assuming the name of Mamertini,—children of Mamers, or Mars. Of course, all Sicily, both Greek and Carthaginian, was roused against them by the outrages they committed. Being hard pressed, the Mamertines invoked, as Italians, the protection of Rome; although one party among them appears to have preferred an arrangement of terms with the Carthaginians. The Roman senate, being ashamed to extend a friendly hand to the Mamertine cutthroats, but not having virtue enough to decline an opportunity for fresh conquests, referred the question to the people at large. The popular vote sent an army into Sicily, and Messene, then besieged by Hiero of Syracuse on one side and by a Carthaginian army on the other, was relieved of both. The Romans thereon proceeded, in two aggressive campaigns, against Syracusans and Carthaginians alike, until Hiero bought peace with them, at a heavy cost, and became their half-subject ally for the remainder of his life. The war with the Carthaginians was but just commenced. Its first stunning blow was struck at Agrigentum, the splendid city of Phalaris, which the Carthaginians had destroyed, 405 B. C., which Timoleon had rebuilt, and which one of the Hannibals ("son of Gisco") now seized upon for his stronghold. In a great battle fought under the walls of Agrigentum, 262 B. C., Hannibal lost the city and all but a small remnant of his army. But the successes of the Romans on land were worth little to them while the Carthaginians commanded the sea. Hence they resolved to create a fleet, and are said to have built a hundred ships of the quinquereme order and twenty triremes

HANNIBAL CROSSING THE RUONE.
(After painting by Henri Motte)

within sixty days, while rowers for them were trained by an imitative exercise on land. The first squadron of this improvised navy was trapped at Lipara and lost; the remainder was successful in its first encounter with the enemy. But where naval warfare depended on good seamanship the Romans were no match for the Carthaginians. They contrived therefore a machine for their ships, called the *corvus*, or raven, by which, running straight on the opposing vessel, they were able to grasp it by the throat, so to speak, and force fighting at close quarters. That accomplished, they were tolerably sure of victory. With their *corvus* they had annihilated the Carthaginian fleet in a great sea-fight at Myla, in 260, and got so much mastery of the sea that they were able to attack their Punic foes even in the island of Sardinia, but without much result. In 257 B.C. another naval battle of doubtful issue was fought at Tyn-daris, and the following year, in the great battle of Ecnomus, the naval power of the Carthaginians, for the time being, was utterly crushed. Then followed the invasion of Carthaginian territory by Regulus, his complete successes at first, his insolent proposal of hard terms, and the tremendous defeat which overwhelmed him at Adis a little later, when he, himself, was taken prisoner. The miserable remnant of the Roman army which held its ground at Clypea on the African coast was rescued the next year, 255 B.C., by a new fleet, but only to be destroyed on the voyage homeward, with 260 ships, in a great storm on the south coast of Sicily. Then Carthaginians reappeared in Sicily and the war in that unhappy island was resumed. In 254 the Romans took the strong fortified city of Panormus. In 253, having built and equipped another fleet, they were robbed of it again by a storm at sea, and the Carthaginians gained ground and strength in Sicily. In 251 the Roman consul, Cæcilius Metellus, drove them back from the wall of Panormus and inflicted on them so discouraging a defeat, that they sent Regulus, their prisoner, on parole, with an embassy, to solicit peace at Rome. How Regulus advised his countrymen against peace, and how he returned to Carthage to meet a cruel death—the traditional story is familiar to all readers, but modern criticism throws doubt upon it. In 250 B.C. the Romans undertook the siege of Lilybæum, which, with the neighbouring port of Drepana, were the only strongholds left to the Carthaginians. The siege then commenced was one of the most protracted in history, for when the First Punic War ended, nine years later, Lilybæum was still resisting, and the Romans only acquired it with all the rest of Sicily, under the terms of the treaty of peace. Meantime the Carthaginians won a bloody naval victory at Drepana (240 B.C.) over the Roman fleet, and the latter, in the same year, had a third fleet destroyed on the coast by relentless storms. In the year 247 that Carthaginian command in Sicily was given to the great Hamilcar, surnamed Barca, who was the father of a yet greater man, the Hannibal who afterwards brought Rome very near to destruction. Hamilcar Barca, having only a few mutinous mercenary soldiers at his command, and almost unsupported by the authorities at Carthage, established himself, first, on the rocky height of Mount Ercte, or Hercte, near Panormus, and afterwards on Mount Eryx, and harassed the Romans for six years. The end came at last as the consequence of a decisive naval victory near the Ægæan isles, which the Romans achieved, with a newly built fleet, in March, 241 B.C. The Carthaginians, discouraged, proposed peace, and purchased it by evacuating Sicily and

paying a heavy war indemnity. Thus Rome acquired Sicily, but the wealth and civilization of the great island had been ruined beyond recovery.—R. B. Smith, *Carthage and the Carthaginians*, ch. 4-7.—See also ROME: Republic: B.C. 264-241.

ALSO IN: W. Ihne, *History of Rome*, bk. 4, ch. 3.—Polybius, *Histories*, bk. 1.—A. J. Church, *Story of Carthage*, pt. 4, ch. 1-3.

Second (218-201 B.C.).—Between the First Punic War and the Second there was an interval of twenty-three years. Carthage, meantime, had been brought very near to destruction by the Revolt of the Mercenaries (see CARTHAGE: B.C. 241-238) and had been saved by the capable energy of Hamilcar Barca. Then the selfish faction which hated Hamilcar had regained power in the Punic capital, and the Barcine patriot could do no more than obtain command of an army which he led, on his own responsibility, into Spain, 237 B.C. The Carthaginians had inherited from the Phœnicians a considerable commerce with Spain, but do not seem to have organized a control of the country until Hamilcar took the task in hand. Partly by pacific influences and partly by force, he established a rule, rather personal than Carthaginian, which extended over nearly all southern Spain. With the wealth that he drew from its gold and silver mines he maintained his army and bought or bribed at Carthage the independence he needed for the carrying out of his plans. He had aimed from the first, no doubt, at organizing resources with which to make war on Rome. Hamilcar was killed in battle, 228 B.C., and his son-in-law, Hasdrubal, who succeeded him, lived only seven years more. Then Hannibal, the son of Hamilcar, in his twenty-sixth year, was chosen to the command in Spain. He waited two years, for the settling of his authority and for making all preparations complete, and then he threw down a challenge to the Romans for the war which he had sworn to his father that he would make the one purpose of his life. The provocation of war was the taking of the city of Saguntum, a Greek colony on the Spanish coast, which the Romans had formed an alliance with. It was taken by Hannibal after a siege of eight months and after most of the inhabitants had destroyed themselves with their wealth. When Rome declared war it was with the expectation, no doubt, that Spain and Africa would be the battle grounds. But Hannibal did not wait for her attack. He led his Spanish army straight to Italy, in the early summer of 218 B.C., skirting the Pyrenees and crossing the Alps. The story of his passage of the Alps is familiar to every reader. [See ALPS: As barriers.] The difficulties he encountered were so terrible and the losses sustained so great that Hannibal descended into Italy with only 20,000 foot and 6,000 horse, out of 50,000 of the one and 9,000 of the other which he had led through Gaul. He received some reinforcement and coöperation from the Cisalpine Gauls, but their strength had been broken by recent wars with Rome and they were not efficient allies. In the first encounter of the Romans with the dread invader, on the Ticinus, they were beaten, but not seriously. In the next, on the Trebia, where Scipio, the consul, made a determined stand, they sustained an overwhelming defeat. This ended the campaign of 218 B.C. Hannibal wintered in Cisalpine Gaul and passed the Apennines the following spring into Etruria, stealing a march on the Roman army, under the popular consul Flaminius, which was watching to intercept him. The latter pursued and was caught in ambush at Lake Trasimene, where Flaminius and 15,000 of his men were slain, while most of the survivors of

the fatal field were taken prisoners and made slaves. Rome then seemed open to the Carthaginian, but he knew, without doubt, that his force was not strong enough for the besieging of the city, and he made no attempt. What he aimed at was the isolating of Rome and the arraying of Italy against her, in a great and powerfully handled combination of the jealousies and animosities which he knew to exist. He led his troops northward again, after the victory of Lake Trasimene, across the mountains to the Adriatic coast, and rested them during the summer. When cooler weather came he moved southward along the coast into Apulia. The Romans meantime had chosen a dictator, Q. Fabius Maximus, a cautious man, whose plan of campaign was to watch and harass and wear out the enemy, without risking a battle. It was a policy which earned for him the name of "The Cunctator," or Lingerer. The Roman people were discontented with it, and next year 216 B. C. they elected for one of the consuls a certain Varro, who had been one of the mouth-pieces of their discontent. In opposition to his colleague, Æmilius Paullus, Varro soon forced a battle with Hannibal at Cannæ, in Apulia, and brought upon his countrymen the most awful disaster in war that they ever knew. Nearly 50,000 Roman citizens were left dead on the field, including eighty senators, and half the young nobility of the state. From the spoils of the field Hannibal was said to have sent three bushels of golden rings to Carthage, stripped from the fingers of Roman knights. Rome reeled under the blow, and yet haughtily refused to ransom the 20,000 prisoners in Hannibal's hands, while she met the discomfited Varro with proud thanks, because "he had not despaired of the Republic." Capua now opened its gates to Hannibal and became the headquarters of his operations. The people of southern Italy declared generally in his favor; but he had reached and passed, nevertheless, the crowning point of his success. He received no effective help from Carthage; nor from his brother in Spain, who was defeated by the elder Scipios, that same year (216 B. C.) at Ibera, just as he had prepared to lead a fresh army into Italy. On the other hand, the energies of the Romans had risen with every disaster. Their Latin subjects continued faithful to them; but they lost at this time an important ally in Sicily, by the death of the aged Hiero of Syracuse, and the Carthaginians succeeded in raising most of the island against them. The war in Sicily now became for a time more important than that in Italy, and the consul Marcellus, the most vigorous of the Roman generals, was sent to conduct it. His chief object was the taking of Syracuse and the great city sustained another of the many dreadful sieges which it was her fate to endure. The siege was prolonged for two years, and chiefly by the science and the military inventions of the famous mathematician, Archimedes. When the Romans entered Syracuse at last, 212 B. C., it was to pillage and slay without restraint, and Archimedes was one of the thousands cut down by their swords. Meantime, in Italy, Tarentum had been betrayed to Hannibal, but the Romans still held the citadel of the town. They had gained so much strength in the field that they were now able to lay siege to Capua and Hannibal was powerless to relieve it. He attempted a diversion by marching on Rome, but the threat proved idle and Capua was left to its fate. The city surrendered soon after (211 B. C.) and the merciless conquerors only spared it for a new population. For three or four years after this the war in Italy was one of minor successes and reverses on both sides, but Hannibal

lost steadily in prestige and strength. In Spain, Hannibal's brother, Hasdrubal, had opportunely beaten and slain (212 B. C.) both the elder Scipios; but another and greater Scipio, P. Cornelius, son of Publius, had taken the field and was sweeping the Carthaginians from the peninsula. Yet, despite Scipio's capture of New Carthage and his victories, at Bæcula, and elsewhere, Hasdrubal contrived, in some unexplained way, in the year 208 B. C., to cross the Pyrenees into Gaul and to recruit reinforcements there for a movement on Italy. The next spring he passed the Alps and brought his army safely into Cisalpine Gaul; but his dispatches to Hannibal fell into the hands of the Romans and revealed his plans. The swift energy of one of the consuls, C. Claudius Nero, brought about a marvellous concentration of Roman forces to meet him, and he and his army perished together in an awful battle fought on the banks of the Metaurus, in Umbria. The last hopes of Hannibal perished with them; but he held his ground in the extreme south of Italy and no Roman general dared try to dislodge him. When Scipio returned next year (206 B. C.) and reported the complete conquest of Spain, he was chosen consul with the understanding that he would carry the war into Africa, though the senate stood half opposed. He did so in the early months of the year 204 crossing from Sicily with a comparatively small armament and laying siege to Utica. That year he accomplished nothing, but during the next winter he struck a terrible blow, surprising and burning the camps of the Carthaginians and their Numidian allies and slaughtering 40,000 of their number. This success was soon followed by another, on the Great Plains, which lie seventy or eighty miles to the southwest of Carthage. The Numidian king, Syphax, was now driven from his throne and the kingdom delivered over to an outlawed prince, Massinissa, who became, thenceforth, the most useful and unscrupulous of allies to the Romans. Now pushed to despair, the Carthaginians summoned Hannibal to their rescue. He abandoned Italy at the call and returned to see his own land for the first time since as a boy he left it with his father. But even his genius could not save Carthage with the means at his command. The long war was ended in October of the year 202 B. C. by the battle which is called the battle of Zama, though it was fought at some distance west of that place. The Carthaginian army was routed utterly, and Hannibal himself persuaded his countrymen to accept a peace which stripped them of their ships and their trade, their possessions in Spain and all the islands, and their power over the Numidian states, besides wringing from them a war indemnity of many millions. On those hard terms, Carthage was suffered to exist a few years longer.—Based on R. B. Smith, *Carthage and the Carthaginians*.—See also **ROME**: Republic: B. C. 218-202.

PUNJAB, **Punjaub**, or **Panjab**.—"Everything has a meaning in India, and the Panjab is only another name for the Five Rivers which make the historic Indus. They rise far back among the western Himalayas, bring down their waters from glaciers twenty-five miles in length, and peaks 26,000 feet high, and hurl their mighty torrent into one great current, which is thrown at last into the Arabian Sea. It is a fertile region,

not less so than the Valley of the Ganges. This Panjab is the open door, the only one by which the European of earlier days was able to descend upon the plains of India for conquest and a new home. . . . In the Panjab every foot of the land is a romance. No one knows how many armies have shivered in the winds of the hills of Afghanistan, and then pounced down through the Khaibar Pass into India, and overspread the country, until the people could rise and destroy the stranger within the gates. Whenever a European invader of Asia has reached well into the continent, his dream has always been India. That country has ever been, and still is, the pearl of all the Orient. Its perfect sky in winter, its plenteous rains in summer, its immense rivers, its boundless stores of wealth, and its enduring industries, which know no change, have made it the dream of every great conqueror."—J. F. Hurst, *Indika*, ch. 75.—"In form, the country is a great triangle, its base resting on the Himalayan chain and Cashmere, and its apex directed due south-west. . . . The five streams which confer its name, counting them from north to south, are the Upper Indus, the Jhelum, the Chenab, the Ravee and the Sutlej, the Indus and Sutlej constituting respectively the western and eastern boundary. . . . The four divisions enclosed by the five convergent streams are called doabs—lands of two waters. . . . Besides the territory thus delineated, the Punjab of the Sikhs included Cashmere, the Jummoo territory to Spiti and Tibet, the trans-Indus frontier and the Hazara highlands in the west; and to the east the Jullundur Doab with Kangra and Noorpoor. These last, with the frontier, are better known as the cis- and trans-Sutlej states."—E. Arnold, *Marquis of Dalhousie's administration of British India*, v. 1, ch. 2.—See also INDIA: Map.—The Sikhs established their supremacy in the Punjab in the eighteenth century, and became a formidable power, under the famous Runjet Singb, in the early part of the nineteenth century. (See SIKHS.) The English conquest of the Sikhs and annexation of the Punjab to British India took place in 1840.—See also INDIA: 1845-1849.

PUNT, Land of.—"Under the name of Punt, the old inhabitants of Kemi [ancient Egypt] meant a distant land, washed by the great ocean, full of valleys and hills, abounding in ebony and other rich woods, in incense, balsam, precious metals, and costly stones; rich also in beasts, as camelopards, hunting leopards, panthers, dog-headed apes, and long-tailed monkeys. . . . Such was the Ophir of the Egyptians, without doubt the present coast of the Somauli land in sight of Arabia, but separated from it by the sea. According to an old obscure tradition, the land of Punt was the original seat of the gods. From Punt the holy ones had travelled to the Nile valley, at their head Amon, Horus, Hathor."—H. Brugsch Bey, *History of Egypt under the Pharaohs*, ch. 8.—See also COMMERCE: Ancient: B. C. 2500.

PURITANS: In distinction from Independents, or Separatists.—"When, in 1603, James I. became king of England, he found his Protestant subjects divided into three classes,—Conformists, or High Ritualists; Nonconformists, or Broad-Church Puritans; and Separatists, popularly called Brownists [and subsequently called Independents. (See INDEPENDENTS, OR SEPARATISTS: Their origin and opinions.)] The Conformists and the Puritans both adhered to the Church of England, and were struggling for its control. . . . The Puritans objected to some of the ceremonies of the Church, such as the ring in marriage, the sign of the cross in baptism, the promises of god-parents, the showy vestments, bowing in the creed, receiving evil-livers to the communion, repetitions, and to kneeling at communion as if still adoring the Host, instead of assuming an ordinary attitude as did the apostles at the Last Supper. The majority of the lower clergy and of the middle classes are said to have favored Puritanism. . . . Dr. Neal says that the Puritan body took form in 1564, and dissolved in 1644. During that term of eighty years the Puritans were ever 'in and out of the Church of England'; as Dr. Prince says in his *Annals* (1736), those who left the Episcopal Church 'lost the name of Puritans and received that of the Separatists.' . . . The Separatists, unlike the Puritans, had no connection with the National Church, and the more rigid of them even denied that Church to be scriptural, or its ministrations to be valid. . . . The Pilgrim Fathers, the founders of our Plymouth, the pioneer colony of New England, were not Puritans. They never were called by that name, either by themselves or their contemporaries. They were Separatists, slightly called Brownists, and in time became known as Independents or Congregationalists. As Separatists they were oppressed and maligned by the Puritans. They did not restrict voting or office-holding to their church-members. They heartily welcomed to their little State all men of other sects, or of no sects, who adhered to the essentials of Christianity and were ready to conform to the local laws and customs. . . . Though their faith was positive and strong, they laid down no formal creed."—J. A. Goodwin, *Pilgrim republic*, ch. 2, 1.—"The reader of this history must have remarked that 'Puritan' and 'Separatist' were by no means convertible terms: that, in point of fact, they very often indicated hostile parties, pitted against each other in bitter controversies. And the inquiry may have arisen—How is this? Were not the Separatists all Puritans? . . . The term 'Puritan' was originally applied to all in the church of England who desired further reformation—a great conformity of church government and worship to primitive and apostolic usages. But after awhile the term became restricted in its application to those who retained their respect for the church of England, and their connection with it, notwithstanding its acknowledged corruptions; in distinction from those who had

been brought to abandon both their respect for that church and their connection with it, under the conviction that it was hopelessly corrupt, and could never be reformed. The Separatists, then, were indeed all Puritans, and of the most thorough and uncompromising kind. They were the very essence—the oil of Puritanism. But the Puritans were by no means all Separatists; though they agreed with them in doctrinal faith, being all thoroughly Calvinistic in their faith.”—G. Punchard, *History of Congregationalism*, v. 3, appendix, note F.—See also CHURCH OF ENGLAND: 1534-1563; ENGLAND: 1558-1588.

1620-1660.—Close relations between English and American Puritans.—Social and political character of Puritan ideals.—“In order to get a realistic view of them [the Puritans] we must think of them as belonging to the history of England in one of the most stirring periods, and not merely to the prenatal history of the United States. They were seventeenth-century Englishmen and not faint foreshadowings of eighteenth-century Americans. . . . The early New-Englander was first of all an Englishman. He had come to the New World impelled by ideas which he held in common with thousands of his countrymen. He was enthusiastically devoted to a great revolutionary cause which, beginning with a few obscure people, gathered strength until at last it swept away the long-established order. In the early part of the struggle New England was on the fighting-line. It was the Puritan revolution which culminated in the establishment of the English Commonwealth with which these men were related. Here they found the realization of their ideals. . . . The fundamental interest [of the Puritans] was not in the individual man, but in a new social order. He did not make our distinction between church and state. Religion was to him a public matter. That every state should have a religion was something on which all parties in that day were agreed. But the Puritan contention was that the religion of the state should not be formal, but real. The nation should be held to the same strict rules of conscience which bound the private man. There was no excuse for public unrighteousness. Milton was setting forth a political creed when he wrote, ‘A Commonwealth ought to be a huge Christian parsonage, one mighty growth and stature of an honest man, as compact of virtue as of body.’ [See CHRISTIANITY: 17th-20th centuries.] When the passengers of the *Mayflower* formed themselves into a body politic ‘for the glory of God and the advancement of the Christian religion,’ they were clearly expressing their purpose. Civil government was not an end in itself: it was a means for advancing true religion. An early New England minister asks the question, ‘What is our errand in the wilderness?’ His answer is that it is not religion as a private interest. Personal religion could be practised anywhere. New England’s design in the vast undertaking is to set up the Kingdom of Christ in whole communities. This Kingdom must be set up in a public and openly prevailing manner. It is in the commonwealth that it must be established. . . . It was a purpose which was at once political and religious. . . .

Years before, while still in England, they had, ‘as the Lords free people, joynd themselves (by a covenant of the Lord) into a church estate, in the fellowship of the gospel, to walke in all his wayes made known unto them or to be made known unto them, according to their best endeavors, whatsoever it would cost them, the Lord assisting them.’ But their church had been a voluntary organization without power to determine community life. They wanted to do what Calvin had done in Geneva, and Knox in Scotland, to give full political expression to their religious convictions. It was because he had suspected they were at heart revolutionists of a dangerous type that King James had driven them out of England. While he was still only king in Scotland he had learned that Calvinism was something more than a system of theology; it involved a theory that was hostile to the divine right of kings to rule. . . . In Germany the Reformation had first excited the hopes of the people and then disappointed them. The peasants’ revolt, with its threat of a great social revolution, had frightened Luther. Henceforth he put his trust in princes and supported their claims to authority. But in France the Reformation took a different turn. A young Frenchman, John Calvin, issued a book on ‘The Institutes of the Christian Religion’ which had an effect on the revolutionary forces of the seventeenth century like that which the works of Rousseau had on the revolution of the eighteenth century. Both men began with the statement of abstract ideas, but these abstractions were taken up by thousands of their contemporaries and applied to the political problems of the day. It is interesting that both these men found their home in the free city of Geneva. Calvin’s entrance into Geneva was dramatic, and his career a stormy one. With all the self-confidence of youth he ‘took over’ the government of the city. The doctrine of the direct sovereignty of God was applied to municipal affairs. Geneva was ruled in the name of the Invisible King. The Scotch Calvinist Andrew Melville confronted the absolutism of King James with a doctrine which was equally uncompromising: ‘There are two kings in Scotland, King James and Jesus Christ whose subject King James is.’ . . . It was in 1604, in the famous conference at Hampton Court, that James in pithy sentences declared that he was prepared to fight Puritans, Presbyterians, and Separatists to the death. They might differ among themselves, but they were all one to him. They all agreed in undermining the royal authority. [See ENGLAND: 1604.] . . . We have as our inheritance, which we share with our British brethren, the whole Puritan movement on both sides of the Atlantic. . . . The man of the Pilgrim company best beloved and longest remembered was the pastor, John Robinson, who crossed the sea only in spirit. Hampden and Pym and Eliot and Baxter and Milton and Cromwell have left a deeper impress upon America than all the Mathers.”—S. M. Crothers, *Pilgrims and their contemporaries* (*Century Magazine*, May, 1920).

1730-1775.—In American colonies.—End of immigration from England.—Devotion to education in New England.—Intellectual predominance of the clergy.—"Immigration practically ceased about 1730, not to be resumed on a large scale until the age of steamships a century later. . . . New England was inhabited by pure English stock, and retained for many generations its Puritan character. The early immigrants had come in congregations and settled in compact groups, making little self-governing towns clustered about the church, the school, and the village green. Learning was more carefully nurtured and widely diffused in New England than anywhere else in the colonies. Before 1650 public-school instruction had been made compulsory in all New England except Rhode Island. . . . Until the rise of a class of brilliant young lawyers like Otis and the Adamses, on the eve of the Revolutionary War, the clergy were the undisputed leaders of society. Education was entirely controlled by a public opinion largely inspired from the pulpits of the Puritan divines. With the virtues of soberness, industry, scrupulous conscientiousness, and a high standard of private and public morality, Puritanism also unfortunately developed narrowness, self-righteousness, and unwholesome cultivation of the austere and joyless sides of life. The first play that ventured to invite the applause of a New England audience, 'The Orphan,' enacted in a Boston coffeehouse in 1750, was prohibited as 'tending to discourage industry and frugality and greatly to increase impiety.' At the same time New York, Baltimore, and cities to the south were centers of gayety."—D. S. Muzzey, *American history*, pp. 72-74.—See also BLUE LAWS.

PYLOS, or Pilus, ancient town of Messenia, Greece, on the Bay of Navarino, five miles west of modern Navarino. It was captured by the Athenians during the Peloponnesian War, 425 B. C. See GREECE: B. C. 425; ATHENS: B. C. 426-422.

PYM, John (1584-1643), English statesman. Member of Parliament, 1614-1643; conducted the impeachment of Strafford, 1640; escaped seizure by Charles I, 1642. See ENGLAND: 1642 (January); 1643 (August-September).

PYRAMIDS: Description.—Chief examples.—"The name 'pyramid'—first invented by the ancients to denote the tombs of the Egyptian kings, and still used in geometry to this day—is of Greek origin. The Egyptians themselves denoted the pyramid—both in the sense of a sepulchre and of a figure in Solid Geometry—by the word 'abumir,' while, on the other hand, the word 'Pir-am-us' is equivalent to the 'edge of the pyramid,' namely the four edges extending from the apex of the pyramid to each corner of the quadrangular base."—H. Brugsch Bey, *History of Egypt*, ch. 7.—"The royal tombs of the early dynasties were built in the form of pyramids, the greater part of which are above ground; they consist of the chamber in which funereal gifts were offered, the passage and the sarcophagus chamber. The actual pyra-

mid contained the passage and the sarcophagus chamber, but although the chamber, sometimes called temple or chapel, in which funereal gifts were offered, was a building separate from the pyramid, it nevertheless formed an integral part of the pyramid plan. On the western bank of the Nile, from Abu Roâsh on the north to Médûn on the south, is a slightly elevated tract of land, about twenty-five miles long, on the edge of the Libyan desert, on which stand the pyramids of Abu Roâsh, Gîzeh, Zâwyet el-'Aryân, Abusir, Sakkarah, and Dahshûr. Other places in Egypt where pyramids are found are El-lahûn in the Fayyûm, and Kullah near Esneh. . . . Tomb-pyramids were built by kings and others until the XIIIth dynasty. The ancient writers who have described and treated of the pyramids are given by Pliny (*Natural History* xxxvi. 12, 17). If we may believe some of the writers on them during the Middle Ages, their outsides must have been covered with inscriptions; these were probably of a religious nature. . . . The pyramids of Gîzeh were opened by the Persians during the fifth and fourth centuries before Christ; it is probable that they were also entered by the Romans. . . . Once opened, it must have been evident to every one what splendid quarries the pyramids formed, and very few hundred years after the conquest of Egypt by the Arabs, they were laid under contribution for stone to build mosques, etc., in Cairo. At the end of the twelfth century Melik el-Kâmil made a mad attempt to destroy the pyramid built by Mycerinus; but after months of toil he only succeeded in stripping off the covering from one of the sides. It is said that Muhammad 'Ali was advised to undertake the senseless task of destroying them all."—E. A. W. Budge, *Mummy*, pp. 328-331.—Among the more important pyramids are the following: (1) Step pyramid of Sakkarah, generally believed to have been built by the fourth king of the first dynasty. (2) Great pyramid, largest of the three at Gîzeh built by Khufu or Cheops, second king of the fourth dynasty, 3733 B.C. (3) Second pyramid, at Gîzeh, built by the third king of the fourth dynasty, 3666 B.C. (4) Third pyramid, at Gîzeh, built by the fourth king of the fourth dynasty, 3633 B.C. (5) Pyramids of Abu Roash, six miles north of Gîzeh, believed by some to be older. Very little remains of them except piles of stones. (6) Pyramids of Abusir, built in the fifth dynasty. Because of their poor construction only four of the original fourteen are standing.—See also ARCHITECTURE: Oriental: Egypt; EGYPT: Monuments.

PYRMONT, former small principality of central Germany now a part of Waldeck. See WALDECK.

PYRRHIC DANCE, spirited military dance, performed in armor, which gave much delight to the Spartans, and is said to have been taught to children only five years old. It was thought to have been invented by the Cretans.—Based on G. Schömann, *Antiquities of Greece: The state*, pt. 3.

PYRRHO OF ELIS (c. 360-270 B.C.), Greek sceptic philosopher. Founder of Pyrrhonism. See AGNOSTICISM.

PYRRHUS (c. 318-272 B.C.), king of Epirus, c. 286-272 B.C. Won the battle of Heraclea against the Romans, 280 B.C., but with such heavy loss that it was almost a defeat. Hence we have the term, "Pyrrhic victory." See MACEDONIA: B.C. 297-280; B.C. 277-244; ROME: Republic: B.C. 281-272; SPARTA: B.C. 272.

PYTHAGORAS (fl. 6th century B.C.), Greek philosopher and founder of a school of philosophers known as Pythagoreans. "He settled in Crotona and founded an association, the purpose of which is described as ethical, religious and political. His ideal was to develop, among his followers, the political virtues, to teach them to act for the good of the state, to subordinate themselves to the whole. In order to realize this end, he emphasized the need of moral training: the individual should learn to control himself, to subdue his passions, to harmonize his soul; he should have respect for authority, for the authority of his elders, his teachers, and the state. The Pythagorean brotherhood seems to have been a practical training-school for citizenship, in which the ideals of the master were put to test. . . . Pythagoras himself left no writings. . . . It is likely, however, that he is the originator of the number-theory which forms the central idea in the doctrine of the school that bears his name. . . . The Pythagoreans take note of the fact of form and relation in the world; they find measure, order, proportion, and uniform recurrence, which can be expressed in numbers. . . . [They discovered that there is a numerical relation between the length of the string and the pitch of the tone.] The Pythagorean school also gave its attention to the study of astronomy and furnished a number of astronomers."—F. Thilly, *History of philosophy*, pp. 19-22.—See also MUSIC: Ancient: B.C. 540-A.D. 4th century; ASTRONOMY: Early history of; NEOPLATONISM.

PYTHIAN GAMES, one of the four great Greek festivals, held at Delphi. See DELPHI.

PYTHO, Sanctuary of.—According to the Greek legend, a monstrous serpent, or dragon, Pytho, or Python, produced from the mud left by the deluge of Deucalion, lived in a great cavern of Mount Parnassus until slain by the god Apollo. The scene of the exploit became the principal seat of the worship of Apollo, the site of his most famous temple, the home of the oracle which he inspired. The temple and its seat were originally called Pytho; the cavern, from which arose mephitic and intoxicating vapors was called the Pythium; the priestess who inhaled those vapors and uttered the oracles which they were supposed to inspire, was the Pythia; Apollo, himself, was often called Pythius. Subsequently, town, temple and oracle were more commonly known by the name of Delphi. See DELPHI.

Q

QALANDARIYAH, order of Dervishes. See DERVISHES.

Q-BOATS, decoys used by the British against German submarines in the World War. Apparently harmless merchantmen, they would suddenly drop their screens and let fly a broadside at the submarine.

QUADI, ancient Germanic people. See MARCOMANNI; EUROPE: Map showing barbaric migrations.

Campaigns of Marcus Aurelius. See SARMATIAN AND MARCOMANNIAN WARS OF MARCUS AURELIUS.

357-359.—War of Constantius. See LIMIGANTES.

374-375.—War of Valentinian.—A treacherous outrage of peculiar blackness, committed by a worthless Roman officer on the frontier, in 374, provoked the Quadi to invade the province of Pannonia. They overran it with little opposition, and their success encouraged inroads by the neighboring Sarmatian tribes. In the following year, the Emperor Valentinian led a retaliatory expedition into the country of the Quadi and revenged himself upon it with unmerciful severity. At the approach of winter he returned across the Danube, but only to wait another spring, when his purpose was to complete the annihilation of the offending Quadi. The latter, thereupon, sent ambassadors to humbly pray for peace. The choleric emperor received them, but their presence excited him to such rage that a blood-vessel was ruptured in his body and he died.—Based on E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 25.

Probable modern representatives. See BOHEMIA: Its people, etc.

QUADRILATERAL, famous military position in northern Italy, formed by the group of strong fortresses at Peschiera, Verona, Mantua, and Legnano. "The Quadrilateral . . . fulfils all the requirements of a good defensive position, which are to cover rearward territory, to offer absolute shelter to a defending army whenever required, and to permit of ready offensive: first, by the parallel course of the Mincio and Adige; secondly, by the fortresses on these rivers; thirdly, by passages offered at fortified points which insure the command of the rivers."—C. Adams, *Great campaigns in Europe from 1796 to 1870*, p. 232.

QUADRIVIUM, advanced curriculum of medieval schools consisting of arithmetic, astronomy, geometry and music. See UNIVERSITIES AND COLLEGES: Nature of medieval universities; MUSIC: Folk music and nationalism.

QUADRUPLE ALLIANCE: 1718. See FRANCE: 1717-1719; ITALY: 1715-1735; SPAIN: 1713-1725.

1815. See AIX-LA-CHAPELLE: Congresses: 3; FRANCE: 1815 (July-November).

1834. See SPAIN: 1833-1846.

QUAESTIO, Roman jury. See COURTS: Roman.

QUAESTIO PERPETUA, Roman criminal court. See CALPURNIAN LAW.

QUÆSTOR, Imperial.—In the later Roman empire, "the Quæstor had the care of preparing the Imperial speeches, and was responsible for the language of the laws. . . . His office is not unlike that of the Chancellor of a mediæval monarch."—T. Hodgkin, *Italy and her invaders*, v. 1, bk. 1, ch. 3.

QUÆSTORS, Roman.—"Probably created as assistants to the consuls in the first year of the republic. At first two; in 421 B. C., four; in 241, eight; in 81, twenty; in 45, forty. Thrown open to plebeians in 421 B. C. Elected in the Comitia Tributa. The quæstor's office lasted as long as the consul's to whom he was attached."—R. F. Horton, *History of the Romans*, appendix A.—"We have seen how the care of the city's treasures had been intrusted to two city quæstors, soon after the abolition of the monarchy. In like manner, soon after the fall of the decemvirate, the expenditures connected with military affairs, which had hitherto been in the hands of the consuls, were put under the control of new patrician officers, the military quæstors, who were to accompany the army on its march."—A. Tighe, *Development of the Roman constitution*, ch. 6.—See also ROMÉ: Republic: B. C. 445-400; B. C. 133; MILITARY ORGANIZATION: 10.

QUAPPAS, North American Indian tribe. See SIOUAN FAMILY.

QUARANTIA, body of judges created by the grand council of Venice, 1170. See VENICE: 1032-1310.

QUARTER DAYS.—The "quarter days," for rent-paying, in England, are Lady Day (March 25), Midsummer Day (June 24), Michaelmas (September 29) and Christmas. In Scotland they are: Candlemas (February 2), Whitsunday (May 15), Lammas Day (August 1), and Martinmas (November 11).

QUARTER SESSIONS, Courts of, minor courts of record, dealing with petty criminal and civil cases. Their origin is in English law, and the name comes from an English statute of 1388, which states that the "justices shall keep their sessions in every quarter of the year at the least." In the United States, these courts are found in many of the States, and their jurisdiction is defined by State legislation. Their work comprises minor criminal offenses.

QUARTERMASTER CORPS, United States Army. See **WORLD WAR:** Miscellaneous auxiliary services; V. Moving men and material; a, 11.

QUATRE BRAS, strategic position on the Mek-hong, or Cambodia, river, in French Indo-China. In 1863 it came into the possession of France. See **INDO-CHINA:** B. C. 218-1886.

QUATRE BRAS (France), Battle of. See **FRANCE:** 1815 (June).

QUAY, Matthew Stanley (1833-1904), American political leader. Served in the Civil War; secretary of state for Pennsylvania, 1872-1878, 1879-1882; state recorder, 1878-1879; state treasurer, 1885-1887; United States senator, 1887-1899, 1901-1904. See **RIPPER BILL OR ACT.**

QUEANT, town eight miles northeast of Ba-paume, northeastern France. In the World War, the German Siegfried lines of trenches met the Drocourt-Quéant switch line here, forming a salient. In December, 1917, in the battle of Arras, the British nearly reached the town, but it was not captured until the final Allied offensive of 1918. See **WORLD WAR:** 1918: II. Western front; I, 1.

QUEBEC, capital of the province of Quebec, Canada, at the confluence of the St. Lawrence and St. Charles rivers. The population in 1921 was 93,193.

1535.—**Its Indian occupants.—Its name.**—When Jacques Cartier sailed up the St. Lawrence, in 1535, he found an Indian village called Stadacona occupying the site of the present city of Quebec. The name Quebec, afterwards given to the French settlement on the same ground, is said by some to be likewise of Indian origin, having reference to the narrowing of the river at that point. "Others give a Norman derivation for the word: it is said that Quebec was so-called after Caudebec, on the Seine."—E. Warburton, *Conquest of Canada*, v. 1, ch. 2.

QUEBEC, Province of: Geographical description.—Area.—Population.—"The name Quebec, whose use by Europeans dates from Champlain's visit in 1608, was first given to the settlement known as Stadacona, then to a district, and finally to an entire Province. In extent Quebec, excluding the newly added territory of Ungava, is as large as the British Isles, France and Belgium united, 346,875 square miles; comprising Ungava, it is the

largest province in the Dominion of Canada. It lies on both banks of the River St. Lawrence, and its length is just one thousand miles from its eastern extremity on the edge of Labrador to Lake Abitibi on the west. [See **CANADA:** Map of Dominion of Canada and Newfoundland.] A century and a half has elapsed since the Conquest and the territory which in the course of its history has been known successively as New France, as Canada, as Lower Canada, and now as the Province of Quebec, has largely preserved the racial and religious character imparted to it by its founders. . . .

[In 1921 the estimated population was 2,500,000 of which over two-thirds were of French origin.] If we consider religion we shall find the Roman Catholic Church claiming of this total no fewer than 1,705,000 adherents, or the bulk of the French and Irish population. In the Canadian Parliament the Province is represented by twenty-four members of the Senate and sixty-five of the House of Commons. . . . Since Confederation, in 1867, Quebec enjoys the right perpetually of sending sixty-five members to the Dominion House of Commons. At each census the number of the representatives of the other provinces is adjusted according to the augmentation or diminution of the Quebec population. . . . The Government consists of a Lieutenant-Governor appointed by the Governor-General for a term of five years, and of two Houses, the Legislative Council of twenty-four members appointed by the Crown for life, and the Legislative Assembly elected by the people for a term of five years. The system resembles that of the Dominion at Ottawa, and an Executive Council of the Ministry is responsible to the legislature. This Cabinet has nine members. . . . For the administration of justice, the Governor-General appointed the judges of the superior, district, and county courts, their salaries being fixed and paid by the Dominion Government. The judges of the Court of Quebec must, nevertheless, be selected from the bar of the Province. The administration of justice, regarding the constitution, maintenance, and organisation of provincial courts, both civil and criminal, is left to the Province, and there are also county courts of limited jurisdiction. . . . In Parliament and law, the use of the dual languages is permitted; in the Courts particularly, French is more generally employed."

—B. Willson, *Quebec: The Laurentian province*, pp. 3-5.—The chief resources are agriculture, lumbering, the fur trade, fishing and manufactures, in which last pulp and paper loom large. Of minerals the most valuable for the province is probably asbestos. There are valuable cement, building stone, and clay quarries. See **U. S. A.:** Economic map.

1534-1535.—**Explored by Cartier.** See **AMERICA:** 1534-1535.

1635-1672.—**From Champlain to Tracy.—Dual administration.—Great intendant.**—"When the year 1665 began, the French colony on the shores of the St. Lawrence, founded by the valour and devotion of Champlain [see **CANADA:** 1608-1611], had been in existence for more than half a century. Yet it was still in a pitiable state of weakness and destitution. The care and maintenance of the settlement had devolved upon trading companies, whose narrow-minded mercantile selfishness had stifled its progress. . . . To the shackles of commercial greed, to forgetfulness on the part of the mother country, had been added the curse of Indian wars. During twenty-five years the daring and ferocious Iroquois had been the constant scourge of the handful of settlers, traders, and missionaries. Champlain's successors in the office of governor, Montmagny, Ailleboust, Lauzon, Argen-

son, Avaugour, had no military force adequate to the task of meeting and crushing these formidable foes. Year after year the wretched colony maintained its struggle for existence amidst deadly perils, receiving almost no help from France, and to all appearance doomed to destruction. To make things worse, internal strife exercised its disintegrating influence; there was contention among the leaders in New France over the vexed question of the liquor traffic. In the face of so many adverse circumstances—complete lack of means, cessation of immigration from the mother country, the perpetual menace of the bloody Iroquois incursions, a dying trade, and a stillborn agriculture—how could the colony be kept alive at all? Spiritual and civil authorities, the governor and the bishop, the Jesuits and the traders, all united in petitioning for assistance. . . . Fortunately a change was at hand. . . . Petitions and statements were addressed to the king by Mgr. de Laval, the head of ecclesiastical affairs in the colony, by the governor Avaugour, and by the Jesuit fathers; and Pierre Boucher, governor of the district of Three Rivers, was sent to France as a delegate to present them. Louis and his minister studied the conditions of the colony on the St. Lawrence and decided in 1663 to give it a new constitution. The charter of the One Hundred Associates was cancelled and the old Council of Quebec—formed in 1647—was reorganized under the name of the Sovereign Council. . . . To establish a new and improved system of administration was a good thing, but this alone would hardly avail if powerful help were not forthcoming to rescue New France from ruin, despondency, and actual extermination. The colony was dying for lack of soldiers, settlers, and labourers, as well as stores of food and munitions of war for defence and maintenance. Louis XIV made up his mind that help should be given. In 1664 three hundred labourers were conveyed to Quebec at the king's expense, and in the following year the colonists received the welcome information that the king was also about to send them a regiment of trained soldiers, a viceroy, a new governor, a new intendant, settlers and labourers, and all kinds of supplies. This royal pledge was adequately fulfilled. On June 19, 1665, the Marquis de Tracy, lieutenant-general of all the French dominions in America, arrived from the West Indies. . . . With him came four companies of soldiers. During the whole summer ships were disembarking their passengers and unloading their cargoes of ammunition and provisions at Quebec in quick succession. . . . At length, on September 12, the cup of public joy was filled to overflowing by the arrival of the ship *Saint Sebastien* with two high officials on board. David de Remy, Sieur de Courcelle, the governor appointed to succeed the governor Mézy, who had died earlier in the year, and Jean Talon, the intendant of justice, police, and finance. . . . The Marquis de Tracy was an able and clear-sighted commander, the Sieur de Courcelle a fearless, straightforward official. But the part of Jean Talon in the common task, though apparently less brilliant, was to be in many respects the most important, and his influence the most far-reaching in the destinies of the colony. . . . In 1665 Canada had only three settled districts: Quebec, Three Rivers, and Ville-Marie or Montreal. Quebec, the chief town, . . . contained barely seventy houses with about five hundred and fifty inhabitants. . . . In the neighbourhood of Quebec were a few settlements. According to the census of the following year there were 452 persons on the Island of Orleans, 533 at the Côte Beaupré, 185 at Beauport, 140 at Sillery, and 112 at Charlesbourg and Notre-Dame-des-

Anges on the St. Charles river. Three Rivers was a small port with a population of 455, including that of the adjoining settlements. . . . Montreal or Ville-Marie was scarcely more important than Three Rivers. The population of the whole district numbered only 625. . . . Altogether the white population of Canada, including the settlers and labourers arriving during the summer of 1665, numbered only 3215. Yet the colony had been in existence for fifty-seven years! It was certainly time for a new effort on the part of the mother country to infuse life into her feeble offspring. This was a task calling for the earnest care and the most energetic activity of Tracy, Courcelle, and Talon. One of the first matters to receive their attention was the reorganization of the Canadian administration. . . . On September 23, 1665, a solemn sitting of the Sovereign Council was held, at which Tracy, Courcelle, Laval, and Talon were present, together with the Sieur Le Barrois, general agent of the West India Company, and the Sieurs de Villeray, de la Ferté, d'Auteuil, de Tilly, Damours. . . . The next proceeding of the rulers of New France was to prepare for a decisive blow against the daring Iroquois . . . [and] during the summer and autumn of 1665 the Carignan soldiers were kept busy with the construction of . . . necessary defensive works. . . .

"One of the first problems with which the intendant had to deal in discharging the duties of his office was the dualism of administrative authority. . . . Colbert had founded a new trading company, known as the West India Company. This corporation had been granted wide privileges over all the French possessions in America, including feudal ownership and authority to administer justice and levy war. The company was thus invested with the right of appointing judicial officers, magistrates, and sovereign councils, and of naming, subject to the king's sanction, governors and other functionaries; it had full power to sell the land or make grants in feudal tenure, to receive all seigniorial dues, to build forts, raise troops, and equip war-ships. The company's charter had been granted in 1664, and of course Canada, as well as the other French colonies in the New World, was included in its jurisdiction. The situation of this colony was therefore very peculiar. In 1663 the king had cancelled the charter of the One Hundred Associates and had taken back the fief of Canada; but a year later he had granted it again to a new company. At the same time he showed clearly that he intended to keep the administration in his own hands. Thus Canada seemed to have two masters. . . . But in point of fact the king wielded the government, thus taking back with one hand what he had given with the other. By right the company controlled the administration of justice; it could, and actually did, establish courts. But, in fact, the king appointed the intendant supreme judge in civil cases, and made the Sovereign Council a tribunal of superior jurisdiction. By right, to the company belonged the power of granting land and seigneuries. In fact, the governor or the intendant, the king's officers, made the grants at their pleasure. This strange situation, which lasted ten years—until the West India Company's charter was revoked in 1674—is often confusing to the student of the period. . . . Another enterprise of the intendant was numbering the people. Under his personal supervision, during the winter of 1666-67, a general census of the colony was taken—the first Canadian census of which we have any record. [In 1666 Tracy led an expedition against the Mohawks and won a decided victory.] . . . Tracy had led a successful expedition against the Iroquois and

coerced them into a lasting peace. He had seen order and harmony restored in the government of the colony. His mission was over and he left Canada on August 28, 1667, Courcelle remaining as governor and Talon as intendant. From that moment the latter, though second in rank, became really the first official of New France, if we consider his work in its relation to the future welfare of the colony. . . . Under Talon's wise direction and encouragement, the settlement of the country progressed rapidly. Now that they could work in safety, the colonists set themselves to the task of clearing new farms. In his Relation of 1668 Father Le Mercier wrote: 'It is fine to see new settlements on each side of the St. Lawrence for a distance of eighty leagues. . . . The fear of aggression no longer prevents our farmers from encroaching on the forest and harvesting all kinds of grain, which the soil here grows as well as in France.' In the district of Montreal there was great activity. It was during this period that the lands of Longue-Pointe, of Pointe-aux-Trembles, and of Lachine were first cultivated. At the same time, along the river Richelieu, in the vicinity of Forts Chambly and Sorel, officers and soldiers of the Carignan-Salières regiment were beginning to settle. . . . Shipbuilding was another industry of his introduction. In 1666, always desirous of setting an example, he built a small craft of one hundred and twenty tons. . . . In building and causing ships to be built the intendant had in view the extension of the colony's trade. One of his schemes was to establish regular commercial intercourse between Canada, the West Indies, and France. . . . [For this purpose he] entered into partnership with a merchant and shipped to the West Indies salmon, eels, salt and dried cod, peas, staves, fish-oil, planks, and small masts much needed in the islands. The establishment of commercial relations between Canada and the West Indies was an event of no small moment. During the following years this trade proved important. . . . Colbert hesitated at first to encourage emigration, but he had yielded somewhat before Talon's urgent representations, and from 1665 to 1671 there was an uninterrupted influx of Canadian settlers. It is recorded in a document written by Talon himself that in 1665 the West India Company brought to Canada for the king's account 429 men and 100 young women, and 184 men and 92 women in 1667. During these seven years there were in all 1828 state-aided immigrants to Canada. The young women were carefully selected, and it was the king's wish that they should marry promptly, in order that the greatest possible number of new families should be founded. . . . The paternal policy of the minister and the intendant was favoured by the disbanding of the Carignan companies. In 1668 the regiment was recalled to France; four companies only were left in Canada to garrison the forts. The officers and soldiers of the companies withdrawn were entreated to remain as settlers, and about four hundred decided to make their home in Canada. . . . On the whole the situation in Canada at the end of 1668, three years after Talon's arrival, was most satisfactory. Peace and security were restored; hope had replaced despondency; colonization, agriculture, and trade were making progress; population was increasing yearly. In this short space of time New France had been saved from destruction and was now full of new vigour. Every one in the colony knew that the great intendant had been the soul of the revival, the leader in all this progress. It may therefore be easily imagined what was the state of popular feeling when the news came that Talon was to

leave Canada. He had twice asked for his recall . . . Louis XIV gave him leave to return to France and appointed Claude de Bouteroue in his stead. . . . [On August 8, 1670, Talon returned to Quebec and remained until] under his powerful direction New France, through her missionaries, explorers, and traders, stamped her mark over three-quarters of the territory then known as North America. Her moral, political and commercial influence was felt beyond her boundaries—west, north, and south. She had hoisted the cross and the fleur-de-lis from the sunny banks of the Arkansas to the icy shores of Hudson Bay, and from the surges of the Atlantic to the remotest limits of the Great Lakes; . . . and her name inspired awe and respect in a hundred Indian tribes. . . . In 1672 a ship of over four hundred tons was launched, and preparations had been made for another of eight hundred tons. Seven years earlier only nineteen out of 2378 vessels in the French mercantile marine had exceeded four hundred tons. The infant shipyard at Quebec was doing well. Agriculture and industry were flourishing in New France. Hemp was being grown successfully, and a larger quantity of wool was made available by increasing flocks of sheep. The intendant insisted that women and girls should be taught to spin. He distributed looms to encourage the practice of weaving, and after a time the colony had home-made carpets and table-covers of druggat, and serges and buntings. The great number of cattle ensured an abundance of raw hides. Accordingly the intendant established a tannery, and this in turn led to the preparation of leather and the making of shoes. . . . New France at this time was prosperous and happy. 'Peace reigns within as well as without the colony,' wrote Talon at the end of the year 1671. There was work and activity on all sides. New settlements were opened, new families were founded, new industries were born. No wonder that Talon, when he reflected on what had been achieved in seven years, should have written: 'This portion of the French monarchy is going to become something great.' . . . Courcelle [the governor, with whom the intendant had frequently clashed], had asked for his own recall; his request was also granted and the Comte de Frontenac was named in his stead. No intendant was appointed to fill Talon's place. At the beginning of September 1672, while Talon had still two months to serve, Frontenac arrived in Quebec to take up his duties as the sole executive head of the colony.—T. Chapais, *Great Intendant*, pp. 1-6, 10, 12-13, 15-17, 19-21, 23, 38, 48-50, 54, 58, 95-96, 120-121, 123, 126-127.

1672-1689.—Frontenac's first term.—Extension of colony.—Disputes of bishop, governor and intendant.—Destruction of Lachine.—'The Intendant, Talon, was still in office when Frontenac arrived in 1672; but as he left soon afterwards, Frontenac found himself in undisputed control of both civil and military affairs, saving the possible interference of the Court. The colony was so near bankruptcy that no one but a trained economist endowed with independent control, could have rescued it, or have reconciled the interests of the West India Company with the prosperity of the people and the welfare of the State. But if camp life had not made of Frontenac a statesman or financier, it did train him to become the saviour of Canada at a crisis in her history when absolute confidence in his own judgment and unshaken courage in carrying out his policy were needed to impress on the enemies of France in America, both savage and civilized, respect for her military strength, and to infuse into the disheartened

colonists a spirit of nationality and an ardor for territorial expansion. He conducted no important campaign against the English or the Iroquois during his first administration, yet by the force of his character, by his natural gift of oratory, supplemented by picturesque and significant gesture-language, he so impressed the Iroquois, during the great peace conference at Montreal in 1680, with awe and respect that they refrained from any overt act of barbarity till after his recall in 1682."

—J. Douglas, *Old France in the New World*, p. 394.—Frontenac's ideas on the government of the colony were far in advance of the views of Louis XIV and Colbert. On his arrival in Quebec, the new governor attempted to create an assembly to represent the Three Estates. His "next step was to reorganize the municipal government of Quebec by permitting the inhabitants to choose two aldermen and a mayor. . . . The king wished to discourage all memory of the Three Estates, and Frontenac was told that no part of the Canadian people should be given a corporate or collective status. The reprimand, however, did not reach Canada till the summer of 1673, so that for some months Frontenac was permitted to view his work with satisfaction. . . . [As his next move he determined to build a fort at the entrance to Lake Ontario as a preliminary to extending the settlements. He therefore went up the river, with all the state and all the troops that he could muster. He had already sent La Salle to summon the Five Nations to a conference at the mouth of the Cataract where the new fort was to be elected. There he met them on July 12, 1673, and held an assembly while at the same time he proceeded with the business of building the fort under their eyes, with an ease by which he hoped to create an impression upon them. Having overawed the Indians by his display of military force he returned to Quebec.] At the beginning of September 1675 Frontenac was confronted with an event which could have given him little pleasure. This was the arrival, by the same ship, of the bishop Laval, who had been absent from Canada four years, and Jaques Duchesneau, who after a long interval had been appointed to succeed Talon as intendant. Laval returned in triumph. He was now bishop of Quebec, directly dependent upon the Holy See and not upon the king of France. Partly through a clash of dignities and partly through a clash of ideas, there soon arose at Quebec a conflict which rendered personal friendship among the leaders impossible, and caused itself to be felt in every part of the administration. . . . The simplest form of stating the case is to say that Frontenac clashed with Laval over one set of interests and with Duchesneau over another; over ecclesiastical issues with the bishop and over civil interests with the intendant. In the Sovereign Council these three dignitaries sat together, and so close was the connection of Church with State that not a month could pass without bringing to light some fresh matter which concerned them all. [The disputes with Laval chiefly concerned the church.] . . . Frontenac was no theorist, and probably would have written a poor treatise on the relations of Church and State. At the same time, he knew that the king claimed certain rights over the Church, and he was the king's lieutenant. Herein lies the deeper cause of his troubles with the Jesuits and Laval. . . . Rightly or wrongly, the governor held that the bishop was subservient to the Jesuits, while Colbert's plain instructions required the governor to keep the Jesuits in check. [The first dispute was over a question of precedence and the honors to be accorded to the governor at church

services. Then came an argument over the organization of parishes, in which Frontenac, who declared that parish priests should live all the year round among their people, would seem to have been in the right, if it were not that the people were unwilling to supply sufficient means for their support.] . . . After some three years of controversy the king, as usual, stepped in to settle the matter. By an edict of May, 1679, he ordained that the priests should live in their parishes and have the free disposition of the tithes which had been established under an order of 1667. [The third source of enmity was the question of supplying brandy to the Indians, in which Laval, who took the negative side showed himself in advance of his time.] . . . As he saw it, the sale of brandy to the Indians was a sin, punishable by excommunication. . . . In the end the king . . . declared the regulation of the brandy trade to fall within the domain of the civil power. He warned Frontenac to avoid an open denial of the bishop's authority in this matter, but directed him to prevent the Church from interfering in a case belonging to the sphere of public order. . . . Between Frontenac and his other opponent, the intendant Duchesneau, the strife revolved about a different set of questions [those of civil affairs] without losing any of its bitterness. . . . But, as Laval and Duchesneau were both at war with Frontenac they naturally drew together. . . . All modern writers agree that Canada suffered grievously from these disputes, but a difference of opinion at once arises when an attempt is made to distribute the blame. . . . Everything which Duchesneau did gave Frontenac annoyance—the more so as the intendant came armed with very considerable powers. During the first three years of Frontenac's administration the governor, in the absence of an intendant, had lorded it over the colony with a larger freedom from restraint than was normal under the French colonial system, . . . [but] Duchesneau's instructions gave him a degree of authority which proved galling to the governor. Within three weeks from the date of Duchesneau's arrival the fight had begun (September 23, 1675). In its earliest phase it concerned the right to preside at meetings of the Sovereign Council. . . . Incredible as it may seem, this issue regarding the right to preside was not settled until the work of the Council had been disturbed by it for five years. . . . The whole episode shows how completely the French colonial system broke down in its attempt to act through two officials, each of whom was designed to be a check upon the other. . . . When we consider how Canada from end to end was affected by these disputes, we may well feel surprise that Colbert and the king should have suffered them to rage so long. By 1682 the state of things had become unbearable. Partisans of Frontenac and Duchesneau attacked each other in the streets. . . . One alternative was to dismiss Frontenac; another, to dismiss Duchesneau. Seignelay chose the third course and dismissed both. . . . [They were followed by De la Barre and Meulles who arrived in 1682, and were no more friendly than their predecessors in office. More than that De la Barre's weakness soon became evident to the Indians and Meulles' reports procured his recall. He was followed by the Marquis de Denonville, who has the distinction of living on better terms with the intendant and bishop than any other governor of New France. He was not however strong enough to stand against the combination of Indian inroads and the stand taken by Dongan, the governor of New York.] The domain of the Five Nations [moreover] was not the only part of America

where French and English clashed. . . . With Denonville's consent and approval, a band of Canadians left Montreal in the spring of 1686, fell upon three of the English posts—Fort Hayes, Fort Rupert, Fort Albany—and with some bloodshed dispossessed their garrisons. Well satisfied with this exploit, Denonville in 1687 turned his attention to the chastisement of the Iroquois. . . . [He began by an act of treachery toward friendly Indians and followed it up by building a fort at Niagara in defiance of an agreement made with Dongan, which he had to abandon next year (1688). He then attempted to make peace with the Indians, but convinced that they could not trust him] . . . the Iroquois prepared to deliver a hard blow. On August 5, 1689, they fell in overwhelming force upon the French settlement at Lachine. . . . Such were the events which, in seven years, had brought New France to the brink of ruin. But she was not to perish from the Iroquois. In October, 1689, Frontenac returned to take Denonville's place."—C. W. Colby, *Fighting governor*, pp. 37, 51-52, 57-60, 62-65, 67, 70, 106, 111-112.

1698-1739.—Governorship of De Callières and of De Vaudreuil.—Indian warfare.—Industrial development.—“The last half century of the French domination on the St. Lawrence and the Lakes presents two very different aspects of the colonial life of New France. Administrative degeneration at headquarters was coupled with wonderful activity by the people in so exploring the recesses of the continent that they extended the claims of France to territory from the Atlantic almost to the Pacific. . . . [Frontenac, who died in 1698, was succeeded by] Louis Hector de Callières, an old Canadian, who before emigrating had been a captain in the Regiment of Navarre and shortly after coming to Canada had been appointed Governor of Montreal. It was while in that position that he had helped to save Quebec from Sir William Phips by hastening to Frontenac's assistance with a detachment of troops. As Governor he showed both vigor and statesmanship. He secured a cessation of hostilities among the Indian tribes and, after the peace of Ryswick, with the concurrence of Governor Bellamont, he checked them in their favorite pastime, that of border massacre. He used the Jesuits as political agents to win wavering Iroquois over to the French side, and virtually protected his country against any future attacks from those of the Iroquois who remained true to the British alliance. . . . His successor, the Marquis de Vaudreuil, left in some respects a less enviable record. He also was a soldier, who came to Canada in 1687 to command a detachment of the troops of the marine. He also helped to defeat Phips, and on de Callières' appointment as Governor General followed him as Governor of Montreal. For the part he took in bringing about the treaty with the Indians he received the *fief* of Vaudreuil, which remains in the possession of his family. He had therefore the advantage of colonial experience when he took the reins of office. But his popularity with the Indians and his thorough acquaintance with their habits of thought and action created such intimate sympathy with them that it blinded him to the consequence of using them as a weapon in his war with the English colonies. . . . Vaudreuil's long administration was responsible for almost uninterrupted border raids which embittered more and more the relations between the neighboring colonies. It was a policy fraught with danger, more especially when the disparity in

strength between the two groups of hostile colonists was taken into account. Still, it was a policy which a soldier who was threatened by an enemy of overwhelmingly greater strength and resources, may be forgiven for adopting. It had been repudiated by his predecessor, who, though a soldier, had, as a statesman, clearer insight into the future. Unfortunately, therefore, the eighteenth century opened dismally with these ignoble broils between New France and New England. The war of the Spanish succession was the excuse, but the exasperation growing out of Indian war tactics was the real exciting cause. . . . No method of warfare was as cheap as turning loose those savages, with their Abenaki and Micmac allies, on defenceless settlers along the New England border. The raiding parties were generally accompanied by Frenchmen. The provocation had been great, for though the Iroquois had not been commanded by Englishmen in their descents upon the St. Lawrence, the Five Nations had been allies of the English, and 1,500 Iroquois warriors had been enlisted in the land force which should have cooperated with Phips before Quebec. . . . But whatever the justification, the reprisals made by the French and their Indian allies upon the border villages of New England from Maine to Connecticut, intensified the hatred of the English Puritans against the French Papists, and led the *Bostonnais* to adopt as a duty, which was undoubtedly to their interest, the destruction of the French colonies of Acadia and Canada. . . . The Marquis de Vaudreuil ruled Canada from 1703 to 1725. Though not sagacious enough to foresee the fatal consequences of irritating his powerful neighbors, he nevertheless appreciated their inevitable territorial expansion, and to check their advances built Fort Niagara, reestablished Fort Michilimackinac, and strengthened the fortifications of both Quebec and Montreal. One of his most important domestic measures was his redivision of the Colony into parishes—strung along both banks of the river, much as they exist today. . . . During the Governorship of de Callières and de Vaudreuil the intendants were Bochart, François de Beauharnais, the Raudots, father and son, performing at the same time different functions of the same office, and Bégon. Bégon had waited two years for a successor. The next appointee to the office, M. Chazel, was wrecked and lost with all on board the Chameau; the second selection, M. Dupuy, relieved him in 1726. . . . [De Vaudreuil was replaced in 1725 and] between the new Governor and the Intendant there soon broke out acute hostilities. . . . These unseemly quarrels, which revived the animosities between Church and State, of Frontenac's administration, scandalized all pious citizens and encouraged the spirit of freedom, or of revolt, as some might consider it, which was beginning to replace the old temper of abject submission. The battle did not cease, even with the withdrawal of Dupuy, for his act in appointing in his place Père Dupuy was disallowed, and M. d'Aigremont was nominated. He, dying almost immediately, was succeeded by M. Hocquart, the only Intendant worthy of comparison with Talon. . . . Under Hocquart further industrial progress was made. Shipbuilding so advanced that in 1733 ten small vessels were built in Quebec; in the same year the first road for wheeled vehicles was opened between Quebec and Montreal; and in 1737 the first furnace was lighted at the St. Maurice iron mines. Turpentine and tar, as well as lumber, were exported; but the most lucrative trade was in the dried root of the ginseng. . . . Hocquart

took a great interest in education, and introduced the Christian Brothers as teachers of elementary schools. He deplored the preference of all classes of colonists for amusement and for active over intellectual pursuits. Still the colony seemed under a blight. Its population in 1739 amounted to only 42,701, of whom 4,603 lived in Quebec and its *banlieue*, and 4,210 in Montreal."—J. Douglas, *Old France in the New World*, pp. 529-534.

1866-1876.—Influence of the church in politics. —Election appeals.—"Until after the Union [with Upper Canada] there had been practically no dissension within the Church itself [in Quebec]. After the Union, and particularly after the winning of responsible government, controversy was frequent and vigorous. . . . The Rouge group in the House of Assembly in the fifties incurred the hostility of the clergy by their attitude on two questions—the powers of religious communities and the control of the schools. . . . In the dozen years that followed, . . . the area of conflict widened, occupying the whole provincial stage, and the connection with the contemporaneous movements in Europe became still more marked than in the Union period. One factor in the situation was that the aggressively ultramontane wing of the Church in Quebec had grown more powerful. . . . In Quebec as in the other provinces there had been set up a provincial government to which were assigned education and the local matters in which the Church was chiefly concerned. No longer was it necessary to run the gauntlet of a vigilant and biased Clear Grit group from Upper Canada when matters ecclesiastical were brought before the House [for] . . . in Quebec the people were four-fifths Catholic. . . . [Moreover] the men of the new school, led by Bishop Bourget, gave hearty support to the ultramontane movement, and were encouraged by its success to assert a wider influence in state affairs and to take a stronger line against their moderate brethren within the Church itself."—O. D. Skelton, *Life and letters of Sir Wilfrid Laurier*, v. 1, pp. 86, 93-94, 118-119, 125-126.—In 1871 a violent struggle broke out between the two political parties "with the issue of the *Catholic Programme*, . . . a manifesto prepared by a group of editors and lawyers, who, in their own words, 'belonged heart and soul to the ultramontane school.' . . . It sought to lay down a policy to govern all good Catholics in the coming elections. The doctrine of the separation of church and state, the document declared, was impious and absurd. On the contrary, the authorities of the state, and the electors who chose them, must act in perfect accord with the teachings of the Church, and endeavour to safeguard its interests by making such changes in the laws as the bishops might demand. To secure this end the Conservative party must be supported. When two Conservatives or two Liberals were running, the one who accepted the Programme was to be elected; where a Conservative and a Liberal were opposed, the former would be supported; if it happened that a Conservative who opposed the programme was running against a Liberal who accepted it, 'the situation would be more delicate'—and Catholics

should not vote at all. . . . The Liberal party was sorely pressed. In the emergency some of its moderate members determined to throw off the incubus of their anti-clerical traditions by reorganizing and renaming the party, . . . the *Parti National*. . . . The result of the following elections gave some ground for hope. . . . In 1873 a brief pastoral was issued by all the bishops condemning Catholic Liberalism in vague but sweeping terms. Two years later another joint pastoral, that of September 22, 1875, went into the whole question elaborately, . . . and the right of the clergy to intervene in politics was again upheld. . . . [The Liberals, on the other hand, insisted that] for a priest to threaten eternal punishment [i.e., use of undue influence, was] a ground for voiding an election. The matter was pressed to a decision in appeals against candidates returned in two federal by-elections, in Chambly and Charlevoix, and in one provincial election, in Bonaventure. . . . In defence it was urged that, in the first place, the civil courts had no authority over ecclesiastics, at least for acts done in their spiritual capacity, and, in the second place, that the Church had a right to defend its interest against attack, and that in using to this end all the powers at its disposal it was employing no undue influence. Judge Routhier, the author of the *Catholic Programme*, upheld these contentions in the first trial of the Charlevoix case, but the Supreme Court, in judgments delivered by Mr. Justice Taschereau, brother of the Archbishop, and by Mr. Justice Ritchie, denied the existence of any clerical immunity from civil jurisdiction, and found that the threats which had been made from the pulpit constituted undue influence of the clearest kind. Accordingly they voided the election."—O. D. Skelton, *Day of Sir Wilfrid Laurier* (G. M. Wrong and H. H. Langton, ed., *Chronicles of Canada Series*, v. 30, pp. 44-46, 48).

1867.—Incorporated in Dominion of Canada. —See CANADA: 1867; CANADA, CONSTITUTION OF: 1867.

1876-1888.—Jesuit estates and their disposal. —"After the Conquest of Canada it was decreed that the Jesuits then in the country should be permitted to remain and die there, but that they must not add to their numbers, and that their estates should be confiscated to the Crown. Lord Amherst, the British commander-in-chief, made an unsuccessful attempt to have these estates granted to himself; but in the Crown's possession they remained, and fell to the province of Quebec at Confederation. This settlement had never been accepted. The bishops contended that the Jesuits' estates should have been returned to the Church, and the Jesuits, who had come back to Canada in 1842, asserted their own rights to their ancient lands. Thus the thorny question as to what disposition should be made of these lands baffled the provincial authorities until 1888, when Honoré Mercier, himself a pupil of the Jesuits, and now a most aggressively faithful son of the Church, grappled with the problem, and passed an act embodying a compromise which had been found acceptable by all parties concerned. The sum of \$400,000 was to be paid in satisfaction for all claims, to be divided among the Jesuits, the Church authorities, and Laval University, in proportions to be determined by the Pope. At the same time \$60,000 was voted to Protestant school's to satisfy their demands. In Quebec the measure was accepted with little discussion. . . . In Ontario . . . D'Alton McCarthy, Colonel O'Brien, and John Charlton . . . called on the Dominion Gov-

ernment to disallow the act. But Sir John Macdonald declined to intervene. A resolution in the House of Commons calling for disallowance was defeated by 188 to 13, the minority being chiefly Conservatives from Ontario."—O. D. Skelton, *Day of Sir Wilfred Laurier* (G. M. Wrong and H. H. Langton, ed., *Chronicles of Canada Series*, v. 30, pp. 114-116).

1878.—Dispute over provincial rights.—"In determining what powers should be assigned to the Dominion and what to the provinces, the Fathers of Confederation . . . made [the Dominion] residuary legatee of powers not specified. The central government, too, was given a right of veto over all provincial laws and empowered to appoint the lieutenant-governors of the provinces. . . . It was in Quebec that the first issue as to provincial rights arose. The Mackenzie Government in 1876 had appointed [a Liberal] Duc Letellier de St. Just, . . . lieutenant-governor. . . . The neglect of the [Conservative] premier, M. de Boucherville, to consult Letellier before introducing some railway legislation proved the last straw, and in March, 1878, Boucherville was dismissed and Henri Joly de Lotbinière was called upon to form a Cabinet. . . . Sir John Macdonald, then leader of the Opposition [in the Dominion House], moved a vote of censure upon Letellier, which was defeated on a party vote. A year later, after the change of government at Ottawa, a Quebec ministerialist again moved in the House of Commons the resolution of censure. . . . The constitutional issue was clear, and on this the Liberals rested their case. . . . The vote of censure carried, and Macdonald recommended to the governor-general, the Marquis of Lorne, that Letellier should be dismissed. Here again a nice question of responsibility arose. First the question had been whether the lieutenant-governor was to be guided by provincial ministers or by the federal government which appointed him. Now the problem was whether the governor-general should be guided by his advisers in Canada, or by the British Government which had appointed him. . . . The question was referred to the Colonial Office [and] the colonial secretary replied that the lieutenant-governor was undoubtedly responsible to the governor-general for any act, and that equally undoubtedly the governor-general must act upon the advice . . . of his responsible ministers. The governor-general suggested reconsideration, but the Macdonald Cabinet was obdurate and Letellier was dismissed. Fortunately the precedent thus set has not been followed. The principle is now established that a lieutenant-governor may be dismissed only when he cannot find provincial ministers willing and able to support him."—O. D. Skelton, *Day of Sir Wilfrid Laurier* (G. M. Wrong and H. H. Langton, ed., *Chronicles of Canada Series*, v. 30, pp. 62-66).

QUEENSLAND: Geographic description.—"The State of Queensland, situated on the north-east coast of Australia, is the third largest on the continent. [See AUSTRALIA: map.] The coastline is upwards of 2,000 miles, and includes an area of 670,500 square miles. The northern portion is well within the tropics; but even here there are stretches of elevated table-land with a temperate climate, good rainfall, and productive soil. The products are mainly primary of many sorts, direct from the soil. The vast western areas are occupied with ever-increasing herds of cattle and horses and flocks of sheep. The extensive scrub and forests supply a great variety of useful and beautiful timbers in immense quantities. Coal is abundant and widely distributed. Minerals of all grades, precious metals, gold, silver, copper, tin, and exquisite gems of several kinds are freely obtained. On the coast sugar-growing is largely carried on, with cultivation of tropical and sub-tropical fruits, such as bananas, pine-apples, paw-paws, oranges, and lemons. Maize is freely grown in many districts, dairying is a large and growing industry, while considerable areas in the south are productive of wheat and kindred cereals. . . . The capital city, Brisbane, is almost at the extreme south, a few miles up the river. Unlike the other States, there are several large coastal towns which

do their own trade with the outer world, and are gateways to extensive hinterlands. From these ports independent systems of railway have reached out, and these are now being linked up, both along the coast, and towards the western border. A good system of free education has been established, with frequent High and Grammar Schools, and a recently constituted University."—J. Colwell, *Century in the Pacific*, pp. 363-364.

1824-1900.—As a separate colony.—"An uneasy feeling that transportation to New South Wales was loosing all its terrors for evil-doers, and was, in fact, coming to be looked upon as something to be desired, led to the sending to Australia of a Special Commissioner, John Thomas Bigge, . . . to examine and report upon the system of government, the whole question of transportation, and the treatment of convicts. Bigge spent two years in this enquiry, and presented reports which had an important influence on the development of Australia. . . . [Among other things] the formation of out-settlements as places of secondary punishment for convicts of the more troublesome type was recommended. This last recommendation led to the establishment of a penal settlement at Port Macquarie in Northern New South Wales, and a little later (1824) to the foundation of the first permanent settlement in what is now Queensland, the penal colony of Moreton Bay on the Brisbane River. . . . Originally New South Wales nominally included the whole of Eastern Australia."—T. Dunbabin, *Making of Australasia*, pp. 101, 202.—"When the convict establishment was disbanded in 1840, settlement proceeded in much the same way as in the Port Phillip districts. Hitherto immigration into the colony had been mainly across the north-western plains of New South Wales, but so soon as the Moreton Bay district was thrown open to colonization direct immigration from Europe and from the coastal districts of New South Wales was established. Brisbane became the natural outlet for the produce of the hinterland, and agricultural industries were gradually established in the coast lands in the southern portion of the State."—A. J. Herbertson and O. J. R. Howarth, *Oxford survey of the British empire: Australasia*, p. 303.—"For some years after the separation of Victoria, [New South Wales] . . . still took in all the north-east and north of the continent. But with the spread of settlement in the country round Moreton Bay and far to the northward another movement for separation gathered strength. In 1850 the country north of 28° and south as far as Cape York, and westward to 141° east, with a population of nearly 30,000 and an area of over 500,000 square miles, was made an independent colony under the name of Queensland. . . . The new colony had vast areas of rich pasture-land, including some of the finest cattle country in Australia, and fertile and well-watered agricultural tracts. The American Civil War of 1863-1865 made cotton-growing boom in Queensland, and later sugar-growing, carried on with the aid of Kanaka labourers from the South Sea Islands, flourished in the coastal areas. The creation of Queensland left a great block of country between the 141st and 129th parallels of east latitude and extending from the north coast to the northern boundary of South Australia in 26° south, still nominally part of New South Wales, from which it was completely cut off. In 1862 Queensland secured a good slice of this, including much fine pastoral country, by persuading the British Government to move the colony's boundary

westward from 147° to 138° S. It was suggested that Queensland should take over the whole of the region, but it was not prepared to undertake the financial responsibility."—T. Dunbabin, *Making of Australasia*, p. 203.—During the rule of "Sir Arthur Kennedy, who succeeded to the government of Queensland in 1877, . . . a proposal to annex New Guinea to Queensland acquired shape. . . . Missionaries were settled at various points in New Guinea, and there was correspondence as to the necessity for establishing some authority to restrain outrages by Europeans 'on natives of islands beyond the Queensland limits.' Again the Colonial Office was urged to annex the eastern portion of New Guinea, and (Nov. 1878) moved by rumours that gold had been discovered there, and that lawful authority would be needed, Sir Arthur Gordon, the High Commissioner in the Pacific, arrived at the conclusion that annexation would be inevitable in order to avert 'a reign of lawless violence and anarchy.' . . . Again in 1882 the subject of annexation was revived, in consequence of rumours that the French and the Germans were about to intervene there, but the Earl of Derby announced that the government were 'not prepared at present to reopen' the question. In February, 1883, the Queensland Agent-General in London (by letter) urged immediate annexation, and Lord Derby (8th March) called for a report from Sir A. Kennedy 'before so grave a step could be considered.' Before his invitation was received a commercial telegram announced that the Queensland government had (4th April) taken formal possession of New Guinea for Her Majesty [see NEW GUINEA] and Sir John A. Kennedy telegraphed (16th April):—'To prevent foreign powers from taking possession of New Guinea, Queensland government, through Police Magistrate, Thursday Island, took formal possession in Her Majesty's name on 4th instant, pending your decision on my despatch this mail.'"—G. W. Rusden, *History of Australia*, v. 3, pp. 411-413.—The question of confederation roused comparatively small interest throughout the country, and no representative was sent to the federal convention held at Melbourne. The enabling bill, however, passed in 1899 without difficulty, and later in the year was submitted to a referendum and was accepted by a small majority.—See also AUSTRALIA: 1885-1892; 1900: Federation of Australian colonies.

QUEENSTOWN, or Cobh, Ireland, seaport of the city of Cork. Before the American Revolution Cove or Cork, as it was then known, was a small fishing village. In 1901 the population was 7,909. In 1849 the name was changed to Queenstown in honor of Queen Victoria, since it was her first landing place in Ireland. During the World War, Queenstown was the United States naval base for destroyers. The name was again changed to Cobh (Cove) in 1922.

QUEENSTOWN, South Africa, town of Cape province, in the upper valley of the Great Kei river. The population in 1904 was 9,616. It was

founded in 1853 and named after Queen Victoria. Up to 1868 the land was held by the burghers on a military tenure. Queenstown is the center of a wheat and sheep-raising district, and a busy commercial town.

QUEENSTOWN HEIGHTS, Battle of. See U.S.A.: 1812 (September-November).

QUETTA, locally known as Shal Kot, the capital of British Baluchistan, India, commanding the route between India and southern Afghanistan. (See INDIA: Map.) It is the southernmost point in the line of frontier posts and a system of strategic railways on the frontier of India. Sir Robert Sandeman, the founder of the Baluchistan province, entered the country in 1875. Two years later the cantonment of Quetta was occupied by British troops. In 1883 it was ceded by the Khan to the British on an annual quit-rent of 25,000 rupees. In 1905 when the new staff college for India was established, it was decided to locate it at Quetta, which was the headquarters of the 4th division of the Indian army. The new college was opened on June 1, 1907.

QUICHES AND CAKCHIQUELS.—"Of the ancient races of America, those which approached the nearest to a civilized condition spoke related dialects of a tongue, which from its principal members had been called the Maya-Quiche linguistic stock. Even to-day, it is estimated that half a million persons use these dialects. They are scattered over Yucatan, Guatemala, and the adjacent territory, and one branch formerly occupied the hot lowlands on the Gulf of Mexico, north of Vera Cruz. The so-called 'metropolitan' dialects are those spoken relatively near the city of Guatemala, and include the Cakchiquel, the Quiche, the Pokonchi and the Tzutubill. They are quite closely allied, and are mutually intelligible, resembling each other about as much as did in ancient Greece the Attic, Ionic and Doric dialects. . . .

The civilization of these people was such that they used various mnemonic signs, approaching our alphabet, to record and recall their mythology and history. Fragments, more or less complete, of these traditions have been preserved. The most notable of them is the national legend of the Quiches of Guatemala, the so-called Popol Vuh. It was written at an unknown date in the Quiche dialect, by a native who was familiar with the ancient records."—D. G. Brinton, *Essays of an Americanist*, p. 104.—See also MAYAS; CENTRAL AMERICA: Aborigines; GUATEMALA: Aborigines, etc.

QUICHUAS, or Quechuas, South American Indian tribe. See GUCK, OR COCO GROUP; GALAPAGOS ISLANDS; PERU: Paternal despotism of the Incas.

QUIDS.—John Randolph of Virginia "had been one of the Republican leaders while the party was in opposition [during the second administration of Washington and the administration of John Adams, as presidents of the United States], but his irritable spirit disqualified him for heading an Administration party. He could attack, but could not defend. He had taken offense at the President's [Jefferson's] refusal to make him Minister to England, and immediately took sides with the Federalists [1805] followed by a number of his friends, though not sufficient to give the Federalists a majority. . . . The Randolph faction, popularly called 'Quids,' gave fresh life to the Federalists in Congress, and made them an active and useful opposition party."—A. Johnston, *History of American politics*, ch. 6, sect. 3.—See also U.S.A. 1808: Sixth presidential election.

QUIPU, WAMPUM.—"The Peruvians adopted a . . . unique system of records, that by means of the quipu. This was a base cord, the thickness of the finger, of any required length, to which were attached numerous small strings of different colors, lengths, and textures, variously knotted and twisted one with another. Each of these peculiarities represented a certain number, a quality, quantity, or other idea, but what, not the most fluent quipu reader could tell unless he was acquainted with the general topic treated of. Therefore, whenever news was sent in this manner a person accompanied the bearer to serve as verbal commentator, and to prevent confusion the quipus relating to the various departments of knowledge were placed in separate storehouses, one for war, another for taxes, a third for history, and so forth. On what principle of mnemotechnics the ideas were connected with the knots and colors we are totally in the dark; it has even been doubted whether they had any application beyond the art of numeration. Each combination had, however, a fixed ideographic value in a certain branch of knowledge, and thus the quipu differed essentially from the Catholic rosary, the Jewish phylactery, or the knotted strings of the natives of North America and Siberia, to all of which it has at times been compared. The wampum used by the tribes of the North Atlantic coast was, in many respects, analogous to the quipu. In early times it was composed chiefly of bits of woods of equal size, but different colors. These were hung on strings which were woven into belts and bands, the hues, shapes, sizes, and combinations of the strings hinting their general significance. Thus the lighter shades were invariable harbingers of peaceful or pleasant tidings, while the darker portended war and danger. The substitution of beads or shells in place of wood, and the custom of embroidering figures in the belts were, probably, introduced by European influence."—D. G. Brinton, *Myths of the New World*, ch. 1.—See also **WAMPUM**; **PERU**: 1200-1527.

QUIRE. See **BOOKS**: Evolution.

QUIRINAL.—"The Palatine city was not the only one that in ancient times existed within the circle afterwards enclosed by the Servian walls; opposite to it, in its immediate vicinity, there lay a second city on the Quirinal. . . . Even the name has not been lost by which the men of the Quirinal distinguished themselves from their Palatine neighbors. As the Palatine city took the name of 'the Seven Mounts,' its citizens called themselves the 'mount-men' ('montani'), and the term 'mount,' while applied to the other heights belonging to the city, was above all associated with the Palatine; so the Quirinal height—although not lower,

but on the contrary somewhat higher, than the former—as well as the adjacent Viminal, never in the strict use of the language received any other name than 'hill' ('collis'). . . . Thus the site of the Roman commonwealth was still at this period occupied by the Mount-Romans of the Palatine and the Hill-Romans of the Quirinal as two separate communities confronting each other and doubtless in many respects at feud. . . . That the community of the Seven Mounts early attained a great preponderance over that of the Quirinal may with certainty be inferred."—T. Mommsen, *History of Rome*, bk. 1, ch. 4.—The name is now applied to the palace of the King of Italy.—See also **PALATINE HILL**; **SEVEN HILLS OF ROME**.

QUIRITES.—In early Rome the warrior-citizens, the full burgesses, were so-called. "The king, when he addressed them, called them 'lance-men' (quirites). . . . We need not . . . regard the name Quirites as having been originally reserved for the burgesses on the Quirinal. . . . It is indisputably certain that the name Quirites denoted from the first, as well as subsequently, simply the full burgess."—T. Mommsen, *History of Rome*, bk. 1, ch. 4-5.—The term quirites, in fact, signified the citizens of Rome as a body. Whether it originally meant "men of the spear," as derived from a Sabine word, is a question in some dispute.—H. G. Liddell, *History of Rome*, bk. 1, ch. 5.

RAB-SHAKEH, title of the chief minister of the Assyrian kings. The Rab-Shakeh of Sennacherib demanded the surrender of Jerusalem.

RACE PROBLEMS: Race as a factor in human history.—Race and color.—Modern development of race problem as color problem.—"The term race is popularly used in a very vague way. The newspapers . . . said, during trouble in Poland [following the Russian revolution of 1905], that the Russian soldiers then in Warsaw showed 'race antipathy' in their conflicts with the people. We all know, however, that the mutual hatred of Russians and Poles is due mainly to political and religious causes. Frenchmen of the northern provinces who are anthropologically wholly indistinguishable, as Professor Ripley tells us, from the inhabitants of many western German districts, still have what they call a 'race antipathy' for the man across the border. Thus almost any *National* or *Political* or *Religious* barrier, if it is old enough, may lead to a consciousness of difference of race. On the other hand, there are of course unquestionable physical varieties of mankind, distinguished by well-known physical contrasts. But the anthropologists still almost hopelessly disagree as to what the accurate classification of these true races may be. . . . The numerous questions and prejudices which are aroused by the contact of the various races of men have always been important factors in human history. They promise, however, to become, in the near future, still more important than they have ever been before. . . . Physically speaking, great masses of men are today [brought] into more frequent and closer contact than was formerly possible, because of the ease with which at present numerous means of communication can be used, because of the increase of peaceful migrations, and because of the imperial ambitions of several of the world's great peoples. . . . When we think of East Indian coolies now present as laborers, side by side with native negroes and with white men in the British West Indies; when we remember the problem of South Africa, as it was impressed upon our minds a few years since, at a moment when Dutchmen and Englishmen fought for the land while Kaffirs and Zulus watched the conflict, . . . we then see that the earliest social problem of humanity is also the most recent problem."—J. Royce, *Race questions and prejudices* (*International Journal of Ethics*, Apr., 1906).—"When races dwell together on the same ground or in close proximity, as the Magyars and Saxons live among or close to the Roumanians in Transylvania or the Lithuanians near to Poles and Russians, or the Ainos among the Japanese, the more numerous, or otherwise stronger element ultimately absorbs the weaker. Inter-marriage is a more potent factor in the blending process than government or commerce, and inter-marriage always goes on except where checked by differences of colour or differences of Religion. Even these two causes may not be permanent. The latter at any rate seems likely to lose some of its power and colour repulsion is strong only among the Teutonic peoples."—J. Bryce, *Race sentiment*, p. 34.—The term "race problem" refers, in particular, to the situation which arises when one or the other of the colored races is thrown in close contact with white men. "It is only superficially that color and physiognomy divide the cultivated races. The fundamental differences are economical and social. The religious differences are rather phases and results of these, and are intertwined with both. In our modern world the economic difference is by

far the most important; it is the gap between the Eastern standard of comfort and the Western that makes the two stand so far apart. The long quarantine of Oriental labor in its three great centers, China, India and Japan, dragged the standard down into the closest proximity to starvation; nothing but periodical famines and plagues, sweeping out their millions, made any progress, even the most infinitesimal, possible. When the bulk of a people are at the intermittent mercy of these two brooms of humanity, there must be stagnation, in spite of occasional spurts of progress. To admit this Eastern standard into immediate competition with the Western would end in dragging the latter down more than raising the former up. Western nations must, in order to save themselves from the long stagnation of the East, exclude Eastern labor till its standard is greatly raised. That this process of elevation has begun we can see. In India famines and plagues, thanks to British rule, have no longer the omnipotence they had; and education and Western manufacture and markets are raising the value and wages of labor. . . . Almost as important a differentiation of ideal is the position of woman. All these Eastern centers still abase her not only in social but in household life. This is perhaps the more patent difference in ideals; but it is not the more potent; for the Western emancipation of woman is comparatively recent; what made it easy was the monogamy of Western peoples. The process will be longer in the East because of the long recognition and approval of polygamy. There can be no real admixture of the races till the position of woman in the household is as secure in Japan as in the West. In India and China the process will be much more prolonged because they are not insular, and hence are not easily opened to foreign influences and ideas. But the growth of Western education in both is quickening the life and will lead to vast social and political changes. Japan is the only Eastern nation that the Western people on the Pacific have to fear; for she has Westernized most efficiently in arts, sciences and armaments. But with the advantages of Westernism she must take, and is rapidly taking, its defects; in her future wars there will be less patriotism, less concentration of power and less national plasticity."—J. M. Brown, *Pacific ocean in racial history of mankind* (*Journal of Race Development*, July, 1911).—See also **EUROPE: Introduction to historic period: Distribution of races.**

Problem of mixed races.—Mental inferiority of negro questioned.—"On the borderland between the great races of the earth, where the white Caucasian comes in contact with the Negro, the brown Caucasian, the Mongol and the Amerindian, a grave problem has been created by the fusion of the white with the coloured races. In Africa and India the question is especially difficult. The white man has mingled his blood with that of the native races, and then, like Amnon, in the domestic history of the house of David, has turned upon his action, and scorned the victims of his blandishments. That constitutes the problem: What is to become of the 'coloured people' in Africa, and the great Eurasian community in India?"—A. J. Macdonald, *Trade politics and Christianity in Africa and the East*, p. 233.—Of all the race problems which face western civilization in the twentieth century, the one which is most difficult of solution is that of the negro and negroid races, and their place in the world. Formerly, the problem was simplified by the belief that the negro was mentally inferior to the white man, but this is now being questioned by some modern authorities. "In

a discussion of the mental differences between one race and another, it should be borne in mind that when we talk about the characteristics of a race as a whole, we are dealing with an abstraction which has no existence in nature, . . . [and] the degree of variability in each race is very great. . . . In a comparison between the negro and the North European we may safely say that the traits of the negro are so characteristic that they are not duplicated among the whites and that there is a distinct gap between the extreme variants in these two cases. . . . In a discussion of the physiological side of the negro problem we are most immediately interested in the functioning of the brain. It is true that, on the average, the brain of the negro is slightly smaller than the brain of the European. But here the enormous variability in the size and structure of the brain in both the white and the negro races should be borne in mind. . . . Whether or not there is a difference in the number of cells and connective fibres in the brains of the two races is an open question. . . . In relation to . . . [the] question of the mental ability of the negro, the study of primitive life in Africa seems most significant. The contrast presented by African industrial and political conditions and conditions among . . . [the] poor negroes [of the United States] is very striking. Instead of shiftlessness, we find in Africa highly developed native arts. Excellent work in weaving, carving, pottery, blacksmithing, and even metal casting and glass blowing, is done by the black races either all over the African continent or at least locally. Industrially, the African negro is in advance of most other primitive tribes. His political organization reminds one strongly of the political conditions in mediæval Europe. . . . An important phase of the negro problem in . . . [the United States] relates to the position of the mulatto. The common saying is that he inherits all the bad qualities of both races. Socially this may be true in many cases, and it can readily be understood. If, however, the attempt is made to prove the biological inferiority of the mulatto, we are confronted by the fact that no evil results are found in the mixed populations of Africa in the northern borderland of the negro country, where Mediterranean races and negroes have intermarried, and also by the fact that under favorable conditions the mulatto is healthy and may attain to great eminence, as in the cases of Dumas and Pushkin. . . . Even if there is neither a biological nor a psychological justification for the popular belief in the inferiority of the negro race, the social basis of the race prejudice in America is not difficult to understand. The prejudice is founded essentially on the tendency of the human mind to merge the individual in the class to which he belongs, and to ascribe to him all the characteristics of his class. . . . To the popular mind, the negro appears as a class, and the impressions made by the life of the poor negro are generalized by the white man and are combined with dogmatic beliefs regarding the physical and hereditary mental make-up of the race. . . . It is claimed by many that the negro problem is economic rather than racial, that the fear of negro competition causes racial opposition. Obviously, this explanation also would not hold good if the tendency did not exist to treat the negro as a class, not as an individual. The economic conflict may be a contributing cause that accentuates the pre-existing feeling of the contrast between whites and negroes. This feeling may be emphasized in many ways—by economic interest, by questions of social privilege, or by any other social process

that brings about conflicts of interest between large groups of whites and negroes. It would, however, be an error to seek in these sources the fundamental cause for the antagonism; for the economic conflict, as well as the other conflicts, presupposes the social recognition of the classes."—F. Boas, *Problem of the American negro* (*Yale Review*, Jun., 1921).

Previous to 1900.—Absence of problem where two races do not compete as equals.—South America.—"One may say that there is no 'colour question' in South America. . . . Although both in Spanish America and in the United States there are social distinctions which coincide with race distinctions, the character of those distinctions is different. In both countries there are two sections. But in the United States everyone who is not white is classed as coloured, however slight the trace. In Spanish America everyone who is not wholly Indian is classed as white, however marked the Indian tinge. Thus the mixed population, which in the United States swells the negro element, is in Spanish America a part of the white nation, and helps to give that element its preponderance. And a further difference appears in the fact that whereas in the United States the man of colour is discriminated against for social purposes, irrespective of his wealth, education, or personal qualities, in Spanish countries race counts for so little that when he emerges out of the poverty and ignorance which mark the Indian, his quality with the white man is admitted. So rarely, however, does he emerge that one may broadly say that the Nation consists in these republics of white men and mestizos only, the Indian constituting, if not another nation, yet a separate nationality, marked off not merely by poverty, but by its language and the adherence of its members to ancient superstitions. They have nothing, except the worship of the saints and a fondness for liquor, in common with the class above them, for they speak a different language, think differently, feel differently, have their own amusements, and cherish, in a dim way, faint memories of a time when their forefathers were masters of the land. They are not actively hostile to the white people, and, indeed, get on better with their landlords than some European peasantries have done with theirs. But they live apart, inside the nation, but not of it. . . . If it is asked how the presence of this solid Indian mass, unassimilated by the white nation, has affected that nation and the progress of the country as a whole, the answer is that in the first place it prevented all chance of the growth of a free European agricultural population even in those high valleys where Europeans could work and thrive; . . . and besides the weakening of the state by the lack of national spirit in half of its population, the presence of a large mass of ignorance and superstition has operated to reduce the general intellectual level. There have been countries where a small rich and ruling class, living on the toil of inferiors, has cultivated art and letters with brilliant success, but we find nothing of the sort here. The ignorant mass has depressed the whole, as a glacier chills the air of its valley. Whether the Spanish stock has deteriorated through the mixture of Indian blood is a more difficult matter to determine. The Peruvians and Bolivians of today, both whites and mestizos—and the same thing is true of Venezuelans and Ecuadorians—differ much from the Spaniards of the sixteenth century and from the European Spaniard of today. They are probably more excitable: they are naturally less industrious because they live in hot countries and have Indians to work for them. But

in Spain itself, . . . the Catalans are more energetic than the Andalusians, the Gallegos more industrious than the Valencians. . . . Moreover, our knowledge of heredity in its influence on race development is still imperfect. The Argentines, who are of an almost pure white stock, also differ much from the modern Spaniard. [See ARGENTINA: Population.] It might seem natural to assume *a priori* that men of pure European race would continue to hold the foremost place in these countries, and would show both greater talents and a more humane temper than those in whose veins Indian blood flows. But I doubt if the facts support such a view. Some of the most forceful leaders who have figured in the politics of these republics have been mestizos. . . . Of the four northern republics, Panama, Colombia, Venezuela, and Ecuador, . . . the number of purely Spanish families is small. It is probably largest in Colombia. In Venezuela the Indians have been more largely absorbed into the general population than has happened in Colombia and Ecuador. In all four states such of the Indians as remain wild forest dwellers are passive, and practically outside the nation, which is, as a social and political entity, predominantly mestizo. What has been said of Peru and Bolivia is true of these states also: there is no colour line: the mestizos are treated as white and are not, as a class, intellectually inferior to the white. The Indian forms the lowest stratum, and seldom rises out of it. There remains Brazil, distinguished from the other republics by the fact that in addition to her small mestizo population and her pure Indian population, most of it wild, she has a great mass of negroes and a still larger mass of mulattoes and quadroons. It is hardly too much to say that along the coast from Rio to Bahia and Pernambuco, as well as in parts of the interior behind these two cities, the black population predominates. In character and habits it somewhat resembles the negroes of the British West Indies and Santo Domingo, being superior to the Haytians, but inferior in education and enterprise to the coloured people of the southern states of North America. High as is its fecundity, its death-rate is also so high, owing to the general neglect of sanitary precautions, that it does not appear to be increasing relatively to the general population. It is well treated—slavery was seldom harsh among the kindly natured, easy-going Portuguese—and bears no ill-will to its former masters. Neither do they feel towards it that repulsion which marks the attitude of the whites to the negroes in North America and South Africa. The Brazilian lower class intermarries freely with the black people: the Brazilian middle class intermarries with mulattoes and quadroons. Brazil is the one country in the world, besides the Portuguese colonies on the east and west coasts of Africa, in which a fusion of the European and African races is proceeding unchecked by law or custom. The doctrines of human equality and human solidarity have here their perfect work. The result is so far satisfactory that there is little or no class friction. The white man does not lynch or maltreat the negro: indeed, I have never heard of a lynching anywhere in South America except occasionally as part of a political convulsion. The negro is not accused of insolence and does not seem to develop any more criminality than naturally belongs to any ignorant population with loose notions of morality and property. The chief conclusion which the history of the relations of races in the South American continent suggests are the three following. The first may be thought doubtful.

It is negative rather than positive, and though it seems worth stating, I state it with diffidence: The fusion of two parent stocks, one more advanced, the other more backward, does not necessarily result in producing a race inferior to the stronger parent or superior to the weaker. The Mestizo in Peru is not palpably inferior in intellect to the Spanish colonial of unmixed blood, but seems to be substantially his equal. The Mestizo in Mexico is not palpably superior—some doubt if he is at all superior either physically, morally, or intellectually—to the pure Tarascan or Zapotec Indian, who is, no doubt, a stronger human being than the South American Quichua or Aymara. The second conclusion is this: Conquest and control by a race of greater strength have upon some races a depressing and almost ruinous effect. The Peruvian subjects of the Incas had reached a state of advancement which, though much below that of the ancient Egyptians and Babylonians, was remarkable when one considers that their isolation deprived them of the enormous benefit of contact with other progressive peoples, and when one considers also the disadvantage of living at a great altitude, the absence of milk-yielding animals, and the paucity both of animals capable of domestication and of cereal plants. The impact of Spanish invasion not only shattered their own rudimentary civilization to pieces, but so took all the heart and spirit out of them that they have made practically no advances during four centuries, and have profited hardly at all by the western civilization of their masters. The aborigines of Mexico, having more stamina of intellect and will, have suffered less by the shock, but have done almost as little to assimilate the arts and ideas of Europe. Thirdly, the ease with which the Spaniards have intermingled by marriage with the Indian tribes—and the Portuguese have done the like, not only with the Indians, but with the more physically dissimilar negroes—shews that race repugnance is no such constant and permanent factor in human affairs as members of the Teutonic peoples are apt to assume. Instead of being, as we Teutons suppose, the rule in this matter, we are rather the exception, for in the ancient world there seems to have been little race repulsion: there is very little to-day among Mohammedans: there is none among Chinese. This seems to suggest that since the phenomenon is not of the essence of human nature, it may not be always as strong among the Teutonic peoples as it is to-day. Religion has been in the past almost as powerful a dissevering force as has racial antagonism. In the case of Spaniards and Portuguese, religion, so soon as the Indians had been baptized, made race differences seem insignificant. Islam has always done this in the East and in Africa.”—J. Bryce, *South America*, pp. 473-482.

1705-1895.—Negro problem in the United States.—Its first appearance.—Development up to 1900.—“What was the Negro Problem? It was certainly not merely a question of slavery; in the last analysis this institution was hardly more than an incident. Slavery has ceased to exist, but even to-day the problem is with us. The question was rather what was to be the final place in the American body politic of the Negro population that was so rapidly increasing in the country. In the answering of this question supreme importance attached to the Negro himself; but the problem soon transcended the race. Ultimately it was the destiny of the United States rather than of the Negro that was to be considered, and all the ideals on which the country was based came to the testing. . . . The history of the Negro peo-

ple in the United States falls into well defined periods or epochs. First of all there was the colonial era, extending from the time of the first coming of Negroes to the English colonies to that of the Revolutionary War. This divides into two parts, with a line coming at the year 1705. Before this date the exact status of the Negro was more or less undefined; the system of servitude was only gradually passing into the sterner one of slavery; and especially in the middle colonies there was considerable intermixture of the races. By the year 1705, however, it had become generally established that the Negro was to be regarded not as a person but as a thing; and the next seventy years were a time of increasing numbers, but of no racial coherence or spiritual outlook, only a spasmodic insurrection here and there indicating the yearning for a better day. With the Revolution there came a change, and the second period extends from this war to the Civil War. This also divides into two parts, with a line at the year 1830. In the years immediately succeeding the Revolution there was put forth the first effective effort toward racial organization; . . . but, in spite of a new racial consciousness, the great mass of the Negro people remained in much the same situation as before, the increase in numbers incident to the invention of the cotton-gin only intensifying the ultimate problem. About the year 1830, however, the very hatred and ignominy that began to be visited upon the Negro indicated that at least he was no longer a thing but a person. Lynching began to grow apace, burlesque on the stage tended to depreciate and humiliate the race, and the South became definitely united in its defense of the system of slavery. On the other hand, the Abolitionists challenged the attitude that was becoming popular; the Negroes themselves began to be prosperous and to hold conventions; and Nat Turner's insurrection thrust baldly before the American people the great moral and economic problem with which they had to deal. With such divergent opinions, in spite of feeble attempts at compromise, there could be no peace until the issue of slavery at least was definitely settled. The third great period extends from the Civil War to the opening of the great war in Europe. Like the others it also falls into two parts, the division coming at the year 1895. The thirty years from 1865 to 1895 may be regarded as an era in which the race, now emancipated, was mainly under the guidance of political ideals. Several men went to Congress and popular education began to be emphasized; but the difficulties of Reconstruction and the outrages of the Ku Klux Klan [see Ku Klux Klan] were succeeded by an enveloping system of peonage, and by 1890-1895 the pendulum had swung fully backward and in the South disfranchisement had been arrived at as the concrete solution of the political phase of the problem."—B. G. Brawley, *Social history of the American negro*, pp. 116, 372-373.—See also EDUCATION: Modern developments: 20th century: General education: United States: Negroes; BALTIMORE: 1871-1015; NORTH CAROLINA: 1898; 1000.

1855-1907.—Australasia.—Genesis of Chinese problem.—Imperial complications in Hindu problem.—"Long traffic with China ports by European nations had, by the middle of the nineteenth century, set up a natural leakage of individual Chinese into almost all of the countries bordering on the Pacific. Everywhere the unsurpassed industrial qualities of the Chinese conquered for them a livelihood and often a competence. Employers appreciated their patience, their sobriety,

their docility, and their capacity; and on the whole they were made welcome. But herein lay the elements of an economic problem to which no European government could close its eyes for long. . . . By the end of 1887 Chinese were denied free access to any part of Australia. Moreover, by discriminating under the factory laws in that year, Victoria took the initiative in a programme of social conservation, which later became the guiding principle of legislation throughout Australia and New Zealand. . . . In December, 1887, China took up officially in London the question of the treatment of Chinese nationals in British dominions. . . . [Just at this moment an influx of Chinese into unoccupied territory was reported, and at the same time Chinese immigrants in excess of the statutory quota arrived in Sydney and Melbourne. An act was hastily passed by New South Wales, however, and these latter were not allowed to land. Immediately afterwards South Australia proposed a colonial conference, which was held in June, 1888. The colonies to whom the question had been submitted by the colonial office] recommended that the Imperial Government should endeavour to get a treaty with China, under which Chinese should be entirely excluded, with the exception of officials, travellers, merchants, and students; and in the meantime they agreed to standardise their own legislation by leaving out the poll-tax, and making the passenger limitation one to every 500 tons of the ship's register. . . . In 1896 a conference of Australasian premiers at Sydney decided to apply the anti-Chinese restrictions to other Asiatics. . . . [But all legislation was reserved] pending the meeting of the Imperial Conference in 1897. In welcoming the delegates, Chamberlain spoke very seriously and sympathetically on the Asiatic problem. The British Empire, he said, contained an empire of 300,000,000 Asiatics, all as loyal to the Crown as the delegates themselves, and including many hundreds of thousands every whit as civilized as the white races. . . . He advised the conference to confine its attention to the character of the immigrants and not to their colour. . . . No decision was come to at the conference, but Chamberlain persevered, and later in the year was able to inform the Australian colonies that Japan also would accept the exclusion of her people by means of the language test. . . . That the language test did not, however, completely settle the Asiatic problem was evident when the Commonwealth proceeded in its earliest days to put into effect the 'White Australia' policy to which it was committed from its birth."—G. H. Scholefield, *Pacific, its past and future*, pp. 231-234, 236-237.—See also JAPAN: 1905-1014.

1880-1906.—Anti-Chinese agitation in the United States and Canada.—Treaties suppressing immigration of laborers.—Chinese boycott.—Protest of President Roosevelt.—Restriction on Chinese immigration in Canada.—Oriental emigration developed with the improved means of transportation in the latter half of the nineteenth century. . . . The motives for this emigration were exactly the same as those which attracted European emigrants to the United States at the same time. They were primarily economic, the desire to better one's self. Great opportunities existed in California, the land of gold, and every Chinese hoped to make a fortune in a few years and then return to his native district. For this reason very few women accompanied the vigorous pioneers, whose stay, it was hoped, would be but brief. The United States, in those days, welcomed European immigration. . . . Those who came from northern Europe were easily assim-

lated by the old British stock, and in comparison with the people of the colored races all the Europeans were easily absorbed. . . . But the Chinese and Japanese usually remained apart. They were different in color and culture. For mutual benefit and protection they tended to live together in groups. . . . After the immigration question began to be studied, the dangers of mass immigration were pointed out. By this was meant the immigration of peoples from any part of the world in such numbers that they would form homogeneous groups or masses, which would maintain their national language, customs, and standards of living. . . . Asiatic immigration, if unregulated, would tend to the mass type. Chinese were the first Oriental immigrants to enter California after the American occupation. . . . At first they were well received. They were peaceful, industrious, thrifty, and honest, and there was work enough for all to do and wages were high. But within a few years objections were raised against them. . . . These objections may be summed up as: (1) social—they were said to be unassimilable, with strange and repellent manners, customs, and ideals; (2) economic—they were cheap labor, with a low standard of living, able and willing to work for less than a white man's wage; (3) moral—they engaged in opium-smoking, incessant gambling, and other vices; (4) political—if their numbers were not checked, they would soon overrun and control the whole Pacific Coast. . . . The desire of most Californians that Chinese immigration be restricted was a proper one, but the measures taken by the local officials and by many of the citizens were, in many cases, absolutely indefensible. The story of the mistreatment of the Chinese in California and other Western States is a discreditable page in American history."—P. J. Treat, *Japan and the United States, 1853-1921*, pp. 251-252.—Efforts to restrict immigration by legislation were unavailing; but in 1880 a treaty was made between the United States and China, which, on the part of the United States, had the intention of excluding Chinese laborers. The preamble of this act states that "Whereas, in the eighth year of Hsien Feng, Anno Domini 1858, a treaty of peace and friendship was concluded between the United States of America and China, and to which were added, in the seventh year of Tung Chih, Anno Domini 1868, certain supplementary articles to the advantage of both parties, which supplementary articles were to be perpetually observed and obeyed: and, Whereas the Government of the United States because of the constantly increasing immigration of Chinese laborers to the territory of the United States, and the embarrassments consequent upon such immigration, now desires to negotiate a modification of the existing Treaties which shall not be in direct contravention of their spirit: Now, therefore," etc. The following are the four articles of the treaty thus explained:

Article 1. Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to

the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

Art. II. Chinese subjects, whether proceeding to the United States as teachers, students, merchants or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

Art. III. If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with illtreatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection and to secure to them the same rights, privileges, immunities and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

Art. IV. The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith, such measures will be communicated to the Government of China. If the measures as enacted are found to work hardship upon the subjects of China, the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese Foreign Office may also bring the matter to the notice of the United States minister at Peking and consider the subject with him, to the end that mutual and unqualified benefit may result.

This is the latest of the still obligatory engagements by treaty that bear on the admission of visitors or immigrants from China to the United States. Hence the Government of the United States is now under the engagements which it made with the Government of China in 1880, which included an engagement to be faithful to the hospitable spirit of the compact of 1868. When one has looked over those engagements of national honor, it seems hard to harmonize them in spirit, or even in letter, with some of the enactments which are regulating, at the present day, the treatment of people from China who venture to approach the entry ports of the United States. Such for example, as the following, from "the Act of May 6, 1882, as amended and added to by the Act of July 5, 1884":

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act, and until the expiration of ten years next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is hereby suspended, and during such suspension it shall not be lawful for any Chinese laborer to come from any foreign port or place, or having so come to remain within the United States.

Sect. 2. That the master of any vessel who shall knowingly bring within the United States

on such vessel, and land, or attempt to land, or permit to be landed any Chinese laborer, from any foreign port or place, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by a fine of not more than five hundred dollars for each and every such Chinese laborer so brought and may also be imprisoned for a term not exceeding one year. . . .

Sect. 6. That in order to the faithful execution of the provisions of this act, every Chinese person, other than a laborer, who may be entitled by said treaty or this act to come within the United States, and who shall be about to come to the United States, shall obtain the permission of and be identified as so entitled by the Chinese Government, or of such other foreign government of which at the time such Chinese person shall be a subject, in each case to be evidenced by a certificate issued by such Government, which certificate shall be in the English language, and shall show such permission, with the name of the permitted person in his or her proper signature, and which certificate shall state the individual, family, and tribal name in full, title or official rank, if any, the age, height, and all physical peculiarities, former and present occupation or profession, when and where and how long pursued, and place of residence of the person to whom the certificate is issued, and that such person is entitled by this act to come within the United States.

If the person so applying for a certificate shall be a merchant, said certificate shall in addition to above requirements, state the nature, character, and estimated value of the business carried on by him prior to and at the time of his application as aforesaid: *Provided*, That nothing in this act nor in said treaty shall be construed as embracing within the meaning of the word "merchant," hucksters, peddlers, or those engaged in taking, drying, or otherwise preserving shell or other fish for home consumption or exportation.

If the certificate be sought for the purpose of travel for curiosity, it shall also state whether the applicant intends to pass through or travel within the United States, together with his financial standing in the country from which such certificate is desired.

The certificate provided for in this act, and the identity of the person named therein shall, before such person goes on board any vessel to proceed to the United States, be vised by the indorsement of the diplomatic representatives of the United States in the foreign country from which such certificate issues, or of the consular representative of the United States at the port or place from which the person named in the certificate is about to depart; and such diplomatic representative or consular representative whose indorsement so required is hereby empowered, and it shall be his duty, before indorsing such certificate as aforesaid, to examine into the truth of the statements set forth in said certificate, and if he shall find upon examination that said or any of the statements therein contained are untrue it shall be his duty to refuse to indorse the same.

Such certificate vised as aforesaid shall be prima facie evidence of the facts set forth therein, and shall be produced to the Chinese inspector in charge of the port in the district in the United States at which the person named therein shall arrive, and afterward produced to the proper authorities of the United States whenever lawfully demanded, and shall be the sole evidence permissible on the part of the person so producing the same to establish a right of entry into the

United States; but said certificate may be controverted and the facts therein stated disproved by the United States authorities.

It will be observed that Article IV of the Treaty of 1880 provides that, if measures enacted in the United States "are found to work hardship upon the subjects of China, the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him." One who consults the annual reports that are published, of "Papers relating to the Foreign Relations of the United States," will find that the Chinese Minister at Washington has had occasion very often to bring cases of the kind thus referred to in the Treaty to the notice of the Secretary of State, and discovered, when he did so, almost invariably that under the enactments complained of the Secretary of State had no power even to "consider the subject" of complaint with him. Wu Ting-fang, who represented China at Washington in 1900-2, had much correspondence on such matters with Secretary Hay, whose sympathetic friendliness to China was well proved. Resentful feeling aroused in China by the immigration and exclusion laws of the United States, in their special application to incoming Chinese and in the harshness of their administration, began to have expression at Shanghai in May, 1905, when resolutions were adopted at a meeting of the merchant guilds of that city which initiated an extensive boycotting of American goods and of everything connected with America. A report of the meeting and of its recommendations was sent to all parts of the empire and elicited a quick and general response. The undertaking of the movement was to stop the buying of American goods; socially to ostracise tradesmen who continue to handle them, and to render no service to Americans in China, except for higher pay than is demanded from others. This boycotting attitude of large numbers in China was persisted in throughout the year, and not only made itself felt seriously in commercial circles, but impressed the American public with a proper sense of the indignities they were allowing to be imposed on a people who deserve their respect. The president (Roosevelt), in his Message to Congress at the opening of the session in December, dealt justly with the subject, as follows:

"The conditions in China are such that the entire Chinese coolie class, that is, the class of Chinese laborers, skilled and unskilled, legitimately come under the head of undesirable immigrants to this country, because of their numbers, the low wages for which they work, and their low standard of living. Not only is it to the interest of this country to keep them out, but the Chinese authorities do not desire that they should be admitted. At present their entrance is prohibited by laws amply adequate to accomplish this purpose. These laws have been, are being, and will be, thoroughly enforced. . . . But in the effort to carry out the policy of excluding Chinese laborers, Chinese coolies, grave injustice and wrong have been done by this Nation to the people of China, and therefore ultimately to this Nation itself."—*President's Message to Congress, Dec. 5, 1905.*—No effective impression on the moral sense of the rationality of Congress was made by the president's appeal, and the laws which are contemptuous of national treaties and indifferent to the national honor remain on the statute books unchanged. That others than the president in the Federal administration felt the wrong and the

shame of the law which it had to administer, was shown by an article from the pen of the secretary of commerce and labor, published in the spring of 1908. The following are some passages from the article:

"It is not the policy of the Government with reference to Chinese immigration, but the manner in which it is, of necessity, carried out, by reason of the way in which the laws are framed, that causes constant friction and dissatisfaction. . . . The attitude of the Chinese Government may be inferred from the fact that in 1904, after the convention of 1894 had been in force ten years, China availed herself of her reserved right and formally denounced the treaty, refusing longer to be a party to an arrangement which, as carried into effect, was offensive to her national pride. . . .

"For proof of the feeling of the Chinese people it is only necessary to refer to the boycott of American goods, inaugurated by various trade guilds and business and commercial associations of the Empire during the summer of 1905. At that time China held first rank among Oriental countries as a consumer of American products. In that year, her total commerce amounted to \$497,000,000, of which \$329,000,000 were imports; \$57,000,000, or more than seventeen per cent., being supplied by the United States. . . . It was reasonable to believe that American trade would continue to progress and a larger and larger share of the foreign trade of China [would] accrue to the United States. Instead of that, the exports of the United States to China, according to our statistics, fell to \$44,000,000 in 1906, and to \$26,000,000 in 1907.

"It is not necessary to attribute the decline wholly to the boycott of 1905, but a drop in our exportations to that country of fifty per cent. in two years is sufficiently startling to challenge attention. But on higher grounds than those of mere commercial interest should the frame of the laws be changed. . . .

"I would not suggest a change in the established policy of rigidly excluding Chinese laborers of every description, both skilled and unskilled. . . . But, at a time when this policy of exclusion has been so thoroughly applied that there remain in the United States only about 70,000 Chinese, . . . little danger need be apprehended from a full and fair reconsideration of the subject and a re-casting of the laws upon a juster basis. . . .

"By making admission the rule, and exclusion the exception, we could easily preserve the present policy in all its integrity, and even strengthen the real prohibitory features thereof, at the same time entirely removing a material cause of friction, dissatisfaction and unnecessary humiliation to the people of a friendly nation."—O. S. Straus, *Spirit and letter of exclusion (North American Review, Apr., 1908)*.

A much stronger expression was given to the shamed feeling of honorable Americans on this subject by former Secretary of State John W. Foster, in an article written in 1900, in which he said: "I do not know how I can better illustrate the kind of protection, or want of protection, extended to the Chinese, as guaranteed by the Constitution, the treaties, and the solemn promises of the government of the United States, than by recalling a notorious case which occurred . . . [in Boston] and under the conduct of Federal officials. At about half past seven o'clock on the evening of Sunday, October 11, 1902, a number of United States officials of Boston, New York, and other cities charged with the administration of the

Chinese exclusion laws, assisted by a force of the local police, made a sudden and unexpected descent upon the Chinese quarter of Boston. The police and immigration officials fell upon their victims without giving a word of warning. The clubs, restaurants, other public places where Chinese congregated, and private houses were surrounded. Every avenue of escape was blocked. To those seized no warrant for arrest or other paper was read or shown. Every Chinese who did not at once produce his certificate of residence was taken in charge and the unfortunate ones were rushed off to the Federal Building without further ceremony. . . . In many cases no demand was made for certificates, the captives were dragged off to imprisonment, and in some instances the demand was not made till late at night or the next morning, when the certificates were in the possession of the victims at the time of their seizure. . . . About two hundred and fifty Chinese were thus arrested and carried off to the Federal Building. Here they were crowded into two small rooms where only standing space could be had, from eight o'clock in the evening, all through the night, and many of them till late in the afternoon of the next day. . . . Some of them were released during the night, when relatives brought their certificates or merchants were identified. But the greater part were kept till the next day, when the publicity of the press brought friends, or relief through legal proceedings. . . . So strong was the indignation of the respectable citizens of Boston, that a large public meeting was held in Faneuil Hall to denounce the action of the immigration officials and the police. . . . It was announced by the immigration officials that their raid was organized under the belief that there were a number of Chinese in Boston and its vicinity unlawfully in the United States, and this method was adopted for discovering them. The official report of the chief officer soon after the event showed that two hundred and thirty-four Chinese were imprisoned, that one hundred and twenty-one were released without trial or requirement of bail, and that only five had so far been deported, but that he hoped that he might secure the conviction and deportation of fifty; as a matter of fact, however, the deportations fell much below that number. . . . [Even the treaty of 1880] which had been obtained from China so reluctantly, yet with the generous exhibition of friendship on her part just described, did not prove satisfactory to the increasing demands of the labor unions. Before ten years were passed, under the spur and excitement of the presidential campaign of 1888, and upon the hesitation of the Chinese government to make a further treaty modification, the Scott Act was passed by Congress, which was a deliberate violation of the treaty of 1880, and was so declared by the Supreme Court; but under our peculiar system it became the law of the land. Our government had thus flagrantly disregarded its solemn treaty obligations. Senator Sherman, then chairman of the Committee on Foreign Relations, stated in the Senate that we had furnished China a just cause for war."—J. W. Foster, *Chinese boycott (Atlantic Monthly, Jan., 1906)*.—See also IMMIGRATION AND EMIGRATION: United States: 1862-1913.—In Canada the opposition of organized labor to Asiatic immigration, on the Canadian Pacific coast, directed first against an influx of Chinese, brought about, in 1904, the imposition of a head-tax of \$500 on every person of Chinese origin entering Canada thereafter, with the following exceptions:

(a) The members of the diplomatic corps, or other

government representatives, their suites and their servants, and consuls and consular agents; (b) The children born in Canada of parents of Chinese origin and who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return; (c) Merchants, their wives and children, the wives and children of clergymen, tourists, men of science and students, who shall substantiate their status to the satisfaction of the controller, subject to the approval of the Minister, or who are bearers of certificates of identity, or other similar documents issued by the government or by a recognized official or representative of the government whose subjects they are, specifying their occupation and their object in coming into Canada."—See also below: 1903-1908.

1903-1908.—Anti-Indian agitation in British dominions.—South Africa.—Australia.—Canada.—When the twentieth century opened to the anti-Chinese agitation was added anti-Indian agitation in the British dominions and the anti-Japanese feeling in the Pacific dominions and the United States. The anti-Indian feeling involved special difficulties inasmuch as India is a part of the British empire. In the Transvaal the problem was a legacy from the Boer government, Indian merchants and others, attracted by the tales of easily made wealth, had pressed into the country, and had been opposed by the Kruger government. "Before the Boer-British War, there had been Indian complaints of ill-treatment in the Transvaal, which added something to the controversies of Great Britain with the South African Republic. After the war, when British authority had become supreme at Pretoria, it found a legacy of existing law which was embarrassing at once. The situation was described in a despatch of May 11, 1903, from Viscount Milner, the British High Commissioner, to the Colonial Secretary at London, Mr. Chamberlain, in which he attempted to exhibit, as he said, 'the difficulty which besets any kind of action on this thorny question.' The Government, he wrote, is 'between two fires. On the one hand, it is accused of not enforcing the present law with sufficient strictness and is called upon to legislate in the direction of a complete exclusion of Asiatics except as indentured labourers. Even in that capacity, their introduction meets with strenuous opposition. On the other hand, the Asiatics, of whom British Indians form by far the most numerous section, not only protest against any fresh legislation but demand the repeal of the existing law. [See SOUTH AFRICA, UNION OF: 1903-1904; 1905.] In 1906, the semi-autonomous authority then organized adopted an ordinance on the subject of Asiatic residence in the Colony which Lord Elgin, who had succeeded Mr. Chamberlain in the Colonial Office, disapproved. In the next year, however, when the full measure of colonial autonomy had been conferred by the Imperial Government . . . essentially the same provisions were embodied in an enactment by the new Transvaal Legislature, entitled 'The Asiatic Law Amendment Act, 1907,' and Lord Elgin could not venture to disapprove them again, for the reasons which he stated to the Colonial Governor. This measure was followed . . . by an 'Immigrants' Restriction Act, 1907,' which accentuated still further the inhospitality of Transvaal legislation, and made more serious trouble for the British Government. . . . not only with its Indian subjects, but with the Chinese. On the effect of the two acts upon British Indians Lord Elgin wrote to Mr. Morley, Secretary of State for India

(Oct. 10, 1907): 'The practical effect of Section 2 (4) will be to prevent the further immigration into the Transvaal of British Indians or other Asiatics. . . . In the interests of British Indians themselves, it is probably desirable, in view of the state of Colonial feeling, that further immigration should be restricted. Lord Elgin does not, therefore, propose to raise any objection to this provision.' . . . The most obnoxious features of the two offensive acts were an educational qualification, which required applications for admission to the colony and for trading licenses in it, and other connected documents, to be written by the applicants in a European language, Yiddish being recognized as European, and a prescribed registration which required finger-prints as a means of identification. Both of these provisions of law were felt to be insulting and degrading by the Hindus of the better class, who organized a refusal of submission to them, and tested them without avail in the courts. Their language was treated contemptuously in the educational qualification, while, personally, they were classed with criminals by the finger-print identification. The agitators of disaffection in India made much of these indignities, and the matter was extremely embarrassing to the British administration there."—J. N. Larned.—"The thesis of South Africa is that unrestricted right of entry to Indians will lower the whole standard of living for the white man and make his existence in the country impossible. It is the same thesis as is adopted regarding Asiatic immigration by . . . our western States, by Canada and by Australia. It has extended to the European settlers of British East Africa. Questions of justice, fair play, higher considerations of national interest fall on deaf ears when the Anglo-Saxon is asked to let in the Asiatic. He simply will not do it. There is no argument. Only those who are far away from the 'yellow peril' and who would not be affected themselves by unrestricted Asiatic immigration espouse the cause of Japanese, Chinese, and Indians."—H. A. Gibbons, *New map of Africa*, pp. 63-64.—"The influx of Chinese [into Australia] continued to be governed by colonial legislation, under the advice of the Colonial Secretary. Nor did the Imperial Government withhold assent from colonial bills. New Zealand imposed a language test; and the number of Chinese in New Zealand is constantly diminishing, though not necessarily for this reason. The Imperial Government declined to interfere when a Chinese petition was received in 1908, holding that the matter was exclusively for the Dominion to decide. . . . By the Post and Telegraph Act of 1901 the Federal Parliament [of Australia] forbade the making of any contract for the carriage of ocean mails with shipping companies who employed other than white labour. This was aimed directly at British lines which had for years employed seamen belonging to India (lascars). Chamberlain at once declared that this Act must terminate any mail agreement between the Imperial and the Australian governments. . . . The British Government could not consistently become a party to a contract in which the employment of Indian subjects was in terms forbidden 'on the ground of colour only.' The case of Australia, he held, was all the weaker for the fact that it was seeking not to protect its white population from an influx of foreign immigrants, but merely to prevent 'the employment of His Majesty's Indian subjects on a contract to be mainly performed in tropical or sub-tropical waters.' . . . The Commonwealth took yet another step in the same direction in 1906 by passing a Bill to restrict the tariff preference

to British goods to such as were carried in ships manned exclusively by white labour. As the Bill infringed several commercial treaties it was not assented to, so that the white labor aspect did not require to be adjudicated upon."—G. H. Scholefield, *Pacific, its past and future*, pp. 234, 237-238.—The position in the west of Canada was no less difficult than in Australasia and Africa. "The effect of restriction [of Chinese immigration] was to raise the price of wages among the Chinese each time it was increased, until after the five hundred dollars was imposed, the Chinaman, secure in the labor market against more Chinamen, advanced their own wages by some method of combination. . . . This lucrative wage attracted the cupidity of the Japanese, . . . and they increased very rapidly in numbers in a very short space of time. Then . . . Hindus, similarly attracted, also came in large numbers. They were principally Sikhs, discharged soldiers. . . . A temporary depression in 1907, owing to the slump in the money market and the failure of crops in the Middle West, brought about a slackness in the labor market, and feeling against these importations culminated in riots. The Chinese, except that they were generally in demand, as a problem, were comparatively easily dealt with; but with the Japanese and Hindus the case was quite different. The proud Japanese nation resented the discrimination against its subjects. In the case of Japanese, therefore, delicate diplomacy had to be resorted to and, on the grounds of the well-being of both races, the Japanese government voluntarily agreed to limit the numbers to come to Canada each year to a comparatively harmless minimum. In the case of the Hindus, it was hard to find justification for exclusion that would satisfy Hindu, shall I say, prejudices. At the time they began to come in numbers, the state of unrest in India was giving the British government great anxiety. For a few representatives of the British Empire to exercise sovereignty over 150,000,000 of racially alien peoples, and then the rights of citizenship to be denied to these peoples on British territory elsewhere, was what the Englishman would call 'a little thick,' and the two facts taken together required some effort to make them fit in with Hindu logic. . . . The Japanese are a greater danger and the least desirable of the three racial elements to which the province is opposed and that because of their enterprise and aggressiveness, their determination to get a foothold on equal terms with the Anglo-Saxon, a desire, which by the way, the Japanese government resists on the part of the citizens of other nations in Japan. . . . The Hindu, newly imported, with his . . . prejudice and traditional occultism and caste, is impossible. Physically and mentally he has qualities which, in the second generation, would perhaps beneficially assimilate with the white race; but the process is fraught with danger. Undoubtedly, the yellow or brown or dusky peril of the Orient is imminent and economically is real and menacing. . . . The danger is in numbers, not in individuals and a half billion whites in a territory so large as British Columbia would be as one against a host. A million or two in the Middle West would have just as little chance against a horde of Asiatics."—E. R. Gosnell, *British Columbia and British international relations, Canadian national problems (Annals American Academy of Political and Social Science, Jan., 1913)*.—"The position of the British Indian in Canada is rendered the more difficult in comparison with that of the Japanese, because of the impossibility of the adoption by the Indian Government of any

system of restraint of emigration to Canada on the same lines as that adopted by the Government of Japan. The result has been that . . . the Canadian Government has been determined to prevent the entry of any British Indians at all into the Dominion on its western side. . . . In the first place a rule was made that no person could be allowed to enter Canada who did not come in by a continuous journey from the place of origin whence he migrated, and on a through ticket purchased in advance: that rule evidently rendered it impossible for any one to enter Canada from India in the absence of any direct passenger steamship connexion. Further, it was laid down that immigrants of Asiatic race must possess in their own right not less than two hundred dollars apiece, but from this rule were excepted natives of countries as to which special arrangements were in force, like Japan, or as to whom special statutory provision was made, such as Chinese."—A. B. Keith, *Imperial unity and the dominions*, pp. 195-196.

1904-1909.—First anti-Japanese agitation in California.—Segregation of Orientals in San Francisco schools.—Japanese resentment.—Labor question at the bottom.—State rights and treaty rights.—"The so-called Japanese problem in America [which first became pressing in California in 1904] is simply one phase of an age-long and world-wide problem, the adjustment of human relations. . . . Fortunately for the Japanese, their immigration to California did not develop until the anti-Chinese agitation had quieted down. . . . In 1870, the census reported fifty-five persons of the Japanese race in the country; in 1880, the number was 148; and in 1890, 2,030. In 1885, Japan permitted her laborers to emigrate, and an immigration convention with Hawaii was concluded the next year. This fact, coupled with the desire for labor in California to take the place of the unobtainable Chinese laborers, caused Japanese immigration to increase steadily after 1890. In 1891, 1,136 entered the United States . . . and in 1900, 12,628. The latter number has never been equaled since that time. . . . The increase of Japanese immigration in 1900 and the following years alarmed some of the labor leaders in California. . . . The Japanese, unlike many of the Chinese, were unwilling to remain as unskilled laborers, and many of them promptly changed their status from laborers to skilled workmen, small merchants, land renters and owners. On this account they began to compete with organized labor at first, and later with the farming class."—P. J. Treat, *Japan and the United States, 1853-1921*, pp. 250, 253-254.—"In November, 1904, the American Federation of Labor held its annual meeting in San Francisco. It adopted a resolution demanding that the terms of the Chinese Exclusion Act should be so extended 'as to permanently exclude from the United States and its insular territory all classes of Japanese and Koreans other than those exempted by the present terms of the act.' In February, 1905, the *San Francisco Chronicle*, a daily newspaper of state-wide reputation, began to publish a series of articles having the general object of representing the immigration of Japanese, particularly of Japanese laborers, as a menace to the interests of the people of California and of the nation as well. . . . The series of articles . . . sought to establish as fact a rapidly increasing inflow of Japanese laborers, ready to work at wages far below the white standard, and sending native-born white men into the ranks of the unemployed. By a unanimous vote in each House, and with only a few absentees, the California Legislature on

March 1 and 2, 1905, placed itself on record with respect to Japanese immigration in the adoption of a concurrent resolution. After a lengthy preamble, the Legislature—

“Resolved, that in view of the facts and reasons aforesaid, and of many others that might be stated, we, as representatives of the people of the State of California, do earnestly and strenuously ask and request, and in so far as it may be proper, demand for the protection of the people of this State and for the proper safeguarding of their interests, that action be taken without delay, by treaty, or otherwise, as may be most expeditious and advantageous, tending to limit within reasonable bounds and diminish in a marked degree the further immigration of Japanese laborers into the United States. That our Senators and Representatives be, and they are hereby, requested and directed to bring the matters aforesaid to the attention of the President and the Department of State.”—*California Statutes, 1905, Concurrent and Joint Resolution, ch. xxiv.*—“Little popular interest was aroused, however, until the action of the Board of Education of San Francisco, of October 11, 1906, requiring Japanese school-children to attend the Oriental school, formerly used by Chinese alone. Although various explanations of this resolution were given at the time, the real reason was to start the process of discrimination which would eventually lead to the enactment of an exclusion law. When the news reached Japan, great indignation was expressed. This was primarily due to regret that in the United States, a country which had been so uniformly friendly to Japan, such a discriminatory measure should be adopted. But, in addition, the blow fell at a most unfortunate time, for only a few months before the Japanese Red Cross had contributed to the relief of the earthquake and fire victims of San Francisco the sum of \$224,060, an amount greater than the contributions of all the rest of the world, outside the United States. . . . Throughout the United States there was widespread criticism of the action of the San Francisco officials. President Roosevelt instructed Secretary Metcalf, of the Department of Commerce and Labor, and a Californian himself, to visit San Francisco and report on the situation. . . . On receipt of this report, President Roosevelt addressed a special message to Congress, on December 18, 1906, in which he said, in part: ‘I authorized and directed Secretary Metcalf to state that, if there was any failure to protect persons and property, then the entire power of the Federal Government within the limits of the Constitution would be used promptly and vigorously to enforce the observance of our treaty, the supreme law of the land, which treaty guaranteed to Japanese residents everywhere in the Union full and perfect protection for their persons and property; and to this end everything in my power would be done, and all the forces of the United States, both civil and military, which I could lawfully employ, would be employed.’”—P. J. Treat, *Japan and the United States, 1853-1921*, pp. 254-255.—“The effect of the president’s utterances was to raise new questions, and to bring new and powerful influences to the support of the San Francisco authorities. In California the San Francisco School Board received at once the credit of heroic defense of the principle of state sovereignty. Expression of the same sentiment in Congress was immediate and direct. . . . On March 13, 1907, the offending resolution of the previous October was repealed. . . . The Superintendent of Schools had given as the main reason for segregation, that 95 per cent. of the Japanese

pupils were young men and ‘we object to an adult Japanese sitting beside a twelve-year-old girl.’ The facts were that on December 8, 1906, in all schools of primary and grammar grade there was an enrollment of 28,736 pupils. Of these there were 93 Japanese, nearly one-third of whom were born in the United States. There were 28 girls and 65 boys. Of the 65 boys 34 were under 15 years of age, and of the remaining 31 only 2 were 20 years. 25 of the boys over 15 years were in the grammar grades, leaving but 6 to justify the objection of adults ‘sitting beside children of tender years.’ . . . The great fire in San Francisco in 1906 drove the Japanese from their established quarters. Their attempts to gain new locations in districts previously occupied wholly by white residents tended to draw attention to them. For a time the policing of the city was inadequate, and cases of bodily violence toward Japanese were not infrequent. The biennial sessions of the legislature [between 1905 and 1907] regularly furnished a large supply of anti-Japanese resolutions and bills, introduced for effect and without sufficient support for enactment. However, in 1909 legislation was attempted looking toward prohibiting Japanese from becoming owners of real property. It was only the strenuous protests of President Roosevelt actively supported by the governor of the state that prevented . . . the enactment of some such measure. The legislature finally contented itself with making an appropriation for a state census of Japanese. The treaty-right and State-right questions involved in the controversy were most perfectly clarified by Secretary of State Root, in an address before the . . . American Society of International Law, at Washington, in April, 1907. It had been assumed, he said, ‘that in making and asserting the validity of the treaty of 1804 the United States was asserting the right to compel the State of California to admit Japanese children to its schools. No such question was involved. That treaty did not by any possible construction assert the authority of the United States to compel any State to maintain public schools or to extend the privileges of its public schools to Japanese children or to the children of any alien residents. The treaty did assert the right of the United States, by treaty, to assure to the citizens of a foreign nation residing in American territory equality of treatment with the citizens of other foreign nations. So that, if any State chooses to extend privileges to alien residents as well as to citizen residents the State will be forbidden by the application of the treaty to discriminate against the resident citizens of the particular country with which the treaty is made and will be forbidden to deny to them the privileges which it grants to the citizens of other foreign countries. The effect of such a treaty, in respect to education, is not positive and compulsory; it is negative and prohibitory. It is not a requirement that the State shall furnish education; it is a prohibition against discrimination when the State does choose to furnish education. It leaves every State free to have public schools or not, as it chooses, but it says to every State: ‘If you provide a system of education which includes alien children you must not exclude these particular alien children.’”—F. H. Clark.—“As there was a constitutional question involved, the Federal Government brought two suits, one in the Federal Circuit Court and the other in the State Supreme Court, to test the validity of the resolution. The issue was never determined, for President Roosevelt had found a better way to settle the difficulty. . . . This took the form of the ‘Gentlemen’s Agreement.’ Under

it Japan agreed to give passports for America only to non-laborers, such as merchants, travelers, students, and officials. Laborers who had visited Japan might receive passports to return to the United States, and passports might be issued to the parents, wives, and children of domiciled laborers, as well as to laborers who had already acquired an interest in a farming enterprise in that country."—P. J. Treat, *Japan and the United States, 1853-1921*, p. 256.—See also JAPAN: 1905-1914; IMMIGRATION AND EMIGRATION: United States: 1862-1913.

1904-1913.—General anti-Asiatic attitude of Australia and New Zealand.—"White Australia policy."—Navigation Act of Australia.—Legislation in Canada.—Immigration Act of New Zealand.—It is in Australia and New Zealand, where the conflict of Asiatic and European involves the future destiny of a new people, that the anti-Asiatic policy has been the most thorough-going. Colonized in the modern period and developed with special regard to the new power of organized labor in the world, these countries have been determined that there shall be no repetition in their midst of the color problem which developed in the course of the colonization of America. "The late Professor C. H. Pearson, at one time Minister for Education in Victoria, . . . in his *National Life and Character*, admirably summarised the dangers to which his adopted country was exposed by reason of its situation, and the motives which actuated the various colonial Governments in passing enactments designed to place some restriction on the wholesale flooding of their territories. 'The fear of Chinese immigration which the Australian democracy cherishes, . . . is, in fact, the instinct of self-preservation, quickened by experience. We know that coloured and white labour cannot exist side by side; we are well aware that China can swamp us with a single year's surplus of population; and we know that if national existence is sacrificed to the working of a few mines and sugar plantations, it is not the Englishmen in Australia alone, but the whole civilised world that will be the losers. Transform the northern half of our continent into a Natal, with thirteen out of fourteen belonging to an inferior race, and the southern half will speedily approximate to the condition of Cape Colony, where the whites are indeed a masterful minority, but still only as one in four. We are guarding the last part of the world in which the higher races can live and increase freely for the higher civilisation. It is idle to say that if all this should come to pass our pride of place will not be humiliated. We are struggling among ourselves for supremacy in a world which we thought as destined to belong to the Aryan race and to the Christian faith, to the letters and arts and charm of social manners which we have inherited from the best times of the past. We shall wake to find ourselves elbowed and hustled, perhaps even thrust aside by peoples whom we looked down upon as servile and thought of as bound always to minister to our needs.' . . . The Greater Britain that is to be may be the best security for the Mother Land in years to come, and her natural ally and friend. Australian statesmen claim that they are not only safeguarding British interests, but also legislating for posterity and looking forward to the time—perhaps a century hence—when the population of the Commonwealth may be one hundred millions or even more. . . . Leaders and followers of every political cast, Conservatives, Liberals, and Radicals, have now but one national ideal—Purity of Race. They recognise

that hybrids cannot make a great nation; that an infusion of Chinese, Japanese, or Indo-Chinese blood must result in race deterioration; and that, if they are to live happily and prosperously, it must be with no strangers within their gates other than those of Caucasian descent who are able to conform to the conditions and customs of civilised communities."—O. P. Law, W. T. Gill, *White Australia (Nineteenth Century, Jan., 1904)*.—"In 1907 there were 41,078 male Asiatics in Australia and only 1,997 Asiatic females. Consequently the effective competition against Australian workmen, and the military danger of the number of Asiatics would be five times as great as would arise if they came in families. Further, white immigration would be checked by the Asiatic influx, and very soon there would be 20 Asiatic men to one white man in North Australia. In ten years we might easily have in North Australia quite half the number of unassimilable male aliens which brought about the catastrophe in Moesia, and the control of the occupied country would tend more and more to be lost to us. It would not be Australian but Asiatic ideas that would be cherished there; nor would it be Australian moral and political life that would be achieved."—A. Harper, *White Australia policy (M. Atkinson's Australia, economic and political studies, pp. 451-453)*.—"A New Zealand Bill of 1910 to penalise vessels employing lascars was . . . refused the royal assent, after being discussed at the Imperial Conference of 1911. . . . So far the restriction of Asiatics has been fairly satisfactory considering the geographical and economic influences bearing on the problem. It cannot be said to have reached a solution though, for a recent royal commission in Australia recommended the gradual exclusion of Japanese divers from the pearl fisheries in favour of white labour. . . . The Asiatic problem must inevitably be a serious one for Australia and New Zealand at all times. Up to the present [written in 1910], considering the strong public feeling on the matter, its treatment has had happy results. This is largely owing to the sagacious attitude adopted by the British Government. By taking the Dominions into its confidence and freely acknowledging the justice of their fears, the Imperial Government has been able to control and co-ordinate the colonial restrictions, and at the same time to conciliate the Asiatic power concerned, with almost remarkable success."—G. H. Scholefield, *Pacific, its past and future, pp. 238-239*.—"The most serious feature of the present day is the tendency of the Parliament of Queensland to extend beyond the sphere of immigration which is covered by Commonwealth legislation the principle of the exclusion of Asiatics from employment because they cannot pass a language test. . . . The effect of the passing of the *Navigation Act, 1913*, of the Commonwealth into operation, when it is brought into effect, will be to make it practically impossible to employ lascars in the coasting trade, which includes any trade done between Commonwealth ports by oversea vessels, since the requirements of the Commonwealth laws regarding conditions of space are such as to be impossible of convenient application to lascar crews. More serious, however, is the fact that the Royal Commission of the Commonwealth on the Pearl Fishery is anxious to see the participation of Japanese in that trade brought to an end by replacing the Japanese with Australian divers and excluding them from the waters of Australia, a recommendation which has not so far been acted upon. But by joint action of the Commonwealth and Queensland the sugar-growing trade has been closed to Asiatics, with

compensation for vested rights. In the case of New Zealand, while immigration has been prohibited in large measures by the use of the language test in the Immigration Act, in 1913 there was a good deal of agitation on the ground that natives in considerable numbers had succeeded in entering the country from Fiji, despite the protection of the Act."—A. B. Keith, *Imperial unity and the dominions*, pp. 199-201.—"Though her danger is so much less than . . . [that of Australia] Japan takes precisely the precautions . . . [as Australia does], with the result that though Japan is so much nearer China than Australia is, there are twice as many Chinese labourers in Australia as there are in Japan, and her population is 50,000,000, while ours is 5,000,000. Nor can she be blamed for so doing. No State in modern times, either in East or West, has ever permitted unrestricted immigration of this kind, nor can any State do so if it wishes to survive."—A. Harper, *White Australia policy* (*M. Atkinson's Australia, economic and political studies*, ch. 12, p. 454).—"Apart from the question of entry, and the attempts, mainly unsuccessful, of British Columbia to hamper the operations of Indian and Japanese settlers, the Dominion has been free from any substantial amount of differential legislation. Some annoyance was caused both in India and in Japan in 1912 by the enactment in the province of Saskatchewan of an Act which provided that no person should employ in any capacity any white woman or girl, or permit any white woman or girl to reside or lodge in, or to work in, or, save as customer in a public apartment, to frequent any restaurant, laundry, or other place of business or amusement owned, kept, or managed by any Japanese, Chinaman, or other oriental person. The strictness of this law was such that the most distinguished Japanese or Indian firm could not have employed a typist, and the form of legislation was obviously as offensive as its intention was doubtless good. As a result, both Japanese and Chinese restaurant-keepers had to dismiss their white employés, a result which was naturally represented by them as being devised by their white rivals in business as a mode of interfering with their trade. Fortunately these considerations appealed to the Dominion and Provincial Governments, and in due course the Act was amended by one passed in 1913 to omit all reference to Japanese and other orientals, and to restrict the operation of the measure to Chinamen, who are throughout the Dominions treated as being in an inferior position to any other oriental peoples. A similar Act of Manitoba passed in 1913 (c. 10) has not been made operative."—A. B. Keith, *Imperial unity and the dominions*, pp. 197-198.—See also JAPAN: 1905-1914.

1905-1921.—Recurrence of negro question in the United States.—Progress of negro.—Conflict with white labor.—Exodus from South to North.—Distribution in the North.—Effect of migration on the South.—Problems of negroes in the North.—Race riots.—Lynching.—Since the beginning of the twentieth century the same causes which have aggravated other race-problems have increased the friction between the white men and the negroes, and have brought about far-reaching changes in the geographical distribution of the negroes in America, and in their social point of view. The first factor in this change is the progress of the negroes themselves. There is an increasing number of intelligent and well-educated negro leaders, and a very rapid increase of wealth among the whole negro population, especially in industrial centres. With education and wealth comes an increasing

discontent with the restrictions placed upon them, and the insults and dangers they are subject to. They are learning to band together in associations for mutual protection and development. The following manifestoes of associations for the betterment of negroes are typical of others: In July, 1905, a conference of colored men from the North and South, among whom Professor W. E. Burghardt DuBois, of Atlanta, appeared to be the leading spirit, was held at Buffalo, New York. Its outcome was an organization which took the name of "The Niagara Movement." At the annual meeting of the organization, at Sea Isle City, New Jersey, in August, 1909, ten states were reported to be represented. Its objects are indicated in the following passages from an address which this meeting adopted: "For four years the Niagara Movement has struggled to make ten million Americans of negro descent cease from mere apology and weak surrender to aggression, and take a firm, unflinching stand for justice, manhood, and self-assertion. We are accumulating property at constantly accelerating rate; we are rapidly lowering our rate of illiteracy; but property and intelligence are of little use unless guided by the great ideals of freedom, justice, and human brotherhood. As a partial result of our effort we are glad to note among us increasing spiritual unrest, sterner impatience with cowardice, and deeper determination to be men at any cost. . . . That black men are inherently inferior to whites is a wide-spread lie which science flatly contradicts, and the attempt to submerge the colored races is one with world-old efforts of the wily to exploit the weak. We must, therefore, make common cause with the oppressed and down-trodden of all races and peoples; with our kindred of South Africa and the West Indies, with our fellows in Mexico, India, and Russia, and with the cause of the working classes everywhere. On us rests to no little degree the burden of the cause of individual freedom, human brotherhood, and universal peace in a day when America is forgetting her promise and destiny. Let us work on and never despair because pigmy voices are loudly praising ill-gotten wealth, big guns, and human degradation. They but represent back eddies in the tide of time." In 1909 "a number of people who were interested in the general effect of the Negro Problem on democracy in America organized in New York the National Association for the Advancement of Colored People. It was felt that the situation had become so bad that the time had come for a simple declaration of human rights."—C. B. Brawley, *Social history of the American negro*, p. 33.—The declaration read as follows: "As first and immediate steps toward remedying . . . national wrongs, so full of perils for the whites as well as the blacks of all sections, we demand of Congress and the Executive: (1) That the Constitution be strictly enforced and the civil rights guaranteed under the Fourteenth Amendment be secured impartially to all. (2) That there be equal educational opportunities for all and in all the States, and that public school expenditure be the same for the negro and white child. (3) That in accordance with the Fifteenth Amendment the right of the negro to the ballot on the same terms as other citizens be recognized in every part of the country." "In 1910 Moorfield Storey, a distinguished lawyer of Boston, became national president, and W. E. Burghardt DuBois director of publicity and research. . . . The organization was successful from the first, and local branches were formed all over the country, some years elapsing, however, before the South was penetrated. Said the Director: 'Of two things we Negroes have

dreamed for many years: An organization so effective and so powerful that when discrimination and injustice touched one Negro, it would touch 12,000,000. We have not got this yet, but we have taken a great step toward it. We have dreamed, too, of an organization that would work ceaselessly to make Americans know that the so-called "Negro problem" is simply one phase of the vaster problem of democracy in America, and that those who wish freedom and justice for their country must wish it for every black citizen. This is the great and insistent message of the National Association for the Advancement of Colored People. This organization is outstanding as an effort in coöperation between the races for the improvement of the condition of the Negro."—B. G. Brawley, *Social history of the American negro*, p. 339.—"It recognizes the national character of the Negro problem and no sectionalism. It believes in the upholding of the Constitution of the United States and its amendments, in the spirit of Abraham Lincoln. It upholds the doctrine of 'all men up and no man down.' It abhors Negro crime, but still more, the conditions which breed crime, and most of all the crimes committed by mobs in the mockery of the law, or by individuals in the name of the law. It believes that the scientific truths of the Negro problem must be available before the country can see its way wholly clear to right existing wrongs. It has no other belief than that the best way to uplift the colored man is the best way to aid the white man to peace and social content; it has no other desire than exact justice, and no other motive than humanity. Its object is to make 12,000,000 Americans physically free from peonage, mentally free from ignorance, politically free from disfranchisement, and socially free from insult. Its aims are: To abolish legal injustice against Negroes; to stamp out race discriminations; to prevent lynchings, burnings and torturings of Negroes; to secure to every colored citizen the common rights of citizenship; to compel equal accommodations in railroad travel, irrespective of color; to secure for colored children an equal opportunity to public school education through a fair apportionment of public education funds. Through its national office and branches in forty-three states, the District of Columbia, Canada, the Canal Zone and the Philippine Islands, it carries on educational and protective work and seeks to establish better race relations on the basis of justice and fair play. The Association also maintains an Anti-lynching fund for the investigation and publication of the facts concerning lynching and race riots and for educational work and legal action to stamp out lynching and mob violence. The work is supported entirely by voluntary contributions and membership fees."—*Manifesto of the National Association for the Advancement of Colored People*.—"Of special interest along the line of economic betterment has been the . . . Urban League, which also has numerous branches with headquarters in New York and through whose offices thousands of Negroes have been placed in honorable employment. The National Urban League was also formally organized in 1910; it represented a merging of the different agencies working in New York City in behalf of the social betterment of the Negro population, especially of the National League for the Protection of Colored Women and of the Committee for Improving the Industrial Conditions among Negroes in New York [both 1906]."—B. G. Brawley, *Social history of the American negro*, p. 339.—As a direct result of this progressive spirit the negroes at first began to incur the hostility of organized white labor. As an instance of the race conflicts

in labor, may be cited a strike in Georgia. In May and June, 1909, the white men employed as firemen on the Georgia railroad struck against the employment of blacks in the same capacity. Generally, the southern railroads have employed, for years, both white and black firemen. On the Georgia railroad there were about sixty of the former and forty of the latter. The white firemen were eligible to promotion to be engineers; the blacks were not. By an unwritten law they were excluded from the higher and better paid service; but as firemen the best among them had gradually won promotion to the better trains and better "runs" on the road. It was this fact which caused the strike of their white associates. As a labor strike it would have caused little trouble; as a race and color question it inflamed the state and the South, and disturbed the country at large for several weeks. The conflict of the railroad company was not with its own employees but with mobs along its line, always ready to be maddened by the thought of a negro in any place which a white man wanted. A mediation in the matter undertaken, at the instance of President Taft, by the United States Commissioner of Labor, Dr. Charles P. Neill, and the chairman of the Interstate Commerce Commission, Mr. Martin A. Knapp, succeeded with much difficulty, in arranging a reference of the dispute to arbitration. The main proposition submitted to the board of arbitration by the employees was in these words: "That the Georgia Railroad Company and its terminals at Atlanta will not use negroes as locomotive firemen on the road or in the yards, nor as hostlers nor assistant hostlers." On this its decision was as follows: "The Georgia Railroad, when using negroes as locomotive firemen on the road or in the yards, or as hostlers, or as hostlers' helpers, shall pay them the same wages as white men in similar positions." But the representative of the employees dissented from this decision in part, explaining his view, as follows: "In so far as the above finding permits the continued employment of negro firemen by the Georgia Railroad, I dissent therefrom, because I believe from the evidence that such employment is a menace to the safety of the travelling public. In so far as such finding requires that when negroes are so employed they shall receive wages equal to those paid white men, I concur therein, believing that such requirement, by removing the principal incentive for their employment, will result in the speedy elimination of this cheaper labor, and a consequent improvement of the service." On most of the minor points in controversy the arbitrators were agreed in their conclusions, and the settlement of the whole matter was complete.

In 1910 the new position of negro labor was recognized by the admission of negroes to the American Federation of Labor. "Before the migration movement the strength of the negroes in labor unions was largely in the South. In this section they were found in considerable numbers in the carpenters, bricklayers, plasterers, longshoremen and miners' unions. In the North, however, they were not generally connected with the unions mainly for the reason that, excepting the hod carriers, teamsters, asphalt and cement workers and a few other organizations of unskilled laborers, they were not found in any occupation in sufficient numbers to necessitate being seriously considered by organized labor. The necessities of the industrial situation created by the war, however, brought thousands of negroes north and into trades and occupations in which hitherto they had not been found at all or only in negligible numbers. A change in attitude, therefore, was necessary. At

the 1910 annual meeting of the National Council of the American Federation of Labor a resolution was unanimously passed inviting negroes and all other races into the Labor Federation. The officers of the Federation were instructed to take measures to see that negro workmen as well as workmen of other races be brought into the union. In 1913 this action was reaffirmed with the assertion that: "Many years ago the American Federation of Labor declared for the thorough organization of all working people without regard to sex, religion, race, politics or nationality; that many organizations affiliated with the American Federation of Labor have within their membership negro workmen with all other workers of their trade, and the American Federation of Labor has made and is making every effort within its power for the organization of these workmen."—*Negro migrations during the war (Carnegie Endowment for International Peace, 1920, p. 147)*.—It was not until 1916-1917 that the negro problem, in its new form, became really pressing. Then occurred a great exodus of negroes to the north, bringing with it problems of re-adjustment that, in many cases, were not settled without riot and bloodshed. "Within the brief period of three years following the outbreak of the great war in Europe, more than four hundred thousand negroes suddenly moved north. In extent this movement is without parallel in American history, for it swept on thousands of the blacks from remote regions of the South, depopulated entire communities, drew upon the negro inhabitants of practically every city of the South, and spread from Florida to the western limits of Texas. . . . Despite the apparent suddenness of this movement, all evidence indicates that it is but the accentuation of a process which . . . [had] been going on for more than fifty years. So silently indeed . . . [had] this shifting of the negro population taken place that it . . . quite escaped popular attention. Following the decennial revelation of the census there . . . [was] a momentary outburst of dismay and apprehension at the manifest trend in the interstate migration of negroes. Inquiries into the living standards of selected groups of negroes in large cities antedating the migration of 1916-1917 . . . revealed from year to year an increasing number of persons of southern birth whose length of residence has been surprisingly short. The rapid increase in the negro population of the cities of the North bears eloquent testimony to this tendency. The total increase in the negro population between 1900 and 1910 was 11.2 per cent. In . . . fifty years the northern movement . . . transferred about 4 per cent. of the entire negro population; and the movement . . . [had] taken place in spite of the negro's economic handicap in the North. . . . None of the causes [of migration] was more effective than that of the opportunity to earn a better living. Wages offered in the North were double and treble those received in the South. . . . The inability to educate their children properly because of the inadequacy of school facilities . . . [and] the treatment which the negroes received at the hands of the courts and the guardians of the peace constituted . . . [other causes] of the migration. In the South negroes largely distrust the courts and have to depend on the influence of their aristocratic white friends. When a white man assaults a negro he is not punished. When a white man kills a negro he is usually freed without extended legal proceedings, but the rule as laid down by the southern judge is usually that when a negro kills a white man, whether or not in self-defense, the negro must die. Negro witnesses count for

nothing except when testifying against members of their own race. The testimony of a white man is conclusive in every instance. In no State of the South can a negro woman get a verdict for seduction, nor in most cases enter a suit against a white man; nor, where a white man is concerned, is the law of consent made to apply to a negro girl. . . . Another frequent complaint was directed against the accommodations for travel. . . . Labor agents were a very important factor in stimulating the movement. Agents were reported, at one time or another, in every section from which the migrants went. When the vigilance of the authorities restricted their activities they began working through the mails. . . . In the first communities visited by representatives of northern capital, their offers created unprecedented commotion. Drivers and teamsters left their wagons standing in the street. Workers, returning home, scrambled aboard the trains for the North without notifying their employers or their families. . . . Homes were thrown on the market and sold at ruinously low prices. It was observed that the beginnings in each new community exhibited the same characteristics. This is due in part to a pretty universal state of unrest among negroes throughout the South. Although the first State entered by representatives of northern capital was Florida, their efforts were not confined to that commonwealth. And again, although the Pennsylvania and Erie Railroads were the first to import negroes in large numbers, they were not alone in the field very long. The steel mills of the East and the railroads of the West soon followed—each selecting States from which egress was easy and convenient. The authorities of the cities of Florida, when they began to engage themselves in the suppression of recruiting agents, succeeded in scattering them to other fields where their mere presence, preceded as it was by the news of their mission in the South, was sufficient to attract, first, all of the landless labor, then to loosen the steady workman wedded to the soil, and finally to carry away the best of the working classes. Quite naturally southeastern Georgia was the second district to feel the drain of the exodus. These workers were carried into Pennsylvania, New York and New Jersey for the maintenance work of the roads. North Carolina was next entered; then finally Virginia which had been sending many negroes into New York, Pennsylvania and New Jersey for a number of years. . . . [Many of the negroes so recruited went to the large cities with unhappy results in New York in overcrowding, and in Chicago in race riots.] By the summer of 1916, the exodus from Florida had grown to such ungovernable bounds that the more stable classes of negroes became unsettled. . . . Caught up in the wave of enthusiasm that swept over the South, these migrants could not resist the impulse to leave. The economic loss resulting from their reckless departure . . . probably can never be even approximately estimated. What seems of most interest here is that they were in the frame of mind for leaving. They left as though they were fleeing some curse; they were willing to make almost any sacrifice to obtain a railroad ticket and they left with the intention of staying. What has been described, of course, can not be construed to apply to every one who left. There were those of the business and professional classes who were prompted by other motives than those which impell the masses of migrants. There were, for example, migrants who in the South had held positions of relatively high standing by virtue of the fact that there do exist two institutional standards, the white and the black. Measured by the require-

ments of the latter, they stood high in the respect of the community, but when removed to the North they suffered in the rank of their occupation. A college president or even a school teacher had little opportunity in their respective fields in the North. They had, therefore, migrated because deserted by their neighbors they were left with a prospect of a diminishing social importance. . . . The New England States, which were probably the first to attract this labor, were Connecticut and Massachusetts. The tobacco fields of Connecticut with Hartford as a center received the first negro laborers as mentioned above. Before a year had passed there were over 3,000 southern negroes in the city of Hartford. Massachusetts had its new war plants which served as an attraction. . . . The migration to the Northwest was more extensive. Ohio, the State of vital historical association for negroes, was generously visited. Cleveland, Columbus, Cincinnati, Akron and Youngstown were popular centers. The coal mines, factories and iron works were most in need of men, and obtained them without any great difficulty. Indiana, still probably remembered as the delicate spot in the inquiry following a similar migration thirty-nine years ago, with its very highly developed industries caught the flood proceeding up the Mississippi valley. Indianapolis was a popular point although not a satisfactory one for the migrants, who pretty generally left it for better fields. Gary and Indiana Harbor, more properly satellite cities of Chicago, developed an almost entirely new negro population. . . . The departure of the first negroes usually elicited no concern from the authorities. It was assumed that their actions were merely expressions of the negro's 'love for travel,' and that they would soon return. When, however, they did not return and hosts of others followed, the white South became deeply concerned and endeavored to check the movement. Throughout the exodus drastic legislation and force were employed. In Alabama, Arkansas, Mississippi and Georgia laws were passed in an effort to suppress the activities of labor agents. Licenses were made prohibitively high; labor agents were arrested and heavily fined. In some cases their coming was penalized to prohibit their operations entirely and frequently suffered physical injury. In Florida labor recruiting early assumed a serious aspect. Precaution was, therefore, taken to impede the progress of the work of labor agents among negroes, at first by moral suasion and then by actual force. . . . The same condition with respect to the apparent necessity for prohibitive measures obtained in Georgia. The local governments early took action to prevent the drain of the labor population to northern States through the operation of labor agents. It was soon observed, however, that these agents worked out their schemes so clandestinely that it was impossible to check the movement by such measures. . . . The disconcerted planters and business men of the South resorted to another plan. Reconciliation and persuasion were tried. Meetings were held and speakers were secured and advised what to say. In cities and communities where contact on this plan had been infrequent, it was a bit difficult to approach the subject. The press of Georgia gave much space to the discussion of the movement and what ought to be done to stop it. The consensus of opinion of the white papers in the State was that the negro had not been fairly treated, and that better treatment would be one of the most effective means of checking the migration. Mob violence, it was pointed out, was one of the chief causes of the exodus. . . . Tuskegee Institute was also quick to offer a remedy

for the migration. In the latter part of September, 1916, the institution made a strong effort to persuade the negro farmers to remain on the land instead of going to the cities. Conferences were held with the bankers of Tuskegee and with many planters of Macon county and a method of dealing with the situation was worked out. This method embraced a number of helpful suggestions as to how to solve their many perplexing problems. . . . Southern business men and planters soon found out that it was impossible to treat the negro as a serf and began to deal with him as an actual employé entitled to his share of the returns from his labor. It was evident that it would be very much better to have the negroes as coworkers in a common cause than to have them abandon their occupations in the South, leaving their employers no opportunity to secure to themselves adequate income to keep them above want. A more difficult change of attitude was that of the labor unions. They had for years been antagonistic to the negroes and had begun to drive them from many of the higher pursuits of labor which they had even from the days of slavery monopolized. The skilled negro laborer . . . [had] gradually seen his chances grow less and less as the labor organizations . . . invaded the South. In the end, however, the trade unions . . . [were] compelled to yield. . . . There was, too, a decided change in the attitude of the whole race toward the blacks. The white people could be more easily reached, and very soon there was brought about a better understanding between the races. Cities gave attention to the improvement of the sanitary conditions of the negro sections, which had so long been neglected; negroes were invited to take part in the clean-up week; the Women's Health League called special meetings of colored women, conferred with them and urged them to organize community clubs. Committees of leading negroes dared to take up with their employers the questions of better accommodations and better treatment of negro labor. Members of these committees went before chambers of commerce to set forth their claims. Others dared boldly to explain to them that the negroes were leaving the South because they had not been given the treatment which should be accorded men. Instead of expressing their indignation at such efforts on the part of the negroes, the whites listened to them attentively. Accordingly, joint meetings of the whites and blacks were held to hear frank statements of the case from speakers of both races. One of the most interesting of these meetings was the one held in Birmingham, Alabama. The negroes addressing the audience frankly declared that it was impossible to bring back from the North the migrants who were making good there, but that the immediate problem requiring solution was how to hold in the South those who had not gone. These negroes made it clear that it was impossible for negro leaders through the pulpit and press to check the movement, but that only through a change in the attitude of the whites to the blacks could the latter be made to feel that the Southland is safe for them. Here we see the coming to pass of a thing long desired by those interested in the welfare of the South and long rejected by those who have always prized the peculiar interest of one race more highly than the welfare of all. White men, for the first time, were talking on the streets with negroes just as white men talk with each other. The merchants gave their negro patrons more attention and consideration. A prominent white man said, 'I have never seen such changes as have come about within the last four months. I know of white men

and negroes who have not dared to speak to one another on the streets to converse freely.' The suspension of harsh treatment was so marked in some places that few negroes neglected to mention it."—N. J. Scott, *Negro migration during the war*, pp. 3, 6-7, 17-19, 21, 36, 37-39, 43, 57, 72-73, 79, 81, 88-89.—In the North the negroes naturally met new and disturbing problems of re-adjustment. The most difficult question was that of housing. The influx of negroes into any white district caused a fall in real estate values, and in many cases the negroes were simply driven from block to block, or charged prohibitive prices for cruelly inadequate accommodations. Moreover, the persecution to which they were subjected in certain parts of the South began to be repeated in the North. As a result there was, from 1917 to 1920, an epidemic of race-riots, beginning with the terrible riots in East St. Louis. "In East St. Louis, Ill., all of the social problems raised by the movement were seen in their baldest guise. The original population of this city had come for the most part from Georgia, Mississippi, Kentucky [see KENTUCKY: 1917], and Tennessee. It had long been an important industrial center. It was also a very rough place, . . . and there was very close connection between the saloons and politics. For years the managers of the industrial plants had recruited their labor supply from Ellis Island. When this failed they turned to the Negroes of the South; and difficulties were aggravated by a series of strikes on the part of the white workers. By the spring of 1917 not less than ten thousand Negroes had recently arrived in the city, and the housing situation was so acute that these people were more and more being forced into the white localities. Sometimes Negroes who had recently arrived wandered aimlessly about the streets, where they met the rougher elements of the city; there were frequent fights and also much trouble on the street cars. The Negroes interested themselves in politics and even succeeded in placing in office several men of their choice. In February, 1917, there was a strike of the white workers at the Aluminum Ore Works. This was adjusted at the time, but the settlement was not permanent, and meanwhile there were almost daily arrivals from the South, and the East St. Louis *Journal* was demanding: 'Make East St. Louis a Lily White Town.' There were preliminary riots on May 27-30. On the night of July 1 men in automobiles rode through the Negro section and began firing promiscuously. The next day the massacre broke forth in all its fury, and before it was over hundreds of thousands of dollars in property had been destroyed, six thousand Negroes had been driven from their homes, and about one hundred and fifty shot, burned, hanged, or maimed for life. . . . Later there was a congressional investigation, but from this nothing very material resulted. In the last week of this same month, July, 1917, there were also serious outbreaks in both Chester and Philadelphia, Penn., the fundamental issues being the same as in East St. Louis."—B. G. Brawley, *Social history of the American negro*, pp. 347-348.—Ill-feeling broke out sporadically all over the country—of which the riots in Washington and Chicago may be taken as typical. "Serious race riots lasting for several days in Washington and Chicago left a toll of dead among both the white and the black participants, and spread a reign of terror throughout both cities never before experienced in their history. The riots in Washington began on Saturday, July 10, 1919. [See WASHINGTON, D. C.: 1919.] They were occasioned by long-continued and repeated reports of assaults by negroes on white women. Soldiers,

sailors, marines, and civilians, made violent attacks on negroes in the Centre Market district, in the heart of the city; negroes were dragged from street cars and automobiles; subsequently these attacks spread to other parts of the city, despite the calling out of the police reserves to quell the rioting. A late report put the number of negroes taken to the Emergency Hospital at fifteen. A series of clashes occurred Saturday night and Sunday, and continued until Tuesday, July 22. The situation was being held in hand by Major Gen. Haan, co-operating with the police, when riots broke out again on Tuesday with increased violence; armed and defiant negroes rode about in automobiles shooting at the whites in retaliation and the mobs got beyond control. Seven men, four colored, were killed, and more than seventy were wounded and sent to the hospitals; hundreds were arrested and heavily fined. Large numbers of soldiers, mounted and on foot, and also marines, policed the city. The riots practically ceased at the date mentioned; District Commissioner Brownlow issued an appeal to all citizens to remain indoors and to do everything possible to avoid further clashes. Secretary Daniels, in an official communication to Admiral Benson, demanded that the names of all sailors and marines implicated in the attacks on the negroes should be reported. The rioting, which lasted for several days, was the most serious since the days following the civil war, when there were riots during the period of the old 'Feather Duster Legislature' which met before the present form of Government was organized. . . . [On July 27, race rioting broke out in Chicago. (See CHICAGO: 1919; July).] Willis N. Huggins, editor of the colored weekly, *The Chicago Searchlight*, ascribed the origin of the feud to the large employers of labor, who had imported thousands of blacks into the city, and to the city's failure to provide housing accommodations; he also referred to political exploitation by local leaders, to unscrupulous landlords' profiteering, and to sensational articles in the public press of the country. E. Frank Gardiner, in a long article published in the *New York Times*, laid stress upon the linking of corrupt politics with gambling houses and other places of ill fame, where whites and blacks drank and danced together all night, undisturbed by the Mayor or by the city police."—*Race riots in Washington and Chicago* (*New York Times Current History*, Sept., 1919).—On the night of September 2, 1910, there also occurred a demonstration, which, though not strictly a race riot, was characteristic of the bad feeling that was being worked up here and there in the north. A mob surrounded the Omaha court-house and removed a negro prisoner, whom they hanged and cremated. When the mayor attempted to interfere, he narrowly escaped hanging, and the whole mob broke into disorder, which made this one of the most disgraceful of the numerous affairs of this sort on record in the United States.

1906-1921.—Problem between white and black non-existent in Jamaica.—In the *International Journal of Ethics* for May, 1906, Professor Royce reported several visits to Jamaica—where 14,000 or 15,000 white inhabitants were living with about 650,000 black and mulatto people—that he had found no race problem existing, no racial antagonism, no public discussion of race equality or superiority. He said: "When once the sad period of emancipation and of subsequent occasional disorder was passed, the Englishman did in Jamaica

what he has so often and so well done elsewhere. He organized his colony; he established good local courts, which gained by square treatment the confidence of the blacks. The judges of such courts were Englishmen. The English ruler also provided a good country constabulary, in which native blacks also found service, and in which they could exercise authority over other blacks. Black men, in other words, were trained,—under English management, of course,—to police black men. A sound civil service was also organized; and in that educated negroes found in due time their place, while the chiefs of each branch of the service were and are, in the main, Englishmen. The excise and the health services, both of which are very highly developed, have brought the law near to the life of the humblest negro, in ways which he sometimes finds, of course, restraining, but which he also frequently finds beneficent. Hence, he is accustomed to the law; he sees its ministers often, and often, too, as men of his own race; and in the main he is fond of order, and respectful toward the established ways of society. The Jamaica negro is described by those who know him as especially fond of bringing his petty quarrels and personal grievances into court. He is litigious just as he is vivacious. But this confidence in the law is just what the courts have encouraged. That is one way, in fact, to deal with the too forward and strident negro. Encourage him to air his grievances in court, listen to him patiently, and fine him when he deserves fines. That is a truly English type of social pedagogy. It works in the direction of making the negro a conscious helper toward good social order. Administration, I say, has done the larger half of the work of solving Jamaica's race problem. Administration has filled the Island with good roads, has reduced to a minimum the tropical diseases by means of an excellent health service, has taught the population loyalty and order, has led them some steps already on the long road 'up from slavery,' has given them, in many cases, the true self-respect of those who themselves officially cooperate in the work of the law, and it has done this without any such result as our Southern friends nowadays conceive when they think of what is called 'negro domination.' Administration has allayed ancient irritations. . . . The work has been done by administration,—and by reticence. For the Englishman, in his official and governmental dealings with backward peoples, has a great way of being superior without very often publicly saying that he is superior. You will know that in dealing, as an individual, with other individuals trouble is seldom made by the fact that you are actually the superior of another man in any respect. . . . Be my superior, quietly, simply showing your superiority in your deeds, and very likely I shall love you for the very fact of your superiority. For we all love our leaders. But tell me that I am your inferior, and then perhaps I may grow boyish, and may throw stones. Well, it is so with races. Grant, then, that yours is the superior race. Then you can afford to say little about that subject in your public dealings with the backward race. Superiority is best shown by good deeds and by few boasts."—J. Royce, *Race questions and prejudices* (*International Journal of Ethics*, Apr., 1906).—This absence of friction between white and black and other colored races still continues. The almost pure negroes practically form a lower class by themselves, and there is nothing to hinder any of them from rising in the social scale. There is also a comparatively large Hindu population in the island, which, because of their religious and social peculiarities holds itself more

or less apart. The mixed race forms a middle class, and individuals who distinguish themselves, or are members of European families are accepted as a matter of course in white society. The statement may be made of all the British West Indian islands.

1909-1921.—**Black and white problem in South and East Africa.**—The problem of the black and white races in Africa, in the sections of the continent in which they come in conflict had already reached the stage of discussion in 1904, when it was stated that "The native population of Africa south of the Zambesi is ten millions. The white population is under one million. To-day the majority of the natives are in a semi-savage condition. But the day may come when they shall have emerged from that condition, and have attained the degree of civilisation which prevails amongst the negroes, their kindred, in the United States. The process of evolution has begun. When it is completed, the relative position of the black and white populations in South Africa will be—what? Look to the United States and you shall find some hint of the answer. The native population of Cape Colony, including the territories, is, in round numbers, 1,200,000, and the white population 377,000. Day by day the power of the native grows. The gate of the political arena stands wide open to him, and he is not slow to enter. With the exception of natives occupying lands under tribal tenure (an important exception, but one that is constantly diminishing), every male person, irrespective of colour, race, and creed, and above the age of twenty-one years, and born or naturalised a British subject, is entitled to the full franchise after one year's residence in the Colony, provided he occupies property of the value of 75*l.* or is in receipt of wages of not less than 50*l.* annually, and is able to sign his name and state in writing his address and occupation. Such a franchise would horrify the average American in the South, and unquestionably it will have to be radically amended unless the colonists are prepared to endure political annihilation. At present neither Bondsman nor Progressive will face the situation. Neither wishes to alienate the substantial aid which his party gets from the natives."—R. Jones, *Black peril in South Africa* (*Nineteenth Century*, May, 1904).—On the suffrage question for natives, connected with the Union of South African States, see SOUTH AFRICA, UNION OF: 1908-1909.—The problem is of no less importance in East Africa. In 1911, Maurice S. Evans, who had been a member of the legislative assembly of Natal, and who made a special study of the relations between the races, discussing the question of western civilization upon the primitive mind of the native said: "We have, among us [in South East Africa], an overwhelming preponderance of these people, we are a white speck in a black mass. They live in two camps of unequal size, the vast majority as did their fathers as tribesmen, the minority, more or less educated, and following, at greater or less distance, our life. We have so far broken in upon them as to notably decrease, in some cases to entirely kill, much that in the old time made up their interest in life. Before we arrived and in the early days of our occupation their lives, though easy, were not vacant, they had many interests and congenial occupations. Their share in their own government was limited, but they knew what was going on and were not ignored; from time to time they were called up to the kraal of the chief, and indirectly, their opinions had weight and formed custom and law. Under a tyrant they could not become lethargic or apathetic, the dan-

ger of some arbitrary action kept them on the alert, but their position was not irremediable, for they could and did rise, directly or by proxy, and assert their rights. The witchcraft which they dreaded, prevented them from stagnating, and folk lore and myth gave interest to their lives. Their strong physical natures found vent in warlike expeditions and tribal fights, the country was full of game, and hunting was a frequent exercise which worked off their hot blood. Their weapons and utensils were simple enough, but all had to be made by hand from raw materials which had to be found, and the manufacture gave scope to considerable ingenuity and some little artistic effort. All this we have changed. The pride of the Zulu in his king is limited to a tribal head under control of the magistrate. His laws are ready-made for him by the European, and his opinion thereon is never asked, his interests have degenerated into grievances. The great and absorbing game of war is forbidden him, and even faction fights are severely (too severely) punished. The great herds of wild animals have gone, and hunting, as his fathers knew it, with its thrilling dangers, is a thing of the past; at best he is called out as beater to a European shooting harmless buck. The weapons and utensils, to the making of which he had to devote time, patience, and skill, are now bought at the store of the Asiatic or white man. The old customs, the stories, folklore and myth, with knowledge of woodcraft and plant, all of which stimulated the mental powers and imagination, are rapidly being forgotten. As I cannot too often reiterate, they are, though outwardly little changed, undergoing inward changes, and the whole process amounts to bewilderment. The young people are getting out of hand; the simple interest their fathers had in their natural surroundings and social life is dwindling, and they look for excitement in more frequent visits to town and in beer drinking. This casting down of restraint and sanctions, coupled with the comparative monotony of their lives, is leading rapidly, in the opinion of nearly all observers, to deterioration of character. Neither the colonists in their private capacity, nor the Government as representing them, are replacing the old activities with any adequate substitute, and for the old recognized and accepted control familiar to them, is put the policeman. Laws without end are made to prevent their injuring the white man, but few which aim at their own benefit."—M. S. Evans, *Black and white in South East Africa*, pp. 106-108.

1913-1921.—Recurrence of Anti-Japanese agitation.—Henyey-Webb law in California.—Legislation of 1920.—California situation.—Hindus in British Columbia.—"There can be little question that the Gentlemen's Agreement was a far more satisfactory way to meet the question of Japanese immigration [into the United States] than an exclusion law. Under the Chinese exclusion laws the American officials had to pass upon the right of an immigrant to be placed in the exempt class. This was a difficult thing to do, at an American port, with inadequate sources of information. . . . But, under the agreement, the Japanese Government scrutinized carefully every applicant for a passport. Its officials knew perfectly whether a man was a merchant or a laborer. There have been few if any cases of passports having been wrongly granted. Later criticisms arose from the nature of the agreement, rather than from its enforcement, and Japan then decided to bar out the so-called 'picture brides,' or women who had been married *in absentia* to Japa-

nese residents of the United States. . . . The immigration question is the fundamental question concerning the Japanese in the United States. It has been settled by an agreement which has worked satisfactorily since 1908. If at any time it should fail to operate, and Japanese laborers should enter the country in violation of its terms, some other method should be considered and adopted. But, on the other hand, the question has been complicated by various attempts to discriminate against Japanese who are lawfully resident in the United States. In so far as these measures are discriminatory they are indefensible. . . . [In 1912 Arizona passed an act to prevent the Japanese from forming colonies.] In 1913, the California Legislature passed an act [Henyey-Webb Land Act] which denied to aliens ineligible to citizenship the right to own land or to lease agricultural land for more than three years."—P. J. Treat, *Japan and the United States*, pp. 256-258.—The actual provisions of this law were framed in such a way as to contain no express reference to Japanese and thus not to constitute in form a discrimination against Japanese. They read as follows: "Sect. 1. All aliens eligible to citizenship under the laws of the United States may acquire, possess, enjoy, transmit, and inherit real property, or any interest therein, in this state in the same manner and to the same extent as citizens of the United States, except as otherwise provided by the laws of this state. Sect. 2. All aliens other than those mentioned in Section 1 of this act may acquire, possess, enjoy, and transmit real property or any interest therein, in this state in the manner and the extent and for the purposes prescribed by any treaty now existing between the government of the United States and the nation or country of which such alien is a citizen or subject, and not otherwise, and may, in addition thereto, lease lands in this state for agricultural purposes for a term not exceeding three years." The Japanese public was greatly incensed and there was again talk in the Japanese press of war. (See also CALIFORNIA: 1900-1920.) "No anti-Japanese measures were advocated in California between 1913 and 1919. Students of the question, who realized how well the Gentlemen's Agreement was operating, believed that all occasion for agitation and misrepresentation had passed, and that the resident Japanese could now be judged on their merits as individuals rather than as representatives of an unpopular race. Unfortunately, early in 1919, the old agitation against the Japanese was renewed. . . . Between July, 1908, and July, 1910, 79,738 Japanese entered the continental United States, but 68,770 departed, so the net increase was only 10,968, or an average of less than a thousand a year. Yet, in spite of these official figures, the average Californian believed that Japanese laborers were pouring into the State. And, when the alarming statements regarding the Japanese birth-rate were tested by the actual facts, the conditions were found to be perfectly reasonable. . . . As a matter of fact, the birth-rate reached its peak in 1917, and has steadily declined. . . . The 1920 census figures reported a Japanese population of 70,707 out of a total of 3,426,861. The increase in the past decade had been, of Japanese, 20,351, and of the entire population, 1,040,312, so only the most inveterate opponents of the Japanese continued to predict a Japanese domination within the next few years. Japanese land-holding had, however, largely increased within the decade. [(See CALIFORNIA: 1920.) Although it was strongly opposed, the Anti-Alien Land Bill became law and thus] . . . for a second time, a measure was passed which reversed the

wise policy of President Roosevelt, for it combined a maximum of friction with a minimum of efficiency. [See IMMIGRATION AND EMIGRATION: United States: 1920-1921: Anti-Japanese law in California.] The act made it more difficult, but not impossible, for Japanese to own land. But it did not prevent them from using land, as its advocates had alleged, for crop contracts would take the place of leases, as had frequently been done in the past. . . . The Japanese question in California, and in other Western States, consists of two elements, which should not be confused. One is the question of immigration, the other is the treatment of Japanese who are lawfully resident in the United States. The restriction of Oriental immigration is an American policy, as the Chinese exclusion laws, the General Immigration Act of 1917 [see IMMIGRATION AND EMIGRATION: United States: 1917], and the Gentlemen's Agreement with Japan, all testify. The policy is a wise one, and is so considered by thoughtful Japanese and Chinese."—P. J. Treat, *Japan and the United States*, pp. 259-263.—"All the other grievances which Americans harbor against the Japanese nation and her people are as nothing beside those arising from the so-called 'invasion' of California. . . . The average man east of the Rockies supposes that the Japanese is like the Chinaman who came to California in the old days. The Chinaman was a coolie, hailing as a rule from Canton, in southern China. He was the lowest grade of large-town worker, generally unskilled, and ready to turn his hand to any sort of rough labor that turned up. . . . Not so the Japanese who have poured into California. These men are skilled farmers and small business men. They have left their native land to carve their fortunes where opportunity beckons. They are eager to get a solid footing in their new home. They seek to become landowners and business men. They do not come to work for the Americans any more than the Pilgrim Fathers came to work for the Indians. They come as the Pilgrim Fathers did, to take possession of the country. . . . And the Easterner, accustomed to seeing all kinds of aliens becoming Americans, not only believes the Japanese but sympathizes with his aspiration. Not so the small California farmer. To him this very love of our country and the determination to merge one's identity in it threaten him with a competition he has already proved himself unable to withstand. Many Americans east of the Rockies have said: 'How foolish to oppose the Japanese when this country needs so many farm laborers. The California farmer is biting off his nose to spite his face when he advocates exclusion. If he shuts out the Japanese he will never find farm laborers.' To which we must reply that if the California farmer does not shut out the Japanese, he will not need farm laborers much longer. The State board report says: 'The Oriental is of no appreciable value as a farm laborer to the American farmer. Very few of them . . . are in the employ of American farmers as purely farm help. . . . The Oriental farm-laboring class is valuable principally to land speculators or developers who do not farm their own lands, but lease them upon some crop basis to Orientals. As a matter of fact there are probably more white laborers working for Oriental farmers than there are Oriental laborers working for American farmers.' Here we come to the very storm-center. The American who feels the 'Yellow Peril' acutely is the independent small farmer,—the man with one or two hundred acres off which he seeks to get a living and small competence for himself and his children. He has, let us say, been growing berries or sugar beets or

grapes or vegetables on his place for many years, all of which he has been selling in competition with other Americans whose standard of work and living has been the same as his own or nearly so. Into a community of such people there comes a keen and thrifty Japanese. For a year or two he may work around as a farm hand, . . . chiefly in order to discover the quality and promise of the soil in the district. Finally he rents a piece of ground, and then appear wife and children, and often, too, a small army of friends, all of the same race. All of these fall to, working at a pace which bewilders and horrifies the Americans thereabouts. Fourteen, sixteen, and even eighteen hours in the fields a day are schedules frequently observed in Japanese communities. . . . Out of every 100 people growing berries in California, 88 are Japanese. Out of every 100 who raise sugar beets, 67 are Japanese. Out of every 100 who grow grapes, 52 are Japanese. Out of every 100 who raise vegetables (for market, of course), 46 are Japanese. Out of every 100 who grow citrous fruits, 39 are Japanese. Out of every 100 who grow deciduous fruits, 36 are Japanese. . . . [Furthermore] when we are thinking about the human problems such as those involved in the Japanese issue [we must remember that the rich, fertile land in California comprises about one-sixth of the area of the State]. It is in the fertile one-sixth of the State that the Japanese have concentrated. Less than one-third of the white population of the State lives in this same fertile region. Thus, from the point of view of community life and economic development, the effective proportion of Japanese to whites is much greater than the general statistics for the State at large would indicate. . . . Thus we see that the social and economic struggle is really between some 800,000 whites thinly scattered over a region smaller than New York State and compact groups of Japanese officially numbering 87,279. . . . The whites, while they practise coöperation much more extensively than most American farmers do, in fact, still lag far behind the Japanese."—W. B. Pitkin, *Must we fight Japan?* pp. 198, 203-208, 218, 220.—Yet "it is doubtless true that at the beginning when Japanese immigrants first entered the labor market their wages were lower than those of whites and it is quite likely that in some cases white labor was driven out by Japanese. As a rule, however, Japanese took the place of vanishing Chinese. Today there is more work than workers, either white or brown. . . . Now the readiness of the Japanese to work long hours and in unhygienic conditions does raise a serious question. . . . Japanese have largely taken the place of Chinese in farm labor; . . . they have also made possible developments in berry, lettuce, celery and kindred crops which white labor alone would never have allowed. . . . It is no discredit, moreover, to the Japanese that he is thrifty and enterprising. . . . We want industrious, ambitious and enterprising labourers."—S. L. Gulick, *American Japanese problem*, pp. 29, 31-32.—See also PHILIPPINE ISLANDS: Geographical description; WESTERN AUSTRALIA: 1921.—"The result of the prohibition [of Hindu immigration into Canada] was the famous voyage of the *Komagata Maru* from Hong Kong [in 1914] with a miscellaneous body of Indians collected, many of them no doubt under false pretences, but others collected with revolutionary intent. The Indians in Canada were under the influence of the revolutionary section of the Indians in the United States, and in the minds of these revolutionaries was concerted the device of the voyage of the vessel, with the idea either of compelling the Canadian Government to permit

their entry, or in the alternative of intensifying indignation in India. The vessel duly arrived, the law courts were invoked, but of course, in view of the clear requirements of the law, in vain, in favour of the Indians, save a few who, being domiciled in Canada, were allowed entry, and after an effort to defy the law, the Canadian Government, which it should be recorded, behaved with dignity and restraint, reprovisioned the vessel, and sent it away on its return voyage. [From] the subsequent history of the revolutionary members of its passengers, . . . Canada could not help feeling that her wisdom in repressing the entry of Indians was amply justified. . . . The same feeling was intensified by a series of murders of anti-revolutionaries by the revolutionary section, and in particular the brutal murder in open court of Mr. Hopkinson, who, on behalf of the Dominion and Indian Governments, had been engaged in the attempt to protect the peaceful Indians from the revolutionary section of the populace. On the other hand it is to be admitted that the [Indian] settlers in British Columbia had some real ground of grievance. . . . These immigrants, many of the Sikhs, soldiers of the Crown, had entered Canada in good faith without let or hindrance, had made good in the country, and desired that they should be rejoined by their wives and children. The difficulty felt on this head after the adoption by the Government of Sir Wilfrid Laurier of the policy of restriction after the riots in British Columbia led to the sending of a delegation to the Minister of the Interior in the new Ministry of Mr. Borden, and feeling was made more bitter by the assertion that Mr. Rogers then promised the deputation to relax the restrictions, and afterwards failed to keep his promise. . . . It is probable enough that the allegation of bad faith which was spread widely over India was a deliberate invention of the revolutionary section of the Indian population. In point of fact the Government saw their way in a couple of individual cases to relax the rigour of the law against the entry of the wives of the immigrants."—A. B. Keith, *Imperial unity and the dominions*, pp. 196-197.

1922-1923.—Consequences of continued migration of negroes in the United States.—"The intricate social and political problems occasioned by the presence of two dissimilar races in the United States have heretofore been deemed purely sectional matters. By anyone at all familiar with the history of the country . . . it was easily understood why the Negro race was found almost entirely within the Southern states, and it was assumed that it would probably always remain there. Now suddenly the race, moved by some widespread impulse, begins of its own volition a migration northward which may alter the entire aspect of the racial question in America, and possibly swell into one of those mighty floods which, like the flight of Tatar tribes, changes history. . . . One learns with surprise that the movement, first noted about two years ago, has already shifted nearly half a million of our colored citizens to the states of the North and West. In less than twelve months forty thousand colored farm-laborers have left Georgia. From replies to an . . . inquiry sent out by the Agricultural College of South Carolina it appears that during the period of six months ending May 1, 1923, forty-one counties in that state sent North fifty thousand Negroes, chiefly adult laborers. It is difficult to take in the full significance of these figures when applied to sparsely settled districts. One county, for instance, reports the loss of 3600 Negroes, or just 22 per cent of its entire population, white and black. It further reports the abandon-

ment of 2520 farms during the present season, showing that in the Cotton Belt the Negro exodus and the agricultural crisis go hand in hand. Another Carolina county, celebrated in the old days as standing second in the United States in point of cotton production, claims to have lost 3500 Negroes since the planting of the present crop. . . . However, those vast humid plains of the South Atlantic and Gulf states are destined to remain forever the home of the bulk of the African race in America. Their climate and the ease with which an existence can be wheedled out of nature most nearly resemble conditions in his ancient land, and it is there that the race shows the greatest despite the constant trickle to other sections. In the North his numbers can be maintained only by accretions from the Black Belt. . . . Statistics compiled by Dr. Walter F. Wilcox of Cornell University show an amazing preponderance of Negro deaths over births in the colder states. In New England the ratio is 135 deaths to 100 births, in New York City, 16 deaths to six births, and in the state of Minnesota 65 deaths to one birth."—E. T. H. Shaffer, *New South: The negro migration*, (*Atlantic Monthly*, Sept., 1923).

1923.—Status of Indians in Kenya Colony.—"Although on the surface a seemingly unimportant issue, the status of Indians in Kenya Colony—a territory of East Africa—has raised a question which affects the whole structure of British imperialism. After a long and bitter controversy the British Government [in 1923] . . . reached a decision which is far from satisfactory to the natives of India. . . . The decision, set forth in a Parliamentary paper issued in London on July 24 may be regarded as the judgment in a test case defining the status of Indian immigrants in all parts of the British Empire. What the Indians wanted was simple enough; equality of treatment in all respects with both Europeans and natives not only in political rights but in unrestricted freedom to enter or leave the colony, to buy and sell land, to be eligible for the civil service, and to be spared the disadvantages and indignities of segregation. The British Government, which has consistently held that its role is that of protector of the natives, declares in the Parliamentary paper of July 24 that the Kenya Colony and Protectorate is African territory and that the interests of the African natives must be paramount, and that when these interests and the interests of immigrant races conflict, the former shall prevail. . . . The essential points of the settlement as laid down in the Parliamentary paper, . . . may be summarized as follows: That responsible self-government for the colony [of Kenya] is out of the question; that the Indian demand for equal franchise cannot be granted, but that the Government is prepared to grant the Indians and Arabs representation on the Legislative Council through the communal system of election; that the elected members of the Council shall comprise five Indians, one Arab and eleven Europeans. This leaves the franchise unchanged as regards white settlers. The policy of segregation as between Europeans and Asiatics in townships must be abandoned, but the existing practice of reserving agricultural land in the highlands for British and Europeans must be maintained. The Government undertakes temporarily to reserve an area in the lowlands and to ascertain when a demand exists for agricultural land on the part of the Indians. The Government declares it cannot countenance racial discrimination with respect to British immigrants, and that some further control over immigration in the economic interest of the natives is required. The Governor of Kenya is

instructed to investigate this matter. Finally, the Government suggests that the whole question may be re-examined after a period of years, with a view to improving the position of the Indians."—L. Powys, *Britain's imperial problem in Kenya Colony* (*New York Times Current History*, Sept., 1923).

RADAGAISUS, Radagais, or Rodogast.—"In the year 406, Italy was suddenly overrun by a vast multitude composed of Vandals, Sueves, Burgunds, Alans, and Goths, under the command of a king named Radagais. To what nation this king belonged is not certain, but it seems likely that he was an Ostrogoth from the region of the Black Sea, who had headed a tribe of his countrymen in a revolt against the Huns. The invading host is said to have consisted of 200,000 warriors, who were accompanied by their wives and families. These barbarians were heathens, and their manners were so fierce and cruel that the invasion excited far more terror than did that of Alaric. . . . Stilicho [the able minister and general of the contemptible Emperor of the West, Honorius] found it hard work to collect an army capable of opposing this savage horde, and Radagais had got as far as Florence before any resistance was offered to him. But while he was besieging that city, the Roman general came upon him, and, by surrounding his army with earthworks, compelled him to surrender. The barbarian king was beheaded, and those of the captives whose lives were spared were sold into slavery."—H. Bradley, *Story of the Goths*, ch. 10.—See also ROME: 404-408.

RADICALISM.—"For more than a century there has been a vast movement of mind in the western world which now receives the general name of Radicalism, or, going back to the beginning of Radicalism in modern history, we should fix the time of its appearance when Martin Luther attached certain daring theses to the gates of the council church of Wittenberg. In the next century it assumed shape in English and New English Puritanism, in the next played a subordinate part in the American Revolution, while in France it became meantime a speculative mania, warring in the name of reason on all the higher antecedent experience of humanity. Which mania, getting to be practical, broke out in the immeasurable frenzy of the Revolution of 1789. Now the old Radicals were distinguished by some well marked mental and moral characteristics. Their creed was, to put it briefly, that the whole social order ought to be based on a few universal and self-evident propositions. . . . To-day, the written constitutions which were regarded as so many bulwarks of individual rights and of certain fundamental principles, are found to be either somewhat hampering to progress or are liable to be stretched in interpretation so as to cover accomplished facts. We do not now think of a fixed order,—of a state of things in which no great changes are to be made. . . . If the prevailing nature of the old Radicalism is considered, it will also be found to have been Puritan in the fullest sense of the word, and by Puritanism is meant a certain, high, unbending and always non-materialistic way of looking at life and approaching great questions. The true Puritan looks rather to the ends and purposes of things than to the pleasures of the moment. . . . Very different is the type of Radicalism now in the ascendant; the new Radical is as essentially unpuritanical as his prototype was puritanical. He is as hungry for pleasure and the lightening of the burden of life as the other was to improve his moral and intellectual status. He wants a good time in the most natural sense and a pleasant life of the kind that a great city provides. . . . Radicalism is characterized less by its principles than by the manner of their application. Its political doctrine is that of democracy and as a general thing liberal men will approve of it. And though democracy may be the parent of Radicalism, this is no dishonor to the parent. Democratic ideas in a justly liberal sense must necessarily have some offshoots which are deformed, because so many persons can appreciate mere license who cannot appreciate true liberty. . . . The fact that Radicalism, as often formulated by its leaders, meets among the working classes a very wide reception proves, indeed, that the Radicals are spreading something, but it does not prove that what they are spreading is Radicalism. What I here seek to point out is that the thing which is uttered by them with a certain aim and with a certain meaning, takes on another meaning as it enters the ears of the working classes, and presents to their minds aims of quite a different kind. Radicalism is, in this respect, rather an antagonism than a principle. It has less of political desire or of aspiration than of the spirit of contest against privilege. It would be absurd to suppose that the ordinary Radical argued politics or considered them on scientific principles, so much as with piqued feelings and with resentment. The main idea is to pull down and not to build up. There may be a dominance of principle in a small minority but there is a dominance of feeling in the great majority. Radicalism, speaking loosely, is hatred of class privilege. It is a sentiment which

is fanned by discontent. This brings us down to the bed-rock truth that only as a people grow better and wiser do they make intelligent progress toward the higher social state. The great task before reformers is to forward the mental, moral, and spiritual revolution involved in their ideal. This accomplished, all other reforms are easy."—J. E. Shea, *Radicalism and reform* (*Proceedings of the American Political Science Association, Dec., 26-29, 1906*).

RAGA, Ragma, or Rhages.—"The Median city next in importance to the two Ecbatanas was Raga or Rhages, near the Caspian Gates, almost at the extreme eastern limits of the territory possessed by the Medes. The great antiquity of this place is marked by its occurrence in the Zendavesta among the primitive settlements of the Arians. Its celebrity during the time of the Empire is indicated by the position which it occupies in the romances of Tobit and Judith. . . . Rhages gave name to a district; and this district may be certainly identified with the long narrow tract of fertile territory intervening between the Elburz mountain-range and the desert, from about Kasvin to Khaar, or from long. 50° to 52° 30'. The exact site of the city of Rhages within this territory is somewhat doubtful. All accounts place it near the eastern extremity; and, as there are in this direction ruins of a town called Rhei or Rhey, it has been usual to assume that they positively fix the locality. But . . . there are grounds for placing Rhages very much nearer to the Caspian Gates."—G. Rawlinson, *Five great monarchies: Media, ch. 1*.—See also CASPIAN GATES.

RAILROADS

Their significance in modern civilization.—"Of all the factors that have contributed, during this century, to the growth of wealth, to the increase of material comfort, and to the diffusion of information and knowledge, the railway plays the most prominent part. It has widened the field for the division of employments; it has cheapened production; it has promoted exchange, and has facilitated intercommunication. In its aggregate it represents a larger investment of capital than any other branch of human activity; and the service that it renders, and has rendered, to society is, both from industrial and commercial points of view, greater than is rendered by any other

single service to which men devote their activities. . . . In the shape of the railway, the road has become the principal lever in man's conquest over want, distress from the accidents of birth in locality, and the disadvantages arising therefrom. It has diffused civilization, and has distributed the commodities of any one part of the civilized world over every other part, so that wants and satisfactions become substantially equalized throughout the industrial world. . . . The general result of railway construction has been an enormous increase of production and productive power on the part of mankind, and has also resulted in an enormous development in the character of produc-

tions, particularly in the direction of producing, for general and popular consumption, commodities which, until the railway was introduced, were in many cases impossible of transportation, except along the lines of waterway."—S. Sterne, *Railways in the United States*, p. 34.

1759-1881.—England.—Origin of steam railroad.—Early patents.—Stephenson's locomotive.—Railway mania.—Manchester and Liverpool railway.—Midland railways.—Monopolies.—Rate war.—To England is due the honor of the origin of the steam railroad. "The application of the steam engine to locomotion on land was, according to Watt, suggested by Robison, in 1759. In 1784, Watt patented a locomotive engine, which, however, he never executed. About the same time Murdoch, assistant to Watt, made a very efficient working model of a locomotive engine. In 1802, Trevithick and Vivian patented a locomotive engine, which was constructed and set to work in 1804 or 1805. It travelled at about five miles an hour, with a net load of ten tons. The use of fixed steam engines to drag trains on railways by ropes, was introduced by Cook in 1808. After various inventors had long exerted their ingenuity in vain to give the locomotive engine a firm hold of the track by means of rackwork-rails and toothed driv-

STEPHENSON'S "ROCKET," 1825

ing wheels, legs, and feet, and other contrivances, Blackett and Hedley, in 1813, made the important discovery that no such aids are required, the adhesion between smooth wheels and smooth rails being sufficient. To adapt the locomotive engine to the great and widely varied speeds at which it now has to travel, and the varied loads which it now has to draw, two things are essential—that the rate of combustion of the fuel, the original source of the power of the engine, shall adjust itself to the work which the engine has to perform, and shall, when required, be capable of being increased to many times the rate at which fuel is burned in the furnace of a stationary engine of the same size; and that the surface through which heat is communicated from the burning fuel to the water shall be very large compared with the bulk of the boiler. The first of these objects is attained by the 'blast-pipe,' invented and used by George Stephenson before 1825; the second, by the tubular boiler, invented about 1820, simultaneously by Séguin in France and Booth in England, and by the latter suggested to Stephenson. On the 6th October, 1820, occurred that famous trial of locomotive engines, when the prize offered by the directors of the Liverpool and Manchester Railway was gained by Stephenson's engine, the 'Rocket,' the parent of the swift and powerful locomotives of the present day, in which the blast-pipe and tubular boiler are combined."—W. J. M. Rankine, *Manual of the steam engine*, pp. xxv-xxvii.—George Stephenson,

the son of a common workingman, and self-educated as a mechanic and engineer, was appointed engine-wright of Killingworth Colliery in 1812. In the following year he urged the lessees of the colliery to undertake the construction of a "travelling engine," as he called it. "Lord Ravensworth, the principal partner, had already formed a very favourable opinion of Stephenson, from the important improvements which he had effected in the colliery engines, both above and below ground; and, after considering the matter, and hearing Stephenson's statements, he authorized him to proceed with the construction of a locomotive. . . . The engine was built in the workshops at the West Moor, the leading mechanic being John Thirlwall, the colliery blacksmith, an excellent workman in his way, though quite new to the work now entrusted to him. . . . The wheels of the new locomotive were all smooth,—and it was the first engine that had been so constructed. From the first, Mr. Stephenson was convinced that the adhesion between a smooth wheel and an edgerail would be as efficient as Mr. Blackett had proved it to be between the wheel and the tramroad. . . . The engine was, after much labour and anxiety, and frequent alterations of parts, at length brought to completion, having been about ten months in hand. It was first placed upon the Killingworth Railway on the 25th of July, 1814; and its powers were tried on the same day. On an ascending gradient of 1 in 450, the engine succeeded in drawing after it eight loaded carriages of 30 tons' weight at about four miles an hour; and for some time after, it continued regularly at work. It was indeed the most successful working engine that had yet been constructed. . . . The working of the engine was at first barely economical; and at the end of the year the steam power and the horse power were ascertained to be as nearly as possible upon a par in point of cost. The fate of the locomotive in a great measure depended on this very engine. Its speed was not beyond that of a horse's walk, and the heating surface presented to the fire being comparatively small, sufficient steam could not be raised to enable it to accomplish more on an average than about three miles an hour. The result was anything but decisive; and the locomotive might have been condemned as useless had not Mr. Stephenson at this juncture applied the steam blast [carrying the escape of steam from the cylinders of the engine into the chimney or smoke-stack of the furnace], and at once more than doubled the power of the engine." A second engine, embodying this and other improvements, was constructed in 1815, with funds provided by Mr. Ralph Dodds. "It is perhaps not too much to say that this engine, as a mechanical contrivance, contained the germ of all that has since been effected. . . . It is somewhat remarkable that, although George Stephenson's locomotive engines were in daily use for many years on the Killingworth railway, they excited comparatively little interest."—S. Smiles, *Life of George Stephenson*, ch. 9-24.—The Stockton and Darlington line, incorporated "for making and maintaining a railway or tramroad from the river Tees at Stockton to Wilton Park Colliery, with several branches therefrom, all in the county of Durham." received Parliamentary sanction to employ locomotives for passenger traffic as well as freight; and on the first day (September 27, 1825) there was run a "mixed" train,—passengers were taken aboard on trucks, and other wagons carried coal,—but thereafter for a number of years steam traction was used exclusively for freight, usually coal; while passengers were carried by rail coaches, which were drawn

by horses, on this line. However, on this 25-mile railroad was first demonstrated the use of the steam cars as a common carrier. Many roads, besides the Liverpool and Manchester railway, were projected at this time. The Liverpool and Manchester railway was constructed by Stephenson, and opened for service in 1830, when his famous locomotive, the "Rocket" achieved a speed of thirty-five miles an hour. Owing to a severe financial crisis, "the state of the country was such that it was impossible to bring the projects before Parliament with any prospect of success. Thus, what might have been a railway boom in 1825 and 1826, collapsed for want of money, and it was not until ten years later that public interest in railway projects became general."—H. G. Lewin, *British railway system*, pp. 5-7.—From 1835 to 1844 was a period of great activity in railroad construction in the British Isles. Short lines were extended into trunk lines and new roads were pushed to completion in remote sections of the country. "There were few securities in which the moneyed classes could invest their savings. The debt of the nation was decreasing; and the public funds were no longer a very remunerative investment. The canal system was tolerably complete, and did not require the expenditure of any large amount of capital. Agricultural improvements had been arrested by the decreased price of agricultural produce; and there were no other obvious purposes to which an ordinary investor could devote his little savings. Yet the savings went on accumulating, and were ready for any profitable use. The natural result ensued. Financing speculators, with more ability than honesty, came forward to relieve the investors of their superfluous money; and the savings of the nation, pouring into the only available outlets, were wasted in the waters of the ocean or the deserts of South America. It required the crisis of 1825-6 to convince the people of the supreme folly which they had committed. But the sharp lesson, while it taught them prudence, did not teach them how to save. They abstained from investing their savings abroad, but they kept them unproductive at home. Trade, in consequence, stagnated from the prevalent distress; and the labouring classes, suffering from its stagnation, were unable to find employment for their labour. The introduction of railways at once altered this condition of things. The investing classes found a new, safe, and almost illimitable field for the investment of their money; the labouring classes found a new sphere for the employment of their labour. . . . Engineers, surrendering their previous opinions, were now busily projecting new railways, and fondly speculating on the almost illimitable field for the exercise of their abilities which was suddenly afforded them. For a season, indeed, conservative municipalities, stagnating in the torpor of their dull existence, had the folly to resist the invasion of their quiet towns by the steam-engine. . . . Interested opposition of this character soon disappeared, because the benefits which the railway conferred on municipalities . . . outweighed the slight inconveniences which it brought with it; and the very classes, who, at one time, had tried to resist even the approach of the railway, complained if they had no station within easy distance of their own door."—S. Walpole, *History of England*, pp. 25, 24.—"All the English railways were constructed by private enterprise, each under a particular act of Parliament. In 1836-37 railroad speculation developed to the point of mania. There was scarcely a practicable line between two considerable places that was not embraced in the pro-

pectus of one or another company. Promoters resorted to all kinds of tricks to get capital and spent extraordinary sums in the struggle for Parliamentary authorizations. . . . By 1838 the four great centers of London, Birmingham, Liverpool and Manchester were all connected by rail. Less than 2000 miles had been constructed up to 1843, but in 1848 more than 5000 had been built. The capital expended amounted to \$325,000,000 in 1843 and to more than \$1,000,000,000 in 1848. By 1861 the capital embarked in these enterprises amounted to \$1,800,000,000, over \$80,000,000 a year having been expended during the preceding 18 years."—L. G. McPherson, *Transportation in Europe*, pp. 225, 227.—"Although the Liverpool and Manchester line paid eight or nine per cent dividends from the outset, the general money market did not become interested in railway shares until 1843; in the earlier period, railways were

GEORGE STEPHENSON
(After painting by John Lucas)

financed by local funds. . . . The usual source of capital was the mercantile community in the towns at either end of the line; the Liverpool and Manchester project was typical of railway projects for somewhat more than a decade. . . . Communication between Liverpool, Manchester, and London was controlled by four separate companies. Traffic from the midland cities, Derby, Nottingham, Leeds, and intermediate points, was served by three closely related lines, which secured connection with London by transfer to the London and Birmingham at Rugby. The actual inconvenience was not as great as might be imagined, for provision was made from the outset for the joint use of stations and in some cases for the joint use of portions of track. . . . Through passenger coaches were put into operation between London and points on the railroads of the Midland lines at an early date, and the complexities of the division of revenues from traffic led to the establishment of the Railway Clearing-House in 1842. . . . In 1844 Parliamentary sanction was obtained for

the formation of the Midland Railway. This was the nucleus of the first of the modern railway systems to be formed by amalgamation of small lines. The component parts of the London and North Western were united in 1846. The Great Western, however, was not the result of amalgamations. It was somewhat similar to the other projects in so far as it was a scheme for connecting London and Bristol, but the project really went far beyond the limits of a scheme to serve purely local interests. This road was surveyed by Brunel and his influence appears not only in certain technical details of engineering, but also in the general conception of the road. . . . The Great Western was . . . conceived as a complete system that should primarily depend upon a monopoly of traffic in an entire region. It was certainly the first of the

The Great Western began to adapt its line to the northern gauge at an early date, at first by adding a third rail so that both gauges could be used, latterly by a complete abandonment of the broad gauge. . . . The density of traffic in the London-Liverpool district and the traffic between London and Scotland led to competition as soon as the railway network began to approach its ultimate form. Lines built for local purposes possessed significance from the point of view of through traffic, so that competition emerged where none was originally planned. . . . As early as 1835-36, merchants of York, led by George Hudson, projected lines to connect York with the Midland lines at Leeds and other lines to afford a Scottish connection. The section between York and Leeds was soon completed and the rails were ex-

IMPROVED MODEL OF STEPHENSON'S "ROCKET," 1837

railways to be planned in the modern spirit, with a view to what we may call commercial strategy. The ultimate extensions to Oxford and Liverpool were not foreseen by Brunel, but the domination of the west of England was part of the plan. The notion that the road was to be somewhat isolated induced Brunel to modify in some details the character of the engineering work. The gauge of the roads in the north, built by Stephenson, or under the influence of his ideas, was the four-foot-eight-and-one-half-inch gauge that had been taken from the tram wagons of the colliery lines. Brunel felt that this gauge was not well adapted to the needs of a railway. . . . He therefore recommended a seven-foot gauge, confident that the slight additional expense involved in laying the roadbed would be recovered in economies of operation. . . . The development of contacts with the roads of the London-Liverpool traffic region, however, rendered the difference in the gauge unfortunate.

tended northward by easy stages. In 1841 the rails stopped at Darlington; extension to Newcastle was authorized in the following year and opened in 1846. The Newcastle-Berwick section was opened in October, 1847; and as Scotch companies had been at work on the Edinburgh end since 1844, it was possible to offer through service from London to Edinburgh. The trip was made in thirteen hours and ten minutes; an all-rail route except for the gap caused by the delay in the completion of the bridge over the Tyne at Newcastle. Meanwhile the London and North Western interests had been at work on a west coast route, via Lancaster and Carlisle, which was finally opened for traffic in February, 1848. The first trains on this route ran on a fifteen-and-one-half-hour schedule, but by July the trains were making the journey to Edinburgh in twelve hours. In the fall the Tyne bridge was completed, but the east coast service was hampered by the dependence upon the

London and North Western for connections between Rugby and London, and in this service there were discriminations in favor of the passengers and freight that were booked for Scotch points via the west coast route. . . . A through line from London to York [at first opposed by Hudson] . . . was finally authorized as the Great Northern Railway in June, 1846. Portions of the line were opened for traffic in 1850. . . . The London and North Western, assisted by the Midland as a subservient ally, endeavored to exclude the Great Northern from all possible traffic and proposed arrangements which would afford minimum facilities for the handling of such traffic as involved joint activity. Branches were built into Great Northern territory, the Scotch companies associated with the London and North Western were persuaded to refuse traffic and connections, and attempts were made to induce the local east and west lines to boycott the new road. . . . Timetables were arranged with a view to producing a maximum degree of inconvenience to passengers using the new line. The opening of increased por-

panies included were the London and North Western, the Lancaster and Carlisle, and the Caledonian, constituting the west coast group; the North British, the York, Newcastle and Berwick, the York and North Midland, and the Great Northern, constituting the east coast route; and the Midland, which at this time was hardly more than a connecting link between the two great competitive systems. The Octuple Agreement was relatively unfavorable to the Great Northern; it received no share in the traffic of Glasgow, Perth, and Aberdeen, and only an unsatisfactory share of the traffic with Edinburgh, Berwick, and Newcastle. These arrangements were distinctly less amiable than the arrangements between the London and North Western and the Great Western with reference to competitive traffic. In those negotiations provision was made for charging equal rates based on the shortest or most advantageous route; in dealing with the Great Northern, the directors of the London and North Western were unwilling to recognize the new line as an equal, and the agreements were merely a kind of truce which did not

FIRST FRENCH LOCOMOTIVE OF MARC SÉGUIN

tions of the Great Northern line produced a wild rate war among the roads seeking passengers to the Exhibition of 1851; round-trip fares from the West Riding to London fell from fifteen shillings to ten, and then to five shillings. Finally, the Great Northern agent at Leeds declared that the Great Northern fare would be sixpence less than any fare declared by any other road. This rate war was proceeding simultaneously with negotiations among the roads for a division of traffic and an agreement as to rates. The general principle of a traffic pool had been assumed at the outset, and it was equally clear that there must be rate agreements, but matters of detail proved such an obstacle that it was necessary to call in as arbitrator, the . . . President of the Board of Trade, W. E. Gladstone. . . . The award finally made was based upon somewhat arbitrary percentages, the Great Northern being awarded sixty-three per cent of the traffic of the most intensely disputed area—Lincolnshire. This Gladstone award covered only the traffic south of York. The Scotch traffic had caused somewhat less trouble so that the roads had reached an agreement privately in March, 1851. The arrangement involved eight companies and is therefore known as the 'Octuple Agreement': the

put an end to the attempt to destroy the traffic of the Great Northern. The London and North Western urged passengers to buy tickets to intermediate points, and from such places to London, rates being arranged to reduce the total fare below the level provided for in the award. . . . The Midland could not exist as an independent line between the London and North Western on one side and the Great Northern on the other side. . . . The London and North Western, however, succeeded in winning the Midland over to its old allegiance and in 1853 application was made to Parliament for authority to amalgamate the two systems. . . . The whole matter was canvassed by a committee of the House of Commons of which Mr. Cardwell was chairman and the decision was in favor of competition among the railways. [The Midland developed lines to competitive points on all coasts.] . . . The accomplishment of these results was difficult. When the proposed amalgamation of 1853 was denied by Parliament the two companies contented themselves with a secret joint-purse agreement which was not discovered until 1857. The officials of the Great Northern discovered it unexpectedly and used their knowledge to put an end to the alliance between the London and North

Western and the Midland. . . . Arrangement was made for the Midland to use the tracks of the Great Northern between Hitchin and London, so that Midland trains began to operate directly to London in 1858, though the traffic was frequently obstructed by discreetly contrived difficulties in the yards and terminals. Work on an independent entrance to London was begun in 1860, but the terminal at St. Pancras and the line to Bedford were not completed until 1860. The Scotch connections were still slower in development. The line to Carlisle was opened for freight in 1875."—A. P. Usher, *Introduction to industrial history of England*, pp. 443-444, 446-452, 454-456.—See also SCOTLAND: 1750-1921.

acquiring the real estate, and that the concessionary companies should provide the track and its appurtenances and the rolling-stock, and should conduct the operations [but], upon the expiration of each concession the permanent way and the equipment were to be taken over by the government at an expert valuation."—L. G. McPherson, *Government transportation in Europe*, pp. 45, 49.—"The railway history of France stands by itself. Nowhere is the passion for logic and the love of symmetry which distinguish the French genius better exemplified than in the history of the French Railway system. . . . The whole country was divided up among six great companies, five of which radiate from Paris, and the sixth, the Midi, serves the extreme South and Southwest. The development of the railway network has been systematic from the outset; trunk lines first, then important branches, then the less important ones, and finally in recent years a considerable development of light secondary lines. Throughout, the State . . .

1823-1905.—France.—Origin of railroads.—Development of projected system.—Government concessions.—Government ownership.—"The origin of railways in France is found in the two lines constructed in 1823 and 1826, with horses as the motive power, to connect the coal field of Saint Étienne with the Rhone on the one side and the Loire on the other. Concessions for lines between Paris and St. Germain and Versailles were awarded in 1835 and 1836. . . . A law enacted on June 11, 1842, ordered the construction of the nine lines that constitute today the main arteries of the French network. Seven of these lines focus at Paris; one from Nancy and Strasburg, one from Marseilles and Lyons, one from Toulouse and Bourges, one from Bayonne, Bordeaux and Tours, one from Nantes, one from Havre and Rouen, one from Belgium and Lille; and there are two transverse lines, one from Bordeaux to Marseilles by way of Toulouse, and one from Mulhouse to Dijon. To secure the establishment of these lines, the government offered concessions, stipulating that the state should construct the roadbed and the structures, that the localities through which the lines were to pass should pay two-thirds of the cost of

guided, subsidized and controlled. Each company . . . [had] a monopoly of its own district. So far as possible, the points where the great systems meet are arranged—not, as in Holland, or formerly in Italy, at the great towns—but precisely at the points of least importance from a traffic standpoint. Where traffic is unavoidably competitive, as for instance from Paris to Central Switzerland, which can be reached either by the Eastern or by the Paris and Lyons railway, arrangements are deliberately made to prevent competition. The Government controls all rates and fares charged and all services given, and the Government approves, not merely of pools, but of agreements by which shippers, attempting to consign traffic by the route by which the railway companies have agreed the traffic shall not flow, are deliberately penalized by higher rates."—W. M. Acworth, *Historical sketch of government ownership of railroads in foreign countries*, pp. 29-30.—In the quarter of a century preceding 1905, the French railroad mileage increased 71 per cent.

1826-1850.—United States.—Railroad begin-

nings.—“Whatever credit is due to the construction of the first railroad ever built in America is usually claimed for the State of Massachusetts. Every one who has ever looked into a school history of the United States knows something of the Quincy railway of 1826. Properly speaking, however, this was never—or at least, never until the year 1871,—a railroad at all. It was nothing but a specimen of what had been almost from time immemorial in common use in England, under the name of ‘tram-ways.’ . . . This road, known as the Granite railway, was built by those interested in erecting the Bunker Hill Monument, for the purpose of getting the stone down from the Quincy quarries to a wharf on Neponset River, from which it was shipped to its destination. The whole distance was three miles, and the cost of the road was about \$34,000.”—C. F. Adams, Jr., *Railroads, their origin and problems*, ch. 1.—“In 1826, a coal mining company began using a railroad over the mountains from Carbondale to Honesdale, Pa., and the following year another coal company put a similar road [Switchback Railroad] into service at Mauch

very simple product of native genius. . . . In June, 1831, a second locomotive, called the West Point, had arrived in Charleston; and this at last was constructed on the principle of Stephenson’s Rocket. In its general aspect, indeed, it greatly resembled that already famous prototype. There is a very characteristic and suggestive cut representing a trial trip made with this locomotive on March 5th, 1831. . . . About six months before . . . there had actually been a trial of speed between a horse and one of the pioneer locomotives, which had not resulted in favor of the locomotive. It took place on the present Baltimore & Ohio road upon the 28th of August, 1830. The engine in this case was contrived by no other than Mr. Peter Cooper. . . . The Cooper engine, however, was scarcely more than a working model. Its active-minded inventor hardly seems to have aimed at anything more than a demonstration of possibilities. The whole thing weighed only a ton, and was of one-horse power. . . . Poor and crude as the country was, however, America showed itself far more ready to take in the far reaching consequences of

FIRST TRAIN RUN FROM ALBANY TO SCHENECTADY, AUGUST 9, 1831

Chunk, Pa. These mountain roads were built for private use, and the cars were operated by the force of gravity and by means of stationary engines. They were not railroads in the present meaning of the term. . . . The Baltimore & Ohio Railroad was the pioneer, in that it was the first road to be constructed for the general use of the public.”—E. R. Johnson, *Elements of transportation*, p. 7.

“There is, indeed, some reason for believing that the South Carolina Railroad was the first ever constructed in any country with a definite plan of operating it exclusively by locomotive steam power. . . . On the 15th of January, 1831—exactly four months after the formal opening of the Manchester & Liverpool road—the first anniversary of the South Carolina Railroad was celebrated with due honor. A queer looking machine, the outline of which was sufficient in itself to prove that the inventor owed nothing to Stephenson, had been constructed at the West Point Foundry Works in New York during the summer of 1830—a first attempt to supply that locomotive which the Board had, with a sublime confidence in possibilities, unanimously voted on the 14th of the preceding January should alone be used on the road. The name of Best Friend was given to this

the initiative which Great Britain gave in 1830 than any other country in the world. . . . It might almost be said that there was a railroad mania. . . . Accordingly, after 1830 trial trips with new locomotives followed hard upon each other. To-day it was the sensation in Charleston; to-morrow in Baltimore; the next day in Albany. Reference has already been made to a cut representing the excursion train of March 5th, 1831, on the South Carolina Railroad. There is, however, a much more familiar picture of a similar trip made on the 9th of August of the same year from Albany to Schenectady, over the Mohawk Valley road. This sketch, moreover, was made at the time and on the spot by Mr. W. H. Brown.”—C. F. Adams, Jr., *Railroads, their origin and problems*, ch. 1.—“The present great New York Central System originated in the charter granted in 1826 to the Mohawk & Hudson, seventeen miles of which, from Albany to Schenectady, were opened for traffic in 1831. Between 1830 and 1835, three lines were built out of Boston, one to Providence, another to Lowell, and a third to Worcester. The Worcester line was extended to Albany by 1841. The following year one could travel [using a dozen of connecting roads] by rail from Boston to

Buffalo. The germ of the Pennsylvania System was the Columbia Railroad, built by the State of Pennsylvania from Philadelphia to Columbia on the Susquehanna River. It was put into operation in 1834. Three years later, private corporations had built lines from Philadelphia to New York Bay and to Baltimore. The next year the Reading Railroad up the Schuylkill Valley was in operation. Railroad building in the South began in South Carolina with the line from Charleston to Hamburg on the Savannah River opposite Augusta. When this road, 137 miles in length, was opened in 1834, it had the distinction, for a short time, of being the longest railroad in the world. . . . It was uncertain at the start of railroad building, and for some time afterwards, whether the railways could carry freight cheaply enough to compete with the canals, rivers, and lakes over routes where waterways were in existence or could be constructed. . . . [In] 1850, the mileage was 9000."—E. R. Johnson, *Elements of transportation*, pp. 8, 10.—See also U. S. A.: 1836-1840; ALABAMA: 1830-1833; INDIANA: 1831-1870; MICHIGAN: 1830-1846; MISSISSIPPI: 1831-1869; PENNSYLVANIA: 1825-1836.

Tanner, *Description of canals and railroads of the United States, 1840*.—J. L. Ringwalt, *Development of transportation systems in United States, 1888*.

1830-1880.—United States.—Mechanical improvements of railroads.—"After the success of the 'Rocket,' and of the Liverpool and Manchester Railway, the authority of George Stephenson and his son Robert became absolute and unquestioned upon all subjects of railway engineering. Their locomotives had very little side play to their wheels, and could not go around sharp curves. They accordingly preferred to make their lines as straight as possible, and were willing to spend vast sums to get easy grades. Their lines were taken as models and imitated by other engineers. . . . When we come to the United States we find an entirely different state of things. The key to the evolution of the American railway is the contempt for authority displayed by our engineers, and the untrammelled way in which they invented and applied whatever they thought would answer the best purpose, regardless of precedent. . . . The first, and most far-reaching, invention was that of the swivelling truck, which, placed under the front end of an engine, enables it to run around curves of almost any radius. . . . The swivelling truck was first suggested by Horatio Allen, for the South Carolina Railway, in 1831; but the first practical use of it was made on the Mohawk and Hudson Railroad, in the same year. It is said to have been invented by John B. Jervis, Chief Engineer of that road. The next improvement was the invention of the equalizing beams or levers, by which the weight of the engine is always borne by three out of four or more driving-wheels. They act like a three-legged stool, which can always be set level on any irregular spot. The original imported English locomotives could not be kept on the rails of rough tracks. The same experience obtained in Canada when the Grand Trunk Railway was opened, in 1854-5. The locomotives of English pattern constantly ran off the track; those of American pattern hardly ever did so. Finally all their locomotives were changed by having swivelling trucks put under their forward ends, and no more trouble occurred. The equalizing levers were patented in 1838, by Joseph Harrison,

Jr., of Philadelphia. These two improvements, which are absolutely essential to the success of railways in new countries, and have been adopted in Canada, Australia, Mexico, and South America, to the exclusion of English patterns, are also of great value on the smoothest and best possible tracks. The flexibility of the American machine increases its adhesion and enables it to draw greater loads than its English rival. The same flexibility equalizes its pressure on the track, prevents the shocks and blows, and enables it to keep out of the hospital and run more miles in a year than an English locomotive. Equally valuable improvements were made in cars, both for passengers and freight. Instead of the four-wheeled English car, which on a rough track dances along on three wheels we owe to Ross Winans, of Baltimore, the application of a pair of four-wheeled swivelling trucks, one under each end of the car, thus enabling it to accommodate itself to the inequalities of a rough track and to follow its locomotive around the sharpest curves. . . . The climbing capabilities of a locomotive upon smooth rails were not known until, in 1852, Mr. B. H. Latrobe, Chief Engineer of the Baltimore and Ohio Railroad, tried a temporary zigzag gradient of 10 per cent,—that is 10 feet rise in 100 feet length, or 528 feet per mile—over a hill about two miles long, through which the Kingwood Tunnel was being excavated. . . . It was worked for passenger traffic for six months. This daring feat has never been equalled. Trains go over 4 per cent. gradients on the Colorado system, and there is one short line, used to bring ore to the Pueblo furnaces, which is worked by locomotives over a 7 per cent. grade. These are believed to be the steepest grades worked by ordinary locomotives on smooth rails. Another American invention is the switchback. By this plan the length of line required to ease the gradient is obtained by running backward and forward in a zigzag course, instead of going straight up the mountain. . . . With the improvement of brakes and more reliable means of stopping trains upon steep grades, came a farther development of the above device, which was first applied on the Denver and Rio Grande Railroad in Colorado, and has since been applied on a grand scale on the Saint Gothard road, the Black Forest railways of Germany, and the Semmering line in the Tyrol. This device is to connect the two lines of the zigzag by a curve at the point where they come together, so that the train, instead of going alternately backward and forward, now runs continuously on. It becomes possible for the line to return above itself in spiral form, sometimes crossing over the lower level by a tunnel, and sometimes by a bridge. . . . There is one thing more which distinguishes the American railway from its English parent, and that is the almost uniform practice of getting the road open for traffic in the cheapest manner and in the least possible time, and then completing it and enlarging its capacity out of its surplus earnings, and from the credit which these earnings give it."—T. C. Clarke, *American railway*, pp. 3-4, 7-10.

1830-1853.—Canada.—Early railroads.—St. Lawrence and Atlantic, the first international railroad.—"The railway found Canada scarcely a geographical expression, and made it a nation. . . . From the beginning in Canada, to a much greater degree than in Great Britain or in the United

States, the railway was designed to serve through traffic. But it was regarded at first as only a very minor link in the chain. River and canal were still considered the great highways of through traffic. Only where there were gaps to be bridged between the more important waterways was the railway at first thought profitable. . . . In 1832, . . . a charter was granted by the legislature of Lower Canada to the Company of the Proprietors of the Champlain and St. Lawrence Railroad, for a line from Laprairie on the St. Lawrence to St. Johns, sixteen miles distant on the Richelieu river, just above the rapids. From St. Johns transportation to New York was easily effected, through the Richelieu to Lake Champlain and thence to the Hudson. This portage road promised to shorten materially the journey from Montréal to New York. Construction was begun in 1835, and the road opened for traffic in July 1836. The rails were of wood, with thin flat bars of iron spiked on. These were apt to curl up on the least provocation,

system prompted further steps. A second stage in Canadian railway building had begun [when the Grand Trunk was started in 1853]. . . . [But] the St. Lawrence and Atlantic was the Canadian half of the first international railway ever built. At the outset much more than half of the enterprise and activity was centred in the United States, for the Canadas were still apprentices in railway promotion and construction."—O. D. Skelton, *Railway builders*, pp. 12, 36-41.

1832-1905.—Germany.—State construction of railroads.—Prussian predominance.—Bismarck and railway problems of the empire.—"The construction of steam railroads in Germany did not begin until several lines were well under way in England and in the United States. The first railroad was a short local line between Nuremberg and Fürth, opened in 1832. Other similar lines were then built, to connect towns not far distant one from another such as Dresden and Leipzig, Berlin and Potsdam, Brunswick and Wolfenbuettel.

OPENING OF FIRST GERMAN RAILROAD BETWEEN NUREMBERG AND FÜRTH

(After painting by H. Heim, in the German Museum at Munich)

whence came their popular name of 'snake-rails.' At first horse power was used, but in 1837 the proprietors imported an engine and an engineer from England. Some premonition of trouble made the management decide to make the trial run by moonlight. In spite of all the efforts of the engineer and officials, the *Kitten* would not budge an inch. Finally an engineer, borrowed from the Baltimore and Ohio Railroad, reported that all that was needed was 'more wood and water,' and given these the *Kitten* gambolled along at twenty miles an hour. . . . For ten years the sixteen-mile Champlain and St. Lawrence was the sole steam railway in British North America, while by 1846 the United Kingdom had built over twenty-eight hundred miles, and the United States nearly five thousand. Political unrest, commercial depression, absorption of public funds in canals, hindered development in Canada. . . . It was not until the railway mania broke out in England in the middle forties . . . that Canadian promoters found interest awakened and capitalists keen to listen. At the same time, the active competition of United States roads for the western traffic and the approaching completion of the St. Lawrence canal

The early development of the main lines was in an easterly and westerly direction in the interior. . . . The first railways in Prussia were built by private companies, the state being unable to raise large funds for railway construction. Besides granting concessions to private companies, the state sometimes aided them by the direct purchase of shares and by the guaranty of interest. All such concessions provided that the state could take over the lines at will. . . . In some of the other German states the railways were constructed and operated by the government, in some by private companies, while in others there appeared railways of both sorts, state owned and privately owned. . . . After the establishment of the Empire, a committee of investigation reported that economic considerations point to the conclusion that all railways should be under the control of the State. Prince Bismarck formed a plan for the purchase of all the railways by the Empire; but to this project several of the states offered such strong opposition that it was abandoned. He then adopted the policy of purchase by the Prussian state. With the authorization of the Prussian Diet, the policy of securing entire state control of the Prussian railways was formally

inaugurated in 1880, and within ten years this object was practically attained. Prussia not only acquired substantially all the main railway lines within its territory, but gained control of the principal routes in north Germany, although in many cases they extended beyond the Prussian boundaries. It hereby gained . . . [a] dominant influence over the railway policy of the entire Empire. . . . The capital expenditures on the Prussian railways to 1905 were \$2,286,000,000."—L. G. McPherson, *Transportation in Europe*, pp. 56-58.—See also GERMANY: Constitution of the empire: VII.

1834-1908.—Continent of Europe.—Origin and development of railways.—"In Austria, . . . the building of railways was greatly discouraged by the government until 1836. In that year the Emperor rather reluctantly granted Baron Rothschild a charter for a railway from Vienna into the province of Galicia. Another charter was granted to a Baron Sina for a line from Vienna to Raab and Gloggnitz. The policy then adopted in Austria guaranteed to each railroad company a monopoly in its own district during the period for which the charter was granted. Soon after the state also commenced building lines, but the growth of the Austrian system was slow until after the war of 1866. . . . Belgium has the best-developed track system on the continent. The state commenced the construction of railroads as early as 1834, and the first line (Brussels-Malines) was opened May 5th, 1835. Four great state lines were constructed in different directions, and between these lines private roads were permitted to be built. Between 1850 and 1870 the private lines increased from 200 to 1,400 miles, and competition between them and the state lines became so active as to reduce rates to the lowest possible point. In 1870 the government decided to buy a large number of competing lines. In 1874 it had acquired more than half, and . . . [by 1893], with a few exceptions, they . . . [were] all owned and controlled by the state. . . . In Italy railroad enterprises have received attention since 1853. The first roads were those of Lombardy, being commenced while that province was still under Austrian rule. The treaties of Zurich in 1859 and of Vienna in 1866 delivered these roads and the Venetian lines to the kingdom of Italy. Between 1860 and 1870 the systematic construction of a railroad net was commenced which connected the various lines with each other and with Rome. Nearly all the railroads of Italy fell into the hands of the government, but in 1885 they were leased for a term of sixty years to three companies, terminable at the end of twenty or forty years by either party upon two years' notice. . . . The first road in Spain was opened in 1848 between Barcelona and Mataro. The government greatly encouraged railroad construction by subsidies, and during the decade following 1855 the development of the railway system of the country was rapid. More than thirty companies have been formed, which have built about twenty main lines. . . . In Portugal very little railroad building was done previous to 1863, when a little over three hundred miles of road . . . [were] constructed. The government owns nearly half of the roads of the country, the remaining lines being the property of private companies. . . . In Denmark the first railroad was built on the island of Seeland

in 1847. Previous to 1880 the larger part of the roads of the kingdom was owned by private companies. Since then several of the most important private roads have been purchased by the state. . . . On the Scandinavian Peninsula the railroad system has developed rather slowly. Norway built the first line from Christiania to Eidsvold in 1854, and Sweden commenced railroad building two years later. The narrow-gauge system [was] fully developed here. While in Norway the greater part of the lines is owned by the state, the roads of Sweden are chiefly in the hands of private companies."—W. Larrabee, *Railroad question*, pp. 54, 56-58.—Holland's railroad history is a unique contrast to the other continental countries. Her "lines were built by the State [but] the operation has always been wholly in private hands. For many years, there were in Holland three principal companies; the State Railway Company, the Holland Company and the Dutch Rhenish Company. In 1890, the Dutch Government made a new departure. It bought up all the lines which it did not own, and it then apportioned the whole system anew between two companies representing, respectively, the old State Railway and the Holland Companies, in such a manner that each Company had access to every important town in competition with the other. This system, which presumably was patterned on the Italian System of 1885, has been in existence ever since. In 1908 a motion in Parliament in favor of nationalization was brought forward and defeated."—W. M. Acworth, *Historical sketch of government ownership of railroads in foreign countries*, p. 27.—See also MONTENEGRO: 1010; BALKAN STATES: Map.

1835-1873.—Latin America.—Beginnings of railroads in Cuba, South America and Panama.—"The oldest railway line in the northern group of republics was built in Cuba as early as 1835, and is, in fact, the oldest of all in Latin America. . . . Chile had the first railway on the continent of South America, the line being built by an American in 1851. The Argentine Republic followed in 1857, and Brazil a year later. Not only railroads, but practically all of the modern means of transportation in Latin America, were initiated and constructed with European and American capital. Most of them, also, are owned by foreigners. . . . Of the transcontinental lines, the Panama Railway between Colón and Panama was built in 1855 to facilitate the journey of the gold seekers bound for California, and to serve as a means of transit until the long projected waterway through the Isthmus of Panama could be completed."—W. R. Shepherd, *Latin America*, pp. 184-185, 187.

1837-1908.—Russia.—First railroads.—Political corruption of state-aided roads.—Foreign capital sought for railroad construction.—Concession policy of the government.—Witte's plan to develop Siberia through railroads.—"The first Russian railroad was the Tzarkoselsky (from Petrograd to Tzarskoie-Selo, Tr.), twenty-five versts long, built in 1837 by private means without any subsidies or guarantees on the part of the Government; the railroad was to remain the property of its builders for an indefinite time. The construction lasted two years, and cost comparatively

little—forty-two thousand rubles per verst, including all the necessary buildings. The exploitation of that railroad convinced the Government of the practicability of railroads in Russia, and it undertook the construction of the Petrograd-Moscow line, subsequently called, the Nicolaievsky. At the head of the fiscal undertaking stood Minister of Communications Kleinmichel, one of Arakcheiev's generals; although it is generally testified that personally he was honest, the construction of the railroad was connected with flagrant abuses. True, it was firmly built, especially the depots, bridges, etc., but it cost one hundred and sixty-five thousand rubles per verst, as against forty-two thousand rubles of the Tzarskoselsky railroad. The construction of the Nicolaievsky railroad lasted nine years; the bonded peasants were driven in hordes to the works, and the workers perished in large numbers. These were the only railroads built during the reign of Nicolas. True, in 1851, the Government decided to construct the Warshavsky (Petrograd-Warsaw) Railroad, . . . but until 1853 only a small portion was constructed, at the expense of eighteen million rubles, and the breaking out of the war caused the work to cease for lack of funds. After the Crimean Campaign the Government of Alexander II, which had just experienced the horrors of want of roads, . . . determined to consider as one of its first tasks the construction of roads. But in view of the bitter lesson taught by the fiscal management of the building of the Nicolaievsky railroad, and in accordance with the principles of its new economic policy, the Government decided to hand the matter over to private companies, limiting its own rôle to general initiative and to encouragement of private enterprises. Added to these considerations was the plan for attracting capital and metal-money into Russia, for which reason foreigners were allowed to head the undertaking. Although among the founders was one Russian banker, Stiglitz, most of them were foreigners; even the office of the company was not in Petrograd, but in Paris. A joint-stock company was formed, under the title Main Company of Russian Railroads; it issued stock, with the Government's guarantee for five per cent. income on that capital, besides other privileges, as, for instance, that the company should retain ownership of the roads for ninety-nine years. . . . The Main Company was to complete, first of all, the Warshavsky line, then to construct the line Düna-burg-Riga, next the Moscow-Nizhni-Novgorod line, and finally, the Moscow-Sevastopol line. It had been planned in that way to connect the fertile Volga provinces, part of New Russia, and the central black-soil provinces, with a Baltic port through Moscow, while Moscow would in her turn be joined with the Black Sea (Sevastopol). But the Main Company completed only the Warshavsky road and the line to Nizhni-Novgorod, while the Düna-burg-Riga was not finished by the stipulated time, and the Moscow-Sevastopol railroad was not even begun. Only part of the capital was subscribed abroad, but the larger portion of the stock and obligations the company sold and realised in Russia, so that in the end the hopes of the Government for the influx of foreign capital were not fulfilled; the reverse came to pass, and the whole enterprise, conducted as it was rapaciously in means and methods, proved unfortunate in all respects. . . . In spite of this failure, Reiter and the new Minister of Communications, Melnikov, decided to continue the work; in Reiter's opinion the construction of railroads was unconditionally necessary for his basic task—the development of the

country's productive powers, in general, and the raise of the course of the Russian money, in particular, by way of increasing the grain-export. Melnikov prepared a quite purposeful plan for the further development of the railroad net, . . . but it was very difficult to begin its realisation. Reiter still preferred private capital for the undertaking; he expected an influx of Russian and foreign capital; besides he pointed out that since a considerable part of the construction would have to be done by the aid of loans, it was important that those loans be a private matter, although with the Government's guarantee, lest the contracting of new loans should harm the national credit. On the other hand, Melnikov considered that since private construction had been compromised, the work should be done by fiscal means. . . . The Kiev-Balta railroad was built in this way, and it appeared that thanks to Melnikov's personal honesty and strict watchfulness, the cost was only a little over fifty thousand rubles per verst. An important role in the history of Russian railroads was played by the concession given to a Russian contractor, Derviz. In 1866 he undertook to build the Riazan-Kozlov line which connected through Riazan, Moscow, and—through the latter—Petrograd, with the most fertile region; the enterprise proved very profitable, and yielded eight per cent. dividend the first year. It completely changed the state of the Riazan-Moscow line which began to pay twelve per cent. dividend. These circumstances, discovered after 1866, aroused the appetites of Russian capitalists, and improved the chances of Russian railroads abroad. . . . [It was] argued that in the next ten years (1865-1875) at least five thousand versts of railroads should be built. Although . . . [this] calculation was considered optimistic in 1865, it was greatly exceeded, because owing to the concession-fever which began after the success of the Riazan-Koslov line, between 1865 and 1875 were built not five thousand, but twelve thousand more versts, so that by 1875 Russia was in possession of a net of seventeen thousand versts, which connected the most productive regions with ports and with the coal region of the Don, and allowed a wide export of internal products abroad."—A. Kornilov, *Modern Russian history*, pp. 130-144.—"The results of this [concession] policy were shown during the period of 1891-1902, by the construction of new railroads in European Russia carried out chiefly by private enterprise. [Under the able ministry of Count Witte], the Government concentrated its efforts on Siberia, Central Asia and the Caucasus, where roads of strategical and general State importance were laid down. As to European Russia, the Government although it built during the said period some 4000 versts of new railways, was in general content to extend the network of railways belonging to the State by purchasing privately owned roads. Generally speaking this period in the history of Russian railways yielded by far the best results; railway construction had not before been undertaken on so large a scale, nor has it ever since attained these dimensions."—K. Zahorsky and E. Geidanov, *Internal transport, Russian railways, canals and inland waterways* (A. Rafalovich, ed., *Russia: Its trade and commerce*, pp. 230-231).—The first railroad into Siberia was begun in 1878, from Perm to Ekateringburg. The Trans-Siberian railroad was started in 1892, and four years later, a concession was obtained from China to build 2070 miles of track across Manchuria. The Chinese Eastern railway, built by Russia, financed by France, and coveted by Japan, has been the center

of Siberian politics. In fact after 1908 Russia concentrated on railroad building in Siberia, and practically all rail development in Central Russia was at a standstill—a fact of vital importance in the World War.—See also TRANS-SIBERIAN RAILWAY; ASIA: 1500-1900; CHINA: 1895; RUSSIA: 1905 (October); SIBERIA: 1917-1919.

1838-1873.—England.—Railway mail service established.—Beginning of railroad legislation.—Acts of 1845 and 1853.—Railway Commission of 1873.—“In 1838 provision was made for the conveyance of mail by the railways at reasonable charges; some power of compulsion was given the Government. Finally, in 1840, a committee was appointed to consider the entire question of legislative policy. The tendencies of the time were recognized, the mistakes of the past admitted, but no substantive measure of control was proposed. The committee recommended that steps be taken to insure the observance by the companies of the provisions and limitations of their charters. In the sessions of 1841-42 acts were passed providing: that no railway should be opened until it had been inspected by the Board of Trade; that returns should be made to the Board of Trade as to traffic, tolls, rates, and all cases of accident; that existing by-laws affecting persons not servants of the companies were to be submitted to the Board of Trade. The Board of Trade was also designated as the ‘guardian of the public interest,’ and authorized to certify to the law officers of the Crown any infraction of the interest of the public. These acts thus established the principle of regulation, but made no specific provision of importance.”—A. P. Usher, *Introduction to the industrial history of England*, p. 463.—“The first important act, I think, that affects the English railways is what is known as the ‘cheap-trains act,’ which was introduced by Mr. Gladstone as long ago as 1844. One consequence of that act was that it regulated what was probably the most important existing rate in the world. I suppose a yearly traffic of \$100,000,000 is carried on that rate to-day. The act provided that one train per day should carry third-class passengers at two cents per mile, and the fact is that to-day in England every train carries third-class passengers at that rate. This same act of Parliament provided that the state was to be entitled to take over any railway constructed after the passage of the act at 25 years purchase, upon the supposition that the annual profit would be not less than 10 per cent. Practically that act has not been put into force yet. With respect to rate regulation proper, the first act that we need to notice was in 1845, called the ‘railway clauses consolidation act,’ and it applies to every new railway that is constructed. One clause of that act is known as the ‘equality clause,’ which requires that every railway company shall charge the same rate for traffic carried the same distance under the same conditions. Practically no two kinds of traffic are carried the same distance and under exactly the same conditions. Therefore, a clause that merely insisted on equality when all the circumstances were exactly the same had very little effect. Nine years afterwards, in 1854, Parliament enacted what is known as the ‘railway and canal traffic act of 1854.’ Under that act the railway companies were put under obligations, if the circumstances were different, to make such a difference in the rates as was proportional to the difference of circumstances. The early act said circumstances being equal, charges should be equal. The later act said circumstances being different, the difference is to be proportional to

the difference of circumstances. That act was left to be applied by an ordinary law court, the court of common pleas. That court, being an ordinary law court, showed, I think one may say, a considerable distaste for dealing with what were not strictly law questions. It is, of course, familiar to this honorable committee that the question always raised was: What are similar conditions? What are differences of conditions, that justify a difference of rates? At the bottom that is not a legal question, but an economic or business question. From its point of view the court showed considerable distaste, and I think one may say did not encourage complaints of that kind to be brought before it. Then after nearly 20 years, in 1872, there was an inquiry into this matter. There was considerable depression of trade following on very great prosperity at the time of the Franco-German War, and the traders grew restive, raised many difficulties and there was an inquiry by a very strong Parliamentary committee consisting of 10 members, nine of whom were at that time, had been or afterwards became cabinet ministers. That committee recommended—and it was carried into effect by the act of 1873—the institution of a railway commission. That commission was not a legal court except in the sense that it could make orders, and of its three members two were laymen; there was one legal member, not of the standing of a judge, but the chairman was a layman. One effect of that was that the railway companies particularly protested against being subjected to the jurisdiction of what they claimed to be an inferior court. Whenever they were defeated, as they frequently were, they took the case on appeal, or by writ of prohibition, or by various legal methods, before one of the ordinary law courts, and I think one might say that as a rule, certainly in many cases, they succeeded in upsetting the judgment of the commission. Another point of very great importance, I think, in the act of 1873, was that it put the obligation upon the railways to publish every rate, perhaps not in the most effective way, but each railroad was compelled to keep, at every station from which it sent traffic, books showing the rates at which all traffic was carried and the conditions attaching to the rate.”—W. M. Acworth, *Hearing before Committee on Interstate Commerce, United States Senate, May, 1915* (quoted in L. G. McPherson, *Transportation in Europe*, pp. 233-236).

1850-1860.—United States.—Early consolidations.—Pennsylvania, New York Central, Erie and Illinois Central systems.—“The decade following 1850 is a notable one in the history of railways, because it was then that railroad consolidation began on a large scale. . . . The Pennsylvania Railroad Company, by constructing roads, and by purchasing and leasing State lines, connected Philadelphia and Pittsburg in 1852. The Pennsylvania System to-day includes roads once owned by over two hundred companies. [The New York Central, between Albany and Buffalo (1851), two years later added the Hudson River railroad between Albany and New York (1853).] . . . Other railway systems were growing rapidly by construction rather than by consolidations. The Erie Railroad reached Lake Erie in 1851; the same year the Baltimore & Ohio entered Wheeling on the Ohio River; and in 1854 the Rock Island connected Chicago with the Mississippi River. Before the end of the decade, the Illinois Central, aided by a liberal land grant made by the United States in 1850, had reached a length of 700 miles.”—E. R. Johnson, *Elements of transportation*, pp. 11-12.—“The Illinois Central . . . was long considered one

of the greatest railroads in the world. Until after the Civil War there was only one road with a length aggregating more than 1,000 miles. This growth began early in the '50s, at which time the Pennsylvania system first surpassed 500 miles in length; and in 1853 to 1858, when the New York Central nucleus was formed by the consolidation of some sixteen independent corporations. . . . The inconvenience, both for freight and passenger traffic, incident to these small systems was quite obvious. It is stated that, for instance, a journey from New York to the Mississippi in the '50s involved not less than seven bodily transfers from one car to another."—W. Z. Ripley, *Railroads, finance and organization*, p. 456.—See also MICHIGAN: 1850-1860; MINNESOTA: 1849-1894; MISSOURI: 1851-1874; WISCONSIN: 1851.

1853-1918.—Canada.—Intercolonial railroad for the maritime provinces.—Its merger with Canadian National railways after the World War.—In 1853 "the Maritime Provinces of New Brunswick, Nova Scotia and Prince Edward Island were complaining of their isolation from the rest of British North America and clamouring for railway connections. Between the terminus of the Grand Trunk in Quebec and private lines in Nova Scotia, there was a gap of five hundred miles through New Brunswick. The Intercolonial Railway . . . was then projected in order to bring into closer union the separate parts of Canada. Substantial help was finally secured from the British Government and in 1863 a commission was appointed to arrange for surveys of district to be covered, during the progress of which negotiations for the complete union of the provinces were begun. . . . There were various unforeseen difficulties, and it was nine years later before the line between Riviere du Loup and Truro was opened for traffic. Meanwhile the Dominion had taken over the government roads already existing in Prince Edward Island, New Brunswick and Nova Scotia, making 950 miles of railway under the control of the Federal Government in 1876. Numerous other lines were built and acquired. By 1898, the main line of the Intercolonial Railway was complete, including the sections from Montreal to Halifax, from Moncton to St. John, and from Truro to Sydney, Cape Breton."—M. Low, *History of Canadian National railways*, p. 8.—As a Canadian government road, the Intercolonial was one of the original lines to be merged in the Canadian National railways in 1918.—See also NEWFOUNDLAND: 1897-1900.

1853-1919.—Canada.—Grand Trunk railroad.—Grand Trunk Pacific built by the government.—Its difficulties.—Nationalization.—"The Grand Trunk Railway was incorporated November 10th, 1853. . . . It was a bold scheme, almost a reckless one, in the pioneering days of the early fifties, to link up Sarnia, Ontario, with Portland, Maine, via Toronto and Montreal. The undertaking was entered into in order to give Montreal and the west direct communication by rail with the Atlantic seaboard and to give eastern points a direct route to the west through Canada. . . . The first train over the line ran from Montreal to Toronto on October 27, 1856. This train was the forerunner of the International Limited of today. The original system was completed in 1850, the Grand Trunk having at that time a line from Portland, Maine, to Sarnia, Ontario, the latter being connected with Port Huron, Michigan, by ferry. There were also several branch lines. . . . Eventually, by a series of intricate and interesting nego-

tiations, the Grand Trunk Railway was extended to Chicago, Illinois and Detroit. Gradually, by the construction of branch lines and by the acquisition of other railways already operating, the system had spread a net-work all over the south-western parts of the Provinces of Ontario and Quebec. In 1870, the Pullman sleeping-car was introduced into Canada by the Grand Trunk. Several fine bridges and other structures were built, including the St. Clair tunnel connecting Sarnia and Port Huron, which was completed in 1861, being the first sub-aqueous tunnel in America. The main line was double-tracked, making a continuous stretch of double track from Chicago, Illinois to St. Rosalie, Quebec, a distance of 886 miles. . . . Then the Grand Trunk Pacific was begun [1903], . . . a line from Moncton, N. B., to Prince Rupert, B. C., wholly within Canadian territory. The Western Division, from Winnipeg to the Pacific Coast, comprising some 1755 miles, was constructed by the Grand Trunk Pacific Railway Company [1914]. The Eastern Division, extending from Winnipeg to Moncton, N. B., 1804 miles in length, was constructed by, and at the cost of, the Canadian Government, under the supervision of the Commissioners of the National Transcontinental Railway, with the intention of leasing it to the Grand Trunk Pacific for a period of fifty years."—M. Low, *History of Canadian National railways*, pp. 6-10.—But the Grand Trunk declined to operate this transcontinental road, after a time, unless the government would furnish further financial support, as the competition with the Canadian Pacific, its transcontinental rival, was so great. Since no more state aid was forthcoming, the road went into the hands of the Canadian minister of railways, and was operated, under his supervision, by Grand Trunk officials until incorporated into the Canadian National railways, following the government merger of 1918.

ALSO IN: F. A. Talbot, *Making of a great Canadian railway*.

1854-1906.—Mexico.—Early railroad construction.—Diaz régime.—Concessions.—The first railroad was built in Mexico in 1854, connecting Mexico City with Guadalupe. During the next two decades, while Mexico underwent two civil wars, and the French occupation, many concessions for railroads were granted to foreign firms, only to be declared null and void by the government before any building was started. "In 1872 Porfirio Diaz became provisional president. He at once attacked the railroad policy of his predecessor as unduly influenced by foreign interests. . . . On September 26, 1876, he issued a decree nullifying any contract made by his predecessor 'which may result in any burden to the nation.' . . . By the end of Diaz' first term, however, the situation was changed, and the country entered upon a period of active railroad development. Several events contributed to the change. One was the belated recognition of the Diaz government by the United States, thus removing the grounds for prejudice against Americans seeking concessions in Mexico. . . . The early eighties were years of optimism, and American capital flowed in increasing currents into Mexican railroads. The source of these funds were generally the larger financial interests, however; for it does not appear that the securities were generally taken by small investors. For such an extensive distribution, time is needed; and before the necessary time had elapsed, it became apparent that original estimates were inadequate and that too much reliance had been placed upon subsidies. In 1885 the Mexican government found it necessary to suspend the payment of sub-

sides, and, although it made a partial resumption of payments a year later, the American investor had become dubious about the possibility of obtaining great returns from money placed in a country where uncertainty was the general rule. . . . The field, therefore, was left to the interests already committed to the venture and to investors in Europe who were able and willing to place their funds with a view to a slow development and deferred returns."—F. W. Powell, *Railroads of Mexico*, pp. 109, 111-112, 110-120.—Across the isthmus of Tehuantepec, the narrowest portion of Mexico, the building of a railway connecting the Atlantic and the Pacific oceans was discussed in 1859, and attempted in 1882, 1887 and 1893. Finally in 1898 the Mexican government contracted with the London firm of Pearson and Son, Ltd., to rebuild the 192 miles of line already laid, and to complete the road to the terminals, Puerto Mexico (Coatzacoalcos) on the Gulf coast, and Salina Cruz on the Pacific coast. The work was completed in 1906, and the interoceanic railroad formally opened by President Diaz.

Also in: B. Moses, *Railway revolution in Mexico*.—G. C. Terry, *Tehuantepec railway of Mexico* (*Engineering Magazine*, Jan., 1907).

1855-1915.—India.—Early development under Lord Dalhousie.—Later development to meet famine emergencies and to exploit resources.—Roads from Calcutta, Bombay and Madras.—The general Indian railway policy was laid down by Lord Dalhousie, who established the Board of Public Works in India. The first railroad was built out of Bombay in 1855, under his direction. This great administrator proceeded to advance the plans and construction of three trunk railroads, the East Indian from Calcutta, in northern India; the Great Indian Peninsula from Bombay in western India and the Madras, from Madras in south-eastern India. They were built by private companies for the purpose of linking up the cities named with the other great centers of population, the government in order to attract capital guaranteeing five per cent on the investment for a period of twenty-five years, with provisions for then taking over the lines. This policy, however, proved embarrassing in consequence of the financial burden, the average cost being £16,000 per mile, so that the policy was modified in the next decade. "Feeders" were also constructed chiefly of narrow gauge lines, with the assistance of the government. The East Indian railway by 1861 ran from Calcutta to Allahabad, yielding the full rate of five per cent the very first year. Even before the Mutiny in 1857, about 200 miles of railroad were opened for traffic, but that was not sufficient to be of much help in putting down the great rebellion. The military exigencies hastened the further construction of railroads. After the great famine of 1866 railroad building, together with the construction of new irrigation canals, was stimulated to the utmost to provide greater means of famine relief and mitigation of droughts. Direct construction of new lines as well as the purchase of the "guaranteed" roads were undertaken by the government, whose railroad debt in subsequent years ran upwards of £200,000,000. The term of several contracts with the private companies having expired, under their specified conditions the government had the right to take possession of the lines, but instead of doing so it made contracts for another 25-year period, under which it should share profits above five per cent. Other lines, however, were wholly acquired by the government, among them the East Indian railway in 1879. This railroad, ascending the Ganges from

Calcutta to Delhi, sends forth a branch to Jabalpur in the Central provinces, so that in 1871 direct rail connection had been established between Calcutta, in Bengal, and Bombay and Madras, respectively, on the west and east coasts; and in 1878, connections were further established through Panjab to Karachi, the great port in the Indus delta. The Great Indian Peninsula railway (2900 miles) extends from Bombay, "the gateway of India" on the west coast, north to Cawnpore and Agra, and east to Jabalpur (or Jubbulpore) where it connects with the East Indian railway for Northern India and Calcutta; it also connects at Nagpur with the Bengal-Nagpur railway (2550 miles) for the Central Provinces and for Calcutta; and with the Madras and Southern Mahratta railway at Raichpur for Madras; as well as with the Hyderabad state railway at Wadi, for that most important of native Indian States, having almost 15,000,000 population. The ownership of the Great Indian Peninsula railway was taken over by the government in 1900, but it is operated by a private company. The Bombay Baroda and Central India railway (2775 miles) was also taken over by the government in 1905 and connects Bombay with Baroda, Delhi and the leading railroads in northern India. It is one of the original guaranteed railroads, tapping the rich Guzerat and Rajputana. The Madras and Southern Mahratta railway (3100 miles), running from Madras on the east coast into Hyderabad and Mysore, and connecting also with railroads in the north and south, was taken over by the government in 1907, as was the South Indian railway (1700 miles) running from Trichinopoly, Madras, and connecting by a ferry with the Ceylon Government railway. The East Indian railway (2710 miles), giving the only direct access to Calcutta from Northern India, was linked with the Oudh and Rohilkhand railway, a state road connecting together Benares, Allahabad, Lucknow and Cawnpore. Another important state road is the Northwestern railway (3750 miles) connecting Karachi on the Arabian sea with Panjab and with the Northwestern Provinces, and penetrating Baluchistan. The Bengal and Northwestern railway is an important line of 2000 miles. Not owned by the state like the Oudh and Rohilkhand, it forms a web north of the Ganges with rail connections at Benares and Cawnpore. The East Indian railway, by means of its great bridge over the lower Ganges (opened Mar. 4, 1915) has further given easy access to Assam, northern Bengal and Burma. The Burma railways connect Rangoon and Mandalay, with extensions to Lashio in the North Shan states and to Taunggyi in the South Shan states. Reverting to the Northwestern railway, tapping Baluchistan via Bolan Pass (Quetta is 536 miles from Karachi, 727 miles from Lahore), this extension was obviously built more from a military strategic standpoint than with a view to its commercial importance. It skirts the boundary of Afghanistan. With respect to the native state railways of India, Baroda has a greater railroad mileage in proportion to its area than is possessed by any other state. In view of the removal of the capital of India to Delhi, it is now interesting to consider the later history of the railroads as related to that city, from which seven of them radiate. The East Indian and the Great Indian Peninsula railway lines have already been mentioned as furnishing communications with the east and south. "It is over fifty years since the first railway in the Panjab, a short line joining Lahore and Amritsar, was opened in 1862. Three years later Lahore was linked up with Multan and the small steamers which then plied on the Indus.

Amritsar was connected with Delhi in 1870, and Lahore with Peshawar in 1883. The lines from Peshawar to Lahore and branching thence to Karachi and Delhi may be considered the Trunk Line. . . . There are now three routes from Delhi to Lahore: (a) The N. W. Railway *via* Meerut and Saharanpur (on east of Jamna), and Ambala, Ludhiana, Jalandhar, Amritsar; (b) The Southern Panjab Railway *via* Jind, Rohtak, Bhatinda, and Ferozepore; (c) The Delhi-Ambala-Kalka branch of the East Indian Railway from Delhi through Karnal to Ambala, and thence by the N. W. Railway. This is the shortest route. The Southern Panjab Railway also connects Delhi with Karachi through its junction with the N. W. Railway at Samasata to the south by Bahawalpur. Another route is by a line passing through Rewari and the Merta junction. Karachi is the natural seaport of the central and western Panjab. The S. P. Railway now gives an easy connection with Ferozepore and Ludhiana, and the enormous export of wheat, cotton, etc., from the new canal colonies is carried by several lines which converge at Khanewal, a junction on the main line, a little north of Multan. The Sind Sagar branch starting from Lala Musa between Lahore and Amritsar with smaller lines taking off further north at Golra and Campbellpur serves the part of the province lying north of the Salt Range. These lines converge at Kundian in the Mianwali district, and a single line runs thence southwards to points on the Indus opposite Dera Ismail Khan and Dera Ghazi Khan, and turning eastwards rejoins the trunk line at Sher Shah near Multan. There are a number of branch lines in the plains, some owned by native States. Strategically a very important one is that which crossing the Indus by the Khushalgarh bridge unites Rawalpindi with Kohat. The only hill railway is that from Kalka to Simla, [the summer capital].—J. Douie, *Panjab, North-west Frontier Province and Kashmir*, pp. 128-130.

1861-1865.—United States.—Government control of railroads in the Civil War.—“In view of the paramount importance the railway system was to assume in the conduct of the war, the Federal Government took possession of the Philadelphia, Wilmington and Baltimore Railway on March 31, 1861. This preliminary measure was followed by the passing, in January, 1862, by the United States House of Representatives, of ‘An Act to authorise the President of the United States in certain cases to take possession of railroad and telegraph lines, and for other purposes.’ . . . Thus the Act in question established a precedent for a Government taking formal possession of, and exercising complete authority and control over, the whole of such railways as it might require to employ for the purposes of war; although, in point of fact, only such lines, or portions of lines, were so taken over by the War Department as were actually required. In each instance, also, the line or portion of line in question was given back to the owning company as soon as it was no longer required for military purposes; while at the conclusion of the war all the lines taken possession of by the Government were formally restored to their original owners by an Executive Order dated August 8, 1865. . . . In certain instances the lines taken possession of were in so defective a condition that it was imperatively necessary to relay them, apart all together from any question of gauge. Lines which, though begun, were not finished, had to be completed; in others new lines had to be constructed throughout, or extensive sidings provided; so that

. . . we see that it was not then simply a question of the Federal Government taking possession of and operating an existing complete and efficient system of railways. . . . Reviewing the general situation at this time [General McCallum, military director of railroads] . . . says in his report: ‘The attempt to furnish an army of 100,000 men and 60,000 animals with supplies from a base 300 miles distant by one line of single-track railroad, located almost the entire distance through the country of an active and vindictive enemy, is without precedent in the history of warfare.’ . . . To meet the various conditions which had thus arisen, McCallum was authorised by the Federal Government to create two distinct departments, destined to bring about a still further development in the application of rail-power to war by establishing precedents which the leading countries of the world were afterwards to follow more or less completely, according to their own circumstances and requirements. The departments were known respectively as the ‘Transportation Department,’ embracing the operation and maintenance of all the lines brought under use by the army of the North; and the ‘Construction Corps,’ which was to repair the damage done by wrecking parties of the enemy, maintain lines of communication, and reconstruct, when necessary, railways captured from the enemy as the Federals advanced. . . . One expedient resorted to by the Federal Government, on finding they could not procure from the manufacturers all the rails they wanted, was to pull up the railway lines that were not wanted for military purposes and use their rails for relaying those that were. . . . These details may convey some idea of all that was involved in the utilization of rail-power in the American Civil War under such development of railway construction as had then been brought about.”—E. A. Pratt, *Rise of rail-power in war and conquest, 1833-1914*, pp. 16-17, 19-20, 22-23.

1862-1911.—United States.—Development of railway mail service.—“The assorting of mail while in transit was begun in this country in 1802, when William A. Davis, who was then chief clerk in the mailing department of the post office at St. Joseph, Mo., fitted up the first railway postal cars. These cars were run on the Hannibal and St. Joseph Railroad, and were put in service to facilitate the prompt forwarding of the overland mails westward from St. Joseph, an important distributing point at which the mails were then transferred from the railroad to the ‘overland stages.’ The advantages of having the mails reach the distributing point assorted ready to be forwarded without delay to their several destinations were quickly recognized, and the traveling post office was soon established on the principal lines of railroad. . . . The mail service over a particular route is generally an adjunct of the passenger service until a weight of 50,000 pounds is reached for a single mail, and when that weight is exceeded fast mail trains are put into service. . . . A change in the organization of the railway mail service was made in 1911 by the establishment of terminal railway post offices at the railway stations of the large cities. By handling at these post offices a part of the mail formerly sorted in the post-office cars a large reduction was made in the car space and the number of railway postal clerks needed. The terminal post office makes possible

the use of labor-saving devices which could not be installed in cars, and also brings about the elimination of much of the rehandling of mail matter. . . . In accordance with the act of Congress passed in 1873 the pay to the railroads for carrying the mails is based upon the weight of the mail carried, the distance the mail is transported, and the number of full-sized postal cars operated by the railroad. The actual rate of pay, as fixed by the act of 1873, was reduced 10 per cent in 1876. Another reduction of 5 per cent was made in 1878, and in 1907 a reduction was made on all weights in excess of 5,000 pounds. . . . The daily weight of mail carried by the railroads over the various routes is ascertained by weighing the mails once in four years for not less than 90 successive working days. . . . There has for a number of years been a controversy over the present method and rates of payment to the railroads for the transportation of the mails. The Postmasters General of the last two administrations have maintained that the railroads have been paid too much, while the railroad companies have protested that they have received too little."—E. R. Johnson and T. W. Van Metre, *Principles of railroad transportation*, pp. 231-237.

1869.—United States.—First regulation of railroads by state commissions.—"The first commission of the advisory type was created by Massachusetts, in 1869; and the other States that adopted commissions of this kind were largely influenced by the provisions of the Massachusetts Law. The commission created by Massachusetts consisted of three men appointed by the Governor with the consent of the State Council; the term of office was three years, one man being appointed each year. The commission was given authority (a) to ascertain whether the railway companies were living up to the terms of their charters and were obeying the laws; (b) to supervise the roads with reference to the security and accommodation of the public; (c) to investigate the railroads either upon the commission's own motion or upon complaint of some shipper or traveler; (d) to prescribe and enforce a system of keeping accounts; (e) to act as a board of arbitration to settle disputes between the corporations and the public; and (f) to make an annual report, with recommendations, to the Legislature. It will be seen that the Massachusetts commission had no authority to issue orders or to enforce its decisions. The theory of the law was that the railroads would be regulated by the force of public opinion and by enactment of such laws as the Legislature might think necessary."—E. R. Johnson, *Elements of transportation*, pp. 133-134.

ALSO IN: F. H. Dixon, *State railway control*.
1869-1910.—United States.—Growth of railroads.—Transcontinental lines.—"The means of transportation and communication were developed upon an unprecedented scale during twenty years after the Civil War. Railroad building was checked during the war, but only temporarily, and the decade saw the number of miles almost doubled—from 30,635 in 1860 to 52,014 in 1870. . . . Railroad extension was again interrupted by the crisis of 1873 [see U.S.A.: 1873], which was largely caused by the too rapid railway construction and the intense speculation accompanying it, but by 1879 it began to revive, and the end of the decade saw the number of miles again almost doubled; by 1880 there were 93,296 miles of railroad in the United States. This increase of almost 75 per cent. in ten years far outran the growth in population, which was only 30 per cent. in the same period. Most of the new construction took place

in the northwestern States and afforded an outlet for the grain supplies which these States were beginning to pour into the world's markets; considerable was built also in the South and Southwest. The building of the railways, too, both facilitated, and was demanded by, the enormous immigration which now began to fill up our western territory. During this same decade the population in the Northwest increased 44 per cent. and that of the Pacific States 114 per cent. By 1880 there was one mile of road completed to every 571 of the population, as against every 1087 in 1860. The people of the United States were already better supplied with railroad facilities than were those of any other country. . . . The idea of a transcontinental railroad had been advocated as early as 1834, and the gold discoveries in California had revived the demand for it, but nothing tangible was done in this direction until 1862. Then the political and military necessity of uniting the Pacific States with the East, and of securing better means of communication with the Southwest, induced Congress to aid several companies to build lines across the western plains. The Union Pacific railroad, which constructed its line from Omaha to Ogden, received 12,000,000 acres of the public lands, and the Central Pacific, which built eastward from Sacramento to connect with the Union Pacific, received 8,000,000 acres. [The two lines met at Ogden in 1869 and were joined by a golden spike.] The Northern Pacific was granted over 10,000,000 acres. Additional grants to the Kansas Pacific and other corporations brought up the total to 33,000,000 acres. In addition to these grants of land three of the companies mentioned received large loans of money from the Federal government. During the twenty-one years between 1850 and 1871, at which time land grants were discontinued, more than 150,000,000 acres were placed at the disposal of railroad corporations by the Federal government and 55,000,000 acres by the State governments, to which the land was previously given for this purpose by the Federal government."—E. L. Bogart, *Economic history of the United States*, pp. 348, 350-351.—Other conquests of continents by railroad engineers were achieved by the completion of the Canadian Pacific in 1886 (see below: 1871-1910), and the Trans-Andean railroad in 1910.—See also U.S.A.: 1865-1872; ARIZONA: 1864-1883; DAKOTA TERRITORY: 1871-1876; IDAHO: 1880-1889; IOWA: 1873-1874; 1874-1898; KANSAS: 1859-1866; NEBRASKA: 1863-1921; NEVADA: 1860-1913; NEW MEXICO: 1879-1885; OKLAHOMA: 1872; OREGON: 1870-1887; WISCONSIN: 1856-1893; 1873-1907.

1870-1876.—United States.—Granger legislation for railroads.—"Railroads and settlers both moved too far west; and ran heavily into debt to do it. . . . These roads were dependent upon the wheat crop for their revenue. The price of wheat, which for some years had been high, was at last affected by the extension of production and the change of conditions. With transportation charges at their previous figure, the farmers could no longer pay their debts. With transportation charges reduced, the railroads could not pay theirs. There was a loss to be divided, instead of a profit. It was beyond the power of any law to divide this loss in such a way as to give a profit

to both parties. . . . Where there was but one railroad, it charged all that it could extort. When the farmer had once settled so far from any market, he was at the mercy of the railroad, which furnished his sole means of transportation. But where there were two competing roads they brought rates down to a point where they only paid operating expenses, and not any share of the fixed charges. The resulting discriminations were enormous; and these discriminations seemed to be the reason why farming did not pay. . . . Too often, in the treatment of the farmers, the railroad agents added insult to injury. A state of feeling was developed through the community which only wanted organization to become all powerful. It found this organization in the Granges. In Illinois the constitutional convention of 1870 made an important declaration concerning State control of rates, on the basis of which a law was passed in 1871, establishing a system of maxima. This law was pronounced unconstitutional by Judge Lawrence. The result was that he immediately afterward failed of re-election, solely on this ground. The defeat of Judge Lawrence showed the true significance of the farmers' movement. They were concerned in securing what they felt to be their rights, and they were unwilling that any constitutional barriers should be made to defeat the popular will. They had reached the point where they regarded many of the forms of law as mere technicalities. They were dangerously near the point where revolutions begin. But they did not pass the point. The law of 1873 avoided the issue raised by Judge Lawrence against that of 1871. Instead of directly fixing maxima, it provided that rates must be reasonable, and then further provided for a commission to fix reasonable rates. Similar laws were passed by Iowa and Minnesota almost immediately afterward. The Legislature of Wisconsin went even farther, fixing, by the so-called Potter Law, the rates on different classes of roads at figures which proved quite unremunerative. The railroads made vain attempts to contest these regulations in the courts. They were defeated again and again, and finally, in 1877, the Supreme court of the United States sustained the constitutionality of the Granger laws. In the second year of its operation, no Wisconsin road paid a dividend; only four paid interest on their bonds. Railroad construction had come to a standstill. Even the facilities on existing roads could not be kept up. Foreign capital refused to invest in Wisconsin; the development of the State was sharply checked; the very men who had most favored the law found themselves heavy losers. These points were plain to every one. They formed the theme of the Governor's message at the beginning of 1876. The very men who passed the law in 1874, hurriedly repealed it after two years' trial. In other States the laws either were repealed, as in Iowa, or were sparingly and cautiously enforced. By the time the Supreme Court published the Granger decisions, the fight had been settled, not by constitutional limitations, but by industrial ones.—A. T. Hadley, *Railroad transportation*, pp. 130-136.—See also U. S. A.: 1873-1874.

Also in: S. J. Buck, *Granger movement*.

1870-1910.—United States.—Increase of railroad mileage.—“Twenty years down to 1800, at which time 5,000 miles was about the maximum length of a single railroad, cover the second period in the development of the larger transportation units. The Pennsylvania first attained the length of about 4,000 miles in 1880. Two years later the Lake Shore & Michigan Southern absorbed its

parallel line, the Nickel Plate road. Then, when in 1885 the New York Central picked up the West Shore, the Vanderbilt system under common control first attained sizable proportions. Even west of Chicago, the Vanderbilt interest was already strong in the Chicago & Northwestern, which by 1886 had about 3,500 miles of line. Some 1,500 miles more were soon added in subsidiary properties. By 1889 the Union Pacific owned 2,000 miles of line and controlled nearly 4,000 more. Whether the Act to Regulate Commerce of 1887 (see U. S. A.: 1887; Interstate Commerce Act) appreciably affected the growth of large units or not is entirely obscured in face of the more important direct effects of general prosperity or stagnation. Single systems comprising as much as 10,000 miles of line appeared for the first time after 1890. The Pennsylvania rapidly increased in size to a mileage greater than 7,000. And the interchange of business attendant upon close working agreements and community of ownership between the trunk lines and roads west of Chicago, foreshadowed even closer relationship in future. . . . The spread of consolidation, especially since 1900, has been so marked that there has been an actual decrease in the number of independent operating roads. During the decade to 1910, 300 more railroads came into being; but the number independently operated fell from 847 to 829.”—W. Z. Ripley, *Railroads, finance and organization*, pp. 456-457.—See also CAPITALISM: 10th century: United States; DELAWARE: 1868-1860; FLORIDA: 1876-1884; MICHIGAN: 1850-1880; 1885-1895; MINNESOTA: 1877-1888; NEBRASKA: 1880-1907: Railroads as a factor in the development of the state; NEVADA: 1907-1913: Railroad commission; NEW HAMPSHIRE: 1870-1905; NORTH DAKOTA: 1880-1892; SUPREME COURT: 1882-1898; U. 1871-1910.—Canada.—Canadian Pacific railroad.—Its amalgamations.—“Years before Confederation, such far-seeing Canadians as William M'Dougall and George Brown had pressed for the annexation of the British territories beyond the Lakes. . . . The decisive political factor came into play in 1870, when British Columbia entered the federation. Its less than ten thousand white inhabitants—deeming themselves citizens of no mean country, and kept to their demands by the urging of an indefatigable Englishman, Alfred Waddington—made the construction of an overland railway an indispensable condition of union, and Sir John Macdonald courageously accepted their terms. . . . These factors, then, brought the question of a railway to the Pacific on Canadian soil within the range of practical politics. . . . During the parliamentary session of 1871 the government of Sir John Macdonald decided that the road should be built by a company, not by the state, that it should be aided by liberal subsidies in cash and in land, and, to meet British Columbia's insistent terms, that it should be begun within two, and completed within ten, years. The Opposition protested that this latter provision was uncalled for and would bankrupt the Dominion, but the government carried its point, though it was forced to hedge later by a stipulation—not included in the formal resolutions—that the annual expenditure should be such as not to press unduly upon the Dominion's resources. The first task was to survey the vast wilderness between the Ottawa valley and the Pacific, and to find, if possible, a feasible

route. . . . The man chosen for the task of achieving this impossibility was Sanford Fleming. Appointed engineer-in-chief in 1871, he was for nine years in charge of the surveys, though for half that time his duties on the Intercolonial absorbed much of his energy. . . . Back to Ottawa the pilgrims came, and there on October 21, 1880, the contract was signed by Charles Tupper for the government and by George Stephen, Duncan M'Intyre, James J. Hill, John S. Kennedy, Morton, Rose and Co. of London, and Cohen, Reinach and Co. of Paris. . . . When parliament met in December 1880 the contract was laid before it. The terms were princely. For constructing some nineteen hundred miles the syndicate were to be given free and complete the seven hundred and ten miles under construction by the government, \$25,000,000 in cash, and 25,000,000 acres of selected land in the Fertile Belt. They were promised exemptions from import duties on construction materials, from taxes on land for twenty years after the patents were issued and on stock and other property for ever, and exemption from regulation of rates until ten per cent per annum was earned on the capital. Assurance was given that for twenty years no competitive roads connecting with the western states would be chartered: 'no line of railway south of the Canadian Pacific, except such line as shall run southwest or to the westward of southwest, nor to be within fifteen miles of latitude 49°.' Ten years were given to complete the task, and a million dollars were deposited as security. . . . The financial policy adopted by the Canadian Pacific was unique in the records of great railway enterprises on this continent. It was simply to rely entirely on stock issues, to endeavour to build the road without incurring any bonded debt. Not until the last year of construction, 1885, were bonds based upon the security of the road itself issued for sale. It was doubtless desirable, if possible, to avoid the reckless methods by which so many American roads had been hopelessly waterlogged by excessive bond issues. . . . The men behind the Canadian Pacific proved themselves possessed of courage and determination such as will always win them honour. At more than one critical stage they staked their all to keep the work going. But the fact remains that the bulk of the resources utilized in the original building of the road were provided or advanced by the people of Canada. The Canadian Pacific is as truly a monument of public as of private faith. . . . In the Eagle Pass, at Craigellachie, on November 7, 1885, the eastward and westward track-layers met. It was only a year or so before that the Northern Pacific had celebrated the driving of the last golden spike by an excursion which cost the company a third of a million, and heralded the bankruptcy of the road. There was no banquet and no golden spike for the last rail in the Canadian Pacific. William Van Horne had announced that 'the last spike would be just as good an iron spike as any on the road,' and had it not been that Donald A. Smith happened along in time to drive the spike home, it would have been hammered in by the navy on the job. Six months later the first passenger train went through Montreal to Vancouver. The longest railway in the world was open from coast to coast, five years before the end of the time required by the original contract."—O. D. Skelton, *Railway builders*, pp. 114-117, 141-143, 155, 159, 166.—The process of absorbing other roads into this great trunk line soon began. In the west the Canadian Pacific acquired the Winnipeg to Manitou, in 1882, the Manitoba South Western, the Manitoba and North

Western, the North West Central, the Qu'Appelle, Long Lake and Saskatchewan, the Crow's Nest Pass, the Calgary and Edmonton, the Columbia and Kootenay. In the east many of the smaller lines were amalgamated with the Canadian Pacific, among them the North Shore, the Ontario and Quebec, the New Brunswick railway, and the St. John and Maine railway. In the United States the company secured control of the Minneapolis, St. Paul, and Sault Ste. Marie, the Wisconsin Central, the Duluth South Shore and Atlantic railway, thus forming a vast system of transportation aggregating 10,543 miles, in 1910.—See also CANADA: 1880; BRITISH COLUMBIA: 1886-1888.

1872.—England.—Third class established on all trains.—In 1872, the Midland railways announced that third class passenger coaches would be carried on all trains. The service in the third class was gradually improved, and two years later the second class was discontinued, and the first class rates for passengers reduced.

1872-1912.—South America.—Trans-Andean railroad.—Arica-La Paz railroad.—In South America railroad development went forward with notable constructions. "The inception of the Transandine line dates back to 1872, when Messrs. Juan and Marteo Clark secured a concession from the Argentine government for the building of a railway from Buenos Ayres to Mendoza and the Argentine boundary, and shortly afterward a concession from the Chilean government for a line from Los Andes to the Chilean boundary. The line to Mendoza was finished in 1886, and in January, 1887, the construction of the extension toward the Chilean frontier was taken in hand. . . . The construction was divided into three sections, the first of which, from Los Andes to Juncal, a distance of 32 miles was opened for traffic in February, 1906. . . . Section two is that between Juncal and Portello, which lies in an exceptionally mountainous district. This second section of the Transandine Railway was opened in January, 1908, well within the specified time. It is, however, in the last part of the third section, viz., that from Los Andes and La Cumbre, or the dividing line between Chile and Argentina, that the great spiral tunnel, perhaps one of the longest of its kind and most difficult of construction in the world, has been made. The summit tunnel has a length of 9,906 feet, and in addition there are short lengths of artificial tunnel at each end, viz., 105 feet on the Chilean side and 338 feet on the Argentine side. . . . As Buenos Ayres is the main gate on the Atlantic coast of the completed road, so is Valparaiso the gate on the Pacific side."—F. C. Coleman, *Transandine railway and tunnel* (*Scientific American*, Jan. 27, 1912).—Another feat of railroad building is the Arica-La Paz line. From Arica on the Chilean Pacific coast this remarkable railway extends 267 miles to La Paz, the lofty capital of Bolivia. The line was built in accordance with agreements entered into by the Chilean and Bolivian governments in 1904, though actual construction work did not commence until 1909. The road was opened in 1912, the total cost of construction reaching \$12,000,000 or over \$45,000 a mile. The work was performed by a firm of British engineers. One of the noteworthy achievements was the laying of twenty-eight miles of rack railroad, which constitute the longest uninterrupted stretch of cog and wheel construction in the world. The Arica-La Paz road taps the rich copper regions of Bolivia

and forms a link in a transcontinental system across Chile, Bolivia and Brazil.—See also ARGENTINA: 1909; Mitre law: CHILE: 1909-1910; 1909-1912.

1872-1916.—Japan.—First railroads.—Government and private construction.—Nationalization.—The first railroad line in Japan was opened between Tokio and Yokohama in 1872. Two other short lines were built in the next five years. In 1883 the Grand Trunk railway from Tokio to Kyoto was begun. Although the first ten years of railway enterprises were characterized by state monopoly, during the decade of 1881 to 1891, the Nippon Railway Company and twelve other private companies were established. The government undertook larger projects in 1892. "Japan decided on the nationalization of her railways in 1906. Her principal railways have since been purchased by the government and placed under sole management of the Board of Railways, so that of the total length of railways in Japan proper, aggregating 6,500 miles, the government railroads reached 5,650 miles [in 1916]."—*Japan Financial and Economic Magazine, Jan., 1916, p. 10.*—These lines are being linked to the mainland of Asia by car floats, where, as part of her Chinese policy, Japan has been acquiring practical control of the railways in Korea and Manchuria by managing Chinese-owned lines, and by securing concessions for new lines by diplomatic pressure.—See also JAPAN: Map.

1876-1921.—China.—Early railroads.—Peking-Mukden line.—Railway concessions to rival European powers.—Russia's aggression for the Trans-Siberian railway.—Japan's encroachments.—"In 1876, the first railway in China was laid by a foreign firm from Shanghai to Wusung, where the bar on the Shanghai river interrupts the traffic. It was well patronized, paid a dividend at once, and after running sixteen months, was purchased by the Chinese authorities, who no sooner came into possession of it than they tore it up and shipped the materials to Formosa."—H. Norman, *People and politics of the Far East, p. 308.*—"The next line to be started was one which, though unambitious in its scope, became ultimately a part of the important line from Peking to Mukden. In 1877 permission was obtained by the Chinese Engineering and Mining Company to build a railway from its mines at Kaiping to a canal at Hsukchuang, a distance of six miles. It had not been the intention of the Government that the cars should be drawn by steam, but in fact the engineer in charge managed to construct and operate a steam locomotive which received the name of 'The Rocket of China.' The use of this engine was acquiesced in, and in 1886 permission was obtained to extend the line southward to Tientsin, which extension was completed in 1889. In 1891, the further extension of this line northward to Shanhaikuan was authorized. A few years later the ownership of the road was acquired by the Imperial Government and its operation placed in the hands of the Chinese Imperial Railways Administration. In 1894, the line was again extended from Tientsin to Peking. After the Sino-Japanese War a loan of £2,300,000 (16,000,000 taels) was obtained from the British banks for extending the line to Mukden. the loan agree-

ment bearing date of October 10, 1898. The conditions of this, one of the first of China's railway loans, need to be summarized, as they show the character of the 'control' provided for, and also furnished a model for a number of later loans. The loan was made 'a first charge upon the security of the permanent way, rolling stock, and entire property, with the freight and earnings of the existing lines between Peking and Shanhaikuan, and on the freights and earnings of the new lines when constructed.' Undertaking was given by the Chinese Government that the roads, buildings, rolling stock, etc., would be kept in good condition. If the construction of branch lines or extensions connecting with the lines concerned should be later proposed, the British and Chinese Corporation was to be applied to for loans if foreign capital was needed."—W. W. Willoughby, *Foreign rights and interests in China, pp. 526-527.*—"In the 'Battle for Concessions' the private speculator in railways appeared on the scene to worry the Chinese Government, but behind him, in addition, was the whole diplomatic force of his country. Later, the bankers, encouraged by their governments to finance railway construction in those regions which the latter had marked out as their sphere of political influence or of pecuniary interest, secured for the money market the issues of loans, and for the trade of their respective countries orders for the materials required. . . . When our troops were defeated by the Japanese in the autumn of 1894, the policy of the Powers with respect to China was consequently changed. Russia headed the way and prepared to play an important part in the Far East by the construction of the Trans-Siberian Railway. [See TRANS-SIBERIAN RAILWAY.] Long before the Chino-Japanese War, Russia had cherished the idea of constructing a railroad from the Urals to the Pacific coast, with the object of strengthening her strategical position and political influence in the Far East. Russia's first attempt was to seize one of the Korean ports, free from the grip of ice, as a terminus, but this attempt failed owing to England's objection. In May, 1891, the Siberian Railroad was officially started at Vladivostok. The Chino-Japanese War had given Russia the opportunity to secure an ice-free port in the territory of China. France was not inactive in demanding something for her services to China. On June 20, 1895, a treaty with France was signed by China, stipulating, besides the extension of the frontier between China and Indo-China and the exploitation of mines situated in the Province of Hunnan and other resources, that the military railways already built between Phulungthuong and Langson in Tongking, or other railroads to be constructed in Annam misat, after a mutual understanding, be extended into Chinese territory. . . . Great Britain now wanted to act in her turn. On February 4, 1897, she made a treaty with China, in which, besides many privileges granted to her, China allowed an important modification on the Burmese frontier. At the end of the same year, China, having been obliged to liquidate the Japanese War Indemnity, negotiated a loan with some British financial agents. The security of the loan was to be the native and maritime customs, the salt tax and Likin (an internal merchandise tax). But the British Government was not satisfied with this ample and sufficient security and demanded certain concessions in addition. These included the railway from Burma to Yunnan, a guarantee of the non-alienation of the Yangtze region to any other Power, greater freedom of internal trade with the aboli-

tion of Likin on foreign goods in the treaty ports, and finally the opening of Taliénwan and Nanning to foreign trade. . . . The recognition of the occupation of Kiaochow and the concessions of railways and mines to Germany accelerated the aggressive actions of the other covetous Powers. Russia made a more significant advance from North Manchuria and on March 27, 1898, secured a twenty-five years' lease of Port Arthur and Taliénwan, and compelled the Manchu Court to permit the Chinese Eastern Railway Company to extend a branch line from a certain point (Harbin) on the main line to these two ports. . . . The Trans-Siberian Railroad as originally projected was entirely within Russian territory and followed the bank of the Amur River from Stetinsk to the Ussuri—a wide useless detour. When Russia secured this concession the section on the north bank of the Amur River was abandoned for a Trans-Manchurian Railroad which leaves a station near Chita and enters Manchuria at Manchouli to rejoin the original line at Nikolskoi, about 67 miles from Vladivostock—thus shortening the distance by about 500 miles. The line running across Manchuria towards Vladivostock covers a distance of about 960 miles in Chinese territory. In the Spring of 1897, work of construction was started and in the same year the city of Harbin was founded and made the headquarters of construction. This was the first step toward what has been called Russia's 'pacific conquest' of China. . . . The construction of the whole system was pushed on very rapidly. In the fall of 1901 the entire Chinese Eastern Railway connecting the Trans-Siberian line with Vladivostock across Manchuria and the line south from Harbin to Port Arthur were completed. This system in Manchuria in all measured about 1,600 miles. The estimated cost of construction of the whole system was about Rbs. 422,292,547. After the Russo-Japanese War the Southern section of the railway from Kuangchengtze to Dairen (Japanese spelling of Talién) was surrendered to Japan. The Chinese Eastern Railway system . . . has a total mileage of only 1,078 miles; the Manchouli (*via*. Harbin) to Sufenho (Pagonitchnaia) section forms the Manchurian section of the Trans-Siberian Railway with a branch to Kuangchengtze . . . ports. . . . And thus we see that the four systems of railway, *i.e.*, the Russian system in Manchuria, the German system in Shantung, the French system in Kuhnán and Kwangsi, and the British system connecting Burma with Yunnan and Szechuan all owe their origins to political and strategical rather than commercial aspirations. . . . Up to the middle part of the year 1900 the Russian, French, Belgian, and American syndicates pushed on in surveying or in constructing their respective roads with considerable vigor and energy. The British concessionaires, however, were very inactive and backward in carrying out the work on their concessions, most of which were only in preliminary arrangement and by no means promising of anything definite. This was first due to the political intrigues which had influenced the Government to oppose British enterprises and support the Franco-Belgian group of capitalists backed by Russian diplomacy, and secondly due to the outbreak of the Boer War which had made it for a time impossible to raise capital in the London money market to finance projects. The securing of concessions for building railroads and working mines by foreign syndicates supported by their respective governments or by the combination of several governments the energetic but dangerous action

exhibited by the aggressive foreign ministries and navy and army cliques in robbing territories and seizing political and commercial privileges, and the subsidizing of China by foreign capital stirred up an anti-foreign feeling among the people. In June, 1900, the Boxer movement originating in the Province of Shantung, burst over North China. Its results were the further humiliation of China and the retardation of the constructional work on railways."—M. C. Hsu, *Railway problems in China* (Columbia University studies in history, economics and public law, pp. 27-32, 44, 54-55).—Out of the period of "the battle of concessions" have grown the economic problems, which formed so vital a part of the Far Eastern question discussed at the Washington conference, which President Harding called in November, 1921. The Far Eastern republic of China, which at that time controlled the Chinese Eastern railway, was refused admission to this peace conference. Because of the international complications of this famous railway, the United States had proposed its internationalization in 1916, but the idea was rejected by Japan, Russia, and France.—See also CHINA: 1898 (February-December); 1899 (March-April); 1904-1909.

1880-1882.—United States.—Abuses in railroad construction.—"In the three years 1880-1882 . . . 29,000 miles of railroads [were built in the United States], an addition of thirty-four per cent. to the railroad mileage of the country. Not more than one third of these were justified by existing business. Another third, perhaps, were likely to be profitable at some future date, or at any rate to be of real service to the community; but not now. Of the remainder, some were built to increase the power of existing systems, where they were not needed and not likely to be needed on their own account. Some were built to put money into the hands of the builders, as distinct from the owners. Some were built to sell, as a black-mailing scheme against other roads. To make money out of the building of a railroad, it was only necessary to subscribe the small sum requisite for obtaining a charter, with the right to issue first-mortgage bonds. The original subscribers would then have at their disposal whatever funds the bondholders might furnish. They could pay themselves a good commission for selling the bonds. They could then organize as a construction company, and contract to pay themselves a high price for building the road. These are but two means among many which afforded them an opportunity of transferring the bondholder's money to their own pockets in their double capacity as directors and contractors. This was not the worst. When the money came out of the bondholders' pockets, the bondholders were in some sense responsible for being duped. Sometimes the money came out of the pockets of the stockholders of rival roads, who were in no sense responsible. Some roads were built because they could so injure existing roads by competition as to force those roads to buy them out. The system of receiverships, originally intended as a protection to investors, has been carried to a point where it tends to the furtherance of schemes like these. Such was the character and purpose of many of the recent railroad projects."—A. T. Hadley, *Railroad transportation, its history and its laws*, pp. 52-53.

1882-1905.—Great Britain.—Government regulation.—Railway and canal commission.—Subsequent legislation.—“Railway commission legislation was introduced [in Great Britain] regularly between 1882 and 1886. In 1885 the nine principal railways submitted bills to Parliament embodying a general classification and a rearrangement of their maximum rates. But the protests of the traders led to the withdrawal of these measures. . . . In 1887 a regulative measure, which in some respects resembled the legislation of the following year, passed the House of Lords. So far as the form of the Commission is concerned the most important changes introduced by the legislation of 1888 were the court organization of the Commission and the limitation of the right of appeal. . . . The new legislation provided for a Commission of five members, composed of two lay and three ex-officio members. The ex-officio members are superior court judges, one for England, one for Scotland, one for Ireland. The active Commission at any one time has a membership of three, the two lay commissioners presided over by the designated superior court judge of the country in which the Commission is sitting. . . . The Act of 1888, while it repealed portions of the railway regulative acts already in existence, did not codify the portions remaining. Consequently there are still in effect sections of the Railway Clauses Consolidation Act, 1845, the Railway and Canal Traffic Act, 1854, the Regulation of Railways Act, 1868, and the Regulation of Railways Act, 1873. Since 1888 jurisdiction in regard to actual rates has been given by an Act of 1894; while, under a law of 1904, the powers of the Commission in regard to private sidings have been made more definite by an interpretation of the ‘reasonable facilities’ clause of the Act of 1854. While the jurisdiction given by the Act of 1888 embraces a variety of functions, the most important of which are undue preference, facilities for traffic, traffic on steamboats, through rates, rate books, terminals, legality of rates, provisions relating to private branch sidings, and references under the Board of Trade Arbitrations Act, 1874, the most important matters from the standpoint of the traders are (a) terminals, (b) reasonable facilities, (c) through rates, (d) undue preference, (e) control over actual rates.”—S. J. McLean, *English railway and canal commission of 1888* (*Quarterly Journal of Economics*, Nov., 1905).

1887-1906.—United States.—Federal regulation of railroads through Interstate Commerce Commission.—Elkins Act.—Hepburn Act.—“How our system of [federal railroad] regulation has grown up is illustrated by the way in which from time to time powers have been conferred on the Interstate Commerce Commission. . . . The act to regulate commerce went into effect in 1887. [It was known as the Cullom Act from the report of Senator Cullom’s committee.] There had been prolonged, widespread and well-founded complaints of rebating and other forms of unfair discrimination in rates, and the law was passed mainly to abolish these practices. It prohibited rebating and other forms of unfair discrimination, and forbade rates to exceed reasonable maxima. There was apprehension lest the pools of traffic and earnings which had been formed by various groups of competing lines would cause rates to be

made and kept excessive, and therefore pooling also was prohibited. The Interstate Commerce Commission was created to enforce these provisions. It understood it was authorized to prescribe and put into effect maximum reasonable rates; but the Supreme Court of the United States held otherwise. During the twenty years following the creation of the commission the question of rates, and especially the rebating phase of it, continued to absorb public attention; and regulation, state and national, dealt mainly with this question. Several minor amendments to the Interstate Commerce law, all dealing with rate matters, were passed, and in 1903 the Elkins law was enacted, strengthening the provisions against rebating. In 1906 was passed the Hepburn act, specifically authorizing the commission, when it found rates unreasonable, to fix maximum reasonable rates.”—S. O. Dunn, *Interstate Commerce Commission and the railroads* (*Annals of the American Academy of Political and Social Science*, Jan., 1916).—“The original Interstate Commerce Bill, introduced by Mr. Reagan, absolutely prohibited ‘less for the long haul.’ The Senate amended by adding ‘under similar circumstances and conditions,’ and the Interstate Commerce Commission has held that ‘water competition’ makes dissimilar circumstances and thus legalizes it. And in this connection it may be added that the other Senate amendment to the Reagan bill, creating an Interstate Commerce Commission, was, next to the above amendment, the wisest measure of the bill. It forms a body of experts whose opinions and decisions must gradually educate the public, on the one hand, to a better understanding of transportation problems, and restrain the railroads, on the other, from many of the abuses incident to unchecked competition among them.”—E. P. Alexander, *Railway management* (*American Railway*, p. 173).—“The result of twenty years’ operation under the interstate commerce act of 1887, passed to restrain abuses of unjust discrimination and unreasonableness of rates, was that the railroads came to regard the action of the commission it created as of no importance. The delays, due to the necessity of resorting to the courts to try out the merits of every order of the commission, before it became effective, made the remedy of the complaining shipper or locality so slow and burdensome that in contested cases it was no remedy at all. The commission was not, under the old act, authorized to fix reasonable rates. It could only say that a particular rate was unreasonable and order a railroad to change its rate and make it reasonable. The railroad might fix a new rate at anything less than the rate declared to be unreasonable, and if the reduction made was not sufficient, a new action had to be brought to decide that the new rate was also unreasonable. . . . Made aware of the moribund condition of railway regulation under the old law and of the widespread abuses which prevailed in railway management, President Roosevelt, in his message of 1904, recommended that the powers of the commission be largely increased; first, by enabling the commission to fix rates, and second, by making its order effective against the carriers without resort to courts to compel performance. He asked that it be made an administrative tribunal with real power. This was done by the passage of the [Hepburn] Rate Bill, in June, 1906. The new act enables the commission to fix rates and gives efficacy to all of its orders by providing that they shall go into effect thirty days after they are made, unless suspended by an order of court, and

failure to comply with them is punishable by a fine of \$5,000 a day during the delinquency. Express companies, sleeping car companies, and oil pipeline companies are brought under the jurisdiction of the commission as common carriers. The act gives the commission power to fix rates for the various incidental services performed by railroads at terminals and on the journey and to require them to be performed for every shipper. By withholding such services from one, and extending them to another, and by imposing varying charges for them, companies have been able in the past to make them a convenient instrument for discrimination. The new law requires the publication of rates charged for such incidental services. Railroads are compelled to furnish cars without discrimination for the movement of traffic. After . . . [two years] they are confined in their business strictly to transportation by a provision forbidding them . . . to transport for themselves anything but what is intended for their use as common carriers. Experience has shown that the railroads can not be trusted to deal fairly in matters of transportation between themselves and their competitors in an outside business. The new law makes radical changes in the matter of the publication of rates. Under the old law, by means of what was called the 'midnight tariff,' a railroad company gave favored shippers advance information of a contemplated reduction of rate and immediately restored the old rate when these shippers had profited by it. Thirty days' notice is now required of any change in the rates unless the commission, for good cause, modifies the requirement. Again, the law enables the commission to prescribe a uniform system of accounting for railroads. Under the old law the commission could call for a report of the railroads and might ask questions of railroads, but it had no way to compel a compliance with its request, and no penalty was provided in the law for failure to make the full report. Under the new law, annual reports must be made under oath, and penalties are prescribed for failure to file them with the commission within a certain time. The commission can call for monthly or special reports. It may prescribe the bookkeeping methods of the carrier and has access at all times through examiners to the carrier's books. The carrier is forbidden to keep any other books than those prescribed. . . . Never before was there such a united opposition by the railroad interests to any National measure as they instituted against the Rate Bill. . . . [The main objection urged against it was that it would] be unwise because it was a departure from the *laissez-faire* doctrine of as little government as possible, and was a long step toward socialism and Government ownership."—W. H. Taft, *Present day problems*, pp. 156-159.—See also COM-MODITY CLAUSE OF THE HEPBURN ACT; U.S.A.: 1887; Interstate Commerce Act; TRUSTS: United States: 1903-1906; 1904-1909.

1890-1902.—United States.—Sherman anti-trust law applied to railroad combinations.—Four types of great railroad systems in the United States.—As it finally passed the two houses of Congress and was approved by the president, July 2, 1890, the much discussed and much litigated piece of legislation, known as the Sherman Act, embodied its purpose in the first two sections, which read as follows:

Sect. 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal. Every person who shall make any such contract or engage in any such combination or conspiracy, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding five thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

Sect. 2. Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding five thousand dollars, or by imprisonment not exceeding one year, or by both said punishments in the discretion of the court.

The test case as to whether or not this law was applicable to railroad monopolies came when the suit of the United States against the Trans-Missouri Freight Association, the Atchison, Topeka and Santa Fé Railroad Company, and others, was brought for the dissolution of an association or combination alleged to be in restraint of trade, and in violation, therefore, of the Sherman Anti-Trust law. It was tried originally in November, 1892, before United States District Judge Riner, of the Kansas district, who ruled that the law did not apply, and dismissed the case. On appeal it was tried again with the same result the next year before Circuit Judge Sanborn and District Judges Shiras and Thayer. Judges Sanborn and Thayer affirmed the judgment of the District Court, while Judge Shiras dissented. The question then went for final adjudication to the Supreme court, where it was argued on December 8 and 9, 1896, and decided on March 22, 1897. The opinion of the court, delivered by Justice Peckham, reversed the judgment of the courts below, affirming that the Anti-Trust Act applies to railroads, and that it renders illegal all agreements which are in restraint of trade. The case was accordingly remanded to the Circuit Court "for further proceedings in conformity with this opinion." Justices White, Field, Gray, and Shiras dissented from the opinion of the majority. The relation between the Interstate Commerce Act and the Sherman Anti-Trust law was pointed out by the Industrial Commission in its report of 1902: "It is of peculiar interest to note that this leading case was decided, not upon interpretation of the interstate commerce act itself, but under the provisions of the Sherman anti-trust law of 1890. . . . Two questions were plainly before the court: First, whether the Sherman Anti-Trust law applied to and covered

common carriers by railroad; and secondly, whether the Trans-Missouri Freight Association violated any provision of that act by being an unreasonable restraint upon trade. The court itself acknowledged that it was doubtful whether Congress originally intended to include railroads under the prohibitory provisions of the anti-trust law. Counsel for the carriers showed, it would seem conclusively, that an amendment proposed by Mr. Bland to include railroads in the prohibition was rejected. The dissenting Supreme Court justices maintained that in the absence of a specific application of the anti-trust law to railroads, inasmuch as the anti-trust law was a general act, while the act to regulate commerce, antedating it by three years, was specific, the latter exempted the railroads, in any case, from the drastic provisions of the Sherman Act against combinations in restraint of trade. The court refused to consider other than mere questions of law, holding that if pooling were excepted it was the province of Congress to take appropriate action. . . . It has very frequently been asserted that a primary cause of the notable tendency toward railroad consolidation since 1898 was the definitive prohibition of all varieties of traffic contracts or agreements by the Trans-Missouri Freight Association decision of 1897. This decision, as has already been indicated, was rendered upon the basis of the Sherman Anti-Trust law, without contemplation of the prohibitive provision of the Act to regulate commerce of 1887. According to the opinion of many jurists, in fact, the latter act could not reasonably have been construed to prohibit many of the traffic agreements which have been customary between carriers. It has been urged with great force that coöperation among the railroads having been finally adjudged illegal, it became necessary to have recourse to a more drastic remedy, namely, consolidation in some of its various forms. . . . The first difference to be noted between pooling and consolidation is that the latter is much more comprehensive in its scope. . . . Agreements for the division of traffic constitute but the mere machinery by which a certain result is to be attained. . . . Experience has abundantly shown that it is possible for railroads to maintain a large part of their identity, even reserving to themselves the power to make rates independently, under a pool, in exceptional cases, without thereby entirely nullifying the steady influences of such traffic agreements. Consolidation, however, necessarily involves the unification of all interests as between railroads. . . . In brief, pooling may still permit competition in respect to facilities. It may merely eliminate the ruinous phases of competition in rates, leaving still in force the healthful influences of reasonable rivalry. Consolidation proceeds to the uttermost to stifle competition of all kinds, whether in respect of rates or of facilities. . . . A second point to be kept in mind as between the effects of consolidation and pooling lies in the fact that consolidation can never hope to accomplish the steadying influence upon rates which is claimed for railroad pools, until such time as every railroad within a given competitive territory shall have been bought up and absorbed. . . . A division of territory into a number of specific groups, each absolutely monopolized by one interest, seems to be the only logical outcome of the consolidations which have been already accomplished."—*Final Report of the Industrial Commission*, 1902, pp. 338-348.—"It seems fairly well established, however, that the [anti-trust] law does not prevent the consolidation of lines which

are not parallel and which do not directly compete with one another, and this kind of consolidation is going on all the time. . . . The Hawley group of roads . . . embraces the Chicago & Alton; St. Louis & San Francisco; Missouri, Kansas & Texas; Chesapeake & Ohio; Toledo, St. Louis & Western; Minneapolis & St. Louis; Iowa Central; Texas Central, and the Kansas City, Mexico & Orient, with a total extent of between 14,000 and 15,000 miles. It is possible to distinguish more or less clearly four types of railroad consolidations in the United States. . . . The kind of consolidation exemplified by the major Harriman lines, the Pennsylvania system or the Vanderbilt roads, may be described as strong, since it has been brought about by actual majority ownership of the capital stock of the properties represented. This majority ownership may be vested in any one, or in two or three of the roads embraced in the group. . . . A weak combination, or one controlled through minority ownership, is represented in the Hawley roads. No one of these roads and no single corporation or individual owns or holds actual control of the stock of all the rest of them; but the same group of capitalists has a good-sized minority interest in all of them; and, in the absence of any organized opposition by the majority stockholders, this serves well enough for the purpose of securing temporary control of the executive committee of each road by persons representing the same party. In the specific case of the Hawley roads there exists a mixture of the strong and the weak forms of combination, since one of the properties has been made a holding company for actual control of three of the others. By far the largest proportion of the system mileage, however, is outside the specific grasp of this little holding company. The Hill roads furnish an example of a different type of combination. The Northern Pacific, the Great Northern, and, to a certain extent, the Chicago, Burlington & Quincy, are all of them to a greater or less degree parallel and competing lines within the apparent meaning of the anti-trust law. Yet these three lines are operated under conditions of the utmost harmony, and they adhere to a common and consistent line of general policy. In this case, strong or actual control of the Burlington is held through joint bonds issued by the Great Northern and the Northern Pacific. The Great Northern and the Northern Pacific have not a single director in common, and are operated by different officers. Yet James J. Hill . . . directed the general policy of both roads quite closely for a great many years, and harmony between them is established partly through family ownership of securities, and partly through the workings of a minority party of capitalists, somewhat in the fashion of that shown in the formation of the Hawley system. . . . The form of control exercised in the case of the Gould lines is different from any of these; it may be described as being primarily a strong or majority control exercised by the members of a single family, the descendants of Jay Gould, who actually have majority stock of the various component parts of the system locked up in their strong boxes. This statement is not exhaustive; the control of the Western Pacific by the Denver & Rio Grande, for example, is direct and proprietary, without any third party intervening. But the actual control of such roads as the Texas & Pacific and the St. Louis Southwestern is supposed to be distributed throughout the Gould family, individual owners in this case performing the same function that is often exercised by a

holding company."—R. Morris, *Railroad administration*, pp. 257-260.

1892-1922.—United States.—Organization of railroad employees.—Strikes. See ARBITRATION AND CONCILIATION: United States: 1888-1921; LABOR LEGISLATION: 1862-1920; LABOR STRIKES AND BOYCOTTS: 1877-1911; 1880-1900; 1922: Strike of railway shopmen; U.S.A.: 1894: Strike at Pullman; 1898 (June); 1913 (June); 1917 (March); New railway strike; 1919 (August-November); NEW YORK: 1891-1893; YOUNG MEN'S CHRISTIAN ASSOCIATION: 1868-1910.

1893-1910.—United States.—Era of depression.—Period of railroad consolidation.—Second period of dissolution.—Harriman combinations.—"The period of depression of 1893-'97 retarded for some time the growth of railroad systems. In fact, dismemberment of a number of important properties took place in connection with bankruptcy and reorganization. The Atchison lost the 'Frisco'; and the Union Pacific was bereft of the Oregon Short Line. This second system, in fact, was entirely dismembered. The Erie was about the only important property which underwent the disrupting tendency of financial readjustment. Low-water mark in consolidation occurred in 1898 when only 174 miles of line changed hands. It was during these years of depression that the rubbish was cleared away for the constructive work of consolidation which characterized the ensuing decade. A striking example is the Southern Railway, which already in 1900 aggregated almost 40 smaller railroads in a system comprising about 7,000 miles of line. Preliminary to this work, however, was a complete breakup and reconstruction of the Richmond and West Point Terminal. Such occurrences are typical of the decade of the '90s. The working out of the higher strategy in railroad consolidation was the most significant feature of American transportation history in the decade to 1910.—Within this brief period what now promise to become more or less permanent financial and operating groups, evolved out of the competitive chaos of large units of depression of 1893-'97. Nor was the growth of large units confined to railroading alone. In fact, the rapid rise of great banking units undoubtedly had much to do with the activity in this direction in the railroad field. All the various event of the period naturally dovetail together. Rising freight and passenger rates; growing interest in governmental control; hostility to continued favoritism and personal discrimination; the growth of the trusts; it is difficult to determine the order of causation. Combination in every department of commerce was in the air. It was the spirit of the time. But undoubtedly the intimate association of railroads with great banking houses in New York favored, if it did not actually bring about, many of the great combinations. Moreover, the return of railroad securities in large volume from Europe as a result of the panic of 1893, afforded a unique opportunity to great financiers to acquire control of properties and thereafter to shift them bodily from hand to hand as inclination and opportunity dictated. Speculation in earlier years was more largely confined to sales of stocks and bonds; now it became common to buy and sell entire railroads through transfer at one time of controlling portions of their shares. As one witness in an important transaction put it,—'We bought the Louisville & Nashville just as you would buy a box of candy. It was wrapped up and delivered to us, and we paid \$50,000,000 for it. That was all there was to it.' Popular atten-

tion was to some degree focused upon the course of consolidation by reason of this highly accentuated control by bankers or stock-exchange houses, with the attendant speculative activity on a large scale to which attention has already been called. The suddenness of the outbreak of combination with the return of prosperity about 1898 may be judged from the statement of the Interstate Commerce Commission that 'disregarding mere rumors and taking account of well-authenticated statements, there were absorbed in various ways between July 1, 1899, and November 1, 1900, 25,311 miles of railroad. There are in the whole United States something less than 200,000 miles of road; more than one-eighth of this entire mileage was, within the above period, brought in one way and another under the control of other lines.' The Rock Island was a leading instance. With 3,800 miles of line in 1901, its length rose within less than five years to a total in excess of 15,000. The highest flight of railroad combination occurred . . . in the final exploits of the late E. H. Harriman in 1906, in investing the proceeds of his speculative operations with Union Pacific funds in the stocks of other railroads all over the United States. Absolutely controlling nearly 25,000 miles of line, the Union Pacific stock holdings powerfully influenced over 30,000 miles in addition; while other Harriman alliances indirectly affected some 16,000 miles over and above this. A stupendous and top-heavy pyramid was thus erected comprising perhaps one-third of the railway net of the United States. . . . There is every indication that the combination movement was brought to a close by a process of financial exhaustion. In how far the size of the resultant unit conformed to the demands of operating efficiency seems open to question. For a time it seemed as if the railroad groups were so firmly established and well-defined by mutual agreements of the parties in interest, that they might be regarded as more or less permanent. Even the new and undeveloped territory appeared to be partitioned off by treaty and alliance. The shifting panorama of years of struggle for supremacy promised to be succeeded by a sort of stable equilibrium. Something akin to the balance of power in Europe was indicated; whereby any wholesale readjustment of relationships within a single system might entail too great results upon other financial or operating groups to be permitted to occur. But prophecies to this effect failed to reckon with two human and political certainties. Foremost among these was the frailty of man's existence. The deaths of Harriman in 1909 and of Morgan three years later removed the [personal] main-springs of constructive effort in the direction of consolidation. And the rising hostility of the public to monopoly was exemplified in increasing pressure by public authority under the Sherman Anti-Trust Act. And then again, all of the financial excesses of the frenzied years of speculation came home to roost along about 1910. In response to all of these influences, certain of the great consolidations . . . began to go to pieces. The Gould system died of inanition; the Rock Island, of internal corruption; and the Union Pacific and New England monopolies by mandate of the Federal Department of Justice."—W. Z. Ripley, *Railroads, finance and organization*, pp. 456-462.

1895.—South Africa.—Cape-to-Cairo railroad.—Cecil Rhodes' achievements in Rhodesia.—"That the Cape-to-Cairo Railway, as the plan first took form in Cecil Rhodes' mind, was to be an

'All British route' was, perhaps, its principal reason for being. It was to be a long steel artery, so to speak, reaching from one end of the continent to the other, from which the long line of British colonies and protectorates, beginning at Egypt and ending at Cape Colony, should draw vigour for their growth and development. . . . He [Rhodes] realised that the first thing to be done, . . . was to get the railway itself under way; the matter of the 'All Red' route, he always believed, could be arranged later. The Rhodes Cape-to-Cairo plan—indeed, the one which has been followed undeviatingly down to this day—was to utilise the 2,000 miles of lake and riverway which occur almost exactly upon a straight line drawn between the two termini [Cape Town and Cairo] and to build the intervening railway links, totaling 4,000 miles in length, as rapidly as the financial and engineering difficulties could be overcome. . . . The magnet of the diamond mines had taken the railway to Kimberley; . . . the gold mines of the Rand had drawn it on to Johannesburg; and the efforts of the Chartered Company of Rhodesia carried it on to Bulawayo, Matabeleland, in 1895. Beyond stretched the 1,000 miles or more of the almost unexplored wilds of Northern Rhodesia which must be crossed to make the connection with Lake Tanganyika that Rhodes had set himself to establish. . . . Rhodes decided that Bulawayo must be reached [in two years]. . . . Large forces of natives were whipped up; and by superhuman effort what was apparently impossible was achieved—492 miles being laid in five hundred working days. . . . Construction on the line from Bulawayo to Victoria Falls was started by the Rhodesian Company before the outbreak of the Boer War, but the disturbed condition of the country preceding and during that struggle made it difficult to make much headway. . . . Rhodes turned in his need to the financial giants of Lombard Street and, partly through the generosity of the late Alfred Beit in heading the list with £500,000, but principally through the force of his own indomitable personality, had the whole £4,400,000 he needed subscribed within a week. Construction was started anew in Rhodesia, but before the railway reached Victoria Falls the band which was driving it forward relaxed, and grew cold in death. The last words of the Imperial Dreamer, 'So much to do, so little done!' are believed to have referred chiefly to his dearest scheme, the Cape-to-Cairo Railway."—L. R. Freeman, *Rhodes's "All Red" route* (*World's Work*, Jan., 1916).—See also CAPE-TO-CAIRO RAILWAY; DELAGOA BAY ARBITRATION; RHODESIA: 1008; SOUTH AFRICA, UNION OF: Constitution.

1898.—Switzerland.—State-owned railways.—After fifty years' experience with railroad problems as private enterprises and government subsidies, Switzerland, in 1868, decided to put into effect a system of state-owned railroads. Accordingly, the Central, the Northeastern and the United Swiss lines were acquired in 1901, the Jura-Simplon in 1903, and finally the St. Gothard in 1900. Furthermore the hydro-electric developments of Switzerland have progressed as a federal monopoly and furnished the principal motive power of the federal railways and their branches.

1899-1916.—Germany.—Berlin to Bagdad railway, a center of European conflicts in the Near East.—Construction prior to World War.—Germany's ambition to control the trade of the Near East through the construction of a great rail route reaching from Berlin to Constantinople, and from Skutari across Asia Minor, through Adana,

Aleppo and Mosul, to Bagdad,—thus connecting the Baltic Sea with the Persian gulf,—was attempted in 1899, when a concession to build a railroad across Asia Minor from Kinieh to Bas-sorah, was obtained from the sultan. The other governments of Europe vigorously protested against this Pan-Germanic scheme, and in November, 1903, an agreement was made among them, whereby the Germans were to control forty per cent of the capital, the French, twenty, the British, thirty and the Turks, ten per cent. The significance of this railroad in the commercial rivalries back of the World War is patent. "The first section of the line from Kinieh via Eregli and Bugurlu (in Asia Minor) was constructed—and well constructed, too—to the length of 124 miles, the railhead being reached some time in 1904, or about five years after the work was begun. The next section taken in hand was shorter, about 105 miles, from Burgurlu to Aleppo. To carry out this portion of the work a separate small company was formed in Switzerland with German capital, the head offices being situated in Glarus. The progress made subsequently was very remarkable, work proceeding simultaneously in three different directions—the first from Adana eastward to Amanus, the second from Adana westward to the Taurus Mountains, and the third from Bugurlu eastward to the Taurus mountains. But the section eastward from Adana to Bugurlu has since fallen into abeyance although the original plans called for its construction early in 1909."—*Bagdad railway* (*Scientific American*, Apr. 7, 1917, supplement).—Sections of the construction work were pushed to completion after the outbreak of the World War, but the line never reached its prospective terminus at the head of the Persian gulf. By the latter part of 1916 further work was out of the question and the future course of the road is at present an uncertainty.—See also BAGDAD RAILWAY.

1899-1919.—Canada.—Canadian Northern railroad.—Its history and nationalization.—"The third transcontinental railroad, known as the Canadian Northern, began as an amalgamation to take over a couple of small Manitoba railways. . . . Under the direction of two ambitious railroad builders, Messrs. Mackenzie and Mann, the company leased several other short lines in Manitoba and formed the nucleus of a system [in 1899]. In 1902 power was obtained to build eastward toward Ottawa and Montreal, and westward, by Edmonton and the Skeena River, to the Pacific Coast. Thus, while the Grand Trunk Railway was maturing plans to build into the rich and rapidly developing agricultural areas of the West, the Canadian Northern Railway was planning to secure Eastern outlets. Although the logical outcome of this state of affairs should have been a fusion of these interests, unfortunately this did not take place. The Grand Trunk railway, however, secured the financial support of the Canadian Government at the price of agreeing . . . to a national Grand Transcontinental line to Canadian maritime ports. In spite of this the Canadian Northern did not relinquish its design to build eastward, though for ten years the history of the road largely centered around its feverish construction activity in the West. To a large degree excellence of roadbed and equipment was sacrificed in the determination to preempt rail facilities into new territory opening for settlement. As a result of this policy the company has over five

thousand miles of line in operation in the prairie Provinces apart from its outlet to the head of navigation at Port Arthur on Lake Superior. In British Columbia it has pushed through the Rocky Mountains at Yellowhead Pass and has completed its line from that point to Vancouver. In the meantime control was obtained of certain lines in Eastern Canada. This paved the way for building the connection link in the system between Montreal and Port Arthur, and in 1911 guarantees were secured from the Dominion Government for a bond issue that enabled this section of the line to be built. . . . The Canadian Northern Railway system . . . extends from Quebec to Vancouver, and taps Duluth, Toronto, Ottawa, and Montreal, covers the prairie Provinces with a large number of branches, and has the Halifax and Southwestern Railway in Nova Scotia."—D. A. MacGibbon, *Railway rates and the Canadian Railway Commission*, pp. 48-49.—Operated by this continental system of railways are the Canadian Northern steamships on the Great Lakes, and a fleet of ships giving service between Montreal and Bristol, England. In 1919, the Dominion took over

Hill. Realizing the necessity of connecting the western frontier with the eastern markets, Mr. Hill "cast his entire fortune into the balance, and with the assistance of several associates, took over the property [of the St. Paul and Pacific railroad], and with it its enormous debt of over \$33,000,000. James J. Hill . . . had bought a property that was bankrupt and was described as 'two streaks of rust reaching out into the desert'; but in this bold beginning was the germ of the great railroad system which, under the name of the Great Northern, was to bring him fame and fortune in the years to come. . . . Mr. Hill extended his railroad to the Red River and connected with the government line from Winnipeg. By this extension the rich lands of Minnesota were opened to immigrants, and the great wheat-lands of the Northwest were connected with the markets of the United States. . . . Ten years later, in 1893, Mr. Hill began actively to carry out his plan of extending his railroad from Helena to the coast. It is hard to realize the tremendous difficulties which faced him. On the one hand, the Rocky Mountains seemed to block his path; on the

J. J. HILL

the ownership of this great railroad, the first addition to the government lines in the merger known as the Canadian National railways.

1900-1913.—Great Britain.—Beginning of consolidation of railway lines.—In the first decade of the twentieth century, the railways faced a decline in their revenues, due to increased operating expenses, and competition with electric tram-lines and motors. As a solution of this situation, the principle of coöperation, rather than competition was resorted to by the railways. The London and North Western made an agreement [in 1908] to pool all competitive traffic, and in 1918, the Lancashire and York road entered this combination. A little later the Great Northern, the Great Central, and the Great Eastern consolidated. The Great Western and the London and South Western followed their example. Consolidation was therefore in practice before the war, and made the transition to government control, as a war emergency, a less difficult adjustment.

1901-1905.—United States.—Hill system and Northern Securities case.—The great network of railroads embracing the Hill system was developed by the pioneer railroad builder, James Jerome

other, a financial panic made the obtaining of the money necessary for the project seem almost an impossibility. But he was undismayed; every obstacle was overcome, the road was built, and the empire again extended its boundary, this time to . . . the Pacific. Following the completion of the Great Northern, as the consolidation of his various railroads was now called, to Puget Sound, Mr. Hill began his struggle to obtain control of other railroads in order to combine them all into one vast coherent system. The Northern Pacific Railroad was the first to be added, and then the Burlington System was secured and incorporated into the vast development of his plan. Fifty years before, the penniless country boy had left the small village of his birth to seek his fortune; and now, after this life of usefulness, he found himself able to pay in cash over \$200,000,000 for the Northern Pacific Railway System."—J. Husband, *Americans by adoption*, pp. 110-113.—This colossal investment is bound up with the story of the famous Northern Securities case. When it became apparent that the Hill interests were buying up all the stock of the Northern Pacific, E. H. Harriman, representing the Union Pacific interests, went into the stock market and started to outbuy his rivals, in order to gain the controlling vote in the Northern Pacific railroad. This raid

on the market, which resulted in the Northern Pacific panic, brought about a compromise between Hill and Harriman, from which issued the Northern Securities Holding Company, incorporated in 1901 under the laws of New Jersey. The specific plan of operation was set forth in a circular issued by the Northern Securities Company, on November 22, 1901, to holders of the stock of the Great Northern Railway Company, which said: "The Northern Securities Company . . . has acquired from several large holders of stock of the Great Northern Railway Company a considerable amount of that stock. A uniform price has been paid of \$180 per share, in the fully paid stock of this company, at par. This company is ready to purchase additional shares of the same stock at the same price, payable in the same manner, and will accept offers made on that basis if made within the next sixty days." "It seems that the capitalization of \$400,000,000 was fixed at that figure in order to cover approximately the combined capital stock of the Northern Pacific and Great Northern at an agreed price apparently based upon earning capacity. The par value of the outstanding capital stock of the Great Northern was \$123,880,400, and that of the Northern Pacific amounted to \$155,000,000. The Northern Securities Company purchased about seventy-six per cent. of the former and ninety-six per cent. of the latter, on the basis of \$115 per share of \$100 of Northern Pacific and \$180 per share of \$100 of the Great Northern."—B. H. Meyer, *History of Northern Securities case* (*Bulletin of University of Wisconsin*, no. 142).—From the standpoint of public interests, the combination looked dangerous to the northwestern states, as being a suppression of competition and a creation of monopoly in railway transportation, and it was quickly announced that the Governor of Minnesota had determined to invite the governors of states affected by the transaction to a conference, for the purpose of considering "the best methods of fighting the Northern Securities Company's propositions in the courts and by new legislation, if necessary." The result of the conference was a suit undertaken by the State of Minnesota, at first in the Supreme Court of the United States, where it was found to be impracticable, but finally begun in the United States Circuit Court. This state action was soon followed by proceedings taken by the Federal government. Attorney-General Knox was asked by the President [Theodore Roosevelt] for an opinion as to the legality of the procedure involved in the formation of the Northern Securities Company, and replied that, in his judgment it violated the provisions of the Sherman Act of 1890. The President then "directed that suitable action should be taken to have the question judicially determined." Suit was begun accordingly on March 10, 1902, by the United States, in the United States Circuit Court at St. Paul, against the three companies—Northern Securities, Great Northern, and Northern Pacific. Testimony was taken in St. Paul and New York, and the case was argued in March, 1903, at St. Louis, before a special trial court, composed of four circuit judges. The decision rendered by this court, the four judges concurring, declared the transaction illegal, and enjoined the Northern Securities Company from performing the acts that it was intended to perform. This decision was contradicted, however, by one given at about the same time in the suit of the State of Minnesota, which had its trial in the United States Circuit Court for the district of Minnesota. There the legality of the forma-

tion of the Northern Securities Company was affirmed. Appeals from both decisions were taken to the Supreme Court, and that of the special trial court, in the suit of the Federal Government, which declared the procedure involved in the formation of the Northern Securities Company to be in violation of the Sherman Act of 1890, was fully sustained by a majority of the Court, in March, 1904. In the opinion of the majority of the justices, "if Congress has not, by the words used in the Act, described this and like cases, it would, we apprehend, be impossible to find words that would describe them." The court below was authorized accordingly to execute its decree against the Securities Company. A little later the Supreme Court decided in the Minnesota State suit that it had no jurisdiction, and sent the case back, to be remanded to the state court from which it had been originally removed. With this case nothing further was done.

1901-1909.—United States.—Harriman system.—In 1901, when Edward H. Harriman, as director of the Union Pacific railroad, entered into competition with James J. Hill for the control of the Northern Pacific, his name was little known to the general public. At his death in 1909 he was said to be absolute director of 75,000 miles of railroad. "The rejuvenated Union Pacific and Southern Pacific will always stand as monuments to his genius. . . . He was not an Empire Builder in the sense that James J. Hill has been. . . . He did not originate any of these roads but he rebuilt them so that they were completely transformed. The Union Pacific was a government aided road, and the debt owing to the government had to be repaid. . . . Mr. Harriman and his syndicate arranged for the payment of the full amount [\$53,000,000]. His ability to handle large sums of money was never more forcibly shown than in 1901 when he sought to wrest control of Northern Pacific from the Morgan-Hill people. . . . thereby bringing on the famous Northern Pacific corner. . . . In this purpose he was defeated. . . . He accepted the decision that a holding company should be formed, namely, the Northern Securities Co. . . . Before his death he succeeded in getting a system of lines running from ocean to ocean. . . . In recent years Mr. Harriman had the hostility of the government to contend with. Mr. Roosevelt and Mr. Harriman had previously been close friends, but now all the powers of the national government were employed to crush Mr. Harriman. The Interstate Commerce Commission began to probe into the affairs of the Harriman roads. . . . It may be said he triumphed even against the government inasmuch as the government was unable to bring up anything that reflected on him."—*Mr. Harriman as a constructive force* (*Commercial and Financial Chronicle*, Sept. 11, 1909).

1902.—Abyssinia.—French projects. See ABYSSINIA: 1902.

1904-1909.—Canada.—Railway Commission.—Its establishment and powers.—"The history of the Railway Commission since its establishment in 1903 has been one of constantly expanding jurisdiction. The original act conferred powers greatly in excess of those enjoyed by the Railway Committee, and by the Legislature and judicial

decisions since that time the jurisdiction of the Board has been extended and confirmed until as an executive and judicial body it now exercises a quite unique authority. The act of 1903 created a Board of three commissioners appointed by the Governor-in-Council, to hold office for a period of ten years. Unless disqualified by age, commissioners might be reappointed. One commissioner was to be Chief Commissioner of the Board, and a second Deputy Chief to act in the former's absence. To the Chief Commissioner was given the power of determining any question which in the opinion of the commissioners was a question of law. An amendment to the act in 1908 increased the number of commissioners to six and provided for an Assistant Chief Commissioner. The office of Chief Commissioner was limited to a judge of a superior court or an advocate or barrister of ten years' standing. . . . Being a statutory tribunal the Board of Railway Commissioners must rely for its authority upon the Canadian Railway Act. A warrant must be found in the act for its orders or they are null and void. . . . The powers of the Board as exercised fall into three broad divisions: the initial location and construction of a line; regulations covering safety and convenience, in operation; and the regulation of tariffs and tolls."—D. A. MacGibbon, *Railway rates and the Canadian Railway Commission*, pp. 84-85, 88-89.—In June, 1909, the commission gave a decision as momentous as any since its activities began in 1904. In the case of the Dawson Board of Trade against the White Pass Railway Company (an English corporation) the commission decided that its jurisdiction extended to all railways in Canada, whether or not they originated in the United States.

1904-1921.—Canada-Ontario's venture.—Temiskaming and Northern Ontario railway.—The province of Ontario in 1904 undertook the building and operation of a railroad on its own responsibility, without any Dominion aid. The railroad was built at a cost of \$22,000,000. In 1921 it had not yet been nationalized, though it connected with the government railways a Cochrane.

1905-1909.—Switzerland.—Simplon Pass tunnel.—Purchase of St. Gothard railway by Swiss government.—The tunnel piercing the Simplon Pass, between Brigue, Switzerland, and Iselle, Italy, was finished February 24, 1905, after seven years' work and at a cost of \$14,000,000. It is twelve miles long,—two and three-quarters miles longer than the St. Gothard tunnel. It opens direct railway communication between Paris and Milan. The St. Gothard tunnel and railway were built under an agreement with the Swiss government under which the latter reserved the right of buying the St. Gothard within thirty years, and the price arranged was twenty-five times the amount of the net profits of the line during the last ten years of working. The right was exercised in the spring of 1909, and thus the last of the principal Swiss lines passed into the possession of the government.

1905-1914.—Manchuria.—South Manchuria railway.—Control by Japanese. See MANCHURIA: 1905-1914; PORTSMOUTH, TREATY OF.

1905-1921.—China.—Peking-Hankow railway.—Chinese built railways.—Hukuang loan and consortium of Great Powers.—President Taft's policy.—Nationalization.—"From the very beginning the United States has pursued a very righteous course in dealing with China. She always maintained fair play which has been greatly appreciated by China. Her 'open door' policy, made known through her wise Secretary of State, Mr.

Hay, has saved China from serious humiliation. Even during the stormy period of the Battle for Concessions China had great confidence in her. This can be proved in the case of the Canton-Hankow concession, which the Chinese Government intrusted to the American syndicate, with full power to control the expenditure of loan funds and the management of the road, while, on the contrary, she held these to herself in the case of the Belgian concession for the Peking-Hankow road."—M. C. Hsu, *Chinese railway problems (Columbia University studies in history, economics, and public law, pp. 49-54)*.—"American financial interests were the first to become interested in the construction of [the Peking-Hankow] line, which has now become the most profitable of all the Chinese lines, and a survey was made under the authority of United States Senator Washburn. When, however, it came to the matter of a contract for the construction of the line, a Belgian company, the Société d'Etudes de Chemins de Fer en Chine, representing Belgian, French and Russian financial interests, obtained the contract. This it did, however, only by offering to the Chinese terms which afterwards the company found so liberal that it had to ask of the Chinese Government that they be modified—a request which, it may be observed, was backed by diplomatic pressure. . . . The line was opened to traffic in 1905."—W. W. Willoughby, *Foreign rights and interests in China*, p. 535.—"Feeling that their country was dominated by foreigners and fired with the laudable ambition to furnish from their own pockets the capital required for the building of railways in their own provinces, the prominent merchants and gentry of the several provinces started a 'sovereign right campaign.' . . . Mr. Chang Yu-nan of Fukien, who made his fortune in Java, was the first Chinese merchant who started the first purely Chinese railway enterprise. . . . The Chaochow and Swatow Railway Co. capitalized at \$3,303,303 Mex., was the first distinctly Chinese railway organization which has succeeded in constructing and operating a road. . . . In 1906, we find construction work begun on four other private roads, viz., the Hsinning Railway in Kwangtung province, the Kiangsi (Kiukiang-Nanchang) Railway in the Province of Kiangsi, the Anhui (Wuhu-Kuangtechow) Railway in the province of Anhui and the Chekiang-Kiangsu (Shanghai-Hankchow-Ningpo) Railway. In 1907, work on the Fukien (Changchowfu to Amoy) Railway in the Province of Fukien and the Tsitsihar Light Railway in North Manchuria was started by natives. In 1910, the rails of the Tungkuang-Honanfu (Lotung) Railway in the Province of Honan and the Szechuan-Hankow Railway were laid from their respective terminals. . . . The construction of the Peking-Kalgan section was commenced from Peking in October, 1905. Nine months later, the Nankow Pass was reached, a distance of 32 miles, and by the end of 1909 the whole line was completed. Its total length is about 130 miles, extending to Tantungfu in the Province of Shansi. There are many weighty facts of construction, including tunnels, at the Nankow Pass, where a gradient of 1 in 30 for five miles has been introduced. Mr. Jeme Tien-yow, a Yale graduate, was appointed as the Chief Engineer to undertake the construction work. When the construction of the line was first proposed many people believed that the Nankow Pass would present insuperable difficulties from the engineer's standpoint. When Mr. Jeme succeeded in completing this important work he was hailed throughout the world as the 'father' of

Chinese railway engineers, and honors were heaped on him by his fellow countrymen and by his Government. The line was built entirely under Chinese supervision and from the surplus profits of the Peking-Mukden Railway."—M. C. Hsu, *Railway problems in China* (Columbia University studies in history, economics, and public law, pp. 80-97, 104-105).—"In June, 1906, the building of the [important Canton-Hankow] road was turned over to merchants of the provinces through which it was to pass—Kwangtung, Hunan, and Hupeh. Under private auspices some 10,000,000 taels was spent with but thirty-five miles of poorly constructed and poorly-equipped line to show for it. It became evident that the Imperial Government would have to reassume control of the project and again to solicit foreign financial aid. This the Peking Government did, and began negotiations with the French, German, and British banks, whereupon the American Government asserted that it possessed a right to participation in the proposed [Hukuang] loan—a right based upon promises dating from 1903 and 1904, made by the Chinese Government. In pressing this American claim to participation, the American President, Mr. Taft, took the step, extraordinary from the diplomatic point of view, of communicating personally and directly with the head of the Chinese Government, Prince Regent Chun. In a telegram, dated July 15, 1909, to Prince Chun, President Taft said: 'I am disturbed at the report that there is certain prejudiced opposition to your Government's arranging for equal participation by American capital in the present railway loan. To your wise judgment it will of course be clear that the wishes of the United States are based not only upon China's promises of 1903 and 1904, confirmed last month, but also upon broad national and impersonal principles of equity and good policy in which a regard for the best interests of your country has a prominent part. I send this message not doubting that your reflection upon the broad phases of this subject will at once have results satisfactory to both countries. I have caused the Legation to give your minister for foreign affairs the fullest information on the subject. I have resorted to this somewhat unusually direct communication with Your Imperial Highness, because of the high importance that I attach to the successful result of our present negotiations. I have an intense personal interest in making the use of American capital in the development of China an instrument for the promotion of the welfare of China, and an increase in her material prosperity without entanglements or creating embarrassments affecting the growth of her independent political power and the preservation of her territorial integrity.' . . . However, on May 23, 1910, an agreement was reached in a conference held at Paris between the representatives of the British, French, German and American banks, for American participation in the Hukuang loan, and on May 20, 1911, the loan agreement with China was signed by the four banking groups."—W. W. Willoughby, *Foreign rights and interests in China*, pp. 550-553.—Russia and Japan insisted upon participation in these financial negotiations with the Chinese empire, and their entrance into the consortium was effected, so that the Hukuang loan was finally distributed among the Six Powers. The imperial government began to carry into effect a program for nationalizing the railways of China, under the administration of Sheng Hsuan-huai, minister of communications. His policy was to have the state take over all railways under private

construction, and to have all trunk lines constructed and built by the state. In the same year the revolution broke out in China in the Province of Szechuan, which finally resulted in the overthrow of the monarchy and the establishment of the republic, and which was taken as a protest against the imperial government's negotiation with foreign governments to finance nationalization of China's railways.—"The agitation was not against railway 'nationalization,' which the most intelligent leaders of Chinese public opinion recognized as desirable, but against the manner in which it was carried into effect. Sheng Kung Pao, the Minister of Communications, upon the signature of the Hukuang Loan Agreement took steps to repurchase the rights of the provincial companies in accordance with the 'nationalization' plan. Incidentally, it is reported on the best authority, he bought up the major portion of some of the provincial bonds, and offered to redeem them at par. He did not acquire control of the Szechuan bonds, and therefore offered only 60 on their face value. Hence the riots."—W. Straight, *Loan negotiations* (*Journal of Race Development*, Apr., 1913).—Under the republican government established in 1911, a railroad commission was formed to make a thorough study of transportation conditions in China. An American expert on transportation problems, Henry Carter Adams, formerly of the United States Interstate Commerce Commission, acted as adviser to this commission, and directed a uniform system of accounting for the Chinese railroads. A consortium of western bankers, modified by the absence of Germany and Russia, negotiated a loan to China in 1920, to take the place of the 1911 Hukuang loan interrupted by the World War. The United States participated in this international contract, following the Washington conference on disarmament in November, 1921, which passed the Root resolution to ensure the maintenance of the 'open door' in China, and the territorial integrity of that nation.—See also CHINA: 1905-1909; 1920: Growth of the railway system; Railroad map; SIBERIA: 1917-1919; WASHINGTON CONFERENCE.

Willoughby, *China at the peace conference*.

1906-1920.—Mexico.—Limantour's policy of nationalization of railroads.—Their ruin during revolution.—"One of the most remarkable acts of original and courageous statesmanship in the administration of President Diaz is represented by the great railway merger through which the Mexican Government has protected the Mexican nation against the perils of a railway trust or monopoly such as at one time seemed to threaten even the highly developed, experienced, and hard-headed people of the United States. As the development of railways in Mexico began to approach the present proportions of 15,000 miles, the Diaz administration, always on the alert against influences tending to overshadow or lessen the control of Mexicans in their own affairs, became aware of the fact that one of the mightiest railway systems in the United States . . . was attempting to buy control of the Mexican Central Railway, which was financially embarrassed and likely to be unable to pay the interest on its bonds. There could

be no doubt that this would be the first step in the economic conquest of Mexico by foreigners, a conquest that must eventually invade the domestic politics, and ultimately the government, of the republic. With the great trunk lines in the hands of foreign corporations, and the connecting railroads at the mercy of the central monopoly,—the industry and agriculture of Mexico would be in the grip of aliens. Already, in 1903, the government had prevented a merger of the Mexican National and the Mexican Central lines by buying the stock control of the Mexican National. But in 1906 the signs of a proposed conquest of Mexico, through a giant monopoly were again formidable. . . . With the hearty approval of President Diaz, Mr. Limantour [Mexico's brilliant minister of finance], supported by the Congress, prepared a plan through which the nation might be saved from the threatened foreign railway despotism and Mexico kept open and free for both native and foreign investors in agriculture, mining, and manufactures; for it was clear that if a railway trust could hamper and frighten a nation with such courage, energy, and individual powers of resistance as the people of the United States, the engulfing and controlling force of such a combination would be all the more terrible in a partly developed, languid, and easy-going people like the Mexicans. The result of Mr. Limantour's labors was a merger of the following lines, with the stock control in the hands of the Mexican Government: . . . National Railways of Mexico, 6,166,456 miles; Inter-oceanic Railway of Mexico, 733,837 miles; Mexican Southern Railway, 292,043 miles; Texas-Mexican Railway, 161,853 miles; Pan-American Railroad, 284,276 miles; Vera Cruz and Isthmus Railroad, 292,043 miles; total, 7,030,508 miles."—J. Creelman, *Diaz, master of Mexico*, pp. 391-393. —During the revolution of 1910-1920, the Mexican railroads suffered from destruction of property by bandits, and suspension of operation. Rail transportation was paralyzed, though the small lines were privately operated in oil regions, and an attempt was sometimes made to restore government lines.—See also MEXICO: 1898-1900; 1923 (February).

1907.—United States.—Regulation of railroads by the states.—"Never in the history of railroad legislation have our transportation systems run counter to a campaign so comprehensive, widespread, and disturbing as the general trend of 'regulation' in almost every State Legislature in session during 1907. . . . Thirty-five States, in all, attempted to enact laws reducing freight or passenger rates, establishing railroad commissions, increasing the powers of existing commissions, regulating car service, demurrage, safety appliances, block signals, free passes, capitalization, liability for accidents to employees, hours of labor, black-listing, strikes, etc. . . . Uniformity was sought without discrimination or foresight. Railroads in densely populated districts and those in sparsely settled rural localities were given alike a two-cent rate. Worse than this: roads of different earning power in the same State were assigned a level rate. The prosperous and well-established road and the struggling pioneer were bracketed,—to sink or swim. But all of their work was not wasted. Real constructive legislation was enacted in many States in regard to corporate control, safety appliances,

block signals, working hours, rights of employees, railroad mergers, valuation, capitalization, publication of rate schedules, etc., while in the States of South Carolina, South Dakota, Tennessee, and Wisconsin the rate question was given fair and temperate consideration. . . . An analysis of the general results shows that passenger fares were either actually reduced or affected in twenty-one States: Alabama, Arkansas, Georgia, Indiana, Illinois, Iowa, Kansas, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Oklahoma, Pennsylvania, South Dakota, Virginia, West Virginia, and Wisconsin. Two-cent rates now prevail in Arkansas, Indiana, Illinois, Minnesota, Missouri, Nebraska, Pennsylvania, and Wisconsin; and in Ohio, since 1906; two-and-one-half-cent rates in Alabama and North Dakota. North Carolina has established a two-and-one-quarter-cent rate; West Virginia, a two-cent rate for railroads over fifty miles in length; Iowa, a sliding scale of from two to three cents per mile; Michigan, a two, three, and four-cent rate; Kansas, Maryland, and Mississippi, two-cent rates for mileage books; the railroad commissions of Georgia and South Dakota have been authorized to establish a two-cent and a two-and-one-half-cent rate, respectively; and Oklahoma specifies in its new constitution a maximum charge of two cents for passenger fare. Virginia's Corporation Commission has adopted a two-cent rate for trunk lines, a three-cent rate for minor roads and a three-and-one-half-cent rate on one or two lines. Freight charges were lowered in many States. The Commodity Freight Rate law of Minnesota is probably the most scientific and equitable, and is being used by many Western roads as a basis. Commissions in other States have adopted it as a model. Laws prohibiting free passes were enacted in Alabama, Indiana, Kansas, Maine, Minnesota, Nebraska, Nevada, New Hampshire, New York, Oklahoma, Oregon, South Dakota, and Texas. Eleven States created railroad commissions: Colorado, Indiana, Michigan, Montana, Nevada, New Jersey, New York, Oklahoma, Oregon, Pennsylvania, and Vermont. Sixteen others gave increased power to existing commissions, apart from rate regulation: Alabama, Arkansas, Florida, Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, New Hampshire, North Carolina, South Carolina, South Dakota, Texas, Washington and Wisconsin."—R. E. Ireton, *Legislatures and the railways (Review of Reviews, Aug., 1907)*.

1907-1922.—United States.—Investigation of freight classifications.—In 1907 the Uniform Classification Committee, consisting of five representatives of the railroads from different parts of the country began a long series of sessions to investigate the conditions of freight traffic in the United States, and to devise means of simplifying the conflicting classification of freight rates. This committee reported the following conditions: In "1907, the railways of the United States reported a total freight tonnage of 1,706,336,650. This, however, was a greater number of tons than was actually shipped on the railroads, because of the fact that much of the freight was handled by two or more railroads, each of which reported its

entire tonnage. After making the subtractions needed to eliminate duplications, it is found that 977,489,440 tons were actually turned over to the railroads by shippers. . . . To handle this traffic 41,337 freight and switching locomotives and over two million freight cars were used. Over one half (53.39 per cent) of this great volume of traffic was made up of minerals mainly coal and iron ore. In no other country of the world is the mineral traffic so great as in the United States, and as this traffic must be carried at low freight rates, the average earning of the railroads for carrying a ton of freight one mile is less in the United States than elsewhere. Manufacturers make up somewhat more than one seventh of the total tonnage (15.41 per cent), products of the forest include one ninth (11.38 per cent), and agricultural products one twelfth (8.62 per cent). These four commodities include eight ninths of the total traffic, the other one ninth being made up of animal products, general merchandise, and miscellaneous articles. In these few groups of commodities more than ten thousand distinct kinds of articles are included. It is obvious that it would be impossible for the railroads to make a rate for each of the ten thousand articles; hence it is necessary to group the articles into a small number of classes, and to make rates vary with classes instead of by articles. Furthermore, it is desirable that the railroad should give lower rates on commodities when they are shipped in carloads than when they are handled in less than carload quantities. . . . Prior to the passage of the Interstate Commerce Act in 1887, nearly every large railroad had its own classification, but in that year these various classifications were consolidated into three. One of these, the official classification applies in the territory north of the Ohio and Potomac Rivers and east of the Mississippi River. This originally grouped articles into six numbered classes, but these six classes have been raised to fourteen; nominally there are six classes, but their number has really been increased by grouping certain articles as one and a half, twice, or two and a half, etc., first class. South of the Ohio and Potomac, and east of the Mississippi, the southern classification is in force. It groups commodities into fourteen classes. West of the Mississippi the western classification prevails. It groups articles into ten classes. The class to which an article is assigned depends upon the value of the article, the expense of transporting it, the value of the service to the shipper, and many other factors. Inasmuch as the rate which an article pays is determined by the class to which it is assigned, the forces which control rates also control the classification. . . . Not all articles of freight are included within the classification. Coal, live stock, lumber, grain, cement, and many other bulky commodities that are invariably handled in carload quantities are each given what is called a commodity tariff rate. Such commodities are 'ex-class freight.' Taking the country as a whole, the number of commodities thus designated is relatively large—between one thousand and two thousand—but they are less numerous than those within the classification."—E. R. Johnson, *Elements of transportation*, pp. 67-69.—The committee of 1907 found the practice of rate-making under the three systems of classification, according to region, so complex that it recommended a gradual standardizing of freight rates in order to keep business stable. So the three classification systems remained in effect until revised in 1922, under the Transportation Act of 1920.

1908-1909.—United States.—Commodity clause of the Hepburn Act applied to anthracite railroads of Pennsylvania.—In May, 1908, the commodity clause of the Hepburn Act became operative (see COMMODITY CLAUSE OF THE HEPBURN ACT), and soon thereafter its constitutionality was challenged by certain Eastern railroads. This famous clause was introduced into the Hepburn Bill, in 1906, by Senator Elkins. Hence it is sometimes known as the "Elkins Clause." With an especial view to dissolving the monopolistic combination by which a group of railroads operating in Pennsylvania had established control over the mining and marketing as well as the transportation of anthracite coal, the clause declared it to be unlawful "for any railroad company to transport from any State to any other State or to any foreign country any article or commodity other than timber manufactured, mined, or produced by it, or under its authority, or which it may own in whole or in part, or in which it may have any interest, direct or indirect, except such articles or commodities as may be necessary and intended for its use in the conduct of its business as a common carrier."

Since 1874 the constitution of Pennsylvania had declared that "no incorporated company doing the business of a common carrier shall, directly or indirectly, prosecute or engage in mining or manufacturing articles for transportation over its works; nor shall such company directly or indirectly engage in any other business than that of common carrier, or hold or acquire lands, freehold or leasehold, directly or indirectly, except such as shall be necessary to carry on its business." But this constitutional prohibition had not sufficed to restrain the owners of the railways which tap the anthracite coal district from acquiring practical ownership of so large a part of its mines as to be able, by combinations and understandings among their managers, to monopolize the market of that most important commodity. It was thought that the power vested in the Federal government to regulate the commerce in coal between Pennsylvania and other states might be brought into exercise against this anthracite monopoly with more effect. In the trial in the United States Circuit Court for the eastern district of Pennsylvania . . . the government met defeat. Two of the three judges of the court, namely Gray and Dallas, filed opinions against the constitutionality of the enactment, their colleague, Judge Buffington, dissenting. The case went then on appeal to the Supreme Court, and there, by a judgment so nearly unanimous that Judge Harlan alone dissented on a single point, the decision of the Circuit Court was reversed and the constitutionality of the law upheld. The following summary of its opinion was given out by the Supreme Court at the time of the announcement, May 3, 1900:

"(1) The claim of the government that the provision contained in the Hepburn act, approved June 29, 1906, commonly called the Commodities Clause, prohibits a railway company from moving commodities in interstate commerce because the company has manufactured, mined, or produced them, or owned them in whole or in part, or has had an interest direct or indirect in them, wholly irrespective of the relation or connection of the carrier with the commodities at the time of transportation, is decided to be untenable. It is also decided that the provision of the commodities clause relating to interest, direct or indirect, does not embrace an interest which a carrier may have in a producing corporation as the result of the ownership by the carrier of stock in such corporation irrespective of the amount of stock which the carrier may own in such corporation, provided the corporation has been organized in good faith.

"(2) Rejecting the construction placed by the government upon the commodities clause, it is decided that that clause, when all its provisions are harmoniously construed, has solely for its object to prevent carriers engaged in interstate commerce from being associated in interest at the time of transportation with the commodities transported, and therefore the commodities clause only prohibits railroad companies engaged in interstate commerce from transporting in such commerce commodities under the following circumstances and conditions: (a) When the commodity has been manufactured, mined, or produced by a railway company, or under its authority, and at the time of transportation the railway company has not in good faith before the act of transportation parted with its interest in such commodity: (b) When the railway company owns the commodity to be transported in whole or in part: (c) When the railway company at the time of transportation has an interest direct or indirect in a legal sense in the commodity, which last prohibition does not apply to commodities manufactured, mined, produced, owned, etc., by a corporation because a railway company is a stockholder in such corporation.

"Such ownership of stock in a producing company by a railway company does not cause it as the owner of the stock to have a legal interest in the commodity manufactured, etc., by the producing corporation.

"(3) As thus construed the commodities clause is a regulation of commerce within the power of Congress to enact. The contentions elaborately argued for the railroad companies that the clause, if applied to preëxisting rights, will operate to take property of railroad companies and therefore violate the due process clause of the Fifth Amendment, were all based upon the assumption that the clause prohibited and restricted in accordance with the construction which the government gave that clause, and for the purpose of enforcing which prohibitions these suits were brought. As the construction which the government placed upon the act and seeks to enforce is now held to be unsound, and as none of the contentions relied upon are applicable to the act as now construed, because under such construction the act merely enforces a regulation of commerce by which carriers are compelled to dissociate themselves from the products which they carry and does not prohibit where the carrier is not associated with the commodity carried, it follows that the contentions on the subject of the Fifth Amendment are without merit.

"(4) The exemption as to timber, etc., contained in the clause is not repugnant to the Constitution." Six railway companies, namely, the Delaware and Hudson, the Erie, the Central of New Jersey, the Lackawanna, the Pennsylvania and the Lehigh Valley, were involved in the test suit on which this decision was given; but the ruling affected all roads engaged in coal mining. Justice Harlan dissented from that part of the decision which relates to the ownership of stock in a producing company; otherwise the opinion, announced by Justice White, was the opinion of the entire Bench.

1908-1918.—Australasian colonies.—Railroads as state enterprises in Australia.—Rapid extension of roads.—Transcontinental line.—"The most conspicuous instance of railways being constructed by the state because private enterprise refused to undertake the task, is to be found in the Australasian colonies of Great Britain. . . . Speaking broadly, the seven separate States which make up . . . Australasia have among them [1920] over 20,000 miles of railway owned and worked by the respective governments."—W. M. Acworth, *Historical sketch of government ownership of railroads in foreign countries*, p. 20.—"The growth toward this mileage has been rapid. "At the end of 1908 New South Wales was first in mileage with 3472 miles, followed by Victoria, 3401 miles, Queensland 3359 miles, South Australia, 1279 miles, and West Australia, 1830 miles, but in 1912 Queensland was at the head of the list with 4143 miles, New South Wales, 3799 miles, Victoria, 3543 miles, South Australia, 1460 miles, and West Australia, 2471 miles. The figures show that Queensland and West Australia are building more rapidly than the older colonies of New South Wales and Victoria. Queensland's increased mileage comes chiefly in the construction of two entirely new lines, one of 454 miles along the coast, and one of 1200 miles across the Western portion of the colony. . . . With the rapid development of the Australasian colonies, in recent years came the desire to link up the railways of the eastern side of the continent with those of West Australia. . . . Western Australia in particular had long desired connection with the chief centers in the east, but unaided, was unable to finance so great a scheme."—E. Protheroe, *Railways of the world*, pp. 718, 723.—"In 1912 surveyors inspected and reported on a route from Perth to Brisbane. Work on one section was begun at once, but the war delayed construction and the entire line was not finished until in the latter part of 1917. "For the first time through railroad connection from the east to west of the island continent was an accomplished fact. Today it is possible to travel by rail from Perth, the capital of western Australia, right away to Brisbane, Queensland's leading city, passing en route through Adelaide, Melbourne and Sydney, a route joining up the capitals of the five states of the commonwealth, representing a total journey of 3,805 miles. . . . The work has occupied five years and demanded an expenditure of \$35,000,000. . . . The railroad . . . [reduces] the time of the journey from Perth to Melbourne from five to two days, and . . . [brings] the eastern cities of the island continent much nearer the mother country, for it is proposed to convey the mails by the new route and not by boat as hitherto. Incidentally, too, it brings western Australia's capital nearer the United States."—*Scientific American*, Mar. 9, 1923, pp. 221-223.—See also AUSTRALIA: 1907-1920; WESTERN AUSTRALIA: 1913.

1909-1910.—France.—Purchase of Great Western railroad.—Strikes.—Social insurance legislation. See FRANCE: 1906-1909: Presidency of Armand Fallières; LABOR STRIKES AND BOYCOTTS: 1906-1910; SOCIAL INSURANCE: Details for various countries: France: 1909.

1910-1916.—United States.—Commerce court created by Mann-Elkins Act.—Bureau of valuation.—Increase of powers of Interstate Commerce Commission.—“The Mann-Elkins Act of June 18, 1910, . . . turned out to be a very important piece of legislation. [See U. S. A.: 1910 (March-June).] Its provisions were directed mainly to two ends: expedient appeals from the Interstate Commerce Commission, and increasing the Commission's powers. The congestion and delay in appeal proceedings called for remedy. At the President's suggestion, the law provided a new tribunal, composed of five circuit judges selected by the Chief Justice, and known as the Commerce Court. This court was to sit continuously at Washington for the purpose of hearing appeals from the rules and acts of the Commission. Appeals from its judgments might be carried to the Supreme Court, with precedence over all save criminal cases. The powers of the Commission were increased in several ways. (1) Jurisdiction was extended to interstate and foreign telegraph (including wireless), telephone, and cable companies, and the term 'railroad' was broadened to include appurtenant bridges and ferries. (2) The Commission was authorized to suspend newly announced tariffs for a period of from four to ten months, pending investigation. (3) It was empowered to proceed against a carrier at any time, and on its own initiative. (4) The 'long and short haul' clause was revived in full vigor. The original bill forbade issues of railway stocks and bonds unless approved by the Commission. In the Senate this was stricken out, and the measure as passed merely authorized the President to appoint a commission to investigate the subject and report upon it. Under the terms of the new law the Commerce Court was organized in December, 1910, with Martin A. Knapp, former chairman of the Interstate Commerce Commission, as presiding judge. The tribunal never gained popular confidence, and in 1912 Congress in effect abolished it by cutting off its appropriation. This action was perhaps influenced by the impeachment and removal, in 1912, of a member of the court, Robert W. Archbald, on the charge of using his position to enhance his personal fortunes. The remaining members of the court were continued as ordinary circuit judges; and appeals from the acts and rulings of the Commission were thereafter lodged with the federal circuit courts of appeal throughout the country, as before 1910. The promising idea of a central court of review was thus abandoned. Physical valuation as a basis for rate-making had long been growing in favor. Beginning with Texas in 1803, more than a dozen states passed laws on the subject; and while in most cases the main object was taxation, the effect on rate-making was always kept in mind. When the Hepburn bill was before Congress, Senator La Follette urged nation-wide valuation; and a valuation clause narrowly escaped insertion in the Mann-Elkins law. The Interstate Commerce Commission favored the plan, and the special Securities Commission, in a report of November 1, 1911, supplied fresh impetus. A Valuation Act

was signed by President Taft March 1, 1913, making it the duty of the Interstate Commerce Commission to 'investigate, ascertain, and report in detail,' within five years, the original cost to date, the cost of reproduction new, and the cost of reproduction, less depreciation, of every piece of property owned or used by common carriers subject to the Interstate Commerce Act. The Commission organized a Division of Valuation, and appointed a staff of engineers to take charge of the inventory in each of five great sections of the country; the railroads set up a bureau to co-operate; appraisals began in 1914; and the first tentative reports appeared in 1916. Judicial decisions after the passage of the Hepburn Act tended to exalt the regulative power of the federal government and of its agents, the Interstate Commerce Commission. In the *Minnesota Rate Cases*, decided June 9, 1913, the Supreme Court took new ground in asserting that state regulation of interstate rates was exclusive only until Congress acted, and that Congress might regulate such rates as against state control whenever it wished, for the reason that intrastate rates indirectly determined interstate rates. In the *Texas-Shreveport Case*, decided June 8, 1914, the court held not only that the federal government could regulate intrastate rates, but that the Interstate Commerce Commission already had the necessary authority. The *Minnesota* cases were primarily a test of the rate-making powers of the states; and the court ruled that the states had full power to fix rates on railroad traffic within their borders, except where the use of such power would interfere directly with the regulation of commerce beyond their borders, or amount to confiscation. This was a disappointment to the railroads, which within ten years had developed a preference for federal, as against state, rate-making control; yet there was promise of relief in the new reaches of the federal authority. Other decisions specially fortified the Interstate Commerce Commission. In *Interstate Commerce Commission vs. Illinois Central Railroad*, decided January 10, 1910, the Supreme Court fully discussed judicial review and made clear its purpose to hold the acts of the Commission subject to judicial authority. But it announced that review on grounds of reasonableness would be applied only when the Commission's acts were regarded as so unreasonable as to violate a constitutional provision, or to be confiscatory 'beyond any just or fair doubt.' The court asserted that it would not pronounce illegal an order or a statute merely because it considered such order or statute unwise or inexpedient; in short, it disclaimed intent to encroach upon the Commission's administrative functions. Furthermore, in *United States and Interstate Commerce Commission vs. Kansas City Southern Railway*, decided December 1, 1913, the Supreme Court affirmed in sweeping language the power of the Commission to regulate not only rates, but the internal administration of railroad companies."—F. A. Ogg, *National progress*, pp. 52-57.

1910-1920.—Germany.—Modern railroads.—Great extent of mileage.—Nationalization.—Financial effect of nationalization.—“In 1910 Germany possessed greater railway mileage than that of any other country in Europe. Of the 37,586 miles only about 2,700 miles were worked by private companies. The Prussian state rail-

ways continued to exemplify the best features of railway operation in Germany. All the German state railroads were nationalized on April 1, 1920, at a fixed valuation. The several states were permitted to decide whether the purchase price should be determined by the capital invested or the arithmetical mean between the invested capital and the earning capacity plus any deficits on the state railroads since 1914. The financial effect of the transfer of the state roads to the nation was unfavorable. No time limit . . . [was] fixed for the transfer of the private railroads acting as common carriers. Railroads of the third-class and street railways . . . [were to] remain the property of the several states. These enterprises . . . [were] affected most by the social and economic revolutions in Germany. Many private roads . . . [were] in danger of bankruptcy and financial collapse."—M. von Völker, *German transportation and communication* (tr. by E. M. Fogel, *Annals of the American Academy of Political and Social Science*, Nov., 1920).—See also GERMANY: Map.

1912-1914.—United States.—Steamship and railroad lines severed.—Volume of freight traffic.—On August 16, 1912, Congress passed a bill empowering the Interstate Commerce Commission to sever the connections of steamship lines owned or operated by railroads, where competition existed between such carriers "through the Panama canal or elsewhere." This section of the Panama canal tolls legislation became effective in July, 1914. In that same year it was estimated that the freight business of the United States had reached the proportion where the railroads of the country were hauling annually twelve tons for every man, woman, and child in the United States, making an annual freight bill for every individual of about \$22.50.

ALSO IN: S. Daggett, *Panama canal and the railroads* (*Journal of Political Economy*, v. 23, p. 953).

1912-1915.—United States.—Flagler's "oversea railroad" to Key West.—The opening of Mr. H. M. Flagler's "oversea railroad" to Key West on January 22, 1912, marked the achievement of the apparently impossible and brought Cuba several hours nearer the United States. The official title of this unique piece of railroad construction is the Key West Extension of the Florida East Coast railway. The February (1912) Bulletin of the Pan American Union states briefly the details of the work, from which it is learned that "all construction work of the ordinary railroad kind had to be abandoned, new methods and new principles had to be introduced, and a unique system had to be devised before accomplishment was assured." This new system involved "the erection of the track on stone arches whose foundations were the bed of the sea, and the continuance of that substantial trestle-work into the open ocean, at one place even out of sight of land." The entire extension from Homestead, a point twenty-eight miles south of Miami, is 156 miles in length and its approximate cost was \$18,000,000. Key West has by this construction become the railroad terminus nearer to Panama than any other American port. In 1915 the final link was completed in the system that will enable a freight-car loaded in any part of the United States to be unpacked in Havana. A ferry-steamer, especially designed and constructed, receives cars at Key West and after a hundred-mile ocean trip lands

them at Havana on the Cuban railway system.—See also FLORIDA: 1885-1915.

ALSO IN: R. M. Harper, *Completion of the railroad across Florida Keys* (*Bulletin of the American Geographical Society*, v. 44, no. 1, 1912).

1912-1922.—South America.—Need of railroads to develop its resources.—Pan-American railroad projected.—Though considerable railroad construction was undertaken by the republics of South America during the decade of 1912 to 1922, there was still an amazing lack of rail transportation on the continent, which must be supplied before the immense resources of the country can be utilized. "Venezuela, Colombia and Ecuador, although their combined area is equal to one-third of the area of the United States, have between them less than 1,500 miles of railways, and yet these republics have vast resources of almost every description. . . . Peru, lying directly south of Ecuador, has a coast line which equals the distance from Maine to Georgia. Its arid coastal lands, a short time ago looked upon as almost a worthless desert, have been found to contain oil and petroleum in paying quantities. . . . No great distance inland from . . . [the large port of Chimbote], an extensive coal deposit has been found; into these coal fields a railroad could readily be built, there being but one real engineering difficulty along the route. Although the mines of Peru have been worked since before the days of Julius Cæsar, there are still vast quantities of minerals on the plateaus and slopes of the Andes. Inducements are being offered to promote more railway construction, so that the country may be further opened up. . . . Better railway facilities than in the past, and the actions and enterprise of an enlightened government, are placing the wealth of this vast yet thinly settled republic within reach of foreign markets. . . . Chile, extending as it does from the boundaries with Peru to stormy Cape Horn, has a coastline equal in length to the distance from St. John's, Newfoundland, to the northern boundary of Brazil. . . . Its greatest wealth is in its nitrate fields, although copper, iron and other minerals abound. The Tofo iron mines, about to be developed by the Bethlehem Steel Corporation, contain, it is estimated, upward of 185,000,000 tons of 60 per cent. ore, which, it is stated, can be placed aboard ship at a cost of less than 20 cents a ton. The Republic of Argentina stands today foremost among the South American countries. Although it is by far the best developed of the ten Republics and boasts of a larger foreign trade than the Empire of China, more capital will be needed from year to year to build new railways. . . . Uruguay, which is and which likely will continue to be, primarily a cattle country, wants meat product factories and refrigerating plants, and will doubtless need additional railway lines in the future. Paraguay, heretofore, spoken of as a country behind the age, has fully awakened to its possibilities and in consequence is beginning to move forward by leaps and bounds. The Republic, tiny as it looks on the map, is larger than California and Ohio combined. It has direct rail and river communication with Buenos Ayres and will soon be connected by rail with the Brazilian seacoast. . . . Brazil, . . . the largest Republic in South America, . . . is, in fact, larger than the United States, excluding Alaska. The great wealth of Brazil, at present developed, lies in two products, coffee and rubber; five-sixths of the nation's exports being made up of those two commodities. [Yet her railway facilities are quite inadequate.]

... One enterprise which will involve the continent as a whole and which is still more or less a dream of the future has for a long time attracted attention. The so-called Pan-American Railway is projected to form an all rail route from New York to Buenos Ayres. At the present time a number of sections of this future through line are in operation or under construction. These sections are of such a variety of gauges, however, as to be practically useless for the purpose of through communication. The completion of this line will place New York within a little more than two weeks' journey of Argentina;—it is questionable, however, if many persons will have the endurance to make the trip. The route proposed passes through the United States, Mexico, Central America, Panama, Colombia, Ecuador, Peru, Bolivia and Argentine. If this railway, or rather combination of railways, serves no other purpose, it will at least do much to foster Pan-Americanism."—F. M. Halsey, *Railway expansion in Latin America*, pp. 153-157.—See also PAN-AMERICAN RAILWAYS; AMAZON RIVER: Its course; AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902; ARGENTINA: Railroads; BOLIVIA: 1913 (May); 1919; ECUADOR: 1921; CENTRAL AMERICA: Map.

1914-1918.—Great Britain.—War administration of railways.—Efficiency of service.—Problems of traffic.—Financial conditions of roads.—“A series of parliamentary acts, extending from 1842 to 1888, had laid the foundation for the governmental authority under which the railways [of England] were taken over in 1914. . . . The requirement thus laid upon the British government by law was met . . . by means of a mutual agreement between the government and the railways, the principal features of which were as follows: 1. It was agreed by the railways that their organization should be placed without reserve at the disposal of the military authorities, for the transportation of troops, guns and munitions, military equipment and supplies, when, where, and under whatever conditions needed. For purposes of military transportation any railway or group of railways would virtually be commandeered for exclusive military service whenever the occasion demanded, all other traffic being sidetracked or restricted until the exigency has passed. 2. It was mutually agreed that no money would pass from the government treasury into that of any railway for any specific movement of troops or supplies. 3. The government treasury agreed to pay to each railway, at certain periodic intervals, such sums of money as would bring its net income for the period to the level of the last corresponding period before the outbreak of the war. . . . If a railway should suffer a deficit, . . . the government agreed not only to pay over such amount of money as would make up the deficit, but also to add enough to its payment to place the road in the same relative condition (as regards net income) as before the war. Conversely, if any railway should be so favorably situated . . . as to earn more than its normal net income, it would be required to turn the excess into the treasury. 4. It was agreed that the normal net income for each road would be considered as the net income actually earned during the calendar year ended December 31, 1913, which was the last full year under peace conditions. . . . However, there was at first one important qualification. It was mutually agreed that if the net income of any railway for the first seven months of the

calendar year 1914 (January to July, inclusive) showed increases or decreases as compared with the net income of the corresponding seven months of 1913, the payments of the government to that railway for the last five months of the year (August to December, 1914), would be such as to bring the net income of those months relatively as much above or below the net income of the corresponding five months of 1913 as the normal seven months' net income of 1914 was above or below the net income of 1913. This qualification was discarded after January 1, 1915, and 1913 became in fact the yardstick, or test year . . . [a year that was a record breaker for the British railways]. The first great test was the hasty mobilization of the Expeditionary Force for passage to France in August, 1914. . . . Under the mobilization schedules prepared years before the war, trains were operated at fixed intervals and came into Southampton every 12 minutes for 16 hours of every day, or from dawn until dark. The regulations provided that if a train were over 12 minutes late, it should lose its turn on the schedule and should be sidetracked until the whole troop movement was completed. Not a single train lost its turn. In fact, most of the trains arrived at Southampton from 20 to 30 minutes ahead of schedule. This one movement of the first Expeditionary Force called for 1,500 trains. . . . [The] military transportation work [of the railways] throughout the whole war . . . [was] of the same high order. They contributed thousands to the colors, many of whom served in France in the construction, reconstruction, or operation of war railways. They loaned equipment to be shipped cross-channel, and contributed bridges and even rails and ties from out their own roadbeds. In fact whole branch lines were in some cases torn up and transported bodily to France. They loaned skilled men to munitions works and other branches of war industry. Skilled boiler makers from some of the railway shops were detailed to service in naval dockyards. Many of their docks and harbors, and half of their 200 and more steamers were turned over to the Admiralty and the War Office for transport or other services. Companies undertook car building and repairing in their own car shops for the Admiralty and the War Office, the result being that the building of new equipment for railway purposes was materially curtailed. Normal repair work was greater than usual, owing to the pressure of war traffic on the equipment; in addition, the roads were called upon to adapt much of their rolling stock to the unusual demands of war transportation, such as by the adaptation of freight cars to carry horses, cavalry, artillery equipment, and the like. Some roads supplied telephones and power, others handled naval repairs in their marine shops, while still others undertook various forms of work for the government, entirely separate from their transportation activities. Many of the large roads fitted up ambulance and hospital trains for service both in France and England, stretcher cars, hospital ships, rest rooms for soldiers and other conveniences of the kind; the larger part of this work was done in their own shops. . . . What the government paid the railways was from five to ten per cent of what might be regarded as their normal revenues under conditions of peace. Whether the government traffic represented a greater proportion of total railway traffic than five to ten per cent, records do not show; but in view of the tremendous movement of government munitions and supplies and of troops, it would seem unques-

tionable that such movement has represented a much greater share of the total railway movement than ten, or possibly even twenty or thirty per cent. Differently stated, this seems to indicate that the British government has been enjoying an unusually low rate on the transportation business it has furnished to the railways, and that it drove a good bargain, even on the basis of the peak year 1913. . . . Railway stocks . . . [fell] considerably in market value, even in the face of fairly well maintained dividends. Whether the same phenomenon would have occurred under a different arrangement, or would have occurred to the same extent is a moot question, but one hardly worth discussing. It is safe to assume that under any conditions of operation the railways could hardly have competed with other industries that were making tremendous war profits. The same competition was going on simultaneously in the United States between the railways and other industries, and in all cases the railways failed to be successful in earning the same rates on investment as industry in general, or in securing capital on the same terms as war favored industries. Yet it is not unlikely that the fall in prices of British railway stocks reflected the uneasiness of the investing public as to the future of the railways."—F. H. Dixon and J. H. Parmelee, *War administration of the United States and Great Britain*, pp. 83-86.

1916.—United States.—Adamson law.—The Adamson eight-hour day law, enacted, September, 1916, was recommended to Congress by President Wilson during the strike crisis of that year. By this piece of Federal legislation, the eight hour day for work and wages of railway employees engaged in interstate or foreign commerce was established.—See also ADAMSON LAW; ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1888-1921; SUPREME COURT: 1917; U.S.A.: 1916 (August-September).

1916-1920.—United States.—Federal control of railroads during World War.—Railroads' War Board.—Director-general of railroads.—Policy and organization.—War time coöperation.—Conditions after armistice.—"In the Army Appropriation Act of August 29, 1916, was contained a provision to establish a Council of National Defense 'for the coördination of industries and resources for the national security and welfare.' This act directed the Council of National Defense, which consisted of six cabinet officers, to nominate, and the President to appoint 'an Advisory Commission consisting of not more than seven persons, each of whom shall have special knowledge of some industry, public utility, or the de-

velopment of some natural resource, or be otherwise specially qualified' for the performance of duties assigned by the commission. The duties of the Council, which were specifically mentioned in the act, were numerous and of large significance in the great campaign of preparedness upon which the country was entering. The first of these prescribed duties was 'the location of railroads with reference to the frontier of the United States so as to render possible expeditious concentration of troops and supplies to points of defense; the coördination of military, industrial and commercial purposes in the location of extensive highways and branch lines of railroad; the utilization of waterways.' As the transportation expert who should be responsible for the development and use of railway facilities, the President appointed Daniel Willard, President of the Baltimore and Ohio Railroad, and he was made chairman of the Committee on Transportation and Communication, and later chairman of the Advisory Commission. Upon the initiative of Mr. Willard, the executive committee of the American Railway Association met on February 16, 1917, and elaborated plans for the more complete coöperation of railways in the scheme of national defense."—F. H. Dixon and J. H. Parmelee, *War administration of the railways in the United States and Great Britain*, p. 17.—The railroad authorities "in turn created an Executive Committee of five presidents of leading railroads: Fairfax Harrison, President of the Southern Railroad; Samuel Rea, President of the Pennsylvania Railroad; Julius Kruttschnitt, Chairman of the Executive Committee of the Southern Pacific Railroad; Hale Holden, President of the Chicago, Burlington and Quincy Railroad; and Howard Elliott, President of the New York, New Haven and Hartford Railroad. Mr. Willard, as Chairman of the Advisory Commission of the Council of National Defense and of its Committee on Transportation and Communication, was requested to act with this Committee as an *ex officio* member, and the Interstate Commerce Commission was invited to designate one of its members to act in a like capacity. This Executive Committee was popularly known as the Railroads' War Board. It is important to note that although it worked in close coöperation with the Council of National Defense and by many was mistakenly considered as one of the subordinate units of that organization, it was a committee constituted by and representing the railroads and not the Government. This Committee opened headquarters at Washington and organized a large staff, the entire expenses of which were defrayed by the railroads. The members of the Committee themselves gave practically their entire time to the work of the Committee without remuneration from the Government. There can be no question regarding the loyal and effective work done by this Committee. In scores of ways it took action looking to the more effective utilization of cars and railway facilities generally, the reduction in the number of trains, the reciprocal use by the roads of each other's tracks and terminals."—W. F. Willoughby, *Government organization in war time and after*, pp. 170-171.—In May, 1917, the powers of the Interstate Commerce Commission were increased by the passage of the Esch Car Service Act giving the commission control over the movement, distribution, exchange, interchange, and return of cars, a necessary expansion of its authority to meet the war conditions of traffic. "In view of the fact therefore that [the] important service in

the war for the year 1917, at least, was to consist in an adequate output and an efficient distribution of food supplies and raw materials of manufacture, quite as much as a prompt handling of military traffic, some additional power in the hands of the Executive seemed urgently needed. Accordingly, on August 10, 1917, Congress passed the Priority Law, under which the President was authorized during the continuance of the war to direct that carriers, whether by rail, water or otherwise, shall give preference in transportation to such traffic as in his judgment is essential to the national defense. He may issue his orders direct or through such person as he may designate for the purpose, or through the Interstate Commerce Commission. . . . Robert S. Lovett, Chairman of the Executive Committee of the Union Pacific Railroad, was appointed by the President August 18 as Director of Priority Shipments, . . . [and was later] made chairman of the so called Priority Board, which has broader functions than those relating to transportation merely. With Judge Lovett's approval, it was arranged that the Railroads' War Board should accept orders on behalf of all carriers. The railways individually signed an agreement authorizing the War Board to accept service, and pledging themselves to consider such orders as legal and binding upon them. . . . On October 6, the War Board announced that the railways had moved to date approximately 720,000 soldiers from their homes to training camps or embarkation points. All but 32,500 men in the first five per cent of the National Army required special train service, involving 13,500 passenger cars, including 1,500 Pullman and tourist sleepers, 2,000 baggage cars, and 4,500 freight cars. In the handling of materials for camp construction, the railways . . . [showed] the same efficiency. Within thirty days from the date that the government placed its first order for cantonment materials, the railways had delivered more than 12,000 carloads of lumber and other building materials to the sixteen cantonments, and they had built many miles of extra trackage at their own expense for the local handling of government freight. Shipments of food and materials . . . [continued] uninterruptedly, the number of cars of material of all kinds arriving at army camps having reached on December 1, 1917, a total of 128,350."—F. H. Dixon and J. H. Parmelee, *War administration of the railways in the United States and Great Britain*, pp. 42-51.—The federalization of the railroads took place December 28, 1917, when President Wilson, under the authority granted him by the Army Appropriations Act of August 29, 1916, took possession of the railroads of the United States, and appointed as their director-general, William G. McAdoo, secretary of the treasury. Complete control of railroads by the government came as a war measure, and was aimed to meet the acute labor situation, and the difficulties of unified administration under the Railroad War Board. The Federal Control Act was passed by Congress on March 21, 1918, as the necessary legislation to sanction the action of the President. A feature of the Federal Control Act "was that providing for what was designated as a Revolving Fund. This Fund was created in the first instance by the appropriation of \$500,000,000. To this Fund would be also carried any funds available from any operating income of any road. From the monies thus accumulated the Railroad Administration was directed to pay the expenses of Fed-

eral control and the compensation to roads agreed upon in so far as such payments could not be made from the income of the roads themselves; to provide additional terminals, rolling stock, and other equipment; to make advances to roads with which to make such capital expenditures at such a rate of interest and subject to such conditions of repayment as the President might fix; and to purchase securities issued by the roads as authorized by the President for the purpose of meeting these obligations. Express authorization was also given for the utilization of this Fund for the operation of canals or for the purchase, construction, or use and operation of boats, barges, and other transportation agencies on the inland canal and coastwise waterways. Finally, the Act authorized the President during the period of Federal control to initiate rates, classifications, regulations, and practices by filing the same with the Interstate Commerce Commission, which rates, regulations, and practices should immediately enter into force and continue until modified or set aside by the Interstate Commerce Commission after a full hearing. In reaching its decisions the Interstate Commerce Commission was directed to give due consideration to the fact that the roads were being operated under a unified and coordinated national control and not as competing units. The Act, however, further provided that if the President certified to the Commission that such changes in rates, classifications, regulations, and practices were necessary in order to provide the operating revenues necessary to meet expenses of operation and other obligations, the Commission, in determining the reasonableness of such rates, classifications, etc., should take into consideration such certification of the President and such recommendation in relation thereto as he might make."—W. F. Willoughby, *Government organization in war time and after*, pp. 178-179.—"But, with all the emphasis placed upon matters of finance and their effect upon the pressing problems of enlargement, upon labor unrest, and upon the coordination of facilities, other reasons were in the background. One of the great obstacles to complete coordination of facilities under voluntary agreement among the railroads was law-made rather than railroad-made. The things which the United States Railroad Administration at once set about to do were the very things that the railroads as private corporations were forbidden to do by the anti-trust and anti-pooling laws. What the Railroads' War Board had done in voluntary unification was directly contrary to those laws, and the executives knew that they might be held personally liable. There were no informal 'understandings' that under the emergency conditions the Department of Justice would overlook the situation. On the contrary, there were positive indications by official inquiries that the Attorney General was keeping himself informed of every move. The laws obliged railroads to compete; they prohibited the pooling of facilities and earnings. Under the war conditions the maximum of transportation production depended to a large extent upon effective coordination, which required the pooling of resources. This phase of the situation undoubtedly had weight in the government's decision to take over the railroads. The President's proclamation of December 26, 1917 directed Mr. McAdoo, as Director General of Railroads, to take possession of and control, operate, and utilize 'each and every system of transportation and appurtenances thereof,' and to perform the duties im-

posed upon him through the boards of directors, receivers, officers, and employees of said systems of transportation. 'Until and except so far as said director shall from time to time by general or special orders otherwise provide, the boards of directors, receivers, officers, and employees of the various transportation systems shall continue the operation thereof in the usual and ordinary course of the business of common carriers, in the names of their respective companies.' The Director General's first general order . . . directed that 'all officers, agents, and employees . . . may continue in the performance of their present regular duties, reporting to the same officers as heretofore and on the same terms of employment.' Under this order the president of a railroad company acted as agent of the Director General and at the same time continued as the chief executive of the corporation—a form of organization which was continued until after the passage of the Federal Control Act, approved March 21, 1918. That Act provided the terms of compensation to the corporations and otherwise established the relations between the Director General as the lessee of the railroads and the individual companies as lessors. Immediately after the passage of the Control Act an attempt was made to draw a fairly sharp line between railroad activities which were purely corporate and those which were federal. For example, on March 30, 1918, Circular No. 17 outlined a policy under which the salaries and expenses of officers and employees engaged primarily in work for the corporation would be paid from corporate funds if the corporation desired to continue their services, and under which the government would pay the salaries and expenses of such officers and employees only as were necessary for the federal operation of railroads. This circular was aimed at such corporate officers as chairmen of the Board, general counsel, and executive financial officers such as the New York corporate organizations of western and southern railroads. This action was followed on May 21 by a fundamental change in organization. Instead of continuing the chief executive of a railroad company as the agent of the government, the Director General ordered that there should be a distinct cleavage between federal and corporate activities. To that end he required that a federal manager, to act for the Director General, should be appointed for each railroad or for each group of railroads in the cases where some of the small roads were operated as parts of larger systems. Federal managers were obliged to sever all connection with the railroad companies. They were to represent the government exclusively. In most cases the president or the operating vice president was chosen as federal manager. Thereafter there were two sets of officers and employees. The first, the federal organization, included as its principal officers a federal manager (on a few of the larger systems there was also a general manager), a federal auditor, a federal treasurer, a federal counsel, and other officers necessary under governmental operation. The second set of officers looked out for corporate interests and consisted of a president, secretary, corporate auditor, corporate treasurer, and others necessary to serve the interests of the company while the roads were under federal control. This action, designed to remove the possibility of conflict of interest and of loss to the government by the former plan of dual responsibility, was precipitated by a few cases in which the Director General did not receive the

measure of support which he believed was necessary. In announcing the new policy Mr. McAdoo said: "Inasmuch as "no man can serve two masters," and the efficient operation of the railroads for winning the war and the service to the public is the purpose of federal control, it was manifestly wise to release the presidents and other officers of the railroad companies, with whose corporate interest they are properly concerned, from all responsibility for the operation of their properties. . . . All ambiguity of obligation is thus avoided. Officers of the corporation are left free to protect the interests of their owners, stockholders, and creditors, and the regional and operating managers have a direct and undivided responsibility and allegiance to the United States Railroad Administration.' Mr. McAdoo asserted that the government saved large sums by the change and much publicity was given to the 'fancy salaries' paid railroad presidents and others who were by this action transferred to the corporate pay rolls and paid from corporate funds, or who, as federal managers, were paid lower salaries. The majority of the officers who accepted the higher positions in the regional and central organizations received smaller salaries than they had received as officers of railroad companies, but the number was not as large among federal managers. A very few of them were benefited financially. With this change in the relations between the Director General and the companies, the organization of the United States Railroad Administration assumed the form which continued without substantial alteration during the entire period of federal control. The unit of organization was the federal manager of a road or a small group of roads. The country was divided into seven regions—Eastern, Allegheny, Pocahontas, Southern, Northwestern, Central Western, and Southwestern. Each region was in charge of a regional director, assisted in some cases by district directors. The regional directors had control over all activities within their respective regions, but in functional matters their work was coordinated by the several directors of the central administration. . . . In theory the regional directors, controlling the several federal managers, were intended to be supreme in their respective regions, and were to be responsible directly to the Director General. It was the intention that the central organization should work through the regional directors. In practice, however, there was much 'short-cutting' between officers of the central administration and the federal managers, federal auditors, federal treasurers, and other officers subordinate to federal managers. There was some feeling on the part of the regional directors that they should not be held responsible for actions over which they had no direct control. Yet on the whole, considering the size of the organization and the lack of time in which to work out and publish a *Manual of Organization* with a clear definition of authority and responsibility, the confusion was relatively small. Inasmuch as the motives of practically every one in the official organization were in harmony with the controlling desire to operate the railroads at the highest pitch of efficiency for war purposes, it was just as well that the order of procedure was not so bound up by rigid rules as to substitute army 'red tape' for a reasonable degree of personal initiative in short-cutting where the circumstances justified."—W. J. Cunningham, *Railroads under government operation* (*Quarterly Journal of Economics*, Feb., 1921).—"A feature

of this system of Federal administration of national transportation agencies deserving special mention is that it embraced navigable waterways as well as railroads. One of the serious defects in our internal transportation system has been the failure to correlate these two agencies of transportation. This failure the Railroad Administration sought to correct by the development of means of water transportation and by providing for their utilization alone or in connection with the railroads. On February 16, 1918, the Director-General appointed an Inland Waterways Committee, headed by Major-General W. M. Black to consider the whole problem of the development and more effective utilization of the waterways of the country. On April 11, 1918, the President issued a proclamation taking over the four principal Atlantic coastwise steamship lines and placing their operation under the Railroad Administration. By this action the Railroad Administration was placed in a position in which it could route freight either by rail or water as the exigencies of the situation might render advisable. A few days later the Railroad Administration announced its intention of constructing and operating barges on the Erie Canal. On July 22, 1918, the President by proclamation took over and placed under the Railroad Administration the Cape Cod Canal. Another important act of the Railroad Administration was the consolidation and unification of the express business of the country. As a first step in this direction the Director-General in May, 1918, authorized the four leading express companies, the Adams, American, Wells Fargo, and Southern, to effect a consolidation under the name of the American Railway Express Company. This done, he entered into a contract with this new Company to handle for the Railroad Administration all of its express business. On November 16, 1918, the President by proclamation took over this Company and placed it under the direct administration of the Railroad Administration. The Pullman Company had previously been taken over. The result of these several steps was to bring under a central control practically all of the internal transportation agencies of the country."—W. F. Willoughby, *Government organization in war time and after*, pp. 180-181.—The port of New York is an example of the radical policy at times followed by the war administration in the interests of transportation. "Railroads formerly furnished free lighterage to all parts of the harbor and included the cost in the line haul charge. The Federal Railroad Administration changed this and ordered separate charges to be made for lighterage service. This change has brought to the front the necessity of substituting direct rail connection for the outworn plans used in New York harbor ever since the days of sailing vessels."—*Mechanical devices for up-to-date ports (Americas, Mar., 1919)*.—"Important economies . . . [were] realized in the consolidation of ticket offices in the larger cities; the elimination of passenger- and freight-soliciting agents; the reduction of advertising expenses; the discontinuance of insurance through private companies; the reduction of unnecessary trains; the common use of terminal facilities, cars, and other facilities; the standardization of locomotives and equipment; the routing of freight so that commodities may be forwarded by the shortest route or those best situated to handle the business; the reduction of salaries; and in scores of other ways too numerous to mention. Immense service . . . [was] ren-

dered in directing capital expenditures. Instead of each road considering its own interests alone, the interests of the country as a whole . . . [were] given first place. The Revolving Fund . . . enabled the Government to make advances for the improvements most urgently needed. . . . Notwithstanding the great increase in rates, the roads under Government operation . . . far from earned the money necessary to pay the compensation due them under the terms of the agreements entered into between them and the Government. The deficit at the end of 1918 amounted to \$202,135,602, and each month since then . . . [saw] this sum greatly increased. This deficit . . . [had] to be met out of the general funds of the Treasury raised by general taxation."—W. F. Willoughby, *Government organization in war time and after*, pp. 189-190.—"From the date of the passage of the Federal Control Act in March, 1918, until the latter part of October, a large part of the time of the Director General and his legal and other advisors was taken in framing a standard contract between the government and the companies. While this contract was based on the provisions of the Act, its terms were so hurriedly drawn that many complications were apparent when the attempt was made to express them in a formal contract. The negotiations were long drawn out and the contract as finally approved by Mr. McAdoo represents many compromises, most of them from the side of the committee representing the railroad companies. Considerable difficulty was experienced in coming to an agreement with many of the companies, so that up to January 1, 1919 contracts had been executed by but 23 of the 160 or more Class I railroads. At the end of federal control 147 contracts had been executed and 83 were still under consideration. Of these, 49 had agreed with the Director General as to compensation, while 15 had declined to accept the compensation offered and filed applications with referee boards to fix compensation. Six roads had declined to make contracts and seven had never made application therefor. . . . The twenty-six months of federal control may be divided into two distinct periods in which the conditions differed fundamentally. The first period was from January 1, 1918 to the signing of the armistice. During that period and until January 11, 1919, Mr. McAdoo was Director General. The second period was from the signing of the armistice until the end of federal control on February 20, 1920. During that time (except for the first two months) Mr. Walter D. Hines was Director General. The first period was one of intensive military activity. The sole thought was to administer the railroads as an effective agency of the army and navy. Officers and employees were spurred by motives of patriotism. The public cheerfully accepted limited railroad service and cordially cooperated with the Administration in its efforts to produce the maximum of the kind of transportation most needed in the war. The fact that the railroads were functioning effectively and were breaking all records of transportation efficiency compensated the shipping and the traveling public for their sacrifices, and encouraged railroad officers and employees to do their utmost. Wages had been raised substantially; the high cost of living was not yet as disturbing a factor as it became later; and the general morale of the service was fairly satisfactory. Almost immediately after the signing of the armistice, there came a marked slackening. The spur of patriotism disappeared. The common

motive to excel was lacking. The game was over. The war had been won. The minds of both officers and men turned to their personal interests. Early in January, 1920 the first of the protracted hearings on the return of the railroads was held by the Senate Committee on Interstate Commerce. Then began a country-wide discussion of the railroad problem and the formulation of the many 'plans' for its solution. To add to the confusion the lid was lifted from the cauldron of dissatisfaction on the part of shippers and travelers. With the conclusion of military activity there came an insistent demand for a resumption of pre-war service and pre-war shipping privileges. A natural reaction set in against governmental administration. The states began to assert their rights and the shippers' organizations became active in their criticism. An agitation was started to restore the rate-making power of the Interstate Commerce Commission and a Congressional bill designed to bring it about failed only because vetoed by the President. Coupled with these disturbing factors, the cost of living continued to mount. Railroad employees had expected prices to drop. . . . The appeal of patriotism could no longer be invoked, and the general feeling of discontent with economic conditions in all lines of business seriously undermined the morale of railroad service."—W. J. Cunningham, *Railroads under government operation* (*Quarterly Journal of Economics*, Feb., 1921).

—It is of interest to contrast the policy of the United States Government with that of Great Britain in assuming control over the railroads of the country for war purposes. The British Government left the roads in the possession of their owners and merely designated them as its agents, in return for which it guaranteed to them an income at least equal to that which they had enjoyed in 1913. The United States Government, on the other hand, assumed full possession of the roads and their direct operation under an arrangement whereby it stood to gain or lose according to the financial results obtained, and the roads themselves were guaranteed an income equal to the average income enjoyed by them during the three-year period ending June 30, 1917. For all practical purposes the Government while in possession could operate the roads as if it were their owner. It could thus make capital expenditures for improvements, in which case it would be entitled to a fair interest return on the sums so expended."—W. F. Willoughby, *Government organization in war time and after*, pp. 177-179.—See also U.S.A.: 1917-1919: Effect of the war.

Dixon, *Government and railroads*.—S. O. Dunn, *Railways in peace and war*.—I. L. Sharfman, *American railroad problem*.

1917-1918.—United States.—American transportation service in France.—"An American railway Commission, made up largely of militarized civilians, was dispatched to France in mid-May, 1917, shortly after the declaration of war. Curiously enough it was not instructed to look into the needs of our own army that was to follow, but rather to pass upon the propriety of the requests of Great Britain and France for immediate assistance in the way of railway troops and material. Having accomplished this purpose by the middle of the ensuing month, shortly after the arrival of General Pershing in France, the Commission was disbanded, and one of its members, who re-

mained at the request of the Commander-in-Chief to deal with transportation matters, soon realized that to him had fallen the lot of visualizing the transportation needs of an army of undetermined size, destined to fight in a sector as yet unselected, and calling for an unknown weight of supplies per man per day. . . . The Americans gave only limited assistance in carrying out these projects, their construction forces having arrived rather slowly. In fact, outside of their great yards and great warehouse terminals (in connection with which they laid 2400 kilometers of track), they only built the second track through Nantes and the alternate line leaving the Bourbonnais line at Challuy (half way between Saincaize and Nevers) and connecting at Harlot on the Nevers-Chagny line. This connecting line which crossed the River Loire on a long trestle kept out of the yard at Nevers traffic between Bourges, Saincaize, Cergy-la-Tour, Montchanin, Chagny and Perrigny. Commenced at the beginning of 1918, it was opened for traffic October 23. It was a double track line 8.7 kilometers in length. At the same time the French railroads had to meet the requirements of a traffic over 40% in excess of that of 1913, with 17% fewer employees, 5% fewer locomotives and 0% fewer cars. They were therefore unable to furnish the 1,700 locomotives, the 26,000 freight cars of 30 tons capacity, the 2,500 coaches for soldiers, wounded and men on leave, and the 52,000 railroad men required in October 1918, for American transportation alone. And the requirements in May 1919 would have been more than double these figures. . . . To summarize in a concrete and striking way, the American Army in October 1918 unloaded in France, for every minute of the day and night, an average of seven men, two horses and seven tons of freight. During this month, on the P.O. system alone, the Americans loaded 31,000 cars, of which over 17,000 were loaded at the ports. The warehouse station at Gievres alone received 25,327 cars and reforwarded to the armies 15,183."—F. A. Le Henaff and H. Bornecque, *French railroads and the war* (tr. by G. T. Slade), pp. 5-6, 18, 26.

1917-1919.—Railroads in the World War.—Percentage of government-owned roads.—Railroad conditions in France and Russia.—"It was not in the United States alone, however, that the war made marked changes in governmental control. In Germany about 92 per cent of the 40,000 miles of railway was in 1913 classed as 'state lines,' but at the beginning of the war every mile of railway in the German Empire passed under governmental control, and this was true of Austria-Hungary, in which about 82 per cent of her 29,000 miles had been controlled by the government. About 65 per cent of the 40,000 miles of railway in Russia was government owned before the war and the remainder at the beginning of the war immediately passed under governmental control. In France at the beginning of the war only about 20 per cent of her 32,000 miles of railway was classed as 'state lines,' although most of the remainder was constructed under such terms that the government expected to finally become its owner and was able to immediately, when war was declared, take control of practically the entire system. In Italy about 83 per cent of her 11,000 miles of road was governmental and the remainder was readily controlled for war purposes when she entered the international struggle. Great Britain, in which all of her 24,000 miles of railway was privately owned, took temporary control of the entire system when the war began, while in Belgium, which had formerly controlled about 50 per

cent of her 5,500 miles of railways, the entire system, of course, was taken over by the German government. In the British Colonies, other than Canada, most of the railways were already under government control, in Australia and New Zealand 93 per cent, in India 85 per cent, in British South Africa 72 per cent and in Egypt, practically controlled by Great Britain even before the war, 79 per cent. In many of the neutral countries a large percentage of the roads were government-controlled, Norway 85 per cent, Sweden 32 per cent, Denmark 52 per cent, Netherlands 55 per cent, Switzerland 56 per cent, Mexico 78 per cent, Peru 61 per cent, Chile 50 per cent, Brazil 43 per cent and Japan 71 per cent. Argentina and Canada had, to a large extent, followed the plan of the United States, for only 17 per cent of the roads of Argentina were classed as 'state lines' and less than 10 per cent of those of Canada, though that country had advanced such large sums to aid certain of their railways as to give her a commanding voice in their management."—O. P. Austin, *Government transportation (Americas, Sept., 1918)*.

—The destruction of railroads in the battle area of France intensified the problems of the campaign on the western front. After the war, France was faced with a shortage of supplies and of labor to reconstruct these roads. In Russia, the conditions of transportation during and after the war form a vital chapter in her revolutionary history. In 1914 Russia was on the eve of an extensive program of railway building, contemplating the addition of 27,450 versts of railway lines. "Perhaps few people abroad know that, in connection with all this, even at the beginning of the war the traffic of the Nicolaievskaa railway was more congested than on any other two-track railway in the world. The position was further complicated by the very important fact that, with the blockade of the Baltic, all imports of foreign coal and coke for the Petrograd region were stopped. The necessary coal had to be brought from the Donetz collieries, and that only by rail. Thus the railway lines connecting Petrograd with the South had to carry additional freights to the amount of over 400 million poods of coal, and that along the already congested route from South to North. . . . In the interior of the country there was now a constant stream of men coming from all parts of Russia to the West, and of course, by rail. . . . All [supplies] . . . had likewise to be gradually transported to the stores in the rear, and also created a stream of freights towards the West. . . . The shortage of labour, of implements . . . had a great influence on the reduction of repairs of rolling-stock. Owing to a variety of causes, the coal supplied to the railways by Russian collieries was of far lower quality than that used for firing locomotives before the war; this caused a reduction in the speed of traffic, etc. All this, taken together, slowly but steadily prepared the ground for the dreadful state of affairs which . . . brought the normal economic activity of Russia to an impossible condition, to the so-called disorganisation of transport. This disorganisation was growing during the whole period of the war, and was the consequence of the fundamental fact that there were not enough railways in Russia to carry on the war. . . . [In the revolution of 1917] the carrying industry suffered especially. There is no doubt that the policy of Nekrassov, the Minister of Ways and Communication, greatly conduced to this. In this industry everything is dependent on accuracy and on the harmony of action between the separate parts and workers. Therefore, it is absolutely necessary that the work should be directed from

one centre, and by persons possessed of considerable technical knowledge. And yet with the sanction of the new Minister, a duality of authority was introduced into railway affairs, a duality which had a ruinous effect on the government of the State. Elected committees were formed here likewise, both in the Ministry, and on the separate railway lines. They interfered in railway affairs, removed chiefs they did not like, appointed new ones at their discretion; and things reached such a pass that, for instance, the Kazan railway declared itself to be an independent republic, which refused to obey any orders from Petrograd. . . . The number of damaged cars and engines grew with alarming rapidity. Already in September, 1917, the official at the head of this branch expressed his opinion that, if this went on, by winter the railways would have to stop completely. There was hope of assistance from the United States, from whence cars and engines were expected to be sent. At Vladivostock special workshops were established for the purpose of assembling the railway stock. But this required time. And the general ruin of railways was advancing with gigantic strides, and with it the question of foodstuffs was getting worse and worse, not only in towns, but in whole districts. . . . But the railways are still there. The rolling stock, etc., has suffered to some extent. But there is nothing that cannot be remedied, and within a comparatively short period, too."—N. Nordman, *Peace problems: Russia's economics*, pp. 43-45, 73-74, 99-100, 125-126.—See also WORLD WAR: 1916: VI. Turkish theater: b, 2, i; 1918: VI. 1918-1919.—United States.—National Transportation Conference.—Problems of the return of the railroads after World War.—"The National Transportation Conference was called together in December, 1918, by the Chamber of Commerce of the United States. . . . In calling this Conference the Chamber of Commerce recognized that every citizen throughout the nation is directly interested in securing good transportation and that each important interest affected by transportation should have a voice in determining what should be done with the railroads after the . . . emergency [of war administration]. The Chamber, therefore, invited prominent men belonging to each important interest to attend the Conference and take part in its deliberations. All of the important plans for the solution of the railroad problem were presented to the Conference either in the form of printed documents or by speakers who addressed the meetings or took part in the discussions."—R. Waterman, *National transportation conference, Washington, D. C., Oct., 1910 (pamphlet)*, p. 1.—Every interested group or organization had a plan to offer when it became evident that the government intended to discontinue Federal control. Besides the Chamber of Commerce of the United States, the Interstate Commerce Commission, the Association of Railway Executives, the National Association of Owners of Railway Securities, and the National Railroad Brotherhoods, all brought forward plans for the solution of the railroad problem. The consensus of opinion in the Transporta-

tion conference was for the consolidation of railroad lines into a permanent system, which was also the policy advocated by the Interstate Commerce Commission. The Railroad Brotherhoods proposed the most radical readjustment, namely the Plumb plan.—See also U. S. A.: 1918-1920.

ALSO IN: *Proceedings of Public Ownership Conference, Bulletin no. 14, Chicago, Nov., 1919.*

1919.—United States.—Plumb plan of railroad operation.—The plan offered by the Four Railway Brotherhoods for the operation of the country's railroads bears the name of Glenn E. Plumb, counsel for the Brotherhoods, who formulated the plan and explained it to the American public. This solution for the railroads was proposed to Congress in the bill introduced on August, 1919, by Representative, Sims, after having been endorsed by the American Federation of Labor. The Plumb plan provides: "That Congress shall create a corporation of the United States government, not for profit, but exclusively for service. That this corporation shall have no capital stock and shall issue no bonds. That it shall represent the public interest, the management of the railways and the classified employee of the railways. That its sole capital shall be the skill, efficiency and ability of those employed in the transportation service. That it shall be governed in the following manner: The administrative body is to be a board of directors; one-third of the members of which are to represent the public, one-third the management of the railroads, and one-third the classified employees. The government shall lease to this corporation all the lines and equipment and other railroad property of which it has acquired exclusive ownership by extinguishing private interests therein. The corporation shall operate the same and shall pay all operating expenses. It shall then pay to the government first such amounts each year as the Interstate Commerce Commission from time to time shall designate, for the proper maintenance and renewal of the existing plant, to pay interest on the bonds issued for the extinguishment of private interests and bonds issued to secure new capital for betterments and extensions, and to provide for the payment of the principal of all bonds as they become due. Rates are to be fixed at a level estimated to cover all costs of operation, plus all capital charges, as above described. Then, if, through efficiency or economy, those charged with the management and operation of the railroads should succeed in reducing costs of operation below the amount so fixed, one-half of the saving shall be distributed as a dividend to employees of both classes, based upon their several salaries or wages, and one-half shall belong to the public. If in any year the saving that goes to the public shall equal or exceed five per cent. of the gross operating revenue, the Interstate Commerce Commission must reduce rates so as to absorb the public's share. It will be noted that this is not a profit-sharing plan. It could not be, because profits have been eliminated. It is a savings-sharing plan. If the saving in any year amounts to ten per cent. or over, the public's share is distributed to those who pay transportation charges in the shape of lower rates. The consuming public will, therefore, be benefited in lower passenger rates and in lower prices for goods that they consume on account of the lower freight charges. After such a reduction of rates has been made, the saving for the next year, unless there be a further economy in operation, or an increase in efficiency, will be only half as great as it was the previous year. But every reduction in rates produces an increased volume of traffic, thus tending to reduce the cost of opera-

tion per unit of traffic; that is, provided that the railroads are equipped to handle the increased traffic. The portion of savings assigned to the public will be used for the betterment of plant and equipment, and will thus tend to maintain the capacity of the roads to handle increased traffic and to reduce the cost of handling. The building of extensions, paid for in part by assessment upon the sections or interests benefited, will further increase earnings. The retirement of bonds out of sinking funds will have a like effect. So that every tendency is in the direction of lower rates, until finally service will be rendered at the lowest possible cost, economically determined—or at absolute cost. Thus, the public will get the best possible service at the lowest possible cost, and those who do the work of transportation will get the full reward for their services, apportioned according to their respective contributions to the efficiency of the service. So that the plan of the railway employees satisfies the requirements of justice to the individual and to the community at large."—G. E. Plumb and W. G. Roylance, *Industrial democracy*, pp. 198-200.

1919.—Dutch East Indies.—Railroad equipment.—"Only Java and Sumatra are provided with railways. In addition to an extensive system of well-built vehicle roads, Java has over 3000 miles of railways. The main lines are owned and operated by the Government; the local lines are in private hands. The Government owned lines represent an investment of more than \$85,000,000. In Sumatra there are about 800 miles of railways: located on the west coast, near the Onibilin coal mines; at the east coast, in the tobacco and rubber districts near Medan, and in the southeast, near the port of Palembang, for which is expected a large future in coal, petroleum and agricultural products. In Borneo and Celebes, and even in all the other islands, there is up to this time not a single mile. . . . The Government has planned a large system of railroads in Borneo and Celebes, and it is expected that they will be developed by private interests with strong Government co-operation."—J. Van de Waerden, *America's interest in the Netherlands' East Indies (Americas, Jan., 1919)*.

1920.—United States.—Esch-Cummins Act (Transportation Act of 1920).—The Esch-Cummins Act, known as the Transportation Act of 1920, was the solution of the railroad post-war situation finally arrived at by Congress (Feb. 28, 1920). It was not satisfactory to the American Federation of Labor, which asked President Wilson to veto the bill. "The House passed the so-called Esch bill (Nov. 17, 1919), which dealt largely with perfecting the existing machinery of regulation; the Senate passed the Cummins bill, which was a radical departure from existing regulatory legislation. The bill as it came out of conference and was enacted into law was largely a combination of these two bills, with some important modifications. . . . The outstanding feature of the Transportation act is that it is radically constructive. While there are many corrective features there are helpful features from the point of view of railroad operations. Its main purposes are to establish the credit of the railroads upon a basis which will not put too great a burden upon the users of the railroads, and to give to the Interstate Commerce Commission such powers as appear necessary in order to correct the faults inherently arising in independently operated railroads. The truly remarkable thing is that a comprehensive and properly articulating act has been constructed out of two bills so radically different as the Senate and House bills. The

conciseness and clearness of the language of the act is no less noteworthy. There is little ambiguity, except perhaps in the long and short haul provision, which was intended to be ambiguous. Although the act may not fully solve the underlying problem of the weak and the strong railroads, it is a mighty step in that direction and subsequent legislation will probably be merely supplementary."—E. J. Rich, *Transportation Act of 1920* (*American Economic Review*, Sept., 1920). —"The most important provisions of the [Transportation Act were]: (1) That on March 1, 1920, Federal operation shall cease and the railroads shall be returned to private operation. (2) That under a new rule of rate-making the railroads shall be assured adequate revenues; and adequacy shall be defined in the first two years as a net return of 5½ or 6 per cent. on the fair value of the property as determined by governmental authority. (3) That during the transition period the Government shall aid in restoring the financial stability and the credit of the railroads: (a) by continuing the government guaranty of a standard return for six months after the roads are returned to their owners; (b) by creating a revolving fund of \$300,000,000 from which the roads may obtain under certain conditions short-term loans to meet their most pressing needs; (c) by extending the carrier indebtedness for capital expenditures made by the government during Federal control for a period of ten years with interest at 6 per cent.; and (d) by the creation of a reserve fund containing one-half of the excess earnings of those railroads whose net earnings exceed the 6 per cent. specified in the rule of rate-making. (4) That the rates and services of interstate carriers shall continue to be regulated by the Interstate Commerce Commission; that the commission shall be enlarged by the addition of two new members, making eleven in all; and that the commission shall have authority: (a) to make inquiry continuously concerning the transportation facilities and services of the whole country, and when and how they should be improved; the state of the credit of all common carriers; and the new capital which the public interest may require any carrier to secure; (b) to permit the consolidation of two or more carriers provided that such consolidation is in harmony with a comprehensive plan (previously adopted by the commission) for consolidating all of the railroads of the country in a limited number of strong competing systems, and also provided that, in the opinion of the commission, the proposed consolidation is in the public interest; (c) to fix interstate rates that shall be just, reasonable, and adequate; (d) to determine the valuation of railroad property; (e) to prescribe a uniform accounting system for all carriers; (f) to exercise exclusive jurisdiction over capital expenditures and the issuance of securities by carriers; (g) to prohibit the extension of present lines or the construction or acquisition of new lines by any carrier until it has obtained from the commission a certificate of public necessity and convenience; (h) to require the construction of docks and rail connections between rail and water carriers; (i) to provide when necessary for the redistribution of traffic and for joint use of terminal; (j) to exercise jurisdiction over the use, control, and supply as well as the movement, distribution, and interchange of locomotives and cars and also over the supply, movement, and operation of trains; and (k) to order a carrier to install automatic train-stop or train-control devices. (5) That the wages and working conditions of railroad employees shall be regulated by a Railroad Labor Board composed

of three representatives of the carriers, three representatives of the employees, and three representatives of the public; and that disputes between the carriers and their employees in regard to rules or working conditions may be referred to railroad boards of labor adjustment—local, regional, or national—voluntarily organized between the roads and their employees, or if such boards are not voluntarily formed, such disputes shall be decided by the Railroad Labor Board."—E. Hungerford, *Our railroads to-morrow*, pp. 66-68.—Federal control of railroads in the United States was terminated, on March 1, 1920, by the proclamation of the President, and on that day operation of the properties was resumed by the corporations. Under Section 209 of the Act of Congress, known as the Transportation Act of 1920, the Government guaranteed that for the period of six months, from March 1 to Sept. 1, 1920, the railway operating income of each carrier having a contract fixing its compensation under the Federal Control Act, shall not be less than one-half the amount named in such contract as annual compensation, provided that the carrier shall have accepted the provisions of said Section 209. "According to a report . . . by James C. Davis, Director general of railroads, . . . transmitted to Congress by President Harding, losses sustained by the government from war-time operation of railroads and its aftermath of earnings guarantees and damage settlements will total approximately \$1,800,000,000."—*Commercial and Financial Chronicle*, Feb. 17, 1923, p. 687.—See also ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1888-1921; LABOR LEGISLATION: 1862-1920.

ALSO IN: R. MacVeagh, *Transportation Act of 1920*.

1920.—Alaskan railroads.—Work of engineering commission.—The most vital piece of railroad construction in Alaska since the war period was completed in 1920 when the government engineering commission finished the link of the Alaska Northern railroad connecting the Metaunsa coal fields with tide-water, thus increasing mileage in the vast region which is greatly lacking in transportation facilities.

ALSO IN: J. Bernhardt, *Alaskan Engineering Commission*.—A. H. Brooks, *Development of Alaska by government railroads* (*Quarterly Journal of Economics*, May, 1924).

1920.—British Columbia's provincial railroad, the Pacific Great Eastern.—As an exclusive enterprise of the province, British Columbia built the Pacific Great Eastern railway, which was opened in 1920 and extended fifty-three miles to Red Rock creek.

1920.—Canadian National railways, Canada's solution of her transportation problem.—Financial difficulties of early operation.—Extent of system.—By 1920 Canada had gone a long way in the solution of the railroad problem by nationalizing certain of her important railways, but the financial difficulties marked her program as still in the experimental stage. Taking as a nucleus the roads already owned by the Dominion, the Intercolonial, Prince Edward Island, National Transcontinental—the government purchased the Canadian Northern railway (1918), and the next year the Grand Trunk. The Grand Trunk Pacific was likewise taken over in a financially depleted condition. All expenses incurred in the operation of these roads were to be paid out of government revenues and in the event of a deficit in any one, the amount was to be made up out of the consolidated fund of revenues from the other roads. A heavy penalty was imposed for political

interference in the management of the government lines.—Based on *Moody's rating service*, 1922, p. 1563.—The great transportation system . . . [included] 22,375 miles of railways, 102,000 miles of telegraph lines, 10 hotels, 86 ocean vessels of a total tonnage of 393,000 tons, 11 car ferries, 4 lake vessels and five British Columbia coast vessels. It . . . [traversed] every province in Canada's dominion, directly serving the great seaports of Halifax, N. S., St. John, N. B., The Sydneys, N. S., Quebec, Que., Montreal, Que., Portland, Maine, Vancouver, B. C., Victoria, B. C., Prince Rupert, B. C., and Seattle, Wash., connecting at the above seaports with all ocean and coastwise steamship services.—M. Low, *History of Canadian National railways* (*Science et Industrie*, June, 1923).—"The year [1920] generally was the worst in the history of steam roads in Canada, the ratio of operating expenses to operating revenue being 97.17 per cent., as compared with 92.2 per cent. for 1919 and an average of 71 per cent. for the period 1900 to 1917, the range for these years having been from 67.4 to 74.4 per cent. Of the 56 roads reporting, 31 paid operating expenses and 25 had a deficit. Of these 31, after paying taxes, interest, rents, &c., 19 had a corporate income of \$36,581,437. The corporate losses sustained by the other 37 roads amounted to \$79,669,825, the larger items being as follows:

Canadian Northern.....	\$40,501,705
Canadian Govt. lines.....	9,432,054
Grand Trunk.....	4,519,809
Grand Trunk Pacific.....	17,456,359

"These lines with the exception of the Grand Trunk, were operated as part of the national system. It is significantly added that the loss on the Canadian Government lines—that is, on the Intercolonial and the National Transcontinental—does not include interest on funded and unfunded debt. The figures from the Canadian Northern, however, include interest. As has already been noted, the figures for the corporate loss on the Intercolonial and National Transcontinental do not include interest on the funded or unfunded debt. The official records for these roads show nothing more than the construction expenditure. The best expert opinion, however, estimates the fixed charges on the Intercolonial at no less than \$23,000,000, and those on the National Transcontinental at \$17,000,000. That is to say, if these were privately owned roads they would have had to earn \$40,000,000 more than they did or their corporate loss would have been approximately \$49,500,000 instead of \$9,432,000. This method of charging deficits and loans up to the National Treasury, and forgetting all about it, insofar as the roads were considered, and in addition making no allowance for interest charges, has given the people of Canada an entirely erroneous idea of the actual cost of rail transportation."—W. G. Gates, *Government railway operation in Canada* (*New York Annalist*, Sept. 5, 1921).—See also CANADA: 1920: Canadian National railroad; NEWFOUNDLAND: 1921.

1921.—United States.—Problems of consolidation.—Ripley plan.—On August 3, 1921, the Interstate Commerce Commission published a tentative plan for the consolidation of the railroads of the United States into nineteen systems. This plan was in substance the work of W. Z. Ripley, transportation expert of Harvard University. It was sent to the governors of all the states with the view of receiving the opinions of all the transportation interests. At that time the railroad companies expressed considerable opposition to the

idea of consolidation. The Ripley plan is as follows:

"No. 1. New York Central System—New York Central lines, except Lake Erie & Western, Toledo & Ohio Central, Zanesville & Western, Kanawha & Michigan and Indiana Harbor Belt; Western Maryland, Fonda, Johnstown & Gloversville, Lake Erie & Pittsburgh, Pittsburgh, Chartiers & Youghiogheny, Monongahela, Boston & Maine, Maine Central, Bangor, Aroostook. Note: Boston & Maine, Maine Central and Bangor & Aroostook may be included in System No. 7 or in 7a. Professor Ripley rejects trunk line treatment of the New England roads, but the commission presents it alternatively to bring out discussion.

"No. 2. Pennsylvania System—Pennsylvania, Panhandle, Toledo, Peoria & Western, Lorain, Ashland & Southern, Lake Erie & Pittsburgh, Central Indiana, Pittsburgh, Chartiers & Youghiogheny, Monongahela.

"No. 3. Baltimore & Ohio System—Baltimore & Ohio, Reading, Central of New Jersey, Cincinnati, Indianapolis & Western, Chicago, Indianapolis & Louisville, New York, New Haven & Hartford, Central New York, New Haven & Hartford, Central New England, Lehigh & New England, Lehigh & Hudson.

"No. 4. Erie System—Erie, Delaware & Hudson, Delaware, Lackawanna & Western, Ulster & Delaware, Bessemer & Lake Erie, Buffalo & Susquehanna, Pittsburgh & Shawmut, Pittsburgh, Shawmut & Northern, Lorain, Ashland & Southern, Wabash lines east of Missouri River.

"No. 5. Nickel Plate-Lehigh Valley System—Lehigh Valley, New York, Chicago & St. Louis, Toledo, St. Louis & Western, Detroit & Toledo Short Lines, Lake Erie & Western, Wheeling & Lake Erie, Pittsburgh & West Virginia, Bessemer & Lake Erie.

"No. 6. Pere Marquette System—Pere Marquette, Detroit & Mackinac, Ann Arbor, Detroit, Toledo & Ironton, Boyne City, Gaylord & Alpena.

"No. 7. New England System—New Haven, Ontario & Western, Boston & Maine, Maine Central, Bangor & Aroostook, Lehigh & Hudson River, Lehigh & New England.

"No. 7a. New England-Great Lakes System—same as above, with addition of Delaware & Hudson, Lackawanna, Ulster & Delaware, Buffalo, Rochester & Pittsburgh, Pittsburgh & Shawmut, Pittsburgh, Shawmut & Northern.

"No. 8. Chesapeake & Ohio System—Chesapeake & Ohio, Hocking Valley, Virginian.

"No. 9. Norfolk & Western System—Norfolk & Western, Toledo & Ohio Central, Kanawha & Michigan.

"No. 10. Southern System—Southern Railway and affiliated lines, New Orleans, Great Northern, Alabama & Vicksburg.

"No. 11. Atlantic Coast Line-Louisville & Nashville System—Those two roads and subsidiaries, Western Railway of Alabama, Richmond, Fredericksburgh & Potomac, Norfolk Southern, Atlanta, Birmingham & Atlantic, Winston-Salem Southbound, Roanoke to Winston-Salem branch of the Norfolk & Western, Florida East Coast, Carolina, Clinchfield & Ohio, Georgia & Florida, Gulf Mobile & Northern, Mississippi Central.

"No. 12. Illinois Central-Seaboard System—Illinois Central, Seaboard Air Line, branch of Norfolk & Western from Lynchburg, Va., to Durham, N. C.; Gulf & Ship Island, Tennessee Central, Carolina, Clinchfield & Ohio.

"No. 13. Union Pacific-Northwestern System—Union Pacific, Chicago & Northwestern, Lake Su-

perior & Ishpeming, Wabash lines west of Missouri River.

"No. 14. Burlington-Northern Pacific System—Chicago, Burlington & Quincy, Northern Pacific, Chicago, Great Western, Minneapolis & St. Paul, Spokane, Portland & Seattle. (Colorado & Southern may be included in System No. 16.)

"No. 15. Milwaukee-Great Northern System—Chicago, Milwaukee & St. Paul, Great Northern, Duluth & Iron Range, Duluth, Missaba & Northern, Green Bay & Western, Spokane, Portland & Seattle, Butte, Anaconda & Pacific.

"No. 16. Santa Fe System—Atchison, Colorado Southern, Denver & Rio Grande, Western Pacific, Utah Railway, Northwestern Pacific, Nevada Northern.

"No. 17. Southern Pacific-Rock Island System—Southern Pacific, Nevada Northern, Chicago, Rock Island & Pacific, Arizona & New Mexico, El Paso & Southwestern, San Antonio & Aransas Pass, Trinity & Brazos Valley, Midland Valley, Vicksburg, Shreveport & Pacific, Chicago, Peoria & St. Louis.

"No. 18. Frisco-Katy-Cotton Belt System—St. Louis-San Francisco, St. Louis Southwestern, Louisiana Railway & Navigation Company, Chicago & Alton, Missouri, Kansas & Texas, Trinity & Brazos Valley, San Antonio, Uvalde & Gulf. (Note—M., K. & T. may be included in No. 17.)

"No. 19. Chicago-Missouri Pacific System—Chicago & Eastern Illinois, Missouri Pacific, Kansas City Southern, Kansas City, Mexico & Orient, Kansas, Oklahoma & Gulf, Texas & Pacific, Fort Smith Western, Louisiana & Arkansas, Gulf Coast Lines, International & Great Northern, (Gulf Coast Lines indicate the New Orleans, Texas & Mexico and subsidiaries.)

"Subsidiaries of Canadian roads, such as the Soo Line, are not assigned, the commission remarking that they are portions of through transcontinental Canadian systems in active competition with the systems set forth."—*New York Times*, Aug. 3, 1921.

1921.—Great Britain.—End of state control.—In Great Britain government control of railways ended Aug. 15, 1921, with no guarantees for ensuing stages of operation, except that the railway tribunal was to fix rates sufficiently high to secure a "fair return." The carriers were required to submit by Jan. 1, 1923, their plans for mandatory consolidation into four systems of a non-competitive character, or submit to one imposed by government.

1921-1922.—Germany.—Denationalization of railroads.—Strikes. See GERMANY: 1921 (November-December); LABOR STRIKES AND BOYCOTTS: 1922: Germany.

1921-1923.—New England railroads, a unique problem.—"The railroad system of New England—into which the investing public has already poured the best part of a billion dollars, to which should be added annually \$25,000,000 more to keep it up-to-date—is its greatest single industry. . . . The roads of New England must either be grouped together or parceled out among the Western trunk-lines. The figures point to the latter course; but the powerful popular instinct, which has opposed this in the past, rests upon a sound (if somewhat inarticulate) foundation. New England railroads succeeded when they were local enterprises supported by the loyalty of New England. As they slipped from this basis, they began to fail, and they have now collapsed. . . . The freight-traffic

of New England is peculiar. Unlike that of our great Western states (or even that which the great trunk lines handle), the business of New England is largely in less than car-load lots. New England is, in fact, far more like Old England, and has properly been compared to a huge terminal"—P. Cabot, *Root, hog, or die* (*Atlantic Monthly*, Aug., 1921).—Under the Transportation Act of 1920, the Interstate Commerce Commission has met the critical situation of the New England railroads by placing "New England, with the other two subdivisions of Official Classification Territory, into the Eastern Group; and . . . [ordering] that freight rates in that group be raised 40 per cent. 'At that rate level the revenues of the carriers in Trunk Line and Central Freight Association territories would, it was asserted, exceed by 1.48 per cent what they would have received if they had been a separate group. It was estimated that the excess would be about \$25,000,000 annually. Substantially that amount (besides the additional revenue to be raised otherwise) was said to be necessary to meet the needs of the New England lines.'"—E. G. Buckland, *Three years of the Transportation Act* (*Yale Law Journal*, May, 1923).

ALSO IN: E. Hungerford, *Our railroads tomorrow*.—W. J. Cunningham, *Operation of railroads in New England* (*Railway Age Gazette*, June 2, 1916).

1922-1923.—Canada.—Progress of National railways.—The progress made by the Canadian National railways (or C. N. R. as the government lines came to be known) was encouraging after the initial financial strain of the years following consolidation. By 1923 the announcement was made "that the consolidated system showed for the year 1922 an operating surplus of approximately four million dollars, and this result was regarded as highly satisfactory. . . . The C. N. R. found itself in a strongly entrenched position in respect to competitive business. . . . It was well satisfied that the system secured almost exactly fifty per cent of the exported portion of the 1923 crops."—*Economist*, Mar. 31, 1923, pp. 677-678.—Sir William Thornton was appointed president of the Canadian National railways in 1923.

Biggar, *Canadian railroad problems*.—Thomas and Carner, *Canadian Almanac*, 1923, pp. 168-172.—J. C. Hopkins, *Canada's annual review of public affairs*.

1923.—Great Britain.—Consolidation of railroads into four systems.—"As a result of experience in railroad management gained during the war, all the railroads of Great Britain, except the London Urban lines, were amalgamated on January 1 into four great systems, to be known respectively as the Southern Railway, the Great Western Railway, the London Midland and Northern Railway and the London & Northeastern Railway. The size of these units may be judged from the fact that the London & Northeastern came into control of 7,000 miles and 2,000 stations, and was expected to carry 300,000,000 passengers and 183,000,000 tons of freight per annum."—*New York Times Current History*, Feb., 1923, p. 867.

1923.—United States.—Status of railroads under Transportation Act of 1920.—Problem of total and individual valuation.—Freight classification.—Record of Labor Board.—One very interesting aspect of the post-war legislation known as the Transportation Act of 1920 (Esch-Cummins Bill) is that for the first three years of its admin-

istration the opinions of the Supreme Court judges construing the Act were unanimous. "The first important decision of the Commission under the Act was in *Ex Parte 74, Increased Rates, 1920*, in which, after an extended hearing, the Commission, in the absence of final values found under the Valuation Act, fixed the total value of the railroads at \$18,900,000,000, and the value of those in the Eastern group at \$8,800,000,000. It established four groups and increased the freight rates as follows: Eastern Group, 40 per cent; Southern Group, 25 per cent; Western Group, 35 per cent; Mountain-Pacific Group, 25 per cent, and increased passenger rates 20 per cent in all groups. It has made two general decreases, one of the hay and grain rates, effective January 1, 1922, 10 per cent, and the other a general decrease of 10 per cent in all groups, effective July 1, 1922. . . . [The body created by the Transportation Act and known as the Railroad Labor Board, in the three ensuing years] increased wages \$505,384,342.00, and decreased wages \$513,844,418.00, leaving a net increase of \$81,539,924.00, or 3.2 per cent. . . . In the course of the hearings before the Labor Board and decisions thereunder, questions arose as to the authority of the Labor Board to require carriers or employees to abide by its decisions. . . . This . . . [was] the first time that the United States Supreme Court construed the powers of the Labor Board under the Transportation Act, and in effect . . . [its construction] establishes it merely as a body of arbitrators, whose decisions have no force excepting that of public opinion."—E. G. Buckland, *Three years of the Transportation Act* (*Yale Law Journal*, May, 1923).—By 1923, in attempting to place a valuation on the individual railroads of the country, "the Government . . . [had] spent \$23,000,000 and railroads more than \$60,000,000 in the biggest single job of accounting ever attempted in the history of the nation, or probably of any other nation. The final cost will be far above \$100,000,000. . . . Between 800 and 900 railroads or railway systems are subject to valuation, and tentative valuations on less than 350 have been turned out . . . [by 1923], so there . . . [were] years of hard work ahead. Most valuations are based on the year 1914 or 1915. Only a few small roads have accepted the tentative valuations as satisfactory and thus permitted them to become final. All other valuations have been challenged by the individual carriers and thus under the law thrown open automatically to review and dispute by the roads. Each is a separate problem in itself. . . . The detailed history of the movement, the voluminous legal briefs, the hundreds of thousands of sheets of figures and the minutes of hearings, if gathered together in printed form, would fill a freight train. They would be as voluminous as the records of the World War."—W. L. Kiplinger, *Final rail valuations reopen the rate battle* (*New York Times*, Sept. 16, 1923).

RAILROADS, Electric: Interurban electric railways.—Critical situation of municipal trolley service.—Electrification of steam railroads.—Its progress.—The electric railway, or trolley, as it is utilized in the civilized countries of the world, is the product of fifty years experimentation [see ELECTRICAL DISCOVERY: Electric locomotives: 1847-1899]; "but the real beginning of the modern development is generally credited to the United States and to [Frank J.] Sprague in recognition of his work in building the system of Richmond, Virginia. For in place of the one or two-car roads previously operated, the Richmond contract, started in the spring of 1887, included 'the building of a generating station, erection of overhead lines, and the equipment of forty cars, each with two 7½ H.P. motors on plans largely new and untried'. . . . The development since 1887 is almost inconceivable. At the beginning of that year there were less than forty miles of electric railways and not more than forty cars in the United States. Ten years later about 20,000 miles of track were equipped, and 50,000 cars were in service, representing an investment of one and a half million dollars."—W. A. Durgin, *Electricity: Its history and development*, pp. 147, 150.—Within the next decade "interurban electrics . . . [were] most highly developed in the Central Western States—Ohio, Indiana, southern Michigan, Illinois, eastern Wisconsin, and eastern Missouri. It . . . [was] possible to travel by electric railway from Sheboygan, Wis., or Rockford, Ill., to Port Huron, Mich., Louisville, Ky., or Westfield, N. Y., with but one small gap in the continuity of the line. New England . . . [had become] a second home of electric interurbans. . . . Other special sections . . . [were] New York, in the Hudson and Mohawk valley and the region tributary to Buffalo; Pennsylvania, in the southeastern and northeastern and western valley regions, and the Pacific Coast, in Southern California and the regions adjacent to Portland, Spokane, and Puget Sound. . . . In some parts of England steam railroads have been driven to electrification of their lines by electric railroad competition, but thus far this effect has not appeared in the United States. The electrification of steam railways in this country has been chiefly in the services in terminals and tunnels, on mountain grades, and in regions of dense passenger traffic adjacent to large centers of population. There are instances where steam lines have been electrified chiefly to handle short-distance passenger traffic, such as the Rochester branch of the Erie Railroad, the main line of the West Shore Railroad between Utica and Syracuse,

and the West Jersey and Seashore line of the Pennsylvania Railroad, but the motive was to obtain the advantages of electric power, rather than to combat electric railway competition."—E. R. Johnson and G. G. Huebner, *Railroad traffic and rates*, v. 2, pp. 231, 248.—The same economic pressure which caused the steam railroads to face an increase of operation during and after the World War, and which culminated in the United States in the widespread railroad problems of the second decade of the twentieth century, brought the electric railway situation to a crisis. In cities throughout the country there arose the issue of the five-cent trolley fare. "Here we have a railway system—or series of systems—which in their capitalization amount to about a third as much as the steam railroads. They carry about 12,000,000,000 passengers a year. They collect \$700,000,000 revenue a year, and yet that industry for various reasons—has come to a position where it can hardly survive."—D. L. Wilcox, *Present street car crisis in America, and the way out* (*Proceedings*

any rate of fare which the public is willing to permit will be sufficient for that purpose."—P. H. Gadsden, *Electric railways* (*Address at the War Emergency and Reconstruction Congress of the United States Chamber of Commerce, Atlantic City, New Jersey, Dec. 3-6, 1918*).

"The use of electricity as a motive-power upon this country's so-called standard railroads (the electrical engineers like to call these 'heavy traction railroads') is no novelty. It began . . . [in 1805] when the Baltimore and Ohio railroad completed the electrification of its then new tunnels under the City of Baltimore. The move was made primarily to remove offensive smoke conditions, particularly in the main tunnel connecting Mount Royal and Camden stations, nearly two miles apart. . . . The obvious success of this early installation slowly led to its imitation elsewhere among the railroads of the land—a third-rail suburban plan on the New Haven from Bristol through New Britain to Hartford, Connecticut, and a branch of the same system down to Nantasket Beach,

Courtesy General Electric

3000 VOLT GEARLESS PASSENGER LOCOMOTIVE, ON THE CHICAGO, MILWAUKEE, AND ST. PAUL RAILWAY

of Public Ownership Conference, Chicago, 1910).—"The condition of the electric railways, although generally typical . . . [was] somewhat more aggravated than that of other public utilities, . . . not only because relatively few roads have received adequate rate increases, but also because their difficulties have been enhanced by the action of the National War Labor Board. The decisions of that Board . . . [added] over \$100,000,000 annually to their greatly increased operating expenses. In every other industry, these additional labor costs have been promptly passed on to the consumer, that is, to the Government, in most cases during the war; but in the case of electric railways, the startling doctrine was announced by the National War Labor Board that it could not, and would not, take into consideration the financial condition of the companies, and that its award would not be influenced by the admitted inability of the companies to pay the increased wage scale. Without questioning the justice or propriety of that position, it is apparent that the result of it is that a wage scale has been imposed upon the electric railways which cannot be taken care of by the present five-cent fare, and a very grave question exists whether

Massachusetts. Yet the process was slow indeed. . . . It was not until . . . [1907] that electric installation of any considerable size came into being; the large suburban services that were created by the New York Central, the New Haven, and the Pennsylvania, coincident with the similar suburban services in Oakland, California, and in Portland, Oregon, and in some of the longer tunnels of the land; the Hoosac tunnel of the old Fitchburg, the tunnel of the Michigan Central under the Detroit River, and that of the Great Northern through the Cascades in Washington being notable instances of this last sort of installation. After these came the large installations of the Norfolk and Western through the Alleghenies and of the Chicago, Milwaukee, and St. Paul. . . . And after this . . . [occurred] a great hiatus, the huge rise in material and construction costs of every sort, the war, and the . . . paralysis of our railroad development. . . . In 1918 . . . our steam locomotive consumed 163,000,000 tons of coal in addition to 45,700,000 barrels of oil. Reducing these last to their coal equivalent, we have a total fuel consumption expressed in terms of coal of 170,000,000. And when we measure that consumption

alongside the freight carried—1918 was one of the record years of our American railroads—it will be seen that for every thousand tons of freight that they moved one mile they burned 290 pounds of coal. Through any modern steam-generating electric station—the figures taken from the modern powerhouses of the few steam railroads that already have been progressive enough to install electric motive power—an even hundred pounds of coal may easily move more than 1600 tons of freight one mile—in the accurate phrasing of the railroaders themselves, 1600 ton-miles. In other words the same freight traffic moved by electricity through steam powerhouses would have required but a little over fifty million tons of coal. From 120,000,000 to 130,000,000 tons of coal would have been saved—a saving roughly expressed in money at between three-quarters of a billion and a billion dollars, which of itself would be a 4 or 5 per cent. dividend upon the total capitalization of our American railroads. In the saving that we have just shown we have presupposed an absolutely universal substitution of electric for steam power all the way across the land. This, however, is not practical to-day; nor is it likely to be practical in any day to come, for every mile of our 275,000 miles of American railroad system. On the other hand this huge estimate of national saving is based entirely upon the coal-consumption basis. The most impressive savings . . . are those accomplished by our lines which have bended water-power, hitherto wasted, to the movement of their trains. I have stood upon the brink of Niagara Falls and there seen train after train arrive and depart, each hauled by a steam locomotive. And all the while I knew that the force and power of that mighty cataract was lighting the homes and driving the street cars of Toronto and of Syracuse—by land, respectively one hundred and 150 miles distant. What a travesty upon efficiency!”—E. Hungerford, *Our railroads to-morrow*, pp. 135-139.—“Most of the leading countries in Europe have announced plans either to increase the present mileage of electrified steam railways or to carry out such work where hitherto electrification was not regarded as economically feasible. In South America, Brazil and Chile either have work under construction or are about to let contracts for such projects. In Asia, Japan and India are both making investigations with a view to electrifying certain suburban or heavy-traffic sections. In Australia, the suburban line out of Melbourne has been in process of electrification for some years. . . . In Africa the question of electrifying steam railways for the Union of South Africa has reached the stage where bids have been invited. . . . In several instances, standard American plans have been adopted practically complete by engineers advising foreign governments on steam railway electrification.”—*United States Commerce Reports*, Sept. 26, 1921, pp. 195-196.—The Paris-Orleans railroad contracted for the electrification of its main lines in May, 19, 1922.

RAJAH, MAHARAJA, Hindu titles equivalent to king and great king respectively.

RAJASTHANI, Indo-Aryan vernacular spoken in central India. See PHILOLOGY: 16.

RAJPUTANA, group of twenty-one native states of northwestern India (see INDIA: Map), comprising an area of 128,987 square miles and a population in 1921 of 9,844,384. From six to seven per cent of the natives are Rajputs (see RAJPUTS); the great majority of the rest are Hindus. The administration is in the hands of native rulers. The Indian government is represented by an agent resident at Abu, assisted by three residents and three political agents. Before the Mohammedan invasions in the eleventh century, the district was subject to two or three tribal dynasties of Rajputs, from whom it takes its name. Mohammedan control continued until the eighteenth century, when the death of Aurangzeb and the invasion of Nadir Shah resulted in an alliance among the three leading Rajput chiefs. Internal dissension, however, weakened the alliance and about 1756 the Mahrattas, a neighboring Indian people, took possession of Ajmere. By the end of the century they subdued almost all of Rajputana. At the opening of the Pindari war in 1817, Rajputana passed under British protection and the Mahratta menace was ended. In the mutiny of 1857 most of the rajputs remained loyal.

RAJPUTS.—"The Rajpoots, or sons of Rajas, are the noblest and proudest race in India. . . . They claim to be representatives of the Kshatriyas; the descendants of those Aryan warriors who con-

quered the Punjab and Hindustan in times primeval. . . . The Rajpoot empire of a remote antiquity is represented in the present day by the three kingdoms of Meywar, Marwar, and Jeypore. Meywar, better known as, Chittore or Udaipore, is the smallest but most important of the three. It forms the garden of Rajpootana to the eastward of the Aravulli range. [From Udaipur the Gurkhas, a Rajput race, settled in the province of Gurkha, in Nepal, and became rulers of the whole kingdom.] Westward of the range is the dreary desert of Marwar. Northward of Meywar lies the territory of Jeypore, the intermediate kingdom between Meywar and the Mussulmans. . . . In former times the sovereigns of Meywar were known as the Ranas of Chittore; they are now known as the Ranas of Udaipore. They belong to the blue blood of Rajpoot aristocracy."—J. T. Wheeler, *History of India*, v. 3, ch. 7.—"To the Sesodia clan, the oldest and purest blood in India, belong the States of Odeypoor, Banswarra, Pertabgarh, and Shahpura; to the Rathore clan, the State of Jodhpore and Bikanir; Jeypoor and Ulwar to the Kuchwaha, and so on."—A. RAMBOUILLET, Hôtel de.—The marquise de Rambouillet, who drew around herself, at Paris, the famous coterie which took its name from her hospitable house, was the daughter of a French nobleman, Jean de Vivonne, sieur de Saint-Gohard, afterwards first marquis de Pisani, who married a Roman lady of the noble family of the Strozzi. Catherine de Vivonne was born of this union in 1588, and in 1600, less than twelve years old, became the wife of Charles d'Angennes, vidame du Mans afterwards marquis de Rambouillet. Her married life was more than half a century in duration; she was the mother of seven children, and she survived her husband thirteen years. During the minority of the husband the ancient residence of his family had been sold, and from 1610 to 1617 the marquis and marquise were engaged in building a new Hôtel de Rambouillet, which the latter is credited with having, in great part, designed. Her house being finished, she opened it "to her friends and acquaintances, and her receptions, which continued until the Fronde (1648) [see FRANCE: 1647-1648; 1649], brought together every evening the choicest society of the capital,

and produced a profound influence upon the manners and literature of the day. The marquise ceased attending court some years before the death of Henry IV., her refinement and pure character finding there an uncongenial atmosphere. The marquise was not alone a woman of society, but was carefully educated and fond of literature. Consequently the reunions at the Hôtel de Rambouillet were distinguished by a happy combination of rank and letters. Still more important was the new position assumed by the hostess and the ladies who frequented her house. Until the XVIIth century the crudest views prevailed as to the education and social position of woman. It was at the Hôtel de Rambouillet that her position as the intellectual companion of man was first recognized, and this position of equality, and the deferential respect which followed it, had a powerful influence in refining the rude manners of men of rank whose lives had been passed in camps, and of men of letters who had previously enjoyed few opportunities for social polish. The two classes met for the first time on a footing of equality, and it resulted in elevating the occupation of letters, and imbuing men of rank with a fondness for intellectual pursuits."—T. F. RAND SCHOOL OF SOCIAL SCIENCE.—"The Rand School of Social Science has . . . [since 1906] carried on an educational campaign among the working people of New York City, and for about half that time its work has, through its full-time correspondence, and research departments, been national in scope. It is owned and controlled by a membership corporation, known as the American Socialist Society, and its administration is carried on by a board of directors, which has the power of electing officers and heads of departments annually. The school is, as indicated, an adjunct to the Socialist Party, having the primary function of 'offering the general public facilities for the study of socialism and related subjects and giving socialists instruction and training calculated to make them more efficient workers for the socialist and labor movement.' Organized in 1906-1907 with 250 members, the classes had increased to 5,000 in 1918-1919, the attendance ranging during the six busiest months of the year from 1,500 to 2,000 per week. . . . [During 1918-1919 the attendance exclusive of extension and correspondence classes, ran above 5,000.] The training course . . . is a 'systematic and extensive curriculum of instruction and supervised practice, the aim of which is to prepare and equip students for work in the party, the unions, and other branches of the working-class movement as secretaries, organizers, propagandists, teachers, etc.' [Economic, political, and socio-historical subjects, together with English, public-speaking and organization methods, constitute the central feature

of the curriculum.] Hitherto, only full-time training for a period of six months has been available, and from 1911 to 1916 an aggregate of 125 young men and women were graduated under this plan. At the beginning of the 1918-1919 session, part-time work was introduced. The instruction given under the part-time plan covers practically the same ground as that of the full-time classes, but extends over a period of approximately two years. . . . Every student must possess a working knowledge of the English language, but beyond this requirement no definite entrance qualifications are demanded."—C. P. Sweeney, *United States Bureau of Labor Statistics, Bulletin no. 271, Aug., 1920, pp. 59-61*.—"In the summer of 1919 the office of the Attorney General of the State of New York tried to close the Rand School of Social Science, on the ground that it was the center of seditious activities in the entire State. The attempt failed. The movement originated with the Lusk Committee, appointed by the legislature to investigate radical activities. Having failed in its first efforts to destroy the Rand School the Lusk Committee tried again through legislative action. In March, 1920, Senator Lusk introduced in the Senate a bill providing for the licensing of private schools by the board of Regents. At the same time another measure was introduced providing additional qualifications for teachers in the public schools of the State. [These measures were defeated. They were again introduced in the legislative session of 1921 and again opposed by the Emergency Educational Conference assisted as in 1920 by a number of active civic and social organizations. Nevertheless they became law on May 12, 1921. In order to test the constitutionality of the school licensing law] the Rand School opened for its fall term on September 26 without having applied for a license. On October 24 the State began an action in the Appellate Division of the Supreme Court, in the form of an application for a permanent injunction to restrain the American Socialist Society from conducting and operating the Rand School without license. . . . It was agreed that pending the determination of the question of constitutionality there should be no interference with the work of the Rand School. [On May 27th, 1923, the Lusk laws were declared unconstitutional and the cases were dropped.]"—*American Labor Year Book, 1921-1922, pp. 44, 45-46*.—See also EDUCATION: Modern developments: 20th century: Workers' education: United States

RANTERS, MUGGLETONIANS.—"These [the Ranters] made it their business,' says [Richard Baxter, the great Puritan divine], 'to set up the Light of Nature under the name of Christ in Man, and to dishonour and cry down the Church, the Scripture, and the present Ministry, and our worship and ordinances; and called men to hearken to Christ within them. But withal they conjoined a cursed doctrine of Libertinism, which brought them to all abominable filthiness of life. They taught, as the Familists, that God regardeth not the actions of the outward man, but of the heart, and that to the pure all things are pure.' . . . Of no sect do we hear more in the pamphlets and newspapers between 1650 and 1655, though there are traces of them of earlier date. . . . Sometimes confounded with the Ranters, but really distinguishable, were some crazed men, whose crazes had taken a religious turn, and whose extravagances became contagious. Such was a John Robins, first heard of about 1650, when he went about, sometimes as God Almighty, sometimes as Adam raised from the dead. . . . One heard next, in 1652, of two associates, called John Reeve and Ludovick Muggleton, who professed to be 'the two last Spiritual Witnesses (Rev. xi.) and alone true Prophets of the Lord Jesus Christ, God alone blessed to all eternity.' They believed in a real man-shaped God, existing from all eternity, who had come upon earth as Jesus Christ, leaving Moses and Elijah to represent him in Heaven." Muggleton died in 1698, "at the age of 90, leaving a sect called The Muggletonians."—D. Masson, *Life of John Milton*, v. 5, pp. 17-20.

RAPALLO, Battle of (1425). See ITALY: 1412-1447.

Massacre at (1404). See ITALY: 1404-1496.

RAPALLO, Treaty of (1920).—"The treaty between Italy and the Kingdom of the Serbs, Croats, and Slovenes, which was signed [at Rapallo, November 12th, 1920, and ratified by all parties by December 29th, constitutes a] . . . virtual revocation of the secret treaty of London of April 26, 1915. [See LONDON: TREATY OR PACT OF.] This treaty [which balances] Italian claims in the north against Jugo-Slav claims in Dalmatia, . . . is even less favorable to Jugo-Slavia than was the 'ultimatum' of January, 1920, against which President Wilson protested. One of the specific objections to the ultimatum line was that it would make difficult the operation by Jugo-Slavia of the railway north of Fiume. The Rapallo boundary deprives Jugo-Slavia of the line of the railway as far as the junction-point of St. Peter, on the direct route from Fiume to Laibach. In addition, solid blocks of Slovenes are thrown into Italian territory. This line, therefore is Italy's 'compensation' for her surrender of claims to Fiume and Dalmatia. . . . Italy and Jugo-Slavia recognize the complete liberty and independence of the State of Fiume, and engage to respect it as such

in perpetuo. The State of Fiume embraces the *corpus separatum* as at present delimited, including the city and district of Fiume, together with the *lisière* to connect with Italian territory. No mention is made of any supervision or control over Fiume by the League of Nations. Adjacent to Fiume and separated by a stream only a few yards in width is Susak, which goes to Jugo-Slavia. . . . Zara and its environs and the islands of Lagosta and Pelagosa are given to Italy. The Treaty of Rapallo, therefore, does not diverge very greatly from the Treaty of London as to the boundary east of Trieste and north of Fiume. Dalmatia goes to Jugo-Slavia as compensation for her concessions in the north, and Fiume becomes an independent state. To what extent the terms of the treaty will permit Fiume to maintain her economic position remains to be seen. It may be a second Craow."—J. S. Reeves, *Treaty of Rapallo (American Journal of International Law, Apr., 1921)*.—See also ADRIATIC QUESTION; FIUME: 1915-1918, to 1919-1921; BALKAN STATES: 1921: Jugo-Slavia.

RAPALLO, Treaty of (1922).—During the progress of the Genoa conference (see GENOA CONFERENCE [1922]), a treaty of amity and coöperation was concluded between the Soviet government and the German Republic at Rapallo on April 16. The text runs:

The German State, represented by Dr. Rathenau, and the Soviet Government, represented by M. Tchicherin, have agreed upon the following stipulations:

Article 1. The two States have agreed to regulate, according to the following principles, matters between them which refer to war-time problems between Russia and Germany. *Sub-clause A:* The German State and the Soviet Republic renounce reciprocally all indemnities referring to their war outlay and all indemnities referring to war damage, that is to say, to damage suffered by their citizens in the theater of war through military operations including requisitions made in enemy territory. The two parties renounce also the indemnities for damage caused to the citizens of one of the two parties as a result of exceptional laws of war, as well as by coercive measures carried out by the State organizations of either party. *Sub-clause B:* The legal, public and private relations affected by the state of war, including the question of the treatment of merchant ships which may have fallen into the hands of the opposite party, will be regulated according to principles of reciprocity. *Sub-clause C:* Germany and Russia renounce reciprocally the payment of costs for prisoners of war. The German State renounces also the repayment of the costs incurred for Russian soldiers interned in Germany. The Russian State, for its part, renounces repayment for all that Germany has received of the enormous amount of war material taken into Germany by these interned prisoners.

Art. 2. Germany renounces her claim resulting from the application of laws and of measures hitherto taken by the Soviet Government toward the German subjects and their private rights, as well as the rights of the German State and States against Russia. Germany gives up also measures taken against the Soviet Government and its organs, or against citizens of the Soviet State and their private rights, with the exception that the Soviet State shall not put into practice any similar claims against a third State.

Art. 3. Diplomatic and consular relations be-

tween the German State and the Soviet Republic shall be restored immediately. In regard to the admission of the respective Consuls, a special agreement shall be made.

Art. 4. The two States have also agreed that the general legal position of the citizens of one of the States in the territory of the other and the regulation of commercial and administrative relations shall be based on the principle of the most favored nation. The principle does not apply to the preferences and advantages that the Soviet Republic concedes to any other republic or similar State that formerly belonged to the Russian Empire.

Art. 5. The two Governments will deal with the economic needs of the two countries with reciprocal feelings of goodwill. An exchange of views will take place in regard to the fundamental settlement of this problem on an international basis. The German State declares itself ready to do all in its power to protect and facilitate the negotiations of private firms.

Art. 6. The first and fourth articles of this treaty are applicable after ratification. The others come into force immediately.

Despite repeated denials from German and Russian official sources that there were any secret clauses in the Treaty of Rapallo, the Constantinople correspondent of the *Chicago Tribune* cabled on August 21, 1922, the text of a confidential report from Karl Radek "circulated to the political departments of the Soviet Foreign Office," revealing the existence of secret clauses in that treaty. These clauses refer to important economic concessions granted by Russia to Germany. They are:

First.—A fifteen-year lease to German land banks of the sugar beet territories in the Ukraine around Kharkov and Kiev. . . .

Second.—The Donetz coal basin is to be let to the Stinnes financial group for a period of fifteen years, exploitation being under direct control of the German General Staff Council. . . .

Third.—Colonization of Kuban by a treaty by 1,000 German reservists, with the right reserved to these colonists to dispose of all concessions in the Maikop petroleum fields.

Fourth.—Colonization of the Terek district with 15,000 German reservists as concessionaires with 25 per cent. of the Grohni oil wells granted to the Krupp interests and the balance remaining in the hands of M. Krassin for disposal in other quarters.—*New York Times*, Aug. 22, 1922.

RAPPAREES, TORIES.—"Ejected proprietors [in Ireland, during the seventeenth and eighteenth centuries] whose names might be traced in the annals of the Four Masters, or around the sculptured crosses of Clonmacnois, might be found in abject poverty hanging around the land which had lately been their own, shrinking from servile labour as from an intolerable pollution, and still receiving a secret homage from their old tenants. In a country where the clan spirit was intensely strong, and where the new landlords were separated from their tenants by race, by religion, and by custom, these fallen and impoverished chiefs naturally found themselves at the head of the discontented classes; and for many years after the Commonwealth, and again after the Revolution, they and their followers, under the names of tories and rapparees, waged a kind of guerrilla war of depredations upon their successors. After the first years of the 18th century, however, this form of crime appears to have almost ceased; and although we find the names of tories and rapparees on every page of the judicial records, the old meaning was no longer attached to them, and they had become the designations of ordinary felons, at large in the country."—W. E. H. Lecky, *History of England*, 18th century, v. 2, ch. 7.—"The distinction between the Irish foot soldier and the Irish Rapparee had never been very strongly marked. It now disappeared [during the war in Ireland between James II and William of Orange (1691)]. Great part of the army was turned loose to live by marauding."—T. B. Macaulay, *History of England*, v. 4, ch. 17.—See also **IRELAND:** 1689.

RAVENIKA, Parliament of.—"Henry, the second emperor of the Latin empire of Romania, or empire of Constantinople, convened a general parliament or high-court of all his vassals, at Ravenika, in 1209, for the determining of the feudal relations of all the subjects of the empire. Ravenika is in ancient Chalkidike, some fifty miles from Thessalonica."—G. Finlay, *History of Greece from its conquest by the Crusaders*, ch. 4, sect. 4.

RAVENNA, one of the oldest cities of Italy, in the province of Ravenna, of which it is the capital. It is connected with the Adriatic sea by a canal six miles long. Its population in 1921 was 72,023.

B. C. 50.—Caesar's advance on Rome. See **ROME**: Republic: B. C. 50-49.

A. D. 404.—Made capital of Western empire.—"The houses of Ravenna, whose appearance may be compared to that of Venice, were raised on the foundation of wooden piles. The adjacent country, to the distance of many miles, was a deep and impassable morass; and the artificial causeway which connected Ravenna with the continent might be easily guarded, or destroyed, on the approach of a hostile army. These morasses were interspersed, however, with vineyards; and though the soil was exhausted by four or five crops, the town enjoyed a more plentiful supply of wine than of fresh water. The air, instead of receiving the sickly and almost pestilential exhalations of low and marshy grounds, was distin-

guished, like the neighbourhood of Alexandria, as uncommonly pure and salubrious; and this singular advantage was ascribed to the regular tides of the Adriatic. . . . This advantageous situation was fortified by art and labour; and, in the twentieth year of his age, the Emperor of the West [Honorius, 395-423 A.D.] anxious only for his personal safety, retired to the perpetual confinement of the walls and morasses of Ravenna. The example of Honorius was imitated by his feeble successors, the Gothic kings, and afterwards the exarchs, who occupied the throne and palace of the emperors; and till the middle of the eighth century Ravenna was considered as the seat of government and the capital of Italy."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 30.—See also **ROME: Empire:** 404-408.

REBECCAITES, or Daughters of Rebecca.—Between 1839 and 1844, a general outbreak occurred in Wales against what were thought to be the excessive tolls collected on the turnpike roads. Finding that peaceful agitation was of no avail the people determined to destroy the turnpike gates, and did so very extensively, the movement

spreading from county to county. They applied to themselves the Bible promise given to the descendants of Isaac's wife, that they should possess the "gate" of their enemies, and were known as the Daughters, or Children of Rebecca, or Rebeccaites. Their proceedings assumed at last a generally riotous and lawless character, and were repressed by severe measures. At the same time Parliament removed the toll-gate grievance by an amended law.—Based on W. N. Molesworth, *History of England, 1830-1874*, v. 2, p. 131.

RECALL: Definition and purpose.—States which have adopted recall.—Advantages.—Recall of judges.—The recall is "the power to remove, before the end of his term, any official elected by the voters. Although existing for a long while in some Swiss cantons, it made its first American appearance under the title of the 'imperative mandate' in the Populist propaganda . . . [late in the nineteenth century] and was first given practical recognition in the Los Angeles charter of 1903. [The recall was used in Greece and Rome and among the early Germanic tribes. In the United States, the Articles of Confederation and the first constitution of Pennsylvania, that of 1776, contained provisions for the recall of elected officers by the assemblies which chose them. The practice was later abandoned because it was believed that the short term would sufficiently protect the people from abuse of power. In 1903 it was revived in its modern form (see INITIATIVE AND REFERENDUM: Development in the United States)]. Since that time it has found its way into the constitutions and general laws of several states, notably those of Oregon, Iowa, South Dakota, Washington, Oklahoma and California. [In 1918 South Dakota adopted a peculiar form of recall, by which public officials may be recalled by the party which secured their election or appointment. The recall may be limited to administrative officials or it may include the judiciary.] It has also been provided for in the special charters of more than a hundred cities [see COMMISSION GOVERNMENT IN AMERICAN CITIES: 1907], most of them municipalities which have adopted the commission type of government. . . . [Upon securing the signatures of a stated percentage of voters, ranging as a rule from fifteen to twenty-five per cent, the question of continuing a particular officer is submitted to popular vote at a recall or removal election.] Unless the incumbent receives the highest number of votes among the candidates offering themselves, he is recalled; that is, he leaves office and his place is taken by that candidate who did receive the largest number of votes. Ordinarily this successor fills out only the unexpired term. It is frequently provided, in order to prevent abuses of the recall procedure, that no removal petition may be filed until after an officer has been at least six months in his post and that thereafter a petition may not be filed more than once during his term of office. The constitutionality of the recall has invariably been upheld by the courts. . . . In the amended Boston charter of 1909 a modified system of recall was established in connection with the mayoralty. In providing for a four-year mayoral term the framers

of those amendments deemed it advisable to entrust to the voters the power of terminating a mayor's tenure at the end of his second year in office. It happens that the state elections in Massachusetts take place in November and that the Boston municipal elections are held in January following. At the state elections, accordingly, the voters are asked (and this without the filing of any petition on their part) whether they desire an election for the post of mayor at the forthcoming January polling. If a majority of the registered voters pronounce in the affirmative then the incumbent of the mayoralty vacates his office and a new election for a four-year term is held. The question goes on the state ballot once every four years, that is, whenever a mayor's term is halfway run. The chief argument in favor of the recall, as advanced by friends of the expedient, is its efficacy as an agent of unremitting popular control over men in public office. . . . It is an application, in a wider sense, of that principle of ministerial responsibility which is a feature of English government and which enables the course of public policy to be altered at any moment by the recall of a cabinet at the hands of the House of Commons."—W. B. Monro, ed., *Initiative, referendum and recall*, pp. 42-43, 44-46, introduction.—Dissolution of parliament is another application of the recall used effectively in Great Britain. From time to time parliament . . . "is voluntarily dissolved in order to refer some important question to the decision of the people. Indeed, it is the rule to ascertain the will of the constituencies by a dissolution when an important new measure is introduced. In the twenty-three years, from the Congress of Berlin to the South African war, including the period of the Egyptian war, parliament was dissolved eight times in order to ascertain by a 'referendum' the will of the people on important foreign and domestic measures, including foreign wars, the Irish land act, Irish home rule, the corrupt practice act, the franchise act, the redistribution of seats, and public education. Within the last few years [written in 1912] there were two dissolutions in quick succession in order to ascertain the will of the people on a new system of land taxation. It must be remembered that the dissolution of parliament also involves a change of the executive. It is as though the President and congress were both subjected to a 'recall' at one election."—G. W. Guthrie, *Initiative, referendum and recall (Annals of the American Academy of Political and Social Science, Sept., 1912)*.—"In its administrative departments the city requires men who will combine a responsive attitude with some executive skill and judgment. The emphasis, indeed, ought to go upon the latter qualities. The recall provision, however, puts the whole emphasis upon the former. . . . The case for the recall provision in relation to administrative officials is correspondingly weakened. With respect to judicial officers it is weakest of all unless we are prepared to accept the revolutionary doctrine that the duty of a judge is that of a supplementary lawmaker. . . . [The chief advantage of the recall lies in the opportunity it offers to secure both administrative efficiency and accountability to the public.] The right men can be appointed, and after appointment, these can be held to the proper attitude. The foregoing assumes, however, that the power to recall an officer will be used sparingly and for good reason only. Otherwise it would be no more than an effective instrument of intimidation and blackmail. Nothing indeed can

be predicted with certainty concerning the merits and faults of the recall in operation until after it has had a trial over a considerable period and under varying degrees of political stress. If it can develop a good tradition, it may prove a highly useful addition to our machinery of local government. At its best it has great potentialities for good. But at its worst the recall contains endless possibilities of political demoralization and harm."—W. B. Munro, ed., *Initiative, referendum and recall*, pp. 48, 51, introduction.—See also MUNICIPAL GOVERNMENT: Evolution of types.

Lodge, *Compulsory initiative and referendum and the recall of judges*.

Recall of judicial decisions.—"Under the recall of judicial decisions, as adopted into the constitution of Colorado (in 1912), if a measure is declared unconstitutional by the supreme court of that state, a popular petition may require that the law be submitted to a popular vote for adoption or rejection. If a majority of the vote upon such a law is in its favor the law stands as a valid law independently of the judicial decision. Substantially what this amounts to is a referendum for the purpose of taking the particular law out from under the constitution as construed by the highest state court. In effect it is merely to this extent an amendment of the state constitution. . . . Colorado is the only state which has adopted a recall of judicial decisions, and since 1912 there seems to have been relatively little popular interest in such a proposal. . . . Amending the constitution has an advantage over the recall of judicial decisions in that it deals not merely with the specific law in dispute, but with the principle underlying the legislation; and also in that it makes a specific change in the terms of the constitution itself. If a recall of judicial decisions were employed it would be difficult for a court to know to what extent if any it was intended to lay down a rule for the future, or for a law upon the same subject different in text or in policy."—Illinois Legislative Reference Bureau, *Constitutional Convention Bulletin*, 1919, no. 2, pp. 69, 110.—During the presidential campaign of 1912, Theodore Roosevelt advocated the recall of judicial decisions. Summarizing his plea for the measure, he said: "I am not proposing anything in connection with the Supreme Court of the United States, or with the Federal Constitution. I am not proposing anything having any connection with ordinary suits, civil or criminal, as between individuals. I am not speaking of the recall of judges. I am proposing merely that in a certain class of cases involving the police power, when a state court has set aside as unconstitutional a law passed by the Legislature for the general welfare, the question of the validity of the law—which should depend, as Justice Holmes so well phrases it, upon the prevailing morality or preponderant opinion—be submitted for final determination to a vote of the people, taken after due time for consideration. And I contend that the people, in the nature of things, must be better judges of what is the preponderant opinion than the courts, and that the courts should not be allowed to reverse the political philosophy of the people."—T. RECOGNITION OF STATES.—"Recognition is the act through which it becomes apparent that an old State is ready to deal with a new State as an International Person and a member of the Family of Nations. Recognition is given either expressly or tacitly. If a new State asks formally for recognition and receives it in a formal declaration of any kind, it receives express recognition. On the other hand, recognition is tacitly and indirectly given when an old State enters officially into intercourse with the new, be it by sending or receiving a diplomatic envoy, or by concluding a treaty, or by any other act through which it becomes apparent that the new State is actually treated as an International Person. But no new State has by International Law a right to demand recognition, although practically such recognition cannot in the long run be withheld, because without it there is no possibility of entering into intercourse with the new State. . . . It must be especially mentioned that recognition by one State is not at all binding upon other States, so that they must follow suit. But in practice such an example, if set by one or more Great Powers and at a time when the new State is really established on a sound basis, will make many other States at a later period give their recognition too."—L. Oppenheim, *International law*, v. 1, pp. 110-111.—"State existence *de facto* is not a question of international law, but depends on the existence of a sovereign political unity with the attributes which necessarily appertain to it. This *de facto* exist-

tence is not dependent upon the will of any other state or states. The entrance of the state into the international statehood, however, [existence *de jure*] depends entirely upon the recognition by those states already within this circle. . . . The internal acts of a *de facto* state are valid whatever the attitude of the international circle."—G. G. Wilson and G. F. Tucker, *International law*, p. 47 and note.

RECREATION: Modern connotation.—Definition.—Early development in Greece.—Public games.—Drama.—The complete history of recreation would comprise the history of the fine arts, and virtually all social culture. Though the activity itself has always existed, the word has gained a special connotation in the twentieth century through organized attempts to develop various forms of recreation as a feature of democratic social life, and as a regenerating and educational force in the community. Though one cannot say that recreation is a modern invention, the "recreation movement" is an interesting and significant social development of the twentieth century. Recreation is applied to any voluntary activity undertaken for the sake of immediate pleasure, rather than as a means to an end. It takes its place in history because in any civilized state, the regulation of this universal impulse to pleasure tends to become a public matter. In Greece recreation became a fine art, and the theory of it was developed more fully than anywhere else. Well-born youths were instructed in the two branches of education—gymnastic or the training of the body, and music or the training of the soul. [See GYMNASTIA, GREEK.] These benefits were extended to the whole community through the great public games, the Olympian [see OLYMPIC GAMES], Isthmaean, Pythian, and Nemean games. Thus, the real contribution of the Greeks lay not only in the beautiful development of the athletic game, the

drama (see DRAMA: Origin), and the festival, but in the conscious and articulate recognition of recreation as an educational force in the life of the individual and the center of really free democratic life in the state.

B. C. 100-A. D. 400.—Character of public recreation in Rome.—The "Triumph."—The fresh, free, democratic spirit of the best Greek life was almost wholly wanting in Rome, and the history of public recreation in Rome is as much the history of sumptuary law for the regulation of private festivity as the history of any constructive development of recreation. The Romans did make one outstanding contribution, however, in the "Triumph," or solemn public procession in honor of a victorious general. Something of this feeling of public ceremony is the redeeming feature even of the great Roman games and gladiatorial displays.—See also SECULAR GAMES AT ROME; BATHS.

600-1600.—Festival spirit of the medieval church.—Origin of drama.—Tournament.—Village festivals.—Renaissance.—After the fall of the Roman empire the church developed from the primitive festival life of Europe the drama of the Christian year, wherein the festival of the winter solstice became the festival of the birth of Christ; the festival of the spring solstice became the resurrection of Christ at Easter, and so forth. The church festivals proved the source of the modern drama of Europe (see DRAMA: Medieval) and of most of our finest music and art. Under the wing of the church flourished a type of recreation, which has now passed away, but which has more than once furnished the inspiration for games and ceremonies in the modern revival of recreation—the tournament (see TOURNEY), the court of love, and the flower festivals. (See PROVENCE: 1170-1207; TOULOUSE: 1323-1324.) Side by side with these festivities of lords and gentry went village festivals of one sort or another, mostly associated with church holidays. Of these the best known are the May-pole ceremonies of England—together with the whole Robin Hood tradition. The Renaissance gave an impetus to splendor and ingenuity of imagination in the festivities of court, church, and village, and developed in particular the drama, the court masque, and the gorgeous religious festivity which Spain transferred to Latin America, and which flowered with a new beauty in the new environment. But it was also the beginning of the rational, critical, self-conscious attitude which destroyed the spirit of play in Europe. From this time until the end of the nineteenth century there was almost no really vital development of recreation.

1886-1906.—Early phase of modern recreation movement.—"In 1886, Boston established the first organized and supervised outdoor playground in America under private auspices, and other cities here and there throughout the country, feeling the need for play space for little children, made playgrounds and play centers possible through the efforts of interested groups of people. Then came the realization, growing slowly but surely, that the support and administration of playground work should be a municipal function, and pressure was brought to bear upon city governments to carry on the work. Gradually, city after city assumed this responsibility. Soon the broader needs of the recreation movement began to make themselves felt and the opening of schools as social centers and the development of recreation for adults and of playgrounds and play centers open throughout the year became the important factors in the movement. A number of states passed legislation making possible recreation commissions and departments and the work began to assume the propor-

tions of a national movement."—*Community recreation, Dec., 1919 (pamphlet), pp. 1-2.*

1906-1914.—**Organization of the Playground and Recreation Association of America.—Increase in recreation activities.**—"With the formation in June, 1906, of the Playground and Recreation Association of America, there began an organized systematic effort to help cities throughout the country establish year-round recreation systems on a permanent basis, supported by funds raised through taxation and administered by municipal departments under the direction of paid superintendents of recreation. [Dr. Gulick, the first president, gave wide publicity to the movement. In 1910, Dr. Gulick resigned and Joseph Lee, one of the first promoters of the playground movement in Boston, became president of the association. As head of the Child Welfare Department, Professor McKeever of the University of Kansas, gained notable success in his campaigns for improving recreation facilities throughout the smaller cities of Kansas.] Statistics on the recreation movement compiled by the Playground and Recreation Association of America for the year 1918 show that there were 129 cities having year-round recreation systems with over 1600 workers employed the [entire] year. In the great majority of instances the work was publicly supported."—*Ibid.*

1914.—**Recreational facilities at the beginning of the World War.—Their significance as national assets.—Typical recreational developments in Germany and England.**—"At the outbreak of the World War it was discovered that the organized development of recreation during the preceding decade had provided a technique and a corps of workers whose services were invaluable in preserving the morale of both soldiers and civilians. The types of recreation evolved in England and in Germany were characteristic. "The German likes to eliminate the hazardous, the foolhardy. . . . But he does not scorn football, tennis, golf. On the contrary, he does everything with a passion, and overdoes it as the Americans and English do. Football, for instance, . . . is highly valued by the younger generation in Germany. . . . Villages challenge one another and the games are widely advertised and largely attended by the general public. . . . Every half-way modern town has magnificent [tennis] courts. [Baseball has not been introduced.] Golf is still generally confined to the health resorts which are visited mostly by foreigners."—F. L. Sneff, *Athletic life of the Germans (Playground, May, 1914, pp. 62, 64)*.—"This building up of physical strength and morale was part of the whole national effort to create a great military machine. In England, however, the recreational movement was individualistic and philanthropic. By 1914 seven cities in Great Britain had municipal golf links and 13,596 acres of ground outside of London were devoted to play. In Scotland, the gift which Andrew Carnegie made in 1905 to Dunfermline, providing for trained supervision of the city playgrounds, resulted by 1914 in a remarkable increase in recreational activities. As the war progressed social recreation came to rank third in importance among the means of "carrying on."

1914-1918.—**Recreational activities in connection with the World War.—In the trenches.—Among victims of the war.**—"As a result of the World War, recreation was developed on a tremendous scale. Practically every philanthropic agency of any importance was mobilized to cheer up the soldiers and hearten the sufferers in the devastated districts. The Y. M. C. A. huts and the Y. W. C. A.

hostess houses supplied military substitutes for the comforts of home, including lounge-rooms, smokes, and music. The War Camp Community Service imported and circulated the favorites of the theatre in person. The Community Motion Picture Bureau built up an enormous motion-picture service for the trenches. The salvation army lassies made a reputation on coffee and doughnuts. The Knights of Columbus supplied recreation under Roman Catholic auspices. As an agency of reconstruction in the devastated districts recreation was found to be even more important than in the actual carrying on of the war. The precocious, war-shattered children of the war-districts were taught by the Red Cross to play as systematically as they were taught to eat, and, carried by the various relief agencies, the playground movement penetrated into southern and eastern Europe and even into Siberia, where a playground association and a city playground were established at Irkutsk in 1918 under the direction of Maurice Ross, formerly recreation superintendent at Westbrook, Maine.—See also **WORLD WAR: Miscellaneous auxiliary services: IX. War relief: g, 10.**

1914-1921.—**Recreational facilities as a means of extending American ideals in the Orient.—Philippines.—Hawaii.—China.**—"A unique phenomenon of international life is the rapid extension of the ideals of American education and social betterment in the Orient by teachers and social workers inspired with missionary zeal. These efforts are of enormous influence in building up a spirit of admiration and goodwill for the United States among the younger generation of Orientals. In the Philippine Islands, "Baseball, basketball, and track events of all kinds have been encouraged through the schools, and the inter-municipal and inter-provincial gatherings are actually 'fiesta' days. . . . For eight years there has been a Parks and Playgrounds Committee in Manila [written in 1914]."—F. R. White, *Recreation development in the Philippine islands (Playground, May, 1914, pp. 59-60)*.—"Because Hawaii is more directly under the control of the American government, it was possible to develop the playground movement there more rapidly than in the Philippines. "From the time of its inception, . . . [about 1910] the supervised playground movement in Hawaii has thrived and the efforts of various agencies continue to be directed toward the development of a broader recreational program. . . . [In 1910] the Free Kindergarten and Children's Aid Association employed for the first time a trained playground worker from California who, in addition to supervising the general work of the five centers, conducted classes for training play leaders. The average daily attendance at these play grounds is [in 1920] about seven hundred, and the activities are most varied. Because of the kindly climate the boys and girls of Hawaii may play out-of-doors the year round. . . . Appreciation of the value of organized play is developing throughout Hawaii, as a partial survey shows. Four of the private schools of Honolulu employ play leaders and physical directors, while others have teachers who devote part of their time to organized play."—*Play in Hawaii (Playground, Nov., 1920, pp. 503, 504)*.—"In China the interest in recreation as a part of the social and educational system is one of the many intellectual importations of young China from America. In 1914 "Mr. Huang Yen Pei, the vice-president of the Kiangsu Education Association became interested in playgrounds. Mr. Huang was on the Commercial Commission which . . . toured America and he took the opportunity to investigate every playground and every playground system he could find.

... [As a result of his visit sixty playgrounds were planned and put into operation throughout the province of Kiangsu and directors were trained in playground methods and technique. Following the example of Kiangsu, the Nanking government Teachers' College established] a three years' course in physical education. This school has now [1919] turned out one class. . . . In the playgrounds of Shanghai besides the organized free play in the playgrounds, there is a great deal of work being done in organizing athletics in the city. High school and grammar school leagues in basket ball, soccer football and tennis, are conducted during the year there, as are a large number of track meets for schools and other playgrounds. . . . [It is doubtful if there are] any team games which are indigenous to the Chinese. Most of the games are of the Jack Stones type. . . . There are one or two games which approach the team-game type but which lack the cooperative element to an extent."—C. H. McCloy, *Play and recreation in China* (*Playground*, Nov., 1919, pp. 360, 361, 363).

1914-1921.—Rapid development of municipal recreation.—Municipal theaters.—Growth of the community center.—Survey of social centers of American cities.—Municipal camps.—Municipal recreation in England and Denmark.—In the municipality recreation has found its natural center and is playing a vital part in the social, physical, and political development of the people. The first social center was the schoolhouse, and, between 1913 and 1917, 2622 social centers were provided in city schools throughout the United States. As the play movement widened in scope, however, and public schools and libraries extended their recreational facilities so as to meet the needs of adults as well as children, it became evident that a specially designed building was required for these activities. "After much experimentation it was found that 'an ideal building was one which in addition to the ordinary school-rooms and domestic science rooms, libraries, etc., provides one or more large floor space for social dancing, so that the young people may feel that their wants are provided for, and at the same time furnishes a gymnasium for physical recreation, and leaves the assembly hall for neighborhood gatherings, lectures and entertainments, and for use as a public forum.' . . . [The years 1912-1914 saw a marked increase in aesthetic activities. Besides regulating existing recreations, such as commercialized amusements, the municipalities provided music, theaters, dances, and community dramatics, festivals, and pageantry.] More extensive than the efforts to raise the standard of musical appreciation, perhaps, were those in behalf of a higher form of dramatic expression. Among the many events were the construction of municipal theatres in Pittsfield and Northampton, Massachusetts; Concordia, Kansas; Hennessey, Oklahoma; Richland Center, Wisconsin; and Red Wing, Minnesota. . . . In addition to these events were other constructive efforts such as the organization of the Drama League of America, the Drama League of New York City, the Chicago Drama League, the New Theatre and the Little Theatre of New York, the Toy Theatre and the Drama Society of Boston, and the Wisconsin Dramatic Society. The latter sought to unite groups of amateurs throughout the State and 'to raise the standard of dramatic appreciation,' while the drama societies of the large cities sought 'to promote in public schools, social centers, settlements, churches, and other agencies, amateur dramatic performances having an educational value,' and to bring to bear on the commercial stage the influence of a refined public opinion

which would demand productions of a more desirable nature from both the artistic and the moral standpoint. About 1915 the term 'community center' came into use in New York, when referring to the agency or instrument through which 'neighborhood organization' was being effected. The community center is a place where the people can unite in their own way for the expression and enjoyment of whatever interests they have in common."—C. E. Rainwater, *Play movement in the United States*, pp. 121-122, 161, 216.—By 1913 there were sixty-five community centers in New York City. The National Social Unit experiment conducted in Cincinnati during 1916-1919 emphasized the self-government and self-support features of the community center. In 1919 a national organization was formed to aid urban and rural communities in solving the problems of reconstruction. This organization, known as Community Service, Incorporated, is an outgrowth of the Playground and Recreation Association of America and of the War Camp Community Service. It began work with a fund of two million dollars which was used to organize community centers in about 400 cities, each community furnishing about ten dollars for every dollar expended by the organization. In 1920 "465 cities reported that playgrounds and recreational centers are being conducted under paid leadership. The most encouraging increase from the point of view of the effectiveness and permanency of the work lies in the 10,218 play leaders employed as against 8,043 in 1919, or an increase of 27 per cent. There has been also an increase of 38 per cent in the number of workers employed during the entire year, 2,011 now being retained on this basis. This is indicative of growing appreciation on the part of municipalities of the importance of making facilities for recreation function not only during the summer months but throughout the entire year. There has also been a considerable growth in the number of neighborhood and community centers open at night. One hundred and fifty-one cities report [1921] an attendance of 437,683 at their winter centers, an increase of more than 124 per cent over the attendance in 1919. Twenty-five cities have been benefited by gifts from public spirited citizens of either land or money to be used for playground purposes. As instances of this Columbus, O., has been made the recipient of forty acres of land to be developed as a model outdoor center and play field; Kalamazoo, Mich., has been given seventeen acres of land located in the center of the city for playground purposes; Sacramento has been given a memorial playground; and the recreational facilities of Scranton, Pa., are largely increased through a private gift; Newburgh, N. Y., has been presented with a municipal golf course. This growth in the movement is a recognition that the supervised playground is as much a part of the municipal machinery as the policing of the street, the furnishing of adequate protection against fires, or the providing of modern school plants with well equipped staffs of teachers. It is a recognition of the effect of properly directed recreation upon child life. The well supervised playground provides a little democracy where the child may develop initiative, learn to mix with his fellows, develop qualities of leadership and discipline, brush off anti-social habits, and adapt himself to his surroundings and his fellows as preparation for the larger playground of competition and of life. In providing play space many cities are now utilizing private property and vacant lots, equipping such spaces with simple apparatus which can easily be moved. In congested districts certain streets are

being closed off from traffic in order that some semblance of recreational facilities may be offered to the children. Public school athletic leagues, usually under the direction of the school board and the park board have aroused a wholesome spirit of rivalry among school children and have inculcated in them team play, a sense of leadership and loyalty. Through the use of pageants and games in which large numbers of children are used, group activity has also been encouraged. This serves to counteract the danger of too high athletic specialization and the professionalizing of those who show special athletic prowess. With the further appreciation of what city planning means to the life of a community and with the increasing understanding of child life may be expected a continued expansion of the playground movement."—*Cities at play (Survey, Feb. 26, 1921, p. 768)*.—By 1922, Boston, the city where the modern play movement originated, had twelve community centers in operation, providing men's activities, women's activities, boys' and girls' clubs, orchestra, glee and choral clubs, parliamentary law, debating and dramatic clubs, dressmaking, millinery, embroidery and basketry classes, athletics and gymnastics, games, socials, dances, concerts, lectures, entertainments, illustrated talks and motion pictures.—Based on *Community Center, Sept.-Oct., 1922*.—"Los Angeles, California, believes that municipal playgrounds are one of the best investments a city can make and it has established two municipal camps—one seventy-five miles from the city and the other 100 miles from the city at elevations of 4500 and 6000 feet. . . . The charge in the Los Angeles camps is fifteen dollars for two weeks. Four thousand people were taken care of in the two camps during the summer [of 1923], and seven thousand dollars over and above expenses collected."—*Playground, Aug., 1923, p. 283*.

The principal social center in London is the People's Palace, which stands in the heart of the east-end. It was founded by private legacy "To create an institution in which, whether in science, art, or literature, any student may be able to follow up his education. The trustees also desired to provide for those who wished simply for social enjoyment, and to this end proposed to establish the Winter Garden Concert Hall, Recreation Grounds, gymnasium and swimming baths for both sexes, and rooms for indoor games." The activities carried on in Queen's Hall of the People's Palace are probably more varied than in any other hall in London. First are the regular entertainments of the institution held four times a week. The other social events include humorous entertainments, concerts, oratorics, and the most recent motion pictures. The Sunday afternoon chamber concerts are well attended. All seats are free. The Handel Society gives an annual concert in the Hall, the Bach choir sings on various occasions and the People's Palace Choral and Orchestra societies also give three or four concerts each season. The hall is loaned to numerous societies for concerts, and entertainments for poor children and the blind are also given there. Baby shows, dog shows, and poultry shows have been held. The People's Palace Music Festival, founded with the object of encouraging the study of good music, the choral and orchestral societies whose members are drawn from the immediate neighborhood, and the Mandoline Band is one of the largest in London—all meet in Queen's Hall regularly. Two or three flower shows are held each year by the East London Horticultural Society, the children's section being made a special feature. Plants are given out to the children of the neighbourhood some

weeks before the date of the summer show. These are tended in their homes and prizes are awarded in accordance with the condition in which they are brought back for exhibition at the show. The Recreation Hall of the People's Palace is for family recreation. The holder of a membership ticket may be accompanied by his wife and two children free of charge. Women may join as members. Billiard and bagatelle tables, cards, chess, and writing tables are provided and a large number of books are available. The orchestra plays daily from seven to ten o'clock. Tea, coffee and cigarettes are supplied at low charges. The Evening Play Center is open each evening from five to seven, on Saturdays in the morning. The children enjoy drill, dancing, singing, games, sewing, basket work. The boys are taken to Victoria Park for cricket and football on Saturday mornings. Swimming facilities are open at the Palace from Easter to September. During the daytime the pool is used almost continuously by the children of the London County Council's elementary schools, certain hours being fixed for each school. Attendance at the baths is kept by the school authorities and the charges paid by the council. In the evening the pool is open to adults. During the winter the base of the swimming pool is covered with board flooring and used for part of the play center activities. The opportunity of physical recreation in the way of swimming and the comfort offered through the washing baths during the summer are not the least of what the People's Palace means to the people of the East-end of London."—*Recreation in the East-end of London (Playground, Nov., 1920, pp. 499-501)*.

"In almost every Danish village there is a meeting house built at the expense of the whole village, and managed by a committee of the villagers, for the use of the whole village. This house is the social center of the village. . . . There one night at least every week in winter the young men meet together for physical culture. They have their unpaid Sandow, and go through a regular course of training. There also one night old and young alike meet together to hear a lecture. About twice a month a grand debate is held, the debaters being the villagers themselves, helped out by University students, perhaps. Twice a month too, there is a concert; while from time to time there are private theatricals, social evenings, and even dances. 'Sometimes' the lecturers are paid, but very rarely; for they are as a rule either professors, students or politicians, and they make it part of their regular work to lecture in villages gratis. In some districts there is a committee, the duty of which is to see that all the villages are well supplied with lectures.'"—*Remaking of village life (Playground, Nov., 1910, pp. 373-374)*.

1915-1922.—Rural recreation in the United States.—"The conception of recreation as an important part of rural life is age-old. The joy of harvest as expressive of the glorification of achievement has for hundreds of years found expression in harvest festivals. . . . The Grange, the Farmers' Union, the Farm Bureau and other farm organizations have gone far to demonstrate the value of get-together occasions for all kinds of purposes, and their field of service is rapidly widening. The clubs developed by the States Relations Service of the United States Government are helping to mould the leisure-time interests of thousands of boys and girls. Private organizations are providing leadership which is helping to raise up local leaders. . . . The telephone and automobile have done much to offset the long distances and the isolation which make a community-wide social life so difficult of

achievement. Visiting among neighbors and recreational gatherings are now far more practicable for the men, women and children living in farming areas than they were a few years ago. The great need is for the organization of community forces in such a way that scattered efforts will be focused and community forces made to function for the benefit of the home, the school, the church and other groups, so that all these agencies may contribute to the best good of the community at large."—Community Service, *Rural and small community recreation (pamphlet)*, May, 1921, p. 5.—"During the two or three years preceding 1918, a limited number of 'community councils' were formed in country-side and 'town' districts. . . . These 'joint-committees,' as they were also called, usually made a more or less thorough survey of their community and outlined a program of development extending over a period of from three to five years. Provision for play was always a feature of the work of the 'councils' and one which occupied much of its attention. Massachusetts was one of the first states in which this plan was adopted on a wide scale. . . . By 1918 community buildings had been provided in one or more rural districts in forty-one states. . . . In some rural communities, efforts toward 'neighborhood organization' resulted in the creation of a new public office: the 'community secretary.' . . . Under the personal leadership of the 'community secretaries,' the local institutions and associations were correlated into a functional and dynamic whole. The control and support of play was a phase of the task of the 'community secretary,' constituting at least fifty per cent of his work, and involving the management of the social center and the public forum, the making out of a calendar of local meetings and events, the directing of community surveys, and the charting of community needs. . . . [With the formation of the War Camp Community Service in 1918 and its successor, Community Service, Incorporated, rural and urban communities alike received the benefit of trained vision and expert assistance in the various problems of communal life. The evolution of the play movement in the United States is typified in this expansion of rural activity. For at first provision was made only for little children and only gradually extended to include persons of all ages. Then expansion proceeded by regular stages] from facilities operated during the summer only to those maintained throughout the year; from outdoor equipment and activities only to both outdoor and indoor facilities and events; from congested urban districts to both urban and rural communities; from philanthropic to community support and control; from free play and miscellaneous events to directed play with organized activities and correlated schedules; from a simple to a complex field of activities including manual, physical, aesthetic, social, and civic projects; from the provision of facilities to the definition of standards for the use of leisure time; and from individualistic interests to community activities."—C. E. Rainwater, *Play movement in the United States*, pp. 167-168, 170-173, 330.

RED CROSS: Character and aim.—Inception of the idea.—War relief in early ages.—Precursors of the Red Cross.—First Geneva Convention (1864).—International conferences.—Geneva convention (1906).—"A confederation of relief societies in different countries, acting under the Geneva Convention [of 1864] carries on its work under the sign of the Red Cross. The aim of these societies is to ameliorate the condition of wounded soldiers in the armies in campaign on land or sea. The societies had their rise in the conviction of certain philanthropic men, that the official sanitary service in wars is usually insufficient, and that the charity of the people, which at such times exhibits itself munificently, should be organized for the best possible utilization."—*History of the Red Cross (Washington, 1883)*.—Before the organization of the Red Cross societies, provision for the care of the sick and wounded was an idea of extremely slow development. In ancient Egypt "physicians were employed by the State and the soldier being held in high regard, received their care without charge. There were men skilful in the art of removing arrows and of giving first aid during the Trojan War, and de Quincey says of Homer that his knowledge of wounds would have fitted him for the post of house surgeon in a modern hospital. . . . Alexander the Great, who took a lively interest in his soldiers' welfare, employed physicians only for his own and his friends' benefit, leaving the common soldier to play the part of surgeon for himself. . . . The military hospital . . . dates from the time of the Roman Empire. . . . The consideration for the soldier was not confined to the Romans, for Tacitus gives accounts of the wives of the Germans dressing the warriors' wounds. A touch of the Red Cross spirit manifested itself after a battle a thousand years ago, when Haldora of Iceland called to the women of her household, 'Let us go and dress the wounds of the warriors, be they friends or foes.' In the first century of the Christian Era hostels for pilgrims sprang up along the routes of travel. In these both poor and sick found refuge. . . . [During the Crusades the military nursing orders, such as those of St. John of Jerusalem, of Rhodes and of Malta cared for the sick and wounded whether Christian or Moslem.] Save for the volunteer aid of these nursing orders, there seems to have been no attempt made to provide any nursing care in time of war. [Progress toward more humanitarian arrangements was made slowly. In the eighteenth century the] generals at the head of the French and Austrian forces accepted an arrangement suggested by Percy, the French surgeon-general, that the hospitals should be considered as sacred asylums, and that their location be plainly indicated so that the soldiers could readily recognize them."—M. T. Boardman, *Under the Red Cross flag at home and abroad*, pp. 10-20, 21, 23-24.—Not until the Crimean war did people realize the importance of making provision for the sick and wounded.

But when Florence Nightingale and her group of 38 nurses went out to Scutari her labors to alleviate suffering became an inspiration to others. In 1862 a Genevan, Henri Dunant, who had been present at the battle of Solferino, published a work entitled "A Souvenir of Solferino," in which he strongly advocated more humane and extensive appliances of aid to wounded soldiers. His book came to the attention of M. Moynier, president of the Society of Public Utility of Switzerland, and as a result of the endeavors of that organization, an international conference was called at Geneva, Switzerland, in 1863, which "though it had not an official character, brought together representatives from a number of Governments. At this conference a treaty was drawn up, afterwards remodeled and improved, which twenty-five Governments . . .

FLORENCE NIGHTINGALE

[had signed by 1880]. The treaty provides for the neutrality of all sanitary supplies, ambulances, surgeons, nurses, attendants, and sick or wounded men, and their safe conduct, when they bear the sign of the organization, viz: the Red Cross. Although the convention which originated the organization [the Geneva convention of 1864] was necessarily international, the relief societies themselves are entirely national and independent; each one governing itself and making its own laws according to the genius of its nationality and needs. It was necessary for recognizance and safety, and for carrying out the general provisions of the treaty, that a uniform badge should be agreed upon. The Red Cross was chosen out of compliment to the Swiss Republic, where the first convention was held, and in which the Central Commission has its headquarters. The Swiss colors being a white cross on a red ground, the badge chosen was these colors reversed. There are no 'members of the Red Cross,' but only members of societies whose sign it is.

There is no 'Order of the Red Cross.' The relief societies use, each according to its convenience, whatever methods seem best suited to prepare in times of peace for the necessities of sanitary service in times of war. They gather and store gifts of money and supplies; arrange hospitals, ambulances, methods of transportation of wounded men, bureaus of information, correspondence, etc. All that the most ingenious philanthropy could devise and execute has been attempted in this direction. In the Franco-Prussian war this was abundantly tested."—*History of the Red Cross*, pp. 14-15.—In 1877 the International Committee of the Red Cross, which acts as a medium of communication between the Red Cross societies of the various countries, appointed Clara Barton its representative in the United States. She had devoted herself to promoting the cause of the Red Cross in America since 1860 and it was through her efforts that the United States in 1882 signed the Geneva convention and created the American Red Cross. (See also BARTON, CLARA.) Up to 1922, ten international conferences had been held by the Red Cross societies: the first at Paris in 1867; the second at Berlin in 1869; the third at Geneva in 1884; the fourth at Karlsruhe in 1887; the fifth at Rome in 1892; the sixth at Vienna in 1897; the seventh at St. Petersburg in 1902; the eighth at London in 1907; the ninth at Washington in 1912; and a tenth not fully representative but aiming at such an association, at Geneva in March, 1920. These conferences are not to be confused with the Geneva conventions of August 22, 1864, and July 6, 1906, which established the articles of international agreement. At the conference of 1906 the ten articles of the original convention were expanded to thirty-three, including "a definite recognition of the national voluntary aid societies and a statement of the conditions under which their services may be employed; provisions guarding against the improper use of the Red Cross symbol; and agreements for the exchange of information concerning wounded who may have been taken prisoners and of the identification marks of those found dead upon the field of battle. It is noticeable that the word 'neutrality' does not occur in the Convention of 1906, that term having been regarded as inapplicable to military or semi-military establishments active in connection with belligerent armies; instead it is provided that medical establishments and their personnels as well as the sick and wounded, shall be respected and cared for without distinction of nationality. Thirty-six powers were represented at the Conference of 1906, and of these several, including Great Britain and the United States, ratified the Convention in the following year. The Convention of 1906 does not, however, necessarily abrogate that of 1864, for it expressly declares that the latter shall continue to be binding on all its signatories until such times as they shall ratify the more recent agreement."—J. P. McMurrich, *Origins of the Red Cross movement* (*University Magazine*, Apr., 1917).

1864-1914.—Development of Red Cross on the continent between its inception and the World War. — Russia. — France. — Belgium.—Balkan states.—Italy.—Germany and her allies.—Neutral nations.—Red Crescent.—The Red Cross society, as organized at the Geneva convention of 1864, was primarily an organization for relief in time of war. Before long, however, the national societies began to afford relief to sufferers in national calamities. "It has been claimed that the American Red Cross was the originator of the idea that . . . Red Cross societies should render

relief after serious disasters, and that therefore this new field of activities was called 'the American amendment.' The fact is that before the American Red Cross even existed the Russian Red Cross had advocated and carried on such service. The aid it gave for the relief of sufferers from the serious famine in the valley of the Volga is typical of its success in such humanitarian lines. Not only were the starving to be fed, but those sick from scurvy and typhoid to be cared for under many difficulties. . . . The Russian Red Cross . . . developed into an extensive organization, with many departments for the divisions of its work. . . . In spite of royal patronage, it was not until 1876 that its invaluable service was appreciated. In the Russo-Turkish war, when it at once leaped into popular favor eight million dollars were contributed for its war relief work, which enabled it to transport and care for over four hundred thousand sick and wounded men. . . . During the Russo-Japanese War . . . [when] Russia was fighting thousands of miles from her base of supplies . . . without the hospital trains of the Red Cross many of . . . [the sick and wounded] men would have perished in a distant land, far away from their homes and families. . . . [During the Franco-Prussian war of 1870, the French societies, though not so well organized as those of Germany, provided nearly two million dollars.] In the titanic struggle that overwhelmed Europe [1914-1918] . . . the French Red Cross . . . had to bear a burden almost beyond comprehension. It . . . consisted of three independent branches under one central committee, the Society for the Aid of the Military Wounded, the Union of the Women of France, and the Association of French Women. . . . After most of Belgium had been occupied by the German forces, the Belgian Red Cross remained for a time inactive, but the Belgian army, driven out of its own country, had still need of the Red Cross. On the request of King Albert, General Melis and Doctor Depage reorganized its service and established a large hospital at La Panne, on the coast, in the small northwest corner of the country that still remained unconquered. . . . Serbia and Montenegro both have their Red Cross Societies. . . . Two wars in quick succession had exhausted the supplies and resources of the Serbian Red Cross. At the outbreak of the . . . [World War] there were only four hundred doctors in a population of four million persons, and when more than one hundred of these perished from typhus fever, Serbia was in a desperate state for medical personnel, as well as supplies. The little mountain country of Montenegro, with fifty thousand men under arms, had for its army and its civil population a little more than a score of physicians. . . . Without the aid of the Red Cross, both of allies and of neutrals, not only would [the sick and wounded] have perished by thousands, but multitudes of the civil population would have also died. For nine months the shadows of war clouds hung over Italy, and the mutterings of the storm gave her warning to prepare. Fortunately for her, she possessed a most excellent Red Cross which . . . not only proved its efficiency after earthquakes and volcanic eruptions, but which has maintained for years an active and successful preventive campaign against the malarial fever of the Campagna. In the sulphur mines of Sicily and in other parts of the country first-aid instructions have also been part of its work. The society has a large number of hospital trains, each with a personnel ready to

mobilize the moment the train is called into active service. There is a close affiliation between the society and the Italian Government, some of whose officials are members of its governing body. This system of Italy's was adopted by the American Red Cross at the time of its reorganization in 1905. Forseeing the coming danger, the Italian Red Cross . . . occupied itself for many months in preparation. . . . With royal support it was natural that Germany should accept the Red Cross idea and enter into its development with enthusiasm. . . . [In the war of 1866 the German societies furnished more than three million dollars and in the Franco-Prussian conflict of 1870, they secured and applied more than fourteen millions. After the formation of the German Empire] a Central Committee of the Red Cross was created for direction and supervision of the State branches. . . . No other Red Cross organization has been so constantly active as the German. All national

CLARA BARTON

disasters from a flood, or fire, to an epidemic have found it ready and equipped for relief operations. But not content with these occasional duties, it has undertaken constant daily service of various kinds. For a number of years it has carried on extensive anti-tuberculosis work, maintained numerous sanatoria, day and night camps and other institutions. . . . Instructions in first-aid, and the organization of sanitary columns . . . enabled the German Red Cross to put into active service some eighty thousand trained men for ambulance, transportation and hospital duty. . . . More than seven hundred thousand German women form a special branch of the Red Cross under the name of the Women's Union of the Fatherland [written in 1917]. . . . At the beginning of August [1914] . . . when the call to arms went forth in Germany, as promptly and as smoothly as the army itself the Red Cross mobilized. Every other organization in the country that desired to aid was placed under its direction, and the Government instructed all contributions of money and supplies to be sent to it and the knightly orders. . . . In Austria-Hungary there were two Red Cross so-

cieties—that of Austria, with headquarters at Vienna, and that of Hungary, with its headquarters in its own building, at Budapest. . . . Several Red Cross associations existed in Austria previous to 1880, which at that time were united under one central committee. This society, like the other European societies, . . . devoted itself to preparation for war relief in the way of trained personnel, ambulance transportation, equipment and supplies. It . . . took part in relief operations after disasters, and sent a number of its kitchen wagons to Italy, from which at Catania, hot meals were served every day to twelve thousand persons. . . . The estimated total value of the Austrian Red Cross endowment, materials and supplies, amounted before the . . . [World War] to over five million dollars. The Hungarian Red Cross . . . [was] similar to that of Austria. . . . The old prejudice against the cross horn of the days of the Crusades . . . made Turkey unwilling to accept this emblem as the insignia both of its army medical service and its volunteer relief society. With the consent of the other signatory powers of the Treaty of Geneva, Turkey . . . adopted as her symbol the Red Crescent, while at the same time promising to respect the protection of the Red Cross. . . . The Red Crescent Society was organized in 1877 at Constantinople. During the war with Russia, though in its infancy, it received more than a million dollars in money and nearly half a million additional for field hospitals and supplies. After the Italian earthquake it contributed funds for relief, and contributions were also sent to aid the victims of the Armenian massacres. At the time of the first Balkan war the Red Crescent maintained a number of hospitals, for which some of its equipment and ambulances were purchased in America with the aid of the American Red Cross. During the cholera epidemic the society had a number of the large mosques thrown open for several thousand of the victims, and aided the pathetic multitudes of refugees from the invaded districts who fled to Constantinople, where they had to be sheltered and fed. The society . . . had many difficulties to overcome and not the least remarkable development . . . shown . . . [is] the liberty permitted Moslem women in its work. . . . The few countries of Europe that . . . [did] not become involved in the widespread conflict . . . [were] so fearful of being drawn into the vortex of strife that their Red Cross societies . . . [were necessarily limited] in the aid they could offer. They . . . did what they could, notably the societies of Switzerland and Holland; the former . . . especially for prisoners of war and for the repatriation of refugees and wounded. Holland . . . cared for thousands of destitute and panic-stricken Belgians who fled to the refuge their kindly and generously hospitable neighbor offered.”

1919-1920.—International activities.—Cannes conference.—League of Red Cross societies.—Meeting of general council at Geneva.—“The medical conference assembled at Cannes, France, April 4, 1919, on invitation of the Red Cross societies of Great Britain, France, Italy, Japan, and the United States, is destined to mark the beginning of one of the great constructive enterprises growing out of the world war. Many efforts . . . had been made in past years to promote international uniformity and coöperation in combating communicable diseases, but probably there has never been held a more remarkable conference than this one, comprising the foremost medical and public health experts of the nations named. . . . The sections formed were as follows: venereal diseases, child welfare, tuberculosis, malaria, nursing, preventive medicine.”—W. F. Snow, *Red Cross conference at Cannes (Social Hygiene, Oct., 1919, pp. 473, 475, 487)*.—“In order that the great resources and strength of the vast organizations which the National Red Cross societies had developed during the war should be preserved and utilized in time of peace for carrying on the Red Cross movement, a new international Red Cross organization was established while the peace negotiations were in progress in Paris . . . [in 1919 as an outgrowth of the medical conference at Cannes.] The name of this new organization is the League of Red Cross Societies, and its articles of association were adopted on May 5, 1919. . . . Its objects are stated to be: (1) To encourage and promote in every country in the world the establishment and development of a duly authorized voluntary national Red Cross organization, having as purposes the improvement of health, the prevention of disease, and the mitigation of suffering throughout the world, and to secure the coöperation of such organizations for these purposes. (2) To promote the welfare of mankind by furnishing a medium for bringing within the reach of all the peoples the benefits to be derived from present known facts and new contributions to science and medical knowledge and their application. (3) To furnish a medium for co-ordinating relief work in case of great or international calamities. The original members of the League are the American, British, French, Italian and Japanese National Red Cross Societies, which are described in the articles of association as the founder members. Any other Red Cross society which pursues the objects of the League and is authorized in conformity with the principles of the International Committee of the Red Cross at Geneva and is duly authorized by the government of the country in which it is situated, is eligible for admission to the League. The membership of the League already [January, 1920] comprises the National Red Cross Societies of Argentina, Australia, Belgium, Brazil, Canada, China, Cuba, Czecho-Slovakia, Denmark, France, Great Britain, Greece, Holland, India, Italy, Japan, New Zealand, Norway, Peru, Poland, Portugal, Roumania, Serbia, South Africa, Spain, Sweden, Switzerland, the United States of America, Uruguay and Venezuela. Each member of the League reserves to itself entire freedom of action at all times with reference to its own policies and activities, and any member of the League is at liberty to withdraw from the League at any time by giving written notice. The control of the affairs of the League is vested in a General Council and a

Board of Governors. The General Council of the League consists of representatives of all the National Red Cross organizations which are members of the League. The Board of Governors consists of not more than fifteen members, each of whom is appointed by a National Red Cross organization, and two *ex-officio* members, who are respectively the Director General and Secretary General of the League. The American, British, French, Italian and Japanese National Red Cross organizations as founder members of the League are each entitled permanently to appoint one member of the Board. . . . In order to give this new organization an international status and sanction, the Peace Conference at Paris, at the suggestion of the organizers of the League of Red Cross Societies, inserted in the Covenant of the League of Nations the following provision which appears as Article XXV thereof: The Members of this League agree to encourage and promote the establishment and co-operation of duly authorized voluntary national Red Cross organizations having as purposes the improvement of health, the prevention of disease and the mitigation of suffering throughout the world. The first meeting of the General Council of the League of Red Cross Societies was held at Geneva in March [1920]."—C. P. Anderson, *International Red Cross organization* (*American Journal of International Law*, Jan., 1920, pp. 212-214).—"Twenty-seven national organizations were represented at the meeting of the League of Red Cross Societies at Geneva in March [1920]: . . . the United States, France, Great Britain, Italy, Japan, Belgium, China, Norway, Portugal, Brazil, Peru, Australia, Canada, Argentina, South Africa, Greece, Sweden, New Zealand, Denmark, Roumania, Venezuela, Cuba, India, Holland, Servia, Spain, Poland, Switzerland, Czechoslovakia and Uruguay. . . . It will of course be understood that a very large part of the time was given over to the consideration of the . . . [appalling] situation in central Europe, as reported by delegates from those regions. . . . The league's largest operation . . . [was] in Poland, where typhus . . . [was raging] and where the league . . . [was] coördinating the work of the American Red Cross, the British Red Cross, the Quaker units, etc. Provided that through the League of Nations the governments . . . [could] supply transportation, coal, food and clothing, the League of Red Cross Societies at Geneva pledged itself to undertake as its responsibilities hospitalization, medical and surgical supplies, doctors and nurses."—H. F. Draper, *Red Cross at Geneva* (*Survey*, Apr. 24, 1920, p. 140).

1919-1923.—Increase in number of Red Cross societies.—Their relative strength.—Repatriation of war prisoners.—International conference at Geneva.—When the World War broke out in 1914, the Geneva Convention had been in effect for fifty years. Five countries adhered to the original convention, while thirty-seven had adopted the revised version of 1906. By the end of 1922, fourteen additional societies had signified their adherence to the Geneva Convention of 1906 or applied for recognition by the International Committee, which can be obtained only by unanimous consent of all Red Cross societies. On August 15, 1910, the International Committee published an analysis of the answers made by eleven societies to its questionnaire of April 8, 1910, directed to all Red Cross societies. The United States reported a membership of twenty-six millions, or 262 out of every 1,000 of population. The Japanese Red

Cross came next with 1,500,000 or nineteen members per thousand inhabitants. Switzerland with 11.2 per cent, Sweden with 10.9 per cent, Italy with 8.2 per cent, Denmark with 8.1 per cent were of more nearly equal strength. France, Norway, Spain, the Netherlands, and Portugal reported percentages of 6.4, 3.8, 3.1, 2.7, and .9, respectively. In 1921 the German Red Cross societies and the women's associations of the Red Cross were united under the name of the German Red Cross. The Red Cross of Soviet Russia was recognized by the International Committee in the same year.—Based on *Revue internationale de la Croix-rouge*, v. 50, pp. 470, 1080.—The three Red Cross societies of France furnished 362 million francs during the World War. In Germany, Red Cross expenditures for the war period amounted to 726 million marks. The Red Cross of Italy contributed 63,500,000 lire. At the conclusion of the armistice the international committee of the Red Cross societies undertook the repatriation of prisoners of war, principally in Russia and Germany. By March 31, 1922, a total of 421,000 prisoners had been restored to their respective countries. On August 25, 1923, the League of Red Cross Societies of the World met at Paris and three days later the eleventh international conference of Red Cross societies opened at Geneva.

American National Red Cross: Various incorporations.—Peace and war work.—"The American National Red Cross has had a number of incorporations, first in the District of Columbia in 1881, [when it was founded by Clara Barton] under the name of the American Association of the Red Cross [see BARTON, CLARA]; again in 1893 in the District of Columbia, under the name of the American National Red Cross, and in 1900 it was given a national incorporation by Congress. Its last incorporation was received from Congress January 5, 1905, in order to embody certain important changes in its organization and methods of administration. The last incorporation was the first one to protect and restrict the use of the Red Cross insignia, although the United States signified its adherence to the provisions of the Geneva Convention in 1882. . . . The American National Red Cross is intended to aid in the prevention and alleviation of human suffering in times of peace as well as war. Its motto is 'Neutrality and Humanity.' [From] . . . its organization in 1905 [until the entrance of the United States into the World War] it . . . received and disbursed over \$10,000,000 in cash and donated relief supplies to the value of over \$5,000,000. It . . . conducted over eighty Relief Operations in various parts of the world such as the Japanese Famine of 1906; the San Francisco, the Vesuvius, the Valparaiso, the Kingston earthquakes of 1906-07; the Chinese famines of 1907-10; Italian Earthquake, Messina, 1908; Cherry Mine Disaster, 1909; forest fires in 1910; forest fires, plagues, mine disasters, 1911; Titanic Wreck and Mississippi Flood, 1912; Ohio and Interior Storm and Flood Relief; Grecian-Balkan War; Serbian Balkan-Turkish Balkan Relief, 1913; Floods, Mexican Insurrection, Volcano and other relief, 1914; Serbian Anti-Typhus Campaign and Eastland Disaster, and European War Relief, 1915-16. . . . [During these years of 1915-1916 it sent about four hundred surgeons, trained nurses, and sanitarians to various parts of Europe. Shipments of supplies exceeding 5,000,000 pounds . . . [were] made to Europe's war zones."—H. S. Kerrick, *Military and naval America*, pp. 338-341.—"In August, 1914, when the World War broke

over Europe, the American Red Cross, true to its watchword, offered its trained personnel and hospital supplies to every belligerent country; acceptance was unanimous. On September 13, 1914, the relief ship *Red Cross* carried surgeons, supplies and 120 nurses for England, Russia, France, Germany, Austria, Belgium, Serbia, and Bulgaria. . . . When . . . in the spring of 1915, typhus broke out in Serbia, . . . only after a bitter battle was the scourge conquered. The tale of suffering that the pioneers sent back to America in 1914-1915 . . . was unbelievably strange. . . . American nurses won a place of honor on the medical rôles of all Europe. Their experience was to prove valuable in later days. The units were recalled in October, 1915; after the promised year of service, but many members remained as volunteers. When America went into the war, Red Cross nurses were still serving in all of the Allied countries. Thus, the stirring and troubled days of April, 1917, found the Red Cross nurses mobilized for immediate action. Eight thousand and fifteen names stood on the Red Cross rolls. . . . When America recognized the existence of a state of war with Germany, twenty-five Base Hospital Units [see BASE HOSPITALS] were well under way. . . . Six of the waiting Base Hospital Units were assigned to duty with the British Expeditionary Force. . . . It was over the hospital unit in Rouen that the Stars and Stripes first floated as the flag of an ally on the soil of France."—H. P. Davison, *American Red Cross in the Great War*, pp. 80-84.

American National Red Cross: 1917-1919.—In the World War.—Activities abroad and at home.—"On May 12, 1917, President Wilson appointed Mr. H. P. Davison, Chairman of a War Council to direct the war relief activities of the American Red Cross. In June, 1917, the War Council boldly asked the American people for One Hundred Million Dollars as a war fund, an appeal unprecedented in the history of relief enterprises. . . . The result showed that the War Council had not miscalculated the liberality of the American people, for the fund was oversubscribed, \$114,023,640.23 collected. . . . It was on June 2, 1917, that the first American Red Cross Commission sailed for France, a band of eighteen under the leadership of Major M. P. Murphy, with general instructions to prepare for service to the American troops when they should arrive and to do everything possible for the immediate and future relief of the sorely pressed armies and civilian population of our Allies. . . . The first detachment of foreign workers . . . in time expanded to a grand total of 6,374 workers. . . . Other commissions were furnished to Russia, Italy, Serbia, Roumania, Great Britain, Belgium (always closely associated with the Commission to France, but ultimately founded as an independent commission), Palestine, Switzerland, Greece, Siberia, Archangel, Russian and Allied Prisoners in Germany, western Russia and Baltic Provinces and later a commission to Poland, besides special provisions for other countries such as Armenia, to which no commission was sent but which the Red Cross made heavy contributions of money. Through these various Commissions there . . . [was] expended in relief work abroad . . . [including that rendered to the American army and navy] a total of \$157,775,016.81, . . . [The total personnel of the commissions was] 9,544. . . . Canteens of various types, hospitals for various purposes, hospital supplies, surgical dressings service, diet kitchens, ambulance corps, convalescent homes, relief of maimed

soldiers, prisoners' relief, refugee relief, assistance to repatriates, tuberculosis commissions, service to children, general medical and nursing service, re-education of mutilated—these were a few of the outstanding items [of relief]. The Red Cross department of Home Service was created to care for the families of American soldiers. Care of refugees and repatriés abroad was a natural corollary to care for the soldier . . . of [the] Allies. Nor was that all. . . . The Red Cross Medical and Nursing Service expanded from army activities to civilian activities in every country of . . . [the] Allies, and doctors and nurses . . . in many places, assumed the added duty of instructing native doctors and nurses in Red Cross methods. . . . Contrary to expectations, there was more rather than less need for the American Red Cross in Europe in the first three months that followed the Armistice. . . . It was not mere organization pride which compelled the American Red Cross to prolong its extensive foreign operations, but the pressing and practical necessity of providing ways and means, funds and personnel, to complete a work which simply could not be abandoned. As rapidly as possible commissions . . . [were] closed, their continuing activities transferred to national governmental authorities or to American Red Cross Chapters consisting of American residents. The Belgian, Italian, Greek, Palestine, British and Swiss [and French] Commissions . . . [were quickly] closed, the French reduced to the lowest working basis, but work in the Balkans, Poland, some of the Baltic countries and Siberia [continued for some time]. . . . By an amendment to the Army Bill, Congress . . . [authorized] the Secretary of War to transfer to the American Red Cross such medical and surgical supplies and dietary food stuffs [then] in Europe as [should] not be needed by the army abroad or at home, 'to be used by the American Red Cross to relieve and supply the pressing needs of the countries involved in the late war.'"—American Red Cross, *American Red Cross, past, present and future*, (pamphlet), Nov., 1919.

American National Red Cross: 1919-1920.—Post-war relief work.—"During the fiscal year 1919-1920, the American Red Cross spent fifty million dollars in closing up and consolidating its relief work in Europe, so far as that was possible. Yet it continued its overseas activities in Poland, Serbia, Vienna, Constantinople, and several other countries or cities. As an example of the relief work it may be stated that on closing the Red Cross relief work in France and Belgium [in which country more than four million dollars had been expended in relief work between July 1, 1917 and June 30, 1919], supplies were furnished to nearly four thousand villages and over three million people were benefited by gifts or sales of material."—*Red Cross carries on* (*Outlook*, Nov. 3, 1920, p. 402).

American National Red Cross: 1920-1921.—Reorganized domestic policy.—"When the war ended there were two plainly marked phases to the domestic program of the American Red Cross: First the obligation to serve without stint the men who had been with the colors and second, the opportunity to direct popular interest and to organize local resources for the betterment of local conditions of life, particularly those which affect health. . . . During the war the Red Cross had only national aims. Everyone realized that to achieve great national purposes the individual communities must follow uniform methods and must accept highly centralized national control. . . . And so far as national obligations still exist

Red Cross chapters are still working in the same spirit. On December 1, 1920, of 3,244 chapters reported to national headquarters, 2,540 were still active in war service. . . . On the second phase of the program the situation is radically different. Instead of a great band numbering millions, working toward a common aim, the active Red Cross people . . . [dissolved] into hundreds of little groups, more or less strong, turning their attention to prosaic local conditions and familiar problems, attacking matters hitherto taken for granted and dependent upon local interest and local financial resources to support a local service. The national society very early after the war laid down several policies of which time has proved the wisdom. The first of these was that it should remain entirely optional with the local community and the chapter to decide whether or not a local service would be undertaken. If the community already had developed some of the forms of service appropriate to the Red Cross, the chapter must arrange its program in a way that would not jeopardize such community resources as were already functioning. . . . Among all the possible forms of service which might have been encouraged, the national and division offices . . . gradually picked out the following as those in which the accumulated skill and training of the chapter people would stand them in good stead: 1. Formal instruction to lay people in first aid, in home hygiene and care of the sick and in food selection; 2. Public health nursing; 3. Home service for civilian families; 4. The organization of community effort in support of public health activities; 5. The organization of activities for children who are members of the Red Cross. . . . As a result of . . . [a] policy of insinuation and gentle encouragement, the chapters . . . to a surprising degree turned their attention to local problems. On December 1, 1920, 937 chapters had established a public health nursing service, while over 500 others had made application for the assignment of public health nurses. . . . 1,223 chapters were holding classes in home hygiene and care of the sick, 522 in regular first aid, 186 in life saving or water first aid, and 125 in food selection. . . . Home service . . . [had] been extended to civilian families by 689 chapters; Junior Red Cross auxiliaries . . . were organized and operating in more than half of all the chapters; health centers . . . [were being] operated by 185 chapters and 588 chapters . . . [were carrying] on public health projects aside from nursing or health centers. These latter are largely clinics. . . . If there is anything significant about what the Red Cross has done at home it lies in the fact of sheer bulk and in that it has opened up vast stretches of territory hitherto unserved, and has brought considerable masses of population into touch with these new forms of effort to make social institutions function more effectively and to reduce some of the needless hardship and waste of life and happiness. . . . The first readjustment in organization consisted in having what has been termed the consolidated field staff, which for the United States includes about one hundred and fifty people. . . . On January 20 [1921], the central committee of the American Red Cross, after consideration of a report made by a special committee headed by W. Frank Persons, authorized the completion of the centralization process so as to change the department and bureau heads in national and division offices from the semi-operating to the purely advisory relationship. Responsibility for general supervision of all activities continues to rest upon the chairman of the central committee. . . . The policies outlined for

the immediate future . . . [included]: The grouping in one department of the several forms of service for ex-soldiers and sailors and their families and for the men . . . in the army and navy and in the government hospitals and training centers; the operation of the entire organization with . . . [a view to reducing it] to the smallest size consistent with the efficient discharge of the obligations assumed; the financing of activities needed to finish the war work out of reserved war funds and the financing of the peace program from current income; the expenditure of the current income of the national organization in such a way as to secure a maximum of direct service to chapters, and, while there . . . [was] a shortage of trained personnel, particularly of field workers, the concentration of attention on assistance to chapters which . . . [had] already started on their peace program rather than on those which . . . [had] not as yet assumed such obligations."—N. R. Deardorff, *American Red Cross at home* (Survey, Feb. 12, 1921, pp. 691-693).

American National Red Cross: 1922.—Foreign relief work.—Foreign nursing service.—Domestic health activities.—“During the last twelve months [written August 1923], the activities of the American Red Cross in insular and foreign territory extended to almost every corner of the world. . . . Our most extensive foreign activity during the year was that by which the Red Cross met the emergency following the defeat of the Greek forces in Turkey and the burning of the city of Smyrna. . . . The American Red Cross in its Greek relief operations, extending over a period of nine months, spent \$2,610,000 and saved from starvation and epidemic disease more than 500,000 people. Fleeing from their country during the revolutionary period, a vast number of refugees from Russia flocked into the neighboring countries, where hundreds of thousands of them found themselves without resources or the means of self-support. . . . From the East and the West, the distress of these refugees has called to the sympathy of all nations. During the past year, to the American Red Cross have come many urgent appeals in their behalf—from Constantinople, Serbia, Bulgaria, Greece, Germany, Austria, Poland, Latvia, Vladivostok, Manchuria, Shanghai, and Manila. . . . In July, 1922, an arrangement was made by the terms of which the League of Nations, the American Relief Administration, and the American Red Cross undertook to finish the task of evacuation of Russian refugees from Constantinople. The League of Nations agreed to provide the sum of 30,000 pounds sterling, the American Relief Administration \$100,000, and the American Red Cross \$40,000. Owing to the failure of the League of Nations to raise the amount agreed upon, the American Red Cross made a further subscription equal to 15,000 pounds sterling. This new project moved slowly subject to many unforeseen delays. . . . In the Spring of 1923, a final vigorous effort was made to put an end to the task. An additional contribution of \$17,000 was given by the League, and \$35,000 additional was given by the Red Cross. By June 30, the long task was substantially completed. With the conquest of eastern Siberia by the Soviet government in 1922, another wave of refugees fled into China and Korea. Those in Korea were given care by the Japanese Red Cross Society. In behalf of those in China, strong appeals were received by the American Red Cross from several sources, and after proper investigation, the China Central Committee of the American Red Cross was called upon to spend an appropriation of \$25,000. . . . In the autumn of 1922, a party of refugees numbering

perhaps 1,700 persons, . . . and under command of Admiral Stark of the old Russian Navy, fled from Vladivostok by sea. . . . [After having been refused entrance at several Chinese and Japanese ports they landed at Manila, where \$10,000 was expended in providing relief for the surviving 800 refugees. They were transferred to San Francisco about July 1, 1923, where] self-supporting employment was quickly found for the entire group. Other important phases of the foreign operations of the American Red Cross include: large contributions for hospital and medical supplies in coöperation with the work of famine relief carried on in Russia by the American Relief Administration. This work was substantially complete by June 30, 1923. In November, 1922, a severe earthquake caused wide-spread destruction in the northern portion of Chile. The American Red Cross promptly answered the call by a contribution of \$10,000 to be expended in behalf of the sufferers of the Chilean Red Cross. Toward the end of 1922, a contribution of \$25,000 was made to the German Red Cross Society for expenditure in behalf of sick and undernourished children in the German Empire. . . . [During 1922 relief was extended in China to the Swatow typhoon sufferers, to the refugees and wounded of the recent civil wars and to Russian refugees in Manchuria.] One of the most severe earthquakes of recent years visited Persia in May, 1923, but received little attention in the press. The American Red Cross, however, upon learning of the earthquake, forwarded \$5,000 to be spent by the American Minister to Persia. This is just a glimpse of the story, but it indicates how the activities of the American Red Cross, on behalf of humanity, extended to almost every corner of the world."—E. P. Bicknell, *Foreign relief work done during year* (*Red Cross Courier*, Aug. 25, 1923, pp. 9, 12).—In October 1922 a health advisory committee composed of ten of the leading medical and public health authorities of the country was appointed to provide a comprehensive peace-time program. The report of the committee was unanimously approved on February 24, 1923. Existing health activities were endorsed and a stronger program of health education adopted. William C. Hunt, Manager of the Pacific division of the Red Cross, stated in an address before the International Health Education Conference in San Francisco that "while all health work of the Red Cross is educational, not all of it is confined to individuals of school age. Some consideration is given to the pre-school and pre-natal child, while considerable effort is made to train adults into proper health habits and attitude. The American Red Cross has contributed to health education by conducting classes in Home Hygiene and Care of the Sick for groups of adults and school children. . . . The nutrition program of the Red Cross includes instruction concerning pre-natal, pre-school, adult, and abnormal dietary requirements. This activity is conducted by qualified nutrition workers. . . . The number of children receiving regular Red Cross nutritional instruction in the schools was 110,000, while the pre-school children numbered 4,270, and regular instruction was given to 3,006 teachers. . . . In First Aid the Red Cross prepares textbooks of instruction, standard first aid kits, boxes of appliances, etc. . . . Approximately 14,000 students received instruction in Red Cross First Aid last year. . . . There are at present 24,000 Junior auxiliaries with 123,000 teachers conducting Junior activities, and a Junior Red Cross membership of approximately 5,000,000 children. . . . The American Red Cross has built up an enrollment of approximately 40,000 highly qualified nurses. . . .

The Red Cross Public Health Nursing Service in many rural or remote districts is supplying the first conception of the positive health ideal, and is supplying the leadership for an awakened health interest. . . . Over 1,000 Red Cross Public Health nurses are in the field to-day."—W. C. Hunt, *How Red Cross raises health standard of nation* (*Red Cross Courier*, Aug. 4, 1923).—Between July 1, 1917 and July 1, 1923 more than 70 million dollars was spent by the American Red Cross, nationally and through the chapters, in providing service to the men who wore the American uniform in the World War. The Red Cross rendered relief in twenty-three disasters during 1922. Between June 1, 1881 and March 31, 1923 a total of \$20,573,298 was expended in disaster relief.

British organizations: National Aid Society (1870) and the St. John Ambulance Association (1878).—Central British Red Cross Committee formed (1898).—Amalgamation of societies for the Great War (1914).—Work of the British dominions.—"Unlike the continental nations, Great Britain organized no Red Cross after the Treaty of Geneva was adopted, but when the horrors of the battles of 1870 startled the English public, 'the National Red Cross Society for Aid to the Sick and Wounded in War' was created, with Queen Victoria as patroness. As no organization had existed, great difficulty was experienced in dealing with the large sums of money and the vast amount of stores contributed. . . . It was only after the report of the International Conference of Vienna in 1897 pointed out the dangers caused by the absence of a central Red Cross organization in touch with military requirements that a Central Red Cross Committee was created to coördinate this work of the Society for the Aid of the Sick and Wounded in War, the St. John's Ambulance Association and the Army Nursing Reserve. . . . At the time of the Ninth International Red Cross Conference, held at Washington in 1912, Great Britain was the only important country whose society sent no delegates. The British government and the St. John's Ambulance Association were both well represented, the later by Sir John Furley, a veteran in war relief work who, though nearly 80 years of age, . . . in the [World War] again aided the Princess Christian to provide and equip an hospital train. Canada for some time [had had] a well organized Red Cross Society, but in the other British possessions the war relief . . . [was] largely carried on by the branches of the St. John's Ambulance Association. The native princes of India . . . [showed] a remarkable loyalty to Great Britain in the . . . [World War]. . . . The Begum, besides the hospital ship, forwarded through the St. John's Ambulance Association thousands of Korans for the Moslem soldiers fighting with the British army. [The dominions of] Canada, Australia, New Zealand, and all the smaller British colonies . . . [did] their share in the relief work. The St. John's Ambulance Association, under the Knights of St. John of Jerusalem, takes a very important part in the Red Cross work of Great Britain. . . . During the Boer War the British Red Cross, after some delay spent in organizing its departments, did good service especially with its hospital ships and trains."—M. T. Boardman, *Under the Red Cross flag at home and abroad*, pp. 228-230.—We get an idea of British Red Cross activities during the Great War from "an article in *The Red Cross Magazine* (August, Garden City, N. Y.), contributed by Ian Malcolm, who was British Red-Cross Sub-Commis-

sioner in France during 1914-1915, and who tells us of the seven campaigns in which the British Red Cross . . . [had been] engaged in France, Servia, Egypt, Gallipoli, Saloniki, Mesopotamia and East Africa. Yet it would be a mistake to suppose that these . . . [were] the only activities of the Red Cross during the war, for there . . . [were] countless Red-Cross hospitals, homes, institutions, and war-centers scattered about from east to west, from north to south, all working at full strength. And, furthermore, there . . . [was] the prisoners-of-war department supplying something like 150,000 parcels of food every fortnight to British prisoners in Germany, and the prisoners interned in Switzerland. Of interesting record is the statement of this writer that for twenty years . . . Germany and Russia [had] kept their Red-Cross organization closely linked up with the Army and on almost a war-footing even in times of peace. This was never done in England, we are told, but—when the war did break out in August, 1914, our small and quite unknown Red-Cross organization pulled itself together, amalgamated with the Order of St. John of Jerusalem, and offered the War Office to work unitedly, body and soul, day and night, for the relief of suffering on the fields of battle and at home. . . . From all quarters of the British Empire came help: the poorest and the richest at home, the raja and the ryot in India, the South-African millionaire, the Canadian rancher, tea-planters from Ceylon, sheep-farmers from Australia and New Zealand—all competed to be the first to offer themselves and of their best. No wonder that, at first, our modest organization was overwhelmed; the marvel is that it did not utterly break down. Instead of which it has triumphed gloriously.' Then a Canadian contributor to *The Red Cross Magazine* tells us that altho the Canadian Red-Cross Society was in existence at the outbreak of the war, it was not at all in an active existence, but branches soon were formed all through the Dominion until . . . [there was] hardly a village from Halifax to Vancouver that . . . [was] not doing its share."—*Literary Digest*, July 28, 1917, pp. 35-36.

British organizations: 1914-1920.—War work. —Relief work in Great Britain was administered through two joint committees of the British Red Cross society and the Order of St. John of Jerusalem in England. These committees were known as the joint war committee and the joint war finance committee. "Immediately on the outbreak of War, the British Red Cross Society started operations, and a Fund was opened by *The Times* for the receipt of donations to carry on the work. Subsequently, however, *The Times* laid it down that the first £200,000 of this Fund was to be retained by the British Red Cross Society, and that all further receipts over and above the £200,000 were to be divided between the British Red Cross Society and the Order of St. John of Jerusalem. . . . A formal agreement was entered into by the two Corporations in October, 1914, but experience quickly showed that this arrangement for a division of the Fund could not be satisfactorily carried out, and a fresh Agreement was substituted whereby the two Corporations agreed to pool the funds instead of dividing them, and to apply all monies entrusted to them to war work which they should undertake in common. . . . [The total amount of the Times Fund was £16,510,023 and the total sum subscribed from all sources reached £21,885,035 for the period from October 20, 1914 to June 30, 1920.] Any general estimate of the British Empire's Red Cross activities would, of course, include the operations of other Societies within

the British Dominions, such as the Canadian, Australian, and South African Branches of the British Red Cross Society. These great Societies, though nominally Branches of the British Red Cross Society, are for all practical purposes separate organizations with separate funds. By munificent gifts of money and stores, and in many other ways, they supported the Joint War Committee."—*Reports by the Joint War Committee and the Joint War Finance Committee of the British Red Cross Society and the Order of St. John of Jerusalem in England, 1914-1919*, pp. 49, 2-3.—Of the total subscribed £17,340,428 was expended on war work and £2,717,927 on after-care and other post-war schemes. In addition the Scottish branch of the British Red Cross collected more than £2,000,000 and administered these funds separately. The three provinces of Leinster, Munster and Connaught in Ireland contributed more than half a million pounds and Ulster alone subscribed £143,000. Important departments of Red Cross activity were those which maintained and equipped hospitals at home and abroad, provided prisoners in enemy countries with food and clothing, conducted inquiries concerning the wounded and missing, furnished educational and industrial training for prisoners interned in Holland and Switzerland, and provided after-care for disabled men. Of the work done in the various belligerent countries the most extensive was accomplished in France and Belgium. "The Canadian Red Cross Society had been founded in 1896 as a branch of the great international Society first organized at Geneva in 1864. During the war it expended more than \$24,000,000, besides sending more than \$6,000,000 to the British Red Cross. The money was spent in the provision of hospitals, recreation rooms, ambulances, motor lorries, in sending food to Canadian prisoners and in a thousand errands of mercy. Not only were Canadians assisted, but large supplies were sent to all . . . [the] Allies. Since the war it has carried on its activities for both wounded and disabled soldiers, and in coöperation with public authorities in the improvement of the health of the people. . . . The provincial Government of Ontario alone spent on direct war work up to the time of the Armistice about \$8,500,000, and in the following year over \$1,000,000 more. This included gifts of flour to Great Britain, of machine-guns to the Canadian forces, the erection and equipment of a great Military Hospital at Orpington in Kent, the maintenance at home of a Soldiers' Aid Commission."—W. L. Grant, *Ontario high school history of Canada*, pp. 382-383.

Japan: Origin and growth.—**Extensive membership.**—"The Red Cross Society of Japan is by no means merely a copy of the Red Cross societies of Europe, as its name would seem to indicate; for the idea of assisting the wounded soldiers and allaying the suffering caused by war arose spontaneously in Japan. . . . In 1867, two years before the Restoration, when Japan was considered a savage country by the West, and when she possessed neither railways nor telegraphs, machinery, etc., Count Sano, an enthusiastic humanitarian, was sent by the Shogun to the Exhibition in Paris, where he had the opportunity of studying the Red Cross societies of various countries. Again, in 1873, when this gentleman was ambassador in Vienna, he carefully observed the Red Cross Society, and especially its activity during the Franco-German War of 1870. When the Civil War of 1877 broke out in Japan, Count Sano was back in his native country, and he conceived the idea of forming a society after the model of the European Red Cross societies. The nobility

of Japan received his ideas most favourably, and a society was founded which was called Hakuaisha (Benevolent Society). . . . The Mikado countenanced the objects of the Society and assisted it in every way. From 1887 onward he gave it a yearly contribution of 5,000 yen, to which in 1888 a gift of 100,000 yen was added. After the Chino-Japanese War, the Mikado's yearly contribution was increased to 10,000 yen, in recognition of the progress which the Society had made of the great assistance which it had given during that campaign. . . . [This was in addition to a yearly contribution of 5,000 yen for patients and generous gifts to the society from time to time.] The motto of the Japanese Red Cross Society is 'Pay your debt to your country by helping its soldiers'; and this motto . . . quickly made the Society immensely popular throughout the country. . . . The war with China of 1894-1895 demonstrated the excellence of the Japanese Red Cross Society, and proved at the same time its best advertisement, for at the end of 1895 there were more than 100,000 members. Since the Society had proved its immense practical utility, the number of its members rose by leaps and bounds, and at the end of 1898 there were 570,000 members, and the yearly receipts had reached 1,582,622 yen.—O. Eitzhacher, *Red Cross Society of Japan* (*Contemporary Review*, Sept., 1904).—In the Russo-Japanese war only two per cent of the army died from disease as against 1.51 per cent who died from wounds. In 1917 we read that, "one person in every twenty-eight in Japan is a member of the Red Cross. This makes a total membership of 1,890,000; and the resources of the society exceed \$15,000,000. By many it is said that the Eastern Kingdom has the best Red Cross Society in the world. But the spirit which actuates this organization goes with the Japanese people when they travel, and we find that every fifth Japanese in San Francisco and Los Angeles has joined the Red Cross of . . . (the United States).—*Japan's background for the Red Cross* (*Literary Digest*, July 28, 1917, p. 36).

RED KNIGHTS, Catholic social organization, forerunner of the Knights of Columbus. See **KNIGHTS OF COLUMBUS**: Circumstances of origin.

RED LAND, district between the Rhine and the Weser, Germany, in which the Vehm courts were held. See **VEHMGERICHTS**.

RED RIVER EXPEDITION. See U.S.A.: 1864 (March-May: Louisiana).

RED ROBE, Counsellors of the, members of the Council of Ten in Venice. See **VENICE**: 1032-1319.

RED SEA, an arm of the Indian ocean, separating the Arabian peninsula from northeast Africa. It extends for a distance of about 1,200 miles from the Gulf of Aden, through the strait of Bab-el-Mandeb, in a northerly direction to the Sinai peninsula, where it branches westward into the Gulf of Suez and eastward in the Gulf of Akaba. Its greatest breadth is about 250 miles in the southern portion, narrowing to 130 miles in the north. The opening of the Suez canal in 1869 converted the Red sea from a comparatively unfrequented sheet of water into one of the world's most important ocean highways, as nearly all sea-borne traffic between Europe and the Far East pass through it.—See also **ERYTHREAN SEA**; **JEWS**: Exodus.

REDEMPTION, Right of. See **EQUITY LAW**: 1612.

REDEMPTIONERS.—"Redemptioners, or term slaves, as they were sometimes called, constituted in the early part of the 18th century a peculiar feature of colonial society. They were recruited from among all manner of people in the old world, and through this channel Europe emptied upon America, not only the virtuous poor and oppressed of her population, but the vagrants, felons, and the dregs of her communities. . . . There were two kinds of redemptioners: 'indentured servants,' who had bound themselves to their masters for a term of years previous to their leaving the old country; and 'free-willers,' who, being without money and desirous of emigrating, agreed with the captains of ships to allow themselves and their families to be sold on arrival, for the captains, advantage, and thus repay costs of passage and other expenses."—A. D. Mellick, Jr., *Story of an old farm*, ch. 11.—See also **INDENTURED SERVANTS**; U.S.A.: 1663-1745.

REDEMPTORISTS.—The members of the congregation of the Most Holy Redeemer, founded by St. Alphonsus Maria de Liguori, in 1732, are commonly known as Redemptorists. The congregation is especially devoted to apostolic work among neglected classes of people.—See also **MONASTICISM**: 16th-19th centuries.

RELIEF, International. See **INTERNATIONAL RELIEF**; **BELGIUM**: 1914-1918: National distress.

RELIEF BILL (1829). See **IRELAND**: 1811-1820.

RELIGION: Ethnic and catholic religions.—"By ethnic religions we mean those religions, each of which has always been confined within the boundaries of a particular race or family of mankind, and has never made proselytes or converts, except accidentally, outside of it. By catholic religions we mean those which have shown the

desire and power of passing over these limits, and becoming the religion of a considerable number of persons belonging to different races. . . . Now we find that each race, beside its special moral qualities, seems also to have special religious qualities, which cause it to tend toward some one kind of religion more than to another kind. These religions are the flower of the race; they come forth from it as its best aroma. Thus we see that Brahmanism is confined to that section or race of the great Aryan family which has occupied India for more than thirty centuries. It belongs to the Hindoos, to the people taking its name from the Indus, by the tributaries of which stream it entered India from the northwest. It has never attempted to extend itself beyond the particular variety of mankind. Perhaps one hundred and fifty millions of men accept it as their faith. It has been held by this race as their religion during a period immense in the history of mankind. Its sacred books are certainly more than three thousand years old. But during all this time it has never communicated itself to any race of men outside of the peninsula of India. It is thus seen to be a strictly ethnic religion, showing neither the tendency nor the desire to become the religion of mankind. The same thing may be said of the religion of Confucius. It belongs to China and the Chinese. It suits their taste and genius. They have had it as their state religion for some twenty-three hundred years, and it rules the opinions of the rulers of opinion among three hundred millions of men. But out of China Confucius is only a name. So too, of the system of Zoroaster. It was for a long period the religion of an Aryan tribe who became the ruling people among mankind. The Persians extended themselves through Western Asia, and conquered many nations, but they never communicated their religion. It was strictly a national or ethnic religion, belonging only to the Iranians and their descendants, the Parsees. In like manner it may be said that the religion of Egypt, of Greece, of Scandinavia, of the Jews, of Islam, and of Buddhism are ethnic religions. Those of Egypt and Scandinavia are strictly so. It is said, to be sure, that the Greeks borrowed the names of their gods from Egypt, but the gods themselves were entirely different ones. It is also true that some of the gods of the Romans were borrowed from the Greeks, but their life was left behind. They merely repeated by rote the Greek mythology, having no power to invent one for themselves. But the Greek religion they never received. For instead of its fair humanities, the Roman gods were only servants of the state,—a higher kind of consuls, tribunes, and lictors. The real Olympus of Rome was the Senate Chamber on the Capitoline Hill. Judaism also was in reality an ethnic religion, though it aimed at catholicity and expected it, and made proselytes. But it could not tolerate unessentials, and so failed of becoming catholic. The Jewish religion, until it had Christianity to help it, was never able to do more than make proselytes here and there. Christianity, while preaching the doctrines of Jesus and the New Testament, has been able to carry also the weight of the Old Testament, and to give a certain catholicity to Judaism. The religion of Mohammed has been catholic, in that it has become the religion of very different races,—the Arabs, Turks, and Persians, belonging to the three great varieties of the human family. But then Mohammedanism has never sought to make *converts*, but only *subjects*; it has not asked for belief, but merely for submission. . . . But Christianity teaches the

unity of God not merely as a supremacy of power and will, but as a supremacy of love and wisdom; it teaches God as Father, and not merely as King, so it seeks not merely to make proselytes and subjects, but to make converts. Hence Christianity, beginning as a Semitic religion, among the Jews, went across the Greek Archipelago and converted the Hellenic and the Latin races; afterward the Goths, Lombards, Franks, Vandals; later still, the Saxons, Danes, and Normans. Meantime, its Nestorian missionaries, pushing east, made converts in Armenia, Persia, India, and China. In later days it has converted negroes, Indians, and the people of the Pacific Islands. Something, indeed, stopped its progress after its first triumphant successes during seven or eight centuries. At the tenth century it reached its term. Modern missions, whether those of Jesuits or Protestants, have not converted whole nations and races, but only individuals here and there. The reason for this check, probably is, that Christians have repeated the mistakes of the Jews and Mohammedans. They have sought to make proselytes to an outward system of worship and ritual, or to make subjects to a *dogma*; but not to make converts to an idea and a life."—J. F. Clarke, *Ten great religions*, pp. 15-19.—See also BRAHMANISM; BUDDHISM; CHRISTIANITY; CONFUCIANISM; EGYPT: Religion; JEWS: Religion and the prophets; MOHAMMEDANISM; MYTHOLOGY: Grecian; Scandinavian; ZOROASTRIANS.

Universal elements. — Soul. — Underworld. — Animism. — Transmigration. — Fetishism. — Ceremonies. — Taboo. — Totemism. — Sacrifice. — Magic.—"The soul is among all men intimately connected with religion. All tribes, even the lowest, observe that a human being is made up of two parts, the body of flesh and bones, and an impalpable something that lives within. This impalpable something, or soul, is called by various names, but belief in it is universal. . . . Among savage peoples the soul is thought to have a material form. They cannot otherwise conceive of it. Perhaps a man's shadow, which, in his ignorance of optics, is to the savage inexplicable, contributed originally to this belief. Souls were not, however, always thought of as existing in human form; sometimes they were conceived in animal shapes. . . . The universality of religion is now generally conceded. Man is a worshipping animal; he is 'incurably religious.' Certain Australian tribes, reported on by Spencer and Gillen, appear at first sight to be exceptions to this rule, but a closer study of the facts leads one to believe that religion is not entirely absent. 'Religion is man's attitude toward the universe regarded as a social and ethical force,' and there is no satisfactory historical evidence that since man was man there have been peoples who did not attempt to enter into social relations with the extra-human powers of the universe. Among primitive peoples the essential part of religion is not belief, but practice. The primary aim is to avert the anger of supernatural beings and to secure their aid in the struggle for existence. . . . The universality of man's faith in the survival of the soul after death is attested in part by the universality of the belief in ghosts, and in the uniform practice of placing food in the tombs of the departed. Among all peoples, whether in the two Americas, in Central Africa, in Australia, or among the ancient inhabitants of Egypt or Palestine, not only food and drink, but the utensils that the departed had used in life were buried with him. Among the quantities of delicacies Queen Tai, of Egypt's Eighteenth Dynasty, placed in the tomb of her parents splen-

did easy chairs, a bed, chests of clothing, and even a chariot in which they might ride. Similarly the Indians bury with their brave his bow and arrows for use in the happy hunting-grounds beyond the setting sun. The underworld, while not universally believed in, plays an important part among many peoples. Except where the bodies of the dead are burned, or where, as in Northern Alaska, the earth is continuously frozen, they are buried in the ground. Where some are deposited for a time in trees, as in Australia, they are ultimately buried in the earth. Naturally it was inferred that the soul descended into the earth with the body. In many parts of the world, accordingly, there is supposed to be a great cavern in the heart of the earth in which the dead abide. Such was the Aralu of the Babylonians, the Sheol of the Hebrews, the Hades of the Greeks, and the Hel of the Scandinavians. This underworld was generally thought to be a dark and cheerless place. The dead longed for the free life of the upper air where the sun shone. Among some races, as civilization advanced, this underworld was divided into Elysian fields in which the good passed cheerful and happy lives, and places of punishment in which the wicked received the reward of their deeds. Belief in an underworld is not, however, universal. Peoples living near the sea have sometimes thought of the dead as dwelling beyond the deep; others have thought of them as living in high mountains; still others have thought of them as living in the sun, moon, or stars. Several peoples who have begun by thinking of the dead as in an underworld have, as they advanced, transferred that dwelling to the sky or to a heaven above the sky. Such a change can be traced among the Egyptians.

"As early man was conscious that he himself possessed a spirit or soul, so he attributed a similar spirit to everything about him, not only to animals, in whom the presence of a spirit was manifested in action, but to trees, rocks, springs, plants, weapons, heavenly bodies, etc. This general belief of men is called *animism*. These spirits might be weak or powerful, kind or unkind, helpful or hurtful, but in their midst man was compelled to live. He must, accordingly, come into relationship with them. In course of time the good and more powerful spirits developed into gods. One of the earliest and most persistent beliefs is that souls are reborn or reincarnated as human beings, beasts, plants, or inanimate things. The rise of such a belief is natural. If at the moment of a child's birth a person dies, it is natural to infer that the spirit has passed from one body to the other. Such a belief has been held among savages in America, Africa, Asia, and Oceania, as well as by the Brahmins, Buddhists, Plato, and Swedenborg. Gods are powerful and fully personified spirits with whom clans or tribes are believed to have established friendly relations. It is not always easy to distinguish a god from a spirit or ghost. The spirit or ghost may be regarded as just as powerful in his sphere as Ashur or Jupiter in his, but the sphere of the god is larger and his functions are more varied. In the earliest times the gods appear to have been the spirits of springs or of fertile localities. As man was dependent on their blessings, it was easy to regard them as powerful and beneficent. If the god was the god of a locality, it might be thought to dwell in a tree or a rock. Later the sun, moon, certain stars, the wind, rain, and even the sky were personified as gods, i. e., their spirits were thought to be influential in human life, so that man for his own good should cultivate friendly

relations with them. At times the local spirit of a tribe's dwelling-place became associated with the tribe as its god, and was gradually detached from its original locality. Thus tribal gods arose. As human society is constituted of men and women, so the gods were thought to be male and female. In many parts of the world a power akin to that of man is supposed to reside in certain inanimate things. When such objects are parts of an animal, such as bones, claws, tails, feet, etc., or of vegetables, they are probably thought to retain something of the power of the living thing to which they belonged. Fetish objects in West Africa are believed to be inhabited by spirits. In Australia an object called a *churinga* is regarded as the abode of the soul of an ancestor endowed with marvelous power. Closely related to fetishism is the practice of making images of the gods, although idolatry is a step higher in the process of evolution. An idol is an image or an object consciously made by man to represent his god. . . . Early religious expression consists largely of ceremonies. These are of social and economic significance. They consist of harvest festivals, or, among pastoral peoples, festivals of the weaning time, at which the gladness of the populace finds expression as a tribute to deity. Among uncivilized peoples these feasts are often orgies of a bestial nature. When, as among the Semites, the feast was held in honor of a deity of fertility, sexual license was thought to be pleasing to such deities. But similar license was granted at such times in many other parts of the world. At such feasts wives were often selected and marriages consummated. As religion covered the whole of life, marriage feasts had a certain religious significance. Birth, too, was attended with certain other ceremonies. But most important of all were the ceremonies through which young men, and in parts of the world young women, must pass at the age of puberty. These initiated the young people into the full life of the tribe as adult members; as adults they also came into full relationship with the god of the tribe. . . . Uncivilized men conceive of the supernatural as a kind of divine electricity with which many things in the world are charged. If things so charged are not handled in certain ways, the holiness, or supernatural power, will discharge itself and harm the individual. From this general conception many prohibitions have arisen. These are found among all peoples in early stages of development, though they vary in different tribes. The word 'taboo' is taken from a Polynesian dialect, where the phenomenon was first studied. . . . Taboos control the actions of men, not only in daily life, but during their religious festivals and ceremonies, though the taboos that are in force at such times often differ from those that control daily life. Totemism is the name given to the system of tribal subdivision denoted by totems. Totems are natural objects, usually animals, though they are sometimes plants, assumed as the emblem of a clan or family. The name is derived from the languages of the American Indians, among whom totemism was first studied. The totem is sometimes regarded as the ancestor of the tribe and is often closely associated in one way or another with its deity. Totemism exists in many parts of the world among tribes in a low stage of development, though there is no evidence that it has been universal. A number of the highly civilized nations of antiquity appear, however, to have passed through a totemistic stage of development. [See also CHURCH AND STATE: Totemism.] . . . In all parts of the world men have

offered to the gods gifts of food. They have assumed that the gods needed sustenance as much as they themselves. These gifts have, however, not consisted merely of grain or bloodless offerings, but of animal life as well, and, among many peoples, even of human victims. Only a few of the higher religions have reached a stage of evolution in which animal sacrifice is discarded, although human sacrifice survives only among the lowest savages. . . . The reason why animal sacrifice is a part of all early religion is obscure. It is regarded by some as a gift to the gods of the most costly kind of food; by others, as a meal in which the kinship or social bond between gods and men is renewed by both partaking of the flesh of a totemic victim akin to both; by still others its significance is found in the bursting forth of the victim's blood, the sight of which is supposed to appease the offended god. Whatever the explanation of the practice of animal sacrifice may be, it is clear that all men have, at a certain stage of religious development, believed that through it they entered into renewed communion with their gods. . . . Side by side with early religions one finds magical practices, and there has been much discussion as to whether magic originated before religion or whether it is a degenerate form of religion. In religion men appeal to higher powers to be gracious; they seek to gain the good will of gods by offerings and prayer; in magic they seek to force supernatural powers to do their will. There is in magic no reverence, but compulsion only. . . . The religions of all the civilized nations had their root in the religion of an uncivilized people. As some of the material of a tree comes from the earth through its roots, though more comes from the air through the leaves, so civilized religions, however much they owe to the inspiration of great souls after the rise of civilization, owe something to the inheritance, of the remote, uncivilized past."—G. A. Barton, *Religions of the world*, pp. 2-13.—See also AFRICA: Races of Africa: Prehistoric peoples; MADAGASCAR; MEXICO: Aboriginal peoples; PERU: 1200-1527.

North American Indians.—"The idea of God, often strange and grotesque perhaps, was nevertheless powerfully expressed in the Indian mythologies. Each division of the race possessed its own word to signify 'spirit.' Some of these words meant 'that which is above,' 'the higher one,' 'the invisible,' and these attributes accorded to deity show that the original Indian conception of it was practically the same as those which obtained among the primitive peoples of Europe and Asia. The Idea of God was that of a great prevailing force who resided 'in the sky.' Savage or primitive man observes that all brightness emanates from the firmament above him. His eyes are dazzled by its splendour. Therefore he concludes that it must be the abode of the source of all life, of all spiritual excellence. . . . Before man has discovered the uses of that higher machinery of reason, philosophy, and has learned to marshal his theological ideas by its light, such deities as he worships conform very much to his own ethical standard. They mirror his morality, or lack of it. They are, like himself, savage, cruel, insatiable in their appetites. Very likely, too, the bestial attributes of the totemic gods cling to those deities who have been evolved out of that system. Among savage people ideas of good and evil as we conceive them are non-existent. To them 'good' merely implies everything which is to their advantage, 'evil' that which injures or distresses them."—L. Spence, *Myths of the North American Indians*, pp. 101-102.—See also AMERICA: Theory

of a cultural wave, etc.; MYTHOLOGY: American Indians.

Course of development in highly organized religions.—"The organized religions often follow parallel lines of development. (1) In the primitive stage spirits are innumerable, 'they swarm.' No limits can be placed on the number of objects possessed by them as their home, and countless hordes besides roam homeless in earth and sea and air. But as man's mentality grows, he compares and generalizes and groups. To take one example: whereas each plot of ground once had its corn-spirit whose gift the crop of that field was, comparison gave rise to the idea of an earth-goddess, a Demeter or Ceres or Core, by whose beneficence came all the gifts earth made to man in growing crops. The corn-spirits of a district coalesced and then became a national deity to whom finally all increase of the earth was attributed. The history of Zeus among the Greeks also illustrates this principle. Nearly 200 names are known for this deity, only about one-third of which are poetic or descriptive. Nearly all the rest are referred to local or elemental deities whom he absorbed or displaced, assuming their functions and their cults, the latter of which are in several cases discordant with his normal worship and alien to his nature as a sky-god. The explanation is that as Zeus became the great national deity through the leadership of the tribes whose principal god he was, he took over the being, attributes, offices, shrines, and worship of older gods whose memory lingered solely in the names added to his as expressive of some special phase. So was it everywhere. The number of the gods was ever diminishing. Pantheons replaced the hordes of worshipful spirits, and in these the principal god obscured the lesser who tended to vanish from cult and recognition. Thus in Assyria Asshur became almost the only god aside from Ishtar, and in Israel, where according to the first commandment the gods of the nations were recognized as real existences, by the time of the exile Yahweh had come to be regarded as the only god of all the earth. Sometimes in this process gods were associated in triads or trinities, as in Egypt, Babylonia, and India, in the last case paralleling every phase of the Christian doctrine of the Trinity. Thus the tendency is toward monotheism, a result achieved only in Judaism, Christianity, Mohammedanism, and possibly in Zoroastrianism. (2) Another general tendency is that toward crystallization in ritual and creed. At the rise of a religion observances and conceptions are spontaneous, free, individualistic. But as the community grows exhortation hardens into doctrine, confession into creed, observance into ritual, acceptance of which and conformity to which mark the true believer. Thus orthodoxy and heterodoxy take their rise and become integral parts of religious thinking and terminology. (3) There is also a general tendency toward sectarianism. Against the disposition to define correct modes of teaching, of belief, and of worship arises the individualistic and diversified mentality of mankind, protesting against the limitations placed upon conceptions of God and on ways of serving him. Groups of individuals find themselves agreeing together in disagreeing with the standards erected. The result is that sect arises wherever attempt is made at uniformity. As an example, what is perhaps the most rigid and unyielding religious platform yet made, the teaching of Mohammed, is obliged to accommodate Sunni and Shiah with their almost untellable variety of subdivisions. Judging from the universal tend-

ency of religion to develop one sect, if history forecasts the future, oneness of belief will never be attained. And if the apparent demands of human nature be taken into the reckoning, such a result is not desirable. The Calvinistic mind must be left to its adoration of the mathematical precision of definite and exact foreordination, while the Arminian mind rejoices in the absolute responsibility of the individual for his own salvation or destruction."—G. W. Gilmore, *Comparative religion* (*New Schaff-Herzog encyclopedia of religious knowledge*, v. 3, pp. 201-202).—"We must regard Hellenism as the representative of all objective religions, in so far as they have a common pantheistic basis; while we must regard Hebraism as the general representative of subjective religion, the religion of moral obligation and moral aspiration. And, moreover, we must remember that we have not now the direct collision of these opposites; but that, in modern life, the reconciling principle of Christianity is ever mediating between the two, and reducing their antagonism to the relative opposition of different elements or organs in one life. . . Religions of the Hellenic type dwelt in the world. They were at one with the social life and politics of the nations among whom they prevailed. As religions of the poetic sense, they welcomed the aid of art. They were tolerant of interests and pursuits other than their own, rarely intolerant even of the science and philosophy which destroyed them. They consecrated the bonds of national life and made patriotism one with piety. But, as they mingled together the natural and the spiritual, they were defective in purifying moral influence. They did not awake a clear consciousness of the distinction between the lower and the higher nature of man. . . Hebraism, on the other hand, took its stand on the spirituality of God, as lited in His holiness above all His creatures. As a consequence, it emphasised the contrast between that which *is* and that which *ought to be*, and called forth a desire for purity and holiness, such as was unknown to any other race. Its stern commands awoke in its adherents a consuming zeal for righteousness which refused to make any terms with evil, and saved them as by fire from the polluting compromises of heathenism. On the other hand, it was narrow, unspeculative, often fanatical. In its exclusive regard for divine holiness it tended to intolerance and jealous hatred of almost every civilising influence. The monotonous intensity of its piety was unfavourable to any exercise of the intelligence or of the imagination, which could not be made directly subservient to religious purposes. It allowed only one channel in which the higher life of man might flow. . . How often, in our own day, do we thus see renewed the old quarrel of the saint, the religious man, the moral teacher, against the philosopher, the scientific man, the artist. The former finds the latter too worldly and indifferent, too willing to treat evil with toleration and to make compromises with it, too much inclined to regard the 'one thing needful' as only one of the various interests of mankind, and not as the supreme interest to which everything should be sacrificed. The latter finds the former too narrow and intolerant, too anxious for instant moral gains, too eager to proselytise and convert, too careful for safety, and too careless about truth."—E. Caird, *Evolution of religion*, v. 2, pp. 14-10.

B. C. 2000-200. — Egyptian. — Babylonian-Assyrian.—"The autochthonous development of thought was slow and timid. The syncretism of similar gods was, indeed, old and the early solar

explanations of so many gods prepared the ground for the theory, found after 1600 B. C., that all forces of nature were only manifestations of one great god of the universe, the sun. [See MYTHOLOGY: Egyptian.] Thus the imperfect solar monotheism of the short-lived religious reform of Pharaoh Amenhotep IV (about 1400 B. C.) was, after all, not as novel an undertaking as it seems at first; some pantheistic and almost monotheistic tendencies can be traced some centuries farther back. The masses, however, successfully resisted that reform, clinging to the old local names and cults. It cannot be repeated too strongly that all deviations from their conservatism were isolated and timid steps of a few most advanced scholars. The question remains: Why did this religion effect such a favorable and deep impression upon the Greeks and Romans that it extended over the whole Roman empire, so that in the last centuries of heathenism many hoped to find in the popular cult of Osiris an antidote against the spreading Christian creed? . . . It was this very conservatism and the simple, blind faith of the Egyptian masses which impressed the classical people so very deeply. Greek religion had become a shadowy remembrance and was treated with skepticism and frivolity, while the Egyptians firmly insisted on the bodily presence of the gods in their temples. So the Greeks concluded that such an earnest faith must have some deeper, secret reasons and that the Egyptian gods, notwithstanding all their strange features, possessed more reality than the shadowy gods of Greece. The wonderful civilization, above all, the architecture of the Egyptians and the attractiveness of everything unintelligible added to this impression that the mysterious creed of Egypt deserved special esteem."—W. M. Müller, *Egyptian religion* (J. A. Montgomery, ed., *Religions of the past and present*, pp. 48-49).—See also EGYPT: B. C. 1379; About B. C. 1200-670; ABYDOS, EGYPT; PRIESTHOOD: In Egypt.—"The Babylonian-Assyrian religion in its oldest form as revealed by the votive inscriptions of Sumerian rulers and by specimens of literature that may with great probability be carried back to the earliest period, is long past the stage of primitive beliefs, though it shows traces that in its conception of divine government of the universe it started from what is commonly termed animism. . . . Religion being the partly emotional, partly intellectual response to an instinct, confirmed by experience, that man is not the arbiter of his fate, it is natural for him to make the effort to supplement his inherent and self-evident weakness in the presence of nature by securing the aid of powers upon whose favor he is dependent. The storm destroys his handiwork, and therefore to avoid the catastrophe he seeks the favor of the power manifesting itself in the storm. The stream may sink his primitive craft and therefore, before trusting himself to the treacherous element, he endeavors to assure himself of the favor of the spirit or power residing in the water. When the advances to the agricultural stage, the earth and the sun are the two forces that in the main condition his welfare; and as a consequence he personifies the earth as a mother in whose womb the seed has been placed, which with the cooperation of the sun is brought to fruition. . . . Starting from this animistic conception of nature the Sumerians and Akkadians developed a pantheon, all the members of which take their rise as personified powers of nature. In thus grouping the gods into a more or less definite relationship—and that is involved in the creation of a pantheon—the religion passes beyond the

animistic stage. . . . Such tendencies as exist towards recognizing a single power as the sole arbiter of the universe centre in Babylonia around Marduk. Correspondingly, we find in Assyria, Ashur rising to a position which suggests that the Assyrians too were groping their way to a conception of the unity of the universe. [See MYTHOLOGY: Babylonian and Assyrian.] The thought that all phenomena are to be traced to a single source was at least grasped, though never in so definite a manner as to lead to a genuine monotheistic conception of divine government. . . . The higher spiritual conception of the presence of the divine in the universe thus encountered decided limitations, and despite considerable speculation of a relatively advanced theological character in the temple schools, the religion of the masses remained on a low level. . . . If, the question be raised as to the influence which the religion with its elaborate form of divination, with its variegated incantation ritual, its festivals and special occasions, its days of contrition and days of thanksgiving, exercised on the life of the people, the general verdict must be given that the ethical ideals, as voiced in the extensive religious literature, in the myths of which we have a considerable number, in creation and deluge tales, in the exploits of heroes, human but with semi-divine traits, are relatively high. Obedience to the gods led to placing the emphasis on fair dealings with one's fellows. Reverence for the superior powers upon whose favor the general as well as the individual welfare depended entailed, as a corollary, respect for the laws developed for the government of the country, albeit that the people had little direct share in such government, which remained autocratic to the latest period. The gods, though often depicted as arbitrary, yet on the whole appear to have had a real concern for the welfare of humanity. . . . We have ethical precepts—little collections of ethical sayings—which inculcate kindness, fidelity, truthfulness as the highest virtues by the side of piety and devotion to the gods. The hymns and penitential songs, as well as the prayers attached to the inscriptions of the rulers, breathe this same ethical spirit, even while asking the superior powers for purely material blessings."—M. Jastrow, *Religion of Babylonia and Assyria*, pp. 50, 54, 61-62, 73-75.—See also ASSYRIA: People, etc.; BABYLONIA: Religion; Early (Chaldean) monarchy; PRIESTHOOD: In Semitic religions (non-Jewish); SEMITES.

B. C. 1000.—Hinduism.—Primitive Aryan religion.—Vedic hymns.—Rule of the priests.—Transmigration.—Karma.—Caste system.—Brahmanism.—"The careful comparison of the religions of the various ancient Aryan peoples enables us to realize in some degree what the religion was in the still earlier days of the undivided people. It seems certain, first of all, that they honoured a vast number of special gods, each of them supposed to oversee some distinct aspect of life. But in that primitive age these Aryan men had already another group of gods distinguished as the heavenly ones (*deva—deus*) from the vulgar throng. They were all natural phenomena, but they were also all connected one way or an-

other with the sky and with the grandest of nature's operations. It seems clear that the undivided people already worshipped Sky, Sun, Moon, Dawn, Wind, Fire. But though they regarded and worshipped them as gods, they still called them by their significant names; they had not given them proper names or epithets. The method of obtaining the help of the gods in those days seems to have been already prayer and sacrifice of a rudimentary kind. . . . Ancestor-worship was almost as important to the original Aryan people as the worship of the gods. . . . Our first historical knowledge of the Aryan tribes which produced the great civilization of India shows them settled in the Western Punjab and beyond the Indus. . . . Like their early Aryan ancestors, they worshipped the heavenly powers, calling them *devas*; and they were very conscious of the great advantage which their knowledge of these gods gave them over the aborigines. They arranged their gods in three groups, according as they belonged to the upper region of light, the atmosphere, or the earth. These three groups were designated Upper, Middle, and Lower. The chief divinities were—Upper: *Varuna, Sūrya, Savitri, Vishnu, Ushas, Aditi, Mitra, Aryaman, the Asvins*; Middle: *Vata, Indra, Budra, Purjanya, the Maruts*; Lower: *Agni, Soma, Yama*. Their worship was largely sacrificial. Animals were often killed in sacrifice; but their most elaborate rites were connected with the offering of the *Soma* . . . and of clarified butter, called *ghī*. They were accustomed to have hymns recited at all sacrifices. But, although they laid so much stress on sacrifice, they had no temples and no images. Sacrifices were offered in the open air, and the arrangements were very simple. The gods were so closely connected with natural phenomena that no visible symbol was required. . . . The worship of ancestors was kept up with great care by the Indo-Aryans. They were called *pitaras*, 'fathers,' were regularly worshipped, and were invited to come to the sacrifice along with the gods. After death it was believed that the souls of the good were conducted by Yama to the place prepared for them, where they enjoyed an immortality of peace and happiness along with the 'fathers' and the gods. There was no doctrine of transmigration in those days. By the end of this period the centre of Hindu culture had moved east with the moving tribes to the holy field of Kurukshetra. The hymns, which had been composed during the previous centuries, and which were carefully preserved in the great families and believed to be inspired, were now gradually gathered in some priestly school into the great collection which is called the *Rigveda*. Young Brahmins committed these hymns to memory at school, in order to be able to use them at the sacrifices. The collection was universally accepted by the people as their sacred book, every hymn being recognized as a divine utterance revealed to the *rishi*, 'seer,' whose name it bears. Just ere the collection was closed, a hymn was added which declares that the three great divisions of the people and the aboriginal *Sūdras* had each a distinct origin in God. Thus a religious basis was found for that old-world form of fixed social organization which soon developed into caste. These hymns which form the *Rigveda* are one of the most interesting groups of literature in all the world. No other people ever produced a body of religious poetry of such striking originality and beauty at such an early stage of their history. The nearest parallel is formed by the Zoroastrian *Gathas* or hymns of the *Avesta*, the earliest literature of the sister people, the Iranians or early Persians; but they have

not nearly the interest and power of the *Rigveda*. The people in their daily life, their war, toil and worship, stand out clear and distinct in these hymns; and there is something most fascinating in the way the gods are conceived and addressed. A few of the latest hymns are philosophical. They ask questions rather than answer them; yet already the conception of the One behind all the gods finds expression, and a number of the ideas which afterwards helped to create the Hindu system are tentatively put forward. At a later date a large number of verses were gathered together, nearly all of them from the *Rigveda*, and so arranged as to form a special manual for the second order of priests. This collection was called the *Samaveda*. Its verses were chanted at the *Soma* sacrifice. Another manual, consisting partly of verses, partly of sacrificial formulae in prose, was put together for the use of the third order, and was called the *Yajurveda*. At a later date a new school separated the sacrificial formulae from the verses. The old *Yajurveda* was thereafter called Black, while the unmixed text was known as the White. These new collections were held to be divinely inspired, just like the *Rigveda*. They were Revelation in the fullest sense. The word for revelation is *sruti*, 'hearing.' When the second and third orders had each formed its own *Veda*, the *Rigveda* tended to become the manual of the first order only. . . . While, in the times of the *Rigveda*, men sought to win the regard of the gods, or to persuade them to give their help by sacrifice, hymn and prayer, in this new period the sacrifice is regarded as a mysterious operation which, if faithfully carried out, will irresistibly compel the gods to grant the appropriate reward. If only carried far enough, sacrifices will exalt a man to the level of the gods. The accurate performance of every detail of the ritual thus became a matter of extremest importance. For this reason the priest was all-powerful. His help was needed at every point in the intricate ceremonial of the altar. Without him the layman was helpless. Hence the divine authority of the Brahman was fully acknowledged and became firmly rooted in the religious practice of the nation. Indeed so great had the power of the priests become that they were spoken of as gods upon earth, and were feared even more than the gods of heaven. . . . During this period the theological ideas of the Brahmins underwent a great change. A deep tendency is manifested towards belief in one God, either the personal Creator, Prajapati, or, more often, a mysterious incomprehensible divine essence diffused through all things. Along with this new God came the idea that the ordinary gods were merely mortals until they extorted immortality from the Supreme by sacrifice and austerity. Many of the ancient gods had already fallen into the background, while others had come into great prominence among whom were Rudra, who now received his more attractive name, Siva, and Vishnu; Siva as the mountain-god and the god of thieves, and Vishnu as the sun-god. . . . The problems raised by the very varying fortunes of men and the extraordinary differences in character met with everywhere were solved for the Indian mind by the doctrine of Transmigration and its pendant Karma. [See BUDDHISM: Law of Karma.] The doctrine of *Transmigration* is that souls are emanations of the divine spirit, sparks from the central fire, drops from the ocean of divinity, that each soul is incarnated in a body times without number, that the same soul may be in one life a god, in another a man, in a third an animal or even a plant, and that there can be no

rest for the soul nor relief from suffering until it finds release from the necessity of birth and returns to the divine source whence it came. . . . The Brahman was everywhere accepted as the divine teacher and sacrificer; his Veda was the one Revelation; and Caste was the heaven-sent system for the social organization of the people. This then is essential Hinduism:—

"A. *The Theory of God and the world*, consisting of—(1) The one impersonal Reality and the unreal phenomenal world, which undergoes cyclic change. All minor gods are gathered under the pantheistic All. (2) Transmigration and Karma the explanation of the world. (3) Release from Transmigration and union with the one Reality, the object of all serious men.

"B. *The organizing conception*, consisting of—(1) The divine priest. (2) The inspired Veda. (3) Caste.

"By the time that this new conception of the world had taken distinct form, it had become the custom to send every boy belonging to the Brahman, Kshatriya, and Vaisya castes to a Brahmanical school to receive an education. A ceremony of initiation introduced the lad to this religious training. A Brahman priest muttered sacred texts over him and put the sacred thread on his shoulder; and immediately thereafter his education began. It was a birth into a new life. Hence these three castes are known as twice-born. The fact that every man of these castes spent several years under Brahman discipline and teaching explains in some degree the extraordinary influence of the priestly class. No one but a Brahman was allowed to teach. Teaching, sacrificing and receiving gifts were the three functions which belonged to them by virtue of their birth. . . . Many theories of the constitution of the world were formed and taught; but the most important of all is the doctrine of the Upanishads. The ordinary name for the World-soul was *Brahman*, a neuter noun which expresses the common thought of the time, that the World-soul is an impersonal essence present in all things. There were many speculations as to its nature; until some wise thinker called Brahman the *atman*, or Self of the universe. Then, as the soul of the universe was *atman*, and the soul of the individual was *atman*, the conclusion was soon drawn that the two were identical. . . . The conception of Brahman-Atman in the Upanishads is a great lightning-flash of truth, and it is placed before us in many a noble passage: Brahman is Consciousness; Brahman is the Reality of everything; Brahman is joy; Brahman is incomprehensible; by the command of Brahman all things are done. The phrase, *sachchidananda Brahma*, 'Brahman is reality, intelligence, and bliss,' is a very late one, not found in this period at all, but it sums up Upanishad thought with great accuracy."—J. N. Farquhar, *Primer of Hinduism*, pp. 15-16, 21-25, 30-31, 39-43, 48-49.—See also ASIA: Unity of Asiatic civilization; BRAHMANISM; BUDDHISM; INDIA: PEOPLE; JAINISM; MYTHOLOGY: Eastern Asia; PRIESTHOOD: Pagan; THEISM; VEDANTISM.

B. C. 750-A. D. 30.—Religion of Rome.—Primitive forms.—Influence of Etruscan civilization.—Greek influence.—Greek myths and ideals.—Introduction of Oriental cults.—Augustus and emperor-worship.—Cult of Mithras.—Rise of Christianity.—Two successive stages [may be

noted] in Rome's religious development: a primitive stage in which the as yet untouched Italic stock was concerned with the gods purely as the givers of physical and material goods, as the guardians of the herds and of the crops and of human increase. There was no purpose in this worship other than the mere instinct of social preservation. The individual had no spiritual life of his own, and therefore no individual religious interests. Then we chronicled a great change. This was not the coming of individualism. It was not yet time for that. It was rather the advent of a loftier purpose into the intellectual and spiritual consciousness of these people. In a word, we [have] the coming of the Etruscans, their conquest of this region; and the great gift which their presence brought to the Roman people. When they came, they found a loosely united tribal community; when they departed, they left a nation behind them. There was something in the world bigger than the number of the sheep and the fullness of the granaries. There was a nation and a love of it. There was, in a word, patriotism, and a large background of religion to support it. Jupiter Optimus Maximus, Jupiter Victor, and his daughter Victoria, these were objects of worship which filled men with a new enthusiasm. Yet it was no new and strange thing soon to be lost. It was to be a permanent possession for at least a thousand years. It was to outlast as a vital power every form of religion then present. Thus filled with a patriotic zeal, possessed of an ethnic religion, the Roman people went forward into their history. . . . In the case of the influence of Greece on Rome, the purely commercial stage was reached very early, even before the Etruscans came, for we find Greek vases from southern Italy in the graveyard in the Forum, which ceased to be used when the Etruscans conquered Rome. The influence of Greek religion and myth seems to have become prominent during the Etruscan domination. Doubtless the Etruscans themselves, with their love of Greek things, assisted materially in this. Finally, the influence of literature did not make itself felt until the middle of the third century, and does not concern us here. The vital factor in the changes of these centuries was the influence of Greek religion and myth. [See MYTHOLOGY: Grecian.] The first Greek elements which came into Rome were, curiously enough, not recognized by the Romans as being Greek. There was, for example, the cult of Hercules, himself purely a Greek god, who came up with the merchants out of southern Italy, and in some way, which we do not understand, established himself at Tibur (Tivoli). [See HERACLEIDÆ.] Thence his cult spread to Rome, where he was received not as a Greek god, but as a god of Tibur,—i. e., a Latin-Sabine god,—and given an altar inside the *pomerium*, in the Forum Boarium. Then there were Castor and Pollux, who were the patrons of the cavalry in southern Italy, and came up into Latium, where they established themselves, especially at Tusculum. Thence they, too, came into Rome as kindred and not foreign gods, and received a temple in the Forum. . . . But these were isolated cases. The rank and file of Greek gods came into Rome in an extraordinary way. As early as the sixth century, Rome had established commercial relations with Cumæ. As a result of these relations the cult of Apollo, the divine physician, was introduced into Rome and given a sanctuary in the Campus Martius. In the train of Apollo there came to Rome a collection of oracles written in Greek. These oracles were the possession of the Roman State.

They were housed in the Capitoline Temple, and placed under the guardianship of a newly formed priesthood. In time of peril the Senate caused the oracles to be consulted, and the deities which they recommended were thereupon introduced. In this fashion a host of Greek gods entered Rome during the three centuries with which we are dealing. The earliest recorded use of the Sibylline Oracles is in the case of the trinity, Demeter, Dionysios, and Kore, who were introduced into Rome and given a temple, in B. C. 493, outside the *pomerium*, near the spot where later stood the Circus Maximus. These three Greek deities were, however, given the names of three already existing Roman gods, Ceres, Liber, Libera. The inevitable result of this identification was that the old Roman gods were entirely forgotten, and the name came to mean almost exclusively the new Graeco-Roman deities. But although 493 is the first recorded instance, we are justified in supposing that the worship of Hermes, under the name of Mercury, was also due to these oracles, Mercury received a temple in B. C. 495, also in the neighborhood of the Circus Maximus. . . . It was probably about the same time that the old Roman Neptune, who had been primarily a god of water and of rivers, but with no especial connection with the sea, began to be identified with the Greek Poseidon, the ruler of the ocean. By her worship of the deity of the sea, Rome gained in a sense a control over the ocean, and effected, as it were, a sort of marine insurance, which was becoming essential to her on account of the grain traffic with Sicily. The Sibylline Oracles were doubtless used on many occasions of which our records show no traces; and this accounts in part for the fact that the next known date of their use is B. C. 293, two hundred years later. . . . In B. C. 292, on the occasion of a severe pestilence in Rome, the Books were again consulted, with the result that the worship of Aesculapius was introduced from Epidaurus. The snake, which symbolized the god of healing and which the Roman embassy brought back from Greece, elected to swim ashore at the island of the Tiber; and accordingly it was there that the sanctuary of Aesculapius was built. When in the course of centuries paganism had given place to Christianity, the work of healing, which had gone on without change on this spot, was continued by the hospital of San Bartolommeo down into the present day. But this place of healing has not only the longest unbroken record in our world today; it was also the inspiration of that other St. Bartholomew's, which London and the world know so well. Half a century later, in B. C. 249, during a critical period in the First Punic War, when Rome was terrified by a series of prodigies, the Oracles were again consulted, and Pluto and Persephone were brought into Rome and, under the name of Dis and Proserpina, given an altar in the Campus Martius. This was the beginning for Rome of those saecular games, which, two centuries later, were to be celebrated by Augustus and for which Horace wrote the *Carmen Saeculare*. . . . More important even than the introduction of these deities was the gradual diffusion of the religious ideas and myths of Greece. With amazing willingness and marvelous facility the Romans adapted all their old deities to these new ideas. . . . The Greek idea of men as the sons of gods, with all intercourse and companionship which such a descent implies, was something at once incomprehensible and terrible to the Roman mind. . . . Thus there came into being that *superstitio*, that excess of belief, which was to be so characteristic of Roman religion

from now until the end of the Republic, that Lucretius, in attacking it, thought that he had attacked religion. This *superstitio* battered upon the crises and the perils of the Second Punic War, and it was in one of the darkest moments of that war that it received a visible incorporation in the introduction of the Great Mother of the Gods [Cybele]. Hannibal had been defeated, but he had taken refuge with his troops in the mountain fastnesses of southern Italy. It seemed impossible to drive him out of the peninsula. In her perplexity Rome had recourse to the Sibylline Books. [See SIBYLS.] There an oracle seemed to indicate that, if the Great Mother of the Gods were brought to Italy and worshiped in Rome, she would drive Hannibal out. The Romans, who at this time had scarcely heard of the Magna Mater, obediently sent for her, and in due course the meteoric stone, which incorporated her, was fetched from Pessinus in Phrygia, and brought by ship to the mouth of the Tiber. . . . Thus brought in, she accomplished her work, and Hannibal returned to Carthage. But when Hannibal had gone, there remained in Italy a far worse enemy of Rome. It was the great Mother herself, with her cymbal-clashing eunuch priests; the first of the orgiastic Oriental cults, fraught with such danger to Rome, until they, too, became in time subdued to a more spiritual purpose. But for the moment Hannibal was gone, the Second Punic War was ended, and we turn to the last half of the Republic. . . . The Great Mother had now received her own temple on the Palatine, and her priests, with their clashing and discordant music, were familiar figures in the streets of Rome. The law still forbade Roman citizens to become priests of Cybele, but evasions of the law were not unknown. [See also MYTHOLOGY: Germanic: Identification of Germanic gods with Roman, etc.] . . . Other gods of the Orient were following the Cybele's train. There was the bloodstained figure of the Cappadocian Mâ, whom Rome had taken and identified with her own old-fashioned Bellona. Then in the days of Sulla there came Isis and her priests. The more exuberant forms of Greek philosophy became popular in Rome. Such crude ideas as those of the Neopythagoreans, with their doctrine of the transmigration of souls, appealed strongly to their jaded senses. . . . Entirely apart from their own personal belief, the rulers of Rome felt it their patriotic duty to be the defenders of the state religion. They were entirely frank in their disbelief, and one of the greatest jurists of the day describes three kinds of religion: the religion of the philosophers, who explain the world according to their own doctrines; the religion of the poets, who use the paraphernalia of the gods on which to hang their myths and stories; and the religion of the statesmen, who defend the religious forms of the fathers because they are an integral part of the state. . . . Toward the close of this period, in the age which we call the age of Cicero, we have two very interesting attempts to deal with the problems of religion. The two attempts . . . approached the subject from exactly opposite sides. In the one case, that of Varro, the attempt is made to restore old Roman religion by learning; in the other case, that of Lucretius, religion is attacked and an attempt is made to destroy it. . . . The political period. . . . is the first three centuries of the Empire, from the accession of Augustus to the death of Diocletian. . . . From the beginning of his career until almost the close of it, the greatest strength of Augustus lay in his marvelous knowledge of human psychology. . . .

With a quiet unobtrusiveness, which was characteristic of all that he did, Augustus set about the task of awakening in men's minds the long-forgotten chords of patriotism; and the instruments which he used to make this music were of such varied kinds that each man after his own fashion was compelled to hear. . . . If men were ever again to respect the gods, the places where the gods were worshiped must be restored and made worthy of respect. . . . Thus we turn to the most important religious institution in the Augustan scheme, the establishment of emperor worship. It cannot in any sense be affirmed that Augustus invented emperor-worship, nor is it true that he introduced it into Rome. It was in the world long before his day, and to a certain degree it had already entered Rome before he came to power. It is nevertheless strictly true that he controlled it and by very delicate manipulation, by processes of encouragement and discouragement, now by toleration and again by energetic prohibition, he shaped it and welded it into the instrument which it was to be in the subsequent history of the Empire. It is difficult for us to realize the power that emperor-worship possessed during the centuries to come. It was in a sense the only universal form of religion in the Roman Empire. . . . And so Augustus died, and left his scheme of things to his successors to be tried in the succeeding centuries. It is very wonderful how successful that scheme was and how capable of rational alteration; and it is surprising to what an extent it controlled the masses of the people in the two hundred years which followed. . . . If one had spoken to a Roman in the fourth century, or even in the third century, before Christ, concerning his soul, its sinfulness, and its need of salvation, there would have been no discussion possible, for the person addressed would not have understood what it was all about. It is very difficult for us to put ourselves in such a position of innocence; but we can at least realize that there are certain Oriental nations of the present day who do not understand these concepts, who have indeed a sense of right and wrong, but who have not the consciousness of an individual soul, and hence can neither feel its guilt nor desire its salvation. The origin of this idea of the personal soul is obscured in great mystery. It was not present at the time of the Punic Wars. We see only scanty traces of it in the literature of the Ciceronian age, and yet in the time of Seneca it was absolutely prevalent. Various explanations may be suggested. . . . The only explanation which seems in any wise satisfactory is that these ideas were imported from the Orient partly through the doctrines of the later Greek philosophy, which was itself tinged with the Orient, partly through direct contact with the religions of the Orient. . . . But however these ideas may have arisen, they are everywhere present during these centuries of the Empire. . . . These are the questions which men have put to themselves ever since, but which the Romans are now asking for the first time; and the answer is of extreme interest, because it is so particularly pagan and Greek. . . . The answer is: Sin is ignorance; to know the truth is to do it. Knowledge, therefore, perfect knowledge, guarantees freedom from sin. The wise man is the holy man. But if this be true, and if [as was thought] the world be soon to come to an end, then all knowledge is not equally profitable, but rather that knowledge which makes for righteousness; and if life be so short and uncertain, then the wise man will renounce the other things of life and give himself

over to the better part. It is the new scale of valuation which the idea of the approaching end of the world brings with it. It is the gospel of renunciation. It is philosophy and the cure of souls, and its first and greatest spokesman is Seneca. . . . A half a century later, Aurelian built in the Campus Martius the great temple to his Sun-God, the *Deus Sol Invictus*, and at the close of the century, Diocletian, in a court which was entirely governed by Oriental etiquette, boasted that his power depended upon the favor of Mithras. . . . But all these cults of the Orient fade into absolute insignificance in comparison with that of Mithras. [See MITHRAISM.] No matter what a man's beliefs may be, the story of Mithras touches the depths of his being, not because of its romantic interest, but because of its profoundly religious content; or perhaps we ought more truly to say, because its religion is so thoroughly in accord with modern ideas. We cannot here trace in detail the story of the wandering of the god Mithras, out of the theology of India into that of Persia, out of Persia into Asia Minor, and out of Asia Minor into Rome; where his power grew, at first, with Pompey's Cilician pirates, then especially under the Flavians, and most of all at the end of the third century under Diocletian. It was not simply a religion; it was an atmosphere of Oriental ideas in religion, politics, science, and etiquette. It appealed so strongly to the court of Diocletian that the West stood in a graver danger of being conquered by Asia than even at the hands of the Mohammedans, and yet the religion of Mithras never became an acknowledged religion of the Roman State. . . . In the cult itself we know that there was a form of baptism, and a sacrificial meal, and that there was a ceremony of the blood that was shed for all (*mana cunctis*). They believed also in the immortality of the soul, in the resurrection of the dead, in a place of future punishments and rewards, and in the ascent of Mithras on high. In the nature of things, the Christians asserted that these doctrines had been stolen from them by the demons and revealed to these worshippers of Mithras; and similar accusations seem to have been made by the followers of Mithras. In both cases they were doubtless wrong. It is merely an instance of similar ideas arising under similar circumstances. Thus the whole Roman Empire was girt about by the love of Mithras, and we find the caves which served as churches in almost every province. Spreading at almost the same time as Christianity, it had by the middle of the third century outrun it in numbers and influence. . . . Christianity had the same advantages as the other Oriental cults. The way had been prepared for her as for them. She profited by the same awakened sense of the individual soul and its sinfulness, by the same philosophical ideas of the unity of God, and that the many gods of polytheism were in the last analysis merely many phases of the one divine power. She, too, had found men convinced that the world was soon to come to an end, and that the most important work of man was the purification of the soul so that it might be worthy of immortality. . . . The organization of the Empire rendered possible organized persecution; philosophy created heresies; and the other Oriental religions, which in the main supported rather than opposed one another, ranged themselves unitedly against her."—J. B. Carter, *Religious life of ancient Rome*, pp. 34, 39-46, 48, 55-57, 64, 68, 70-75, 81-82, 87-88, 90, 100-102.—See also PRIESTHOOD: In Greece and Rome; GUILDS: Roman; AUSPICES.

B. C. 600.—Buddhism.—Relation of Buddhism to Hinduism.—"It is a strange thing, and very characteristic of the real meaning of the true Buddhism, that there is no life of Gotama the Buddha in the Buddhist scriptures. . . . The actual date of the birth of the Buddha is still a matter of controversy, but may be fixed approximately at about B. C. 600. [See BUDDHA.] . . . We should never forget, that Gotama was born and brought up and lived and died a Hindu. His teaching, far-reaching and original as it was, and really subversive of the religion of the day, was Indian throughout. Without the intellectual work of his predecessors his own work, however original, would have been impossible. He was no doubt the greatest of them all; and most probably the world will come to acknowledge him as, in many respects, the most intellectual of the religious teachers of mankind. But Buddhism is essentially an Indian system. The Buddha himself was, throughout his career, a characteristic Indian. And, whatever his position as compared with other teachers in the West, we need here only claim for him that he was the greatest and wisest and best of the Hindus."—T. W. Rhys-Davids, *Buddhism*, pp. 87, 90, 116-117.—See also BUDDHISM; INDIA: B. C. 2000-600; B. C. 600-327.

B. C. 600-A. D. 30.—Value of Greek religion.—"During its long course over centuries Greek religion never suffered from any internal revolution so that the deposits of earlier ages were never entirely obliterated, but to the last these imprints of the successive periods of culture through which the Hellenic race passed were preserved; thus their religion reveals to us more clearly than anything else the evolution of the Greeks from savagery. As Gilbert Murray says: 'There is hardly any horror of primitive superstition of which we cannot find some distant trace in our Greek record. There is hardly any height of spiritual thought attained in the world that has not its archetype or its echo in the stretch of Greek literature that lies between Thales and St. Paul.' Lastly, we must not forget that the potency of this religion did not end with the greatness of Greece, but continued on into later Europe. It was not blotted out by Christianity. On the contrary, whatever real power it had, passed over into the ideas and forms of our own religion to such an extent that one could maintain that Greek religion has exercised indirectly as much influence on the various phases of modern religious life as mythology has on modern literatures. The influence of the religion of Greece on Christianity is too complex a subject to be more than hinted at in this connection. That ancient rites should have persisted in the Eastern Church under the cover of the new religion, and that ancient gods and heroes should reappear as saints, is not so surprising when we reflect on the summary way in which Constantine established the new faith. It was not difficult to convert the Parthenon into a Christian church, when the virgin goddess of wisdom was supplanted first by St. Sophia and later by Mary. Similarly, it was easy to replace Apollo by St. George and Poseidon by St. Nicholas, the patron saint of sailors. Nor should we be surprised when we see an old Greek rite celebrated now by a Greek priest. The influence of Greek theology and philosophy on Christian belief can be directly traced in the changes wrought in the

concept of Christianity, when it had to be cast into a new mould to meet the changed atmosphere from Palestine to Europe. Though the influence of the old ritual on the plastic ritual of the early church cannot be traced so easily, it may be said in general that the simplicity of the primitive Christian sacrament gradually had given way by the fifth century to the richly developed ritual of the church, which was only an evolution of ancient Greek rites. . . . With the establishment of the Macedonian empire and the conquests of Alexander great changes were wrought not only in the political and social life of Greece, but in religion. Some of these changes were in the direction of decay, while others heralded a new life. . . . Behind all the changes of this period was the consciousness of a wide-spread failure of Greek ideals, which changed the whole viewpoint of men's ideas of life and of the soul. First, there was the failure of the City-State, which was crushed by Philip and later by the military monarchies set up by Alexander's successors. . . . With the loss of the City-State the influence of the old Olympian theology waned, for the two were bound up together. Even before Philip's conquest the philosophical assault on the ancient system had slowly gained ground and had undermined the popular faith without putting an adequate substitute in its place. Men still perfunctorily observed the outward forms of religion but had lost faith in their efficacy. With unbelief came superstition, and comfort was sought in foreign cults. Amid the debris of ancient ideals the Hellenistic Greek looked to himself, to his own feelings and thoughts. Instead of trying to live justly, as Socrates had inculcated, and to help his fellow-men by the example of a pious life, it was not his aim to seek personal holiness and salvation. Whereas the aim of the old religion had been the family, the tribe and the City, the aim of the new was the individual. The old Greek had gloried in good works; the latter gloried in his personal faith. The loss of political hope, the despair of hoping to arrive at truth through patient inquiry, gave birth to a new ideal—mysticism, asceticism, selfish individualism. Consequently, although the new age was one of enlightenment, of great thinkers like Zeno, Cleanthes, Chrysippus, still it was full of morbidity and pessimism. The Greek now turned to revelations and mysteries, to the neglect of this transitory life in the hope of an eternal sinless one to come. . . . Thus in the fourth century the Eleusinia were extended, those of Andania were reorganized, and those of Megalopolis were instituted. In the later centuries foreign ones were added, as those of Samothrace, of Attis, of Isis, of the Great Mother, and finally of Mithra. Some of their ideas passed over into Christianity, such as the saving grace of baptism, the communion with God by a holy sacrament, the mystic death and rebirth of the neophyte. Such rites and beliefs satisfied men's yearning for immortality or absorption in the deity. . . . After Alexander's time things got worse. With the establishment of the kingdoms of his successors, the old gentile barriers of religion broke down completely. The whole later history of paganism is concerned with the gradual influx of Eastern ideas."—W. W. Hyde, *Religion of Greece* (J. A. Montgomery, ed., *Religions of the past and present*, pp. 254-255, 304-306, 308, 309).—See also EUROPE: Ancient; Greek civilization; Secularism, etc.; Spread of Hellenism; PAGANISM: Heroes and gods; PRIESTHOOD: In Greece and Rome.

B. C. 600-A. D. 30.—Inner logic of Hebrew religion.—Semitic religions in general.—“From the first of Israel’s known religious history there was working an inner logic which binds together its beginning and climax. . . . It was Wellhausen who made the classic remark that the Mosaic religion was summed up in this word: Yahwe Israel’s God, Israel Yahwe’s people.” This axiom developed its logic. The worship of one Deity alone, or the conscience of his jealousy, led to the denial of competitive or antagonistic deities. For if other gods there were, as gods they implicitly deserved service in their lands and empires. If those gods were not to be worshiped, it was a confession by implication that they did not exist. It was a similar and withal uniquely drastic application of logic which shut up all the shrines of the late King Josiah to teach the one national God through the single sanctuary of Jerusalem. And it was by a similar logic that Judaism proceeded to the sense of its missionary duty to the world, as set forth in the Evangelist of the Second Isaiah and the parable of Jonah. If there was only the one God and Israel alone knew him, it was Israel’s commission, if there were any pride and humanity, to make him known to the world. The religion of Israel was led on by the same unconscious logic that has driven every monistic religion into claiming and preaching a Gospel for the world. The same singleness of mind which marks the home religion forces it into the exclusiveness, intolerance, bigotry, if you will, which is the antinomy in every religion which will be catholic. . . . The Hebrew cult is a phase of the old Semitic cult, with its origin in North Arabia and its further developments in Suria, also a land of *genuine* Semitism. . . . In one important respect the phenomenon of the cult in the Hebrew religion is remarkable; that cult was not static, as in the case of Babylonia, it was ever in flux; and further there was in the Hebrew religion the consciousness of this flux and of the epochs of its history. We might best compare the Greek consciousness, in the form of legend, of the introduction of the Orphic and Dionysiac cults. Several clearly marked stages may be marked out in our field. (1) The primitive period, illustrated by the Patriarchal and Mosaic traditions; here we have many reminiscences of the antique Arabian cult. (2) The period of assimilation with the elaborate cult-system of Canaan; this system, which also probably contained elements that had filtered in from Babylonia, the Mediterranean, possibly Egypt, was the principal alien factor in the history, although there was too much of an identity among the various phases of the Semitic cult to allow us to distinguish exactly between Arabian and Canaanitish. (3) The age of reaction, chiefly represented by the Prophets of the 8th century, although earlier prophetic men had taken stand against the Canaanite innovations, for example the prophets who opposed the building of the temple in Jerusalem. (4) The compromise between the Jerusalem hierarchy and the prophetic reformers, appearing in Deuteronomy and carried on into the so-called Law of Holiness (Lev. 17-26) and Ezekiel. The elements of Canaanite religion regarded as antagonistic to the worship of Yahwe were done away with in the drastic reform of Josiah; the cult was absolutely centralized at the temple at Jerusalem. But this centralization only intensified the ritualistic elements of the religion, and these triumphed with the acceptance by the prophetic element of the

purification of patently objectionable features. As in the case of the reforming Aenaten of Egypt, the reform broke down with the death of King Josiah, but, unlike the Egyptian precedent, a composition of contrary forces had been formed which set the order for the future. For it was the element that accepted this reformed order which persisted through the cataclysm of the Exile. Ezekiel, a prophet but still more a priest, and withal an apocalypticist, laid down a typical ritual scheme for the security of holiness in the future. (5) The ecclesiastical establishment of the Post-exilic Age. This conserved the chief theological results of the Prophets, provided them with a shell the world could not break, but made Judaism a typically ritualistic institution. It continued the unobjectional elements of the elder cult, restored ancient forms of practice, added new elements to perfect the scheme, probably introduced Babylonian elements, and in general theorized at will. And the flux-like character of the Law was continued by those High-Church Progressives, the Pharisees. But the same age which saw the intensification of the ritual of the community to an abnormal degree witnessed the rise of its antinomy, the Synagogue, the cultless meeting-house of the Jews. It was the centralization of the cult in Jerusalem which in part produced this pole to itself; but the phenomenon also grew out of older spiritual elements of the religion which the later crystallization could not harden or control. Prayer and praise, in forms which have become classical, took the place of the sacrificial cult for the greater part of life; the Sabbath, with its rest and worship stood for the elaborate calendar of sacrifice; the teacher, wise man and rabbi became the spiritual leaders of Judaism, and ultimately laid down the law to the hierarchy. These spiritual elements kept their place in or made their way into the cult itself. The Psalter of the Christian Church was the hymnal of the temple, many of its songs being the actual accompaniments of the temple ritual; the theologians met in the temple, and there Jesus could preach, for it was his ‘Father’s House.’ After all, the spiritual religion of the Jew found nothing incongruous to itself in that temple ritual which we moderns so superciliously treat. It was reserved for the late Epistle to the Hebrews for the Christian Church to learn that it could dispense with that stay of the Paternal religion. The Hebrew cult is the tremendous interest to the archaeologist; it is the equal value to the student of religious thought and life. For in this religion which issued so loftily, whether we consider later Judaism or Christianity, we can mark stage by stage the growth of a wonderful germ, in part struggling with, in part submitting to, outward forms which descended to the utmost superstition, transforming them and yet compromising with them where essentials were not concerned. It was the cult which conserved that religion for us. And in preserving its cult that religion consciously recognized that its truth was not a pure philosophy or an abstract ethic but a religious life for a people as a whole, to be incorporated in forms and symbols of the world. . . . Such is this strange religion. It abounds in inner antinomies, it runs against the usual processes of religious thought. It defies philosophy. It is the riddle of the student of religion. He may whittle it down to its lowest terms, finding in it the most primitive forms of religion common to every folk. But it will not be explained in that way. If it has its feet on the earth, it holds its head in the heavens.”—J. A. Montgomery, *Hebrew religion*

622.—**Mohammedanism.**—**Koran.**—**Relation of Mohammedanism to Judaism, Christianity, Parsiism.**—"Islam means submission—the submission of the faithful to Allah. This term, which characterizes better than any other the essence of the relation in which Mohammed places the believers to the object of their worship, epitomizes the feeling of dependence on an unlimited Power to whom man must give himself up, willingly or unwillingly. . . . The year 622 marks the first epoch in the history of Islam. Ridiculed by his countrymen and tribesmen, Mohammed flees to the northern city of Yathrib, whose people coming from a southern stock, showed themselves more receptive to religious influences. Here also, owing to the large colony of Jews, the ideas which Mohammed advanced were more familiar, or at least appeared less strange. Because of the help which people of this town gave to the prophet and his followers, whom they sheltered, Yathrib became Medina, 'the City' (of the prophet), by which name it has ever since been known. . . . The Hijra (flight to Medina) accordingly is not only an important date in the history of Islam, because of the change it wrought in the outward fortunes of the community; marks, not only the time in which the little group of the prophet's followers, having found a secure haven, began to take aggressive measures and wage a war against the enemy, which in 630 resulted in the conquest of Mecca and subsequently in the subjection of Arabia; but it also marks an epoch in the religious formation of Islam. . . . Mohammed himself declared his Koran an inimitable work. His followers, without considering any one of its parts as having more merit than another, regarded the book as divinely supernatural, sent to them through the prophet. In fact it was to them the supreme miracle by which the prophet established the truth of his divine mission. It was from the Parsees that he received the far-reaching suggestion which robs the Sabbath of its character as a day of rest. He chose Friday as the weekly day of assembly, but even in adopting the hexameron theory of creation, he emphatically rejects the idea that God rested on the 7th day. Therefore, not the 7th day, but the day preceding is taken, not as a day of rest, but as a day of assembly on which all worldly business is permitted after the close of worship. . . . Throughout the entire history of Islam the Koran remains as a divine foundation deeply revered by the followers of the religion of Mohammed. It is the object of a veneration such as has hardly yet been given to

any other book in the literature of the world."—I. Goldziher, *Mohammed and Islam*, pp. 2, 7-9, 11, 14, 28-29.—See also **MOHAMMEDANISM**; **CALIPHATE**; **KORAN**; **MAHDI**.

REMBRANDT (Rembrandt Harmens van Rijn) (1606-1669), Dutch painter. Son of a Leyden miller; studied under Jacob van Swanenburch and Peter Lastman; removed to Amsterdam, 1631, where he became wealthy and famous; forced into bankruptcy, 1656, and spent the remainder of his life in poverty. He is ranked as one of the world's greatest painters, and is also noted as an etcher. Some of his more famous works are: "The Night Watch" (Ryks Museum); "The Anatomical Lecture" (Hague); and "The Syndics of the Cloth Workers" (Ryks Museum). He also painted a number of noted portraits.—See also PAINTING: Dutch; AMSTERDAM.

REPARTIMIENTOS, ENCOMIENDAS.—Columbus, as governor of Hispaniola (Hayti), made an arrangement "by which the caciques in their vicinity, instead of paying tribute, should furnish parties of their subjects, free Indians, to assist the colonists in the cultivation of their lands: a kind of feudal service, which was the origin of the repartimientos, or distributions of free Indians among the colonists, afterwards generally adopted, and shamefully abused, throughout the Spanish colonies; a source of intolerable hardships and oppressions to the unhappy natives, and which greatly contributed to exterminate them from the island of Hispaniola. Columbus considered the island in the light of a conquered country, and arrogated to himself all the rights of a conqueror, in the name of the sovereigns for whom he fought."—W. Irving, *Life and voyages of Columbus*, v. 3, bk. 12, ch. 4.—"Repartimiento,' a distribution; 'repartir,' to divide; 'encomienda,' a charge, a commandery; 'encomendar,' to give in charge; 'encomendero,' he who holds an encomienda. In Spain an encomienda, as here understood, was a dignity in the four military orders, endowed with a rental, and held by certain members of the order. It was acquired through the liberality of the crown as a reward for services in the wars against the Moors. The lands taken from the Infidels were divided among Christian commanders; the inhabitants of those lands were crown tenants, and life-rights to their services were given these commanders. In the legislation of the Indies, encomienda was the patronage conferred by royal favor over a portion of the natives, coupled with the obligation to teach them the doctrines of the Church, and to defend their persons and property. . . . The system begun in the New World by Columbus, Bobadilla, and Ovando was continued by Vasco Nuñez, Pedrarias, Cortés, and Pizarro, and finally became general."—H. H. Bancroft, *History of the Pacific states*, v. 1, p. 262, footnote.—See also COLONIZATION: Spanish; SLAVERY: 1493-1542.

1918. See ENGLAND: 1918: Representation of the People Act; PROPORTIONAL REPRESENTATION: England.

REPRESENTATIVE GOVERNMENT.—"This [representative government] is the great distinction between free states of the modern type, whether kingly or republican, and the city-commonwealths of old Greece. It is the great political invention of Teutonic Europe, the one

form of political life to which neither Thucydides, Aristotle, nor Polybios ever saw more than the faintest approach. In Greece it was hardly needed, but in Italy a representative system would have delivered Rome from the fearful choice which she had to make between anarchy and despotism."—E. A. Freeman, *History of federal government*, ch. 2.—"Examples of nearly every form of government are to be found in the varied history of Greece: but nowhere do we find a distinct system of political representation. There is, indeed, a passage in Aristotle which implies a knowledge of the principles of representation. He speaks of 'a moderate oligarchy, in which men of a certain census elect a council entrusted with the deliberative power, but bound to exercise this power agreeably to established laws.' There can be no better definition of representation than this: but it appears to express his theoretical conception of a government, rather than to describe any example within his own experience. Such a system was incompatible with the democratic constitutions of the city republics; but in their international councils and leagues, we may perceive a certain resemblance to it. There was an approach to representation in the Amphictyonic Council, and in the Achaian League; and the several cities of the Lycian League had a number of votes in the assembly, proportioned to their size—the first example of the kind—being a still nearer approximation to the principles of representation. But it was reserved for later ages to devise the great scheme of representative government, under which large States may enjoy as much liberty as the walled cities of Greece, and individual citizens may exercise their political rights as fully as the Athenians, without the disorders and perils of pure democracy."—T. E. May, *Democracy in Europe*, v. 1, ch. 3.—"The most interesting, and on the whole the most successful, experiments in popular government, are those which have frankly recognized the difficulty under which it labours. At the head of these we must place the virtually English discovery of government by Representation, which caused Parliamentary institutions to be preserved in these islands from the destruction which overtook them everywhere else, and to devolve as an inheritance upon the United States."—H. S. Maine, *Popular government*, p. 92.—"To find the real origin of the modern representative system we must turn to the assemblies of the second grade in the early German states. In these the freemen of the smaller locality—the Hundred or Canton—came together in a public meeting which possessed no doubt legislative power over matters purely local, but whose most important function seems to have been judicial—a local court, presided over by a chief who suggested and announced the verdict, which, however, derived its validity from the decision of the assembly, or, in later times, of a number of their body appointed to act for the whole. Those local courts, probably, as has been suggested, because of the comparatively restricted character of the powers which they possessed, were destined to a long life. On the continent they lasted until the very end of the middle ages, when they were generally overthrown by the introduction of the Roman law, too highly scientific for their simple methods. In England they lasted until they furnished the model, and probably the suggestion, for a far more important institution—the House of Commons. How many grades of these local courts there were on the continent below the national assembly is a matter of dispute. In England there was clearly a series of three. The lowest was the township assembly, concerned

only with matters of very slight importance and surviving still in the English vestry meeting and the New England town-meeting. Above this was the hundred's court formed upon a distinctly representative principle, the assembly being composed, together with certain other men, of four representatives sent from each township. Then, third, the tribal assembly of the original little settlement, or, the small kingdom of the early conquest, seems to have survived when this kingdom was swallowed up in a larger one, and to have originated a new grade in the hierarchy of assemblies, the county assembly or shire court. At any rate, whatever may have been its origin, and whatever may be the final decision of the vigorously disputed question, whether in the Frankish state there were any assemblies or courts for the counties distinct from the courts of the hundreds, it is certain that courts of this grade came into existence in England and were of the most importance there. In them, too, the representative principle was distinctly expressed, each township of the shire being represented, as in the hundred's court, by four chosen representatives. These courts, also, pass essentially unchanged through the English feudal and absolutist period, maintaining local self-government and preserving more of the primitive freedom than survived elsewhere. We shall see more in detail, at a later point, how the representative principle originating in them is transferred to the national legislature, creating our modern national representative system."—G. B. Adams, *Civilization during the Middle Ages*, ch. 5.—"Among representative Governments three specially deserve to be studied—the Parliamentary and Cabinet System of Britain, which, reproduced in the British self-governing Dominions and France, has been more or less imitated in other European countries; the Presidential system of the United States, adopted in many of the other American republics, and the Executive Council system of Switzerland. As each of these has been described in the chapters of Part II, dealing with France, America, and Switzerland, this chapter is intended only to compare each with the others in respect of characteristic merits and defects."—J. Bryce, *Modern democracies*, v. 2, p. 506.—See also APPOINTMENT; CABINET; CITY MANAGER PLAN OF MUNICIPAL GOVERNMENT; CONGRESS OF THE UNITED STATES; DEMOCRACY; ELECTIONS; EUROPE: Modern: Political revolution of 1848; INITIATIVE AND REFERENDUM; PARLIAMENT; PROPORTIONAL REPRESENTATION; RECALL; STATE GOVERNMENT; SUFFRAGE, MANHOOD; SUFFRAGE, WOMAN.

REPRESENTATIVES AT LARGE.—When, after an increase in its number of representatives, the state has failed to redistribute its districts, the additional member or members are voted for upon a general state ticket, and are called "representatives at large."

RESIDENCIA.—"Residencia was the examination or account taken of the official acts of an executive or judicial officer [Spanish] during the term of his residence within the province of his jurisdiction, and while in the exercise of the functions of his office. . . . While an official was undergoing his residencia it was equivalent to his being under arrest, as he could neither exercise office nor, except in certain cases specified, leave the place."—H. H. Bancroft, *History of the Pacific states*, v. 1, p. 250, footnote.—See also AUDIENCIAS.

ALSO IN: F. W. Blackmar, *Spanish institutions of the Southwest*, p. 60.

RESISTANCE, Right of.—"Whilst merchantmen may not take part in offensive operations, they are permitted to evade search or defend themselves in case of attack it may not be prudent to offer resistance to a warship, but it is not illegal. The use of arms by a merchant ship for purposes of self-defence is legitimate; the practice is sanctioned by the long-established custom

of many maritime powers, and in . . . [England] it has been in use for at least three centuries. It has been recognized in courts of law and in the naval codes and ordinances of several states; and during the Great War various neutral Governments have admitted its legality. Hence, all that has been said above with regard to unarmed merchantmen applies equally to armed merchantmen."—F. E. Smith (Lord Birkenhead), *International law*, pp. 423-424.

RETHEL, town in France, on the Aisne, about twenty-three miles northeast of Rheims. It was captured by the French from the Spaniards, in 1650, and recovered by Condé in 1653. In 1918 it was entered by the French. See FRANCE: 1650-1651; 1653-1656; WORLD WAR: 1918: II. Western front: x, 2.

Battle of (1650). See FRANCE: 1650-1651.

RETHONDES, hamlet six miles east of Compiègne, northeastern France. Here, on November 6, 1918, the Allied generalissimo, Marshal Foch, delivered the terms of the armistice to the German envoys. See WORLD WAR: 1918: IX. End of the war: a, 7.

RETORSION, RETALIATION, REPRISAL.—Definition.—The use of these terms is not uniform, and they are frequently almost interchangeable. Careful distinctions are, however, made by some writers. All three words include in their meaning the idea of extra legal pressure for purposes of compensation for or prevention of illegal and injurious acts on the part of another state, or its citizens. Lorimer would deny any such right. But the usage of nations undeniably allows it in war, and in some forms also in peace. "Retorsion in war is the action of a belligerent against whom a law has been broken, and who retorts by breaking the same or some other law, in order to compensate himself for the damage which he has suffered and to deter his enemy from continuing or repeating the offence. Where the same law is broken the proper term is retaliation, but there is no difference of principle between the cases, and the term retorsion covers both."—J. Westlake, *Collected papers*, p. 259.—"The only solid distinction between retorsion and reprisal is to be found in the nature of the act. A reprisal may be confined to a seizure of persons or property within or without the jurisdiction. A retorsion may be confined to acts within the jurisdiction. . . . In the medieval times, when there was no strong central government and Europe was divided among a number of petty feudal states, in fact independent, reprisals were frequently resorted to not only by the princes themselves, but by their subjects, for redress of damages inflicted on an individual or the prince by another state or its members. It has been suggested that this practice

was on the conception which then prevailed of a solidarity existing between a state and its members by which each member of a state was responsible for acts of damage committed by the state or one of the members, and when anyone had suffered damage from another state or its members the obtaining of redress for that damage was the concern of all. It is probable also that the general state of lawlessness and weakness of government induced monarchs and princes to view with indifference reprisals by other states or its members on a subject who was too powerful to be compelled to do justice. . . . The resort to reprisals was indeed an application of the law of self-help, and was not necessarily regarded as an act of war, the distinction between the two being clearly apprehended. The growth of commerce and the increasing value of private property, together with the increasing strength of the central governments, operated to gradually repress reprisals. The first step appears to have been by the various princes repressing independent acts of reprisal by their subjects and requiring authority from the state before proceeding. This license was designated as a special reprisal and when the act contemplated was on the high sea by a vessel, was called letters of marque and reprisal, and the person operating thereunder, if a private citizen, was called a privateer. The increase in commerce and civilization soon outgrew these restrictions and various treaties were negotiated in the effort to suppress a practice which was clearly inconsistent with the growth in law and in order in western Europe and on the high seas. In modern times the practice has been abandoned altogether so far as individuals or states are concerned in times of peace, and the practice of seizing property in time of war may be regarded as the only aspect of the former unrestrained exercise of the power to seize which remains in modern times."—R. R. Foulke, *International law*, v. 2, pp. 100-103, 110.—"Reprisals as a mode of seeking redress or exerting pressure without war were a firmly established institution of the law of nations, and were very often resorted to in former days. They have now fallen much into disuse, mainly because their place has to a large extent been taken by pacific blockade, which is in truth a new form of reprisals, elaborated during the last three-quarters of a century."—J. Westlake, *Collected papers*, p. 569.—All writers are agreed that reprisals should be very sparingly exercised. But very little is to be found in the books. The authors of the *Handbuch des Völkerrechts* deal with the matter under the head of *kriegsraison*, a term which we have rendered by the words 'the casuistry of war.' They argue with some justification that reprisals are the kind of exception which proves the rule, and declare that the relation of *Kriegsraison* to *Kriegsrecht*, of reprisals in war to the laws of war, is analogous to that of Necessity to Criminal Law. This is a fair statement of the case. The analogy suggests the relation of justifiable homicide to murder. The matter has never been regulated, and the disinclination to do so is intelligible enough, for this is certainly a case where regulation might seem to suggest recognition. Professor Holland, who writes with unrivalled authority on these matters, summarises prevalent authoritative opinion upon this subject in the form of four restrictions. (1) The offence in question must have been carefully inquired into. (2) Redress for the wrong, or punishment of the real offender, must be unattainable. (3) The reprisals must be authorized, unless under very special circumstances, by the commander-in-chief. (4) They must not

be disproportioned to the offence and must in no case be of a barbarous character. That is as far as it is possible to go."—T. Baty and J. H. Morgan, *War: Its conduct and legal results*, p. 198-199.—"Reprisals in war occur where one of the belligerents performs an act in the conduct of hostilities which the other belligerent regards as calling for some measure of attempted protection or punishment. The other belligerent will then perform some act by way of damage to the interests of the enemy, in the hope that by so doing, it will deter him from further proceeding in the original act. Different opinions have been expressed as to reprisals, but in practice they have been freely resorted to, and the question as to the adoption depends entirely upon the necessities of the case and the civilization and humanity of the contending parties."—R. R. Foulke, *International law*, v. 2, p. 200.

RETREAT OF THE TEN THOUSAND.

See PERSIA: B. C. 401-400.

RETZ, Jean François Paul de Gondi, Cardinal de (1614-1679), French ecclesiastic and political leader. Took active part in the movement against Cardinal Mazarin, 1648-1649; imprisoned at Vincennes, 1652; escaped, 1654; returned to France, 1662; wrote his "Memoirs," for which he is chiefly noted. See FRANCE: 1640, to 1651-1653.

REUDIGNI, Germanic tribe formerly inhabiting the region of the Elbe, Germany. See AVIONES.

RÉUNION, or Bourbon, island in the Indian ocean, 400 miles southeast of Tamatave, Madagascar, and 130 miles southwest of Port Louis, Mauritius. It is a French possession, and has an area of 965 square miles. Its population in 1921 was 173,190. See MASCARENE ISLANDS; MAURITIUS.

REUSS, formerly two sovereign principalities of central Germany which merged into one republic of the same name on April 4, 1919, and in May, 1919, combined with other Thuringian states to form the republic of Thuringia with the capital at Weimar. See GERMANY: 1918-1920.

REVAL, or Revel, capital and seaport of Esthonia, on the Gulf of Finland, about fifty miles south of Helsingfors. (See RUSSIA: Map of Russia and the new border states.) In 1022 the population was 123,496. The city is said to have been founded by Waldemar II of Denmark in 1219. It joined the Hanseatic League in 1284, and passed to the sovereignty of the Teutonic Knights in 1346. In 1561 it was acquired by Sweden and Peter the Great annexed it to Russia in 1710. It became the capital of the republic of Esthonia in 1919.—See also BALTIC PROVINCES: 1920; RUSSIA: 1920.

REVENUE CUTTER SERVICE, United States.—Organization.—Duties.—Life saving.—Service in war.—"After the freedom of the American colonies had been won through the War of the Revolution the country returned to a peace basis and the Continental Navy was disbanded. From that time on there was no sea force available for the protection of the coasts and the maritime interests of the newly constituted United States until the organization of the Revenue-Cutter Service, under an act of the First Congress, approved by President Washington on August 4, 1790. By the first of November, 1791, ten vessels were ready for duty, and during a period of six years and eleven months revenue cutters formed the only armed force afloat belonging to the young Republic, and were engaged in patrolling the coast line of the country and enforcing its maritime

laws. The first appointments of officers in the Revenue-Cutter Service were made from amongst those who had served in the Continental Navy, and the first commission granted by President Washington to any officer afloat was issued to Captain Hoopley Yeaton, of New Hampshire, in the United States Revenue-Cutter Service. This officer had previously served as a lieutenant on the frigates *Kaleigh* and *Dean* of the Continental Navy. The organization of the Revenue-Cutter Service is similar to the naval establishment and it is mainly due to the constant system of drills and discipline incident to military training that the vessels are always ready for prompt response to calls for help. The exactions of military training are found to be of the greatest value in the humanitarian work on the seas. . . . From the standpoint of national economics the Revenue-Cutter Service occupies a peculiarly advantageous and unique position in that, while steadily employed in times of peace in conserving life and property on the seas, it is in constant readiness for the purely military duty of destroying life and property on the seas should the unfortunate necessity for such action arise. The work of the . . . Service, as defined by law, consists in the enforcement of almost every statute bearing upon the maritime interests of the Nation. Its duties embrace the protection of the customs revenue, involving the right of search of all merchant vessels arriving within the United States or within four leagues thereof if bound to a port in the United States; the suppression of piracy; the search for wrecked and missing vessels; the enforcement of the neutrality laws, by preventing armed expeditions against friendly Governments; the suppression of mutiny; the drilling of the life-saving crews; the enforcement of law and the protection of property in Alaska; the protection of seal and other fisheries in Alaskan waters; the destruction of derelicts and other dangers to navigation along our coasts; the rendering of assistance to vessels in distress and aiding the shipwrecked; the enforcement of the navigation laws and of the national marine quarantine regulations; guarding the safety of the public at yacht races and regattas; the supervision of anchorages at certain ports; the protection of the sponge fisheries in the Gulf of Mexico and the Straits of Florida; the patrol of the ice fields and the destruction of derelicts in the North Atlantic Ocean, both under international agreement; the extending of medical and surgical aid to the crews of American vessels engaged in the deep-sea fisheries. . . . The work of assisting the maritime and commercial interests of the country is not confined to the Atlantic, Pacific, and Gulf coasts, and to the Great Lakes, but extends to the Hawaiian Islands, Porto Rico, the Bering Sea, and Arctic Ocean. In the Arctic regions the laws are upheld and enforced, the seal and other fisheries are protected, and the merchant vessels which sail those northern seas are aided when help is needed. . . . From the date of the establishment of the Life-Saving Service commissioned officers of the Revenue-Cutter Service have been detailed to duty in connection with it, and its efficiency is largely due to their efforts. Under the direction of the General Superintendent of the Life-Saving Service they drill the crews of life-saving stations and investigate cases of loss of life within the scope of life-saving operations. They have given to that Service the benefits of a number of inventions and appliances for the furtherance of its humane work. . . . The revenue cut-

ters co-operate with the Navy whenever the President so directs, and in time of war the duties of the Service are self-evident. . . . In the wars in which the United States has been involved the Revenue-Cutter Service has been to the front with the Navy and the Army. In 1798 and 1799, during the troubles with France, the revenue cutter *Pickering* captured ten prizes in engagements with the French, and another cutter, the *Eagle*, captured five. During the War of 1812 the first capture made was that of the British topsail schooner *Patriot* by the revenue cutter *Jefferson*. A total of fourteen British vessels captured, with their guns, officers, and men, tells briefly the story of the operations of the Revenue-Cutter Service during this war. The troubles with the Seminole Indians also called for the aid of the revenue cutters, in co-operation with the Army and the Navy. An excerpt from the report of Captain Thomas T. Webb, U.S.N., commanding the sloop-of-war *Vandalia*, to Commodore Dallas, in command of the naval squadron, shows the value of the work of the revenue cutters in this war when he says, 'Their prompt and ready co-operation with the Army has called forth the highest commendations from the commanding generals, who take occasion to eulogize the services rendered by the *Vandalia* and revenue cutters.' In the War with Mexico, five revenue cutters were engaged in naval operations and performed efficient service in the attacks on Alvarado and Tabasco. Excellent work was also done in connection with the blockading fleet off the Mexican coast. When a naval force was sent to Paraguay in 1858 the revenue cutter *Harriet Lane* was ordered to join the squadron. In his report to the Secretary of the Navy on the operations . . . during this expedition Commodore Shubrick says, in part, 'I should express my sense of the skill and zeal with which Captain Faunce [U.S.R.C.S.] had used the very efficient vessel under his command in extricating us from our difficulties [in grounding]. At one time I feared that the services of the *Fulton* would be lost altogether to the expedition, and they certainly would have been for a great length of time if not entirely, but for the assistance afforded by the *Harriet Lane*.' The Revenue-Cutter Service participated in the Civil War (1861-1865) both in naval engagements and in the more trying blockade duty. At the attack on Fort Hatteras; in the reconnaissance of the batteries at Norfolk; in the bombardment of Drewry's Bluff, on the James River; and in operations in the Chesapeake Bay the revenue cutters were actively engaged. During the Spanish-American War there were thirteen revenue cutters co-operating with the Navy, one of which, the *McCulloch*, was the subject of commendation by Admiral Dewey in one of his reports to the Secretary of the Navy, in which he speaks of that ship as being 'a valuable auxiliary to the squadron.' It was during this war that the revenue cutter *Hudson*, Lieutenant Frank H. Newcomb, U.S.R.C.S., commanding, took part in the action at Cardenas, Cuba. In this engagement such bravery was shown by Lieutenant Newcomb, his officers and crew, in the rescue of the torpedo boat *Winslow* from imminent danger of destruction by the shore batteries, that Congress awarded a gold medal to Lieutenant Newcomb, and silver and bronze medals, respectively, to the other officers and the members of the crew of the *Hudson*."—United States Treasury Department, *United States Revenue Cutter Service (pamphlet)*.—In 1914 a bill was passed by the United States

Congress combining the Revenue Cutter Service and the Life Saving Service into one organization, known as The Coast Guard. "The Coast Guard Cutters automatically came under control of the Navy when . . . [the World War] was declared. Its vessels, its trained officers and men proved a valuable addition to . . . [the forces of the United States] and rendered notable service in various areas and in many lines of activity at home and abroad. They formed a very important part of . . . [the] forces at Gibraltar . . . constantly engaged in escorting convoys."—J. Daniels, *Our navy at war*, p. 332.

REYDANIYA, Battle of (1517). See TURKEY: 1481-1520.

REYES, Bernardo (d. 1913), Mexican soldier and political leader. Instigated revolt in 1911; surrendered and was imprisoned in the same year. See MEXICO: 1910-1913.

REYES, Rafael (1852-), Colombian statesman and soldier. President of Colombia, 1904-1910. See COLOMBIA: 1904-1909; 1909.

REYNOLDS, John (1713-1788), colonial governor of Georgia, c. 1752-1757. See GEORGIA: 1743-1764.

REYNOLDS, Sir Joshua (1723-1792), English painter. See PAINTING: English.

REYNOSA, Battle of. See SPAIN: 1808 (September-December).

REZA, or Riza Khan, Persian minister of war, 1921-1923. See PERSIA: 1911-1923.

REZANOV, Nicolai Petrovitch de (1764-1807), Russian statesman and administrator. Became privy councillor, 1803; appointed ambassador to Japan, 1804; led an expedition to California, 1806. See CALIFORNIA: 1806-1846.

REZON, Rasun, or Rezin (fl. 730 B. C.), founder of Damascus. See DAMASCUS.

RHÆTIA, RHÆTIANS, VINDELICIANS.—"The Alps from the Simplon pass to the sources of the Drave were occupied by the Rhætians. [See SWITZERLAND: B. C. 1st century.] Beyond the Inn and the Lake of Constance, the plain which slopes gently towards the Danube was known by the name of Vindelicia. Styria, the Kammergut of Salzburg, and the southern half of the Austrian Archduchy, belonged to the tribes of Noricum, while the passes between that country and Italy were held by the Carnians." The Roman conquest of this Alpine region was effected in the years 16 and 15 B. C. by the two stepsons of the Emperor Augustus, Tiberius and Drusus. (See ROME: Empire: B. C. 31-A. D. 14.) In addition to the people mentioned above, the Camuni, the Vennones, the Brenni and the Genauni were crushed. "The free tribes of the eastern Alps appear then for the first time in history, only to disappear again for a thousand years."—C. Merivale, *History of the Romans*, ch. 35.—See also TYROL: Origin.

Settlement of Alemanni. See ALEMANNI: 406-504.

RHAGES. See RAGA.

RHAKOTIS, ancient village in Egypt, on the present site of Alexandria. See ALEXANDRIA: B. C. 332; B. C. 282-246.

RHALLES, Demetrios. See RALLI, DEMETRIOS.
RHEDONES, Gallic tribe. See VENETI OF WESTERN GAUL.

RHEGIUM, Siege of (387 B. C.).—Rhegium, an important Greek city, in the extreme south of Italy, on the strait which separates the peninsula from Sicily, incurred the hostility of the tyrant of Syracuse, the elder Dionysius, by scornfully refusing him a bride whom he solicited. The savage-tempered despot made several attempts without success to surprise the town, and finally laid siege to it with a powerful army and fleet. The inhabitants resisted desperately for eleven months, at the end of which time (387 B. C.) they were starved into surrender. "Dionysius, on entering Rhegium, found heaps of unburied corpses, besides 6,000 citizens in the last stage of emaciation. All these captives were sent to Syracuse, where those who could provide a mina (about £3.17s.) were allowed to ransom themselves, while the rest were

sold as slaves. After such a period of suffering, the number of those who retained the means of ransom was probably very small."—G. Grote, *History of Greece*, pt. 2, ch. 83.

RHEIMS, or Reims, city in northeastern France, on the Vesle, about ninety-eight miles northeast of Paris. In 1921 the population numbered 76,645. The city is built on the site of a stronghold of the Rimi, which was later a Roman camp. It was here that Clovis received baptism, and the cathedral was the place of coronation of the French kings from the thirteenth to the nineteenth century.

Origin of name. See BELGÆ.

1094.—Council of. See PAPACY: 1056-1122.

1429.—Crowning of Charles VII. See FRANCE: 1429-1431.

1814.—Capture by Allies and recovery by Napoleon. See FRANCE: 1814 (January-March).

1874.—Modern fortifications.—In 1874, Rheims was chosen as one of the outer defences of Paris, and the construction of a chain of detached forts was begun.

1914-1918.—Siege by German army.—In August 1914, the city was occupied by the Germans in their march on Paris. After the battle of the Marne they fell back; but throughout the World War the city was bombarded from time to time, and the cathedral was made the object of persistent attack. Irreparable damage was done to this ancient monument, and Rheims itself was practically destroyed. See also WORLD WAR: 1914: I. Western front: s, 5; 1917: II. Western front: b, 1; b, 1, i; 1918: II. RHINE BRIDGEHEADS.—The principal Rhine bridgeheads are Mainz, Coblenz and Cologne.

They were occupied after the World War armistice by French, American and British troops, respectively.

RHINE LEAGUE.—The Rhine League was one of several Bunds, or confederations formed among the German trading towns in the Middle Ages, for the common protection of their commerce. It comprised the towns of southwest Germany and the Lower Rhine provinces. Prominent among its members were Cologne, Wessel and Münster. Cologne, already a large and flourishing city, the chief market of the trade of the Rhine lands, was a member, likewise, of the Hanseatic League (see HANSA TOWNS).—Based on J. Yeats, *Growth and vicissitudes of commerce*, p. 158.—See also CITIES, IMPERIAL AND FREE, OF GERMANY; FEDERAL GOVERNMENT: Medieval leagues in Germany.

RHODE ISLAND: Area.—Geographic description.—Industries.—Population.—Rhode Island is the smallest state in the Union, having a total area of 1,248 square miles. It is bounded

ROGER WILLIAMS

north and east by the state of Massachusetts; south by the Atlantic Ocean and west by the state of Connecticut. Manufacturing is the most important industry of Rhode Island. Since 1870 over twenty-two per cent. of the population have been engaged as wage-earners in factories. The state ranks first in the dyeing and finishing of textiles and in the manufacture of silverware and jewelry; second in the refining of gold and silver. There are some fisheries in Rhode Island, but the shell-fish industry suffered severe loss owing to the pollution of the Providence river and the upper waters of the Narragansett. Agriculture has been steadily on the decline since 1850. In 1920, the population numbered 604,307.

Aboriginal inhabitants. See ALGONQUIAN FAMILY.

1631-1636.—Roger Williams, the founder, in Massachusetts.—Offenses against Boston Puritanism.—Banishment.—On February 5, 1631, "the ship Lyon arrived at Nantasket, with twenty passengers and a large store of provisions. Her arrival was most timely, for the [Massachusetts] colonists were reduced to the last exigencies of famine. Many had already died of want, and

many more were rescued from imminent peril by this providential occurrence. A public fast had been appointed for the day succeeding that on which the ship reached Boston. It was changed to a general thanksgiving. There was another incident connected with the arrival of this ship, which made it an era, not only in the affairs of Massachusetts, but in the history of America. She brought to the shores of New England the founder of a new State, the exponent of a new philosophy, the intellect that was to harmonize religious differences, and soothe the asperities of the New World; a man whose clearness of mind enabled him to deduce, from the mass of crude speculations which abounded in the 17th century, a proposition so comprehensive, that it is difficult to say whether its application has produced the most beneficial result upon religion, or morals, or politics. This man was Roger Williams, then about thirty-two years of age. He was a scholar, well versed in the ancient and some of the modern tongues, an earnest inquirer after truth, and an ardent friend of popular liberty as well for the mind as for the body. As a 'godly minister,' he was welcomed to the society of the Puritans, and soon invited by the church in Salem to supply the place of the lamented Higginson, as an assistant to their pastor Samuel Skelton. The invitation was accepted, but the term of his ministry was destined to be brief. The authorities at Boston remonstrated with those at Salem against the reception of Williams. The Court at its next session addressed a letter to Mr. Endicott to this effect: 'That whereas Mr. Williams had refused to join with the congregation at Boston, because they would not make a public declaration of their repentance for having communion with the churches of England, while they lived there; and, besides, had declared his opinion that the magistrate might not punish the breach of the Sabbath, nor any other offence, as it was a breach of the first table; therefore they marvelled that they would choose him without advising with the council, and withal desiring him, that they would forbear to proceed till they had conferred about it.' This attempt of the magistrates of Boston to control the election of a church officer at Salem, met with the rebuke it so richly merited. The people were not ignorant of the hostility their invitation had excited; yet on the very day the remonstrance was written, they settled Williams as their minister. The ostensible reasons for this hostility are set forth in the letter above cited. That they were to a great extent the real ones cannot be questioned. The ecclesiastical polity of the Puritans sanctioned this interference. Their church platform approved it. Positive statute would seem to require it. Nevertheless, we cannot but think that, underlying all this, there was a secret stimulus of ambition on the part of the Boston Court to strengthen its authority over the prosperous and, in some respects, rival colony of Salem. . . . As a political measure this interference failed of its object. The people resented so great a stretch of authority, and the church disregarded the remonstrance. . . . What could not as yet be accomplished by direct intervention of the Court was effected in a surer manner. The fearlessness of Williams in denouncing the errors of the times, and especially the doctrine of the magistrate's power in religion, gave rise to a system of persecution which, before the close of the summer, obliged him to seek refuge beyond the jurisdiction of Massachusetts in the more liberal colony of the Pilgrims. At Plymouth 'he was well accepted as an assistant in the ministry to Mr. Ralph Smith, then pastor of the church there.'

The principal men of the colony treated him with marked attention. . . . The opportunities there presented for cultivating an intimate acquaintance with the chief Sachems of the neighboring tribes were well improved, and exerted an important influence, not only in creating the State of which he was to be the founder, but also in protecting all New England amid the horrors of savage warfare. Ousamequin, or Massasoit, as he is usually called, was the Sachem of the Wampanoags, called also the Pokanoket tribe, inhabiting the Plymouth territory. His seat was at Mount Hope, in what is now the town of Bristol, R. I. With this chief, the early and steadfast friend of the English, Williams established a friendship which proved of the greatest service at the time of his exile."—S. G. Arnold, *History of the state of Rhode Island and Providence Plantations*, v. 1, ch. 1.—Williams "remained at Plymouth, teaching in the church, but supporting himself by manual labor, nearly two years. His ministry was popular in the main and his person universally liked. Finally, however, he advanced some opinions which did not suit the steady-going Plymouth elders, and therefore, departing 'something abruptly,' he returned to Salem. There he acted as assistant to Mr. Skelton, the aged pastor of the church, and when Mr. Skelton died, less than a year later, became his successor. At Salem he was again under the surveillance of the rulers and elders of the Bay, and they were swift to make him sensible of it. He had written in Plymouth, for the Plymouth Governor and Council a treatise on the Massachusetts Patent, in which he had maintained his doctrine that the King could not give the settlers a right to take away from the natives their land without paying them for it. He was not a lawyer but an ethical teacher, and it was doubtless as such that he maintained this opinion. In our day its ethical correctness is not disputed. It has always been good Rhode Island doctrine. He also criticised the patent because in it King James claimed to be the first Christian prince who discovered New England, and because he called Europe Christendom or the Christian World. Williams did not scruple to denounce these formal fictions in downright Saxon as lies. He does not appear to have been, at any period of his life, a paragon of conventional propriety. A rumor of the treatise got abroad, though it remained unpublished. The patent happened to be a sensitive point with the magistrates. It had been granted in England to an English trading company, and its transfer to Massachusetts was an act of questionable legality. Moreover it was exceedingly doubtful whether the rulers, in exercising the extensive civil jurisdiction which they claimed under it, did not exceed their authority. They were apprehensive of proceedings to forfeit it, and therefore were easily alarmed at any turning of attention to it. When they heard of the treatise they sent for it, and, having got it, summoned the author 'to be censured.' He appeared in an unexpectedly placable mood, and not only satisfied their minds in regard to some of its obscurer passages, but offered it, since it had served its purpose, to be burnt. The magistrates, propitiated by his complaisance, appeared to have accepted the offer as equivalent to a promise of silence, though it is impossible that he, the uncompromising champion of aboriginal rights, can ever have meant to give, or even appear to give, such a promise. Accordingly when they heard soon afterwards that he was discussing the patent they were deeply incensed, though it was doubtless the popular curiosity excited by their own indiscreet action which

elicited the discussion. Their anger was aggravated by another doctrine then put forth by him, namely, that an oath ought not to be tendered to an unregenerate, or, as we should say, an unreligious man, because an oath is an act of worship, and cannot be taken by such a man without profanation. . . . He also taught that an oath being an act of worship, could not properly be exacted from any one against his will, and that even Christians ought not to desecrate it by taking it for trivial causes. . . . The magistrates again instituted proceedings against him, at first subjecting him to the ordeal of clerical visitation, then formally summoning him to answer for himself before the General Court. At the same time the Salem church was arraigned for contempt in choosing him as pastor while he was under question. The court, however, did not proceed to judgment, but allowed them both further time for repentance. It so happened that the inhabitants of Salem had a petition before the court for 'some land at Marblehead Neck, which they did challenge as belonging to their town.' The court, when the petition came up, refused to grant it until the Salem church should give satisfaction for its contempt, thus virtually affirming that the petitioners had no claim to justice even, so long as they adhered to their reculant pastor. Williams was naturally indignant. He induced his church—'enchanted his church,' says Cotton Mather—to send letters to the sister churches, appealing to them to admonish the magistrates and deputies of their 'heinous sin.' He wrote the letters himself. His Massachusetts contemporaries say he was 'unlamb-like.' Undoubtedly they heard no gentle bleating in those letters, but rather the reverberating roar of the lion chafing in his rage. The churches repelled the appeal; and then turning to the Salem church, besieged it only the more assiduously, laboring with it, nine with one, to alienate it from its pastor. What could the one church do,—with the magistracy against it, the clergy against it, the churches and the people against it, muttering their vague anathemas, and Salem town suffering unjustly on its account,—what could it do but yield? It yielded virtually if not yet in form; and Williams stood forth alone in his opposition to the united power of Church and State. . . . The fateful court day came at last. The court assembles, magistrates and deputies, with the clergy to advise them. Williams appears, not to be tried, but to be sentenced unless he will retract. He reaffirms his opinions. Mr. Hooker, a famous clerical dialectician, is chosen to dispute with him, and the solemn mockery of confutation begins. . . . Hour after hour, he argues unsubdued, till the sun sinks low and the weary court adjourns. On the morrow [Friday, October 9, 1635], still persisting in his glorious 'contumacy,' he is sentenced, the clergy all save one advising, to be banished, or, to adopt the apologetic but felicitous euphemism of his great adversary, John Cotton, 'enlarged' out of Massachusetts. He was allowed at first six weeks, afterwards until spring, to depart. But in January the magistrates having heard that he was drawing others to his opinion, and that his purpose was to erect a plantation about Narragansett Bay, 'from whence the infection would easily spread,' concluded to send him by ship, then ready, to England. [See MASSACHUSETTS: 1636.] The story is familiar how Williams, advised of their intent, baffled it by plunging into the wilderness, where, after being 'sorely tost for one fourteen weeks, in a bitter winter season, not knowing what bread or bed did mean,' he settled with the opening spring, on the east bank of the Seekonk,

and there built and planted."—T. Durfee, *Historical discourse: Two hundred and fiftieth anniversary of the settlement of Providence, 1886*.—"The course pursued towards Roger Williams was not exceptional. What was done to him had been done in repeated instances before. Within the first year of its settlement the colony had passed sentence of exclusion from its territory upon no less than fourteen persons. It was the ordinary method by which a corporate body would deal with those whose presence no longer seemed desirable. Conceiving themselves to be by patent the exclusive possessors of the soil,—soil which they had purchased for the accomplishment of their personal and private ends,—the colonists never doubted their competency to fix the terms on which others should be allowed to share in their undertaking. . . . While there is some discrepancy in the contemporary accounts of this transaction, there is entire agreement on one point, that the assertion by Roger Williams of the doctrine of 'soul-liberty' was not the head and front of his offending. Whatever was meant by the vague charge in the final sentence that he had 'broached and divulged new and dangerous opinions, against the authority of magistrates,' it did not mean that he had made emphatic the broad doctrine of the entire separation of church and state. We have his own testimony on this point. In several allusions to the subject in his later writings,—and it can hardly be supposed that in a matter which he felt so sorely his memory would have betrayed him,—he never assigns to his opinion respecting the power of the civil magistrate more than a secondary place. He repeatedly affirms that the chief causes of his banishment were his extreme views regarding separation, and his denouncing of the patent. Had he been himself conscious of having incurred the hostility of the Massachusetts colony for asserting the great principle with which he was afterwards identified, he would surely have laid stress upon it. . . . It is . . . clear that in the long controversy it had become covered up by other issues, and that his opponents, at least, did not regard it as his most dangerous heresy. So far as it was a mere speculative opinion it was not new. . . . To upbraid the Puritans as unrelenting persecutors, or extol Roger Williams as a martyr to the cause of religious liberty, is equally wide of the real fact. On the one hand, the controversy had its origin in the passionate and precipitate zeal of a young man whose relish for disputation made him never unwilling to encounter opposition, and on the other, in the exigencies of a unique community, where the instincts of a private corporation had not yet expanded into the more liberal policy of a body politic. If we cannot impute to the colony any large statesmanship, so neither can we wholly acquit Roger Williams of the charge of mixing great principles with some whimsical conceits. The years which he passed in Massachusetts were years of discipline and growth, when he doubtless already cherished in his active brain the germs of the principles which he afterwards developed; but the fruit was destined to be ripened under another sky."—J. L. Diman, *Orations and essays*, pp. 114-117.

1636.—Wanderings of the exiled Roger Williams.—His followers.—Settlement at Providence.—Dealings with the Indians.—The little that is known of the wanderings of Roger Williams after his banishment from Salem, until his settlement at Providence, is derived from a letter which he wrote more than thirty years afterwards (June 22, 1670) to Major Mason, the hero of the

Pequot War. In that letter he says: "When I was unkindly and unchristianly, as I believe, driven from my house and land and wife and children, (in the midst of a New England winter, now about thirty-five years past,) at Salem, that ever honored Governor, Mr. Winthrop, privately wrote to me to steer my course to Narragansett Bay and Indians, for many high and heavenly and public ends, encouraging me, from the freeness of the place from any English claims or patents. I took his prudent motion as a hint and voice from God, and waving all other thoughts and motions, I steered my course from Salem (though in winter snow, which I feel yet) unto these parts, wherein I may say Peniel, that is, I have seen the face of God. . . . I first pitched, and began to build and plant at Seekonk, now Rehoboth, but I received a letter from my ancient friend, Mr. Winslow, then Governor of Plymouth, professing his own and others love and respect to me, yet lovingly advising me, since I was fallen into the edge of their bounds, and they were loath to displease the Bay, to remove but to the other side of the water, and then he said, I had the country free before me, and might be as free as themselves, and we should be loving neighbors together. These were the joint understandings of these two eminently wise and Christian Governors and others, in their day, together with their counsel and advice as to the freedom and vacancy of this place, which in this respect, and many other Providences of the Most Holy and Only Wise, I called Providence. . . . Some time after, the Plymouth great Sachem, (Oufamaquin,) upon occasion affirming that Providence was his land, and therefore Plymouth's land, and some resenting it, the then prudent and godly Governor, Mr. Bradford, and others of his godly council, answered, that if, after due examination, it should be found true what the barbarian said, yet having to my loss of a harvest that year, been now (though by their gentle advice) as good as banished from Plymouth as from the Massachusetts, and I had quietly and patiently departed from them, at their motion to the place where now I was, I should not be molested and tossed up and down again, while they had breath in their bodies; and surely, between those, my friends of the Bay and Plymouth, I was sorely tossed, for one fourteen weeks, in a bitter winter season, not knowing what bread or bed did mean, beside the yearly loss of no small matter in my trading with English and natives, being debarred from Boston, the chief mart and port of New England."—J. R. Bartlett, ed., *Letters of Roger Williams*, pp. 335-336.—"According to the weight of authority and the foregoing extract, when Williams left Salem he made his way from there by sea, coasting, probably, from place to place during the 'fourteen weeks' that 'he was sorely tossed,' and holding intercourse with the native tribes, whose language he had acquired . . . during his residence at Plymouth. Dr. Dexter and Professor Diman interpret this and other references differently, and conclude that the journey must have been by land. See Dexter, p. 62, note; Nar. Club Pub., Vol. II, p. 87. Perhaps the true interpretation is that the journey was partly by sea and partly by land; that is, from the coast inward—to confer with the natives—was by land, and the rest by sea."—O. S. Straus, *Roger Williams*, ch. 5, and footnote.—Mr. Rider, the well-known critical student of Rhode Island history, has commented on the above passage in Mr. Straus's work as follows: "The distance from Salem by sea to Seekonk was across Massachusetts Bay, Cape Cod Bay, the Atlantic Ocean, Vineyard Sound, Buzzard's Bay, the At-

lantic Ocean again, and Narragansett Bay,—a distance scarcely less than 500 miles, in and out, by the line of the coast; all of which had to be covered either in a birch bark canoe or in a shallop; if in a canoe, then to be paddled, but if in a shallop, where did Williams get it, and what became of it? History does not answer. If Williams was in a boat sailing into Narragansett Bay, 'the pleasure of the Most High to direct my steps into the Bay' would become a positive absurdity unless the Most High meant that Williams should jump overboard! He certainly could have taken no steps in a boat. But if Williams was in a boat, what sense could there be in his saying 'I was sorely tossed for one fourteen weeks, in a bitter (hyperbole again) winter season, not knowing what bread or bed did mean.' Did they not have beds in boats, nor bread? As to the expression in the Cotton Letter, it was his soul, and not his body, which was exposed to poverties, &c.; observe the quotation. . . . When Mr. Straus in his foot-note, speaks of Williams's journey, 'partly by sea and partly by land, that is from the coast inward, to confer with the natives,' he is dealing solely with the imagination. No such conference ever took place."—S. S. Rider, *Roger Williams (Book notes, v. 11, p. 148)*.—It was the opinion of Prof. Gammell that, when Roger Williams fled from Salem, "he made his way through the forest to the lodges of the Pokanokets, who occupied the country north from Mount Hope as far as Charles River. Ousemaguin, or Massasoit, the famous chief of this tribe, had known Mr. Williams when he lived in Plymouth, and had often received presents and tokens of kindness at his hands; and now, in the days of his friendless exile, the aged chief welcomed him to his cabin at Mount Hope, and extended to him the protection and aid he required. He granted to him a tract of land on the Seekonk River, to which, at the opening of spring, he repaired, and where 'he pitched and began to build and plant' [near the beautiful bend in the river, now known as 'Manton's Cove,' a short distance above the upper bridge, directly eastward of Providence.—Foot-note]. At this place, also, at the same time, he was joined by a number of his friends from Salem. . . . But scarcely had the first dwelling been raised . . . when he was again disturbed, and obliged to move still further from Christian neighbors and the dwellings of civilized men [as related in his letter quoted above]. He accordingly soon abandoned the fields which he had planted, and the dwelling he had begun to build, and embarked in a canoe upon the Seekonk River, in quest of another spot where, unmolested, he might rear a home and plant a separate colony. There were five others, who, having joined him at Seekonk, bore him company. [Coasting along the stream and] round the headlands now known as Fox Point and India Point, up the harbor, to the mouth of the Mooshausic River, [he landed, and] upon the beautiful slope of the hill that ascends from the river, he described the spring around which he commenced the first 'plantations of Providence.' It was in the latter part of June, 1636, as well as can be ascertained, that Roger Williams and his companions began the settlement at the mouth of the Mooshausic River. A little north of what is now the centre of the city, the spring is still pointed out which drew the attention of the humble voyagers from Seekonk. Here, after so many wanderings, was the weary exile to find a home, and to lay the foundations of a city, which should be a perpetual memorial of pious gratitude to the superintending Providence which had pro-

tected him and guided him to the spot. . . . The spot at which he had landed . . . was within the territory belonging to the Narragansetts. Canonicus, the aged chief of the tribe, and Miantonomo, his nephew, had visited the colonies of Plymouth and Massachusetts Bay, while Williams resided there, and had learned to regard him, in virtue of his being a minister, as one of the sachems of the English. He had also taken special pains to conciliate their good-will and gain their confidence. . . . Indeed, there is reason to believe that, at an early period after his arrival in New England, on finding himself so widely at variance with his Puritan brethren, he conceived the design of withdrawing from the colonies, and settling among the Indians, that he might labor as a missionary. . . . In all his dealings with the Indians, Mr. Williams was governed by a strict regard to the rights which, he had always contended, belonged to them as the sole proprietors of the soil. . . . It was by his influence, and at his expense, that the purchase was procured from Canonicus and Miantonomo, who partook largely of the shyness and jealousy of the English so common to their tribe. He says, 'It was not thousands nor tens of thousands of money that could have bought of them an English entrance into this bay.'"—W. Gammell, *Life of Roger Williams (Library of American Biography, series 2, v. 4, ch. 6-7)*.—See also U. S. A.: 1607-1752.

1636-1661.—Sale and gift of lands by Indians to Roger Williams.—Transfer to associates.—"The first object of Mr. Williams would naturally be, to obtain from the sachems a grant of land for his new colony. He probably visited them, and received a verbal cession of the territory, which, two years afterwards, was formally conveyed to him by a deed. This instrument may properly be quoted here. 'At Narraganset, the 24th of the first month, commonly called March, the second year of the plantation or planting at Moshassuck, or Providence [1638]; Memorandum, that we, Canonicus and Miantonomo, the two chief sachems of Narraganset, having two years since sold unto Roger Williams the lands and meadows upon the two fresh rivers, called Moshassuck and Wanasquatucket, do now, by these presents, establish and confirm the bounds of these lands, from the river and fields of Pawtucket, the great hill of Notaquoncanot, on the northwest, and the town of Mashapaug, on the west. We also in consideration of the many kindnesses and services he hath continually done for us, both with our friends of Massachusetts, as also at Connecticut, and Apaum, or Plymouth, we do freely give unto him all that land from those rivers reaching to Pawtuxet river; as also the grass and meadows upon the said Pawtuxet river. In witness whereof, we have hereunto set our hands. [The mark (a bow) of Canonicus. The mark (an arrow) of Miantonomo]. In the presence of [The mark of Soshah. The mark of Alsomunsi]. . . . The lands thus ceded to Mr. Williams he conveyed to twelve men, who accompanied, or soon joined, him, reserving for himself an equal part only.'" Twenty-three years later, on the 20th of December, 1661, he executed a more formal deed of conveyance to his associates and their heirs of the lands which had unquestionably been partly sold and partly given to himself personally by the Indians. This latter instrument was in the following words. "Be it known unto all men by these presents, that I, Roger Williams, of the town of Providence, in

the Narraganset Bay, in New England, having, in the year one thousand six hundred thirty-four, and in the year one thousand six hundred thirty-five had several treaties with Canonicus and Miantinomo, the two chief sachems of the Narraganset, and in the end purchased of them the lands and meadows upon the two fresh rivers called Moshasuck and Wanasquatucket, the two sachems having, by a deed under their hands, two years after the sale thereof, established and confirmed the bounds of these lands from the rivers and fields of Pawtucket, the great hill of Notaquoncanot on the northwest, and the town of Mashapaug on the west, notwithstanding I had the frequent promise

receive into the fellowship and society of enjoying and disposing of the said purchase; and besides the first that were admitted, our town records declare, that afterwards we received Chad Brown, William Field, Thomas Harris, Senior, William Wickenden, Robert Williams, Gregory Dexter, and others, as our town book declares; and whereas, by God's merciful assistance, I was the procurer of the purchase, not by monies nor payment, the natives being so shy and jealous that monies could not do it, but by that language, acquaintance and favor with the natives, and other advantages, which it pleased God to give me, and also bore the charges and venture of all the gratuities, which I gave

ROGER WILLIAMS OPPOSING THE PEQUOT EMISSARIES

of Miantinomo, my kind friend, that it should not be land that I should want about these bounds mentioned, provided that I satisfied the Indians there inhabiting. I having made covenant of peaceable neighborhood with all the sachems and natives round about us, and having, of a sense of God's merciful Providence unto me in my distress, called the place Providence, I desired it might be for a shelter for persons distressed for conscience. I then considering the condition of divers of my distressed countrymen, I communicated my said purchase unto my loving friends, John Throckmorton, William Arnold, William Harris, Stukely Westcott, John Greene, Senior, Thomas Olney, Senior, Richard Waterman, and others, who then desired to take shelter here with me, and in succession unto so many others as we should

to the great sachems and other sachems and natives round about us, and lay engaged for a loving and peaceable neighborhood with them, to my great charge and travel; it was therefore thought fit by some loving friends, that I should receive some loving consideration and gratuity, and it was agreed between us, that every person, that should be admitted into the fellowship of enjoying land and disposing of the purchase, should pay thirty shillings unto the public stock; and first, about thirty pounds should be paid unto myself, by thirty shillings a person, as they were admitted; this sum I received, and in love to my friends, and with respect to a town and place of succor for the distressed as aforesaid, I do acknowledge the said sum and payment as full satisfaction; and whereas in the year one thousand six hundred and

thirty-seven, so called, I delivered the deed subscribed by the two aforesaid chief sachems, so much thereof as concerneth the aforementioned lands, from myself and from my heirs, unto the whole number of the purchasers, with all my power, right and title therein, reserving only unto myself one single share equal unto any of the rest of that number; I now again, in a more formal way, under my hand and seal, confirm my former resignation of that deed of the lands aforesaid, and bind myself, my heirs, my executors, my administrators and assigns, never to molest any of the said persons already received, or hereafter to be received, into the society of purchasers, as aforesaid; but that they, their heirs, executors, administrators and assigns, shall at all times quietly and peaceably enjoy the premises and every part thereof, and I do further by these presents bind myself, my heirs, my executors, my administrators and assigns never to lay any claim, nor cause any claim to be laid, to any of the lands aforementioned, or unto any part or parcel thereof, more than unto my own single share, by virtue or pretence of any former bargain, sale or mortgage whatsoever, or jointures, thirds or entails made by me, the said Roger Williams, or of any other person, either for, by, through or under me. In witness whereof, I have hereunto set my hand and seal, the twentieth day of December, in the present year one thousand six hundred sixty-one. Roger Williams. . . . From this document, it appears, that the twelve persons to whom the lands, on the Moshassuck and Wanasquatucket rivers, were conveyed by Mr. Williams, did not pay him any part of the thirty pounds, which he received; but that the sum of thirty shillings was exacted of every person who was afterwards admitted, to form a common stock. From this stock, thirty pounds were paid to Mr. Williams, for the reasons mentioned in the instrument last quoted."—J. D. Knowles, *Memoir of Roger Williams*, ch. 8.

1637.—Pequot War.—"Williams was banished in 1636 and settled at Providence. The Pequot war took place the next year following. The Pequots were a powerful tribe of Indians, dwelling . . . in the valley of the Thames at the easterly end of Connecticut, and holding the lands west to the river of that name. The parties to this war were, the Massachusetts, Plymouth, and Connecticut colonies, assisted by the Narragansett and Mohegan tribes of Indians on one side, against the Pequots, single-handed, on the other. The Pequots undertook to make an alliance with the Narragansetts and the Mohegans (Hubbard's *Indian Wars*, 1677, p. 118), and but for Williams would have succeeded, (Narr. Club, v. 6, p. 269). Williams had obtained a powerful influence over Canonicut and Miantinomi, the great Sachems of the Narragansetts, (Narr. Club, v. 6, p. 17.) and Massachusetts having just banished him, sent at once to him to prevent if possible this alliance, (Narr. Club, v. 6, p. 269). By his influence a treaty of alliance was made with Miantinomi, Williams being employed by both sides as a friend, the treaty was deposited with him and he was made interpreter by Massachusetts for the Indians upon their motion, (Winthrop's *Hist. N. E.*, 1853, v. 1, p. 237). The Narragansetts, the Mohegans, the Niantics, the Nipmucs, and the Cowesets, were by this treaty either neutrals or fought actively for the English in the war."—S. S. Rider, *Political results of the banishment of Williams* (*Book notes*, v. 8, no. 17).—See also NEW ENGLAND: 1637.

1638-1640.—Purchase, settlement and naming of the island.—Coming of Anne Hutchinson.—Founding of Newport.—Early in the spring of

1638, while Mrs. Anne Hutchinson was undergoing imprisonment at Boston (see MASSACHUSETTS: 1636-1638), "Mrs. Hutchinson's husband, Coddington, John Clarke, educated a physician, and other principal persons of the Hutchinsonian party, were given to understand that, unless they removed of their own accord, proceedings would be taken to compel them to do so. They sent, therefore, to seek a place of settlement, and found one in Plymouth patent; but, as the magistrates of that colony declined to allow them an independent organization, they presently purchased of the Narragansetts, by the recommendation of Williams, the beautiful and fertile Island of Aquiday [or Aquinet, or Aquidneck]. The price was 40 fathoms of white wampum; for the additional gratuity of ten coats and twenty hoes, the present inhabitants agreed to remove. The purchasers called it the Isle of Rhodes—a name presently changed by use to Rhode Island. Nineteen persons, having signed a covenant 'to incorporate themselves into a body politic,' and to submit to 'our Lord Jesus Christ,' and to his 'most perfect and absolute laws,' began a settlement at its northern end, with Coddington as their judge or chief magistrate, and three elders to assist him. They were soon joined by others from Boston; but those who were 'of the rigid separation, and savored Anabaptism,' removed to Providence, which now began to be well peopled."—R. Hildreth, *History of the United States*, v. 1, ch. 9.—"This little colony increased rapidly, so that in the following spring some of their number moved to the south-west part of the island and began the settlement of Newport. The northern part of the island which was first occupied was called Portsmouth. Both towns, however, were considered, as they were in fact, as belonging to the same colony. To this settlement, also, came Anne Hutchinson with her husband and family after they had been banished from Massachusetts. There is no record that in this atmosphere of freedom she occasioned any trouble or disturbance. Here she led a quiet and peaceable life until the death of her husband in 1642, when she removed to the neighborhood of New York, where she and all the members of her family, sixteen in number, were murdered by the Indians, with the exception of one daughter, who was taken into captivity. In imitation of the form of government which existed under the judges of Israel, during the period of the Hebrew Commonwealth, the two settlements, Rhode Island and Portsmouth, chose Coddington to be their magistrate, with the title of Judge, and a few months afterward they elected three elders to assist him. This form of government continued until 1640."—O. S. Straus, *Roger Williams*, ch. 6.

1638-1647.—Constitution of Providence Plantation.—Charter and union.—Religious liberty as understood by Roger Williams.—"The colonists of Plymouth had formed their social compact in the cabin of the Mayflower. The colonists of Providence formed theirs on the banks of the Mooshausick. 'We, whose names are hereunder,' it reads, 'desirous to inhabit in the town of Providence, do promise to subject ourselves in active or passive obedience to all such orders or agreements as shall be made for public good for the body, in an orderly way, by the major assent of the present inhabitants, masters of families, incorporated together into a town fellowship, and such others as they shall admit unto them only in civil things.' Never before, since the establishment of Christianity, has the separation of Church from State been definitely marked out by this limitation of the authority of the magistrate to civil things; and

never, perhaps, in the whole course of history, was a fundamental principle so vigorously observed. Massachusetts looked upon the experiment with jealousy and distrust, and when ignorant or restless men confounded the right of individual opinion in religious matters with a right of independent action in civil matters, those who had condemned Roger Williams to banishment, eagerly proclaimed that no well ordered government could exist in connection with liberty of conscience. . . . Questions of jurisdiction also arose. Massachusetts could not bring herself to look upon her sister with a friendly eye, and Plymouth was soon to be merged in Massachusetts. It was easy to foresee that there would be bickerings and jealousies, if not open contention between them. Still the little Colony grew apace. The first church was founded in 1639. To meet the wants of an increased population the government was changed, and five disposers or selectmen charged with the principal functions of administration, subject, however, to the superior authority of monthly town meetings; so early and so naturally did municipal institutions take root in English colonies. A vital point was yet untouched. Williams, indeed, held that the Indians, as original occupants of the soil, were the only legal owners of it, and carrying his principle into all his dealings with the natives, bought of them the land on which he planted his Colony. The Plymouth and Massachusetts colonists, also, bought their land of the natives, but in their intercourse with the whites founded their claim upon royal charter. They even went so far as to apply for a charter covering all the territory of the new Colony. Meanwhile two other colonies had been planted on the shores of the Narragansett Bay: the Colony of Aquidnick, on the Island of Rhode Island, and the colony of Warwick. The sense of a common danger united them, and, in 1643, they appointed Roger Williams their agent to repair to England and apply for a royal charter. It has been treasured up as a bitter memory that he was compelled to seek a conveyance in New York, for Massachusetts would not allow him to pass through her territories. His negotiations were crowned with full success. . . . He found the King at open war with the Parliament, and the administration of the colonies entrusted to the Earl of Warwick and a joint committee of the two Houses. Of the details of the negotiation little is known, but on the 14th of March of the following year [1644], a 'free and absolute charter was granted as the Incorporation of Providence Plantations in Narragansett Bay in New England.' . . . Civil government and civil laws were the only government and laws which it recognized; and the absence of any allusion to religious freedom in it shows how firmly and wisely Williams avoided every form of expression which might seem to recognize the power to grant or to deny that inalienable right. . . . Yet more than three years were allowed to pass before it went into full force as a bond of union for the four towns. Then, in May, 1647, the corporators met at Portsmouth in General Court of Election, and, accepting the charter, proceeded to organize a government in harmony with its provisions. Warwick, although not named in the charter, was admitted to the same privileges with her larger and more flourishing sisters. This new government was in reality a government of the people, to whose final decision in their General Assembly all questions were submitted. 'And now,' says the preamble to the code, . . . 'it is agreed by this present Assembly thus incorporated and by this present act declared, that the form of government

established in Providence Plantations is Democratical.'—G. W. Greene, *Short history of Rhode Island*, ch. 3, 5.—"The form of government being settled, they now prepared such laws as were necessary to enforce the due administration of it; but the popular approbation their laws must receive, before they were valid, made this a work of time; however, they were so industrious in it, that in the month of May, 1647, they completed a regular body of laws, taken chiefly from the laws of England, adding a very few of their own forming, which the circumstances and exigencies of their present condition required. These laws, for securing of right, for determining controversies, for preserving order, suppressing vice, and punishing offenders, were, at least, equal to the laws of any of the neighbouring colonies; and infinitely exceeded those of all other Christian countries at that time in this particular,—that they left the conscience free, and did not punish men for worshipping God in the way, they were persuaded, he required. . . . It was often objected to Mr. Williams, that such great liberty in religious matters, tended to licentiousness, and every kind of disorder: To such objections I will give the answer he himself made, in his own words [Letter to the Town of Providence, January, 1654-5]. 'Loving Friends and Neighbours, It pleaseth God yet to continue this great liberty of our town meetings, for which, we ought to be humbly thankful, and to improve these liberties to the praise of the Giver, and to the peace and welfare of the town and colony, without our own private ends. I thought it my duty, to present you with this my impartial testimony, and answer to a paper sent you the other day from my brother,—'That it is blood-guiltiness, and against the rule of the gospel, to execute judgment upon transgressors, against the private or public weal.' That ever I should speak or write a title that tends to such an infinite liberty of conscience, is a mistake; and which I have ever disclaimed and abhorred. To prevent such mistakes, I at present shall only propose this case.—There goes many a ship to sea, with many a hundred souls in one ship, whose weal and wo is common; and is a true picture of a commonwealth, or an human combination, or society. It hath fallen out sometimes, that both Papists and Protestants, Jews and Turks, may be embarked into one ship. Upon which supposal, I do affirm, that all the liberty of conscience that ever I pleaded for, turns upon these two hinges, that none of the Papists, Protestants, Jews, or Turks, be forced to come to the ship's prayers or worship; nor, secondly, compelled from their own particular prayers or worship, if they practise any. I further add, that I never denied that, notwithstanding this liberty, the commander of the ship ought to command the ship's course; yea, and also to command that justice, peace, and sobriety, be kept and practised, both among the seamen and all the passengers. If any seamen refuse to perform their service, or passengers to pay their freight;—if any refuse to help in person or purse, towards the common charges, or defence;—if any refuse to obey the common laws and orders of the ship, concerning their common peace and preservation;—if any shall mutiny and rise up against their commanders, and officers;—if any shall preach or write, that there ought to be no commanders, nor officers, because all are equal in Christ, therefore no masters, nor officers, no laws, nor orders, no corrections nor punishments—I say I never denied, but in such cases, whatever is pretended, the commander or commanders may judge, resist, compel, and punish such transgressors, according to

their deserts and merits. This, if seriously and honestly minded, may, if it so please the Father of lights, let in some light, to such as willingly shut not their eyes. I remain, studious of our common peace and liberty,—Roger Williams.' This religious liberty was not only asserted in words, but uniformly adhered to and practised; for in the year 1656, soon after the Quakers made their first appearance in New England, and at which most of these colonies were greatly alarmed and offended: Those at that time called the four united colonies, which were the Massachusetts, Plymouth, Connecticut, and New Haven, wrote to this colony, to join with them in taking effectual methods to suppress them, and prevent their pernicious doctrines being spread and propagated in the country.—To this request the Assembly of this colony gave the following worthy answer: 'We shall strictly adhere to the foundation principle on which this colony was first settled; to wit, that every man who submits peaceably to the civil authority, may peaceably worship God according to the dictates of his own conscience, without molestation.' And not to the people of the neighbouring governments only, was this principle owned; but it was asserted in their applications to the ruling powers in the mother country; for in the year 1659, in an address of this colony to Richard Cromwell, then lord protector of England, Scotland, and Ireland, there is this paragraph,—'May it please your highness to know, that this poor colony of Providence Plantations, mostly consists of a birth and breeding of the providence of the Most High.—We being an outcast people, formerly from our mother nation, in the bishops' days; and since from the rest of the New English over-zealous colonies: Our frame being much like the present frame and constitution of our dearest mother England; bearing with the several judgments, and consciences, each of other, in all the towns of our colony.—The which our neighbour colonies do not; which is the only cause of their great offence against us.' But as every human felicity has some attendant misfortune, so the people's enjoyment of very great liberty, hath ever been found to produce some disorders, factions, and parties amongst them. . . . It must be confessed, the historians and ministers of the neighbouring colonies, in all their writings for a long time, represented the inhabitants of this colony as a company of people who lived without any order, and quite regardless of all religion; and this, principally, because they allowed an unlimited liberty of conscience, which was then interpreted to be profane licentiousness, as though religion could not subsist without the support of human laws, and Christians must cease to be so, if they suffered any of different sentiments to live in the same country with them. Nor is it to be wondered at, if many among them that first came hither, being tinctured with the same bitter spirit, should create much disturbance; nor that others, when got clear of the fear of censure and punishment should relax too much, and behave as though they were become indifferent about religion itself. With people of both these characters, the fathers of this colony had to contend. . . . In this age it seemed to be doubted whether a civil government could be kept up and supported without some particular mode of religion was established by its laws, and guarded by penalties and tests: And for determining this doubt, by an actual trial, appears to have been the principal motive with King Charles the Second, for granting free liberty of conscience to the people of this colony, by his charter of 1663,—in which he makes use of these words: 'That they

might hold forth a lively experiment, that a most flourishing civil state may stand, and best be maintained, and that amongst our English subjects, with a full liberty in religious concerns. And that true piety, rightly grounded on gospel principles, will give the best and greatest security to sovereignty, and will lay in the hearts of men the strongest obligations to true loyalty.'—S. Hopkins, *Historical account of the planting and growth of Providence (Massachusetts Historical Society Collections, 2nd series, v. 9)*.

1639.—Religious tenets of first settlers.—First Baptist church.—'There can be little doubt, as to what were the religious tenets of the first settlers of Providence. At the time of their removal here, they were members of Plymouth and Massachusetts churches. Those churches, as it respects government, were Independent or Congregational, in doctrine, moderately Calvinistic and with regard to ceremonies, Pedobaptists. The settlers of Providence, did not cease to be members of those churches, by their removal, nor did the fact of their being members, constitute them a church after it. They could not form themselves into a church of the faith and order of the Plymouth and Massachusetts churches, until dismissed from them; and after such dismissal, some covenant or agreement among themselves was necessary in order to effect it. That they met for public worship is beyond a doubt; but such meetings, though frequent and regular, would not make them a church. Among the first thirteen, were two ordained ministers, Roger Williams and Thomas James. That they preached to the settlers is quite probable, but there is no evidence of any intent to form a church, previous to March 1639. When they did attempt it, they had ceased to be Pedobaptists, for Ezekiel Holyman, a layman, had baptized Roger Williams, by immersion, and Mr. Williams afterwards had baptized Mr. Holyman and several others of the company, in the same manner. By this act they disowned the churches of which they had been members, and for this, they were soon excommunicated, by those churches. After being thus baptized, they formed a church and called Mr. Williams to be their pastor. This was the first church gathered in Providence. . . . Mr. Williams held the pastoral office about four years, and then resigned the same. Mr. Holyman was his colleague. . . . A letter of Richard Scott, appended to 'A New England Fire-Brand Quenched,' and published about 1673, states that Mr. Williams left the Baptists and turned Seeker, a few months after he was baptized. Mr. Scott was a member of the Baptist church for some time, but at the date of this letter, had united with the Friends. According to Mr. Williams' new views as a Seeker, there was no regularly constituted church on earth, nor any person authorized to administer any church ordinance, nor could there be, until new apostles should be sent by the Great Head of the church, for whose coming he was seeking. He was not alone in these opinions. Many in his day believed that the ministry and ordinances of the christian church were irretrievably lost, during the papal usurpation. It has been supposed, by some, that Mr. Williams held these opinions while in Massachusetts, and that this was the reason he denied the church of England to be a true church, and withdrew from his connexion with the Salem church. Aside from the statement of Mr. Scott, above quoted, that Mr. Williams turned Seeker, after he joined the Baptists and walked with them

some months, the supposition is shown to be groundless, by his administering baptism in Providence, as before stated, and joining with the first Baptist church there. These acts he could not have performed, had he then been a Seeker."—W. R. Staples, *Annals of the town of Providence*, ch. 7.

1641-1647.—Samuel Gorton.—Warwick Plantation.—First charter.—"Among the supporters of Mrs. Hutchinson, after her arrival at Aquedneck, was a sincere and courageous, but incoherent and crotchety man named Samuel Gorton. In the denunciatory language of that day he was called a 'proud and pestilent seducer,' or, as the modern newspaper would say, a 'crank.' It is well to make due allowances for the prejudice so conspicuous in the accounts given by his enemies, who felt obliged to justify their harsh treatment of him. But we have also his own writings from which to form an opinion as to his character and views. . . . Himself a London clothier, and thanking God that he had not been brought up in 'the schools of human learning,' he set up as a preacher without ordination, and styled himself 'professor of the mysteries of Christ.' He seems to have cherished that doctrine of private inspiration which the Puritans especially abhorred. . . . Gorton's temperament was such as to keep him always in an atmosphere of strife. Other heresiarchs suffered persecution in Massachusetts, but Gorton was in hot water everywhere. His arrival in any community was the signal for an immediate disturbance of the peace. His troubles began in Plymouth, where the wife of the pastor preferred his teachings to those of her husband. In 1638 he fled to Aquedneck, where his first achievement was a schism among Mrs. Hutchinson's followers, which ended in some staying to found the town of Portsmouth while others went away to found Newport. Presently Portsmouth found him intolerable, flogged and banished him, and after his departure was able to make up its quarrel with Newport. He next made his way with a few followers to Pawtuxet, within the jurisdiction of Providence, and now it is the broad-minded and gentle Roger Williams who complains of his 'bewitching and madding poor Providence.' . . . Williams disapproved of Gorton, but was true to his principles of toleration and would not take part in any attempt to silence him. But in 1641 we find thirteen leading citizens of Providence, headed by William Arnold, sending a memorial to Boston, asking for assistance and counsel in regard to this disturber of the peace. How was Massachusetts to treat such an appeal? She could not presume to meddle with the affair unless she could have permanent jurisdiction over Pawtuxet; otherwise she was a mere intruder. . . . Whatever might be the abstract merits of Gorton's opinions, his conduct was politically dangerous; and accordingly the jurisdiction over Pawtuxet was formally conceded to Massachusetts. Thereupon that colony, assuming jurisdiction, summoned Gorton and his men to Boston, to prove their title to the lands they occupied. They of course regarded the summons as a flagrant usurpation of authority, and instead of obeying it they withdrew to Shawomet [Warwick], on the western shore of Narragansett bay, where they bought a tract of land from the principal sachem of the Narragansetts, Miantonomo."—J. Fiske, *Beginnings of New England*, pp. 163-168.—"Soon afterward, by the surrender to Massachusetts of a subordinate Indian chief, who claimed the territory . . . purchased by Gorton of Miantonomi [or Miantonomo], that Government made a demand of jurisdiction there also; and as

Gorton refused their summons to appear at Boston, Massachusetts sent soldiers, and captured the inhabitants in their homes, took them to Boston, tried them, and sentenced the greater part of them to imprisonment for blasphemous language to the Massachusetts authorities. They were finally liberated, and banished; and as Warwick was included in the forbidden territory, they went to Rhode Island. Gorton and two of his friends soon afterward went to England." Subsequently, when, in 1647, the government of Providence Plantations was organized under the charter which Roger Williams had procured in England in 1644 in the form of a patent from the Long Parliament, "Warwick, whither Gorton and his followers had now returned, though not named in the charter, was admitted to its privileges."—C. Deane, *New England (Narrative and critical history of America, v. 3, ch. 9)*.

1647-1776.—Religious liberty in the colony.—Statutes affecting Roman Catholics.—Position of Jews.—Roger Williams' ideal of religious liberty was fully lived up for close upon a century. But "in 1745 there was printed a revision or compilation of all the laws of the colony since its first charter, which was called the 'Revision of 1745.' This makes reference to a law said to have been passed in 1663-64 to the effect, that 'all men professing Christianity, and of competent estates and civil conversation (Roman Catholics excepted), shall be admitted freemen, or may choose or be chosen colonial officers.' This . . . is referred to by Chalmers, an English author, in his 'Political Annals,' London (1780). Judge Samuel Eddy, . . . who was Secretary of State in Rhode Island from 1797 to 1819, and had all the records at command, says that he carefully investigated all the laws of the colony from the first Charter (1643-44) to 1719, and that 'there is not a word on record of the act, referred to by Chalmers' and contained in the 'Revision of 1745' prior to that year. . . . [W. M. West, in 'American Democracy,' p. 131, states that this disfranchising act was passed in 1719.] The following appears as the law in 1798: 'Whereas a principal object of our venerable ancestors, in their migration to this country and settlement in this State, was, as they expressed it, to hold forth a lively experiment, that a most flourishing civil State may stand and be best maintained with a full liberty in religious concerns: Be it therefore enacted by the General Assembly, and by the authority thereof it is enacted, that no man shall be compelled, nor shall he be enforced, restrained or burdened in his body or goods, nor shall otherwise suffer on account of his religious opinions or belief, but that all men shall be free to profess and by argument to maintain their opinions in matters of religion, and that the same shall in nowise diminish, enlarge or affect their civil capacities.' This whole legal presentation is found in Robert Walsh's 'Appeal,' an octavo, published in Philadelphia, 1819, pp. 429-435. Religious liberty for Jews in Rhode Island must be referred to here. At the opening of the seventeenth century, Holland was the only country where they enjoyed this blessing. Their largest European congregation was in Amsterdam, also their Talmud Torá, or school for Hebrew youth. Leonard Busher made the first plea for their liberty in England, in 1614, saying: 'The king and Parliament may please to permit all Christians, yea, Jews, Turks and pagans, so long as they are peaceable and no malefactors.' A second plea was made by Roger Williams, in three passages of his 'Bloody Tenet,' published in London, 1644,

one of which reads thus, and the others are of the same tenor: 'It is the will and command of God, that since the coming of his Son, the Lord Jesus, a permission of the most paganish, *Jewish*, Turkish or antichristian consciences and worships, be granted to men in all nations and all countries. That civil States with their officers of justice are not governors or defenders of the spiritual and Christian state and worship.' Drs. Featley, Baillie and others charged him with the most shocking blasphemy for this doctrine, and popular indignation was so savage that his book was burned. . . . The Jews had been driven from England in 1290, and after banishment for 364 years, they petitioned Cromwell and Parliament for permission to return, that they might trade in the realm and follow their religion. What influence Williams's book had exerted in favor of their return does not appear, but about six years after its publication their request was granted, and in 1665 they built their first synagogue in King Street, The General Assembly of Rhode Island decreed, in 1647, three years after . . . [the] publication of the 'Bloody Tenet,' and three years before England permitted Jews to return to the realm, that in this colony, 'all men may walk as their consciences persuade them, every one in the name of his God.' . . . On the same high authority [that of the Jewish Calendar by Rabbi Lyons], we find that the Jewish congregation, *Teshuat Israel*, was openly organized in Newport, Rhode Island, in 1658, under the broad provision of 1647, that 'all men,' in that Colony 'May walk as their consciences persuade them, every one in the name of his God.' Such liberty they had not elsewhere on this globe at that time, Holland not excepted. . . . They labored under . . . [no] restrictions in Rhode Island, but in all . . . respects stood upon a perfect equality with Baptists, Quakers and other religionists, and that congregation has remained undisturbed to this day, . . . and is but fourteen years younger than the first Baptist Church of that city. Arnold says that they did much to build up the commercial interests of Newport. Some of them rose in public favor for their services to the State, and on August 20th, 1750, 'Moses Lopez, of Newport, was excused at his own request from all other civil duties, on account of his gratuitous services to the government in translating Spanish documents.' This indicates that he had done all the civil duties of a freeman up to that time. By the year 1763, the little Jewish congregation at Newport had increased to sixty families, their necessities demanding the erection of a synagogue, which they began to build in 1762, and which their rabbi, Isaac Touro, dedicated to Jehovah in 1763, with 'great pomp and ceremony.' This large increase in their number was due chiefly to the great earthquake of 1755. . . . These [and other] facts entirely disprove the alleged fact that in 1663-1664 Rhode Island passed a law restricting religious liberty to those 'professing Christianity.' Some writers have fallen into singular confusion in treating of this subject, making Roger Williams and Rhode Island identical on the one hand, by holding them responsible for each other's acts, and on the other by confounding the civil and religious liberties of that Colony as if they were one. A noted case cited under this groundless assumption is that of Aaron Lopez and Isaac Elizur. These two Hebrews petitioned the Superior Court of Rhode Island, at its March term, in 1762, for naturalization under an Act of Parliament, and were rejected on the ground, that to naturalize them

would violate the spirit of the charter; that none could be made citizens but Christians; and that the Colony was too full of people already. The last of these reasons throw suspicion on the other two given for the decision. . . . The question before . . . [the court] was a purely civil question, involving only the naturalization of a foreigner, and not his right to religious liberty under the laws of Rhode Island. . . . [Charles Deane states that] Rhode Island has always granted liberty to persons of every religious opinion, but has placed a hedge about the franchise [the Catholic exclusion clause]. . . . Was it not natural for the founders of Rhode Island to keep the government in the hands of its friends, while working out their experiment, rather than to put it into the hands of the enemies of religious liberty? . . . [The] distinction between the civil and religious questions involved here is precisely as clear in the case of the Jews as of the Catholics. 'The decision in the case of Lopez appears to be irregular in every respect. It subverts an Act of Parliament, violates the spirit of the charter, enunciates principles never acted upon in the Colony, and finally dismisses the case on a false issue. . . . The reasons assigned for the rejection, in the decree above given, were false. . . . If that had been the fundamental law from the beginning, no one could have been admitted a freeman who was not a Christian; but Jews were admitted to freemanship again and again by the Assembly. . . . The charter of Rhode Island guaranteed, and the action of the Colony uniformly secured, to all people perfect religious freedom. It did not confer civil privileges as a part of that right upon any one, such only were entitled to those whom the freemen saw fit to admit.'—T. Armitage, *History of the Baptists*, pp. 650-656.—See also JEWS: United States: 17th-18th centuries.

1651-1652.—Coddington's usurpation.—Second mission of Roger Williams to England.—Restoration of the charter.—First enactment against slavery.—In 1651, William Coddington, who had been chosen president some time before, but who had gone to England without legally entering the office, succeeded by some means in obtaining from the Council of State a commission which appointed him governor of Rhode Island and Connecticut for life, with a council of six to assist him in the government. This apparently annulled the charter of the colony. Again the colony appealed to Roger Williams to plead its cause in England and again he crossed the ocean, "obtaining a hard-wrung leave to embark at Boston. . . . In the same ship went John Clarke, as agent for the Island towns, to ask for the revocation of Coddington's commission. On the success of their application hung the fate of the Colony. Meanwhile the Island towns submitted silently to Coddington's usurpation, and the main-land towns continued to govern themselves by their old laws, and meet and deliberate as they had done before in their General Assembly. It was in the midst of these dangers and dissensions that on the 10th of May, in the session of 1652, it was 'enacted and ordered . . . that no black mankind or white being forced by covenant, bond or otherwise shall be held to service longer than ten years,' and that 'that man that will not let them go free, or shall sell them any else where to that end that they may be enslaved to others for a longer time, he or they shall forfeit to the Colonie forty pounds.' This was the first legislation concerning slavery on this continent. If forty pounds should seem

a small penalty, let us remember that the price of a slave was but twenty. If it should be objected that the act was imperfectly enforced, let us remember how honorable a thing it is to have been the first to solemnly recognize a great principle. Soul liberty had borne her first fruits. . . . Welcome tidings came in September, and still more welcome in October. Williams and Clarke . . . had obtained, first, permission for the colony to act under the charter until the final decision of the controversy, and a few weeks later the revocation of Coddington's commission. The charter was fully restored."—G. W. Greene, *Short history of Rhode Island*, ch. 6.

1656.—Refusal to join in persecution of Quakers. See MASSACHUSETTS: 1656-1661.

1660-1663.—Charter from Charles II, and boundary conflicts with Connecticut.—"At its first meeting after the King [Charles II] came to enjoy his own again, the government of Rhode Island caused him to be proclaimed, and commissioned Clarke [agent of the colony in England] to prosecute its interests at court, which he accordingly proceeded to do. . . . He was intrusted with his suit about a year before Winthrop's arrival in England; but Winthrop [the younger, who went to England on behalf of Connecticut] had been there several months, attending to his business, before he heard anything of the designs of Clarke. His charter of Connecticut had passed through the preliminary forms, and was awaiting the great seal, when it was arrested in consequence of representations made by the agent from Rhode Island. . . . Winthrop, in his new charter, had used the words 'bounded on the east by the Narragansett River, commonly called Narragansett Bay, where the said river falleth into the sea.' To this identity between Narragansett River and Narragansett Bay Clarke objected, as will be presently explained. A third party was interested in the settlement of the eastern boundary of Connecticut. This was the Atherton Company, so called from Humphrey Atherton of Dorchester, one of the partners. They had bought of the natives a tract of land on the western side of Narragansett Bay; and when they heard that Connecticut was soliciting a charter, they naturally desired that their property should be placed under the government of that colony, rather than under the unstable government of Rhode Island. Winthrop, who was himself one of the associates, wrote from London that the arrangement he had made accorded with their wish. Rhode Island, however, maintained that the lands of the Atherton purchase belonged to her jurisdiction. . . . When Winthrop thought that he had secured for Connecticut a territory extending eastward to Narragansett Bay, Clarke had obtained for Rhode Island the promise of a charter which pushed its boundary westward to the Paucattuck River, so as to include in the latter colony a tract 25 miles wide, and extending in length from the southern border of Massachusetts to the sea. The interference of the charters with each other endangered both. The agents entered into a negotiation which issued, after several months, in a composition effected by the award of four arbiters. Two articles of it were material. One was that Paucattuck River should 'be the certain bounds between the two colonies, which said river should, for the future, be also called, alias, Narragansett, or Narragansett River.' The other allowed the Atherton Company to choose 'to which of these colonies they would belong.' The undesirable consequences of a dispute were thus

averted; though to say that 'Paucattuck River' meant Narragansett Bay was much the same as to give to the Thames the name of the British Channel; and if the agreement between the agents should stand, Connecticut would be sadly curtailed of her domain. [On July 8, 1663], Clarke's charter, which the King probably did not know that he had been contradicting, passed the seals. It created 'a body corporate and politic, in fact and name, by the name of the Governor and Company of the English Colony of Rhode Island and Providence Plantations in New England in America.' Similar to the charter of Connecticut in grants marked by a liberality hitherto unexampled, it added to them the extraordinary provision that 'no person within the said colony, at any time thereafter, should be anywise molested, punished, disquieted, or called in question, for any difference of opinion in matters of religion which did not actually disturb the civil peace of the said colony.' . . . Matters were now all ripe for a conflict of jurisdiction between Rhode Island and Connecticut. Using the privilege of choice secured by the compact between the agents, the Atherton Company elected to place their lands, including a settlement known by the name of Wickford, under the government of the latter colony. Rhode Island enacted that all persons presuming to settle there without her leave should be 'taken and imprisoned for such their contempt.' . . . This proved to be the beginning of a series of provocations and reprisals between the inharmonious neighbors."—J. G. Palfray, *Compendious history of New England*, v. 2, bk. 2, ch. 12.

1683.—Death of Roger Williams.—Influence on political development of the United States.—Estimates of his character.—Roger Williams having given all to his colony, seems to have died without property, dependent upon his children. His son, Daniel, in a letter written in 1710, says: "He never gave me but about three acres of land, and but a little afore he deceased. It looked hard, that out of so much at his disposing, that I should have so little, and he so little. . . . If a covetous man had that opportunity as he had, most of this town would have been his tenants." "Of the immediate cause and exact time of Mr. Williams' death we are not informed. It is certain, however, that he died at some time between January 16, 1682-3, and May 10, 1683. . . . He was in the 84th year of his age."—J. D. Knowles, *Memoir of Roger Williams*, pp. 111, 354.—"We call those great who have devoted their lives to some noble cause, and have thereby influenced for the better the course of events. Measured by that standard, Roger Williams deserves a high niche in the temple of fame, alongside of the greatest reformers who mark epochs in the world's history. He was not the first to discover the principles of religious liberty, but he was the first to proclaim them in all their plentitude, and to found and build up a political community with those principles as the basis of its organization. The influence and effect of his 'lively experiment' of religious liberty and democratic government upon the political system of our country, and throughout the civilized world, are admirably stated by Professor Gervinus in his 'Intro-

duction to the History of the Nineteenth Century.' He says: 'Roger Williams founded in 1636 a small new society in Rhode Island, upon the principles of entire liberty of conscience, and the uncontrolled power of the majority in secular affairs. The theories of freedom in Church and State, taught in the schools of philosophy in Europe, were here brought into practice in the government of a small community. It was prophesied that the democratic attempts to obtain universal suffrage, a general elective franchise, annual parliaments, entire religious freedom, and the Miltonian right of schism would be of short duration. But these institutions have not only maintained themselves here, but have spread over the whole union. They have superseded the aristocratic commencements of Carolina and of New York, the high-church party in Virginia, the theocracy in Massachusetts, and the monarchy throughout America; they have given laws to one quarter of the globe, and, dreaded for their moral influence, they stand in the back-ground of every democratic struggle in Europe.'—O. S. Straus, *Roger Williams*, p. 233.—'Roger Williams, as all know, was the prophet of complete religious toleration in America. . . . That as a man he was 'conscientiously contentious' I should naturally be among the last to deny; most men who contribute materially towards bringing about great changes, religious or moral, are 'conscientiously contentious.' Were they not so they would not accomplish the work they are here to do.'—C. F. Adams, *Massachusetts: Its historians and its history*, p. 25.—'The world, having at last nearly caught up with him, seems ready to vote—though with a peculiarly respectable minority in opposition—that Roger Williams was after all a great man, one of the true heroes, seers, world-movers, of these latter ages. Perhaps one explanation of the pleasure which we take in now looking upon him, as he looms up among his contemporaries in New England, may be that the eye of the observer, rather fatigued by the monotony of so vast a throng of sages and saints, all quite immaculate, all equally prim and stiff in their Puritan starch and uniform, all equally automatic and freezing, finds a relief in the easy swing of this man's gait, the limberness of his personal movement, his escape from the pasteboard proprieties, his spontaneity, his impetuosity, his indiscretions, his frank acknowledgments that he really had a few things yet to learn. Somehow, too, though he sorely vexed the souls of the judicious in his time, and evoked from them words of dreadful reprehension, the best of them loved him; for indeed this headstrong, measureless man, with his flashes of Welsh fire, was in the grain of him a noble fellow; 'a man,' as Edward Winslow said, 'lovely in his carriage.' . . . From his early manhood even down to his late old age, Roger Williams stands in New England a mighty and benignant form, always pleading for some magnanimous idea, some tender charity, the rectification of some wrong, the exercise of some sort of forbearance toward men's bodies or souls. It was one of his vexatious peculiarities, that he could do nothing by halves—even in logic. Having established his major and his minor premises, he utterly lacked the accommodating judgment which would have enabled him to stop there and go no further whenever it seemed that the concluding member of his syllogism was likely to annoy the brethren. To this frailty in his organization is due the fact that he often seemed to his contemporaries an impracticable person, presumptuous, turbulent,

even seditious.'—M. C. Tyler, *History of American literature*, ch. 9, sect. 4.

1776.—Allegiance to the king renounced.—State independence declared.—British occupation.—'The last Colonial Assembly of Rhode Island met on the 1st of May [1776]. On the 4th, two months before the Congressional Declaration of Independence, it solemnly renounced its allegiance to the British crown, no longer closing its session with 'God save the King,' but taking in its stead as expressive of their new relations, 'God save the United Colonies.' . . . The Declaration of Independence by Congress was received with general satisfaction, and proclaimed with a national salute and military display. At Providence the King's arms were burned, and the Legislature assumed its legal title, 'The State of Rhode Island and Providence Plantations.' . . . From the 4th of May, 1776, the Declaration of Independence of Rhode Island, to the battle of Tiverton Heights, on the 29th of August, 1778, she lived with the enemy at her door, constantly subject to invasion by land and by water, and seldom giving her watch-worn inhabitants the luxury of a quiet pillow. . . . In November . . . a British fleet took possession of her waters, a British army of her principal island. The seat of government was removed to Providence.'—G. W. Greene, *Short history of Rhode Island*, ch. 24-25.—See U.S.A.: 1776 (January-June): King George's war measure, etc.

1783-1790.—Conditions after the War of Independence.—Paper money.—Opposition to the Federal constitution.—Tardy entrance into the Union.—Rhode Island emerged from the war of independence bankrupt. "The first question was how to replenish the exhausted treasury. The first answer was that money should be created by the fiat of Rhode Island authorities. Intercourse with others was not much thought of. Fiat money would be good at home. So the paper was issued by order of the Legislature which had been chosen for that purpose. A 'respectable minority' opposed the insane measure, but that did not serve to moderate the insanity. When the credit of the paper began to fall, and traders would not receive it, laws were passed to enforce its reception at par. Fines and punishments were enacted for failure to receive the worthless promises. Starvation stared many in the face. Now it was the agricultural class against the commercial class; and the former party had a large majority in the state and General Assembly. When dealers arranged to secure trade outside the state, that they might not be compelled to handle the local paper currency, it was prohibited by act. When three judges decided that the law compelling men to receive this 'money' was unconstitutional, they were brought before that august General Assembly, and tried and censured for presuming to say that constitutional authority was higher than legislative authority. At last, however, that lesson was learned, and the law was repealed. Before this excitement had subsided the movement for a new national Constitution began. But what did Rhode Island want of a closer bond of union with other states? . . . She feared the 'bondage' of a centralized government. She had fought for the respective liberties of the other colonies, as an assistant in the struggle. She had fought for her own special, individual liberty as a matter of her own interest. Further her needs were comparatively small as to government machinery, and taxation must be small in proportion; and she did not wish to be taxed to support a general government. . . . So when the call was made for each state to hold a convention to elect delegates to a Constitutional Convention, Rhode Island paid not the slightest attention to it. All the other states sent delegates, but Rhode Island sent none; and the work of that convention, grand and glorious as it was, was not shared by her. . . . The same party that favored inflation, or paper money, opposed the Constitution; and that party was in the majority and in power. The General Assembly had been elected with this very thing in view. Meanwhile the loyal party, which was found mostly in the cities and commercial centres, did all in its power to induce the General Assembly to call a convention; but that body persistently refused. Once it suggested a vote of the people in their own precincts; but that method was a failure. As state after state came into the Union, the Union party, by bonfire, parade, and loud demonstration, celebrated the event.—G. L. Harney, *How Rhode Island received the constitution* (*New England Magazine*, May, 1800).—"The country party was in power, and we have seen that elsewhere as well as in Rhode Island, it was the rural population that hated change. The ac-

tion of the other states had been closely watched and their objections noted. One thing strikes a Rhode Islander very peculiarly in regard to the adoption of the federal constitution. The people were not to vote directly upon it, but only second-hand through delegates to a state convention. No amendment to our state constitution, even at this day, can be adopted without a majority of three-fifths of all the votes cast, the voting being directly on the proposition, and a hundred years ago no state was more democratic in its notions than Rhode Island. Although the Philadelphia Convention had provided that the federal constitution should be ratified in the different states by conventions of delegates elected by the people for that purpose, upon the call of the General Assembly, yet this did not accord with the Rhode Island idea, so in February, 1788, the General Assembly voted to submit the question whether the constitution of the United States should be adopted, to the voice of the people to be expressed at the polls on the fourth Monday in March. The federalists fearing they would be outvoted, largely abstained from voting, so the vote stood two hundred and thirty-seven for the constitution, and two thousand seven hundred and eight against it, there being about four thousand voters in the state at that time. Governor Collins, in a letter to the president of Congress written a few days after the vote was taken, gives the feeling then existing in Rhode Island, in this wise:—"Although this state has been singular from her sister states in the mode of collecting the sentiments of the people upon the constitution, it was not done with the least design to give any offence to the respectable body who composed the convention, or a disregard to the recommendation of Congress, but upon pure republican principles, founded upon that basis of all governments originally derived from the body of the people at large. And although, sir, the majority has been so great against adopting the Constitution, yet the people, in general, conceive that it may contain some necessary articles which would well be added and adapted to the present confederation. They are sensible that the present powers invested with Congress are incompetent for the great national government of the Union, and would heartily acquiesce in granting sufficient authority to that body to make, exercise and enforce laws throughout the states, which would tend to regulate commerce and impose duties and excise, whereby Congress might establish funds for discharging the public debt." A majority of the voters of the country was undoubtedly against the constitution, but convention after convention was carried by the superior address and management of its friends. Rhode Island lacked great men, who favored the constitution, to lead her. . . . The requisite number of states having ratified the constitution, a government was formed under it April 30, 1789. . . . [The] General Assembly, at its September session in that year, sent a long letter to Congress explanatory of the situation in Rhode Island. . . . 'The people of this state from its first settlement,' ran the letter, 'have been accustomed and strongly attached to a democratical form of government. They have viewed in the new constitution an approach, though perhaps but small, toward that form of government from which we have lately dissolved our connection at so much hazard and expense of life and treasure,—they have seen with pleasure the administration thereof from the most important trusts downward, com-

mitted to men who have highly merited and in whom the people of the United States place unbounded confidence. Yet, even on this circumstance, in itself so fortunate, they have apprehended danger by way of precedent. Can it be thought strange, then, that with these impressions, they should wait to see the proposed system organized and in operation, to see what further checks and securities would be agreed to and established by way of amendments, before they would adopt it as a constitution of government for themselves and their posterity? . . . Rhode Island never supposed she could stand alone. In the words of her General Assembly in the letter just referred to:—'They know themselves to be a handful, comparatively viewed.' She, like New Hampshire, Massachusetts, New York, Virginia, and North Carolina, hoped to see the constitution amended. Like the latter state she believed in getting the amendments before ratification, and so strong was the pressure for amendments that at the very first session of Congress a series of amendments was introduced and passed for ratification by the states, and Rhode Island, though the last to adopt the constitution, was the ninth state to ratify the first ten amendments to that instrument now in force; ratifying both constitution and amendments at practically the same time. One can hardly wonder at the pressure for amendments to the original constitution when the amendments have to be resorted to for provisions that Congress shall make no law respecting an establishment of religion, or prohibiting the free use thereof, or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble and to petition the government for a redress of grievances; that excessive bail should not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted; for right of trial by jury in civil cases; and for other highly important provisions."—H. Rogers, *Rhode Island's adoption of the Federal constitution* (Rhode Island Historical Society, 1890).—The convention which finally accepted for Rhode Island and ratified the federal constitution met at South Kingston in March, 1790, then adjourned to meet at Newport in May, and there completed its work. 1819-1888.—Struggle for democratic constitution.—Inequalities in suffrage provisions.—Property qualification.—Discrimination against foreigners.—Final achievement of democratic government.—'The adoption [in 1888] of the Amendment to the Constitution of Rhode Island . . . relating to the elective franchise, . . . [brought] to a close a political struggle which began in earnest in 1819. [So great a political change did this amendment make that it is well] . . . to note briefly some of the steps by which the change came to pass. . . . The qualifications of electors was not defined by the charter. That power was given to the General Assembly. A property qualification was first introduced into the laws of 1665, and . . . [even under the law of 1888] in part retained. It was not at first specified to be land, but men of competent estates, without regard to the species of property, 'may be admitted to be freemen.' Even so accurate a scholar as the late Judge Potter, has erred in his statement of the case. He says that by the act of March, 1663-4,

all persons were required to be of 'competent estate.' This is not correct. The proposition was made two years subsequent to the establishment of the charter, and was made by the King of England, and sent by him by commissioners to Rhode Island and was then adopted and enacted by the General Assembly. . . . This qualification was made to depend only on land, by the act of the General Assembly of February 1723-4, and was a purely Rhode Island measure (Digest, of R. I., 1730, p. 110). From that time until the present, . . . this qualification has in some measure remained. The value was then (in 1723) fixed at £100, and practically, it was never changed. It was raised or lowered from time to time to meet the fluctuation of paper money. Sometimes it was in 'old tenor' and sometimes in 'lawful money,' both of which were in paper, and reckoned usually in pounds, shillings and pence. In 1760, the amount was £40 lawful money. In 1763 'lawful money' was defined to be gold or silver. After the decimal system came into use, the mode of reckoning was changed into dollars. Thus in £40 are 800 shillings, which at six shillings to the dollar, which was then New England currency, is equal to \$133.33; by the law of 1798 the sum was made \$134, and so . . . under the recent amendment [of 1888] it remains as a qualification of an elector, who can vote on a question of expenditure, or the levying of a tax. . . . There was practically no change in the qualifications required of a man to become an elector from the earliest times down to 1842. In 1819 a serious attempt was made to obtain a constitution. A convention was called and a constitution was framed and submitted to the people, that is, to the Freemen, for adoption; but the General Assembly enacted that a majority of three-fifths should be required for its adoption. . . . It did not enlarge the suffrage; a proposition to that end received only 3 votes against 61, nor was it of any general benefit, and it was as well that it failed. The political disabilities of men were confined to two classes, to wit: The second son, and other younger sons of freemen, and those other native American citizens of other states who had removed into Rhode Island, and therein acquired a residence. To these two classes, although possessed of abundant personal property, and upon which the state levied and collected taxes, and from whom the state exacted military service, the right to vote was denied, because among their possessions there was no land. It was taxation without representation, the very principle upon which the Revolution had been fought. In 1828 more than one-half the taxes paid in Providence were paid by men who could not vote upon any question. In 1830, in North Providence, there were 200 freemen and 579 native men, over twenty-one years, who were disfranchised. . . . There were in 1832 five men in Pawtucket who had fought the battles for Rhode Island through the Revolution, but who, possessing no land, had never been able to vote upon any question. . . . In another respect a great wrong was done. It was in the representation of the towns in the General Assembly. Jamestown had a representative for every eighteen freemen. Providence, one to every 275. Smithfield, one in every 200. Fifty dollars in taxes, in Barrington, had the same power in the representation that \$750 had in Providence. The minority of legal voters actually controlled the majority. . . . Such then was the political condition of men in Rhode Island in 1830. There were about 8,000 Freemen and

about 13,000 unenfranchised Americans with comparatively no naturalized foreigners among them. The agitation of the question did not cease. In 1829 it was so violent that the General Assembly referred the question to a committee, of which Benjamin Hazard was the head, and which committee made a report, always since known as Hazard's Report, which it was supposed would quiet forever the agitation. But it did not; for five years later a convention was called and a portion of a constitution framed. The question of foreigners was first seriously raised by Mr. Hazard in this report. By this term Mr. Hazard intended not only citizens of countries outside of the United States, but he intended American citizens of other American States. He would deny political rights to a man born in Massachusetts, who came to dwell in Rhode Island, in the same way that he would deny them to a Spaniard. A Massachusetts man must live here one year, the Spaniard three, but both must own land. These ideas were formulated in the constitution of 1834 as far as it went. . . . Fortunately it fell through and by the most disgraceful of actions; and its history when written will form one of the darkest chapters in Rhode Island history. This discrimination against foreign born citizens, that is, men born in countries outside of the United States, became more pointed in the proposed Landholders' Constitution of November 1841. A native of the United States could vote on a land qualification, or if he paid taxes upon other species of property. A foreigner must own land and he could not vote otherwise. This Constitution was defeated. Then came the People's Constitution, (otherwise known as the Dorr Constitution). It made no restrictions upon foreigners; it admitted all citizens of the United States upon an equal footing; negroes were excluded in both documents. This Constitution never went into effect. Then came the . . . Constitution, adopted in September, 1842, by which all the disabilities complained of were swept away with the exception of the discrimination in the case of foreigners. By it negroes were admitted, but foreigners were required to hold lands, as all the various propositions had provided with the single exception of the People's Constitution. Now comes the amendment . . . [of 1888 (see below: 1887-1893)], and parallel with it . . . [is] reproduced the section relating to the same matter from the People's Constitution:

"Qualification of Electors under Amendment (Bourn) to Constitution, adopted April, 1888.

"Section 1. Every male citizen of the United States of the age of 21 years, who has had his residence and home in this State for two years, and in the town or city in which he may offer to vote six months next preceding the time of his voting, and whose name shall be registered in the town or city where he resides on or before the last day of Dec., in the year next preceding to

"Qualification of Electors under the People's (Dorr) Constitution, 1842.

"Section 1. Every white male citizen of the United States of the age of twenty-one years, who has resided in this State for one year, and in any town, city or district of the same for six months next preceding the election at which he offers to vote, shall be an elector of all officers, who are elected, or may hereafter be made eligible by the people * *

"Sec. 4. No elector

shall have a right to vote in the election of all civil officers and on all question in all legally organized town or ward meetings: Provided, that no person shall at any time be allowed to vote in the election of the City Council or any city, or upon any proposition to impose a tax, or for the expenditure of money in any town or city, unless he shall within the year next preceding have paid a tax assessed upon his property therein, valued at least at one hundred and thirty-four dollars.

who is not possessed of, and assessed for ratable property in his own right to the amount of one hundred and fifty dollars, or, who shall have neglected, or refused to pay any tax assessed upon him in any town or city or district, for one year preceding the * * meeting at which he shall offer to vote, shall be entitled to vote on any question of taxation, or the expenditure of any public moneys * *

"Sec. 7. There shall be a strict registration of all qualified voters * * * and no person shall be permitted to vote whose name has not been entered upon the list of voters before the polls are opened.

"It thus appears that the people of Rhode Island . . . at last adopted an amendment to the Constitution, more liberal in its qualifications of electors, than the terms asked by Mr. Dorr, in 1842. . . . All that was asked by Mr. Dorr, and even by those of his party, more radical than himself . . . [was] granted, and even more. And yet they were denounced with every species of vile epithet as Free Suffrage Men?"—S. S. Rider, *End of a great political struggle in Rhode Island (Book notes, v. 5, pp. 53-57)*.—See also SUFFRAGE, MANHOOD; United States: 1800-1864.

1840.—Child labor law.—Its failure. See CHILD WELFARE LEGISLATION: 1813-1871.

1841.—Judicial contest between Rhode Island and Massachusetts on boundary question.—Case for Rhode Island.—Decision against Rhode Island.—In 1841 the Supreme Court of the United States settled a boundary dispute with Massachusetts which had already endured for more than a century. "The case . . . made by the bill, and to be now taken as true, is substantially this: The charter boundary between these colonies was three miles south of Charles River; and the parties intending to mark a line in that place, marked it by mistake, four miles further south, encroaching so much on the territory of Rhode Island; and the complainant [Rhode Island] was led into this mistake by confiding in the representations of the commissioners of the defendant. And as soon as the error was discovered, she made claim to the true line and has ever since contended for it. . . . This dispute is between two sovereign and independent states. It originated in the infancy of their history, when the question in contest was of little importance. And fortunately steps were taken to settle it, in a mode honorable and just, and one most likely to lead to a satisfactory result. In 1754, William Murray, then attorney-general, afterwards Lord Mansfield, was consulted by Connecticut, whether the agreement with Massachusetts respecting their common boundary, in 1713, would be set aside by a commission appointed by the crown. To which Mr. Murray replied,—'I am of opinion, that, in settling the above-mentioned boundary, the crown will not disturb

the settlement by the two provinces so long ago as 1713. I apprehend his Majesty will confirm their agreement, which of itself is not binding on the crown, but neither province should be suffered to litigate such an amicable compromise of doubtful boundaries.' . . . If the matter was open, the same construction already made in the case of Merrimac River must be put upon the same words in the same charter applied to Charles River. . . . From the settlement referred to up to that time this opinion was given by Mr. Murray, forty-one years only had elapsed. And if that time was sufficient to protect that agreement, with how much greater force does the principle apply to the agreements under consideration, which are protected by the lapse of more than a century and a quarter. More than two centuries have passed since Massachusetts claimed and took possession of the territory up to the line established by Woodward and Saffrey. This possession has ever since been steadily maintained, under an assertion of right. It would be difficult to disturb a claim thus sanctioned by time, however unfounded it might have been in its origin. Forty years elapsed before a mistake was alleged, and since such allegation was made nearly a century has transpired. If in the agreements there was a departure from the strict construction of the charter, the commissioners of Rhode Island acted within their powers, for they were authorized 'to agree and settle the line between the said colonies in the best manner they can, as near agreeable to the royal charter as in honor they can compromise the same.' Under this authority, can the complainant insist on setting aside the agreements, because the words of the charter were not strictly observed? It is not clear that the calls of the charter were deviated from by establishing the station of Woodward and Saffrey. . . . The State of Rhode Island, in pursuing this matter, has acted in good faith and under a conviction of right. Possessing those elements, in an eminent degree, which constitute moral and intellectual power, it has perseveringly and ably submitted its case for final decision. [Judgment was given in favor of Massachusetts.]"—J. B. Scott, *Judicial settlement of controversies between states of American Union*, v. 1, p. 873.—See also SUPREME COURT: 1835-1864.

1841-1843.—Dorr rebellion.—Attempt to force constitutional revision.—Old charter replaced by state constitution.—The old colonial charter of Rhode Island remained unchanged until 1843. Its property qualification of the right of suffrage, and the inequality of representation in the legislature which became more flagrant as the state and its cities increased in population, became causes of great popular discontent. The legislature turned a deaf ear to all demands for a democratic basis of government, and in 1841 a serious attempt was made by a resolute party to initiate and carry through a revision of the constitution independently of legislative action. A convention was held in October of that year which framed a constitution and submitted it to the vote of the people. It was adopted by a majority of the votes cast, and, in accordance with its provisions, an election was held the following April. Thomas Wilson Dorr was chosen governor, and on May 3, 1842, the new government was formally inaugurated by its supporters at Providence, where they were in the majority. "If Mr. Dorr and his officers, supported by the armed men then at their command, had taken possession of the State House, Arsenal and other state property, and acted as if

they had confidence in themselves and their cause, the result might have been different. This was the course desired and advocated by Mr. Dorr, but he was overruled by more timid men, who dared go just far enough to commit themselves, disturb the peace of the state, and provoke the Law and Order government, but not far enough to give themselves a chance of success. While the People's government was being organized in Providence, the regularly elected General Assembly met on the same day at Newport, inaugurated the officers as usual, and passed resolutions declaring that an insurrection existed in the state and calling on the President for aid, which was . . . declined with good advice as to amnesty and concession, which was not heeded. On the following day a member of the People's legislature was arrested under the Algerine law, and this arrest was followed by others, which in turn produced a plentiful crop of resignations from that body. . . . At the request of his legislature, Mr. Dorr now went to Washington and unsuccessfully tried to secure the aid and countenance of President Tyler. . . . During Mr. Dorr's absence, both parties were pushing on military preparations. . . . The excitement at this time was naturally great, though many were still inclined to ridicule the popular fears, and the wildest rumors filled the air." On the 18th, the Dorr party made an attempt to gain possession of the state arsenal, but it failed rather ignominiously, and Dorr himself fled to Connecticut. One more abortive effort was made, by others less sagacious than himself, to rally the supporters of the constitution, in an armed camp, formed at Chepachet; but the party in power confronted it with a much stronger force, and it dispersed without firing a gun. This was the end of the "rebellion." "In June, 1842, while the excitement was still at its height, the General Assembly had called still another convention, which met in September and . . . framed . . . [a new] constitution, making an extension of the suffrage nearly equivalent to that demanded by the suffrage party previous to 1841. [See above: 1819-1888.] In November this constitution was adopted, and in May, 1843, went into effect with a set of officers chosen from the leaders of the Landholders' party, the same men who had always ruled the state. . . . Early in August, Governor Dorr, who had remained beyond the reach of the authorities, against his own will and in deference to the wishes of his friends who still hoped, issued an address explaining and justifying his course and announcing that he should soon return to Rhode Island. Accordingly, on October 31, he returned to Providence, without concealment, and registered himself at the principal hotel. Soon afterwards, he was arrested and committed to jail, without bail, to await trial for treason. . . . The spirit in which this trial was conducted does no credit to the fairness or magnanimity of the court or of the Law and Order party. Under an unusual provision of the act, although all Dorr's acts had been done in Providence County, he was tried in Newport, the most unfriendly county in the state. . . . Every point was ruled against Mr. Dorr, and the charge to the jury, while sound in law, plainly showed the opinion and wishes of the court. It was promptly followed by a verdict of guilty, and on this verdict Mr. Dorr, on June 25, just two years from his joining the camp at Chepachet, was sentenced to imprisonment for life. . . . Declining an offer of liberation if he would take the oath to support the new constitution, Mr. Dorr went

to prison and remained in close confinement until June, 1845, when an act of amnesty was passed, and, he was released. A great concourse greeted him with cheers at the prison gates, and escorted him with music and banners to his father's house, which he had not entered since he began his contest for the establishment of the People's constitution. The newspapers all over the country, which favored his cause, congratulated him and spoke of the event as an act of tardy justice to a martyr in the cause of freedom and popular rights. . . . But Mr. Dorr's active life was over. He had left the prison broken in health and visibly declining to his end. The close confinement, dampness, and bad air had shattered his constitution, and fixed upon him a disease from which he never recovered. He lived nine years longer but in feeble health and much suffering."—C. H. Payne, *Great Dorr War* (*New England Magazine*, June, 1890).

ALSO IN: D. King, *Life and times of Thomas Wilson Dorr*.

1861-1865.—Civil War.—Ease in recruiting.—Governor Sprague's financial aid.—Statistics of military contributions.—"The part that the State of Rhode Island took in the . . . [Civil War] was alike creditable to her citizens and to her public men then in positions of authority. No half-hearted measures were pursued, but a quick response was made to all demands for troops or money. An active patriotism animated the people, which found vent in the rapid equipment of regiment after regiment, until in the end it was found that the state had sent into the field more than her quota of troops. . . . On April 16, the day after the President's proclamation, Governor Sprague issued an order for the organization of the First Regiment of Infantry. This was accomplished so promptly that on April 20 the first detachment left Providence under command of Colonel Ambrose E. Burnside, and the second on April 24, under command of Lieutenant-Colonel Joseph S. Pitman. Great credit is given Governor Sprague for his course during the early days of the war, not only for the energy he displayed in raising and equipping troops, but also for the great financial assistance he furnished at the same time. Much money was needed, and the state was not in a position to provide it immediately. The firm of A. & W. Sprague at once offered to guarantee the payment of all accounts for equipping the troops, and as the credit of this manufacturing house at that time was unlimited, there was no difficulty under such circumstances in organizing regiments and securing all the necessary supplies. Governor William Sprague . . . resigned as Governor to take his seat as senator from Rhode Island in the United States Congress, March 3, 1863, and his unexpired term as Governor was completed by William C. Cozzens, who held the office from March 3 to May. James Y. Smith was then elected and held that office until 1866. . . . During Governor Sprague's term the troops went to the front, while . . . during Governor Smith's incumbency recruiting went on to keep the regiments up to their war footing. . . . A branch of the United States Sanitary Commission was established in Providence, October, 1861, and it did good service in collecting and forwarding medicines and supplies. The Providence Ladies' Volunteer Relief Association made and forwarded garments and clothing, and many of the women of the city were actively engaged in the work of this organization, which accomplished a great deal

of good. In the spring of 1863, this society became known as the Rhode Island Relief Association, and worked as auxiliary to the Sanitary Commission. . . . Rhode Island sent into the field during the . . . [war] 24,042 men. . . . These figures, however, include re-enlistments, and the actual quota has been given as 23,778. . . . The casualties were: 255 killed, 1,205 died of wounds or disease, and 1,249 were wounded."—E. Field, *State of Rhode Island and Providence Plantations at the end of the century*, v. 1, pp. 375-379.

1867-1887.—Attempts to amend the state constitution.—Prohibition.—Extension of franchise.—Legislation in regard to Indians.—"Immediately succeeding the period of the . . . [Civil War attempts were] made to extend the elective franchise to naturalized citizens of Rhode Island who were excluded by the constitution of 1843. . . . [See above: 1819-1838.] In 1867 and 1868 attempts were made to remove . . . restrictions by framing a new constitution . . . [but] although the house did pass these proposals as amendments to the constitution, the senate rejected them and the attempt failed. During the administration of Seth Padelford, who succeeded Burnside in 1869 and was governor for four years, similar bills were introduced providing for a constitutional convention, but failed of passage. . . . In 1871, the assembly voted to submit to the people the following amendments: That the property qualification clause should be repealed so far as related to foreign-born citizens, that the registry tax should be repealed and that state appropriation for sectarian purposes should be prohibited. These all failed to receive the necessary three-fifths vote of the people, the third amendment alone obtaining even a majority. . . . Governor Howard was succeeded in 1875 by Henry Lippitt, who headed the administration for two years and was followed, in 1877, by Charles C. Van Zandt. Attempts to change certain provisions in the constitution during this period were frequent, although generally unsuccessful. In 1873 a motion to introduce a woman's suffrage amendment failed, as did a conditional motion of a similar nature, championed by Amasa M. Eaton in the following year. . . . Governor Van Zandt, whose administration began in 1877, was succeeded by Alfred H. Littlefield, 1880-'83, Augustus O. Bourn, 1883-'85, and George P. Wetmore, 1885-'87. In this decade the attempts to alter the constitution were chiefly in regard to the introduction of woman's suffrage, the repeal of the registry tax, the prohibition of liquor, and the extension of the franchise to naturalized citizens who served in the Union army or navy during the Civil War. Only the last two propositions met with favor. Liquor legislation had often been a subject of discussion before the assembly. Although a sort of prohibitory law had been tried for a short period, the state had been under some form of license for practically its whole existence. There had been a growing feeling that the license system had not accomplished the best results, and of course absolute lack of any restraint was too dangerous a procedure. . . . With the hope of thus bettering the situation, the legislature, in 1886, voted to submit to the people the following amendment: 'The manufacture and sale of intoxicating liquors to be used as a beverage shall be prohibited. The general assembly shall provide by law for carrying this article into effect.' In the April election the people sealed their approval of the new system by a vote of 15,113 to 0,230. But the prohibitory method proved far from satis-

factory. The violation and defiance of the law were general, and cases were rarely pressed. In January, 1889, the assembly voted that the previous prohibitory amendment should be annulled, and in June the people concurred in their opinion by a vote of 28,315 to 9,950. A special session of the legislature was called in July, when a new license law was passed. At the same session of March, 1886, that passed the prohibitory amendment, the following amendment was also passed for the second time and offered to the approval of the people: 'All soldiers and sailors of foreign birth, citizens of the United States, who served in the army or navy of the United States for this state in the late Civil War, and who were honorably discharged from such service, shall have the right to vote on all questions in all legally organized town, district or ward meetings, upon the same conditions and under and subject to the same restrictions as native born citizens.' At the election in April, it was formally approved by the people by a vote of 18,993 to 1,477.

"During this decade, from 1877 to 1887, among the acts passed of some importance was that abolishing tribal authority and tribal relations of the Narragansett Indians. This tribe had been undergoing a gradual process of degeneration, and for many years the annual appropriation for the Indian school had proved of no practical benefit. Accordingly, on March 31, 1880, all distinctive legislation connected with them was repealed, and a few months later the state purchased their tribal lands, which were sold at auction."—E. Field, *State of Rhode Island and Providence Plantations at the end of the century, v. 1, pp. 380-381, 384.*

1877-1887.—Harbor improvements.—"An important movement, initiated by the harbor commissioners in 1877, was that of improving the harbor facilities in Narragansett Bay and its estuaries. Congress, by 1883, had appropriated \$355,000 for this purpose, and thereafter made such further appropriations as the necessity of the work required. During the process of operations, the channel of the bay, and also of the Providence and Pawtucket rivers was widened and dredged, Newport harbor was deepened, work on the Block Island break-water and harbor was begun, and improvements were made in several of the smaller rivers. This aid given to the facilities for navigation was well placed, and resulted in increased commercial enterprise. Other important measures of this same period were the final adjusting of the two boundary questions—the northern line with Massachusetts in March, 1883, and the western line with Connecticut in May, 1887."—E. Field, *State of Rhode Island and Providence Plantations at the end of the century, v. 1, p. 385.*

1887-1893.—Suffrage amendment to constitution.—Provision for plurality.—"At the January session in 1887 a motion was successfully introduced, promising the long sought for extension of the suffrage. Senator Bourn of Bristol presented an amendment to the constitution, providing for the substitution of a poll-tax for the registry tax, and the removal of discriminations against naturalized citizens. [See above: 1810-1888.] It again passed both houses at a special November session in 1887, and when submitted to the people on April 4, 1888, it was adopted by a vote of 20,668 to 12,193. A difference of opinion then arose as to the operation of this amendment upon the registry laws mentioned in Chapter VII of the Public Statutes. Upon requisition of the Governor as to the subject, the Supreme Court de-

cidated that any provisions in the constitution conflicting with the amendment were annulled and that the present registry laws was fully operative. . . . During the years from 1889 to 1893 the requirements of a majority instead of a plurality vote seemed frequently to defeat the choice of the people in their election of a Governor. In 1887 Governor Wetmore had been defeated for re-election by John W. Davis, the Democratic candidate, who in turn was defeated in 1888 by Royal C. Taft, the Republican candidate. In 1889 the popular vote was considerably increased by the enfranchisement of naturalized citizens under the Bourn amendment, and ex-Governor Davis received a large plurality, but he failing to receive a majority over all, the Republican candidate, Herbert W. Ladd, was elected by the grand committee. Ex-Governor Davis again received a plurality over Governor Ladd in 1890, and failing of a majority was elected by the grand committee. In 1891 he received a plurality again, but the Republicans having a majority in grand committee, ex-Governor Ladd was elected Governor. In 1892 D. Russell Brown and William C. T. Wardwell were the candidates respectively of the Republicans and Democrats, and the former was chosen by the people. The next year Governor Brown's opponent was David S. Baker, who was given a small plurality of the popular vote. Owing to a disagreement of the two houses, one of which was controlled by the Republicans and the other by the Democrats, they did not meet in grand committee, and the old state officials held over. This frequent defeat of the popular will showed that some change was needed. Accordingly a constitutional amendment providing for plurality instead of majority elections was passed and submitted to the people in November, 1893. It was approved by a vote of 26,703 to 3,331."—E. Field, *State of Rhode Island and Providence Plantations at the end of the century, v. 1, pp. 386-387.*

1893-1898.—Judiciary Act.—Factory inspection law.—Improvement of highways.—Part in Spanish-American War.—"Under the title of 'An act to simplify the duties, equalize the burdens, and increase the efficiency of the Judiciary of the State,' [in 1893] an act was passed altering those chapters of the public laws that related to the judiciary, repealing those measures that were obsolete, and harmonizing conflicting statutes. The most important act of 1894 was the factory inspection law, passed on April 26. This provided for the appointment of two factory inspectors, regulated the employment of child labor, and required better sanitary arrangements in factories. On May 23, 1895, an act was passed for the improvement of state highways. A commission had been appointed in 1892 to inquire into this matter, and upon their report, it was enacted that a state highway commissioner should be appointed whose duty it was to provide for the improvement of highways and to encourage better methods of roadmaking. Provision was also made for the more effective maintenance and repair of highways and bridges. . . . The most important events of the year 1898 were those connected with the war with Spain. At the very beginning of the struggle, the general assembly, on April 21, 1898, appropriated \$150,000 'to defray such military and naval expenses as may be necessary by reason of the existing conditions between the United States and the Kingdom of Spain.' When, on April 23, 1898, President McKinley issued the call for troops, recruiting offices were immediately opened in Providence, Newport,

Pawtucket, Woonsocket and Westerly. Regiments . . . [were] quickly enlisted."—E. Field, *State of Rhode Island and Providence Plantations at the end of the century*, v. 1, pp. 388-389.

1900.—Constitutional amendments.—Erection of new state house.—Capital located in Providence.—"The propositions for a constitutional convention had received somewhat of a drawback through the opinion rendered by the Supreme Court in 1883, that the constitution could be amended only in the way provided for by the instrument itself. The only feasible method in order to remove objectionable features in the constitution, was for one legislature to submit to the succeeding legislature specific amendments to separate provisions. At the January session of 1900 a series of amendments were introduced abolishing the May session [which sat in Newport] and therefore Newport as a state capital; increasing the pay of assemblymen to five dollars a day, for not more than sixty days in a year; changing the date of the state election from April to November, extending the time for registration of voters to June 30 of each year; and making several minor provisions for the election of general officers. This motion passed both houses at the January session and again at the following May session. In November, 1900, it was submitted to the people, and was accepted by a vote of 24,351 to 11,959. In many ways the most important movement inaugurated toward the close of the century was the building of the new marble State House. . . . In 1890 a committee was finally appointed to consider and report upon the subject. In accordance with the recommendation, a statehouse commission consisting of thirteen men was chosen by the assembly with full powers to select a site and build a new capitol. An enabling act, authorizing the assembly to provide for the issue of \$1,500,000 in statehouse bonds was passed and in November, 1892, was sealed with the popular approval. Additional issues of bonds to the amount of \$800,000 in April, 1898, and \$700,000 in November, 1900, brought the total up to \$3,000,000. Ground was broken for the building on September 16, 1895, when Governor Lippitt removed the first spadeful of earth, and the corner-stone was laid with impressive Masonic ceremonies on October 15, 1896. The assembly held its first session in the new building in January, 1901. The completion of this beautiful marble palace and the creation of Providence as the sole capital city mark an epoch in Rhode Island's history. For the first two centuries of the state's existence, . . . the assembly had been making a circuit of Narragansett Bay in its endeavor to hold legislative sessions. In 1854, the number of capitals was reduced from five to two. Providence and Newport were the two largest towns, and henceforth Rhode Island indulged in the peculiar distinction of having two capitals. But as the manufacturing population in the northern part of the state gradually increased, the business of government centered more in that section and especially in the rapidly growing city of Providence. At the very close of the century, when Providence showed such gains as to have a population nearly five times as large as any other city in the state, the inevitable change came."—E. Field, *State of Rhode Island and Providence Plantations at the end of the century*, v. 1, pp. 390, 392.

1909-1922.—Constitutional amendments.—Taxation and workmen's compensation.—Factory laws.—Woman suffrage.—Bond issue.—Part in

World War.—Action on Volstead Act.—In 1909 important constitutional amendments were passed. One of these provided for a needed redistricting of the state, another made the lieutenant-governor presiding officer in the Senate, the third and perhaps most important gave the governor, for the first time, the veto power. In 1912 a tax act was passed providing for a board of tax commissioners and a state tax upon corporations. An employers' liability act was also passed in this year (1912). (See SOCIAL INSURANCE: Details for various countries; United States: 1920.) Factory laws regarding hours of labor for persons under twenty-one were amended, and in 1913 a fifty-four hour week for women and children was established in certain employments. In 1916 a bond issue of \$850,000 for new buildings for the state penal and charitable institutions was passed by referendum. The following year (1917) the board of control and supply and the board of charities and correction were succeeded by a state penal and charitable commission. In 1917 women received the right to vote for presidential electors. Rhode Island furnished 16,861 men for service in the World War or .45% of the whole force. Liberty and Victory Loans were subscribed to the amount of \$209,444,110. On March 13, 1918, Rhode Island refused to ratify the Eighteenth Amendment. In 1920 the state brought suit in the United States Supreme court to test the validity of the Amendment and the Volstead Act but it was dismissed. [See LIQUOR PROBLEM: United States: 1919-1920.] A special committee was appointed in 1922 to determine how far the statutes of Rhode Island deny or abridge the political and civil rights of women.

RHODES, Colossus of.—"In the elementary works for the instruction of young people, we find frequent mention of the Colossus of Rhodes. The statue is always represented with gigantic limbs, each leg resting on the enormous rocks which face the entrance to the principal port of the Island of Rhodes; and ships in full sail passed easily, it is said, between its legs; for, according to Pliny the ancient, its height was 70 cubits. This Colossus was reckoned among the seven wonders of the world, the six others being, as is well known, the hanging gardens of Babylon, devised by Nitocris, wife of Nebuchadnezzar; the pyramids of Egypt; the statue of Jupiter Olympus; the Mausoleum of Halicarnassus; the temple of Diana at Ephesus; and the Pharos of Alexandria, completely destroyed by an earthquake in 1303. Nowhere has any authority been found for the assertion that the Colossus of Rhodes spanned the entrance to the harbour of the island and admitted the passage of vessels in full sail between its widestretched limbs. . . . The following is the real truth concerning the Colossus." After the abandonment of the siege of Rhodes, in 305, by Demetrius Poliorcetes, "the Rhodians, inspired by a sentiment of piety, and excited by fervent gratitude for so signal a proof of the divine favour, commanded Chares to erect a statue to the honour of their deity [the sun-god Helios]. An inscription explained that the expenses of its construction were defrayed out of the sale of the materials of war left by Demetrius on his retreat from the island of Rhodes. This statue was erected on an open space of ground near the great harbour, and near the spot where the pacha's seraglio now stands; and its fragments, for many years after its destruction, were seen and admired by travellers."—O. Delepierre, *Historical difficulties*, ch. 1.—"The ancient authors have told us little of this great work of Chares, but his was a Herculean task. For twelve . . . years he laboured, and . . . in the year 280 B. C., his task was completed. Section by section the brass had been cast in moulds, and was ready to be raised on its foundation in the harbour. As the monstrous brass legs were erected, the great hollows within were filled with stone masonry, lest the body become top heavy and fall over. Thus the statue grew upward. . . . The height of the Colossus is generally given as seventy cubits, or about one hundred and five feet. . . . Within was a spiral stairway leading to its head, where, if mediæval tradition were true, was a beacon light to guide the ships to the city. No authoritative picture of the statue has survived, and so meagre are the ancient descriptions that every attempt to restore it would be in vain. We only know that it was of brass, and so immense in size, and so beautiful in workmanship, that it won the admiration of the world."—E. J. Banks, *Seven wonders of the ancient world*, pp. 151-163.—In 244 B. C. the Colossus was destroyed by an earthquake and its restoration was forbidden by the oracle at Delphi.

RHODES, Island of: Ancient history.—"The most easterly of the Ægean islands is Rhodes [see ÆGEAN], lying twelve miles from the Asia Minor shore, just where Cape Alypo juts into the sea. It is the largest of the Sporades group, yet its length from north-east to south-west is but forty-five miles; its width is half its length; its area . . . 424 square miles. [See CRUSADES: Map of Mediterranean lands after 1240.] . . . History has not yet told us the name of the first people who lived upon the island, or when or whence they came, yet we know that Rhodes was inhabited centuries before Homer sang of Troy. Tradition says that

the Telchines, renowned for their skill as metal workers, were the first to settle there. The earliest Rhodian inhabitants of whom history speaks were the Greek colonists from Argos. . . . At the extreme north-eastern end of the island is a large harbour embraced by two of the arms projecting from the mountains. There small bands of colonists had built their homes, but it was not till 408 B. C. that the harbour was selected as the site of the city of Rhodes. Hippodamus, an architect of Miletus, was selected to lay out its plan, and the new capital of the thriving little kingdom soon rivalled the older cities of Greece. . . . The fame of Rhodes aroused the covetousness of her neighbours. Its independence was brief. Successively it became subject to Sparta and to Athens, and to Artemisia of Halicarnassus, who built the wonderful tomb to her husband Mausolus."—E. J. Banks, *Seven wonders of the ancient world*, pp. 156-158.

B. C. 412.—Revolt from Athens. See GREECE: B. C. 413-412.

B. C. 378-357.—In the new Athenian confederacy.—Revolt and secession.—Social War. See ATHENS: B. C. 378-357.

B. C. 340.—Capture by Persians.—"It is not known when or how Artemisia's troops were driven out: but the fact is certain, for her successor, Idreus, had to seize the place afresh."—C. Torr, *Rhodes in ancient times*, p. 12.

B. C. 332.—Capture by Alexander the Great.—Eighty years after its capture by the Persians the city "fell into the hands of Alexander the Great. But when Alexander died it recovered its freedom. Again at Peace, Rhodes prospered. Once more its merchant ships covered the seas. Alexandria at that time was the great market where the grains of India and Africa were stored, but it was in Rhodian ships that they were distributed throughout the world. Thus was formed a strong bond between the little island and the great Egyptian city."—E. J. Banks, *Seven wonders of the ancient world*, p. 158.

B. C. 304.—Siege by Demetrius.—"When Alexander died, Antigonus, one of his generals, became King of Macedonia. A quarrel arose between Macedonia and King Ptolemy of Egypt, and Antigonus, with his son Demetrius, made war upon the Egyptian King. Then the commerce and the prosperity of little Rhodes were threatened, for if Alexandria fell, there would be no grain for the Rhodian ships to carry. Rhodes, therefore, sent its fleet to the aid of Ptolemy and the Macedonians were driven home. [See MACEDONIA: B. C. 310-301.] . . . Demetrius, determined that it should be punished for causing his defeat, laid siege of the city."—E. J. Banks, *Seven wonders of the ancient world*, p. 150.—"Demetrius Poliorcetes landed in the spring of 304 B. C. without opposition and established a camp and a harbour near the great city. His assaults were first mainly directed against the harbours. The city was in grave peril but at last the Rhodian sailors inflicted such damage on the floating siege-engines that attacks by sea were abandoned and with them all hope of starving out the garrison. After this the Rhodian cruisers cut off the invaders supplies, while provisions were thrown into the city by Ptolemy. Cassander and Lysimachos, and reinforcements came from Egypt and Crete. Some months were now spent in building the Helepolis (a movable wooden tower nine stories high) and other engines for the assault by land. With these the walls were breached and decisive action was fought in the very streets of the city. But at the end of a year, Rhodes was still untaken. . . .

Antigonus directed Demetrius to make peace and Ptolemy . . . advised the Rhodians to accept any reasonable terms."—C. Torr, *Rhodes in ancient times*, p. 14.—"The unsuccessful siege of Rhodes, B. C. 305 or 304, by Demetrius, the son of Antigonus, was one of the great events of ancient military history. It showed not only the power but the virtues of this merchant aristocracy. They rebuilt their shattered city with great magnificence. They used the metal of Demetrius's abandoned engines for the famous Colossus. . . . It was doubtless during the same period that Rhodes perfected that system of marine mercantile law which was accepted not only by all Hellenistic states, but acknowledged by the Romans down to the days of the empire. . . . We do not know what the detail of their mercantile system was, except that it was worked by means of an active police squadron, which put down piracy, or confined it to shipping outside their confederacy, and also that their persistent neutrality was only abandoned when their commercial interests were directly attacked. In every war they appear as mediators and peace-makers. There is an allusion in the 'Mercator' of Plautus to young men being sent to learn business there, as they are now sent to Hamburg or Genoa. The wealth and culture of the people, together with the stately plan of their city, gave much incitement and scope to artists in bronze and marble, as well as to painters, and the names of a large number of Rhodian artists have survived on the pedestals of statues long since destroyed. But two famous works—whether originals or copies seems uncertain—still attest the genius of the school, the 'Laocoon,' now in the Vatican, and the 'Toro Farnese.'"—J. P. Mahaffy, *Story of Alexander's empire*, ch. 20, with footnote.—See also SCULPTURE: Hellenistic.

RHODES, Knights of.—During their occupation of the island, the Knights Hospitallers of St. John of Jerusalem were commonly called Knights of Rhodes, as they were afterwards called Knights of Malta. See HOSPITALLERS OF ST. JOHN OF JERUSALEM.

RHODES SCHOLARSHIPS.—Cecil Rhodes, himself an Oxford man, "conceived the notion of sending representative young men from the British Empire, the United States, and Germany to Oxford University. . . . Mr. Rhodes drew up four wills, in 1877, 1882, 1888, and 1891, which were all inspired by the same central idea—the widening of Anglo-Saxon influence with a view to securing the peace of the world. . . . Sixty-six of the Scholarships provide for all the self-governing Colonies of the Empire and for some others. An annual Scholarship is given to each Province of Canada, each State of Australia, to New Zealand, Newfoundland, Natal, Jamaica, and Bermuda. To Cape Colony he gave four annual Scholarships and to Rhodesia three. He believed that if the young men who are to rule the various parts of the Empire in the next generation, could become familiar with each other in their youth, and by an education together grow into mutual understanding, it would go far to solve the problem of united action when the need should arise. While he aimed at the unification of the British Empire, he firmly believed that he was working for the good of mankind. His vision grew. The great development of the United States struck his imagination. He saw that the Anglo-Saxon element exerted a controlling influence in that country. . . . He thought it was the prime duty of statesmanship in our day to draw the British Empire and the United States into the closest bonds of sympathy and understanding. Therefore he ordered that two Scholarships should be given to each State, but that only one should be filled in any given year. Each Scholarship is good for three years, so this statement means that each State may send a representative to Oxford in each of two successive years, but no qualifying examinations are held and no appointment is made the third year of each triennium. A codicil [provided] for the assignment of five Scholarships annually of 250 pounds each to Germany. The German Scholars [were] appointed by the Emperor. . . . Mr. Rhodes stipulated that in an election to a Scholarship regard should be had to (1) a candidate's literary and scholastic attainments; (2) his fondness for and success in manly outdoor sports; (3) his qualities for manhood, truth, courage, devotion to duty, sympathy for and the protection of the weak, kindness, unselfishness, and fellowship; (4) his exhibition during school days of moral force of character and of instincts to lead and to take an interest in his schoolmates, for those latter attributes will be likely in after life to guide him to esteem the performance of public duties as his highest aim. A man's race or religious opinions weigh neither in favor of nor against any candidate."—L. B. Mitchell, *Rhodes scholarships (University of New Mexico Bulletin, whole no. 73, Educational Series, v. 1, no. 8, Mar., 1914, pp. 237, 238-239)*.—The scholarships were not given during the World War, but were resumed in 1919.

RHODESIA: Geographical description.—Area.—Population.—Resources.—Rhodesia is a territory in British South Africa, having an area of about 430,375 square miles. [See AFRICA: Map; BRITISH EMPIRE: Extent.] It is bounded on the

south by Bechuanaland and the Transvaal, on the east by Portuguese East Africa, Nyasaland and Tanganyika territory and the Congo, and on the west by Portuguese West Africa, the Congo State and Bechuanaland. The Zambesi river divides it into Northern and Southern Rhodesia. In 1921, there were 33,620 Europeans and 770,000 natives in Southern Rhodesia. Rhodesia is essentially a mining country, gold being the principal product, but there is a great deal of stock raising and farming as well. In 1916, there were 17,762 miles of railroads open for traffic. Two great trunk lines join the territory to the southern coast ports and cross the Zambesi at the Victoria Falls, penetrating central Africa, while the other line connects the former with Beira on the East coast. The native population [of Northern and Southern Rhodesia] in 1913 was about 712,780, of whom about 400,000 were living in Reserves; the total area of the Reserves allowing a higher amount for each inhabitant than that obtaining in other parts of South Africa. . . . The Chief Commissioner in Matabeleland reported [1902] that the progress of transition from a well-defined but barbarous social system to one of progressive civilization continued to accelerate, though it was bound to be slow in a country showing so great a disparity between the native and the European population. Firm and patient tutelage was the only way to counteract the disintegrating and degrading tendencies of the first contact with civilization. . . . The local native . . . is by instinct an agriculturist and stock-breeder; and in these directions he has shown a distinct tendency to acquire knowledge with a view to further his own interests. . . . [Therefore] it seemed advisable to increase the responsibilities of the chiefs and also to set on foot native councils with certain powers in regard to local matters. . . . A severe epidemic of influenza in 1918 . . . added to other ills; [but] throughout, the attitude of the natives [was] one of steady confidence in the administration and of an increasing disposition towards education and industrial habits."—H. E. Egerton, *British colonial policy in the XXth century*, pp. 100, 182, 183, 188.—See also AFRICA: Modern European occupation: 1014-1020: Climatic conditions; BAROTSELAND; MATABELELAND.

Early History.—"It is estimated that in Rhodesia there are . . . considerably over five hundred distinct groups of ruins. . . . Of the 114,814 registered gold mines now current (1900) considerably more than half have been pegged on lines of ancient workings."—R. N. Hall and W. G. Neale, *Ancient ruins of Rhodesia*, pp. 17, 56.—These ruins are found between the Zambesi and Limpopo rivers and extend from the coast to at least 27°. Positive archaeological evidence demonstrates that the earliest date which can be assigned to any of the sites explored is the tenth or eleventh century A. D. From the fifteenth century a large part of Rhodesia was ruled by the Mashonas. Modern history starts with the invasion in the early part of the nineteenth century of the Matabele, an offshoot of the Zulu.

1887.—Portuguese claim to Rhodesia.—Protest of British government.—Although the explorations of David Livingstone (1857) had made known the general character of Rhodesia and its great mineral wealth, it was not till 1887 that the country appeared upon the stage of universal history. In that year a map was submitted to the Portuguese Cortes, showing the territories claimed by Portugal in Africa. Rhodesia was included in a sea to sea stretch of land reaching from the Portuguese settlements on the west coast, all the

way across the continent. Whereupon the British representative at Lisbon informed the government of Portugal that his government could not recognize this claim to territory not effectively occupied by Portuguese settlers or commercial interests.

1887-1889.—Occupation of Rhodesia by Cecil Rhodes and the British South Africa Company.—Treaty with Lobengula.—Formation of the company.—Lest the Portuguese should take the hint and proceed to occupy the land they claimed, the British made haste to take effective possession of it. Representatives of an influential syndicate directed by Cecil Rhodes drew up a treaty with Lobengula, the native chieftain, which granted to the British the exclusive right to the exploitation of the minerals of this territory. After purchasing all other claims to territory, held by individuals or companies, Cecil Rhodes united all British interests in Rhodesia in the British South Africa Company, which obtained a charter in 1889, and the country thus acquired was named in honor of the founder of the company.—See also SOUTH AFRICA, UNION OF: 1804-1895.

1903-1908.—Growing agitation among settlers for abrogation of the charter of the British South Africa Company, and a voice in the government.—Colonization had scarcely begun before the settlers, few in number though they were, began to claim a share in the government. The position of the country was greatly complicated by the presence of the governing and other powers of the British South Africa Company, by which, under the terms of its charter of October 20, 1889, the administration of the country was carried on, subject to certain changes made by subsequent legislation. "From 1903 onwards there has been the growing desire of the settlers to secure the freer development of the country apart from the management of the Company, which, having commercial as well as administrative functions to fulfil, is regarded by them as incompetent to manage the two successfully. The Company, on their part, while prepared to concede in principle that the administrative power of the Company should be brought to an end, have contended that their rights in the lands of the country and their claims to be repaid thereby if not otherwise, for all their expenditure on the conquest and administration of the country, in so far as these sums have not been repaid by administrative revenue, should be secured to them: the nature of the sums can be judged from the proposals in 1903-4, which would have given the settlers control in exchange for the acceptance of liability for a debt of about £7,500,000, of which only a third would be represented by sums to be spent on development, the rest being dead-weight debt. This proposal could not be accepted as the country could not bear such a burden, and the Imperial Government refused to assist, and in 1905 vetoed the proposal to raise a loan of £250,000 for advances to farmers

on the security of the administrative revenue. In 1907, the Company adopted the policy of making a distinction between the commercial and administrative aspect of their business transactions, but without any approval from the Imperial Government, while there was steadily growing in the country a determination to question the title of the Company to the control of the land, on the ground that the control of the land was vested in the Company merely as an administrative body. And that it had no proprietary right to the land, so that, if it were deprived of its administrative powers, the proprietary claims it asserted would disappear, and the new administration would have complete control over all land not lawfully alienated or leased. The Company in its turn relied on its conquest of the land plus its concessions from Lobengula, and its occupation to give it a proprietary title."—A. B. Keith, *Imperial unity and the dominions*, pp. 494-495.—In spite of the fact that the company was assuming all financial responsibility and was investing large sums for railway development, in May, 1907, the legislative council passed a resolution asking the directors to extend responsible government to Rhodesia.

1908.—Report of the British South Africa Company.—Increasing prosperity.—Plans for railways.—The early years of the company's existence were unproductive, but in 1906 the tide began to turn. The tone of the yearly reports became more confident, and in February, 1909, the shareholders were given the following information: "During 1908 there has been a remarkable improvement in the circumstances of Rhodesia. This improvement has been evident in every department of trade and industry, and is reflected in the returns of administrative receipts, railways, mines and land. It was pointed out last year what an important effect even a slight increase in general prosperity would exercise upon the whole financial position, and the figures now available show that this view was correct. The administrative revenue of Southern Rhodesia during the years 1908-9 will suffice to cover administrative expenditure without any call whatever upon the commercial income of the company; the shortages of the railway companies in respect of the same period will be less by £100,000 than in 1907-8; during the year ending 31st March, 1910, large additional revenue will be derived from the carriage from the port of Beira of the materials and stores for the extension of the railway into the Congo territory. . . . The negotiations for the extension northwards of the Rhodesian Railway system have been brought to a successful conclusion. With the coöperation of the Tanganyika Concessions (Limited) a company has been formed called the Rhodesia-Kantanga Junction Railway and Mineral Company (Limited), which will construct a standard gauge line from the present terminus at Broken Hill to a point on the frontier of the Congo Free State; from the frontier to the Star of the Congo Mine the line will be constructed by the Compagnie du Chemin de Fer du Kantanga. . . . On the completion of the first section to the frontier, Rhodesia will be traversed by a trunk line from south to north. The European population shows a net increase of over 1,100 since the intermediate census, in September, 1907, when it numbered 14,018. An area of 1,160,365 acres of land has been settled and occupied during the past year. The output of gold has increased from £2,178,886 in 1907 to £2,526,937 in 1908. Imports have increased by about £100,000 during the past year."—See also SOUTH AFRICA, UNION OF: 1904.

1908-1918.—Continued agitation for self-gov-

ernment.—Changes in form of administration.—Refusal to enter Union of South Africa.—Material development.—World War.—"In 1908 and 1909 efforts were made to induce the Imperial Government to settle . . . [the dispute between the settlers and the company], but the Secretary of State declined to intervene, seeing that an effective settlement was only possible if both parties agreed, and the Company declined to agree. But the Imperial Government insisted in 1911 on the issue of an Order in Council to carry out the promise of a wider representation of the people of the country by the abolition of the nominee majority in the part-elective Legislative Council set up by the Order in Council of 1903, and by the new Order the Legislature was made to consist of five nominees to seven elective members in place of equal numbers of each. In 1912 a movement of some strength apparently developed itself in favour of ultimate union with the Union, but in 1913 the Company made a new statement of policy modifying in the direction of greater freedom their position of 1907. They agreed to increase the Legislature to eight nominees with twelve elective members, to carry out more completely the separation of administrative and commercial revenue, . . . to transfer all administrative buildings to the administration without extra cost, and to surrender some additional sources of revenue to the administration. They announced their intention to favour responsible government if that were desired, in which case no claim would be made for the initial expenditure of the Company on the acquisition and defence of the country. . . . They moreover expressed readiness to arrange for loans for capital expenditure desired for administrative purposes, and agreed that after October 29, 1914, they would not, if the charter came to an end in respect of their administrative privileges, claim . . . the value of public works carried out since October 29, 1914, if on the whole period the administration had paid its way and, if it had not, the amount claimed would only be the actual value or the deficit in the total cost of administration as compared with administrative revenue, whichever should be the less. Partly as a result of this, and partly as the result of the growing feeling of distrust of the Union in consequence of Mr. Hertzog's anti-British propaganda, the electors at the elections for the reformed Council . . . refused to return any candidate suspected of leanings towards the merger of Rhodesia in the Union, and the Legislative Council thereupon asked that the existing form of company government should be continued for the time being. . . . It was further asked that the . . . accounts of the Company should be placed in the hands of an auditor who should not be an ordinary servant of the Company, that loans on the security of the Company's administrative revenue should be allowed, and that any member of the Council should be permitted to propose appropriations after provision had been made for Civil Service, police, and the maintenance of law and order. The Imperial Government, in consultation with the Company, arranged that there should be issued a supplemental charter, providing that, if the Legislature should resolve by a majority that responsible government should be introduced, this could be done if the Imperial Government thought fit, but that otherwise the charter should not be changed as regards the general principles of administration. They also agreed to the appointment of the Auditor or Auditor-General being made, like those of the judges, one to which the approval of the Secretary of State was necessary,

the same approval being requisite for dismissal. The proposal to allow any member of the Legislature to propose appropriation was rejected. . . . [But the imperial government] agreed that the Company should advance monies to the administration for the purpose of carrying out works which could not be defrayed from ordinary revenues, the sums to be repaid from such revenue as rapidly as possible, . . . on the understanding that, if the administration of the Company terminated, the Company would have no right to the repayment of the sums outstanding, but would have a right to the cost of the works executed, in so far as they had not been defrayed from the balance, if any, between administrative revenue and expenditure."—A. B. Keith, *Imperial unity and the dominions*, pp. 405-408.—"Although upon the surface the political struggle of Rhodesia appears to be between the 'pro-charter' and 'anti-charter,' the real fight is between Responsible Government and the Union. . . . The greatest difficulty in granting Responsible Government is . . . that of entrusting so large a territory occupied by 800,000 Natives to the form of government which would remove the bulk of the inhabitants from any measure of Imperial control."—J. H. Harris, *The chartered millions*, pp. 280, 285.—The main objections of the Rhodesians to become members of the Union of South Africa were "that the representation which would be given Rhodesia in the Union parliament would be relatively so insignificant that an adequate discussion of Rhodesian affairs could not be secured; (and) that the Union is a bilingual country."—H. T. Langden, *Future of Rhodesia (Quarterly Review, Apr., 1914)*.—"In 1910 North-East and North-West Rhodesia were united as one in Northern Rhodesia. With responsibilities for a population of over a million natives and only some twenty thousand Europeans, it was impossible to segregate completely the native population in Reserves with the object of keeping them from contact with the European inhabitants. The true policy was to make the native as efficient as possible so as to enable him to contribute his maximum to the development of the country. . . . The communal system was gradually dying out, and a tendency towards individualism was gradually making its way. In this state of things an increase in the powers of the Native Commissioners which had been made was followed by excellent results."—H. E. Egerton, *British colonial policy in the XXth century*, pp. 184-185.—There were in active service during the World War, 6,850 European Rhodesians and 2,721 natives. Two Rhodesian regiments were raised, of which one served in the campaign in South-West Africa and the other in British East Africa. There were also many Rhodesians in the British army.—See also WORLD WAR: 1918: VII. East African theater: a.

1918-1922.—Final plans for responsible government.—In 1910 the legislative council passed a resolution asking the colonial office to state what condition of fitness, financially and in other respects would be considered sufficient to justify the grant of responsible government. The colonial secretary answered that he did not yet consider the territory ready to assume the financial responsibility of responsible government. "A General Election, held in April, 1910, for the Southern Rhodesian Legislative Council returned a body of members unanimously opposed alike to the incorporation of the territory in the Union and to the continuance of the Company's government. With a single exception all the members were in favour of the immediate introduction of respon-

sible government. . . . The question was further considered in 1921 by a committee presided over by Lord Buxton. With regard to the natives they recommended that no conditions, disabilities or restrictions should be imposed by law, without the previous consent of the Imperial authority, which did not equally apply to persons of European descent (save in respect of arms, ammunition and liquor); whilst the right to the franchise should remain unaffected. . . . The Committee [further] recommended that a detailed scheme should be submitted to a referendum of the white settlers, for acceptance or rejection. A constitution similar to that granted to the Transvaal in 1906 [was] agreed upon. . . . [Consequently, once the terms, of admission to the South African Union were made known, the electors of Southern Rhodesia could decide whether Southern Rhodesia should become a separate colony, or become a part of the South African Union.]"—H. E. Egerton, *British colonial policy in the XXth century*, pp. 191-192.—"In April [1922] General Smuts met a Rhodesian delegation appointed by the Colonial Secretary and outlined the terms upon which South Rhodesia might be incorporated in the Union. . . . The referendum taken on October 27th, resulted in 5,089 votes being cast for Union and 8,774 for responsible Government. Rhodesia having thus emphatically declared its intention to control its own future, it devolves upon the Imperial Government to determine upon what date the territory is to be annexed to the crown."—*Annual Register, 1922*, pp. 273-274.

1907.—**Reunion of Confederate war veterans.—Unveiling of monument of Jefferson Davis.**—A great gathering of the surviving veterans of the Confederacy, to the number of about 15,000, at Richmond, late in May and early in June, was brought about in connection with the unveiling of an impressive monument to Jefferson Davis. An equestrian statue of General J. E. B. Stuart was also unveiled on one of the days of the reunion.

RICHTER, Johann Paul Friedrich (Jean Paul) (1763-1825), German humorist. See GERMAN LITERATURE: 1700-1832.

RICIMER (d. 472), Roman commander. Defeated the Vandals in a naval battle off the coast of Corsica, 456; deposed Avitus, emperor of the West, 457. See ROME: Empire: 455-476.

RICOS HOMBRES, great barons of Aragon. See CORTES: Early Spanish.

RICOTTI-MAGNANI, Cesare (b. 1822-), Italian general and statesman. Commanded a division at the battle of San Martino, 1864; min-

ister of war, 1872-1876, 1884-1887, 1896; senator, 1890-1896; prime minister, 1896. See ITALY: 1895-1896.

RIDER, section of, or amendment to, a bill, relating to an entirely different subject than that contained in the bill proper. Riders are usually attached to appropriation bills for the purpose of forcing some measure upon the other house, or the executive, which would not otherwise have passed the latter. Riders cannot be defeated in the national government without rejecting the whole bill; but in most of the states it is provided that bills must contain no more than one subject, and in addition, the governor may veto any item in an appropriation bill while approving the bill as a whole.

RIDGEWAY, Battle of (1866). See CANADA: 1866-1871.

RIDINGS OF YORKSHIRE.—The name Ridings is a corruption of the word Trithings, or Thirds, which was applied to the large divisions of Yorkshire and Lincolnshire (England) in the time of the Angles.—Based on T. P. Taswell-Langmead, *English constitutional history*, ch. 1, note.

RIEDEL, Friedrich Adolph, Baron (1738-1800), German general. Commanded the Hessians against the Americans, 1776-1777. See U.S.A.: 1777 (July-October).

RIEHL, Wilhelm Heinrich (1823-1897), German historian. See HISTORY: 33.

RIEL, Louis (1844-1885), Canadian revolutionist. See CANADA: 1869-1873.

RIEL'S REBELLION (1869). See CANADA: 1869-1873.

RIENCOURT-LES-BAPAUME, town of northern France, about eight miles northeast of Bapaume and fifteen miles southwest of Douai. It was taken by the British in 1918. See WORLD WAR: 1918: II. Western front: k, 3.

RIENZI, Cola di (c. 1313-1354), Italian patriot. Led a revolution at Rome and proclaimed union of Italy, 1347; tribune of the people at Rome, 1347-1348; senator, 1354. See ROME: Medieval city: 1347-1354; ITALY: 1343-1393.

RIETFOONTEIN, Battle of (1890). See SOUTH AFRICA, UNION OF: 1890 (October-December).

RIFF, or Rif, mountainous region on the north coast of Morocco, from Ceuta eastward to the Algerian border. It was the scene of tribal revolts against Spain. See MOROCCO: 1909; 1919; 1921-1923.

RIFLES AND REVOLVERS: Origin of small arms.—Muskets.—Rifles.—“We have old writings which tell us of guns being used seven hundred years ago, and we believe that there must have been some sort of guns more than two thousand years ago, which takes us back before the time of Christ. A Greek historian, writing at the time of one of the wars of Alexander the Great, tells us that the Hindus ‘had the means of discharging flame and missiles on their enemies from a distance.’ . . . The early attempt at guns may have helped to frighten the enemy from approaching the walls of a besieged city, but it is not likely that they did any real damage to the enemy at a distance. . . . The first idea was to make a gun from long bars of iron, fixing them firmly together so as to form a tube, iron hoops being used to tie them together, just as a wooden barrel is hooped together. These tubes, or guns, were called cannons, because the French word for a tube is *canon*. . . . Large cannons were very heavy things to move about with an army, so attempts were made long ago to supply the foot soldiers with small guns which they would be able to

carry about just as the old archers carried their long-bows. Some six or seven hundred years ago the infantryman was given a miniature cannon, mounted with a wooden butt end, which he could steady against his chest. These hand-guns had a touch-hole, to which the soldier applied a flame just as in the larger cannons. Then someone suggested that the soldier would be able to take much better aim if he had not to worry about finding the touch-hole. And so a trigger was attached, and when this was pulled, it brought a lighted match down on to the touch-hole. It is not difficult to guess what led to this invention, for the old cross-bows had triggers, which when pulled released the springs and shot the bolts or arrows. Then it was found that the soldier could not get his eye down low enough to take proper aim, while the butt of the gun rested on his chest. This difficulty suggested the butt being made suitable to rest against the shoulder. . . . These early hand-guns were called ‘match-lock muskets.’ . . . The musketeers . . . had to carry several yards of slow match wound round their muskets, and . . . had first to produce a spark by means of a flint and steel, and thus light the end of the slow match. . . . These difficulties led to the invention of the wheel-lock musket [1515], in which the lock, or firing mechanism, consisted of a small wheel, with teeth, which by rubbing on a piece of flint produced sparks which set the powder alight. When the trigger was pulled, not only did it set the wheel in motion, but it also uncovered the pan at the same moment. Before the trigger was pulled, the soldier had to wind up the firing mechanism. . . . The difficulties of this wheel-lock musket led to the invention of the flint-lock musket [by the Spaniards, early in the seventeenth century], in which a piece of flint was made to strike a piece of furrowed steel, and thus produce the necessary sparks. This was done without any clockwork, and therefore saved a lot of time. . . . [These flint-lock muskets were introduced into England by William III and were used in the battle of Waterloo.] Among the soldiers of the Duke of Wellington this musket was nicknamed ‘Brown Bess,’ from the colour of its barrel. . . . [In 1807 a Scottish clergyman named Alexander Forsythe] invented [in 1807] an entirely new method of firing guns. His . . . idea was to make the pulling of the trigger cause a small hammer to strike a small brass cap containing some chemicals. . . . The explosion of this small percussion cap was the means of setting off the charge of gunpowder within the gun. . . . [This gun was accepted by the government and at once came into use.] The first thing that enabled guns to shoot straight was . . . [putting] the bullets in at the breech end of the gun. The bullet, being made to fit tightly to the bore of the gun, was shot off much straighter than the loose-fitting bullet which had to zigzag its way along the barrel. But there was another very important invention which ensured the bullet flying straight. . . . The hand-gun of to-day is called a rifle. . . . The earlier guns had smooth bores through which the bullets travelled along the barrels. The rifle has a grooved bore, a sort of corkscrew, or spiral groove, on the inside of the barrel [the first being mentioned in the second half of the fifteenth century]. The word ‘rifle’ . . . used to describe this groove, . . . was made from an old Anglo-Saxon word meaning a groove. . . . [When it is] forced along the bore of the gun, by the explosion of the gunpowder, the bullet, fitting into these grooves . . . [spins] round and round and . . . [leaves] the muzzle of the gun with a very rapid spinning motion [which

causes it to travel much straighter through the air.]”—C. R. Gibson, *War inventions and how they were invented*, pp. 19, 22-28, 35-36.

Waterloo to the eve of the World War.—Breechloaders, needle-gun and Chassepôt.—Repeating and magazine rifles.—After the general superseding of the smooth-bore musket by the rifle in the early part of the nineteenth century there still remained several basic improvements to be made before a satisfactory military weapon was evolved.

used in the Franco-German War of 1870-1871. By this time, the breech-loading principle was embodied in all rifles, sporting and military, and the next step in securing still greater rapidity of fire was taken when the magazine rifle was invented. During the American Civil War several breechloaders were in use (Sharp, Henry and Spencer rifles) but it was not till 1866 that the Winchester repeating, or magazine, rifle appeared. This became the hunting rifle par excellence of the western

FIREARMS OF THE 16TH CENTURY

1. Musketeer with matchlock. 2. Wheel-lock. 3. Arquebus with matchlock. 4. Wheel-lock pistol.
5. Flint-lock pistol. 6. German revolver. 7. German wheel-lock. 8. Spanish wheel-lock.

Rapidity and accuracy of fire together with a longer range, and a flatter trajectory for the bullet were the principal objects to be attained. At the beginning of the nineteenth century all rifles and muskets were muzzle loading and the act of loading was slow. The solution of this difficulty was found in the invention of the breech-loading rifle in 1811, though it was not till 1841 that Prussia adopted the famous needle gun, the first breech-loader to be employed in a European army. The needle gun speedily justified itself and contributed greatly to the Prussian victory over Austria in 1866. France was experimenting with an improved needle gun, the Chassepôt, which they adopted in 1866 and

plains and was of course the forerunner of a great number of other models with numerous mechanical variations all having the common object of furthering rapidity of fire. This combination of the breech-loader with a magazine attachment, which contained a number of cartridges fed mechanically into the chamber at the rear end of the gun barrel, made for great convenience and speed in firing. As soon as this was proved to be possible and not too expensive the repeating principle was applied to the great majority of rifles, both hunting and military. In 1885 the French converted the Chassepôt into the Lebel using smokeless powder; the Germans adopted the

Mauser, a modified Chassepôt, in place of the needle gun in 1884; the Austro-Hungarian army was supplied with the Mannlicher after 1886; the British with the Lee-Metford in 1888; and the American with the Krag-Jørgensen and finally the improved Springfield in 1903. A longer range and a flatter trajectory were secured by the use of more and more powerful powders and the long, pointed (Spitzer) bullet; while more precise and delicate sights maintained accuracy of marksmanship with the increased distance the bullet had to travel.

World War.—American contributions.—Inventions of J. M. Browning.—Revolvers and automatic pistols.—"American inventors have been responsible for every important improvement in small-arms for more than a century. Even the automatic pistol, credit for which was claimed originally by Germany, was a deliberate theft of a Yankee idea, as any one who cares to inspect the models in the Patent Office at Washington may prove to his own satisfaction. . . . The breech-loading rifle, . . . the repeating rifle, [and] the revolver [were American inventions as well as] . . . the machine-gun. At the beginning of the war in Europe the demand for rifles for the British, French, and Russian armies was so far greater than their manufacturers were able to supply that they called upon America for help; so when . . . [the United States] entered the war . . . a number of well-equipped factories . . . had been . . . producing rifles in enormous quantities for these foreign governments. . . . [There were] on hand about 600,000 of the model 1903 Springfield, with manufacturing capacity at . . . [the] government arsenals of only about 700 a day. To adopt the British weapon would have involved changing . . . ammunition. The problem was solved by making certain modifications in the British Enfield rifle so that it took the same ammunition and the same sights as the old Springfield. This modified Enfield became the Springfield, model 1917, and with it . . . [the United States] armed nearly three million soldiers. . . . John M. Browning . . . [invented] nearly every one of the Winchester rifles, from the model of 1873 to that of 1906. He invented the auto-loading shot-gun and the auto-loading rifle. . . . He was responsible for the perfection of the Stevens 12-gauge repeating shot-gun . . . [He] invented the Colt automatic machine-gun . . . [the United States] standard army weapon up to 1917. He . . . designed all the Colt automatic pistols . . . [and] the .45-caliber automatic pistol, which was the standard side-arm of the United States army. . . . Simultaneously with the water-cooled gun, John M. Browning offered a light machine-gun or, more properly speaking, an automatic rifle, weighing only fifteen pounds. This is a gun that can be fired from the shoulder and which will continue to fire automatically so long as the marksman keeps his finger on the trigger and the supply of cartridges is kept up. The cartridges for the Browning automatic rifle are fed in in clips of twenty at a time; the twenty shots are fired in a quarter that number of seconds. It takes less than a second to slip a new set into place."—F. P. Stockbridge, *Yankee ingenuity in the war*, pp. 200, 202, 206-209.

Shot-guns in the World War.—New ammunition for trench and aerial warfare.—"One application of Yankee ingenuity to small-arms evoked a protest from the German Government, which declared that . . . [the United States was] conducting warfare in an inhuman and barbarous manner by using shot-guns in the trenches . . . in violation of the Geneva Convention. . . . The main

charge was true—we were using shot-guns. The efficacy of the sawed-off shot-gun or 'riot-gun' had been demonstrated by many Western sheriffs. . . . [The troops had been supplied] with both Winchester and Remington repeater shot-guns with shortened barrels, primarily for the purpose of arming the guards placed over German prisoners, but many of them were actually used in the trenches. Each shell contained nine buckshot the size of a pea; for close fighting there is no fire-arm so deadly. . . . [A new problem required to be solved] in manufacturing tracer bullets and incendiary bullets for aerial warfare. In loading cartridge-belts for aircraft machine-guns a tracer bullet is substituted for the ordinary bullet, made of lead with a cupro-nickel jacket at stated intervals. The tracer bullet gives off a bright light as it passes through the air, a light so brilliant as to be plainly visible in the brightest sunlight. This enables the gunner to know at all times whether his bullets are reaching their mark, as he can actually see the tracers, which may be every fifth bullet, for at least 500 yards of their flight. . . . The purpose of the incendiary bullet in aerial warfare is to set fire to the gas-tank of the enemy machine. . . . The incendiary bullet gives off a spiral of blue smoke as it passes through the air, and at a range up to 350 yards such a bullet striking the gas-tank of an observation balloon or a Zeppelin, or any inflammable part of an airplane or its gas-tank, starts a conflagration. The armor-piercing bullet is not a solid chunk of steel; such a missile might make a dent in thin armor-plate, but it would not penetrate it. As every one who has tried to drill a hole in steel realizes, a lubricant for the drill is necessary. In the case of the armor-piercing bullet this lubricant is melted lead. . . . When the bullet is fired against armor plate the cupro-nickel jacket shatters into pieces, the lead melts under the heat of the impact and the steel block passes through the armor, lubricated by the molten lead."—F. P. Stockbridge, *Yankee ingenuity in the war*, pp. 304-308.—See also MILITARY ORGANIZATION: 16; 17; ORDINANCE.

"RIGHT," "LEFT," AND "CENTER."—In France, and several other continental European countries, political parties in the legislative bodies are named according to the positions of the seats which they occupy in their respective chambers. The extreme conservatives gather at the right of the chair of the presiding officer, and are known, accordingly, as "The Right." The extreme radicals similarly collected on the opposite side of the chamber, are called "The Left." Usually, there is a moderate wing of each of these parties which partially detaches itself and is designated, in one case, "The Right Center," and in the other, "The Left Center;" while, midway between these divisions, there is a party of independents who take the name of "The Center."

RIO DE JANEIRO, capital of Brazil, South America, on the great bay of the same name. (See LATIN AMERICA: Map.) Its population in 1920 was 1,157,873. The bay was probably discovered by Amerigo Vespucci, a Portuguese, about 1500, but its discovery is attributed by the Portuguese to Gonçalves who visited it in 1502. (See AMERICA: 1500-1514.) The first settlement was made in 1555 by a French expedition under Nicholas Durand Villegaignon who built a fort on one of the larger islands. (See FLORIDA: 1562-1563.) The French settlers were however attacked and scattered in 1560 by the Portuguese from Bahia, who established a settlement on the mainland in 1567. The town grew slowly, but it was of sufficient importance to be made the capital of Brazil in 1762 when it had a population of 30,000 including slaves. During the Napoleonic invasions the court of Portugal was transferred to Brazil, and in 1808 Rio de Janeiro became the royal seat. In 1821 the population had increased to 112,695. In 1822 the independence of Brazil from its mother country was declared, and was ruled as an empire by Pedro I and Pedro II until 1889 when the republic was established. Commercial relations with Europe increased trade and Rio de Janeiro rapidly became one of the leading cities of the continent. In 1892 extensive improvements in sanitation were made and the docking, transportation and lighting facilities were enlarged.

1893-1894.—Revolt against Peixoto. See BRAZIL: 1893-1894.

1903-1905.—Eradication of yellow fever. See PUBLIC HEALTH: Yellow fever.

RIO DE LA PLATA. See PLATA, RIO DE LA.

RIO DE LA PLATA, Provinces of the, federated group of provinces about the Plata river, Argentina. The first province known by this name was established in 1620. Its capital was Buenos Aires. See ARGENTINA: 1580-1777; 1806-1820; LATIN AMERICA: 1778-1824; URUGUAY: 1806-1815.

RIO DE ORO, Spanish possession in northwestern Africa, extending from Cape Blanco to Cape Nun. With Adrar, it has an area of 109,200 square miles, and a population (1922) of 495. Spain took

possession of it in 1885, and later by a convention with France acquired a strip of the desert. The colony is administered by the governor of the Canary islands. See AFRICA: Map.

RIO PRIETO, Engagement at the. See U. S. A.: 1898 (July-August: Porto Rico).

RIPARIAN RIGHTS: Definition.—Origin.—Inland lakes and waterways.—"According to the strict meaning of the term, riparian rights are such as follow, or are connected with, the ownership of the banks of streams or rivers. Those whose lands border upon the waters are called 'littoral' proprietors, although the words 'riparian' and 'littoral' are sometimes used interchangeably."—J. M. Gould, *Treatise on the law of waters*, p. 275.—"Modern laws controlling riparian rights are based upon the doctrines of territorial jurisdiction and maritime privileges in international law. This law has recognized that national territory consists of water as well as land. Maritime territory in every State extends to the ports, harbors, bays, mouths of rivers and adjacent parts of the sea enclosed by headlands belonging to the same state. Within these limits, its rights to property and territorial jurisdiction are absolute and include those of every other state. The great inland lakes, and their navigable outlets, are considered as subject to the same rule as inland seas: where enclosed within the limits of a single state they are regarded as belonging to the territory of that state; but if different nations occupy their borders, the rule of *mare clausum* cannot be applied to the navigation and use of their waters. No distinction is made between salt-water lakes, or inland seas and fresh-water lakes. The right of territorial jurisdiction over the outlets of these inland waters . . . where a navigable river forms the boundary of conterminous states, the middle of the channel—the *filum aquae*, or *thalweg*—is generally taken as the line of their separation, the presumption of law being that the right of navigation is common to them both."—G. S. Baker, *Halleck's international law*, v. 1, pp. 181-182.

"A mode of acquiring title to realty is where portions of the soil of real estate are added by gradual deposition, through the operation of natural causes, to that already in possession of the owner. This is called title by accretion."—E. Washburn, *American law of real property*, v. 3, p. 55.

Theories of water law under Roman law.—Common right.—Conflict of English law and Spanish law in western states.—Rotation principle.—"Existing, or proposed, systems of water law have one first elemental principle for all of them. In the beginning, they have the same root in their attitude to running water as a physical substance. It is the idea that water running in streams and watercourses is not of itself the property of any person and cannot be. Although differing with regard to the regulation of the use of the water, yet the water itself, by all of them, and by probably all people, is considered not belonging to any person. This is expressed at the beginning by the Roman jurists, in the compilation of Justinian as follows: 'By natural law these things are common to all: the air, running water, the sea, and as a consequence, the shores of the sea.'"—S. C. Wiel, *Theories of water law* (*Harvard Law Review*, Apr., 1914).—"Prima facie, every proprietor upon each bank of a river is entitled to the land, covered with water, in front of his bank, to the middle thread of the stream,

or as it is commonly expressed, *usque filum aquae*. In virtue of this ownership, he has a right to the use of the water flowing over it in its natural current, without diminution or obstruction. But, strictly speaking, he has no property in the water itself; but a simple use of it, while it passes along. The consequence of this principle is that no proprietor has a right to use the water to the prejudice of another. It is wholly immaterial whether the party be a proprietor above or below in the course of the river; the right being common to all the proprietors on the river, no one has a right to diminish the quantity which will, according to the natural current, flow to a proprietor below, or to throw it back upon a proprietor above. This is the necessary result of the perfect equality of right among all the proprietors of that which is common to all [a public right]. The natural stream, existing by the bounty of Providence for the benefit of the land through which it flows, is an incident annexed by operation of law, to the land itself."

—4 *Mason* (U. S. C. C.) 307.—"The law of Prior Appropriation is the chief law in the States west of the Mississippi Valley. It had its beginning in the early days of the State of California, when the region was an uninhabited frontier. . . . Under this system, the idea of a water right was the having possession of a portion of the flow of the stream. It was called a possessory right and had the features of a possessory system. It was initiated by taking possession of a portion of the flow of a stream. This system is eminently a pioneering system."—S. C. Wiel, *Theories of water law* (*Harvard Law Review*, Apr., 1914).—The denser settlement of the western states has developed several complex and important economic problems with respect to the rights over internal waterways. Those problems are becoming increasingly urgent and are giving rise to new theories for water legislation. California has long grappled with these problems. After the discovery of gold 1848, the settlers were confronted with the peculiar laws and customs of the Spaniards. Many conflicts and legal disputes arose through the miners taking water for sluicing and gold-washing purposes, changing the courses of streams and cutting off the water flowing over falls, which they used for propelling water wheels. When California became more settled and agricultural settlements were made in Oregon and Washington further problems and conflicts developed through the changing and pollution of streams by gold dredging operations by logging and log fluming and by irrigation dams. "If there is not water enough to permit a diversion of a stream and a simultaneous use of part by both parties without injury, the court may by its decree fix the times when, by rotation, the whole may be used by each at different times in proportion to their respective rights. In doing so, the court should recognize the paramount and primary right of the respondent to the first flow in a full ditch during the irrigation season as it may be required. . . . While this remedy of rotation and use of waters for irrigation purpose has been more generally applied as between riparian proprietors, in principle, there is no reason why it should not be made applicable as between claimants by appropriation. It is applied between riparian owners to permit the beneficial use of the waters by all, and as by appropriation only the right to a beneficial use is acquired, there is no reason why, when it can be justly made applicable, the same rule of rotation should not be applied as between appropriators."—102 *Cal.* 147, 1912.

Modern water title problems in the United

States.—Increased water conservation.—Recent legislation protecting national rights.—The tremendous advances made in recent years have called for the utilization of water and water power for a great number of industrial and agricultural purposes. These include the development of the arid lands of the western and south-western states by intensive farming through irrigation, the construction of dams, frequently of immense size for irrigation and for the generation of electrical power for mining, manufacturing, metallurgical and chemical purposes as well as for public service corporations. Many cities are confronted with the necessity of increasing their water supplies and are frequently forced to draw upon the water in nearby streams and rivers. These numerous and extensive demands upon the country's water resources, naturally, are bringing the subject of water rights before the state and federal government. These political and legal questions recall the conflicts experienced by the railroad builders when the new transportation requirements come into conflict with old legal theories. "The limit of the agricultural development of a state is dependent, almost entirely, upon the amount of the available water supply. This is a matter of vital concern to every citizen. If the amount of water permitted to be appropriated for the irrigation of one acre of land is twice the amount required to produce ordinary agricultural crops, then the ultimate irrigable area will be reduced by one-half. The average irrigator, if not restrained, will use from three to sixteen feet in depth of water on his land during an irrigating season, whereas better results could doubtless have been produced with less than thirty-six inches in depth. State streams are of growing importance to the logging and other industries. Many streams are entirely diverted and carried into other water-sheds for placer and other mining purposes. The entire low water flow of many streams has been diverted to create power for the operation of flour, woolen and other mills and factories. Perpetual Franchises in the use of state's public waters are being rapidly acquired for the development of electric power. No restriction as to time is demanded by the State, as is required by the laws of Italy (Canada, Australia and many other countries). The history of other industries, and especially the hydro-electric power development of other states and countries, points to an early monopoly of the state's water powers. If franchises to the use of water for hydro-electric power and other developments were granted only for a limited period of years (21 and 30 years being usual in some countries) with privilege of renewal under restrictions, instead of perpetually, as heretofore, the public could take advantage of any changed conditions, prevent abuses, and even derive a revenue from such use if found desirable."—J. H. Lewis, *Need of water legislation in Oregon*, pp. 8-9.—"Advancing civilization has done more than augment the uses and value of water; it has increased the evils and dangers arising from water. The ice gorges along the Ohio and Mississippi rivers were matters of small concern when Indians were the only people interested. Now they often cost millions of dollars and hazard many lives. Hence, immense sums of money are being expended to protect commerce from their action. Every reservoir, every diversion dam in a stream, every artificial waterway adds a new element of danger and insecurity to the lives and property below and gives ground for new laws and regulations with respect to the management of water. The swamps and marshes created through the interrup-

tion of underground water supplies by impervious strata seriously impair the value of lands for agriculture in civilized districts and become a menace to health and prosperity in cities and towns."—E. Mead and R. P. Teele, *Water rights on interstate streams*, p. 103.

RIPON, Frederick John Robinson, Viscount Goderich, First Earl of (1782-1859), British statesman. Chancellor of the exchequer, 1823-1827; prime minister, 1827-1828; colonial secretary, 1831-1832; president of the board of trade, 1841-1843; president of the India board, 1843-1846. See ENGLAND: 1827-1828; Administration of Lord Goderich; INDIA: 1880-1893.

RIPON, ancient cathedral city in West Riding, Yorkshire, England, about twenty-two miles northwest of York. The town originated with the building of a monastery in the seventh century. Ripon was made a royal borough by Alfred the Great, and suffered successive disasters through the Saxon, Danish, Norman and Scottish wars. During the Middle Ages Ripon was famous for its woolen cloth, which was followed after the sixteenth century by the manufacture of spurs, whence the proverb, "as true as Ripon rowells." The one thousandth anniversary of the incorporation of the city of Ripon was celebrated on August 27, 1886.

Treaty of. See ENGLAND: 1640.

RIPON REGULATIONS (1831). See AUSTRALIA: 1810-1837.

RIPUARIANS, Law of the.—"On the death of Clovis, his son, Theodoric, was king of the eastern Franks; that is to say, of the Ripuarian Franks; he resided at Metz. To him is generally attributed the compilation of their law. . . . According to this tradition, then, the law of the Ripuarians should be placed between the years 511 and 534. It could not have, like the Salic, the pretension of ascending to the right-hand bank of the Rhine, and to ancient Germany. . . . I am inclined to believe that it was only under Dagobert I., between the years 628 and 638, that it took the definite form under which it has reached us."—F. Guizot, *History of civilization*, v. 2, *lecture* 10.—See also GAUL: 5th-10th centuries.

RIPUARI, tribe of the Franks who settled along the banks of the Rhine river. See FRANKS: BARBARIAN INVASIONS: 5th-10th centuries; GERMANY: 481-768.

ROBBIA, Luca della (c. 1400-1482), Florentine sculptor. See **SCULPTURE: Early Renaissance.**

ROBE, La Nobless de la. See **PARLEMENT OF PARIS.**

ROBERT I (c. 865-923), king of France, 922-923. Son of Robert the Strong; usurped power and drove out Charles the Simple. See **FRANCE: 877-987.**

Robert II, the Pious (c. 970-1031), king of France, 996-1031. Son of Hugh Capet; gained the duchy of Burgundy, 1015, through the death of his uncle in 1001.

Robert, the Wise (1275-1343), king of Naples, 1309-1343. Leader of the Guelphs; patron of Petrarch and Boccaccio. See **ITALY: 1313-1330; FLORENCE: 1301-1313.**

Robert I, the Bruce (1274-1329), king of Scotland, 1304-1329. Fought for the kingdom of Scotland against Edward I, 1304-1314; won the battle of Bannockburn, 1314; received recognition of his title in the Treaty of Northampton, 1328. See **SCOTLAND: 1370.**

Robert II, the Steward (c. 1316-1390), king of Scotland, 1371-1390. First of the Stuart dynasty. See **SCOTLAND: 1370.**

Robert III (c. 1340-1400), king of Scotland,

1390-1406. During his reign the power was in the hands of his brother, Robert, earl of Fife.

Robert I, the Devil (d. 1035), duke of Normandy, 1028-1035. Aided exiled English princes, Edward and Alfred; made pilgrimage to Jerusalem; died at Nicæa; became center of many myths.

Robert II (c. 1054-1134), duke of Normandy, 1087-1134. Eldest son of William the Conqueror; fought against William II of England, 1089, 1094; took part in the First Crusade, 1096-1100; invaded England, 1101; taken prisoner by Henry II of England, 1106. See **CRUSADES: 1096-1099; ENGLAND: 1087-1135.**

Robert II (d. 1111), count of Flanders, 1063-1111. See **CRUSADES: 1096-1099.**

ROBERT DE BETHUNE, count of Flanders, 1305-1322. See **FLANDERS: 1299-1304.**

ROBERT GUISCARD (c. 1015-1085), duke of Apulia and Calabria, 1057-1085. Leader of the Normans in Italy; with his brother Roger conquered part of Italy from the Saracens; captured and sacked Rome, 1084, and delivered Pope Gregory VIII from Henry IV.

ROBERT OF COURTENAY (d. 1228), emperor of Romania, or Constantinople, 1221-1228.

ROBERT OF GENEVA, or Clement VII (d. 1394), antipope, 1378-1394. Opposed to Urban VI. See **PAPACY: 1352-1378.**

ROBERT OF GLOUCESTER (d. 1300), English chronicler.

ROBERT THE STRONG (d. 866), count of Anjou and Blois. See **FRANCE: 861.**

ROBERT, Nicholas Louis, French inventor. See **INVENTIONS: 19th century: Industry.**

ROBERT COLLEGE.—Robert College was founded at Constantinople in 1863 by James A. and William B. Dwight, sons of an American missionary to Turkey, the Rev. Harrison G. O. Dwight. It was named after Christopher R. Robert, of New York, its main supporter, whose gifts to it amounted to \$450,000. Its first president was the Rev. Cyrus Hamlin, who presided over it until 1877, when he resigned and was succeeded by the Rev. Dr. George Washburn.

Influence on Bulgaria. See **BULGARIA: 1900.**

ROBERT ESPAGNE, town in France, in the Marne region, about five miles southwest of Bar le Duc. It was a scene of fighting during the World War. See **WORLD WAR: 1914: I. Western front: p, 7.**

ROBERTS, Frederick Sleigh, 1st Earl (1832-1914), British field marshal. Served in India, 1851-1878; in Afghanistan, 1878-1880; commander-in-chief in India, 1885-1893; in Ireland, 1895-1899; in South Africa during the Boer War, 1899-1900; commander-in-chief of the British army, 1900-1904. See **SOUTH AFRICA, UNION OF: 1900 (January-February); (March): Proclamation, etc.: 1900 (March-May); (May-June); (August-December); (November); WAR, PREPARATION FOR: 1907-1909: British territorial force; WORLD WAR: 1914: I. Western front: w, 18.**

ROBERTS, George Henry (1869-), British statesman. Entered Parliament, 1906; lord commissioner of the treasury, 1915-1916; minister of labor, 1917-1918; food controller, 1919-1920.

ROBERTS, Joseph Jenkins (1800-1876), first president of Liberia, 1847. See **LIBERIA: 1846-1863.**

ROBERTS, Robert (d. 1898), English Christadelphian preacher. See **CHRISTADELPHIANS.**

ROBERTSON, James (1742-1814), American pioneer. See **TENNESSEE: 1760-1772; 1785-1796.**

ROBERTSON, William (1721-1793), Scottish historian. See HISTORY: 25.

ROBERVAL, François de la Roch, Sieur de (fl. 1540), French colonist in Canada. See AMERICA: 1541-1603.

ROBESON, George Maxwell (1829-1897), American political leader. Secretary of the navy, 1869-1877; member of Congress, 1879-1883. See U.S.A.: 1860-1877.

ROBESPIERRE, Maximilien François Marie Isidore de (1758-1794), French revolutionist. See FRANCE: 1790-1791: Oath of the clergy; 1791 (July-September); 1792 (August-September); (November-December); 1793-1794 (November-June); 1794 (June-July): French victory at Fleurus; 1794 (June-July): Monstrous Law, etc.

ROBIN HOOD BALLADS. See BALLAD: Development.

ROBINSON, Charles (1818-1894), American political leader. Governor of Kansas Territory, 1856-1860; became first governor of the state, 1861. See KANSAS: 1861-1865.

ROBINSON, Henry Mauris (1868-), American lawyer. Served in the Council of National Defense, 1917-1918; member of the Supreme Economic Council of the Peace Conference of Paris, 1919; member of the United States Shipping Board, 1919; representative at the First International Labor Conference, 1919; chairman of the Bituminous Coal Commission, 1920. See U.S.A.: 1918-1920.

ROBINSON, Hercules George Robert, 1st Baron Rosmead. See ROSMEAD, HERCULES GEORGE ROBERT ROBINSON, 1ST BARON.

ROBINSON, James Fisher (1800-1892), governor of Kentucky, 1862-1863.

ROBINSON, James Harvey (1863-), American historian. See HISTORY: 33.

ROBINSON, John (1575-1625), English Non-conformist minister. See INDEPENDENTS, OR SEPARATISTS: 1604-1617.

ROBOGDIL, early native Irish tribe. See IRELAND: Tribes of early Celtic inhabitants.

ROCA, Julio Argentino (1843-1914), Argentine general and statesman. Minister of war, 1874-1880; president of Argentina, 1880-1886, 1898-1904. See ARGENTINA: 1880-1891.

ROCCASECCA, Battle of (1411). See ITALY: (Southern): 1386-1414.

ROCHAMBEAU, Jean Baptiste Donatien de Vimeur, Comte de (1725-1807), French marshal. Distinguished himself in the War of the Austrian Succession and in the Seven Years' War; sent to America as lieutenant-general with a force of 6,000 to assist Washington, 1780; made marshal of France, 1791; commanded the Army of the North, 1791-1792. See U.S.A.: 1781 (May-October); 1790 (July).

ROCHDALE, parliamentary and municipal borough in England, eleven miles northeast of Manchester, on the Roch. In 1921 it had a population of 90,807. It is the seat of the Rochdale Equitable Pioneer's Society, an experiment in coöperation. See COÖPERATION: Origin; England; EDUCATION: Modern developments; 20th century; Workers' education: England; SOCIALISM: 1844-1848.

ROCHE, Guy de la (d. 1264), ruler of Athens, 1225-1264. See ATHENS: 1205-1308.

ROCHE, Otto de la, ruler of Athens, c. 1205-1225. See ATHENS: 1205-1308.

ROCHELLE, La, seaport in France, on an arm of the Bay of Biscay, about 120 miles northwest of Bordeaux. Its population in 1906 was 24,524.

Early importance.—Expulsion of the English.—Grant of municipal independence.—"Rochelle had always been one of the first commercial places

of France; it was well known to the English under the name of the White Town, as they called it, from its appearance when the sun shone and was reflected from its rocky coasts. It was also much frequented by the Netherlanders. . . . The town had . . . enjoyed extraordinary municipal franchises ever since the period of the English wars [see FRANCE: 1337-1360, and 1360-1380]. It had by its own unaided power revolted from the English dominion [1372], for which Charles V., in his customary manner, conferred upon the townsfolk valuable privileges,—among others, that of independent jurisdiction in the town and its liberties. The design of Henry II. to erect a citadel within their walls they had been enabled fortunately to prevent, through the favour of the Chatillons and the Montmorencies. Rochelle exhibited Protestant sympathies at an early period."—L. von Ranke, *Civil wars and monarchy in France, in the sixteenth and seventeenth centuries*, ch. 14.

1568.—Becomes headquarters of the Huguenots.—Arrival of queen of Navarre. See FRANCE: 1563-1570.

1573.—Siege and successful defense. See FRANCE: 1572-1573.

1620-1622.—Huguenot revolt in support of Navarre and Béarn.—Unfavorable peace of Montpellier. See FRANCE: 1620-1622.

1625-1626.—Renewed revolt.—Second treaty of Montpellier. See FRANCE: 1624-1620.

1627-1628.—Revolt in alliance with England.—Siege and surrender.—Richelieu's dyke.—Decay of the city. See FRANCE: 1627-1628.

ROCHESTER, England, port, municipal and parliamentary borough in the county of Kent, on the Medway river, thirty-three miles southeast of London. The city had (1911) a population of 31,384. One of the two Roman towns in Britain called Durobrivæ is identified in site with the modern city. It derived its Saxon name—originally "Hrofæscester"—"according to Bede, from one of its early rulers or prefects named Hrof."—Based on T. Wright, *Celt, Roman and Saxon*, ch. 5, 16.—See also DUROBRIVÆ.

ROCHESTER, New York, county seat of Monroe county, seventy miles northeast of Buffalo. It is the third largest city in the state and in 1920 had a population of 295,750. The village of Rochester was founded about 1812 on the "hundred-acre tract," bought in 1802 by Nathaniel Rochester, Charles Carroll and William Fitzhugh. In 1817 the name was changed to Rochester, and in 1834 the city was chartered. In 1825 the opening of the Erie canal gave the first stimulus to its commercial growth.

ROCHLITZ, Friedrich (1769-1842), German novelist and musical critic. See MUSIC: Modern: 1800-1908.

ROCK OF BEHISTUN. See BEHISTUN, ROCK OF.

ROCK OF CASHEL. See CASHEL.

"ROCK OF CHICAMAUGA," nickname of General George Henry Thomas. See U.S.A.: 1863 (August-September: Tennessee): Rosecrans' advance.

ROCK SPRINGS, city in Sweetwater county, Wyoming, 258 miles west of Laramie. It was the scene of a race riot, 1885. See WYOMING: 1868-1889.

ROCKEFELLER, John Davison, Sr. (1830-), American financier and philanthropist. Head of the Standard Oil Company, 1882-1911. See CAPITALISM: 19th century: United States; GEN-

ERAL EDUCATION BOARD; GIFTS AND BEQUESTS; ROCKEFELLER FOUNDATION; TRUSTS: United States; Standard Oil Company.

ROCKEFELLER, John Davison, Jr., (1874-), American capitalist and philanthropist. See BELGIAN CONGO: 1906-1908; COLORADO: 1915.

ROCKEFELLER FOUNDATION: International health board.—China medical board.—Division of medical education.—World War relief.—“The purpose of the Rockefeller Foundation [founded in 1912] in the words of the Charter, is ‘to promote the well-being of mankind throughout the world.’ [It] was established in order to provide an agency, not dependent upon the life of any individual, which should deal with the problems of philanthropy in accordance with the principles and methods most approved in each generation.”—*Philanthropic boards established by John D. Rockefeller* pp. 14-15.—“It accomplishes its work through (1) agencies, which it creates to carry out specific programs, and (2) other existing organizations unaffiliated with the Foundation, to which it makes appropriations to enable them to carry out specific items of programs in public health and medical education. Agencies of the first class are (1) The International Health Board; (2) The China Medical Board; (3) The Division of Medical Education. [The] International Health Board [which was organized in 1913], conducts public health demonstrations and develops cooperative public health programs in different parts of the world. These programs, conducted always in cooperation with government authority, in 1920 were carried on principally in 12 southern states . . . in combating malaria and hook-worm disease, and in 22 foreign countries, states, or islands in combating these diseases and yellow fever. [The] Board has extended its activities to every section of the world where yellow fever is known to exist. [It gave] . . . assistance to the Republic of Czechoslovakia in the organization of its public health administration and laboratory service. For the purpose of training native personnel and promoting greater efficiency and higher standards in public health, . . . [it] provides foreign fellowships for the study of public health in the United States. After the World War, it gave [special attention to the eradication of tuberculosis in France].”—G. P. Hendricks, *Handbook of social resources of the United States*, p. 258.—“The China Medical Board, which was established in 1913, has for its purpose the promotion and development of scientific medicine and hygiene in China through medical schools, hospitals, training schools for nurses, etc. . . . After consultation with a number of persons who have lived or travelled in the Far East, the Foundation decided in January, 1914, that the most appropriate work for it in China would be to assist in the development of scientific medicine there. . . . To carry out the recommendations of the investigating commission [sent out in 1914], whose report was adopted as a basis for the proposed work, the China Medical Board was established . . . to develop two medical schools of high standard, one at Peking and the other at Shanghai.”—*Philanthropic boards established by John D. Rockefeller*, pp. 26, 27.—The China Medical Board “develops the Foundation’s program of medical education in China. Has planned and is supporting in full a medical center at Peking, including a medical school [which was opened in 1921], pre-medical school, hospital, and nurse-training school. Through this Board the Foundation gives aid to medical schools and hospitals already established

in China, [and] provides fellowships and scholarships . . . [for] advanced medical study in the U. S. . . . [by] medical missionaries . . . [and] Chinese physicians and nurses. [The] Division of Medical Education has conducted investigations of medical education in Canada and western and central Europe. . . . Other work of the Foundation includes maintenance of a School of Public Health at Johns Hopkins University; . . . studies and demonstrations in mental hygiene and in hospital and dispensary service; support through National Research Council . . . of research in physics and chemistry; contributions to medical centers in Canada, London and Brussels, and emergency aid to medical institutions throughout Europe.”—G. P. Hendricks, *Handbook of social resources of the United States*, pp. 258, 259.—“In October, 1914, the Rockefeller Foundation determined to send a War Relief Commission to Europe to make a first-hand study of conditions requiring relief, especially as they affected non-combatants, and to advise the Trustees as to the . . . means of rendering aid most effectively. . . . [As the result of a] survey . . . made of the organization and workings of relief in Belgium, Holland, Poland, Serbia, Montenegro, Turkey, and Italy . . . the Foundation made appropriations for relief measures in certain of the countries visited.”—*Philanthropic boards established by John D. Rockefeller*, pp. 32-33.—See also WORLD WAR: Miscellaneous auxiliary services: XIV. Cost of war: b, 8.

ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH.—The Rockefeller Institute for Medical Research was incorporated in 1901 to conduct, assist, and encourage investigations in the sciences and arts of hygiene, medicine and surgery, and allied subjects, in the nature and cause of disease, and methods of treatment and prevention. It makes knowledge relating to these subjects available for the protection of public health and the improved treatment of disease and injury, and through the department of laboratories conducts important research work. The hospital, established 1910, admits patients suffering from certain diseases chosen for observation and study and also offers clinical facilities. The department of animal pathology (1915) studies diseases of animals which are of great economic importance or which may throw light upon problems of human pathology.—Based on G. P. Hendricks, *Handbook of social resources of the United States*, p. 250.

ROCKEFELLER PLAN. See COLORADO: 1915.

ROCKHILL, William Woodville (1854-1914), American diplomat. Minister to Greece, Rumania, and Serbia, 1897-1899; director of the International Bureau of American Republics, 1890-1905; minister to China, 1905-1909; ambassador to Russia, 1909-1911; ambassador to Turkey, 1911-1914. See CHINA: 1901-1908.

ROCKINGHAM, Charles Watson Wentworth, 2nd Marquess of (1730-1782), British statesman. Prime minister, 1765-1766; 1782. See ENGLAND: 1764-1765; 1782-1783.

ROCROI, town in northern France, twenty-two miles northwest of Charleville and two miles from the Belgian frontier.

1643.—Siege of. See FRANCE: 1642-1643.

1653.—Siege and capture by Condé in Spanish service. See FRANCE: 1653-1656.

1659.—Recovered by France. See FRANCE: 1650-1661.

ROD, Black. See BLACK ROD.

RODBERTUS, Karl Johann (1805-1875), German socialist. Member of the Prussian national

assembly, 1848-1849; appointed minister of public worship and education, 1848. See SOCIALISM: 1836-1875.

RODIN, Auguste (1840-1917), French sculptor. See SCULPTURE: Modern; ART: Definitions and theories.

RODNEY, Cæsar (1728-1784), American patriot. One of the signers of the Declaration of Independence. See U.S.A.: 1774 (September); 1765: Stamp Act Congress; 1776: (July): Text of Declaration of Independence.

RODNEY, George Brydges, Baron (1718-1792), English admiral. Served in the Seven Years' War; victor over the Spanish in the battle off Cape St. Vincent, 1780; and over the French in the battle of Dominica, 1782. See ENGLAND: 1780-1782.

RODOGAST. See RADAGAISUS.

RODOLF, or Rodolph. See RUDOLPH.

RODRIGUEZ, Juan Gaspar (1761-1840), dictator of Paraguay, 1811-1840. See PARAGUAY: 1608-1873.

RODRIGUEZ, island in the Indian ocean, 320 miles east of the island of Mauritius. Its area is about 42 square miles, and its population in 1921 was 6,584. See MASCARENE ISLANDS.

RODZIANKO, Michael Vassilievich (1859-), Russian statesman. President of the Russian Duma, 1911-1917. See RUSSIA: 1916: Opposition of Duma, etc.; 1917 (March 8-15); WORLD WAR: 1917: III. Russia and the Eastern front: f.

ROEBLING, John Augustus (1806-1869), American engineer. Builder of Brooklyn Bridge, 1869. See NEW YORK CITY: 1867-1915.

ROENTGEN. See RÖNTGEN.

ROESKILD, Peace of (1658). See SWEDEN: 1644-1697.

ROGATION.—With reference to the legislation of the Romans, "the word Rogatio is frequently used to denote a Bill proposed to the people. . . . After a Rogatio was passed it became a Lex; but in practice Rogatio and Lex were used as convertible terms, just as Bill and Law are by ourselves."—W. Ramsay, *Manual of Roman antiquities*, ch. 4.

ROGATION DAYS, Monday, Tuesday and Wednesday before Ascension day in the Christian church calendar. On these days litanies were chanted in procession (rogationes).

ROGER I (1031-1101), grand count of Sicily, 1096-1101.

Roger II (c. 1093-1154), king of Sicily, 1130-1154, grand count of Sicily, 1101-1130. United Norman conquests in Italy with Sicily, 1127-1139; invaded Byzantine empire, 1146. See AMALFI; BYZANTINE EMPIRE: 1146.

ROGER DI FLOR (1262-1306), German military adventurer and leader of Catalan Grand Company. Served with the Knights Templar, 1291; vice-admiral of Sicily under Frederick of Aragon until 1302; served under the Byzantine emperor, Andronicus II, 1303-1304; created cæsar, 1306. See CATALAN GRAND COMPANY.

ROGER OF HOVEDEN, or Howden (fl. 1174-1201), early English chronicler. See HISTORY: 19.

ROGER OF PALERMO, teacher of medicine at Salerno during the twelfth century. See MEDICAL SCIENCE: Medieval: 12th-15th centuries.

ROGERS, John (c. 1500-1555), English Protestant clergyman and martyr. Published "Mathew's Bible," 1537. See BIBLE, ENGLISH: 16th-17th centuries.

ROGERS, Robert (1731-1795), American soldier. Served in the French and Indian War, 1755-1766; arrested by the Americans, 1775; fought in

the English army under Howe, 1775-1776. See NEW BRUNSWICK: 1758-1785.

ROGERS, Woodes (d. 1732), English privateer and colonial governor. Became first crown governor of the Bahamas, 1718. See BAHAMA ISLANDS: 1402-1783.

ROHATYN, town in southern Poland, about thirty miles southeast of Lemberg. See WORLD WAR: 1915: III. Eastern front: g, 3.

ROHILLA WAR (1772-1774). See INDIA: 1773-1785.

ROIS FAINEANS, appellation of the Merovingian kings. See FRANKS: 511-752.

ROISIN, town in Belgium, about two miles from the French border, and fifteen miles southwest of Mons. It was a scene of fighting during the World War. See WORLD WAR: 1918: II. Western front: w, 2.

ROJAS, Paul José Pablo (c. 1845-1905), president of Venezuela, 1888-1890. See VENEZUELA, 1896-1892.

ROJDESTVENSKY, Ziniv Petrovitch. See ROZHDESTVENSKY.

ROKYCANA, or Rokycan, John of, Bohemian churchman. Leader of the Moravian sect, elected archbishop of Prague, 1453. See BOHEMIA: 1434-1457.

ROLAND, name of famous bell in Ghent. See GHENT: 1539-1540.

ROLAND, Legend of: Historical foundation. See SPAIN: 778.

Romances of. See FRENCH LITERATURE: 1050-1350.

ROLAND DE LA PLATIERE, Jean Marie (1734-1793), French statesman. Leader of the Girondists and member of the Jacobin club; minister of the interior, March-June, 1792; August, 1792-January, 1793; deputy to the Convention; opposed extreme revolutionists. ROMAN CITIZENSHIP: Under the republic. See QUIRITES.

Under the empire.—"While Pompeius, Cæsar, Augustus and others extended the Latin rights to many provincial communities, they were careful to give the full Roman qualification [the 'privileges of Quiritary proprietorship, which gave not merely the empty title of the suffrage, but the precious immunity from tribute or land-tax'] to persons only. Of such persons, indeed, large numbers were admitted to citizenship by the emperors. The full rights of Rome were conferred on the Transalpine Gauls by Claudius, and the Latin rights on the Spaniards by Vespian; but it was with much reserve that any portions of territory beyond Italy were enfranchised, and rendered Italic or Quiritary soil, and thus endowed with a special immunity. . . . The earlier emperors had, indeed, exercised a jealous reserve in popularizing the Roman privileges; but from Claudius downwards they seem to have vied with one another in the facility with which they conferred them as a boon, or imposed them as a burden. . . . The practice of purchasing Civitas was undoubtedly common under Claudius. . . . Neither Hadrian, as hastily affirmed by St. Chrysostom, nor his next successor, as has been inferred from a confusion of names, was the author of the decree by which the Roman franchise was finally communicated to all the subjects of the empire. Whatever the progress of enfranchisement may have been, this famous consummation was not effected till fifty years after our present date, by the act of Antoninus Caracalla [211-217]."—C. Merivale, *History of the Romans*, ch. 67, with footnote.

ROMAN CITY FESTIVAL.—The "Roman chief festival or festival of the city (ludi maximi, Romani) . . . was an extraordinary thanksgiving festival celebrated in honour of the Capitoline Jupiter and the gods dwelling along with him,

ordinarily in pursuance of a vow made by the general before battle, and therefore usually observed on the return home of the burgess-force in autumn. A festal procession proceeded toward the Circus staked off between the Palatine and Aventine. . . . In each species of contest there was but one competition, and that between not more than two competitors."—T. Mommsen, *History of Rome*, bk. 1, ch. 15.

ROMAN FAMILY.—"When we say that the Family is the basis of Roman society, we mean that it is the Family, not the Individual, of which the State takes account. . . . And it is to be remembered that emancipated children formed no part of the family of their birth: they belonged to some other family. This Family is under the absolute rule of the Father. All the persons, and the estate also, are in his [manus] 'hand.' But if he is supreme head of the Family, and so enjoys all the rights, on the other hand it is he who is liable for the fulfilment of all the duties. He has the estate, but out of it he must maintain the members of the Family: above all, he must see that the proper offerings and acts of worship are duly performed, and so ensure the favour of the gods. For every Family has its own goods, and its religious observances must be performed by its own representative. There must therefore always be someone in the position of Father. As no woman could be the head of a Family, it is clear that sons, or one son at least, were necessary for the continuance of the Family. In case no son was born to him in the course of nature, the Father could and did make good the deficiency by adopting some one as his son. The adopted son was in exactly the same position as a son by birth would have been: he was subject to the absolute power of the adopting Father, and henceforth owed worship to the gods of his new family, not to those of that which he was born. He was thus qualified to succeed his new Father at death and become Father of the Family himself. A woman was always in the 'hand' of some man: in other words some man was always her Father. Her marriage meant that she was 'discharged' from the hand of one 'Father' into that of another."—W. E. Heitland, *Roman republic*, pp. 33-34.—See also ROME: Ancient kingdom: Genesis of the people; GENS.

ROMAN FETIALES. See FETIALES.

ROMAN FREEDMEN.—In the organization of the great Roman households, freedmen, or manumitted slaves found many opportunities for a career. The vast senatorial estates, often scattered over three continents, were managed by freedmen of education and business capacity. Julius Cæsar introduced them into public affairs in the first century when he installed some of his household

as officers of the mint. "The power of the imperial freedmen . . . increased to unendurable bounds under Claudius' facile régime. It will be remembered that while the Senate had Roman quaestors and aediles to administer their departments, Augustus had organized his bureaus as a part of his personal household. His own financial agent—who according to business customs was a freedman, continued to be the fiscal agent even after the enormous revenues of a dozen provinces came into his hands. Such agents and secretaries naturally secured even greater power as the emperor's power grew. Under Caligula and Claudius they might be called cabinet secretaries, ex-slaves as they were . . . Callistus Caligula's filthy-handed freedmen who had aided Claudius to the throne, now became his secretary of petitions. . . . On such men Claudius was largely dependent, since he had no experience in affairs of State and these men seem to have made the greatest possible profit out of their positions."—T. Frank, *History of Rome*, pp. 426-427.

ROMAN PEACE (Pax Romana).—"The benefits conferred upon the world by the universal dominion of Rome were of quite inestimable value. First of these benefits, . . . was the prolonged peace that was enforced throughout large portions of the world where chronic warfare had hitherto prevailed. The 'pax romana' has perhaps been sometimes depicted in exaggerated colours; but as compared with all that had preceded, and with all that followed, down to the beginning of the nineteenth century, it deserved the encomiums it has received."—J. ROMAN PROVINCIAL GOVERNMENT.—

For the Roman nobles "debarred as they were from trade, . . . a career in the public service became a great avenue to the accumulation of enormous wealth. The Roman carried with him into the provinces the slave-owner's arrogance and confidence. Their conquest by war had meant for provincials only plundering; in times of peace Rome's governors and officials, seeking to make their fortunes by their administration, pursued a policy of uninterrupted pillage. . . . Only a man with the spirit of a Horace could resist the temptation of a lucrative governorship and prefer the prospect of a good crop at home to the dazzling pro-consulship of fertile Africa. The term of office for the governor was one year only. When the safety of the province was endangered, however, it was deemed a matter of such importance to have the administration continue uninterrupted, that the appointment of a successor was not permitted and the measure to lengthen the governorship was not subject to veto. . . . The governor, it would seem moreover, had some power on his withdrawal from the province, to appoint a deputy as interim administrator. No inconsiderable part of the governor's duties was the credit of the province. To arrange the finances of the towns, to satisfy the tax-farmers, to deal with disputes between Roman citizens and provincials he held court at various centres. It was a necessity of his position to keep his friends at home informed of all movements in his own and neighboring states and to be in touch himself with the political situation in Rome. For this purpose he found the messengers of the tax-contractors very useful in transmitting and forwarding mails. Any account of Roman provincial government, however, would be incomplete without a reference to the numerous demands on a governor for assistance. Personal applications for posts and requests to enforce payment on luckless provincials were constantly urged."—E. H. Oliver, *Roman economic conditions to close of republic*, pp. 154-156.

ROMAN ROADS IN BRITAIN.—"Four principal lines of road have been popularly known as 'the four Roman ways.' In the time of Edward the Confessor, and probably much earlier, there were four roads in England protected by the king's peace. These were called Watlinge-strete, Fosse, Hickenilde-strete, and Erming-strete. Watling-street runs from London to Wroxeter. The Fosse from the sea coast near Seaton in Devonshire to Lincoln. The Ikenild-street from Icelingham near Bury St. Edmund's in Suffolk, to Wantage in Berkshire, and on to Cirencester and Gloucester. The Erming-street ran through the Fenny district of the east of England. These streets seem to have represented a combination of those portions of the Roman roads which in later times were adopted and kept in repair for the sake of traffic. . . . The name of 'Watling-street' became attached to other roads, as the Roman road beyond the Northumbrian wall, which crossed the Tyne at Corbridge and ran to the Frith of Forth at Cramond, bears that name; and the Roman road beyond Uriconium (Wroxeter) to Bravinium (Leintwarden) Salop, is also called Watling-street. The street in Canterbury through which the road from London to Dover passes is known as Watling-street, and a street in London also bears that name. . . . Two lines of road also bear the name of the Icknild-

street, or Hikenilde-street; but there is some reason to believe that the Icknield-street was only a British trackway and never became a true Roman road."—H. M. Scarth, *Roman Britain*, ch. 13.—"In the fifth year after the Conquest, inquisition was made throughout the kingdom into the ancient laws and customs of England. . . . From this source we learn, that there were at that time in England four great roads protected by the King's Peace, of which two ran lengthways through the island, and two crossed it, and that the names of the four were respectively, Watlinge-strete, Fosse, Hikenilde-strete and Erming-strete. These are the roads which are popularly but incorrectly known as 'the four Roman ways.' . . . The King's Peace was a high privilege. Any offence committed on these highways was tried, not in the local court, where local influence might interfere with the administration of justice, but before the king's own officers."—E. Guest, *Origines Celticae*, v. 2: *Four Roman ways*.—See also BRITAIN: 411; WATLING STREET.

ROMAN WALLS IN BRITAIN.—There were two great fortified walls constructed by the Romans in Britain, but the name is most often applied to the first one, which was built under the orders of the Emperor Hadrian, from the Solway to the Tyne, seventy miles long and from eighteen to nineteen feet high, of solid masonry, with towers at intervals and with ditches throughout. In the reign of Antoninus Pius a second fortified line, farther to the north, extending from the Forth to the Clyde, was constructed. This latter was a rampart of earth connecting numerous forts. Hadrian's wall was strengthened at a later time by Severus and is sometimes called by his name. Popularly it is called "Graham's Dike." Both walls were for the protection of Roman Britain from the wild tribes of Caledonia.—E. Guest, *Origines Celticae*, v. 2: *Four Roman ways*, pp. 88-94.—See also BRITAIN: 117-145.

ROMANIA, Empire of.—The new feudal empire, constituted by the Crusaders and the Venetians, after their conquest of Constantinople, and having the great and venerable but half ruined capital of the Byzantines for its seat, received the name of the empire of Romania. The reign of its first emperor, the excellent Baldwin of Flanders, was brought to a tragical end in little more than a year from his coronation. Summoned to quell a revolt at Adrianople, he was attacked by the king of Bulgaria, defeated, taken prisoner and murdered within a year by his savage captor. He was succeeded on the throne by his brother Henry, a capable, energetic and valiant prince; but all the ability and all the vigor of Henry could not give

cohesion and strength to an empire which was false in its constitution and predestined to decay. On Henry's death, without children (1216), his sister Yoland's husband, Peter of Courtenay, a French baron, was elected emperor; but that unfortunate prince, on attempting to reach Constantinople by a forced march through the hostile Greek territory of Epirus, was taken captive and perished in an Epirot prison. His eldest son, Philip of Namur, wisely refused the imperial dignity; a younger son, Robert, accepted it, and reigned feebly until 1228, when he died. Then the venerable John de Brienne, ex-king of Jerusalem, was elected emperor-regent for life, the crown to pass on his death to Baldwin of Courtenay, a young brother of Robert. "John de Brienne died in 1237, after living to witness his empire confined to a narrow circuit round the walls of Constantinople. Baldwin II. prolonged the existence of the empire by begging assistance from the Pope and the king of France; and he collected the money necessary for maintaining his household and enjoying his precarious position, by selling the holy relics preserved by the Eastern Church [such, for example, as the crown of thorns, the bonds, the sponge and the cup of the crucifixion, the rod of Moses, etc.]. He was fortunate in finding a liberal purchaser in St. Louis. . . . At length, in the year 1261, a division of the Greek army [of the empire of Nicaea] surprised Constantinople, expelled Baldwin, and put an end to the Latin power [see NICAEA: 1204-1261], without the change appearing to be a revolution of much importance beyond the walls of the city."—G. Finlay, *History of Greece from its conquest by the Crusaders*, ch. 4.—In the last days of the sham empire, Baldwin II maintained his court "by tearing the copper from the domes of the public buildings erected by the Byzantine emperors, which he coined into money, and by borrowing gold from Venetian bankers, in whose hands he placed his eldest son Philip as a pledge."—G. Finlay, *History of the Byzantine and Greek empires, from 716 to 1453*, v. 2, bk. 4, ch. 1, sect. 3.—See also BYZANTINE EMPIRE: 1204-1205.

ROME

ANCIENT KINGDOM

Genesis of the people of Rome.—"The Roman people belonged to that part of the Indo-European race which entered Italy and is, for that reason, often called Italic. [See PHILLOGY: 9; 10.] At the beginning Rome was only an insignificant village community of Latium, the land of the Latins. The Italic stock were not the first inhabitants of Italy; they were preceded by the Mediterranean race whose presence in the Mediterranean basin is of unknown antiquity. The Italic stock was apparently scattered through the hills and valleys of Central Italy by 1000 B. C. or earlier. These people lived in huts and protected themselves as best they could. The beginnings of Rome consisted of collections of such huts. The site was selected because its seven hills could each be surrounded by palisades and be defended. Archaeological discoveries in the Forum seem to show that the site was occupied as early as 1000 B. C. About 800 B. C. that part of Italy now called Tuscany was invaded by a people from Asia, whom we call Etruscans. They were apparently kindred to the people of Lydia, for their art was similar to that of Lydia and they employed the same alphabet as the Lydians. The newcomers mingled with the Italic stock and formed the Etruscans of history. They were more civilized than the Italic population to the south of them."—G. G. Barton, *Religions of the world*, p. 265.—"The rest of the peninsula was the home of the Italian stock, of which there were several branches. Of that in the southwest the most famous was the Latin people in the plain south of the Tiber; the inhabitants of Sicily belonged to the same branch. The mountaineers formed another vigorous branch, called, from their chief peoples, the Umbro-Sabellians. The Umbrians lived in the northern Apennines overlooking Etruria; the Sabellians were split into several tribes occupying the mountain-valleys of the centre and south. The most vigorous and numerous stock among them was the Samnite. The northern plain of the Po was the seat of mixed populations, a kind of vestibule for peoples to enter and mingle before pushing on southward to permanent homes."—G. S. Goodspeed, *History of the ancient world*, p. 241.—"First, Rome was built by colonists from Alba Longa [traditional date, 753]; secondly, . . . these colonists were simple shepherds; thirdly, . . . the foundation of Rome dates from the age of bronze, and was caused by the necessity felt by the Alban shepherds to escape from the threatening neighborhood of the volcano. From these facts, duly verified and established, will follow the consequence that the Etruscans had nothing to do with the foundation of Rome. . . . The mighty river which washed the foot of the Palatine had, at that remote period, no special name; it was called Rumon, which means simply 'a stream, a river.' The inhabitants of the surrounding villages, which were mostly perched on high hills and mountains, Tusculum, Aricia, Alba, Tibur, Praeneste, having entered into commercial communications with the new settlement, began to name it from its most prominent topographical feature, from its connection with the Rumon or river: they called it Roma, which means the 'town of the river.' . . . They called the leader of the settlement Romulus, which means 'the man from the town of the

river.'"—R. Lanciani, *Original Rome in the light of recent discoveries*, pp. 32-33.—See also *ÆNEAS*.—"When tradition gives us our first view of the Roman State we see it organized as follows. There is the whole body of the People, the community, as we might call it. Of this body there are sections, called curiæ, which sections are represented as existing from the foundation of Rome. The community is only conceived as divided into these sections or wards, for the two bodies come into being together. . . . We next learn that the curia was made up of gentes. The size of clans being necessarily various, we infer that the number of clans in the several curies must have varied also: and there is no real evidence to the contrary. The curies appear as political divisions on an equal footing: and in each curia no account is taken of the primitive grouping of its members in clans and families. But we are also told that the community consisted of three tribes, Ramnenses, Titienses, and Luceres. These tribes do not appear as original divisions of the community. . . . Each tribe is made up of curies: of these there are thirty, or ten to a tribe: and even after these three primitive tribes disappear the curies remain, thirty in number. Regarded as a part of the community, neither the tribes nor the curia have any organization. Neither can act independently, for want of machinery."—W. E. Heitland, *Roman republic*, pp. 36-37.—"Its language was composed of the most diverse elements. The Latin predominated, but Sabellian roots were numerous, and more Greek radicals were found in it than in any other of the dialects of Central Italy. As to its name, no one knew to what language that belonged. According to some, Rome was a Trojan word; according to others, a Greek word. There are reasons for believing it to be Latin, but some of the ancients thought it to be Etruscan. The names of Roman families also attest a great diversity of origin. . . . The effect of this mixing of the most diverse nations was, that from the beginning Rome was related to all the peoples that it knew. It could call itself Latin with the Latins, Sabine with the Sabines, Etruscan with the Etruscans, and Greek with the Greeks. Its national worship was also an assemblage of several quite different worships, each one of which attached it to one of these nations."—Fustel de Coulanges, *Ancient city*, bk. 5, ch. 2.—"The whole history of the world has been determined by the geological fact that at a point below the junction of the Tiber and the Anio the isolated hills stand nearer to one another than most of the other hills of Latium. On a site marked out above all other sites for dominion, the centre of Italy, the centre of Europe, as Europe then was, a site at the junction of the three of the great nations of Italy, and which had the great river as its highway to lands beyond the bounds of Italy, stood two low hills [see CAPITOLINE HILL; PALATINE HILL], the hill which bore the name of Latin Saturn, and the hill at the meaning of whose name Palatine scholars will perhaps guess for ever. These two hills, occupied by men of two of the nations of Italy, stood so near to one another that a strait choice indeed was laid on those who dwelled on them. They must either join together on terms closer than those which commonly united Italian leagues, or they must live a life of border warfare more ceaseless, more bitter, than the ordinary warfare of

Italian enemies. Legend, with all likelihood, tells us that warfare was tried; history, with all certainty, tells us that the final choice was union. The two hills were fenced with a single wall; the men who dwelled on them changed from wholly separate communities into tribes of a single city. The hill of Saturn became the site of Rome's capitol, the scene of her triumphs, the home of her patron gods. The hill on the other side of the swampy dale became the dwelling-place of Rome's Cæsars, and handed on its name of Palatium as the name for the homes of all the kings of the earth. Around those hills as a centre, Latium, Italy, Mediterranean Europe, were gathered in, till the world was Roman, or rather till the world was Rome."—E. A. Freeman, *Practical bearings of European history (Lectures to American audiences, pp. 278-279)*.—See also ITALY: Ancient; LATIUM; ALBA; SABINES; EUROPE: Ancient; Roman civilization: Its origins.

Early character and civilization.—"In the social fabric of [the] early population a fairly rigid caste system came into existence, a record of which has survived in the well-known words 'patrician' and 'plebian.' The origin of this class system is still an unsolved problem. . . . Eventually, the influential men took the legal steps necessary to secure predominance for themselves and their descendants; they stereotyped the caste system by ordaining that they alone, the patricii, could hold offices of state, they alone could consult the auspices in behalf of the city, and that their ranks should not be contaminated by intermarriage with plebians. There is, however, a striking peculiarity in Rome's caste system which deserves attention. In other states under conditions resembling those of early Latium, economic laws usually worked without check until a feudal system grew up in which the lower class was reduced to serfdom. Such serfs were the helots of Sparta, Crete, Thessaly, and other states of early Greece, the subject tenants of ancient Egypt and of mediæval Europe. In early Rome the plebians seem never to have become serfs; they were not, so far as we know, bound to the soil. This circumstance may be due to a certain sense of equity which is so prominent a characteristic in the legislation of this people. But it is more likely that local conditions saved the Romans from the paralyzing effects of a feudal system. A period of Etruscan rule checked the normal development of oligarchy at Rome, and, after the nobility succeeded in ridding itself of this, new methods of warfare had been introduced which made a real feudal system obsolete. The old—we may say the Homeric—military methods of single combat were being displaced. On the north the Etruscans had introduced the Greek armor and hoplite army. On the south, the Greek colonies were teaching the new methods to the neighboring Italic tribes. The Roman nobles were therefore compelled in self-defense to discard their ancient manner of warfare and to form solid legions for which the inclusion of the plebian soldier was a necessity. But in bringing the plebeian host into the line they made it aware of its own worth and gave it an opportunity to demand political rights. Tradition is probably near the truth when it asserts that the populace of Rome saved its civil rights and won political privilege by means of military boycotts. But whatever it was that saved Rome from the feudal system, which established itself for a period at least in almost all other ancient states, the fact that she did escape is very important to an understanding of her later military successes. The pe-

culiar characteristics of the Roman people can be noticed in various legal institutions which it is well to bear in mind from the very beginning. A sense of fair play and a respect for legal orderliness permeates the whole early history of this people. The Romans were always unusually liberal in their practice of emancipating slaves and of giving the privileges of citizenship to freed slaves, whereas the Greeks consistently refused to incorporate freedmen into the citizen body. Again, the Romans early established a distinct court of equity—that of the praetor peregrinus—for cases in which foreigners were involved, so that strangers who did not know the Roman *mos maiorum* might find equitable treatment in their business dealings with citizens. Of the same general nature is the ancient custom of prohibiting the sale and employment of debtor slaves within the borders of Latium, and the practice of exacting a treaty of federation from conquered enemies rather than a proof of subjection in the form of tribute. Most striking of all is the fetial institution, an institution which has a special significance for the study of Roman imperialism, since it reveals the spirit of Rome's *ius belli* as nothing else can. From time immemorial a semi-political, priestly board existed whose province it was to supervise the rites peculiar to the declaration of war and the swearing of treaties, and which formed, as it were, a court of first instance in such questions of international disputes as the proper treatment of envoys and the execution of extradition. When any complaint arose that a neighboring tribe had committed an act of war it was the duty of this board to investigate the matter for the senate, and, if it found the complaint just, to send its herald to the offending state with a demand for restitution. . . . Now if the practices of the fetial board were observed in good faith, it is apparent that peace must have been the normal international status assumed between Rome and her neighbors, and that war was considered justifiable only on the score of an unjust act,—for example, the breach of a treaty, a direct invasion, or the aiding of an enemy."—T. Frank, *Roman imperialism, pp. 5-8*.—"As Rome was on a navigable river, and well situated for small trade with the Etruscans and other neighbors, some of the citizens engaged in making wares and in buying and selling. Most of the Romans, however, were peasants. [See AGRICULTURE: Ancient: Development of the servile system among the Romans.] The farmer, clad simply in his tunic, a loose woolen garment which reached the knee, followed his bronze-shod plough drawn by a yoke of cattle. His narrow mind held only sober, practical ideas; for he saw nothing of the world beyond the mountains bordering the plain of the Tiber,—mountains which inspired him with no love of the beautiful and the grand, but rather with a feeling of hatred for the enemies who were wont to sweep down from them upon his little field. His laborious life, his warfare against famine, pestilence, and neighbors who were always harassing, made him stern and harsh, and, even in his dealing with the gods, calculating and illiberal. Though love, pity, and benevolence found little place in his heart, he was strong in the more heroic virtues,—he was dignified, brave, and energetic; he revered the gods and the forefathers, and obeyed the laws; above all, he was a man of his word. . . . We find the same simplicity and severity in the family. Marriage was a religious act which made the home sacred. Originally the dwelling was a hut with a single room. . . . In time it came to have several rooms. The dwelling was a holy

place. Within lived the Penates, guardian deities of the family store, and the Lar, who protected the house from every harm. Every person had a guardian spirit, the man a Genius, the woman a Juno. The Genius of the father was the chief household god. The father was priest of these gods, owner of the estate, and master of his wife and children through life. He could load his son with chains, sell him into slavery, or put him to death. Even if the son were a senator or magistrate, the father could drag him home and punish him for misconduct. Woman was always under guardianship, the maiden of her father, the matron of her husband. Nevertheless she was respected. The mother aided in the worship of the home gods, and shared equally with the sons and daughters in the inheritance. In this strict, moral school, young men were disciplined for public life. As the family grew larger in the course of several generations, it often happened that the members, even if widely separated, kept up their social and religious relations with one another. Such an association of kinsmen, larger than the family, was a gens. In origin and general character it was like the Greek gens. Whereas in Athens a man had but a single name,—the one given him by his parents,—a Roman usually had three. In the case of Publius Cornelius Scipio, for instance, Publius is the personal name given by his parents; Cornelius is the name of his gens; and Scipio the name of his family, a branch of the Cornelian gens. This is the order in which the names occur. Sometimes a fourth name is added to define the individual more precisely, or merely as an honor, and occasionally we find even a fifth. . . . Several families united in a curia, or brotherhood. On certain festal days the men of a brotherhood ate together in a common dining-hall containing a sacred hearth, on which they kept fire burning perpetually in honor of Juno. When war broke out, the members of a curia followed their leaders to the front, and stood side by side on the field of battle. Kinship and religion inspired them to deeds of daring; 'the soldier felt ashamed to forsake the comrades with whom he had lived in communion of libations, sacrifices, and holy rites.' Ten curiae united in a tribe, and three tribes composed the state. The curia was the same institution as the Greek phratry (brotherhood), and the Roman tribe was practically the same as the Greek. In early Rome the commons of each tribe formed a regiment of foot and the nobles a troop of horse. . . . The commons were called plebians (the 'multitude') and the nobles patricians. In general character the patricians were like the Eupatrids at Athens, or like the nobles of most other states. They alone were qualified to be senators, magistrates, and priests. The king could ennoble any plebian whom he considered sufficiently marked by wealth or personal merit. In general the plebians were like the commons of Athens and of most other states of ancient or modern times. Under the kings and for a long time afterward their rights were limited. They could own property and could engage in business. Personally they were free, and had a right to protection of life and property. They could vote in the popular assembly, but were not permitted to sit in the senate or to hold any office or priesthood. As the patricians alone were acquainted with the laws, which were unwritten, the plebian, to secure protection for himself and his family before the courts of law, chose a noble as his patron, whom he bound himself to serve as a client. Thus many of the plebians became clients

of the patricians. The duty of the patron was to give his clients legal advice in their business, to sue for them when injured, and to defend them when sued. The clients, on the other hand, followed their patron to war and supported him in public life, labored in his fields or made him presents, that he might fill his offices with becoming dignity. Though the original object of clientage was doubtless good . . . after the overthrow of kingship, it became intolerably oppressive. . . . [The king's] authority conferred upon him by the people, made him absolute commander in war and supreme judge with power of life and death over his subjects. In addition to these duties, he was head of the state religion. All officials, civil, military, and religious, were appointed by him, and were merely his helpers. Although originally but a citizen, his office gave him great dignity. Accordingly, he dressed in an embroidered purple robe and high red shoes, and with an eagle-headed sceptre in his hand sat on an ivory throne, the curule chair. In his walk he was accompanied by twelve attendants, called lictors, each bearing an axe bound in a bundle of rods. The axes signified his absolute power, extending to life and death. The curule chair and the lictors armed with axes were first used by the Etruscan kings, and borrowed from them by the rulers of Rome."—G. W. B. C. 753-510.—**Legendary period of the kings.**—**Credibility of Roman annals.**—**Probable Etruscan domination.**—**Economic conditions under the kings.**—**Servian reforms.**—**Foreign affairs.**—**Fall of the Tarquins.**—"It may . . . be stated, as the result of this inquiry, that the narrative of Roman affairs, from the foundation of the city to the expulsion of the Tarquins is formed out of traditionary materials. At what time the oral traditions were reduced into writing, and how much of the existing narrative was the arbitrary supplement of the historians who first framed the account which has descended to us, it is now impossible to ascertain. . . . The records of them, which were made before the burning of Rome, 300 B. C., were doubtless rare and meagre in the extreme; and such as there were at this time chiefly perished in the conflagration and ruin of the city. It was probably not till after this period—that is to say, about 350 years after the era assigned for the foundation of the city, that these oral reports—these hearsay stories of many generations—began to be entered in the registers of the pontifices. . . . The history of the entire regal period, as respects both its external attestation and its internal probability, is tolerably uniform in its character. . . . Niebuhr, indeed, has drawn a broad line between the reigns of Romulus and Numa on the one hand, and those of the five last kings on the other. The former he considers to be purely fabulous and poetical; the latter he regards as belonging to the mythico-historical period, when there is a narrative resting on a historical basis, and most of the persons mentioned are real. But it is impossible to discover any ground, either in the contents of the narrative, or in its external

evidence, to support this distinction. Romulus, indeed, from the form of his name, appears to be a mere personification of the city of Rome, and to have no better claim to a real existence than Hellen, Danaus, Ægyptus, Tyrrhenus, or Italus. But Numa Pompilius stands on the same ground as the remaining kings, except that he is more ancient; and the narrative of all the reigns, from the first to the last, seems to be constructed on the same principles. That the names of the kings after Romulus are real, is highly probable; during the latter reigns, much of the history seems to be in the form of legendary explanations of proper names. . . . Even with respect to the Tarquinian family, it may be doubted whether the similarity of their name to that of the city of Tarquinii was not the origin of the story of Demaratus and the Etruscan origin. The circumstance that the two king Tarquins were both named Lucius, and that it was necessary to distinguish them by the epithets of Priscus and Superbus, raises a presumption that the names were real. Müller indeed regards the names of the two Tarquins as merely representing the influence exercised by the Etruscan city of Tarquinii in Rome at the periods known as their reigns. . . . The leading feature of the government during this period is that its chief was a king, who obtained his office by the election of the people, and the confirmation of the Senate, in the same manner in which consuls and other high magistrates were appointed after the abolition of royalty; but that, when once fully elected, he retained his power for life. In the mode of succession, the Roman differed from the early Greek kings, whose office was hereditary. The Alban kings, likewise, to whom the Roman kings traced their origin, are described as succeeding by inheritance and not by election. . . . The predominant belief of the Romans concerning their regal government was, that the power of the kings was limited by constitutional checks; that the chief institutions of the Republic, namely, the Senate and the Popular Assembly, existed in combination with the royalty, and were only suspended by the lawless despotism of the second Tarquin. Occasionally, however, we meet with the idea that the kings were absolute."—G. C. Lewis, *Inquiry into the credibility of early Roman history*, v. 1, ch. 11, sect. 39-40.—The names of the kings, with the dates assigned to them, are as follows: Romulus, 753-717 B.C.; Numa Pompilius, 715-673 B.C.; Tullus Hostilius, 673-642 B.C.; Ancus Martius, 641-617 B.C.; Lucius Tarquinius Priscus, 616-570 B.C.; Servius Tullius, 578-535 B.C.; Tarquinius Superbus, 534-510 B.C. According to the legend of early Rome, Romulus attracted inhabitants to the city he had founded by establishing within its walls a sanctuary or refuge, for escaped slaves, outlaws and the like. But he could not in a fair way procure wives for these rough settlers, because marriage with them was disdained by the reputable people of neighboring cities. Therefore he arranged for an imposing celebration of games at Rome, in honor of the god Consus, and invited his neighbors, the Sabines, to witness them. These came unsuspectingly with their wives and daughters, and, when they were absorbed in the show, the Romans, at a given signal, rushed on them and carried off such women as they chose to make captive. A long and obstinate war ensued, which was ended by the interposition of the women concerned, who had become reconciled to their Roman husbands and satisfied to remain with them.—Based on Livy, *History*, ch. 9.—"We cannot . . . agree with Nie-

buhr, who thinks he can discover some historical facts through this legendary mist. As he supposes, the inhabitants of the Palatine had not the right of intermarriage ('connubium') with their Sabine neighbours on the Capitoline and the Quirinal. This inferiority of the Palatine Romans to the Sabines of the Capitoline and Quirinal hills caused discontent and war. The right of intermarriage was obtained by force of arms, and this historical fact lies at the bottom of the tale of the rape of the Sabines. Such a method of changing legends into history is of very doubtful utility. It seems more natural to explain the legend from the customs at the Roman marriage ceremonies [in which the pretence of forcible abduction was enacted]."—W. Ihne, *History of Rome*, bk. 1, ch. 2.—"With the reign of the fifth king, Tarquinius Priscus, a marked change takes place. The traditional accounts of the last three kings not only wear a more historical air than those of the first four, but they describe something like a transformation of the Roman city and state. Under the rule of these latter kings the separate settlements were for the first time enclosed with a rampart of colossal size and extent. The low grounds were drained, and a forum and circus elaborately laid out; on the Capitoline Mount a temple was erected, the massive foundations of which were an object of wonder even to Pliny. . . . The kings increase in power and surround themselves with new splendour. Abroad, Rome suddenly appears as a powerful state ruling far and wide over southern Etruria and Latium. These startling changes are, moreover, ascribed to kings of alien descent, who one and all ascend the throne in the teeth of established constitutional forms. Finally, with the expulsion of the last of them—the younger Tarquin—comes a sudden shrinkage of power. At the commencement of the republic Rome is once more a comparatively small state, with hostile and independent neighbours at her very doors. It is difficult to avoid the conviction that the true explanation of this phenomenon is to be found in the supposition that Rome during this period passed under the rule of powerful Etruscan lords. Entering Italy, as they probably did from the north or north-east, they seem to have first of all made themselves masters of the rich valley of the Po and of the Umbrians who dwelt there. Then crossing the Apennines, they overran Etruria proper as far south as the banks of the Tiber, here too reducing to subjection the Umbrian owners of the soil. In Etruria they made themselves dreaded, like the Northmen of a later time, by sea as well as by land. . . . We find the Etruscan power encircling Rome on all sides, and in Rome itself a tradition of the rule of princes of Etruscan origin. The Tarquinii come from South Etruria; their name can hardly be anything else than the Latin equivalent of the Etruscan Tarchon, and is therefore possibly a title (= 'lord' or 'prince') rather than a proper name. . . . That Etruria had, under the sway of Etruscan lords, forged ahead of the country south of the Tiber in wealth and civilisation is a fact which the evidence of remains has placed beyond doubt. It is therefore significant that the rule of the Tarquins in Rome is marked by an outward splendour which stands in strong contrast to the primitive simplicity of the native kings. . . . These Etruscan princes are represented, not only as having raised Rome for the time to a commanding position in Latium, and lavished upon the city itself the resources of Etruscan civilisation, but also the authors of important internal changes.

They are represented as favouring new men at the expense of the old patrician families, and as reorganising the Roman army on a new footing, a policy natural enough in military princes of alien birth."—H. F. Pelham, *Outlines of Roman history*, bk. 1, ch. 3.—"The earliest settlement at Rome . . . was on the Palatine. Gradually the population outgrew this narrow space, and built their dwellings on the neighboring hills. Then one of the kings took possession of the Capitoline Mount, and established his citadel there. At first the people could not live in the valleys which separated the hills, because they were marshy and often overflowed. The Tarquins drained these low grounds by means of sewers. The most famous of these works was the Cloaca Maxima ('the greatest sewer'), which drained the Forum, or market-place, and made the ground about it habitable. But the great stone arch which now covers it was built hundreds of years after the downfall of the kingship. The public life of the community centered in this valley. The smiths and the shopkeepers set up their stalls round the Forum. About it the king built temples; and adjoining it on the northwest they made an assembly-place—the comitium—in which they built a senate-house. Above the Forum, on the Capitoline, they erected a temple to Jupiter, Juno, and Minerva,—usually known as the temple of the Capitoline Jupiter. Though in the Etruscan style, it was for centuries the most magnificent building in Rome. Under the Tarquins Rome was a group of straggling villages situated on neighboring hills and separated by wide tracts of vacant land. The traditional account of the period asserts that Servius surrounded the whole with a great stone wall. This account may be true; but it is now well known that the so-called Servian Wall, remnants of which are still standing, was built in the fourth century B. C., more than a hundred years after the kingly period. Equally late is the so-called Wall of Romulus on the Palatine."—G. W. Botsford, *History of the ancient world*, pp. 335-336.—"The industrial productions of those early times must have been of a very rude character. Yet the early Albans imitated Etruscan pottery in their rough cups and flasks, and the blocks of stone at Antemnae are cut into sizes which approach regularity. And as Rome's position on the Tiber forced her to become the emporium of Latium and to develop urban rather than pastoral or agricultural characteristics, trades began to thrive, and Mamurius Venturius, the skilled maker of shields, to receive celebration in the hymns of the Salli. . . . To [the Romans the] . . . reign of Numa is curiously significant of change. Not merely is settled agriculture well begun, but division of labour in the trades is simultaneously outlined. Whatever may be the significance of their assigning this date for the modifications of the old conditions, it is clear that the time came when the single family found itself unable to satisfy its own growing needs. Outside the family there sprang up arts, which demanded a special aptitude and considerable training. This process, brought about unquestionably by a gradual evolution, the Roman writers express in the formal language:—'The distribution of Numa was made according to the several trades of musicians, goldsmiths, masons, dyers, shoemakers, tanners, braziers, and potters. . . . Rome's commerce outside of Latium practically began with the foundation of Ostia. Distinct from her central position to become the mart of Latium and later the emporium of Italy, Rome must have early felt the need of such an

outpost both for harbourage and as a protecting fort. . . . But besides its great water-route, from the earliest times Rome had more or less clearly defined land-routes. . . . From time immemorial venturous Italian traders had dared the dangers of the Alps to barter with barbarian tribes beyond, and perhaps revived their failing courage by recalling that by this route Hercules was said to have reached Italy from Gaul. That there was great inter-Italian commerce is indicated by the fact that copper was a general medium of exchange throughout the whole peninsula. Conditions were very favourable for Rome to stretch out the tentacles of commerce towards the western Mediterranean. The great colonizing movement of the Greeks, more especially of the Phœcians, tended to displace the Phœnicians who with trading-posts situated on the promontories and coasts of the western sea had long since established a brisk trade with the native peoples. But Greek colonization and commerce in their turn were forced to yield; for on the north coast had arisen the people of the Etruscans whose commercial greatness was due not more to the rich copper, silver and iron of their country than to the daring of their sailors; while the Phœnicians attempted to strengthen their grasp by establishing in Libya the entrepot of Carthage, a city with the same trading instincts as the metropolis but with a newer life. Coöperating on the basis of a common enmity of their common rival, the combined fleets of these two states overthrew in the naval engagement of Aleria in 537 B. C. the commercial supremacy of the Greeks in the western Mediterranean. It was during this struggle of the Etruscans and Carthaginians against the Greeks that the Romans embarked upon marine enterprise. Fortunately their relations with all the combatants were cordial; for they had intimate commercial connections with Carthage, with the Etruscans of Caere, and with the Phœcians of Velia and Massilia. This commercial development is largely due to the encouragement given to trade by the last kings of Rome. Now head of the Latin league, the Romans could safely go afield in their enterprises. The expansion of their trade is best indicated by their position in the great commercial treaty concluded with Carthage about the beginning of the Republic."—E. H. Oliver, *Roman economic conditions to close of republic*, pp. 16, 18, 24-25.—"The most important event in the internal history of Rome traditionally referred to as the regal period is the 'Servian' Reform. By this measure the community was organized as an army under a regular scheme, in which duties were assigned to all according to their presumed capabilities: but, though the object of this reform was military, it soon led to far-reaching consequences of a political kind. . . . What was needed was a muster-roll of all persons liable to service, on the basis of which an army could be formed without disorder or delay whenever there was a prospect of war. In preparing this roll age and wealth must be the leading considerations. Moreover the army must be as large as possible: hence plebians and patricians must serve alike. Again, financial arrangements must be made for the pay and maintenance of armies in the field. It was therefore desirable that the names and properties of those who, though unable to bear arms, could serve the state as taxpayers, should be duly registered, so that the available resources of the state might at any moment be known. And so the Roman community was classified as a military whole in five divisions or classes according to property, each class having a

normal equipment, which every member of the class must provide for himself. But the division into classes did not go far in providing a military organization. More important were the subdivisions of the classes called 'Centuries.' The word *centuria* means a hundred (of anything), but in practice we find it applied to hodies of both more and less than 100. In military language it means little more than 'company.'—W. E. Heitland, *Roman republic*, pp. 44-46.—'[Tradition] represents Servius as the creator of new tribes and the reorganizer of the army. His object was to introduce the Greek military system already adopted by Etruria. As each soldier had to arm and equip himself at his own expense, Servius found it necessary to take a census of the citizens in order to know who should buy heavier and who lighter armor. For this purpose a new local division of the country was necessary, for the three old tribes had been outgrown by the increase in population and territory. First, then, he divided the city into four districts, called tribes, and the country into sixteen tribes. Taking the census tribe by tribe, Servius divided the citizens into five classes, according to the size of their freeholds. He required the members of the first or wealthiest class to equip themselves with the heaviest and most efficient arms, those of the second class to buy somewhat less complete equipments, and so on to the lowest. The three wealthier classes were heavy-armed, and stood in ranks, one behind another, while the fourth and fifth classes, as light troops, served wherever occasion demanded. The first class formed four ranks with ten *centuries* in each; the second and third classes formed each one rank. Of the light troops there were ten *centuries* in the fourth class, and fourteen in the fifth. When necessary, two more ranks could be formed of the light troops, making eight ranks in all. Thus the army contained eighty-four hundred footmen. From early times it appears to have been composed of two divisions, termed legions, of forty-two hundred foot-soldiers each. This organization included mainly plebeians; the patricians continued to serve in the cavalry, of which there were six *centuries*, three to each legion. The army, thus organized for the field, contained the men of military age—from seventeen to forty-six years. The older men remained in the city for the defence of the walls. At the time of this new arrangement the territory of Rome had increased four or five fold, chiefly at the expense of the Etruscans, the Sabines, and the Latins. When Rome subdued a neighboring city, she razed the walls and everything they enclosed, excepting the temples, and seized a third or perhaps a half of the conquered land. She compelled many of the dispossessed people to settle on her own hills, and, admitting all to the citizenship, bestowed the patriciate upon the nobles. With the growth of her territory, therefore, came a corresponding increase in her population and her military strength. After the reform of Servius, Rome could put into the field the largest, best organized, and best disciplined army in Latium.'—G. W. Botsford, *History of the ancient world*, pp. 336-337.—'According to the traditional account Rome began her career of conquest in the regal period. We hear of the subjection of a number of neighbouring towns, some of which seem to have stood in what is now called the Campagna: several of these do not again appear in history and their sites are not certainly known. The power of Rome was pushed to the seaboard, and Ostia, the port at the mouth of the Tiber, garrisoned as a citizen

settlement. Collisions with the Etruscan powers also took place to the North: to the North-East some extension was effected at the expense of the Sabines. But by far the most important gain was made to the South-East and South, not so much in the way of direct acquisition of territory as of the attainment of a dominating position in the Latin League. Loose confederations of kindred communities seem to have been common in ancient Italy. We come across collective names, Latins, Sabines, Aequi, Volsci, Samnites, Etrusci, and so forth. Each of these names stands for a unit, a sort of small nation, made up of lesser units. We know of some, and may believe of them all, that they met together at certain seasons. These gatherings were religious festivals held at some holy spot, such as a sacred grove or well, where the national gods were approached with common sacrifice and ceremonies. Fairs often grew up in connexion with these meetings, and they served also as opportunities for joint consideration of a common policy, if and when common action seemed likely to be called for. More than this we are hardly free to say. National unity was recognized, but the cohesion of these larger units was clearly very loose: each of the smaller constituent units was a community, entitled (and probably preferring) to act by and for itself whenever it might think its resources sufficient for the work in hand. Only a great emergency, some external danger threatening several communities at once and eventually the whole, would rouse such ill-organized powers to undertake and maintain an efficient national defence. If tradition of the early times, checked by our knowledge of later events, be worthy of any trust, it would seem that the above characteristics were present in all the Leagues of Italy, whether they consisted of cities, as among the Latins, or of cantons of hill-men, as the Samnites in the dales of Apennine.'—W. E. Heitland, *Roman republic*, p. 40.—'Lucius Tarquinius Superbus, or Tarquin the Proud, son of Tarquinius Priscus and son-in-law of Servius Tullius, brought about the assassination of the latter, and mounted the throne. Lucius Tarquin, having thus seized the kingdom (for he had not the consent either of the Senators or of the Commons to his deed), bore himself very haughtily, so that men called him Tarquin the Proud. First, lest some other, taking example by him, should deal with him as he had dealt with Tullius, he had about him a company of armed men for guards. And because he knew that none loved him, he would have them fear him. To this end he caused men to be accused before him. And when they were so accused, he judged them by himself, none sitting with him to see that right was done. Some he slew unjustly, and some he banished, and some he spoiled of their goods. And when the number of the Senators was greatly diminished by these means (for he laid his plots mostly against the Senators, as being rich men and the chief of the State), he would not choose any into their place, thinking that the people would lightly esteem them if there were but a few of them. Nor did he call them together to ask their counsel, but ruled according to his own pleasure, making peace and war, and binding treaties or unbinding, with none to gainsay him. Nevertheless, for a while he increased greatly in power and glory. He made alliance with Octavius Mamilius, prince of Tusculum, giving him his daughter in marriage; nor was there any man greater than Mamilius in all the cities of the Latins; and Suessa Pometia, that was a city of the Volsci,

he took by force, and finding that the spoil was very rich (for there were in it forty talents of gold and silver), he built with the money a temple to Jupiter on the Capitol, very great and splendid, and worthy not only of his present kingdom but also of that great Empire that should be thereafter. Also he took the city of Gabii by fraud. . . . By such means did King Tarquin increase his power. Now there was at Rome in the days of Tarquin a noble youth, by name Lucius Junius, who was akin to the house of Tarquin, seeing that his mother was sister to the King. This man, seeing how the King sought to destroy all the chief men in the State (and, indeed, the brother of Lucius had been so slain), judged it well so to bear himself that there should be nothing in him which the King should either covet or desire. Wherefore he feigned foolishness, suffering all that he had to be made a prey; for which reason men gave him the name of Brutus, or the Foolish. Then he bided his time, waiting till the occasion should come when he might win freedom for the people. [In a little time] . . . there came to Brutus an occasion of showing what manner of man he was. Sextus, the King's son, did so grievous a wrong to Lucretia, that was the wife of Collatinus, that the woman could not endure to live, but slew herself with her own hand. But before she died she called to her her husband and her father and Brutus, and bade them avenge her upon the evil house of Tarquin. And when her father and her husband sat silent for grief and fear, Brutus drew the knife wherewith she slew herself from the wound, and held it before him dripping with blood, and cried aloud, 'By this blood I swear, calling the Gods to witness, that I will pursue with fire and sword and with all other means of destruction Tarquin the Proud, with his accursed wife and all his race; and that I will suffer no man hereafter to be king in this city of Rome.' And when he had ended he bade the others swear after the same form of words. This they did and, forgetting their grief, thought only how they might best avenge this great wrong that had been done. First they carried the body of Lucretia, all covered with blood, into the market-place of Collatia (for these things happened at Collatia), and roused all the people that saw a thing so shameful and pitiful, till all that were of an age for war assembled themselves carrying arms. Some of them stayed behind to keep the gates of Collatia, that no one should carry tidings of the matter to the King, and the rest Brutus took with him with all the speed that he might to Rome. There also was stirred up a like commotion, Brutus calling the people together and telling them what a shameful wrong the young Tarquin had done. Also he spake to them of the labours, with which the King wore them out in the building of temples and palaces and the like, so that they who had been in time past the conquerors of all the nations round about were now come to be but as hewers of wood and drawers of water. Also he set before them in what shameful sort King Tullius had been slain, and how his daughter had driven her chariot over the dead body of her father. With suchlike words he stirred up the people to great wrath, so that they passed a decree that there should be no more kings in Rome, and that Lucius Tarquin with his wife and his children should be banished. After this Brutus made haste to the camp and stirred up the army against the King. And in the meanwhile Queen Tullia fled from her palace, all that

saw her cursing her as she went. As for King Tarquin, when he came to the city he found the gates shut against him; thereupon he returned and dwelt at Caere that is in the land of Etruria, and two of his sons with him; but Sextus going to Gabii, as to a city which he had made his own, was slain by the inhabitants. The King and his house being thus driven out, Brutus was made consul with one Collatinus for his colleague."—A. J. Church, *Stories from Livy, ch. 5.*

"We have already treated it as a certainty that Rome was once ruled by Kings, and have dwelt on several matters in which the growth of the state during the regal period is asserted. It is not less certain that the regal period came to an end, and that the very title of rex was a name of horror to the Roman people so long as any real Roman people remained. But the circumstances and procedure of this revolution are a mystery. The story handed down to us is a drama in the composition of which imagination, principally Greek imagination, has run riot, and old anecdotes preserved in Herodotus take the place of trustworthy detail. . . . It seems conceivable that the doings of a bad king alarmed the old patrician citizens. They seized the moment when the King, who was naturally the protector of the Plebs, had lost popularity with them by imposing task-works, and effected a revolution. This revolution left the Patricians in possession of the effective control of the state. . . . It is therefore reasonable to conclude that it was a movement of an aristocratic tendency. As for the machinery, we do not know how the change was effected. That the two magistrates of the new Republic were elected in an Assembly of the *Centuries* is probable."—W. E. Heitland, *Roman republic, pp. 51-52.*—"Not altogether political, but to some extent economic, was the revolution by which the kings were expelled from Rome. From the Roman writers we learn the utter distress of the people compelled to construct great public works. The last kings, it is well known, engaged in great building operations. Local tufa, peperine of Alba and of Gabii, the travertine of Tibur and the quarry-stone of Fidenae and Mt. Socrate offered material invitingly near. And it is the kings who are responsible for the employment of this material in those monumental structures,—the Palatine walls, the temple of Jupiter Stator, the Pons Subicius, the harbour at Ostia, the 'Carcer imminens foro,' the temple of Jupiter Optimus Maximus, the Cloaca Maxima, and the walls of Tarquinius Priscus, Servius Tullius, and Tarquinius Superbus. . . . Etruscan engineers and workmen were the chief architects and builders of early Rome. The building of the Servian Wall, however, marks an epoch in Roman development; its splendid material forms a striking contrast to the more primitive works. But greater activity in public construction meant an increased oppression for the Romans. . . . To this accumulation of unusual social burdens were added the everyday trials of the people,—the oppression of all classes, the jealousy of the patricians and their injustice towards the plebeians. It must have been an extreme of building activity, which was task work, that led the plebeians to unite with the patricians against their natural protectors, the kings. . . . The rotation of the kingship among the patricians by the establishment of a yearly consulship and the 'restoration of the law of contracts' proved an efficient revolutionary compromise."—E. H. Oliver, *Roman economic conditions to close of republic, pp. 27-29.*—See also BALANCE OF

REPUBLIC

B. C. 509.—Establishment of the republic.—Valerian laws.—“However much the history of the expulsion of the last Tarquinius, ‘the proud,’ may have been interwoven with anecdotes and spun out into a romance, it is not in its leading outlines to be called in question. . . . The royal power was by no means abolished, as is shown by the fact that, when a vacancy occurred, a ‘temporary king’ (interrex) was nominated as before. The one life-king was simply replaced by two year-kings, who called themselves generals (prætores), or judges (iudices), or merely colleagues (consules). The collegiate principle, from which this last—and subsequently most current—name of the annual kings was derived, assumed in their case an altogether peculiar form. The supreme power was not entrusted to the two magistrates conjointly, but each consul possessed and exercised it for himself as fully and wholly as it had been possessed and exercised by the king; and, although a partition of functions doubtless took place from the first—the one consul for instance undertaking the command of the army, and the other the administration of justice—that partition was by no means binding, and each of the colleagues was legally at liberty to interfere at any time in the province of the other. [See CONSUL, ROMAN.] . . . This peculiarly Latin, if not peculiarly Roman, institution of co-ordinate supreme authorities . . . manifestly sprang out of the endeavour to retain the regal power in legally undiminished fulness. . . . A similar course was followed in reference to the termination of their tenure of office. . . . They ceased to be magistrates, not upon the expiry of the set term, but only upon their publicly and solemnly demitting their office: so that, in the event of their daring to disregard the term and to continue their magistracy beyond the year, their official acts were nevertheless valid, and in the earlier times they scarcely even incurred any other than a moral responsibility.”—T. Mommsen, *History of Rome*, bk. 2, ch. 1.—“The republic seems to have been first regularly established by the Valerian laws, of which, unfortunately, we can discover little more than half obliterated traces in the oldest traditions of the Romans. According to the story, P. Valerius was chosen as consul after the banishment of Tarquinius Collatinus, and remained alone in office after the death of his colleague, Brutus, without assembling the people for the election of a second consul. This proceeding excited a suspicion in the minds of the people, that he intended to take sole possession of the state, and to re-establish royal power. But these fears proved groundless. Valerius remained in office with the sole design of introducing a number of laws intended to establish the republic on a legal foundation, without the danger of any interference on the part of a colleague. The first of these Valerian laws threatened with the curse of the gods any one who, without the consent of the people, should dare to assume the highest magistracy. . . . The second law of Valerius . . . prescribes that in criminal trials, where the life of a citizen was at stake, the sentence of the consul should be subject to an appeal to the general assembly of the people. This Valerian law of appeal was the Roman Habeas

Corpus Act.”—W. Ihne, *History of Rome*, v. 1, bk. 2, ch. 1.—See also COMITIA CURIATA; COMITIA CENTURIATA; CENSORS; QUÆSTORS, ROMAN; SENATE, ROMAN; CONSCRIPT FATHERS.

B. C. 494-492.—Alleged first secession of plebs.—Origin of the tribunes of the plebs, and the ædiles.—Original and acquired power of the tribunes.—Two Roman peoples and their antagonism.—“The struggle [of plebeians against patricians in early Rome] opens with the debt question. We must realize all along how the internal history is affected by the wars without. The debtors fall into their difficulties through serving in the field during the summer; for of course the army is a citizen army and the citizens are agriculturists. Two patrician families take the side of the poor, the Horatii and the Valerii. Manius Valerius Publicola, created dictator, promises the distressed farmers that, if they will follow him in his campaign against the Sabines, he will procure the relaxation of their burdens. They go and return victorious. But Appius Claudius (whose family had but recently migrated to Rome, a proud and overbearing Sabine stock) opposed the redemption of the dictator’s promise. The victorious host, forming a seventh of the arm-bearing population, instantly marched out of the gate of the city, crossed the river Anio, and took up a station on the Sacred Mount [Mons Sacer]. They did not mean to go back again; they were weary of their haughty masters. . . . At last a peace is made—a formal peace concluded by the fetiales: they will come back if they may have magistrates of their own. This is the origin of the tribunes of the plebs [493 B.C.]. The plebs who marched back that day from the Sacred Mount had done a deed which was to have a wonderful issue in the history of the world; they had dropped a seed into the soil which would one day spring up into the imperial government of the Cæsars. The ‘tribunicia potestas,’ with which they were clothing their new magistrates, was to become a more important element in the claims of the emperors than the purple robe of the consuls.”—R. F. Horton, *History of the Romans*, ch. 3.—“The tribune had no political authority. Not being a magistrate, he could not convoke the curies or the centuries. [See COMITIA CURIATA; COMITIA CENTURIATA.] He could make no proposition in the senate; it was not supposed, in the beginning, that he could appear there. . . . In succeeding years we can see how the tribunes took courage, and what unexpected powers they assumed. They had no authority to convoke the people, but they convoked them. Nothing called them to the senate; they sat at first at the door of the chamber; later they sat within. They had no power to judge the patricians; they judged them and condemned them. This was the result of the inviolability attached to them as sacrosancti. Every other power gave way before them. The patricians were disarmed the day they had pronounced, with solemn rites, that whoever touched a tribune should be impure. The law said, ‘Nothing shall be done against a tribune.’ If, then, this tribune convoked the plebs, the plebs assembled, and no one could dissolve this assembly, which the presence of the tribune placed beyond the power of the patricians and the laws. If the tribune entered the senate, no one could compel him to retire. If he seized a consul, no one could take the consul from his hand. Nothing could resist the boldness of a tribune. Against a tribune no one had any power, except another tribune. As soon as the plebs thus had their chiefs, they did not wait long before they had deliberative assemblies. These did not in any man-

ner resemble those of the patricians. The plebs, in their comitia, were distributed into tribes; the domicile, not religion or wealth, regulated the place of each one. The assembly did not commence with a sacrifice; religion did not appear there. They knew nothing of presages, and the voice of an augur, or a pontiff, could not compel men to separate. It was really the comitia of the plebs, and they had nothing of the old rules, or of the religion of the patricians. True, these assemblies did not at first occupy themselves with the general interests of the city; they named no magistrates, and passed no laws. They deliberated only on the interests of their own order, named the plebeian chiefs, and carried plebiscita."—N. D. Fustel de Coulanges, *Ancient city*, bk. 4, ch. 7.—It is supposed that the tribunes were originally two in number; but later there were five, and, finally, ten. The law which created their office was "deposited in a temple, under the charge of two plebeian magistrates specially appointed for the purpose and called *Aediles* or 'housemasters.' These *aediles* were attached to the tribunes as assistants, and their jurisdiction chiefly concerned such minor cases as were settled by fines."—T. Mommsen, *History of the Roman republic* (abridged by Bryant and Hendy), ch. 7.—"Besides the tribunes, who stood over against the consuls, two plebeian *aediles* were appointed, who might balance the patrician *quæstors*. Their name seems borrowed from the temple (*Ædes Cereris*) which is now built on the cattle market between the Palatine and the river to form a religious centre for the plebeian interest, as the ancient temple of Saturn was already a centre for the patrician interest. The goddess of bread is to preside over the growth of the democracy. The duty of *aediles* is in the first instance, to keep the public buildings in repair; but they acquire a position not unlike that of police-officers."—R. F. Horton, *History of the Romans*, ch. 3.

B. C. 493.—League with Latins.—"At the beginning of Rome's republican period the situation of the Latin peoples was as follows. The Latin tribe, although Latium was now broken up into a few city-states, again worked in harmony in face of a common danger. Its strongest cities were Rome, on the Tiber; Praeneste and Tibur on the Sabine slopes, guarding the eastern edge of the plain; Tusculum and Aricia, holding the central Alban ridge; Laurentum, Ardea, Antium, and Tarracina, commanding the coast-lands. On the north of the Tiber were several Etruscan towns, notably Caere, Clusium, and Veii, whose princes long entertained the ambition of regaining the possessions in Latium which they had lost. . . . The Sabines, the *Æqui*, and the *Volsci* were tribes closely akin to the Latins in origin, and spoke Italic dialects that might, without great difficulty, be understood by the Latins. But it is probable that all consciousness of kinship had been lost in the centuries of separation, and that the pressure from without slowly developed an endurance and an organizing faculty which eventually, when aggressively applied, proved irresistible. When the Latins had rid themselves of the Etruscan princes, they next met their common enemy of the south, the *Volsci*, and, taking possession of several of their strongholds, planted Latin colonies upon the captured sites. This event is significant because it inaugurates a scheme of colonization which was later adopted by Rome as the corner-stone of her federal policy. A Latin colony, then as later, was

composed of citizens of the various Latin cities, and it became at once a member in full standing of the league of Latin cities. It therefore served as an outpost of the league, protecting the frontier and, since its citizens were drawn from all the members of the league, as a unifying factor within that body itself. This colonization is furthermore significant because it proves that after the disturbing Etruscan element had been removed the Latins were again ready to act in harmony. . . . After the successful colonization of Signia, Velitrae, and Norba, the league met with several reversals. . . . Certain it is that the *Æqui*, whose native home was in central Italy, succeeded in making their way down the valley between Praeneste and the *Hermican* towns and in seizing Labici and Tusculum on the very Alban hills, while the *Volsci* swept past the new colony of Norba, which they completely isolated by taking Velitrae, Ardea, and all the sea-coast from Antium to Tarracina. In other words, the league lost fully a third of its territory and population. . . . The recovery of the ground which they had lost proved a tedious task for the Latins. . . . Tusculum was retaken from the *Æqui* in 480, Labici in 478, and Bola in 475. By the end of the century, therefore, the *Æqui* had been driven back over the *Trerus* valley into their mountain fastnesses. Ardea was retaken from the *Volsci* and settled as a Latin colony in 442, Tarracina was recovered by the league in 406, and Velitrae recolonized in 404. It is probable, however, that many of the *Volscian* inhabitants were left in possession of their lands, since pro-*Volscian* sympathies repeatedly came into evidence in the region south of the Alban hills later, and a *Volscian* inscription has been found at Velitrae. It is apparent that these gains, losses, and recoveries of territory concerned the Latin league as a whole. Rome had doubtless shared in all the contests, but had not, so far as we know, been subjected to any alterations in her own boundaries. It was, however, much to her advantage that by her position she had been saved from the harrowing raids visited upon the other Latins, and we may therefore assume that the fifth century ended with a balance of advantages in her favour."—T. Frank, *Roman imperialism*, pp. 17-19.—See also below: B. C. 340-338.

B. C. 489-450.—*Volscian wars*.—The wars of the Romans with the neighboring *Volscians* stretched over a period of some forty years (489-450 B. C.) and ended in the disappearance of the latter from history. The legend of *Coriolanus* (*Caius Marcius*, on whom the added name was bestowed because of his valiant capture of the *Volscian* town of *Corioli*) is connected with these wars; but modern critics have stripped it of all historic credit and left it only a beautiful romance.—Based on W. Ihne, *History of Rome*, v. 1, bk. 2, ch. 4.

ALSO IN: A. J. Church, *Stories from Livy*, ch. 7.

B. C. 472-471.—*Publilian law of Volero*.—Exclusion of patricians from the comitia tributa.—"The immediate consequence of the tribuneship of the people was the organisation of the assembly of tribes, the 'comitia tributa,' whereby they lost their former character as factional or party meetings and were raised to the dignity and functions of assemblies of the Roman people. . . . The circumstances which, in 471 B. C., led to the passing of the *Publilian law*, seem to indicate that even at that time the attempt was made by the patricians to change the original character of the tribuneship of the people, and to open it to the patrician class. The patricians intruded themselves in the assembly of the plebeians, surely not for the

purpose of making a disturbance as it is represented, but to enforce a contested right, by which they claimed to take part in the comitia of tribes. . . . This question was decided by the Publilian law, which excluded the patricians from the comitia tributa and specified the privileges of these comitia, now admitted to be purely plebeian. . . . These were the right of meeting together unmoles- ted in separate purely plebeian comitia, the right of freely and independently electing their representatives, the right of discussing and settling their own affairs, and in certain matters of passing resolutions [plebiscita] which affected the whole community. These resolutions were, of course, not binding on the state, they had more the character of petitions than enactments, but still they were the formal expression of the will of a great majority of the Roman people, and as such they could not easily be set aside or ignored by the patrician government."—W. Ihne, *History of Rome*, bk. 2, ch. 8, bk. 6, ch. 1.

B. C. 471.—Growing power of plebeians. See CIVIL LAW: B. C. 471.

B. C. 466-463.—Plague.—In the war of the Romans with the Volscians, the former were so hard pressed that "it became necessary to receive men and cattle within the walls of Rome, just as at Athens in the Peloponnesian war; and this crowding together of men and beasts produced a plague [466-463 B. C.]. . . . It is probable that the great pestilence which, thirty years later, broke out in Greece and Carthage, began in Italy as early as that time. The rate of mortality was fearful; it was a real pestilence, and not a mere fever. . . . Both consuls fell victims to the disease, two of the four augurs, the curio maximus, the fourth part of the senators, and an immense number of citizens of all classes."—B. G. Niebuhr, *Lectures on the history of Rome*, lecture 21.

ALSO IN: T. Arnold, *History of Rome*, ch. 11.

B. C. 458.—Conquest of Æqui.—"Alternating with the raids [of the Romans] against the Volsci are the almost yearly campaigns with the Æqui, who would pour down their valleys and occupy Mount Algidus, threatening Tusculum and the Latin Way which led to Rome. It was on one of these occasions, when the republic too was engaged with Sabines to the north, and Volscians to the south, that the Consul Minucius [458 B. C.] found himself hemmed in on the mountain-side by the Æqui. Very beautiful and very characteristic is the legend which veils the issue of the danger. L. Quinctius Cincinnatus, ruined by a fine imposed upon his son, is tilling his little farm across the Tiber, when the messengers of the Senate come to announce that he is made dictator. With great simplicity he leaves his plough, conquers the Æqui, and returns to his furrows again."—R. F. Horton, *History of the Romans*, ch. 4.

ALSO IN: A. J. Church, *Stories from Livy*, ch. 9.

B. C. 456.—Icilian law.—Early process of legislation illustrated.—Persuasiveness of plebeian petitions.—"The process of legislation in early times has been preserved to us in a single instance in which Dionysius has followed the account derived by him from an ancient document. The case is that of the Lex Icilia de Aventino publicando (B. C. 456), an interlude in the long struggle over the Terentilian law. [See below: B. C. 451-449.] This Lex Icilia was preserved, as Dionysius tells us, on a brazen column in the temple of Diana on the Aventine. It seems unlikely that the original tablet in such a situation should have survived the burning of the city by the Gauls. Yet a

record so important to the plebs would doubtless be at once restored and the restoration would show at least the belief prevalent at this very early period (B. C. 389) as to the proper procedure in case of such a law. 'Icilius,' says Dionysius (X. 31), 'approached the consuls then in office and the senate, and requested them to pass the preliminary decree for the law that he proposed, and to bring it before the people.' By threatening to arrest the consuls he compelled them to assemble the senate, and Icilius addressed the senate on behalf of his bill. Finally the senate consented. . . . (Dionys. X. 32). Then, after auspices and sacrifices, 'the law was passed by the comitia centuriata, which were convened by the consuls.' . . . Now here we have an order of proceeding under which the plebs have a practical initiative in legislation, and in which, nevertheless, each of the powers of the state acts in a perfectly natural and constitutional manner. . . . The formal legislative power lies solely with the populus Romanus. The vote of the corporation of the plebs is not then in early times strictly a legislative process at all. It is merely a strong and formal petition, an appeal to the sovereign assembly to grant their request. But this sovereign assembly can only be convened and the question put to it by a consul. If the consuls are unfavourable to the bill, they can refuse to put it to the vote at all. In any case, unless, like Sp. Cassius, they were themselves revolutionists, they would not think of doing so save on the recommendation of their authorised advisers. . . . The senate is assembled and freely discusses the law. An adverse vote justifies the consuls in their resistance. Then follow tedious manoeuvres. The senate treat with members of the college of tribunes to procure their veto; they urge the necessity of a military expedition, or, as a last resource, advise the appointment of a dictator. Such is the general picture we get from Livy's story. If by these means they can tide over the tribune's year of office, the whole process has to be gone through again. The senate have the chance of a lucky accident in getting one of the new tribunes subservient to them; or sometimes (as in the case of the proposal to remove to Veii) they may persuade the plebs itself to throw out the tribunician rogatio when again introduced (Livy, v. 30). On the other hand the tribunes may bring to bear their reserved power of impeding all public business; and the ultima ratio lies with the plebeians, who have the power of secession in their hands. In practice, however, the senate is nearly always wise enough to yield before the plebs is driven to play this its last card. Their yielding is expressed by their backing the petition of the plebs and recommending the consuls to put the question of its acceptance to the populus. With this recommendation on the part of the senate the struggle is generally at an end. It is still in the strict right of the consuls to refuse to put the question to the comitia. Livy (iii. 10) gives us one instance in the matter of the Terentilian law, when the senate is disposed to yield, and the consul 'non in plebe coerenda quam senatu castigando vehementior fuit.' But a consul so insisting on his right would incur enormous personal responsibility, and expose himself, unsheltered by public opinion, to the vengeance of the plebs when he went out of office. When the consul too has yielded, and the question is actually put to the vote of the sovereign (generally in its comitia centuriata), the controversy has been long ago thoroughly threshed out. Though it is only at this stage that legislation in the strict sense of the word commences, yet no instance is recorded

of a refusal on the part of the sovereign people to assent to the petition of the plebs backed by the recommendation of the senate."—J. L. Strachan-Davidson, *Plebeian privilege at Rome* (*English Historical Review*, Apr., 1886).—For the bearings of this proceeding on the subsequently adopted Valerio-Horatian, Publilian, and Hortensian laws, see below; B. C. 449; B. C. 445-400; B. C. 340; B. C. 287.

B. C. 451-449.—Terentilian law.—Decemvirs and the Twelve Tables.—Not long after the establishment of the tribuneship, "the plebeians felt the necessity of putting an end to the exclusive possession of the laws which the patricians enjoyed, and to make them the common property of the whole nation. This could only be done by writing them down and making them public. A proposal was accordingly made in the assembly of the tribes by the tribune C. Terentilius Arsa (462 B. C.) to appoint a commission for the purpose of committing to writing the whole of the laws. . . . It is not wonderful that the patricians opposed with all their strength a measure which would wrest a most powerful weapon out of their hands. . . . The contest for the passing of the bill of Terentilius lasted, according to tradition, not less than ten years, and all means of open and secret opposition and of partial concession were made use of to elude the claims of the popular party. . . . After a ten years' struggle it [the motion for a commission] was passed into law. It proposed that a commission of ten men, being partly patricians and partly plebeians, should be appointed, for the purpose of arranging the existing law into a code. At the same time the consular constitution was to be suspended, and the ten men to be intrusted with the government and administration of the commonwealth during the time that they acted as legislators. By the same law the plebeian magistracy of the tribunes of the people ceased likewise, and the ten men became a body of magistrates intrusted with unlimited authority. . . . The patricians did not act entirely in good faith. . . . They carried the election of ten patricians. . . . Having, however, obtained this advantage over the credulity of their opponents, the patricians made no attempt to use it insolently as a party victory. The decemvirs proceeded with wisdom and moderation. Their administration, as well as their legislation, met with universal approval. They published on ten tables the greater part of the Roman law, and after these laws had met with the approbation of the people, they were declared by a decision of the people to be binding. Thus the first year of the decemvirate passed, and so far the traditional story is simple and intelligible." The part of the tradition which follows is largely rejected by modern critical historians. It relates that when decemvirs were chosen for another year, to complete their work, Appius Claudius brought about the election, with himself, of men whom he could control, and then established a reign of terror which surpassed the worst tyranny of the kings, refusing to abdicate when the year expired. The tragic story of Virginia connects itself with this terrible oppression, and with the legend of its downfall. In the end, the Roman people delivered themselves, and secured the permanent authority of the code of laws, which had been enlarged from ten to twelve tables.—W. Ihne, *History of Rome*, bk. 2, ch. 9, 10.—See also CODES: B. C. 500.

B. C. 449.—Valerio-Horatian laws.—On the overthrow of the tyranny of the Decemvirs, at Rome, 449 B. C., L. Valerius Potitus and M. Horatius Barbatus, being elected consuls, brought about the passage of certain laws, known as the

Valerio-Horatian laws. These renewed an old law (the Valerian law) which gave to every Roman citizen an appeal from the supreme magistrate to the people, and they also made the plebiscita, or resolutions of the assembly of the tribes, authoritative laws, binding on the whole body politic.—H. G. Liddell, *History of Rome*, bk. 2, ch. 10.

ALSO IN: G. W. Botsford, *History of the ancient world*, pp. 345-346.

B. C. 445-400.—Canuleian law.—Creation of consular tribunes.—Progress of the plebs toward political equality.—"The year 449 had not taken from the patricians all their privileges. Rome has still two classes, but only one people, and the chiefs of the plebs, sitting in the senate, are meditating, after the struggle to obtain civil equality, to commence another to gain political equality. . . . Two things maintained the insulting distinction between the two orders: the prohibition of marriage between patricians and plebeians, and the tenure of all the magisterial offices by those who formed since the origin of Rome the sovereign people of the 'patres.' In 445 B. C. the tribune Canuleius demanded the abolition of the prohibition relative to marriages, and his colleagues, a share in the consulate. This was a demand for political equality." The Canuleian law legalizing marriages between patricians and plebeians was conceded, but not until a third "secession" of the plebeians had taken place. The plebeian demand for a share in the consulate was pacified for the time by a constitutional change which formed out of the consulate three offices: "the quaestorship, the censorship and the consular tribunate. The two former are exclusively patrician. The military [or consular] tribunes, in reality proconsuls confined, with one exception, to the command of the legions, could now be chosen without distinction, from the two orders. But the law, in not requiring that every year a fixed number of them be plebeians, allowed them to be all patricians; and they remained so for nearly fifty years. In spite of such skilful precautions, the senate did not give up the consulate. It held in reserve and pure from all taint the patrician magistracy, hoping for better days. . . . The constitution of 444 B. C. authorized the nomination of plebeians to the consular tribunate; down to 400 B. C. none obtained it; and during the seventy-eight years that this office continued, the senate twenty-four times nominated consuls, that is to say, it attempted, and succeeded, one year in three, in re-establishing the ancient form of government. These perpetual oscillations encouraged the ambitious hopes of a rich knight, Spurius Maelius (439 B. C.). He thought that the Romans would willingly resign into his hands their unquiet liberty, and during a famine he gave very liberally to the poor. The senate became alarmed at this almsgiving which was not at all in accordance with the manners of that time, and raised to the dictatorship Cincinnatus, who, on taking office, prayed the gods not to grant that his old age should prove a cause of hurt or damage to the republic. Summoned before the tribunal of the dictator, Maelius refused to appear, and sought protection against the lictors amongst the crowd which filled the Forum. But the master of the horse, Serv. Ahala, managed to reach him, and ran him through with his sword. In spite of the indignation of the people, Cincinnatus sanctioned the act of his lieutenant, caused the house of the traitor to be demolished, and the 'praefectus annonae,' Minucius Augurinus, sold, for an 'as' per 'modius,' the corn amassed by Maelius. Such is the story of the partition of the nobles [Liv]; but at that epoch to

have dreamt of reëstablishing royalty would have been a foolish dream in which Spurius could not have indulged. Without doubt he had wished to obtain, by popular favour, the military tribunate, and in order to intimidate the plebeian candidates, the patricians overthrew him by imputing to him the accusation which Livy complacently details by the mouth of Cincinnatus, of having aimed at royalty. The crowd always can be cajoled by words, and the senate had the art of concentrating on this word 'royalty' all the phases of popular hatred. The move succeeded; during the eleven years following the people nine times allowed consuls to be nominated. There was, however, in 433 B. C. a plebeian dictator, Mamercus Æmilius, who reduced the tenure of censorship to 18 months. These nine consulships gave such confidence to the nobles that the senate itself had to suffer from the proud want of discipline shown by the consuls of the year 428 B. C. Though conquered by the Æquians, they refused to nominate a dictator. To overcome their resistance the senate had recourse to the tribunes of the people, who threatened to drag the consuls to prison. To see the tribunitian authority protecting the majesty of the senate was quite a new phenomenon. From this day the reputation of the tribunate equalled its power, and few years passed without the plebeians obtaining some new advantage. Three years earlier the tribunes, jealous of seeing the votes always given to the nobles, had proscribed the white robes, which marked out from a distance, to all eyes, the patrician candidates. This was the first law against undue canvassing. In 430 a law put an end to arbitrary valuations of penalties payable in kind. In 427 the tribunes, by opposing the levies, obliged the senate to carry to the comitia centuriata the question of the war against Veii. In 423 they revived the agrarian law, and demanded that the tithe should be more punctually paid in the future by the occupiers of domain land, and applied to the pay of the troops. They miscarried this time; but in 421 it seemed necessary to raise the number of quaestors from two to four; the people consented to it only on the condition that the quaestorship be accessible to the plebeians. Three years later 3,000 acres of the lands of Labicum were distributed to fifteen hundred plebeian families. It was very little: so the people laid claim in 414 to the division of the lands of Bola, taken from the Æquians. A military tribune, Postumius, being violently opposed to it, was slain in an outbreak of the soldiery. This crime, unheard of in the history of Roman armies, did harm to the popular cause; there was no distribution of lands, and for five years the senate was able to nominate the consuls. The patrician reaction produced another against it which ended in the thorough execution of the constitution of the year 444. An Icilius in 412, a Manius in 410 B. C. took up again the agrarian law, and opposed the levy. The year following three of the Icilian family were named as tribunes. It was a menace to the other order. The patricians understood it, and in 410 three plebeians obtained the quaestorship. In [406] . . . pay was established for the troops, and the rich undertook to pay the larger portion of it. Finally, in 400, four military tribunes out of six were plebeians. The chiefs of the people thus obtained the public offices and even places in the senate, and the poor obtained an indemnity which supported their families while they served with the colours. All ambitions, all desires, are at present satisfied. Calm and union returned to Rome; we can see it in the vigour of the attacks on external foes."—V. Duruy, *History of Rome*; v. 1, pp. 231-239.

B. C. 432.—Regulation of census. See CENSUS: Ancient.

B. C. 406-396.—Veientine wars.—Proposed removal to Veii.—"Veii lay about ten miles from Rome, between two small streams which meet a little below the city and run down into the Tiber, falling into it nearly opposite to Castel Giubileo, the ancient Fidenæ. Insignificant in point of size, these little streams, however, like those of the Campagna generally, are edged by precipitous rocky cliffs, and thus are capable of affording a natural defence to a town built on the table-land above and between them. The space enclosed by the walls of Veii was equal to the extent of Rome itself, so long as the walls of Servius Tullius were the boundary of the city. . . . In the magnificence of its public and private buildings Veii is said to have been preferred by the Roman commons to Rome: and we know enough of the great works of the Etruscans to render this not impossible."—T. Arnold, *History of Rome*, v. 1, ch. 12.—"At the opening of the fourth century we find that Romans engaged on their own account in a mortal struggle with Veii, an Etruscan city twelve miles north of Rome and an old-time enemy. . . . The struggle is said to have lasted eleven years. When the Romans finally won [B. C. 396] they incorporated the enemy's territory into the Roman city-state, dividing it into four Roman wards, and reallotting it in small citizen holdings, a procedure which seems to indicate that Rome did not here have the support of the [Latin] League, and that the league's constitution at this time was so loose that individual members might carry on wars independently. A very important result of this victory was that it doubled Rome's territory, making her without question the largest city-state in Latium. Another result, ultimately of far-reaching consequence, was that the allotment of the extensive Veian territory in small holdings immensely increased the force of the Roman army, since soldiers of the line had to be men of property. Finally, since the allotment of land placed a fair competence in the hands of hitherto uninfluential plebeians, it gave an irresistible impetus to the democratic movement. In fact, within twenty years after the distribution of this land the plebeians gained the right to hold the highest office of state. The importance of this circumstance for the question of Roman imperialism lies in the fact that in the future it was usually the democratic element at Rome which favored a policy of expansion."—T. Frank, *Roman imperialism*, pp. 19-20.

B. C. 390-347.—Invasions by the Gauls.—Destruction of the city.—"Before the time we are now speaking of, there had been a great movement in these Celtic nations [of Gael and Cymri]. Two great swarms went out from Gaul. Of these, one crossed the Alps into Italy; the other, moving eastward, in the course of time penetrated into Greece. . . . It is supposed that the Gael who dwelt in the eastern parts of Gaul, being oppressed by Cymric tribes of the west and north, went forth to seek new homes in distant lands. . . . At all events, it is certain that large bodies of Celts passed over the Alps before and after this time, and having once tasted the wines and eaten the fruits of Italy, were in no hurry to return from that fair land into their own less hospitable regions. . . . They overran the rich plains of Northern Italy, and so occupied the territory which lies between the Alps, the Apennines and the Adriatic [except Liguria] that the Romans called this territory Gallia Cisalpina, or Hither Gaul. The northern Etruscans gave way before these fierce barbarians, and their name is heard of no more in

those parts. Thence the Gauls crossed the Apennines into southern Etruria, and while they were ravaging that country they first came in contact with the sons of Rome. . . . The tribe which took this course were of the Senones, as all authors say, and therefore we may suppose they were Gaelic; but it has been thought they were mixed with Cymri, since the name of their king or chief was Brennus, and Brenhin is Cymric for a king."—H. G. Liddell, *History of Rome*, v. 1, bk. 2, ch. 14.—The Romans met the invaders on the banks of the Allia, a little stream from the Sabine hills which flows into the Tiber, and were terribly defeated there. The Gauls entered Rome and found, as the ancient story is, only a few venerable senators, sitting in their chairs and robes of state, whom they slew, because one of the senators resented the stroking of his beard by an insolent barbarian. The remaining inhabitants had withdrawn into the capitol, or taken refuge at Veii and Cære. After pillaging and burning the city, the Gauls laid siege to the capitol, and strove desperately for seven months to overcome its defenders by arms or famine. In the end they retreated, without success, but whether bribed, or driven, or weakened by sickness, is a matter of uncertainty. The Romans cherished many legends connected with the siege of the capitol,—like that, for example, of the sentinel and the sacred geese. "The conquest of Veii was, however, followed by a disaster that nearly destroyed Rome. A Gallic horde from the Po region made a successful raid through Etruria, defeated the Roman army at Allia in 387, sacked and burned the greater part of Rome, and laid siege to the Capitoline fort, the only portion of the city that remained standing. Fortunately the invaders were recalled by the urgent necessity of defending their own homes before they had succeeded in capturing the Roman citadel. They accordingly bargained for as high a price of ransom as possible and departed well laden with booty. The city therefore survived, but it was for the time being terribly weakened, not only in resources, but also in prestige, and Rome's old enemies, the Volsci and Aequi, naturally chose this occasion to renew their raids upon Latium, and some of the Latin cities, apparently through a growing dread of Rome's supremacy, seem to have made terms with the enemy. At least Praeneste is placed in the list of Rome's foes by our best authority. The enemy, however, was repulsed and new Latin colonies were placed at Satricum (385) and at Setia (382) in territory wrested from the Volsci. An invading troop of Aequi was also repulsed, after which these people disappear from Latium. The next forty years was a period of ferment within the league, caused apparently by the mutual jealousies of the various city-states, and especially by their common jealousy of Rome, now rapidly repairing the losses of 387. Rome's rapid growth is not difficult to explain. Her citizens had been taught valuable lessons in arts and crafts, in trade and political organization, by the Etruscan princes, and had received from them an ambition and impetus which they had not before possessed. The recent doubling of Rome's territory enabled the city to absorb a far greater population than hitherto. Rome had a fairly safe harbor which attracted traders from Sicily, Carthage, and Etruria, and by commanding a bridge over the Tiber she became the natural emporium for the products of both sides of the river. Rome thus offered the amenities of a more heterogeneous urban life than other Latin cities could afford, and the races of Italy have always been sociable. When we add that Latin immigrants to the city immediately

secured all the civil rights of citizens because of their common membership in the Latin tribe, we can readily understand how Rome might attract the surplusage of Latian population and grow doubly fast at the expense of less favorably situated or less progressive communities."—T. Frank, *Roman imperialism*, pp. 20-22.

B. C. 376-367.—Licinian laws.—"C. Licinius Stolo and L. Sextius . . . being Tribunes of the Plebs together in the year 376 B. C. promulgated the three bills which have ever since borne the name of the Licinian Rogations. These were: I. That of all debts on which interest had been paid, the sum of the interest paid should be deducted from the principal, and the remainder paid off in three successive years. II. That no citizen should hold more than 500 jugera (nearly 320 acres) of the Public Land, nor should feed on the public pastures more than 100 head of larger cattle and 500 of smaller, under penalty of a heavy fine. III. That henceforth Consuls, not Consular Tribunes, should always be elected, and that one of the two Consuls must be a Plebeian." The patricians made a desperate resistance to the adoption of these proposed enactments for ten years, during most of which long period the operations of government were nearly paralyzed by the obstinate tribunes, who inflexibly employed their formidable power of veto to compel submission to the popular demand. In the end they prevailed, and the Licinian rogations became laws.—H. G. Liddell, *History of Rome*, v. 1, bk. 2, ch. 15.—"Licinius evidently designed reuniting the divided members of the plebeian body. Not one of them, whether rich or poor, but seems called back by these bills to stand with his own order from that time on. If this supposition was true, then Licinius was the greatest leader whom the plebeians ever had up to the time of Cæsar. But from the first he was disappointed. The plebeians who most wanted relief cared so little for having the consulship opened to the richer men of their estate that they would readily have dropped the bill concerning it, lest a demand should endanger their own desires. In the same temper the more eminent men of the order, themselves among the creditors of the poor and the tenants of the domain, would have quashed the proceedings of the tribunes respecting the discharge of debt and the distribution of land, so that they carried the third bill only, which would make them consuls without disturbing their possessions. While the plebeians continued severed from one another, the patricians drew together in resistance to the bills. Licinius stood forth demanding, at once, all that it had cost his predecessors their utmost energy to demand, singly and at long intervals, from the patricians. . . . The very comprehensiveness of his measures proved the safeguard of Licinius. Had he preferred but one of these demands, he would have been unhesitatingly opposed by the great majority of the patricians. On the other hand he would have had comparatively doubtful support from the plebs." In the end, after a struggle of ten years duration, Licinius and Sextius carried their three bills, together with a fourth, brought forward later, which opened to the plebeians the office of the duumvirs, who consulted the Sibylline books. "It takes all the subsequent history of Rome to measure the consequences of the Revolution achieved by Licinius and Sextius; but the immediate working of their laws could have been nothing but a disappointment to their originators and upholders. . . . For some ten years the law regarding the consulship was observed,

after which it was occasionally violated, but can still be called a success. The laws of relief, as may be supposed of all such sumptuary enactments, were violated from the first. No general recovery of the public land from those occupying more than five hundred jugera ever took place. Consequently there was no general division of land among the lack-land class. Conflicting claims and jealousy on the part of the poor must have done much to embarrass and prevent the execution of the law. No system of land survey to distinguish between 'ager publicus' and 'ager privatus' existed. Licinius Stolo himself was afterwards convicted of violating his own law. The law respecting debts met with much the same obstacles. The causes of embarrassment and poverty being much the same and undisturbed, soon reproduced the effects which no reduction of interest or installment of principal could effectually remove. . . . These laws, then, had little or no effect upon the domain question or the re-distribution of land. They did not fulfil the evident expectation of their author in uniting the plebeians into one political body. This was impossible. What they did do was to break up and practically abolish the patriciate. Henceforth were the Roman people divided into rich and poor only."—A. Stephenson, *Public lands and agrarian laws of the Roman republic* (Johns Hopkins University Studies, 9th series, no. 7-8).

B. C. 367.—Institution of the prætorship.—"By the establishment of the prætorship the office of chief judge was separated as a distinct magistracy from the consulship. . . . The prætor was always looked upon as the colleague of the consuls. He was elected in the same manner as the consuls by centuriate comitia, and, moreover, under the same auspices. He was furnished with the imperium, had lictors and fasces. He represented the consuls in town by assembling the senate, conducting its proceedings, executing its decrees. . . . Up to the time of the first Punic war one prætor only was annually elected. Then a second was added to conduct the jurisdiction between citizens and foreigners. A distinction was now made between the city prætor (prætor urbanus), who was always looked upon as having a higher dignity, and the foreign prætor (prætor peregrinus). On the final establishment of the two provinces of Sicily and Sardinia, probably 227 B. C., two new prætors were appointed to superintend the regular government of those provinces, and still later on two more were added for the two provinces of Spain. The number of annual prætors now amounted to six, and so it remained until the legislation of Sulla."—W. Ihnc, *History of Rome*, bk. 6, ch. 5.—See also CONSUL, ROMAN.

B. C. 343-290.—Samnite wars.—"When the Romans had made themselves dominant in middle Italy, and the Samnites (see SAMNITES) in southern Italy, the question which of the two peoples should be masters of the peninsula at large was sure to demand settlement. About the middle of the fourth century, B. C., it began to urge the two rivals into collision, and the next two generations of Romans were busied chiefly with Samnite wars, of which they fought three, with brief intervals to divide them, and at the end of which the Samnite name had been practically erased from history. The first hostilities grew out of a quarrel between the Samnites of the mountains and their degenerate countrymen of Capua and Campania.

The latter sought help from the Romans, and, according to the Romans, surrendered their city to them in order to secure it; but this is obviously untrue. The First Samnite War, which followed this (343-341 B. C.), had no definite result, and seems to have been brought to an end rather abruptly by a mutiny in the Roman army and by trouble between Rome and her Latin allies. According to the Roman annals there were three great battles fought in this war, one on Mount Gaurus, and two elsewhere; but Mommsen and other historians entirely distrust the historic details as handed down. The Second or Great Samnite War occurred after an interval of fifteen years, during which time the Romans had conquered all Latium, reducing their Latin kinsmen from confederates to subjects. That accomplished, the Romans were quite ready to measure swords again with their more important rivals in the south. The long, desperate and doubtful war which ensued was of twenty-two years duration (326-304 B. C.). In the first years of this war victory was with the Romans and the Samnites sued for peace; but the terms offered were too hard for them and they fought on. Then fortune smiled on them and gave them an opportunity to inflict on their haughty enemy one of the greatest humiliations that Rome in all her history ever suffered. The entire Roman army, commanded by the two consuls of the year, was caught in a mountain defile (321 B. C.), at a place called the Caudine forks, and compelled to surrender to the Samnite general, C. Pontius. The consuls and other officers of the Romans signed a treaty of peace with Pontius, and all were then set free, after giving up their armor and their cloaks and passing "under the yoke." But the Roman senate refused to ratify the treaty, and gave up those who had signed it to the Samnites. The latter refused to receive the offered prisoners and vainly demanded a fulfilment of the treaty. Their great victory had been thrown away, and, although they won another important success at Latula, the final result of the war which they were forced to resume was disastrous to them. After twenty-two years of obstinate fighting they accepted terms (304 B. C.) which stripped them of all their territory on the sea-coast, and required them to acknowledge the supremacy of Rome. The peace so purchased lasted less than six years. The Samnites were tempted (268 B. C.) while the Romans had a war with Etruscans and Gauls on their hands, to attempt the avenging of their humiliations. Their fate was decided at the battle of Sentinum (295 B. C.), won by the old consul, Q. Fabius Maximus, against the allied Samnites and Gauls, through the heroic self-sacrifice of his colleague P. Decius Mus (imitating his father of the same name [see below: B. C. 340-338.]) The Samnites struggled hopelessly on some five years longer and submitted finally in 290 B. C. Their great leader, Pontius, was put to death in the dungeons of the state prison under the Capitoline.—Based on J. Michelet, *History of the Roman republic*, bk. 2, ch. 1.

B. C. 340.—Publilian laws.—"In the second year of the Latin war (340 B. C.) the Plebeian Consul, Q. Publilius Philo, being named Dictator by his Patrician colleague for some purpose now unknown, proposed and carried three laws still further abridging the few remaining privileges of the Patrician Lords. The first Publilian law enacted that one of the Censors, as one of the Consuls, must be a Plebeian. . . . The second gave fuller sanction to

the principle already established, that the Resolutions of the Plebeian Assembly should have the force of law. The third provided that all laws passed at the Comitia of the Centuries or of the Tribes should receive beforehand the sanction of the Curies."—H. G. Liddell, *History of Rome*, v. 1, bk. 3, ch. 20.

B. C. 340-338.—Subjugation of Latins.—Grant of pseudo-citizenship.—Real concession of the next century and its effects.—A league between the Romans and their kinsmen and neighbors, the Latins, of Tibur, Præneste, Lanuvium, Aricia, Velitrae, and other towns, as well as with the Hernicans, existed during a century and a half, from the treaty of Sp. Cassius, 493 B. C., according to the Roman annals. At first, the members of the league stood together on fairly equal terms fighting successful wars with the Volscians, the Æquians and the Etruscans. But all the time the Romans contrived to be the greater gainers by the alliance, and as their power grew their arrogance increased, until the Latin allies were denied almost all share in the conquests and the spoils which they helped to win. The discontent which this caused fermented to an outbreak after the first of the Samnite wars. The Latins demanded to be admitted to Roman citizenship and to a share in the government of the state. Their demand was haughtily and even insultingly refused, and a fierce, deadly war between the kindred peoples ensued (339-338 B. C.). The decisive battle of the war was fought under Mount Vesuvius, and the Romans were said to have owed their victory to the self-sacrifice of the plebeian consul, P. Decius Mus, who, by a solemn ceremony, devoted himself and the army of the enemy to the infernal gods, and then threw himself into the thick of the fight, to be slain. The Latin towns were all reduced to dependence upon Rome,—some with a certain autonomy left to them, some with none. "The Latins, being conquered, surrendered,—that is to say, they gave up to the Romans their cities, their worship, their laws, and their lands. Their position was cruel. A consul said in the senate that, if they did not wish Rome to be surrounded by a vast desert, the fate of the Latins should be settled with some regard to clemency. Livy does not clearly explain what was done. If we are to trust him, the Latins obtained the right of citizenship without including in the political privileges the right of suffrage, or in the civil the right of marriage. We may also note, that these new citizens were not counted in the census. It is clear that the senate deceived the Latins in giving them the name of Roman citizens. This title disguised a real subjection, since the men who bore it had the obligations of citizens without the rights. So true is this, that several Latin cities revolted, in order that this pretended citizenship might be withdrawn. A century passed, and, without Livy's notice of the fact, we might easily discover that Rome had changed her policy. The condition of the Latins having the rights of citizens, without suffrage and without connubium, no longer existed. Rome had withdrawn from them the title of citizens, or, rather, had done away with this falsehood, and had decided to restore to the different cities their municipal governments, their laws, and their magistracies. But by a skilful device Rome opened a door which, narrow as it was, permitted subjects to enter the Roman city. It granted to every Latin who had been a magistrate in his native city the right to become a Roman citizen at the expiration of his term of office. This time the gift of this right was complete and without reserve; suffrage, magistracies, census, marriage, private law, all were included. . . . By be-

ing a citizen of Rome, a man gained honor, wealth and security. The Latins, therefore, became eager to obtain this title, and used all sorts of means to acquire it. One day, when Rome wished to appear a little severe, she found that 12,000 of them had obtained it through fraud. Ordinarily, Rome shut her eyes, knowing that by this means her population increased, and that the losses of war were thus repaired. But the Latin cities suffered; their richest inhabitants became Roman citizens, and Latinum was impoverished. The taxes, from which the richest were exempt as Roman citizens, became more and more burdensome, and the contingent of soldiers that had to be furnished to Rome was every year more difficult to fill up."—N. D. Fustel de Coulanges, *Ancient city*, bk. 5, ch. 2.—See also SUFFRAGE, MANHOOD: B. C. 3rd century.

B. C. 312.—Censorship of Appius Claudius.—Admission of the freedmen to the tribes.—Building of Appian way.—"Appius Claudius, . . . afterwards known as Appius the Blind, . . . was elected Censor [312 B. C.], . . . and, as was usual, entered, with his colleague, Plautius Decianus, upon the charge of filling the vacancies which had occurred within the Senate since the last nominations to that body by the preceding Censors. The new elections were always made, it appears, from certain lists of citizens who had either borne great offices or possessed high rank; but Appius, determined from the beginning to secure his authority, either for his own sake or for that of his faction, through any support he could command, now named several of the lowest men in Rome as Senators, amongst whom he even admitted some sons of freedmen, who, as such, were scarcely to be considered to be absolutely free, much less to be worthy of any political advancement. The nomination, backed by a powerful party, out of rather than in the Senate, and vainly, if not feebly, opposed by Plautius Decianus, who resigned his office in disgust at his colleague, was carried, but was set aside in the following year by the Consuls, who could call such Senators as they pleased, and those only, as it seems, to their sessions. Appius, still keeping his place, was soon after assailed by some of the Tribunes, now the representatives, as must be remembered, of the moderate party, rather than of the Plebeian estate. At this the Censor admitted all the freedmen in Rome to the Tribes, amongst which he distributed them in such a manner as promised him the most effectual support. Appius, however, was not wholly absorbed in mere political intrigues. A large portion of his energy and his ambition was spent upon the Way [Appian Way] and the Aqueduct which have borne his name to our day, and which, in his own time, were undertakings so vast as to obtain for him the name of 'the Hundred-handed.' He was an author, a jurist, a philosopher, and a poet, besides. . . . Cneius Flavius, the son of a freedman, one, therefore, of the partisans on whom the Censor and his faction were willing to lavish pretended favor in return for unstinted support, was employed by Appius near his person, in the capacity of private secretary. Appius, who, as already mentioned, was a jurist and an author, appears to have compiled a sort of manual concerning the business-days of the Calendar and the forms of instituting or conducting a suit before the courts; both these subjects being kept in profound concealment from the mass of the people, who were therefore obliged, in case of any legal proceeding, to resort first to the Pontiff to learn on what day,

and next to the Patrician jurist to inquire in what form, they could lawfully manage their affairs before the judicial tribunals. This manual was very likely given to Flavius to copy; but it could scarcely have been with the knowledge, much less with the desire, of his employer, that it was published. . . . But Flavius stood in a position which tempted him, whether he were generous or designing, to divulge the secrets of the manual he had obtained; and it may very well have been from a desire to conciliate the real party of the Plebeians, which ranked above him, as a freedman, that he published his discoveries. He did not go unrewarded, but was raised to various offices, amongst them to the tribuneship of the Plebeians, and finally to the curule ædileship, in which his disclosures are sometimes represented as having been made. . . . The predominance of the popular party is plainly attested in the same year by the censorship of Fabius Rullianus and Decius Mus, the two great

was proposed by the Tribunes. . . . Though some strenuous opposition was made to its passage, it became a law. The highest places of the priesthood, as well as of the civil magistracies, were opened to the Plebeians, whose name will no longer serve us as it has done, so entirely have the old distinctions of their estate from that of the Patricians been obliterated. The Ogulnii did not follow up the success they had gained, and the alliance between the lower Plebeians and the higher Patricians was rather cemented than loosened by a law professedly devised to the advantage of the upper classes of the Plebeians."—S. B. C. 300.—Ogulnian law.—In the year 300 B. C., "Quintus and Cneius Ogulnius appear in the tribuneship, as zealous champions of the popular party against the combination of the highest and the lowest classes. Instead, however, of making any wild attack upon their adversaries, the Tribunes seem to have exerted themselves in the wiser view of detaching the populace from its Patrician leaders, in order to unite the severed forces of the Plebeians upon a common ground. . . . A bill to increase the number of the Pontiffs by four, and that of the Augurs by five new incumbents, who should then, and, as was probably added, thenceforward, be chosen from the Plebeians,

Transalpine Gaul, again entered Roman territory, encouraged and assisted by the Samnites, who were then just engaging in their third war with Rome. A Roman legion which first encountered them in Etruria, under Scipio Barbatus, was annihilated, 295 B. C. But the vengeance of Rome overtook them before that year closed, at Sentinum, where the consuls Fabius and Decius ended the war at one blow. The Gauls were quiet after this for ten years; but in 285 B. C. the Senonian tribes invaded Etruria again and inflicted an alarming defeat on the Romans at Arretium. They also put to death some Roman ambassadors who were sent to negotiate an exchange of prisoners; after which the war of Rome against them was pushed to extermination. The whole race was destroyed or reduced to slavery and Roman colonies were established on its lands. The Boian Gauls, between the Apennines and the Po, now resented this intrusion on Gallic territory, but were terribly defeated at the Vadimonian lake and sued for peace. This peace was maintained for nearly sixty years, during which time the Romans were strengthening

themselves beyond the Apennines, with a strong colony at Ariminum (modern Rimini) on the Adriatic sea, with thick settlements in the Senonian country, and with a great road—the Via Flaminia—in process of construction from Rome northwards across the Apennines, through Umbria and along the Adriatic coast to Ariminum. The Boians saw that the yoke was being prepared for them, and in 225 B. C. they made a great effort to break it. In the first encounter with them the Romans were beaten, as in previous wars, but at the great battle of Telamon, fought soon afterwards, the Gallic hosts were almost totally destroyed. The next year the Boians were completely subjugated, and in 222 B. C. the Insubrians were likewise conquered, their capital Mediolanum (Milan) occupied, and all north Italy to the Alps brought under Roman rule, except that the Ligurians in the mountains were still unsubdued and the Cenomanians and the Veneti retained a nominal independence as allies of Rome. But Hannibal's invasion of Italy, occurring soon after, interrupted

PYRRHUS OF EPIRUS

(After statue in the National Museum, Naples)

the settlement and pacification of the Gallic country and made a reconquest necessary after the war with the Carthaginians had been ended. The new Roman fortified colony of Placentia was taken by the Gauls and most of the inhabitants slain. The sister colony of Cremona was besieged, but resisted until relieved. Among the battles fought, that of Comum, 196 B. C., appears to have been the most important. The war was prolonged until 191 B. C., after which there appears to have been no more resistance to Roman rule among the Cisalpine Gauls.—Based on W. Ihne, *History of Rome*, bk. 3, ch. 12-13, bk. 4, ch. 5, bk. 5, ch. 7.

B. C. 287.—Last secession of the plebs.—Hortensian laws.—“About the year 287 B. C. the mass of the poorer citizens [of Rome], consisting (as may be guessed) chiefly of those who had lately been enfranchised by Appius, left the city and encamped in an oak-wood upon the Janiculum. To appease this last Secession, Q. Hortensius was named Dictator, and he succeeded in bringing back the people by allowing them to enact several laws upon the spot. One of these Hortensian laws was probably an extension of the Agrarian law of Curius, granting not seven but fourteen jugera

(about 9 acres) to each of the poorer citizens. Another provided for the reduction of debt. But that which is best known as the Hortensian law was one enacting that all Resolutions of the Tribes should be law for the whole Roman people.”—H. G. Liddell, *History of Rome*, v. 1, bk. 3, ch. 25.—“With the passing of the Lex Hortensia the long struggle between the orders came to an end. The ancient patrician gentes remained, but the exclusive privileges of the patriciate as a ruling order were gone. For the great offices of state and for seats in the senate the plebeians were by law equally eligible with patricians. The assemblies, whether of people or plebs, were independent of patrician control. In private life inter-marriages between patricians and plebeians were recognised as lawful, and entailed no disabilities on the children. Finally, great as continued to be the prestige attaching to patrician birth, and prominent as was the part played in the subsequent history by individual patricians and by some of the patrician houses, the plebs were now in numbers and even in wealth the preponderant section of the people. Whatever struggles might arise in the future, a second struggle between patricians and plebeians was an impossibility. Such being the case, it might have been expected that the separate organisation, to which the victory of the plebs was largely due, would, now that the reason for its existence was gone, have disappeared. Had this happened, the history of the republic might have been different. As it was, this plebeian machinery—the plebeian tribunes, assemblies, and resolutions—survived untouched, and lived to play a decisive part in a new conflict, not between patricians and plebeians, but between a governing class, itself mainly plebeian, and the mass of the people, and finally to place at the head of the state a patrician Cæsar. Nor was the promise of a genuine democracy, offered by the opening of the magistracies and the Hortensian law, fulfilled. For one hundred and fifty years afterward the drift of events was in the opposite direction, and when the popular leaders of the first century B. C. endeavoured to make the government by the people a reality, it was already too late.”—H. F. Pelham, *Outlines of Roman history*, bk. 2, ch. 1.

B. C. 281-272.—War with Tarentum and Pyrrhus.—The conquest of the Samnites by the Romans, which was completed in 290 B. C., extended the power of the latter to the very gates of the Greek cities on the Tarentine gulf, of which Tarentum was the chief. At once there arose a party in Tarentum which foresaw the hopelessness of resistance to Roman aggression and favored a spontaneous submission to the supremacy of the formidable city on the Tiber. The patriotic party which opposed this humiliation looked abroad for aid, and found an eager ally in the Molossian king of Epirus, the adventurous and warlike Pyrrhus (see EPIRUS), who sprang from the family of Olympias, mother of Alexander the Great. In the autumn of 282 B. C., the inevitable war between Rome and Tarentum broke out, and early in 280 B. C. Pyrrhus landed a powerful army in Italy, comprising 20,000 heavy-armed foot-soldiers, 3,000 horse, 2,000 archers and 20 elephants. The Romans met him soon after at Heraclea, on the coast. It was the first collision of the Roman legion and the Macedonian phalanx, and the first encounter of the Latin soldier with the huge war-beast of the Asiatics. Pyrrhus won a bloody victory, but won it at such cost that it terrified him. He tried at once to arrange a peace, but the proud Romans made no terms with an invader. Next year he inflicted another great defeat upon them, near

Asculum, in Apulia; but nothing seemed to come of it, and the indomitable Romans were as little conquered as ever. Then the restless Epirot king took his much shaken army over to Sicily and joined the Greeks there in their war with the Carthaginians. The latter were driven out of all parts of the island, except Lilybæum, but failing, after a long siege, to reduce Lilybæum, Pyrrhus lost the whole fruits of his success. The autumn of 276 B. C. found him back again in Italy, where the Romans, during his absence of three years, had recovered much ground. Next year, in the valley of Beneventum, they had their revenge upon him for Heraclea and Asculum, and he was glad to take the shattered remains of his army back to Greece. His career of ambition and adventure was ended three years afterwards (see MACEDONIA: 277-244 B. C.), under the walls of Argos, by a tile which a woman flung down upon his head. In due time all Magna Græcia succumbed to the dominion of Rome, and the commerce and wealth of Tarentum passed over under Roman auspices to the new port of Brundisium, on the Adriatic side of the same promontory.—T. Arnold, *History of Rome*, v. 2, ch. 36-37.

B. C. 280-146.—Supremacy in Greece. See GREECE: B. C. 280-146.

B. C. 275.—Union of Italy under sovereignty of the republic.—Differing relations of subject communities to the sovereign state.—Roman citizenship.—“But the rule of Rome over Italy, like her wider rule over the Mediterranean coasts, was not an absolute dominion over conquered subjects. It was in form at least a confederacy under Roman protection and guidance; and the Italians, like the provincials, were not the subjects, but the ‘allies and friends’ of the Roman people. In every possible way she strove to isolate . . . [the conquered peoples] from each other, while binding them closely to herself. The old federal groups were in most cases broken up, and each of the members united with Rome by a special treaty of alliance. In Etruria, Latium, Campania, and Magna Græcia the city state was taken as the unit; in central Italy, where urban life was non-existent, the unit was the tribe. The northern Sabellian peoples for instance,—the Marsi, Pacligni, Vestini, Marrucini, Frentani,—were now constituted as separate communities in alliance with Rome. In many cases, too, no freedom of trade or intermarriage was allowed between the allies themselves, a policy afterwards pursued in the provinces. Nor were all these numerous allied communities placed on the same footing as regarded their relations with Rome herself. To begin with, a sharp distinction was drawn between the Latini and the general mass of Italian allies. . . . The Latin colonies . . . [were] communities founded by Rome, composed of men of Roman blood, and whose only claim to the title Latin lay in the fact that Rome granted to them some portion of the rights and privileges formerly enjoyed by the old Italian cities under the Cassian treaty. Though nominally allies, they were, in fact, offshoots of Rome herself, bound to her by community of race, language, and interest, and planted as Roman garrisons among alien and conquered peoples. The Roman citizen who joined a Latin colony lost his citizenship—to have allowed him to retain it would no doubt have been regarded as enlarging too rapidly the limit of the citizen body; but he received in exchange the status of a favoured ally. The Latin colony did not, indeed, enjoy the equality and independence originally possessed by the old Latin cities. It had no freedom of action outside its own territory, could not make war or

peace, and was bound to have the same friends and foes as Rome. But its members had the right of tradition, and, down to 268 B. C., of intermarriage also with Roman citizens. Provided they left sons and property to represent them at home, they were free to migrate to Rome and acquire the Roman franchise. In war time they not only shared in the booty, but claimed a portion of any land confiscated by Rome and declared public. These privileges, coupled with their close natural affinities with Rome, successfully secured the fidelity of the Latin colonies, which became not only the most efficient props of Roman supremacy, but powerful agents in the work of Romanising Italy. Below the privileged Latins stood the Italian allies; and here again we know generally that there were considerable differences of status, determined in each case by the terms of their respective treaties with Rome. . . . Rome, however, did not rely only on this policy of isolation. Her allies were attached as closely to herself as they were clearly separated from each other, and from the first she took every security for the maintenance of her own paramount authority. Within its own borders, each ally was left to manage its own affairs as an independent state. The badges which marked subjection to Rome in the provinces—the resident magistrate and the tribute—were unknown in Italy. But in all points affecting the relations of one ally with another, in all questions of the general interests of Italy and of foreign policy, the decision rested solely with Rome. The place of a federal constitution, of a federal council, of federal officers, was filled by the Roman senate, assembly, and magistrates. The maintenance of peace and order in Italy, the defence of the coasts and frontiers, the making of war or peace with foreign powers, were matters the settlement of which Rome kept entirely in her own hands. Each allied state, in time of war, was called upon for a certain contingent of men, but, though its contingent usually formed a distinct corps under officers of its own, its numerical strength was fixed by Rome, it was brigaded with the Roman legions, and was under the orders of the Roman consul. This paramount authority of Rome throughout the peninsula was confirmed and justified by the fact that Rome herself was now infinitely more powerful than any one of her numerous allies. . . . Since the first important annexation of territory after the capture of Veii (396 B. C.), twelve new tribes had been formed, and the number of male citizens registered at the census had risen from 152,000 to 200,000. Within this enlarged Roman state were now included numerous communities with local institutions and government. At their head stood the Roman colonies, founded to guard especially the coasts of Latium and Campania. Next to these eldest children of Rome came those communities which had been invested with the full Roman franchise. [See NATURALIZATION: Growth of the idea.] . . . Lowest in the scale were those which had not been considered ripe for the full franchise, but had, like Caere, received instead the *civitas sine suffragio*, the civil without the political rights. Their members, though Roman citizens, were not in the ranks of the Roman legions, but in separate contingents. In addition to these organized town communities, there were also the groups of Roman settlers on the public lands, and the dwellers in the village communities of the enfranchised highland districts in central Italy. . . . The urban communities within the Roman pale, colonies and municipia, were allowed a large measure of local self-government. In all we find local assemblies, senates, and magistrates, to whose hands the ordinary routine

of local administration was confided, and, in spite of differences in detail, in the titles and numbers of the magistrates, the same type of constitution prevailed throughout. But these local authorities were carefully subordinated to the higher powers in Rome. . . . The Roman citizen in a colony or municipium enjoyed, of course, the right of appeal to the Roman people in a capital case. . . . But an additional safeguard for the equitable and uniform administration of Roman law in communities, to many of which the Roman code was new and unfamiliar, was provided by the institution of prefects, who were sent out annually, as representatives of the Roman praetor, to administer justice in the colonies and municipia. To prefects was, moreover, assigned the charge of those districts within the Roman pale where no urban communities, and consequently no organised local government, existed."—H. F. Pelham, *Outlines of Roman history*, pp. 97, 98-101, 105.—See also COLONIZATION: Ancient Greek, Roman, etc.

B. C. 264-241.—Wars between Rome and Carthage.—First Punic War.—Conquest of Sicily.—"Rome was now head of the Italian land, unifier and protector of its peoples. But this high position involved responsibility (1) for the defence of its coasts and (2) for the protection of its commerce. Dangers in both of these directions appeared on account of the power of the African city, Carthage. . . . North Africa as far as the Atlantic was under its authority, as was also a goodly share of Sicily. . . . Corsica, Sardinia and portions of the Spanish peninsula were its possessions; while the trade of all Spain was in its hands. Such commercial influence and activity brought immense wealth to the city, and for centuries had given it easily the leading position in the west. . . . Rome had taken into its possession the Greek cities of Italy and was bound to protect their interests. Thus at this point it came into touch with Carthage's commercial activity. Nor could Carthage, on its part, accept willingly a limitation of its commerce. It is indispensable to every such community to enlarge and strengthen its trade. The one region remaining in the west which could thus be exploited was Italy. Accordingly, it is not strange that Carthaginian pressure upon the Italian peninsula grew greater just at the moment when Rome's duty of protecting Italy became clear to her statesmen. In these circumstances a conflict of interests leading to open war was unavoidable. . . . Rome had under it a population of about five million, Carthage, with a city population of about half a million, had in its empire about five million people also; but whereas Rome could put for years at a stretch one hundred thousand men in the field, Carthage was mainly dependent upon mercenaries and seldom was able to employ more than thirty thousand of them. The main asset of Carthage was its wealth. Its revenues were far greater than those of Rome, which was weak financially; but the first consideration of Carthage was the fleet in which it had on occasion as many as three hundred and fifty vessels, most of them the huge top-heavy quinquiremes which became the normal battle-ships in the third century B. C. To maintain such a fleet, however, strained to the limit even the enormous resources of Carthage."—G. S. Goodspeed, *History of the ancient world*, pp. 343-345.—"The war lasted twenty-three years, [264-241] and is ranked by Polybius above all previous wars for severity. Few conflicts illustrate better the value of naval superiority. At first the Carthaginians were undisputed masters of the sea. They therefore reinforced their troops in Sicily at pleasure, and ravaged the coasts of Italy to the utter

ruin of seaboard prosperity. Indeed, for a time they made good their warning to the Roman Senate before the war began,—that against their will no Roman could dip his hands in the sea. But the Romans, with sagacity and boldness, built their first war fleet and soon met the ancient Queen of the Seas on her own element. Winning command there temporarily, in 256, they invaded Africa itself. The consul Regulus won brilliant successes there, and even laid siege to Carthage. But, as winter came on, the short-term Roman levies were mostly recalled, according to custom, and the weak remnant was soon crushed. Rome's first attempts upon the sea had been surprisingly successful, but soon terrible reverses befell her there also. In quick succession she lost four great fleets with large armies on board. One sixth of her citizens had perished; the treasury was empty; and, in despair, the Senate was about to abandon the effort to secure the sea. In this crisis Rome was saved by the public spirit of private citizens. Lavish gifts built and fitted out two hundred vessels, and this fleet won an overwhelming victory, which closed the war. Carthage had lost command of the sea and could no longer reinforce her armies in Sicily. Moreover, she was weary of the war and of the losses it brought to her commerce; and, in 241, she sued for peace. To obtain it she withdrew from Sicily and paid a heavy war indemnity. Hiero, who after the first years of the war had become a faithful ally of Rome, remained master of Syracuse. . . . The rest of Sicily passed under the rule of Rome."—W. M. West, *Ancient world*, pp. 325-327.—"The occasion of the First Punic War was dishonourable to Rome. Certain mercenary soldiers had seized Messina in Sicily, destroyed the citizens, and held possession against the Syracusans, 284 B. C. They were beaten in the field, and blockaded in Messina by Hiero, king of Syracuse, and then, driven to extremity, sent a deputation to Rome, praying that 'the Romans, the sovereigns of Italy, would not suffer an Italian people to be destroyed by Greeks and Carthaginians,' 264 B. C. It was singular that such a request should be made to the Romans, who only six years before had chastised the military revolt of their brethren Mamertines in Rhegium, taking the city by storm, scourging and beheading the defenders, and then restoring the old inhabitants (270 B. C.). The senate was opposed to the request of the Messina deputation; but the consuls and the people of Rome, already jealous of Carthaginian influence in Sicily and the Mediterranean, resolved to protect the Mamertine buccaners and to receive them as their friends and allies. Thus dishonestly and disgracefully did the Romans depart from their purely Italian and continental policy, which had so well succeeded, to enter upon another system, the results of which no one then could foresee. Some excuse may be found in the fact that the Carthaginians had been placed by their partisans in Messina in possession of the citadel, and this great rival power of Carthage was thus brought unpleasantly near to the recent conquered territory of Rome. The fear of Carthaginian influence overcame the natural reluctance to an alliance with traitors false to their military oath, the murderers and plunderers of a city which they were bound to protect. Thus began 'the First Punic War, which lasted, without intermission, 22 years, a longer space of time than the whole period occupied by the wars of the French Revolution.' In this war Duilius won the first naval battle near Mylae (Melarò). Regulus invaded Africa proper, the territory of Carthage, with great success, until beaten and taken prisoner at Zama, 256-

255 B. C. The war was carried on in Sicily and on the sea until 241 B. C., when peace was made on conditions that the Carthaginians should evacuate Sicily and make no war upon Hiero, king of Sicily (the ally of the Romans), that they should pay 3,200 Euboic talents (about £110,000) within ten years, 241 B. C. The effects of an exhausting war were soon overcome by ancient nations, so that both Rome and Carthage rapidly recovered, 'because wars in those days were not maintained at the expense of posterity.' Rome had to check the Illyrian pirates and to complete the conquest of Cisalpine Gaul and the Ligurians 238-221 B. C. Meanwhile the Carthaginians, hampered by a three years' rebellion [241-237 B. C.] of its mercenary troops, quietly permitted the Romans to take possession of Corsica and Sardinia, [227] and agreed to pay 1,200 talents as compensation to Roman merchants. On the other hand, measures were in process to re-establish the Carthaginian power; the patriotic party, the Barcine family, under Hamilcar, commenced the carrying out of the extensions and consolidations of the territories in Spain."—W. B. C. 218-202.—Second Punic War.—Hannibal in Italy.—Defeat of Hasdrubal at the Metaurus.—War in Africa.—War ended at Zama.—Acquisition of Spain.—"The occasion for the second struggle with Carthage appeared in an unexpected quarter. One of the most skillful Punic generals, Hamilcar Barca, animated by an inextinguishable hatred for Rome, retired to Spain after the 'truceless' war and there spent nine years in building up a Carthaginian power which might furnish men and money to renew the war with Rome. After his death, first his son-in-law Hasdrubal (228-221 B. C.) and later his son Hannibal, with splendid vigor and success, carried on his work. The wild tribes south of the river Ebro were tamed, united and organized into an effective force. Money and munitions of war were collected and a plan of campaign, bold beyond all expectation, was devised. The first step precipitated war. Saguntum, a petty fort in alliance with Rome, was attacked and captured by Hannibal. His surrender was at once demanded and as promptly refused, whereupon a Roman ambassador in the picturesque fashion of the Roman declaration of war 'gathered his toga in two folds—"War or peace," he cried; "which will you have?" "Which you will," was the answer. He shook out the fold of war, and war was accepted by Carthage with a light heart.' Then with an army of fifty thousand infantry and nine thousand cavalry, supported by fighting elephants, Hannibal marched northward with no less audacious a design than the crossing of the Alps and the descent into northern Italy. After almost incredible hardships, through fightings with wild tribes and the fierceness of winter storms among the higher Alps, the army, reduced to less than half its number, stood exhausted, but triumphant, on the plains of Cisalpine Gaul. And now began a duel to the death, the Second Punic War (218 B. C.). The fate of Rome hung on the loyalty of the allied cities of Italy. The newly conquered Gauls soon rose and flocked to Hannibal. The Roman army under the consuls was routed at battles on the banks of the rivers Ticinus and the

Trebia. [See ALPS: Roman period.] The next year (217 B. C.) Hannibal, advancing southward, entrapped and annihilated another Roman army at Lake Trasimene in Etruria; the consul Flaminius was killed in the battle. Then the Romans in alarm appointed Quintus Fabius Maximus dictator, known in history as the 'shield of Rome.' He would not give battle, but followed on the heels of Hannibal as he marched down to the southeast ravaging the country. New commanders, the consuls Aemilius Paulus and Terentius Varro, and a new and great army of more than eighty thousand men marched out against him in 216 B. C.; again the Romans were utterly beaten at Cannae in Apulia; one consul, Varro, and ten thousand men survived the slaughter. In this as in all the other Italian engagements of Hannibal the victory was gained or rendered complete by his clever use of his wonderful Numidian cavalry. Rome now appeared on the verge of destruction. The majority of the Roman allies in southern Italy passed over to Hannibal's side—Capua and Tarentum among the rest. In Sicily, Syracuse and its dependencies renounced the Roman alliance. Philip V, of Macedonia, made an alliance with Hannibal. And, in fact, Hannibal had substantially accomplished his mission, which was not the annihilation of Rome, but the dissolution of the Italian federation and the reduction of its head to its historic position as one among the many petty states of the peninsula. Henceforth, all he had to do was to maintain his position in Italy and prevent the Romans from re-establishing their hegemony. But the heroic Roman spirit remained unshaken. An offer of peace by the victor of Cannae was rejected. An army sent to Syracuse under the command of Metellus, 'the sword of Rome,' captured that city and restored Roman power in Sicily. War was declared against Philip. Energetic efforts were put forth to recover the rebellious Italian cities, while further pitched battles with Hannibal were avoided. The fortified posts occupied by Roman allies all over the land—the Latin colonies—held fast to Rome. Thus gradually the sky brightened, while Hannibal's task grew more difficult. He lost Capua in 211 B. C., and a dash at Rome in the same year failed. Tarentum was taken by the Romans in 209 B. C. The crisis of the struggle came when Hasdrubal, Hannibal's brother, cluding the enemy in Spain, started for Italy. Already Rome was near the end of its resources. Twelve Latin colonies announced that they could keep up the struggle no longer. If the two Carthaginian armies could unite, their victory was sure. But in 207 B. C. the army of Hasdrubal was destroyed at the river Metaurus, he himself killed and his head thrown over the ramparts of his brother's camp. As Hannibal looked upon it, he is said to have declared, 'I behold the fate of Carthage.' This battle decided that Hannibal could maintain his position in Italy for only a limited time. Soon his diminishing army was shut up in the region of Bruttium. Peace was made between Rome and Philip. Meanwhile, a tedious war had been carried on in Spain—Hannibal's sole possible source of reinforcements—by the brothers Publius and Gnaeus Scipio, who were both finally overthrown and killed (212 B. C.). All Spain seemed lost to the Romans when the son of the slain general, Publius Cornelius Scipio, a brilliant young Roman officer, who earlier than anyone else saw the advantage of fighting the war out in Hannibal's own country, came to Spain with an army (211 B. C.). He did not, indeed, prevent the departure of Hasdrubal for Italy, but after a series of striking campaigns he was able in 206 B. C. to return to Italy leaving Rome

master of the Carthaginian part of the Iberian peninsula. Two years later he advanced his project a step further by crossing the sea with an army to carry the war into Africa. [See also SPAIN: B. C. 218-25.] Hannibal was recalled to defend his country and was overthrown by Scipio at the battle of Zama (202 B. C.). The war was over; Carthage was ruined, and nothing was left but to seek as favorable terms of peace as possible. They were not too severe; Spain and the Mediterranean islands were given up; the kingdom of Numidia was granted its independence under King Massinissa, whose claim to the throne of all Numidia Rome had espoused, and war upon it was forbidden; the fleet was reduced to ten triremes; a payment of two hundred talents yearly for fifty years was imposed. Thus Carthage, while not destroyed, lost its political and commercial supremacy and became little more than a dependency of Rome."—G. S. Goodspeed, *History of the ancient world*, pp. 350-354.—"The conquest of Spain had been a political necessity during the war, since it alone could furnish the enemy with new recruits, and its retention afterwards was, of course, the only conceivable course, but for two centuries this new province cost the state more than it yielded. . . . Suffice it to say that various times during the following century the Roman senate would have been relieved to hear that the whole peninsula had disappeared under water. The havoc wrought in southern Italy was irreparable. For twelve years the Romans and Carthaginians had driven each other over this region, both sides storming cities and laying waste fields as the best methods of tiring and weakening their opponents. . . . The waste land—perhaps two million acres—Rome appropriated as being without claimants. But what could she do with it? . . . In the Roman constitution the war wrought few changes. The newly acquired province of Spain readily fell into the form of government shaped for Sicily. The federation in Italy had stood the endurance test better than could have been anticipated, and the senate saw no reason for introducing any innovations there. In fact, because of the general satisfaction, the senate even grew negligent about making several well-deserved promotions towards citizenship. The old-city-state government at Rome had proved itself versatile enough to meet the exigencies of the war. . . . But perhaps the most portentous result of the war lay in Rome's new consciousness of her strength. The struggle had revealed an unknown power of endurance, of loyalty, and of persistence in the temper of the Roman people. It had demonstrated that the constitution held the state's resources at a point of quick response. It seemed to prove that the nation was unconquerable."—T. Frank, *Roman imperialism*, pp. 129-132.

B. C. 215-196.—First Macedonian War (215-205 B. C.).—Second Macedonian War (200-196 B. C.).—Liberation of the Greeks (196 B. C.).—"Before the opening of the conflict with Hannibal, the Romans had taken a few Greek cities into their alliance. At this time the great power in Greece was Philip V of Macedon. Some of the Greek states he actually conquered; others submitted to his alliance through fear, or with difficulty maintained their independence. Philip resented Roman meddling within his own sphere of influence. When, therefore, news came of Hannibal's great success, he made an alliance with the victor, and prepared a fleet for the purpose of landing an army in Italy. Foiled in some minor operations near home, he had to give up his ambitious plan and to use all his resources in defending himself against the Greeks, who were aided

by a few thousand men from Rome. After ten years of defensive campaigning, known as the First Macedonian War, Philip sought and obtained peace (205 B. C.). Rome then entered into alliance with Aetolia, Athens, and other important states of Greece."—G. M. Botsford, *History of the ancient world*, p. 37.—"In 201 B. C. Rome made peace with Carthage, and the senate had leisure to listen to the urgent appeal for assistance which reached her from her Eastern allies. . . . To cripple, or at least to stay the growth of Philip's power was in the eyes of the senate a necessity; but it was only by representing a Macedonian invasion of Italy as imminent that they persuaded the assembly, which was longing for peace, to pass a declaration of war (200 B. C.), an ostensible pretext for which was found in the invasion by Macedonian troops of the territory of Rome's ally, Athens. The war commenced in the summer of 200 B. C.; and, though the landing of the Roman legions in Epirus was not followed, as had been hoped, by any general rising against Philip, yet the latter had soon to discover that his allies, if they were not enthusiastic for Rome were still less inclined actively to assist himself. Neither by force nor diplomacy could he make any progress south of Boeotia. . . . Further resistance was impossible; Philip submitted, and early the next year a Roman commission reached Greece with instructions to arrange terms of peace. These were such as effectually secured Rome's main object in the war, the removal of all danger to herself and her allies from Macedonian aggression. Philip was left in possession of his kingdom, but was degraded to the rank of a second-rate power, deprived of all possessions in Greece, Thrace, and Asia Minor, and forbidden, as Carthage had been in 201 B. C., to wage war without the consent of Rome, whose ally and friend he now became. Macedon thus weakened could no longer be formidable, but might yet be useful, not only as a barrier against Thracians and Kelts, but as a check upon anti-Roman intrigues in Greece. The second point in the settlement now effected by Rome was the liberation of the Greeks. The 'freedom of Greece' was proclaimed at the Isthmian games amid an outburst of enthusiasm, which reached its height when two years later (194 B. C.) Flamininus withdrew his troops from the 'three fetters of Greece'—Chalcis, Demetrias, and Corinth. There is no reason to doubt that, in acting thus, not only Flamininus himself, but the senate and people at home, were influenced, partly at any rate, by feelings of genuine sympathy with the Greeks and reverence for their past. . . . For Rome to have annexed Greece, as she had annexed Sicily and Spain, would have been a flagrant violation of the pledges she had repeatedly given both before and during the war. . . . But a friendly and independent Greece would be at once a check on Macedon, a barrier against aggression from the East, and a promising field for Roman commerce. Nor while liberating the Greeks did Rome abstain from such arrangements as seemed necessary to secure the predominance of her own influence. In the Peloponnese, for instance, the Achaeans were rewarded by considerable accessions of territory; and it is possible that the Greek states, as allies of Rome, were expected to refrain from war upon each other without her consent. The failure of the policy, after all, was due to the impracticability of the Greeks, and the intensity of their civic and tribal feuds. To suppose as some have done that Rome intended it to fail is to attribute to the statesmen of the generation of Scipio and Flamininus even more than the cynicism of the time of L. Mummius."—H. F.

Pelham, *Outlines of Roman history*, pp. 141-142.—“When Alexander died at Babylon in the year 323 B. C., Rome was in the midst of the Samnite wars. Her victories over the Samnites and the cities of Magna Graecia gave her, by 264 B. C., the supremacy of the Italian peninsula. During the next half century she was too busy with the Carthaginians to think of interference in the affairs of the East. The end of the Second Punic War afforded Rome a chance to pursue her designs abroad. . . . In the East, she extended her influence over the highly civilized peoples of Greece and Asia. Rome, ever since the repulse of Pyrrhus, had been slowly drifting into closer contact with the East. The chastisement of the Illyrian pirates [228 B. C.] earned for her the gratitude of the commercial cities of the Greek peninsula. A little later, she aided some of the Greeks against the Macedonian king, Philip V, who had allied himself with Hannibal and threatened an invasion of Italy. This First Macedonian War, as it is called, brought important consequences. It drew closer the ties which bound Rome to the Greek states as their natural champion against Macedonia. It inspired the Roman Senate with bitter resentment toward Philip for his assistance to Carthage. Rome had no sooner crushed Hannibal than she turned her attention to Philip. It was easy to find a pretext for another conflict with Macedonia. Philip was an ambitious monarch whose schemes for conquest threatened Rome's allies in the East—Egypt, Rhodes, and Athens. They sent to the great Italian republic urgent calls for help. The Roman people were weary of fighting, but the Senate used all its influence and forced through the *comitia centuriata* a declaration of war against Philip. The Second Macedonian War was settled by a single battle. The consul Flamininus met the enemy at Cynoscephalæ (‘Dogs’ Heads’), a range of low hills in Thessaly. It was a fateful moment when, for the second time, the legions faced the phalanx. After a sharp struggle, the Romans won and Philip sued for peace. Rome did not feel ready to absorb the territory of Macedonia and thus found an eastern empire. Philip still kept his kingdom, but lost his possessions in Greece. He was forbidden, as Carthage had been, to wage war without Roman consent. Macedonia in this way became a dependent ally of Rome. Shortly after these events, Rome announced the independence of Greece [B. C. 196]. It was then spring, and a vast number of Greeks had gathered at Corinth to witness the athletic games. Suddenly a herald appeared and proclaimed that, by the orders of the Roman Senate, Greece was henceforth free. The people could hardly believe his words, so unexpected was the news. When the festival was over, they nearly killed Flamininus with their demonstrations of joy. Some wanted to look him in the face and call him their preserver, others were eager to grasp his hand, and others covered him with garlands and fillets. Rome was hailed as ‘the nation which, at its own expense, with its own labor, and at its own risk, waged war for the liberty of mankind.’ So, all in all, it was a great day for Greece.”—H. Webster, *Ancient history*, pp. 378-379.

B. C. 197-146.—Roman policy in eastern Mediterranean.—“It was in the western half of the protectorate in European Greece that the first steps in the direction of annexation [to the empire] were taken. The enthusiasm provoked by the liberation of the Greeks had died away, and its place had been taken by feelings of dissatisfied ambition or sullen resentment. Internecine feuds and economic distress had brought many parts of Greece to the verge of anarchy, and, above all, the very foundations of the settlement effected in 197 B. C. were threatened by the reviving power and aspirations of Macedon. . . . The senate could no longer hesitate. They were well aware of the restlessness and discontent in Greece; and after hearing from Eumenes of Pergamum, and from their own officers, all details of Perseus's intrigues and preparations they declared war. The struggle, in spite of Perseus's courage and the incapacity at the outset of the Roman commanders, was short and decisive. . . . The victory gained by L. Æmilius Paullus at Pydna (168 B. C.) ended the war. Perseus became the prisoner of Rome, and as such died in Italy a few years later. Rome had begun the war with the fixed resolution no longer of crippling but of destroying the Macedonian state. . . . Yet Macedonia, though it ceased to exist as a single state, was not definitely constituted a Roman province. . . . All Greeks suspected of Macedonian leanings were removed to Italy, as hostages for the loyalty of the several communities. . . . But this somewhat violent experiment only answered for a time. In 148 B. C. the Achæans rashly persisted, in spite of warnings, in attempting to compel Sparta by force of arms to submit to the league. When threatened by Rome with the loss of all that they had gained since Cynoscephalæ, they madly rushed into war. They were easily defeated and a ‘commission of ten,’ under the presidency of L. Mummius, was appointed by the senate thoroughly to resettle the affairs of Greece. Corinth [146 B. C.] by orders of the senate, was burnt to the ground, and its territory confiscated. Thebes and Chalcis were destroyed, and the walls of all towns which had shared in the last desperate outbreak were razed to the ground. All the existing confederacies were dissolved; no commercium was allowed between one community and another. Everywhere an aristocratic type of constitution, according to the invariable Roman practice, was established, and the payment of a tribute imposed. Into Greece, as into Macedonia in 167 B. C., the now familiar features of the provincial system were introduced—disarmament, isolation, and taxation. The Greeks were still nominally free, and no separate province with a governor of its own was established, but the needed central control was provided by assigning to the neighbouring governor of Macedonia a general supervision over the affairs of Greece. From the Adriatic to the Ægean, and as far north as the river Drilo and Mount Scardus, the whole peninsula was now under direct Roman rule. Beyond the Ægean the Roman protectorate worked no better than in Macedonia and Greece, and the demoralising recriminations, quarrels, and disorders which flourished under its shadow were aggravated by its longer duration, and by the still more selfish view taken by Rome of the responsibilities connected with it. . . . The levelling policy pursued towards Macedon and the

Achaean was applied with less justice to Rome's two faithful and favoured allies, Rhodes and Pergamum. The former had rendered themselves obnoxious to Rome by their independent tone, and still more by their power and commercial prosperity. . . . Finally their commercial prosperity was ruined by the establishment of a free port at Delos, and by the short-sighted acquiescence of Rome in the raids of the Cretan pirates. . . . The frontier of the protectorate was pushed forward to the confines of Armenia and to the upper Euphrates by alliances with the kings of Pontus and Cappadocia beyond the Halys. In Syria, on the death of Antiochus Epiphanes (164 B. C.), Rome intervened to place a minor, Antiochus Eupator, on the throne, under Rome's guardianship. In 168 B. C. Egypt formally acknowledged the suzerainty of Rome, and in 163 B. C. the senate, in the exercise of this new authority, restored Ptolemy Philometor to his throne, but at the same time weakened his position by handing over Cyrene and Cyprus to his brother Euergetes. This display of energy, however, was short-lived. From the death of Eumenes in 159 B. C. down to 133 B. C. Rome, secure in the absence of any formidable power in the East, and busy with affairs in Macedonia, Africa, and Spain, relapsed into an inactivity the disastrous results of which revealed themselves in the next period in the rise of Mithradates of Pontus, the spread of Cretan and Cilician piracy, and the advance of Parthia. To the next period also belongs the conversion on the death of Attalus III. of the kingdom of Pergamum into the Roman province of Asia. . . . To the East [Rome] came as the liberator of the Greeks; and it was only slowly that in this part of the empire her provincial system made way. In the East, moreover, the older civilisation she found there obstinately held its ground. Her proconsuls governed and her legions protected the Greek communities, but to the last the East remained in language, manners, and thought Greek and not Roman."—H. F. Pelham, *Outlines of Roman history*, pp. 141-154.—See also ATHENS: B. C. 197-A. D. 138.

B. C. 192-189.—War with Antiochus the Great of Syria.—"At Rome the prospect of a conflict with Antiochus excited great anxiety, and it was not until every resource of diplomacy had been exhausted that war was declared. At a distance, indeed, Antiochus, the great king, the lord of all the forces of Asia, seemed an infinitely more formidable opponent than their better-known neighbour Philip, and a war against the vaguely-known powers of the East a far more serious matter than a campaign in Thessaly. War, however, was unavoidable, unless Rome was to desert her Greek allies, and allow Antiochus to advance unopposed to the coasts of the Adriatic. And the war had no sooner commenced than the real weakness which lay behind the magnificent pretensions of the 'king of kings' was revealed. Had Antiochus acted with energy when in 192 B. C. he landed in Greece, he might have won the day before the Roman legions appeared. As it was, in spite of the warnings of Hannibal, who was now in his camp, and of the Ætoliens, he frittered away valuable time between his pleasures at Chalcis and useless attacks on petty Thessalian towns. . . . A Roman fleet had already (191 B. C.) crossed the Ægean, and in concert with the fleets of Pergamum and Rhodes worsted the navy of Antiochus. In 190 B. C. the new consul, L. Scipio, accompanied by his famous brother, the conqueror of Hannibal, led the Roman legions for the first time into Asia. At Magnesia, near

Mount Sipylus in Lydia, he met and defeated the motley and ill-disciplined hosts of the great king. For the first time the West, under Roman leadership, successfully encountered the forces of the East, and the struggle began which lasted far on into the days of the emperors. The terms of the peace which followed the victory at Magnesia tell their own story clearly enough. There was no question, any more than in Greece, of annexation; the main object in view was that of securing the predominance of Roman interests and influence throughout the peninsula of Asia Minor, and removing to a safe distance the only Eastern power which could be considered dangerous. . . . The area lying between these 'buffer states' and the Ægean was organised by Rome in such a way as should at once reward the fidelity of her allies and secure both her own paramount authority and her safety from foreign attack. Pergamum and Rhodes were so strengthened—the former by the gift of the Chersonese, Lycaonia, Phrygia, Mysia, and Lydia, the latter by that of Lycia and Caria—as not only amply to reward their loyalty, but to constitute them effective props of Roman interests and effective barriers alike against Thracian and Celtic raids in the north and against aggression by Syria in the south. Lastly, the Greek cities on the coast, except those already tributary to Pergamum, were declared free, and established as independent allies of Rome."—H. F. Pelham, *Outlines of Roman history*, pp. 143-157.

B. C. 189-139.—Wars with Lusitanians. See PORTUGAL: Early history; LUSITANIA.

B. C. 184-149.—Spoils of conquest and the corruption they wrought.—"The victories of the last half-century seemed to promise ease and wealth to Rome. She was to live on the spoils and revenue from the conquered countries. Not only did they pay a fixed tax to her exchequer, but the rich lands of Capua, the royal domain lands of the kings of Syracuse and of Macedonia, became public property, and produced a large annual rent. It was found possible in 167 to relieve citizens from the property tax or tributum, which was not collected again until the year after the death of Iulius Caesar. But the sudden influx of wealth had the usual effect of raising the standard of expense; and new tastes and desires required increased means for their gratification. All manner of luxuries were finding their way into the city from the East. Splendid furniture, costly ornaments, wanton dances and music for their banquets, became the fashion among the Roman nobles; and the younger men went to lengths of debauchery and extravagance hitherto unknown. The result to many was financial embarrassment, from which relief was sought in malversation and extortion. The old standard of honour in regard to public money was distinctly lowered, and cases of misconduct and oppression were becoming more common and less reprobated. . . . The fashionable taste for Greek works of art, in the adornment of private houses, was another incentive to plunder, and in 149 it was for the first time found necessary to establish a permanent court or 'quaestio' for cases of malversation in the provinces. Attempts were indeed made to restrain the extravagance which was at the root of the evil. In 184 Cato, as censor, had imposed a tax on the sale of slaves under twenty above a certain price, and on personal ornaments above a certain value; and though the 'lex Oppia,' limiting the amount of women's jewelry, had been repealed in spite of him in 195, other sumptuary laws were passed. A 'lex Orchia' in 182 limited

the number of guests, a 'lex Fannia' in 161 the amount to be spent on banquets; while a 'lex Didia' in 143 extended the operation of the law to all Italy. And though such laws, even if enforced, could not really remedy the evil, they perhaps had a certain effect in producing a sentiment; for long afterwards we find overcrowded dinners regarded as indecorous and vulgar. Another cause, believed by some to be unfavourably affecting Roman character, was the growing influence of Greek culture and Greek teachers. For many years the education of the young, once regarded as the special business of the parents, had been passing into the hands of Greek slaves or freedmen. . . . On the superiority of Greek culture there was a division of opinion. The Scipios and their party patronised Greek philosophy and literature. . . . This tendency, which went far beyond a mere question of literary taste, was opposed by a party of which M. Porcius Cato was the most striking member. . . . In Cato's view the reform needed was a return to the old ways, before Rome was infected by Greece."—E. S. Shuckburgh, *History of Rome to the battle of Actium*, ch. 32.

B. C. 171-133.—Third Macedonian War.—Downfall of Greece.—"Although the Romans had so far taken nothing for themselves in the eastern wars, their allies in Macedonia and Greece grew restless as they noted the rising greatness of the Italian power. Feelings of dissatisfied ambition or of sullen resentment replaced the enthusiasm with which the Greeks had welcomed their Roman liberators. To the Macedonians the peace declared after the battle of Cynoscephalae brought nothing but humiliation. When Philip V was succeeded by his son Perseus, that prince sought to revive the national aspirations of the Greeks and to pose as a champion of Hellas against barbarian Rome. The Senate, to prevent so formidable a combination, once more took up arms against Macedonia. The Third Macedonian War was short and decisive. The Roman commander, Aemilius Paulus, a son of the consul slain at Cannae, met the enemy near Pydna. 'Paulus had never seen a phalanx till he saw it in the army of Perseus on this occasion; and he often admitted to his friends at Rome afterwards that he had never beheld anything more alarming and terrible.' The phalanx, however impressive, proved no match for the legion. Perseus soon fled from the field, leaving his army to its fate. He was captured later and taken to Rome, where he graced the triumphal procession of his conqueror. Macedonia, as a kingdom, ceased to exist. The country was divided into four states, free in name, but in reality the subjects of Rome. A few years later (146 B. C.), the Romans took away even this vestige of independent rule and converted Macedonia into a province. Thus disappeared a great power which Philip had founded, and Alexander had led to the conquest of the world. For Greece also, the end of 'freedom' was drawing nigh. After the victory at Pydna, all the Greeks suspected of sympathizing with Macedonia were transported to Italy as hostages for the loyalty of their several cities. Among these were a thousand members of the Achaean League. The survivors, after sixteen years of captivity, were allowed to return to their homes. 'It is only a question,' said Cato the Censor, 'whether a parcel of worn-out Greeks shall be carried to their graves here or in Achaea.' This cruel treatment helped further to inflame the spirit of hatred toward Rome. At length the Achaean League rashly declared war.

It could have only one outcome—the downfall of Greece, the triumph of Rome. The heavy hand of Roman vengeance descended on Corinth, the chief member of the league, and at this time one of the most beautiful cities of the world. In 146 B. C., the same year in which the destruction of Carthage occurred, and just half a century after Flamininus had proclaimed the liberation of Greece, Corinth was sacked by the Roman soldiery and burned to the ground. A Greek historian, who was an eye-witness of the destruction of Corinth, tells us that the rude Romans cared little for the treasures of art which filled the city. 'I saw with my own eyes pictures thrown on the ground and soldiers playing dice on them.' The Roman general Mummius was hardly less a boor. When the priceless paintings and statues were taken to Rome to be exhibited at his triumph, he gave orders that any lost on the way should be replaced 'by others of equal value.' Rome was great enough in war, but in everything else was still barbarian. The fall of Corinth may be said to mark the final extinction of Greek independence. Though the Hellenic cities and states were allowed to rule themselves, subject to the oversight of the Roman governor of Macedonia, they paid tribute and thus acknowledged the supremacy of Rome. A century later, Greece became in name, as well as in fact, a province of the Roman Empire. The same year that marked the complete establishment of Roman rule in Spain saw Rome gain her first possessions at the opposite end of the Mediterranean. In 133 B. C., the last king of Pergamum bequeathed his dominions to the Roman people. The new province of Asia, which now came into existence, included all the western part of Asia Minor, together with the Greek cities that lined the coasts. The country took rank among the most valuable of Roman dependencies. Thus the lordship of Asia, held in turn by Cyrus and Darius, by Alexander of Macedonia, and by Antiochus the Great, passed finally into the hands of the Italian republic. Roman supremacy over the Mediterranean world was now all but complete. In 264 B. C., Rome had been only one of the five great Mediterranean States. In 133 B. C., no other power existed to match its strength with that of imperial Rome. To her had fallen in the West the heritage of Carthage, in the East the heritage of Alexander. At a terrible cost in blood and treasure, Rome had built up this mighty empire."—H. Webster, *Ancient history*, pp. 381-384.

B. C. 159-133.—Decline of the republic.—Social and economic causes.—Growing system of slavery and its effects.—Monopoly of land by capitalists.—Extinction of small cultivators.—Rapid decrease of citizens.—"In the Rome of this epoch the two evils of a degenerate oligarchy and a democracy not yet developed but already cankered in the bud were interwoven in a manner pregnant with fatal results. According to their party names, which were first heard during this period, the 'Optimates' wished to give effect to the will of the best, the 'Populares' to that of the community; but in fact there was in the Rome of that day neither a true aristocracy nor a truly self-determining community. Both parties contended alike for shadows. . . . Both were equally affected by political corruption, and both were in fact equally worthless. . . . The commonwealth was politically and morally more and more unhinged, and was verging towards its total dissolution. The crisis with which the Roman revolution was opened arose not out of this paltry

political conflict, but out of the economic and social relations which the Roman government allowed, like everything else, simply to take their course [and which had brought about] the depreciation of the Italian farms; the supplanting of the petty husbandry, first in a part of the provinces and then in Italy, by the farming of large estates; the prevailing tendency to devote the latter in Italy to the rearing of cattle and the culture of the olive and vine; finally, the replacing of the free labourers in the provinces as in Italy by slaves. . . . Before we attempt to describe the course of this second great conflict between labour and capital, it is necessary to give here some indication of the nature and extent of the system of slavery. We have not now to do with the old, in some measure innocent, rural slavery, under which the farmer either tilled the field along with his slave, or, if he possessed more land than he could manage, placed the slave . . . over a detached farm. . . . What we now refer to is the system of slavery on a great scale, which in the Roman state, as formerly in the Carthaginian, grew out of the ascendancy of capital. While the captives taken in war and the hereditary transmission of slavery sufficed to keep up the stock of slaves during the earlier period, this system of slavery was, just like that of America, based on the methodically prosecuted hunting of man. . . . No country where this species of game could be hunted remained exempt from visitation; even in Italy it was a thing by no means unheard of, that the poor free man was placed by his employer among the slaves. But the Negroland of that period was western Asia, where the Cretan and Cilician corsairs, the real professional slave-hunters and slave-dealers, robbed the coasts of Syria and the Greek islands; and where, emulating their feats, the Roman revenue-farmers instituted human hunts in the client states and incorporated those whom they captured among their slaves. . . . At the great slave market in Delos, where the slave-dealers of Asia Minor disposed of their wares to Italian speculators, on one day as many as 10,000 slaves are said to have been disembarked in the morning and to have been all sold before evening. . . . In whatever direction speculation applied itself, its instrument was invariably man reduced in the eye of the law to a brute. Trades were in great part carried on by slaves, so that the proceeds belonged to the master. The levying of the public revenues in the lower departments, was regularly conducted by the slaves of the associations that leased them. Servile hands performed the operations of mining, making pitch, and others of a similar kind; it became early the custom to send herds of slaves to the Spanish mines. . . . The tending of cattle was universally performed by slaves. . . . But far worse in every respect was the plantation system proper—the cultivation of the fields by a band of slaves not unfrequently branded with iron, who with shackles on their legs performed the labours of the field under overseers during the day, and were locked up together by night in the common, frequently subterranean, labourers' prison. This plantation system had migrated from the East to Carthage, . . . and seems to have been brought by the Carthaginians to Sicily. . . . The abyss of misery and woe which opens before our eyes in this most miserable of all proletariates, we leave to be fathomed by those who venture to gaze into such depths; it is very possible that, compared with the sufferings of the Roman slaves, the sum of all Negro suffering is but a drop.

Here we are not so much concerned with the distress of the slaves themselves as with the perils which it brought upon the Roman state [see SLAVE WARS IN SICILY AND ITALY]. . . . The capitalists continued to buy out the small landholders, or indeed, if they remained obstinate, to seize their fields without title of purchase. . . . The landlords continued mainly to employ slaves instead of free labourers, because the former could not like the latter be called away to military service; and thus reduced the free proletariat to the same level of misery with the slaves. They continued to supersede Italian grain in the market of the capital, and to lessen its value over the whole peninsula, by selling Sicilian slave-corn at a mere nominal price. . . . After 595 [159 B. C.], . . . when the census yielded 328,000 citizens capable of bearing arms, there appears a regular falling off, for the list in 600 [154 B. C.] stood at 324,000, that in 607 [147 B. C.] at 322,000, that in 623 [131 B. C.] at 319,000 burgesses fit for service—an alarming result for a period of profound peace at home and abroad. If matters were to go on at this rate, the burgess-body would resolve itself into planters and slaves; and the Roman state might at length, as was the case with the Parthians, purchase its soldiers in the slave-market. Such was the external and internal condition of Rome, when the state entered on the 7th century of its existence. Wherever the eye turned, it encountered abuses and decay; the question could not but force itself on every sagacious and well disposed man, whether this state of things were not capable of remedy or amendment."—T. Mommsen, *History of Rome*, v. 3, bk. 4, ch. 2.—See also SLAVERY: Roman.

ALSO IN: T. Arnold, *History of the Roman Commonwealth*, ch. 2.—G. Long, *Decline of the Roman republic*, v. 1, ch. 10-12.—W. R. Brownlow, *Slavery and serfdom in Europe*, lectures 1-2.

B. C. 149-146.—Third Punic War.—Destruction of Carthage.—"Carthage, bound hand and foot by the treaty of 201 B. C., was placed under the jealous watch of the loyal prince of Numidia, who himself willingly acknowledged the suzerainty of Rome. But it was impossible for this arrangement to be permanent."—H. F. Pelham, *Outlines of Roman history*, bk. 3, ch. 1.—"Such was the commercial ability of the Carthaginians that they continued to prosper even while paying the heavy tribute with which Rome had burdened them. Meantime, the new mistress of the western Mediterranean kept an anxious eye on her old rival. Even the stalwart Romans remembered with uneasiness the invasion of Hannibal. Cato, a famous old-fashioned senator, was so convinced that Carthage was still a danger to Rome that he concluded all his speeches in the Senate with the words, 'Carthage must be destroyed.' For over fifty years more the merchants of Carthage were permitted to traffic in the western Mediterranean, and then the iron hand of Rome was laid upon the doomed city for the last time. To defend herself against the Numidians behind her, Carthage was finally obliged to begin war against them. This step, which the Romans had long been desiring, was a violation of the treaty with Rome. The Senate seized the opportunity at once and Carthage was called to account."—J. H. Breasted, *Ancient times*, pp. 546-547.—"In 149 B. C. the siege of Carthage began. During the next two years little progress was made, but in 147 P.

Cornelius Scipio Æmilianus, son of L. Æmilius Paulus, conqueror of Macedonia, and grandson by adoption of the conqueror of Hannibal, was, at the age of 37, and though only a candidate for the ædileship, elected consul and given the command in Africa. In the next year (146 B.C.) Carthage was taken and razed to the ground. Its territory became the Roman province of Africa, while Numidia, now ruled by the three sons of Masinissa, remained as an allied state under Roman suzerainty, and served to protect the new province against the raids of the desert tribes. Within little more than a century from the commencement of the first Punic war, the whole of the former dominions of Carthage had been brought under the direct rule of Roman magistrates, and were regularly organised as Roman provinces."—H. B. C. 133.—Supremacy of the senate.—Political development.—Acquisitions.—Constitutional growth.—Provincial government.—“At the close of a century first of deadly struggle and then of rapid and dazzling success, Rome found herself the supreme power in the civilised world. . . . We have now to consider how this period of conflict and conquest had affected the victorious state. Outwardly the constitution underwent but little change. It continued to be in form a moderate democracy. The sovereignty of the people finally established by the Hortensian law remained untouched in theory. It was by the people in assembly that the magistrates of the year were elected, and that laws were passed; only by ‘order of the people’ could capital punishment be inflicted upon a Roman citizen. For election to a magistracy, or for a seat in the senate, patrician and plebeian were equally eligible. But between the theory and the practice of the constitution there was a wide difference. Throughout this period the actually sovereign authority in Rome was that of the senate, and behind the senate stood an order of nobles (nobles), who claimed and enjoyed privileges as wide as those which immemorial custom had formerly conceded to the patriciate. The ascendancy of the senate, which thus arrested the march of democracy in Rome, was not, to any appreciable extent, the result of legislation. It was the direct outcome of the practical necessities of the time, and when these no longer existed, it was at once and successfully challenged in the name and on the behalf of the constitutional rights of the people. Nevertheless, from the commencement of the Punic wars down to the moment when with the destruction of Carthage in 146 B.C. Rome’s only rival disappeared, this ascendancy was complete and almost unquestioned. It was within the walls of the senate-house, and by decrees of the senate, that the foreign and the domestic policy of the state were alike determined. . . . Though the ascendancy of the senate was mainly due to the fact that without it the government of the state could scarcely have been carried on, it was strengthened and confirmed by the close and intimate connection which existed between the senate and the nobility. This ‘nobility’ was in its nature and origin widely different from the old patriciate.

Though every patrician was of course ‘noble,’ the majority of the families which in this period styled themselves noble were not patrician but plebeian, and the typical nobles of the time of the elder Cato, of the Gracchi, or of Cicero, the Metelli, Livii, or Licinii were plebeians. The title nobilis was apparently conceded by custom to those plebeian families one or more of whose members had, after the opening of the magistracies, been elected to a curule office, and which in consequence were entitled to place in their halls, and to display at their funeral processions the ‘imagines’ of these distinguished ancestors. The man who, by his election to a curule office thus ennobled his descendants, was said to be the ‘founder of his family,’ though himself only a new man. . . . Office brought wealth and prestige, and both wealth and prestige were freely employed to exclude ‘new men’ and to secure for the ‘noble families’ a monopoly of office. The ennobled plebeians not only united with the patricians to form a distinct order, but outdid them in pride and arrogance. . . . The establishment of senatorial ascendancy was not the only result of this period of growth and expansion. During the same time the foundations were laid of the provincial system, and with this of the new and dangerous powers of the proconsuls.”—H. F. Pelham, *Outlines of Roman history*, bk. 3, ch. 3.—“The great struggle against Hannibal left the Senate the all but undisputed government of Rome. Originally a mere consulting board, assessors of the king or consul, the Senate had become the supreme executive body. That the government solely by the comitia and the magistrates should by experience be found wanting was as inevitable at Rome as at Athens. Rome was more fortunate than Athens in that she could develop a new organism to meet the need. The growth of the power of the Senate was all the more natural and legitimate the less it possessed strict legal standing-ground. But the fatal dualism thus introduced into the constitution—the Assembly governing de jure, and the Senate governing de facto—made all government after a time impossible. The position of the Senate being, strictly speaking, an unconstitutional one, it was open to any demagogue to bring matters of foreign policy or administration before an Assembly which was without continuity, without special knowledge, and in which there was no debate. Now, if the Senate governed badly, the Assembly ‘could not govern at all;’ and there could be, in the long run, but one end to the constant struggle between the two sources of authority.”—W. T. Arnold, *Roman system of provincial administration*, ch. 2.—See also SENATE, ROMAN.—“Changes political, military, economic, social, intellectual, moral, had transformed the state to a far greater extent than contemporary observers were able to perceive. There were still the old magistracies, the Senate, and the Assemblies, but the relations between them had been profoundly modified by events. The position of the Roman people in the world had changed, and the character of the people had been changed with it. The constitution was no longer sufficient for the needs of the time; to amend it was practically impossible, nor indeed do we find the Romans conscious that it required reform. To begin with the Magistrates. The tendency of the Senate to overshadow and control them had long been at work. The strain of the great war had made it necessary to entrust exceptional power to competent individuals, but with the defeat of Carthage the necessity came to an

end. This was assuredly a great relief to the Roman nobles, whose ideal of government was a system under which they (or the leading men among them) divided among themselves year after year all the most important offices. . . . Accordingly we find a clearly-marked tendency to revert to the old system of yearly commands held by the consuls and to keep the consuls within reach. They could thus be regularly superseded by their successors in office, and the continuation of their military powers in the form of the proconsulate was prevented from becoming normal. . . . We must bear in mind that the dictatorship had been quietly dropped, and that a consul was no longer liable to be suddenly thrust into the background by the appointment of a temporary king. It was therefore only natural that the nobles should turn a jealous eye on the consulate. To keep that office in subjection to the influence of the Senate was the keystone of the constitution from the point of view of the nobility, for they controlled, and in effect composed, the Senate. . . . The chief means by which the consulate was held in check were the restrictions on reelection and the employment (in ordinary circumstances) of praetors and propraetors for the performance of continuous duties at a distance from Rome. . . . Since the number of praetors had been raised to four (227 B. C.) it had become the usual practice for a man to pass on from the praetorship to the consulship, not immediately, but after an interval of at least a year. There was no statutory rule, and in critical times an exception might occur; thus Scipio Africanus and Flaminius (consuls 205 and 198) had never been praetors, and there were other cases. The quaestorship had from the first been regarded as a subordinate post in which young men gained their first practical experience of public affairs. There is some reason to think that Scipio Africanus had never served in this office, but his whole career was quite exceptional, and so were the times in which he would naturally have held it. That a man must pass through the quaestorship was a rule of usage as rigid as a rule of law. The order, quaestorship, consulship, was at the beginning of the period 200-133 B. C. established as a normal succession, only to be departed from in critical emergencies. Another office must be mentioned here, the aedileship. As there were but four aediles (2 curule, 2 plebeian), while from 197 onward the number of praetors was six, it is clear that tenure of the office, which came before the praetorship, could not be made a condition of election to the higher post; there would not have been enough qualified candidates. But the aedileship was much sought after. The chief function of aediles was now the provision of the costly games and shows customary at festivals. A lavish outlay on these entertainments was the sure means of winning the favour of the city mob, now more and more becoming the voting exponents of the Roman people's will. In short the tenure of this office was in this period regarded as an election-eering appliance which an ambitious man could not venture to neglect. . . . Nobility conferred by the tenure of office was a quality attainable by popular election: it naturally tended to become in effect hereditary, and those whose fathers had been consuls or praetors, and who were themselves bent on climbing the ladder of office, were especially unwilling to see the number of possible competitors increased. Meanwhile the old-Roman or conservative reform-party desired to check the ambition of the young nobles, mostly men of the

new school, who were over-eager to secure their own advancement in disregard of the claims of tried merit and riper age. It seems that an attempt was made to reduce the number of yearly offices by electing four praetors instead of six in alternate years; but this was no remedy. In the year 180 the attempt to regulate and fix by statute the sequence of official promotion assumed a practical form in the 'law of years' carried by the tribune L. Villius. This is one of the most significant enactments in the history of the Republic. The main points of this law seem to have been as follows. The practice of leaving an interval between the tenure of the regular yearly magistracies (for to these only it applied) was recognized, and the interval fixed at a space of not less than two years. A regular sequence was enjoined, probably in the form of declaring that only one who had held office A was to be eligible for office B. Thus, if the lowest office could only be held at a certain minimum age, a scale of age-qualification would be operative throughout the series. And it was probably in this thoroughly Roman indirect way that the determination of the ages at which the several offices could be held was attained."—W. E. Heitland, *Roman republic*, pp. 189-193.—"At the close of . . . [this] period . . . the Romans ruled most of the territory from Mount Taurus to the Atlantic. They had seven, possibly nine, provinces under governors sent out from the capital. These provinces, in the order of their acquisition, were (1) Sicily, acquired in 241; (2) Sardinia and Corsica, seized soon afterward and organized in the same year as Sicily, 227; (3) [and] (4) Hither and Farther Spain, acquired in the Second Punic War and organized in 197; (5) Cisalpine Gaul, reconquered early in the second century and organized at some unknown time afterward; (6) Illyricum, acquired in the third Macedonian war (167), the date of organization being unknown; (7) Macedonia, organized in 146; (8) Africa, acquired and organized in the same year; (9) Asia, acquired in 133 and organized four years later. Among the dependent allies, often called client states, were all those of Asia Minor outside the province of Asia. In Africa, Numidia and Egypt, with Libya, were in this condition. In Asia the kingdom of Syria possessed more freedom, but was already sinking into clientship."—G. W. Botsford, *History of the ancient world*, pp. 397.—"The right of the people to elect their magistrates, with the exception of the dictator and the master of horse, existed from the beginning of the republic. Their right also to create new offices began with the institution of the consulship and was frequently exercised during the period treated in this chapter. In the age which begins with the Valerian-Horatian legislation [449] we find the people regulating by law the qualifications and conduct of candidates as well as the powers and functions of the magistrates themselves. They had the same right to deal with the organization and competence of the assemblies. From 358 to 287 they rapidly extended their legislative power, by precedent rather than by statute, over the whole field of the constitution and over the administration in all its departments; they ventured even to regulate the senate and to interfere with the imperium. Controlled originally by the senate, in the end they won their freedom from that body, whereas the initiative in every act always remained with the presiding magistrate. Meantime they had acquired supreme judicial power. In constitutional theory they were at last sovereign. The senate

and the magistrates, so this theory asserted, still retained large administrative powers for the sole reason that the assemblies, unable to manage the current details of public business, were content with occasional participation and regulation. Most of these gains had been made by the tribes under the presidency of tribunes or of patrician magistrates, usually praetors. In legislation the *comitia tributa* had rendered the *centuriate* assembly dispensable excepting in declarations of offensive war and in the confirmation of censorial elections. The question whether the people in their centuries and tribes were to realize their sovereignty in actual public life was left to the following period."—*Ibid.*, pp. 315-316.—"While the Romans desired their provinces to be ruled efficiently they measured results from the point of view of the state, not from that of the provincials. The Roman praetor was hardly expected

of accepting gifts and in making purchases. He had not even the right to buy himself a slave in the province except to fill a vacancy in his service. The provisions for native jurors in the praetor's courts, for native censors and tax collectors, and for special courts to hear the cases of provincials against their governors, all these things prove that the sovereign state entertained enlightened views upon its responsibility as a master. The governors of the province for the first century of its history represented the best type of Roman. . . . It would be hard to imagine that under such men the province would have been exploited for the profit of Roman citizens. The few scattered references in Roman authors that bear upon the matter seem to indicate that the senate did not further the special interests of Roman land seekers in the province. Just as the tax farming was largely left in Sicilian hands, so too the land re-

RECONSTRUCTION OF A ROMAN RACE COURSE

(After engraving by Giovanni Piranesi)

to be a director of a charitable organization. Yet as prudence must have a seasoning of sympathy to be effective, Rome's administration, at least in the early days, endeavored to secure the good will of the governed. . . . On the whole, Sicily, at least western Sicily, benefited by the change of sovereigns. . . . Rome, to be sure, was a firm overlord, but she had the name also of desiring to deal justly. Carthage had billeted armies and kept up a constant petty warfare on the island. Rome's policy was to strike hard till a war was over and then maintain peace by her very prestige. Sicily had never before known an era of peace such as followed the Roman occupation. With security, freedom from armies, and exemption from levies, the islanders were more than repaid in material gains for the moderate sum that was sent to Rome in tribute. Various chance references to Sicily indicate that the government did something by way of safeguarding the provincials from the greed of Rome's own citizens. We are told that the praetor was carefully restricted in the matter

remained in their possession. But if the new regime had wrought changes in Sicily, how much more profound were the effects of the acquisition of this, her first province, upon Rome? When the Sicilian quaestor sent the home market nearly a million bushels of wheat per year, he supplied about a third of the demand which had hitherto been satisfied by farmers near the city. The land released from grain production usually fell into hands of capitalists engaged in cattle raising and fruit culture, and the steadier population of small-farm owners diminished in the rustic wards about the city. No less significant were the social changes after the war. The nobles of Rome who had campaigned in Sicily for so many years had often established their headquarters in the splendid Greek cities of the island, and there they had been initiated into the refinements of an old culture and an atmosphere of art and letters which shamed them into new ambitions. In Hiero they found a willing cicerone who must have experienced a cynical satisfaction in displaying the

triumphs of Greek culture to his conquerors. In the theater of Syracuse he doubtless showed them performances of Euripides and Menander; in the temples, the masterpieces of Praxiteles and Apelles; in the libraries, histories which contained even the legends of early Rome—some of which probably the Romans themselves did not know. All this made no small impression. A year after the war a Roman schoolmaster was asked to translate some of the Greek plays so that the Roman games might have something better than races and fights to offer, and presently Hiero was invited to Rome to see how well his lessons had been learned. It is not surprising that Livius began with tragedies from the Trojan cycle, when Segesta had already profited by flattering Rome with a myth of common descent from Troy. Presently too a soldier [Ennius] who had campaigned in Sicily wrote the story of Rome—her first native work—in a pedestrian imitation of Homer's epos; and senators who had doubtless learned the language in Sicily embellished the dry, priestly records of Rome with their best Greek so that the cultured world might know that Rome had a history of which to boast. It was in the Pyrrhic war that Rome had first become conscious of her existence, and in the Sicilian war she found the need for self-expression and the ambition to take her place among the cultured nations of the Mediterranean. Most of all was Rome's political policy affected by the conquest, not so much by what the Romans learned of Greek political science as by the inevitable consequences of owning and ruling a tribute-paying dependency. The profits accruing to the treasury were sure to tempt the populace to new conquest; and in expanding further the Romans must soon embrace peoples that could manifestly never be included with credit in the citizen body. They must then abandon the principle which had in a larger sense justified the continuance of a progressive extension of Roman law and order through Italy, and adopt a rule based upon the claims of superior force. The wisest of the Romans saw very early that consuetude in ruling a politically inferior people for profit must endanger Roman character, coming as it did before the nation had time to shape for itself a humanizing culture capable of counteracting the poison of insolence. The self-complacency with which the conquerors viewed their subjects overseas soon expressed itself in a new attitude toward their Italian allies. In their eyes the Italians now began to sink to the plane of subjects, and the promises of the great statesmen of 340 were in danger of being forgotten. Living in such an atmosphere, the conquering Romans could hardly discover that their city-state was not, like the imperial monarchies, adapted for empire; that a populace which gained dominion over subject races by means of armed force was merely creating a military power that would ultimately turn upon the state itself and subject it also to the position of servitude it imposed upon others. At present they only reveled in the discovery of 'how glorious a thing it was to rule.'—T. Frank, *Roman imperialism*, pp. 103-106.

B. C. 133-121.—Attempted reforms of the Gracchi.—“The first systematic attack upon the senatorial government is connected with the names of Tiberius and Gaius Gracchus, and its immediate occasion was an attempt to deal with no less a danger than the threatened disappearance of the class to which of all others Rome had owed

most in the past. For, while Rome had been extending her sway westward and eastward, and while her nobles and merchants were amassing colossal fortunes abroad, the small landholders throughout the greater part of Italy were sinking deeper into ruin under the pressure of accumulated difficulties. The Hannibalic war had laid waste their fields and thinned their numbers, nor when peace returned to Italy did it bring with it any revival of prosperity. The heavy burden of military service still pressed ruinously upon them, and in addition they were called upon to compete with the foreign corn imported from beyond the sea, and with the foreign slave-labour purchased by the capital of the wealthier men. . . . The small holders went off to follow the eagles or swell the proletariat of the cities, and their holdings were left to run waste or merged in the vineyards, oliveyards, and above all in the great cattle-farms of the rich, while their own place was taken by slaves. The evil was not equally serious in all parts of Italy. It was least felt in the central highlands, in Campania, and in the newly settled fertile valley of the Po. It was worst in Etruria and in southern Italy; but everywhere it was serious enough to demand the earnest attention of Roman statesmen. Of its existence the government had received plenty of warning in the declining numbers of able-bodied males returned at the census, in the increasing difficulties of recruiting for the legions, in servile out-breaks in Etruria and Apulia.”—H. F. Pelham, *Outlines of Roman history*, bk. 4, ch. 1.—The earlier agrarian laws which the Roman plebeians had wrung from the patricians (the Licinian Law and similar ones [see above: B. C. 376-367; also 'AGRARIAN LAWS']) had not availed to prevent the absorption, by one means and another, of the public domain—the “ager publicus,” the conquered land which the state had neither sold nor given away—into the possession of great families and capitalists, who held it in vast blocks, to be cultivated by slaves. Time had almost sanctioned this condition of things, when Tiberius Sempronius Gracchus, elder of the two famous brothers called “The Gracchi,” undertook in 133 B. C. a reformation of it. As one of the tribunes of the people that year, he brought forward a law which was intended to enforce the provisions of the Licinian Law of 367 B. C., by taking away from the holders of public land what they held in excess of 500 jugera (about 320 acres) each. Three commissioners, called *Triumviri*, were to be appointed to superintend the execution of the law and to re-distribute the land recovered, among needy citizens. Naturally the proposal of this act aroused a fierce opposition in the wealthy class whose ill-gotten estates were threatened by it. One of the fellow-tribunes of Tiberius was gained over by the opposition and used the power of his veto to prevent the taking of a vote upon the bill. Then Gracchus, to overcome the obstacle, had recourse to an unconstitutional measure. The obstinate tribune was deposed from his office by a vote of the people, and the law was then enacted. For the carrying out of his measure, and for his own protection, no less, Tiberius sought a re-election to the tribunate, which was contrary to usage, if not against positive law. His enemies raised a tumult against him on the day of election and he was slain, with three hundred of his party, and their corpses were flung into the Tiber. Nine years later, his younger brother, Caius Gracchus, obtained election to the tribune's office and took up the work of democratic political reform which

Tiberius had sacrificed his life in attempting. His measures were radical, attacking the powers and privileges of the ruling orders. But mixed with them were schemes of demagoguery which did infinite mischief to the Roman people and state. He carried the first frumentarian law (*lex frumentaria*) as it was called, by which corn was bought with public money, and stored, for sale to Roman citizens at a nominal price. After three years of power, through the favor of the people, he, too, in 121 B. C. was deserted by them and the party of the patricians was permitted to put him to death, with a great number of his supporters.—Based on G. Long, *Decline of the Roman Republic*, v. 1, ch. 10-13, 18-19.—“Caius, it is said, was the first Roman statesman who appointed a regular distribution of corn among the poorer citizens, requiring the state to buy up large consignments of grain from the provinces, and to sell it again at a fixed rate below the natural price. The nobles themselves seem to have acquiesced

upon huge substructions of solid masonry. Those who most feared and hated him confessed their amazement at the magnificence of his projects and the energy of his proceedings; the people, in whose interests he toiled, were filled with admiration and delight, when they saw him attended from morning to night by crowds of contractors, artificers, ambassadors, magistrates, soldiers, and men of learning, to all of whom he was easy of access, adapting his behaviour to the condition of each in turn; thus proving, as they declared, the falsehood of those who presumed to call him violent and tyrannical. . . . By these innovations Caius laid a wide basis of popularity. Thereupon he commenced his meditated attack upon the privileged classes. We possess at least one obscure intimation of a change he effected or proposed in the manner of voting by centuries, which struck at the influence of the wealthier classes. He confirmed and extended the Porcian law, for the protection of citizens against the aggression of the

LAST ORATION OF GAIUS GRACCHUS AT ROME

(From painting by P. Piatti)

without alarm in this measure, by which they hoped to secure the city from seditious movements in time of scarcity; but they failed to foresee the discouragement it would give to industry, the crowds of idle and dissipated citizens it would entice into the forum, the appetite it would create for shows, entertainments and largesses, and the power it would thus throw into the hands of unprincipled demagogues. Caius next established customs duties upon various articles of luxury imported into the city for the use of the rich; he decreed the gratuitous supply of clothing to the soldiers, who had hitherto been required to provide themselves out of their pay; he founded colonies for the immediate gratification of the poorer citizens, who were waiting in vain for the promised distribution of lands; he caused the construction of public granaries, bridges and roads, to furnish objects of useful labour to those who were not unwilling to work. Caius himself, it is said, directed the course and superintended the making of the roads, some of which we may still trace traversing Italy in straight lines from point to point, filling up depressions and hollowing excrescences in the face of the country, and built

magistrates without a formal appeal to the people. Even the powers of the dictatorship, to which the senate had been wont to resort for the coercion of its refractory opponents, were crippled by these provisions; and we shall see that no recourse was again had to this extraordinary and odious appointment till the oligarchy had gained for a time a complete victory over their adversaries. Another change, even more important, was that by which the knights were admitted to the greater share, if not, as some suppose, to the whole, of the judicial appointments. . . . As long as the senators were the judges, the provincial governors, who were themselves senators, were secure from the consequence of impeachment. If the knights were to fill the same office, it might be expected that the publicani, the farmers of the revenues abroad, would be not less assured of impunity, whatever were the enormity of their exactions. . . . It was vain, indeed, to expect greater purity from the second order of citizens than from the first. If the senators openly denied justice to complainants, the knights almost as openly sold it. This was in itself a grievous degradation of the tone of public morality; but this was not all the

evil of the tribune's reform. It arrayed the two privileged classes of citizens in direct hostility to one another. 'Caius made the republic double-headed,' was the profound remark of antiquity. He sowed the seeds of a war of an hundred years. Tiberius had attempted to raise up a class of small proprietors, who, by the simplicity of their manners and moderation of their tastes, might form, as he hoped, a strong conservative barrier between the tyranny of the nobles and the envy of the people; but Caius, on the failure of this attempt, was content to elevate a class to power, who should touch upon both extremes of the social scale,—the rich by their wealth, and the poor by their origin. Unfortunately this was to create not a new class, but a new party. . . . One direct advantage, at all events, Caius expected to derive, besides the humiliation of his brother's murderers, from this elevation of the knights: he hoped to

MARIUS

(After bust in the Vatican Museum in Rome)

secure their grateful co-operation towards the important object he next had in view: this was no less than the full admission of the Latins and Italians to the right of suffrage."—C. Merivale, *Fall of the Roman republic*, ch. 1.—See also **AGER PUBLICUS**.

ernment.—Jugurthine War.—Invasion and defeat of the Cimbri and Teutones.—Power of Marius.—"For some twenty years after the murder of the Gracchi, the Senate's misrule was undisturbed. But a prolonged fourteen-year border war in Africa again revealed in glaring colors its corruption and incapacity, and brought military masters to the front. Jugurtha, grandnephew of Massinissa,—brave, crafty, cruel,—had made himself king of Numidia by the assassination of a series of princes dependent upon Rome. He bribed Roman investigating commissioners; bought a consul who had been sent to attack him; and, being summoned to Rome after massacring thousands of Italians and Romans in Africa, he bought his acquittal from the Senate itself. But an indignant tribune brought the matter directly before the tribes and so stirred their indignation that war at last was prosecuted in earnest. Its progress revealed the utter corruption of the army, but it finally called out two great captains. One was the rude soldier Marius, son of a Volscian day laborer, who had risen from the ranks, and who by the votes of the people, without having been praetor, was made consul to prosecute the war; the other was his aristocratic lieutenant, Sulla. By skill and good fortune, and by a daring exploit of Sulla's, Marius was able to bring the war to a close during his year of office. Jugurtha was captured. Marius was given a splendid triumph at Rome (January 1, 104 B. C.). With characteristic Roman cruelty the captive king was dragged through the streets in chains at the wheel of his conqueror's chariot, and then cast into an underground dungeon to starve."—W. M. West, *Ancient world*, p. 370.—"Meanwhile the two powerful tribes of German barbarians, the Cimbrians and the Teutones, (See **CIMBRI AND TEUTONES: 113-101 B. C.**), combined with Gauls, had been shifting southward and crossing the northern frontiers of Rome. In Gaul and on the Gallic frontiers six Roman armies, one after another, had been disastrously defeated. It looked as if the Roman legions had at last met their match. There was great anxiety in Rome, and the people determined to reëlect Marius consul and send him against the terrible northern barbarians. Meeting the Teutones in southern Gaul, the people's hero not only defeated but practically destroyed the first German host (102 B. C.). [Aque Sextiae.] Shortly afterward, when the Cimbrians had finally succeeded in crossing the Alps into the Po Valley, Marius met and crushed them also. A soldier of the people had saved Rome."—J. H. Breasted, *Ancient times*, p. 579.—See also **BARBARIAN INVASIONS: B. C. 113**.

B. C. 90-88.—Demands of Italian Socii for Roman citizenship.—Marsian, or Social, War.—Rise of Sulla.—"It is a most erroneous though widely prevalent opinion that the whole of Italy was conquered by the force of Roman arms, and joined to the empire [of the Republic] against its

will. Roman valour and the admirable organization of the legions, it is true, contributed to extend the dominion of Rome, but they were not nearly so effective as the political wisdom of the Roman senate. . . . The subjects of Rome were called by the honourable name of allies (Socii). But the manner in which they had become allies was not always the same. It differed widely according to circumstances. Some had joined Rome on an equal footing by a free alliance ('*fœdus æquum*'), which implied nothing like subjection. . . . Others sought the alliance of Rome as a protection from pressing enemies or troublesome neighbours. . . . On the whole, the condition of the allies, Latin colonies as well as confederated Italians, seems to have been satisfactory, at least in the earlier period. . . . But even the right of self-government which Rome had left to the Italian communities proved an illusion in all cases where the interests of the ruling town seemed to require it. A law passed in Rome, nay, a simple senatorial decree, or a magisterial order, could at pleasure be applied to the whole of Italy. Roman law gradually took the place of local laws, though the Italians had no part in the legislation of the Roman people, or any influence on the decrees of the Roman senate and magistrates. . . . All public works in Italy, such as roads, aqueducts, and temples, were carried out solely for the benefit of Rome. . . . Not in peace only, but also in the time of war, the allies were gradually made to feel how heavily the hand of Rome weighed upon them. . . . In proportion as with the increase of their power the Romans felt more and more secure and independent of the allies, they showed them less consideration and tenderness, and made them feel that they had gradually sunk from their former position of friends to be no more than subjects." There was increasing discontent among the Italian allies, or Socii, with this state of things, especially after the time of the Gracchi, when a proposal to extend the Roman citizenship and franchise to them was strongly pressed. In the next generation after the murder of Caius Gracchus, there arose another political reformer, Marcus Livius Drusus, who likewise sought to have justice done to the Italians, by giving them a voice in the state which owed its conquests to their arms. He, too, was killed by the political enemies he provoked; and then the allies determined to enforce their claims by war. The tribes of the Sabellian race—Marsians, Samnites, Hirpenians, Lucanians, and their fellows—organized a league, with the town of Corfinium (its name changed to Italica) for its capital, and broke into open revolt. The prominence of the Marsians in the struggle caused the war which ensued to be sometimes called the Marsian War; it was also called the Italian War, but, more commonly, the Social War. It was opened, 90 B. C. by a horrible massacre of Roman citizens residing at Asculum, Picenum,—a tragedy for the guilt of which that town paid piteously the next year, when it was taken at the end of a long siege and after a great battle fought under its walls. But the Romans had suffered many defeats before that achievement was reached. At the end of the first year of the war they had made no headway against the revolt, and it is the opinion of Ihne and other historians that "Rome never was so near her destruction," and that "her downfall was averted, not by the heroism of her citizens, as in the war of Hannibal, but by a reversal" of her "policy of selfish exclusion and haughty disdain." A law called the Julian Law, because proposed by the consul L.

Julius Cæsar, was adopted 90 B. C., which gave the Roman franchise to the Latins, and to all the other Italian communities which had so far remained faithful. Soon afterward two of the new tribunes carried a further measure, the Plautio-Papirian Law, which offered the same privilege to any Italian who, within two months, should present himself before a Roman magistrate to claim it. These concessions broke the spirit of the revolt and the Roman armies began to be victorious. Sulla, who was in the field, added greatly to his reputation by successes at Nola (where his army honored him by acclaim with the title of imperator) and at Bovianum, which he took. The last important battle of the war was fought on the old blood-drenched plain of Cannæ, and this time the victory was for Rome. After that, for another year, some desperate towns and remnants of the revolted Socii held out, but their resistance was no more than the death throes of a lost cause.—Based on W. Ihne, *History of Rome*, bk. 6, ch. 9, with footnote, bk. 7, ch. 13-14.

B. C. 88-78.—Rivalry of Marius and Sulla.—War with Mithradates.—Civil War.—Successive proscriptions and reigns of terror.—Sulla's dictatorship.—The political diseases of which the Roman republic was dying made quick progress in the generation that passed between the murder of Caius Gracchus and the Social War. The Roman rabble which was nominally sovereign and the oligarchy which ruled actually, by combined bribery and browbeating of the populace, had both been worse corrupted and debased by the increasing flow of tribute and plunder from provinces and subject states. Rome had familiarized itself with mob violence, and the old respect for authority and for law was dead. The soldier with an army at his back need not stand any longer in awe of the fasces of a tribune or a consul. It was a natural consequence of that state of things that the two foremost soldiers of the time, Caius Marius and L. Cornelius Sulla (or Sylla, as often written,) should become the recognized chiefs of the two opposing factions of the day. Marius was old, his military glory was waning, he had enjoyed six consulships and coveted a seventh; Sulla was in the prime of life, just fairly beginning to show his surpassing capabilities and entering on his real career. Marius was a plebeian of plebeians and rude in all his tastes; Sulla came from the great Cornelian gens, and refined a little the dissoluteness of his life by studies of Greek letters and philosophy. Marius was sullenly jealous; Sulla was resolutely ambitious. A new war, which promised great prizes to ambition and cupidity, alike, was breaking out in the east,—the war with Mithradates. Both Marius and Sulla aspired to the command in it; but Sulla had been elected one of the consuls for the year 88 B. C. and, by custom and law, would have the conduct of the war assigned to him. Marius, however, intrigued with the demagogues and leaders of the mob, and brought about a turbulent demonstration and popular vote, by which he could claim to be appointed to lead the forces of the state against Mithradates. Sulla fled to his army, in camp at Nola, and laid his case before the officers and men. The former, for the most part, shrank from opposing themselves to Rome; the latter had no scruples and demanded to be led against the Roman mob. Sulla took them at their word, and marched them straight to the city. For the first

time in its history (by no means the last) the great capital was forcibly entered by one of its own armies. There was some resistance, but not much. Sulla paralyzed his opponents by his energy, and by a threat to burn the city if it did not submit. Marius and his chief partisans fled. Sulla contented himself with outlawing twelve, some of whom were taken and put to death. Marius, himself, escaped to Africa, after many strange adventures, in the story of which there is romance unquestionably mixed. Sulla (with his colleague in harmony with him) fulfilled the year of his consulate at Rome and then departed for Greece to conduct the war against Mithradates. In doing so, he certainly knew that he was giving up the government to his enemies; but he trusted his future in a remarkable way, and the necessity, for Rome, of confronting Mithradates was imperative. The departure of Sulla was the signal for fresh disorders at Rome. Cinna, one of the new consuls, was driven from the city, and became the head of a movement which appealed to the "new citizens," as they were called, or the "Italian party"—the allies who had been enfranchised as the result of the Social War. Marius came back from exile to join it. Sertorius and Carbo were other leaders who played important parts. Presently there were four armies beleaguering Rome, and after some unsuccessful resistance the gates were opened to them, by order of the Roman senate. Cinna, the consul, was nominally restored to authority, but Marius was really supreme, and Marius was implacable in his sullen rage. Rome was treated like a conquered city. The public and private enemies of Marius and of all who chose to call themselves Marians, were hunted down and slain. To stop the massacre, at last, Sertorius—the best of the new masters of Rome—was forced to turn his soldiers against the bands of the assassins and to slaughter several thousands of them. Then some degree of order was restored and there was the quiet in Rome of a city of the dead. The next year Marius realized his ambition for a seventh consulship, but died before the end of the first month of it. Meantime, Sulla devoted himself steadily to the war against Mithradates (see MITHRADATIC WARS), watching from afar the sinister course of events at Rome, and making no sign. It was not until the spring of 83 B. C., four years after his departure from Italy and three years after the death of Marius, that he was ready to return and settle accounts with his enemies. On landing with his army in Italy he was joined speedily by Pompey, Crassus, and other important chiefs. Cinna had been killed by mutinous soldiers; Carbo and young Marius were the leaders of the "Italian party." There was a fierce battle at Sacriportus, near Præneste, with young Marius, and a second with Carbo at Clusium. Later, there was another furious fight with the Samnites, under the walls of Rome, at the Colline Gate, where 50,000 of the combatants fell. Then Sulla was master of Rome. Every one of his suspected friends in the senate had been butchered by the last orders of young Marius. His retaliation was not slow; but he pursued it with a horrible deliberation. He made lists, to be posted in public, of men who were marked for death and whom anybody might slay. There are differing accounts of the number doomed by this proscription; according to one annalist the death-roll was swelled to 4,700 before the reign of terror ceased. Sulla ruled as a conqueror until it pleased him to take an official title, when he commanded the people to elect him dic-

tator, for such term as he might judge to be fit. They obeyed. As dictator, he proceeded to remodel the Roman constitution by a series of laws which were adopted at his command. One of these laws enfranchised 10,000 slaves and made them citizens. Another took away from the tribunes a great part of their powers; allowed none but members of the senate to be candidates for the office, and no person once a tribune to hold a curule office. Others reconstructed the senate, adding 300 new members to its depleted ranks, and restored to it the judicial function which C. Gracchus had transferred to the knights; they also restored to it the initiative in legislation. Having remodeled the Roman government to his liking, Sulla astounded his friends and enemies by suddenly laying down his dictatorial powers and retiring to private life at his villa, near Puteoli, on the Bay of Naples. There he wrote his memoirs, which have been lost, and gave himself up to the life of pleasure which was even dearer to him than the life of power. But he enjoyed it scarcely a year, when he died, 78 B. C. His body, taken to Rome, was burned with pomp.—Based on G. Long, *Decline of the Roman republic*, v. 2, ch. 17-29.

B. C. 78-68.—Danger from legionaries.—Rising power of Pompey.—Attempt of Lepidus.—Pompey against Sertorius in Spain.—Insurrection of Spartacus and the gladiators.—Second Mithradatic War, and war in Armenia.—"The Roman legionary, . . . drawn from the dregs of the populace, and quartered through the best years of his life in Greece and Asia, in Spain and Gaul, lived solely upon his pay, enhanced by extortion or plunder. His thirst of rapine grew upon him. He required his chiefs to indulge him with the spoil of cities and provinces; and when a foreign enemy was not at hand, he was tempted to turn against the subjects of the state, or, if need be, against the state itself. . . . Marius and Sulla, Cinna and Carbo had led the forces of Rome against Rome herself. . . . The problem which thus presented itself to the minds of patriots—how, namely, to avert the impending dissolution of their polity under the blows of their own defenders—was indeed an anxious and might well appear a hopeless one. It was to the legions only that they could trust, and the legions were notoriously devoted to their chiefs. . . . The triumph of Sulla had been secured by the accession to his side of Pompeius Strabo, the commander of a large force quartered in Italy. These troops had transferred their obedience to a younger Pompeius, the son of their late leader. Under his auspices they had gained many victories; they had put down the Marian faction, headed by Carbo, in Sicily, and had finally secured the ascendancy of the senate on the shores of Africa. Sulla had evinced some jealousy of their captain, who was young in years, and as yet had not risen above the rank of Eques; but when Pompeius led his victorious legions back to Italy, the people rose in the greatest enthusiasm to welcome him, and

the dictator, yielding to their impetuosity, had granted him a triumph and hailed him with the title of 'Magnus.' Young as he was, he became at once, on the abdication of Sulla, the greatest power in the commonwealth. This he soon caused to be known and felt. The lead of the senatorial party had now fallen to Q. Lutatius Catulus and M. Æmilius Lepidus, the heads of two of the oldest and noblest families of Rome. The election of these chiefs to the consulship for the year 676 of the city (B. C. 78) seemed to secure for the time the ascendancy of the nobles, and the maintenance of Sulla's oligarchical constitution bequeathed to their care. . . . But there were divisions within the party itself which seemed to seize the opportunity for breaking forth. Lepidus was inflamed with ambition to create a faction of his own, and imitate the career of the usurpers before him. . . . But he had miscalculated his strength. Pompeius disavowed him, and lent the weight of his popularity and power to the support of Catulus; and the senate hoped to avert an outbreak by engaging both the consuls by an oath to abstain from assailing each other. During the remainder of his term of office Lepidus refrained from action; but as soon as he reached his province, the Narbonensis in Gaul, he developed his plans, summoned to his standard the Marians, who had taken refuge in great numbers in that region, and invoked the aid of the Italians, with the promise of restoring to them the lands of which they had been dispossessed by Sulla's veterans. With the aid of M. Junius Brutus, who commanded in the Cisalpine, he made an inroad into Etruria, and called upon the remnant of its people, who had been decimated by Sulla, to rise against the faction of their oppressors. The senate, now thoroughly alarmed, charged Catulus with its defence; the veterans, restless and dissatisfied with their fields and farms, crowded to the standard of Pompeius. Two Roman armies met near the Milvian bridge, a few miles to the north of the city, and Lepidus received a check, which was again and again repeated, till he was driven to flee into Sardinia, and there perished shortly afterwards of fever. Pompeius pursued Brutus into the Cisalpine. . . . The remnant of Lepidus' troops was carried over to Spain by Perperna, and there swelled the forces of an abler leader of the same party, Q. Sertorius." Sertorius had established himself strongly in Spain, and aspired to the founding of an independent state; but after a prolonged struggle he was overcome by Pompeius and assassinated by traitors in his own ranks. (See SPAIN: B. C. 83-72.) "Pompeius had thus recovered a great province for the republic at the moment when it seemed on the point of being lost through the inefficiency of one of the senatorial chiefs. Another leader of the dominant party was about to yield him another victory. A war was raging in the heart of Italy. A body of gladiators had broken away from their confinement at Capua under the lead of Spartacus, a Thracian captive, had seized a large quantity of arms, and had made themselves a retreat or place of defence in the crater of Mount Vesuvius. [See SPARTACUS.] . . . The consuls were directed to lead the legions against them, but were ignominiously defeated B. C. 72. In the absence of Pompeius in Spain and of Lucullus in the East, M. Crassus was the most prominent among the chiefs of the party in power. This illustrious noble was a man of great influence, acquired more by his wealth, for which he obtained the surname of Dives, than for any marked ability in the field or

in the forum; but he had a large following of clients and dependents, who . . . now swelled the cry for placing a powerful force under his orders, and entrusting to his hands the deliverance of Italy. The brigands themselves were becoming demoralized by lack of discipline. Crassus drove them before him to the extremity of the peninsula. . . . Spartacus could only save a remnant of them by furiously breaking through the lines of his assailants. This brave gladiator was still formidable, and it was feared that Rome itself might be exposed to his desperate attack. The senate sent importunate messages to recall both Pompeius and Lucullus to its defence. . . . Spartacus had now become an easy prey, and the laurels were quickly won with which Pompeius was honoured by his partial countrymen. Crassus was deeply mortified, and the senate itself might feel some alarm at the redoubled triumphs of a champion of whose loyalty it was not secure. But the senatorial party had yet another leader, and a man of more ability than Crassus, at the head of another army. The authority of Pompeius in the western provinces was balanced in the East by that of L. Licinius Lucullus, who commanded the forces of the republic in the struggle which she was still maintaining against Mithradates. . . . The military successes of Lucullus fully justified the choice of the government. He expelled Mithradates from all the dominions which he claimed, and drove him to take refuge with the king of Armenia. The kingdom of Armenia under Tigranes III. was at the height of its power when Clodius, the brother-in-law of Lucullus, then serving under him, was despatched to the royal residence at Tigranocerta to demand the surrender of Mithradates. . . . The capital of Armenia was well defended by its position among the mountains and the length and severity of its winter season. It was necessary to strike once for all [69 B. C.]. Lucullus had a small but well-trained and well-appointed army of veterans. Tigranes surrounded and encumbered himself with a vast cloud of undisciplined barbarians, the flower of whom, consisting of 17,000 mailed cavalry, however formidable in appearance, made but a feeble resistance to the dint of the Roman spear and broadsword. When their ranks were broken they fell back upon the inert masses behind them, and threw them into hopeless confusion. Tigranes made his escape with dastardly precipitation. A bloody massacre ensued. . . . In the following year Lucullus advanced his posts still further eastward. . . . But a spirit of discontent or lassitude had crept over his own soldiers. . . . He was constrained to withdraw from the siege of Artaxata, the furthest stronghold of Tigranes, on the banks of the Araxes, and after crowning his victories with a successful assault upon Nisibis, he gave the signal for retreat, leaving the destruction of Mithradates still unaccomplished. Meanwhile the grave proconsul's enemies were making head against him at Rome."—C. Merivale, *Roman triumphs*, ch. 1.—"After Sulla had made peace with Mithradates, 84 B. C., his successor to the command in the East provoked the king of Pontus to a second war [83-81]. Peace was soon restored by order of Sulla. While Rome was fighting Sertorius in Spain, Mithradates made ready for a new war. He allied himself with the powerful king of Armenia, and won to his support the barbarian tribes along the northern coast of the Black Sea. In 74 B. C., the king of Bithynia died, leaving his realm as a legacy to Rome. It was at once made a province. This event provoked the king of

Pontus to war, as he himself coveted that territory. Mithridates commanded a powerful fleet and army, but opposed to him was the consul Lucius Lucullus, a remarkably skilful general, at the head of five legions. Lucullus first expelled the enemy's forces from the provinces of Asia and Bithynia, and then invaded Pontus. With little fighting he drove Mithridates from his kingdom. The fugitive took refuge with his son-in-law Tigranes, king of Armenia. With a few troops Lucullus marched boldly into Armenia and defeated a greatly superior force of Tigranes. He might have conquered the kingdom; but his troops mutinied and compelled him to retreat. Mithridates returned to Pontus, and Lucullus lost nearly all the territory he had gained (66 B. C.). Had the Romans supported Lucullus, he would doubtless soon have overthrown Mithridates. But many thought Pompey the only man able to conquer this great enemy. The tribune Manilius, accordingly, carried a law which gave the command in the East to Pompey in addition to the power he already had. He easily drove the king from Pontus, the most of which he joined to the new province of Bithynia. Mithridates was afterward killed, at his own request, by a Gallic mercenary. [See also MITHRADATIC WARS.] Pompey then invaded Armenia and received the submission of Tigranes. The latter had conquered Syria and other neighboring countries, but was now obliged to give up everything outside his native kingdom. In 64 B. C. Pompey entered Syria and made a province of it. This was the end of the Seleucid Empire. As the Jews were unwilling to submit, he besieged Jerusalem, and after three months took it while the inhabitants were keeping the Sabbath. In the temple he intruded within the 'Holy of Holies,' a shrine which none but the high priest could enter. But he left the temple unpillaged, and in other ways he respected the native religion. Jerusalem retained its self-government under a high priest who was friendly to Rome. Pompey attended conscientiously to the organization of the East. The new provinces thus far mentioned were Cilicia, Bithynia, and Syria. Crete, too, became a province. [See CRETE: B. C. 68-66.] A few small kingdoms remained in and about Asia Minor; their rulers, though allies in name, were really vassals of Rome. With the great Parthian empire beyond the Euphrates he made a treaty of friendship. These arrangements were all admirable. With her dependent allies and her provinces, Rome now occupied the entire circuit of the Mediterranean."—G. W. Botsford, *History of the ancient world*, pp. 430-432.—See also SIDON.

B. C. 69-63.—Drift towards revolution.—Pompey in the East.—His extraordinary commission.—His enlargement of the Roman dominions.—His power.—Ambitions and projects of Cæsar.—Consulship of Cicero.—"To a superficial observer, at the close of the year 70 B. C., it might possibly have seemed that the republic had been given a new lease of life. . . . And, indeed, for two or three years this promising condition of things continued. The years 69 and 68 B. C. must have been tolerably quiet ones, for our authorities have very little to tell us of them. . . . Had a

single real statesman appeared on the scene at this moment, or even if the average senator or citizen had been possessed of some honesty and insight, it was not impossible that the government might have been carried on fairly well even under republican forms. But there was no leading statesman of a character suited to raise the whole tone of politics; and there was no general disposition on the part of either Senate or people to make the best of the lull in the storm, to repair damages, or to set the ship on her only true course. So the next few years show her fast drifting in the direction of revolution; and the current that bore her was not a local one, or visible to the eye of the ordinary Roman, but one of world-wide force, whose origin and direction could only be perceived by the highest political intelligence. It was during these years that Cæsar was quietly learning the business of government, both at home and in the provinces. . . . Cæsar was elected quæstor in 69 B. C., and served the office in the following year. It fell to him to begin his acquaintance with government in the province of Further Spain [see SPAIN: B. C. 61], and thus began his lifelong connection with the peoples of the West. . . . On his return to Rome, which must have taken place about the beginning of 67 B. C., Cæsar was drawn at once into closer connection with the man who, during the next twenty years, was to be his friend, his rival, and his enemy. Pompeius was by this time tired of a quiet life. . . . Both to him and his friends, it seemed impossible to be idle any longer. There was real and abundant reason for the employment of the ablest soldier of the day. The audacity of the pirates was greater than ever [see CILICIA, PIRATES OF]. Lucullus, too, in Asia, had begun to meet with disasters, and was unable, with his troops in a mutinous temper, to cope with the combined forces of the kings of Armenia and Pontus. . . . In this year, 67 B. C., a bill was proposed by a tribune, Gabinus, in the assembly of the plebs, in spite of opposition in the Senate, giving Pompeius exactly that extensive power against the pirates which he himself desired, and which was really necessary if the work was to be done swiftly and completely. He was to have exclusive command for three years over the whole Mediterranean, and over the resources of the provinces and dependent states. For fifty miles inland in every province bordering on these seas—i. e., in the whole Empire—he was to exercise an authority equal to that of the existing provincial governor. He was to have almost unlimited means of raising both fleets and armies, and was to nominate his own staff of twenty-five 'legati' (lieutenant-generals), who were all to have the rank of prætor. Nor was this all; for it was quite understood that this was only part of a plan which was to place him at the head of the armies in Asia Minor, superseding the able but now discredited Lucullus. In fact, by another law of Gabinus, Lucullus was recalled, and his command given to one of the consuls of the year, neither of whom, as was well known, was likely to wield it with the requisite ability. Whichever consul it might be he would only be recognised as keeping the place warm for Pompeius. . . . Pompeius left Rome in the spring of 67 B. C., rapidly cleared the seas of piracy, and in the following year superseded Lucullus in the command of the war against Mithridates [with the powers given him by the Gabinian Law prolonged and extended by another, known as the Manilian Law]. He did not return till the begin-

ning of 61 B. C. At first sight it might seem as though his absence should have cleared the air, and left the political leaders at Rome a freer hand. But the power and the resources voted him, and the unprecedented success with which he used them, made him in reality as formidable to the parties at home as he was to the peoples of the East. He put an end at last to the power of Mithridates, received the submission of Tigranes of Armenia, and added to the Roman dominion the greater part of the possessions of both these kings. The sphere of Roman influence now for the first time reached the river Euphrates, and the Empire was brought into contact with the great Parthian kingdom beyond it. Asia Minor became wholly Roman, with the exception of some part of the interior, which obedient kinglets were allowed to retain. Syria was made a Roman province. [See *SELEUCIDÆ*: B. C. 64; Syria: B. C. 64-63.] Pompeius took Jerusalem, and added Judæa to Syria [see *Jews*: B. C. 166-40]. . . . The man to whom all this was due became at once the leading figure in the world. It became clear that when his career of conquest was over yet another task would devolve on him, if he chose to accept it—the re-organisation of the central government at Rome. . . . His gathered power overhung the state like an avalanche ready to fall; and in the possible path of an avalanche it is waste of time and labour to build any solid work. So these years, for Cæsar as for the rest, are years of plotting and intrigue on one side, and of half-hearted government on the other. . . . He was elected to the curule-ædileship—the next above the quaestorship in the series of magistracies—and entered on his office on January 1, 65 B. C. . . . Cæsar's political connection with Crassus at this time is by no means clear. The two were sailing the same course, and watching Pompeius with the same anxiety; but there could not have been much in common between them, and they were in fact rapidly getting in each other's way. The great money-lender, however, must have been in the main responsible for the enormous expenditure which Cæsar risked in his ædileship and the next three years. . . . At the close of the year 64 B. C., on the accession to office of a new board of tribunes, . . . an agrarian bill on a vast scale was promulgated by the tribune Servilius Rullus. The two most startling features of this were: first, the creation of a board of ten to carry out its provisions, each member of which was to be invested with military and judicial powers like those of the consuls and prætors; and secondly, the clauses which entrusted this board with enormous financial resources, to be raised by the public sale of all the territories and property acquired since the year 88 B. C., together with the booty and revenues now in the hands of Pompeius. The bill included, as its immediate object, a huge scheme of colonisation for Italy, on the lines of the Gracchan agrarian bills. . . . But it was really an attack on the weak fortress of senatorial government, in order to turn out its garrison, and occupy and fortify it in the name of the democratic or Marian party, against the return of the new Sulla, which was now thought to be imminent. The bill may also have had another and secondary object—namely, to force the hand of the able and ambitious consul [Cicero] who would come into office on January 1, 63; at any rate it succeeded in doing this, though it succeeded in nothing else. Cicero's great talent and the courage and skill with which he had so far for

the most part used them, had made him already a considerable power in Rome; but no one knew for certain to which party he would finally attach himself. . . . On the very first day of his office he attacked the bill in the Senate and exposed its real intention, and showed plainly that his policy was to convert Pompeius into a pillar of the constitution, and to counteract all democratic plots directed against him. . . . Whether it was his eloquence, or the people's indifference, that caused the bill to be dropped, can only be matter of conjecture; but it was withdrawn at once by its proposer, and the whole scheme fell through. This was Cicero's first and only real victory over Cæsar. . . . It was about this time, in the spring of 63 B. C., that the office of Pontifex Maximus became vacant by the death of old Metellus Pius, and Cæsar at once took steps to secure it for himself. The chances in his favour were small, but the prize was a tempting one. Success would place him at the head of the whole Roman religious system. . . . He was eligible, for he had already been for several years one of the college of pontifices, but as the law of election stood, a man so young and so democratic would have no chance against candidates like the venerable conservative leader Catulus, and Cæsar's own old commander in the East, Servilius Isauricus, both of whom were standing. Sulla's law, which placed the election in the hands of the college itself—a law framed expressly to exclude persons of Cæsar's stamp—must be repealed, and the choice vested once more in the people. The useful tribune Labienus was again set to work, the law was passed, and on March 6th Cæsar was elected by a large majority. . . . The latter part of this memorable year was occupied with a last and desperate attempt of the democratic party to possess themselves of the state power while there was yet time to forestall Pompeius. This is the famous conspiracy of Catalina; it was an attack of the left wing on the senatorial position, and the real leaders of the democracy took no open or active part in it."—W. W. Fowler, *Julius Cæsar*, ch. 4-5.

ALSO IN: J. A. Froude, *Cæsar*, ch. 10.—Suetonius, *Lives of the twelve Cæsars: Julius*, sect. 7-13.—C. Middleton, *Life of Cicero*, sect. 2.

B. C. 63.—Conspiracy of Catiline.—The conspiracy organized against the senatorial government of Rome by L. Sergius Catilina, 63 B. C., owes much of its prominence in Roman history to the preservation of the great speeches in which Cicero exposed it [see *LATIN LITERATURE*: B. C. 82-43], and by which he rallied the Roman people to support him in putting it down. Cicero was consul that year, and the official responsibility of the government was on his shoulders. The central conspirators were a desperate, disreputable clique of men, who had everything to gain and nothing to lose by revolution. Behind them were all the discontents and malignant tempers of demoralized and disorganized Rome; and still behind these were suspected to be, darkly hidden, the secret intrigues of men like Cæsar and Crassus, who watched and waited for the expiring breath of the dying republic. Cicero, having made a timely discovery of the plot, managed the disclosure of it with great adroitness and won the support of the people to his proceedings against the conspirators. Catiline made his escape from Rome and placed himself at the head of a small army which his supporters had raised in Etruria: but he and it were both destroyed in the single battle fought. Five of his fellow conspirators were hastily put

to death without trial, by being strangled in the Tullianum.—Based on W. Forsyth, *Life of Cicero*, ch. 8.

B. C. 63-58.—Increasing disorders in the capital.—Wasted opportunities of Pompey.—His alliance with Cæsar and Crassus.—First triumvirate.—Cæsar's consulship.—His appointment to the command in Cisalpine Gaul.—Exile of Cicero.—“Recent events had fully demonstrated the impotence of both the Senate and the democratic party; neither was strong enough to defeat the other or to govern the State. There was no third party—no class remaining out of which a government might be erected; the only alternative was monarchy—the rule of a single person. Who the monarch would be was still uncertain; though,

JULIUS CÆSAR

at the present moment, Pompeius was clearly the only man in whose power it lay to take up the crown that offered itself. . . . For the moment the question which agitated all minds was whether Pompeius would accept the gift offered him by fortune, or would retire and leave the throne vacant. . . . In the autumn of 63 B. C. Quintus Metellus Nepos arrived in the capital from the camp of Pompeius, and got himself elected tribune with the avowed purpose of procuring for Pompeius the command against Catilina by special decree and afterwards the consulship for 61 B. C. . . . The aristocracy at once showed their hostility to the proposals of Metellus, and Cato had himself elected tribune expressly for the purpose of thwarting him. But the democrats were more pliant, and it was soon evident that they had come to a cordial understanding with the general's emissary. Metellus and his master both adopted the democratic view of the illegal executions [for the Catilinarians]; and the first act of Cæsar's prætorship was to call Catulus to account for the

moneys alleged to have been embezzled by him in rebuilding the Capitoline temple and to transfer the superintendence of the works to Pompeius. . . . On the day of voting, Cato and another of the tribunes put their veto upon the proposals of Metellus, who disregarded it. There were conflicts of the armed hands of both sides, which terminated in favour of the government. The Senate followed up the victory by suspending Metellus and Cæsar from their offices. Metellus immediately departed for the camp of Pompeius; and when Cæsar disregarded the decree of suspension against himself, the Senate had ultimately to revoke it. Nothing could have been more favourable to the interests of Pompeius than these late events. After the illegal executions of the Catilinarians, and the acts of violence against Metellus, he could appear at once as the defender of the two palladia of Roman liberty—the right of appeal, and the inviolability of the tribunate,—and as the champion of the party of order against the Catilinarian band. But his courage was unequal to the emergency; he lingered in Asia during the winter of 63-62 B. C., and thus gave the Senate time to crush the insurrection in Italy, and deprived himself of a valid pretext for keeping his legions together. In the autumn of 62 B. C. he landed at Brundisium, and, disbanding his army, proceeded to Rome with a small escort. On his arrival in the city in 61 B. C. he found himself in a position of complete isolation; he was feared by the democrats, hated by the aristocracy, and distrusted by the wealthy class. He at once demanded for himself a second consulship, the confirmation of all his acts in the East, and the fulfilment of the promise he had made to his soldiers to furnish them with lands. But each of these demands was met with the most determined opposition. . . . His promise of lands to his soldiers was indeed ratified, but not executed, and no steps were taken to provide the necessary funds and lands. . . . From this disagreeable position, Pompeius was rescued by the sagacity and address of Cæsar, who saw in the necessities of Pompeius the opportunity of the democratic party. Ever since the return of Pompeius, Cæsar had grown rapidly in influence and weight. He had been prætor in 62 B. C., and, in 61, governor in Farther Spain, where he utilized his position to free himself from his debts, and to lay the foundation of the military position he desired for himself. Returning in 60 B. C., he readily relinquished his claim to a triumph, in order to enter the city in time to stand for the consulship. . . . It was quite possible that the aristocracy might be strong enough to defeat the candidature of Cæsar, as it had defeated that of Catilina; and again, the consulship was not enough; an extraordinary command, secured to him for several years, was necessary for the fulfilment of his purpose. Without allies such a command could not be hoped for; and allies were found where they had been found ten years before, in Pompeius and Crassus, and in the rich equestrian class. Such a treaty was suicide on the part of Pompeius; . . . but he had drifted into a situation so awkward that he was glad to be released from it on any terms. . . . The bargain was struck in the summer of 60 B. C. [forming what became known in Roman history as the First Triumvirate]. Cæsar was promised the consulship and a governorship afterwards; Pompeius, the ratification of his arrangements in the East, and land for his soldiers; Crassus received no definite equivalent, but the capitalists were promised a

remission of part of the money they had undertaken to pay for the lease of the Asiatic taxes. . . . Cæsar was easily elected consul for 59 B. C. All that the exertions of the Senate could do was to give him an aristocratic colleague in Marcus Bibulus. Cæsar at once proceeded to fulfil his obligations to Pompeius by proposing an agrarian law. All remaining Italian domain land, which meant practically the territory of Capua, was to be given up to allotments, and other estates in Italy were to be purchased out of the revenues of the new Eastern provinces. The soldiers were simply recommended to the commission, and thus the principle of giving rewards of land for military service was not asserted. The execution of the bill was to be entrusted to a commission of twenty. . . . At length all these proposals were passed by the assembly [after rejection by the senate], and the commission of twenty, with Pompeius and Crassus at their head, began the execution of the agrarian law. Now that the first victory was won, the coalition was able to carry out the rest of its programme without much difficulty. . . . It was determined by the confederates that Cæsar should be invested by decree of the people with a special command resembling that lately held by Pompeius. Accordingly the tribune Vatinius submitted to the tribes a proposal which was at once adopted. By it Cæsar obtained the governorship of Cisalpine Gaul, and the supreme command of the three legions stationed there for five years, with the rank of prætor for his adjutants. His jurisdiction extended southwards as far as the Rubicon, and included Luca and Ravenna. Subsequently the province of Narbo was added by the Senate, on the motion of Pompeius. . . . Cæsar had hardly laid down his consulship when it was proposed, in the Senate, to annul the Julian laws. [See JULIAN LAWS.] . . . The regents determined to make examples of some of the most determined of their opponents. [Cicero was accordingly sent into exile, by a resolution of the tribes, and Cato was appointed to an odious public mission, which carried him out of the way, to Cyprus.]—T. B. C. 57-52.—Effect of Cæsar's Gallic victories.—Return of Cicero from exile.—New arrangements of triumvirs.—Cæsar's proconsulship extended.—Trebonian law.—Disaster and death of Crassus at Carrhæ.—Increasing anarchy in the city.—“In Rome the enemies of Cæsar . . . were awed into silence [by his victorious career in Gaul], and the Senate granted the unprecedented honour of fifteen days' ‘supplicatio’ to the gods for the brilliant successes in Gaul. Among the supporters of this motion was, as Cæsar learnt

in the winter from the magistrates and senators who came to pay court to him at Ravenna, M. Tullius Cicero. From the day of his exile the efforts to secure his return had begun, but it was not until the 4th of August that the Senate, led by the consul, P. Lentulus Spinther, carried the motion for his return, in spite of the violence of the armed gang of Clodius, and summoned all the country tribes to crowd the comitia on Campus Martius, and ratify the *senatus consultum*. The return of the great orator to the country which he had saved in the terrible days of 63 B. C. was more like a triumph than the entrance of a pardoned criminal. . . . But he had come back on sufferance; the great Three must be conciliated. . . . Cicero, like many other optimates in Rome, was looking for the beginnings of a breach between Pompeius, Crassus and Cæsar, and was anxious to nourish any germs of opposition to the triple-headed monarchy. He pleaded against Cæsar's friend Vatinius, and he gave notice of a motion for checking the action of the agrarian law in Campania. But these signs of an independent opposition were suddenly terminated by a humiliating recantation; for before entering upon his third campaign Cæsar crossed the Apennines, and appeared at the Roman colony of Lucca. Two hundred senators crowded to the rendezvous, but arrangements were made by the Three very independently of Senate in Rome or Senate in Lucca. It was agreed that Pompeius and Crassus should hold a joint consulship again next year, and before the expiration of Cæsar's five years they were to secure his reappointment for another five. . . . Unfortunate Cicero was awed, and in his other speeches of this year tried to win the favor of the great men by supporting their proposed provincial arrangements, and pleading in defence of Cæsar's friend and protégé, L. Balbus. [In the year 55 B. C. the Trebonian law was passed], which gave to Crassus and Pompeius, as preconsular provinces, Syria and Spain, for the extraordinary term of five years. In this repeated creation of extraordinary powers in favor of the coalition of dynasts, Cato rightly saw an end of republican institutions. . . . Crassus . . . started in 54 B. C., at the head of seven legions, in face of the combined opposition of tribunes and augurs, to secure the eastern frontier of Roman dominion by vanquishing the Parthian power [see PARTHIA], which reared on the ruins of the kingdom of the Seleucids, was now supreme in Ctesiphon and Seleucia. Led into the desert by the Arab Sheikh Abgarus, acting as a traitor, the Roman army was surrounded by the fleet Parthian horsemen, who could attack and retreat, shooting their showers of missiles all the time. [In the blinding sand and sun of the desert near Carrhæ [on the river Belik, one of the branches of the Euphrates, the supposed site of the Haran of Biblical history], Crassus experienced a defeat which took its rank with Cannæ and the Arausio. A few days afterwards (June 9th, 53 B. C.) he was murdered in a conference to which the commander of the Parthian forces invited him. . . . The shock of this event went through the Roman world, and though Cassius, the lieutenant of Crassus, retrieved the honour of the Roman arms against the Parthians in the following year, the agile people remained to the last unconquered, and the Roman boundary was never to advance further to the east. Crassus, then, was dead, and Pompeius, though he lent Cæsar a legion at the beginning of the year, was more ready to assume the natural

antagonism to Cæsar, since the death of his wife Julia in September, 54 B. C., had broken a strong tie with his father-in-law. Further, the condition of the capital seemed reaching a point of anarchy at which Pompeius, as the only strong man on the spot, would have to be appointed absolute dictator."—R. F.
