PEASANT TROOPS OF KOSCIUSZKO IN PRAYER BEFORE THE BATTLE
OF RACLAWICE

A battle in which the Polish peasant troops of Kosciuszko, armed with scythes and pikes, won a brilliant victory over a Russian army of about 6,000 troops, April 4, 1794.

(After painting by Jan Chełmiński)

876-911.—Rollo's conquest and occupation. See NORMANS: 876-911.

911-1000.—Strength of Rollo's duchy.—Nor-

have been taken up for his Swedish origin. . . . [But] the Norwegian theory seems . . . the most probable, being based on a trustworthy saga and corroborated by other incidental evidence. . . . The important fact is that Norway, Denmark, and even more distant Sweden, all contributed to the colonists who settled in Normandy under Rollo and his successors, and the achievements of the Normans thus become the common heritage of the Scandinavian race. . . . At this point the fundamental question forces itself upon us, how far was Normandy affected by Scandinavian influences? What in race and language, in law and custom,

MOUNT SAINT MICHEL, NORMANDY

Acquired by Rollo of Norway, 911 A. D.

mans become French.—Scandinavian contribution.—In the year 911 the "Frankish king, Charles the Simple, granted Rollo as a fief a considerable part, the eastern part, of later Normandy, . . . [that is], the region on either side of the Seine which came to be known as Upper Normandy, and it was not till 924 that the Northmen acquired also middle Normandy, or the Bessin, while the west, the Cotentin and the Avranchin, fell to them only in 933. . . . The saga makes . . . [Rollo] a Norwegian, but Danish scholars have sought to prove him a Dane, and more recently the cudgels

was the contribution of the north to Normandy? And the answer must be that in most respects the tangible contribution was slight. Whatever may have been the state of affairs in the age of colonization and settlement, by the century which followed the Normans had become to a surprising degree absorbed by their environment."—C. H. Haskins, *Normans in European history*, pp. 27-20, 48.—"It is now generally admitted . . . that for at least half a century before the battle of Hastings, the Normans were Frenchmen, French in their language, French in their law, proud indeed of

their past history, very ready to fight against other Frenchmen if Norman home-rule was endangered, but still Frenchmen, who regarded Normandy as a member of the state or congeries of states that owed service, we can hardly say obedience, to the king at Paris. Their spoken language was French, their written language was Latin, but the Latin of France; the style of their legal documents was the style of the French chancery; very few of the technical terms of their law were of Scandinavian origin. When at length the 'custom' of Normandy appears in writing, it takes its place among other French customs, and this although for a long time past Normandy has formed one of the dominions of a prince, between whom and the king of the French there has been little love and frequent war; and the peculiar characteristics which mark off the custom of Normandy from other French customs seem due much rather to the legislation of Henry of Anjou than to any Scandinavian tradition."—F. Pollock and F. W. Maitland, *History of English law*, v. 1, p. 66.—"The law of Normandy was by this time Frankish, and its speech was French. Even the second duke, William Longsword [son and successor of Duke Rollo or Hrolf, 927-943] found it necessary to send his son to Bayeux to learn Norse, for it was no longer spoken at Rouen. And in the French of Normandy, the Norman dialect, the Scandinavian element is astonishingly small. . . . Only in one department of life, the life of the sea, is any considerable Scandinavian influence discernible. . . . The Scandinavian contribution to the making of Normandy was . . . Normandy itself, created as a distinct entity by the Norman occupation, and the grant to Rollo and his followers, without whom it would have remained an undifferentiated part of northern France. Next, a new element in the population, numerically small in proportion to the mass, but a leaven to the whole—quick to absorb Frankish law and Christian culture but retaining its northern qualities of enterprise, of daring, and of leadership. It is no accident that the names of the leaders in early Norman movements are largely Norse. And finally a race of princes, high-handed and masterful but with a talent for political organization, state-builders at home and abroad, who made Normandy the strongest and most centralized principality in France and joined to it a kingdom beyond the seas which became the strongest state in western Europe."—C. H. Haskins, *Normans in European history*, pp. 50-51.

1035-1063.—Duke William establishes his authority.—Duke Robert of Normandy (Robert the Devil) who died in 1035 was succeeded by his young son, William, who bore in youth the opprobrious name of the "Bastard," but who extinguished it in later life under the proud appellation of "the Conqueror." By reason of his bastardy he was not an acceptable successor. As long as Robert lived, the nobles submitted in sullen silence [to his desire that his son should succeed him], but the news of his death [in the Holy Land while on a pilgrimage] was the signal for general anarchy. . . . Taking advantage of . . . [William's] minority and the questionable character of his title, the nobles threw off all allegiance, entrenched themselves within their fortified castles which

sprang up on all sides, defied authority and harassed the country with their private quarrels and assassinations. . . . Hitherto . . . there had been no organized opposition. . . . [But], warned by the rapidly developing powers of William (he was by this time [1047] nineteen or twenty) that they must strike at once if they would strike at all, the nobles organized a wide-spread conspiracy. No claimants had as yet come forward to dispute the coronet with William. But now, Guy, Count of Burgundy, the son of Renaud and his wife Alice, sister of Richard III. [and Robert the Devil], claimed the duchy as his right by birth. His appeal was readily answered by the lords of the Côtentin and the Bessin, with whom he promised to share his conquest. . . . William, awakened from his sleep at Valognes by the warning cry of his court fool, 'Up, up, my lord duke; open, flee, delay is death!' with difficulty escaped an attempted surprise, and flying to the strong castle of Falaise, his birth-place, summoned the faithful to his support. His authority was acknowledged by the districts east of the Dives, and by the towns and people generally, who, we are told, even in the Bessin and the Côtentin, cursed the rebels, and in their hearts wished well to the duke. . . . The strike which ensued took the character of a war between the semi-Scandinavian Bessin and Côtentin of the west, and the romance element of the east, a division which, often noticeable before in the history of Normandy, was here to appear for the last time. The forces met at Val-ès Dunes, [1047] on a broad sloping plain some miles south-east of Caen, bounded to the west by the river Orne. . . . The struggle was long and severe. . . . William, more fortunate than his royal ally [Henry of France], here first began his successful career in arms, and struck down many a rebel knight. At last the rebels gave ground and were beaten back, then turned and fled. . . . The results of this crushing defeat were decisive. Guy soon after came to terms, and retired to Burgundy. The other nobles submitted, their castles were everywhere destroyed, and William, after a struggle of twelve years, found himself at last master of Normandy. His success had been entirely due to his energy and mastery ability, and his triumph was marked by singular leniency."—A. H. Johnson, *Normans in Europe*, pp. 92-95.

NORMANS, NORSEMEN, NORTHMEN: Name and origin.—"The northern pirates, variously called Danes or Normans, according as they came from the islands of the Baltic Sea or the coast of Norway, . . . descended from the same primitive race with the Anglo-Saxons and the Franks; their language had roots identical with the idioms of these two nations; but this token of an ancient fraternity did not preserve from

their hostile incursions either Saxon Britain or Frankish Gaul, nor even the territory beyond the Rhine, then exclusively inhabited by Germanic tribes. The conversion of the southern Teutons to the Christian faith had broken all bond of fraternity between them and the Teutons of the north. In the 9th century the man of the north still gloried in the title of son of Odin, and treated as bastards and apostates the Germans who had become children of the church. . . . A sort of religious and patriotic fanaticism was thus combined in the Scandinavian with the fiery impulsiveness of their character, and an insatiable thirst for gain. They shed with joy the blood of the priests, were especially delighted at pillaging the churches, and stabled their horses in the chapels of the palaces. . . . In three days, with an east wind, the fleets of Denmark and Norway, two-sailed vessels, reached the south of Britain. The soldiers of each fleet obeyed in general one chief, whose vessel was distinguished from the rest by some particular ornament. . . . All equal under such a chief, bearing lightly their voluntary submission and the weight of their mailed armour, which they promised themselves soon to exchange for an equal weight of gold, the Danish pirates pursued the 'road of the swans,' as their ancient national poetry expressed it. Sometimes they coasted along the shore, and laid wait for the enemy in the straits, the bays, and smaller anchorages, which procured them the surname of Vikings, or 'children of the creeks;' sometimes they dashed in pursuit of their prey across the ocean."—A. Thierry, *Conquest of England by the Normans*, v. 1, bk. 2.—See EUROPE: Map showing barbaric migrations.

ALSO IN: T. Carlyle, *Early kings of Norway*.

Northern invasions in British Isles and on the continent.—Culture of Northmen.—"When the great northern invasions began at the close of the eighth century, Charles the Great ruled all the Christian lands of the western Continent. . . . By fire and sword he converted the heathen Saxons of the north to Christianity and civilization and advanced his frontier to the Danish border. . . . From the actuality of . . . an invasion [by the Danes] the great Charles was spared, but in the British Isles it had already begun. In 787 the Anglo-Saxon *Chronicle* tells us there 'first came three ships of Northmen out of Hæretha-land' [Denmark], whereupon the reeve of the Dorset port 'rode down to the place and would have driven them to the king's town, because he knew not who they were; and they there slew him. These were the first ships of Danishmen which sought the land of the English nation.' Six years later they fell upon the holy isle of Lindisfarne, pillaged the church sacred with the memories of Northumbrian Christianity, and slew the monks or drove them into the sea. In 807 they first landed in Ireland, and 'after this there came great sea-cast floods of foreigners into Erin, so that there was not a point thereof without a fleet.' Then came the turn of the Continent, first along the coast of Frisia and Flanders, and then in what is now France. In 841, when the grandsons of Charlemagne were quarrelling over the fragments of his empire at Fontenay, the first fleet of Northmen entered the Seine; in 843 when they were making their treaty of partition at Verdun, the Vikings entered Nantes on St. John's Day and slew the bishop before the high altar as he intoned the *Sursum corda* of the mass. Within two years they sacked Hamburg and Paris. Wherever possible they established themselves at the mouths of the great rivers, often on an island like Walcheren, Noirmoutier, or the Ile de Rhé, whence the rivers

opened the whole country to them—Elbe and Weser, Rhine and Meuse, Scheldt, Seine, Loire, and Garonne, even to the Guadalquivir, by which the Arabic chronicler tells us the 'dark red seabirds' penetrated to Seville. One band more venturesome than the rest, entered the Mediterranean and reached Marseilles, whence under their leader Hastings they sacked the Italian town of Luna, apparently in the belief that it was Rome. About the middle of the ninth century the number of the Norse pirates greatly increased and their ravages became more regular and constant, leading in many cases to permanent settlements. In 855 the Old English *Chronicle* tells us 'the heathen men, for the first time, remained over winter in Sheppey,' at the mouth of the Thames, and thereafter, year by year, it recounts the deeds of the Viking band which wintered in England and is called simply *here*, the army. . . . In 878 during mid-winter 'the army stole away to Chippenham and overran the land of the West-Saxons and sat down there; and many of the people they drove beyond sea, and of the remainder the greater part they subdued and forced to obey them except King Alfred, and he, with a small band, with difficulty retreated to the woods and to the fastnesses of the moors.' The following year [879] a similar band, now swollen into 'the great army' made its appearance on the Continent and for fourteen years ravaged the territory between the Rhine and the Loire. Year after year 'the steel of the heathen glistened;' in 886 they laid siege to Paris, which was relieved not by the king's valor but by his offering them Burgundy to plunder instead. A century later the English began to buy them off with Danegeld. . . . There was nothing to do but add a new petition to the litany, 'From the fury of the Northmen, Good Lord, deliver us.' To the writers of the time, who could not see the permanent results of Viking settlement, the Northmen were barbarian pirates, without piety or pity, 'who wept neither for their sins nor for their dead,' and their expeditions were mere wanton pillage and destruction. Moreover, these writers were regularly monks or priests, and it was the church that suffered most severely. A walled town or castle might often successfully resist, but the monasteries, protected from Christian freebooters by their sacred character, were simply so many opportunities for plunder to the heathen of the north. Sometimes the monks perished with their monastery, often they escaped only with their lives and a few precious title-deeds, to find on their return merely a heap of blackened ruins and a desolate countryside. Many religious establishments utterly disappeared in the course of the invasions. In Normandy scarcely a church survives anterior to the tenth century. As the monasteries were at this time the chief centres of learning and culture throughout western Europe, their losses were the losses of civilization, and in this respect the verdict of the monastic chroniclers is justified. There is, however, another side to the story, which Scandinavian scholars have not been slow to emphasize. Heathen still and from one point of view barbarian, the Northmen had yet a culture of their own, well advanced on its material side, notable in its artistic skill, and rich in its treasures of poetry and story. . . . Judged by contemporary standards, the Vikings were not barbarians. They rather show a strange combination of the primitive and the civilized—elemental passions expressing themselves with a high degree of literary art, barbaric adornment wrought with skilled craftsmanship. Berserker rage supplemented by clever strategy, pitiless savagery combined with a strong sense of

public order, constant feuds and murders co-existent with a most elaborate system of law and legal procedure. Young from our point of view, the civilization of the Vikings had behind it a history of perhaps fifteen centuries."—C. H. Haskins, *Normans in European history*, pp. 31-35.—See also BARBARIAN INVASIONS: 5th-10th centuries; BRITTANY: 912-936.

ALSO IN: P. B. Du Chaillu, *Viking age*.—S. Laing, *Preliminary dissertation to Heimskringla*.—C. F. Keary, *Vikings of western Christendom*, ch. 5.

Influence of Vikings upon British Isles and the continent.—"The Norsemen brought with them to Ireland the ideas of cities, commerce, and municipal life hitherto unknown. The introduction

England."—K. Gjerset, *History of the Norwegian people*, v. 1, pp. 79-80.—"The English were satisfied with rural life; they were little attracted by the towns which the Romans had built, and they did not devote themselves to commercial pursuits or the manufacturing of articles for sale. The Danes [meaning all Vikings, Danes and Norwegians] though so closely allied in race, appear to have been men of a different type. They were great as traders and also as seamen. . . . England has attained a character for her shipping and has won the supremacy of the world in manufacturing; it almost seems as if she were indebted, on those sides of life on which she is most successful, to the fresh energy and enterprise ingrafted by Danish settlers and conquerors."—W. Cunningham

CASTLE OF A NORTHMAN SEA-KING

of these supposed a total change necessary in the customs of the natives, and stringent regulations to which the people could not but be radically opposed. . . . No more stringent rules could be devised, whether for municipal, rural or social regulations; and, as the Northmen are known to have been of a systematic mind, no stronger proof of this fact could be given."—A. J. Thebaud, *Ireland, past and present*, p. 122. See IRELAND: 5th-9th centuries.—"A lively intercourse was . . . maintained between Ireland and the English seacoast towns across the Irish Sea, which had either been founded or developed by the Vikings. Several of these towns grew into prominence, . . . especially Bristol, which had become a great trading center. . . . In the Midlands, the towns of the Five Boroughs, Lincoln, Leicester, Nottingham, Stamford and Derby became cities of importance. . . . At the time of the Domesday Book, York was next to London and Winchester, the largest city in

and E. A. McArthur, *Outlines of English industrial history*, p. 11.—"It is the great achievement of the Normans that they gave France a navy. There was no longer any navy in France, and she had ceased to be numbered among maritime nations. The Normans reëstablished the marine, and William the Conqueror succeeded in forming a fleet, the like of which France had not seen. The conquests made by the Normans in Sicily were due in part to their superiority in navigation."—G. B. Depping, *Histoire des expéditions maritime des Normands, et leur établissement en France au dixième siècle*, book 4, ch. 3.—"The building of castles was first developed in Normandy, and the *donjon* or square tower, so typical in medieval castles, is thought to be of Viking origin. In Ireland the Norsemen began to build fortified strongholds as early as 846. . . . Dublin, where stood the royal hall or castle, with its massive stone tower, was surrounded by walls and moats. . . . York and the

cities of the Five Boroughs in England were also well fortified. The Roman towns in early Britain were destroyed by the Anglo-Saxons when they conquered the country. . . . Many of these old ruined cities were rebuilt by the Vikings, and many new ones were founded. These Viking cities were the first to show the signs of municipal and urban life, both in Great Britain and Ireland. They became centers, not only of trade, but also of industry, as the Danes and Norsemen also devoted themselves to industrial pursuits, and produced wares of their own make for the general market. The Vikings had a keen sense for legal justice, and maintained strict order in their towns. They developed a system of city laws of which traces are still found in English city government."—K. Gjerset, *History of the Norwegian people*, v. 1, p. 81.

8th-9th centuries.—Island empire of Vikings. "We have hitherto treated the Norwegians, Swedes, and Danes under the common appellation of Northmen. . . . Still, in tracing the history of their conquests, we may lay it down as a general rule that England was the exclusive prey of the Danes, that Scotland and the islands to the north as far as Iceland, and to the south as far as Anglesea and Ireland, fell to the Norwegians, and Russia to the Swedes; while Gaul and Germany were equally the spoil of the Norwegians and the Danes. . . . While England had been overcome by the Danes, the Norwegians had turned their attention chiefly to the north of the British Isles and the islands of the West. Their settlements naturally fell into three divisions, which tally with their geographical position. 1. The Orkneys and Shetlands, lying to the N. E. of Scotland. 2. The isles to the west as far south as Ireland. 3. Iceland and the Faroë Isles. The Orkneys and Shetlands: Here the Northmen first appear as early as the end of the 8th century, and a few peaceful settlements were made by those who were anxious to escape from the noisy scenes which distracted their northern country. In the reign of Harald Harfagr [the Fairhaired] they assumed new importance, and their character is changed. Many of those driven out by Harald sought a refuge here, and betaking themselves to piracy periodically infested the Norwegian coast in revenge for their defeat and expulsion. These ravages seriously disturbing the peace of his newly acquired kingdom, Harald fitted out an expedition and devoted a whole summer to conquering the Vikings and extirpating the brood of pirates. The country being gained, he offered it to his chief adviser, Rögnwald, Jarl of Möri in Norway, father of Rollo of Normandy, who, though refusing to go himself, held it during his life as a family possession, and sent Sigurd, his brother, there. . . . Rögnwald next sent his son Einar, and from his time [875] we may date the final establishment of the Jarls of Orkney, who henceforth owe a nominal allegiance to the King of Norway. . . . In the Celtic annals these unwelcome visitors had gained the name of Fingall, 'the white strangers,' from the fairness of their complexion; and Dugall the black strangers, probably from the iron coats of mail worn by their chiefs. . . . By the end of the 9th century a sort of naval empire had arisen, consisting of the Hebrides, parts of the western coasts of Scotland, especially the modern Argyll-

shire, Man, Anglesea, and the eastern shores of Ireland. This empire was under a line of sovereigns who called themselves the Hy-Ivar (grandsons of Ivar), and lived now in Man, now in Dublin. Thence they often joined their kinsmen in their attacks on England, and at times aspired to the position of Jarls of the Danish Northumbria."—A. H. Johnson, *Normans in Europe*, ch. 2.—See also BARBARIAN INVASIONS: 5th-10th centuries.—"Under the government of these Norwegian princes [the Hy-Ivar] the Isles appear to have been very flourishing. They were crowded with people; the arts were cultivated, and manufactures were carried to a degree of perfection which was then thought excellence. This comparatively advanced state of society in these remote isles may be ascribed partly to the influence and instructions of the Irish clergy, who were established all over the island before the arrival of the Norwegians, . . . and partly to the arrival of great numbers of the provincial Britons flying to them as an asylum when their country was ravaged by the Saxons, and carrying with them the remains of the science, manufactures, and wealth introduced among them by their Roman masters. Neither were the Norwegians themselves in those ages destitute of a considerable portion of learning and of skill in the useful arts, in navigation, fisheries, and manufactures; nor were they in any respect such barbarians as those who know them only by the declamations of the early English writers may be apt to suppose them."—D. Macpherson, *Geographical illustrations of Scottish history* (quoted by J. H. Burton, *History of Scotland*, v. 2, ch. 15, footnote).—See also IRELAND: 9th-10th centuries; SCANDINAVIAN STATES: 8th-11th centuries.

787-880.—So-called Danish invasions and settlements in England.—"In . . . [the] English chronicles, 'Dena' or Dane is used as the common term for all the Scandinavian invaders of Britain, though not including the Swedes, who took no part in the attack, while Northman generally means 'man of Norway.' Asser however uses the words as synonymous, 'Nordmanni sive Dani.' Across the channel 'Northman' was the general name for the pirates, and 'Däne' would usually mean a pirate from Denmark. The distinction however is partly a chronological one; as, owing to the late appearance of the Danes in the middle of the ninth century, and the prominent part they then took in the general Wiking movement, their name tended from that time to narrow the area of the earlier term of 'Nordmanni.'"—J. R. Green, *Conquest of England*, p. 68, footnote.—Prof. Freeman divides the Danish invasions of England into three periods: 1. The period of merely plundering incursions, which began 787. 2. The period of actual occupation and settlement, from 866 to the Peace of Wedmore, 880. 3. The later period of conquest, within which England was governed by Danish kings, 980-1042.—See also ENGLAND: 855-880; 976-1016.

841.—First expedition up the Seine.—In May, 841, the Seine was entered for the first time by a fleet of Norse pirates, whose depredations in France had been previously confined to the coasts. The expedition was commanded by a chief named Osker, whose plans appear to have been well laid. He led his pirates straight to the rich city of Rouen, never suffering them to slacken oar or sail.

or to touch the tempting country through which they passed, until the great prize was struck. "The city was fired and plundered. Defence was wholly impracticable, and great slaughter ensued. . . . Osler's three days' occupation of Rouen was remuneratingly successful. Their vessels loaded with spoil and captives, gentle and simple, clerks, merchants, citizens, soldiers, peasants, nuns, dames, damsels, the Danes dropped down the Seine, to complete their devastation on the shores. . . . The Danes then quitted the Seine, having formed their plans for renewing the encouraging enterprise,—another time they would do more. Normandy dates from Osler's three days' occupation of Rouen."—F. Palgrave, *History of Normandy and England*, v. 1, bk. 1, ch. 2.

tlement lasted, it grew, it became a power in Europe, and in Gaul it became even a determining power. . . . The lasting character of his work at once proves that the founder of the Rouen colony was a great man, but he is a great man who must be content to be judged in the main by the results of his actions. The authentic history of Rolf, Rollo, or Rou, may be summed up in a very short space. We have no really contemporary narrative of his actions, unless a few meagre and uncertain entries in some of the Frankish annals may be thought to deserve that name. . . . He is described as having been engaged in the calling of a Wiking both in Gaul and in Britain for nearly forty years before his final occupation of Rouen. . . . The exploits attributed to Rolf are spread over so many years, that we cannot help suspecting that the deeds of other chieftains have been attributed to

876-911.—Rollo's acquisition of Normandy.—"One alone among the Scandinavian settlements in Gaul was destined to play a real part in history. This was the settlement of Rolf or Rollo at Rouen. [The genuine name is Hrolfr, Rolf, in various spellings. The French form is Rou, sometimes Rous; . . . the Latin is Rollo.—Footnote.] This settlement, the kernel of the great Norman Duchy, had . . . results of its own and an importance of its own, which distinguish it from every other Danish colony in Gaul. But it is well to bear in mind that it was only one colony among several, and that, when the cession was made, it was probably not expected to be more lasting or more important than the others. But, while the others soon lost any distinctive character, the Rouen set-

him, perhaps that two leaders of the same name have been confounded. Among countless expeditions in Gaul, England, and Germany, we find Rolf charged with an earlier visit to Rouen [876], with a share in the great siege of Paris [885 (see PARIS: 885-886)], and with an occupation or destruction of Bayeux. But it is not till we have got some way into the reign of Charles the Simple, not till we have passed several years of the tenth century, that Rolf begins clearly to stand out as a personal historic reality. He now appears in possession of Rouen, or of whatever vestiges of the city had survived his former ravages, and from that starting-point he assaulted Chartres. Beneath the walls of that city he underwent a defeat [911] at the hands of the Dukes Rudolf of Burgundy and Robert of Paris, which was attributed to the miraculous powers of the great local relic, the under-garment of the Virgin. But this victory, like most victories over the Northmen, had no lasting effect. Rolf was not dislodged from Rouen, nor was his career of devastation and con-

quest at all seriously checked. But, precisely as in the case of Guthrum in England, his evident disposition to settle in the country suggested an attempt to change him from a devastating enemy into a peaceable neighbour. The Peace of Clairon-Epte [911] was the duplicate of the Peace of Wedmore, and King Charles and Duke Robert of Paris most likely had the Peace of Wedmore before their eyes. A definite district was ceded to Rolf, for which he became the King's vassal; he was admitted to baptism and received the king's natural daughter in marriage. And, just as in the English case, the territory ceded was not part of the King's immediate dominions. . . . The grant to Rolf was made at the cost not of the Frankish King at Laon but of the French Duke at Paris. The district ceded to Rolf was part of the great Neustrian March or Duchy which had been granted to Odo [or Eudes] of Paris and which was now held by his brother Duke Robert. . . . It must not be thought that the district now ceded to Rolf took in the whole of the later Duchy of Normandy. Rouen was the heart of the new state, which took in lands on both sides of the Seine. From the Epte to the sea was its undoubted extent from the south-east to the north. But the western frontier is much less clearly defined. . . . The district granted to Rolf . . . had—sharing therein the fate of Germany and France—no recognized geographical name. Its inhabitants were the Northmen, the Northmen of the Seine, the Northmen of Rouen. The land itself was, till near the end of the century, simply the Land of the Northmen—the Terra Northmannorum.—E. 10th-13th centuries.—Breaking up of the Norse island empire.—“At the close of the 10th and beginning of the 11th century the battles of Tara and Clontarf overthrew the power of these Norsemen (or Ostmen as they were called) in Ireland, and restored the authority of the native Irish sovereign. About this time they [the ‘Hy-Ivar,’ or sovereigns of the island empire of the Northmen (see above: 8th-9th centuries)] became Christians, and in the year 1066 we find one of their princes joining Harald Hardrada of Norway in his invasion of England, which ended so disastrously in the battle of Stamford Bridge. Magnus of Norway, thirty-two years later, after subduing the independent Jarls of Shetland and the Orkneys, attempted to reassert his supremacy along the western coast. But after conquering Anglesea, whence he drove out the Normans [from England] who had just made a settlement there, he crossed to Ireland to meet his death in battle. The sovereignty of the Isles was then restored to its original owners, but soon after split into two parts—the Suderies and Norderies (whence the term Sodor and Man), north and south of Ardnamurchan Point. The next glimpse we have of these dominions is at the close of the 12th century, when we find them under a chief named Somarled, who exercised authority in the islands and Argyleshire, and from him the clans of the Highlands and the Western Isles love to trace their ancestry. After

his death, according to the Highland traditions, the islands and Argyleshire were divided amongst his three sons. Thus the old Norse empire was finally broken up, and in the 13th century, after another unsuccessful attempt by Haco, King of Norway, to re-establish the authority of the mother kingdom over their distant possessions, an attempt which ended in his defeat at the battle of Largs by the Scottish king, Alexander III., they were ceded to the Scottish kings by Magnus IV., his son, and an alliance was cemented between the two kingdoms by the marriage of Alexander's daughter, Margaret, to Eric of Norway.” At the north of Scotland the Jarls of Orkney, in the eleventh century, “conquered Caithness and Sutherland, and wrested a recognition of their claim from Malcolm II. of Scotland. Their influence was continually felt in the dynastic and other quarrels of Scotland; the defeat of Duncan, in 1040, by the Jarl of Orkney, contributing not a little to Duncan's subsequent overthrow by Macbeth. They fostered the independence of the north of Scotland against the southern king, and held their kingdom until, in 1355, it passed by the female line to the house of Sinclair. The Sinclairs now transferred their allegiance to their natural master, the King of Scotland; and finally the kingdom of the Orkneys was handed over to James III. as the dowry of his bride, Margaret of Norway.”—A. NORTH CAROLINA: Geographic description.—Area.—Population.—North Carolina is a south Atlantic state, bounded on the north by Virginia, on the east by the Atlantic ocean, on the south by the Atlantic and South Carolina, and on the west by Tennessee. Its total area is 54,426 square miles, of which 3,686 square miles are water. It comprises a sandy coastal plain on the east, a central plateau, and a mountainous western region. An equable climate free from intense extremes of heat and cold, and water-power exceeding that of any other eastern state except Maine, explain both the agricultural and the recent remarkable industrial development of the state. The population in 1920 was 2,559,123, an increase of 352,836 over that of 1910. Less than two per cent are of foreign birth or descent, and seven out of every ten persons are dwellers in solitary, widely scattered farm homes.

Resources.—North Carolina was almost purely agricultural until the Civil War and is still predominantly rural. Despite the constantly increasing proportion of industrial workers, there are no large cities and in the rural districts land is divided into numerous small holdings, as in colonial days. The chief crops are cotton, corn, tobacco, hay, wheat, sweet potatoes and peanuts. In manufactures cotton and tobacco lead. In 1920 Winston-Salem and Durham held first and second places among the cities of the world in the manufacture of tobacco, and as a textile manufacturing center North Carolina is now second only to Massachusetts. 1639-1663.—Pioneer and unorganized colonization.—“An abortive attempt at colonization was made in 1639, and a titular governor appeared in Virginia; but this, and a number of conflicting claims . . . [originating in a patent to Sir Robert Heath], and sufficiently troublesome to the proprietaries of a later time, were the only results of the grant of Charles I. This action on the part of the Crown, and the official information received, did not, however, suffice to prevent the Virginia Assembly lending itself to a scheme by which possession might be obtained of the neighboring territory, or at least substantial benefits realized therefrom by their constituents. With this object, they made grants to a trading company, which led, however, only to exploration and traffic. Other grants of a similar nature followed for the next ten years, at the expiration of which a company of Virginians made their way from Nansemond to Albemarle, and established a settlement there. The Virginian Burgesses granted them lands, and promised further grants to all who would extend these settlements

to the southward. Emigration from Virginia began. Settlers, singly and in companies, crossed the border, and made scattered and solitary clearings within the wilds of North Carolina. Many of these people were mere adventurers; but some of them were of more substantial stuff, and founded permanent settlements on the Chowan and elsewhere. Other eyes, however, as watchful as those of the Virginians, were also turned to the rich regions of the South. New England enterprise explored the American coast from one end to the other, in search of lucrative trade and new resting-places. After a long acquaintance with the North Carolina coast, they bought land of the Indians, near the mouth of Cape Fear River, and settled there. For some unexplained cause—possibly on account of the wild and dangerous character of the scattered inhabitants, who had already drifted thither from Virginia, possibly from the reason which they themselves gave—the New England colonists abandoned their settlement and departed, leaving a written opinion of the poor character of the country expressed in very plain language and pinned to a post. Here it was found by some wanderers from Barbadoes, who were of a different opinion from the New Englanders as to the appearance of things; and they accordingly repurchased the land from the Indians and began a settlement. At this date [1663], therefore, there was in North Carolina this infant settlement of the Barbadoes men, on the extreme southeastern point of the present State, and in the north-eastern corner the Virginia settlers scattered about, with here a solitary plantation and there a little group of farms, and always a restless van of adventurers working their way down the coast and into the interior. . . . Whatever rights the North Carolina settlers may have had in the eyes of the Virginians, who had granted them land, or in those of the Indians, who had sold it, they had none recognized by the English King, who claimed to own all that vast region. It may be doubted whether anything was known of these early colonists in England; and their existence was certainly not regarded in the least when Charles II. lavished their territory, and much besides, upon a band of his courtiers and ministers.”—H. C. Lodge, *Short history of the English colonies*, ch. 5.

1663-1670.—Grant to Monk, Clarendon, Shaftesbury and others.—Organized colonies.—“On the 24th March, 1663, King Charles II. granted to Edward, Earl of Clarendon; George [Monk], Duke of Albermarle; William, Earl of Craven; John, Lord Berkeley; Anthony, Lord Ashley [Earl of Shaftesbury]; Sir George Carteret, Sir John Colleton, and Sir William Berkeley, all the country between the Pacific and Atlantic Oceans, between 31° and 36° parallels of latitude, called Carolina, in honor of Charles. [The grant embraced the present states of Georgia, Alabama and Mississippi, as well as the two Carolinas.] In 1663, Sir William Berkeley, Governor of the Colony of Virginia, visited the province, and appointed William Drummond Governor of the Colony of Carolina. . . . Drummond, at his death in 1667, was succeeded by Stevens as governor. . . . The first assembly that made laws for Carolina, assembled in the fall of 1669. . . . On the death of Governor Stevens, who died in the colony full of years and wealth, the assembly chose Carteret for their governor, and on

his return to England soon after, Eastchurch, who then was in England, was appointed governor, and Miller secretary."—J. H. Wheeler, *Historical sketches of North Carolina*, ch. 4.—"The earliest grant made to the lords proprietors did not include the whole of the present State of North Carolina. Its northern line fell short of the southern boundary of Virginia by half a degree of latitude. Notwithstanding this, an unwarranted exhibition of authority established virtually the proprietary dominion over this unappropriated territory. . . . Colonel Byrd of Virginia, who was born not long after the charter of 1665 was made, and who lived during the administration of Berkeley, states, and no doubt truly, that 'Sir William Berkeley, who was one of the grantees, and at that time governor of Virginia, finding a territory of 31 miles in breadth between the inhabited part of Virginia and the above-mentioned boundary of Carolina [30°], advised the Lord Clarendon of it. And his lordship had interest enough with the king to obtain a second patent to include it, dated June 30th, 1665.' By this patent very large powers were granted; so large that, as Chalmers has remarked, 'no one prerogative of the crown was preserved, except only the sovereign dominion. . . . The existence of the colony from Barbadoes, under Sir John Yeamans, that settled in the old county of Clarendon, from its inception in 1665 to its abandonment in 1690, forms but an episode in the proprietary history of North Carolina. The colony, like all others similarly situated, sought at first to make provision for the supply of bodily wants, in securing food and shelter only; but having done this it next proceeded to make profitable the gifts of Heaven that were around it. Yeamans had brought with him negro slaves from Barbadoes, and so inviting was the new settlement deemed, that in the second year of its existence it contained 800 inhabitants. . . . But with all this prosperity, the colony on the Cape Fear was not destined to be permanent. The action of the lords proprietors themselves caused its abandonment. . . . In 1670, the lords proprietors, who seem to have been anxious to proceed more and more to the southward, sent out a considerable number of emigrants to form a colony at Port Royal, now Beaufort, in the present State of South Carolina. The individual who led the expedition was William Sayle, 'a man of experience,' says Chalmers, 'who had been appointed governor of that part of the coast lying southwestward of Cape Carteret.' . . . Scarcely however, had Sayle carried out his instructions and made his colonists somewhat comfortable, before his constitution yielded to a new and insalubrious climate, and he died. . . . It was not easy for the proprietors immediately to find a fit successor; and, even had such been at hand, some time must necessarily have elapsed before he could safely reach the scene of his labors. But Sir John Yeamans was near the spot: his long residence had acclimated him, and, as the historian states, he 'had hitherto ruled the plantation around Cape Fear with a prudence which precluded complaint.' He therefore was directed to extend his command from old Clarendon, on the Cape Fear, to the territory which was southwest of Cape Carteret. This was in August, 1671. The shores with the adjacent land, and the streams making into the sea, were by this time very well known to all the dwellers in Carolina, for the proprietors had caused them to be surveyed with accuracy. On the banks of Ashley River there was good pasturage, and land fit for tillage. The planters of Clarendon, therefore, turned their faces southward, while those from Port Royal travelled northward; and so the colonists from both settlements met on the banks of the

Ashley, as on a middle ground, and here in the same year (1671) they laid, on the first high land, the foundations of 'old Charlestown.' In 1679, it was found that 'Oyster Point,' formed by the confluence of Ashley and Cooper rivers, was more convenient for a town than the spot previously selected, and the people, with the encouragement of the lords proprietors, began to remove thither. In the next year (1680) were laid the foundations of the present city of Charleston; thirty houses were built, and it was declared to be the capital of the southern part of the province, and also the port of all commercial traffic. This gradually depopulated old Clarendon. . . . We now return to trace the fortunes of the settlement on Albermarle, under Stephens. As before stated he entered upon his duties as governor in October, 1667. . . . His instructions were very full and explicit. The Assembly was to be composed of the governor, a council of twelve, and twelve delegates chosen by the freeholders. Of the twelve councillors, whose advice, by the way, the governor was required always to take and follow, one half was to be appointed by the Assembly, the other half by himself. To this Assembly belonged not only the power to make laws, but a large share of the executive authority also. . . . In 1669, the first legislature under this constitution assembled. And it is worthy of remark, that at this period, when the province may be said to have had, for the first time, a system of regular government, there was in it a recognition of two great principles which are now part of the political creed of our whole country, without distinction of party. These are, first, that the people are entitled to a voice in the selection of their law-makers; and secondly, that they cannot rightfully be taxed but by their own representatives. . . . The people, we have reason to believe, were contented and happy during the early part of Stephens' administration. . . . But this quiet condition of affairs was not to last. We have now reached a period in our history which illustrates the fact, that whatever wisdom may be apparent in the constitution given to the Albermarle colony by the proprietors, on the accession of Stephens, was less the result of deliberation than of a happy accident. . . . But the time had now come for the proprietors to carry out their magnificent project of founding an empire; and disregarding alike the nature of man, the lessons of experience, and the physical obstacles of an unsubdued wilderness, . . . they resolved that all should yield to their theories of government, and invoked the aid of philosophy to accomplish an impossibility. Locke was employed to prepare 'the fundamental constitutions.'"—F. L. Hawks, *History of North Carolina*, v. 2, pp. 441-462.

1669-1693. — Fundamental Constitutions of John Locke, and their failure.—The royal grant of the Carolinas to Monk, Shaftesbury, Clarendon, and their associates invested them with "all the rights, jurisdiction, royalties, privileges, and liberties within the bounds of their province, to hold, use, and enjoy the same, in as ample a manner as the bishop of Durham did in that county-palatine in England. . . . Agreeably to these powers, the proprietors proceeded to frame a system of laws

for the colony which they projected. [John] Locke, the well-known philosopher, was summoned to this work, and the largest expectations were entertained in consequence of his co-operation. Locke, though subsequently one of the proprietors, was, at the beginning, simply the secretary of the earl of Shaftesbury. The probability is that, in preparing the constitution for the Carolinas, he rather carried out the notions of that versatile nobleman than his own. . . . The code of laws called the 'Fundamental Constitutions,' which was devised, and which subsequently became unpopular in the colony, is not certainly the work of his hands. It is ascribed by Oldmixon, a contemporary, to the earl of Shaftesbury, one of the proprietors. The most striking feature in this code provided for the creation of a nobility, consisting of landgraves, cassiques, and barons. These were to be graduated by the landed estates which were granted with the dignity; the eldest of the proprietary lords was to be the superior, with the title of Palatine, and the people were to be serfs. [The tenants, and the issue of the tenants] were to be transferred with the soil, and not at liberty to leave it, but with the lord's permission, under hand and seal. The whole system was rejected after a few years' experiment. It has been harshly judged as . . . the crude conception of a mind conversant rather with books than men—with the abstract rather than the practical in government and society. And this judgment is certainly true of the constitutions in the case in which they were employed. They did not suit the absolute conditions of the country, or the class of people which subsequently made their way to it. But contemplating the institution of domestic slavery, as the proprietors had done from the beginning—a large villanage and a wealthy aristocracy, dominating almost without restraint or responsibility over the whole—the scheme was not without its plausibilities. But the feudal tenures were everywhere dying out. The time had passed, even in Europe, for such a system. . . . The great destitution of the first settlers left them generally without the means of procuring slaves; and the equal necessities, to which all are subject who peril life and fortune in a savage forest and on a foreign shore, soon made the titular distinctions of the few a miserable mockery, or something worse."—W. G. Simms, *History of South Carolina*, bk. 2, ch. 1.—"The constitutions were signed on the 21st of July, 1669 [but subsequently revised by the interpolation of a clause, against the wishes of Locke, establishing the Church of England]. . . . This revised copy of 'the model' was not signed till March, 1670. To a colony of which the majority were likely to be dissenters, the change was vital; it was scarcely noticed in England, where the model became the theme of extravagant applause. . . . As far as depended upon the proprietaries, the government was immediately organized with Monk, duke of Albemarle, as palatine. [But, meantime, the colonists in the northern part of the Carolina province had instituted a simple form of government for themselves, with a council of twelve, and an assembly composed of the governor, the council, and twelve delegates from the freeholders of the incipient settlements. The assembly had already met and had framed some important laws, which remained] . . . valid in North Carolina for more than half a century. Hardly had these laws been established when the new constitution was forwarded to Albemarle. Its promulgation did but favor anarchy by invalidating the existing system, which it could not replace. The proprietaries, contrary to stipulations with the colonists, superseded the existing govern-

ment, and the colonists resolutely rejected the substitute. [Much the same state of things appeared in the South Carolina settlements (not yet separately named), and successive disorders and revolutionary changes made up the history of the pseudo palatinate for many years.]"—G. Bancroft, *History of the United States*, v. 1, pt. 2, ch. 7.—In 1693, "to conciliate the colonists, and to get rid of the dispute which had arisen as to the binding force of the 'Grand Model,' the proprietors voted that, 'as the people have declared they would rather be governed by the powers granted by the charter, without regard to the fundamental constitutions, it will be for their quiet, and the protection of the well-disposed, to grant their request.' This abrogation of the labors of Locke removed one bone of contention; but as the 'Grand Model' had never been actually carried into effect, the government went on much as before. Each of the proprietaries continued to have his special delegate in the colony, or rather two delegates, one for South Carolina, the other for Albemarle, the eight together constituting the council in either province, over which the governor presided as delegate of the palatine, to whom his appointment belonged."—R. Hildreth, *History of the United States*, v. 2, ch. 21.—The text of the "fundamental constitutions" is printed in volume 9 of the 12th edition of Locke's complete works, and in volume 10 of several prior editions.

1688-1729.—Slow progress and unprosperous state of colony.—End of proprietary government.—In 1688, Carolina (the northern province) being afflicted with a governor, one Seth Sothel, who is accused of every variety of extortion and rapacity, the colonists rose up against him, tried him before their assembly, deposed him from his office and drove him into exile. "The Proprietors demurred to the form of this procedure, but acquiesced in the substance of it, and thereby did something to confirm that contempt for government which was one of the leading characteristics of the colony. During the years which followed, the efforts of the Proprietors to maintain any authority over their Northern province, or to connect it in any way with their Southern territory, were little more than nominal. For the most part the two settlements were distinguished by the Proprietors as 'our colony north-east of Cape Fear,' and 'our colony south-west of Cape Fear.' As early as 1691 we find the expression North Carolina once used. After that we do not meet with it till 1696. From that time onward both expressions are used with no marked distinction, sometimes even in the same document. At times the Proprietors seem to have aimed at establishing a closer connexion between the two colonies by placing them under a single Governor. But in nearly all these cases provision was made for the appointment of separate Deputy-Governors, nor does there seem to have been any project for uniting the two legislative bodies. . . . In 1720 the first event occurred which throws any clear light from without on the internal life of the colony. In that year boundary disputes arose between Virginia and her southern neighbour and it was found necessary to appoint representatives on each side to settle the boundary line. The chief interest of the matter lies in the notes left to us by one of the Virginia Commissioners [Colonel William Byrd]. . . . After making all . . . deductions and checking Byrd's report by that of graver

writers, there remains a picture of poverty, indolence, and thriftlessness which finds no counterpart in any of the other southern colonies: That the chief town contained only some fifty poor cottages is little or nothing more than what we find in Maryland or Virginia. But there the import trade with England made up for the deficiencies of colonial life. North Carolina, lacking the two essentials of trade, harbours and a surplus population, had no commercial dealings with the mother country. . . . The only possessions which abounded were horses and swine, both of which could be reared in droves without any care or attention. . . . The evils of slavery existed without its counterbalancing advantages. There was nothing to teach those habits of administration which the rich planters of Virginia and South Carolina learnt as part of their daily life. At the same time the colony suffered from one of the worst effects of slavery, a want of manual skill. . . . In 1729 the faint and meaningless shadow of proprietary government came to an end. The Crown bought up first the shares of seven Proprietors, then after an interval that of the eighth. In the case of other colonies the process of transfer had been effected by a conflict and by something approaching to revolution. In North Carolina alone it seems to have come about with the peaceful assent of all parties. . . . Without a struggle, North Carolina cast off all traces of its peculiar origin and passed into the ordinary state of a crown colony."—J. A. Doyle, *English in America: Virginia, Maryland and the Carolinas*, ch. 12.

1717-1732.—Pioneer migrations begin.—"At the opening of the eighteenth century the tide of population had swept inland to the 'fall line,' the westward boundary of the established settlements. The actual frontier had been advanced by the more aggressive pioneers to within fifty miles of the Blue Ridge. So rapid was the settlement in North Carolina that in the interval 1717-32 the population quadrupled in numbers. A map of the colonial settlements in 1725 reveals a narrow strip of populated land along the Atlantic Coast, of irregular indentation, with occasional isolated nuclei of settlements further in the interior. The civilization thus established continued to maintain a close and unbroken communication with England and the Continent. As long as the settlers, for economic reasons, clung to the coast, they reacted but slowly to the transforming influences of the frontier. Within a triangle of continental altitude with its apex in New England, bounded on the east by the Atlantic and on the west by the Appalachian range, lay the settlements, divided into two Zones—tide-water and piedmont. As no break occurred in the great mountain system south of the Hudson and Mohawk valleys, the difficulties of cutting a passage through the towering wall of living green long proved an effective obstacle to the crossing of the grim mountain barrier. In the beginning the settlements gradually extended westward from the coast in irregular outline, the indentations taking form around such natural centers of attraction as areas of fertile soil, frontier posts, mines, salt-springs, and stretches of upland favorable for grazing. After a time a second advance of settlement was begun in New Jersey, Pennsylvania, and Maryland, running in a southwesterly direction along the broad terraces to the east of the Appala-

chian Range, which in North Carolina lies as far as two hundred and fifty miles from the sea. The Blue Ridge in Virginia and a belt of pine barrens in North Carolina were hindrances to this advance, but did not entirely check it. This second streaming of the population thrust into the long, narrow wedge of the piedmont zone a class of people differing in spirit and in tendency from their more aristocratic and complacent neighbors to the east. These settlers of the Valley of Virginia and the North Carolina piedmont region—English, Scotch-Irish, Germans, Scotch, Irish, Welsh, and a few French—were the first pioneers of the Old Southwest. From the joint efforts to two strata of population, geographically, socially, and economically distinct—tide water and piedmont, Old South and New South—originated and flowered the third and greatest movement of westward expansion, opening with the surmounting of the mountain barrier and ending in the occupation and assumption of the vast medial valley of the continent."—A. Henderson, *Conquest of the Old Southwest*, pp. 3-6.

1755-1759.—Settlement of highlands.—Cradle of westward expansion.—Characteristics of population.—"An excellent pen-picture of educational and cultural conditions in the backwoods of North Carolina, by one of the early settlers in the middle of the century, exhibits in all their barren cheerlessness the hardships and limitations of life in the wilderness. The father of William Few, the narrator, had trekked down from Maryland and settled in Orange County, some miles east of the little hamlet of Hillsborough. 'In that country at that time there were no schools, no churches or parsons, or doctors or lawyers; no stores, groceries or taverns, nor do I recollect during the first two years any officer, ecclesiastical, civil or military, except a justice of the peace, a constable and two or three itinerant preachers. . . . These people had few wants, and fewer temptations to vice than those who lived in more refined society, though ignorant. They were more virtuous and more happy. . . . A schoolmaster appeared and offered his services to teach the children of the neighborhood for twenty shillings each per year. . . . In that simple state of society money was but little known; the schoolmaster was the welcome guest of his pupil, fed at the bountiful table and clothed from the domestic loom. . . . In that country at that time there was great scarcity of books.' . . . Such then, were the rude and simple people in the back country of the Old Southwest—the deliberate and self-controlled English, the aggressive, land-mongering Scotch-Irish, the buoyant Welsh, the thrifty Germans, the debonair French, the impetuous Irish, and the calculating Scotch. The lives they led were marked by independence of spirit, democratic instincts, and a forthright simplicity. In describing the condition of the English settlers in the backwoods of Virginia, one of their number, Doddridge says: 'Most of the articles were of domestic manufacture. There might have been incidentally a few things brought to the country for sale in a primitive way, but there was no

store for general supply. The table furniture usually consisted of wooden vessels, either turned or coopered. Iron forks, tin cups, etc., were articles of rare and delicate luxury. The food was of the most wholesome and primitive kind. The richest meat, the finest butter, and best meal that ever delighted man's palate were here eaten with a relish which health and labor only know. The hospitality of the people was profuse and proverbial. . . . The frontier life, with its purifying and hardening influence, bred in these pioneers intellectual traits, which constitute the basis of the American character. The single-handed and successful struggle with nature in the tense solitude of the forest developed a spirit of individualism, restive under control. On the other hand, the sense of sharing with others the arduous tasks and dangers of conquering the wilderness gave birth to a strong sense of solidarity and of human sympathy. With the lure of free lands ever before them, the pioneers developed a restlessness and a nervous energy, blended with a buoyancy of spirit, which are fundamentally American. Yet this same untrammelled freedom occasioned a disregard for law and a defiance of established government which have exhibited themselves throughout the entire course of our history. Initiative, self-reliance, boldness in conception, fertility in resource, readiness in execution, acquisitiveness, inventive genius, appreciation of material advantages—these, shot through with a certain fine idealism, genial human sympathy, and a high romantic strain—are the traits of the American national type as it emerged from the Old Southwest."—A. Henderson, *Conquest of the Old Southwest*, pp. 25-26, 28-31.

1766-1771.—Insurrection of Regulators.—Battle of Alamance.—Complaints of official extortion, which were loud in several of the colonies at about the same period, led to serious results in North Carolina. "Complaints were most rife in the middle counties, a very barren portion of the province, with a population generally poor and ignorant. These people complained, and not without reason—for the poor and ignorant are ever most exposed to oppression—not only that excessive fees were extorted, but that the sheriffs collected taxes of which they rendered no account. They seem also to have held the courts and lawyers—indeed, the whole system for the collection of debts—in great detestation. Presently, under the name of 'Regulators,' borrowed from South Carolina, they formed associations which not only refused the payment of taxes, but assaulted the persons and property of lawyers, judges, sheriffs, and other obnoxious individuals, and even proceeded so far as to break up the sessions of the courts. The common name of Regulators designated, in the two Carolinas, combinations composed of different materials, and having different objects in view. The Assembly of the province took decided ground against them, and even expelled one of their leaders, who had been elected a member. After negotiations and delays, and broken promises to

keep the peace, Governor Tryon, at the head of a body of volunteers, marched into the disaffected counties. The Regulators assembled in arms, and an action was fought at Alamance, on the Haw, near the head waters of Cape Fear River, in which some 200 were left dead upon the field. Out of a large number taken prisoners, six were executed for high treason. Though the Regulators submitted, they continued to entertain a deadly hatred against the militia of the lower counties, which had taken part against them. Tryon was presently removed from North Carolina to New York. His successor, Joseph Martin, anxious to strengthen himself against the growing discontents of the province, promised to redress the grievances, and sedulously cultivated the good will of the Regulators, and with such success that they became, in the end, staunch supporters of the royal authority."—R. Hildreth, *History of the United States*, v. 2, ch. 29.

1774-1776.—Social and political life just before the Revolution.—Miss Janet Schaw, a Scotch observer, describes political and social conditions in the Cape Fear section which were typical of many other colonial centers in the days immediately preceding the War for Independence. "On our arrival here the stalks of last year's crop still remained on the ground. At this I was greatly surprised, as the season was now so far advanced, I expected to have found the fields completely ploughed at least, if not sown and harrowed; but how much was my amazement increased to find that every instrument of husbandry was unknown here; not only all the various ploughs, but all the machinery used with such success at home, and that the only instrument used is a hoe, with which they at once till and plant the corn. To accomplish this a number of Negroes follow each other's tail the day long, and have a task assigned them, and it will take twenty at least to do as much work as two horses with a man and a boy would perform. . . . I have been at a fine plantation called Hunthill belonging to Mr. Rutherford. On this he has a vast number of Negroes employed in various works. He makes a great deal of tar and turpentine, but his grand work is a saw-mill, the finest I ever met with. It cuts three thousand lumbers . . . a day, and can double the number, when necessity demands it. The woods round him are immense, and he has a vast piece of water, which by a creek communicates with the river, by which he sends down all the lumber, tar and pitch, as it rises every tide sufficiently high to bear any weight. This is done on what is called rafts, . . . and the barrels depending from the

sides. In this manner they will float you down fifty thousand deals at once, and 100 or 200 barrels, and they leave room in the centre for the people to stay on, who have nothing to do but prevent its running on shore, as it is floated down by the tides, and they must lay to, between tide and tide, it having no power to move but by the force of the stream."—J. Schaw, *Journal of a lady of quality, 1774-1776*, pp. 163, 185.

1775-1783.—War of American Revolution. See U.S.A.: 1775 (April), to 1783 (September).

1775 (May).—Mecklenburg Declaration.—"It has been strenuously claimed and denied that, at a meeting of the people of Mecklenburg County, in North Carolina, on May 20, 1775, resolutions were passed declaring their independence of Great Britain. The facts in the case appear to be these:—On the 31st of May, 1775, the people of this county did pass resolutions quite abreast of the public sentiment of that time, but not venturing on the field of independency further than to say that these resolutions were to remain in force till Great Britain resigned its pretensions. These resolutions were well written, attracted notice, and were copied into the leading newspapers of the colonies, North and South, and can be found in various later works (Lossing's 'Field-Book,' ii, 619, etc.). A copy of the 'S. Carolina Gazette' containing them was sent by Governor Wright, of Georgia, to Lord Dartmouth, and was found by Bancroft in the State Paper Office, while in the Sparks MSS. (no. lvi) is the record of a copy sent to the home government by Governor Martin of North Carolina, with a letter dated June 30, 1775. Of these resolutions there is no doubt (Frothingham's 'Rise of the Republic,' 422). In 1793, or earlier, some of the actors in the proceeding, apparently ignorant that the record of these resolutions had been preserved in the newspapers, endeavored to supply them from memory, unconsciously intermingling some of the phraseology of the Declaration of July 4th, in Congress, which gave them the tone of a pronounced independency. Probably through another dimness of memory they affixed the date of May 20, 1775, to them. These were first printed in the 'Raleigh Register,' April 30, 1819. They are found to resemble in some respects the now known resolves of May 31st, as well as the national Declaration in a few phrases. In 1829 Martin printed them, much altered, in his 'North Carolina' (ii, 272) but it is not known where this copy came from. In 1831 the State printed the text of the 1819 copy, and fortified it with recollections and certificates of persons affirming that they were present when the resolutions were passed on the 20th."—J. Winsor, *Note in narrative and critical history of America*, v. 6, p. 256.—"We are inclined to conjecture that there was a popular meeting at Charlotetown on the 19th and 20th of May, where discussion was had on the subject of independence, and probably some more or less explicit understanding arrived at, which became the basis of the committee's action on the 31st. If so, we make no doubt that J. McN. Alexander was secretary of that meeting. He, probably, in that case, recorded the proceedings, and among them some resolution or resolutions in regard to the propriety of throwing off the British yoke. . . . It was in attempting to remember the records of that meeting, destroyed by fire, that John McN. Alexander, then an old man, fell into the errors [which led him, in 1800, to certify, as Secretary, a copy of the document called the Mecklenburg Declaration of Independence]." —H. S. Randall, *Life of Jefferson*, v. 3, appendix 2.

1775-1776.—Arming of loyalist Highlanders and their defeat at Moore's Creek.—First colony vote for independence.—"North Carolina was the first colony to act as a unit in favor of independence. It was the fourth in importance of the United Colonies. Its Provincial Congress had organized the militia, and vested the public authority in a provincial council for the whole colony, committees of safety for the districts, and county and town committees. A large portion of the people were adherents of the crown,—among them a body of Highland emigrants, and most of the party of regulators. Governor Martin represented, not without grounds, that, if these loyalists were supported by a British force, the colony might be gained to the royal side. The loyalists were also numerous in Georgia and South Carolina. Hence it was determined by the King to send an expedition to the Southern Colonies in the winter, to restore the royal authority. This was put under the command of Sir Henry Clinton, and ordered to rendezvous at Cape Fear. 'I am clear,' wrote George III., 'the first attempt should be made on North Carolina, as the Highland settlers are said to be well inclined.' Commissions were issued to men of influence among them, one being Allan McDonald, the husband of the chivalrous Flora McDonald, who became famous by romantic devotion to Prince Charles Edward. Donald McDonald was appointed the commander. These officers, under the direction of the governor, after much secret consultation, enrolled about 1,500 men. The popular leaders, however, were informed of their designs. The militia were summoned, and took the field under Colonel James Moore. At length, when Sir Henry Clinton was expected at Cape Fear, General McDonald erected the royal standard at Cross Creek, now Fayetteville, and moved forward to join Clinton. Colonel Moore ordered parties of the militia to take post at Moore's Creek Bridge, over which McDonald would be obliged to pass. Colonel Richard Caswell was at the head of one of these parties: hence the force here was under his command; and this place on the 27th of February [1776] became a famous battle-field. The Provincials were victorious. They captured a great quantity of military supplies, nearly 900 men, and their commander. This was the Lexington and Concord of that region. The newspapers circulated the details of this brilliant result. The spirit of the Whigs run high. . . . A strong force was soon ready and anxious to meet Clinton. Amidst these scenes, the people elected delegates to a Provincial Congress, which met, on the 4th of April [1776], at Halifax. . . . Attempts were made to ascertain the sense of the people on independence. . . . The subject was referred to a committee, of which Cornelius Harnett was the chairman. They reported an elaborate preamble . . . and a resolution to empower the delegates in the General Congress 'to concur with the delegates in the other colonies in declaring independency and forming foreign alliances,—reserving to the colony the sole and exclusive right of forming a constitution and laws for it,' also 'of appointing delegates in a gen-

eral representation of the colonies for such purposes as might be agreed upon.' This was unanimously adopted on the 12th of April. Thus the popular party carried North Carolina as a unit in favor of independence, when the colonies, from New England to Virginia, were in solid array against it. The example was warmly welcomed by the patriots, and commended for imitation."—R. Frothingham, *Rise of the republic*, ch. 11.

1835.—Constitutional convention.—A constitutional convention, in 1835, removed the restriction on non-Protestants as office holders, maintaining the exclusion of non-Christians. The convention changed the terms of several state officers and enacted laws placing questions of marriage and divorce under general law. Impeachment was provided for.

1835-1860.—Backward in education.—"North Carolina has little reason to be proud of her early history in the cause of education. For years there was greater illiteracy in this state than in any other. Public schools were begun in 1840. . . . The schools grew from 777 in 1840 to 4,369 in 1860. The number of all students in colleges, academies and primary schools increased from 18,681 in 1840 to 177,400 in 1860."—J. P. Arthur, *Western North Carolina*, p. 420.

1850.—Slavery question. See U.S.A.: 1850 (June).

1860.—Occupation of Fort Macon. See U.S.A.: 1860-1861 (December-February).

1861 (January-May).—Popular opposition to secession.—"A large majority of the people of North Carolina were opposed to secession. They

did not regard it as a constitutional right. They were equally opposed to a separation from the Union in resentment of the election of Mr. Lincoln. But the Governor, John W. Ellis, was in full sympathy with the secessionists. He spared no pains to bring the state into line with South Carolina [which had passed her ordinance of Secession December 20, 1860. See U.S.A.: 1860 (November-December).] The legislature met on the 20th of November. The governor, in his message, recommended that the legislature should invite a conference with the Southern States, or send delegates to them for the purpose of securing their co-operation. He also recommended the reorganization of the militia, and the call of a state convention. Bills were introduced for the purpose of carrying these measures into effect. . . . On the 30th of January, a bill for calling a state convention was passed. It provided that no secession ordinance, nor one connecting the state with the Southern Confederacy, would be valid until it should be ratified by a majority of the qualified voters of the state. The vote of the people was appointed to take place on the 28th of February. The delegates were elected on the day named. A large majority of them were Unionists. But, at the same time, the convention itself was voted down. The vote for a convention was 46,671; against a convention, 47,333. The majority against it was 662. This majority against a convention, however, was no criterion of popular sentiment in regard to secession. The true test was the votes received, respectively, by the Union and secession delegates. The former received a majority of nearly 30,000. But the indefatigable governor was not to be balked by the popular dislike for secession. The legislature was called together in extra session on May 1. On the same day they voted to have another election for delegates to a state convention on the 13th of the month. The election took place accordingly, and the delegates convened on the 20th. On the following day the secession ordinance [framed by Judah P. Benjamin] was adopted, and the Confederate Constitution ratified. To save time, and avoid further obstructions, the question of popular approval was taken for granted.—S. S. Cox, *Three decades of Federal legislation*, pp. 119-120.—See also U.S.A.: 1861 (March-April).

1861-1865.—North Carolina's services to Confederacy during Civil War.—"Out of less than 700,000 white population, the state sent 125,000 soldiers to the front, or one in every five of the total white population. . . . Of the armies of the thirteen Confederate States, more than one-sixth were soldiers from North Carolina. The state, which was the last to secede, also furnished one-fifth of the provisions and other supplies for the Confederate armies. Its blockading steamers brought in the greater portion of the medical supplies for the Southern army."—W. Clark, *Raising, organization and equipment of North Carolina troops during the Civil War (North Carolina Booklet, July-October, 1910, pp. 60, 65)*.

1868-1876. — Political regeneration. — Political recovery from the effects of Reconstruction began with the impeachment and removal from office of Governor Wm. H. Holden on March 22, 1871. The great need was now for constitutional reform and after a struggle of four years a convention met on September 5, 1875. It "authorized the legislature to forbid the carrying of concealed weapons [and forbade] secret political societies. . . . Quite a number of important changes were made in the judicial department. The number of Supreme Court justices was reduced from five to three and of Superior Court judges from twelve to nine. All were to be chosen by the people on a general ticket for a term of eight years, but it was left within the power of the legislature to return to election by district and to increase the number of districts and judges. The principle of rotation of the judges was adopted. The legislature was given power to alter and distribute the judicial power among the courts inferior to the Supreme Court, and to provide for election of judges. In this way control of the justices of the peace was gained by the legislature. It was also provided that any judge might be removed from office by a two-thirds vote of both houses of the legislature for mental or physical incapacity. [The new legislature adopted a system of county government which assured white government in black counties, but which also assured democratic control of white counties. This violation of local self-government caused great disturbance for years and finally contributed to the overthrow of the democratic party.] . . . Constitutional reform secured, the conservatives turned their attention to the state officers and with 1876 came the final redemption of the state after a campaign never equalled in the state in its spirit and vivid interest. The democrats, as the conservatives now frankly called themselves, nominated Vance for governor and Thomas J. Jarvis for lieutenant-governor. . . . The [republican] convention unanimously nominated Thomas Settle, who was Grant's candidate, Oliver H. Dockery, who had been a prominent candidate, having bowed to the inevitable and withdrawn. W. A. Smith was selected for lieutenant-governor. In the campaign the race issue was dominant, the democrats finding it an effective reply to the 'bloody shirt' waving of the

republicans."—J. G. de R. Hamilton, *North Carolina since 1860 (History of North Carolina, v. 3, pp. 187-190).*

1870-1892.—Failure of old political parties to satisfy the people.—Adverse agricultural conditions.—Political and economic legacy of reconstruction days.—Railway oppression.—Organization of populist party.—Its political influence.—"The conservative-democratic party of Reconstruction saved the state, gave it peace and good order, solved, temporarily, at least,—for there was no permanency in the solution,—the negro question as it existed at the close of Reconstruction, kept expenses down and thus gave a desperate and largely poverty-stricken people a breathing spell, and was along some lines moderately progressive. Its chief defects were the timidity of its leaders and its lack of social responsibility. The state was crippled by an inequitable, dishonest, and inefficient system of taxation and the party did not want, or feared, to correct it. . . . On the other hand there was no hope in the republican party which was as unsocialized and unprogressive as its opponent, with the additional handicap of having ignorant negroes compose more than half its voting membership. That single fact determined the place and character of the party. It was manifest that before it could offer progress to the state it [too] must be reconstructed. . . . In the period following 1870 conditions [in agriculture, the dominant industry,] were far from good, but there was steadily increasing prosperity. Beginning about 1886 or 1887 depression set in. Cotton prices in spite of fluctuations from year to year had steadily fallen, the average price from 1880 to 1887 being 9 cents. It was 11 cents in 1890, 9 in 1891 and about 6½ in 1892. Grain was similarly affected by the tremendous expansion of the grain fields of the northwest and the enormous crops which were produced. Wheat, which had averaged \$1.07 from 1880 to 1887 was 86 cents in 1887 and still falling. Corn, averaging 46 cents for the same period, had dropped to 34 cents in 1888, to 28 in 1889. In 1890 it rose to 37 cents. Tobacco was beginning to show the effect of consolidation of manufacturers by which the price was controlled. Conditions were indicated in another way. The mortgage burden of the state was heavy. During the decade from 1880 to 1890 it amounted to \$55,832,062 and in 1890 it was \$21,471,428 and steadily increasing. Nearly 18 per cent of the taxed acres were under mortgage and on the average every taxed acre bore a mortgage burden of 53 cents. The average debt was \$13, but this was low, only South Carolina of all the states having a lower rate. A hopeful sign was the steady increase in the number of farms and the decreasing size, tending to intensive agriculture and a wider spread of opportunity. . . . The effects of the war and of Reconstruction were still clearly visible in the state [however], and the farmers, . . . [most of whom were] living from hand to mouth, were without an adequate reserve to carry them over a lean year, much less to bear the burden of a succession of them. [Furthermore restlessness among the negroes, who were migrating to Arkansas and Nebraska in large numbers, was producing a shortage of labor in some parts of the state.] To all this was added the pressure of high railway rates, poor service and discrimination. Attempts to secure a remedy for railroad oppression, which was, it is fair to say, highly magnified, for the railroads themselves were not over-prosperous, were uniformly and successfully thwarted by the railroad interests which, in one way or another, dominated the legislature of the state. . . . [The

steadily growing discontent of the late eighties finally found expression in agrarian organizations.] "In February, 1887, a farmers' convention met in Raleigh, perfected a plan of organization, and elected Elias Carr president. To its influence and activity was due, to a considerable extent the foundation (1889) of the Agricultural and Mechanical College [at West Raleigh] and the withdrawal of the landscrip fund from the University. It is probable that it was called chiefly for that purpose. Its success indicated that the time was ripe for a more complete organization which speedily followed. The Farmers' Alliance was first organized in North Carolina in October, 1887, and was at the time composed of 132 subordinate alliances situated in eight counties. The first local sub-alliance had been organized in April. It spread rapidly and by the following summer had 1,018 local branches in sixty-two counties of the state and membership of more than 42,000. . . . In its inception in North Carolina there was no conscious political purpose in the mass of the members, whatever may have been the aims of the leaders, but it had certain practical aims which made political activity inevitable, and the foundation of a new party, in the event of failure to control the old ones, almost a certainty. These aims were all in the direction of correcting outstanding abuses. Because of railway discrimination and high rates, they advocated state control of freight rates, and later demanded the public ownership of railways and telegraph lines. . . . The first populist convention [held in 1892] was an interesting body. . . . In the convention were a number of republicans who had never left the republican party in reality but, more or less openly, were there primarily to assist in the defeat of the democratic party and if possible to engineer a fusion in the interest of the republican party. The platform adopted called for economy in state government, encouragement to education, agriculture, and manufacturing, a 6 per cent interest law, secret ballot, purity of elections, and the taxation of all railroads. . . . While the elections resulted in a rather sweeping democratic victory, the party winning the state and electoral tickets, eight out of nine members of Congress, and a majority in both Houses of the Legislature, the populists gave a good account of themselves for so young a party. In a number of counties, notably in Chatham, Nash, and Sampson they showed great strength. . . . The vote for governor showed a shrinkage of republican votes from 1888 of almost 40,000 and of democratic votes nearly 13,000. The democrats with a plurality of approximately 40,000 were still 7,000 short of a majority of the total vote. The plurality of the electoral vote was about 33,000 in a much lighter vote, with more than 10,000 votes lacking of a majority."—J. G. de R. Hamilton, *North Carolina since 1860 (History of North Carolina, v. 3, pp. 218-219, 221-222, 225-226, 238-241)*.—For the Populists, fusion with the Republicans in 1894 was a serious mistake. Their program was set at naught and their principles were ignored. Instead of economy, extravagance prevailed; in place of governmental efficiency, there was corruption and disorder. And yet they accomplished much good. The defeat which they inflicted on the Democrats in 1894 caused that party to liberalize its policies, notably in education and social improvement and led to the reassertion of white supremacy.

1890-1900.—Transition from rural to urban and industrial life.—In 1890, less than one tenth of the population was engaged in manufacturing, and almost seven tenths in agriculture. The con-

struction of cotton mills in the South began in earnest at this time and "for the next fifteen years assumed the proportions of a craze in some sections. Some Northern capital was invested, machinery houses took stock, and some Northern mills built branch establishments in the South, but the greater part of the capital came from the savings of the people or from the profits of earlier mills. These profits were for a time enormous. Land was secured and buildings erected for a smaller proportion of the capital than was possible in New England, fuel was abundant and cheap, and where the local supply of cotton was sufficient, freights were saved. There were no restrictions on hours of labor or age of the workers, and operatives were drawn from the farms at low wages. Taxes were low, and it seemed that for a time no mill could fail to be profitable whether well managed or not."—H. Thompson, *New South, economic and social (Studies in Southern history and politics, pp. 300-301)*.—In 1900 the proportion engaged in manufacture in North Carolina showed an increase of two and one-half per cent. Production of the coarser grades of yarn was more than eighteen times that of 1890 and finer grades were being developed.

ALSO IN: H. Thompson, *From the cotton field to the cotton mill, pp. 2, 66-68*.

1897-1899.—Local dispensary laws.—An Act applying the South Carolina "dispensary" system of regulation for the liquor traffic (see SOUTH CAROLINA: 1892-1899) to Fayetteville was passed by the legislature in 1897, and several smaller towns secured local legislation to the same effect in 1899; but attempts to carry a general dispensary law for the State were defeated.

1898.—Race war in Wilmington.—Wilmington, N. C., was the scene, in November, 1898, of what can only be called a fierce revolution, whereby the city government, dominated by the colored population, which outnumbered the white, was violently overturned by the latter. The race conflict was precipitated by an article in a Republican newspaper, edited by a negro, which reflected on the honor of some of the white women and caused wild excitement among the white men. The offending newspaper office was destroyed and its editor fled. Resistance being offered, furious fighting occurred, in which a considerable number of negroes were killed, many were wounded, and hundreds were driven by terror from the town. White Republican officials were also expelled or took to flight, and their opponents secured control of city affairs.

1900.—Constitutional amendment for qualification of suffrage.—By a constitutional amendment, adopted in August, 1900, the following qualification of the suffrage was established:

"Sect. 4. Every person presenting himself for registration shall be able to read and write any section of the constitution in the English language; and, before he shall be entitled to vote, he shall have paid, on or before the 1st day of May of the year in which he proposes to vote, his poll tax for the previous year as prescribed by Article V, section 1, of the constitution. But no male person who was on January 1, 1867 or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided, and no lineal descendant of any such person, shall be denied the right to register and vote at any election in this State by reason of his failure to possess the educational qualification herein prescribed, provided he shall have registered in accordance with the terms of this section prior to December, 1908. The general assembly shall provide for the registration of all persons entitled

to vote without the educational qualifications herein prescribed, and shall, on or before November 1, 1908, provide for the making of a permanent record of such registration, and all persons so registered shall forever thereafter have the right to vote in all elections by the people in this State, unless disqualified under section 2 of this article: Provided, Such person shall have paid his poll tax as above required."

Governor Aycock, who was elected on the suffrage amendment issue, received a majority of 60,354 votes, the largest majority ever received by any man in the history of North Carolina for the office of governor. The amendment was drawn with great skill, he declared, "with the deliberate purpose of depriving the negro of the right to vote, and of allowing every white man to retain that right . . . its passage will mean peace to the land, it will mean an end to an era of crime and lawlessness, security to property and purity of politics. There will be no more dead negroes on the streets of Wilmington, no more rule of the incompetent and corrupt."—R. D. W. Connor and C. Poe, *Life and speeches of Charles B. Aycock*, p. 81.

1900-1920.—Distribution and slow growth of population.—Recent trend toward cities.—In 1860 the slave population of western North Carolina was thirty-eight per cent of the white, while in the East it was more than seventy-five per cent. The fugitive slave laws held the negroes; the whites emigrated—the shiftless "poor whites" to the pine barrens and still more lonely mountains, the better sort to the western states and to the cities. But in North Carolina itself, as late as 1900, there was not a single city with a population of 25,000. The entire population of the state in that year was 1,803,810, of which 386,251 were colored. In 1920 Winston-Salem and Charlotte each approximated 50,000; Wilmington, the seaport, had 33,372; Raleigh, the capital, 24,418; Asheville, the principal city in western Carolina, 28,504; Durham and Greensboro, each in the neighborhood of 20,000. The total population in 1910 was only 2,206,287 of whom 1,500,511 were white and 697,843 negro. The population in 1920 was 2,559,123, of whom 1,783,779 were white and 763,407 negro. The proportion of the population of North Carolina living in places of 2,500 or more increased from 9.9 per cent in 1900 to 14.4 per cent in 1910 and to 19.2 per cent in 1920.

1900-1920.—Education.—"Gov. Aycock did much for education during his term from 1900 to 1904. Rural libraries were started and a loan fund provided."—J. P. Arthur, *Western North Carolina*, pp. 420-421.—School attendance is now compulsory and separate schools are provided for white and colored pupils. There were 7,877 elementary schools with 634,250 pupils in 1918; 248 high schools with 12,788 pupils; nine normal schools for the training of teachers and fifteen universities and colleges. In 1880 the average school term in rural white schools was only 48 days; in 1910, as a result of the new school law the term was 120 days. . . . From 1880-1918 the enrollment of the white school population rose from 54 to 78 per cent and the enrollment of the colored school population from 47 to 69 per cent."—*Public education in North Carolina (Report by the State Educational Commission, 1920, pp. 6-8)*.—The University of North Carolina, founded in 1795, had in 1922 an enrollment of 1,870. It has played an important part in the recent remarkable progress of the state. Through its courses, its publications, its news-letters, its surveys and its incessant activity in behalf of the public wel-

fare, the people of the state are kept constantly aware of their social, economic and intellectual needs, shown how to meet those needs, and most important of all, are assured of constructive leadership.—See also below: 1915-1922.

ALSO IN: R. D. W. Connor and C. Poe, *Life and speeches of Charles B. Aycock*, ch 8, 10.

1900-1922.—Political issues.—Governors.—Since 1900 the Democrats have been securely in power in state government and in most of the counties. A contest in 1907 over railroad passenger rates (provided for by The Maximum Railway Fare Act of 1907) was carried to the United States Supreme Court, which in 1908 declared the rate law unconstitutional. In the same year a special session of the state legislature submitted to the people the question of state-wide prohibition, which was carried by a majority of 44,196. Special and local legislation increased during these years to such an extent that in 1911 Governor Kitchin recommended its limitation by constitutional amendment. This was accomplished, after a contest, by the adoption in 1916 of four constitutional amendments restricting special legislation; providing emergency judges to prevent delays in trials; forbidding the General Assembly to grant special charters to corporations; or to towns, cities and incorporated villages. In 1915 the direct primary was adopted. Since 1901 there has been a marked tendency toward long terms for members of Congress. "Three of the four gubernatorial contests in the democratic party have been intense. In 1904 there was an excited pre-convention campaign between R. B. Glenn, Charles M. Stedman, W. D. Turner, and T. F. Davidson, but with only the first two really having a chance. Glenn was nominated on the fifth ballot and in November carried the state by forty-nine thousand, defeating Charles J. Harris, the republican candidate. In 1908 there was an intense contest between Locke Craig, W. W. Kitchin, and Ashley Horne. The convention which met in Charlotte was deadlocked for almost a week, but Kitchin was finally nominated on the sixty-first ballot and in the election defeated J. Elwood Cox by thirty-eight thousand majority. Locke Craig was nominated without opposition in 1912 and ran against Thomas Settle on the republican ticket and Iredell Meares on the progressive ticket, defeating both with a majority of more than fifty-six thousand. Meares led Settle by more than six thousand. In 1916 Thomas W. Bickett, who had leaped to state-wide reputation by his nominating speech in behalf of Ashley Horne in 1908, and had been nominated for attorney-general when he was not a candidate for the office, defeated Lieutenant-Governor E. B. Daughtridge in the primary by twenty-six thousand. The republicans nominated Frank A. Linney, and a spirited campaign followed in which the two candidates carried on a joint canvass, marked by debate of a high order and fine spirit. Bickett received a majority of forty-seven thousand."—J. G. de R. Hamilton, *North Carolina since 1800 (History of North Carolina, v. 3, pp. 341-342)*.

1902-1922.—Industrial development.—Labor conditions.—"The Southern cotton mill is no longer sure of profits, for some of the former advantages have disappeared with the growth of the industry and increased competition. Since much of the cotton must now be brought from a distance by rail, the freight rate is often greater than the water rate New England pays, and there is the added cost of shipping the product to market. Fuel is more expensive than formerly, though many mills are able to use hydro-electric power generated on the rivers. The farming population is more prosperous and no longer flecks so readily to the

mills. Wages are rising toward the New England level, and, measured by purchasing power, almost if not quite reach it; for though the cost of food and shelter is rising, they are still low, compared with the older manufacturing districts."—H. Thompson, *New South, economic and social (Studies in Southern history and politics, p. 301)*.—The mills are chiefly to be found in "four States, North Carolina, South Carolina, Georgia, and Alabama, and in the hill country of these States, though a few large mills are situated in the lowlands. North Carolina, with over three hundred mills, has more than any other State, North or South, and consumes more cotton than any other Southern State—over a million bales. . . . [It] is second only to Massachusetts in the value of its cotton products. . . . There is some localization of industry: a very large number of mills, for instance, may be found in a radius of one hundred miles from Charlotte, North Carolina, and one North Carolina county has more than fifty mills, though the total number of spindles in that county is not much greater than in some single New England establishment. In the allied knitting industry . . . North Carolina led the South in 1914. . . . [The lucrative fertilizer and cottonseed oil products industries are based on by-products of the cotton industry. Lumbering, the manufacture of furniture and the cultivation of tobacco are also important.] The laborer employed in the manufacturing enterprises of the South, whether white or black, is native born and Southern born. . . . Speaking broadly, those dealing with complicated machines are white, while those engaged in simpler processes are white or black. We find, therefore, a preponderance of whites in the textile industries and in the shops producing articles from wood and iron, while the blacks are found in the lumber industry, in the tobacco factories, in the mines, and at the blast furnaces. There are some skilled workmen among the negroes especially in tobacco, but generally they furnish the unskilled labor. [In 1920 a sixty hour week for workers in mills and factories was adopted. Between 1900 and 1920 industrial wages rose from 14 to 137 million dollars and capital employed from 68 to 669 millions.]"—H. Thompson, *New South (Chronicle of America Series, v. 42, pp. 97-98, 106-107)*.—Since 1915 industrial development has been so rapid as to change North Carolina from a primarily agricultural state to an industrial community. "Agriculture no longer leads in North Carolina; manufacture leads for the first time in the history of the State. It means that North Carolina has moved up from small-scale farm production on domestic levels into big-scale factory production on commercial levels. The volume of wealth created by our factories has been doubled and trebled and quadrupled in quantity since 1914, and its value has been increased even more amazingly. The creation of industrial values shows nearly a sixfold increase during the last five years, against a threefold increase in the value of our agricultural output during the last ten years."—E. C. Branson, *Presidential address (State Social Work Conference, Raleigh, Jan. 25, 1921)*.

1915-1922.—Complete transformation in social outlook.—Carolina playmakers.—Solution of rural problems.—From the most backward of the southern states, proud to be known as "a valley of humiliation between two mountains of conceit," North Carolina has become the foremost southern state in industrial development and in social vision. Road-building, education, and advanced social legislation are creating a self-conscious community with a common life out of a

great number of isolated individuals. Modern methods are working wonders in the material life of town and country alike. In the first ten months of 1922 North Carolina voted \$11,000,000 for school buildings—more than Virginia, South Carolina, Georgia, Florida, and Tennessee combined. At the state university at Chapel Hill, Professor Koch (in 1922) was teaching students how to create a folk literature and a folk theater from their rich native history and traditions. This group, called the Carolina Playmakers, marks the appearance of an original cultural movement among a people hitherto devoid of culture. The story of North Carolina's attack on rural problems since 1915 "covers a common-school fund nearly doubled during the war and a fifty per cent salary increase for public school teachers as a legal requirement; an illiteracy commission with a support fund of \$25,000 a year; a compulsory school attendance law, together with a standard child-labor law; three and a half millions of bond money for enlarging and equipping . . . public institutions of learning and benevolence; nearly \$250,000 a year for public health work, for the medical and dental inspection of schools and the free treatment of indigent school children, and for the defense of . . . homes against the ravages of social disease; around a million two hundred thousand dollars a year of local, state and federal funds for agricultural education and promotion; a law sanctioning co-operative enterprise in general, and in particular the best co-operative credit-union law in the United States, as a result of which . . . [North Carolina has] more farm credit-unions than all the rest of the states combined; a statewide cotton warehouse system based on the best law in the South; a public welfare law establishing a state welfare board with ample authority and support, and . . . [requiring] county welfare boards and superintendents; a juvenile court and probation officer in every county, and in every city with 10,000 inhabitants or more; a rural township incorporation law and a state commission charged with rural organization and recreation; a state-wide social service organization, and public welfare courses at the state university. And so on and on. Thirty-five laws of economic and social import have gone on . . . [the] statute books in four years, all of them directly or indirectly related to rural social welfare."—E. C. Branson, *North Carolina scheme of rural development (Proceedings of the National Conference of Social Work at 46th annual session held in Atlantic City, New Jersey, June 1-8, 1919, pp. 547-548)*.

1916-1917.—Migration of negroes. See RACE PROBLEMS: 1905-1921.

1917.—Opposition to Owen-Keating child labor law. See U.S.A.: 1916-1917: Opposition to Owen-Keating child labor law.

1918-1920.—Part played in World War.—Prohibition.—Election of governor.—Woman suffrage.—The state furnished 73,003 soldiers, or 1.94 per cent of the whole force. North Carolina ratified the National Prohibition Amendment on January 14, 1919. In 1920 Cameron Morrison was elected governor and ratification of the Federal Woman Suffrage Amendment was defeated.

1921-1922.—Failure of strike of cotton mill operatives.—Creation of cotton commission.—"A strike of the cotton mill operatives in North Carolina, which began in February, 1921, ended in August, 1922, with the complete victory of the owners. Wage reductions ranging from thirty-

eight to fifty per cent were made."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, p. 55.—In 1921 the legislature created a cotton commission "to confer with commissions from other cotton states to ascertain the world's demand for cotton, the cost of cotton production, the price to be fixed by the planters; and to work out a scheme to finance the crops in order to maintain the price so fixed."—*American Political Science Review*, Nov., 1922, p. 655.

NORTH DAKOTA: Its location, area, and resources.—North Dakota, one of the western states of the United States, is bounded on the north by the Canadian provinces of Manitoba and Saskatchewan, on the south by South Dakota, on the east by Minnesota, and on the west by Montana. Its area is 70,837 square miles. It is one of the chief wheat producing states, having a larger area of fertility than any other of the western states. Though its interests are mainly agricultural, its manufactured products are flour and pottery. There are large coal deposits, not yet fully developed, in the state. In 1920 the population of North Dakota was 646,872. The state capital is at Bismarck.—See also U.S.A.: Economic Map.

Early history. See DAKOTA TERRITORY.

1803.—Included in Louisiana Purchase. See LOUISIANA: 1798-1803.

1880-1892.—Influence of railroads.—"For years the eye of a master mind had been keenly observant of the happenings in Dakota, and the idea of another road to the Pacific coast, paralleling the Northern Pacific on a more northerly route, was conceived by James J. Hill. . . . Following the financial panic of 1873, in which so many of the leading financiers of the country went down to ruin, Mr. Hill took over the mortgage-encumbered St. Paul and Pacific Railroad, and reorganized it on a sound basis, under the name of the St. Paul, Minneapolis & Manitoba Railroad Company. . . . In 1880 the new transcontinental line crossed the Red River of the North at Grand Forks, and, under the name of the Great Northern Railway, which it still retains, the road continued on its way across the northern part of the state, opening up fresh territory, and with feeder lines furnishing to the new settlers, who followed along its line, marketing facilities for their grain and produce. Response to the railway's initiative was immediate and extensive. All along its route towns and villages sprang up, and the wild country was rapidly settled by an enterprising and aggressive class of farmers and business men, even more rapidly than had been the more southern settlement along the Northern Pacific. Unhampered by the speculative holdings of alternate sections which the huge land grant of the Northern Pacific rendered possible along its territory, every arable section contiguous to the Great Northern was susceptible to homestead entry under the United States government laws, and the development of that part of the country was therefore that much more rapidly accomplished, nor was it long before the northern half of the state was striding side by side in population and wealth with the older settled southern half."—*Development of North Dakota (Year Book of 1909, North Dakota Magazine, Feb., 1910, p. 8)*.

1880-1916.—Admitted to Union.—Settled under new conditions of immigration.—Political character as a state.—North Dakota was created by the division of the territory of Dakota into North and South Dakota, by the votes of the inhabitants, and was admitted into the Union in 1889. (See DAKOTA TERRITORY: 1882-1889;

U.S.A.: 1889-1890.) President Harrison signed the Enabling Act, February 22, 1889, and the constitutional convention was called at Bismarck on July 4 of the same year. The unique provision in North Dakota's state constitution was the prohibition of the liquor traffic at the inception of statehood. The Constitution was ratified in October, 1889, and on November 2, President Harrison proclaimed North Dakota a state. Four years before, as chairman of the Committee on Territories, during the agitation in Congress for statehood of Dakota, he had attributed the phenomenal development of the territory, whose population had increased 885 per cent. in a decade, to the easy conditions of immigration created by the railroad. "The emigrant who is seeking a home in the West does not now use as his vehicle a pack-train, a Conestoga wagon, or even a broadhorn. The great bulk of the people who have gone into Dakota have gone upon the steam-car, many of them, within sight of the home which they were to take up under the homestead laws of the United States. . . . Therefore, . . . the ratio of emigration and settlement in these new States outstrips almost beyond description the settlements of the earlier States in the West. Looking at some of the statistics upon this question, I find by the Railroad Manual of 1883 that Dakota had eleven railroads and nearly 2,500 miles of completed railway."—Speech by Benjamin Harrison, *Congressional Record*, 48th Congress, 2d Session, v. 16, Part 1, Dec. 1, 1884-Jan. 22, 1885, pp. 109-110.—"Without the railroad a farm in North Dakota . . . is worthless. [But, entirely dependent on railroad transportation for the marketing of their products,] the farmers began to complain of extortionate charges, discriminating rates, rebates, and corruption of legislatures."—G. Plumb and W. G. Roylance, *Industrial democracy*, p. 169.—The political cast of this great agricultural community, welcomed into the Union under a Republican administration, has been Republican except in 1892 during the Populist movement, and in 1916, when a political revolution was brought about by the Non-Partisan League. The League's program for the state ownership of grain elevators, and other marketing utilities, made a vital appeal to the North Dakota farmers, who in 1916 were producing 39,325,000 bushels of wheat, 13,515,000 bushels of corn, and 53,750,000 bushels of oats, besides crops of all the other cereals grown in the north temperate zone.—Based on *International Year Book*, 1917.

1892-1896.—Farmers' alliances in politics.—The farmers' alliances, which had developed early in North Dakota, were the organized groups to register a protest against the tyranny of the railroads. They found in the platform of the Populist party the promise of relief from their economic ills, and merged themselves with the growing movement of this third national party. In 1892 North Dakota gave her support to the Populist candidate for President, James B. Weaver of Iowa.

1899.—Decision of State Supreme Court regarding divorce.—In 1899, by Supreme Court decision, divorce proceedings were limited to citizens of the state or persons intending to become bona fide residents.

1900-1914.—Public education.—Growth of railroads.—Irrigation.—Indian reservation.—Initiative and referendum.—"In keeping with the traditions of all agricultural states, North Dakota has shown the intelligence and progressive character of her population by the state and social institutions which have grown up as her territorial youth developed into the lusty growth of statehood. Rec-

ognizing the supreme importance of a liberal and easily available system of education for the coming generations, this subject has been always prominent in the consideration of our legislatures, and . . . the people of North Dakota point with pride to the efficiently conducted schools, both rural and urban, which offer on every hand an education to all who seek it. . . . The railroad development of the state has been, [rapid]. . . . Three great trunk lines pass through the state, the Great Northern, running east and west on its way to the Coast through the upper-one-third; the Northern Pacific, averaging one hundred miles south of the Great Northern, following the same general direction, and the Minneapolis, St. Paul and Sault Ste. Marie railway, following a diagonal course from southeast to northwest, joining the Canadian Pacific line north of the boundary line."—*Development of North Dakota (Year Book of 1909, North Dakota Magazine, Feb., 1910, p. 9)*.—"June 20th, 1907, will go down in history as a red letter day in the development of the state of North Dakota and especially the northwestern section thereof. On that day James Rudolph Garfield, Secretary of the Interior . . . and others of the Reclamation Service, arrived at Williston, Williams County, to inspect and formally open the Buford-Trenton and the Williston irrigation projects, . . . constructed by the United States government through the Reclamation Service. . . . [Under the Reclamation Act, as approved by Congress June 17, 1902, of the \$30,000,000 already in the fund created by the act] \$4,500,000 is credited to North Dakota. . . . The Williston project will eventually bring under irrigation some 40,000 acres of land in the valley of the Little Muddy which empties into the Missouri River just below the city at Williston."—J. W. Jackson, *Williston and Buford-Trenton irrigation projects (North Dakota Magazine, Aug., 1907)*.—See also CONSERVATION OF NATURAL RESOURCES: United States: 1902-1919.—In 1911 the Berthold Indian Reservation was opened to homestead entry. The initiative and referendum first introduced in 1907, was in 1914 made applicable to all legislation by constitutional amendment. See INITIATIVE AND REFERENDUM: Development in the United States.

1915.—Rise of Non-Partisan League. See NON-PARTISAN LEAGUE.

1916-1921.—Political revolution in state.—Success of Non-Partisan League.—Constitutional amendments as basis for League's economic program.—In 1916 North Dakota cast her electoral vote for Wilson, sent a stalwart Republican to the United States Senate, (Senator McCumber) and elected a Non Partisan governor, Lynn J. Frazier. "The Non-Partisan League captured the State offices and the lower branch of the legislature in 1916, but the Senate was half hold-over and it was not until two years later, following the 1918 election, that the Non-Partisans were able to have the legislature enact laws to carry out their program. The following year the League was forced to defend these laws at a referendum precipitated by the Independents, so that the program was held up several months more. This was followed by an attack in State and Federal courts on the constitutionality of the industrial program, which held up the experiment for another year."—O. S. Morris, *Vote of the North Dakota farmers (Nation, Nov. 6, 1921)*.—To provide the constitutional machinery for a reform program, ten constitutional amendments were advocated by the League. "The Ten Constitutional Amendments . . . were voted upon by the voters November 5 [1918]. Three of these were referred to the

voters by the last legislature—giving the legislature power to levy an acreage tax to provide for state hail insurance; giving corporations the right to limit the voting power of stockholders; providing that at least four of the five judges of the supreme court must concur in any decision declaring a law of the state unconstitutional. These each received a majority vote of about 20,000, and at the recent meeting of the state canvassing board were declared adopted, thereby immediately becoming a part of the constitution of the state. The remaining seven amendments were initiated by the Non-Partisan League. No. 1 provides for a modification and extension of the initiative and referendum as applied to legislation; No. 2, for the immediate taking effect of emergency measures; No. 3, that a constitutional amendment must receive a majority of the votes cast thereon by the voters to become a part of the constitution; No. 4, that the legislature may exempt personal property, including buildings and improvements upon land, from taxation; No. 5, that the legislature may levy an acreage tax for hail indemnity. No. 6, that the state may issue or guarantee the payment of bonds, such bonds in excess of \$2,000,000 to be secured by first mortgages upon real estate or upon the property of state-owned utilities. The amount of bonds that may be issued upon the latter security is limited to \$10,000,000; No. 7, that the state, or any county or city, may make internal improvements, and may engage in any industry, enterprise or business not prohibited by the Constitution. . . . The three most cherished measures of the league, the ones regarding constitutional amendment, the debt limit, and public ownership—the ones upon which the league program was dependent—lacked from two to four hundred votes of receiving this majority. In the confusion the attorney general was appealed to. In a lengthy decision, backed by two decisions of the state supreme court, he maintained that the votes to be counted in deciding whether or not any of these amendments had passed were those votes only which had been cast for or against the particular amendment. Accepting this decision, the canvassing board by a three to two vote declared all ten amendments adopted."—E. T. Towne, *Ten constitutional amendments in North Dakota, notes and events (National Municipal Review, Jan., 1916)*.

1917-1918.—World War.—Public opinion.—Loyalty of Non-Partisan League.—"For months after the declaration of war the majority of the people of the Northwest remained in a state of haze as to its real nature. In the fall of 1917 Townley [organizer of the Non-Partisan League] went to Washington and conferred with the President, with George Creel, chairman of the national Committee on Public Information, and with others. . . . Mr. Creel was one of the few men in the government that saw that what in the West had been stupidly called disloyalty was nothing but lack of information. . . . The Committee on Public Information at once took up the task of enlightening those that had never considered the causes of the war, and from that time on there was no trouble, except with the actual German and pro-German element, of which North Dakota had no larger share than some other states. Mr. Creel afterward gave unequivocal testimony to the loyalty of North Dakota under the farmers' administration. . . . [He wrote later:] 'Three successive crop failures, and yet the farmers of that state oversubscribed the first Liberty Loan 140 per cent; the second, 70 per cent; and the third 76 per cent. With only one regiment at the outset, North

Dakota promptly recruited a second, and 3,887 men entered the service as volunteers. The draft records show that the cost per certified conscript in North Dakota was \$1.83 against an average of \$4.23 for all other states. In the last Red Cross drive North Dakota's allotment was \$200,000, and it subscribed \$575,000. Its Y. M. C. A. allotment was \$100,000, and it subscribed \$175,000.' In 1918 North Dakota increased its wheat acreage over 630,000 acres at the request of the government; it was one of the first states to decree that all persons between the ages of eighteen and fifty must be employed in essential industry; also to provide a moratorium protecting soldiers from foreclosure of loans."—C. H. Russell, *Story of the Non-Partisan League*, pp. 243-244.

1918.—Reclamation of lands by irrigation. See CONSERVATION OF NATURAL RESOURCES: United States: 1918.

1919.—Legislative program of Non-Partisan League.—In 1919 the state legislature, controlled by the League, finally succeeded in passing a series of measures to establish agrarian and industrial reforms. An industrial commission, composed of the governor, the secretary of agriculture, and the attorney-general, was authorized to administer state owned enterprises. These enterprises included grain elevators, mills, warehouses, a home-building association, an official newspaper, and a state bank, which was to serve as a clearing house to state banks, and to finance the above named businesses. In the issue which arose concerning the constitutionality of these laws, the supreme court supported the state against the taxpayers. (See NON-PARTISAN LEAGUE.) North Dakota also wrote on her statute books a workman's compensation law, a child labor law, an eight hour law for women, a mine inspection code, a hail insurance provision, an inheritance tax, and an income tax. A new classification of taxable property was made, exempting farm improvements from taxation. The opposition, which had also been opposed to the initiative and referendum amendment to the state constitution, now resorted to this means of checking the League's legislation, and called for a referendum election. The campaign was a bitter one, exciting nation-wide attention. The League program was carried by substantial majorities.

1919.—Minimum wage law passed. See LABOR REMUNERATION: 1910-1920.

1919.—Fargo bank scandal.—The Fargo bank scandal, the personal and political conflicts within the League which it revealed, was one of the causes for the decline of the Non-Partisan movement in North Dakota. Out of highly contradictory contemporary accounts of this event, the facts appear to be as follows: The State Bank of North Dakota, created by the League's legislation, had as a subsidiary corporation the Scandinavian-American Bank at Fargo, of which H. J. Hagen was president. "The bank carried loans of \$432,000 on four Non-Partisan League accounts, to which the greatest possible legal loan, on the best security, would have been \$36,000 on the basis of \$9,000 each. Money was taken out of the bank at the rate of about \$50,000 a month during the last five months it was in operation, increasing Non-Partisan League loans in that time from \$102,000 in April to \$432,000 in October. The bank had no record of the hundreds of thousands of dollars of post-dated checks and similar collateral held on league loans. An apparent credit of \$81,000 in a Duluth bank, maintained with the knowledge and approval of the directors, did not represent actual available assets, as under an agreement between

the banks this deposit in Duluth could be used only to protect certain notes which the Scandinavian-American Bank [had] endorsed 'without recourse' and transferred without actually selling them to the Duluth bank. In other words, false statements were made with the intention of deceiving the bank examiners and the public as to the amount and character of the bank's assets."

—E. T. Devine, *North Dakota, laboratory of the Non-Partisan League* (Survey, Mar. 6, 1920).—The industrial commission ordered a sudden investigation of the Fargo bank, and declared it insolvent. Upon the appeal of president Hagen to the supreme court, however, the state receiver was dismissed, the attorney-general and bank examiner were enjoined from interfering with the bank, and it was opened in a month. During its suspension the farmers brought in their deposits to show their faith in the institution. One faction declared the farmers' patronage was maintained by Townley's political pressure, which extended also to the state judiciary; the other, that the bank was the object of political persecution. However, the League itself closed the bank in 1921.

1920.—Non-Partisan League represented in Senate.—North Dakota in 1920 elected Edwin F. Ladd to the United States Senate. Professor Ladd, president of the agricultural state college of North Dakota, was the League's candidate, and his election carried the state's new policies into national politics.

1920.—Workmen's compensation law passed. See SOCIAL INSURANCE: Details for various countries: United States: 1920.

1921.—Difficulties of League fundamentally financial.—Friction within its ranks.—Recall of Governor Frazier.—The primary problem of the Non-Partisan League was to finance its state ownership plan. The state bank had been devised for this purpose. Having won out in the issue against the objecting taxpayers, the League now faced another crisis, in which it was ostensibly defeated. "Certain groups within the organization turned against it, and united with the old time Republicans. The Opposition put through an initiative measure which struck hard at the Bank of North Dakota by making it no longer necessary for local governing bodies to deposit their funds there. . . . As soon as the local governments began to withdraw their deposits . . . the Bank of North Dakota was obliged to call its deposits from the country banks. The latter in turn began to call the farmers' notes. But the farmers could not pay, and bank after bank went under."—*Nation*, Oct. 19, 1921, p. 438.—On October 28, 1921, counting on the dissatisfaction of the farmers involved in the financial difficulties of the League, its opponents used the constitutional privilege which it had established and demanded a recall of Governor Frazier, who was serving his third term. He was recalled by a majority vote of 11,000, and was succeeded by the Independent Republican candidate, R. A. Nestos. The outcome of the vote was due to complex economic and political conditions. "The recall campaign found the League program in its principal parts inoperative after nearly seven years of fighting and sticking by the farmers. The farmers were discouraged and disappointed. It seemed in vain that they had spent money and energy for seven years to win seven hotly contested State-wide primaries and elections. True, the State Bank had at last sold a considerable part of the State bonds to carry out the program, but this sale had been attacked during the recall campaign by another suit which promised to cause an-

other year's delay and uncertainty. In the meantime the State had had repeated crop failures, or near ones, and the after-the-war deflation had hit the farmers first and worse than any other industry. All this combined caused a sort of despair which made the siren promises of the Independents sound plausible. They promised to give the mill and elevator projects a fair trial, to continue under a separate commission the farm loan function of the Bank of North Dakota, and to give the State a conservative business administration which would turn out the radicals, dreamers, and experimenters, and thus restore State credit and prosperity. It was only necessary, on the basis of [the 1920] election figures, to convince about five thousand farmers who had been voting with the Leaguers that this was the way out. And the Independents did convince about that many, which accounts for the result. Some minor causes of the defeat should be mentioned. The ambitions of some of the North Dakota League leaders succeeded over a year ago, with the cry of 'more democracy in the League,' in eliminating Townley from active charge of League work in the State. The recall defense campaign did not have the benefit of his impelling personality and organizing genius. For the first time since the League began its work, Townley campaign meetings were not held. No other League speaker was able to draw the immense crowds that always featured his tours of the State. He was not in the State until election night. The next day at Fargo he read the returns which spelled defeat while awaiting the formal issuance of the commitment papers in Jackson County, Minnesota, marking the beginning of his ninety days' term for 'discouraging enlistments' during the war, recently upheld by the courts."—O. S. Morris, *Vote of the North Dakota farmers* (*Nation*, Nov. 9, 1921).

1922.—**The Elections.**—The League's candidates sent to United States Senate.—In November, 1922, the Independent Republicans defeated the Non-Partisans for the governorship, electing Governor Nestos. The vote was 110,321 to 81,048. Lynn Frazier, the former governor, was elected to the United States Senate over the Independent Democratic candidate, thus achieving for the Non-Partisans the distinction of holding the state's two seats in the United States Senate.

NORTH SEA, part of the north Atlantic ocean, between the east coast of Great Britain and the continent of Europe.

1908.—**North Sea and Baltic Agreement.**—In 1908, England, France, Germany, Denmark, Sweden and the Netherlands came to an agreement known as the North Sea and Baltic Agreement, concerning the maintenance of the *status quo* in the territories bordering upon the North sea. The treaty was signed at Berlin, where ratifications were deposited July 2, 1908, in the following terms: "Declaration.—The British, Danish, French, German, Netherland, and Swedish Governments, animated by the desire to strengthen the ties of neighbourly friendship existing between their respective countries, and to contribute thereby to the preservation of universal peace, and recognizing that their policy with respect to the regions bordering on the North Sea is directed to the maintenance of the existing territorial *status quo*,

"Declare that they are firmly resolved to preserve intact, and mutually to respect, the sovereign rights which their countries at present enjoy over their respective territories in those regions.

"Should any events occur which, in the opinion of any of the above-mentioned Governments, threaten the existing territorial *status quo* in the regions bordering upon the North Sea, the Powers Signatory of the present Declaration will communicate with each other in order to concert, by an agreement to be arrived at between them, such measures as they may consider it useful to take in the interest of the maintenance of the *status quo* as regards their possessions.

"The present Declaration shall be ratified with the least possible delay. The ratifications shall be deposited at Berlin as soon as may be, and, at the latest, on the 31st December, 1908. The deposit of each ratification shall be recorded in a Protocol, of which a certified copy shall be forwarded through the diplomatic channel to the Signatory Powers.

"Memorandum.—At the moment of signing the Declaration of this days' date, the Undersigned, by order of their respective Governments, consider it necessary to state—

"1. That the principle of the maintenance of the *status quo*, as laid down by the said Declaration, applies solely to the territorial integrity of all the existing possessions of the High Contracting Parties in the regions bordering upon the North Sea, and that consequently the Declaration can in no case be invoked where the free exercise of the sovereign rights of the High Contracting Parties over their above-mentioned respective possessions is in question;

"2. That, for the purposes of the said Declaration, the North Sea shall be considered to extend eastwards as far as its junction with the waters of the Baltic."—Great Britain, *Parliamentary Publications* (*Papers by command, Treaty series no. 35, 1907, and 23, 1908, Cd. 3754 and 4248*).

NORTHWEST TERRITORY OF THE UNITED STATES OF AMERICA.—"This northwestern land lay between the Mississippi, the Ohio, and the Great Lakes. It constitutes five of our large States and part of a sixth [namely, western Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, and Michigan]. But when independence was declared it was quite as much a foreign territory, considered from the standpoint of the old thirteen colonies, as Florida or Canada; the difference was that, whereas during the war we failed in our attempts to conquer Florida and Canada, we succeeded in conquering the Northwest. The Northwest formed no part of our country as it originally stood; it had no portion in the declaration of independence. It did not revolt; it was conquered. . . . We made our first important conquest during the Revolution itself."—T. Roosevelt, *Winning of the West*, v. 1, pp. 32-33.

1763.—Cession to Great Britain by Treaty of Paris.—Possession taken. See **SEVEN YEARS' WAR**: Treaties; **ILLINOIS**: 1765.

1763.—King's proclamation excluding settlers, and reserving whole interior of continent for Indians.—"On the 7th of October, 1763, George III. issued a proclamation, providing for four new governments or colonies, namely: Quebec, East Florida, West Florida, and Grenada [the latter embracing the "island of that name, together with the Grenadines, and the islands of Dominico, St. Vincent and Tobago"], and defining their boundaries. The limits of Quebec did not vary materially from those of the present province of that name, and those of East and West Florida comprised the present State of Florida and the country north of the Gulf of Mexico to the parallel of 31° latitude. It will be seen that no provision was made for the government of nine tenths of the new territory acquired by the Treaty of Paris, and the omission was not an oversight, but was intentional. The purpose was to reserve as crown lands the Northwest territory, the region north of the great lakes, and the country between the Alleghanies and the Mississippi, and to exclude them from settlement by the American colonies. They were left, for the time being, to the undisputed possession of the savage tribes. The king's 'loving subjects' were forbidden making purchases of land from the Indians, or forming any settlements 'westward of the sources of the rivers which fall into the sea from the West and Northwest,' 'and all persons who have willfully or inadvertently

seated themselves upon any lands' west of this limit were warned 'forthwith to remove themselves from such settlements.' Certain reasons for this policy were assigned in the proclamation, such as, 'preventing irregularities in the future, and that the Indians may be convinced of our justice,' etc.; but the real explanation appears in the Report of the Lords Commissioners for Trade and Plantations, in 1772, on the petition of Thomas Walpole and others for a grant of land on the Ohio. The report was drawn by Lord Hillsborough, the president of the board. The report states: 'We take leave to remind your lordships of that principle which was adopted by this Board, and approved and confirmed by his Majesty, immediately after the Treaty of Paris, viz.: the confining the western extent of settlements to such a distance from the sea-coasts as that those settlements should lie within reach of the trade and commerce of this kingdom, . . . and also of the exercise of that authority and jurisdiction which was conceived to be necessary for the preservation of the colonies in a due subordination to, and dependence upon, the mother country. And these we apprehend to have been the two capital objects of his Majesty's proclamation of the 7th of October, 1763. . . . The great object of colonizing upon the continent of North America has been to improve and extend the commerce, navigation, and manufacturers of this kingdom. . . . It does appear to us that the extension of the fur trade depends entirely upon the Indians being undisturbed in the possession of their hunting-grounds, and that all colonizing does in its nature, and must in its consequences, operate to the prejudice of that branch of commerce. . . . Let the Savages enjoy their deserts in quiet. Were they driven from their forests the peltry-trade would decrease.' . . . Such in clear and specific terms was the cold and selfish policy which the British crown and its ministers habitually pursued towards the American colonies; and in a few years it changed loyalty into hate, and brought on the American Revolution."—W. F. Poole, *West, from 1763 to 1783* (*Narrative and critical history of America*, v. 6, ch. 9).—"The king's proclamation [of 1763] shows that, in the construction put upon the treaty by the crown authorities, the ceded territory was a new acquisition by conquest. The proclamation was the formal appropriation of it as the king's domain, embracing all the country west of the heads or sources of the rivers falling into the Atlantic."—R. King, *Ohio*, ch. 5.—The text of the Proclamation of 1763 is in Force's *American archives*, series 4, v. 1, p. 172.

1784.—Jefferson's plan for new states.—"The condition of the northwestern territory had long been under the consideration of the House [the Congress of the Confederation]. Several committees had been appointed, and several schemes listened to, for laying out new States, but it was not till the middle of April [1784], that a resolution was finally reached. One plan was to divide the ceded and purchased lands into seventeen States. Eight of these were to lie between the banks of the Mississippi and a north and south line through the falls of the Ohio. Eight more were to be marked out between this line and a second one parallel to it, and passing through the western bank of the mouth of the Great Kanawha. What remained was to form the seventeenth State. But few supporters were found for the measure, and a committee, over which Jefferson presided, was ordered to place before Congress a new scheme of division. Chase and Howe assisted him, and the three devised a plan whereby the prairie-lands were to be parted out among ten new States. The divisions then marked down have utterly disappeared, and the names given to them become so forgotten that nine tenths of the population which has, in our time, covered the whole region with wealthy cities and prosperous villages, and turned it from a waste to a garden have never in their lives heard the words pronounced. Some were borrowed from the Latin and some from the Greek; while others were Latinized forms of the names the Indians had given to the rivers. The States were to be, as far as possible, two degrees of latitude in width and arranged in three tiers. The Mississippi and a meridian through the falls of the Ohio included the western tier. The meridian through the falls of the Ohio and a second through the mouth of the Great Kanawha were the boundaries of the middle tier. Between this and the Pennsylvania West Line lay the third tier. That vast tract stretching from the 45th parallel of latitude to the Lake of the Woods, and dense with forests of pine, of hickory, and of oak, they called Sylvania. It was the northern State of the western tier. To the long tongue of land separating the water of Michigan from the waters of Erie and Huron they gave the name Cherronesus. A narrow strip, not more than two degrees of latitude in width, and stretching from Lake Michigan to the Mississippi, was called Michigania. As marked down on their rude maps, Michigania lay under Sylvania, in the very heart of what is now Wisconsin. South of this to the 41st parallel of latitude was Assenisipia, a name derived from Assenisipi, the Indian title of the river now called the Rock. Eastward, along the shore of Lake Erie, the country was named Metropotamia. It took the name Mother of Rivers from the belief that within its boundary were the fountains of many rivers, the Muskingum, the two Miamis of Ohio, the Wabash, the Illinois, the Sandusky, and the Miami of the Lake. That part of Illinois between the 39th and 41st parallels was called, from the river which waters it, Illinoia. On to the east was Saratoga, and beyond this lay Washington, a broad and level tract shut in by the Ohio river, the waters of the lake, and the boundaries of Pennsylvania. Under Illinoia and Saratoga, and stretching along the Ohio, was the ninth State. Within its confines the waters of the Wabash, the Sawane, the Tanissee, the Illinois, and the Ohio were mingled with the waters

of the Mississippi and Missouri. The committee therefore judged that a fitting name would be Polypotamia. Pelisipia was the tenth State. It lay to the east of Polypotamia, and was named from Pelisipi, a term the Cherokees often applied to the river Ohio. At the same time that the boundaries of the new States were defined, a code of laws was drawn up which should serve as a constitution for each State, till 20,000 free inhabitants acquired the right of self-government. The code was in no wise a remarkable performance, yet there were among its articles two which cannot be passed by in silence. One provided for the abolition of slavery after the year 1800. The other announced that no one holding an hereditary title should ever become a citizen of the new States. Each was struck out by the House. Yet each is deserving of notice. The one because it was the first attempt at a national condemnation of slavery, the other because it was a public expression of the dread with which our ancestors beheld the growth of the Society of the Cincinnati."—J. B. McMaster, *History of the people of the United States*, v. 1, ch. 2.—The report of Jefferson's committee "was recommended to the same committee on the 17th of March, and a new one was submitted on the 22d of the same month. The second report agreed in substance with the first. The principal difference was the omission of the paragraph giving names to the States to be formed out of the Western Territory." After striking out the clauses prohibiting slavery after the year 1800 and denying citizenship to all persons holding hereditary titles, the Congress adopted the report, April 23, 1784. "Thus the substance of the report of Mr. Jefferson of a plan for the government of the Western Territory (without restrictions as to slavery) became a law, and remained so during 1784 to 1787, when these resolutions were repealed in terms by the passage of the ordinance for the government of the Territory of the United States northwest of the river Ohio."—T. Donaldson, *Public domain: Its history*, pp. 148-149.

1786-1788.—Ohio Company of Revolutionary soldiers and their land purchase.—Settlement at Marietta.—"The Revolutionary War had hardly closed before thousands of the disbanded officers and soldiers were looking anxiously to the Western lands for new homes, or for means of repairing their shattered fortunes. In June, 1783, a strong memorial was sent to Congress asking a grant of the lands between the Ohio and Lake Erie. Those who lived in the South were fortunate in having immediate access to the lands of Kentucky, Tennessee, and the back parts of Georgia. The strife in Congress over the lands of the Northwest delayed the surveys and the bounties so long that the soldiers of the North almost lost hope. . . . [Finally, there] was a meeting of officers and soldiers, chiefly of the Massachusetts, Rhode Island and Connecticut lines, at Boston, March 1, 1786, when they formed a new Ohio Company for the purchase and settlement of Western lands, in shares of \$1,000. General [Rufus] Putnam, General Samuel H. Parsons, and the Rev. Manasseh Cutler, were made the directors, and selected for their purchase the lands on the Ohio River situated on both sides of the Muskingum, and immediately west of the Seven Ranges. The treasury board in those days were the commissioners of public lands, but with no powers to enter into absolute sales unless such were approved by Congress. Weeks and months were lost in waiting for a quorum of that body to assemble. This was effected on the 11th of July, and Dr.

Cutler, deputed by his colleagues, was in attendance, but was constantly baffled in pursuing his objects. . . . The members were disposed to insert conditions which were not satisfactory to the Ohio Company. But the doctor carried his point by formally intimating that he should retire, and seek better terms with some of the States, which were offering their lands at half the price Congress was to receive. The grant to the Ohio Company, upon the terms proposed, was voted by Congress, and the contract formally signed October 27, 1787, by the treasury board, and by Dr. Cutler and Winthrop Sargent, as agents of the Ohio Company. Two companies, including surveyors, boat-builders, carpenters, smiths, farmers and laborers, forty-eight persons in all, with their outfit, were sent forward in the following months of December and January, under General Putnam as leader and superintendent. They united in February on the Youghioghny River and constructed boats. . . . Embarking with their stores they descended the Ohio, and on the 7th of April, 1788, landed at the Muskingum. On the upper point, opposite Fort Harmar, they founded their town, which at Boston had first been named Adelpia. At the first meeting of the directors, held on the ground July 2d, the name of Marietta was adopted, in honor of the French Queen Marie Antoinette, and compounded of the first and last syllables."—R. King, *Ohio*, ch. 8.

Hulbert, *Records of the original proceedings of the Ohio Company (Marietta College Historical Collections, v. 1, pp. xvii, xviii, ciii)*.

1787.—Great ordinance for its government.—Perpetual exclusion of slavery.—"Congress at intervals discussed the future of this great domain, but for a while little progress was made except to establish that Congress could divide the territory as might seem best. Nathan Dane came forward with a motion for a committee to plan some temporary scheme of government. A committee on this point reported (May 10, 1786) that the number of States should be from two to five, to be admitted as States according to Jefferson's proposition, but the question of slavery in them was left open. Nothing definite was done till a committee—Johnson of Connecticut, Pinckney of South Carolina, Smith of New York, Dane of Massachusetts, and Henry of Maryland—reported on April 26, 1787, 'An ordinance for the government of the Western territory,' and after various amendments it was fairly transcribed for a third reading, May 10th. Further consideration was now delayed until July. It was at this point that Manasseh Cutler appeared in New York, commissioned to buy land for the Ohio Company in the region whose future was to be determined by this ordinance, and it was very likely, in part, by his influence that those features of the perfected ordinance as passed five days later, and which has given it its general fame, were introduced. On July 10th the bill was referred to a new committee of which a majority were Southern men, Carrington of Virginia taking the chairmanship from Johnson; Dane and Smith were retained, but Richard Henry Lee and Kean of South Carolina supplanted Pinckney and Henry. This change was made to secure the Southern support; on the other hand, acquiescence in the wishes of Northern purchasers of lands was essential in any business outcome of the movement. 'Up to this time,' says Poole, 'there were no arti-

cles of compact in the bill, no anti-slavery clause, nothing about liberty of conscience or of the press, the right of habeas corpus, or trial by jury, or the equal distribution of estates. The clause that, "religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall be forever encouraged," was not there. These omissions were the New England ideas, which had long before this been engrafted on the Constitution of Massachusetts. This new committee reported the bill, embodying all these provisions except the anti-slavery clause, on the 11th, and the next day this and other amendments were made. On the 13th, but one voice was raised against the bill on its final passage, and that came from Yates of New York. Poole intimates that it was the promise of the governorship of the territory under the ordinance which induced St. Clair, then President of Congress, to lend it his countenance. The promise, if such it was, was fulfilled, and St. Clair became the first governor."—J. Winsor and E. Channing, *Territorial acquisitions and divisions (Narrative and critical history of America, v. 7, appendix)*.

Dunn, ed., *Slavery petitions (Indiana Historical Society, v. 2, no. 12)*.

The following is the text of the "Ordinance for the Government of the Territory of the United States Northwest of the River Ohio," commonly known as the "Ordinance of 1787":

Be it ordained by the United States in Congress assembled, That the said territory, for the purposes of temporary government, be one district, subject, however, to be divided into two districts, as future circumstances may, in the opinion of Congress, make it expedient. Be it ordained by the authority aforesaid, That the estates, both of resident and non-resident proprietors in the said territory, dying intestate, shall descend to, and be distributed among, their children, and the descendants of a deceased child, in equal parts; the descendants of a deceased child or grandchild to take the share of their deceased parent in equal parts among them: And where there shall be no children or descendants, then in equal parts to the next of kin in equal degree; and, among collaterals, the children of a deceased brother or sister of the intestate shall have, in equal parts among them, their deceased parents' share; and there shall, in no case, be a distinction between kindred of the whole and half-blood; saving, in all cases, to the widow of the intestate her third part of the real estate for life, and one-third part of the personal estate; and this law, relative to descents and dower, shall remain in full force until altered by the legislature of the district. And, until the governor and judges shall adopt laws as hereinafter mentioned, estates in the said territory may be devised or bequeathed by wills in writing, signed and sealed by him or her, in whom the estate may be (being of full age,) and attested by three witnesses; and real estates may be conveyed by lease and release, or bargain and sale, signed, sealed, and delivered by the person, being of full age, in whom the estate may be, and attested by two witnesses, provided such wills be duly proved, and such conveyances

be acknowledged, or the execution thereof duly proved, and be recorded within one year after proper magistrates, courts, and registers shall be appointed for that purpose; and personal property may be transferred by delivery; saving, however to the French and Canadian inhabitants, and other settlers of the Kaskaskias, St. Vincents, and the neighboring villages who have heretofore professed themselves citizens of Virginia, their laws and customs now in force among them, relative to the descent and conveyance of property. Be it ordained by the authority aforesaid, That there shall be appointed, from time to time, by Congress, a governor, whose commission shall continue in force for the term of three years, unless sooner revoked by Congress; he shall reside in the district, and have a free hold estate therein in 1,000 acres of land, while in the exercise of his office. There shall be appointed, from time to time, by Congress, a secretary, whose commission shall continue in force for four years unless sooner revoked; he shall reside in the district, and have a freehold estate therein in 500 acres of land, while in the exercise of his office; it shall be his duty to keep and preserve the acts and laws passed by the legislature, and the public records of the district, and the proceedings of the governor in his Executive department; and transmit authentic copies of such acts and proceedings, every six months, to the Secretary of Congress: There shall also be appointed a court to consist of three judges, any two of whom to form a court, who shall have a common law jurisdiction, and reside in the district, and have each therein a freehold estate in 500 acres of land while in the exercise of their offices; and their commissions shall continue in force during good behavior. The governor and judges, or a majority of them, shall adopt and publish in the district such laws of the original States, criminal and civil, as may be necessary and best suited to the circumstances of the district, and report them to Congress from time to time: which laws shall be in force in the district until the organization of the General Assembly therein, unless disapproved of by Congress; but, afterwards, the legislature shall have authority to alter them as they shall think fit. The governor, for the time being, shall be commander-in-chief of the militia, appoint and commission all officers in the same below the rank of general officers; all general officers shall be appointed and commissioned by Congress. Previous to the organization of the General Assembly, the governor shall appoint such magistrates and other civil officers, in each county or township, as he shall find necessary for the preservation of the peace and good order in the same: After the General Assembly shall be organized, the powers and duties of the magistrates and other civil officers, shall be regulated and defined by the said assembly; but all magistrates and other civil officers, not herein otherwise directed, shall, during the continuance of this temporary government, be appointed by the governor. For the prevention of crimes and injuries, the laws to be adopted or made shall have force in all parts of the district, and for the execution of process, criminal and civil the governor shall make proper divisions thereof; and he shall proceed, from time to time, as circumstances may require, to lay out the parts of the district in which the Indian titles shall have been extinguished, into counties and townships, subject, however, to such alterations as may thereafter be made by the legislature. So soon as there shall be 5,000 free male inhabitants of full age in the district, upon giving proof

thereof to the governor, they shall receive authority, with time and place, to elect representatives from their counties or townships to represent them in the General Assembly: Provided, That, for every 500 free male inhabitants, there shall be one representative, and so on progressively with the number of free male inhabitants, shall the right of representation increase, until the number of representatives shall amount to 25; after which, the number and proportion of representatives shall be regulated by the legislature: Provided, That no person be eligible or qualified to act as a representative unless he shall have been a citizen of one of the United States three years, and be a resident in the district, or unless he shall have resided in the district three years; and, in either case, shall likewise hold in his own right, in fee simple, 200 acres of land within the same: Provided, also, That a freehold in 50 acres of land in the district, having been a citizen of one of the States, and being resident in the district, or the like freehold and two years residence in the district, shall be necessary to qualify a man as an elector of a representative. The representatives thus elected, shall serve for the term of two years; and, in case of death of a representative, or removal from office, the governor shall issue a writ to the county or township for which he was a member, to elect another in his stead, to serve for the residue of the term. The General Assembly, or Legislature, shall consist of the governor, legislative council, and a house of representatives. The legislative council shall consist of five members, to continue in office five years, unless sooner removed by Congress; any three of whom to be a quorum: and the members of the council shall be nominated and appointed in the following manner, to wit: As soon as representatives shall be elected, the governor shall appoint a time and place for them to meet together; and, when met, they shall nominate ten persons, residents in the district, and each possessed of a freehold in 500 acres of land, and return their names to Congress; five of whom Congress shall appoint and commission to serve as aforesaid; and, whenever a vacancy shall happen in the council, by death or removal from office, the house of representatives shall nominate two persons, qualified as aforesaid, for each vacancy, and return their names to Congress; one of whom Congress shall appoint and commission for the residue of the term. And every five years, four months at least before the expiration of the time of service of the members of council, the said house shall nominate ten persons, qualified as aforesaid, and return their names to Congress; five of whom Congress shall appoint and commission to serve as members of the council five years, unless sooner removed. And the governor, legislative council, and house of representatives, shall have authority to make laws in all cases, for the good government of the district, not repugnant to the principles and articles in this ordinance established and declared. And all bills, having passed by a majority in the house, and by a majority in the council, shall be referred to the governor for his assent; but no bill, or legislative act whatever, shall be of any force without his assent. The governor shall have power to convene prorogue, and dissolve the General Assembly, when, in his opinion, it shall be expedient. The governor, judges, legislative council, secretary, and such other officers as Congress shall appoint in the district, shall take an oath or affirmation of fidelity and of office; the governor before the President of Congress, and all other officers before the governor. As soon as a legisla-

ture shall be formed in the district, the council and house assembled in one room, shall have authority by joint ballot, to elect a delegate to Congress, who shall have a seat in Congress, with a right of debating, but not of voting during this temporary government. And, for extending the fundamental principles of civil and religious liberty, which form the basis whereon these republics, their laws and constitutions are erected; to fix and establish those principles as the basis of all laws, constitutions, and governments, which forever hereafter shall be formed in the said territory: to provide also for the establishment of States, and permanent government therein, and for their admission to a share in the federal councils on an equal footing with the original States, at as early periods as may be consistent with the general interest.

It is hereby ordained and declared by the authority aforesaid, That the following articles shall be considered as articles of compact between the original States and the people and States in the said territory and forever remain unalterable, unless by common consent, to wit:

Article 1st. No person, demeaning himself in a peaceable and orderly manner, shall ever be molested on account of his mode of worship or religious sentiments, in the said territory.

Art. 2d. The inhabitants of the said territory shall always be entitled to the benefits of the writ of habeas corpus, and of the trial by jury; of a proportionate representation of the people in the legislature; and of judicial proceedings according to the course of the common law. All persons shall be bailable, unless for capital offences, where the proof shall be evident or the presumption great. All fines shall be moderate; and no cruel or unusual punishments shall be inflicted. No man shall be deprived of his liberty or property, but by the judgment of his peers or the law of the land; and, should the public exigencies make it necessary, for the common preservation, to take any person's property, or to demand his particular services, full compensation shall be made for the same. And, in the just preservation of rights and property, it is understood and declared, that no law ought ever to be made, or have force in the said territory, that shall, in any manner whatever, interfere with or affect private contracts or engagements, bona fide, and without fraud, previously formed.

Art. 3d. Religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged. The utmost good faith shall always be observed towards the Indians; their lands and property shall never be taken from them without their consent; and, in their property rights and liberty, they shall never be invaded or disturbed, unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity, shall, from time to time, be made for preventing wrongs being done to them, and for preserving peace and friendship with them.

Art. 4th. The said territory, and the States which may be formed therein, shall forever remain a part of this confederacy of the United States of America, subject to the Articles of Confederation, and to such alterations therein as shall be constitutionally made; and to all the acts and ordinances of the United States in Congress assembled, conformable thereto. The inhabitants and settlers in the said territory shall be subject to pay a part of the federal debts contracted or to be contracted, and a proportional part of the expenses of government, to be apportioned on them by Congress ac-

ording to the same common rule and measure by which apportionments thereof shall be made on the other States; and the taxes, for paying their proportion, shall be laid and levied by the authority and direction of the legislatures of the district or districts, or new States, as in the original States, within the time agreed upon by the United States in Congress assembled. The legislatures of those districts or new States, shall never interfere with the primary disposal of the soil by the United States in Congress assembled, nor with any regulations Congress may find necessary for securing the title in such soil to the bona fide purchasers. No tax shall be imposed on lands the property of the United States; and in no case, shall non-resident proprietors be taxed higher than residents. The navigable waters leading into the Mississippi and St. Lawrence, and the carrying places between the same, shall be common highways, and forever free, as well to the inhabitants of the said territory as to the citizens of the United States, and those of any other States that may be admitted into the Confederacy, without any tax, impost, or duty, therefor.

Art. 5th. There shall be formed in the said territory, not less than three nor more than five States; and the boundaries of the States, as soon as Virginia shall alter her act of cession, and consent to the same, shall become fixed and established as follows, to wit: The Western State in the said territory, shall be bounded by the Mississippi, the Ohio, and Wabash rivers; a direct line drawn from the Wabash and Post St. Vincent's, due North, to the territorial line between the United States and Canada; and, by the said territorial line, to the Lake of the Woods and Mississippi. The middle State shall be bounded by the said direct line, the Wabash from Post Vincent's, to the Ohio; by the Ohio, by a direct line, drawn due North from the mouth of the Great Miami, to the said territorial line, and by the said territorial line. The Eastern State shall be bounded by the last mentioned direct line, the Ohio, Pennsylvania, and the said territorial line: Provided, however, and it is further understood and declared, that the boundaries of these three States shall be subject so far to be altered, that, if Congress shall hereafter find it expedient, they shall have authority to form one or two States in that part of the said territory which lies North of an East and West line drawn through the Southerly bend or extreme of lake Michigan. And, whenever any of the said States shall have 60,000 free inhabitants therein, such State shall be admitted, by its delegates, into the Congress of the United States, on an equal footing with the original States in all respects whatever, and shall be at liberty to form a permanent constitution and State government: Provided, the constitution and government so to be formed, shall be republican, and in conformity to the principles contained in these articles; and, so far as it can be consistent with the general interest of the confederacy, such admission shall be allowed at an earlier period, and when there may be a less number of free inhabitants in the State than 60,000.

Art. 6th. There shall be neither slavery nor involuntary servitude in the said territory, otherwise than in the punishment of crimes, whereof the party shall have been duly convicted: Provided, always, That any person escaping into the same, from whom labor or service is lawfully claimed in any one of the original States, such fugitive may be lawfully reclaimed and conveyed to the person claiming his or her labor or service as aforesaid. Be it ordained by the authority afore-

said, That the resolutions of the 23d of April, 1784, relative to the subject of this ordinance, be, and the same are hereby, repealed and declared null and void. Done by the United States, in Congress assembled, the 13th day of July, in the year of our Lord 1787, and of their sovereignty and independence the twelfth.

1788-1802.—Extinguished by divisions.—Creation of Territory of Indiana and State of Ohio.—“Arthur St. Clair was appointed governor by the Congress [of the Confederation] February 1, 1788, and Winthrop Sargent secretary. August 7th, 1789, Congress [under the federal constitution], in view of the new method of appointment of officers as provided in the Constitution, passed an amendatory act to the Ordinance of 1787, providing for the nomination of officers for the Territory by the President. . . . August 8, 1789, President Washington sent to the Senate the names of Arthur St. Clair for governor, Winthrop Sargent for secretary, and Samuel Holden Parsons, John Cleves Symmes, and William Barton, for judges. . . . They were all confirmed. President Washington in this message designated the country as ‘The Western Territory.’ The supreme court was established at Cincinnati (. . . named by St. Clair in honor of the Society of the Cincinnati, he having been president of the branch society in Pennsylvania). St. Clair remained governor until November 22, 1802. Winthrop Sargent afterwards in 1798, went to Mississippi as governor of that Territory. William Henry Harrison became secretary in 1797, representing it in Congress in 1790-1800, and he became governor of the Territory of Indiana in 1800.”—T. Donaldson, *Public domain*, pp. 159-160.—“The Northwest Territory was divided by an act of Congress of May 7, 1800; and all that part lying west of a line beginning at the Ohio opposite the mouth of the Kentucky River, and running thence to Fort Recovery, and thence north to the Canadian border, was called Indiana Territory. [See INDIANA: 1800-1818; MICHIGAN: 1800-1802.] The reason for this division is to be found in the fact that Congress desired to admit Ohio into the Union as soon as possible; and since the eastern portion of the Territory had grown very rapidly in population this desire might soon be fulfilled. Moreover, it was becoming increasingly difficult to govern the older part of the Territory on an equal basis with the large western region, which was still for the most part a wilderness with only a few scattered settlements.”—D. G. McCarty, *Territorial governors of the Old Northwest*, p. 75.—The eastern portion now became the ‘Territory Northwest of the river Ohio,’ with its capital at Chillicothe. This portion, Nov. 29, 1803, was admitted into the Union. . . . The territory northwest of the river Ohio ceased to exist as a political division after the admission of the State of Ohio into the Union, Nov. 29, 1802, although in acts of Congress it was frequently referred to and its forms affixed by legislation to other political divisions.”—T. Donaldson, *Public domain*, p. 160.

1790-1795.—Indian war.—Disastrous expeditions of Harmar and St. Clair, and Wayne's decisive victory.—Greenville Treaty.—“The Northwestern Indians, at Washington's installation, numbered according to varying estimates, from

20,000 to 40,000 souls. Of these the Wabash tribes had for years been the scourge of the new Kentucky settlers. So constant, indeed, was bloodshed and retaliation, that the soil of this earliest of States beyond the mountains acquired the name of 'the dark and bloody ground.' A broad river interposed no sufficient barricade to these deadly encounters. . . . What with their own inadmissible claims to territory, and this continuous war to the knife, all the tribes of the Northwestern country were now so maddened against the United States that the first imperative necessity, unless we chose to abandon the Western settlements altogether, was to chastise the Indians into submission. . . . Brigadier-General Harmar, who commanded the small force of United States regulars in the Territory, was . . . a Revolutionary veteran. Our frontier military stations extended as far as Vincennes, on the Wabash, which Major Hamtranck, a Canadian Frenchman, commanded. The British commandant was at Detroit, whence he communicated constantly with the Governor-General of the provinces, Lord Dorchester, by whose instigation the Northwestern Indians at this period were studiously kept at enmity with the United States. . . . A formidable expedition against the Indians was determined upon by the President and St. Clair [Governor of the Northwest Territory]; and in the fall of the year [1799] General Harmar set out from Fort Washington for the Miami country, with a force numbering somewhat less than 1,500, near three-fourths of whom were militia raised in Western Pennsylvania and Kentucky. [Successful at first, the campaign ended in a disastrous defeat on the Maumee.]"—J. Schouler, *History of the United States*, v. 1, ch. 2, sec. 1.—"The remnant of his army which Harmar led back to Cincinnati [Fort Washington] had the unsubdued savages almost continually at their heels. As a rebuke to the hostile tribes the expedition was an utter failure, a fact which was soon made manifest. Indian attacks on the settlers immediately became bolder. . . . Every block house in the territory was soon almost in a state of siege. . . . Washington was authorized to raise an army of 3,000 men for the protection of the Northwest. The command of this army was given to St. Clair. At the same time a corps of Kentucky volunteers was selected and placed under General Charles Scott. The Kentuckians dashed into the Wabash country, scattered the Indians, burned their villages and returned with a crowd of prisoners. The more pretentious expedition of St. Clair was not to be accomplished with so fine a military flourish. Like Harmar's army, that led by St. Clair was feeble in discipline, and disturbed by jealousies. The agents of the Government equipped the expedition in a shameful manner, delivering useless muskets, supplying powder that would scarcely burn, and neglecting entirely a large number of necessary supplies; so that after St. Clair with his 2,300 regulars and 600 militia had marched from Ludlow's Station, north of Cincinnati, he found himself under the necessity of delaying the march to secure supplies. The militia deserted in great numbers. For the purpose of capturing deserters and bringing up belated supplies, one of the best regiments in the army was sent southward. While waiting on one of the branches of the Wabash for the return of this regiment the main force was on the fourth of November, 1791, surrounded and attacked by the lurking Indians. At the first yell of the savages scores of the terrified militia dropped their guns and bolted. St. Clair, who for some days had been too ill to sit upon a horse, now exerted all his strength in an effort to rally

the wavering troops. His horses were all killed, and his hat and clothing were ripped by the bullets. But the lines broke, the men scattered and the artillery was captured. Those who stood their ground fell in their tracks till the fields were covered by 600 dead and dying men. At last a retreat was ordered. . . . For many miles, over a track littered with coats, hats, boots and powder horns, the whooping victors chased the routed survivors of St. Clair's army. It was a ghastly defeat. The face of every settler in Ohio blanched at the news. Kentucky was thrown into excitement, and even Western Pennsylvania nervously petitioned for protection. St. Clair was criticised and insulted. A committee of Congress found him without blame. But he had been defeated, and no amount of reasoning could unlink his name from the tragedy of the dark November morning. Every effort was made to win over the Indians before making another use of force. The Government sent peace messengers into the Northwest. In one manner or another nearly every one of the messengers was murdered. The Indians who listened at all would hear of no terms of peace that did not promise the removal of the whites from the northern side of the Ohio. The British urged the tribes to make this extreme demand. Spain also sent mischief-makers into the camps of the exultant red men. . . . More bloodshed became inevitable; and in execution of this last resort came one of the most popular of the Revolutionary chieftains—"Mad Anthony" Wayne. Wayne led his army from Cincinnati in October of 1793. He advanced carefully in the path taken by St. Clair, found and buried the bones of St. Clair's 600 lost, wintered at Greenville, and in the summer of 1794 moved against the foe with strong reinforcements from Kentucky. After a preliminary skirmish between the Indians and the troops, Wayne, in accordance with his instructions, made a last offer of peace. The offer was evasively met, and Wayne pushed on. On the morning of Wednesday the twentieth of August, 1794, the 'legion' came upon the united tribes of Indians encamped on the north bank of the Maumee and there, near the rapids of the Maumee, the Indians were forced to face the most alert and vigorous enemy they had yet encountered. The same daring tactics that had carried Stony Point and made Anthony Wayne historic were here directed against the Indian's timber coverts. . . . Encouraging and marshaling the Indians were painted Canadian white men bearing British arms. Many of these fell in the heaps of dead and some were captured. When Wayne announced his victory he declared that the Indian loss was greater than that incurred by the entire Federal army in the war with Great Britain. Thus ended the Indian reign of terror. After destroying the Indian crops and possessions, in sight of the British fort, Wayne fell back to Greenville and there made the celebrated treaty by which on August 3, 1795, the red men came to a permanent peace with the Thirteen Fires. From Cincinnati to Campus Martius Wayne's victory sent a thrill of relief. The treaty, ceding to the Union two-thirds of the present State, guaranteed the safety of all settlers who respected the Indians' rights, and set in motion once more the machinery of immigration."—A. NORUMBEGA.—"Norembega, or Norumbega, more properly called Arambec (Hakluyt, III. 167), was, in Ramusio's map, the country embraced within Nova Scotia, southern New Brunswick, and a part of Maine. De Laet confines it to a district about the mouth of the Penobscot. Wytfleit and other early writers say that it had a capital city of the same name; and in several old maps this fabulous metropolis is laid down, with towers and churches, on the river Penobscot. The word is of Indian origin."—F. Parkman, *Pioneers of France in the New World: Champlain, ch. 1, foot-note*.—See also CANADA: Names.—On Gastaldi's map of New France, made in 1550, "the name 'La Nuova Francia' is written in very large letters, indicating probably that this name is meant for the entire country. The name 'Terra de Nurumbega' is written in smaller letters, and appears to be attached only to the peninsula of Nova Scotia. Crignon, however, the author of the discourse which this map is intended to illustrate, gives to this name a far greater extent. He says: 'Going beyond the cape of the Bretons, there is a country contiguous to this cape, the coast of which trends to the west a quarter southwest to the country of Florida, and runs along for a good 500 leagues; which coast was discovered fifteen years ago by Master Giovanni da Verrazano, in the name of the king of France and of Madame la Regente; and this country is called by many 'La Francese,' and even by the Portuguese themselves; and its end is toward Florida under 78° W., and 38° N. . . . The country is named by the inhabitants 'Nurumbega'; and between it and Brazil is a great gulf, in which are the islands of the West Indies, discovered by the Spaniards. From this it would appear that, at the time of the discourse, the entire east coast of the United States, as far as Florida, was designated by the name of Nurumbega. Afterwards, this name was restricted to New England; and, at a later date, it was applied only to Maine, and still later to the region of the Penobscot. . . . The name 'Norumbega,' or 'Arambec,' in Hakluyt's time, was applied to Maine, and sometimes to the whole of New England."—J. G. Kohl, *History of the discovery of Maine (Maine Historical Society Collections, series 2, v. 1, pp. 231, 283)*.—"The story of Norumbega is invested with the charms of fable and romance. The name is found in the map of Hieronimus da Verrazano of 1529, as 'Aranbega,' being restricted to a definite and apparently unimportant locality. Suddenly, in 1530, Norumbega appears in the narrative of the Dieppe Captain as a vast and opulent region, extending from Cape Breton to the Cape of Florida. About three years later Allefonsce described the 'River of Norumbega,' now identified with the Penobscot, and treated the capital of the country as an important market for the trade in fur. Various maps of the period of Allefonsce confine the name of Norumbega to a distinct spot; but Gastaldi's map, published by Ramusio in 1556,—though modelled after Verrazano's, of which indeed it is substantially an extract,—applies the name to the region lying be-

tween Cape Breton and the Jersey coast. From this time until the seventeenth century Norumbega was generally regarded as embracing all New England, and sometimes portions of Canada, though occasionally the country was known by other names. Still, in 1582, Lok seems to have thought that the Penobscot formed the southern boundary of Norumbega, which he shows on his map as an island; while John Smith, in 1620, speaks of Norumbega as including New England and the region as far south as Virginia. On the other hand Champlain, in 1605, treated Norumbega as lying within the present territory of Maine. He searched for its capital on the banks of the Penobscot, and as late as 1669 Heylin was dreaming of the fair city of Norumbega. Grotius, for a time at least, regarded the name as of Old Northern origin and connected with 'Norbergia.' It was also fancied that a people resembling the Mexicans once lived upon the banks of the Penobscot. Those who have labored to find an Indian derivation for the name say that it means 'the place of a fine city.' At one time the houses of the city were supposed to be very splendid, and to be supported upon pillars of crystal and silver."—B. F. De Costa, *Norumbega and its English explorers (Narrative and critical history of America, v. 3, ch. 6)*.

NORWAY: Geographic description.—Area.—Population.—Resources.—Physical features.—General survey.—"Norway forms the north-western part of the Scandinavian peninsula, which is separated from Northern Europe by the Baltic. . . . The area is 124,495 sq. miles. . . . Its width in the south is about 250 miles, in the northern half only about 60 miles, with a little more breadth again in Finmarken. The distance from the head of the deep fjords in Nordland to the frontier is considerably less; at one place, Rombaken, at the head of the Vestfjorden, where the future Ofot railway is to be laid, the width is even as little as 5 miles. Norway, as a whole, is thus a long, narrow coast-country on the North Atlantic. The length of the coast round the outer belt of rocks is 1700 miles—about equal to that of France, although the latter country is more than half as large again—; the entire shore-line, including the fjords in and out, and the large islands may be set down as 12,000 miles, and would stretch half way round the globe. . . . The most thickly populated part of Norway is in the south, where 2/3 of the population live. The cultural development of the country has been associated with the lands to the south of the North Sea—Denmark and North Germany, and to the west—Great Britain. Financially, 7/10 of the country's commercial transactions with foreign countries are with those bordering on the North Sea. The general geographical situation of Norway as a separate, independent link in the chain of nations of kindred race round this north-western European inland sea, is thereby indicated."—S. Konow and K. Fischer, *Norway (Official publication for the Paris exhibition, 1900, pp. 1, 7)*.—See also EUROPE: Modern: Political map.

995-1000.—Reign and death of Olav.—Introduction of Christianity.—Possession of Norway by Denmark and Sweden.—About 995 "Olav" Trygvesson, a descendant of Harald Haarfagre, came to the country, and was immediately chosen king by the Tronders. Olav is one of the most brilliant figures in Norwegian history. After a

himself, mortally wounded, sought a grave beneath the waves (9th September, 1000). Norway was now divided between the Danish and Swedish kings and Earl Erik; but the kings gave up their shares to Erik and his brother Svein, who governed them as their vassals. When the Danish king, Knud den Store ('the Great') went to invade England, he called upon Earl Erik to assist him. The Earl obeyed the call, and never saw Norway again."—S. Konow and K. Fischer, *Norway*, p. 130.

1015-1030.—Rule of Olav, son of Harald.—"In the spring of 1015, Olav Haraldsson, a descendant of Harald Haarfagre, returned to Norway from a viking expedition, determined to carry on the life-work of his kinsman, Olav Trygvesson. With

HARDANGER FJORD

romantic boyhood, he had distinguished himself as a leader of a viking army that had ravaged England. Immediately before his coming to Norway, he had embraced Christianity; and now, after becoming king of the country, he began to enforce the adoption of the Christian faith. In the course of a few years, he had, in true viking fashion, brought the population of the entire coast, from Viken up to the borders of Finmarken, under the dominion of the White Christ. His proclamation of Christianity extended also to the Norwegian settlers in the Orkney and Faroe Isles, to Iceland, and to Greenland, then just discovered. When returning from an expedition to Venden, Olav was attacked by an army of superior force, that had been gathered against him by Earl Haakon's son Erik, the Swedish king Olav Skotkonung, and the Danish king Svend Tjageskæg. After a most heroic defence, his men were nearly all killed, and he

the aid of the Upland kings, he succeeded in overthrowing the earls' rule and the foreign dominion; and in Trondhjem, where the chief power of all the land appeared to him to dwell, homage was done to him as king of Norway. Olav brought the little Upland kings under the Norwegian dominion, and sought in every way to place the long-inherited power of the great chieftains under that of the king. . . . By his hard-handed policy, Olav Haraldsson soon aroused a strong opposition against himself. The rebels sought the aid of the Danish king, Knud the Great, who came with an army to Norway in 1028, and received homage at the Orething. Olav fled to Russia, and when, some time after, he attempted to win back his kingdom, he was slain by the chieftains at Stiklestad in Værdalen (20th July, 1030). Not long after, he was regarded as a holy man."—S. Konow and K. Fischer, *Norway*, p. 131.

1035-1240.—Period of greatness.—“It is not without reason that the century which now followed, after Olav's son Magnus had ascended the throne in 1035, has been called the period of Norway's greatness. The kingdom was now, by the unity brought about between the royal power and the aristocracy, enabled to extend its influence to the world around. . . . Olav the Holy's son Magnus (1035-1047) became also, by inheritance, king of Denmark. But after his death, that kingdom passed into the hands of the Svend Estridsson, although Magnus's successor, Harald Haardraade, brother to Olav the Holy, laid claim to it by force of arms. He subsequently tried to conquer England, but fell at Stanford Bridge, shortly before the Norman conquest of the country (1066). The efforts of his grandson, Magnus Barfod (1093-1103), were directed towards the amalgamation of the Norwegian settlements on the islands off the coast of Scotland, and others, into one kingdom. Magnus fell during a descent upon Ireland. A few years afterwards, his son, Sigurd Jorsalfar, set off on a crusade to the Holy Land, where in 1110 he took the strong town of Sidon, which had hitherto defied the efforts of the crusaders.”—S. Konow and K. Fischer, *Norway*, pp. 131-133.

1263.—Invasion of Scotland. See SCOTLAND: 1263.

1266.—Cession of Western islands to Scotland. See SCOTLAND: 1266.

1320-1397.—Period of decline.—“The decline [1320] had already set in during the country's last period of prosperity. . . . From the middle of the 14th century—after the establishment of their factory in Bergen—the Germans practically ruled the commerce of the country, and in other matters also had the game in their own hands. Fresh misfortunes that occurred during the course of the 14th century, threw the country back still further. The population was reduced by one third, by three visitations of the plague—in 1349, 1360, and 1371. As a consequence of the fact that the king now always resides abroad, the defences of the country sank into decay, while the noble families became extinct, or were merged in the peasantry. Even the first union of the country with Sweden (1319-1380 and with Denmark 1380-1397) proved to be very detrimental to Norway, although it had no influence upon her political and international position. But this was still more evident when the Kalmar Union was brought about in 1397 by the election of Erik of Pomerania, the hereditary king of Norway, as king of Denmark and Sweden. By this act, Norway was brought into an actual union, in which she was to play a subordinate part, while yet continuing to be an independent kingdom, and—after a treaty made between Norway and Denmark in 1450—co-ordinate with Denmark, with a state council of her own.”—S. Konow and K. Fischer, *Norway (Official publication for the Paris exhibition, 1900, p. 134)*.—See also SCANDINAVIAN STATES: 1018-1307.

1397-1527.—Under Union of Calmar until dissolution.—Introduction of Reformation. See SCANDINAVIAN STATES: 1307-1527.

15th-18th centuries.—Political union with Denmark.—“It has been said that, during union with Denmark, Norway had no history, and this is partly true. The history of the Oldenburg kings, with their wars, and court intrigues and mistresses, is in no sense the history of Norway. Nor was

the social development of Norway parallel with that of Denmark, during the reign of these kings. Though oppressed and politically powerless, the remoter kingdom escaped the utter misery and degradation which overtook its oppressor. . . . But, as a rule, the kings of the house of Oldenburg did pay more attention to the complaints of their Norse subjects than to those of their own, and they did this—first, because it was important to them to preserve the loyalty of the Norsemen; secondly, because the Norsemen, if their petitions were unheeded, stood ready to take up arms. They knew their rights from of old, and a continued infringement of them, on the part of the foreign officials, made sooner or later the war-arrow fly from farm to farm; and the king was confronted with an armed rebellion. Again and again the obnoxious magistrates, who had imagined that these sturdy mountaineers were as meek and long-suffering as their Danish brethren, were mercilessly beaten, maimed, or killed. Repeatedly the government was forced to concede to rebels what they had not yielded to supplicants. Unpopular laws were revoked, oppressive burdens removed, and promises made of improved administration. And yet, in spite of these ameliorating circumstances, Norway's condition during the Danish rule was miserable. The revenues of the country were spent in Copenhagen, and the people were heavily taxed to support a foreign court and a hungry brood of foreign officials, whose chief interest was to fill their own pockets. Danish nobles married into the great Norwegian families, and secured, by bribery and intrigue in Copenhagen, a virtual franchise for unlimited ill-doing. Great estates were accumulated in the hands of men like Vincent Lunge, Hartvig Krummedlike, and Hannibal Sehested, and the courts were prostituted to favor the land-grabbing schemes of noble adventurers. The public spirit which, in times of old, had jealously watched over the interests of the realm, had already been weakened by the incipient despotism of the last national kings; and what there was left of it now gradually expired. A most striking proof of this is the fact that when, in 1537, Norway lost the last vestige of her independence, being declared to be a province of Denmark, the decree was accepted without protest, and caused no perceptible excitement. So gradually had the change taken place, that no one was surprised. . . . [In the reign of Christian VII (1766-1808) Ove Guldberg, his minister, even] endeavored to abolish the very name of Norseman, insisting that no such nationality existed, all being citizens of the Danish State. During the reign of the last three kings, Norway had, owing to the peace, steadily advanced in material prosperity. The population had, in one hundred years, nearly doubled, being, in 1767, 723,000; and the merchant marine had, since the destruction of the Hanseatic monopoly, grown from 50 to 1,150 ships. A class of native officials, educated at the University of Copenhagen, began to replace the Danish, and, by the sale of the estates of the crown, the number of freeholders among the peasants was largely increased. As the insanity of the king made him unable to attend to the government, his son Crown Prince Frederick, became in 1784, the responsible regent, and made an excellent selection of a premier in Andreas Bernsdorff (1784-1797). This capable and enlightened man piloted Denmark and Norway safely through the stormy times of the French Revolution.”—H. H. Bovesen, *Story of Norway*, pp. 475-7, 508-509.

1718.—Invasion by Charles XII of Sweden. See SWEDEN: 1707-1718.

1767-1806.—Industrial and economic development.—“The permanent state of war, in which most of Europe and America as well found themselves at the close of the [eighteenth] century, naturally placed the commerce and shipping of the few neutral countries in a position to reap enormous harvests. By virtue of the neutrality agreement of the northern powers this situation was profitable, in by no means a negligible degree, to the Scandinavian countries. . . . The Norwegian merchant fleet, which in 1792 had numbered approximately 860 ships of 110,000 tons, had grown in 1806 to 1,650 ships, and a total tonnage of 180,000. At the same time, exports—particularly of timber and fish—not merely increased in quantity, but the prices received for exported goods also rose rapidly. In 1805 the timber exportation reached its culmination with 1,250,000 cubic metres. Under these conditions prosperity was general in Norway, and the towns experienced a flourishing growth. An index of conditions is afforded by the customs receipts, which increased from 460,000 Rix-dollars in 1767 to 1,270,000 Rix-dollars in 1806. A considerable manufacturing industry also profited by the situation, as did also mining. The principal branches of the latter to be carried on were copper, silver, and iron mining; copper and iron smelting were also especially prosperous.”—P. Drachman, *Industrial development and commercial policies of the three Scandinavian countries*, pp. 83-84.

1811.—Establishment of university library at Christiania. See LIBRARIES: Modern: Scandinavian states: Norway.

1814-1815.—Norwegian constitution under union with Sweden.—“When, by the treaty of Kiel in 1814 [see SWEDEN: 1813-1814; VIENNA, CONGRESS OF], Norway was taken from Denmark and handed over to Sweden, the Norwegians roused themselves to once more assert their nationality. The Swedes appeared in force, by land and sea, upon the frontiers of Norway. It was not, however, until the latter country had been guaranteed complete national independence that she consented to a union of the countries under the one crown. The agreement was made, and the constitution of Norway granted on the 17th of May 1814, at which date the contemporary history of Norway begins. . . . The Fundamental Law of the constitution (*Grundlöf*) . . . bears the date of the 4th of November 1814. The Act of Union with Sweden is dated the 6th of August 1815. The union of the two states is a union of the crown alone. . . . Sweden and Norway . . . [formed] like Great Britain, a hereditary limited monarchy. One of the clauses in the Act of Union provides that the king of the joint countries must reside for a certain part of the year in Norway. In his absence, the king represented by the Council of State (*Statsraad*), which must be composed entirely of Norwegians, and consist of two Ministers of State (Cabinet Ministers), and nine other Councillors of State. . . . Of the State Council, or Privy Council (above spoken of), three members, one a Cabinet Minister, and two ordinary members of the Privy Council, . . . were always in attendance upon the king, whether . . . residing in Norway or Sweden. The rest of the Council . . . [formed] the Norwegian Government

resident in the country. All functionaries . . . [were] appointed by the king, with the advice of this Council of State. . . . In 1876 the number of electors to the Storting were under 140,000, not more than 7.7 per cent. of the whole population. So that the franchise was by no means a very wide one. . . . In foreign affairs only . . . [did] Norway not act as an independent nation. There . . . [was] a single foreign minister for the two countries. . . . usually a Swede.”—C. F. Keary, *Norway and the Norwegians*, ch. 13.

1814-1899.—Friction with Sweden.—“Ever since the Union of 1815, Norway had persistently endeavoured to obtain absolute political equality with Sweden, even at the risk of a rupture. Now any slackening of the Union meant the weakening of the royal authority, the chief prop of the Union, which being vested in a semi-foreign dynasty imposed upon Norway by force, could not be very popular there. Moreover the Act of Union itself was, in some points, so ambiguously worded, that both parties, with a little ingenuity, could interpret it their own way. The first anti-monarchical step was taken in 1821, when the Storting abolished the Norwegian nobility, despite the protest of the king, but for whose energetic intervention it would also have repudiated the payment of Norway's coveted share of the old Danish national debt. Under Oscar I, who conceded to Norway a national flag and coat-of-arms and founded the Norwegian order of St. Olaf, there was little friction between the crown and the Norwegians; but the first Storting of Charles XV abolished the office of viceroy, which from 1814 to 1827 had been held exclusively by Swedes, on the ground that it was an anomalous dignity, to the great indignation of the Swedes, who regarded the proceeding as a high-handed breach of the Union. Indeed an actual conflict between the two countries was avoided only by the king's refusal to confirm the decree of the Storting. A counter-proposal from the Swedish Riksdag for a revision of the Union was disregarded by the Storting till 1865, when the whole question was submitted to the consideration of a joint revision committee, whose recommendations were however, ultimately rejected by the Storting in 1870. After the accession of Oscar II (Sept. 18, 1872), the attitude of the Norwegian parliament became more conciliatory. It even voted the expenses of the coronation at Thronhjelm (July 18, 1873), in return for which act of liberality the king consented to the abolition of the vicerealty. . . . Unfortunately Norway's inveterate distrust of Sweden, a distrust natural enough, perhaps, in the smaller and weaker of two confederated states, but none the less unjustifiable and unprofitable, continued to assert itself on the slightest pretext with the inevitable result of provoking reprisals from Sweden. There is something to be said, no doubt, for the contention of Norway that her relatively enormous trading fleet (which is much larger than that of Sweden) entitles her to a separate consular service; but this in itself apparently reasonable claim was only the prelude to a further demand for a separate foreign office. Sweden obviously could not allow Norway to negotiate independently with foreign powers at the risk of imperilling the political existence of the dual state. . . . In the autumn session (1808) the extreme Left reintroduced the irritating question of ‘the pure Norwegian flag’; and virulent attacks were made upon the Swedish government for its perfectly legitimate declaration that the consular and diplomatic unity of both countries must be regarded as a condition precedent to any reform of the Act of Union. The

indignation caused in Sweden by the adoption of the new flag law of the Storting in November, 1898, was exacerbated when King Oscar, while withholding his sanction to the measure, permitted its official publication, justifying his action by an appeal to par. 79 of the Norwegian constitution. Public opinion and the national press in Sweden energetically demanded that the Swedish minister of foreign affairs, Count Douglass, should refuse to notify the unconstitutional decree of the Storting to the powers, thus branding 'the pure Norwegian flag' as an illusory emblem without any political significance. Indeed the agitation nearly led to a cabinet crisis in Sweden. . . . Fortunately, on May 11, King Oscar again resumed his authority, and the influence of the great peacemaker was quickly felt. At the session of the Swedish-Norwegian Councils of State of October 11, 1899, at which the crown-prince was also present, Oscar II, while expressing his deep regret at the disturbing effect of the Storting's flag-resolution, declared that the statute of June 20, 1844, which had added the unional symbol to the Norwegian commercial flag, should cease and determine on December 15, 1899, and that the change should be duly notified to the foreign powers. Moreover this concession was emphasized by the simultaneous retirement of the Swedish minister of foreign affairs, Count Douglass, the most steady opponent of the Norwegian claim throughout."—R. N. Bain, *Scandinavia* (*Cambridge historical series*, pp. 10, 435-436, 438-439, 441-442).

1902-1905.—**Attempted settlement of consular**

question fails.—**Separation from union with Sweden.—King Oscar virtually deposed.—Haakon VII.**—The century long discontent of Norway over the repression of her national aspirations, expressed at this period in the controversy with Sweden concerning the consular service, finally came to a crisis in 1902. In that year a Swedish-Norwegian consular commission appointed to investigate the practicability of separate consuls for each of the united kingdoms, with joint diplomatic representation, produced a report very favorable to the proposition. Prolonged negotiations followed between representatives of the two governments, and the outlines of a system under which Norway should acquire a separate consular service were definitely settled and accepted formally by the king, on December 21, 1903. When it came, however, to the definite framing of laws for carrying the plan into effect, irreconcilable disagreements arose. Several details of the arrangement which Sweden insisted on implied a precedence and superiority of standing for that kingdom in the union of crowns which offended Norwegian pride. The Norwegian government objected to having its selection of consuls made subject to the approval of the foreign minister of the dual monarchy. It objected to having the king, in his commission to them, entitled "King of Sweden and Norway"; and it rejected the Swedish proposals on other points. When the government of Sweden replied that, while it might be willing to consider some modifications of its proposals, it must maintain the important parts of them, the Norwegian government announced that it had no further statements to make, indicating that negotiation in the matter was at an end. Thereupon, on February 7, 1905, the king made public the following statement: "Under the present circumstances I do not see that I can resolve otherwise than to approve of what the Foreign Minister has proposed; but I cannot refrain from expressing to both my peoples my hearty desire that the two kingdoms, which have now been united for nearly a century, will never let any difference of opinion be hurtful to the Union itself. This Union is in truth the safest guarantee for the independence, the security and the happiness of both my peoples." [See also SWEDEN: 1905.] Feeble health now compelled King Oscar to yield the functions of royalty to his son, and the crown prince visited Christiania, as regent, to confer personally with the leaders in Norwegian affairs. The outcome of his visit was the resignation of the ministry of M. Hagerup on March 1, the formation of a new cabinet, under M. Michelsen, and the announcement by the latter that the government would steadfastly maintain the sovereignty of Norway, as an independent kingdom, according to the words of its constitution, the realization of which must depend on the strength and will of the Norwegian people. All attempts in the next three months to overcome or modify the attitude of Norway were unsuccessful. In May, the Storting passed an independent Consular Bill and laid it before King Oscar, who had resumed his duties, and the king refused to sanction it, saying: "The Crown Prince, as Regent, in Joint Council of State of April 5, has already shown the only way in which this important question can be advanced and all difficulties most likely removed, viz., through negotiation. I entirely agree with this view, and do not for the time being find it expedient to sanction this law, which means an alteration of the existing joint consular service which cannot be severed except by mutual arrangement. . . . When I now refuse to sanction this law I do so in accordance with the right conferred upon the King. . . . It is

my equally great love to both nations which makes it my duty to exercise this right." On June 7, M. Michelsen, the prime minister, and his colleagues, gave their resignations to the Storting, whereupon that body, by unanimous vote, adopted the following resolution: "As all the members of the Council of State have resigned their offices; as his Majesty the King has declared himself unable to give the country a new Government; and as the constitutional kingdom has thus ceased to function, the Storting authorizes the members of the Ministry, to-day resigned, to exercise in the meantime, as the Government of Norway, the authority vested in the King, in accordance with Norway's constitution and existing laws, with the alterations necessitated by the fact that the Union with Sweden under one King has ceased on account of the king having ceased to act as Norwegian King." This action was proclaimed to the people on the same day. On the 9th the union flag was lowered from Norwegian forts and war-ships and the Norwegian flag raised in its place. On July 28, with King Oscar's consent, the Swedish Riksdag adopted a resolution assenting to the severance of the union, on condition that it be approved by a vote of the people of Norway. Accordingly the question was submitted to the people on August 13, and all but 184 out of 368,392 votes were given in favor of the separation. A conference at Karlstad in September arranged the future relations of the two kingdoms with success, and the dissolution was complete. It was formally acknowledged by King Oscar on October 26. It was understood in diplomatic circles that Norway, at this time, would have set up a republic if the Great Powers had not interfered. Since King Oscar, who had been thus virtually deposed, made it known that he did not wish any member of his family to accept the crown of Norway if offered, the Storting authorized the government to open negotiations with Prince Charles of Denmark, with a view to its acceptance by him, if its proffer should be sanctioned by a popular vote. Again a plebiscite was polled and a large majority given in favor of the proffer of the crown to Prince Charles. The prince accepted, with the permission of his grandfather, the Danish king, and proposed to take the name of Haakon VII. The name was well chosen for its significance, Haakon VI having been the last of the old royal line of Norway, which became extinct at his death in 1387. The king-elect and his wife entered Christiania on November 25, and took the oath of fidelity to the Norwegian constitution on the 27th. In the following June King Haakon was anointed and crowned with solemn ceremonies, in the ancient cathedral of Trondhjem, the capital of the first king who reigned over the whole Norse realm.

1906-1921.—Explorations in Spitzbergen. See SPITZBERGEN: 1906-1921.

1907.—Represented at second Hague conference. See HAGUE CONFERENCES: 1907.

1907-1908.—Treaty with Great Britain, France, Germany, and Russia guaranteeing integrity of kingdom.—In November, 1907, a treaty was drawn up between Norway, France, England, Russia and Germany. Norway promised not to cede any territory to a foreign power, and the four powers agreed to guarantee the independence and integrity of the Norwegian kingdom. The treaty was to remain in force for ten years, and if not abrogated two years before the expiration of that term, it was to continue for another ten years. A further recognition of Norway's territorial boundaries was

made by the Baltic and North sea agreement of 1908. See NORTH SEA: 1908.

1907-1909.—Lovland ministry.—Concession laws.—Knudsen ministry.—"After Michelsen retired, J. Lovland, who had been minister of foreign affairs, formed a new cabinet. . . . Both . . . [the Labor party and the Socialists] opposed the Lovland ministry, and other even more serious opposition was soon encountered. The question of conservation of natural resources, raised by the Michelsen ministry through the 'concession laws,' which aimed to prevent foreign capitalists from gaining permanent possession of the mines, forests, and waterfalls of the country, had developed into an issue which produced a split in the Coalition party. Gunnar Knudsen, who favored a strong conservation policy, seceded and organized the Radical Liberal party. Aided by the Socialists, this group succeeded in overthrowing the Lovland ministry, and Knudsen formed a new ministry in March, 1908. The remaining part of the Coalition party was organized into the Liberal-Liberal party (Frisindede Venstre), in 1909. . . . The attention of the new ministry was chiefly devoted to the problem of conservation and natural resources, probably the most important economic question which the Norwegian people has hitherto been called upon to settle."—K. Gjerset, *History of the Norwegian people*, v. 2, pp. 585-586.

1909.—Political parties.—Fall of Knudsen ministry.—"The political parties in Norway now ranked as follows: Conservatives, Liberal-Liberals, Radical Liberals, Labor Party, and Socialists. In the elections of 1909 the Conservatives and Liberal-Liberals combined, and succeeded in electing sixty-four representatives as against forty-eight Radical Liberals and eleven Socialists. Of the majority group forty-eight were Conservatives and nineteen Liberals. Owing to this defeat the Knudsen ministry resigned, and W. Konow of Sondre Bergenhus, the leader of the Liberal-Liberals, formed a new ministry in the winter of 1910."—K. Gjerset, *History of the Norwegian people*, v. 2, p. 586.

1909 (October).—Arbitration of frontier dispute with Sweden.—The maritime frontier dispute between Norway and Sweden, consequent on their separation, was referred to The Hague Tribunal, and decided in October, more favorably to Sweden than to Norway, but the decision was loyally accepted by the latter.

1910.—Fall of Radical government.—"The principal interest in 1910 lay in the downfall of the Radical Government after a brief and somewhat humiliating tenure of office."—*Annual Register*, 1910, p. 377.

1910-1914.—Rivalry with other powers over claims to Spitzbergen. See SPITZBERGEN: 1911.

1910-1919.—Statistics for trade unions. See LABOR ORGANIZATION: 1910-1919.

1911.—Amendment to constitution.—"On March 3 the Storting unanimously adopted an amendment in the Constitution to the effect that diplomatic matters and certain questions of military command, which it has been decided to keep secret, should be laid before a committee of nine members elected from the Odelsting, and that such matters might be brought before the Odelsting, on the motion of any member in the Committee."—*Annual Register*, 1911, p. 308.

1911-1912.—Expedition of Amundsen to South Pole. See ANTARCTIC EXPLORATION: 1911-1912.

1911-1913.—Parliamentary rights for women.—Introduction of general suffrage for women.—Fall of Konow.—Formation and defeat of Conservative ministry.—"In 1911 the first woman representative, Anna Rogstad, took her seat in the

Storthing, and in 1912 women were made eligible to all offices, except those of cabinet members, or of the ecclesiastical or military service. In 1898 suffrage had been granted to all men twenty-five years of age who had resided in the country five years, and in 1913 the same right of general suffrage was also extended to women. Article fifty of the constitution was amended to read: 'All Norwegian citizens, men and women, who are twenty-years of age, who have lived in the kingdom for five years and still reside there, shall have the right to vote.' In 1912 the Konow ministry was overthrown by their Conservative allies, who objected to the opinion expressed by Konow on the question of the use of the *Landsmaal* [which in 1885] was legalized as a standard official language equal to the Danish-Norwegian. . . . A new ministry was formed February 20, 1912, by the Conservative leader Bratlie. He attacked the concession laws, and sought to effect the repeal of the provision by which they were made to apply to Norwegian stock companies. But in this attempt he failed. In the elections in the fall of 1912 his party was defeated. The Radicals and the Labor party captured seventy-six seats, and the Socialists twenty-three; the Conservatives and their allies the Liberals retained only twenty-four seats. Gunnar Knudsen, leader of the Radicals, returned to power as head of a new ministry."—K. Gjerset, *History of the Norwegian people*, pp. 593-594, 596.

1913.—**Constitutional amendment.**—"The question of the king's veto power in cases of constitutional amendments had never been formally settled. . . . In order to avoid . . . misunderstandings, article 112 of the constitution was so changed by an act of June 11, 1913, as to deprive the king of the power of veto in cases of constitutional amendments."—K. Gjerset, *History of the Norwegian people*, p. 595.

1914.—**Celebration of centennial of Norway's independence.**—"The centennial of Norway's independence was celebrated in 1914 with a centennial exposition and great festivities in Christiania, and a great number of Norwegian-Americans returned to the old fatherland for the occasion. On the Seventeenth of May a procession of 30,000 children with Norwegian flags, and a large number of Norwegian-Americans with American flags, marched through the streets of the capital. At Eidsvold the Storthing assembled in regular session in the old hall where the constitution was framed in 1814, and on May 20th a festive religious service was celebrated in the cathedral at Trondhjem. In June a musical festival was held in Christiania by thousands of singers assembled from all parts. . . . The celebration closed with a festival on the Fourth of July, when the visiting Norwegian-Americans brought their formal greetings to their fatherland. For over a year a large committee, headed by State Senator L. O. Thorpe of Willmar, Minnesota, had been engaged in collecting a memorial fund, which on that day was presented to the Storthing. . . . The Memorial Fund Committee was represented by Dr. T. Stabo of Decorah, Iowa, . . . and the State of North Dakota by its chief executive, Governor L. B. Hanna, who presented to the Norwegian government a statue of Abraham Lincoln. This piece of art, the work of the Norwegian-American sculptor Paul Fjelde, was a present from that American commonwealth, which is indebted to the sons and daughters of Norway for so much of its progress and prosperity. It was a token of the spirit which has knit strong the fraternal ties between the Viking race of the North and the land of freedom in the New World."—K. Gjerset, *History of the Norwegian people*, p. 610.

1914.—**Scandinavian League.**—Friendly feeling of Norway, Denmark and Sweden consolidated by meetings.—Meeting at Malmö. See SCANDINAVIAN LEAGUE; SWEDEN: 1914-1917; 1914-1918.

1914.—**Pan-German plan.** See PAN-GERMANISM: Pan-German League and its branches.

1914.—**Percentage of governmental control of railways.** See RAILROADS: 1917-1919.

1914-1921.—**Norway's neutrality in World War.**—Efforts for peace.—Losses in World War.—Norway, along with the other Scandinavian countries, remained neutral during the World War, though, as a maritime nation, she suffered constant and vital losses from the negation of "freedom of the seas" and the submarine warfare. "When sea traffic came to a halt in August, 1914, the daily losses of Norway's shipping trade amounted to 100,000 crowns. It became necessary at once to establish a state insurance organization. Norway's merchant fleet was valued in 1914 at 100,000,000 crowns. . . . During the first year of the war, she lost sixty-one ships. Sixteen of the ships were destroyed by mines."—*New York Times Current History*, Dec., 1915, p. 581.—"Norway bore the beginning of her deprivations more philosophically; she kept her ships going; her sailors braved the danger zone without a murmur; yet she managed to remain officially neutral. If Swedish officialism was undoubtedly German, Norwegian officialism was quite the reverse; it reflected exactly the sentiments of the people; the torpedoing of her ships would have led inevitably to war, if the cooler heads of Norway had not perceived that such a defiance was impossible without the assistance of Sweden. It was believed when the German outrages on Norwegian shippers were most lawless, that if Sweden had been willing, there would have been an open break with Germany. The Norwegian press itself, though apparently neutral, was not backward in expressing its sense of the utter brutality of the Prussians towards a neutral nation."—M. F. Egan, *Scandinavian neutrality* (*Yale Review*, Apr., 1918).—In September 1915 a northern interparliamentary congress of Denmark, Norway and Sweden was called at Copenhagen to consider the shipping losses of these countries, and the means of meeting the trade disaster brought upon them by the World War. In the same year, while western Europe was torn by war, Norway sent ten delegates to the eighth Scandinavian peace congress at Stockholm, where the ideals of maintaining international peace were discussed even amid the daily news from the fronts which meant the apparent defeat of the previous peace congresses. In 1916 Norway again took part in an attempt for concerted action of the neutral nations toward peace, in the Stockholm Conference. Her representatives at this conference were Nikolaus Gjelsvik, Professor of international law at the Nobel Institute, and Rev. H. Hanssen, both long associated with movements for world peace. The conference, besides defining the neutrals' attitude, issued a statement to the belligerents which was published in all the warring countries. Fifteen hundred Norwegian societies participated in peace meetings in May, 1916. In 1917, when the United States placed under government control the volume of foodstuffs which might be sent to other countries, this restriction was a virtual embargo on Norway's necessary imports. Consequently, "Norway was among the first of the European nations to send missions to the United States to negotiate for the relaxation of the embargo which they declared threatened them with privation. Dr. Fridtjof Nansen, the arctic explorer, headed the Norwegian

mission . . . which held a conference with the State department on August 8, 1917. . . . Dr. Nansen stated that at the beginning of the war Norway had 3,000,000 tons of merchant shipping, and that one third of it had fallen victim to Germany's submarines."—*New York Times Current History*, Aug., 1917.—Almost another year of threatened famine passed. It was not until May 3, 1918, that a commercial treaty with Norway was made by the United States,—the first treaty to be signed with any of the northern neutrals. It was agreed that Norway should be furnished with supplies not needed by the Allies, but that none of these supplies was to go for trade with the Central Powers, or to replace goods sold to these countries. The treaty was signed for Norway by Dr. Nansen. To carry out this commercial understanding, the United State Shipping Board chartered 400,000 tons of Norwegian sailing ships. After nearly four years of intense economic hardship, during which time Norway had to ration her people, she reckoned her war losses at one half her total ship tonnage, namely 1,300,000 gross tons, due to mining and 'disappearance.' [See also COMMERCE: Commercial age: 1914-1921; WORLD WAR: Miscellaneous auxiliary services: XIV. Cost of war: b, 9, iv.] And in spite of her difficult neutrality, 2000 of her seamen had been killed. "As in most other countries, there has been considerable unrest in Norway since the end of the War. But all efforts of a small minority of Communist elements in the Norwegian Labor party to develop a revolutionary spirit have . . . failed."—*New York Times Current History*, Aug. 15, 1921.

1916.—Scandinavian conferences.—Complete political equality for women.—"The Norwegian Premier and Foreign Minister attended the important Scandinavian Conference at Copenhagen in March, and Mr. Knudsen, the Prime Minister, announced his satisfaction with the results of that meeting, and stated in the Storting on March 15, that the three Governments had agreed at Copenhagen to take the necessary measures to guard the independence of the Scandinavian countries in the economic struggle which was expected to follow the war. A second meeting of Scandinavian Ministers took place in September, this time in Christiania. . . . It was stated that the object was to attain still closer co-operation between the three kingdoms in the difficult task of maintaining their rights as neutrals. Special attention had been given to the destruction and detention of neutral ships and to the 'Black Lists' issued by belligerent Powers. An important reform was carried in Parliament in the shape of a Bill amending the Constitution in such a way as to make women eligible to become members of the Cabinet. Norway thus reached the extreme limit of the principle of political equality between men and women."—*Annual Register*, 1916, p. 206.

1918-1919.—Overthrow of Radical government.—Ministerial crisis.—The beginning of the war (1918) found Gunnar Knudsen, the Radical leader, still at the head of the king's government. But

the general election which had taken place in the autumn of 1919 had been a blow to Knudsen's Radical government. The Radicals and the Labor Socialist combination had returned from the polls with a joint majority over the parties of the Right. But the latter, on the other hand, were now much more powerful in the Storting than they had been in the previous Parliament. Hence when Parliament met at the beginning of February a ministerial crisis immediately arose, and Knudsen handed in his resignation. Upon the request of the king, who was unable to bring about the formation of an alternative cabinet, Knudsen resumed his office and formed a new cabinet with certain important changes of personnel. Ihlan was minister for foreign affairs; and Ombolt, minister of finance.—Based on *Annual Register*, 1918, p. 263; *Ibid.*, 1919, p. 252.

1919.—Represented at conference for International Union of Academies. See INTERNATIONAL UNION OF ACADEMIES: Conference called by French academy.

1919.—Granted sovereignty over Spitzbergen by League of Nations. See SPITZBERGEN: 1921.

1919.—Prohibition.—Municipal election results.—"By a national plebiscite held on October 6, Norway, by a vote of 436,269 to 284,402, decided to prohibit all traffic in whiskey, brandy and other distilled liquors. [See also LIQUOR PROBLEM: Norway: 1919-1923.] . . . In the municipal elections held on December 1, the Conservatives made sweeping gains, largely at the expense of the Socialists."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1920, Supplement, p. 140.

1919.—Labor conditions.—By 1919 "the antagonism between labor and capital [had] become more and more acute. The demands for higher wages on the part of labour . . . reached a point never previously thought of, and the resistance of the employers to such demands . . . in a number of cases resulted in strikes, succeeded by public arbitration. . . . [Between 1914 and 1919] wages . . . [were] raised three times."—Great Britain Overseas Trade Department, *Commerce and industry of Norway down to the year 1919*, pp. 18-33.

1919-1920.—Organization of Young Left party.—"The organization of a Young Left party . . . created considerable interest throughout the nation. Its program includes, among other things, disarmament, universal suffrage, communal control of natural resources and agencies of transportation, abolition of small holdings, state control of business, progressive taxation, old-age and disability insurance for all persons and a reformed educational system."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1920, Supplement, p. 140.

1920.—Norwegian financial situation.—Industrial innovation.—Post-war conditions prevailing in Norway in 1920, resulting in the decline of the krone, and general financial depression, were met by the formation of a national association which proposed by organized effort to reduce consumption to the lowest possible level in the hope of improving the situation. "An important industrial phase . . . [was] marked by the passing of the Worker's Committee Act, applicable to public and private concerns employing at least 50 workers, as also to the State institutions of railways, tramways, telegraphs and telephones. The Act provides for the establishment, at the desire of one-quarter of the employees, of a committee to which all projects for alterations affecting the management of the business, etc., must be submitted by employers. The Committee will exercise various other functions, such as mediation in disputes."—*Economic Review*, Aug. 6, 1920, p. 200.

1920.—General railway strike. See LABOR STRIKES AND BOYCOTTS: 1920-1922: Industrial disturbances.

1920-1921.—Reorganization of trade unions. See LABOR ORGANIZATION: 1920-1922.

1921.—Compulsory arbitration law for labor.—“The compulsory arbitration law . . . passed by the . . . Storting [in 1921] marks the culmination of a series of efforts to rid industry of the menace of general and local strikes. . . . This law empowers the Government, in cases where disputes between labor and capital endanger public interests, to decide that an arbitration court shall pass judgment on the conflict, and does not allow any stoppage of work because of the dispute. The arbitration court consists of five members, of whom the labor organizations appoint one, the employers' associations one, and the Government three, including the Chairman. It is the court's duty to gather evidence from the contesting parties, but even in the absence of one or both parties, judgment may be passed on the conflict. The judgment, passed by a simple majority, is binding, but not for a period longer than two years without the consent of the parties. . . . The new law, passed for one year only, is constructed in the light of experience with earlier legislation. The compulsory arbitration law passed in 1915 expired April 1, 1920. During its existence the arbitration court passed judgments on the great mine strike in [1916, the machinists' strike in 1920, and forty-eight sentences in connection with the great strike in 1920].”—*Compulsory arbitration in Norway* (*New York Times Current History*, June, 1922, p. 527).

1921-1923.—Arbitration with the United States.—“An agreement between the United States and Norway was signed on June 30, 1921, ratifications being exchanged at Washington on August 22, 1921, whereby the two countries . . . agreed to arbitrate certain important claims arising from the war. According to the preamble . . . the purpose of the arbitration . . . [was] ‘to settle amicably certain claims of Norwegian subjects against the United States arising, according to contentions of the Government of Norway, out of certain requisitions by the United States Shipping Board Emergency Fleet Corporation.’ . . . The Norwegian claims . . . concerned contracts for the construction of fifteen ships. . . . Nine of . . . these vessels . . . were to be built in the yards of American companies whose stock was principally, if not entirely, owned by a Norwegian subject largely interested at the time in promoting shipbuilding construction in the United States, and these vessels were originally contracted for by other American companies which were also controlled by the same Norwegian subject. When the requisition became effective the keels of only two of these fifteen contracted ships had actually been laid in the yards, and a portion of the material delivered on one other. The Government took possession of the ships under construction, as well as of all material delivered on the contracts, and, the shipyards being henceforth held exclusively to government work by virtue of the war necessities of the United States, it became impossible for them to execute the contracts in which the Norwegian subjects were concerned.”—S. P. Smith, *Arbitration with Norway* (*American Journal of International Law*, Jan., 1922, pp. 81-82).—“The United States Government, on February 26, [1923] paid in a single Treasury draft the sum of \$12,239,652.47 to the Norwegian Government, under the award rendered by The Hague Tribunal of Arbitration on October 13, 1922, for ships requisitioned by the Emergency

Fleet Corporation in the World War. With the Treasury draft Secretary of State Hughes sent a note to the Norwegian Minister to Washington, H. H. Bryn, sharply protesting against the action of the Tribunal, declaring that the award is not deemed to possess an authoritative character as a precedent, and that the United States paid it merely to bear out the American Government's traditional policy of promoting the judicial determination of international disputes of a justiciable character, and in this interest to give its due support to judicial determination.”—*New York Times Current History*, Apr., 1923, p. 171.

1922.—Represented at Genoa conference. See GENOA CONFERENCE (1922).

1922.—Effect of prohibition controversy.—As an outcome of Norway's prohibition controversy with wine-producing countries, the Spanish government withdrew from the Spanish-Norwegian Maritime Treaty on February 12, 1922. “The commercial and shipping agreement which ended the long tariff war between Norway and Portugal over Norway's prohibition law [of 1919] was ratified April 12 and went into force April 16, the day when Norway's prohibition of strong wines ceased to have legal validity. By the terms of the agreement Norwegian goods in Portugal and the Portuguese Islands are subjected to only the minimal tariff. Norwegian shipping there is charged according to the general tariff, minus 25 per cent, this being the largest reduction allowed to any nation's vessels in Portugal. Norway's obligation to buy Portuguese strong wines has expired.”—*New York Times Current History*, June, 1923, p. 523.

NORWAY, Constitution of.

Title I.

Article 1. The kingdom of Norway is a free, independent, undivisible, and inalienable state, united to Sweden under the same king. The form of its government is limited, hereditary, and monarchical.

Art. 2. The Lutheran evangelical religion shall continue to be the ruling religion of the kingdom; those of the inhabitants which profess it are bound to bring up their children in its tenets; Jesuits and monastic orders shall not be prohibited in the kingdom. The admission of Jews into the kingdom shall always be, as formerly, prohibited.

Title II.

Article 1. The executive power is declared to be in the person of the king.

Art. 2. The king shall always profess the evangelical Lutheran religion, which he shall maintain and protect.

Art. 3. The person of the king is sacred; he can neither be blamed or accused.

Art. 4. The succession is lineal, and collateral, such as is determined by the order of succession decreed by the general estates of Sweden,

and sanctioned by the king in the Act of the 26th September 1810, of which a translation is annexed to this Constitution. Of the number of legitimate heirs, is comprehended the child in its mother's womb, which, as soon as it shall be born, after the death of its father, takes the place which is due to him in the line of succession. When a Prince, heir of the re-united crowns of Norway and Sweden, shall be born, his name and the day of his birth shall be announced at the first Storting, and inscribed in the registers.

Art. 5. Should there not be found any prince, a legitimate heir to the throne, the king can propose his successor at the Storting of Norway, and at the same time to the states general of Sweden. As soon as the king shall have made the proposition, the representatives of the two nations shall choose from among them a committee, invested with the right of determining the election, in case the king's proposition should not, by the plurality of voices, be approved of separately by the representatives of each of the countries. The number of members of this committee, shall be composed of an equal number of Norwegians and Swedes, so that the step to follow in the election shall be regulated by a law which the king shall propose at the same time to the next Storting, and the states general of Sweden. They shall draw by lot one out of the committee for its member.

Art. 6. The Storting* of Norway, and the states general of Sweden shall concert to fix by a law the king's majority; if they cannot agree, a committee, taken from the representatives of the two nations, shall decide it in the manner established by article 5th, title 2nd. As soon as the king shall have attained the years of majority fixed by the law, he shall publicly declare that he is of age.†

Art. 7. When the king comes of age he shall take into his hands the reins of government, and make the following oath to the Storting: "I swear, on my soul and conscience, to govern the kingdom of Norway conformably to its constitution and laws." If the Storting is not then assembled, this oath shall be deposited in writing in the council, and solemnly repeated by the king at the first Storting, either *vivâ voce* or by writing, by the person whom he shall have appointed to this effect.

Art. 8. The coronation of the king shall take place when he is of age, in the cathedral of Drontheim, at the time and with those ceremonies that shall be fixed by himself.

Art. 9. The king shall pass some time in Norway yearly, unless this is prevented by urgent circumstances.

Art. 10. The king shall exclusively choose a council of Norwegians, citizens, who shall have attained the seventieth year of their age. This council shall be composed at least of a minister of state, and seven other members. In like manner the king can create a viceroy or a government. The king shall arrange the affairs between the members of the council, in such manner as he shall consider expedient. Besides these ordinary members of council, the king, or in his absence the viceroy (or the government jointly with the ordinary members of council) may on particular occasions, call other Norwegians, citizens, to sit there, provided they are not members

of the Storting. The father and son, or two brothers, shall not, at the same time, have a seat in the council.

Art. 11. The king shall appoint a governor of the kingdom in his absence, and on failure it shall be governed by the viceroy or a governor, with five at least of the members of council. They shall govern the kingdom in the name and behalf of the king; and they shall observe inviolably, as much the principles contained in this fundamental law as those relative precepts the king shall lay down in his instructions. They shall make a humble report to the king upon those affairs they have decided. All matters shall be decided by plurality of votes. If the votes happen to be equal, the viceroy or governor, or in their absence the first member of council, shall have two.

Art. 12. The prince royal or his eldest son can be viceroy; but this can only occur when they have attained the majority of the king. In the case of a governor, either a Norwegian or a Swede may be nominated. The viceroy shall remain in the kingdom, and shall not be allowed to reside in a foreign one beyond three months each year. When the king shall be present, the viceroy's functions shall cease. If there is no viceroy, but only a governor, the functions of the latter shall also cease, in which event he is only the first member of council.

Art. 13. During the residence of the king in Sweden, he shall always have near him the minister of state of Norway, and two of the members of the Norwegian council, when they shall be annually changed. These are charged with similar duties, and the same constitutional responsibility attaches to them as to the sitting council in Norway; and it is only in their presence that state affairs shall be decided by the king. All petitions addressed to the king by Norwegian citizens ought, first, to be transmitted to the Norwegian council, that they may be duly considered previously to decisions being pronounced. In general, no affairs ought to be decided before the council has expressed an opinion, in case it should be met with important objections. The minister of state of Norway ought to report the affairs, and he shall be responsible for expedition in the resolutions which shall have been taken.

Art. 14. The king shall regulate public worship and its rites, as well as all assemblies that have religion for their object, so that ministers of religion may observe their forms prescribed to them.

Art. 15. The king can give and abolish ordinances which respect commerce, the custom-house, manufactures, and police. They shall not, however, be contrary to the constitution nor the laws adopted by the Storting. They shall have provisional force until the next Storting.

Art. 16. The king shall in general regulate the taxes imposed by the Storting. The public treasurer of Norway shall remain in Norway, and the revenues shall only be employed towards the expenses of Norway.

Art. 17. The king shall superintend the manner in which the domains and crown property of the state are employed and governed, in the manner fixed by the Storting, and which shall be most advantageous to the country.

Art. 18. The king in council has the right to pardon criminals when the supreme tribunal has pronounced its opinion. The criminal has the choice of receiving pardon from the king or of submitting to the punishment to which he is condemned. In the causes which the Odelsting

* The national assembly, or general states of the kingdom.

† A law of the Storting, 13th July 1815, and sanctioned by the king, declared that the king is major on arriving at the age of eighteen years.

would have ordered to be carried to the Rigsret, there can be no other pardon but that which shall liberate from a capital punishment.

Art. 19. The king, after having heard his Norwegian council, shall dispose of all the civil, ecclesiastic, and military employments. Those who assist in the functions shall swear obedience and fidelity to the constitution and to the king. The princes of the royal family cannot be invested with any civil employment; yet the prince royal, or his eldest son, may be nominated viceroy.

Art. 20. The governor of the kingdom, the minister of state, other members of council, and those employed in the functions connected with these offices, the envoys and consuls, superior magistrates, civil and ecclesiastic commanders of regiments, and other military bodies, governors of fortresses, and commanders-in-chief of ships of war, shall, without previous arrest, be deposed by the king and his Norwegian council. As to the pension to be granted to those employed they shall be decided by the first Storthing. In the mean time, they shall enjoy two-third parts of their former salary. The others employed can only be suspended by the king and they shall afterwards be brought before the tribunals, but cannot be deposed excepting by order of an arrest, and the king cannot make them change their situations contrary to their will.

Art. 21. The king can confer orders of knighthood on whomsoever he chooses, in reward of distinguished services, which shall be published; but he can confer no other rank, with the title, than that which is attached to every employment. An order of knighthood does not liberate the person on whom it is conferred from those duties common to all citizens, and particular titles are not conferred in order to obtain situations in the state. Such persons shall preserve the title and rank attached to those situations which they have occupied. No person can, for the future, obtain personal, mixed, or hereditary privileges.

Art. 22. The king elects and dismisses, whenever he thinks proper, all the officers attached to his court.

Art. 23. The king is commander-in-chief of all the forces, by sea and land, in the kingdom, and these cannot be increased or diminished without the consent of the Storthing. They will not be ceded to the service of any foreign power, and troops belonging to a foreign power (except auxiliary troops in case of a hostile invasion), cannot enter the country without the consent of the Storthing. During peace, the Norwegian troops shall be stationed in Norway, and not in Sweden. Notwithstanding this the king may have in Sweden a Norwegian guard, composed of volunteers, and may for a short time, not exceeding six weeks in a year, assemble troops in the environs of the two countries, for exercising; but in case there are more than 3,000 men, composing the army of one of the two countries, they cannot in time of peace enter the other.* The Norwegian army and gun-boats shall not be employed without the consent of the Storthing. The Norwegian fleet shall have dry docks, and during peace its stations and harbours in Norway. Ships of war of both countries shall be supplied with seamen of the other, so long as they shall voluntarily engage to serve. The landwehr, and other Norwegian forces, which are not calculated among

* The law of the Storthing, 5th July 1816, bears, that troops of the line shall be employed beyond the frontiers of the kingdom, and the interpretation given by it to that law is, that troops of the line shall be employed beyond the frontiers of the two kingdoms.

the number of troops of the line, shall never be employed beyond the frontiers of the kingdom of Norway.

Art. 24. The king has the right of assembling troops, commencing war, making peace, concluding and dissolving treaties, sending ministers to, and receiving those of foreign courts. When he begins war he ought to advise the council of Norway, consult it, and order it to prepare an address on the state of the kingdom, relative to its finances, and proper means of defence. On this the king shall convoke the minister of state of Norway, and those of the council of Sweden, at an extraordinary assembly, when he shall explain all those relative circumstances that ought to be taken into consideration; with a representation of the Norwegian council, and a similar one on the part of Sweden, upon the state of the kingdom, shall then be presented. The king shall then require advice upon these objects; and each shall be inserted in a register, under the responsibility imposed by the constitution, when the king shall then adopt that resolution which he judges most proper for the benefit of the state.

Art. 25. On this occasion all the members of council must be present, if not prevented by some lawful cause, and no resolution ought to be adopted unless one half of the members are present. In Norwegian affairs, which, according to the fifteenth article, are decided in Sweden, no resolution shall be taken unless the minister of state of Norway and one of the members of council, or two members, are present.

Art. 26. The representations respecting employments, and other important acts, excepting those of a diplomatic and military nature, properly so called, shall be referred to the council by him who is one of the members in the department charged with it, who shall accordingly draw up the resolution adopted in council.

Art. 27. If any member of council is prevented from appearing, and referring the affairs which belong to his peculiar department, he shall be replaced in this office by one of the others appointed to this purpose, either by the king, if personally present, and if not, by him who has precedence in the council, jointly with the other members composing it. Should several of these be prevented from appearing, so that only one half of the ordinary number is present, the other employed in the offices shall in like manner have right to sit in council; and in that event it shall be afterwards referred to the king, who decides if they ought to continue to exercise this office.

Art. 28. The council shall keep a register of all affairs that may come under its consideration. Every individual who sits in it shall be at liberty to give his opinion freely, which the king is obliged to hear; but it is reserved to his majesty to adopt resolutions after he has consulted his own mind. If a member of council finds that the king's resolution is contrary to the form of government, the laws of the kingdom, or injurious to the state, he shall consider it his duty to oppose it, and record his opinion in the register accordingly; but he who remains silent shall be presumed to have agreed with the king, and shall be responsible for it, even in the case of being referred to at a future period; and the Odels-thing is empowered to bring him before the Rigsret.

Art. 29. All the orders issued by the king (military affairs excepted) shall be countersigned by the Norwegian minister of state.

Art. 30. Resolutions made in absence of the king, by the council in Norway, shall be publicly

proclaimed and signed by the viceroy, or the governor and council, and countersigned by him who shall have referred them, and he is further responsible for the accuracy and dispatch with the register in which the resolution is entered.

Art. 31. All representations relative to the affairs of this country, as well as writings concerning them, must be in the Norwegian language.

Art. 32. The heir-apparent to the throne, if a son of the reigning king, shall have the title of prince royal, the other legitimate heirs to the crown shall be called princes, and the king's daughters princesses.

Art. 33. As soon as the heir shall have attained the age of eighteen, he shall have a right to sit in council, without, however, having a vote, or any responsibility.

Art. 34. No prince of the blood shall marry without permission of the king, and in case of contravention, he shall forfeit his right to the crown of Norway.

Art. 35. The princes and princesses of the royal family, shall not, so far as respects their persons, be bound to appear before other judges, but before the king or whomsoever he shall have appointed for that purpose.

Art. 36. The minister of state of Norway, as well as the two members of council who are near the king, shall have a seat and deliberative voice in the Swedish council, where objects relative to the two kingdoms shall be treated of. In affairs of this nature the advice of the council ought also to be understood, unless these require quick dispatch, so as not to allow time.

Art. 37. If the king happens to die, and the heir to the throne is under age, the council of Norway, and that of Sweden, shall assemble, and mutually call a convocation of the Storting in Norway and Diet of Sweden.

Art. 38. Although the representatives of the two kingdoms should have assembled, and regulated the administration during the king's minority, a council composed of an equal number of Norwegian and Swedish members shall govern the kingdoms, and follow their fundamental reciprocal laws. The minister of state of Norway who sits in this council, shall draw by ballot in order to decide on which of its members the preference shall happen to fall.

Art. 39. The regulations contained in the two last articles shall be always equally adopted after the constitution of Sweden. It belongs to the Swedish council, in this quality, to be at the head of government.

Art. 40. With respect to more particular and necessary affairs that might occur in cases under the three former articles, the king shall propose to the first Storting in Norway, and at the first Diet in Sweden, a law having for its basis the principle of a perfect equality existing between the two kingdoms.

Art. 41. The election of guardians to be at the head of government during the king's minority, shall be made after the same rules and manner formerly prescribed in the second title, Article 5th, concerning the election of an heir to the throne.

Art. 42. The individuals who in the cases under the 38th and 39th articles, are at the head of government, shall be, the Norwegians at the Storting of Norway, and shall take the following oath: "I swear, on my soul and conscience, to govern the kingdom conformably to its constitution and laws;" and the Swedes shall also make a similar oath. If there is not a Storting or Diet, it shall be deposited in writing in the council, and after-

wards repeated at the first of these when they happen to assemble.

Art. 43. As soon as the governments have ceased, they shall be restored to the king, and the Storting.

Art. 44. If the Storting is not convoked, agreeably to what is expressed in the 38th and 39th articles, the supreme tribunal shall consider it as an imperious duty, at the expiration of four weeks, to call a meeting.

Art. 45. The charge of the education of the king, in case his father may not have left in writing instructions regarding it, shall be regulated in the manner laid down under the 5th and 41st articles. It is held to be an invariable rule, that the king during his minority shall learn the Norwegian language.

Art. 46. If the masculine line of the royal family is extinct, and there has not been elected a successor to the throne, the election of a new dynasty shall be proceeded in, and after the manner prescribed under the 5th article. In the mean time the executive power shall be exercised agreeably to the 41st article.

Title III.

Article 1. Legislative power is exercised by the Storting, which is constituted of two houses, namely, the Lagthing and Odelsting.

Art. 2. None shall have a right to vote but Norwegians, who have attained twenty-five years, and resided in the country during five years.*
1. Those who are exercising, or who have exercised functions. 2. Possess land in the country, which has been let for more than five years. 3. Are burghesses of some city, or possess either in it, or some village, a house, or property of the value of at least three hundred bank crowns in silver.

Art. 3. There shall be drawn up in cities by the magistrates, and in every parish by the public authority and the priest, a register of all the inhabitants who are voters. They shall also note in it without delay, those changes which may successively take place. Before being inscribed in the register, every one shall take an oath, before the tribunal, of fidelity to the constitution.

Art. 4. Right of voting is suspended in the following cases: 1. By the accusation of crime before a tribunal; 2. By not attaining the proper age; 3. By insolvency or bankruptcy, until creditors have obtained their payment in whole, unless it can be proved that the former has arisen from fire, or other unforeseen events.

Art. 5. The right of voting is forfeited definitively: 1. By condemnation to the house of correction, slavery, or punishment for defamatory language; 2. By acceptance of the service of a foreign power, without the consent of government. 3. By obtaining the right of citizen in a foreign country. 4. By conviction of having purchased and sold votes, and having voted in more than one electoral assembly.

Art. 6. The electoral assemblies and districts are

* Article 1, Title 3.—Amendment: "Universal male suffrage was introduced by an amendment of 1898. On June 15, 1907, a constitutional amendment was voted granting the right to vote for members of the Storting to all Norwegian women twenty-five years of age or over, who themselves or whose husbands pay a tax upon an annual income of 400 kroner in cities or upon 300 kroner in the country. Women had before the passage of this law the right to vote in communal elections under similar conditions. Under the new constitutional provision about 300,000 of the 550,000 Norwegian women above the age of twenty-five will enjoy the right to vote."—W. F. Dodd, *Modern constitutions*, v. 2, pp. 121-122, 130.

held every three years, and shall finish before the end of the month of December.

Art. 7. Electoral assemblies shall be held for the country, at the manor-house of the parish, the church, town-hall, or some other fit place. In the country they shall be directed by the first minister and assistants; and in towns, by magistrates and sheriffs; election shall be made in the order appointed by the registers. Disputes concerning the right of voting shall be decided by the directors of the assembly, from whose judgment an appeal may be made to the Storting.

Art. 8. Before proceeding to the election, the constitution shall be read with a loud voice in the cities, by the first magistrate, and in the country by the curate.

Art. 9. In cities, an elector shall be chosen by fifty eligible inhabitants. They shall assemble eight days after, in the place appointed by the magistrate, and choose, either from amongst themselves, or from others who are eligible in the department of their election, a fourth of their number to sit at the Storting, that is after the manner of three to six in choosing one; seven to ten in electing two; eleven to fourteen in choosing three, and fifteen to eighteen in electing four; which is the greatest number permitted to a city to send. If these consist of less than 150 eligible inhabitants, they shall send the electors to the nearest city, to vote conjointly with the electors of the former, when the two shall only be considered as forming one district.*

Art. 10. In each parish in the country the eligible inhabitants shall choose in proportion to their number electors in the following manner; that is to say, a hundred may choose one; two to three hundred, three; and so on in the same proportion.† Electors shall assemble a month after, in the place appointed by the bailiff, and choose, either from amongst themselves or the others of the bailiwick eligible, a tenth of their own number to sit at the Storting, so that five to fourteen may choose one; fifteen to twenty-four may choose two of them; twenty-five to thirty-four, three; thirty-five and beyond it, four. This is the greatest number.

Art. 11. The powers contained in the 9th and 10th articles shall have their proper force and effect until next Storting. If it is found that the representatives of cities constitute more or less than one-third of those of the kingdom, the Storting, as a rule for the future, shall have right to change these powers in such a manner that representatives of the cities may join with those of the country, as one to two; and the total number of representatives ought not to be under seventy-five, nor above one hundred.

Art. 12. Those eligible, who are in the country, and are prevented from attending by sickness, military service, or other proper reasons, can transmit their votes in writing to those who direct the electoral assemblies, before their termination.

Art. 13. No person can be chosen a representative, unless he is thirty years of age, and has resided ten years in the country.

* A law passed 8th February 1816, contains this amendment. Twenty-five electors and more shall not elect more than three representatives, which shall be, ad interim, the greatest number which the bailiwick can send; and, consequently, out of which the number of representatives in the county, which are sixty-one, shall be diminished from fifty to fifty-three.

† If future Stortings discover the number of representatives of towns from an increase of population should amount to thirty, the same Storting shall have right to augment of new the number of representatives of the country, in the manner fixed by the principles of the constitution, which shall be held as a rule in future.

Art. 14. The members of council, those employed in their offices, officers of the court, and its pensions, shall not be chosen as representatives.

Art. 15. Individuals chosen to be representatives, are obliged to accept of the election, unless prevented by motives considered lawful by the electors, whose judgment may be submitted to the decision of the Storting. A person who has appeared more than once as representative at an ordinary Storting, is not obliged to accept of the election for the next ordinary Storting. If legal reasons prevent a representative from appearing at the Storting, the person who after him has most votes shall take his place.

Art. 16. As soon as representatives have been elected, they shall receive a writing in the country from the superior magistrate, and in the cities from the magistrate, also from all the electors, as a proof that they have been elected in the manner prescribed by the constitution. The Storting shall judge of the legality of this authority.

Art. 17. All representatives have a right to claim an indemnification in travelling to and returning from the Storting; as well as subsistence during the period they shall have remained there.

Art. 18. During the journey, and return of representatives, as well as the time they may have attended the Storting, they are exempted from arrest; unless they are seized in some flagrant and public act, and out of the Storting they shall not be responsible for the opinions they may have declared in it. Every one is bound to conform himself to the order established in it.

Art. 19. Representatives, chosen in the manner above declared, compose the Storting of the kingdom of Norway.

Art. 20. The opening of the Storting shall be made the first lawful day in the month of February, every three years, in the capital of the kingdom, unless the king, in extraordinary circumstances, by foreign invasion or contagious disease, fixes on some other city of the kingdom. Such change ought then to be early announced.

Art. 21. In extraordinary cases, the king has the right of assembling the Storting, without respect to the ordinary time. The king will then cause to be issued a proclamation, which is to be read in all the principal churches six weeks at least previous to the day fixed for the assembling of members of the Storting at the place appointed.

Art. 22. Such extraordinary Storting may be dissolved by the king when he shall judge fit.

Art. 23. Members of the Storting shall continue in the exercise of their office during three consecutive years, as much during an extraordinary as any ordinary Storting that might be held during this time.

Art. 24. If an extraordinary Storting is held at a time when the ordinary Storting ought to assemble, the functions of the first will cease, as soon as the second shall have met.

Art. 25. The extraordinary Storting, no more than the ordinary, can be held if two-thirds of the members do not happen to be present.

Art. 26. As soon as the Storting shall be organized, the king, or the person who shall be appointed by him for that purpose, shall open it by an address, in which he is to describe the state of the kingdom, and those objects to which he directs the attention of the Storting. No deliberation ought to take place in the king's presence. The Storting shall choose from its members one-fourth part to form the Lagthing, and the other three-fourths to constitute the Odelsting. Each

of these houses shall have its private meetings, and nominate its president and secretary.

Art. 27. It belongs to the Storting,—1. To make and abolish laws, establish imposts, taxes, custom-houses, and other public acts, which shall, however, only exist until the 1st of July of that year, when a new Storting shall be assembled, unless this last is expressly renewed by them. 2. To make loans, by means of the credit of the state. 3. To watch over the finances of the state. 4. To grant sums necessary for its expenses. 5. To fix the yearly grant for the maintenance of the king and viceroy, and also appendages of the royal family; which ought not, however, to consist in landed property. 6. To exhibit the register of the sitting council in Norway, and all the reports, and public documents (the affairs of military command excepted), and certified copies, or extracts of the registers kept by the ministers of state and members of council near the king, or the public documents, which shall have been produced. 7. To communicate whatever treaties the king shall have concluded in the name of the state with foreign powers, excepting secret articles, provided these are not in contradiction with the public articles. 8. To require all individuals to appear before the Storting on affairs of state, the king and royal family excepted. This is not, however, applicable to the princes of the royal family, as they are invested with other offices than that of viceroy. 9. To examine the lists of provisional pensions; and to make such alterations as shall be judged necessary. 10. To name five revisers, who are annually to examine the accounts of the state, and publish printed extracts of these, which are to be remitted to the revisers also every year before the 1st of July. 11. To naturalize foreigners.

Art. 28. Laws ought first to be proposed to the Odelsting, either by its own members or the government, through one of the members of council. If the proposition is accepted, it shall be sent to the Lagthing, who approve or reject it; and in the last case return it accompanied with remarks. These shall be weighed by the Odelsting, which sets the proposed law aside, or remits it to the Lagthing, with or without alterations. When a law shall have been twice proposed by the Odelsting to the Lagthing, and the latter shall have rejected it a second time, the Storting shall assemble, when two-thirds of the votes shall decide upon it. Three days at least ought to pass between each of those deliberations.

Art. 29. When a resolution proposed by the Odelsting shall be approved by the Lagthing, or by the Storting alone, a deputation of these two houses to the Storting shall present it to the king if he is present, and if not, to the viceroy, or Norwegian council, and require it may receive the royal sanction.

Art. 30. Should the king approve of the resolution, he subscribes to it, and from that period it is declared to pass into a public law. If he disapproves he returns it to the Odelsting, declaring that at this time he does not give it his sanction.

Art. 31. In this event, the Storting, then assembled, ought to submit the resolution to the king, who may proceed in it in the same manner if the first ordinary Storting presents again to him the same resolution. But if, after reconsideration, it is still adopted by the two houses of the third ordinary Storting, and afterwards submitted to the king, who shall have been intreated not to withhold his sanction to a resolution that the Storting, after the most mature deliberations, believes to be useful; it shall acquire the strength

of a law, even should it not receive the king's signature before the closing of the Storting.

Art. 32. The Storting shall sit as long as it shall be judged necessary, but not beyond three months, without the king's permission. When the business is finished, or after it has assembled for the time fixed, it is dissolved by the king. His Majesty gives, at the same time, his sanction to the decrees not already decided, either in corroborating or rejecting them. All those not expressly sanctioned are held to be rejected by him.

Art. 33. Laws are to be drawn up in the Norwegian language, and (those mentioned in 31st article excepted) in name of the king, under the seal of the kingdom, and in these terms:—"We, &c. Be it known, that there has been submitted to us a decree of the Storting (of such a date) thus expressed (follows the resolution); We have accepted and sanctioned as law the said decree, in giving it our signature, and seal of the kingdom."

Art. 34. The king's sanction is not necessary to the resolutions of the Storting, by which the legislative body,—1. Declares itself organized as the Storting, according to the constitution. 2. Regulates its internal police. 3. Accepts or rejects writs of present members. 4. Confirms or rejects judgments relative to disputes respecting elections. 5. Naturalizes foreigners. 6. And in short, the resolution by which the Odelsting orders some member of council to appear before the tribunals.

Art. 35. The Storting can demand the advice of the supreme tribunal in judicial matters.

Art. 36. The Storting will hold its sittings with open doors, and its acts shall be printed and published, excepting in cases where a contrary measure shall have been decided by the plurality of votes.

Art. 37. Whoever molests the liberty and safety of the Storting, renders himself guilty of an act of high treason towards the country.

Title IV.

Article 1. The members of the Lagthing and supreme tribunal composing the Rigsret, judge in the first and last instance of the affairs entered upon by the Odelsting, either against the members of council or supreme tribunal for crimes committed in the exercise of their offices, or against the members of Storting for acts committed by them in a similar capacity. The president of the Lagthing has the precedence in the Rigsret.

Art. 2. The accused can, without declaring his motive for so doing, refuse, even a third part of the members of the Rigsret, provided, however, that the number of persons who compose this tribunal be not reduced to less than fifteen.

Art. 3. The supreme tribunal shall judge in the last instance, and ought not to be composed of a lesser number than the resident and six assessors.

Art. 4. In time of peace the supreme tribunal, with two superior officers appointed by the king, constitutes a tribunal of the second and last resort in all military affairs which respect life, honour, and loss of liberty for a time beyond the space of three months.

Art. 5. The arrests of the supreme tribunal shall not in any case be called upon to be submitted to revision.

Art. 6. No person shall be named member of the supreme tribunal, if he has not attained at least thirty years of age.

Title V.

Article 1. Employments in the states shall be conferred only on Norwegian citizens, who profess the Evangelical Lutheran religion—have sworn fidelity to the constitution and king, speak the language of the country, and are,—1. Either born in the kingdom of parents who were then subjects of the state. 2. Or born in a foreign country, their father and mother being Norwegians, and at that period not the subjects of another state. 3. Or, who on the 17th May, 1814, had a permanent residence in the kingdom, and did not refuse to take an oath to maintain the independence of Norway. 4. Or who in future shall remain ten years in the kingdom. 5. Or who have been naturalized by the Storting. Foreigners, however, may be nominated to these official situations in the university and colleges, as well as to those of physicians, and consuls in a foreign country. In order to succeed to an office in the superior tribunal, the person must be thirty years old; and to fill a place in the inferior magistracy,—a judge of the tribunal of first instance, or a public receiver, he must be twenty-five.

Art. 2. Norway does not acknowledge herself owing any other debt than that of her own.

Art. 3. A new general code, of a civil and criminal nature, shall first be published; or, if that is impracticable, at the second ordinary Storting. Meantime, the laws of the state, as at present existing, shall preserve their effect, since they are not contrary to this fundamental law, or provisional ordinances published in the interval. Permanent taxes shall continue to be levied until next Storting.

Art. 4. No protecting dispensation, letter of respite, or restitutions, shall be granted after the new general code shall be published.

Art. 5. No persons can be judged but in conformity to the law, or be punished until a tribunal shall have taken cognizance of the charges directed against them. Torture shall never take place.

Art. 6. Laws shall have no retro-active effect.

Art. 7. Fees due to officers of justice are not to be combined with rents payable to the public treasury.

Art. 8. Arrest ought not to take place excepting in cases and in the manner fixed by law. Illegal arrests, and unlawful delays, render him who occasions them responsible to the person arrested. Government is not authorized to employ military force against the members of the state, but under the forms prescribed by the laws, unless an assembly which disturbs the public tranquillity does not instantly disperse after the articles of the code concerning sedition shall have been read aloud three times by the civil authorities.

Art. 9. The liberty of the press shall be established. No person can be punished for a writing he has ordered to be printed or published, whatever may be the contents of it, unless he has, by himself or others, wilfully declared, or prompted others to, disobedience of the laws, contempt for religion, and constitutional powers, and resistance to their operations; or has advanced false and defamatory accusations against others. It is permitted to every one to speak freely his opinion on the administration of the state, or on any other object whatever.

Art. 10. New and permanent restrictions on the freedom of industry are not to be granted in future to any one.

Art. 11. Domiciliary visits are prohibited, excepting in the cases of criminals.

Art. 12. Refuge will not be granted to those who shall be bankrupts.

Art. 13. No person can in any case forfeit his landed property, and fortune.

Art. 14. If the interest of the state requires that any one should sacrifice his moveable or immoveable property for the public benefit, he shall be fully indemnified by the public treasury.

Art. 15. The capital, as well as the revenues of the domains of the church, can be applied only for the interests of the clergy, and the prosperity of public instruction. The property of benevolent institutions shall be employed only for their profit.

Art. 16. The right of the power of redemption called *Odelsret**, and that of possession, called *Afædesret* (father's right), shall exist. Particular regulations, which will render these of utility to the states and agriculture, shall be determined by the first or second Storting.

Art. 17. No county, barony, majorat or "fidei commis"† shall be created for the future.

Art. 18. Every citizen of the state, without regard to birth or fortune, shall be equally obliged, during a particular period, to defend his country;‡ The application of this principle and its restrictions, as well as the question of ascertaining to what point it is of benefit to the country, that this obligation should cease at the age of twenty-five,—shall be abandoned to the decision of the first ordinary Storting, after they shall have been discharged by a committee; in the meantime, vigorous efforts shall preserve their effect.

Art. 19. Norway shall retain her own language, her own finances and coin; institutions which shall be determined upon by laws.

Art. 20. Norway has the right of having her own flag of trade and war, which shall be an union flag.

Art. 21. If experience should show the necessity of changing some part of this fundamental law, a proposition to this purpose shall be made to an ordinary Storting, published and printed; and it only pertains to the next ordinary Storting to decide if the change proposed ought to be effectual or not. Such alteration, however, ought never to be contrary to the principles of this fundamental law; and should only have for its object those modifications in which particular regulations do not alter the spirit of the constitution. Two-thirds of the Storting ought to agree upon such a change. Christiana, 4th November, 1814. See NORWAY: 1814-1815.

1604.—Origin of name Acadia.—In 1604, after the death of De Chastes, who had sent out Champlain on his first voyage to Canada, Pierre du Guast, Sieur de Monts, took the enterprise in hand and "petitioned the king for leave to colonize La Cadië, or Acadie, a region defined as extending from the 40th to the 46th degree of north latitude, or from Philadelphia to beyond Montreal. . . . De Monts gained his point. He was made Lieutenant-General in Acadia. . . . This name is not found in any earlier public document. It was afterwards restricted to the peninsula of Nova Scotia, but the dispute concerning the limits of Acadia was a proximate cause of the war of 1755. The word is said to be derived from the Indian Aquoddiauke, or Aquoddie, supposed to mean the fish called a pollock. The Bay of Passamaquoddy, 'Great Pollock Water,' if we may accept the same authority, derives its name from the same origin. Potter in 'Historical Magazine,' I, 84. This derivation is doubtful. The Micmac word, 'Quoddy,' 'Kady,' or 'Cadie,' means simply a place or region, and is properly used in conjunction with some other noun; as, for example, 'Katakady,' the Place of Eels. . . . Dawson and Rand, in 'Canadian Antiquarian and Numismatic Journal.'—F. Parkman, *Pioneers of France in the New World: Champlain*, ch. 2. and foot-note.

1621-1668.—English grant to Sir William Alexander.—Cession to France.—Quarrels of La Tour and D'Aulnay.—English reconquest and recession to France.—"In 1621, Sir William Alexander, a Scotchman of some literary pretensions, had obtained from King James [through the Council for New England, or Plymouth Company (see **NEW ENGLAND**: 1621-1631)] a charter, (dated Sept. 10, 1621) for the lordship and barony of New Scotland, comprising the territory now known as the provinces of Nova Scotia and New Brunswick. Under this grant he made several unsuccessful attempts at colonization; and in 1625 he undertook to infuse fresh life into his enterprise by parcelling out the territory into baronetcies. Nothing came of the scheme, and by the treaty of St. Germain, in 1632, Great Britain surrendered to France all the places occupied by the English within these limits. Two years before this, however, Alexander's rights in a part of the territory had been purchased by Claude and Charles de la Tour; and shortly after the peace the Chevalier Razilly was appointed by Louis XIII. governor of the whole of Acadia. He designated as his lieutenants Charles de la Tour for the portion east of the St. Croix, and Charles de Menou, Sieur d'Aulnay-Charnisé, for the portion west of that river. The former established himself on the River St. John, where the city of St. John now stands, and the latter at Castine, on the eastern shore of Penobscot Bay. Shortly after his appointment, La Tour attacked and drove away a small party of Plymouth men who had set up a trading-post at Machias; and in 1635 D'Aulnay treated another party of the Plymouth colonists in a similar way. In retaliation for this attack, Plymouth hired and despatched a vessel commanded by one Girling, in company with their own barque, with 20 men under Miles Standish, to dispossess the French; but the expedition failed to accomplish anything. Subsequently the two French commanders quarrelled, and, engaging in active hostilities, made efforts (not altogether unsuccessful) to enlist Massachusetts in their quarrel. For this purpose La Tour visited Boston in person in the summer of 1643, and was hospitably entertained. He was not able to secure the direct coöperation of Massachusetts; but he was permitted to hire four vessels and a pinnace to aid him in his attack on D'Aulnay. The expedition was so far successful as to destroy a mill and some standing corn belonging to his rival. In the following year La Tour made a second visit to Boston for further help; but he was able only to procure the writing of threatening letters from the Massachusetts authorities to D'Aulnay. Not long after La Tour's departure from Boston, envoys from D'Aulnay arrived here; and after considerable delay a treaty was signed pledging the colonists to neutrality, which was ratified by the Commissioners of the United Colonies in the following year; but it was not until two years later that it was ratified by new envoys from the crafty Frenchman. In this interval D'Aulnay captured by assault La Tour's fort at St. John, securing booty to a large amount; and a few weeks afterward Madame la Tour, who seems to have been of a not less warlike turn than her husband, and who had bravely defended the fort, died of shame and mortification. La Tour was reduced to the last extremities; but he finally made good his losses, and in 1653 he married the widow of his rival, who had died two or three years before.

In 1654, in accordance with secret instructions from Cromwell, the whole of Acadia was subjugated by an English force from Boston under the command of Major Robert Sedgwick, of Charlestown, and Captain John Leverett, of Boston. To the latter the temporary government of the country was intrusted. Ineffectual complaints of this aggression were made to the British government; but by the treaty of Westminster, in the following year, England was left in possession, and the question of title was referred to commissioners. In 1656 it made a province by Cromwell, who appointed Sir Thomas Temple governor, and granted the whole territory to Temple and to one William Crown and Stephen de la Tour, son of the late governor. The rights of the latter were purchased by the other two proprietors, and Acadia remained in possession of the English until the treaty of Breda, in 1668 when it was ceded to France with undefined limits. Very little was done by the French to settle and improve the country."—C. C. Smith, *Acadia (Narrative and critical history of America, v. 4, ch. 4)*.

1713-1730.—Troubles with French inhabitants (Acadians).—Their refusal to swear allegiance.—Hostilities with Indians.—"It was evident from the first that the French intended to interpret the cession of Acadia in as restricted a sense as possible, and that it was their aim to neutralize the power of England in the colony, by confining it within the narrowest limits. The inhabitants numbered some 2,500 at the time of the treaty of Utrecht, divided into three principal settlements at Port Royal, Mines, and Chignecto. The priests at these settlements during the whole period from the treaty of Utrecht to the expulsion of the Acadians were, with scarcely an exception, agents of the French Government, in their pay, and resolute opponents of English rule. The presence of a powerful French establishment at Louisburg, and their constant communications with Canada, gave to the political teachings of those priests a moral influence, which went far towards making the Acadians continue faithful to France. They were taught to believe that they might remain in Acadia, in an attitude of scarcely concealed hostility to the English Government, and hold their lands and possessions as neutrals, on the condition that they should not take up arms either for the French or English. . . . By the 14th article of the treaty of Utrecht, it was stipulated 'that the subjects of the King of France may have liberty to remove themselves within a year to any other place, with all their movable effects. But those who are willing to remain, and to be subject to the King of Great Britain, are to enjoy the free exercise of their religion according to the usages of the church of Rome, as far as the laws of Great Britain do allow the same.' . . . It was never contemplated that the Acadians should establish themselves in the country a colony of enemies of British power, ready at all times to obstruct the authority of the government, and to make the possession of Acadia by England merely nominal. . . . Queen Anne died in August, 1714, and in January, 1715, Messrs. Capoon and But-

ton were commissioned by Governor Nicholson to proceed in the sloop of war Caulfield to Mines, Chignecto, River St. John, Passamaquoddy and Penobscot, to proclaim King George, and to tender and administer the oaths of allegiance to the French inhabitants. The French refused to take the oaths, and some of the people of Mines made the pretence that they intended to withdraw from the colony. . . . A year later the people of Mines notified Caulfield [Lieutenant-Governor] that they intended to remain in the country, and at this period it would seem that most of the few French inhabitants who actually left the Province had returned. Caulfield then summoned the inhabitants of Annapolis, and tendered them the oath of allegiance, but with no better success than his deputies had met at Mines and Chignecto. . . . General Phillips, who became Governor of Nova Scotia in 1717, and who arrived in the Province early in 1720, had no more success than his predecessors in persuading the Acadians to take the oaths. Every refusal on their part only served to make them more bold in defying the British authorities. . . . They held themselves in readiness to take up arms against the English the moment war was declared between the two Crowns, and to restore Acadia to France. But, as there was a peace of thirty years duration between France and England after the treaty of Utrecht, there was no opportunity of carrying this plan into effect. Vaudreuil, Governor of Canada, however, continued to keep the Acadians on the alert by means of his agents, and the Indians were incited to acts of hostility against the English, both in Acadia and Maine. The first difficulty occurred at Canso in 1720, by a party of Indians assailing the English fishermen there. . . . The Indians were incited to this attack by the French of Cape Breton, who were annoyed at one of their vessels being seized at Canso by a British war vessel for illegal fishing. . . . The Indians had indeed some reason to be disquieted, for the progress of the English settlements east of the Kennebec filled them with apprehensions. Unfortunately the English had not been always so just in their dealings with them that they could rely entirely on their forbearance. The Indians claimed their territorial rights in the lands over which the English settlements were spreading; the French encouraged them in this claim, alleging that they had never surrendered this territory to the English. While these questions were in controversy the Massachusetts authorities were guilty of an act which did not tend to allay the distrust of the Indians. This was nothing less than an attempt to seize the person of Father Ralle, the Jesuit missionary at Norridgewock. He, whether justly or not, was blamed for inciting the Indians to acts of hostility, and was therefore peculiarly obnoxious to the English." The attempt to capture Father Ralle, at Norridgewock, which was made in December, 1721, and which failed, exasperated the Indians, and "in the summer of 1722 a war commenced, in which all the Indian tribes from Cape Canso to the Kennebec were involved. The French could not openly take part in the war, but such encouragement and assistance as they could give the Indians secretly they freely supplied." This war continued until 1725, and cost the lives of many of the colonists of New England and Nova Scotia. Its most serious event was the destruction of Norridgewock and the barbarous murder of Father Ralle, by an expedition from Massachusetts in the summer of 1724. In November, 1725, a treaty of peace was concluded, the Indians acknowledging the sovereignty of King

George. After the conclusion of the Indian war, the inhabitants of Annapolis River took a qualified oath of allegiance, with a clause exempting them from bearing arms. At Mines and Chignecto they still persisted in their refusal; and when, on the death of George I and the accession of George II, the inhabitants of Annapolis were called upon to renew their oath, they also refused again. In 1729 Governor Phillips returned to the province and had great success during the next year in persuading the Acadians, with a few exceptions only throughout the French settlements, to take an oath of allegiance without any condition as to the bearing or not bearing of arms. "The Acadians afterwards maintained that when they took this oath of allegiance, it was with the understanding that a clause was to be inserted, relieving them from bearing arms. The statement was probably accurate, for that was the position they always assumed, but the matter seems to have been lost sight of, and so for the time the question of oaths, which had been such a fertile cause of discord in the Province, appeared to be set at rest."—J. Hannay, *History of Acadia*, ch. 17.

1744-1748.—Third Intercolonial War (King George's War). See NEW ENGLAND: 1744; 1745; 1745-1748.

1749-1755.—Futile discussion of boundary questions.—Acadian "Neutrals" and their conduct.—Founding of Halifax.—Hostilities renewed.—"During the nominal peace which followed the Treaty of Aix-la-Chapelle, the representatives of the two governments were anxiously engaged in attempting to settle by actual occupation the question of boundaries, which was still left open by that treaty. It professed to restore the boundaries as they had been before the war; and before the war the entire basin of the Mississippi, as well as the tract between the St. Lawrence River and Gulf, the Bay of Fundy, and the Kennebec, was claimed by both nations, with some show of reason, as no convention between them had ever defined the rights of each. Names had been given to vast tracts of land whose limits were but partly defined, or at one time defined in one way, at another time in another, and when these names were mentioned in treaties they were understood by each party according to its own interest. The treaty of 1748, therefore, not only left abundant cause for future war, but left occasion for the continuance of petty border hostilities in time of nominal peace. Commissioners were appointed, French and English, to settle the question of the disputed territory, but the differences were too wide to be adjusted by anything but conquest. While the most important question was that of the great extent of territory at the west, and . . . both nations were devising means for establishing their claims to it, Acadia, or Nova Scotia, was the scene of a constant petty warfare. The French were determined to restrict the English province to the peninsula now known by that name. The Governor of Canada sent a few men under Boisshert to the mouth of the St. John's to hold that part of the territory. A little old fort built by the Indians had stood for fifty years on the St. John's at the mouth of the Nerepis, and there the men established themselves. A large number was sent under La Corne to keep possession of Chignecto, on the isthmus which, according to French claims, formed the northern boundary of English territory. In all the years that England had held nominal rule in Acadia, not a single English settlement had been formed, and apparently not a step

of progress had been taken in gaining the loyalty of the inhabitants. A whole generation had grown up during the time; but they were no less devoted to France than their fathers had been. It was said that the king of England had not one truly loyal subject in the peninsula, outside of the fort at Annapolis. . . . Among the schemes suggested for remedying this state of affairs, was one by Governor Shirley [of Massachusetts], to place strong bands of English settlers in all the important towns, in order that the Government might have friends and influence throughout the country. Nothing came of this; but in 1749 Parliament voted £40,000 for the purpose of settling a colony. . . . Twenty-five hundred persons being ready to go in less than two months from the time of the first advertisement, the colony was entrusted to Colonel Edward Cornwallis (uncle of the Cornwallis of the Revolutionary War), and he was made Governor of Nova Scotia. Chebucto was selected as the site of the colony, and the town was named Halifax in honor of the president of the Lords of Trade and Plantations. [See also HALIFAX.] . . . In July, a council was held at Halifax, when Governor Cornwallis gave the French deputies a paper declaring what the Government would allow to the French subjects, and what would be required of them." They were called upon to take the oath of allegiance, so often refused before. They claimed the privilege of taking a qualified oath, such as had been formerly allowed in certain cases, and which exempted them from bearing arms. "They wished to stand as neutrals, and, indeed, were often called so. Cornwallis replied that nothing less than entire allegiance would be accepted. . . . About a month later the people sent in a declaration with a thousand signatures, stating that they had resolved not to take the oath, but were determined to leave the country. Cornwallis took no steps to coerce them, but wrote to England for instructions."—R. Johnson, *History of the French war*, ch. 10.—"The government was transferred from Annapolis Royal; but no change was made in the old plan of administration. A General Assembly was contemplated in the governor's commission, but it was not actually established until 1758. The British government followed up the work of colonization with energy. In 1750 the ship *Alderney* brought out 353 settlers who . . . formed the nucleus of the present town of Dartmouth. More important was the assisted immigration of foreign Protestant settlers. These came for the most part from the Palatinate and the upper Rhine. Three hundred Germans in the ship *Ann* from Rotterdam reached Halifax in September 1750. In the spring of 1751 a further immigration of nearly one thousand foreign Protestants reached Halifax, and in the year following a second thousand. It was not until 1754 that courts of law in Nova Scotia began to be organized on the present basis. The advent of Chief Justice Belcher on the scene marks the change. The situation of the colony in 1754 may be precised as follows. After nearly half a century of neglect England, in the lull between two great wars, took up the work of 'planting' Nova Scotia with marked energy. Within four years she poured nearly six thousand settlers into the province and established them firmly in two defensible towns on good harbours. The work did not need to be done again. At the same time Louisbourg was within easy striking distance of the new rival capital, and the large Acadian population settled in the most fertile part of the province supported, as was natural, the French settlement of Cape Breton. This was

the posture of affairs when the Seven Years' War broke out."—A. MacMeehan, *Nova Scotia (Canada and its provinces)*, A. Shortt and A. G. Doughty, ed., v. 13, pp. 83, 87-88).—In 1750, Major Lawrence was sent to Chignecto, with 400 men, to build a block-house on the little river Messagouche, which the French claimed as their southern boundary. "A large French fort, Beau Séjour, was built on the northern side of the Messagouche, and a smaller one, Gaspereaux, at Baie Verte. Other stations were also planted, forming a line of fortified posts from the Gulf of St. Lawrence to the mouth of the St. John's. . . . The commission appointed to settle the question of boundaries had broken up without accomplishing any results; and it was resolved by the authorities in Nova Scotia and Massachusetts [1754] that an expedition should be sent against Fort Beau Séjour. . . . Massachusetts . . . raised about 2,000 troops for the contemplated enterprise, who were under the command of Lieutenant-Colonel John Winslow. To this force were added about 300 regulars, and the whole was placed under the command of Lieutenant-Colonel Moncton. They reached Chignecto on the 2d of June," 1755. The French were found unprepared for long resistance, and Beau Séjour was surrendered on the 16th. "After Beau Séjour, the smaller forts were quickly reduced. Some vessels sent to the mouth of the St. John's found the French fort deserted and burned. The name of Beau Séjour was changed to Cumberland."—R. Johnson, *History of the French war*, ch. 10.—See also CANADA: 1750-1753; ENGLAND: 1754-1755.

1755.—Removal of Acadians and their dispersion in exile.—"The campaign of the year 1755, which had opened in Nova Scotia with so much success, and which promised a glorious termination, disappointed the expectations and awakened the fears of the Colonists. The melancholy and total defeat of the army under General Braddock, while on his march against Fort du Quesne, threw a gloom over the British Provinces. . . . Louisbourg was reinforced, the savages let loose upon the defenceless settlements of the English, and the tide of war seemed ready to roll back upon the invaders. Amidst this general panic, Governor Lawrence and his Council, aided by Admirals Boscawen and Moystyn, assembled to consider the necessary measures that were to be adopted towards the Acadians, whose character and situation were so peculiar as to distinguish them from every other people who had suffered under the scourge of war. . . . It was finally determined, at this consultation, to remove and disperse this whole people among the British Colonies; where they could not unite in any offensive measures, and where they might be naturalized to the Government and Country. The execution of this unusual and general sentence was allotted chiefly to the New England Forces, the Commander of which [Colonel Winslow], from the humanity and firmness of his character, was well qualified to carry it into effect. It was, without doubt, as he himself declared, disagreeable to his natural make and temper; and his principles of implicit obedience as a soldier were put to a severe test by this ungrateful kind of duty; which required an ungenerous, cunning, and subtle severity. . . . They were kept entirely ignorant of their destiny until the moment of their captivity, and were over-

awed, or allured, to labour at the gathering in of their harvest, which was secretly allotted to the use of their conquerors."—T. C. Haliburton, *Account of Nova Scotia*, v. 1, pp. 170-175.—"No just opinion can be formed regarding the forcible removal of the French population from Nova Scotia in 1755, without recognition of the fact that for two years prior to the formal rupture between France and England in 1756 their colonies in America had been openly at war. Again, the situation cannot be understood without recognition of the fact that the French parted most reluctantly with Acadia, never relinquished the hope of regaining it and never ceased to labour towards that end. Their chief political agents were the various missionary priests sent into the province under the provisions of the Treaty of Utrecht. To teach their flocks to consider themselves still virtually subjects of King Louis, or 'neutrals,' to undermine English influence wherever possible, could only have appeared to them in the light of a hazardous, patriotic duty. On this subject much indignation has been displayed by partisan historians on both sides; but the French are no more to be blamed for striving to win back their lost province by all means in their power than the English are to be blamed for striving to retain it. Of all the missionaries the most zealous and efficient by far was Joseph Louis le Loutre. Bold, resourceful, wary, untiring, truculent, tenacious of his purpose, Le Loutre was a born leader of men. . . . Until he left the province in 1754 his hand is to be seen or suspected in every move against the English power. Acting under express orders from the French government he stirred up the Indians to harass the new town of Halifax and discourage the settlers. Many were the massacres in the early days, and deep the terror caused by them. As Duquesne wrote to Le Loutre, 'Ten scalps would stop an English army.' He hectorated the Acadians into compliance with his will by threatening to loose the Indians upon them if they disobeyed. He threatened them from the altar with spiritual pains and penalties if they resisted his dictation. With his own hand he fired the church at Beaubassin to force the inhabitants into retreating across the boundary line into French territory. . . . During the years 1751-52 he forced at least two thousand Acadians to withdraw from Nova Scotia into French territory beyond the isthmus, or into the islands of St. John and Cape Breton, where their state was miserable indeed. It was Le Loutre who began the expulsion of the Acadians. The ultimate cause of this emigration was the action of Cornwallis in demanding a renewal of the oath by the Acadians as a condition of retaining their lands. . . . Either the Acadians were British subjects or they were not. There was no middle ground; they could not be 'neutrals'. . . . In a state of actual war with France it would be impossible to distinguish them from open enemies. . . . The situation was highly critical and the English governors met it, not as all-powerful tyrants, but as men who in the midst of danger take obvious precautions for their safety. Cornwallis failed to persuade the Acadians to renew their unconditional oath of allegiance. He returned to England in 1752, and his successor, Hopson, held office only for a year. [Charles Lawrence,] the next captain-general and governor-in-chief was a man of much more decided character and stronger will than any who had held office before him. In deciding to remove the French population from the province Lawrence and his council felt that they were obliged to act swiftly in a crisis. War was in active progress; British

prestige had received a crushing blow in the annihilation of Braddock's command; intercepted dispatches from the French governor at Louisbourg revealed a plan of campaign to destroy Halifax and drive the English into the sea; leather bags filled with scalping-knives for distribution among the Indians were found in the captured French men-of-war; and the Acadians had refused once more, and for the last time, to bind themselves by an unconditional oath of allegiance. This fatal decision was reached on July 27, 1755. At a meeting of council held on the preceding Friday the two alternatives had been plainly set before the French deputies, either to take the oath or to quit their lands; and they were given the intervening days to think the matter over. Called before the governor in council, they refused point-blank to take the oath."—A. MacMeehan, *Nova Scotia (Canada and its provinces)*, A. Shortt and A. G. Doughty, ed., v. 13, pp. 80-94.—"Winslow prepared for the embarkation. The Acadian prisoners and their families were divided into groups answering to their several villages, in order that those of the same village might, as far as possible, go in the same vessel. It was also provided that the members of each family should remain together; and notice was given them to hold themselves in readiness. 'But even now,' he writes, 'I could not persuade the people I was in earnest.' Their doubts were soon ended. The first embarkation took place on the 8th of October [1755]. . . . When all, or nearly all, had been sent off from the various points of departure, such of the houses and barns as remained standing were burned, in obedience to the orders of Lawrence, that those who had escaped might be forced to come in and surrender themselves. The whole number removed from the province, men, women, and children, was a little above 6,000. Many remained behind; and while some of these withdrew to Canada, Isle St. Jean, and other distant retreats, the rest lurked in the woods, or returned to their old haunts, whence they waged for several years a guerilla warfare against the English. Yet their strength was broken, and they were no longer a danger to the province. Of their exiled countrymen, one party overpowered the crew of the vessel that carried them, ran her ashore at the mouth of the St. John, and escaped. The rest were distributed among the colonies from Massachusetts to Georgia, the master of each transport having been provided with a letter from Lawrence addressed to the Governor of the province to which he was bound, and desiring him to receive the unwelcome strangers. The provincials were vexed at the burden imposed upon them; and though the Acadians were not in general ill-treated, their lot was a hard one. Still more so was that of those among them who escaped to Canada. . . . Many of the exiles eventually reached Louisiana, where their descendants now form a numerous and distinct population. Some, after incredible hardship, made their way back to Acadia, where, after the peace, they remained unmolested. . . . In one particular the authors of the deportation were disappointed in its results. They had hoped to substitute a loyal population for a disaffected one; but they failed for some time to find settlers for the vacated lands. . . . New England humanitarianism, melting into sentimentality at a tale of woe, has been unjust to its own. Whatever judgement may be passed on the cruel measure of wholesale expatriation, it was not put in execution till every resource of patience and persuasion had been tried in vain."—F. Parkman, *Montcalm and Wolfe*, v. 1, ch. 8.—"The removal of the French Acadians

from their homes was one of the saddest episodes in modern history, and no one now will attempt to justify it; but it should be added that the genius of our great poet [Longfellow in 'Evangeline'] has thrown a somewhat false and distorted light over the character of the victims. They were not the peaceful and simple-hearted people they are commonly supposed to have been; and their houses, as we learn from contemporary evidence, were by no means the picturesque, vine-clad, and strongly built cottages described by the poet. The people were notably quarrelsome among themselves, and to the last degree superstitious. They were wholly under the influence of priests appointed by the French bishops."—C. C. Smith, *Wars on the seaboard (Narrative and critical history of America, v. 5, ch. 7)*.—"We defy all past history to produce a parallel case, in which an unarmed and peaceable people have suffered to such an extent as did the French Neutrals of Acadia at the hands of the New England troops."—P. H. Smith, *Acadia*, p. 216.

1755-1785.—Self-government.—Attitude during Revolutionary War.—Non-intercourse and invasions.—"The granting of self-government to the province had been intended by the British authorities from the outset. The greatest obstacle was that the French as Catholics were by British law excluded from the franchise. . . . Under the administration of Lawrence a number of New Englanders settled in Halifax. These men brought with them a perfect acquaintance with all the details of self-government, and they were fiercely impatient of arbitrary action by irresponsible officials. . . . At last the pressure became too strong for . . . [Lawrence, and on the insistence of the lords of trade] on February 7, 1758, the governor and council passed resolutions providing for the election of sixteen members for the province at large, with four for the township of Halifax and two for the township of Lunenburg; and the limits of these districts were determined. The first general assembly in what is now Canada met for the first time on October 2, 1758, in the Court House . . . in the city of Halifax. The province had long been neglected and passed over; the work of settlement had been interrupted by war; now, after 1760, something like a 'boom' began in Nova Scotia real estate. Not only were the Acadian farms occupied, but in the many fine harbours which serrate the coast-line fishing villages sprang up. . . . Settlement spread beyond the bounds of the peninsula. Very soon a sufficient number of people had taken up land in what is now New Brunswick to entitle them to representation in the general assembly. Towards the end of the Seven Years' War the danger of invasion flared up again. During the summer of 1762 a small French squadron captured St. John's in Newfoundland. Halifax was thrown into a panic. Martial law was proclaimed. . . . Much stranger to modern eyes than this excitement at the approach of danger was the curious apathy of Nova Scotia over the unlucky Stamp Act of 1765. . . . While the other colonies were burning the obnoxious act in public and compelling the stamp distributors *not* to perform their duty, Nova Scotia accepted it with complete passivity. . . . That the act was obeyed in Nova Scotia is attested by the existence of many stamped deeds, which must have been executed between the passage of the bill and its repeal in the following year. . . . The circular letter issued by the Massachusetts Assembly in

1768 and addressed to the speaker of the Nova Scotia Assembly was shown by him to Lieutenant Governor Franklyn, who sent it to Lord Shelburne. It was not read in the house, or answered. . . . As early as 1775 Governor Legge comments on 'the great prejudice against this province' felt by the other colonies. This 'prejudice' became more and more intense during the two wars with Great Britain, and was long in dying out. . . . It is the fashion of local historians to represent Nova Scotia as unswervingly 'loyal' throughout the dreary, dragging civil war which was just beginning; but the truth is the inhabitants were divided in their allegiance. It could hardly be otherwise. The majority came from New England, to which they were still closely attached by many ties of blood and interest. Now, after an interval of fifteen years at the utmost, they found themselves, by the mere accident of residence, forced into an attitude of hostility to friends and kindred. . . . Escaping prisoners of war, a stream that never ceased to flow, were concealed, fed and carried out of the province. Not a few of the settlers left Nova Scotia and returned to the 'Continent.' At the same time the official attitude of Nova Scotia towards her sister colonies was from first to last hostile and uncompromising [an attitude that was opposed by bitter dislike]. . . . While Legge and Franklyn were taking measures to defend the province, Allan, the former member for Cumberland, was laying before the Council of Massachusetts a well-considered plan for its conquest. . . . Private vessels of war seem to have been hovering about the coast awaiting the outbreak of hostilities and ready to pounce upon their prey. Single ships were captured at Merigomish, Pictou and Canso. Four were taken at Cape Forchu, and the people of the hamlet were made prisoners. The privateersmen made war both by land and sea. . . . During the war almost every accessible settlement in Nova Scotia suffered. . . . Lunenburg was surprised on July 1, 1782, by the crews of six privateers. They carried off plunder and did damage to the extent of £8000. The invaders also compelled the local authorities to sign a bond for £1000 as ransom for not burning the town. . . . Nor were they always careful to discriminate between friends and foes. Numerous ill-spelt papers in the Massachusetts archives bear witness that American sympathizers in Nova Scotia who had entertained or lodged escaping prisoners, or wrecked crews, or aided them to return to their own place, were plundered, in spite of their 'protections,' as remorselessly as any loyal tory. In the first year of the war the American privateers made 350 captures. In 1779 Lieutenant-Governor Sir Richard Hughes states in a dispatch to Lord Germaine that the rebel cruisers had destroyed the Canso fisheries, worth £50,000 a year to England. Naturally Nova Scotia undertook to make reprisals. . . . In 1779 the general assembly voted £5000 for armed vessels to protect the coast. In addition, numerous privateers were fitted out by speculative merchants, as in the previous war. This seems to have always been a profitable form of investment. In a single year, 1778, no fewer than forty-eight prizes and four recaptures were brought into Halifax, and privateering became more and more active as the war went on. During the war there was no further development of the provincial constitution. From 1771 to 1785 . . . the same general assembly, the fifth, sat for fourteen years. . . . [It is Nova Scotia's Long Parliament. One piece of legislation which does lasting honour to this parliament was nothing

less than the repeal in 1783] of former acts which laid 'His Majesty's subjects professing the Popish religion under heavy disabilities.' . . . In 1785 the act which made it impossible for a Catholic to set up a school was also repealed. Nova Scotia suffered for her loyalty. Non-intercourse was a heavy blow. In November, 1775, Legge writes: 'The trade with the colonies is entirely put an end to, and the inhabitants of this town as well as all other towns on the sea coast are almost entirely destitute of provisions, nor can any provisions of bread kind be expected from Canada till June next, if that province should then be in possession of the Crown.' One dire result of the peace, which advocates of Maritime union might note, was the partition of Nova Scotia. Instead of one government, it was split into three, thus reducing the territory of historical Acadia more than one half and narrowing the ancient bounds to the limits of the peninsula. The year 1784 saw the creation of two new provinces, Cape Breton and New Brunswick. At the beginning of the nineteenth century Cape Breton shared in the benefit of the great immigration from Scotland."—A. MacMeehan, *Nova Scotia* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 13, pp. 101-103, 111-113, 120-121, 214-215, 219-220, 228-229).

1781-1879.—Ship-building.—"Along the Northumberland Strait, Pictou, New Glasgow, Tatamagouche, River John, and Merigomish, were all noted for their shipbuilding. The Crimean War gave a decided impetus to the industry. . . . The coal trade from Pictou to the United States was also a stimulus. In the west, Yarmouth, Windsor, Hantsport, Maitland, Londonderry, and other Bay of Fundy ports were centres for shipbuilding. But, indeed, there were scarcely any harbours or rivers of note, both in the mainland and parts of the Island of Cape Breton, that did not play a greater or less part in this great industry. A little over a quarter of a century ago [written in 1911] there were registered in Nova Scotia 3025 vessels, with a tonnage of 558,911 tons, or about one and a quarter tons of shipping *per capita* of the population, a larger holding than any other country in the world, not even excepting those of Northern Europe. The fleet of Yarmouth alone covered every ocean, and represented the largest tonnage *per capita* of any port in the world. You saw Yarmouth ships in Helsingfors and Monte Video. . . . The prosperous days of wooden sailing vessels reached their zenith in 1870, when they had to give way to iron sailing ships, these again to be replaced by the tramp steamer. . . . And so the immense fleet of Yarmouth vanished."—B. Willson, *Nova Scotia*, pp. 108-109.

1782-1784.—Influx of refugee Loyalists from the United States. See TORIES; NEW BRUNSWICK: 1758-1785.

1782-1869.—Factors in shaping character of province.—Influence of the United States.—Struggle for responsible government.—"The Revolutionary War and the settlement of Nova Scotia by exiles of the defeated party completely changed the orientation of the province. For more than seventy years her policy had been determined by her neighbourhood to Canada and the constant menace of the 'French and Indians.' That menace had now passed away for ever. Her whole relation to the rest of America was also changed.

... The political isolation of Nova Scotia after the war, the coming of the loyalists, the continued reminder of Britain's protection by the presence of a British garrison, all tended to give the province the strong tory cast of character it has ever since retained. The capital was in many respects simply an English garrison town on this side of the Atlantic. Of the moral quality of the loyalist immigrants there is only one view. . . . They were pre-eminently law-abiding. . . . The white population brought with them their love of order, their religion, their class distinctions, [and a desire for education. Dalhousie College was founded by Lord Dalhousie in 1818 during his incumbency in office as governor, and in 1817 Pictou Academy was opened to private education for the Presbyterian ministry. Sir James Kempt who succeeded Dalhousie, was impressed by the need of land communications.] Under his administration money grants for roads and bridges were generous, and the assembly showed its confidence in his ability and wisdom by entrusting him with much of their management. The advantages of the old paternal system of government, with the undisputed power of initiative in the hands of the governor, are well illustrated by the administration of Dalhousie and Kempt. Under the present system no lieutenant-governor of a Canadian province could found a college; nor would he be entrusted with the expenditure of road money. Another important reform, which is due directly to Kempt, was the appointment of a president of Sessions and law judge of the Court of Common Pleas in each of the four juridical divisions of the province. In spite of strong protests this measure became law. A new school of native politicians was growing up which, in virtue of its ability and new ideas, was capable of governing and determined to do so. [Among the first of these was Joseph Howe, one of the greatest of Canadians, who from 1837 to 1873 was at the head of the Liberal party. The first blow for constitutional freedom was, however, struck before Howe entered the struggle.] Against the council the assembly had always maintained its right to control the public purse; but, as the council had the disposal of a large part of the revenue in its own hands, this cardinal principle of constitutional government was still far from being completely realized in Nova Scotia. [In 1826 the Board of Customs ignored the provincial government so far as to order retention of a proportion of the customs duties collected at Halifax, for use in payment of customs officials. The dispute was settled, but shortly afterwards it was discovered that the Board of Customs had again offended by placing their own construction on a clause in the tariff revision act. The result was a quarrel between the Council and the House, known as the "Brandy Dispute," in which the Council finally had to give way.] From the time of the Brandy Dispute the movement towards reform is clearly discernible in the trend of events, though its progress was slow; 1835 marks the definite entrance of Howe into the public life of the province, and thenceforward until his death in Government House in 1873, the history of Nova Scotia is his history. [In 1836 he was elected to the legislature, and] was now in a position to affect reform in the constitution by the use of recognized means. . . . 'All we ask for,' he said [is] . . . a system of responsibility to the people extending through all the departments supported at the public expense.' That is the democratic programme in a nutshell. The House met in January, 1837, the year of the rebellion in Canada, and Howe lost no time

in bringing in his projects of reform. . . . The indictment of the oligarchy is heavy. The council, composed exclusively of residents in the capital, is ignorant of the province as a whole and neglectful of its interests. . . . The Episcopal Church [then the state church] enjoys undue privilege. The Anglican bishop representing but a small minority of the population, has a seat in the council, but the heads of other churches have not. The interest of several councillors in one mercantile concern has prevented the establishment of a sound currency. The casual and territorial revenues of the province are not in the control of the assembly. The presence of the chief justice in the council has made him virtually the head of one political party. . . . The council of Nova Scotia sits behind closed doors. A measure of redress was granted at once. . . . The ancient constitution of Nova Scotia was modified by the creation of a legislative council of nineteen members, which was to sit with open doors, and of an executive council of twelve having imperfect control of affairs. The open rebellion of Papineau and Mackenzie in the Canadas made the position of the reform party in Nova Scotia peculiarly difficult, but the Durham Report, and the application, in the disturbed provinces, of the political principles for which Howe and his followers were contending, strengthened their hands. . . . [The lieutenant-governor, Sir Colin Campbell, upheld the council against a vote of want of confidence.] The assembly's *riposte* was an address to the crown praying for his recall. And in the end the people triumphed."—A. McMeelan, *Nova Scotia*, (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 13, pp. 245-246, 268, 273-274, 278, 281-282, 284-286, 200).—At this time "a council of twelve persons chosen from the capital, with one exception, formed the second branch of the legislature, the Governor having no power to increase the number. The whole executive power of the government was vested in these men, who were never required to appeal to the people, holding as they did their office for life, as the advisers of the Governor, and the rulers of the Province. Under Lord Falkland who had succeeded Sir Colin Campbell, of the . . . men who composed the Executive Council six were members of the representative branch, and were consequently obliged, once in four years, to solicit the suffrages of the people—a wholesome constitutional check being thus vested in the constituencies."—D. Campbell, *History of Nova Scotia for schools*, p. 81.—"Great advantages had been won and the campaign of reform went steadily on. The main obstacle now seems to have been in the character of . . . [Lord Falkland, the governor]. In the end he was recalled like his predecessor, at the instance of Howe and the popular party. . . . His term of office marks the end of the old autocratic condition. . . . It is the glory of Howe that he led his forces to a complete and bloodless victory. Reform of the constitution in Nova Scotia has left no such searing memories as the drum-head courts-martial of Toronto or the slaughter of St. Eustache. To the clear-eyed wisdom and the impetuous courage of Howe the credit is mainly due, though some must be given to the temper of a people long taught to abide by law and bred in constitutional methods. . . . [Falkland was followed in 1848 by Sir James Harvey, who called Howe and his followers to the cabinet, and responsible government was won. Some years later manhood suffrage was introduced and it was then found that the proportion of illiterates in the province was very large. An attempt made, in 1841, by Howe,

to introduce compulsory education had failed. Now it was imperative that something should be done, and when in 1863 Charles Tupper led the re-organized Conservative party to power, he immediately took the matter in hand. In 1864 he introduced a well considered Education Bill, which, in spite of strong opposition was passed and became law. This Act is the foundation of the present school system. The next great measure which engaged his attention was that of confederation, partly because of the opposition to his School Act, partly by reason of the feeling roused by Joseph Howe against confederation, it taxed Tupper's strength and powers of persuasion to force the Plan of Union through the House, and in the next election, he was defeated.]—A. Mac-Mechan, *Nova Scotia* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 13, p. 203).

1867.—Anti-confederation feeling.—Although Nova Scotia had been the first to propose a union of the maritime provinces, and had willingly accepted the proposal to unite with the Canadas, after the Quebec conference a strong feeling grew up against confederation, chiefly on economic grounds. "Mr. Joseph Howe, had been an eloquent advocate of colonial union before it assumed a practical shape, but now took the strong ground that the question should not be forced on the country by a legislature which had no mandate whatever to deal with it, that it should be determined only by the people at the polls, and that the terms arranged at Quebec were unfair to the maritime provinces. [He asked for a general election, which Tupper refused, and the measure was pushed through the House.] Mr. Howe subsequently obtained 'better terms' for Nova Scotia by every available means of constitutional agitation—beyond which he was never willing to go, however great might be public grievances—and then he yielded to the inevitable logic of circumstances, and entered the Dominion government where he remained until he became lieutenant-governor of his native province. The feelings, however, [which] he aroused against confederation lasted with some intensity for years, although the cry for repeal died away, according as a new generation grew up in place of the one which remembered the bitterness of the struggles of 1867."—J. Bourinot, *Canada, the story of the nations*, pp. 413-414.—"In reviewing anti-union literature of that day, one might be led to suppose that nearly all the people had joined the anti-confederate ranks. As a matter of fact, this was never the case. In the vote cast in the first election in September, 1867, 17,500 voted for the anti-confederates and 15,000 as confederates. Those who held union sentiments were unaggressive, but intelligently loyal and assured in their convictions. Of Halifax, the centre of the conflict, these statements are true. The city gave 400 majority for union, and Western Halifax, 300. These majorities were offset by a large majority against union in Eastern Halifax. The gloom and sorrow referred to by Mr. Howe existed largely in his imagination. The first of July, 1867, was observed in Halifax with imposing demonstrations and no opposition."—S. M. NOVI, Battle of. See FRANCE: 1799 (April-September).

NOVI BAZAR, or Novi Pazar, Sanjak of, formerly a sanjak or second grade district of the Turkish empire, which thrust a mountainous wedge between Serbia and Albania. By the treaty of Berlin (1878) permission to garrison the sanjak was given to Austria, to whom it was of great strategic importance, by reason of its location. After the annexation of Bosnia and Herzegovina by Austria, however, the sanjak was restored to Turkey. (See also BALKAN STATES: 1878; BOSNIA-HERZEGOVINA: 1878.) Premier Aehrenthal proposed to build a railway through the sanjak with the terminus at Salonika. The opposition of the Greeks, and the diplomatic resistance of Russia, England and France, led Emperor Francis Joseph to abandon this policy of aggression. By the treaties of London and Bucharest (1913), the district was made part of Serbia. (See SERBIA: 1909-1913.) The town of Novi Bazar, on the site of ancient Rassaia, had a population of 13,433 at the latest census (1913).

NOVIKOV, Nicholas (1744-1818), Russian journalist. See RUSSIAN LITERATURE: 1752-1816.

NOVIOMAGUS, ancient name for Nimuegen, or Nimwegen. See BATAVIANS.

NOVO GEORGIEVSK, fortress on the Vistula, northwest of Warsaw. It was erected by the Poles in 1615, strengthened by Napoleon in 1807, and captured by the Russians in 1813. It was occupied by the Poles during the insurrection of 1830.

NOYADES, drowning of prisoners during the French Revolution. See FRANCE: 1793-1794 (October-April).

NOYON, town in northern France, in the department of the Oise. It was the scene of the coronations of Pippin in 752, of Charlemagne in 768, and of the election of Hugh Capet to the throne of France in 987. During the World War it was in a region of fighting.

1916.—Extent of Noyon salient. See WORLD WAR: 1916: II. Western front: c.

NOYON, Treaty of (1516). See FRANCE: 1516-1517.

NOZALEDA, Spanish monk, and archbishop of Manila. See PHILIPPINE ISLANDS: 1900: Spanish friars.

NOZU, or **Nodzu**, Mitchisura (1840-1908), Japanese soldier. Commander-in-chief of the Manchurian army, 1895; fought in the Chino-Japanese and Russo-Japanese Wars. See JAPAN: 1902-1905.

NU, Egyptian god. See MYTHOLOGY: Egyptian.

NUBAR PASHA (1825-1890), Egyptian statesman. See EGYPT: 1875-1882.

NUBIA, section of Africa which includes the Nile river valley, from the first cataract to the confluence of the White and Blue Niles. It is bounded on the north by Egypt, on the east, by the Red sea, on the west by the Libyan Desert, and extends, without historical boundaries, to the region of Khartoum. This territory, whose natives are negroes, has been ruled by the Egyptians (see EGYPT: B. C. 1414-1379), the Romans, and the Arabs, and is now under the political control of Great Britain.

NUEVO LEON, state in northern Mexico. See MEXICO: 1010-1013.

NUISANCES.—Nuisances, in law, may be divided into public and private. Private nuisances are those which harm or inconvenience a private person. The remedy is court action. Public nuisances are acts which cause inconvenience or damage to the public. Under the common law such acts are punishable as misdemeanors. Anything which is harmful to public health, morals or safety is a nuisance. Common instances are obstructions on public highways, disorderly houses, diseased animals, obscene publications, and any other conditions or objects which have been defined as nuisances by statute.—See also BILLBOARDS.

NUITHONES, Suevic clan. See AVIONES.

NULLIFICATION: First assertion of the doctrine in the United States. See U.S.A.: 1798.

NUMA POMPILIUS, legendary king of Rome, 715-672 B. C. See ROME: Ancient kingdom: B. C. 753-510; GUILDS: Roman.

NUMANTIAN WAR.—"In 133 B. C. the Celtiberians again appeared in the field (resisting the Romans in Spain); and when, on the death of Viriathus, D. Junius Brutus had pushed the legions to the Atlantic in 137 B. C., and practically subdued Lusitania, the dying spirit of Spanish independence still held out in the Celtiberian fortress city of Numanti. Perched on a precipitous hill by the banks of the upper Douro, occupied only by eight thousand men, this little place defied the power of Rome as long as Troy defied the Greeks. . . . In 137 B. C. the consul, C. Hostilius Man-

cinus, was actually hemmed in by a sortie of the garrison, and forced to surrender. He granted conditions of peace to obtain his liberty; but the senate would not ratify them, though the young quaestor, Tiberius Gracchus, who had put his hand to the treaty, pleaded for faith and honour. Mancinus, stripped and with manacles on his hands, was handed over to the Numantines, who, like the Samnite Pontius, after the Caudine Forks, refused to accept him. In 134 B. C. the patience of the Romans was exhausted; Scipio was sent. . . . The mighty destroyer of Carthage drew circumvallations five miles in length around the stubborn rock, and waited for the result. The Virgilian picture of the fall of Troy is not more moving than are the brave and ghastly facts of the fall of Numantia. The market-place was turned into a funeral pyre for the gaunt, famine-stricken citizens to leap upon. . . . When the surrender was made only a handful of men marched out."—R. F. Horton, *History of the Romans*, ch. 18.—See also LUSITANIA; SPAIN: B. C. 218-25.

B. C. 149-146.—Alliance with Rome. See ROME: Republic: B. C. 149-146.

B. C. 118-104.—Jugurthine War.—The Numidian kingdom, over which the Romans, at the end of the second Punic War, had settled their friend Masinissa, passed at his death to his son Micipsa. In 118 B. C. Micipsa died, leaving two young sons, and also a bastard nephew, Jugurtha, whom he feared. He divided the kingdom between these three, hoping to secure the fidelity of Jugurtha to his sons. It was a policy that failed. Jugurtha made sure of what was given to him, and then grasped at the rest. One of his young cousins was soon cleared from his path by assassination; on the other he opened war. This latter, Adherbal by name, appealed to Rome, but Jugurtha despatched agents with money to bribe the senate, and a commission sent over to divide Numidia gave him the western and better half. The commissioners were no sooner out of Africa than he began war upon Adherbal afresh, shut him up in his strong capital, Cirta [112 B. C.], and placed the city under siege. The Romans again interfered, but he captured Cirta, notwithstanding and tortured Adherbal to death. The corrupt party at Rome which Jugurtha kept in his pay made every effort to stifle discussion of his nefarious doings; but one bold tribune, C. Memmius, roused the people on the subject and forced the senate to declare war against him. Jugurtha's gold, however, was still effectual, and it paralyzed the armies sent to Africa, by corrupting the venal officers who commanded them. Once Jugurtha went to Rome under a safe conduct, invited to testify as a witness against the men whom he had bribed, but really expecting to be able to further his own cause in the city. He found the people furious against him and he only saved himself from being forced to cruminate his Roman senatorial mercenaries by buying a tribune, who brazenly vetoed the examination of the Numidian king. Jugurtha being then ordered out of Rome, the war pro-

ceeded again, and in 109 B. C. the command passed to an honest general, Q. Metellus, who took with him Caius Marius, the most capable soldier of Rome, whose capability was at that time not half understood. Under Metellus the Romans penetrated Numidia to Zama, but failed to take the town, and narrowly escaped a great disaster on the Muthul, where a serious battle was fought. In 107 B. C. Metellus was superseded by Marius, chosen consul for that year and now really beginning his remarkable career. Meantime Jugurtha had gained an ally in Bocchus, king of Mauretania, and Marius, after two campaigns of doubtful result, found more to hope from diplomacy than from war. With the help of Sulla,—his future great rival—who had lately been sent over to his army, in command of a troop of horse, he persuaded the Mauretanian king to betray Jugurtha into his hands. The dreaded Numidian was taken to Rome [104 B. C.], exhibited in the triumph of Marius, and then brutally thrust into the black dungeon called the Tullianum to die of slow starvation. Bocchus was rewarded for his treachery by the cession to him of part of Numidia; Marius, intoxicated with the plaudits of Rome, first saved it from the Cimbri and then stabbed it with his own sword; Sulla, inexplicable harbinger of the coming Cæsars, bided his time.—Based on W. Ihne, *History of Rome*, bk. 7, ch. 8.—See also **ROME: Republic: B. C. 118-99**.

NUMIDIANS AND MAURI.—"The union of the Aryan invaders [of north Africa] with the ancient populations of the coast sprung from Phut gave birth to the Mauri, or Maurusii, whose primitive name it has been asserted was Medes, probably an alteration of the word Amazigh. The alliance of the same invaders with the Getulians beyond the Atlas produced the Numidians. The Mauri were agriculturists, and of settled habits; the Numidians, as their Greek appellation indicates, led a nomadic life."—F. Lenormant, *Manual of ancient history of the East*, v. 2, bk. 6, ch. 5.—In northern Africa, "on the south and west of the immediate territory of the Carthaginian republic, lived various races of native Libyans who are commonly known by the name of Numidians. But these were in no way, as their Greek name ('Nomads') would seem to imply, exclusively pastoral races. Several districts in their possession, especially in the modern Algeria, were admirably suited for agriculture. Hence they had not only fixed and permanent abodes, but a number of not unimportant cities, of which Hippo and Cirta, the residences of the chief Numidian princes, were the most considerable."—W. Ihne, *History of Rome*, v. 2, bk. 4, ch. 1.—The various peoples of North Africa known anciently and modernly as Libyans, Numidians, or Nomades, Mauri, Mauritanians or Moors, Gaetulians and Berbers, belong ethnographically to one family of men, distinguished alike from the negroes and the Egyptians.—Based on T. Mommsen, *History of Rome*, bk. 8, ch. 13.—See also **AFRICA: Races: Prehistoric**; **LIBYANS**; **CARTHAGE: B. C. 146**; **PUNIC WARS: SECOND**; **NUMIDIA: 118-104 B. C.**

NUMMUS, Roman term for money. See **MONEY AND BANKING: Ancient: Rome**.

NUNCIO, Papal, permanent diplomatic and ecclesiastical agent of the Roman see accredited to a

foreign court or assigned to a special territory. "Nuncios, in the strict sense of the word, first appear in the sixteenth century. The office, however, was not created at any definite moment; or by any one papal ordinance, but gradually developed under the influence of various historical factors into the form in which we find it in the sixteenth century. . . . After the Council of Trent . . . [nuncios] became the chief agents of the popes in their efforts to check the spread of heresy. . . . The fact that in 1537 the papal correspondence with foreign powers, previously carried on by the pope's private secretary, was handed over by Paul III to the vice-chancellor, Cardinal Alexander Farnese, was the chief element within the curia which led to the permanence of nunciatures. . . . Angelo Leonini, sent to Venice by Alexander VI in 1500, is commonly regarded as the first nuncio, as we understand the term to-day. In Spain the collector general of the papal exchequer . . . was also given diplomatic powers . . . and discharged these two offices from 1506 to 1518 or 1519. . . . From thenceforth the Spanish nunciature may be regarded as permanent. The beginning of a papal nunciature in Germany dates from 1511. . . . The first real nuncio in France was Leone Ludovico di Canossa (1514-17). The French nunciature continued after the Council of Trent to the Revolution. After the Council of Trent a number of new nunciatures were erected. . . . A dispute concerning the rights of the pope in the erecting of nunciatures and the competency of the nuncios themselves arose in 1785 when Pius VI determined to establish a new nunciature in Munich at the request of Charles Theodore, Elector of Bavaria. The elector desired the appointment of a special nuncio, because princes subject to the emperor alone, were bishops of Bavarian dioceses but did not reside in Bavaria, thus greatly impeding the exercise of ecclesiastical administration. The three spiritual electors (the Archbishops of Cologne, Mainz, and Trier) protested on the grounds that thereby their metropolitan rights would be violated. . . . The emperor brought the controversy before the Imperial Diet of Ratisbon in 1788, but without definite results. . . . The French Revolution ended the dispute. Owing to the political development of Italy in the nineteenth century, the papal nunciatures disappeared completely. With the dissolution of the Holy Roman Empire the Imperial German nunciature became the Austrian nunciature when Francis II assumed the title of Emperor of Austria. The partition of Poland ended the nunciature there. The first state outside of Europe to receive a papal representative was Brazil. At first an internuncio was assigned to that country, but of late years a nuncio has resided there."—J. P. Kirsch, *Nuncio* (*Catholic encyclopedia*, v. 11, pp. 160-161).—At present, nunciatures of the first class are Vienna, Paris, Madrid and Lisbon. The Paris nunciature had no incumbent from the rupture of diplomatic relations between France and the Holy See in 1004 until 1020, when a new nuncio was appointed, following the reconciliation of France with the Holy See.

NUREMBERG.—"Nuremberg (Nürnberg) (Norimberga) is situated on the Regnitz, in the centre of Middle Franconia, about 90 miles north-west of Munich, to which it is second in size and importance, with a population of about . . . 1353,000 (1919). (See GERMANY: Map.) The name is said to be derived from the ancient inhabitants of Noricum, who migrated hither about the year 451, on being driven from their early settlements on the Danube by the Huns. Here they distinguished themselves by their skill in the working of metals, which abound in the neighbouring mountains. Before the eleventh century the history of Nuremberg is enveloped in a mist of impenetrable obscurity, from which it does not emerge until the time of the Emperor Henry III., who issued an edict, dated July 16, 1050, 'ad castrum Noremberc,' a proof that it was a place of considerable importance even at this early period. Nuremberg afterwards became the favourite residence of the Emperor Henry IV."—W. J. Wyatt, *History of Prussia*, v. 2, p. 456.—See also HANSA TOWNS.

NUYS, Siege of.—In 1474 Charles the Bold, Duke of Burgundy, with 60,000 men, wasted months in a fruitless siege of the town of Nuys, and became involved in the quarrel with the Swiss (see BURGUNDY: 1476-1477) which brought about his downfall. The abortive siege of Nuys was the beginning of his disasters.—Based on C. M. Davies, *History of Holland*, pt. 2, ch. 2.

NYASALAND PROTECTORATE.—The Nyasaland Protectorate, formally called "British Central Africa," was intended to include that part of British territory north of the Zambesi river,

which is bounded on the east by Lake Nyasa and the Shiré river, on the south by the Zambesi districts, north by the Congo Free State and German territory, and west by Portuguese territory. [See BRITISH EMPIRE: Extent.] . . . Attention was first drawn to Nyasaland by Dr. Livingstone; and, as is well known, he pointed to the Shiré highlands, which lie about 100 miles south of Lake Nyasa, as being one of the most suitable parts of Central Africa for experiments in the way of British colonization and as a field for missionary enterprise. These highlands lie at an elevation of from 2000 to 4000 feet above sea-level, and have a pleasant, fairly cool climate. [See AFRICA: Modern European occupation: 1914-1920: Climatic conditions.] The bulk, indeed, of British Central Africa is over the 2000-foot level, the only low-lying portions being the trough of Lake Nyasa and the Shiré valley."—A. Sharp, *Trade and colonization in British Central Africa* (*Scottish Geographical Magazine*, Mar., 1901).—"An attempt was made by Lord Granville (in the projected Congo Treaty of 1884) to define the sphere of Portuguese influence on the Shiré, so as to leave the greater part of that river and all Nyasaland outside the Portuguese dominions. Had that Congo Treaty been ratified, there would probably never have been the Nyasa Question with the Portuguese. But it was not, and therefore Portugal was equally free with Great Britain to make the best use of her opportunities, which she did. . . . [Sir Harry Johnston] happened to be one of the principal agents employed in bringing Nyasaland under British protection, and in extending that protection to the west and north as far as the shores of Tanganyika and the boundary of the Congo Free State. [See also AFRICA: Modern European occupation: 1884-1899.] As Mr. Cecil Rhodes' agents had added thereto the Protectorate of the Barotse kingdom, the term 'British Central Africa' seemed more fitting to describe this sphere in South-Central Africa than the restricted name of 'Nyasaland.' Treaties with Germany (1890) and Portugal (1891) having sanctioned these acquisitions north of the Zambesi, the administration of the new territory was divided between the Imperial Government—which decided to control the more organized territories round Lake Nyasa—and the newly-founded British South Africa Chartered Company. Between 1895 and 1898 the Chartered Company directed the administration and policing of its North Zambesia territories independently of the Protectorate; but in the summer of 1898 the Company placed its police force under the control of the officer commanding the troops in the British Central Africa Protectorate, and chose one of the Protectorate's officials to conduct its civil administration in the territories east of Barotse. . . . Numerous Arabs from Zanzibar had established themselves in Nyasaland as sultans, and had Muhammadanized certain tribes and infused into them a dislike to European domination. The countries west of Lake Nyasa were ravaged by tribes of more or less Zulu descent, the remains of former Zulu invasions of Central Zambezia. . . . These enemies were all subdued. . . . Mr. Rhodes began in 1893 his great scheme of connecting Cape Town with Cairo by a telegraph line. In five years he has at any rate connected Cape Town with Tanganyika through British Central Africa. These territories north of the Zambesi have proved peculiarly favourable to the cultivation of coffee, which was originally introduced by Scottish missionaries and planters, and which will probably end by making the fortune of this part of Africa, though these countries possess other valuable resources in vegetable products, in min-

erals, and in ivory."—H. H. Johnston, *History of the colonization of Africa by alien races*, pp. 180-183.—In 1923 the population of Nyassaland numbered 1,199,934 natives, divided into three tribes, the Anyanja, the Yao, and the Angoni: 1,486 Europeans, and 563 Asiatics.

OCHTERLONY, David (1758-1825), British general. Leader of campaigns in India during Nepal War, 1814-1816, and the Pindari War, 1817-1818. See INDIA: 1805-1816.

OCHUS. See ARTAXERXES III.

O'CONNELL, Daniel (1775-1847), Irish patriot and political agitator. See IRELAND: 1811-1829; 1840-1841; 1841-1848.

O'CONNOR, Feargus Edward (1794-1855), Irish lawyer and one of the leaders of the Chartist party. See ENGLAND: 1838-1842; 1848.

O'CONNOR, Roderick, or Rory (1116-1198), last king of Ireland, 1166-1198. Acknowledged supremacy of Henry II of England, 1175. See IRELAND: 1014-1160; 1160-1200.

O'CONNOR, Turlough, king of Connaught, 1151-1154. See IRELAND: 1014-1160.

OCTAETERIS, Greek period of eight years. See METON, YEAR OF.

OCTAVIA HILL ASSOCIATION. See BALTIMORE: 1917.

OCTAVIAN LIBRARY. See LIBRARIES: Ancient: Rome.

OCTAVIUS. See AUGUSTUS.

OCTOBER CLUB. See CLUBS: October and March.

OCTOBRISTS, Russian political party. See RUSSIA: 1905-1906.

OCTUPLE AGREEMENT OF RAILWAYS. See RAILROADS: 1750-1881.

ODAL. See ADEL.

ODD FELLOWS, secret, benevolent and social society which arose in England during the eighteenth century. It now has lodges in various countries and is known by the full name of The Independent Order of Odd Fellows.

ODDI, Italian family. They carried on wars with the Baglioni in Perugia during the fourteenth and fifteenth centuries. See BAGLIONI.

ODELSRET.—By exercising the right of Odelsret the Norwegian peasants, when forced to sell their land, can prevent its acquisition by the purchaser by declaring to the authorities every ten years their intention of buying it back. See NORWAY. CONSTITUTION OF: Title IV: Art. 16; footnote.

ODELSTING, lower house of the Norwegian legislature or Storting. See NORWAY, CONSTITUTION OF: Title III.

ODENATHUS (died c. 271), Roman general and ruler of Palmyra. See PALMYRA: Rise and fall; ROME: Empire: 102-284.

ODER, river in northeastern Germany. It rises in northern Moravia and flows into the Baltic sea. 1919.—Provisions regarding navigation of river in Treaty of Versailles. See VERSAILLES, TREATY OF: Part XII: Section II: Chapter III.

ODESSA, city and port on the Black sea, Russia. It is the chief city for exports and has an excellent harbor which is open nearly all year. In 1912 the population numbered 631,040. In early days it was colonized consecutively by Greeks, Lithuanians, Poles and Turks. The Russians captured it in 1789. In 1905-1906 it was the scene of fierce revolutionary and anti-Semitic fighting. During the World War it was bombarded by the Austrians, Turks and Germans and was taken by the Allies. See RUSSIA: Map of Russia and the new border states; 1905 (April-November); 1918-1920; TURKEY: 1914: Turkey at outbreak of World War.

ODEUM AT ATHENS.—"Pericles built, at the south-eastern base of the citadel, the Odeum, which differed from the neighbouring theatre in this, that the former was a covered space, in which musical performances took place before a less numerous public. The roof, shaped like a tent, was accounted an imitation of the gorgeous tent pitched of old by Xerxes upon the soil of Attica."—E. Curtius, *History of Greece, bk. 3, ch. 3.*

ODIN, principal god of Northern mythology. He was represented as the king of the gods of Valhalla, excelling in wisdom and giving victory in war. Other forms of his name are Woden and Wotan. See MYTHOLOGY: Scandinavian.

ODOACER, or Odovacar (c. 434-493), Roman emperor (Western), 476-493. See ROME: Empire: 455-470; Medieval city: 488-526.

O'DONNELL, ancient and powerful Irish family, lords of Tyrconnell, who held most of what is now Donegal. They were the chief rivals of the O'Neills of Ulster. See ULSTER: 1540-1567.

O'DONNELL, Godfrey, Lord of Tyrconnell (d. 1241), first important chieftain of the O'Donnell family. See ULSTER: 1199-1260.

O'DONNELL, Leopold (1809-1867), Spanish general and statesman, descendant of O'Donnell family of Ulster. See SPAIN: 1854-1868.

ODYSSEY, epic relating the adventures of the Greek hero, Odysseus. See HOMER AND THE HOMERIC POEMS; GREEK LITERATURE: Period of the epic; HISTORY: 13.

OEA, ancient town on the site of modern Tripoli, Africa. See LEPTIS MAGNA.

ÆCUMENICAL, or ECUMENICAL, COUNCIL, general or universal council of the entire Christian church. Twenty such councils are recognized by the Roman Catholic church. See COUNCILS OF THE CHURCH; MISSIONS, CHRISTIAN; PAPACY: Supremacy of the Roman See; 1869-1870; RUSSIA: 1917 (August).

ÆDIPUS, Theban legendary hero, son of Laius, king of Thebes and Jocasta, whose tragic story is told by Sophocles in his drama "Ædipus Tyrannus."—See also ATHENS: B. C. 461-431: Development of Greek drama.

OEHLENSCHLÄGER, Adam Gottlob, (1779-1850), Danish poet and dramatist. See SCANDINAVIAN LITERATURE: 1750-1850.

ÆKIST, chief founder of a Greek colonial city.

OELAND, Battles of (1675, 1713). See SWEDEN: 1644-1697; 1707-1718.

ÆNOE, Battle of, a battle of some importance in the Corinthian War, fought about 388 B. C. in the valley of the Charander, on the road from Argos to Mantinea. The Lacedæmonians were defeated by the Argives and Athenians.—Based on E. Curtius, *History of Greece, bk. 5, ch. 4.*

OENOPHYTA, Battle of (450 B. C.). See ATHENS: B. C. 457-456; GREECE: B. C. 458-456.

ÆNOTRIANS.—"The territory [in Italy] known to Greek writers of the fifth century B. C. by the names of Ænotria on the coast of the Mediterranean, and Italia on that of the Gulfs of Tarentum and Squillace, included all that lies south of a line drawn across the breadth of the country, from the Gulf of Poseidonia (Paestum) and the river Silarus on the Mediterranean Sea, to the north-west corner of the Gulf of Tarentum. It was bounded northwards by the Iapygians and Messapians, who occupied the Salentine peninsula and the country immediately adjoining to Tarentum, and by the Peuketians on the Ionic Gulf. . . . This Ænotrian or Pelasgian race were the population whom the Greek colonists found there on their arrival. They were known apparently under other names, such as the Sikels [Sicels], (mentioned even

in the Odyssey, though their exact locality in that poem cannot be ascertained) the Italians, or Itali, properly so called—the Morgetes,—and the Chaones,—all of them names of tribes either cognate or subdivisional. The Chaones or Chaonians are also found, not only in Italy, but in Epirus, as one of the most considerable of the Epirotic tribes.”—G. Grote, *History of Greece*, pt. 2, ch. 22.

OGDAI, Okkodai, or Oktai (d. 1241), ruler of Mongolia 1220-1241. Succeeded his father, Jhengis Khan. See **MONGOLIA**: 1153-1227; 1229-1294.

OGDEN TRACT. See **NEW YORK**: 1786-1799.

OGHAM INSCRIPTIONS.—“In the south and south-western counties of Ireland are to be found, in considerable numbers, a class of inscribed monuments, to which the attention of Irish archæologists has been from time to time directed, but with comparatively little result. . . . They [the inscriptions] are found engraved on pillar stones in that archaic character known to Irish philologists as the Ogham, properly pronounced Oum, and in an ancient dialect of the Gaelic (Gaelic). These monuments are almost exclusively found in the counties of Kerry, Cork, and Waterford, numbering, as far as I have been able to ascertain, 147; the rest of Ireland supplies 13. . . . Again it is worthy of remark, that while 29 Irish counties cannot boast of an Ogham monument, they have been found in England, Wales, and Scotland. In Devonshire, at Fardel, a stone has been discovered bearing not only a fine and well-preserved Ogham inscription, but also one in Romano-British letters. It is now deposited in the British Museum. . . . The Ogham letters, as found on Megalithic monuments, are

formed by certain combinations of a simple short line, placed in reference to one continuous line, called the fleasg, or stem line; these combinations range from one to five, and their values depend upon their being placed above, across, or below the stem line; there are five consonants above, five consonants below, and five consonants across the line, two of which, NG and ST are double, and scarcely ever used. The vowels are represented by oval dots, or very short lines across the stem line. . . . The characters in general use on the monuments are 18 in number. . . . It may be expected from me that I should offer some conjecture as to the probable age of this mode of writing. This, I honestly acknowledge, I am unable to do, even approximately.”—R. R. Brash, *Transactions International Congress of Prehistoric Archaeology*, 1868.—“The Ogam alphabet is of a double origin, forming a sort of compromise between the East and the West. The characters used, if considered merely as writing and without reference to their meaning, are European and traceable to the quaternary period: the same may probably be said of the direction of the writing from left to right. The order of the letters, on the other hand, and some of their names, admit of being traced to a Phœnician origin. The Celts appear to have got their Ogams from the Teutons, who seem to have used an alphabet of that description before they adopted the characters of the Roman alphabet.”—J. Rhys, *Lectures on Welsh philology*, p. 346.—See also **IRELAND**: Tribes of early Celtic inhabitants.

O'HIGGINS, Ambrosio, Marquis of Osorno (c. 1730-1801), Spanish administrator and general of Irish birth. Made general, 1778; viceroy of Peru, 1796-1801. See **CHILE**: 1810-1818; **PERU** 1550-1816.

OHIO: Geography.—Area.—Population.—Ohio is an east north central state, bounded by Michigan and Lake Erie on the north, Pennsylvania and West Virginia on the east, West Virginia and Kentucky on the south, and Indiana on the west. It is the thirty-fifth state in size, with an area of 41,040 square miles, and the fourth in population, which in 1920 was 5,759,394.

Resources.—Manufacturing, mining and oil are the principal industries. Cleveland leads the world in the reduction of iron and steel ore and in the manufacture of machinery. Akron is the world's rubber center. Only four states exceed Ohio in agricultural wealth. It was fourth in the production of hay and tobacco, fifth in the production of corn and oats, and sixth in wheat. Ohio has fifteen universities and a public school enrolment of more than 1,000,000. Politically it is regarded as a pivotal state. See U.S.A.: Economic map.

Name.—“The words Ohio, Ontario, and Onontio (or Yonnondio)—which should properly be pro-

nounced as if written 'Oheeyo,' 'Ontareeyo,' and 'Ononteeyo'—are commonly rendered 'Beautiful River,' 'Beautiful Lake,' 'Beautiful Mountain.' This, doubtless, is the meaning which each of the words conveys to an Iroquois of the present day, unless he belongs to the Tuscarora tribe. But there can be no doubt that the termination 'io' (otherwise written 'iyo,' 'iio,' 'eeyo,' etc.) had originally the sense, not of 'beautiful,' but of 'great.' . . . Ontario is derived from the Huron 'yontare,' or 'ontare,' lake (Iroquois, 'oniatare'), with this termination. . . . Ohio, in like manner, is derived, as M. Cuoq in the valuable notes to his *Lexicon* (p. 159) informs us, from the obsolete 'ohia,' river, now only used in the compound from 'ohionha.'"

—H. Hale, *Iroquois book of rites, appendix, note B.*

(Valley): Description.—"The Ohio valley is made up of the province of the Allegheny Plateaus and the southern portion of the Prairie Plains. In it are found rich mineral deposits which are changing the life of the section and of the nation. . . . The unity of the section and its place in history were determined by the 'beautiful river,' as the French explorers called it—the Ohio, which pours its flood for over a thousand miles, a great highway to the West; an historic artery of commerce, a wedge of advance between powerful Indian confederacies, and rival European nations, to the Mississippi Valley; a home for six mighty States, now in the heart of the nation, rich in material wealth, richer in the history of American democracy; a society that holds a place midway between the industrial sections of the seaboard and the plains and prairies of the agricultural West; between the society that formed later along the levels about the Great Lakes, and the society that arose in the Lower South on the plains of the Gulf of Mexico. The Alleghanies bound it on the east, the Mississippi on the west. At the forks of the great river lies Pittsburgh, the historic gateway to the West, the present symbol and embodiment of the age of steel, the type of modern industrialism. Near its western border is St. Louis, looking toward the Prairies, the Great Plains and the Rocky Mountains, the land into which the tide of modern colonization turns. Between these old cities, for whose sites European nations contended, stand the cities whose growth preëminently represents the Ohio valley; Cincinnati, the historic queen of the river; Louisville, the warder of the falls; the cities of the 'Old National Road,' Columbus, Indianapolis; the cities of the Blue Grass lands, which made Kentucky the goal of the pioneers; and the cities of that young commonwealth, which the Ohio river by force of its attraction tore away from an uncongenial control of the Old Dominion, and joined to the social section where it belonged. The Ohio Valley is, therefore, not only a commercial highway, it is a middle kingdom between the East and the West, between the northern area, which was occupied by a greater New England and emigrants from northern Europe, and the southern area of the 'Cotton Kingdom.' As Pennsylvania and New York constituted the Middle Region in our earlier history, between New England and the seaboard South, so the Ohio Valley became the Middle Region of a later time. In its position as a highway and a Middle Region are found the keys to its place in American history. . . . The Ohio river played an important part in the movements of the earlier men in America, and . . . the mounds of the valley indicate a special type of development intermediate between that of the northern hunter folk, and the pueblo building races of the south."—F. J. Turner, *Frontier in American history*, pp. 160-162.

(Valley): 1700-1725.—Beginnings of French occupation. See CANADA: 1700-1735.

(Valley): 1748-1754.—First movements of struggle of French and English for possession.—"The close of King George's War was marked by an extraordinary development of interest in the Western country. The Pennsylvanians and Virginians had worked their way well up to the eastern foot-hills of the last range of mountains separating them from the interior. Even the Connecticut men were ready to overleap the province of New York and take possession of the Susquehanna. The time for the English colonists to attempt the Great Mountains in force had been long in coming, but it had plainly arrived. In 1748 the Ingles-Draper settlement, the first regular settlement of English-speaking men on the Western waters, was made at 'Draper's Meadow,' on the New River, a branch of the Kanawha. The same year Dr. Thomas Walker, accompanied by a number of Virginia gentlemen and a party of hunters, made their way by Southwestern Virginia into Kentucky and Tennessee. . . . The same year the Ohio company, consisting of thirteen prominent Virginians and Marylanders, and one London merchant, was formed. Its avowed objects were to speculate in Western lands, and to carry on trade on an extensive scale with the Indians. It does not appear to have contemplated the settlement of a new colony. The company obtained from the crown a conditional grant of 500,000 acres of land in the Ohio Valley, to be located mainly between the Monongahela and Kanawha Rivers, and it ordered large shipments of goods for the Indian trade from London. . . . In 1750 the company sent Christopher Gist, a veteran woodsman and trader living on the Yadkin, down the northern side of the Ohio, with instructions, as Mr. Bancroft summarizes them, 'to examine the Western country as far as the Falls of the Ohio; to look for a large tract of good level land; to mark the passes in the mountains; to trace the courses of the rivers; to count the falls; to observe the strength of the Indian nations.' Under these instructions, Gist made the first English exploration of Southern Ohio of which we have any report. The next year he made a similar exploration of the country south of the Ohio, as far as the Great Kanawha. . . . Gist's reports of his explorations added to the growing interest in the overmountain country. At that time the Ohio Valley was waste and unoccupied, save by the savages, but adventurous traders, mostly Scotch-Irish, and commonly men of reckless character and loose morals, made trading excursions as far as the River Miami. The Indian town of Pickawillany, on the upper waters of that stream, became a great centre of English trade and influence. Another evidence of the growing interest in the West is the fact that the colonial authorities, in every direction, were seeking to obtain Indian titles to the Western lands, and to bind the Indians to the English by treaties. The Iroquois had long claimed, by right of conquest, the country from the Cumberland Mountains to the Lower Lakes and the Mississippi, and for many years the authorities of New York had been steadily seeking to gain a firm treaty-hold of that country. In 1684, the Iroquois at Albany, placed themselves under the protection of King Charles and the Duke of York [see NEW YORK: 1684]; in 1720, they conveyed all their lands in trust to England [see NEW YORK: 1726], to be protected and defended by his Majesty to and for the use of

the grantors and their heirs, which was an acknowledgment by the Indians of what the French had acknowledged thirteen years before at Utrecht. In 1744, the very year that King George's War began, the deputies of the Iroquois at Lancaster, Pa., confirmed to Maryland the lands within that province, and made to Virginia a deed that covered the whole West as effectually as the Virginian interpretation of the charter of 1609 [see VIRGINIA: 1744]. . . . This treaty is of the greatest importance in subsequent history; it is the starting-point of later negotiations with the Indians concerning Western lands. It gave the English their first real treaty-hold upon the West; and it stands in all the statements of the English claim to the Western country, side by side with the Cabot voyages. . . . There was, indeed, no small amount of dissension among the colonies, and it must not be supposed that they were all working together to effect a common purpose. The royal governors could not agree. There were bitter dissensions between governors and assemblies. Colony was jealous of colony. . . . Fortunately, the cause of England and the colonies was not abandoned to politicians. The time had come for the Anglo-Saxon column, that had been so long in reaching them, to pass the Endless Mountain; and the logic of events swept everything into the Westward current. In the years following the treaty of Aix-la-Chapelle the French were not idle. Galissonière, the governor of Canada, thoroughly comprehended what was at stake. In 1749 he sent Céloron de Bienville into the Ohio Valley, with a suitable escort of whites and savages, to take formal possession of the valley in the name of the King of France, to propitiate the Indians, and in all ways short of actual warfare to thwart the English plans. Bienville crossed the portage from Lake Erie to Lake Chautauqua, the easternmost of the portages from the Lakes to the southern streams ever used by the French, and made his way by the Alleghany River and the Ohio as far as the Miami, and returned by the Maumee and Lake Erie to Montreal. His report to the governor was anything but reassuring. He found the English traders swarming in the valley, and the Indians generally well disposed to the English. Nor did French interests improve the two or three succeeding years. The Marquis Duquesne, who succeeded Galissonière, soon discovered the drift of events. He saw the necessity of action; he was clothed with power to act, and he was a man of action. And so, early in the year 1753, while the English governors and assemblies were still hesitating and disputing, he sent a strong force by Lake Ontario and Niagara to seize and hold the northeastern branches of the Ohio. This was a master stroke: unless recalled, it would lead to war; and Duquesne was not the man to recall it. This force, passing over the portage between Presque Isle and French Creek, constructed Forts Le Bœuf and Venango, the second at the confluence of French Creek and the Alleghany River." —B. A. Hinsdale, *Old Northwest*, ch. 5.—See also CANADA: 1750-1753; U. S. A.: 1748-1754.

(Valley): 1754.—Opening battle.—Washington's first campaign.—The planting of the French at Forts Le Bœuf and Venango "put them during high water in easy communication by boat with the Alleghany River. French tact conciliated the Indians, and where that failed arrogance was sufficient, and the expedition would have pushed on

to found new forts, but sickness weakened the men, and Marin, the commander, now dying, saw it was all he could do to hold the two forts, while he sent the rest of his force back to Montreal to recuperate. Late in the autumn Legardeur de Saint-Pierre arrived at Le Bœuf, as the successor of Marin. He had not been long there when on the 11th of December [1753] a messenger from Governor Dinwiddie, of Virginia, with a small escort, presented himself at the fort. The guide of the party was Christopher Gist; the messenger was George Washington, then adjutant-general of the Virginia militia. Their business was to inform the French commander that he was building forts on English territory, and that he would do well to depart peaceably. . . . At Le Bœuf Washington tarried three days, during which Saint-Pierre framed his reply, which was in effect that he must hold his post, while Dinwiddie's letter was sent to the French commander at Quebec. It was the middle of February, 1754, when Washington reached Williamsburg on his return, and made his report to Dinwiddie. The result was that Dinwiddie drafted 200 men from the Virginia militia, and despatched them under Washington to build a fort at the forks of the Ohio. The Virginia assembly, forgetting for the moment its quarrel with the governor, voted £10,000 to be expended, but only under the direction of a committee of its own. Dinwiddie found difficulty in getting the other colonies to assist, and the Quaker element in Pennsylvania prevented that colony from being the immediate helper which it might, from its position, have become. Meanwhile some backwoodsmen had been pushed over the mountains and had set to work on a fort at the forks. A much larger French force under Contrecoeur soon summoned them, and the English retired. The French immediately began the erection of Fort Duquesne [on the site now covered by the city of Pittsburgh]. While this was doing, Dinwiddie was toiling with tardy assemblies and their agents to organize a regiment to support the backwoodsmen. Joshua Fry was to be its colonel, with Washington as second in command. The latter, with a portion of the men, had already pushed forward to Will's Creek, the present Cumberland. Later he advanced with 150 men to Great Meadows, where he learned that the French, who had been reinforced, had sent out a party from their new fort, marching towards him. Again he got word from an Indian—who, from his tributary character towards the Iroquois, was called Half-King, and who had been Washington's companion on his trip to Le Bœuf—that this chieftain with some followers had tracked two men to a dark glen, where he believed the French party were lurking. Washington started with forty men to join Half-King, and under his guidance they approached the glen and found the French. Shots were exchanged. The French leader, Jumonville, was killed, and all but one of his followers were taken or slain. The mission of Jumonville was to scour for English, by order of Contrecoeur, now in command of Duquesne, and to bear a summons to any he could find, warning them to retire from French territory. The precipitancy of Washington's attack gave the French the chance to impute to Washington the crime of assassination; but it seems to have been a pretence on the part of the French to cover a purpose which Jumonville had of summoning aid from Duquesne, while his concealment was intended to shield him till its arrival. Rash or otherwise, this onset of the youthful Washington began the war. The English returned to Great Meadows, and while waiting for reinforcements from Fry, Washington threw up some en-

trenchments, which he called Fort Necessity. The men from Fry came without their leader, who had sickened and died, and Washington, succeeding to the command of the regiment, found himself at the head of 300 men, increased soon by an independent company from South Carolina. Washington again advanced toward Gist's settlement, when, fearing an attack, he sent back for Mackay, whom he had left with a company of regulars at Fort Necessity. Rumors thickening of an advance of the French, the English leader again fell back to Great Meadows, resolved to fight there. It was now the first of July, 1754. Coulon de Villiers, a brother of Jumonville, was now advancing from Duquesne. The attack was made on a rainy day, and for much of the time a thick mist hung between the combatants. After dark a parley resulted in Washington's accepting terms offered by the French, and the English marched out with the honors of war. The young Virginian now led his weary followers back to Will's Creek. . . . Thus they turned their backs upon the great valley, in which not an English flag now waved."—J. Winsor, *Struggle for the great valleys of North America* (Narrative and critical history of America, v. 5, ch. 8).

ALSO IN: W. Irving, *Life of Washington*, v. 1, ch. 7-12.—H. C. Lodge, *George Washington*, v. 1, ch. 3.—N. B. Craig, *Olden time*, v. 1, pp. 10-62.

(Valley): 1755.—Braddock's defeat.—French possess the West and devastate English frontiers.—"Now the English Government awoke to the necessity of vigorous measures to rescue the endangered Valley of the Ohio. A campaign was planned which was to expel the French from Ohio, and wrest from them some portions of their Canadian territory. The execution of this great design was intrusted to General Braddock, with a force which it was deemed would overbear all resistance. Braddock was a veteran who had seen the wars of forty years. . . . He was a brave and experienced soldier, and a likely man, it was thought, to do the work assigned to him. But that proved a sad miscalculation. Braddock had learned the rules of war; but he had no capacity to comprehend its principles. In the pathless forests of America he could do nothing better than strive to give literal effect to those maxims which he had found applicable in the well-trodden battlegrounds of Europe. The failure of Washington in his first campaign had not deprived him of public confidence. Braddock heard such accounts of his efficiency that he invited him to join his staff. Washington, eager to efface the memory of his defeat, gladly accepted the offer. The troops disembarked at Alexandria. . . . After some delay, the army, with such reinforcements as the province afforded, began its march. Braddock's object was to reach Fort Du Quesne, the great centre of French influence on the Ohio. . . . Fort Du Quesne had been built [or begun] by the English, and taken from them by the French. It stood at the confluence of the Alleghany and Monongahela; which rivers, by their union at this point, form the Ohio. It was a rude piece of fortification, but the circumstances admitted of no better. . . . Braddock had no doubt that the fort would yield to him directly he showed himself before it. Benjamin Franklin looked at the project with his shrewd, cynical eye. He told Braddock that he would assuredly take the fort if he could only reach it; but that the long slender line which his army must form in its march 'would be cut like thread into several pieces' by the hostile Indians. Braddock 'smiled at his ignorance.' Benjamin offered no further opinion. It was his duty to collect horses and carriages for the use of the expedition, and he did what was required of him

in silence. The expedition crept slowly forward, never achieving more than three or four miles in a day; stopping, as Washington said, 'to level every mole-hill, to erect a bridge over every brook.' It left Alexandria on the 20th April. On the 9th July Braddock, with half his army, was near the fort. There was yet no evidence that resistance was intended. No enemy had been seen; the troops marched on as to assured victory. So confident was their chief that he refused to employ scouts, and did not deign to inquire what enemy might be lurking near. The march was along a road twelve feet wide, in a ravine, with high ground in front and on both sides. Suddenly the Indian war-whoop burst from the woods. A murderous fire smote down the troops. The provincials, not unused to this description of warfare, sheltered themselves behind trees and fought with steady courage. Braddock, clinging to his old rules, strove to maintain his order of battle on the open ground. A carnage, most grim and lamentable, was the result. His undefended soldiers were shot down by an unseen foe. For three hours the struggle lasted; then the men broke and fled in utter rout and panic. Braddock, vainly fighting, fell mortally wounded, and was carried off the field by some of his soldiers. The poor pedantic man never got over his astonishment at a defeat so inconsistent with the established rules of war. 'Who would have thought it?' he murmured, as they bore him from the field. He scarcely spoke again, and died in two or three days. Nearly 800 men, killed and wounded, were lost in this disastrous encounter—about one-half of the entire force engaged. All the while England and France were nominally at peace. But now war was declared."—R. Mackenzie, *America: A history*, bk. 2, ch. 3.—"The news of the defeat caused a great revulsion of feeling. The highest hopes had been built on Braddock's expedition. . . . From this height of expectation men were suddenly plunged into the yawning gulf of gloom and alarm. The whole frontier lay exposed to the hatchet and the torch of the remorseless red man. . . . The apprehensions of the border settlers were soon fully justified. Dumas, who shortly succeeded de Contrecoeur in the command at Fort Duquesne, set vigorously to work to put the Indians on the war-path against the defenceless settlements. 'M. de Contrecoeur had not been gone a week,' he writes, 'before I had six or seven different war parties in the field at once, always accompanied by Frenchmen. Thus far, we have lost only two officers and a few soldiers; but the Indian villages are full of prisoners of every age and sex. The enemy has lost far more since the battle than on the day of his defeat.' All along the frontier the murderous work went on."—T. J. Chapman, *French in the Allegheny valley*, pp. 71-73.

(Valley): 1768-1778.—Boundary disputes.—Early civil government.—“The boundary controversy between Pennsylvania and Virginia, which had been discussed by Dinwiddie and Hamilton before the Braddock Campaign, became acute again after 1768; Virginia claiming that the western line of Pennsylvania was east of the Forks of Ohio, and that Fort Pitt was within the chartered limits of Virginia. . . . [In the beginning of 1774 the boundary troubles broke out in violent form on the western border.] There was a brief lull in the . . . strife during the progress of Dunmore's campaign against the Shawnees in the Summer and Fall of 1774; but after the battle of Point Pleasant and the defeat of the Shawnees in October, it broke out afresh. . . . On December 6, 1774, Lord Dunmore had issued a new commission appointing magistrates for the county of West Augusta, including the district around Pittsburgh, and on the 21st of the following February a number of the new justices west of the mountains met at Fort Dunmore [Fort Pitt] and held their first Court. . . . These records, for Augusta County, extend from February 21, 1775, to November 20, 1776; and for Yohogania County, from December 23, 1776, to August 28, 1780. They are practically the only records of the civil government of the country around the Forks of Ohio during most of this time; as the jurisdiction of Westmoreland County, Pennsylvania, which nominally covered all of Southwestern Pennsylvania, did not actually, at that period, extend much farther west and south than the present limits of the county; although three or four of the Westmoreland justices continued to reside in Pittsburgh. On May 16, 1775, less than a month after the actions at Lexington and Concord, a ‘Meeting of the Inhabitants of that part of Augusta County which lies on the west side of the Laurel Hill’ was held at Pittsburgh, and a Committee of Safety for the District was chosen. Of this Committee, George Croghan was Chairman, and the other justices of Augusta County, with some of the justices of Westmoreland County, and other leading citizens, were members. The Committee adopted a set of resolutions, approving the spirited behavior of their brethren in New England in ‘opposing the invaders of American rights and privileges to the utmost extreme,’ and resolving that the recommendation of the Richmond Convention of March 20th, ‘relative to the embodying, arming, and disciplining of the militia, be immediately carried into execution.’ Similar resolutions were adopted at Hannastown. . . . In July, 1775, the Continental Congress created three Indian Departments, of which the one west of the Alleghany Mountains was called the ‘Middle Department.’ . . . On the 4th of July, 1776, the Virginia Convention of Delegates appointed sixteen Commissioners, ‘to take and collect evidence in behalf of Virginia against persons pretending to have claims for lands within the territory thereof, under deeds and purchases from the Indians. . . . On June 15, 1778, the Supreme Executive Council of the new State of Pennsylvania met at Lancaster and issued a Proclamation, naming some two hundred persons in the State, who ‘have severally adhered to and knowingly and willingly assisted the enemies of the State, and of the United States of America, by having joined their armies at Philadelphia;’ and declaring that under the authority given the Council by the Assembly, for the ‘attainder of divers traitors if they render not themselves by a certain day,’ they ‘hereby strictly charge’ the parties named, that, ‘not rendering himself as aforesaid and abiding the trial

aforesaid, shall, from and after the first day of August, stand and be attainted of High Treason.’” —C. A. Hanna, *Wilderness trail*, v. 2, pp. 66, 76-78, 80-81, 82.

(Valley): 1774.—Lord Dunmore's War with Indians.—Territorial claims of Virginia.—Wrongs of Logan and his famous speech.—“On the eve of the Revolution, in 1774, the frontiersmen had planted themselves firmly among the Alleghanies. Directly west of them lay the untenanted wilderness, traversed only by the war parties of the red men, and the hunting parties of both reds and whites. No settlers had yet penetrated it, and until they did so there could be within its borders no chance of race warfare. . . . But in the southwest and the northwest alike, the area of settlement already touched the home lands of the tribes. . . . It was in the northwest that the danger of collision was most imminent; for there the whites and Indians had wronged one another for a generation, and their interests were, at the time, clashing more directly than ever. Much the greater part of the western frontier was held or claimed by Virginia, whose royal governor was, at the time, Lord Dunmore. . . . The short but fierce and eventful struggle that now broke out was fought wholly by Virginians, and was generally known by the name of Lord Dunmore's war. Virginia, under her charter, claimed that her boundaries ran across to the South Seas to the Pacific Ocean. The king of Britain had graciously granted her the right to take so much of the continent as lay within these lines, provided she could win it from the Indians, French, and Spaniards. . . . A number of grants had been made with the like large liberality, and it was found that they sometimes conflicted with one another. The consequence was that while the boundaries were well marked near the coast, where they separated Virginia from the long-settled regions of Maryland and North Carolina, they became exceedingly vague and indefinite the moment they touched the mountains. Even at the south this produced confusion, . . . but at the north the effect was still more confusing, and nearly resulted in bringing about an inter-colonial war between Pennsylvania and Virginia. The Virginians claimed all of extreme western Pennsylvania, especially Fort Pitt and the valley of the Monongahela, and, in 1774, proceeded boldly to exercise jurisdiction therein. Indeed a strong party among the settlers favored the Virginian claim. . . . The interests of the Virginians and Pennsylvanians not only conflicted in respect to the ownership of the land, but also in respect to the policy to be pursued regarding the Indians. The former were armed colonists, whose interest it was to get actual possession of the soil; whereas in Pennsylvania the Indian trade was very important and lucrative. . . . The interests of the white trader from Pennsylvania and of the white settler from Virginia were so far from being identical that they were usually diametrically opposite. The northwestern Indians had been nominally at peace with the whites for ten years, since the close of Bouquet's campaign. . . . Each of the ten years of nominal peace saw plenty of bloodshed. Recently they had been seriously alarmed by the tendency of the whites to encroach on the great hunting-grounds south of the Ohio. . . . The cession by the Iroquois of the same hunting-grounds, at the treaty of Fort Stanwix [see U. S. A.: 1765-1768], while it gave the whites a colorable title, merely angered the northwestern Indians. Half a century earlier they

would hardly have dared dispute the power of the Six Nations to do what they chose with any land that could be reached by their war parties; but in 1774 they felt quite able to hold their own against their old oppressors. . . . The savages grew continually more hostile, and in the fall of 1773 their attacks became so frequent that it was evident a general outbreak was at hand. . . . The Shawnees were the leaders in all these outrages; but the outlaw bands, such as the Mingos and Cherokees, were as bad, and parties of Wyandots and Delawares, as well as of the various Miami and Wabash tribes, joined them. Thus the spring of 1774 opened with everything ripe for an explosion. . . . The borderers were anxious for a war; and Lord Dunmore was not inclined to balk them. . . . Unfortunately the first stroke fell on friendly Indians." Dunmore's agent or lieutenant in the country, one Dr. Conolly, issued an open letter in April which was received by the backwoodsmen as a declaration and authorization of war. One band of these, led by a Maryland borderer, Michael Cresap, proceeded to hostilities at once by ambushing and shooting down some friendly Shawnees who were engaged in trade. This same party then set out to attack the camp of the famous chief Logan, whose family and followers were then dwelling at Yellow Creek, some 50 miles away. Logan was "an Iroquois warrior, who lived at that time away from the bulk of his people, but who was a man of note . . . among the outlying parties of Senecas and Mingos, and the fragments of broken tribes that dwelt along the upper Ohio. . . . He was greatly liked and respected by all the white hunters and frontiersmen whose friendship and respect were worth having; they admired him for his dexterity and prowess, and they loved him for his straightforward honesty, and his noble loyalty to his friends." Cresap's party, after going some miles toward Logan's camp, "began to feel ashamed of their mission; calling a halt, they discussed the fact that the camp they were preparing to attack consisted exclusively of friendly Indians, and mainly of women and children; and forthwith abandoned their proposed trip and returned home. . . . But Logan's people did not profit by Cresap's change of heart. On the last day of April a small party of men, women, and children, including almost all of Logan's kin, left his camp and crossed the river to visit Greathouse [another borderer, of a more brutal type], as had been their custom; for he made a trade of selling rum to the savages, though Cresap had notified him to stop. The whole party were plied with liquor, and became helplessly drunk, in which condition Greathouse and his associated criminals fell on and massacred them, nine souls in all. . . . At once the frontier was in a blaze, and the Indians girded themselves for revenge. . . . They confused the two massacres, attributing both to Cresap, whom they well knew as a warrior. . . . Soon all the back country was involved in the unspeakable horrors of a bloody Indian war," which lasted, however, only till the following October. Governor Dunmore, during the summer, collected some 3,000 men, one division of which he led personally to Fort Pitt and thence down the Ohio, accomplishing nothing of importance. The other division, composed exclusively of backwoodsmen, under General Andrew Lewis, marched to the mouth of the Kanawha River, and there, at Point Pleasant, the cape of land jutting out between the Ohio and the Kanawha, they fought, on the 10th of October, a great battle with the Indians which practically ended the war. This is sometimes called the battle of Point Pleas-

ant, and sometimes the battle of the Great Kanawha. "It was the most closely contested of any battle ever fought with the northwestern Indians; and it was the only victory gained over a large body of them by a force but slightly superior in numbers. . . . Its results were most important. It kept the northwestern tribes quiet for the first two years of the Revolutionary struggle; and above all it rendered possible the settlement of Kentucky, and therefore the winning of the West. Had it not been for Lord Dunmore's War, it is more than likely that when the colonies achieved their freedom they would have found their western boundary fixed at the Alleghany Mountains. . . . [For some time after peace had been made with the other chiefs Logan would not join in it. When he did yield a sullen assent, Lord Dunmore] was obliged to communicate with him through a messenger, a frontier veteran named John Gibson. . . . To this messenger Logan was willing to talk. Taking him aside, he suddenly addressed him in a speech that will always retain its place as perhaps the finest outburst of savage eloquence of which we have any authentic record. The messenger took it down in writing, translating it literally. [The authenticity of this famous speech of Logan has been much questioned, but apparently with no good ground.]"—T. Roosevelt, *Winning of the West*, v. 1, ch. 8-9.

(Valley): 1786-1796.—Western Reserve of Connecticut.—Founding of Cleveland.—In September, 1786, Connecticut ceded to Congress the western territory which she claimed under her charter (see U.S.A.: 1781-1786; PENNSYLVANIA: 1753-1700), reserving, however, from the cession a tract "bounded north by the line of 42° 2', or, rather, the international line, east by the western boundary of Pennsylvania, south by the 41st parallel, and west by a line parallel with the eastern boundary and distant from it 120 miles—supposed, at the time, to be equal in extent to the Susquehanna tract given to Pennsylvania, 1782. . . . This territory Connecticut was said 'to reserve,' and it soon came to be called 'The Connecticut Western Reserve,' 'The Western Reserve,' etc. . . . On May 11, 1702, the General Assembly quit-claimed to the inhabitants of several Connecticut towns who had lost property in consequence of the incursions into the State made by the British troops in the Revolution, or their legal representatives when they were dead, and to their heirs and assigns, forever, 500,000 acres lying across the western end of the reserve, bounded north by the lake shore. . . . The total number of suf-

ferers, as reported, was 1,870, and the aggregate losses, £161,548, 11s., 6½d. The grant was of the soil only. These lands are known in Connecticut history as 'The Sufferers' Lands,' in Ohio history as 'The Fire Lands.' In 1790 the Sufferers were incorporated in Connecticut, and in 1803 in Ohio, under the title 'The Proprietors of the Half-million Acres of Land lying south of Lake Erie.' . . . In May, 1793, the Connecticut Assembly offered the remaining part of the Reserve for sale." In September, 1795, the whole tract was sold, without survey or measurement, for \$1,200,000, and the Connecticut School Fund, which amounts to something more than two millions of dollars, consists wholly of the proceeds of that sale, with capitalized interest. "The purchasers of the Reserve, most of them belonging to Connecticut, but some to Massachusetts and New York, were men desirous of trying their fortunes in Western lands. Oliver Phelps, perhaps the greatest land-speculator of the time, was at their head. September 5, 1795, they adopted articles of agreement and association, constituting themselves the Connecticut Land Company. The company was never incorporated, but was what is called to-day a 'syndicate.'" In the spring of 1796 the company sent out a party of surveyors, in charge of its agent, General Moses Cleaveland, who reached "the mouth of the Cuyahoga River, July 2d, from which day there have always been white men on the site of the city that takes its name from him. [In 1830 the spelling of the name of the infant city was changed from Cleaveland to Cleveland by the printer of its first newspaper, who found that the superfluous "a" made a heading too long for his form, and he therefore decided to drop it out.]"—B. 1840-1865.—Rôle of state in Mexican and Civil Wars.—The war with Mexico, declared May 13, 1846, was not popular at first in Ohio. The Whigs of the state felt that the war had been brought on by the annexation of Texas and hence was a deliberate and concerted scheme for perpetuating slavery. This sentiment was gradually overcome as the war progressed. "In response to the first call of President Polk for three regiments from Ohio, Governor Bartley issued his proclamation May 20, 1846, appealing to the courage and patriotism of the state to render promptly the required aid. Samuel R. Curtis, Adjutant General of the state, established a general rendezvous at Camp Washington, near Cincinnati, to which point all companies were ordered to proceed as soon as organized. That there was a sustaining war sentiment in Ohio is evidenced by the fact that in less than two weeks after the President's requisition was received, three thousand Ohioans were marching toward the rendezvous. Before June, forty companies were in their tents at Camp Washington. During this month companies assembled here from all over the state; indeed, more appeared than necessary to fill the quota, and these, with much clamor and dissatisfaction, were turned homeward. The thirty companies in camp were ordered by Governor Bartley to be organized into three regiments, and these, after being reviewed by General Wool, who was on his way to Mexico, were mustered into the service of the United States for one year. The recruiting of volunteers was kept up until the Ohio military forces were organized into five infantry regiments, fifteen independent companies of infantry, five companies for the Fifth United States Infantry, and one company of United States Mounted Riflemen. There were about seven thousand officers and men in the Mexican War from Ohio in the army, not including the navy, and these constituted about one-eighth of the entire land forces. . . . [Great as was the rôle of Ohio in the Mexican War, an even greater part was played by the state during the Civil War. In spite of the secret influence of numerous organizations such as the "Sons of Liberty" within the state, the president's calls for troops were loyally met. Up to December 31, 1864, the state had sent 346,326 men into the service of the United States.] A brief review of the record of Ohio in this most trying period of the nation's history will show the remarkable contribution she made in patriotism, blood and treasure. Of her troops that she sent to the field, 11,237 were killed or mortally wounded, and 13,354 died of disease. The people of Ohio paid out in money, according to the Adjutant General's report for 1866, for local bounties during the war, over \$54,000,000 and the state government's expense amounted to over \$11,000,000, making the total expenditures chargeable to the war and paid by the state, and her people, over \$65,000,000."—E. O. Randall and D. J. Ryan, *History of Ohio*, v. 4, pp. 50-51, 279.

1866-1908.—Economic and social transformation.—Construction of railways.—Growth of population.—Political parties.—"The history of Ohio since the close of the Civil War has been that of a profound economic and social transformation. . . . In the Ohio of 1860 agriculture was the great source of individual wealth, and grazing and wool growing came next. . . . The state stood second in the amount of cereals raised, second in horses and cattle, and first in wool. Manufactures

at that time employed only 75,000 men, in a total of 11,000 establishments with a capital of 57 millions, and most of these were limited to local and domestic markets. Cities were small, there being only six with over 8,000 population, only three over 20,000, and only one, Cleveland, over 100,000. In a population of two and a third millions only one ninth lived in cities; the farmer was the typical figure, dominating society and politics. The decade containing the Civil War saw the great change. In those years railways began to be pushed across the state with vigor, until by 1871 over three thousand miles were constructed. Simultaneously and partly as a result of the railway extension the coal measures of the eastern parts of the state began to be opened up; the iron of Pennsylvania, and later of Lake Superior, began to be brought to meet the Ohio coal; and iron and steel manufacturing spread from city to city. All other manufactures felt the stimulus and rushed into production, the number of establishments doubling in a decade, the employees rising to 137,000, and the value of the output more than doubling. In the panic of 1873, this first over-enthusiastic rush of Ohio capital into railways and manufactures paid the penalty of too great optimism and too little caution. In that fatal year and during a long period of subsequent 'hard times' railway earnings decreased, until bankruptcies followed, manufactures were idle or failed, and it seemed as if all industry had come to an indefinite suspension of activity. But from this relapse Ohio rose again with vigor in the years after 1878, and although hindered by another epoch of financial stringency after 1893, did not cease its progress nor experience any severe mishaps. Railways, coal, and iron gave the direction of development throughout. . . . By the opening of the twentieth century Ohio had become one of the leading manufacturing states in the Union, fifth as to the total value of its output, fourth in boots and shoes, second in iron and steel, first in clay products. Ohio manufactures were sent over the United States and exported through the civilized and uncivilized world. Over nine thousand miles of railway covered the state like a network, carrying the coal of the southeastern regions to every corner, and gathering the products of every city or solitary factory. The 75,000 employees of 1860 had increased to 345,000 in 1900, and the proportion of persons engaged in trade, transportation, and manufactures had grown from one third to nearly one half of the total number engaged in remunerative pursuits. By the side of this great industrial development agriculture failed to hold its own. [While the staple crops doubled, manufactures increased seven-fold, and by 1900 Ohio was no longer second, but seventh as a grain-producing state.] . . . The change in industrial interests showed itself unmistakably in the distribution of the population. Of the two and a third millions of 1860 scarcely one ninth lived in cities, a lower proportion than held good in the United States as a whole; but of the four and a sixth millions of 1900 nearly two fifths were urban, a considerably higher proportion than the country at large had reached. In place of six cities only, with more than 8000 population, there were thirty-eight; in place of one over 100,000 there were four, and two of these, Cleveland and Cincinnati, were seventh and tenth respectively among the cities of the land. . . . The real history of Ohio is to be sought in the field of business, of manufactures, and of railways, for beside their great development the politics or public life of the state has been of slight moment. The interests of the men of the era since the Civil War have

been mainly engrossed with the wonderful industrial expansion, and public affairs have had to adjust themselves to the altered situation. Governmentally the history of the state is conservative beyond precedent, since the Constitution of 1851, drawn up for a race of farmers, continued in operation throughout the century,—one of the very few in the country to exist for so long a time. In 1873-74 a constitutional convention,—led by many of Ohio's ablest and most practical men, labored with great thoroughness to perfect a more modern instrument; but the conservative voters in the ill-temper of the year of hard times, 1874, rejected the draft by an overwhelming majority. . . . Legislation during the two generations after the Civil War centred about industrial and economic matters. [The principal local issues were the temperance question and the problem of restricting special legislation. In 1885 the Dow law, imposing a liquor tax, was upheld as constitutional and closed the controversy. The second difficulty was ended in 1902 when the state supreme court made it impossible for municipal corporations to abuse their money power. Local issues, however, were not paramount. In national politics the state held a unique position.] The vote in Ohio was supposed to indicate conclusively the tendencies in the Union at large, and the result was that the two great political parties concentrated their efforts upon the Ohio elections to an unequalled degree. After twenty years of this extreme pressure the voters of the state sought relief by changing the election day to November, but although the state fortunately lost the character of weather-gauge its real political weight was undiminished. The result of this political prominence has been the existence of two very bitterly opposed party organizations in the state, struggling at every election with never fading rancor. For about eighteen years, from 1865 to 1893, their relations remained fairly constant. The Republicans controlled the larger maximum vote, and in presidential elections could be reasonably sure of success; but the Democrats, in 'off years' or on local issues, ran a chance of occasionally electing governors, carrying legislatures, and choosing United States senators. During these eighteen years the Democratic party was a 'hard times party,' almost invariably winning in years of depression, as 1873, 1874, 1883, and 1880, and as invariably being decisively beaten in years of agricultural and industrial prosperity. . . . Finally, in the last decade of the century the two parties came to join issue squarely, the Democrats adhering to their demands for free coinage and a low tariff, while the Republicans shifting with the altered interests of the state, grew steadily firmer in opposition to silver inflation and increasingly vigorous in advocacy of protection. The results of this change showed that the new economic development of the state had worked to the profit of the Republicans. The Democrats, beaten in 1893 during a panic year, failed to recover as on previous occasions, and steadily remained for the next ten years in a hopeless minority. The industrial development of Ohio had apparently brought about a permanent change in the balance of political parties. [During the years 1865 to 1908 Ohio contributed five presidents and many leaders prominent in Senate, House, Cabinet, and judiciary.]—T. C. Smith, *Ohio since the Civil War* (R. 1893.—Arbitration board created. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1886-1920.

1909-1911.—Social legislation enacted.—Political corruption rebuked.—Constitutional amendment approved.—With the inauguration of Judson Harmon as governor of Ohio on January 11, 1909, a vigorous campaign for the enactment of a program of social legislation was undertaken. The legislature, however, was slow to enter upon the work, and the sessions of 1909 and 1910 placed no important statutes on the books. "Governor Harmon was inaugurated for his second term on January 9, 1911. Great interest centered in the legislative session because of the important measures which the governor favored. In January the income tax amendment to the constitution of the United States was ratified, the previous legislature having declined to give it approval. The laws adopted in 1911 include a number of far-reaching character. A maximum one per cent. tax rate was fixed, with the proviso for increase to one and one-half per cent. in any tax district by a majority vote of the people. The affairs of the seventeen state institutions were taken from the control of separate boards of trustees and placed under the management of a state board of administration. A state public service commission was created, with extensive powers for controlling enterprises of public utility, regulating rates, and affording satisfaction to citizens in cases of grievance. A state insurance fund was instituted, from which money will be paid employes injured and dependents of employes killed at their work. The 'Oregon plan' for direct nomination of United States senators was established. The referendum was granted to municipalities upon petition of fifteen per cent. of the voters, and the initiative upon petition of thirty per cent."—E. D. Randall and D. J. Ryan, *History of Ohio, v. 4, pp. 464-465*.—At the same time that the state legislature was establishing an enviable record in social legislation, Judge A. Z. Blair in Adams county was giving the nation a lesson in practical political reform. For several years Judge Blair had been trying to purify the politics of his county and in January, 1911, he succeeded in applying a really effective method of reform. "To begin with, the buying and selling of votes, which had been going on in Adams County for more than thirty years, had become so open and shameless as to be a matter of common knowledge. . . . Judge Blair had been so intimately acquainted with the political life of the county that he knew, as did many others, the condition prevailing. He knew that both parties had been guilty, and that the local politicians and 'party workers' had been very generally engaged in making the bargains and distributing the money, using their respective quotas of funds contributed in greater part by candidates for office. The law of Ohio permits the judge, in a bribery case, to grant immunity to those who turn informer and become State's evidence. Judge Blair's great thought was to take all the politicians and vote-buyers in the county, to the number perhaps of two or three hundred, summon them as witnesses before a special grand jury, and promise them all immunity from present or future prosecution if they would turn over to the court and grand jury their lists of purchased voters, with the amounts paid, and all the necessary facts. . . . It was plain enough that if all the vote-buyers should put the grand jury in possession, frankly, of the

entire truth, they would bring no harm upon themselves and a minimum of harm upon the men whose votes had been sold. The next part of the scheme was to be the announcement, through all the newspapers of the county, and through all other sources of publicity, that the names of those who had sold their votes were known to Judge Blair and to the grand jury, and that indictments had been found against them. If, however, they were wise enough to come to West Union, the county seat, of their own free will and make confession to the judge,—thus saving the expense and trouble of serving papers and making arrests,—they would be treated with great leniency. It was a part of the scheme not to make known the information disclosed to the grand jury by the politicians, and not to make public the names of those against whom indictments had been found. It was desired that as many as possible might facilitate the movement of justice by making confession, and allowing themselves to be sentenced. Such was the bold, simple project. Suffice it to say that it was as effective in practice as it was comprehensive in conception."—A. Shaw, *National lesson from Adams county (Review of Reviews, Feb., 1911)*.

1912.—Adoption of new state constitution.—On January 9, 1912, the constitutional convention, authorized by the electors of the state on November 8, 1910, met in the city of Columbus. Herbert S. Bigelow, of Cincinnati, was elected president, and Charles B. Galbreath, of Columbus, secretary. There were one hundred and nineteen delegates in the body. On September 3, the people of the state ratified the major portion of the work of the convention by adopting thirty-three of the forty-one proposed amendments to the existing constitution. The amendments thus approved constitute virtually a new constitution. More than one half are radical, some are revolutionary in their significance. "The first amendment states that in civil cases the legislature may provide for verdicts by not less than three-fourths of the jury. The amendment providing for the abolition of the death penalty and the substitution of life imprisonment was lost. . . . Probably the most important amendment adopted was that providing for the initiative and referendum. Against this amendment privileged interests used all their power and agencies of publicity. The amendment provides that the constitution can be amended by petition, the proposed change being offered by 10 per cent of the electors and submitted to the electors at the next election. Provision was made for the enactment of laws by the same method, although the details are different from those of any previous initiative and referendum amendment. This section provides that measures may be initiated by 3 per cent of the electors, who file their petitions with the secretary of state who then transmits the proposed measure to the general assembly. If the general assembly enacts the bill it becomes a law. If, however, the assembly fails to pass the bill or passes it in an amended form, the proposed measure can be submitted to the electors in its original or amended form if 3 additional per cent of the electors petition for it. Referendums on laws passed by the legislature are made possible on petition of 6 per cent of the electors. [See INITIATIVE AND REFERENDUM: Development in the United States.] . . . Advanced amendments were enacted in the interest of labor. The legislature was authorized to provide direct mechanics' liens against the property of the owner; to regulate the hours of labor, establish a minimum wage [see LABOR REMUNERATION: 1910-1920] and provide for the comfort, health, safety and general

welfare of all employes. . . . The state was authorized to establish state insurance funds for the protection of industrial workers. Eight hours was made a day's work on all public work, whether done by contract or by the state directly. The abuses of contract prison labor were made impossible by requiring that prisoners should not be contracted out or made to work under the contract system. The element of private profit was eliminated in prison labor, and provision was made for the employment of prisoners in the production of things needed by the state. Conservation of natural resources was provided for by authorizing laws to encourage and promote forestry, to protect streams and lakes, and to regulate the use of water power. The introduction of the Torrens land title system was made possible, by means of which land titles can be registered under public supervision. Substantial judicial reform was secured by giving an intermediate court of appeals final authority in most cases. The most radical departure relates to the interference of the courts with legislation, for the Supreme Court cannot hold a statute unconstitutional if more than one of the judges dissent, although a judgment of the court below holding a statute unconstitutional may be affirmed by a majority of the Supreme Court. Judgments of the trial court can be reversed only with the concurrence of all the judges of the Court of Appeals on the weight of the evidence and by a majority of such judges upon other questions. . . . The direct primary was made mandatory for all offices. School districts were authorized to determine for themselves the size and organization of local boards of education. The double liability of bank stockholders was provided for as was the regulation of corporations. The merit or civil service system was made obligatory on state, county and city offices, and the legislature was required to provide laws for competitive examinations. . . . In general, the constitution takes advanced ground on industrial and labor questions, on the arbitrary powers of the court, on judicial reform, and in providing for the fullest and freest expression of political democracy, through municipal home rule, the direct primary and the initiative and referendum."—F. C. Howe, *New constitution of Ohio (Survey, Sept. 21, 1912)*.

1913.—Great floods.—Their toll in lives and property.—Schemes for prevention.—In March, 1913, a great flood on the Ohio river spread destruction through the valley, especially in the city of Dayton. More than 500 persons were drowned and property worth 250 million dollars was destroyed. Measures were taken immediately to prevent the recurrence of such a disaster and by an expenditure equal to only one-tenth the loss sustained in 1913 the valley has been thoroughly protected against the flood danger. See OHIO RIVER.

1913-1914.—Legislation in harmony with new constitution.—Municipal charters.—During 1913-1914 Ohio enacted several laws in conformity with policies authorized by the constitutional amendments adopted in 1912. In 1913 the Torrens land registration system was adopted, an eight hour day for laborers on public works was legalized, a public utilities commission of three was created and the federal amendment for direct election of senators was ratified by the legislature. Under the municipal home rule provisions of the constitution, Cleveland adopted a new charter, providing for nomination by petition, preferential voting, the short ballot, initiative, referendum and recall. A year later Columbus adopted a charter containing provisions for a council of members chosen at large and for the initiative, referendum and recall

of officials. In November, 1914, Cleveland won its case in a dispute with the New York Central system over the possession of a large tract of land on the lake front. The Federal Supreme Court rendered the decision.

1914-1916.—Eastern Ohio coal strike.—Federal mediation.—Youngstown steel strike. See LABOR STRIKES AND BOYCOTTS: 1914-1915; 1916.

1917-1918.—Part played in World War.—During the World War, Ohio furnished 200,293 soldiers, or 5.33 per cent of the whole force of the United States. The Ohio branch of the council of national defense was appointed by Governor Cox on June 1, 1917. A national army camp, Camp Sherman, was erected at Chillicothe, an ordinance camp at Erie Proving Grounds near Port Clinton, and a chemical plant at Willoughby near Cleveland. \$1,324,545,750 were raised in the state for the Liberty and Victory loans.

1917-1920.—Development of direct legislation, education and taxation.—Recent special legislation.—On November 6, 1917, the voters of Ohio approved an amendment to the state constitution, reserving to the people the power to approve or reject an action of the legislature ratifying any proposed amendment to the Federal Constitution. At the same election woman suffrage was defeated by 130,000. In 1917 the Wright law, creating the Ohio State Board of Education, placed the state well on the way toward an efficient control of its educational system. Two years later the legislature passed the Freeman Bill, providing for a state teachers' retirement system. The system went into operation in 1920 throughout the state and means that during its existence Ohio teachers, who have taught the required number of years, may retire on State pensions. In 1920 the School Revenue Bill provided an increase in the general school levy to enable counties and townships to increase appreciably the salaries of their teachers. "The Ohio legislature, which first met on January 6, 1919, reconvened in December. The session lasted in all about 13 months. The legislature reorganized the state's health service; increased the legal rate of fare on steam and interurban railways from two to three cents a mile; passed a new state highway act; prohibited the teaching of German in the elementary grades of public and parochial schools; defined and provided for the punishment of criminal syndicalism; passed a law prohibiting the flying of the red flag in parades; and enacted a veteran preference measure."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 75).—The same legislature ratified two amendments to the Federal Constitution: the Eighteenth, providing for national prohibition, January 7; and the Nineteenth, or Woman Suffrage Amendment, June 16.

OHIO RIVER, principal eastern tributary of the Mississippi river, formed by the junction of the Allegheny and Monongahela rivers at Pittsburgh, Pennsylvania, and flowing thence between Ohio, Indiana and Illinois on the north, and West Virginia and Kentucky on the south to its union with the Mississippi at Cairo, Kentucky. Little was known of the river until the end of the Indian wars in 1763, when the English gained complete control of the region through which it flowed. (See SEVEN YEARS' WAR: Treaties.) The first steamboat on the Ohio was the "New Orleans," which sailed from Pittsburgh to New Orleans in 1811. From 1820 until 1825, when the Erie canal was opened the Ohio was the great commercial and industrial link between the East and the West. The Middle West owes its rapid industrial development to the presence of this waterway, which by a system of canals, locks and dams, has been made navigable for a distance of 950 miles. The river rises frequently. Twice within fifteen years it destroyed lives and property. In 1808 more than sixty persons died in floods, and in 1913 a great flood again swept through the valley. "On Monday morning, March 24, a few newspapers announced the prediction of the weather bureau that abnormal rains would fall over eastern and southern states during the coming week. Those rains had actually begun the day before. By Monday morning, however, few townspeople or farmers along the threatened rivers foresaw unusual danger. To many persons not themselves in the possible paths of floods, the first real sense of impending destruction dawned when a Pennsylvania train, compelled by wash-outs to detour, plunged into the Mad River at West Liberty, Ohio. This occurred at 1:30 Tuesday morning. But before that, evidence had been accumulating in northwestern Ohio and northeastern Indiana that something more than an ordinary spring run-off was taking place. Not only were a score of lesser creeks in both Ohio and Indiana establishing new flood records, but some of the larger rivers as well were rising with ominous rapidity. There seemed to be little general expectation of widespread disaster. The Omaha tornado of Easter Sunday was still the topic of chief interest. Throughout Monday the scene of the heaviest rainfall had shifted southward; on Tuesday it spread wide over all of Central Ohio. It was, indeed, during the twenty-four hours from midnight on Monday to midnight on Tuesday that most of the Ohio and Indiana towns not on the Ohio river itself, learned what was to be their fate. Then it was that the nation heard those first frantic calls for help which told of whole cities—Dayton, Hamilton, Columbus, Chillicothe, Peru, and other—foundering like stricken ships at sea. Then, too, began those experiences of individuals, families, neighbors, which mark epochs in the memories of those who went through them: the grappling with death, the even worse grappling with a despair that held no hope; the strained waiting for release, accompanied by awful uncertainty as to what might be happening in the next block or the next house; the sight of friends or the members of one's own family perishing without a chance for help to reach them. These things the world has read and re-read; they are being woven into the folk-lore of the communities where they occurred."—*The 1913 floods: Their coming* (Survey, May 2, 1914).—"One million and twelve thousand people lived in the flooded cities and towns. After the waters had

subsid, 428 bodies were recovered, and probably half as many more were never found; 20,000 houses were absolutely destroyed within twenty-four hours; 35,000 homes were damaged in the same length of time. The property loss was easily \$300,000,000. During the first few days of the disaster, 200,000 people had to be fed. But 220,000 represents only those who had to be fed because all their food supplied and means of preparing food were destroyed. It does not include hundreds of thousands who had money to buy food who were hard pressed to obtain it."—G. F. Burba, *The state's part in the emergency* (Survey, May 2, 1914).—Immediately following the disastrous days of the flood of 1913 steps were taken to prevent a recurrence of the catastrophe. "A flood prevention committee, whose function was to devise some means of protecting the city of Dayton, employed engineers to make a careful investigation of the underlying causes and to present some adequate means of preventing future similar disasters. The novel plan now [1919] being executed by the Miami Conservancy district is the result of the work of the chief engineer, Arthur E. Morgan and his assistants. After the survey had been some time in progress, it became apparent that separate flood protection projects carried out separately by each subdivision of the flooded district would be inefficient and unnecessarily expensive. For this reason, a plan of protection for the entire valley was passed by the state legislature, and the Miami Conservancy district was established by law in July, 1915, with its office in Dayton, the largest city in the flooded territory. . . . The district is working to provide for maximum floods by arbitrarily increasing the maximum estimated by the engineers. The protection of the valley depends wholly upon the system of retarding basins and channel improvements that are being made, so the engineers must be beyond their own judgment in the matter. The Conservancy system provides for from 15 to 20 per cent more overflow than is believed possible and 40 per cent beyond the mark of March, 1913. . . . Much legal procedure was necessary before the work could be got under way. Chief engineer Morgan, drafted the Conservancy act, as there was no existing law under which the work could be done and especial assessment levied to pay for it; and his text . . . passed without revision. The Supreme Court tested the validity of the law in many ways and it was not until June 1915, that the Miami Conservancy district was verified beyond dispute as a legal department under the State. An immense bond issue was floated to carry the work until the assessments could be collected, and \$10,000,000 worth were sold in Dayton alone. . . . The river channel improvements are very extensive and include deepening and straightening the channels of the various streams in the Great Miami Valley, and strengthening the levees. It is a work not only for the present but for future generations and will last for probably three centuries with very little improvement."—W. A. Drake, *Miami conservancy flood prevention plan* (Scientific American, Mar. 22, 1919).

OJIBWAS, or Chippewas.—"The Ojibways, with their kindred, the Pottawatamias, and their friends the Ottawas,—the latter of whom were fugitives from the eastward, whence they had fled from the wrath of the Iroquois,—were banded into a sort of confederacy. They were closely allied in blood, language, manners and character. The Ojibways, by far the most numerous of the three, occupied the basin of Lake Superior, and extensive adjacent regions. In their boundaries, the career of Iroquois conquest found at length a check. The fugitive Wyandots sought refuge in the Ojibway hunting grounds; and tradition relates that, at the outlet of Lake Superior, an Iroquois war-party once encountered a disastrous repulse. In their mode of life, they were far more rude than the Iroquois, or even the southern Algonquin tribes."

—F. Parkman, *Conspiracy of Pontiac, ch. 1*.—"The name of the tribe appears to be recent. It is not met with in the older writers. The French, who were the earliest to meet them, in their tribal seat at the falls or Sault de Ste Marie, named them Saulteur, from this circumstance. M'Kenzie uses the term 'Jibway,' as the equivalent of this term, in his voyages. They are referred to, with little difference in the orthography, in General Washington's report, in 1754, of his trip to Le Bœuf, on Lake Erie; but are first recognized, among our treaty-tribes, in the general treaty of Greenville, of 1794, in which, with the Ottawas they ceded the island of Michilimackinac, and certain dependencies, conceded by them at former periods to the French. . . . The Chippewas are conceded, by writers on American philology . . . to speak one of the purest forms of the Algonquin."

OKLAHOMA: Location and resources.—One of the southwestern states of the United States, Oklahoma is bounded on the north by Kansas and Colorado; on the east by Missouri and Arkansas; on the south by Texas; and on the west by Texas and New Mexico. Its relative importance among the states may be indicated as follows: in area, it is the seventeenth, with 70,057 square miles; in population, it was, in 1920, the twenty-first, with 2,028,283; and in mineral output, it is the seventh, chiefly through the production of petroleum. Oklahoma is one of the most important of the cattle-raising states, and is also a great producer of corn, cotton, and wheat.—See also U. S. A.: Economic map.

Aboriginal inhabitants. See **PAWNEE FAMILY**.

1806-1824.—Exploration.—Expulsion of white men.—Forts Gibson and Towson.—Traders.—First steamboat.—In 1806 two exploring expeditions were undertaken to traverse the farther reaches of the Louisiana Purchase, in which was included the present state of Oklahoma. (See **LOUISIANA: 1798-1803**.) One, commanded by Captain Richard Sparks, was turned back a few miles below the southeastern extremity of Oklahoma by a superior force of Spanish troops. The other was headed by Captain Zebulon M. Pike, who sent out a detachment under Lieutenant James B. Wilkinson in a canoe down the Arkansas river. Wilkinson wrote an interesting account of the trip. In 1810 George C. Sibley, a government Indian agent, visited the salt plains in northern Oklahoma; and in 1817 Major Stephen H. Long, exploring the Red and Poteau rivers, selected a site for a military post, which was occupied soon afterward by troops under the command of Major William Bradford, establishing Fort Smith. "Thomas Nuttall, the English naturalist, ascended the Arkansas River to Fort Smith in the late winter and early spring of 1819. After spending several weeks at the post, he accompanied a military expedition to the valley of the Red River. . . . Major Bradford organized and led this expedition in compliance with orders of the War Department directing him to expel all white people found living in the territory of the Osages, the Kiamitia River being its eastern boundary in the region which was tributary to the Red River. A number of families had formed a settlement near the mouth of the Kiamitia, even at that early day. Nuttall did not regard them very favorably, stating that many of them were fugitives from justice in the states, 'such as have forfeited the esteem of civilized society,' and, furthermore, that, to some extent at least, they were disloyal to the Government of the United States. . . . Forts Gibson and Towson were established respectively in April and May, 1824, by Col. Matthew Arbuckle, of the Seventh United States Infantry, and were garrisoned by detachments of troops from that regiment. . . . While it is not improbable that American trappers and traders began to visit the Arkansas River region within a few years after the transfer to Louisiana to American jurisdiction, it was not until after the close of the second war with Great Britain that they made any organized effort to embark in trade in this field. The first trading post to be established in Oklahoma by Americans was that of French and Butherford, near the mouth of the Verdigris River. This enterprise was undertaken in 1817, apparently at the same time with, or immediately after the establishment of the military

post at Fort Smith. The first steamboat arrived at Fort Smith in 1820. From that time on, steam navigation played an important part in the life and affairs of the Indian Territory, until the coming of the first railroad."—J. B. Thoburn, *Standard history of Oklahoma*, pp. 47, 55, 60.

1824-1837.—First Indian migrations.—Claims of western Indians.—Establishment of Indian Territory.—Transportation of tribes from the East.—Purchase treaties with Indians.—Steam navigation on Arkansas.—"Within the five years following the establishment of Forts Gibson and Towson in 1824, the Cherokee, Choctaw and Creek Indians began to move into the adjacent region from points farther east and south. The Creek Indians signed a treaty, February 12, 1825, by which they relinquished all of their lands in Georgia, taking in exchange therefor a grant of land lying between the Canadian and Arkansas rivers in what is now Oklahoma."—J. B. Thoburn and I. M. Holcomb, *History of Oklahoma*, p. 35.—"At the beginning of this period the Osage Indians claimed all of Oklahoma north of the Canadian river and south of that stream they claimed to own all of the land lying west of the Kiamitia. East of the Kiamitia the country was claimed by the Quapaws, though they seldom came into Oklahoma, and the southeastern part of the state was occupied at times by bands of Caddo Keechi Indians. In the southwestern part of the state, in the vicinity of the Wichita Mountains and near the Red River, were the Indians of the Wichita and affiliated tribes. Roving over the plains of the entire western part of the state were the Comanches and the Kiowas. . . . [In May, 1830, an act was passed by Congress and approved by President Andrew Jackson, reserving a tract of land west of Missouri and Arkansas for the colonization therein of the various Indian tribes still living east of the Mississippi river.] Several reservations had already been established in the region immediately west of the State of Missouri and the territories of Arkansas and Iowa so it soon became popularly known as 'the Indian Territory.' . . . Within fifteen years after the passage and approval of the act which provided for the establishment of the Indian Territory, nearly thirty tribes of Indians were transplanted to new reservations within its limits from their old homes in the states east of the Mississippi. More tribes were settled in Kansas than in Oklahoma but they were smaller tribes than those which were given reservations in Oklahoma. Eventually nearly all of the tribes which were settled in Kansas and Nebraska were removed to Oklahoma but it was not done until the white settlements became so numerous in those states as to almost surround their reservations. Practically all of these tribal removals from Kansas and Nebraska occurred during the decade immediately following the close of the Civil war."—J. B. Thoburn, *Standard history of Oklahoma*, pp. 73, 75.—Meanwhile, a number of treaties had been negotiated with the western tribes by which they relinquished vast tracts of land in Indian Territory and the surrounding region. General William Clark, superintendent of Indian affairs for the region west of the Mississippi, and Auguste Chouteau, acting as commissioners for the United States, were responsible for a treaty with the Quapaws, signed at St. Louis, 1818, by which that tribe gave up territory between the Canadian, Arkansas, and Red rivers. General Clark also arranged treaties with the Osage tribes whereby other tracts were relinquished, thus making it possible for the government to assign large reservations to the immigrant tribes

from the southern states. The development of steam navigation greatly facilitated the removal of the Indian tribes from the south. The Arkansas river was the great means of communication with the outside world at this period. In 1828 the first steamboat to go above Fort Smith, the *Facility*, ascended the Arkansas to the Grand river. As early as 1837, one fine steamboat, owned by Cherokees, was engaged in traffic between New Orleans and points in the Indian Territory. "Most of the Choctaws were moved to the Indian Territory during the years 1832-3-4. Some of them came across the country in wagons. [Others were transported by steamboats, up the Mississippi and Arkansas rivers, and were landed at Fort Coffee, near Skulaville. Heartbroken and homesick, as well as worn out with the exposure and privations of the journey, an unduly large proportion of the members of the immigrating tribes sickened and died and were buried in unmarked graves by the wayside. . . . During the summer of 1836 several parties of Cherokees, aggregating in all about 6,000 people, were started on their westward journey under the supervision of army officers. Most of these made the journey by boat down the Tennessee and Ohio rivers to the far side of the Mississippi, whence they finished the trip overland to the Indian Territory."—*Ibid.*, pp. 107-108, 111.

1830-1844.—Settlement of Indians.—Five Civilized Tribes.—Camp Holmes council.—The Indian consolidation policy of the United States brought the Indians west rapidly. In 1830 the Choctaws of Mississippi agreed to move under the same promise as that made to the Cherokees, that their lands should never be included within the limits of a state or organized territory. In 1831 the Senecas and Shawnees ceded their lands in Ohio for large reservations in Indian Territory. The Creeks and Seminoles were united in the west by the treaties of 1832 and 1833. By the close of 1835, provisions had thus been made for settling the Choctaws, Creeks, Seminoles, and Cherokees, four of the so-called Five Civilized Tribes. The fifth tribe, the Chickasaw, whose home had been in Mississippi, agreed to move in 1837. "In February, 1833, commissioners from the United States met delegates from the Creeks and from the Western Cherokees at Fort Gibson to settle all conflicting claims. The northern limit of the Cherokee country was established definitely at the southern line of the Osage territory, practically at the thirty-seventh parallel. All the country between the Osages and the Choctaws from the Mexican border to Arkansas and Missouri was divided between Creeks and the Cherokees. . . . The Cherokee country was divided nominally into two parts. . . . The western part was styled a 'perpetual outlet west,' but the Cherokees were promised the free and unmolested use of it. . . . Although the United States had received all of the present state of Oklahoma from the Quapaws and Osages and had distributed it among tribes from the states east of the Mississippi, yet the . . . Plains Tribes, considered its western half a part of their hunting-grounds. To forestall serious trouble United States commissioners called a great council of the tribes concerned. It met in August, 1835, at 'Camp Holmes on the eastern border of the Grand Prairie, near the Canadian River.' . . . To this place came representatives of the Cherokees, Muskogees or Creeks, Choctaws, Osages, Senecas, and Quapaws, to meet representatives of the Comanches and Wichitas. These tribes agreed to remain on friendly terms with one another and with the United States. The 'Great Prairie west of the Cross Timbers' was made a common hunting-

ground, and licensed Indian traders were promised protection therein. . . . In this way, what is now Oklahoma was divided by a line drawn north and south almost through its center—a prophecy of the time when the civilized tribes were to have its eastern half, and 'blanket' Indians its western half."—R. Gittinger, *Formation of the state of Oklahoma*, pp. 14-15, 17.—By 1844, the boundary between the Cherokees and the Osages was also well defined. As the massing of the Indians called for a better organization of the territory, two bills for that purpose were passed by Congress in 1834. They provided for a reorganization of the department of Indian affairs, and for the regulation of trade. White settlement in this region, now referred to as "Western Territory," was forbidden.

1844-1856.—Road to the west.—Northern territory cut off.—Dissension among Indians.—Treaty with Chickasaws and Choctaws.—"The movement to open the northern part of the larger Indian Territory was connected from the beginning with a desire for a road to the West. The first official suggestion of an encroachment upon the country of the Indians was made in 1844. . . . Within a quarter of a century of the establishment of the larger Indian Territory, it was divided at the thirty-seventh parallel. The northern part was organized and opened to white settlers, while the southern part was left unorganized. This contrast in the disposition of the two parts was due chiefly to the difference between their respective situations in relation to the road to the West. . . . The Indians of the Five Civilized Tribes were more nearly ready for the dissolution of their tribal governments in 1854 than the Indians of western Oklahoma were a generation later. . . . The Seminoles were not satisfied with their connection with the Creeks, considering it subordination. Farther south, the Chickasaws wished to separate from the Choctaws. . . . In June, 1855, a treaty was made with the Chickasaws and Choctaws by which these tribes, which had formed one people since 1837, were separated. . . . Separate reservations and distinct tribal organizations were also given to the Creeks and the Seminoles by a treaty made and ratified in August, 1856."—R. Gittinger, *Formation of the state of Oklahoma*, pp. 25, 44-45, 50-52.

1845.—Across Oklahoma to California.—"In 1845 Capt. John C. Fremont, then en route to the Pacific Coast on an exploring expedition, detached Lieut. James J. Abert, near Bent's Fort, Colorado, sending him southward to explore what is now Western Oklahoma. Lieutenant Abert explored the valley of the Canadian and that of the Upper Washita."—J. B. Thoburn and I. M. Holcomb, *History of Oklahoma*, p. 61.

1845-1861.—Development of Indian Territory.—"The period of fifteen years which ended shortly before the outbreak of the Civil War was distinguished as one of quiet and peaceful development in the Indian Territory. During this period the people of the Five Civilized Tribes made great progress. . . . Many of the Indians had neat, well-kept homes, with all of the comforts and conveniences of civilized life."—J. B. Thoburn and I. M. Holcomb, *History of Oklahoma*, p. 72.

1858.—Survey of northern boundary.—"In the summer of 1858 the boundary line between Kansas and Oklahoma (37th Parallel of North Latitude), was surveyed by a party under the direction of Lieut. Col. Joseph E. Johnson, 2nd U. S. Dragoons."—J. B. Thoburn and I. M. Holcomb, *History of Oklahoma*, p. 67.

1860-1865.—Civil War brought into Indian territory.—Part taken by Indians.—Neutrality of Cherokees.—Albert Pike as Confederate commissioner.—Council at Camp Napoleon.—"The territory included in the present state of Oklahoma had been set apart originally for the southern Indians, and until 1860 it had been occupied by them alone; but at the close of the Civil War, the United States deprived them of their exclusive rights within its limits. The position of the Five Civilized Tribes on the border, not their sympathy for the Southern Confederacy, caused them to take part in the war between Union and secession. The abandonment of the Indian Territory by the United States and its occupation by the Confederacy made it necessary for the Indians to recognize the authority of the Confederate government or oppose it unaided. After the war, the United States made this recognition a pretext for disregarding old agreements. . . . The first formal action in the Indian Territory regarding the coming conflict was taken by the Choctaws. On February 7, 1861, carefully worded resolutions were adopted by their legislature. . . . The resolutions expressed the hope that the Union would continue, but also the desire of the Choctaws to go with the Southern states in case of its dissolution. . . . On May 25 the Chickasaw legislature adopted violent resolutions which set forth that the government had deserted them and ignored their treaty rights. A sort of declaration of independence was issued, and the other Indians were called upon to assert their independence. The principal chief of the Choctaws responded to this on June 14 with a proclamation declaring the Choctaws independent. These declarations were preliminary to an alliance with the Confederates. Three days later, on June 17, John Ross, the chief of the Cherokees, in a letter to General Ben McCulloch, the commander of a force of Arkansas troops, said that he and his people wished to remain neutral. [President Davis, of the Southern Confederacy, sent Albert Pike as a commissioner to the tribes west of Arkansas; and he succeeded during the summer of 1861 in making treaties with a number of the tribes, including Creeks, Chickasaws, Choctaws, Seminoles, Osages, and Quapaws. But on the very day of the Osage Treaty the Superintendent of Indian affairs for this region reported to Washington that the Indians in his district were loyal.] It can never be known how far Pike's treaties met the approval of the majority of the Indians. After the war, some of the tribes were naturally anxious to make it appear that they had not approved the treaties when they were made and that deception and even force had been used. It is certain that their only advisers were Confederates, and it must have seemed to them that the Confederate States had succeeded to the position recently held by the United States. The territory of the Choctaws and Chickasaws was held by the Confederates until practically the close of the war."—R. Gittinger, *Formation of the state of Oklahoma*, pp. 56-50, 61, 73-75.—After the surrender of the last Confederate force, a council of Indians at Camp Napoleon decided to send delegates to ask a restoration of harmonious relations with the United States. A treaty commission was sent out to meet these delegates on the border, at Fort Smith. The Indians were told that they had forfeited their rights under the old treaties, but that the claims of those who had remained loyal would not be forgotten. New treaties were proposed by the commission with provisions for one consolidated government, but the Indians refused to accept them. An agreement of

renewed friendship was finally made, but all the questions at issue were left to be settled later.

1865-1876.—Indian outbreaks.—Custer massacre. See INDIANS, AMERICAN: 1865-1876; U. S. A.: 1866-1876.

1866.—Effects of Civil War.—"The representatives of the Government found chaotic conditions in the Indian Territory when peace was finally proclaimed. Farms had been abandoned, buildings destroyed and stock run off or confiscated by contending forces. Churches and schools had practically ceased to exist, and social, business and industrial conditions were generally demoralized. The people were encouraged to return, to rebuild their homes, and to reopen their farms. Stock, seeds, and implements were purchased for them, and thus they began life under the new order of things."—J. B. Thoburn and I. M. Holcomb, *History of Oklahoma*, pp. 106-108.

1866-1879.—Treaties with Indians.—Attempts to organize territory.—"The history of the Indian Territory from 1866 to 1879 is the history of a struggle for the concentration of the Indians and the establishment of a territorial government. The one was partly accomplished; the other was left undone. The failure to effect a territorial organization was due chiefly to the opposition of the Indians, who believed that a change in their status would make it possible for the railroads to secure a foothold in their country. In time, the Indians came to believe that all the bills for the establishment of territorial government were schemes for depriving them of their land. The first task of the government after the Civil War was to secure territory from the Five Civilized Tribes for the use of other Indians."—R. Gittinger, *Formation of the state of Oklahoma*, pp. 79-80.—"In their terms the treaties had much in common, yet they necessarily differed much in detail. All provided that there should be neither slavery nor involuntary servitude, and each made some provision by which the legal status of freedmen should be fixed. All of the treaties contained explicit consent for the construction of railway lines across their respective tribal reservations. All contained provision for the federation of the tribes of the Indian Territory with a general legislative council, the membership of which was to be apportioned among the several tribes according to their population. All made provision for the settlement of other tribes of friendly Indians in the Territory. All of the treaties proclaimed a general amnesty on account of offenses committed as acts of war between 1861 and 1865, and each made provision for the reimbursement of tribesmen who had suffered loss or destruction of property by reason of their loyalty to the Union during the War."—J. B. Thoburn and I. M. Holcomb, *History of Oklahoma*, p. 108.—"On March 17, 1870, Benjamin F. Rice, senator from Arkansas, introduced a bill for the organization of the Indian Territory under the name of 'Ok-la-ho-ma.' This bill was reported favorably on April 27 by Rice's colleague, Alexander McDonald, for the Committee on Territories. It was explained that the name proposed meant 'home for the red man' in the Choctaw tongue and that it had been given to the Indian Territory in the treaty of 1866 with the Chickasaws and Choctaws. For the next twenty years hardly a Congress passed without the introduction of one or more bills for the establishment of the Territory of Oklahoma."—R. Gittinger, *Formation of the state of Oklahoma*, pp. 85, 86.

1866-1883.—Extermination of the buffalo.—Coming of ranchers.—Cattle raisers associations.—The building of the first railway lines

across the western plains brought unforeseen economic results. Easy transportation of skins and meat led to the wholesale slaughter of buffaloes, which in a few years were practically exterminated. The Indians, who had heretofore relied upon the buffalo herds for food, clothing, and shelter, were forced to seek aid at the tribal agencies for rations and supplies of clothing. Also the disappearance of the wild herds was soon followed by the coming of cattlemen with their stock. The grasses which had furnished sustenance for the buffaloes provided equally good grazing for the cattle. Lands were leased from the Indian reservations at low prices, and cattle ranches began to appear. There was, too, a movement of range cattle northward from the vast herds of Texas to railway lines in Kansas, beginning in 1866. In the earlier years of the Texas cattle trade, these herds were brought across central Oklahoma to avoid the hostility of the wilder Indian tribes to the west. For the grazing privileges, the early ranchmen paid to the Cherokee nation a tax of twenty-five cents per head. But there was usually more or less trouble because of the lack of a settled policy between ranchers, herdsmen, and Indians. "In the case of the Cheyennes and Arapahoes, leases aggregating 3,117,880 acres of land were made respectively to seven different parties for ten-year periods at an annual rental of 2 cents per acre, in January, 1883. . . . Finally it became apparent that some species of tenure other than that of merely occupying the range and paying a head tax on the number of cattle held on such ranges would have to be devised. Meanwhile, cattlemen were learning something of the advantages of organization. The Texas Cattle Raisers' Association was the first of these organizations to be effected. The advantages of meeting in convention for the purposes of counseling together concerning matters of common interest were soon manifest and similar associations of live stock men were formed in other parts of the West. . . . The fact that they were gaining confidence as the result of organizing was amply attested by the amount of wire fence which was built on their ranges during the following summer. The fencing of the ranges in the Cherokee strip had a very disquieting effect upon the 'boomers' who were trying to effect a settlement in the Unassigned Lands. . . . From that time on, the issue between the range cattle interests and the intending settlers was clearly defined."—J. B. Thoburn, *Standard history of Oklahoma*, pp. 534-535.

1872.—Railroad construction.—"On July 25, 26, and 27 [1866], charters were granted to three railroads in the Indian Territory. To each road was made a grant of land to aid in its construction, but the grant was to be effective only when the Indian title should be extinguished. In accordance with these provisions, two railroads were constructed in the Indian Territory in 1871 and 1872; the Missouri, Kansas, and Texas across the territory from north to south, and the Atlantic and Pacific from the Missouri state line to a junction with the other road."—R. Gittinger, *Formation of the state of Oklahoma*, p. 83.

1874-1902.—Care of deaf and blind children. See CHARITIES: United States: 1874-1902.

1885.—Agitation against fencing Oklahoma lands.—Constant efforts to secure the opening of the lands in Oklahoma to white settlement by legal means had thus far had no results. The "boomers," companies of adventurers who hovered on the outskirts of the Indian Territory, occasionally stole across the border to make settlements, but were usually driven out by United States

troops. Captain David L. Payne was the most noted of the leaders during the boomer period which lasted about ten years. "Finding that there was to be no change of policy with respect to their claims under the Cleveland administration, the 'boomers' determined that the cattle companies should be brought to respect the law also. With this end in view, they started a strong agitation against the illegal fencing of the public domain in the Oklahoma country. It proved to be a popular appeal, and soon the pressure became so strong that President Cleveland issued a proclamation (August 7, 1885) ordering that such fences be removed. This was a moral victory for the 'boomers,' though, in effect, it was barren of results, for the cattle companies paid practically no attention to it. The 'boomers' made another organized effort to settle in Oklahoma under the leadership of Couch during the ensuing autumn. They were removed by Lieut. Col. E. V. Sumner, 5th U. S. Cavalry, November 10, 1885. This was the last organized attempt to settle in Oklahoma without warrant of law."—J. B. Thornburn and I. M. Holcomb, *History of Oklahoma*, p. 167.

1885.—Threatened Indian outbreak.—"In the spring of 1885 many of the Cheyenne Indians became restless and were reported to be buying and secreting arms and ammunition. . . . After a thorough investigation into the causes of dissatisfaction among the Cheyennes, General Sheridan notified President Cleveland that there could be no permanent settlement of the trouble until the stockmen were required to remove their cattle from the Cheyenne and Arapaho Reservation. Accordingly President Cleveland issued a proclamation, July 23, 1885, warning all owners of stock on that reservation to remove the same within forty days and declaring existing leases to be void and of no effect."—J. B. Thornburn and I. M. Holcomb, *History of Oklahoma*, pp. 164, 166.

1885-1887.—Dawes Act.—In 1885, H. L. Dawes, senator for Massachusetts, introduced a bill which provided for the allotment of land in severalty to Indians. The bill was passed in 1887, but excluded the lands of the Five Civilized Tribes, the Osage, Peoria, Miami or Sac and Fox Indians, all of whom were known to be definitely opposed to such a measure.—See also U. S. A.: 1885-1891.

1885-1889.—Disappearance of frontier.—Purchase of Creek and Seminole lands.—President authorized to open Oklahoma Territory.—The Indians were made to feel the pressure of the western movement of population. (See U. S. A.: 1885-1891.) "In January, 1889, a delegation headed by Pleasant Porter came to Washington and offered to relinquish to the United States the Creek claims. . . . William F. Vilas, who had succeeded Lamar as Secretary of the Interior, received the delegation under the authority conferred by the law of March 3, 1885. An agreement was signed on January 10, 1889, in which the Creeks for a consideration of two million two hundred and eighty thousand dollars released the United States from all restrictions on the use of the entire Creek cession of 1866. Secretary Vilas had hardly completed the negotiations with the Creeks before two Seminole delegates presented themselves. On February 15 they submitted a formal communication asking the government to enter into an agreement with them concerning their cession of 1866, similar to the agreement just made with the Creeks. . . . The Senate Committee on Indian Affairs by its chairman promptly introduced a bill to accept the offer of the Seminoles and to make an appropriation of one million nine hundred and

twelve thousand dollars as additional compensation for the land ceded by them in 1866. . . . As the adjournment of Congress was at hand . . . the members of the House Committee on Indian Affairs agreed to try to attach it as an amendment to an additional section of importance. This section authorized the President to open the Oklahoma district to settlement immediately, in accordance with the terms of the homestead law. . . . The Indian appropriation bill thus amended . . . was passed finally by both houses on March 2, 1889, and was approved by President Cleveland on the same day."—R. Gittinger, *Formation of the state of Oklahoma*, pp. 149-151.—See also U. S. A.: 1889-1890.

1889-1890.—Opening day proclaimed.—Rush of settlers.—Race for homes.—Organization convention.—Organic Act.—Territorial government.—"March 23, 1889, President Benjamin Harrison issued a proclamation setting the date of the proposed opening of the Oklahoma country to settlement on the twenty-second of April, at 12 M. . . . As the appointed day for the legal opening of the Oklahoma country to homestead settlement drew near, throngs of people began to assemble on the border of the promised land. The multitude of intending settlers included many of the former 'boomers,' but they were in the minority. . . . Promptly at noon, on the twenty-second day of April, 1889, the cavalrymen, who patrolled the borders of the promised land, fired their carbines in the air as a signal that the settlers could move across the line. A mighty shout arose and then the race for claims and homes began. Hundreds crowded the trains of the single railway line that entered Oklahoma; thousands rode on fleet horses, lightly saddled; other thousands rode in buggies and buckboards, and others yet, in heavy farm wagons, drawn by slower teams; yes, and some even made the race on foot!"—J. B. Thornburn and I. M. Holcomb, *History of Oklahoma*, pp. 173-174.—All the valuable land in the newly opened territory was taken up in a single day, and the city of Guthrie, which had no existence when the morning rush began, before night fell had a population of 10,000 souls. "Late in May a call was issued for a convention to meet at Guthrie, July 17, for the purpose of planning the organization of a territorial government. . . . Congress convened in regular session in December. A strong delegation of representative Oklahoma people was on hand with memorials and petitions to urge the immediate passage of an act providing for the organization of the Territory of Oklahoma. But Congress was deliberate and the people of Oklahoma had to wait five long months for the passage of a bill. . . . The Organic Act provided that the Territorial Government should consist of executive, legislative and judicial departments. The Governor and Secretary of the Territory were to be appointed by the President of the United States; the other executive officers to be chosen by the Governor. The Territorial Legislative Assembly consisted of two branches, a Council of thirteen members and a House of Representatives of twenty-six members. The territorial Supreme Court, as originally constituted, consisted of one chief justice and two associate justices, all to be appointed by the President, and all of whom also served as judges of the district courts. Immediately after the approval of the Organic Act, President Harrison appointed the first Territorial officers. George W. Steele, of Indiana, was named as governor. Governor Steele immediately came to Guthrie, which had been designated as the temporary capital, and entered upon the discharge of

his official duties May 22, 1890."—*Ibid.*, pp. 179-181.—See also U. S. A.: 1889-1890.

1889-1898.—Courts for Indian territory.—Tribal ownership and its abuse.—“On March 1, 1889, an act was passed establishing a United States court at Muskogee for the Indian Territory. Jurisdiction was given to this court in civil cases in which citizens of the United States were interested, if the amount involved exceeded the sum of one hundred dollars. . . . The tribal courts however, were allowed to retain exclusive jurisdiction in all cases, civil and criminal, in which only members of the tribes were concerned. . . . The conditions among the Indians themselves called for the attention of Congress. . . . Under the system of the tribal ownership of land with the free use of it by individuals, less than one-fourth of the Indians occupied nearly all that was desirable. Energetic, aggressive tribesmen, usually adopted whites or persons of mixed descent, had possession of farms of hundreds or even thousands of acres. . . . The Indian of pure blood usually lived as far as possible from a town and cultivated a plot of a few acres. His live stock perhaps consisted of a single pony. These conditions provided a strong argument for the allotment of lands in severalty. . . . The tribal courts were abolished [June 28, 1898], and all cases were transferred to the United States courts. Tribal laws were done away with, and the Indians were brought under the laws of the United States. The Dawes Commission was authorized to proceed with the allotment of lands as soon as the rolls of citizens should be completed. Oil, coal, asphalt, and mineral lands were reserved from allotment and set aside to be leased for the benefit of the tribes. The town sites were also reserved, and provisions were made for the sale of town lots under rules intended to protect the rights both of Indians and of owners of improvements.”—R. Gittinger, *Formation of the state of Oklahoma*, pp. 181-186, 191, 192.

1889-1916.—Evolution of educational system.—Subscription schools.—Establishment of public schools and universities under territorial government.—Incorporation of Indian schools with Federal schools.—“When Oklahoma was opened to white settlement, in 1889, the organization of a public school system was not possible until after the passage of the organic act and the installation of a territorial government. During the year which intervened between the date of the opening and the establishment of the territorial government, subscription schools were maintained in the larger towns and cities. The organic act provided for the organization of a system of public schools and appropriated the sum of \$50,000 for the support of the same until the necessary revenue could be raised by local taxation for their maintenance. In accordance with the law under which the lands of Oklahoma were opened to settlement, two sections of each township (16 and 36) were reserved for the benefit of the public schools of the future commonwealth. When the territorial government was installed, the organization of a public school system was promptly undertaken. . . . The first territorial Legislative Assembly enacted the necessary laws for the location and establishment of the University, at Norman, the Agricultural and Mechanical College, at Stillwater, and the Normal School, at Edmond. All of these institutions were organized during the following year. . . . The Legislative Assembly of 1897 passed an act providing for the establishment of the Northwestern State Normal at Alva. In 1901 the Assembly made provision for the establishment of

two additional state schools—the Southwestern State Normal which, after some contention and litigation, was finally located at Weatherford, and the University Preparatory School which was located at Tonkawa. . . . A district school was established in nearly every community within a year after its settlement. . . . In the Indian Territory each of the five civilized tribes had its own educational system, with its national superintendent of schools. These schools consisted of two classes, namely, (1) the district schools which, while primitive in type and in character of work done, were somewhat analogous to the district schools now maintained, and (2) the tribal academies and seminaries, most of which correspond to the grammar school grades, though there were a few which approximated the high school grade. In addition to these there were a number of mission schools scattered throughout the five civilized tribes. . . . With the passage of the Curtis act in 1898 the control of the tribal school systems were taken over by a Federal school administration. The common schools of the five civilized tribes were brought under a uniform system for the first time. To the supervision of this important work John D. Benedict, an Illinois educator of experience and standing was appointed. He was assisted by four district supervisors. Under his direction the schools of the Indian Territory were radically remodeled and improved.”—J. B. Thoburn, *Standard history of Oklahoma*, pp. 873-876.

ALSO IN: L. B. Hill, *History of the state of Oklahoma*.

1891-1901.—Allotment of land to Indians in severalty.—Settlements.—Purchase of Cherokee outlet.—“In accordance with the terms of . . . [the Dawes act], which was supplemented by special agreements with the tribes, lands were allotted in severalty to two thousand seven hundred and eighteen Indians on the Iowa, Sac and Fox, and Pottawatomie-Shawnee reservations situated east of the Oklahoma district. After the Indians had received their allotments, nine hundred thousand acres remained in their reservations, and on September 22, 1891, this area was opened to settlement. The land was not given away. It was sold in tracts of one hundred and sixty acres each for a dollar and a quarter or a dollar and a half an acre, to actual occupants only, who must also be qualified to enter land under the homestead law. Nevertheless, the rush was similar to the one of 1880. Practically every tract was occupied on the first day. [The Cheyenne and Arapahoe reservation in the western part of the territory was opened to settlers in 1892. Meanwhile the government also completed negotiations with the Cherokees for the opening of the outlet.] The Cherokees gave up a tract of more than six million acres. For it they received eight and one-half million dollars. They also stipulated that seventy of their tribesmen should receive allotments in the cession. Finally, they secured a new promise that intruders should be removed from the country remaining to them. . . . The President issued his proclamation on August 19, 1893, declaring that the land would be opened to settlement at noon on September 16, . . . In the eight years from 1893 to 1901 only two additions were made to the area that was open to settlement. One small reservation, that of the Kickapoos, was opened, and the Supreme Court decided against the claims of Texas to the land between the forks of the Red River.”—R. Gittinger, *Formation of the state of Oklahoma*, pp. 163, 165, 166, 168.

1891-1907.—Agitation for statehood.—“In 1891 agitation for admission of Oklahoma Territory and Indian Territory, as one state, began. . . . The representatives of the civilized tribes presented many arguments in opposition to the proposed statehood legislation. . . . One delegate said, ‘I am an old Indian, and I only know one way; and . . . you have agreed with me (that is, with the Creek Nation) that in no time, shall that country be included within the bounds and limits of any state; and I am perfectly satisfied that you will live up to that.’”—J. B. Thoburn, *Standard history of Oklahoma*, p. 673.—Bills for admitting Oklahoma to the Union had been introduced into every Congress since the territory was organized, but it was not until the latter part of the first session of the fifty-seventh Congress that Delegate Flynn secured the passage of a Statehood Bill by the House. When Congress convened in December, 1902, a famous legislative battle over the admission of new states began. The Democrats of the south and west supporting the Omnibus Bill which had passed the House, were opposed by Senator Beveridge, chairman of the Committee on territories, and most of his colleagues on that committee who were against the admission of Arizona and New Mexico at that time. The committee reported a bill for the admission of Oklahoma and Indian Territory as one state. The battle was waged furiously for some time, but in the end the Omnibus Bill was crowded out. “It soon became clear that the leaders in Congress had determined upon a union of the territories. In 1903, Congress met in a brief session. A bill was introduced in each house for the immediate admission of Oklahoma alone, but this was the last serious effort to admit Oklahoma without the immediate inclusion of the Indian territory.”—R. Gittinger, *Formation of the State of Oklahoma*, p. 206.—A bill was introduced in 1904 calling for the admission of two states, one made up of Oklahoma and the Indian Territory, the other of Arizona and New Mexico. This was passed by the House of Representatives, but rejected by the Senate in 1905. In 1905 an effort was made to have the territory occupied by the Five Civilized Tribes made into a separate state to be named Sequoyah; but the bill introduced in Congress did not receive a hearing in either House. Finally in 1906 an act covering Oklahoma, Indian Territory, New Mexico and Arizona enabled the people of Oklahoma and of the Indian Territory to form a constitution and state government and be admitted into the Union on an equal footing with the “original states.” The delegates to a constitutional convention were immediately chosen. The convention held its first meeting in November, and the constitution was finally adopted in July 1907. It was submitted to the people on September 17, and ratified, and on November 16, 1907, proclamation was made of the entry into the union of the new state—See also U.S.A.: 1906 (June).

1893-1903.—Dawes commission.—A joint resolution of the two Houses, authorizing the appointment of a commission to negotiate with individual members of the Five Civilized Tribes, and induce them to take homesteads, was incorporated in the Indian Appropriation Bill of 1893. Senator Dawes was appointed chairman of the commission which carried on its labors until June, 1903, when it disbanded.

1898-1902.—Dissolution of tribes.—Indians declared citizens of the United States.—“The tribes in the Indian Territory were nearly dissolved before the end of the nineteenth century. The governments of the Five Civilized Tribes were

still in existence, but they were little more than consulting agents in the management of the business of the tribes. . . . An act of March 3, 1901, declared that all the Indians in the Indian Territory were citizens of the United States. A great deal was still to be done to close up the affairs of the Five Civilized Tribes, but they had ceased to exist except as financial corporations.”—R. Gittinger, *Formation of the state of Oklahoma*, pp. 193-195.—In 1902, Indian Territory included one hundred and forty-seven incorporated towns.

1907.—Industrial arbitration board created. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States; 1886-1920.

1907.—Indian population.—The enrollment, completed in 1907, showed the Indian citizenship as follows: Seminoles, 3,122; Creeks, 18,716; Cherokees, 41,716; Choctaws, 26,730; and Chickasaws,

HENRY LAURENS DAWES

10,995; total tribal membership, 101,230, about one-fourth of whom were full bloods.

1907-1908.—Admission as a state.—Jurisdiction over Indians transferred to the state.—“Oklahoma became a State on November 16, 1907, with 1,500,000 population. Included within the borders of that State were over 100,000 Indians who only a few years ago owned every foot of that fertile domain, known as Indian Territory, secured to them by the solemn grant and covenants of our government. Oklahoma is an Indian word said to mean, ‘the home of the red man.’ . . . In the very nature of things the white man’s view of progress and prosperity in Oklahoma is incompatible with the Indian’s enjoyment of the rights vested in him by treaties with the government. While framing legislation looking to the erection of a State upon this land, Congress undertook to establish safeguards for protection of the Indians in their new relations. In the treaties of 1808, 1901 and 1902 provisions were made to allot all these lands to the Individual Indians. Having in mind their inexperience and improvi-

dence, restrictions upon the sale of their lands were imposed in various measures. After the lapse of a fixed number of years the degree of blood was to test the Indians' capacity for making provident sales. A homestead was reserved out of each allotment which could not be sold for 21 years. As a further protection and in consideration of the Indian's agreement to the allotment of the land, certain tax exemptions were reserved to the Indian on all or part of his allotment for a limited period of time. Not long after these agreements were made with the Indians the white people, whose presence here was a violation of a score of solemn but empty promises made by our government, discovered that these provisions made for the Indians' protection did not meet with their approval. From that time to this the white man has waged a tireless contest to remove every measure of Indian protection that seems to stand in his way. . . . Since Oklahoma was first represented in Congress it has been urged that the Indian situation should be given over to the care of the State, and that local authority could be trusted to give the Indians all the protection they need. In response to this demand Congress passed an act on May 27, 1908, declaring the status of the Indian in Oklahoma and removing the restrictions on the sale of over nine million acres of their land. This act also committed to the probate courts of Oklahoma full and complete jurisdiction over the persons and property of all minors of the Five Civilized Tribes who previously were under the protection and control of the Federal Government."—G. Foreman, *Protecting the Indian* (*Independent*, Jan. 2, 1913, pp. 39-41).

ALSO IN: R. Gittinger, *Formation of the state of Oklahoma*, pp. 191-195, 230.—F. W. Hodge, *Handbook of American Indians north of Mexico* (*Smithsonian Institution*).

1907-1916.—Political innovations.—Initiative and referendum.—Corporation commission.—“When Oklahoma adopted her constitution preparatory to admission into the Union, that document was widely criticised in certain quarters as ‘radicalism run wild.’ The many-worded constitution [it contains 30,000 words] has proven more formidable in length than in the fundamental character of its ponderous articles and numerous sections. The student will be a little surprised to find that the article devoted to the initiative and referendum is explicit, comparatively brief, carefully written and conservative in word and spirit. . . . Petitions and orders for the initiative and for the referendum shall be filed with the secretary of state and addressed to the governor of the state, who shall submit the same to the people. The referendum may be demanded against one or more items, sections, or parts of any act of the legislature, but this shall not delay the remainder of the act from going into effect.”—C. B. Galbreath, *Provisions for state-wide initiative and referendum* (*Annals of the American Academy of Political and Social Science*, Sept., 1912, pp. 99-100).—See also INITIATIVE AND REFERENDUM: Development in the United States.—Another feature of the new constitution which was regarded as radical, was the strict regulation of public utilities corporations, partly by legislative enactment, but chiefly through the work of the Corporation Commission. “The people of Oklahoma who have to wait in the stations, ride on the trains and pay the freight, created a commission to establish their theory that public service corporations are licensed by the state primarily to serve the public. They bedded its authority deep in the constitution of the state and employed twenty-five or thirty

sections of that document to define its powers. . . . Pleased with the work of the commission, the people have enlarged its authority from time to time and a recent legislature committed to it jurisdiction of the vast natural resources of oil and gas. . . . The commission is called on frequently to determine what constitutes reasonable train service. A multitude of unfair freight rates have been considered and corrected. Refunds varying from a few cents to many dollars have been and constantly are being secured for patrons of railroads, and untold savings have been made to the people of Oklahoma by regulation of the freight rates. The commission deals in a direct manner with the questions before it and the humble citizen may apply for relief without cost. Many controversies that in other states would be heard by the courts, if at all, are considered promptly and the relief applied expeditiously and effectively. . . . Ninety per cent of such complaints submitted to the commission are adjusted in the most informal manner. So potent is the commission that frequently a letter to the offending corporation brings satisfactory adjustment, and often a telephone call will accomplish what otherwise, if the law afforded a remedy at all, could be secured only at the end of a tedious and expensive lawsuit. Where this method fails the matter is set for hearing according to the established procedure, either at the capitol or at some other town convenient to the parties interested. Vested with judicial functions and large executive powers, with authority to institute proceedings, to enforce its mandates and to punish for violation of its orders by fine as for contempt, accountable in a limited sense to only one court in the state, the Corporation Commission is an extraordinary agency of the people of the state. It is responsive to every demand, and by its simple procedure and expeditious method of apply remedies avoids the criticism most often directed at the courts.”—G. Foreman, *Trusts and people get together* (*Independent*, Dec., 11, 1916, p. 454.)

ALSO IN: C. A. Beard, *American government and politics*, pp. 727, 729.

1910.—Removal of capital from Guthrie to Oklahoma City.—In 1910 the capital was changed from Guthrie to Oklahoma City, near the geographical center of the state.

1910-1915.—Grandfather clause declared unconstitutional.—Amendments ratified.—“On August 2 [1910] Oklahoma voted by approximately 40,000 majority to disfranchise practically all of its negroes. This franchise amendment is almost an exact copy of the North Carolina ‘grandfather clause,’ which the Federal Supreme Court has given the sanction of legality. . . . The vital difference between this clause and that which has been adopted in North Carolina is that it creates a permanent condition, whereas in North Carolina, it was adopted as a temporary expedient.”—*Outlook*, Aug. 20, 1910, pp. 853, 854.—While criticism of the grandfather clause was still being heard everywhere, it was declared unconstitutional by the state supreme court; and in 1915, the United States Supreme Court upheld this decision. On March 14, 1910, Oklahoma ratified the Sixteenth Amendment to the Federal Constitution; and on March 5, 1913, the Seventeenth Federal Amendment was ratified.

1913.—Work of commissioner of charities.—Rich oil lands.—Defense of Indian orphans.—The work of the commissioner of charities in Oklahoma is unique, both from the nature of the problems and from the method adopted. Much of the land allotted in severalty to the Indians

of the various tribes has proved to be exceedingly valuable because of the presence of oil, asphalt, coal, or other deposits. "This country of the Osage nation, made so rich in recent years by the bringing in of the Mid-Continent Oil Fields, is said to be the richest nation per capita in the world."—M. Nagle, *Aborigines (Oklahoma Authors' Club, Romance of Oklahoma)*.—There has been a temptation to exploit these Indian lands, and to purchase them at a tenth of their value. In the case of orphans among the Indians, their land has been cared for by guardians, whose motives have often been questionable. But in Oklahoma, as in New Jersey, a single commissioner of charities has done the work usually accomplished by a board, and with notably good results. "The legal department has taken up a vast number of Indian orphan cases. The results have been positively surprising. The legal department has not failed in one single case. The entire amount of money wrested from incompetent or dishonest guardians and returned to orphans has been nearly \$950,000. . . . Besides acting as next friend of orphan children, the general attorney of the commission has been . . . acting as public defender. It seemed to the Legislature that there was as much need of a public defender as of a public prosecutor. . . . On the whole it seems as though the plan of a single headed commission is a success in the State of Oklahoma."—A Johnson, *Commission of charities in Oklahoma (Survey, Apr. 26, 1913, pp. 138-139)*.—See also CHARITIES; PUBLIC DEFENDER.—In 1913 a state liquor law was passed, prohibiting the sale of liquor in regions occupied by Indians.

1913.—Attempt to guarantee bank deposits.—Oklahoma's banking law, as amended in 1913, provides for guarantees that bank deposits will be paid. Each bank is assessed annually to make up a guaranty fund.

1918.—Part played in World War.—The state furnished 80,169 soldiers or 2.13 per cent of the whole force. A national guard camp, Camp Donighan, was located at Fort Sill.

1918-1920.—Equal suffrage.—Miss Robertson in the house.—In 1918 Oklahoma granted full suffrage to women, being the fourteenth state to adopt equal suffrage before the ratification of the federal amendment to that effect August 20, 1920. (See also U. S. A.: 1918 [November].) In November 19, 1920, Miss Alice Robertson of Muskogee was elected to the United States House of Representatives. She was the second woman to sit with that body. January 7, 1918, Oklahoma ratified the Eighteenth Federal Amendment to the Constitution, and February 28, 1920, she ratified the Nineteenth Federal Amendment.

1920.—Status of Indian inhabitants.—Treatment of them. See INDIANS, AMERICAN: 1920: Facts on Oklahoma Indians.

1923.—Oil and gas industry.—In his message to the legislature, Governor Walton reported that the oil and gas industry through the gross production tax was paying all the expenses of state government.

OLD PINAKOTHEK, museum in Munich noted for its valuable collection of northern art. The museum owes its origin to three notable collections: the paintings of Dürer, the Düsseldorf gallery and the Boisserée collection of works of the Lower Rhenish school. In the course of time the museum was considerably enlarged by the purchase of some important works of the Van Eyck school, notable examples of Italian art and by the addition in 1828 of the Wallerstein collection.

OLD POINT COMFORT, town in Virginia about twelve miles north of Norfolk. See VIRGINIA: 1606-1607.

OLD PROVIDENCE, island off the Mosquito Coast of Nicaragua. In the seventeenth century

an attempt was made to found a colony here by "a score of Puritan dignitaries, including the Earl of Warwick, Lord Saye and Sele, and John Pym [who] incorporated into the Westminster Company in 1630 with a combined purpose of erecting a Puritanic haven and gaining profits for the investors. . . . Prosperity came at once in the form of good crops and rich prizes taken at sea. Some of the latter contained cargoes of negro slaves, as was of course expected, who were distributed among the settlers to aid in raising tobacco; and when a certain Samuel Rishworth undertook to spread ideas of liberty among them he was officially admonished that religion had no concern with negro slavery and that his indiscretions must stop. Slaves were imported so rapidly that the outnumbered whites became apprehensive of rebellion. In the hope of promoting the importation of white labor, so greatly preferable from the public point of view, heavy impositions were laid upon the employment of negroes, but with no avail. The apprehension of evils was promptly justified. A number of the blacks escaped to the mountains where they dwelt as maroons; and in 1638 a concerted uprising . . . strained every resource of the government and the white inhabitants. Three years afterward the weakened settlement was captured by a Spanish fleet; and this was the end of the one Puritan colony in the tropics."—U. B. Phillips, *American negro slavery*, pp. 98-99.

Battle of (365 B. C.). See GREECE: B. C. 371-362.

OLYMPIADS, Era of the. See CHRONOLOGY: Era of the Olympiads.

OLYMPIC GAMES.—"The character of a national institution, which the Amphictyonic council affected, but never really acquired, more truly belonged to the public festivals, which, though celebrated within certain districts, were not peculiar to any tribe, but were open and common to all

who could prove their Hellenic blood. The most important of these festivals was that which was solemnized every fifth year on the banks of the Alpheus, in the territory of Elis [see ELIS]; it lasted four days, and, from Olympia, the scene of its celebration, derived the name of the Olympic contest, or games, and the period itself which intervened between its returns was called an olympiad. The origin of this institution is involved in some obscurity, partly by the lapse of time, and partly by the ambition of the Eleans to exaggerate its antiquity and sanctity. . . . Though, however, the legends fabricated or adopted by the Eleans to magnify the antiquity and glory of the games deserve little attention, there can be no doubt that, from very early times, Olympia had been a site hallowed by religion; and it is highly

fare, from the time of the proclamation, for a period sufficient to enable strangers to return home in safety. During this period the territory of Elis itself was of course regarded as inviolable, and no armed force could traverse it without incurring the penalty of sacrilege. . . . It [the festival] was very early frequented by spectators, not only from all parts of Greece itself, but from the Greek colonies in Europe, Africa, and Asia; and this assemblage was not brought together by the mere fortuitous impulse of private interest or curiosity, but was in part composed of deputations which were sent by most cities as to a religious solemnity, and were considered as guests of the Olympian god. The immediate object of the meeting was the exhibition of various trials of strength and skill, which, from time to time,

RESTORATION OF THE ANCIENT CITY OF OLYMPIA

probable that festivals of a nature similar to that which afterwards became permanent had been occasionally celebrated in the sanctuary of Jupiter. . . . Olympia, not so much a town as a precinct occupied by a great number of sacred and public buildings, originally lay in the territory of Pisa, which, for two centuries after the beginning of the olympiads, was never completely subject to Elis, and occasionally appeared as her rival, and excluded her from all share in the presidency of the games. . . . It is probable that the northern Greeks were not at first either consulted or expected to take any share in the festival; and that, though never expressly confined to certain tribes, in the manner of an Amphictyonic congress, it gradually enlarged the sphere of its fame and attraction till it came to embrace the whole nation. The sacred truce was proclaimed by officers sent round by the Eleans: it put a stop to war-

were multiplied so as to include almost every mode of displaying bodily activity. They included races on foot and with horses and chariots; contests in leaping, throwing, wrestling, and boxing; and some in which several of the exercises were combined; but no combats with any kind of weapon. The equestrian contests, particularly that of the four-horsed chariots, were, by their nature, confined to the wealthy; and princes and nobles vied with each other in such demonstrations of their opulence. But the greater part were open to the poorest Greek, and were not on that account the lower in public estimation. . . . In the games described by Homer valuable prizes were proposed, and this practice was once universal; but, after the seventh olympiad, a simple garland, of leaves of the wild olive, was substituted at Olympia, as the only meed of victory. The main spring of emulation was undoubtedly

the celebrity of the festival and the presence of so vast a multitude of spectators, who were soon to spread the fame of the successful athletes to the extremity of the Grecian world. . . . The Altis, as the ground consecrated to the games was called at Olympia, was adorned with numberless statues of the victors, erected, with the permission of the Eleans, by themselves or their families, or at the expense of their fellow citizens. It was also usual to celebrate the joyful event, both at Olympia and at the victor's home, by a triumphal procession, in which his praises were sung, and were commonly associated with the glory of his ancestors and his country. The most eminent poets willingly lent their aid on such occasions, especially to the rich and great. And thus it happened that sports, not essentially different from those of our village greens, gave birth to masterpieces of sculpture, and called forth the sublimest strains of the lyric muse. . . . Viewed merely as a spectacle designed for public amusement, and indicating the taste of the people, the Olympic games might justly claim to be ranked far above all similar exhibitions of other nations. It could only be for the sake of a contrast, by which their general purity, innocence, and humanity would be placed in the strongest light, that they could be compared with the bloody sports of a Roman or a Spanish amphitheatre, and the tournaments of our chivalrous ancestors, examined by their side, would appear little better than barbarous shows."—G. Thirlwall, *History of Greece*, ch. 10.

Revival.—In 1806 the first modern Olympic games were revived at Athens. They were held at Paris in 1900; at St. Louis in 1904; at London in 1908; at Stockholm in 1912; and at Antwerp in 1920. See ATHENS: 1806; ST. LOUIS: 1904; BELGIUM: 1920.

OLYMPIUM AT ATHENS.—The building of a great temple to Jupiter Olympius was begun at Athens by Peisistratus as early as 530 B. C. Republican Athens refused to carry on a work which would be associated with the hateful memory of the tyrant, and it stood untouched until 174 B. C., when Antiochus Epiphanes employed a Roman architect to proceed with it. He, in turn, left it still unfinished, to be afterwards resumed by Augustus, and completed at last by Hadrian, 650 years after the foundations were laid.—Based on W. M. Leake, *Topography of Athens*, v. 1, *appendix* 10.

OLYMPUS.—The name Olympus was given by the Greeks to a number of mountains and mountain ranges; but the one Olympus which impressed itself most upon their imaginations, and which seemed to be the home of their gods, was the lofty height that terminates the Cambunian range of mountains at the east and forms part of the boundary between Thessaly and Macedonia. Its elevation is nearly 10,000 feet above the level of the sea and all travelers have seemed to be affected by the peculiar grandeur of its aspect. Other mountains called Olympus were in Elis, near Olympia, where the great games were celebrated, and in Laconia, near Sellasia. There was also an Olympus in the island of Cyprus, and two in Asia Minor, one in Lycia, and a range in Mysia, separating Bithynia from Galatia and Phrygia. See BALKAN STATES: Map; THESSALY.

OLYNTHUS, ancient city in Chalcidice. See GREECE: Map of ancient Greece.

OMAGUAS, tribe of South American Indians. See EL DORADO.

OMAHA, largest city in Nebraska, on the west bank of the Missouri river. In 1920 the population numbered 191,601. It is the industrial center of the state. Its name comes from the Omaha ("Upper Stream") Indians, aboriginal inhabitants of the district. It is the seat of an important Jesuit university, military headquarters of the department of the Missouri, and one of the principal grain markets in the United States.

1804-1846.—**Early history.**—In 1804 Lewis and Clark held a council here with the Indians. A fur trading station was established in 1825. Mormons settled at Winter Quarters, six miles north of the present Omaha, in 1846, but had to abandon the place after two years because it lay within Indian territory.

1898.—**Trans-Mississippi exposition.**—A highly successful Trans-Mississippi exposition was opened on June 1, and closed on the last day of October, having been attended by 2,600,000 people. Buildings and grounds were prepared with beautiful effect, at a cost of \$2,500,000.

1911.—**Commission government adopted.** See NEBRASKA: 1911-1917.

1913.—**Destructive tornado.**—A tornado which destroyed numerous lives and much property in Omaha on the night of March 23 was one of the causes of the great Ohio valley floods of March and April. See OHIO: 1913.

1915-1922.—**Growth of city.**—In 1915 Omaha and South Omaha were consolidated. Though only thirty-fourth in population, Omaha was at the end of 1922, the seventeenth business city of the United States.

OMAHAS, tribe of North American Indians. See INDIANS, AMERICAN: Cultural areas in North America: Plains area; PAWNEE FAMILY; SIOUAN FAMILY.

OMAN, kingdom on the southeastern coast of Arabia. See ARABIA: Map; 1919: King of Hejaz, etc.; Political division.

OMAR (c. 581-644), Mohammedan caliph, 634-644. Conquered Syria and Palestine. See CALIPHATE: 632-639; 640-646; 644, 661.

Omar II (d. 720), Mohammedan caliph, 717-720.

OMAR KHAYYAM (d. 1123), Persian poet, scientist and philosopher. Leading mathematician of his day, and great astronomer; one of his principal achievements was the reformation of the calendar. See PERSIAN LITERATURE.

OMDURMAN, town in the Sudan on the Nile, two miles northwest of Khartoum. It was the capital of the Mahdi from 1884 until his final defeat in 1885, and of the Khalifa until his overthrow by the English in 1898. The population in 1922 was about 78,000.—See also EGYPT: 1885-1896; 1897-1898.

OMER, or Gomer, ancient Jewish grain measure. See EPHAH.

OMICHUND (d. 1767), Hindu leader of a conspiracy against Surajud Dowlah. See INDIA: 1757.

OMLADINA, Society of. See SERBIA: 1817-1875.

OMMAYYADS, Ommiads, or Ummayyads, dynasty of the Mohammedan caliphate founded by Moawiyah, governor of Syria. It lasted from 651 to 750. See CALIPHATE: 661; 680; 715-750; 756-1031; BAGDAD: 762-763; ABD-AR-RAHMAN; ABBASIDS; MEDICAL SCIENCE: Ancient: 7th-11th centuries.

OMNIBUS BILL. See U.S.A.: 1850 (April-September).

OMORTAG (fl. 810-851), Bulgarian ruler. See BULGARIA: 8th-9th centuries.

OMSK, capital of the province of Akmolinsk, on the Irtysh, western Siberia, from 1839 to 1882, and thereafter of the Steppes. After the construction of the Trans-Siberian railway Omsk became an important commercial center. In 1900 the population numbered 53,050. The town was the seat of Admiral Kolchak's anti-Bolshevik government until the Bolsheviks captured it on December 13, 1919. See ASIA: Map; RUSSIA: 1918-1920; 1919.

ON.—"A solitary obelisk of red granite, set up at least 4,000 years ago, alone marks the site of On, also called the City of the Sun, in Hebrew Beth-shemesh, in Greek Heliopolis. Nothing else can be seen of the splendid shrine and the renowned university which were the former glories of the place. . . . The university to which the wise men of Greece resorted perished when a new centre of knowledge was founded in the Greek city of Alexandria. . . . It was during the temporary independence of the country under native kings, after the first Persian rule, that Plato the philosopher and Eudoxus the mathematician studied at Heliopolis. . . . The civil name of the town was An, the Hebrew On, the sacred name Pe-Ra, the 'Abode of the Sun.'"—R. S. Poole, *Cities of Egypt*, ch. 9.—The site of On, or Heliopolis, is near Cairo.

ONAS, South American Indian tribe. See PATAGONIANS AND FUEGIANS.

ONATE, Juan de (c. 1555-c. 1615), Spanish explorer. See NEW MEXICO: 1595-1598.

ONCKEN, Johann Gerhard (1800-1884), German Baptist leader. See BAPTISTS: Development in Europe, etc.

ONEIDA COMMUNITY, communistic settlement at Oneida, New York, founded in 1847 by John Humphrey Noyes. See SOCIALISM: 1848.

ONEIDAS, North American Indian tribe. See IROQUOIS CONFEDERACY.

O'NEILL, family of Ulster occupying Armagh, Tyrone and Londonderry. See IRELAND: 1559-1603; 1607-1611; ULSTER: 1540-1567.

O'Neill, Brian, prince of Tyrone. See ULSTER: 1199-1260.

O'Neill, Hugh (c. 1540-1616), earl of Tyrone. See IRELAND: 1559-1603; ULSTER: 1585-1608.

O'Neill, Owen Roe (c. 1590-1649), leader of the O'Neills in the Irish rebellion of 1641. See IRELAND: 1641.

O'Neill, Sir Phelim (c. 1603-1653), Irish leader in the rebellion against the Protestants in 1641. See IRELAND: 1641.

O'Neill, Shane (c. 1530-1567), leader of the O'Neills against the English. See IRELAND: 1559-1603.

ONIAGARA, early name for Niagara. See NIAGARA: Name and its original applications.

ONONDAGAS, North American Indian tribe. See IROQUOIS CONFEDERACY.

ONTARIO: Geographic description.—Area.—Population.—Resources.—Ontario, the central province of the Dominion of Canada is bounded "on the east by James Bay and the Province of Quebec; on the west by the Province of Manitoba; on the south by the River St. Lawrence, the Great Lakes, and the State of Minnesota; and on the north by Hudson Bay. [See CANADA: Map.] The Province has an estimated area of 407,262 square miles. Its greatest extent from north to south is 1,075 miles, and from east to west 1,000 miles. . . . Larger than the largest of the prairie provinces by 155,430 square miles, it is fully three and a third times the size of the British Isles, and is almost twice the size . . . [of France].

Ontario is divided into two great sections: Southern Ontario, the older settled portion, with an area of 77,000 square miles; and Northern Ontario, 330,000 square miles. . . . Southern Ontario begins about forty-eight miles west of Montreal. . . . Northern Ontario lies north of a line commencing at Mattawa, 206 miles farther west, and running westward and northward along the north shores of Georgian Bay, the North Channel and Lake Superior, and along the United States boundary to Manitoba. . . . [The population in 1921 was 2,933,662]. The Province of Ontario, though great in forests, minerals, water powers and manufactures, is chiefly agricultural. [See CANADA: Agriculture; U.S.A.: Economic map.] . . . The mineral resources . . . cover practically the entire list of metallics and non-metallics with the exception of coal and tin . . . The Sudbury camp [on Lake Superior] is the world's chief source of nickel. . . . The prosperity of the Province until twenty years ago [written in 1920] depended upon transportation by the Great Lakes, rivers and canals, upon the development of the agricultural and lumber industries, and upon Pennsylvania coal. Since that time the assets have been added to by the Sudbury, Cobalt and Porcupine mines. Then came the immense water-power resources of Niagara, resulting largely from the rapid progress of the art of high voltage transmission. . . . Ontario is the chief manufacturing Province of the Dominion. It has about half the factories of all Canada, and produces almost every kind of manufactured article. All the western towns and cities, with nearly all the villages, and all the eastern cities and large towns are engaged in some kind of manufacturing."—W. S. Wallace, *Province of Ontario* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 17, pp. 1, 17, 127, 135, 167).

1756.—Fort captured by Montcalm. See CANADA: 1756-1757.

1783-1841.—Early settlement by Loyalists.—Hardships of pioneers.—War of 1812.—Increase in population.—The first settlement of Ontario was made by Loyalists who migrated from the United States after the War of Independence. "The majority of the loyalists and other settlers in Upper Canada came from the colony of New York, or from the adjoining colonies of Pennsylvania, New Jersey, and New England . . . After the arrival of the loyalists in the western settlements, a number of the officers who accompanied them were given commissions as magistrates. . . . In 1785 an ordinance was passed by the governor and council of the Province of Quebec 'for granting a limited civil power and jurisdiction to His Majesty's justices of the peace in the remote parts of this province.' . . . In response to the petitions [in 1786] of the magistrates and others representing the western territory, an ordinance, of April, 1787 . . . provided for the creation of new administrative districts in the western country and for the appointment of special officers with a combination of powers. . . . Originally this province was covered with forest. . . . It was into this wooded wilderness that the United Empire Loyalists, numbering in all approximately ten thousand people, came in the latter part of the eighteenth century. They were a people of varied origins—Highland Scottish, German, Dutch, Irish Palatine, French Huguenot, English. Most of them had lived on farms in New York State, and therefore brought with them some knowledge and experience that stood them in good stead in their arduous work of making new homes. . . . In the year 1783

prospectors were sent into Western Quebec, the region lying west of the Ottawa River, and selections were made for them in four districts—along the St. Lawrence, opposite Fort Oswegatchie [Prescott]; around the Bay of Quinté, above Fort Cataragui [Kingston]; in the Niagara peninsula, opposite Fort Niagara; and in the southwestern section, within reach of Fort Detroit. . . . It is difficult at the present time to realize the hardships and appreciate the conditions under which these United Empire Loyalist settlers began life in the forest of 1784. . . . In each of the four districts the government erected mills to grind the grain for the settlers. . . . Waterpower mills were located near Kingston, at Gananoque, at Napanee, and on the Niagara River. . . . For the first thirty years of the new settlements the chief concern of the people was the clearing of their land, the increasing of their field crops, and the improving of their homes and furnishings. It was slow going, and had it not been for government assistance, progress, and even maintenance of life, would have been impossible. That was the heroic age of Upper Canada, the period of foundation-laying in the province. Farming was the main occupation, and men, women, and children shared the burdens in the forest, in the field, and in the home. Roads were few and poorly built, except the three great military roads planned by Lieutenant-Governor Simcoe running east, west, and north from the town of York. Social intercourse was of a limited nature. Here and there a school was formed when a competent teacher could be secured. Church services were held once a month, on which occasions the missionary preacher rode into the district on horseback.”—A. Shortt and A. G. Doughty, *Canada and its provinces*, v. 18, pp. 405, 408-409, 552-554.—“On July 24, 1788, it was proclaimed by Lord Dorchester, by the advice and consent of the council, that that part of Quebec west of the eastern boundary of the township of Lancaster be divided into four districts called Lunenburg, Mecklenburg, Nassau, and Hesse. . . . Land boards and courts were organized in each district. The land boards proceeded to grant lands to loyalists, who continued to enter the province until nearly the end of the century. Those who came in later were called ‘late loyalists’ and were subjected to some annoyance unless they came from some of the eastern provinces. By instructions of Lord Dorchester on June 2, 1787, these boards were authorized to grant two hundred acres of land to all who had improved their former grants and two hundred acres to all new applicants who could establish their claims as loyalists. . . . Many names continued to be added to the United Empire Loyalist list even as late as 1824. . . . Many of the Mohawks and some others of the Six Nations were living at Niagara at the close of the war and, like the loyalists, were not allowed to go back to their old homes on the Mohawk River in New York State. On Brant’s application General Haldimand, on March 23, 1784, gave directions for the purchase of lands from the Missisaugas of the tract between the three lakes, Ontario, Erie, and Huron. Out of his purchase a tract six miles wide on each side of the Ouse or Grand River from its mouth to its source was to be reserved for the Mohawks and such other of the Six Nations as wished to join them, the rest of the purchase to be reserved for loyalists. This grant was authorized by General Haldimand on October 25, 1784. . . . When the Province of Quebec was divided by the Constitution Act of 1791 into Upper Canada and Lower Canada many persons continued to come into the upper province

from the United States [from as far south as the Carolinas]. . . . Only persons of good character and undoubted loyalty were given grants after taking the oath of allegiance. . . . [The first lieutenant governor, John Graves Simcoe, released restrictions and made the oath of allegiance the only requirement for a grant of land]. . . . In 1793 Simcoe had to deviate somewhat from his original policy of granting only two hundred acres to any one person. To encourage the chief men of the province to make an effort to bring in settlers, entire townships were granted to individuals or associations. . . . In 1805 the Queen’s Rangers was disbanded and all its members settled in Upper Canada. . . . Many of the settlers on Yonge Street [which runs through Toronto to Lake Simcoe] came from the Northern States and held in contempt the officers of the province, both civil and military. They brought in with them their own school-teachers, and in their schools used American books that ridiculed British institutions and lauded the institutions of the United States. Indeed, this state of affairs existed in some parts of the province until the middle of the nineteenth century. Many settlers avowing republican principles settled along Lake Erie west of Long Point, as well as in the district about Newcastle along Lake Ontario. . . . Itinerant Methodist preachers, who were soon active among them, propagated political doctrines intended to show the superiority of the republican form of government over the monarchical form. . . . Hull’s invasion of Upper Canada from Detroit [in 1812] was the signal for an uprising in the London district of a large party under Simon Watson, a surveyor, which raided the country without opposition as far as the township of Westminster. The capture of Detroit and the victory of Queenston Heights put a stop to active demonstration in favour of the United States. Hundreds . . . left the country, and others who were less pronounced in their attitude deemed it wise to remain neutral and respectful to the government. But this hatred of British principles took a long time to die out. With scarcely an exception these same districts—about London and the northern part of the county of York—were the recruiting grounds of the participants in the rebellion under Mackenzie in 1837.”—W. S. Wallace, *Province of Ontario* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 17, pp. 39, 41, 42-45).—“Progress was slow [in the early days] but after thirty years fair hope of an agricultural country was beginning to dawn upon the people when the War of 1812 broke out. By this time the population of the province had increased to about eighty thousand. . . . For three years the agricultural growth received a severe check. . . . The close of the war saw a province that had been checked at a time of vigorous growth now more or less impoverished, and, in some sections, devastated. This was, however, but the gloomy outlook before a period of rapid expansion. In 1816, on the close of the Napoleonic wars in Europe large numbers of troops were disbanded, and for these new homes and new occupations had to be found. Then began the first emigration from Britain overseas to Upper Canada. . . . Then began the settlements along the north shore of Lake Ontario and of Lake Erie, and the population moved forward steadily. In 1816 the total population of the province was approximately 100,000; by 1826, according to returns made to the government, it had increased to 166,000; . . . and in 1841 it was 456,000. The great majority of these people, of course, lived upon the land, the towns being comparatively small, and the villages

were composed largely of people engaged in agricultural work. . . . [In 1830] there were only five towns of 1,000 or over; namely, Kingston, 3,587; York (Toronto), 2,860; London (including the township), 2,415; Hamilton (including the township), 2,013; and Brockville, 1,130. The returns to the government show that of the 4,018,385 acres occupied 773,727 were under cultivation."—A. Shortt and A. G. Doughty, *Canada and its provinces*, v. 18, pp. 554-556.

1846-1867.—Growth of population.—Crash of 1856.—Reciprocity with United States.—The period from 1846 to 1867 was one of rapid growth in population. "The free-grant land policy of the government was a great attraction for tens of thousands of people in the British Isles. . . . In the twenty years referred to the population more than doubled, and the improved lands of the province increased fourfold. . . . The Crimean War, in 1854-56, gave an important though temporary boom to Canadian farm products."—A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 18, pp. 565, 569.—"In 1857 there was a great commercial crash in Upper Canada. There had been railway inflation, followed by over-speculation in various directions. Portions of many farms had been converted into village plots, and surveyors and lithographers lived in clover. In some sections the speculation had been productive of wealth; villages and even towns had been successfully 'laid out,' and sold at high prices. . . . All sorts of schemes were set on foot. Some were practicable; some were doubtful; the great bulk were chimerical."—C. Clarke, *Sixty years in upper Canada*, pp. 99-100.—"Reciprocity with the United States from 1855 to 1866 offered a profitable market that had been closed for many years. Then came the close of the great civil war in the United States, and the opening of the cheap, fertile prairie lands of the Middle West to the hundreds of thousands of farmers set free from military service. This westward movement was joined by many farmers from Ontario; there was a disastrous competition in products, and an era of agricultural depression set in just before Confederation."—A. Shortt and A. G. Doughty, *Canada and its provinces*, v. 18, pp. 565, 569-570.

1867.—Government.—Organization of provincial government.—"The Province of Ontario was created by the British North American Act and came into existence on July 1, 1867. [See CANADA: 1867.] The organization of the government of the province, however, was not completed in a night. It was not until July 8, 1867, that the representative of the crown was sworn in under the title of lieutenant-governor; it was not until July 20 that the cabinet of ministers was completed; and it was only on December 27 that the first legislative assembly of Ontario met at Toronto in the old Parliament buildings."—W. S. Wallace, *Province of Ontario* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 17, pp. 103-104).—"The gentleman upon whom Lieutenant-Governor Stisted called to form an administration was John Sandfield Macdonald. In doing this Stisted was of course acting upon instructions from Ottawa. . . . [Sir John A. Macdonald saw that] Sandfield Macdonald was the best man to be placed in charge of the upper province. . . . An opponent of Confederation who had resolved to make the best of the new order, he might serve

to conciliate that large element which had been strongly anti-Confederationist; and a Roman Catholic, he would be able to carry with him the Roman Catholic vote, for which George Brown in the *Globe* had been angling openly. . . . Thus Ontario would be assured a strong administration, ready to work in harmony with the government at Ottawa in setting the Confederation scheme a-working. . . . It was the desire of both Sir John A. Macdonald and John Sandfield Macdonald to establish the new administration of a no-party basis. . . . A coalition had carried Confederation; and it was advisable to entrust a coalition with the task of putting Confederation into effect in Ontario. . . . It was on these lines that Sandfield Macdonald constructed his administration. . . . The first legislative assembly of Ontario met on December 27, 1867, in the old Parliament Buildings in Toronto. . . . Hardly had the house got down to business when the prime minister began to have trouble with his supporters. . . . It was in the third session, however, which began on November 3, 1869, that the opposition won its greatest tactical success. . . . [The attack] . . . was concentrated largely upon . . . the way in which the government was administering the public moneys. The charge was not one of extravagance. . . . Sandfield Macdonald was admitted even by his enemies to be an exemplar of economy: [Edward Blake, the liberal leader], indeed, on more than one occasion had criticized him for his parsimony. What proved the undoing of the Sandfield Macdonald government was its surplus. Partly as the result of rigid economy, but still more because of the excellent terms awarded Ontario in the financial arbitration between the provinces and the Dominion after the Confederation, it very soon became clear that Ontario could have a surplus of several millions [\$4,000,000]. The greater part of this surplus was invested in the debentures and other public securities of the Dominion of Canada; but it proved too great a temptation not to use a little of it in the interests of party patronage. . . . To regard Sandfield Macdonald as personally corrupt would be a grave mistake; he had merely the idea of nearly every other practical politician of his day regarding the distribution of patronage. . . . [The premier induced the House to vote \$1,500,000 in aid of railways, the amount to be distributed at the discretion of the cabinet. This proved to be his undoing. He was defeated by one vote on an amendment to a government measure and was compelled to resign.] The government had accepted the amendment of the opposition as a general motion of no-confidence. . . . [and the next day, December 10, 1871 the ministry resigned]. . . . Sandfield Macdonald deserved much of Ontario, and received little. It was he who did the ditch-work for the foundations of the Confederation scheme in the province; and he administered the affairs of the province with great honesty and economy for four years and a half, under circumstances where neither honesty nor economy was easy. [He was succeeded by the leader of the opposition, Edward Blake who, however, had a seat in the Dominion House also. But when a law forbidding dual representations was passed by the Dominion, he elected to stay in the Dominion parliament. He was followed, in 1872, by Oliver Mowat as premier of Ontario.]"—W. S. Wallace, *Province of Ontario* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 17, pp. 104-106-108, 116-118, 126-128).

1872-1896.—Mowat government.—Disputes with Dominion.—Protestant protective associa-

tion.—Prohibition question.—Legislation.—“For many years before Confederation, and after its creation, electoral corruption . . . had been employed at various elections. . . . The evil had become so serious and threatening that every honest man felt the necessity for some effective remedy. It was the fashion to denounce one or the other of the great parties as the more blamable, but public inquiry . . . proved that . . . each side was sometimes guilty, and that some radical step was necessary to a wide and thorough suppression of the evil. . . . [In 1873 Charles Clarke prepared a ballot bill which in 1874 became law.] This system of voting was afterwards extended to school and municipal elections, and to Separate Schools when desired by the trustees.”—C. Clarke, *Sixty years in upper Canada*, pp. 103, 108.—“Since Confederation the control of liquor licences in the province had been vested in the municipalities, and it must be confessed that the municipal councils had been scandalously slack, for the most part, in their administration of the law. [A bill introduced by Adam Crooks] . . . proposed, therefore, to take the control of licences away from the municipalities, and place it in the hands of boards of commissioners appointed by the government. . . . [This bill, known as the Crooks’ Act, was passed in 1876.] The other notable bill of the session was the Education Bill. . . . A bill was introduced abolishing the Council of Public Instruction, and substituting for it a new department of Education, with a responsible minister of Education at its head. . . . The Education Bill, like the ‘Crooks Act,’ placed in the hands of the government dangerous powers in regard to patronage. . . . Mowat gave his word that, under the new régime, political considerations would not be allowed to enter into educational appointments; and it is pleasing to think that to a large extent this promise was kept. . . . Indeed, it might almost be said that Mowat regarded the interests of the province as paramount over those of the Dominion. . . . It is not within the scope of this article to discuss in detail the constitutional struggles over the interpretation of the British North America Act which took place between Mowat and the government of Sir John A. Macdonald. But something must be said about the struggle in its broad outlines. The first conflict which arose between Ontario and the Dominion was over the act respecting Escheats and Forfeitures, passed by the Ontario legislature in the session of 1874. . . . The second conflict took place over the ‘Crooks Act’ of 1876. . . . Since that time there has been no question of the right of the provinces to regulate the sale of liquor within their confines. . . . But it was over another measure, a government bill of the session of 1881, entitled a Bill to protect the Public Interest in Rivers and Streams, that the battle-royal took place. . . . Mowat achieved another victory over the champions of federal rights. . . . Mention must be made, finally, of the dispute over the boundary question. . . . The decision arrived at by the arbitrators in 1878 was a complete corroboration of the claims of Ontario to the vast hinterland of the province north and west of Lake Superior. The effect of the award was to make Ontario twice as large again as the Dominion government contended it was. . . . Thus the dispute ended all along the line in a victory for Mowat, who had himself argued some of the cases before the Judicial Committee of the Privy Council. [See MANITOBA: 1871-1012.] [W. R. Meredith, the Conservative leader] and his followers may have been ill-advised in defending, as they did,

the course of the Dominion government regarding the boundary dispute. . . . Yet he did not seem to see that by his belligerent championship of provincial rights, by his magnification of the province at the expense of the Dominion, he was doing what in his own lay to wreck the work of Confederation. . . . [From] 1883 the Mowat government . . . spared no pains to confirm the Roman Catholics in their attachment to the liberal party. . . . That some sort of understanding existed between some members of Mowat’s cabinet and some high officials of the Roman Catholic Church, one is tempted to believe. . . . In 1894 the agitation against the Roman Catholics was taken up by what was known as the Protestant Protective Association. . . . It had come into Canada from the United States, where it had first arisen; and it had no connection with the official conservative party. Yet in the public mind the two were, unfortunately, not entirely dissociated; and the opposition leader had to bear the blame, doubtless, of some of the ‘P. P. A.’s lucubrations. . . . The question of prohibition, has been the rock on which more than one administration in Ontario has nearly come to grief. Sandfield Macdonald and Edward Blake escaped it, but from the beginning of Sir Oliver Mowat’s régime . . . it was a burning question in provincial politics. . . . Sir Oliver Mowat was at first sceptical regarding the power of the province to prohibit the sale of liquor, but as an earnest of his goodwill he introduced the Licence Act and its amendments. . . . [In the summer of 1896 Laurier asked Mowat to undertake the administration of justice in the new cabinet. Sir Oliver accepted the offer and thus the way was cleared in the provincial government for other men.] Sir Oliver Mowat was prime minister of Ontario for nearly twenty-five years, a longer period of office than has fallen to the lot of any other first minister in the history of constitutional government in the British Empire. During this time he administered the affairs of the province with great honesty and efficiency, so that Ontario presented the spectacle of one of the best-governed territories in the world; and he placed on the statute-book a mass of sound and useful legislation which was a model of conservative reform. By a series of gradual extensions of the franchise he introduced manhood suffrage; he reformed the electoral laws and introduced the use of the ballot; unified the courts of law and equity; he cheapened and simplified legal proceedings; he carried out repeatedly the codification of the statute law, and he consolidated the municipal law; he curbed and regulated the liquor traffic; he bettered the legal status of married women; he went far toward protecting the rights of wage-earners; he introduced the principle of the graded succession duty. . . . That he made mistakes, and serious mistakes, it would be folly to deny; but the rarity of this occurrence is well illustrated in the difficulty the opposition had in formulating election platforms.”—W. S. Wallace, *Province of Ontario* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 17, pp. 140-151, 160-164, 175-177).

1896-1905.—Hardy administration.—Ross administration.—Defeat of liberal government.—“With the disappearance of Sir Oliver Mowat and G. F. Marter in 1896 the reins passed into other hands. A. S. Hardy, the commissioner of Crown Lands, was called upon by the lieutenant-governor, Sir George Kirkpatrick, to form an administration; and the conservatives chose as the leader of the opposition James (afterwards Sir James) Pliny Whitney. The administration that

Hardy formed was merely a reorganization of the cabinet of Sir Oliver Mowat. . . . As prime minister Hardy scarcely had a chance to show his hand. . . . [In 1899 he was forced by ill-health to resign and George W. Ross] was called upon to form an administration. [The Ross government is remembered chiefly for a measure of municipal reform and for opening up New Ontario by the Temiskaming and Northern Ontario railway. The government was defeated at the general election of 1905.] The causes of the downfall of the government were in the main two: first, Ross's policy in regard to prohibition [see CANADA: 1898 (September)]; and second, the charges of corruption which were levelled against his administration. . . . He introduced a prohibition bill which required a referendum to the people before it became law, and which required . . . a two-thirds majority, to carry it. The referendum took place in December 1902; and although a large majority was polled in favour of the bill, the bill failed to reach the required two-thirds majority by only a few hundred votes. . . . In 1905 Ross decided to appeal to the country with the hope of being returned with a working majority. . . . [But] most people in the province felt that 'thirty-two years in the saddle' was enough for any political party, . . . and the result of the elections was a landslide in favour of the conservative party. Five of the ministers . . . [were defeated, and James P. Whitney, the conservative leader] was carried to power with a majority in the house of forty. Never in the history of the province had there been such a startling upheaval. The administration which Whitney formed in 1905 did not seem at the time to be a conspicuously strong one. . . . [Its undeniable success] was largely due to the personality of Sir James Whitney himself."—W. S. Wallace, *Province of Ontario* (A. Shortt and A. G. Doughty, ed., *Canada and its provinces*, v. 17, pp. 170-185).—During the period of the Ross administration Ontario came into possession of great wealth by the accidental discovery in 1903 of an immense silver field on the line of the Temiskaming and Northern Ontario Railway. The deposit of silver is accompanied by cobalt, and as the province owns the public lands within her borders, she is the recipient of a large income from mining royalties. Gold was found a few years later at Porcupine and other points.

1906-1914.—Whitney administration.—Educational developments.—Hydro-electric commission.—The new administration set to work with all the vigor of a party which had been long out of office. Improvements were made in the educational system,—new normal schools established, rural continuation schools were introduced, industrial and elementary technical training were made part of the public school system, half the succession duties was assigned for the support of the Provincial University at Toronto. (See EDUCATION: Modern developments: 20th century: General education: Canada.) "In 1906 the Hydro-Electric Commission was appointed, with the Honourable Adam Beck as its first chairman. . . . No country in the world has such water-powers

as Canada, and the discovery of this 'white coal' has begun to change the whole face of Ontario. From Niagara and from other falls various companies began to generate power, but in 1906 a number of the municipalities of Ontario combined to provide power for themselves, in order to save the profits paid to the companies. With the help of the Government their combination grew into the Hydro-Electric Power Commission, which represents most of the municipalities of Western Ontario, is gradually being joined by more and more in the centre and east, and now supplies most of the power of this type used in the province. . . . In the same year (1906) a Railway and Municipal Board was appointed, to decide questions at issue between railways, especially electric railways, and the municipalities."—W. L. Grant, *Ontario high school history of Canada*, p. 318.—The Whitney administration lasted until the death of the leader in 1914.

1914-1923.—Hearst administration.—Farmer-Labor government.—"In the provincial elections in Ontario in June-July 1914, the Conservatives were again successful, in spite of vigorous attacks upon their administration of hydro-electric power, their restrictions upon bilingual schools, and their attitude toward the liquor traffic. Later in the year Sir James Whitney died. . . . He was succeeded by . . . William Hearst, who had been Minister of Mines in his Cabinet. . . . In 1910, at a general election, . . . [the Conservative government] was swept from power. At this election, in addition to the two historic parties, members were elected by the United Farmers of Ontario . . . and by a Labour Group in the cities, which advocated further legislation in favour of the working-man. There were thus four parties; and a Farmer-Labour Coalition, under the leadership of Mr. E. C. Drury, a prominent farmer, came into power. . . . In 1914, Ontario passed a very important Workmen's Compensation Act. . . . Scales of compensation were laid down, but large powers of inspection and of assessing damages were given to a Board of Commissioners. . . . The general feeling was that the Act was wise, and a just recognition by the province of the great principle that the working-man is not a tool, but a citizen, whose just rights it is the business of the state to safeguard. . . . In Ontario the age limit for compulsory education was raised by The Adolescent School Attendance Act, the operation of the Act beginning in September, 1921."—W. L. Grant, *Ontario high school history of Canada*, pp. 302-304.—The most difficult of the problems with which the government was confronted, was, perhaps, "that of administering the Temperance Act. The next most troublesome problem was that of dealing with the Hydro-Electric Commission . . . [which] had extended itself gradually under succeeding acts, until it controlled all the water powers for the Province of Ontario. [Large sums were being asked for to extend the Hydro-Electric Commission's railways. Opposition to this policy developed, and Drury appointed what was known as the Hydro-Commission to investigate the Hydro-Electric Commission.] But the efforts of the Premier to solve this problem only brought upon him large ex-

penditures and the steady opposition of large interests. . . . Great road contracts were let, and the rural politicians were not long in recognizing their opportunity. The outcome of the policy was that though enormous amounts of money were spent, relatively few roads were completed. [Salaries of the teachers in the province were increased by fifty per cent. This was a much needed advance which nevertheless still further raised the already high expenditure from \$22,000,000 in 1910 to \$37,000,000 in 1922, and caused great dissatisfaction. The premier's difficulties were increased moreover by the opposition of the leader of the United Farmers of Ontario to the government policy of acting with the support of the Liberal party. At the general election of 1923 the Agrarian party was defeated and the Conservatives went into power with a sweeping majority.]—P. H. Bryce, *Agrarian movement in Ontario* (*New York Times Current History*, Sept., 1923).

OPHIR, Land of.—The geographical situation of the land called Ophir in the Bible has been the subject of much controversy. Many recent historians accept, as "conclusively demonstrated," the opinion reached by Lassen in his "Indische Alterthumskunde," that the true Ophir of antiquity was the country of Abhira, near the mouths of the Indus, not far from the present province of Guzerat. But some who accept Abhira as being the original Ophir conjecture that the name was extended in use to southern Arabia, where the products of the Indian Ophir were marketed.—See

OPIUM PROBLEM: 1729-1858.—Origin of opium smoking.—Introduction in China.—Chinese anti-opium edicts.—"The poppy has been known in China for twelve centuries, and its medicinal use for nine centuries. . . . It was not until the middle of the seventeenth century that the practice of mixing opium with tobacco for smoking purposes was introduced into China. This habit was indulged in by the Dutch in Java, and by them taken to Formosa, whence it spread to Amoy and the mainland generally. There is no record to show when opium was first smoked by itself, but it is thought to have originated about the end of the eighteenth century. Foreign opium was first introduced by the Portuguese from Goa at the beginning of the eighteenth century. In 1720, when the foreign import was 200 chests the Emperor Yung Ching issued the first anti-opium edict, enacting severe penalties on the sale of opium and the opening of smoking divans. The importation however continued to increase, and by 1790 it amounted to 4000 chests annually. In 1796 opium smoking was again prohibited, and in 1800 the importation of foreign opium was again declared illegal. Opium was now contraband, but the fact had no effect on the quantity introduced into the country, which rose to 5000 chests in 1820; 16,877 in 1830; 20,619 chests in 1838, and 70,000 chests in 1858."—*China Year Book*, 1921-1922, p. 780.

1840.—Friction between Great Britain and China.—So-called "opium war."—In 1834 the "British government . . . sent out a special representative who was instructed to obtain further trading concessions from China. He was to open negotiations directly with the Chinese government, and not with the group of merchants through which the government had heretofore dealt with foreigners. The English insisted, in other words, that the Chinese open their country to foreign nations on the basis of equality. This demand led to friction, for the Chinese continued to regard the English as barbarians. Under the circumstances there could be but one outcome, war. Unfortunately for the good name of Great Britain, the question came to an issue over the opium question. For some years one of the principal British exports to China had been opium, chiefly opium raised in India. The traffic had been frowned upon by the Chinese government, partly because it led to the export of silver and partly because of the demoralizing moral and physical effects of the drug. The Chinese repeatedly declared the traffic illegal, and occasionally made half-hearted attempts to stamp it out. The venality of the local authorities, however, had thwarted attempts at restriction and had even permitted an increase. Finally, in 1839 the imperial court resolved on a determined effort and sent to Canton a special commissioner [named Lin.] to put an end to the traffic. This commissioner . . . forced the surrender of all the drug then held in stock by the foreign merchants and destroyed it. This and some other acts, in which the British were treated with arrogance and with what was from their standpoint rank injustice, led to increased friction and finally to open hostilities (1840-42). [See also CHINA: 1830-1842.] From the British standpoint the war was primarily to secure just treatment of their subjects by the Chinese and to open China to trade on terms more

nearly fair to foreigners. To the Chinese and to most of the world, however, it seemed to be designed primarily to force opium upon the Chinese. Hostilities were confined almost exclusively to naval attacks on the cities of the southern coast. The British were uniformly successful and finally, after several abortive attempts at negotiations, concluded a treaty, known as the Treaty of Nanking, which brought to an end the days of restricted trade. Canton, Amoy, Foochow, Ningpo, and Shanghai were opened to foreign trade; the island of Hong Kong was ceded to Great Britain; a policy of fair tariffs at treaty ports replaced that of arbitrary official exactions; an indemnity of twenty-one million dollars was exacted, of which six millions went to pay for the opium destroyed; and official correspondence between the two nations was placed on a basis of equality. . . . This was China's first foreign war."—K. S. Latourette, *Development of China*, pp. 144-146.—"The so-called 'opium war' of 1840 . . . attracted much attention in the United States, as the interests of its merchants prospectively involved, was at that time very considerable. Among those of its citizens who especially considered the subject was ex-President John Quincy Adams, who gave to the American public, in December, 1841, the results of his investigations and study, in the form of a lecture before the Massachusetts Historical Society. . . . After tracing historically what had occurred up to the year 1841, Mr. Adams said: 'Do I hear you inquire what is all this to the opium question, or the taking of Canton? These, I answer, are but that movement of mind on this globe of earth of which the war between Great Britain and China is now the leading star—The justice of the cause between the two parties—which has the righteous cause? I answer, Britain has the righteous cause. The opium question is not the cause of the war; but the arrogant and insupportable pretensions of China, that she will hold commercial intercourse with the rest of mankind, not upon terms of equal reciprocity, but upon the insulting and degrading forms of the relation between lord and vassal.'"—D. A. Wells, *United States and Great Britain (America and Europe, pt. 1, pp. 24-25)*.

1895.—Report of opium commission in India. See INDIA: 1895 (April).

1900-1906.—Progressive tariff and internal taxation measures to check consumption of the drug in China.—The following is from a report on opium production and taxation in China prepared by Mr. Williams, Chinese secretary of the United States legation at Peking, and sent to the State Department at Washington, in September, 1906: "Previous to 1900 native opium passing through the maritime customs at Ichang had been paying a total charge of taels,* 60 per picul* exclusive of taxes at the place of production. In July, 1900, the viceroy, Chang Chih-tung, with a view to checking the consumption of opium in the territory under his jurisdiction, increased this charge to taels 72 per picul, and near the close of 1901 increased it again, making it taels 80 per picul. This, with the likin charged in Szechuen, made a total on the product coming from that province of taels 84.76. Opium designed for local consumption was still more heavily taxed, being required to pay taels 90 besides the likin of Sze-

chuen, or a total of 94.76 taels per picul. The immediate result of this action was to greatly increase smuggling and to drive legitimate traffic to the use of native junks or roundabout land routes controlled by the native customs or likin offices, and thus to reduce the receipts of the maritime customs. Another significant result was the importation of a small amount of foreign opium to a district where it had been unknown for many years. In view of these facts, in 1903 the authorities reduced the tax to a total of 76.75 taels per picul, including the Szechuen likin. In February, 1904, the same tax was imposed in the province of Hunan, also in the jurisdiction of the Viceroy Chang Chih-tung, and in the summer of the same year an agreement was made with the provincial authorities of the provinces of Kiangse and Anhui that one consolidated tax, to include both likin and customs duties, should be levied at a uniform rate in the four provinces, and to prevent discrimination by the native customs as against the maritime service it was agreed that the collection of this consolidated tax should be intrusted to the imperial maritime customs at Ichang and to branch offices under its control. The port of Ichang was chosen because it is at the head of steam navigation on the Yangtze, for which reason most of the opium from Yunnan and Szechuen was sent thither for distribution. In 1905 this arrangement was extended to four other provinces, Kiangse, Fukien, Kuangtung, and Kuangsi, and the tax increased to taels 134.79 per picul for opium destined to the four inner provinces and taels 104 for that going to those on the seaboard. Previous to this latter arrangement, however, after the experience of 1902, it was seen that unless the tax on foreign opium should also be increased the effort to stamp out the vice by heavy taxation would fail, and therefore in 1903 representations were made to the British Government by the Chinese minister in London looking toward the increase of the duty upon Indian opium. The reply of the British Government, as quoted in the Peking Gazette, was that the tax on the native drug ought to be increased by the same amount as any addition made to the duty on the foreign article. Upon this a memorial was submitted to the Imperial Chinese Government, asking that the customs duty and likin on foreign and native opium be increased by an equal amount, and the matter was referred to the proper boards for consideration and report. . . . As to the native drug, the steps to increase the taxes upon it in eight of the provinces have been related above. The success of this arrangement . . . [was] so pronounced that on the 7th of May (1906) an imperial edict appeared directing that the system adopted in the eight provinces mentioned above should be at once extended to all the provinces of China proper and at a later date, to be hereafter determined, to Turkestan and Manchuria."

1905.—Recommendations for Philippines.—A committee appointed by the Philippine commission, to investigate methods of dealing with the sale and use of opium, included an American army officer, Major Carter, a Filipino physician, Dr. Albert, and the missionary bishop of the Protestant Episcopal church, Bishop Brent. The following is from a summary of the committee's report, published in *The Outlook of March 4, 1905*: "Although the Committee visited and studied Java, Cochin China, the Straits Settlements, and various places in China, including Hong-kong, it really found the solution of the question in the Japanese administration of Formosa. [See also FORMOSA: 1874-1910.] . . . It is not surprising that the Com-

* The tael was said to be worth 73 cents in gold in 1905. The weight of the picul is 133½ pounds.

mittee recommend what is practically an adaptation of the Formosan system for the Philippines. For the maintenance of this system it is indispensable that the 'opium and the traffic therein be made a strict Government monopoly immediately.' That is the first provision. 'Second, prohibition, except for medicinal purposes, after three years. Third, only licensees, who shall be males and over twenty-one years of age, shall be allowed to use opium until prohibition goes into effect. Fourth, all vendors or dispensers of opium, except for medical purposes, shall be salaried officials of the Government. Fifth, every effort shall be made (a) to deter the young from contracting the habit by pointing out its evil effects and by legislation, (b) to aid in caring for and curing those who manifest a desire to give up the habit, and (c) to punish and, if necessary, to remove from the islands incorrigible offenders.'"

1906.—Chinese imperial edict against the use of opium.—Undertaking to suppress it in ten years.—By formal edict from the throne, published in September, 1906, the imperial government of China undertook to eradicate the use of opium in that empire, and to do so by heroic measures within ten years. A register was ordered to be made of every consumer of the drug (estimated at 40 per cent. of the vast population of the empire) and of the quantity that he consumed. Those who were under sixty years of age were required to diminish their consumption by not less than twenty per cent each year, till they were free of the habit and the use was stopped. Meantime there would be a public provision of medicines to assist the cure. To those beyond sixty years in age, and to the princes, nobles, and magnates of the empire, a certain relaxation of these rules would be allowed. But all minor officials under sixty years must drop opium entirely, at once, and there would be no toleration of an acquirement of the opium habit thereafter. No further cultivation of the poppy would be allowed, and, of course, the importation would be controlled. Tang Shao Yi, the special Chinese envoy who visited the United States and England early in 1909, had much to do with this measure on the part of his government, and, in addressing a deputation which called on him in London, had this to say of the circumstances connected with it: "He had always taken a deep interest in the anti-opium movement ever since he was a student in America in the early seventies. He had never realized, however, that they could attempt to make such a movement in China till he was sent by his Government to India in 1905 in connexion with the Lhasa Convention. While there he had opportunities of studying the opium question, and he was fortunate enough to make the acquaintance of the finance secretary, Mr. Baker. From him he learnt that the Government of India could dispense with the revenue derived from opium. Nothing was more surprising to him and nothing gave him greater joy than to hear that. In that year the question was brought up in England, and when he returned to China in the winter of 1905 he informed his Government that the British public was very 'anti-opium' and also that the Indian Government was not at all anxious for the revenue derived from opium. Therefore, he told his Government that it was for the Chinese themselves to put a stop to the opium trade, and that they must not rely upon others. He had already got regulations in his head and the Government asked him to draw up certain rules to put a stop to the opium curse. In order not to be too radical, he suggested that three years should be allowed for

putting an end to it, but the Cabinet said that was too radical, and, although he suggested six years, the final decision of the Government was to make it ten years."—See also MANCHURIA: 1905-1907.

1908.—Indo-Chinese agreement to restrict traffic.—In accordance with an agreement between China and the Indian government, China reduced its production of opium and India its export of the drug by 5,100 chests a year for three years, commencing January 1, 1908. India forfeited a revenue of ten million dollars a year by this arrangement.

1909.—Progress in opium reform.—An official report on the progress of the opium reform in China, by Mr. Max Müller, Councillor of the British legation at Peking, was published as a Parliamentary Paper (Cd. 4967), early in January, 1910. In communicating the report to the Foreign Office, Sir N. Jordan wrote: "This report shows that considerable progress continues to be made in the task which the Chinese Government undertook three years ago. There has undoubtedly been a very sensible diminution in the consumption and cultivation of opium, and a public opinion has been formed which will greatly strengthen the hands of the Government and the provincial authorities in the drastic measures which they contemplate taking in the near future. . . . That the end, however, is so near as many of the official pronouncements would seem to indicate is, I venture to think, very doubtful. We have full and reliable information about only two of the provinces—Shansi and Yunnan—and the annexes to Mr. Max Müller's report furnish eloquent testimony of the good work that has been done in both. At the opposite extreme stand Shensi, Kansu, Hupei, and Szechuan, in all of which comparatively little has been accomplished to check either the consumption or cultivation of the drug. The last-named province, which is by far the largest producing area in the Empire, will furnish the supreme test of the success or failure of the programme of total prohibition, and as the order has gone forth that no poppy is to be sown this autumn, the issue on which so much depends is doubtless being fought out as this report is being written."

1909 (February).—International opium commission, in session at Shanghai.—On the suggestion of Bishop Brent, of the Philippines, the government of the United States took the initiative in bringing about the appointment of an international commission to investigate matters connected with the use of and traffic in opium. The commission, composed of delegates from China, Japan, Great Britain, France, Germany, Holland, Turkey, and the United States, met at Shanghai on February 1, 1909, and was in session until February 26, under the presidency of Bishop Brent. Its study of the subject appears to have been made difficult and definite conclusions prevented by the lack of trustworthy Chinese statistics of the production of opium in the empire itself, and of other important facts. The results of four weeks of investigation and discussion were embodied in nine resolutions, the first of which recognized the sincerity of the endeavor of the Chinese government to eradicate the great evil from its dominion. Of the further resolutions, one urged upon all governments the importance of drastic measures to control the manufacture, sale, and distribution of morphia and other noxious derivatives of opium; another recommended scientific investigation of so-called opium remedies; a third said all countries should adopt reasonable measures to pre-

vent the shipment of opium or its derivatives to any country which prohibits their entry. By the terms of the remaining resolutions the delegates were urged to influence as far as possible their own governments to take steps for the gradual suppression of opium-smoking in their own territories respectively; to further examine into their systems for the regulation of the traffic, in the light of the experience of other countries; to enter into negotiations with China to insure the adoption of effective and prompt measures to prohibit opium traffic in those concessions and settlements. Finally, the conference recommended that each government apply its pharmacy laws to its subjects in consular districts, concessions, and settlements in China. In some quarters the outcome of the meeting was sharply criticised as being empty of any practical fruit, and England was accused of having rendered it so, under the influence of the Indian opium trade. But the State Department at Washington gave expression to a very different view. There it was pointed out that the Commission had been one of inquiry, only; that its instructions had been "to study the opium problem and report as to the best and most feasible means of solving it," and that this programme was executed "to the entire satisfaction of the Governments concerned."

1909 (February).—United States.—Act to prohibit the importation and smoking of opium in the United States.—A stringent act prohibitory of the importation and use of opium for any other than medicinal purposes passed the Senate of the United States on February 2, 1909, having already been adopted by the other House. Smoking opium is positively forbidden; no one may bring it into the country without facing a fine of from fifty to five thousand dollars and imprisonment for two years; the mere possession of opium, a preparation of, or derivative therefrom, is to be deemed sufficient evidence to authorize conviction. For medicinal purposes, opium may be brought in under regulations prescribed by the secretary of the treasury.

1910-1922.—Growth of opium problem in the United States.—Dr. Alexander Lambert stated before Congress in 1922 that twelve to seventy-two times as much opium is consumed in the United States as in any other white country. In New York State alone there are 50,000 addicts. The world produces 500 times its opium requirements. Three and one-half tons is its actual medical need; 1,500 tons are produced and consumed.

1911.—Ten-year agreement between Great Britain and China.—At the expiration of the Indo-Chinese agreement of 1908, Great Britain and China, in May, 1911, arranged for its renewal for a period of ten years.

1911-1919.—Second international opium conference at The Hague.—International opium convention made part of Treaty of Versailles.—"On December 10, 1911, an international opium conference met at the Hague, again as in 1909 on the initiative of the United States. China, France, Germany, Great Britain, The Netherlands, Italy, Japan, Persia, Portugal, Siam, and the United States were represented. On January 23, 1912, the International Opium Convention was signed. . . . China caused its incorporation in the treaty of peace with Germany in 1910. Article 205 of the treaty of Versailles provides that a ratification

of the peace treaty shall be tantamount to a ratification of the opium convention. [The United States had already ratified the convention in 1914.]"—*China Year Book*, 1921-1922, pp. 797, 793, 802.

ALSO IN: H. Wright, *International opium conference* (*American Journal of International Law*, pp. 865-889).

1916-1918.—End of legal import trade in China.—Destruction of stocks on hand.—"In accordance with the Anglo-Chinese agreement of 1911 the legitimate foreign opium trade in China and the legitimate Chinese cultivation of opium came to an end on December 31, 1917. . . . In the meantime the troubled condition of the country led to a marked recrudescence of opium growing throughout a number of provinces. On June 11, 1918 an official from the Ministry of Finance signed an agreement with the Opium Combine at Shanghai to purchase the balance (of opium on hand). . . . It soon became known, however, that the intention of those concerned in the deal was to resell . . . to a Shanghai syndicate [at a large profit]. The syndicate it was stated was to advance the Peking Government \$5,000,000 for the right to dispose of the opium in Kiangsu and Kiangsi. . . . This proposed deal evoked protests from the British and American governments. . . . The controversy dragged on until in accordance with a decision of the Peking Government the whole stock was publicly burnt."—*China Year Book*, 1922, pp. 677, 678.

1918.—Japanese morphia traffic.—During 1918 the opium traffic, which was now legally at an end, was reintroduced in a deadlier guise from a different quarter. Morphia manufactured from Persian opium in well-equipped laboratories in Japan and Formosa was smuggled into China in 1918 in large quantities, conservatively estimated at eighteen tons. The chief agency in the distribution of morphia was the Japanese post-office, which permitted no inspection of parcels in its post offices in China. The island of Formosa, favored by geographical propinquity, did a flourishing trade in morphia, opium and other contraband, under Japanese protection. The profits of Japan from the morphia trade amounted to \$8,400,000 in 1913 and increased enormously during the World War. In 1918, 165,078 ounces of morphia were imported into Japan. During the period from 1915-1920, the yearly average rose to 478,629 ounces, an increase of 2,406 per cent over that of the decade 1808-1907.—Based on T. F. F. Millard, *Democracy and the eastern question*, ch. 8, and *China Year Book*, 1921-1922, p. 705.

1919-1922.—Efforts of China to stop opium production.—American and British-made morphia brought in by Japanese smugglers.—"The central administration has attempted to put a stop to poppy cultivation but the actual conditions seem to have been determined by the attitude of the local military and civil authorities. . . . The trade in opium derivatives is in inverse ratio to the cultivation of the poppy. That is to say: where the people secure narcotics from locally grown poppy, there is little, if any, demand for these drugs from outside sources; but where the restrictions prevent local cultivation, people are supplied with opium derivatives through illicit channels. . . . Practically no morphia is manufactured in China; . . . all that comes in is manufactured in the United States and Great Britain, from which countries it is exported to Japan, whence it finds its way into China. . . . In Japan the use of opium and cocaine derivatives is strictly confined by law to purely medical purposes. . . .

During 1920, 872,000 ounces in excess of legitimate consumption were imported into Japan."—*China Year Book, 1921-1922, pp. 790, 794-795.*

1921-1923.—Work of League of Nations opium committee.—Coöperation with the United States.—"Under the auspices of the League of Nations arose the greatest movement ever started to solve the problem of dangerous drugs. . . . In the Treaty of Versailles an article was included in the League of Nations Pact whereby the League was entrusted with exclusive control over the trade in opium and other dangerous drugs. The signatory Powers of the Treaty which had not yet signed or ratified the above-mentioned convention pledged themselves under Article 295, among other things, to promulgate the necessary laws within twelve months after the Versailles Treaty came into force. At the very first League of Nations Assembly [February 1921] the Council was requested to nominate an advisory committee on the opium question. In the second session it was decided to extend the activities of the committee to the chemical derivatives of these drugs. . . . If when the poppy is in bloom one could travel by aeroplane from the Mediterranean to the Pacific, one would see below one an expanse of white fields stretching from Thrace to Asia Minor; the great Persian plateau, too, is rich in poppies. Proceeding further East, one would find in India about 200,000 acres of poppy fields. The peasants do not plant the poppy any more in China, but it is found in Formosa and in Korea and Manchuria. In January of this year the fourth session of the Opium Committee took place in Geneva. All the members of the committee, including the German delegate, were in agreement. For the first time the United States was officially represented. This fact is all the more valuable in that the United States is among the chief manufacturers and exporters of morphia and cocaine. About one million pounds of coca leaves are imported into America annually. . . . Switzerland, where the illicit trading in morphia and cocaine is immense, did not ask to be represented. Persia sent written word to the Committee that she approved of the licensing system for imports and exports, and Turkey stated that she would sign the Opium Convention as soon as she was represented on the League. The main difficulty consisted in finding a way to ascertain the quantities of opium, morphia and cocaine necessary for medicinal purposes. . . . The success of the campaign will depend almost entirely on the amount of co-operation among the various Governments. Much resistance will have to be broken down, and the Governments appear to be ignoring the fact of the existence of powerful syndicates interested in the preparation of these narcotics. The suppression of smuggling is another great difficulty. . . . In England a new law permits the searching of the houses of suspected persons and provides for a fine up to £1,000 and for penal servitude not exceeding ten years. . . . The United States have introduced legislation whereby import is restricted and all export prohibited. Germany possesses very stringent protective legislation, which should, however, be perfected as regards export concessions. It is humiliating to have to acknowledge that in Switzerland, where the use of cocaine is attaining dangerous proportions, effective legislation is particularly lacking. . . . It is useless any longer to conceal the fact that it possesses important cocaine and morphia factories."—*The League of Nations and the drug traffic (Economic Review, May 11, 1923, p. 411).*—The fifth session of the opium advisory committee was held at Geneva in May, 1923. The sittings were open to

the public and a strong American delegation was present. The representatives of the United States submitted proposals to recognize the use of opium products for other than medicinal purposes as an abuse, and to prevent such abuse by limiting the production of raw opium in such a manner as to leave no surplus available for non-medicinal and non-scientific purposes. These statements were accepted by the advisory committee "as embodying the general principles by which the governments should be guided in dealing with the question of the abuse of dangerous drugs, and on which, in fact, the International Convention of 1912 is based. . . . [The committee reviewed its own efforts to accomplish the same ends during the past two years in] taking all possible steps to secure the adhesion of all countries to the Convention; (2) investigating the question of the world's needs of the manufactured drugs for medical and scientific uses, with a view to the eventual limitation of the production of these drugs; (3) recommending the system of import certificates, arranging the exchange between states of information in regard to the illicit traffic in the drugs, and proposing other measures for securing international co-operation in suppressing that traffic; (4) inviting the Powers with territories in the Far East to review their requirements of opium, and submitting proposals for an investigation by the Chinese Government of the conditions in China, with a view to the more effective application of Chapter II, of the Convention and the solution of the problem of the use of prepared opium in the Far East; (5) collecting and publishing information as to the measures taken to give effect to the Convention and the position generally in all countries in regard to the traffic, with a view to securing the enforcement of the Convention. . . . [In addition,] the Committee studied in considerable detail the status of its regular work. A mass of statistics and other data prepared by the Secretariat from reports sent in by the Governments in answer to various questionnaires was gone through and consideration given to the status of the system of import and export certificates, annual reports, the statistics for the amounts of drugs needed for medicinal and scientific purposes, the imposition of more severe penalties for violation of the drug regulations, and the status of the ratification of the 1912 Convention. In connection with the latter, Mrs. Hamilton Wright [assessor to the Committee] informed the Committee that the Turkish delegation at Lausanne authorized her to state that Turkey would ratify the Convention shortly.—*Social and humanitarian questions, fifth session of the opium committee (Monthly Summary of the League of Nations, June 15, 1923, pp. 109-110).*

OPSONINS. See **MEDICAL SCIENCE**: Modern: 19th century: Opsonins.

OPTIMATES.—"New names came into fashion [in Rome], but it is difficult to say when they were first used. We may probably refer the origin of them to the time of the Gracchi [133-121 B. C.]. One party was designated by the name of Optimates, 'the class of the best.' The name shows that it must have been invented by the 'best,' for the people would certainly not have given it to them. We may easily guess who were the Optimates. They were the rich and powerful, who ruled by intimidation, intrigue, and bribery, who bought the votes of the people and sold their interests. . . . Opposed to the Optimates were the Populares."—G. Long, *Decline of the Roman Republic*, v. 1, ch. 20.—See also **ROME**: Republic: B. C. 150-133.

OPUENDO, Antonio de, Spanish admiral. See **NETHERLANDS**: 1625-1647.

ORACLES.—"Wherever the worship of Apollo had fixed its roots, there were sibyls and prophets; for Apollo is nowhere conceivable without the beneficent light of prophecy streaming out from his abode. The happy situation and moral significance of leading colleges of priests procured a peculiar authority for individual oracles. Among these are the Lycian Patara, the Thymbraean oracle near Troja (to which belongs Cassandra, the most famed of Apollo's prophetesses), the Gryneum on Lesbos, the Clarian oracle near Colophon, and finally the most important of all the oracles of Asia Minor, the Didymæum near Miletus, where the family of the Branchidæ held the prophetic office as a hereditary honorary right. Delos connects the Apolline stations on the two opposite sides of the water: here, too, was a primitive oracle, where Anius, the son of Apollo, was celebrated as the founder of a priestly family of soothsayers. . . . The sanctuaries of Ismenian Apollo in Thebes were founded, the Ptoïum on the hill which separates the Hylia plain of the sea from the Copæic, and in Phocis the oracle of Ahæ. The reason why the fame of all these celebrated seats of Apollo was obscured by that of Delphi lies in a series of exceptional and extraordinary circumstances by which this place was qualified to become a centre, not only of the lands in its immediate neighbourhood, like the other oracles, but of the whole nation. . . .

With all the more important sanctuaries there was connected a comprehensive financial administration, it being the duty of the priests, by shrewd management, by sharing in profitable undertakings, by advantageous leases, by lending money, to increase the annual revenues. . . . There were no places of greater security, and they were, therefore, used by States as well as by private persons as places of deposit for their valuable documents, such as wills, compacts, or ready money. By this means the sanctuary entered into business relations with all parts of the Greek world, which brought it gain and influence. The oracles became money-institutions, which took the place of public banks. . . . It was by their acquiring, in addition to the authority of religious holiness, and the superior weight of mental culture, that power which was attainable by means of personal relations of the most comprehensive sort, as well as through great pecuniary means and national credit, that it was possible for the oracle-priests to gain so comprehensive an influence upon all Grecian affairs. . . . With the extension of colonies the priests' knowledge of the world increased, and with this the commanding eminence of the oracle-god. . . . The oracles were in every respect not only the provident eye, not only the religious conscience, of the Greek nation, but they were also its memory."—E. Curtius, *History of Greece*, bk. 2, ch. 4.—"The sites selected for these oracles were generally marked by some physical property, which fitted them to be the scenes of such miraculæ manifestations. They were in a volcanic region, where gas escaping from a fissure in the earth might be inhaled, and the consequent exhilaration or ecstasy, partly real and partly imaginary, was a divine inspiration. At the Pythian oracle in Delphi there was thought to be such an exhalation. Others have supposed that the priests possessed the secret of manufacturing an exhilarating gas. . . . In each of the oracular temples of Apollo, the officiating functionary was a woman, probably chosen on account of her nervous temperament;—at first young, but, a love affair having happened, it was decided that no one under fifty should be eligible to the office. The priestess sat upon a tripod, placed over the chasm in the centre of the temple."—C. C. Felton, *Greece, ancient and modern*, ch. 2, lect. 9.

ORANGE, House of. See **NETHERLANDS**: 1813.

ORANGE, Principality of.—"The little, but wealthy and delicious, tract of land, of which Orange is the capital [see **ARAUSSIO**] being about four miles in length and as many in breadth, lies in the Comté Venaissin, bordering upon that of Avignon, within a small distance of the Rhone; and made no inconsiderable part of that ancient and famous Kingdom of Arles which was established by Boso towards the end of the 9th century [see **BURGUNDY**: 888-1032; 1032]. . . . In the beginning of the 10th century, historians tell us of one William, surnamed Cornet, of uncertain extraction, sovereign of this State, and highly esteemed by the great Emperor Charlemagne, whose vassal he then was. Upon failure of the male descendants of this prince in the person of Rambald IV., who died in the 13th century, his lands devolved to Tiburga, great aunt to the said Rambald, who

brought them in marriage to Bertrand II. of the illustrious house of Baux. These were common ancestors to Raymond V., father to Mary, with whom John IV. of Chalon contracted an alliance in 1386; and it was from them that descended in a direct male line the brave Philibert of Chalon, who, after many signal services rendered the Emperor Charles V., . . . had the misfortune to be slain, leaving behind him no issue, . . . while he had the command of the siege before Florence. Philibert had one only sister, named Claudia, whose education was at the French court, [where, in 1515, she married Henry, of Nassau, whereby the principality passed to that house which was made most illustrious, in the next generation, by William the Silent, Prince of Orange. The Dutch stadtholders retained the title of Princes of Orange until William III. Louis XIV seized the principality in 1672, but it was restored to the House of Nassau by the Peace of Ryswick (see FRANCE: 1697). On the death of William III it was declared to be forfeited to the French crown, and was bestowed on the Prince of Conti; but the king of Prussia, who claimed it, was permitted, under the Treaty of Utrecht, to bear the title, without possession of the domain (see UTRECHT: 1712-1714).]—J. Breval, *History of the House of Nassau*.—See also NASSAU.

ORANGE FREE STATE: **Geography**.—**Area**.—**Population**.—The Orange Free State Province is a pastoral and agricultural region, 50,389 square miles in area, lying north of the Orange and south of the Vaal rivers. It is bounded on the north by the Transvaal, east by Natal, southeast by Basutoland, and south and west by the Cape province. Its population in 1921 was 628,827. Of these 188,556 were white and 440,271 were colored. It is a member of the legislative Union of South Africa, formed May 31, 1910.

1824-1836.—**Settled by Boers**.—In 1824 Dutch farmers from Cape Colony settled in the region and in 1836 the great trek from Cape Colony brought many new settlers, who in the same year drew up a rudimentary republican form of government.—See also **BOER**.

1854.—**Independence recognized**.—By the convention of Bloemfontein the state was recognized as an independent republic. See also **SOUTH AFRICA, UNION OF: 1806-1881**.

1902-1920.—**British colony**.—**Formation of national union**.—**Termination of intercolonial council**.—**Language question**.—**Union of col-**

onies.—The burghers under Christian de Wet and others kept the field for nearly two years after the British proclamation of annexation; but British sovereignty was acknowledged finally by articles of peace signed May 31, 1902. A civil administration of the colony had been established in 1901. A nominated legislative council was set up in 1902, and some ex-burghers became unofficial members. In 1903 the railroads and the constabulary of the two colonies (The Transvaal and Orange River Colony) came under an intercolonial control, and movements were made to repair the ravages of the war, the repatriation of prisoners and occupants of concentration camps, etc. The educational system was reorganized, and land-settlements were begun in an attempt to increase the British part of the population. As they recovered from the war the Boers thought of recovering their political ascendancy. At a congress of ex-burghers at Brandfort, December, 1904, a resolution demanding self-government for the colony was passed, followed in July 1905 by a conference at Bloemfontein resolving to form a national union, which, formally organized in May 1906, became the *Oranjie Unie*. The Transvaal Boers had formed a similar organization in January 1905, *Het Volk*. The object of these organizations and of the Africander Bond were to advance the Boer ideals in state and society, and all had similar constitutions. Some ex-burghers had sincerely accepted the new order, and these formed an opposing organization and gave it the title of the Constitutional party; but it was only in Bloemfontein that it had any strong following. But now the whole political situation of the Boer colonies was altered by the incoming of Sir Henry Campbell-Bannerman's Liberal government in London, December 1905. The late Conservative government had intended to lead the Boers to self-government through an intermediate representative form, which the Campbell-Bannerman party decided to omit. In April 1906 it sent a committee to South Africa to inquire and report. It recommended and secured the adoption of a form of government which, though not just what they had asked, was seen by the Boers to insure power to their majority. This was promulgated July 1, 1907; and an election for the legislature was held in the following November, returning twenty-nine members of the *Oranjie Unie*, five Constitutionalists (four of them being four-fifths of the total representation of Bloemfontein), and four Independents. To form the first ministry following the election the governor called on Mr. Abraham Fischer, leader and chairman of the *Oranjie Unie*, an able Boer statesman in pre-war time, vice-president of the volksraad in 1893, member of the executive council of the state in 1896, a counsellor of both Presidents Steyn and Kruger, formulator of the ultimatum sent to the British on the eve of the war, and ambassador to Europe in the Boer cause while the war was raging. The first meeting of the new legislature was on Dec. 18, 1907. It was then announced that both the Transvaal and the Orange River Colony had notified the termination of the intercolonial council, each meaning to acquire individual control of its own constabulary and railways. After sitting two days the legislature was prorogued until May 1908, when a bill to foster the Dutch language was the chief measure enacted. Strife resulted from the administration of this act, for it required every child to accept instruction in every subject partly in Dutch, often against the protests of English-speaking parents, and sometimes even of Dutch burghers. A fruitless conference on the matter was held at Bloemfontein in November 1909, and finally

the English-speaking population undertook the establishment of their own separate schools. In May, 1908, there was an interstate conference, including representatives of Cape Colony, Natal, Transvaal, and Orange, among whose important acts was the sending of a resolution to the several parliaments recommending closer union among the South-African states and the appointment of delegates to a national convention to draft a constitution. The union of the four colonies by imperial act was promulgated May 31, 1910; Orange River Colony having entered the union under the title of the Orange Free State Province. (See also SOUTH AFRICA, UNION OF: 1908-1909.) In 1912 the issue of bilingual instruction was compromised by the adoption of a proposal of the Union Parliament that up to Standard IV instruction in the schools should be given in the pupil's "home language." In 1920 Afrikaans or colloquial Dutch was made equivalent to Netherlands Dutch as a medium of instruction and has been widely used. The Dutch Nationalists were strongly entrenched in the state during the World War. It was the principal fighting area in the rebellion of General De Wet in 1914. General Herzog, who became leader of the Dutch Nationalists on the death of ex-president Steyn in 1916, carried the Free State in the elections of 1915 and 1920.

1921.—Movement for an independent union of South Africa.—General Herzog again carried the Free State in the election of 1921, when he declared for the secession of the Union from the British Empire. His party won sixteen out of the seventeen constituencies into which the province was divided.

ORATORY, Congregation of the.—"Philip of Neî, a young Florentine of good birth [1515-1505; canonised 1622] . . . in 1548 instituted at Rome the Society of the Holy Trinity, to minister to the wants of the pilgrims at Rome. But the operations of his mission gradually extended till they embraced the spiritual welfare of the Roman population at large, and the reformation of the Roman clergy in particular. No figure is more serene and more sym-

pathetic to us in the history of the Catholic reaction than that of this latter-day 'apostle of Rome.' From his association, which followed the rule of St. Augustine, sprang in 1575 the Congregation of the Oratory at Rome, famous as the seminary of much that is most admirable in the labours of the Catholic clergy."—A. W. Ward, *Counter-Reformation*, p. 30.—The congregation continued to spread throughout Europe, up to 1800. Suppressed under Napoleon I, it recovered and after a second suppression was revived in 1869. Cardinal Newman founded an English branch in 1847.

ORDEAL, a method of determining the guilt or innocence of an accused person by a casting of lots, or a trial of strength or endurance often of such a nature that only something which might be believed to be an interposition of heaven could save the prisoner. "During the full fervor of the belief that the Divine interposition could at all times be had for the asking, almost any form of procedure, conducted under priestly observances, could assume the position and influence of an ordeal. As early as 502, we find Gregory the Great alluding to a simple purgatorial oath, taken by a Bishop on the relics of St. Peter, in terms which convey evidently the idea that the accused, if guilty, had exposed himself to imminent danger, and that by performing the ceremony unharmed he had sufficiently proved his innocence. But such unsubstantial refinements were not sufficient for the vulgar, who craved the evidence of their senses, and desired material proof to rebut material accusations. In ordinary practice, therefore, the principal modes by which the will of Heaven was ascertained were the ordeal of fire, whether administered directly, or through the agency of boiling water or red-hot iron; that of cold water; of bread or cheese; of the Eucharist; of the cross; the lot; and the touching of the body of the victim in cases of murder. Some of these, it will be

seen, required a miraculous interposition to save the accused; others to condemn; some depended altogether on volition, others on the purest chance; while others, again, derived their power from the influence exerted on the mind of the patient. They were all accompanied with solemn religious observances. . . . The ordeal of boiling water ('æneum,' 'judicium aquæ ferventis,' 'cacabus,' 'caldaria') is probably the oldest form in which the application of fire was judicially administered in Europe as a mode of proof. . . . A caldron of water was brought to the boiling point, and the accused was obliged with his naked hand to find a small stone or ring thrown into it; sometimes the latter portion was omitted, and the hand was simply inserted, in trivial cases to the wrist, in crimes of magnitude to the elbow, the former being termed the single, the latter the triple ordeal. . . . The cold-water ordeal ('judicium aquæ frigidæ') differed from most of its congeners in requiring a miracle to convict the accused, as in the natural order of things he escaped. . . . The basis of this ordeal was the superstitious belief that the pure element would not receive into its bosom any one stained with the crime of a false oath."—H. C. Lea, *Superstition and force*, ch. 3.—See also CRIMINAL LAW: 1198-1199.

ORDERS OF ARCHITECTURE: Definition.—The order is "the unit of classic architecture, comprising the column and its entablature, and called Tuscan, Doric, Ionic, Corinthian, or Composite, according to its details. The column consists of base, shaft and capital. The entablature comprises the Architrave, or lintel, which rests upon the columns and is cut in one, two, or three flat bands, its top marked by a projecting moulding; the Frieze, a high band either plain or decorated; and the projecting cornice, supported by its Bed-moulding and sometimes by brackets, and ending in a Cymatium or Crown-moulding. The Doric, Ionic, and Corinthian orders are both Greek and Roman, though the Corinthian was fully developed only under Roman influence. The Greek Doric is heavy and massive. It has no base, a channelled shaft, and a capital with a heavy square abacus supported by an oval moulding called the Echinus. Its frieze is decorated with flat channelled blocks called Triglyphs . . . between which are square panels called Metopes, often charged with sculpture.

. . . The Roman Doric is lighter. The columns have a base; the architrave is lower and the frieze higher. The Ionic has a fluted column, and a capital with large scrolls or Volutes at the corners and an echinus under them, a frieze plain or charged with continuous sculpture, and a cornice usually with dentils. The Corinthian has a fluted column, a high capital surrounded by two ranges of acanthus leaves with small volutes at the corners, a frieze like the Ionic, and a cornice enriched with dentils, brackets called Modillions, and carved mouldings. The Tuscan and Composite are Roman only. The first is a simplified Doric, without channels or triglyphs; the second a somewhat simplified Corinthian, its heavier capital carrying larger volutes and an echinus like the Ionic."—W. P. P. ORDINANCES OF 1311. See **ENGLAND**: 1310-1311.

ORDNANCE: 14th-18th centuries.—Invention of gunpowder.—Early development of guns and ammunition.—"The Chinese had for a long time known how to make powder, but they did not use it except for fireworks. [See **CHEMISTRY**: Explosives: Gunpowder and early use of explosives.] The alchemists of the thirteenth century had known of a mixture of carbon, sulphur, and saltpetre, but this powder fused instead of exploding. The Arabs in purifying the saltpetre succeeded in producing a real gunpowder, and used it for throwing projectiles through a tube. [See **LIQUID FIRE**.] The Christians imitated them; in 1325 Florence had metal cannon and iron balls cast. The invention was adopted throughout Europe, but it was perfected slowly. . . . Artillery did not become really formidable until the sixteenth century, and the portable firearms did not become dangerous until the seventeenth century."—C. Seignobos, *History of mediæval and modern civilization*, pp. 235-236.—"Grape' and 'canister' were introduced [in the following century]. . . . [See **WARSHIPS**: 15th-16th centuries]. Grape consisted of a number of tarred lead balls, held together in a net. Canister consisted of a number of small shot in a tin can, the shots being dispersed by the breaking of the can on discharge. Grape now consists of cast iron balls arranged in three tiers by means of circular plates, the whole secured by a pin which passes through the centre. The number of shot in each tier varies from three to five. . . . [It] is very destructive up to three hundred yards and effective up to six hundred yards. Canister shot as we know it at present, is made up of a number of iron balls, placed in a tin cylinder with a wooden bottom the size of the piece of ordnance for which it is intended. Towards the close of the eighteenth century, short cast-iron guns called 'carronades' were introduced by Gascoigne of the Cannon Iron Works, Scotland. They threw heavy shots at low velocity with great battery effect. They were for a long time in use in the British navy. . . . The entire battery of the *Victory*, Nelson's famous flag-ship at the battle of Trafalgar, amounting to a total of 102 guns, was composed of 'carronades'

ORDNANCE OF THE 15TH, 16TH AND 17TH CENTURIES

1. Earliest form of bronze mortar. 2. Bronze hand-gun, 1380-1400. 3. Barrel of hand-gun with tail-screw, 1460-1480. 4. Bronze hand-gun, 1400-1420. 5. Stone gun, 1460-1470, mounted. 6. Forerunner of the machine-gun, the "death organ," 1600-1610, with 20 barrels arranged in five movable tiers. 7. Artilleryman firing gun, 1400. 8. Wrought-iron muzzle-loader, grape-shot, 1450-1500. 9. Wrought-iron breech-loader, Italian, 1480-1500. 10. Burgundian stone-cannon, 1450-1476, artillery of Charles the Bold, lost in the battle of Nancy, 1477. 11. Brandenburg 4-pounder bronze "field-serpent," 1526. 12. Danzig bronze 18-pounder, 1617. 13. Italian "wild man," 1586; belonged to Duke Julius of Brunswick. 14. Smooth wrought-iron 24-pound breech-loader called the "wild man," 1480-1500. 15. "Lazy maid," wrought-iron cannon, throwing a 70-pound stone shot; one of the oldest Saxon guns, from the 14th century. 16 and 17. Revolver guns with 7 barrels, 17th century. 18. Gun throwing a stone bullet of 6 pounds, 1150-1500. 19. So-called leather cannon, made of a copper barrel wrapped in several layers of string and leather, used by Gustavus Adolphus of Sweden, 1626; scrapped because of overheating. 20. Prussian 24-pounder bronze gun, cast in Berlin, 1708; 8 feet long, throwing an iron shot weighing 23 pounds. 21. Brandenburg bronze mortar for stone shot of 17 pounds, 1707.

varying in size from thirty-two to sixty-eight pounders. They were mounted on wooden truck carriages and were given elevation by handspikes applied under the breech. . . . They were trained by handspikes with the aid of side-tackle and their recoil was limited by a stout rope, called the breeching, the ends of which were secured to the sides of the ship. The slow match was used for firing, the flint lock not being applied to naval guns until 1780."—P. Severing, *Marvels of modern science*, pp. 172-174.—See also MILITARY ORGANIZATION: 16.

19th century.—Field artillery.—Dahlgren gun.—Rapid fire guns.—Introduction of rifling.—Cost of manufacture and life of the gun.—French "Model 96."—"From earliest times, artillery has been classed as light and heavy, and

with the bayonet. At the beginning of the Napoleonic wars, the guns of the artillery were quite generally scattered along the infantry line, Napoleon himself being the first to employ them in masses. Waterloo furnishes a very good example of the use of artillery at the time. The British artillery was in a long line along the crest of a ridge, with the infantry drawn up in small squares a little distance behind the crest. The gunners worked their pieces until the French cavalry were almost upon them, then sought safety in the infantry squares opened to receive them. The wave of attack past, they returned to the guns. . . . [In the Civil War in the United States] the mass idea was little used at first. The batteries were usually scattered along the line, and fired independently at whatever suitable targets appeared in their

FIELD ARTILLERY IN THE TIME OF EMPEROR MAXIMILIAN

The precursors of the modern machine gun
(After the painting by Anton Hoffman)

essentially the uses of each have remained the same—the former to attack unsheltered, the latter to attack sheltered, personnel, animals, and material. The old muzzle loader was a practically indestructible tube of iron or bronze mounted on an equally simple and strong carriage. The ammunition was quite in keeping with it. Round shot and grape or canister constituted the projectiles of the field gun. Their use was equally simple. When the enemy was still some hundreds of yards distant, well within what are now termed effective rifle ranges, the gun was loaded with a round shot, leveled, and fired in his direction. . . . When the enemy came within 300 yards, grape or canister was used. The frame of the former or the case of the latter broke up on discharge, and the balls acted as do those from a shotgun. It was now a question of loading and firing as rapidly as possible into the smoke, but at the best only a few shots were possible before the charging infantry arrived

front. The Germans never forgot the lessons of the Napoleonic wars, and, against Austria in 1866 and France in 1870, employed their artillery in masses."—E. D. Scott, *Evolution of field artillery*, p. 116.—"In 1856 Admiral Dahlgren of the United States Navy designed the *Dahlgren* gun with shape proportioned to the 'curve of pressure,' which is to say that the gun was heavy at the breech and light at the muzzle. This gun was well adapted to naval use at the time. From this, onward, guns of high pressure were manufactured until the pressure grew to such proportions that it exceeded the resisting power, represented by the tensile strength of cast iron. . . . General Rodman, Chief of Ordnance of the United States Army, . . . suggested the casting of guns hollow and the cooling of them from the inside outwardly by circulating a stream of cold water in a bore while the outside surface was kept at a high temperature. This method placed the metal inside in a state of com-

pression and that on the outside in a state of tension. . . . This system was universally employed and gave the best results obtainable from cast iron for many years and was only superseded by that of 'built up' guns, when iron and steel were made available by improved processes of production. . . . The various forms of modern ordnance are classified and named according to size and weight, kind of projectiles used and their velocities; angle of elevation at which they are fired; use; and mode of operation. The guns known as breechloading rifles are from three inches to fourteen inches in calibre, that is, across the bore, and in length from twelve to over sixty feet. They weigh from one ton to fifty tons. They fire solid shot or shells weighing up to eleven hundred pounds at high velocities, from twenty-three to twenty-five hundred feet per second. They can penetrate steel armor to a depth of fifteen to twenty inches at 2,000 yards distance. Rapid fire guns are those in which the operation of opening and closing the breech is performed by a single motion of a lever actuated by the hand, and in which the explosive used is closed in a metallic case. These guns are made in various forms and are operated by several different systems of breech mechanism generally named after their respective inventors. The Vickers-Maxim and the Nordenfeldt are the best known in America. A new type of the Vickers-Maxim was introduced in 1897 in which a quick working breech mechanism automatically ejects the primer and draws up the loading tray into position as the breech is opened. This type was quickly adopted by the United States Navy and materially increased the speed of fire in all calibres."—P. Severing, *Marvels of modern science*, pp. 174-176.—"With the muzzle loader the ranges were so short that the gunner could see his target with the naked eye; consequently, open sights, similar to those on the pistol or rifle, were used. The ranges possible with the new pieces were such that this was no longer true, and optical sights made their appearance. These had not yet come into use in the United States at the time of the Spanish War, but were more or less common in European armies. At about that time it became known that the French had a gun called the 'Model 96,' made on a wholly new system. The points of the new system were, briefly, that the gun when fired slid to the rear on its carriage, compressing a set of springs which, when the force of recoil was expended, returned it to its firing position. By combining a hydraulic system with the springs, the shock of firing was so completely neutralized that the carriage remained in position, and a number of shots could be fired without relaying (aiming) the gun. This increased the possible rapidity of fire and also its accuracy. It was the first adaptation to field guns of a system for controlling recoil that had recently come into use with the heavy guns of position in fortresses and seacoast works. Moreover, the weight was well within the requirements of mobility. A simple yet ingenious system of optical and leveling instruments enabled the gun to be laid on (aimed at) any target, though unseen to the gunner. The possibilities of the new gun were beyond anything formerly imagined. Military Europe received the information with incredulity, quickly followed by alarm, and then came a frantic effort to produce something just as good. The United States followed suit in 1904, and by 1906 the then existing batteries had been equipped with guns of the new system. All gun makers have followed the French system, all have made improvements on it, but up to the beginning of the European War

the French gun, as improved, was better than the best of any other nation. The remarkable performance of this gun had an unfortunate effect on the French military. It lulled them into the belief that their gun was all-sufficient. Other nations, knowing that the field of battle would present problems that no gun of light metal could solve, and that the light piece could never replace the heavy piece in its particular rôle, went quietly ahead adapting the new system to the heavy artillery. Model after model appeared until in 1912 it was believed the limit had been reached when the Skoda 12-inch howitzer appeared at the Austrian manœuvres. But a further surprise was in store when the German 17-inch howitzer appeared in Belgium in 1914."—E. D. Scott, *Evolution of field artillery*, pp. 117-118.—See also MILITARY ORGANIZATION: 42; WARSHIPS: 1861-1892.

20th century.—World War.—Importance of heavy artillery.—Indirect fire.—Observation by airplane.—Artillery in trench warfare.—Anti-aircraft artillery.—Barrage fire.—Transport.—Railroad artillery.—Machine guns.—"Not all the French were obsessed with the all-sufficiency of their adored '75's.' But the advocates of heavier metal were given little consideration, and it was only in 1913 that the organization of five regiments of heavy artillery was authorized. They were not completely organized or equipped when the war began a year later. What happened is history. The heaviest fortifications fell one after another before the heavy artillery. The French gun everywhere demonstrated its superiority to others of its class in field fighting, but also its relative uselessness against even such field earthworks as infantry could construct overnight. Then came the rush to remedy the deficiency. The coasts were in no danger from the German fleets, and their fortifications were stripped of every heavy gun for which a carriage could be improvised, and these were hurried to the front. Factories were established, guns and carriages were designed and built—ever the cry was for heavy artillery and more heavy artillery, to match, and eventually to overmatch, that of Germany. The great race for munitions was on, the race that meant winning or losing, the war, and the dominant feature of it all was artillery, and mostly heavy artillery. Not until the heavy artillery of the Allies matched that of the Germans did their prospects for a successful issue brighten. Under the new order of things, positions for the guns were classified roughly as open (wholly exposed to hostile view), partly open (partly concealed by a crest or other cover, the gunner still able to see the target through his sight), and covered (wholly concealed from hostile view). . . . In 1914 the covered position came into universal use. It must not be supposed that the artillery assumes one long straight line. The necessity for concealment, for control, for ability to concentrate its fire, and other considerations make the line anything but straight. Batteries are often placed behind others, and the heavy batteries are scattered about. Generally speaking, the front half of the artillery area contains the light artillery, the rear half the heavy. . . . The long range of the modern gun enabled its fire to be delivered on parts of the battlefield far removed from its immediate front, and this led to the development of the principle that artillery is considered concentrated when so disposed that its fire can be concentrated. By dispersing the batteries the best position could be utilized, the difficulties of the hostile artillery increased, the safety and therefore usefulness of one's own artillery increased.

This, however, demanded a more elaborate system of communication than was formerly considered necessary. In the trench warfare of Europe, it soon became evident that the separation of the commander from his battery was necessarily the rule, that one person could at best see little of the field in which targets might appear and which the battery might reach with its fire, and consequently the more observers the more valuable the battery. It became the custom to put in as many observers and telephones as there were personnel and material available. Artillery communication

ing from the direction of one of these positions indicates it is occupied, and the location is at once swept by fire. It is sometimes possible to locate quite accurately the direction to a hostile battery by the sound of its guns. Such direction known, the probable position of the battery may be determined from maps, or from knowledge of the ground. If the direction be determined from two points of the line well apart, the hostile battery position may be determined with some accuracy from the sound alone. Shot furrows in the ground give close approximations for direction, and if one

MODERN TYPES OF ARTILLERY

3. United States 16-in. gun, on railway mounting.

systems today much resemble those of cities, switchboards and all. Since so much depends on the wires remaining intact during a bombardment, they are run along the sides of communication trenches or buried, and those in the front lines, at least, are laid in several strands, well separated. . . . Reaching the hostile artillery in a covered position presents a difficult problem. Before aerial observation became so common many methods were used in seeking a solution, and most of these are in use to-day. When practicable the ground over which an enemy will be obliged to operate is carefully mapped and every possible artillery position and route thereto carefully noted. Fire com-

or two time fuses can be picked up their settings may determine the range. Scouts and observers to the front and flanks endeavor to get information for the artillery. . . . But with the best of information, only approximate ranges and directions can be determined, and the fire of the artillery can be delivered only on a certain area known to contain a target. It may or may not be effective. This condition still obtains, for the use of light overhead cover or screens aids in concealment against aerial observation. . . . As nothing short of a direct hit will put the gun out of commission, its factor of safety may be considered as high. . . . The airplane observer had little diffi-

culty in locating them. The airplane was, and is, used to a great extent in artillery observation. In the earlier stages of the [World] war [see *WORLD WAR: Miscellaneous auxiliary services: IV. Aviation: a, 3*] the great value of the airplane for artillery observation naturally led to every effort being made by the opposing forces to defeat its purpose. Not only was overhead concealment developed to an unimagined degree, but it became the regular practise to detail airplanes as escorts to those containing artillery observers, to protect them against hostile airplanes, and special artillery units were organized whose sole function was to fire on hostile aircraft. . . . An interesting feature of artillery fire is the 'curtain' or 'barrage' fire. This means simply keeping up such a terrific fire on a certain area that an enemy cannot or will not cross it. When an infantry attack is launched, a barrage on the ground beyond the enemy's front line prevents his reinforcements coming up while the attacking infantry are having it out with the defenders of the trench. If the attack carries beyond the first line, the artillery of the defense promptly interposes a barrage to prevent its reaching the second line. If the attack on the first line fails, the defending artillery puts a barrage behind the attacker's line, to prevent reinforcements coming up to it, and to enable the victorious defenders to counter-attack and destroy the enemy in his own trenches. . . . The vehicles were formerly horse-drawn . . . [but] prior to the European War some attempts had been made to utilize the gas engine for the hauling of artillery. A notable case was that of an English militia battery which equipped each of its guns and caissons with a four-cylinder automobile. In July, 1914, the battery made a run of 120 miles in six hours, went into action in a rough field, did some firing, and then changed to another position a mile from the first. . . . Four days would have been unusually good time for horsed artillery to have accomplished as much as this motor battery did in six hours. This performance might have led to a wide development of such transport but for the sudden outbreak of the war. It was the first evidence that mechanical transport might be as successfully applied to light artillery as to heavy. Its value for heavy artillery had long been recognized. Soon after the Boer War the British adapted the caterpillar to the traction of their one heavy gun, the sixty-pounder. . . . The load behind the tractor was about five tons, and, curiously enough, the complaint was made that the tractor was too slow—could make only five miles an hour, [although] that was certainly better than any horse transport could do. . . . Field artillery has always been a more or less 'specialized' arm, and a highly important one, but in no previous war did its relative importance to other arms appear so great. Nor will this relative importance diminish. It alone can overcome the field works of the enemy, and the use of field works of scientific construction is certain in any war of the future. Always a costly arm, it is more so now than ever, due to the complicated engines it uses. For an army of a million men the cost [of equipment alone] is more than \$120,000,000; that of ammunition, more than \$240,000,000."—E. D. Scott, *Evolution of field artillery*, pp. 118-124.—"Mounting heavy artillery on railway cars was not an idea born of the war with Germany. The idea was originally American, the first authenticated record of such employment being by the Union forces at the Siege of Richmond in 1863, when a 13-inch cast-iron mortar was mounted on a reinforced flat car. In 1913 the commanding officer of the defenses of the Potomac

recommended that artillery of various caliber be mounted on railroad platforms, with ammunition, range-finding and repair cars, making up complete units, so that this armament could be quickly transported at any time to the place where most needed. It was then apparent that guns in fixed positions, of whatever caliber, violate the cardinal military principle of mobility. Of late railway artillery has come to be as varied in its design as field artillery, each type of railway mount having certain tactical uses, the three types of cannon used being mortars, howitzers and guns. The general types of railway mount adopted are those which give the gun all-around fire (360 degree traverse), provide limited traverse for the gun, and allow no lateral movement for the gun on the carriage, but are used on curved track, or epis, to give the weapons traverse aim."—E. S. Farrow, *American guns in the war with Germany*, pp. 118-189.—"An American, Dr. Richard J. Gatling, . . . invented the first rapid-fire gun—a gun with a cluster of barrels that would discharge a stream of bullets at the turning of a crank handle. That was in 1861, several years before the French mitrailleuse [invented by Reffye in 1866] made its appearance. [This gun was used to some extent in the American Civil War and the Franco-German War.] Then, twenty years later, came the single-barreled machine-gun, in which each cartridge was loaded and fired by the recoil of the previous cartridge, at the rate of ten shots per second. This was invented by Hiram Maxim, an American, who later became a British subject. [The Maxim gun was used extensively by the British in the Boer War.] We have a third notable American contribution in the air-cooled gun of I. N. Lewis, a retired captain of the United States army, which is so light that it can be handled by a single man, and may even be fired from the shoulder like a regular service rifle, although it takes a strong man to do this, for it weighs twenty-six and one half pounds. The automatic machine-gun and the automobile engine have many points of close resemblance. The cylinder has its counterpart in the gun barrel, the piston in the bullet. . . . In the Maxim gun the barrel is surrounded by a water jacket that holds about two gallons of water. It takes only six hundred rounds to bring this water to a boil. . . . The Colt machine-gun, another American design . . . depends upon air cooling, or radiation of the heat directly into the surrounding atmosphere. . . . The Hotchkiss gun has radiating fins on the barrel something like the fins of the motor-cycle or air-cooled automobile engine. The Lewis gun still further approximates the air-cooled automobile engine by employing a counterpart of the cooling-fan to draw a current of cool air over the radiating fins. . . . Unlike other machine guns, the Lewis fires cartridges from a fan-shaped magazine instead of from a cartridge-belt. The magazine holds about fifty cartridges."—A. R. Bond, *On the frontiers of science* (*Century*, January, 1916).—"America's greatest feat in machine-gun production was the development of the Browning weapons. These guns, . . . were of three types: the heavy Browning water-cooled gun, weighing 37 pounds, for the use of our troops in the field; the light Browning automatic rifle, weighing 15.5 pounds, and in appearance similar to the ordinary service rifle, also for the use of our soldiers fighting on the ground; and, finally, the Browning synchronized air-craft gun of the rigid type, which was the Browning heavy machine gun made lighter by the elimination of its water-jacket, speeded up to double the rate of fire, and provided with the additional attachment of the synchronized firing

mechanism."—B. Crowell, *America's munitions, 1917-1918*, p. 171.—See also ENGLAND: 1915: Ministry of Munitions; Munitions fabrication; RIFLES AND REVOLVERS: Origin of small arms; World War; SUBMARINES: 1912-1918; WORLD WAR: 1918: II. Oregon has abundant crops, and contains one-sixth of the standing timber of the United States. Important crops are wheat, hay, potatoes, sugar-beet and hops. Fruit, fishery, and live-stock industries all contribute to the manufacturing activities of the state. The Columbia, Willamette, and Snake rivers and the Pacific ocean furnish excellent water facilities. Since the opening of the Dalles and Celilo canal in 1915, ocean-going vessels have been able to navigate the Columbia river as far as Portland. In 1921 transportation facilities included also 3305 miles of steam and 694 miles of electric railway. Oregon ranked thirty-fourth in population in 1920, with 783,389 inhabitants.—See also U.S.A.: Historical geography; Economic map.

Aboriginal inhabitants. See CHINOOKAN FAM-

ILY; KALAPORIAN FAMILY; KITUNALIAN FAMILY; MODOCS.

Origin of name.—"Recent research establishes the fact that the name Oregon is a corruption or variation by Jonathan Carver of the name Ouragon or Ourigan, which was communicated to him by Major Robert Rogers, English commandant of the frontier military and trading post at Mackinac, Michigan, during the years 1766-67 of Captain Carver's journey to the upper valley of the Mississippi river and to Lake Superior."—T. C. Elliott, *Origin of the name Oregon* (*Quarterly of the Oregon Historical Society, June, 1922*).—Major Rogers had learned by 1792 that the Missouri must be ascended to its source before reaching the Ouragon. "Captain Carver was undoubtedly an author having little of integrity or shame, but as his book of travels . . . [published in 1788], contained the first printed use of the word Oregon, and moreover as it had a wide circulation and reached many countries, it is to Carver rather than to Rogers that the general use of the name by cartographers and others must be traced."—C. H. Carey, *History of Oregon, p. 29*.

Early exploration.—"Early discoveries and explorations . . . seem to have begun, so far as the Northwest Coast is concerned, with those of Juan Rodriguez Cabrillo, who . . . in 1542-3 . . . observed land at 44° north latitude. The next European to venture into those parts was Sir Francis Drake, who, in the course of his long semi-piratical expedition beginning in 1577, touched the Northwest Coast at 43° N.L. (according to some accounts 48°) and claimed the land for his sovereign under the name of New Albion. Following these pioneers were many others, Spanish, Russian, English, French and American."—L. B. Shippee, *Federal relations of Oregon* (*Quarterly of the Oregon Historical Society, June, 1918*).—"The English Government sent Captain James Cook to the Pacific upon a series of famous voyages of discovery, in the years 1775-1780; and when his reports were made public it became known that not only was this bleak coast rich in sea otter, but that the skin brought a very high price in the China market. . . . By 1792 there were twenty-nine vessels from seven different countries engaged in this trade. . . . [which] was prosecuted with varying success for nearly forty years. In 1792, . . . [Captain George Vancouver, who had been sent to continue the work of Cook], met the Ship Columbia, Gray, Master, of Boston, in the Strait of Juan de Fuca, and learned that the mouth of the long-sought 'River of the West' lay between bold headlands, in latitude forty-six degrees. Captain Gray's discovery later gave the United States one of her titles to the Oregon region. The river, which was to take its name from Captain Gray's vessel was chartered by Vancouver on this expedition. He also charted the whole coast far northward, although, curiously enough he missed the entrance of the only other large river in the whole extent of fifteen degrees of latitude. This river was later [1807] explored by Simon Fraser, whose name it bears."—J. C. Bell, Jr., *Discovery and exploitation, Opening a highway to the Pacific, 1838-1846* (*Columbia University studies in history, economics and public law, v. 06, no. 1, pp. 15, 16, 17*).

1741-1836.—Russian claims.—Explorations in Northern Pacific.—Russian-American Fur Company.—Protests of the United States against Russian operations in Oregon country.—Treaty limiting claims of Russia and the United States.—Compromise between Russia and Great Britain.—In 1741, Vitus Bering, a Dane sailing for

the Russian Czar, discovered the Aleutian Isles and the strait that bears his name. When "at length [the voyagers] sought a return to Kamtchatka, [they met with] head winds, sickness, and many casualties, [and] took to winter quarters on a small island eighty miles off that coast, where the vessel was afterward wrecked. Here the gallant and daring man made his grave with thirty of his men, and history has affixed his name to the island, as if a monument; and indeed it is but a pile of granite. The survivors of the unfortunate expedition carried home with them choice furs, and made large profits on their sale. This led to individual enterprises in those hard seas, and in 1766 to the organization of companies for the Russian fur trade. . . . Two years before the century closed the Russian-American Fur Company was formed, with exclusive rights of trapping and trading for twenty years between latitude fifty-five and Bering Strait. The Company soon occupied the American coast for a thousand miles, up and down, and also the Aleutian archipelago, with their chief traders, sailors, and native helpers. . . . In 1812 the Russians obtained permission of the Spanish governor of California to found a trading post at Bodega Bay, a little north of San Francisco. Their ostensible object and real permission were to lay in beef there, from the wild cattle, for their northern posts and traders. In two or three years they had so multiplied and fortified themselves, that the authorities of California remonstrated, and finally ordered them to leave, when the Russians coolly replied that they had concluded to remain. They did so, and in 1820 established another fortified trading house about forty miles farther north. In the following year, the Russian government claimed, by public decree, all the northwest coast and islands north of latitude fifty-one, and down the Asiatic coast as low as forty-five degrees and fifty minutes, and forbade all foreigners to come within one hundred miles of the coasts, except in cases of extremity. To this bold claim . . . John Quincy Adams [then secretary of State], objected most strenuously. . . . and he denied, most emphatically, that Russia had any just claim on that coast south of the fifty-fifth degree . . . [while] Great Britain made similar protestations. . . . After much correspondence it was agreed between Russia and the United States, in 1824, that the United States should make no new claims north of 54° 40', and the Russians none south of it. Russia also made a similar agreement with Great Britain the next year, and the two were to be binding for ten years, but with the privilege of continued navigation and trade where they had been previously enjoyed. When the ten years expired Russia served notice on the United States and Great Britain of the discontinuance of their navigation and trade north of the agreed line of 54° 40'. A compromise was effected between Russia and Great Britain by a lease from Russia to the Hudson Bay Company of the coast and margin from 54° 40' to Cape Spenser, near 58°—that narrow strip of Alaska which now lies between British Columbia and the Pacific. With the United States matters were finally adjusted to mutual satisfaction. [In 1836] the English accused the Russians of infringing treaty obligations by making and holding settlements south of 54° 40', and asked Mexico to expel them. Mexico was willing but not able, and therefore asked for the kindly offices of the United States in the matter. At . . . [the request of the United States] Russia withdrew from California, and relinquished all claims and ambitions south of 54° 40'. Russia, therefore, was

counted out from among the competitors for Oregon."—W. Barrows, *Oregon*, pp. 23-26.

ALSO IN: C. H. Carey, *History of Oregon*, pp. 460-467.—J. C. Bell, Jr., *Discovery and exploitation, Opening a highway to the Pacific, 1838-1846* (*Columbia University studies in history, economics and public law*, v. 96, no. 1, ch. 1, 2).

1749-1859.—Oregon claims of Hudson's Bay Company.—Rivalry with Northwest Company.—Absorption of rival fur company.—Subsequent vast commercial and political power of Hudson's Bay Company.—Benevolent rule of Dr. McLoughlin.—Relations with Indians, settlers, and missionaries.—Puget Sound Agricultural Company.—Great Britain based her claims to the Oregon country on the discoveries of her navigators and the explorations and settlements made by two powerful fur companies. In 1670 the Hudson's Bay Company received a charter from Charles II granting it exclusive trade privileges and broad legislative, judicial and governing powers throughout the entire Hudson's Bay region, an extent of more than one million square miles. The company made no attempt to assert its powers, however, until 1784, when daring Montreal fur traders of the Northwest Company began to compete with them. "In 1789 Alexander Mackenzie of the Northwest Company, one of the ablest and boldest men in the history of discovery, floated down the river which bears his name to the Arctic Ocean. Two years after his return he set out to cross the continent through the low Peace River Pass, and in 1793 arrived upon the Pacific, in latitude 50° 20' [having for a distance descended the stream which Fraser, another Nor'wester, explored and named in 1807. His journeys proved conclusively] . . . the non-existence of the long-sought practicable Northwest Passage between the Atlantic and Pacific Oceans. . . . [From 1815 until 1821 settlements established by the two rival companies on the Red River of the North, near the present sites of Winnipeg and Pembina, were the scene of constant strife, which ended only when Parliament compelled them to amalgamate in 1821, keeping the name of the Hudson's Bay Company. In 1824 Dr. John McLoughlin, Chief Factor of the company, was placed in charge at Fort Vancouver. Under his guidance] "Fort Vancouver soon grew into a post second only to that of York Factory, on Hudson's Bay . . . and Governor Simpson reported in 1824 that the Company had thirteen posts west of the Mountains, and that furs were procured both from the natives and from expeditions which travelled on horseback along the Willamette, Snake, and other rivers, trapping and trading, south to the very borders of California. The trade yielded between £30,000 and £40,000 annually, and was yet in its infancy."—J. C. Bell, Jr., *Discovery and exploitation, Opening a highway to the Pacific, 1838-1846* (*Columbia University studies in history, economics and public law*, v. 96, no. 1, pp. 19, 52-53).—"The company never had in its service a more efficient man than Dr. John McLoughlin. To the discipline, at once severe and just, which Dr. McLoughlin maintained in his district, was due the safety and prosperity of the company he served, and the servants of that company generally; as well as, at a later date, of the immigration which followed the hunter and trapper into the wilds of Oregon."—F. F. Victor, *River of the West*, p. 28.—"There were no Indian wars in the Oregon Country during all the time Dr. McLoughlin was in charge at Fort Vancouver from 1824 to 1846. All the Indian wars in the Oregon Country occurred after he resigned from the Hudson's Bay Company.

The first of these wars began with the Whitman massacre in 1847. . . . The policy of the Hudson's Bay Company was to crush out all rivals in trade. . . . [As it] bought its goods in large quantities in England, shipped by sea, and paid no import duties, it could sell at a profit at comparatively low prices. In addition, its goods were of extra good quality, usually much better than those of the American traders. It also desired to prevent the settling of the Oregon Country. The latter purpose was for two reasons: to preserve the fur trade; and to prevent the Oregon Country from being settled by Americans to the prejudice of Great Britain's claim to the Oregon Country."—F. V. Holman, *Dr. John McLoughlin, the Father of Oregon*, pp. 27, 32-33.—"In 1838 the Puget Sound Agricultural Company was formed with headquarters at Nisqually (1842) to separate the agricultural and stock raising business of the company, as it became extensive, from the fur trade, which was that for which the Hudson's Bay Company had its exclusive license. The capital stock was £200,000, of which only £20,000 was ever paid up."—W. I. Marshall, *Acquisition of Oregon*, v. 1, p. 339.—"The Hudson's Bay Company and its subsidiaries engaged the attention from time to time through the years, of eight presidents of the United States. . . . In 1889 on the decision of a joint commission of the United States and Great Britain, the United States paid \$650,000 to extinguish the private property rights that were enjoyed by the Hudson's Bay Company and Puget Sound Agricultural Company in 1848, when the Oregon Country became subject to the absolute sovereignty of the United States."—C. H. Carey, *History of Oregon*, p. 279.

1790-1805.—Status of territorial claims in Oregon at the end of eighteenth century.—Conflict of Spanish and British claims.—Nootka convention.—American claim through Louisiana Purchase.—"At the close of the eighteenth century, Oregon was universally recognized as the territory lying along the North Pacific Ocean from the forty-second parallel of latitude to that of fifty-four degrees and forty minutes, and reaching inward to the Rocky Mountains. At that time it was claimed by Spain both by discovery and first settlement. In the year 1790, Great Britain advanced claims upon it. A diplomatic discussion arose between the two Powers, which ended temporarily in an agreement called the Nootka Convention, by which no territorial or sovereign rights or powers were recognized by Spain to Great Britain, but only certain easements, so to speak, in and upon this territory, such as the right to navigate the waters and to fish in them, to trade with the natives, and to make such temporary settlements as might be necessary for the reasonable enjoyment of these rights. In the year 1796, war was waged between Spain and Great Britain, and, according to the British principles of that day, every agreement between the two Powers was abrogated in consequence thereof; so that Spain, while retaining her sovereignty over Oregon, was now relieved of the encumbrance of the British rights. This was the status of Oregon when Spain ceded Louisiana to France in 1800, and when France ceded the same territory to the United States in 1803 (see LOUISIANA: 1798-1803); and the matter of first concern to the United States was the question whether Louisiana contained Oregon or any part of it. It is probable that President Jefferson thought it did, since the Lewis and Clark expedition, sent out

by him to examine the new purchase, crossed the Rockies, discovered the sources of the Columbia River, followed this stream to the Pacific, and made report thereof to the President. But if he did, he was certainly mistaken. It is true that Louisiana had no western boundary positively fixed by any agreement between the Powers, but the general principles of international law, to which recourse must always be had in the absence of specific agreements, made the water shed of the Mississippi the western boundary, and the Treaty of Utrecht, of 1713, to which France and Great Britain were parties, made the forty-ninth parallel of latitude the northern boundary, westward from the Lake of the Woods."—J. W. Burgess, *Middle period*, pp. 311-313.—See also IDAHO: 1804-1811.

1805.—Lewis and Clark expedition. See U. S. A.: 1804-1805.

1808-1826.—Beginnings of American enterprise in Oregon.—American Fur Company.—Founding of Astoria.—Transference of Astoria and American fur interests to England.—Restoration of Astoria.—"Ten year" treaty with Great Britain.—"The return of Lewis and Clark [1806] stimulated individual enterprise in occupying the new American purchase and magnificent fur lands. The struggles of competitors were sharp and serious at times, but were finally compromised in the organization of the American Fur Company, in 1808, with headquarters at St. Louis. They started trading-posts on the sources of the Mississippi and Missouri, and some on the other side of the mountains. [Fort Henry, a post established on the Snake river in 1810 was one of the earliest white settlements in Idaho.]"—W. Barrows, *Oregon*, p. 58.—"The first trading establishment to be attempted at the mouth of the Columbia was the beginning of a log house by Captain Winship of Boston, in 1810. A rise of the river flooded him out, and he did not return, fearing he would be unable to compete with the Astor enterprise. John Jacob Astor, fur merchant, was for many years the successful rival of the Canadians in the Great Lakes country. In 1811, he initiated a large and well conceived plan to exploit the Columbia River country by means of a principal post on tide water, with smaller tributary posts in the interior. It was the establishment of Astoria which brought David Thompson of the Northwest Company down the river, and which, in spite of its admirable conception and the power with which it was sustained, became a commercial failure and later a diplomatic wrangling-point. . . . Refusal of the government to back a commercial enterprise, poor location, loss of the supply ship, and inexperienced personnel, were the causes of failure of Astor's enterprise. When the superintendent heard, in 1813, of war between the United States and Great Britain, he sold the post and all goods of trade to a representative of the Northwest Company, and remained with many of his men on the Columbia, in the employ of that company. Shortly thereafter, an English sloop-of-war put in to the river and captured Astoria as an enemy post, with an appropriate carouse. In 1818 it was returned to the possession of the United States [in accordance with the terms of Ghent, 1814, which left the Oregon question still unsolved]."—J. C. Bell, Jr., *Discovery and exploitation, Opening a highway to the Pacific, 1838-1846* (Columbia University studies in history, economics and public law,

v. 96, no. 1, whole no. 217, pp. 23-24).—In 1818 a convention was entered into between Great Britain and the United States by which the Oregon country was to be held in joint occupancy by the two nations, for a period which terminated in 1826. This convention was renewed in 1827.

1818-1846.—Continued disputes with Great Britain over Oregon Territory.—Beginning of effective settlement by Americans.—Political agitation concerning boundary line.—Compromise on the forty-ninth parallel.—After 1824 the

JOHN JACOB ASTOR
(1763-1848)

region in dispute between England and the United States was only the region north and west of the Columbia river, an extent of 58,000 square miles. "The British had trading posts at the mouth of the Columbia, which they emphatically asserted to be theirs; we, on the other hand, claimed an absolutely clear title up to the 40th parallel, a couple of hundred miles north of the mouth of the Columbia, and asserted that for all the balance of the territory up to the Russian possessions our title was at any rate better than that of the British. In 1818 a treaty had been made providing for the joint occupation of the territory by the two powers, as neither was willing to give up its claim to the whole, or at the time at all understood the value of the possession, then entirely unpeopled. This treaty of joint occupancy had remained in force ever since. Under it the British had built great trading stations, and used the whole country in the interests of certain fur companies."—T. Roosevelt, *Life of Thomas Benton*, p. 282.—"The early American traders were crowded out as a result of the more

liberal terms offered to Indians and trappers by the Hudson's Bay Company. Independents were furnished with goods at lower prices, and received better offers for their furs. Prior to 1834 as many as eleven different American organizations had tried to gain a foothold in the Oregon territory, but all were forced by ruinous competition either to ply their trade in regions farther south or to quit the fur trade altogether and seek a livelihood elsewhere."—C. H. Carey, *History of Oregon*, p. 262.—The policy of the Hudson's Bay Company, "was really hostile to English and national interests,—it was to cultivate wilderness and not civilization, trading huts and not settlements, half-breeds and not English families."—S. V. Johnson, *Short history of Oregon*, p. 162.—Therein lay the difference between the British and American methods of colonization in Oregon. Even before 1840 the Americans had begun to establish actual settlers along the banks of the rivers, some Methodist missionaries being the first to come in. The Rev. Jason Lee and his associates arrived in 1834 and at Dr. McLoughlin's suggestion settled in the Willamette valley. Two years later the American Board of Foreign Missions sent Marcus Whitman, a physician, and N. H. Spalding, a missionary, with their wives, to establish missions "among the Indians of the great interior valley of the Columbia—Whitman with the Cayuse on the Walla Walla River, and Spalding with the Nez Perce on the Lapwai. . . . They found that the Indians soon settled about them and copied their agricultural methods."—J. C. Bell, Jr., *Discovery and exploitation, Opening a highway to the Pacific, 1838-1846* (*Columbia University studies in history, economics and public law*, v. 96, no. 1, whole no. 217, p. 77).—The activity of the missionaries augmented an already widespread and enthusiastic interest in the region. The English and American press teemed with publications on the subject of Oregon. American diplomacy from 1814-1846 insisted on the line of forty-nine degrees with unswerving tenacity. In 1826 President Adams even went so far as to declare that the line of forty-nine degrees to the coast, was "our ultimatum." To all that diplomatic and congressional action could do was now added the stimulus of an agrarian crisis in the Mississippi valley. Banking and transportation difficulties in 1837 and 1839 combined with superabundant crops to cause the bottom to fall out of the market. By 1842 conditions were extremely trying. Floods and sickness now followed, and in great distress the farmers sought new markets. The territory on the Pacific coast offered what the fertile Mississippi valley lacked—the advantages of position. All these factors entered into the great emigration movement which was to fill Oregon with American settlers and make the boundary question acute. In 1843 a huge caravan of about 875 Americans made the journey from the frontiers of Missouri.—Based on W. I. Marshall, *Acquisition of Oregon*, v. 1, ch. 6.—In 1845 3000 more "settlers of the same sort in their turn crossed the vast plains, wound their way among the Rocky Mountains, through the pass explored by Fremont, . . . and descended the western slope of the great water-shed to join their fellows by the banks of the Columbia. When American settlers were once in actual possession of the disputed territory, it became evident that the period of Great Britain's undisputed sway was over. . . . Tyler's administration did not wish to embroil itself with England; so it refused any aid to the settlers, and declined to give them grants of land, as under the joint occupancy treaty that would have

given England offense and cause for complaint. But . . . [Senator Thomas H. Benton of Missouri] and the other Westerners were perfectly willing to offend England, if by so doing they could help America to obtain Oregon, and were too rash and headstrong to count the cost of their actions. Accordingly, a bill was introduced providing for the settlement of Oregon, and giving each settler 640 acres, and additional land if he had a family. . . . It passed the Senate by a close vote, but failed in the House. . . . The unsuccessful attempts made by Benton and his supporters, to persuade the Senate to pass a resolution, requiring that notice of the termination of the joint occupancy treaty should forthwith be given, were certainly ill-advised. However, even Benton was not willing to go to the length to which certain Western men went, who insisted upon all or nothing. . . . He sympathized with the effort made by Calhoun while secretary of state to get the British to accept the line of 49° as the frontier; but the British government then rejected his proposition. In 1844 the Democrats made their campaign upon the issue of 'fifty-four forty or fight'; and Polk, when elected, felt obliged to insist upon this campaign boundary. To this, however, Great Britain naturally would not consent; it was, indeed, idle to expect her to do so, unless things should be kept as they were until a fairly large American population had grown up along the Pacific coast, and had thus put her in a position where she could hardly do anything else. Polk's administration was neither capable nor warlike, however well disposed to bluster; and the secretary of state, the timid, shifty, and selfish politician, Buchanan, naturally fond of facing both ways, was the last man to wish to force a quarrel on a high-spirited and determined antagonist like England. Accordingly, he made up his mind to back down and try for the line of 49°, as proposed by Calhoun, when in Tyler's cabinet; and the English, for all their affected indifference, had been so much impressed by the warlike demonstrations in the United States, that they in turn were delighted; . . . accordingly they withdrew their former pretensions to the Columbia River and accepted [June 15, 1846] the offered compromise."—T. Roosevelt, *Life of Thomas H. Benton*, pp. 283-288.

Benton, *Thirty years' view*, v. 2, ch. 143, 156-159.—*Treaties and conventions between United States and other countries*, p. 438.—J. W. Burgess, *Middle period*, pp. 313-316.—K. Coman, *Economic beginnings of the far West*, v. 2, ch. 1.—H. J. Kelly, *History of the settlement of Oregon*.—S. Parker, *Journal of an exploring tour beyond the Rocky mountains*.—J. Schafer, *History of the Pacific Northwest*, ch. 10 and 12.—L. B. Shippee, *Federal relations of Oregon* (*Quarterly of the Oregon Historical Society*, 1918).—J. W. Bashford, *Oregon missions*.

1840-1842.—Dr. Whitman's ride to save his mission.—Whitman controversy.—The result of the first few years of missionary endeavor were encouraging. But with the advent in 1838 of two zealous Roman Catholic priests, Father Francis N. Blanchet and Father Modest Deners, there arose a bitter contest for the spiritual control of the Indians which lasted for several years. The roving habits of the tribes and the decrease in the school attendance added to the trials of the missionaries and in 1842 the Board of Missions ordered that the stations among the Cayuses and Nez Percés be closed.—Based on S. V. Johnson, *Short history of Oregon*, pp. 206-211.—When this order was received Doc-

tor Whitman resolved to start at once for the East and, if possible, to save the situation. "He left Willatpu, October 3, 1842, on a journey that at that season would have daunted even a seasoned mountain man. . . . After a trip to New York and Washington, he proceeded to Boston, where he was received without cordiality by the American Board, who were inclined to censure him for having left his station without permission. [Nevertheless, the Board reversed its decision, and Dr. Whitman returned, joining the emigrant party of 1843 at Fort Hall, 600 miles from the Whitman mission.] . . . The true motive of Doctor Whitman's winter ride was long the subject of controversy, but the evidence is now regarded as complete that he undertook it to save the mission, and not, as has been assumed by some, for political reasons associated with extensions of the authority of the United States over the Oregon Country. He was successful in his purpose. . . . No circumstance in Oregon history has given rise to so much controversy or has been the subject of so much attention by historical writers as the Whitman controversy, but it has practically been set at rest by the publication of 'Marshall's Acquisition of Oregon,' in which the whole subject is minutely examined and the arguments of advocates of the theory that 'Whitman saved Oregon' are refuted, and the arguments of opponents of that theory are corrected and reinforced. . . . (See . . . Leslie W. Scott, in *The History of the Oregon Country*, Vol. I, pp. 223-238, 302-306.)"—C. H. Carey, *History of Oregon*, pp. 357-358.—Almost as important as Marshall's exhaustive study was Professor Bourne's article on the legend of Marcus Whitman, which proves that "Oregon was in no danger of being lost to the United States. The real danger was that the government would be pushed by the Oregon advocates in the West into an aggressive policy which might result in war with England. When the Linn Bill passed the Senate, February 3 [1843], by a vote of 24 to 22, providing for the extension of the laws of the United States over the whole of the Oregon territory, the erection of courts and the granting of lands to settlers, there was not the slightest danger of the Senate ratifying a treaty to alienate the territory. The appearance of a solitary missionary in Washington advocating what a majority of the Senate had already voted, and what state legislatures were demanding in resolutions was veritably a drop in the bucket, and of equal significance."—E. G. Bourne, *Legend of Marcus Whitman* (*American Historical Review*, Jan., 1901).

ALSO IN: J. W. Bashford, *Oregon missions*, ch. 14, 15.

1843-1848.—Problems of government.—Provisional government.—With the influx of settlers in 1843, the necessity for some kind of political organization arose. "Some were in favor of complete independence, while others wanted a provisional government that should last until that of the United States should be extended over the country. . . . The decision favored a provisional government, and a committee of nine was appointed to draft a plan to be submitted to the people at a meeting to be held at Champooick on the fifth of July, 1843. This committee is of great importance in the history of civil government in Oregon, because of the responsibility which rested upon it, and because of the excellence of its work. . . . In the drawing up of their organ of government they very wisely adopted the ordinance of 1787, making such changes as the peculiar local conditions rendered necessary. There was, first, a bill of rights. . . . There was also provision for the necessary

organs of government, a legislative branch, to consist of nine members, elected annually; an executive branch, to consist of a committee of three; and a judicial department, to consist of supreme and associate judges, a probate judge, and justice of the peace. . . . When the plan drawn up had been reported to the people, its provisions were readily passed."—J. R. Robertson, *Genesis of political authority and of a commonwealth government in Oregon* (*Quarterly of the Oregon Historical Society*, Mar., 1900).—"The scheme of government by executive committee was displeasing to the newcomers, many of whom preferred a governor as the chief executive officer of a state. So, too, the slavery issue was alive, and the guarantee of the Organic Act of 1843, with its inclusion of the provision of the Ordinance of 1787, was unsatisfactory to many."—C. H. Carey, *History of Oregon*, p. 380.—These new difficulties were settled in 1845. The organic law was amended and a compact for mutual protection was made with the Hudson's Bay Company. Slavery was prohibited forever. A house of representatives replaced the legislative committee and the executive committee was supplanted by a governor elected by the people. In 1848 Oregon became an organized territory.

1846-1855.—Establishing of territorial government.—Period of bitter political strife.—Attitude on the Kansas-Nebraska Bill.—"On June 15, 1846, the treaty with Great Britain was signed which secured to the United States the territory of Oregon lying south of the forty-ninth parallel of latitude. [It was not, however, until August 14, 1848, that the bill providing for the organization of Oregon as a territory became law, although the population after the arrivals of 1845 was estimated at 6000. The territory at that time covered about 202,000 square miles, comprising the present states of Oregon, Washington and Idaho, with about 28,000 square miles of Montana and about 13,000 square miles of Wyoming. This unexpected delay was caused by the opposition of the pro-slavery leaders in Congress to the anti-slavery clause in the Oregon provisional government.] . . . March 3, 1849, the territorial government was put into operation by a Democratic governor (General Joseph Lane) appointed by President Polk. . . . [Before long, however, the Whigs, who had obtained control of the national government in 1848, aroused bitter opposition in Oregon by removing well-liked Democratic officials and replacing them with Whigs from other states. Thereupon the Democrats went to work in earnest to perfect a party organization for the territory. A few men popularly called 'The Salem Clique' were soon recognized as leaders, and this group, dominated by the commanding personality of Asahel Bush, the editor of the Statesman,] gave to Oregon an arrogant and narrowly partisan rule. Rebellion in the ranks was not tolerated, and erring members were ruthlessly read out of the party. These domineering Democratic leaders also soon found it difficult to submit to the superior power of the national government. . . . The territorial delegate in Congress was requested to suggest that it would be well if the people of Oregon were granted the power of electing all their territorial officers. The suggestion, needless to say, was unheeded. In the meantime a violent and bitter struggle was in progress in the territory between the Whig Officials and the Democratic Legislature. The tension between the two parties soon became almost unbearable. Two

possible remedies appear to have suggested themselves to the Democratic leaders—statehood and independence. A movement for statehood was actually set on foot in 1851, and also in that year appeared the first accusation that the leaders of the Oregon Democracy designed at no distant day to throw off their allegiance to the United States government and attempt to set up an independent republic. If the danger existed, as seems probable, it passed away with the success of the Democrats in the presidential election of 1852. In 1854 'the most momentous measure that passed Congress from the day the Senators and Representatives first met until outbreak of the Civil War' was introduced in that body—the Kansas-Nebraska Bill. The storm raised by the passage of the bill was never to die away until slavery itself should be crushed. . . . The doctrine of Popular Sovereignty [therein] enunciated . . . was one that from its very nature appealed to the people of Oregon, with their virile Western confidence in the ability of the people of a locality to manage their own affairs, and yet in the beginning there seems to have been little unanimity of opinion with regard to the bill. Despite the dominance of the Democratic Party there were in Oregon great numbers of thinking people who opposed the further extension of slave territory, and viewed with alarm the aggressive attitude of the Southern Democrats who were dictating the policies of the national Democratic Party. In 1855 the first convention of Free-Soilers was held in Oregon, and the movement inaugurated which led to the formation of the Republican Party of Oregon. There appeared, too, a visible defection in the Democratic ranks, though this was due to local rather than to national disputes."—D. Hull, *Pacific coast republic (Quarterly of the Oregon Historical Society, Sept., 1916)*.

ALSO IN: C. H. Carey, *History of Oregon, ch. 32*.

1847-1848.—Whitman massacre.—Causes and results.—Effect of California gold discovery on conditions in Oregon.—"On the afternoon of November 29, 1847, Dr. Whitman and eleven others were massacred at his home by Cayuse Indians."—H. S. Lyman, *History of Oregon, v. 4, p. 43*.—"Fifty-three women and children were held captive, the women and girls being subjected to indescribable indignities, until they were ransomed by Peter Skene Ogden, factor of the Hudson's Bay Company at Fort Vancouver, who was notified of the massacre by the trader at Fort Walla Walla and who employed the artifices of frontier diplomacy and knowledge of Indian character supported by the traditional influence of the Hudson's Bay institution. The causes of the massacre were various. It is an interesting theory that one of these was the age-old practice of the Indians to exact the penalty of death of their 'medicine men' who did not succeed in effecting a cure. Measles and dysentery had been epidemic and there were sinister whisperings among the natives that disease had been introduced by the doctor as a means of exterminating them and acquiring their lands. Then, too, the meaning of the constantly increasing stream of immigration had not escaped the Indians, . . . who saw in the incoming tide of settlers only the doom of their race."—C. H. Carey, *History of Oregon, p. 362*.—As a result of the massacre, the missions were abandoned, and a war with the Cayuse Indians was precipitated, which continued intermittently until the spring of 1850. It was the first of Oregon's Indian wars. Meantime, in July, 1848, news reached Oregon that gold had been discovered in California. "After the first flush of excitement, in which about two-thirds

of the able-bodied men of the territory left hurriedly for the new El Dorado, thereby depleting the population to an extent which even the Indian war had not done, those who remained at home found opportunity to organize agricultural and industrial production on a new and better basis. By the spring of 1849 a large inflow of gold had created a circulating medium which gave life to commerce; markets had been established which promised a certain and profitable outlet for all that farmers and lumbermen could produce; flour mills and sawmills flourished whenever they could obtain hands to operate them. Whereas there had been a distinct feeling of depression throughout the region as the result of the over-population by the migrations culminating in 1847, this now gave way to the spirit of the optimism that high wages and advancing prices create. Debts were paid throughout the territory; new manufacturing enterprises were started; towns sprang up; the river was filled with vessels awaiting cargoes of supplies for the mines."—C. H. Carey, *History of Oregon, p. 505*.

1855-1856.—First broaching of plan to establish a Pacific republic.—Democratic support of the plan.—Whig opposition.—"Exposure" of the "plot."—Effect of the presidential election on plan.—"In July, 1855, an editorial headed 'Our Future,' appeared in the Standard (Democratic) suggesting the idea of the formation of an independent nation west of the Rockies as being in harmony with the designs of an all-wise Providence, by whom this natural boundary had been laid down. . . . In September of the same year the Statesman had some further information to give concerning the Revolutionary scheme. A letter from an anonymous correspondent in San Francisco, reprinted from an exchange, set forth details of the plan: . . . 'A new Republic is to be formed, consisting at first of ten states, three to be formed within the present limits of the State of California, three in Oregon Territory, two in Washington Territory, and two from western portions of Utah and New Mexico. The basis is to be a confederated government similar to yours on the Atlantic Side. The great Pacific Railroad is to be abandoned, and every obstacle thrown in the way of its construction, while the argument at the hustings is to be made to the people that the government at Washington has refused the road to the people of the Pacific. The question of slavery is to be adjured and disclaimed until the plan is so far executed that there can be no retraction, after which the southern four or five states will adopt slavery. . . . The President, Senate, Representatives, and Cabinet Ministry are all to be chosen by direct vote of the people. The naturalization laws are to be fixed on a severe basis. The act of independence is to be simultaneous with a well-planned and decisive seizure of the United States Reserves, with whatever of movables or livestock they may contain. The Sandwich Islands are to be guaranteed their independence and the United States are to be appealed to in a tone of friendly good-bye. . . . It is to be shown that we send our gold away, and receive no government protection in return, and that as we now virtually govern ourselves we might as well have the credit of it abroad. The conspirators will be startled when they see this letter in your columns, and will begin to leave the lead to find out their soundings.' If such a plan as this outlined by the unknown correspondent

existed, . . . the election of Buchanan was probably more responsible for the failure of the leaders to consummate the plan for a Pacific Coast Republic at this particular time, than was the untimely exposure of the plot by the press."—D. Hull, *Pacific coast republic (Quarterly of the Oregon Historical Society, Sept., 1916)*.

1856-1859.—Statehood and the slavery question.—Slavery question in Oregon.—Slavery in Oregon as issue in Federal congress.—Delay in Statehood Bill due to slavery question.—Granting of statehood.—Discrimination against "color" in state constitution.—The civil war in Kansas caused a rapid growth in Republican strength in Oregon. Furthermore statehood, which had been opposed from 1854-1856 as a Democratic scheme to obtain more offices, was carried in 1857 by a majority of 5938. Immediately the slavery issue arose and assumed dangerous proportions, but when the constitution was submitted to the people in 1857, the questions of slavery and of the admission of free negroes into the state were presented as separate issues, with the result that the constitution was adopted by a decisive majority. Only one-fourth of the voters supported slavery but free negroes were refused admission into the state. No sooner was this crisis safely past than the Dred Scott decision came to create dissension in the Democratic ranks. "The regular Democratic convention, meeting in March 1858 endorsed both the Kansas-Nebraska doctrine and the Dred Scott decision, in spite of the fact that Douglas, the author of the doctrine of popular sovereignty, had broken with the administration over the Dred Scott decision. The platform warmly endorsed Buchanan, however, so it may be understood that Douglas was to be abandoned. The National Democrats, in a separate convention, though endorsing President Buchanan, held to the rights of the people of the territories to frame and adopt their constitutions and all local laws for their own government. . . . In the meantime, the statehood bill had passed the Senate by a vote of practically two to one but was held up in the House of Representatives. When Congress adjourned without having acted on the measure, Senator Lane was accused of trying to put Oregon into the position of a state outside the Union. Viewing his actions in this light, very significant is the message sent by Governor Curry of Oregon, Lane's close friend, to the territorial legislature which assembled in December, 1858. After deploring the fact that Oregon had not been admitted as a state, he went on to show that the whole territorial system of the United States was unconstitutional. He said: 'It is wrong in principle. There is no provision of the Constitution which confers the right to acquire territory to be retained as territory, and governed by Congress with absolute authority. . . . In my judgment Congress has no constitutional authority to establish governments anywhere upon the public domain or to create and ordain any species of constitution or organic law for the government of any civil community anywhere within the boundary of the United States.' Such ideas enunciated at this critical time could not but arouse distrust. . . . The Statehood Bill was passed by the House, February 12, 1859, and on February 14 it became law. The bill had been regarded in Congress as a party issue, and the debate over it had been long and acrimonious. The Republicans opposed the admission of Oregon ostensibly because the territory lacked the necessary population, but really because, while Kansas with a greater population had been refused admission unless she would ac-

cept a pro-slavery constitution, Oregon with less population was to be admitted with a constitution prohibiting the entrance of free negroes into the state. They justly considered the distinction unfair. Then even more influential was the fact that a closely contested presidential election was at hand, and Oregon with her democratic delegation might cast the decisive vote. . . . The Statehood Bill would most certainly have failed of passage had it not been that fifteen republicans, inspired by Eli Thayer of Massachusetts, revolted against the party dictum and supported the admission of Oregon. As it was, the new state was admitted by a majority of 114 to 108."—D. Hull, *Pacific coast republic (Quarterly of the Oregon Historical Society, Sept., 1916)*.

ALSO IN: H. S. Lyman, *History of Oregon, v. 4*—G. H. Williams, *Political history of Oregon from 1853 to 1856 (Quarterly of the Oregon Historical Society, v. 2, pp. 1-35)*.

1859-1860.—Part played in nomination of Lincoln.—Oregon was admitted as a state in 1859, just in time to help nominate Lincoln. At the Republican convention of 1860, Horace Greeley, editor of the *New York Tribune*, acting as proxy for Leander Holmes, one of the six delegates from Oregon, "first favored the nomination of Bates, but subsequently exercised his great influence in directing the tide toward Lincoln on the memorable preliminary third ballot, when the choice of Lincoln was made practically certain by the casting of four of Oregon's five votes for him. . . . It is plain that the outcome of the convention was largely determined by Oregon, whose votes on the preliminary ballot gave Lincoln within one and one-half votes of the number required for a choice. On each of the first two ballots Oregon cast five votes for Bates; on the third preliminary ballot four were for Lincoln and one for Seward; and on the third formal ballot the five votes were for Lincoln, who was then nominated."—C. H. Carey, *History of Oregon, p. 638*.

ALSO IN: L. M. Scott, *Oregon's nomination of Lincoln (Quarterly of the Oregon Historical Society, 1910, pp. 201-214)*.

1859-1861.—Triumph of Union cause.—Growing strength of republicans.—Recurrence of Pacific republic plan.—Growing sentiment against secession.—"As dissensions among the Democrats increased the Republicans were growing stronger, and straining every effort to form a party organization strong enough to defeat the Democrats at the polls. . . . The elections of 1859 were pregnant with meaning. The machine Democrats were successful, but their candidate for Congressman was elected by a bare majority of 16 votes, and their majorities everywhere were dangerously cut down. Undoubtedly many of the Douglas Democrats had cast their votes for Republican candidates. This was a grim presage of the end. . . . [At the national Democratic convention held at Charleston, April 23, 1860, the northern Democrats succeeded in having a Douglas platform adopted and the southerners withdrew. Thereupon Lane who had not attended the convention, telegraphed the Oregon delegation to withdraw also. The two factions held separate conventions at Baltimore and at Richmond in June.] At the Seceder's convention which met in Baltimore, Breckinridge was nominated for President and Lane for Vice-President. . . . The news of Lane's instructions to the Oregon delegation and the report of the doings of the Seceder's convention aroused a storm of indignation among the Douglas Democrats of Oregon. . . . Again was revived the rumor

of a projected Pacific Republic. The *Statesman* of July 17, 1860, under the head of 'The Lane and Gwin Conspiracy' said: 'It is openly charged by Washington correspondents that Gwin (Senator from California) and Lane have entered into a conspiracy with Southern Congressmen to break up the Democratic organization as a preliminary step to breaking up the Union, out of which three republics are to be formed.' . . . In December, 1860, fairly complete details of the plan were given. The Pacific Republic was to be an aristocracy after the model of the ancient republic of Venice, all the power being vested in an hereditary nobility, the chief executive being elected on a very limited suffrage. Slaves were to be procured by inviting coolies, South Sea Islanders, and negroes to immigrate to California, and then reducing them to slavery. Gwin, it appeared, favored a separate republic on the Pacific Coast because he feared that the aggressive policy of the southern leaders would be likely to involve the other states in continual difficulties. While the details of the plan might excite suspicion as the elaborations of a journalistic imagination, the truth of the main outline appears to have been fairly well substantiated. In commenting on the plan Bush of the *Statesman* said in part: 'Now we rejoice in the pride of our strength—the strength of a great and powerful nation. Sundered from our parent states our pitiable weakness would render us a by-word and a reproach among neighboring nations. With Mexico upon one side, British Columbia on the other, a defenseless sea-coast in front, and a horde of hostile savages and marauding Mormons in the rear, and unable to protect ourselves on any side, we could only preserve our existence by forming an alliance with some powerful government which could afford us protection at the price of our liberty.' . . . On the sixth of November, 1860, the presidential vote was cast, and by the ninth it was known not only that Lincoln was elected, but that the Republicans had carried Oregon. There followed shortly after the news of the secession of South Carolina, and early in 1861 of five other states. At first, in Oregon as in many other northern states was heard the cry, 'Let the erring sisters depart in peace,' but later a more war-like tone developed among Republicans and Douglas Democrats. The Radical Democratic press, however, warmly supported the seceders. Lane of course openly stood with the Secessionists. . . . As the War went on, the various disunion papers edited in Oregon, one by one laid themselves open to prosecution and were suppressed. While in parts of the state men at first went to the elections armed, least the pro-slavery party should attempt to re-enact the scenes of the Kansas-Nebraska strife, as they threatened to do, the sense of danger gradually passed away, and a sense of security returned."—D. Hull, *Pacific coast republic (Quarterly of the Oregon Historical Society, Sept., 1916)*.

1861-1878.—Rôle in the Civil War.—Indian Wars.—"Oregon's principal share in the Civil war consisted in protecting the frontier against marauding Indians and the interior from rebel sympathizers, while the troops of other states were engaged in more conspicuous and apparently more glorious, but no more essential or arduous, service on the actual field of combat."—C. H. Carey, *History of Oregon, p. 658*.—In 1863 the Pacific republic movement again caused uneasiness, this time through the activities of a secret organization called the Knights of the Golden Circle. These secessionist sympathizers became menacing in 1864

between the dates of the Wilderness campaign and Sherman's march to the sea, the darkest hour of the Union cause. The greatest danger however came from the Indians of southern and eastern Oregon, who harassed the settlers continually. In order to insure adequate protection for the settlers, reservations were provided for the Indians, but they refused to go to them. They were subdued only after three wars had been fought. These were the Shoshone War (1866-1868), the Modoc War (1864-1873), and Joseph's War (1877). This war against the lower Nez Percés Indians under their famous chieftain Joseph was the last of the Indian wars of the Pacific coast.

1870-1887.—Railroad building.—"In 1870 there were one hundred and fifty-nine miles of railroad in the state. Very soon thereafter the California and Oregon Railway operated a line northward from San Francisco, while the Oregon and California Railway extended its road from Portland southerly almost to the California line [and connected the two termini by] a regular stage line over the Siskiyou mountains, . . . thus accomplishing through passenger traffic. When the last spike was driven on the Northern Pacific Railway in 1883, Oregon had direct trans-continental rail connection with the East. This was speedily followed by the completion of a second direct line, the Union Pacific Railway, in 1884; and in 1887 rail connection between San Francisco and Portland was completed. Today the Pacific Northwest is served by five trans-continental railways."—S. V. Johnson, *Short history of Oregon, pp. 308-309*.

ALSO IN: C. H. Carey, *History of Oregon, ch. 37*.
1872.—Final settlement of boundary question.—The last chapter of the Oregon boundary dispute was not written until Oct. 21, 1872, when the San Juan water boundary controversy was settled by arbitration (see SAN JUAN or NORTH-WESTERN WATER BOUNDARY). George Bancroft, United States minister to Germany at that time, wrote of it that, "after an unrelenting strife of ninety years, the award of His Majesty, the Emperor of Germany, closes the long and unintermitted and often very dangerous series of disputes on the extent of their respective territories, and so for the first time in their history opens to the two countries the unobstructed way to agreement, good understanding, and peace."—C. H. Carey, *History of Oregon, p. 496*.

1873.—Modoc War. See U. S. A.: 1866-1876.
1876-1898.—"Free silver" and national policies.—Tariff and Mongolian immigration.—Party platforms on the question of silver.—Subsidence of "free silver" enthusiasm.—Imminence of war with Spain.—From 1876-1898 the state platforms of the republican party advocated a protective tariff and a uniform currency founded on a gold basis. The democrats called for a tariff for revenue only, restriction of Mongolian immigration, repeal of the Resumption Act and of the National Bank Act, and direct issue of currency by the government. Both parties in 1876 demanded a return to specie payments and favored governmental assistance in railroad expansion. In 1884 the two parties followed the national platforms respectively, and both favored forfeiture of all unearned land grants. "In 1886 Binger Hermann was re-elected to congress over N. H.

Butler on a republican platform saying, among other things, 'We believe that the coin of the country should be gold and silver, and that our paper currency should be maintained and convertible thereto at par, and we favor such legislation as shall in the future maintain the use of both metals as a circulating medium, and we favor international arbitration with a view to determine and establish a uniform ratio between gold and silver.' The democratic state platform was silent on the money question, and otherwise both platforms followed the usual national lines. . . . [In 1888] the republican platform dealt largely in criticism of the tariff policy of the national democratic administration, favored protection, opposed Chinese immigration and found fault generally with President Cleveland's administration. The democratic platform, on the contrary, indorsed Cleveland and his policy, and in other matters demanded forfeiture of railroad grants and opposed Mongolian immigration. . . . [In 1890] the republican state platform favored the enactment of the Australian ballot [adopted the following year], a protective tariff, the forfeiture of the railroad land grant from Wallula to Portland, the restriction of Chinese immigration, internal improvement, an eight-hour law, and denounced trusts. . . . [It declared in favor of the free and unlimited coinage of silver. The democratic state platform likewise declared for free coinage of silver.] In 1892 the republican platform followed the usual lines, and on money matters indorsed the Sherman act. . . . It favored a boat railway at the Dalles and the election of senators by direct vote of the people, the construction of ample defense of our coast and the building of an efficient navy. The democratic platform endorsed the national platform of 1884-1888, and the administration of Cleveland, condemned the billion-dollar congress, denounced the McKinley tariff and demanded tariff reform. . . . [In 1894 the republican platform] adopted the statement of the national republican platform of 1882 favoring bimetalism and the parity of the two metals, and all dollars, paper or coin. It also favored the Nicaragua Canal and restricted foreign immigration. The democratic state platform resolved for income tax, the Nicaragua Canal, liberal pensions, election of senators by the people, and opposed Chinese and pauper immigration, the federal election law, and all measures discriminating against silver. It demanded free coinage 'to supply the demands of business,' and that all money be made a full legal tender."—W. C. George, *Political history of Oregon from 1876 to 1898* (*Quarterly of the Oregon Historical Society*, June, 1902).—In 1897, when Senator Mitchell's second term expired, a conflict of opinion arose between the state and national republican organizations on the currency issue. The state platform declared for bimetalism, whereas the national platform demanded the gold standard. In consequence of this disagreement, the state was represented by only one senator, Mr. McBride, until the election of Joseph Simon, of Portland, which took place at a special session of the Legislature in October, 1898.—Based on C. H. Carey, *History of Oregon*, p. 830-831.—In 1898 the question of the free and unlimited coinage of silver at the ratio of sixteen to one was the practical issue, and the Democrats and the People's party men (except the middle-of-the-roads—i.e., the populists) along with free silver Republicans, united on a state ticket. The fusion ticket was defeated, however, by the anti-free silver Republicans.

1898-1899.—Part played in the Spanish-American War.—The event which overshadowed all others in the administration of Governor Lord was the Spanish-American War followed by the Philippine insurrection. On the first call to arms, April 25, 1898, the state was allotted only one regiment and the entire National Guard was therefore consolidated into one regiment, called the Second Oregon. It was chosen immediately as one of the commands to constitute the first army of occupation of the Philippines. The entire Oregon regiment aided in putting down a Filipino uprising in Manila in February, 1899, and received an official compliment for highly meritorious service. From this date the Oregonians were constantly engaged. Their total casualties were sixty-seven dead and eighty-seven wounded. Seven received medals of honor for distinguished service.—Based on C. H. Carey, *History of Oregon*, pp. 823-833.

1902-1915.—Social legislation.—"Oregon system."—Initiative and referendum.—Direct primaries.—Labor laws.—"In governmental changes Oregon is the leader. Her priority in large governmental adaptation has given rise to the term, the Oregon system. And by the Oregon system is meant such a body of laws as the initiative and referendum, the direct primary, the direct election of senators, the recall, the corrupt practices act and the presidential preference primary. Associated with these are woman suffrage, home rule for cities and a constitutional amendment making it possible to adopt proportional representation."—W. F. Ogburn, *Social legislation on the Pacific coast* (*Popular Science Monthly*, Mar., 1915).—"Since the adoption of the initiative and referendum constitutional amendment in 1902, a total of ninety-eight proposed constitutional amendments and one hundred and fifteen measures have been passed upon by the people. . . . Forty-three of the ninety-eight constitutional amendments were approved by the electors of the state and fifty-five were rejected. . . . Only forty-six of the one hundred and fifteen measures were approved by the voters, the other sixty-nine being rejected. . . . The most frequent resort to the initiative was that of the advocates of single tax. Aside from three local attempts to introduce this radical change in taxation in as many counties, all of which were unsuccessful, the voters of the state have been called upon at five general elections between 1908 and 1920 to pass upon single tax as a state-wide issue in one form or another. . . . Equal suffrage was submitted at four successive biennial elections before women finally [1912] received the constitutional right to vote in this state. . . . This method of legislation has been used upon various other important measures submitted to the people in the same manner, including local option and prohibition, direct primary [1904], extending initiative and referendum to all local, special, and municipal laws, recall of public officials [adopted 1908], corrupt practices act, permitting three-fourths jury verdict in civil cases, establishing state normal school, providing for popular expression of choice for President and Vice President, requiring voters to be citizens of the United States, empowering the governor to veto single items or emergency clauses, fixing a maximum limit on state and county bonded indebtedness, enacting soldiers' bonus and educational aid bills, and providing for women jurors. . . . The initiative has . . . frequently been used as a means of adopting city ordinances, and of amending city charters, particularly at Portland."—C. H. Carey, *History of Ore-*

gon, pp. 846, 849-851.—Of recent labor legislation for women, the minimum wage laws have aroused the greatest interest. "In 1913, the Oregon Legislature passed a minimum-wage law. . . . [In accordance with its provisions, an industrial welfare commission was established in 1913 which fixed a minimum weekly wage for experienced women workers in manufacturing and laundry establishments at \$8.64 and in mercantile and other occupations at \$9.25.]"—W. F. Ogburn, *Social legislation on the Pacific coast* (*Popular Science Monthly*, Mar., 1915).

ALSO IN: W. F. Ogburn, *Direct legislation in Oregon* (*Quarterly Publications of the American Statistical Association*, June, 1914).—A. H. Eaton, *Oregon system*.—J. Shafer, *History of the Pacific Northwest*, pp. 303 ff.

1905.—Lewis and Clark exposition in Portland. See PORTLAND, OREGON: 1905.

1908-1914.—Single tax movement.—Its fate in successive elections.—"When, in 1909, the Joseph Fels Fund to promote the single tax movement in the United States was established, the most promising opportunity confronting its managers was in the state of Oregon. In the election of 1908 a state-wide single tax measure has received thirty-four and one-half percent of the vote upon it, while in Multnomah County, which contains the city of Portland, it had failed of passage by only a few hundred votes. . . . The [campaign made by] the Joseph Fels Fund Commission in Oregon constitutes the most elaborately planned effort which single taxers have made. On January 28th, 1908, the single taxers filed with the Secretary of the State of Oregon an initiative petition proposing a constitutional amendment to be voted upon at the election in June. The proposed amendment was . . . peculiar in that it did not, like most of the single tax proposals, provide in general terms for the exemption of personal property and improvements. The list of objects to be exempted from taxation discriminated in a manner hardly consistent with the single tax philosophy in not providing for the exemption of intangible personalty and of the improvements and fixtures of business other than manufactures. The single taxers in this campaign placed considerable emphasis upon the desirability of attracting manufactures to Oregon through tax exemption. . . . Working under the name of 'the Oregon Tax Reform Association,' [they] waged a straight single tax campaign. The result of the ballot was the defeat of the measure, 32,066 to 60,871. But in Multnomah County the single tax was defeated by only 483 votes. . . . In 1908 the single taxers had advocated their measure as 'a step in the direction of the single tax.' But in 1910 their tactics were less direct. The argument in the voters' pamphlet made no reference to the single tax, and was submitted, not by a single tax organization, but by the Oregon State Federation of Labor and the Central Labor Council of Portland and vicinity. . . . [The real end of the measure was understood to be the adoption of the single tax, piecemeal, by the several counties, and the vote on the amendment was close—44,171 for it, and 42,127 against. In 1912 the single tax was the leading state issue.] . . . Taking advantage of the local option amendment of 1910 [they] submitted measures exempting personal property and improvements from taxation in three counties—Clackamas, Coos, and Multnomah, the latter containing the city of Portland. They also submitted a state-wide measure, commonly known as the 'Graduated Single Tax and Exemption Amendment.' . . . [which departed] from

the accepted single tax theory in admitting progressive taxation. The scale was elaborately worked out. The amendment provided for a graduated tax, in addition to taxes levied at the ordinary rate, on individual or corporation holdings of land or franchises within each county of value in excess of \$10,000. The rate rose from \$2.50 per \$1,000 on holdings valued at from \$10,000 to \$20,000 till it reached \$30 per \$1,000 on holdings valued at more than \$100,000, a maximum rate of three per cent, which, added to the regular tax rate, would have confiscated practically the entire value of holdings to which it applied. Section (i) established the single tax 'limited' throughout the state, but permitted the taxation of personal property and improvements by counties which should thereafter specially vote to tax them. Section (g) was aimed at the State Tax Commission, which has vigorously fought the single taxers; it abolished the offices of the two appointive members. . . . The election returns showed that the 'Graduated Single Tax and Exemption Amendment' was lost [by a vote of] 31,534 to 82,015. . . . In 1914 the single taxers submitted two amendments. One proposed 'to exempt up to \$1,500 all kinds of personal property and land improvements of all kinds,' but not land. This amendment contained a clause directing the Secretary of State to re-submit the measure, if adopted in 1914, at the regular elections of 1916 and 1918, an unfavorable vote at either of these elections to repeal it. The other proposed a graduated sur-tax on owners of 'land and natural resources and interests therein' of value greater than \$25,000. Both amendments were defeated [by a vote of] more than two to one. . . . The Legislative Tax Committee continued its efforts to secure the classification of objects of taxation and the separation of sources of state and local revenue by submitting two amendments. Both were beaten by majorities as big as those rolled up against the single tax amendments."—N. Young, *Single tax movement in the United States*, pp. 168-171, 174-175, 180-181.

ALSO IN: C. V. Galloway, *Taxation developments in Oregon* (*Proceedings of the National Tax Association*, 1911, p. 245 ff.).—F. G. Young, *Single tax movement in Oregon* (*American Economic Review*, Sept., 1911, pp. 643-648).—A. H. Eaton, *Oregon system*, pp. 22, 32-37, 134 ff.—J. H. Gilbert, *Single tax movement in Oregon* (*Political Science Quarterly*, 1916, pp. 25-53).

1911-1917.—Social legislation.—Economic legislation.—Between 1911 and 1917 the efforts of Oregon toward social legislation were continued. In 1911 a law was passed making the white slave traffic a felony; and a parole board was created to have oversight of the administration of parole of prisoners. In 1913 an act of the legislature provided for an eight-hour day for laborers on public works. In 1915 capital punishment was abolished, but was restored after an experience of six years. In 1917 Parental schools were established to be used for children who were unruly in temper or were continuously absent from school. The economic problems of the state also inspired some remedial legislation. In 1911 a state-banking department was created. In 1915, the constitution was amended in order to provide for a system of rural credits, and to enable the governor to veto single items in appropriation bills. In 1915, also, the Supreme Court gave a ruling on the forfeiture of land held by the Oregon and California Railroad. The case arose from a decision of the District court which declared a large amount

of land forfeited because it had not been sold to bona fide settlers as the law required. The decision stopped further sales but refused to demand forfeiture.

1916.—**Suffrage granted to women.** See SUFFRAGE, WOMAN: United States: 1851-1920.

1916 (July).—**Columbia River highway.**—"On the 7th of this month [July, 1916], Multnomah County, Oregon, of which Portland is the chief city . . . [dedicated] to the public one of the most beautiful highways in the world—a paved boulevard forty-two miles long through the gorge of the Columbia River connecting with other roads east and west, which make altogether, a highway more than two hundred miles in length, from the eastern side of the Cascade Mountains to the Pacific Ocean."—*New Columbia highway (World's Work 1916, pp. 202-203)*.

1917.—**Referendum and repeal of Sunday observance law.** See SUNDAY OBSERVANCES: United States.

1918.—**Part played in the World War.**—The state furnished 30,116 soldiers or .8 per cent of the whole force. The Forty-first or "Sunset" Division of the United States army on its arrival at Camp Greene, North Carolina, originally consisted entirely of Oregon regiments and when enlarged and reconstructed late in 1917, remained largely Oregonian. The division participated in no battles as a unit, but was represented on every sector of the western front. Oregon won further distinction by its achievements in shipbuilding and aircraft production.

1920.—**Workmen's compensation.** See SOCIAL INSURANCE: Details for various countries: United States: 1920.

1920.—**Census.**—The population of Oregon increased from 672,765 in 1910 to 783,389 in 1920, inclusive of 4,500 Indians, 2,144 Negroes, 3,000 Chinese and 4,151 Japanese. "The proportion of the population of Oregon living in places of 2,500 or more increased from 32.2 per cent in 1900 to 45.6 per cent in 1910 and to 40.9 per cent in 1920."—*United States Census Bulletin, 1920.*—Almost one-third of the people live in the city of Portland, which had in 1920 a population of 258,288. Salem, the capital, has 17,097; Astoria, 14,027; and Eugene, 10,593.

1921-1923.—**New legislation.—School law.**—Operation of minimum wage law.—"In 1921 Oregon created a water power commission for the specific purpose of cooperating with the federal power commission . . . and authorized a joint legislative commission to investigate existing conditions of accounting in the state; the benefits to be derived from adopting a uniform accounting system; and the advisability of putting the state accounting system in the hands of an elected state auditor. . . . [In the same year] Oregon provided a commission on taxation and for investigation of methods of taxation to provide more equitable distribution and to afford adequate revenues to the state."—*American Political Science Review, Nov., 1922, pp. 649, 656.*—"By a vote of approximately 115,000 to 101,000 the people of Oregon on November 7th last [1922] passed an initiative amendment to the Oregon compulsory school law, whereby, after September 1, 1926, all children in the state of Oregon, between the ages of eight and sixteen, must attend the public schools for the period during which they are in session. Some minor exceptions are provided in case of physical disabilities, of distance from school, and of individual private instruction."—E. V. O'Hara (*Catholic World, Jan., 1923, p. 482*).—"This measure, which was interpreted as having for its purpose

the abolishment of private and parochial schools, was vigorously discussed during the campaign. More than two hundred Oregon lawyers are said to have joined in a written opinion that the bill is unconstitutional, and it is understood that the question will be carried to the Supreme Court of the United States."—*School and Society, Nov. 18, 1922, p. 575-576.*—In 1923 the minimum wage law had been in effect ten years. In 1919, when the cost of living had increased by seventy-two per cent, Oregon revised its earliest rulings and adopted a rate of \$13.20 a week, which still obtained in May, 1923. "The results of the wage law in Oregon were largely to prevent wage controversies in women's occupations by bringing employers and employees face to face at the conference table. It entirely falsified the expectations of its opponents that it would result in having men take women's places, in bringing down the better paid to the minimum, or in injuring business. It destroyed the advantage which unscrupulous employers, willing to cut wages below the subsistence level, had enjoyed over their more decent competitors. Finally, it gave women workers a solid footing in their wage bargaining, by fixing in the law and in the conscience of the State the principle that any industry is a parasite on society which offers its workers less than enough to maintain them in frugal and decent comfort."—E. V. O'Hara, *Oregon law (Catholic World, May, 1923, p. 210)*.

ORIFLAMME.—"The Oriflamme was originally the Banner of the Abbey of St. Denis, and was received by the Counts of the Vexin, as 'Avoués' of that Monastery, whenever they engaged in any military expedition. On the union of the Vexin with the Crown effected by Philip I., a similar connexion with the Abbey was supposed to be contracted by the Kings; and accordingly Louis the Fat received the Banner, with the customary solemnities, on his knees, bare-headed, and ungirt. The Banner was a square Gonfalon of flame-coloured silk, unblazoned, with the lower edge cut into three swallow-tails."—E. Smedley, *History of France*, pt. 1, ch. 3, footnote.—"The Oriflamme was a flame-red banner of silk; three-pointed on its lower side, and tipped with green. It was fastened to a gilt spear."—G. W. Kitchin, *History of France*, v. 1, bk. 3, ch. 5, footnote.—See also FLAGS: France.

ORIK, or **Orrique,** Battle of (1140). See PORTUGAL: 1095-1325.

ORINOCO STEAMSHIP COMPANY CASE.—"The parties to this case were the United States of America and the United States of Venezuela, and the issue was the revisability of an award previously [1904] rendered by an international commission. . . . By a protocol of February 17, 1903, the United States and Venezuela agreed to refer to a mixed commission for determination 'all claims owned by citizens of the United States of America.' . . . Among the claims submitted to the commission was that of the Orinoco Steamship Company, a New Jersey corporation, which had taken over all the rights and liabilities of the Orinoco Shipping and Trading Company, the shareholders of which had almost all been American citizens, though the company itself had been under nominal British registry. . . . [Ownership of the Oleachea contract of 1891 and the Grell contract of 1894 gave the company practically exclusive navigation and trade privileges on the Orinoco river. In 1900 the Orinoco Shipping and Trading Company] began to press the Venezuelan Government for payment of claims arising out of civil war and otherwise, with the result that on May 10 the government agreed to extend the Grell contract six years, and the company agreed, in full discharge of all indebtedness, to accept a payment of 100,000 bolivars down and a similar payment to be made at a later date. [The government broke its contract, and when in 1902 the company was reorganized as the Orinoco Steamship Company, hostility on the part of the

Venezuela government forced it to sell out at a great sacrifice. Failing a decision by the commission, the claim was referred to the umpire, Dr. Barge, of the Netherlands, who in 1904 awarded only \$28,224.03 of a claim amounting to over \$1,400,000. The United States protested and on October 25, 1910, the Permanent Court of Arbitration set aside the award of 1904 on the ground of failure to conform with the terms of the defining protocol.] . . . In all, the total amount awarded by the tribunal, inclusive of interest, was over \$64,000 in excess of the Barge award."—E. C. Stowell and H. F. Munro, *International cases*, v. 1, pp. 89, 90-91, 95.

ORISKANY, Battle of. See U.S.A.: 1777 (July-October).

ORISSA.—"The Palestine of India is found in Orissa. . . . Dr. William Wilson Hunter speaks of it as a province of about the same extent and population as the Scotland of his own day, and this defines the Holy Land of the Hindus strictly speaking. This territory is contained in Orissa, but Orissa, as descriptive of the whole area inhabited by the people who speak the Uriya language, is a larger country. The dimensions of the wider area embrace sixty thousand square miles, occupied by not less than eight millions of people, allocated for Government purposes (such at least was the case in the days of which we write) chiefly to Bengal, but also in part to Madras in the south, and to the Central Provinces in the west. Albeit the poorest of the provinces of India and, in some respects, the most backward, the fame of it has spread to the uttermost part of the country, and beyond to other lands. . . . 'Of all the regions of the earth,' says one of their number in explaining the various places of pilgrimage to his pupils, 'India is the noblest, and of all the countries of India, Utkala boasts the highest renown. From end to end it is one vast region of pilgrimage. Its happy inhabitants live secure of a reception into the world of spirits; and even those who visit and bathe in its sacred rivers obtain remission of their sins, though they may weigh like mountains.' Who shall estimate the soul's gain from a sojourn in such a land? But what need for enlarging on the praises of a realm in which the gods themselves love to dwell?' This might be dismissed as the dream of a harmless old visionary, but . . . Hunter's testimony is not less striking. 'There is not a fiscal division of Orissa,' he declares, 'without its community of cenobites, scarcely a village without fertile abbey lands, and not a single ancient family which has not devoted its best acres to the gods. Hundreds of monasteries dot the province, and enjoy an aggregate rent-roll of £50,000 a year. Every town is filled with temples, and every hamlet has its shrine. This lavish devotion extends into the hill country. . . . Even foreigners feel that they are treading on hallowed ground, and the villagers still tell how the image-breaking Mussulmans retired abashed before the sanctity of Orissa.'"—R. L. Lacey, *Holy land of the Hindus*, pp. 1-3.

ORKNEY ISLANDS, a group of about seventy islands, north of the mainland of Scotland, with an area of 376.3 square miles and a population, in 1922, of 24,500. All of the islands, except two or three, have Norse names. They constitute a county of Scotland and are divided into eighteen parishes. Their county town is Kirkwall (Kirkju-

vagr), founded by Jarl Ragnvald. Their only other principal town is Stromness, which has a fine harbor. Together with the Shetland island the Orkneys send one representative to Parliament. At the death of John Jarl in 1231 the direct line of the Norse jarls became extinct, but the Orkneys continued to be a dependency of Norway until 1471, when they were ceded to Scotland by their last jarl, William Sinclair. When the Orkneys came under Scotch rule Scotchmen came over to the islands. A good many of them secured large estates and finally became a landed aristocracy, oppressing the original Norse settlers with heavy taxes. This engendered a hostile feeling between the Scotch and Norse elements, which augmented when the Scotch law was substituted for the old Norse law of St. Olav. Remains from the Norse period are still to be found in the islands. The Magnus cathedral (1137-1156) in Kirkwall is a magnificent structure, the finest building of the islands. The people of the Orkneys have retained their Norse character to the present time, and refuse to be called Scotch. The freeholders are still called "udallers" (i.e., oldesmaend). They are great sailors and fishermen. The Norse language disappeared during the eighteenth century and English took its place. However, many words and idioms have survived, and the memory of the Norse era is greatly loved.—See also NORMANS: 8th-9th centuries; Island empire, etc.; 10th-13th centuries.

ORLEANS, Philip II, Duke of (1674-1723), regent of France. See FRANCE: 1715-1723; 1717-1719; 1717-1720; 1723-1774.

ORLEANS, city of north central France, on the right bank of the Loire river, seventy-seven miles from Paris. Its population in 1921 was 60,048.

Origin and name.—"The Loire, flowing first northwards, then westwards, protects, by its broad sickle of waters, this portion of Gaul, and the Loire itself is commanded at its most northerly point by that city which, known in Caesar's day as Genabum, had taken the name Aurelianum from the great Emperor, the conqueror of Zenobia, and is now called Orléans."—T. Hodgkin, *Italy and her invaders*, v. 2, bk. 2, ch. 3.—See also GENABUM.

Early history. See GAUL: B. C. 58-51.

451.—Siege by Attila. See HUNS: 451.

511-752.—Merovingian capital. See FRANKS: 511-752.

1429.—Deliverance by Joan of Arc.—In the summer of 1428 the English, under the duke of Bedford, having maintained and extended the conquests of Henry V, were masters of nearly the whole of France north of the Loire. The city of Orléans, however, on the north bank of that river, was still held by the French, and its reduction was determined upon. The siege began in October, and after some months of vigorous operations there seemed to be no doubt that the hard-pressed city must succumb. It was then that Joan of Arc, known afterwards as the maid of Orléans, appeared, and by the confidence she inspired drove the English from the field. They raised the siege on

the 12th of May, 1429, and lost ground in France from that day.—Based on Monstrelet, *Chronicles*, bk. 2, ch. 52-60.—See also FRANCE: 1429-1431.

OSAKA, imperial city and important railway center in Japan, on the banks of the Yodo river in the island of Hondo. (See JAPAN: Map.) The census of 1920 gives its population as 1,252,083. It has been called the Venice of the East because of its 1,300 bridges that span the Yodo and the numerous canals. In 1495-1496 Rennie Shonin of the Shin-Shu sect built a temple on the site of the present castle. In 1583 Hideyoshi made Osaka his capital and erected a beautiful palace here, which was burned by Tokugawa retainers in the civil war of 1668. The same year the city was opened to foreign residents and foreign trade. In 1871 a government mint was established here under foreign superintendence. A large part of the city was destroyed by fire in August, 1900. At present the city is the headquarters of the Osaka military district.

OSORIO, Manuel (1770-1830), Spanish general. Commanded the Spanish forces in Chile, 1814-1816. See CHILE: 1810-1818.

OSRHOËNE, or Osroëne, small principality or petty kingdom surrounding the city of Edessa, its capital, in northwestern Mesopotamia. It appears to have acquired its name and some little importance during the period of Parthian supremacy. It was a prince of Osrhoëne who betrayed the ill-fated army of Crassus to the Parthians at Carrhæ. In the reign of Carcalla Osrhoëne was made a Roman province. Edessa, the capital, claimed great antiquity, but is believed to have been really founded by Seleucus. During the first ten or eleven centuries of the Christian era Edessa was a city of superior importance in the eastern world, under dependent kings or princes of its own. It was especially noted for its schools of theology.—Based on G. Rawlinson, *Sixth great oriental monarchy, ch. 11*.

OSSIANIC CYCLE. See CELTS: Ancient Irish sagas.

OSTEND, seaport and fashionable resort of Belgium, on the North sea. As a commercial port it ranks after Antwerp. It is the headquarters of the Belgian fishing fleet and is noted for its traffic in hares. Its population in 1922 was 48,073. See NETHERLANDS: Map.

1602-1604.—Siege and capture by Spaniards. See NETHERLANDS: 1594-1609.

1706.—Besieged and reduced by the Allies. See NETHERLANDS: 1706-1707.

1722-1731.—India Company chartered and abolished. See SPAIN: 1713-1725; 1726-1731.

1745.—Taken by the French. See BELGIUM: 1745.

1865-1910.—Fortress demolished.—Growth of town.—The last of the ramparts were razed in 1865, and a new town arose. At the end of the nineteenth century extensive improvements of the city and harbor facilities were inaugurated which made Ostend the second port of Belgium. In 1860 tonnage at the port amounted to 129,151. By 1900 it rose to 2,169,823, and by 1910 to 2,190,894.

1914-1919.—Effect of World War.—During nearly the whole of the World War, Ostend was held by the Germans, who erected sea defenses, constructed a submarine base and emplaced powerful guns. On May 10, 1918, the British in a daring raid sunk ships in the harbor entrance, partly blocking it. On October 17, 1918, the Belgian troops entered Ostend. During the next year, the latest for which statistics of the commerce of Ostend are available, only 1,005 ships, representing a tonnage of 390,960, cleared the port, which was still suffering from the effects of the blocking of the harbor.—See also WORLD WAR: 1914: I. Western front: e; f; 1918: II. Western front: r, 2; m; VIII. Aviation; IX. Naval operations: a; BELGIUM: 1918.

OSTERLINGS, eastern cities. See HANSA TOWNS.

OSTERREICH. See AUSTRIA.

OSTIA.—Ostia, the ancient port of Rome, at the mouth of the Tiber, was regarded as a suburb of the city and had no independent existence. Its inhabitants were Roman citizens. In time, the maintaining of a harbor at Ostia was found to be impracticable, owing to deposits of silt from the Tiber, and artificial harbors were constructed by the emperors Claudius, Nero and Trajan, about two miles to the north of Ostia. They were known by the names Portus Augusti and Portus Trajani. In the twelfth century the port and channel of Ostia were partially restored, for a time, but only to be abandoned again. The ancient city is now represented by a small hamlet, about two miles from the seashore.—Based on R. Burn, *Rome and the Campagna*, ch. 14.

OSTIAKS, eastern branch of the Finnish race in the southern part of the Ural mountains. See HUNGARY: Origin of Hungarians.

OSTMEN. See NORMANS: 10th-13th centuries.

OSTRACH, Battle of (1799). See FRANCE: 1708-1709 August-April).

OSTRACISM.—"The state [Athens] required means of legally removing persons who, by an excess of influence and adherents, virtually put an end to the equality among the citizens established by law, and thus threatened the state with a revival of party-rule. For this purpose, in the days of Cleisthenes, and probably under his influence, the institution of ostracism, or judgment by potsherds, was established. By virtue of it the people were themselves to protect civic equality, and by a public vote remove from among them whoever seemed dangerous to them. For such a sentence, however, besides a public preliminary discussion, the unanimous vote of six thousand citizens was required. The honour and property of the exile remained untouched, and the banishment itself was only pronounced for a term of ten years."—E. Curtius, *History of Greece*, v. 2, bk. 2, ch. 2.—"The primary

motive for its introduction at Athens [by Cleisthenes (see ATHENS: B. C. 508)], as subsequently at Syracuse, was the avoidance of tyranny. It was, therefore, meant to be employed when one man's influence became so great as to threaten the existence of the constitution; it was an effectual way of showing that there was an overwhelming majority against him, and a mode of frustrating his possible designs without having to resort to violence and bloodshed. But it also served the important secondary purpose of producing a national consciousness and sustaining an interest in the government, as the careful nature of the procedure adopted forced the people to continuous reflection on the political situation. The ecclesia had first to determine whether a resort to ostracism was advisable, and on this occasion the whole political situation would necessarily be discussed. If the resolution was in the affirmative, the people met again and voted by tribes, under the presidency of the nine Archons and the council, recording on tablets the names of the men whom they individually destined for exile. A bare majority was sufficient to effect it, but at this second stage six thousand votes had to be recorded in all. Considering the frailty of Greek constitutional governments, and the recent experience of Athens in the time of Cleisthenes, the institution was a useful one; but it was evidently open to abuse. Ostracism might be worked by a powerful party to banish a legitimate constitutional leader."—A. H. J. Greenidge, *Handbook of Greek constitutional history*, p. 161.—See also BOYCOTT: Origin; FATALISM.

OSTROLENKA, Battles of (1831, 1915). See POLAND: 1830-1832; WORLD WAR: 1915: III. Eastern front: g, 7; g, 8; h, 1.

OSTROVNO, Battle of. See RUSSIA: 1812 (June-September).

OSTRÓVSKI, Alexander Nikolaevich (1823-1886), Russian dramatist. See RUSSIAN LITERATURE: 1855-1880.

OSTWALD, Wilhelm (1853-), German chemist. See NOBEL PRIZES: Chemistry: 1909.

OSWALD (605-642), king of Northumbria, 634-642.

OSWEGO, city on Lake Ontario in the state of New York. Its population in 1920 was 23,620. It is the terminus of the state barge canal and has one of the largest starch factories in the world. During the colonial period and especially during the French and Indian War, it was the most valued position of the English in North America.

1690-1696.—Frontenac's expeditions.—"From 1600 to 1606, Count de Frontenac, the vigorous Governor of Canada, founder of Kingston, making Oswego his base of operations, dispatched expeditions against the Iroquois to drive them from alliance with the English and into alliance with himself."—G. T. Clark, *New York State Historical Association Proceedings*, 1914, v. 13, p. 325.

1715-1726.—Fur traders.—Traffic with Indians.—Competition between English and French fur traders began some time between 1715 and 1720. In 1726, 300 English and Dutch fur traders gathered at Oswego and remained all summer carrying on a brisk traffic with the Indians.

1722.—Fort built by the English. See CANADA: 1700-1735.

1728-1839.—Erection of Fort Oswego.—The first Fort Oswego was erected on the left bank of the Oswego river by Governor Burnet. The French called it Fort Chouagen and later Fort Peperel.

It was for a long time the only fort of the English on the northwestern frontier and guarded all their territory west of the settled line of the sea-coast from Canada to Georgia. In 1755 the British enlarged Fort Oswego and built Fort Ontario on the west bank of the river. When Oswego fell before the Marquis de Montcalm in August 1756, the English regarded its loss as a national misfortune. The British restored and garrisoned Fort Ontario in 1759. Here in 1766 the great Ottawa chieftain, Pontiac, made his pledge of peace with Great Britain. In January, 1783, Washington, unaware that the Treaty of Paris had been signed, sent an unsuccessful expedition against Fort Ontario. During the War of 1812 the fort sustained its last siege. After a vigorous resistance Colonel Mitchell surrendered to Sir James Yeo, May 6, 1814. Oswego was incorporated as a village in 1828, when the Oswego canal was finished, and became a city in 1848.—Based on G. T. Clark, *New York State Historical Association Proceedings*, 1914, v. 13, pp. 326-330.

1755.—English position strengthened. See CANADA: 1755 (August-October).

1756.—Captured by the French. See CANADA: 1756-1757.

1783-1796.—Retained by the English after peace with the United States.—Final surrender. See U. S. A.: 1783-1796; 1794-1795.

OSWEGO CANAL. See BARGE CANAL.

OSWI, king of Northumbria, 655-670.

OTADENI, or Ottedeni, one of the tribes in Britain whose territory lay between the Roman wall and the Firth of Forth. Mr. Skene thinks they were the same people who are mentioned in the fourth century as the "Attacotti."—Based on W. F. Skene, *Celtic Scotland*, v. 1.—See also BRITAIN: Celtic tribes.

OTIS, James (1725-1783), American patriot and orator. Author of numerous pamphlets on political subjects. See MASSACHUSETTS: 1761; U. S. A.: 1761; 1765: Stamp Act congress.

OTOES, or Ottoes, North American Indian tribe. See INDIANS, AMERICAN: Cultural areas in North America: Plains area; PAWNEE FAMILY; SIOUAN FAMILY.

OTOMIS.—"According to Aztec tradition, the Otomis were the earliest owners of the soil of Central Mexico. Their language was at the conquest one of the most widely distributed of any in this portion of the continent. Its central regions were the States of Queretaro and Guanajuato. . . . The Otomis are below the average stature, of dark color, the skull markedly dolichocephalic, the nose short and flattened, the eyes slightly oblique."—D. G. Brinton, *American race*, p. 135.—See also INDIANS, AMERICAN: Cultural areas in Mexico and Central America: Aztec area.

OTRANTO, seaport and archiepiscopal see of Apulia, Italy, in the province of Lecce. It was taken by the Turks in 1480 and assigned to Ferdinand of Aragon by the Treaty of Cambrai in 1508. See ITALY: 1447-1480; VENICE: 1508-1500.

OTTAGAMIES, North American Indian tribe. See SACS.

OTTAKAR I (d. 1230), king of Bohemia, 1192-1230.

Ottakar II (c. 1230-1278), king of Bohemia 1253-1278. See BOHEMIA: 10th-13th centuries.

OTTAWA, Canada, city in Carlton county, province of Ontario. It is the capital of the Dominion of Canada, and is built on the southern bank of the Ottawa river. For the most part the city lies on a group of low hills between Chaudiere Falls and Rideau Falls; but has stretched beyond this latter point. The outstanding architectural feature of the city is the group of Parliament buildings, which stand on a bluff, high above the river. In 1921 the population of Ottawa was 107,137.

Founding of city.—"In 1826 the village of Bytown, now Ottawa, the capital of the Dominion of Canada, was founded. The origin of this beautiful city was this: Colonel By, an officer of the Royal Engineers, came to survey the country with a view of making a canal to connect the tidal waters of the St. Lawrence with the great lakes of Canada. After various explorations, an inland route up the Ottawa to the Rideau affluent, and thence by a ship canal to Kingston on Lake Ontario, was chosen. Colonel By made his headquarters where the proposed canal was to descend, by eight locks, a steep declivity of 90 feet to the Ottawa River. 'The spot itself was wonderfully beautiful.' . . . It was the centre of a vast lumber-trade, and had expanded by 1858 to a large town."—W. P. Gresswell, *History of the Dominion of Canada*, p. 168.

1854-1865.—Incorporation as a city.—Capital of Canada.—First session of Parliament.—In 1854 the village of Bytown became the city of Ottawa, and four years later was chosen by Queen Victoria as the capital of Canada. The first session of parliament was opened in the new capital in 1865.

1900.—Great fire.—The city of Ottawa, capital of the Dominion of Canada, and the lumber manufacturing town of Hull, on the opposite side of the Ottawa river, were both devastated, on the 26th of April, by one of the most destructive fires of the century. It originated in the upsetting of a lamp in a dwelling in Hull. This was at half-past ten o'clock in the morning. A big gale blowing from the northeast made quick work of the inflammable houses in Hull, and by twelve o'clock the flames had reached the river-bank and leaped across to the Ottawa side. The fire then retraced its steps in Hull, and destroyed a group of factories. It "blazed a crescent-shaped path five miles long and a mile wide, destroying in its journey the public buildings and the residential part of Hull, the industrial area of the Chaudiere, and the suburbs of the Ottawa laboring classes at Mechanicsburg,

Rochesterville, and Hintonburg. Fully 15,000 people were rendered homeless, and \$15,000,000 worth of property was annihilated."—*Canadian Magazine*, July, 1900.

1912-1916.—Bi-lingual school question.—Bonnie Entente with Quebec. See CANADA: 1912-1916.

1914.—Represented at defense conference. See CANADA: 1914 (October).

1916.—Parliament buildings destroyed by fire.—The houses of Parliament of which the corner stone was laid in 1860 by the Prince of Wales (Edward VII), were destroyed by fire in 1916; only the octagon-shaped library, with its contents, was saved. The archives building and royal mint escaped, due to the fact that they are situated on the opposite bank of the Rideau canal, which divides the city into two sections. The Houses have been rebuilt in Gothic style on the same lines as before, including the beautiful tower above the main entrance.

1919.—Represented at national industrial conference. See CANADA: 1919 (September).

OTTAWA AND HULL CITY PLAN. See CITY PLANNING: Canada.

OTTAWAS, North American Indian tribe. See ALGONQUIAN FAMILY; OJIBWAS; PONTIAC'S WAR.

OTTEDENI. See OTADENT.

OTTERBURN, Battle of.—This famous battle was fought, August 19, 1388, between a small force of Scots, harrying the border, under Earl Douglas and a hastily assembled body of English led by Sir Henry Percy, the famous Hotspur. The English, making a night attack on the Scottish camp, not far from Newcastle, were terribly beaten, and Hotspur was taken prisoner; but Douglas fell mortally wounded. The battle was a renowned encounter of knightly warriors, and greatly interested the historians of the age. It is narrated in Froissart's chronicles (v. 3, ch. 126), and is believed to be the action sung of in the famous old ballad of Chevy Chase, or the "Hunting of the Cheviot."—Based on J. H. Burton, *History of Scotland*, v. 3, ch. 26.

OTTIMATI, political party in Florence. See FLORENCE: 1408-1500.

OTTO I, the Great (912-973), Holy Roman emperor, 962-973, and king of Germany, 936-973. Gave his support to Lombardy against Berengar, 951; defeated the Magyars, 955; crowned emperor at Rome, 962. See ADELAIDE; EUROPE: Middle Ages; Holy Roman and papal empires; GERMANY: 936-973; HOLY ROMAN EMPIRE: 962; HUNGARY: 934-955; ITALY: 061-1030; PAPACY: 6-11th centuries; ROME: Medieval city: 903-964.

Otto II (955-983), Holy Roman emperor, 973-983. Subdued revolt in Bavaria, 977; expelled the French from Lorraine, 978. See GERMANY: 973-1056.

Otto III (980-1002), Holy Roman emperor, 983-1002. See GERMANY: 973-1056.

Otto IV (c. 1182-1218), Holy Roman emperor, 1200-1215. Elected king of Germany, 1108; crowned emperor, 1200; quarreled with the pope, who put Frederick II forward as anti-emperor, 1212; defeated at battle of Bouvines, 1214. See FRANCE: 1214; ITALY: 1183-1250; BOUVINES, BATTLE OF.

Otto (1815-1867), king of Greece, 1833-1862. See GREECE: 1830-1862; ADRIANOPLE, TREATY OF.

Otto I (d. 1183), count of Wittelsbach, and duke of Bavaria, 1183. See BAVARIA: 1180-1356.

Otto I (c. 1130-1184), margrave of Brandenburg, 1170-1184. See BRANDENBURG: 1168-1417.

Otto II (d. 1205), margrave of Brandenburg, 1184-1205. See BRANDENBURG: 1168-1417.

1659.—Taken by the French and returned to Spain. See FRANCE: 1650-1661.

1667.—Taken by the French. See BELGIUM: 1667.

1668.—Ceded to France. See NETHERLANDS: 1668.

1679.—Restored to Spain. See NIMEGUEN, PEACE OF.

1706.—Surrendered to Marlborough and the allies. See NETHERLANDS: 1706-1707.

1708.—Marlborough's victory. See NETHERLANDS: 1708-1709.

1745-1748.—Taken by the French and restored. See BELGIUM: 1745; AIX-LA-CHAPELLE: Congresses: 2.

1918.—Occupied by the Allies during World War. See WORLD WAR: 1918: II. Western front: m; q, 4; x, 3.

OUDH, or Oude.—The provinces of Oudh and Agra, before 1801 called the North-Western Provinces and Oudh, together constitute one of the fifteen administrations into which India is divided. The area of Oudh is 24,158 square miles; that of the United Provinces 107,000. (See INDIA: Map.) The two provinces together had in 1921 a population of over forty-five and one-half millions, of whom 12,170,368 inhabited Oudh. "Before the British settler had established himself on the peninsula of India, Oudh was a province of the Mogul Empire. When that empire was distracted and weakened [in 1738-1739] by the invasion of Nadir Shah [see INDIA: 1662-1748], . . . the Governor began to govern for himself."—J. W. Kaye, *History of the Sepoy War in India*, v. 1, ch. 3.—In 1764 the Nawab of Oudh was defeated at Buxar, but was permitted to retain his domain, enlarged by the province of Allahabad and Kora. In 1801 Lord Wellesley forced a treaty on the Nawab Sa'adat Ali, ceding in perpetuity to the British East India Company districts yielding £1,500,000 yearly. The province was thus reduced to virtually its present dimensions. In 1835 a lieutenant-governor was appointed for the North-Western Provinces, as the present province of Agra was then called. These were augmented by the addition of Delhi after the Mutiny of 1857 (see INDIA: 1857) and of the Saugar and Nerbudda territories after 1853. Oudh remained under its nawab, who in 1810 took the title of king. The country was badly governed, however, and in 1856 the British annexed it and made it a chief commissionership. This measure proved so unpopular that when the mutiny of 1857 broke out, the Oudh sepoys joined it, and the siege of Lucknow followed. In 1877 the lieutenant-governor of the North-Western Provinces was given the additional office of chief commissioner of Oudh. This arrangement was continued until 1901, when the provinces were given their present designation.

1351.—Declares independence. See INDIA: 1290-1398.

1763-1765.—English wars with the nabob. See INDIA: 1757-1772.

OXENSTIERNA, or Oxenstjerna, Count Axel Gustafsson (1583-1654), Swedish statesman. Sent by Charles IX as ambassador to the court of Mecklenburg, 1606; became senator, 1609; regent, 1621; appointed chancellor, 1611; arranged the Peace of Stolbova with Russia, 1617; appointed governor-general of the conquered Polish districts

and concluded peace with them, 1629; placed at the head of the Evangelical League at the Congress of Heilbronn, 1633; directed the policy of the Protestants in Germany until the Peace of Westphalia, 1648.—See also GERMANY: 1632-1634; SWEDEN: 1644-1697; DELAWARE: 1638-1640.

OXFORD, city, municipal and parliamentary borough, on the Thames river, fifty-one miles from London; famous as the seat of a great university. Its population in 1921 was 57,052. "Oxford had already seen five centuries of borough life before a student appeared within its streets. Instead of its prosperity being derived from its connection with the University, that connection has probably been its commercial ruin. . . . The University found Oxford a busy, prosperous borough, and reduced it to a cluster of lodging houses."—J. R. Green, *Early history of Oxford (Studies in Oxford history, pp. 1-24)*.—Tradition has it that Saint Frideswide founded a nunnery in the eighth century on the site of the present cathedral, and University college claims Alfred as its founder. Oxford is first authentically mentioned, however, in the English Chronicle of the year 912. It was then a town of rapidly growing importance on the frontier between Mercia and Wessex. It was burned three times by the Danes (979, 1002 and 1010) and was surrendered to Sweyn in 1013. The Norman conquest inflicted widespread destruction on the city, but it recovered rapidly and maintained a position of political and commercial importance throughout the thirteenth century. In 1142 Stephen besieged Queen Matilda here and forced her to flee. The Mad Parliament of 1258 met here. The latter part of the century saw in the founding of Merton, University and Balliol colleges the beginning of the great university of Oxford. Townsmen were hereafter subordinated to students, and the rivalry thus engendered culminated in the St. Scholastica riots, February 10 and 11, 1354/5. As a result the university received successive charters enhancing its privileges. It was at Oxford that Ridley and Latimer were martyred in 1555. Here Charles I made his headquarters during the Civil War. (See ENGLAND: 1642 [October-December].) From 1651 until 1657 Cromwell himself was chancellor of Oxford. Charles I held the last Oxford Parliament in 1681. During the reign of George I and George II, the university was Jacobite and the town Hanoverian. From 1785, when George III visited Oxford, until to-day, the history of the university has been the sole history of the town.

OXFORD, Provisions of, system or constitution of government secured in 1258 by the English barons, under the lead of Earl Simon de Montfort. The king, Henry III, "was again and again forced to swear to it, and to proclaim it throughout the country. The special grievances of the barons were met by a set of ordinances called the Provisions of Westminster, which were produced after some trouble in October 1259."—W. Stubbs, *Early Plantagenets, p. 100*.—The new constitution was nominally in force for nearly six years, repeatedly violated and repeatedly sworn to afresh by the king, civil war being constantly imminent. At length both sides agreed to submit the question of maintaining the Provisions of Oxford to the arbitration of Louis IX of France, and his decision, called the Mise of Amiens, annulled them completely. De Montfort's party thereupon repudiated the award and the civil war called the "Barons' War" ensued.—Based on C. H. Pearson, *History of England in the Early and Middle Ages, v. 2, ch. 8*.—See also COMMON LAW: 1258; ENGLAND: 1216-1272.

ALSO IN: W. Stubbs, *Select charters, pt. 6*.

OXFORD, or TRACTARIAN, MOVEMENT, reform movement within the Anglican church initiated by certain intellectual and religious leaders at Oxford, and designed to bring the church into closer conformity with historic Catholicism. "Never was religion in England so uninteresting as it was in the earlier part of the 19th century. Never was a time when thought was so active, criticism so keen, taste so fastidious; and which so plainly demanded a religion intellectual, sympathetic, and attractive. This want the Tractarian, or Oxford movement, as it is called, attempted to supply. . . . But the Tractarians put before themselves an aim far higher than that. They attempted nothing less than to develop and place on a firm and imperishable basis what Laud and the Non-Jurors had tried tentatively to do; namely, to vindicate the Church of England from all complicity with foreign Protestantism, to establish her essential identity with the Church of the Apostles and Fathers through the mediæval Church, and to place her for the first time since the Reformation in her true position with regard to the Church in the East and the West. . . . Naturally the first work undertaken was the explanation of doctrine. The 'Tracts for the Times,' mainly written by Dr. Newman and Dr. Pusey, put before men what the writers believed to be the doctrine of the Church of England, with a boldness and precision of statement hitherto unexampled: The divine Authority of the Church. Her essential unity in all parts of the world. The effectiveness of regeneration in Holy Baptism. The reality of the presence of our Lord in Holy Communion. The sacrificial character of Holy Communion. The reality of the power to absolve sin committed by our Lord to the priesthood. Such were the doctrines maintained in the Tractarian writings. . . . They were, of course, directly opposed to the popular Protestantism of the day, as held by the Evangelical party. They were equally opposed to the Latitudinarianism of the Broad Church party, who—true descendants of Tillotson and Burnet—were under the leadership of men like Arnold and Stanley, endeavouring to unite all men against the wickedness of the time on the basis of a common Christian morality under the guardianship of the State, unhampered by distinctive creeds or definite doctrines. No two methods could be more opposite."—H. O. Wakeman, *History of religion in England*, ch. 11.—"The two tasks . . . which the Tractarians set themselves, were to establish first that the authority of the primitive Church resided in the Church of England, and second, that the doctrines of the English Church were really identical with those of pre-Tridentine Christianity. . . . The Tractarians' second object is chiefly recollected because it produced the Tract which brought their series to an abrupt conclusion [1841]. Tract XC. is an elaborate attempt to prove that the articles of the English Church are not inconsistent with the doctrines of mediæval Christianity; that they may be subscribed by those who aim at being Catholic in heart and doctrine. . . . Few books published in the present century have made so great a sensation as this famous Tract. . . . Bagot, Bishop of Oxford, Mr. Newman's own diocesan, asked the author to suppress it. The request placed the author in a singular dilemma. The

double object which he had set himself to accomplish became at once impossible. He had laboured to prove that authority resided in the English Church, and authority, in the person of his own diocesan, objected to his interpretation of the articles. For the moment Mr. Newman resolved on a compromise. He did not withdraw Tract XC., but he discontinued the series. . . . The discontinuance of the Tracts, however, did not alter the position of authority. The bishops, one after another, 'began to charge against' the author. Authority, the authority which Mr. Newman had laboured to establish, was shaking off the dust of its feet against him. The attacks of the bishops made Mr. Newman's continuance in the Church of England difficult. But, long before the attack was made, he had regarded his own position with dissatisfaction." It became intolerable to him when, in 1841, a Protestant bishop of Jerusalem was appointed, who exercised authority over both Lutherans and Anglicans. "A communion with Lutherans, Calvinists, and even Monophysites seemed to him an abominable thing, which tended to separate the English Church further and further from Rome. . . . From the hour that the see was established, his own lot was practically decided. For a few years longer he remained in the fold in which he had been reared, but he felt like a dying man. He gradually withdrew from his pastoral duties, and finally [in 1845] entered into communion with Rome. . . . A great movement never perishes for want of a leader. After the secession of Mr. Newman, the control of the movement fell into the hands of Dr. Pusey."—S. Walpole, *History of England from 1815*, v. 4, ch. 21.—See also **BISHOP**: Since the Reformation; **CHURCH OF ENGLAND**: 19th century; **PROTESTANT EPISCOPAL CHURCH**: 1836-1874; **ENGLISH LITERATURE**: 1833-1900.

PACIFIC OCEAN: Geographical description.—Mobility of ocean bed.—“By ‘the Pacific’ is here meant that great sea, covering more than a third of the globe, which is almost surrounded by the west coast of America, by the east coast of Asia, and of the great islands of New Guinea, Australia, and New Zealand, and by the Antarctic continent from a point south of New Zealand to a point south of Cape Horn. . . . The islands, literally innumerable, . . . like the peaks and upper edges of ranges of a submerged land, rise above the sea-level, in groups, in lines, or singly, from the Australian and south-east Asiatic coast, on either side of the equatorial line, and extend two-thirds across to America. For these islands, though mostly too small, too rugged, or too little above the sea-level, to afford much opportunity for human life and activity, . . . are of great historical importance, because in the early days they were the main attraction of Europeans to the Pacific, and because in our days the great European Powers, having first divided the coastal regions, . . . are engaged in the partition of the islands, the ‘stepping-stones’ from coast to coast. . . . Almost all the islands of this great belt,—the South Sea islands . . . are volcanic rock-masses round the sea edge of which . . . coral has grown, forming . . . a fringing reef. In some cases the rock-core has sunk, lower and lower, and . . . the coral at the outer, or living edge of the fringing reef, has grown straight upward, tending always to keep its upper surface just below the level of the sea; and in this way a water-channel has gradually been formed between the central rock mass and the outer rim of coral.”—E. I. Thurn, *European influence in the Pacific* (*Geographical Journal*, Apr., 1915).—“The eastern half of the Pacific, to a distance of about 5,000 miles from the coast of America, is practically devoid of islands. . . . The vast majority of islands [that] figure in the history of European colonisation in the Pacific are within 2000 miles of the coasts of Australia and New Zealand. The more easterly of these, between the equator and 30 deg. S. Lat. and between 135 degree and 180 degree West Longitude constitute the Polynesian Archipelago, and are inhabited by the . . . race of whom the Maori of New Zealand, the

Hawaiians, the Tahitians, the Tongans, and the Samoans, are the best known. . . . In Fiji, the Polynesians blend with the more savage Melanesians, whose zone extends westward through all the islands to the Australian coast, and northwards of the equator. The northern part of Melanesia is sometimes called Micronesia.”—G. H. Scholefield, *Pacific, its past and future*, pp. 1, 2.—In “the Pacific . . . there is a characteristic . . . that is . . . distinctive; it is its mobility of bed. . . . The mobility naturally varies. There are belts that are now subsiding and belts that are rising. One zone, stretching from the south-east of Japan south-eastwards over the equator down to within a couple of thousand miles of the South American coast has manifestly been subsiding during the existing geological era. . . . The region away to the south-west, extending from the Philippines to New Zealand in a southerly direction and from Celebes to Samoa in an easterly direction has evidently been rising for a long period. . . . The coral insect in this ocean raises its reef at the average rate of fifteen to eighteen inches in ten years. Taking this as the rate through recent geological times and taking the average depths for some distance around the groups of islets . . . in early neolithic times, certainly in paleolithic times, these groups were both broad and lofty. . . . In that state of the ocean the least oceanic of canoes might venture in the lee of the groups right down into the far center of the great watery expanse. And this would account for one of the most singular phenomena in human culture. These central groups are occupied by a people, the Polynesians. . . . It was undoubtedly a Caucasian race with predominant light hair that went down into Polynesia. . . . They were the only race in the history of the world that mastered the art of oceanic navigation in the ages of stone. . . . The Polynesians were the first and only true oceanic navigators before the invention of the mariner’s compass. . . . It is often assumed that there was a Melanesian people first in Polynesia; but, though the Fijians and the Solomon Islanders make large canoes, they have never ventured far from the coasts of their own groups. . . . It was necessity that urged the Polynesians into oceanic voyaging and skill. The subsidence of their islands and the shrinking of the land on which they could live drove them far afield . . . a marked contrast to the Melanesians, who occupy archipelagoes comparatively close together and whose language is unintelligible and culture is totally different in villages a few miles apart.”—J. M. Brown, *Pacific ocean in the racial history of mankind* (*Journal of Race Development*, July, 1911).

People.—Main types.—“It is generally accepted that a Turanian speaking race originated somewhere on the borders of Europe and Asia, not far from the Caspian Sea. One branch made their way to Europe, . . . while the other branch, the Armenoide, moved south to Persia [and] across India, pushing before them the original black Dravidian Hamitic people out to Indonesia and eventually into the Pacific.”—T. R. St. Johnston, *Islanders of the Pacific*, p. 46.—These Dravidians or Melano-Indians, were of the oldest known race of India and are thought to have been closely connected with the negroids and Australian aborigines. They are supposed to have been related also to the Hamitic people of western Asia. The negroids were an undersized black aboriginal race who inhabited central and western Europe, the greater part of Asia,

west Africa and the islands of the East Indies. From them have sprung the Negritos, Papuan, or Melanesians, Malays, and Indonesians.—Based on W. A. Reed, *Negritos of Zambalos*, v. 2, pt. 1.—“There are at least three main types of people in the Pacific, and the first of these is the Negrito, now very rarely to be seen. He is a short, round-headed, frizzly-haired type, without marked eyebrow ridges, and not unduly black of skin. His nose is short and fairly straight, but broad at the nostrils and depressed at the root. He is of much the same type as the Andaman Islander, and is to be seen, though often blended with other races, in parts of the Pelew Islands, the Philippines, Papua, and as the so-called pygmies of the New Hebrides, described by Dr. Speisser. . . . The Negrito is dull and apathetic, and for this reason probably was easily exterminated by the succeeded races. The next main type is the ‘Melanesian,’ who is noted

that of a southern European. He is, even to our ideas, handsome, and he has the carriage and bearing of a race of chiefs, and the intelligence to maintain by diplomacy a mastery that he acquired by force of arms. In Fiji both Melanesian and Polynesian types are still quite distinct in the western and eastern sides respectively of the colony, . . . and the mental characteristics are equally defined.”—T. R. St. Johnston, *Islanders of the Pacific*, pp. 275-277.—See also HAWAIIAN ISLANDS: Anthropology of the islands; INDIANS, AMERICAN: Origins of the American Indian; MALAY, MALAYSIAN, OR BROWN, RACE; MATRIARCHATE.

B. C. 2500-A. D. 1500.—Early exodus to Pacific islands.—Migrations of Polynesians from India to Malay archipelago.—Spread of the race to Hawaiian islands.—“The Oceanic isles of the Pacific undoubtedly have been in remote times the

CANNIBALS OF THE NEW HEBRIDES

for his dark skin, overhanging eyebrow ridge, sunken orbits, longer nose, projecting lips, narrow and receding forehead, and generally dolichocephalic head. His face is somewhat angular, he has bushy, ‘upstanding’ hair, and can grow a good beard when he wishes. He is quick and furtive in his movements, sulky according to European ideas, but a good worker under supervision. His legs are thin and weedy, but he is wiry and not easily tired. The last of the three divisions is the Polynesian, who is brachycephalic, wavy-haired; . . . and without much hair on the face. He has high cheek-bones, which, with the hair, show the remote mongoloid ancestry, and when this is strengthened in the northern islands by more recent blendings from eastern Asia he frequently shows a just perceptible slanting of the eyelids. It is this latter blended type that is known as the ‘Micronesian.’ The lips of the Polynesian are thinner, the features more regular, and the chin better formed than in the case of the Melanesian. He is a viril, sturdy, well-formed type, and his skin is sometimes not much darker than

scene of some of the most remarkable migrations by water in the history of the world. . . . These widely separated islands have been peopled by three different peoples, the Melanesians, the Polynesians, and the Micronesians, forming two distinct divisions of mankind. . . . The Melanesians sometimes go by the name of Papuans, the Malay name for the inhabitants of New Guinea, [see NEW GUINEA] the principal home of the race, . . . and are regarded as the aborigines of Oceania. . . . The Polynesians . . . must have migrated to the Pacific Islands at much later periods than the Malays or Papuans and their sub-families. . . . They represent a branch of the Caucasian division of mankind, who at some very remote period, perhaps in the new Stone Age, migrated from the mainland of Asia. . . . Malay tribes, produced the fine Mahories of Samoa, the Sandwich Islands, and New Zealand.”—C. R. Enoch, *Secret of the Pacific*, pp. 267-269.—“Great ships sailed the Pacific in the lost ages; native traditions tell of lengthy voyages of months duration, in three-masted ships with

many people, animals and household goods on board. . . . Captain Cook records a two-masted ship one hundred and eight feet long, used by the Hawaiians. . . . William Ellis found double canoes at Tahiti that were over seventy feet long. . . . There is a legend among the Indians of Vancouver, that the gods arrived there from the west in copper ships, many centuries ago. . . . The people who crossed and recrossed the Pacific in those early days were skilled navigators. . . . They had a keen instinct for astronomy, and read the stars. . . . There were wonderful sailing charts of the Marshall Islands (some of which are still extant). . . . The

first start of the movement probably took place about 2500 B.C., when the earliest invasion of north-west India by the Turanian-speaking people occurred, the impact making itself felt all along the line of the route across northern India and down the Ganges . . . and reached Java and the gates of the Pacific not later than the fifth century B.C."—T. R. St. Johnston, *Islanders of the Pacific*, pp. 40, 45, 279. The theory best meeting all facts is "the Polynesian race in pre-historic ages, dwelt in northern India, from thence they spread through farther India into the East Indian Archipelago, where they exterminated the black race, or drove them into the mountains; [and] that they were in their turn conquered, amalgamated with, or expelled by Mongoloid tribes from the mainland of Asia, then . . . they migrated into the Pacific, passing north of New Guinea, and between the New Hebrides and the Solomon Islands which were occupied by ferocious blacks. . . . The Maori branched off and went south into New Zealand, but the old time branch, the Manahume, is supposed to have gradually been absorbed with the other Polynesian as they scattered through the Pacific islands. The original inhabitants of Indonesia were the Papuans, and Melanesians. The result of the two invasions [Polynesian and Mongolian] was to leave the pre-Malay race, a mixture of Polynesian and Mongolian, called the Indonesians. Some of the Melanesians are still to be found in the interior of the larger islands of the Archipelago, but . . . there is no sufficient evidence of any Melanesian people having pre-occupied any part of the Pacific that is now inhabited by Polynesians. . . . In 300 B.C. there were several successive waves of emigrations from eastern India to the Archipelago [but] it is probable that the Polynesians left the Archipelago before this time. . . . There are but slight clues to the origin of the Malay or brown race, it is generally agreed that the ancestors of these people emigrated from northern India before it was invaded by the Aryan race."—W. D. Alexander, *Origin of the Polynesian race*, pp. 229-230.—"The earliest halting-place [of the Polynesians] was in Malaysia, where some of their kind still remain on the west coast of Sumatra, from which point they extended eastwardly . . . [settling as far north as the Hawaiian islands. Their eastern outpost was Easter island and their Australian area was Australia, New Zealand, Tasmania and the neighboring islands.] The history of the Hawaiians, or Sandwich Islanders, has been traced to the fifth century, and from this it is adduced that their departure from Malaysia or the Indian Archipelago may be put at the first or second century. Savaii, the largest of the Samoan Islands, is by tradition assigned as the Polynesian ancestral home in the East Pacific. . . . From this point the Polynesians, or the various branches of the race, must have made their way in all directions. . . . 1,400 miles to the north-west [from Savaii] takes us to Tahiti, of the French Society Islands. . . . We read that the natives of Tahiti buried their chiefs in the temples; their embalmed bodies, after being exposed, were interred in a crouching position. . . . 'Sacrificial offerings, including human sacrifices, formed a prominent part of Tahitian worship.' . . . A thousand miles or more to the north . . . of Tahiti lie the Marquesas. . . . The natives of the Marquesas are a pure Polynesian race, usually described as physically the finest of all South Sea Islanders. . . . Continuing our westward course for 1,800 miles from Tahiti, we reach the Tonga or Friendly Islands, slightly to the south of Samoa, and about 1,000 miles north of New Zealand . . . the largest of the group. . . .

WITCH DOCTOR OF THE SOUTH SEA ISLANDS
Practically hidden by shell money contributed by his patients who are possessed of witches.

charts were skillfully made of reeds interlaced and bound together, in such a way that some of them showed the currents, and others the prevailing winds, while attached at the proper places, were small shells to mark the positions of the various islands. With these charts the Marshall islanders used to make long voyages . . . in big sailing canoes built to withstand the heaviest seas. Similar charts were known to the early Fijians. . . . That the Polynesians, especially the Tongans and Samoans made extraordinary lengthy voyages is shown by the . . . story of the journey of Ui-te-rangiora to the Antarctic seas. [Ui-te-rangiora lived about the seventh century A.D.] . . . The

Samoa, not very far to the north of Tongataba, was the principal home of the navigating Polynesian people, and Savaii, the largest island of the group. . . . They carried the name Savaii in various forms to Tahiti, Hawaii, the Marquesas, and New Zealand. . . . The Javanese Babads tell of an Indian prince who came to Java about 78 to 120 A. D., where he found a nomadic people. Chinese infiltration probably began long after 220 B. C. Arabian traders voyaged to the East Indian Archipelago long before the time of Mohammed. A mixture of Proto-Malayans with Indonesians, whom we may call Proto-Polynesians, drifted into the West Pacific, and gave to the black, woolly-haired natives their language and some elements of higher culture, the resultant mixed people being the Melanesians. Later migrations fared farther into the Pacific, and the Samoan Islands appear to have been their first centre of dispersal within the Pacific; later Tahiti and Raratonga were starting-points for fresh discoveries. . . . The Malayans themselves, the dominant race of the Malay Peninsula and of the Malay Archipelago, are of mysterious origin. . . . [A] generally accepted theory is that the Malayan race is distinct and came from the South, until it was stayed by the Mongolian race living on the mainland of Southern Asia."—C. R. Enock, *Secret of the Pacific*, pp. 269-270, 275-276, 279-280, 293-294, 296.—See also HAWAIIAN ISLANDS: Discovery and early history. . .

1513-1764.—First European explorers.—Portuguese.—Spanish.—Dutch.—Drake and English buccaneers.—“Early in the sixteenth century . . . nothing was known in Europe of the Pacific ocean. The Portuguese, with their Dutch rivals in their wake, had crept eastward round the world, and had reached ‘the Spice islands,’ only just short of the Pacific area; and the Spaniards, travelling westward, had reached the east coast of America. What lay between the Portuguese-Dutch and the Spanish outposts no man knew. The story of the unveiling of the Pacific began on September 25, 1513, when from the peak in Darien Balboa first caught sight of what he called the Great South sea, and took formal possession of it, and all which appertained to it, for his master, the King of Spain. [See AMERICA: 1513-1517.] Seven years later, in 1520, another Spaniard, Magellan, found and sailed through a waterway into the South sea—or, as he called it, the Pacific ocean—and then crossed to the extreme western edge of that sea, where he found ‘the Isles of Lazarus,’ the Philippines, and there lost his life in a fight with the natives. Magellan had thus gone westward round the world all but to . . . Moluccas, which had by that time been reached by the Dutch from the east. Balboa’s and Magellan’s adventures were but incidents in the founding by Spain of the great empire which, during the three subsequent centuries, it held on the Pacific coast of America and, across the ocean in the Philippines. Following more or less in the track of Magellan, Mendana in 1567 discovered the Solomon islands and Quiros in 1606 discovered the northernmost of the New Hebridean islands [see NEW HEBRIDES], which he thought to be part of the supposed ‘great southern continent.’ . . . While Spanish influence was thus making itself felt on the American coast of the Pacific [and] in the Philippines . . . other Europeans were endeavouring . . . to look into this ocean [also]. . . . The Dutch East India Company, early in the seventeenth century, was established as far east as Java, and held from the States of the Netherlands a monopoly of Dutch trade with all countries between the Straits of Magellan and the Cape of Good Hope. . . . Le

Maire and Schouten sailed in 1615, passed Magellan’s strait, and further south discovered and passed through that which has since been called after Le Maire, between Tierra del Fuego and the land which these Dutchmen, mistaking it for the great southern continent, called Staten-land, in honour of the Netherland States. The Hollanders crossed the Pacific, nearly, . . . on the Spaniards’ track, and eventually reached Batavia, where they were seized for infringement of the Dutch Company’s monopoly. . . . Le Maire and Schouten . . . were the first discoverers of many islands, and were almost the first Europeans to have any considerable dealings with the South Sea islanders. In 1642 the Dutch East Company sent Tasman from Batavia to explore the still entirely unknown southwest Pacific. During this expedition much of the south coast of New Holland was discovered—thus first showing that the Australian land-mass did not extend to the South Pole. Tasman also discovered and named Van Diemen’s Land, which he thought

SIR FRANCIS DRAKE

to be part of North Holland, he discovered also New Zealand, where his people had a first meeting with the natives of the South Pacific. [See NEW ZEALAND: 1642-1814.] . . . He then passed on to . . . the Friendly or Tongan islands, and had much dealing . . . with the natives there, and got back to Batavia. . . . Meanwhile the Spaniards had greatly strengthened their position on the American shore and in the Philippine islands, and their ships periodically crossed the Pacific between these two points. It was the attraction of these treasure ships which led the first Englishman, Francis Drake, between 1578-80, to enter the Pacific. He entered by Magellan’s strait, and after having been driven so far south that he probably saw ‘the Horn,’ [he] . . . passed up the coast . . . till he reached a point, probably on the Gulf of California, where he claimed for the English queen, a country which he called New Albion, and then struck westward across the Pacific, and so home by way of the Cape of Good Hope. . . . One very remarkable group of islands . . . was the Galapagos. . . . The Galapagos group, so called because of the giant tortoises which abounded there, consists of high volcanic islands, with an aggregate

area estimated at 2400 square miles, lying actually on the equator, quite apart from the main South Sea group, off the American shore, and only some 600 miles from the isthmus of Darien. It is uncertain when and by whom these islands were first discovered, but they are named on a map by Ortelius of about 1570, and the name seems to show that the discoverers were Spaniards. These islands were ideal havens of undisturbed and unobserved rest. So many a buccaneer . . . and storm-tossed, battle-wearied sailormen have found [them]. . . . One of these filibusters of the Galapagos, William Dampier, whose notoriety as a buccaneer—though he seems never to have played a leading part among those folk—was counterbalanced by his good repute as a hydrographer, was officially employed, and for a time did good work, on the Australian and New Guinea coasts in the scientific voyages of exploration, which began to take the place of mere voyages of adventure. Anson's fa-

CAPT. JAMES COOK

mous voyage round the world in 1740-1744, during which he effectively attacked the Spaniards along the Pacific coast, is of interest to the student of the spread of European influences in the Pacific area, if only for the incident of the wreck [therein described. Among] . . . the survivors [who were saved from the wreck of the] . . . Wager, on an island off the coast of Chile . . . was [a] Midshipman, afterwards Admiral Byron, . . . [who] eventually got back to England. . . . [He had seen] far more of the out-of-the-way parts of Spanish America of that date than any other Englishman ever did; and several of them, Byron, Gunner John Bulkeley, and Carpenter John Cummins, Lieut. Campbell, and Midshipman Isaac Morris, published narratives . . . 'affecting narratives of the dangers and distresses which befel' them. . . . [It was this midshipman, who] in 1764 . . . [as Commodore John Byron] made the celebrated voyage with the *Dolphin*; the first to go in a series of voyages to the Pacific."—E. I. Thurn, *European influence in the Pacific* (*Geographical Journal*, Apr., 1915).—See also ANTARCTIC EXPLORATION: Problems of discovery.

1764-1850.—Systematic exploration of the Pa-

cific.—French expedition under Bougainville.—Captain Cook.—Russian voyages.—“We now come to that splendid series of voyages to the Pacific, . . . controlled by two of the great European Powers, which began to lay the real foundations of European influence in the Pacific as it exists to-day. First in turn of these was Commodore John Byron's voyage with the *Dolphin* and the *Tamar* (1764-6); then the English voyages of Captain Samuel Wallis, in the *Dolphin*, and Captain Philip Cartaret, in the *Swallow* (1766-9), and the almost simultaneous French voyage of Bougainville, in the frigate *La Boudese* (also 1766-9); and then Captain Cook's voyages in 1768 to his death in 1778—or perhaps till the ships got back to England in 1780. . . . Even before Wallis and Cartaret, and the French expedition under Bougainville, got back to Europe from their respective voyages of investigation, Captain James Cook began that series of voyages into the Pacific during which, between 1768 and his death, in the Sandwich islands, in 1779, he . . . explored the Pacific, everywhere except along that part of the Spanish coast which had long been under Spanish influence, . . . [and] laid the foundations on which British influence in the Pacific has since been built. Cook did not live to see his countrymen actually established in any part of the Pacific. But it is to his gathering of facts, and to the subsequent use of these facts by men whom he influenced and taught, that we owe that small settlement of New South Wales—the yeast which eventually spread not only through Australia, Tasmania, and New Zealand, but thence through most, and these the most important, of the islands which serve as stepping-stones across the South Seas; and it is to other of Captain Cook's men—especially to Captain George Vancouver—that we owe the rights which eventually led to the British settlements on the Pacific coast of North America. [See also ANTARCTIC EXPLORATION: 1510-1810; AUSTRALIA: 1601-1800; NEW ZEALAND: 1642-1814; OREGON: Early exploration.] . . . Passing to the nineteenth century, it may here be recorded, that during its first forty years or so, the sending of elaborately organized scientific expeditions to cruise through the Pacific, without much obvious purpose or result, other than the increase of knowledge, was continued by at least two European Governments. The most important English voyage of this period was that of Mathew Flinders, who as a pupil of Captain Bligh was another of Cook's men—but in the second generation, which, in that it was a practical and resultful completion of the examination of the coasts and adjoining seas of the great land which he was the first to call Australia, was of a different class. But the French Expedition under Nicolas Baudin, almost contemporaneous with that of Flinders—indeed, the two came in contact more than once—was probably never intended for other than scientific purposes, though the fact that it resulted in the placing on Freycinet's map of the name *Terre Napoléon* as part of *Nova Hollandia* has suggested that Baudin's instructions had political as well as scientific intention. The two French Government expeditions, in 1826-0 and 1837-40, both under Dumont D'Urville, were even more certainly purely for purposes of investigation. Three of a series of Russian expeditions to the Pacific during this period may here be mentioned. Adam John von Krusenstern, who had served in the English navy and had studied English methods of trade in the East Indies and in China, sailed in 1803, in command of the men-of-war *Nedeska* and *Neva*, the first Russian ships to circumnavigate the world,

and—at his own suggestion—paid particular attention, in passing through the Pacific, to the possibility of direct shipment in Russian vessels of furs from the languishing settlements in Alaska to the Chinese, East Indian and further markets—instead of by land from Okhotsk. This particular scheme seems to have had little or no result; but his voyages, and subsequent voyages under Krusenstern's pupils, Otto von Kotzebue and Bellingshausen, which directly resulted from his, put at his disposal the material which before he died he utilized in the publication of the magnificent atlas, with accompanying memoirs, of the geography of the Pacific as far as then known. Bellingshausen's voyage, in 1810-21 . . . is remarkable in several ways. His investigation of the Antarctic regions of the Pacific was for long surpassed in merit only by that of his predecessor, Captain Cook. He discovered many of the islands in the Tuamotu archipelago."—E. I. Thurn, *European influences in the Pacific*, pp. 310, 312-313.—See also ANTARCTIC EXPLORATION: 1810-1838; 1830-1845.

1800-1914.—Establishment of European powers in the Pacific.—French acquisitions.—British annexation of Fiji and the beginning of British influence.—Gradual annexation of small Pacific island groups by Germany.—Convention of Samoa.—"Between 1800 and 1840, though no European government was established in the islands, a great many individuals, chiefly English, American, and French, got . . . into many . . . of these islands. These were of two very different classes. The earlier of the two were the so-called 'beachcombers,' i.e., those whom the combing wave threw on to the island beaches, mostly derelict sailors and escape prisoners from 'Botany Bay' and Norfolk island, who found refuge in the remote islands of the western half of the Pacific, where the natives were least advanced in culture; and these were followed by the missionaries, who resorted more to the eastern islands, where the natives were of much higher culture. . . . Incidentally, the difference in this contact between 'civilized' and 'savage' men in the eastern and western isles may be noted. In the eastern islands the missionary intruders, speaking generally, strove gradually to induce their more cultured hosts to join in building up a new social order in quaint imitation of European models. . . . In the western islands, the beachcombers, reaching the islands before the missionaries, and being far from anxious for the introduction of social order, broke down even the 'club-law' which had before prevailed over the backward natives, and so brought about a state of utter lawlessness and disorder which made it much more difficult for the missionaries when they did come, to gain any footing. The first definite step taken by a European Power to end this disorder by assuming control in any of the islands, was in 1842-3, when the French government, to settle the local disputes between the Protestant and Roman Catholic missions, took possession . . . of the Society islands, including Tahiti, of the Tuamotu group, the Marquesas, and other islands in the Eastern Pacific. . . . French acquisitions in the Pacific were for many years effected on a policy of supporting French missionaries, rather than of protecting the natives; whereas . . . [the] British policy [1850] was to acquire only what has seemed absolutely necessary for the protection of the natives, and only in very urgent cases anything for the advantage . . . of the European intruders, and . . . then only when it might be taken without injury to the native occupants. . . . A third European Power, . . . [which] made acquisitions in the Pacific, Ger-

many, seems to have done this without reference either to the interests of the natives or to the commercial value of the places taken, but for strategic reasons. The establishment of French authority in the Eastern Pacific, in 1842-3, and the more frequent visits to the western area of men-of-war of various nationalities, British, French, or American, not only for scientific exploration, but to 'show their flags' and to keep some sort of order in the new cosmopolitan islands, rendered the lives of the scattered . . . [European traders and settlers] somewhat safer than before. . . . By trader is here meant the man who . . . occupied himself in collecting from the natives what produce they had—tortoise shell, *beche de mer*, coconuts—paying for these things with European goods, and exporting what he collected by the trading ships which began to call more regularly. By the settler is meant the man who, probably having been a trader, contrived to get possession, . . . [of] 'native land,' which he cultivated with the assistance of such natives as he could . . . get to work for him. Among the traders and settlers who gradually gathered in the No-man's islands of the Pacific, were not a few individual Germans, who were first brought together under the influence of the once great Hamburg firm of Goddefroi, which later gave place to the so-called 'Deutsche Handels and Plantagen Gesellschaft der Südsee Inseln,' which for a time controlled much of the trade and claimed a very large proportion of the alienated native land in many of the islands which had not then been appropriated by any European Power. In 1853 France . . . took possession of the magnificent island of New Caledonia, . . . and used it . . . for a convict station. . . . Its use for oversea prisoners has been abandoned only within the last ten years, [although the harbour and roads of Noumea itself, were splendidly engineered by convict labour, the opportunity for thus making a great colony was missed. The most noteworthy consequence of the French acquisition of New Caledonia . . . was that from that island many French subjects . . . passed up into the New Hebrides, which were . . . outside the purview of European authorities. It was not till 1874-5 . . . that Great Britain annexed . . . any islands in the Pacific. In 1850 the Fiji islands . . . had been offered by the native chiefs, but had . . . been refused by H. B. M. Government on the ground that it was not clear that the offer was spontaneous on the part of the natives. . . . A few more years of ever-increasing disorder in Fiji followed; and then, as the only way of relieving an impossible situation, a renewed offer from the more important Fijian chiefs to cede the islands was accepted, Fiji becoming a British Crown colony in October 1874. . . . A few years after the annexation of Fiji . . . the office of High Commissioner of the Western Pacific was created (in 1877), with limited jurisdiction over British subjects (extended in 1893 to foreigners) in 'all islands in the Western Pacific not being within the limits of the colonies of Fiji, Queensland, New South Wales, or New Zealand, and not being within the jurisdiction of any civilized Power, together with full jurisdiction over British possession and protectorates.' . . . [Since] the office was instituted, a large number of islands extending over a very wide area, have . . . passed . . . under the jurisdiction of the High Commissioner. The Gilbert [Kingsmill] and Ellice islands were declared a British protectorate, in 1862 . . . [and] many of the Solomon islands were added in the following year. . . . Among many other quite small but very important additions to the British possessions in

the Pacific, may here be mentioned Fanning island . . . which was annexed in 1888 as a repeating station for the Pacific cable connecting Canada and Australia. Thus the High Commissioner of the Western Pacific and . . . Governor of Fiji—[both positions] . . . are held by the same person—has . . . authority over a very large number of islands . . . scattered over a wide area, extending from . . . Australia to Ducie islet, two-thirds of the way to America; over a British Crown Colony, of great extent, . . . which lies isolated between the great Dominions of Australia and Canada. The next important move in the partition of the Pacific was made by an entirely new player. . . . The German Empire . . . wanted a colonial policy, and before long thought it saw a chance of establishing a great dependency in and about New Guinea the greater part of which was then a veritable no-man's-land. . . . In 1884, and the few following years [to 1914], Germany declared a Protectorate over a large part of the east of New Guinea—calling this Kaiser Wilhelm's Land; over New Britain and New Ireland, which it renamed respectively Neu Pommern and Neu Mecklenburg, calling the two together the Bismarck Archipelago; and over the Marshall islands. It also claimed as within its sphere of influence several of the larger Solomon islands; and at the same time it purported to take in many less considerable scattered islands as adjuncts to these compact German holdings in the North-West Pacific. [The] development was at first entrusted to a chartered company; but . . . about 1899 the Imperial Government assumed direct control, consolidating the whole under one central government, the headquarters of which . . . was at Herbertshöhe, in the north-east of New Britain. . . . Less effort seems to have been spent on trade development, and more on converting the Bismarck Archipelago into a strong naval base. Australia, which had long tried by every means in its power to induce Great Britain to consent to the annexation of all but the Dutch part of New Guinea, was naturally moved to fresh effort at the first sign of Germany's intention to raise its flag in any part of the great island, so close to the north Australian shore; with the result that on November 6, 1874, the same year in which the German flag was hoisted in another part of the island, a British protectorate was sanctioned over the southeastern part of the island. . . . It was not till 1901 that . . . full charge was handed over to Australia. . . . In 1906, Australian New Guinea was renamed Papua. In 1807-8 Germany acquired . . . Kiau-Chau on the Chinese coast; and by working this as a naval station in connection with that other in the Bismarck Archipelago greatly strengthened her general position in the Pacific. Also . . . in October, 1800, she bought from Spain several groups of scattered islets which chanced to lie in the new German Pacific; the Carolines and, except Guam which had been ceded in 1808 to the United States, the Marianne, or Ladronne islands. . . . America's first share in the partition was when, in 1867-68, she bought Alaska from Russia, and thus gained footing in the extreme north-east of the Pacific. Next, in 1898, America, at the close of her war with Spain, took over the Philippine islands . . . and Guam, the largest of the Marianne islands. Guam has a good harbor, and is . . . a good naval station on the way to the Philippines. . . . At the same time America annexed the Hawaiian islands [or] the Sandwich islands. . . . They afford another convenient naval station on the way between America and the Philippines; and they have since been so admirably developed by their new owners as to

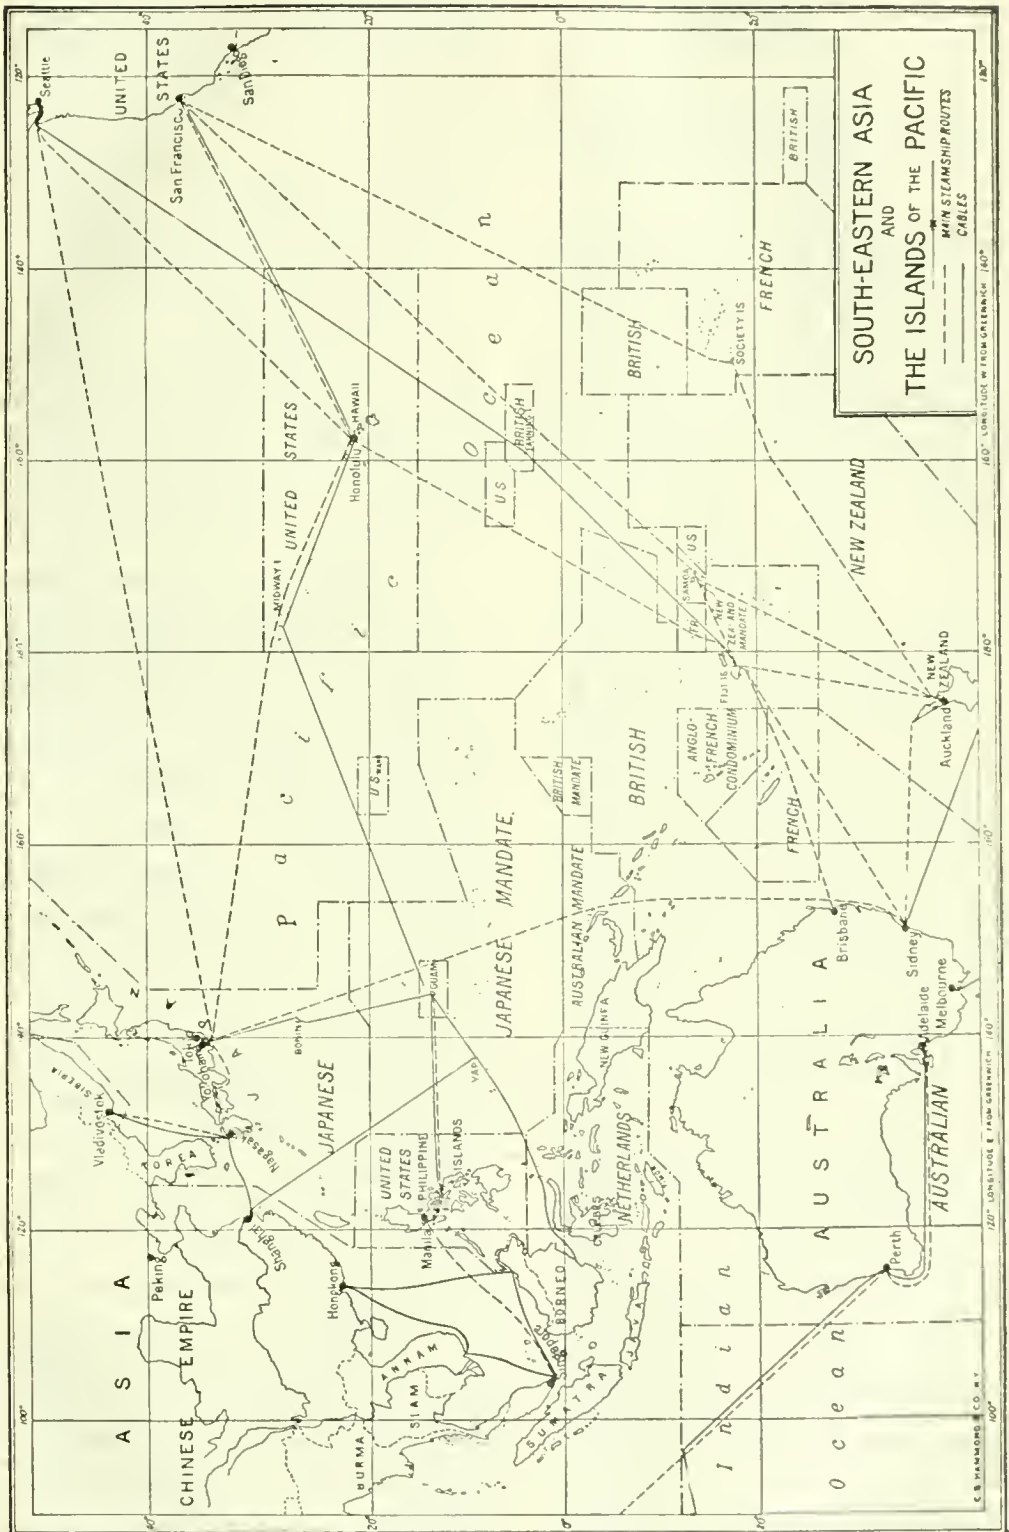

justify . . . their annexation. The story now comes to the convention of Samoa, in 1899-1900, between Great Britain, Germany, and America. The Samoan islands in the Central Pacific had . . . been in special degree cosmopolitan. The islands and their natives were very attractive to Europeans, Britishers, . . . Americans and Germans. . . . The Commissioners met in Samoa to settle . . . which of the three powers concerned . . . should prevail in these islands. . . . Germany got the Samoan islands, which were more commercially valuable, but without any good harbour; America, besides a few quite unimportant islets, got the island of Tutuila with the fine harbour of Pangopango as a naval station in the South Pacific; and Great Britain . . . secured exclusive control . . . over the Tongan group, including the splendid natural harbour of Vavao, and she also secured recognition of exclusive rights to all but two (Bougainville and Buka) of the Solomon islands. . . . After the Samoan convention, the only considerable South Sea islands still to be taken definitely within the sphere of influence . . . of the European powers, were the New Hebrides. A few British subjects, from Australia, and a few French subjects, from New Caledonia, had long before scattered themselves as pioneer settlers over the islands of this group, and a few missionaries, chiefly British, but some French Roman Catholics, had, at great risk to themselves, gained some ascendancy over the natives in certain of the islands. But the islands were still outside the pale of any civilized law. Indeed, in 1878, the British and French Governments, who were alone concerned, mutually agreed not to occupy the islands, with the natural result that disorders increased. In 1887, Australia protesting against this state of affairs, a joint commission of British and French naval officers was appointed to protect the lives and property of British and French subjects, and to maintain what order they could by means of very occasional visits by men-of-war, and in 1902 British and French Residents were appointed."—E. I. Thurn, *European influence in Pacific* (*Geographical Journal*, Apr., 1915).

1914-1918.—In World War.—Disposition of islands at Paris peace conference.—At the beginning of the World War Germany had colonial possessions of considerable importance in the Pacific. (See GERMANY: Former colonies.) German contact with these islands was cut off by the English control of European waters and it was necessary for allied forces to occupy these islands lest they should lend aid with their wireless and coaling stations, or supply the German warships with their own goods. The only military and naval activity of the war among the Pacific islands took place during the first three or four months of the war, while German raiders were harrying British pots in the Pacific and the Indian oceans. But the enormous superiority of the British navy soon made an end of all German vessels on Pacific waters, and New Zealand and Australian forces took possession of German Samoa, the Solomon Islands, and Kaiser Wilhelm's land, while the Japanese took the Marshall islands and the other northern groups. By November of 1914 all German pos-

sessions in the Pacific were in the hands of the Allies.

1918.—Small islands claimed by United States.—Wake island was annexed by the United States in 1898. A number of small islands were taken over in 1918, chief of which are Christmas, Gallego, Starbuck, Penrhyn, Phoenix, Palmyra, Howland, Baker, Johnston, Gardner Midway, Morell, and the Marcus islands, which makes the total area of the Pacific islands under the control of the United States, 121,000 square miles, with a population of 9,250,000.

1918-1921.—Changed economic and political status of Pacific as a result of the World War.—Anglo-Japanese Alliance and British imperial conferences.—Difficulties involved in Pacific mandates.—During the World War, there was a tremendous increase in wealth and commerce on the various shores of the Pacific. In many cases the Japanese and the Australians obtained a monopoly of trade and industry that had formerly belonged to Europe. Travel and commerce between the Occident and the Orient which formerly went by way of Suez and the near East, went by way of America and the Pacific, and this greatly contributed to the vast expansion of Japanese commerce and shipping. (See JAPAN: 1918-1921.) The result was that at the end of the war the centre of economic and political interest in the World War rapidly shifted from the Atlantic to the Pacific. During the two or three years following the war there was an epidemic of pan-Pacific congresses and commissions. At the British imperial conference in 1921 the results were of an indeterminate character. (See BRITISH EMPIRE: Colonial and imperial conferences: 1921.) In the agenda was the question of the renewal of the Anglo-Japanese Alliance. During the period of 1918-1921, the Japanese feeling regarding the Pacific was that they had as much right to a sovereign position on the Asiatic shores of that ocean, as the United States had on the American. The desire of the Tokio Government was to obtain for her citizens, without discrimination of caste, the most perfect opportunity possible, to develop the natural resources of China, or of the islands where her people might be, and so secure at a moderate cost, the raw materials which are necessary for her industries. At this time there was a great dearth of native laborers in both Australia and New Zealand as well as on the islands over which they had rule. The demands of the former for a mandate over New Guinea (see NEW ZEALAND: 1916-1921), and of the latter for a mandate over Samoa brought both these dominions in conflict with this policy of Japan, and both countries objected most strenuously to any Asiatic immigrations.—Based on J. E. Baker, *British empire*, p. 455.

ALSO IN: M. Shidehara, *Frank official statement for Japan*, p. 395.

1919-1921.—Treaty of Versailles.—By the Treaty of Versailles, the islands south of the equator were placed under the mandatory control of Australia, with the exception of Samoa, which was given to New Zealand, and Nauru which was retained for the British empire. The islands north of the equator, including the Marshall, Pelew, Caroline, and Ladrone groups were placed under the mandate of Japan, with the exception of Yap whose disposition remained a source of controversy until 1921.

1921.—Treaty concerning Yap and mandated

north Pacific islands. See YAP; NEW ZEALAND: 1916-1921.

1922.—Disappearance of primitive races.—"It has been one of the puzzles of . . . thoughtful men—this evanescence of primitive people. Civilization enters into their midst and they vanish by more or less slow degrees. . . . Mild diseases like measles or chicken pox . . . mowed down half the population of the Polynesian or Melanesian group. . . . But epidemics had their course and left the survivors, and yet the people of the Pacific ocean continued to melt away. . . . A Maori who knew that his death was due or predicted, would . . . promptly die. It was suicidal power of the imagination and doubtless found the real basis of sorcery in all the groups of the Pacific. . . . It is more imagination than truth. . . . The heart is gone and the race vanishes. . . . [But with those people who have kept up with modern inventions and education] as the case of the Maoris, the arrest of their racial decay is almost coeval with their complete familiarity with these [wonders of steam and electricity]. . . . If our paternal government and our missionaries mean to save the primitive people, . . . they must recognize the law of struggle and work as the only panacea."—J. M. Brown, *Aboriginal decay in the Pacific ocean*, pp. 277-278, 284.

PADUA, Declaration of.—"The flight to Varennes proved to the people of France, as well as to the monarchs and statesmen of Europe, that Louis XVI. was a prisoner in Paris, and an enemy to the new settlement of the government, as laid down by the Constitution in course of preparation. The Emperor Leopold, as brother of Marie Antoinette, as Holy Roman Emperor and supporter of dynastic legitimacy, as the leading monarch of Europe, decided to intervene. On 6th July 1791 he issued the [declaration known as the] Manifesto of Padua, in which he invited the sovereigns of Europe to join him in declaring the cause of the King of France to be their own, in exacting that he should be freed from all popular restraint, and in refusing to recognise any constitutional laws as legitimately established in France, except such as might be sanctioned by the King acting in perfect freedom. The English Government paid little or no attention to these requests of Leopold, but the Empress Catherine, and the Kings of Prussia, Spain, and Sweden, for different reasons and in different degrees, heartily accepted Leopold's views, and armed intervention to carry them into effect was suggested. But Leopold had no desire for war. His policy since his accession had been distinctly in favour of peace. He was a diplomatist, not a soldier, and he desired to frighten France by threats, rather than to fight France for the liberty of Louis XVI. and his family. The sequel to the Manifesto of Padua was a conference at Pilnitz between the Emperor Leopold and King Frederick William II. of Prussia, accompanied by their minist-

ters, in August 1791."—H. M. Stephens, *Revolutionary Europe*, pp. 102-103.

PADUS, name by which the river Po was known to the Romans. Dividing Cisalpine Gaul, as the river did, into two parts, they called the northern part Transpadane and the southern part Cispadane Gaul.

PÆANS.—"The pæans [among the ancient Greeks] were songs of which the tune and words expressed courage and confidence. 'All sounds of lamentation,' . . . says Callimachus, 'cease when the Ie Pæan, Ie Pæan, is heard.' . . . Pæans were sung, not only when there was a hope of being able, by the help of the gods, to overcome a great and imminent danger, but when the danger was happily past; they were songs of hope and confidence as well as of thanksgiving for victory and safety."—K. O. Müller, *History of the literature of ancient Greece*, v. 1, p. 27.

PÆONIANS.—"The Pæonians, a numerous and much-divided race, seemingly neither Thracian nor Macedonian nor Illyrian, but professing to be descended from the Teukri of Troy, . . . occupied both banks of the Strymon, from the neighbourhood of Mount Skomius, in which that river rises, down to the lake near its mouth."—G. Grote, *History of Greece*, pt. 2, ch. 25.

PAES, Sidonio (d. 1018), Portuguese soldier and statesman. One of the leaders of the revolution of 1017; president and minister for war and foreign affairs, April-December, 1018. See **PORTUGAL**: 1015-1020; 1010.

PAEZ, José Antonio (1700-1873), Venezuelan soldier and statesman. Fought in the War of Independence against Spain, 1810-1820; president of the republic, 1830-1834, 1830-1843; dictator, 1846; minister to the United States, 1860; dictator, 1861-1863. See **VENEZUELA**: 1820-1880; **COLOMBIA**: 1810-1830.

PAGAN, town in Burma, about 62 miles southwest of Mandalay. During the Middle Ages it was the seat of the Burmese kings. See **BURMA**: Early history.

PAGAN PRIESTHOOD. See **PRIESTHOOD**: Pagan.

PAGANISM: Definition and origin of term.—"The Old Testament employs the word *goyim* ('peoples,' 'nations'; E. V. 'Gentiles,' 'heathen,' 'nations') as a designation of all peoples other than the chosen one, and uses it in a religious sense. Other nations of antiquity had similar designations for peoples of other faiths, but these had only ethnic or national significance, such as the *barbaroi* of the Greeks, or the *airya* or *arya* by which Indians and Iranians distinguished themselves from others. A name for other peoples founded upon religious differences alone is peculiar to the Jews. The usage of the Old Testament passed over into the New Testament and into the Latin and Gothic versions, where *ethnē*, *centes*, *thiedos* were employed to designate the followers of false religions. In later Latin usage the word *paganus* ('pagan') came to be applied to those who retained the old faith as distinct from the Christian majority, though the original sense of

the word may have been simply 'civilian' as opposed to 'military,' and it had later the meaning 'rustic' or 'countryman' (cf. Gothic *halthus*). In Germany since the war of Luther the term *Heide* ('heathen') has been much used to name all religions except Judaism and Christianity. These two religions are historically connected, and are regarded as the true religions or religions of revelation. As a rule, Islam is now also admitted to the category of religions of revelation, but is still regarded as false.—*New Schaff-Herzog encyclopedia of religious knowledge*, v. 5, pp. 178.—The most usual application of the term is to the religion of the Greeks and Romans.

Heroes and gods in Greek religion.—"It was in the worship of heroes especially that the variations of religious sentiment found opportunity for development, and led to singular results. The heroes are not, as was long believed, human beings defied; they are of the same origin as the gods. In nearly every case one finds a god and a hero answering to the same allegory, and representing, under two distinct figures, a single phenomenon, a single star, a single meteor. The hero is thus the double of a divinity, the pale reflection, a sort of parheliion, of the effulgence of a major deity. True it is, that in comparing the legend of the god with that of the hero, one commonly finds the latter to be far more copious. But the cause of this difference is quite simple. The hero, being regarded as a man, and, in accordance with popular opinion, having left traces of his existence here below, necessarily obtained a greater vogue, and made more of an appeal to the sentiments of the crowd; just as the saints, in the less enlightened parts of Christendom, occupy a much more important place than God himself, precisely because, being inferior, they are not separated from mortals by so insuperable a distance. It was above all at the time when people affected to derive moral instruction from the pagan religion that the heroes gained in importance and popularity. It cannot be denied that they actually lent themselves far better than the gods to that kind of teaching. The adventures in which their valor, subjected to severe tests, was seen at times to yield, only to reassert itself, were set forth by the poets as models of resignation and courage. Hercules in particular was made use of in this way by those whom one might call the preachers of paganism. Hercules, according to a very probable hypothesis which the demonstrations of M. Maury raise to the level of certitude, was an ancient divinity of the air (*Hera-cles*) whose cult, in the hands of the warlike race of the Dorians, took on an altogether heroic character which was transformed, under the influence of the poets and philosophers, into a moral allegory pure and simple. This demi-god, arising like all the other Hellenic types of divinity from a personification of the elements, but rendered singularly uncouth through confusion with the Tyrian Melkarth, finally became the ideal of human perfection—a kind of saint who was furnished with an edifying biography, in connection with whom an attempt was made to awaken in men's souls a sense of duty."—E. Renan, *Paganism* (L. Cooper, ed., *Greek genius and its influence*, pp. 264-265).—See also MYTHOLOGY: Grecian; RELIGION: B. C. 2600-A. D. 30.

Suppression in Roman empire. See ROME: Empire: 391-395.

Revival of paganism during Renaissance.—"To a considerable extent the Renaissance was also a rebirth of pagan sensuality. Some of its devotees drew from their study of the classic authors excuse for a careless life of selfish ease untrammled and untroubled by any thought of a future world. The unbridled passions of others moved in strange orbits and gave to the life of the time a deadly iridescence. Yet the revival of the individual conscience had produced a greater sensitiveness in distinguishing between right and wrong. It was this revival of conscience that in a large measure directed progress and impelled humanity upon its way. The paganism of the Renaissance was only an ephemeral thing. It would be incorrect to think that it was the study of Greek and Roman life that gave to the Italians their pagan attitude towards life. Nothing could be further from the truth. It was the innate sense of reality of the Italians that led them to govern their lives so largely by their senses, a sense that had been emancipated by the revival of individuality, that gave to them the pagan conception of life. When they read the classic authors they were at first surprised and then delighted to find men who like themselves were bent upon enjoying to the full the pleasures of the present life. The resuscitation of the paganism of antiquity was merely a confirmation of their own. The paganism of the Italians, then, was in large part a matter of temperament; but it was also something of an intellectual epidemic, a youthful exuberance, a reaction against the trammels from which they had but recently become emancipated. Eventually they discovered that 'a system which sacrificed what was inward' could not satisfy them; and profound as was the indebtedness of the Renaissance to the new paganism, much of the finest work of the era was accomplished when 'the glow of medieval faith' inspired it. Michelangelo's greatness, for instance, was due to the fact that his genius was 'spiritualized by the reverie of the Middle Age, penetrated by its spirit of inwardness and introspection,' that he lived 'not a mere outward life like the Greek, but a life full of inward experiences, sorrows, and consolations.' So, in the later Renaissance, did the Hellenistic and medieval ideals tend to mix and mingle, to become concurrent and concomitant forces."—E. M. Hulme, *Renaissance, the Protestant revolution and the Catholic reformation in continental Europe*, pp. 149-150, 94-95.—See also MYTHOLOGY: Germanic: Sources of knowledge; NEOPLATONISM.

PAINE, Robert Treat (1731-1814), American patriot. One of the signers of the Declaration of Independence. See U. S. A.: 1776 (July): Text of Declaration, etc.

PAINE, Thomas (1737-1809), English political and philosophical writer. Came to America in 1774; published a pamphlet entitled "Common Sense" in which he advocated American independence from the mother country; joined the Continental army and served as aide-de-camp with General Greene; during that time he published the first of a series of pamphlets called *The Crisis*; returned to Europe, 1787; elected deputy to the French convention, and held his seat until the fall of the Girondists in 1793, imprisoned for ten months, barely escaping execution. After his release published his "Age of Reason"; restored to his seat in the Convention and served until 1795; returned to America, 1802.—See also DEISM: American deists; ENGLISH LITERATURE: 1780-1830; STATE, DEPARTMENT OF, UNITED STATES: 1774-1780; U. S. A.: 1776 (January-June): King George's war measures.

PAINTING: Meaning.—Progress.—"Painting," says Delacroix . . . "is an art in which we use the picture of a reality as a bridge to something beyond it." Or we might say, if we were 'realists,' to a greater enjoyment of the thing we represent. This art of painting as it has come to us through ages means something so vast that we might take it in a way as the report of the eye on all that there is. . . . And as all is memory, so this report of the eye applies to what we imagine as well as to what we see with others. For our imagination . . . is an arrangement of our memories—just as our sight is. We see through our memory. . . . Therefore, by the by, we see

the fallacy of the well-meaning artists—let us quote Courbet—who would not paint goddesses, or angels, or ideal landscapes, because they had not seen them. But for others the painting of goddesses and so forth was and is just as well a rendering of what has been seen. So that to-day a survey of this art, of what it has done and how it has done it, would run from, let us say, the vase-paintings of the Greeks and the black-and-white of China to frescoes,—mediæval or of the new Italian path,—to discoveries of methods,—such as that of oils,—to the Titians and the Rubenses; and finally, through the conquests of light and air in what we have called chiaro-oscuro, to the use of the vision of the open eye, as Sir Joshua called it, or the record of continuous successive different facts brought together; over beautiful surfaces, soothing to the eye, or over the polished hardness of Gérôme and similar. And in this last century, with the accomplishment, the influence, the mastering direction of the photograph, and finally the application of methods more or less derived from the scientists to the use of pigments, as representing light, we could close with our last developments,—the wild arrangements of impressionist color."—J. La Farge, *On painting* (*New England Magazine*, 1908, pp. 230-232).—Very important in the development of painting have been the mediums used. "Oil painting, from the great range and scope which it affords the painter, and the infinite variety of effects he is able to produce by the means at his command, has for long been the favorite of almost all artists, and by far the largest number of important paintings which have been executed since the discovery of this method have been carried out in it. [Prior to the fifteenth century, fresco and tempera were the favorite mediums. Tempera, or distemper, colors] . . . employed by the ancients appear to have been earths or oxides mixed with gum or glue instead of oils. . . . Towards the close of the middle ages, the Italians discovered that by using albumen, or white of egg, instead of size, as a means of union between the particles of color, they obtained a better substance for tempera painting, and one less liable to be affected by damp. . . . Paintings in this medium, however, dry too quickly for any elaborate working-up, and require some sort of varnish to protect them. . . . The term fresco—an Italian word, signifying fresh—has been given to paintings made upon plaster still wet or fresh. . . . The ground painted on is the last layer of plaster, which is laid on just before the artist begins his work. He first transfers the exact outlines of his composition to the wet smooth surface by pricking them through transfer paper. . . . The actual painting has to be done very rapidly, and the greatest skill and decision are necessary, as no subsequent alteration can be made. . . . The true fresco is distinguished by a singularly luminous quality of color. . . . Another process employed by the ancients for mural painting was that called encaustic, in which wax melted by heat appears to have been the chief ingredient for fixing and melting the colors."—N. D'Anvers, *Elementary history of art*, pp. 208-302.—Other methods are pastel and water color. The last has been the especial field of Asiatic painters. Water-colors are usually applied to paper, parchment, or ivory. Wood or "panel" was the favorite basis of the worker in distemper, and was formerly used for oils, but has been replaced by canvas.

Pre-classical styles.—"Painting, with several of its sisters, seems to have appeared and disappeared in very early times only to reappear among other peoples at distant places. . . . One of the most

astonishing discoveries of recent times was made in the caves of Altamira in northern Spain. Reputable archaeologists believe that a people known as Aurignacians produced the paintings found on the walls of these caves. [The subjects are animals, usually in motion.] The bold spirit, technical skill, and general excellence of the execution of these prehistoric works might well stagger the pride of some of our modern painters. If the painting was done, as it is believed, in the paleolithic age of Europe [see EUROPE: Prehistoric period: Palolithic art, etc.], it must be in the neighbourhood of thirty thousand years old. . . . In historic times, painting has been traced back many centuries before our era. Pliny says that the Egyptians claim to have invented this art at least six thousand years before it passed into

which they seem to have understood. As draughtsmen, they were successful in contours and in the seizing of variety, especially that which indicated racial differences; and besides, they drew birds with remarkable cleverness. The few caricatures which survive make it plain that the Egyptians had a sense of humour. Composition and foreshortening were unknown. . . . In the early centuries, the Egyptians employed painting chiefly to illustrate events; but the motif changed as their art intermingled with that of Assyria and Judea. . . . In some of their very earliest work the Assyrians achieved the indefinable charm of a style all their own. Jewish art concerned itself principally with richer materials on which to use, for the most part, its borrowed designs."—R. H. Bell, *Philosophy of painting*, pp. 38-39, 49-56.

THE BISON, POLYCHROME PAINTING OF THE OLD STONE AGE

Reduced facsimile of painting found on the wall in the Cave of Altamira, Spain
(Reproduction of the original by Abbé Breuil)

Greece. He adds: 'Their vanity and lying are well known.' Nevertheless, their earliest tombs, temples, mummies, monuments, and papyri bear clear evidence of the art, which, it is true, never developed to any worthy degree. Sculpture and architecture were dominant. Painting was employed principally to adorn with colour their hieroglyphics, outlines, and bas-reliefs; and that use of the art was continued in the ornamentation of their later statues, columns, and architecture. Pigments were laid on in flat masses; and it is generally agreed among students that the Egyptian painters never blended their colours [numerous examples still extant are remarkably bright and pure in color]. . . . There was virtually no progression in their art. . . . If they had any real notion of perspective, or any idea of the spirited imitation of Nature, it was smothered by conventionalities prescribed by the priesthood, a caste which dominated art. . . . The artists did, however, have distinct conceptions of colour harmony, the laws of

Greek.—Sources.—Great epoch, from Cimon to Alexander.—Alexandrian period.—Decline.—“For the history of Greek painting we have to rely upon the words of Aristotle, Plutarch, Pliny, Quintilian, Lucian, Cicero, Pausanias. Their accounts appear to be partly substantiated by the vase paintings, and such few slabs and Roman frescoes as remain to us. There is no consecutive narrative. . . . The earliest settlers of Greece probably learned painting from the Phœnicians, and employed it, after the Egyptian, Assyrian, and Phœnician manner, on pottery, terra-cotta slabs, and rude sculpture. It developed slower than sculpture perhaps; but were there anything of importance left to judge from, we should probably find that it developed in much the same manner as sculpture. Down to 500 B. C. [see also ÆGEAN CIVILIZATION: Excavations and antiquities: Cretan area; B. C. 1600-1200], there was little more than outline filled in with flat monochromatic paint and with a decorative effect similar, perhaps, to that of the vase

paintings."—J. C. Van Dyke, *Textbook of history of painting*, p. 25.—"Few Greek paintings remain to corroborate ancient criticism; . . . on the other hand, the works of ancient writers contain abundant historical information on the subject. . . . Painting was in an apparently advanced state in Asia Minor and in Magna Græcia long before it made any progress in Greece itself. . . . Homer does not mention painting as an imitative art, nor is there in Greek theogony, or hero-worship, any god or hero, or an individual of any kind, who represents the class of painters. . . . Cimon of Cleonæ . . . may perhaps be considered the earliest Greek artist worthy of the name of a painter. He was probably not earlier than Solon, with whom he may have been contemporary. [He] . . . is recorded as the inventor of foreshortenings, or the first to make oblique views of the figure, which the Greeks, according to Pliny, termed 'Catagrapha.' He also first made muscular articulations, indicated the veins, and gave natural folds to draperies."—R. N. Wornum, *Epochs of painting*, ch. 1.—"The great epoch of Grecian painting began at the time of Cimon [460 B.C.] and continued to that of Alexander [323 B.C.]. Polygnotus of Thasos, first to achieve great renown, went to live at Athens somewhere about the time of 460 B.C. He and his contemporaries established painting as a fine art in all its essentials. They handled colouring and form with power and understanding, and rendered character with facility. . . . Then came Apollodoros, Zeuxis, Parrhasius, Eupompus, Timanthes, and others, who enlivened and embellished the broad or generic style of their predecessors in the previous generation. [Athens and Sicyon were the great seats of art at this time.] The dramatic element was introduced in composition; form was enriched with local colour and colour with tone; character was accentuated, and objects were rendered more intelligible by a judicious treatment of local colour with regard to the accidental peculiarities of their appearance. The Alexandrian period was principally devoted to refinement. It merely added, as Wornum says, 'variety of method and effect to the already perfect art of the preceding age.' Among the great Alexandrian masters . . . were Apelles, Pamphilus, Protogenes, Euphranor, Nicias, Nicomachus, Aristides, Pausias. . . . The tendency was more and more in the direction of technical excellence which too often degenerated into mannerism. The higher and nobler qualities of the art were slowly sacrificed for petty effects; method and form engaged the attention of the masters rather more than essence and ideal. . . . Even those who decry Greek painting admit that the Greeks had had a wonderful play of pictorial fancy, a fine perception of light and shade and of colour-harmony. It is conceded by all that they excelled in exquisite draughtsmanship and rhythm of line; that for action, beauty, and skillful arrangement in composition, they have never been equalled; that they had a wide range of subject,—were masters of fresco-technic in wall-painting, and of tempera technic for panels. . . . And since the Greeks achieved a splendour in architecture, sculpture, and literature unequalled at any other time in the history of civilization, it is not likely that they failed in painting, especially when we note the symmetry and balance shown in the decorative work on vases, etc., admittedly executed by inferior artists."—R. H. Bell, *Philosophy of painting*, pp. 71-72, 98-99.—See also EDUCATION, ART: Greece.

Roman.—Frescoes.—Rome was more distinguished for its collections than for its artists; there

was not a single painter of great name, though many Greek artists were assembled at Rome. The destruction of Corinth by Mummius, 146 B.C. [see GREECE: B. C. 280-146], was in the first respect a greater event for Rome, for from that time forth, for two or three centuries, Rome almost drained the ancient world of its works of art. . . . The paintings of Pompeii and Herculaneum have incontestably tended rather to lower the reputation of the ancient painters than otherwise, in the estimation of the world generally, though the competent judge will find, upon a judicious examination, the confirmation of ancient criticism in these remains; for they contain many great beauties, especially in composition, though they are evidently the works of the inferior artists of an inferior age. To judge, however, of the ancient masterpieces of art from such specimens, is tantamount to estimating the great works of modern ages by the ordinary patterns on common crockery and French paper-hangings."—R. N. Wornum, *Epochs of painting*, ch. 2.—"The painting of the Roman period is known to us in the numerous frescoes at Pompeii, as well as in the stucco decorations of the walls of houses and tombs in Rome and in the provinces. We also possess the first essays of Christian pictorial art, executed in the catacombs from the second to the fourth century. . . . Roman painting was not in any sense a mere continuation of Hellenic painting. Here, again, side by side with Greek works, easily recognisable by the vigour of the drawing and the more or less deliberate imitation of bas-reliefs, we find from the middle of the first century, manifestations of an original style, especially at Pompeii. This style is not unlike that of the modern Impressionists; it is characterized by the use of patches of light and colour, sometimes producing the most charming effect. Certain mural decorations at Pompeii executed in this style, have not been surpassed in our own times. Did it originate in Rome or in Alexandria? It is difficult to say; but it is certain that it flourished in Italy, and that no examples of it have survived elsewhere. There is wonderful specimen in Rome itself, the *Eros with a Ladder*, of the Casino Rospigliosi, a fresco so free in execution that it might easily be attributed to Fragonard. Thus we see that the accepted idea of Roman art as a long and monotonous decadence is as contrary to fact as to historic laws. Wholly incontestable, however, is the retrogressive evolution of Hellenic art and classic tradition, which was modified by the inter-mixture of Oriental elements in Asia, though it still clung to antique types and formulæ, and was finally merged in Byzantine art. But side by side with this obsolescent art sprang up, as early as the first century after Christ, a realism which may fitly be called Roman, since its masterpieces were produced in Rome, a realism which seems to have had its root in Italian soil. Throughout the Middle Ages the two opposing principles were arrayed against each other. Byzantine art lowered for a long time over the western countries like a nightmare; but the day came when Italian realism, brought into touch with the French realism of the fourteenth century, triumphed, and the Renaissance was the result. At the present day, Byzantine art still prevails in Greece, Turkey, and Russia, the ancient religious domain of Byzantium, while the western nations have a wholly different art akin to the realism of the Romans."—S. Reinach, *Apollon*, pp. 93-94.

Early Christian and Byzantine art.—"The Hellenistic faith was a worship of nature, a glorification of humanity, and exaltation of physical

and moral perfections. It dealt with the material and the tangible, and Greek art appealed directly to the sensuous and earthly nature of mankind. The Hebraic faith or Christianity was just the opposite of this. It decried the human, the flesh, and the worldly. . . . In art the fine athletic figure, or, for that matter, any figure, was an abomination. The early Church fathers opposed it. It was forbidden by the Mosaic decalogue and savored of idolatry. But what should take its place in art? How could the new Christian ideas be expressed without form? Symbolism came in, but it was insufficient. A party in the Church rose up in favor of more direct representation. Art should be used as an engine of the Church to teach the Bible to those who could not read. This argument held good, and notwithstanding the opposition of the Iconoclastic party painting grew in favor. It lent itself to teaching and came under ecclesiastical domination. As it left the nature of the classic world and loosened its grasp on things tangible it became feeble and decrepit in its form. While it grew in sentiment and religious fervor it lost in bodily vigor and technical ability. For many centuries the religious motive held strong, and art was the servant of the Church. It taught the Bible truth, but it also embellished and adorned the interiors of the churches. All the frescos, mosaics, and altar-pieces had a decorative motive in their coloring and setting. The church building was a house of refuge for the oppressed, and it was made attractive not only in its lines and proportions but in its ornamentation. . . . Technically the work begins to decline from the beginning in proportion as painting was removed from the knowledge of the ancient world. . . . The color was rich and the mechanical workmanship fair for the time, but the figure had become paralytic. It shrouded itself in a sack-like brocaded gown, had no feet at times, and instead of standing on the ground hung in the air. Facial expression ran to contorted features, holiness became moroseness, and sadness sulkiness. The flesh was brown, the shadows green-tinted, giving an unhealthy look to the faces. Add to this the gold ground (a Persian inheritance), the gilded high lights, the absence of perspective, and the composing of groups so that the figures looked piled one upon another instead of receding, and we have the style of painting that prevailed in Byzantium and Italy from about the ninth to the thirteenth century."—J. C. Van Dyke, *Textbook of the history of painting*, pp. 38-41.—See also BYZANTINE EMPIRE: Part in history; EDUCATION, ART: Roman and early Christian.—"Though painters were doubtless in considerable numbers throughout the whole of the middle ages, the illuminations in MSS. constitute the principal . . . remains of actual painting of the period. . . . The great period for manuscript illuminations in the West was apparently the age of Charlemagne, who, as well as his grandson, Charles the Bald, was a great patron of such works of taste. . . . The Anglo-Saxons were long among the best illuminators; and the Irish also were distinguished for their excellence in this department of art."—R. N. Wornum, *Epochs in painting*.

See also EDUCATION, ART: Medieval and Renaissance.

Italian: Early Renaissance.—Cimabue, Duccio, Giotto.—Great schools of the fifteenth century.—"Giovanni Cimabue, born at Florence in 1240, ends the long Byzantine succession in Italy [see ART: Relation of art and history], which had continued uninterrupted from the time of

Constantine until the thirteenth century. In him, 'the spirit of the years to come' is decidedly manifest; but he never entirely succeeded in casting off the hereditary Byzantine asceticism, although, in his later years, he attained to much greater freedom of drawing, even, in some of his works, to something like a natural expression. Whether this was owing to the influence of his great pupil Giotto, or whether he himself had a dawning perception that nature was more likely to be right than tradition, it is difficult to say: but at all events, the progress in his art is so distinct, that most writers place him at the beginning of the new epoch, and Vasari extols him as having given 'the first light to the art of painting.' So much praise has indeed been accorded to Cimabue, and Vasari's enthusiasm is so catching, that we can scarcely help believing that he was a great artist; yet it must be owned, that when we come to study his works, they produce a feeling of disappointment, and when we compare his feeble efforts at naturalism with the noble achievements of Giotto, we can scarcely avoid thrusting him back amongst his Byzantine predecessors, rather than setting him forward as the father of such a great race as the Italian painters. But the Florentines of that time were more than satisfied with the achievements of their high-born artist, and stiff and melancholy as his Madonnas appear to us, they were then reckoned marvels of grace and beauty, and awoke the warmest feelings of love and devotion in simple pious minds."—C. Heaton, *Concise history of painting*, pp. 45-47.

ALSO IN: B. Berenson, *Study and criticism of Italian art*, pp. 3-5.

"Siena, the rival city of Florence, produced the first Italian painter of genius, Duccio, who had evidently seen and studied the Byzantine paintings and enamels (1255-1319). Duccio combined with a sense of grandiose composition a broad, if as yet not very delicate, feeling for line. He was the first to translate into true pictures, that is to say, expressive groupings of figures, the painted chronicles of the Middle Ages, which pious souls had spelt out for centuries as a kind of Bible for the unlettered. Duccio was the progenitor of a numerous family of painters at Siena, among them Simone Martini, called Memmi, the Lorenzetti, and Taddeo Bartolo, who, though they did not equal the Florentines in power, surpassed them perhaps in passion, poetry, and tenderness. . . . The weakness of the Siennese school was, that it aimed rather at expression and emotion than at perfection of form, that it 'marked time,' so to speak, and was incapable of following the Florentines on the salutary path of naturalism while preserving its distinctive charm. By the middle of the fifteenth century, the vitality of the Siennese school was exhausted. Thenceforth, Florence, who had learnt from her in the beginning, sent artists to her. The first of the great Florentine painters was Giotto, who died in 1336. Was he influenced by Duccio? It is possible. But his great merit lies in his having rejected the Byzantine tradition, which continued to hold Duccio in thrall. . . . Giotto's drawing is not always correct, his draperies are sometimes heavy and his heads vulgar; but with what clarity and poetry he expresses what he has to say! Giotto's frescoes at Assisi, illustrating the life of St. Francis, and those at Padua and in the Church of Santa Croce at Florence are among the most charming achievements of painting, although not one of the figures they contain is above criticism. Giotto was inspired by the Gothic masters, notably by Giovanni Pisano (d. 1329), but above all, by

Nature. His disciples were nearly all merely Giottesques, who escaped from the salutary contact with realities. . . . Giottism produced but one great artist, the monk Fra Angelico of Fiesole (1387-1455), and even he was influenced by Masaccio, an uncompromising realist. Fra Angelico was the painter *par excellence* of Christianity as preached by St. Francis of Assisi. The joys of belief, the happiness of suffering for the faith, the beatitude of the elect, have never been more eloquently expressed than by him."—S. Reinach, *Apollo*, pp. 151-154.—Before the death of Fra Angelico, oil-painting became generally known in Italy. Side by side with, and often opposed to, the ecclesiastical motive in art, there developed an intense interest in the use of the new medium, as well as in other phases of the science of painting, resulting in a rapidly progressive skill and ease in rendering the subject. The progress of sculpture, especially the work of Donatello, was extremely closely related to that of painting. "During the later 15th century the town of Padua produced a remarkable school of art, headed by Andrea Mantegna. . . . During this same period, and largely under Paduan influence, the beginnings of the later Venetian school were made. . . . Aside from the schools just named, Italian art in general converged toward Florence in the 15th century, and also radiated thence. . . . Perugia, where Raphael's teacher was long resident, became in art a dependency or connection of Florence. . . . It was from the Florentine school that the great artists developed who made the glory of Roman art at the beginning of the 16th century."—W. H. Goodyear, *History of art for classes*, pp. 253-254.—"Masaccio, . . . like Giotto a century earlier,—himself the Giotto of an artistically more propitious world—was, as an artist, a great master of the significant, and, as a painter, endowed to the highest degree with a sense of tactile values, and with a skill of rendering them. In a career of but few years he gave to Florentine painting the direction it pursued to the end. . . . His frescoes at once became, and for as long as there were real artists among them remained, the training-school of Florentine painters. Masaccio's death left Florentine painting in the hands of Fra Angelico, Paola Uccello, and Andrea del Castagno; the younger, Domenico Veneziano and Fra Filippo. . . . Uccello . . . was the first representative of two strong tendencies in Florentine painting—of art for dexterity's sake, and art for scientific purposes. . . . [Fra Filippo's] works are still copious, and many of them are admirably preserved; we therefore have every facility of judging him as an artist, yet nothing is harder than to appreciate him at his due. If attractiveness, and attractiveness of the best kind, sufficed to make a great artist, then Filippo would be one of the greatest, greater perhaps than any other Florentine before Leonardo. . . . His real place is with the *genre painters*; only his *genre* was of the soul, as that of others—of Benozzo Gozzoli, for example—was of the body. . . . The leanings of the school [of Florentine painting] during this interval [1430-1460] were not artistic and artistic alone, but that there were other tendencies as well, tendencies on the one side, toward the expression of emotion (scarcely less literary because in form and colour than if in words), and, on the other, toward the naturalistic reproduction of objects. . . . While the former tendency was represented by Filippo alone, the latter had Paola Uccello, and all of Castagno and Veneziano that the genius of these two men would permit them to sacrifice to naturalism and science. To the extent,

however, that they took sides and were conscious of a distinct purpose, these also sided with Uccello and not with Filippo. It may be agreed, therefore, that the main current of Florentine painting for a generation after Masaccio was naturalistic, and that consequently the impact given to the younger painters who during this period were starting, was mainly toward naturalism. . . . Meanwhile we must continue our study of the naturalists, but now of the second generation. Their number and importance from 1460 to 1490 is not alone due to the fact that art education toward the beginning of this epoch was mainly naturalistic, but also to the real needs of a rapidly advancing craft, and even more to the character of the Florentine mind, the dominant turn of which was to science and not to art. But as there were then no professions scientific in the stricter sense of the word, and as art of some form was the pursuit of a considerable proportion of the male inhabitants of Florence, it happened inevitably that many a lad with the natural capacities of a Galileo was in early boyhood apprenticed as an artist. . . . This was literally the case with the oldest among the leaders of the new generation, Alessio Baldovinetti, in whose scanty remaining works no trace of purely artistic feeling or interest can be discerned; and it is only less true of Alessio's somewhat younger, but far more gifted contemporaries, Antonio Pollaiuolo and Andrea Verrocchio. These also we should scarcely suspect of being more than men of science, if Pollaiuolo once or twice, and Verrocchio more frequently, did not dazzle us with works of almost supreme art, which, but for our readiness to believe in the manifold possibilities of Florentine genius, we should with exceeding difficulty accept as their creation—so little do they seem to result from their conscious striving. . . . To confine ourselves, however, as closely as we may to painting, and leaving aside for the present the question of colour, which is, in Florentine art, of entirely subordinate importance, there were three directions in which painting as Pollaiuolo and Verrocchio found it had greatly to advance before it could attain its maximum of effectiveness: landscape, movement, and the nude. . . . In all that concerns movement, Verrocchio was a learner from Pollaiuolo, rather than an initiator, and he probably never attained his master's proficiency. . . . But in landscape Verrocchio was a decided innovator. . . . It is a temptation to hasten on from Pollaiuolo and Verrocchio to Botticelli and Leonardo, to men of genius as artists reappearing again after two generations, men who accomplished with scarcely an effort what their precursors had been toiling after. But from these it would be even more difficult than at present to turn back to painters of scarcely any rank among the world's great artists, and of scarcely any importance as links in a chain of evolution, but not to be passed by, partly because of certain qualities they do possess, and partly because their names would be missed in an account, even so brief as this, of Florentine painting. The men I chiefly refer to, one most active toward the middle and the other toward the end of the fifteenth century, are Benozzo Gozzoli and Domenico Ghirlandajo. Although they have been rarely coupled together, they have much in common. Both were, as artists, little more than mediocrities with almost no genuine feeling for what makes painting a great art. The real attractiveness of both lies entirely outside the sphere of pure art, in the realms of *genre* illustration. And here the likeness between them ends; within their common ground

they differed widely. . . . Ghirlandaio was born to far more science and cunning in painting than was current in Benozzo's early years, and all that industry, all that love of his occupation, all that talent even, can do for a man, they did for him; but unfortunately he had not a spark of genius."—B. Berenson, *Florentine painters of the Renaissance*, pp. 31-32, 40, 43, 45, 48, 56-57, 61-63.—"Umbrian born, but Florentine trained. . . . [Piero della Francesca (c. 1420-1492)], became more scientific than sentimental, and excelled as a craftsman. He knew drawing, perspective, atmosphere, light-and-shade in a way that rather foreshadowed Leonardo da Vinci. From working in the Umbrian country his influence upon his fellow-Umbrians was large. It showed directly in Signorelli (1441-1523), whose master he was, and whose style he probably formed. . . . Signorelli and Perugino seem opposed to each other in their art. The first was the forerunner of Michael Angelo, the second was the master of Raphael; and the difference between Michael Angelo and Raphael was, in a less varied degree, the difference between Signorelli and Perugino. . . . Filippino modelled his art upon that of his father, Fra Filippo, and was influenced by Botticelli. . . . He was the most important of the fifteenth-century technicians, without having any peculiar distinction or originality, and in spite of being rather prosaic at times."—J. C. Van Dyke, *Text-book of the history of painting*, pp. 63-64, 66-67.—"Between Giotto and Michelangelo, Botticelli (1444?-1510) is unquestionably the most eminent figure as representing all that is most deeply characteristic of Florentine art. . . . That concentrated devotion to his subject which Angelico dedicated wholly to the service of the church, Botticelli brought to the treatment of every theme. Christian or Pagan, nowhere, not even in the final triumphs of the Florentine school, is the absolute control of the imagination more completely asserted. . . . There is hardly a line of his curiously invented patterns of design, there is no tiny fragment in the assorted harmonies of his color, radiant or subdued, that is not summoned there for the special service of the theme he seeks to illustrate." J. W. C. Carr, *Ideals of painting*, pp. 52-54.—"The art of a nation passes through very much the same development as that of an individual. There are the first crude efforts, then the struggle with technical difficulties. The delirious pleasure of overcoming the latter, then, very often makes one forget the end for the means, and one falls in love with the language itself rather than with the things to be expressed. . . . But technique in all its branches had now been mastered. . . . Perspective, both linear and ariel, line, light and shade, color and composition, no more offered any difficulties. One school had developed in grandeur and simplicity, another in sentiment, another in ideal quality, and so on. Now the giants of painting came, and united all these excellencies of quality and technical accomplishments into one great, perfect art. Thus we have the period of the High Renaissance."—O. M. Brauner, *Painting: The High Renaissance in Italy* (*Fine Arts Journal*, Sept., 1916).—See also EDUCATION, ART: Medieval and Renaissance.

Italian: High Renaissance.—Leonardo, Michelangelo, Raphael, Correggio, Titian, Tintoretto.—"Andrea del Sarto (1486-1531), Fra Bartolomeo (1475-1517), and Albertinelli (1474-1515) form [in the High Renaissance] a notable group, which, however, falls quite below the first rank. They seem born too late for the highest ambition. They are influenced and left behind by the giants

in whom the High Renaissance culminated, and they paved the way for the mannerists of the final period."—A. V. V. Brown and W. Rankin, *Short history of Italian painting*, p. 229.—"The suddenness of the change from an art still more or less primitive to the full-blown art of the high Renaissance, and the briefness of this period of splendor, may be best shown by a few dates. The first picture of the new and fully matured style, Leonardo's 'Last Supper,' was probably painted in 1497. Within fifteen years, that is, by 1512, the ceiling of the Sistine Chapel and the frescoes of the Camera della Segnatura had been completed, and when Raphael died, in 1520, the decline had already begun. . . . Even Correggio, the youngest and the most revolutionary of the giants of the high Renaissance, who transformed painting beyond the dreams of Michelangelo or Raphael, had completed his work and died in 1534. Yet Lorenzo da Credi, Leonardo's fellow pupil in Verrocchio's studio, younger than Leonardo by seven years, survived until 1537, a primitive to the end. Nothing can account for the extent and the rapidity of this change but the extraordinary genius of four men: Leonardo, Michelangelo, Raphael, and Correggio. . . . The earliest of the four, Leonardo da Vinci, was, in a sense, rather a precursor of the high Renaissance than a full sharer in it. Twenty-three years older than Michelangelo and thirty-one years older than Raphael, he was already a mature and world-famed artist when they were beginning their careers, and in his later years he completed very little work of importance. Painter, sculptor, architect, engineer and man of science, as well as musician and courtier, he allowed his varied interests to distract him from artistic creation, and of the few things he actually painted most are lost or ruined. Enough remains for us to see that his task was to push all parts of the art of painting to the very verge of perfection, not to carry any one of its elements to the highest possible point. . . . It is in the treatment of light and shade that he was most the innovator, and he has been called the inventor of *chiaroscuro*, but even here he did not go the whole way. . . . Of light and shade as a separate element of art, capable of its own range of expression—of light and shade which veils form rather than reveals it—he knew nothing, or chose not to utilize such knowledge as he had. For . . . it is necessary to distinguish between what Leonardo the scientific investigator had learned of the aspects of nature and what Leonardo the artist thought fit for artistic employment. . . . The Florentine ideal in art was the utmost realization of form. Leonardo was a true Florentine, and he introduced into painting just so much of light and shade as should assist in this realization, no more. . . . At first sight Michelangelo may seem almost as versatile a genius as Leonardo himself. He, also, was painter, sculptor, architect, and engineer, and he was, besides all these, a poet, of true power. Yet his task was a much narrower one than that of Leonardo. In the three arts he practised, his work was to express the Renaissance ideal of energy, and to express it by means of the Florentine idea of significant form. He is essentially the draftsman and his special distinction is to have pushed significant draftsmanship further than it had ever gone before or has ever gone since. . . . No one since the Greeks knew the human figure as Michelangelo knew it, and no one has relied so exclusively upon the human figure as his means of expression. . . . As Michelangelo was born to give in his art the highest expression of the Renaissance ideal of energy, so Raphael

PAINTINGS OF THE EARLY AND LATER ITALIAN RENAISSANCE.

Giotto: "St. Francis receiving from the Pope the Confirmation of the Rule of his Order"

Andrea del Sarto: "Madonna of the Harpies"
(In the Uffizi Gallery, Florence)

was born to express the equally cherished, if partly inconsistent, ideal of serene and ordered dignity, of a clear and spacious existence governed by intelligence and right reason; and nothing could be more unlike the proud and tortured spirit of the great Florentine than the sunny wholesomeness of Raphael's nature. . . . He was seldom successful in representing any vehemence of action, and it was not this function to evoke pity or terror. His world is a world of peace and tranquility, and its dominating character is orderliness. Now in art, the very principle of order is design, and Raphael was the greatest master of design that the world has seen. The perfection of ordered design—the mastery of formal composition—was his gift to the world, and to it everything else was subordinated. . . . If Correggio was a less supremely great artist than Michelangelo or Raphael, yet his art is even more surprising and unaccountable than theirs, and a more strikingly original genius than his has never appeared. . . . His innovations were innumerable. . . . But all these innovations, admirable or the reverse, are as nothing compared with his invention of *chiaroscuro*, of which he is the supreme master in Italian art. With him light and shade ceases to be a mere means of securing relief and becomes a separate element of art of the highest expressional value. . . . With the death of Correggio the golden age of Italian painting, outside Venice, comes to an end. The later art divides itself into two main streams which cross and intermingle—the stream of the baroque springing from Michelangelo and the stream of the academic springing from Raphael. . . . In the latter part of the sixteenth century the Caracci founded the school of the Eclectics, which endeavored to unite the merits of all other schools; to compose like Raphael, draw like Michelangelo, use Correggio's *chiaroscuro* and Titian's color. Like all attempts to be a little of everything, it became not very much of anything. . . . Italian art was dying. Henceforth the living art of the world was to be produced elsewhere.”—K. Cox, *Concerning painting*, pp. 67-97.—At almost the same time as the High Renaissance in Florence and Rome painting also reached its height in Venice. (See *VENICE*: 16th century). With her Byzantine heritage of color and her commercial interests in the East, Venice was distinct in character from the rest of Italy; and by virtue, perhaps, of her continued prosperity and independence, painting was later there in its decline. The Venetian is the last of the great Italian schools. “Florence was the soil of humanism; there colour was subordinate to line; and the picture, in a sense, was the woven raiment of the painter's thought. . . . Venice demanded of art not the expression of thought and knowledge, as such, but rather a sensuous quality which should express in colour the poetry of every day life. And thus the Venetians became the first great European school of colourists. . . . [They] thought in colour and studied its appearance in nature, its possibilities in art, and its powers in pigment. In these things they have not been excelled.”—R. H. Bell, *Philosophy of painting*, pp. 127-128.—The two greatest masters were Giorgione (c. 1477-1510) and Titian (c. 1477-1576). “Titian occupies almost, if not quite as important a place in the history of painting as does Shakespeare in that of literature. His fame, his popularity, the wide range as well as the immense quantity of his works, entitle him to be ranked with our poet, if only for the immense influence they have both exercised on posterity. . . . As it happens, too, Titian stands in much the same relation to Giorgione as Shake-

peare did to Marlowe. Giorgione was really the great innovator, and Giorgione died young, leaving Titian to carry on the work.”—R. Davies, *Six centuries of painting*, pp. 78-79.—Little is known of Giorgione, and only three pictures can be ascribed to him with any certainty. Yet by virtue of his lyrical, romantic charm, his is one of the most distinct personalities in art. Titian's two successors, Veronese (1518-1594) and Tintoretto (1528-1588) were masters of a colossal style of decoration, magnificent in color and composition, which prevailed even into the 18th century.—See also *EDUCATION, ART: Medieval and Renaissance.*

French (12th-18th centuries).—School at Fontainebleau.—Greatness of the seventeenth century.—Decline under Louis XV.—“From the time when Charlemagne gathered Byzantine artists round him at Aix-la-Chapelle, to the dawn of the Renaissance, there are evidences of an uninterrupted Art activity in France; but besides that the interest attaching to such efforts is, in many cases, antiquarian rather than artistic, those in which the germs of French painting can be traced were long in assuming any national character. . . . The first gleam of any national character affecting French art appears about the middle of the 12th century, when the rise of the pointed Gothic architecture drove painting from the walls to the windows. Glass painting not only reached its highest perfection in France, but, from its peculiar style, indicated far more surely a future School of Painting than the mural frescoes. . . . The same influences that drove painting from the walls of churches turned the attention of artists during the 13th and 14th centuries to such subjects as *retablos* and altar-pieces. But these so-called artists do not pre-suppose an improved school of painting. In fact, before the 14th century, painting had no standing as a separate art, but was strictly subordinated to sculpture or architecture. The painter was still merely a decorator. . . . While frescoes and decorative painting supplied only a temporary want, miniature was from the first the real medium for the exercise of whatever artistic zeal existed. . . . It was the Italian wars, begun in 1494 by Charles VIII., that first brought the artistic treasures of Italy prominently before the eyes of the French monarchs.”—G. W. Smith, *Painting, Spanish and French*, pp. 97-212.—“Painting in France did not, as in Italy, spring directly from Christianity, though it dealt with the religious subject. From the beginning a decorative motive—the strong feature of French art—appears as the chief motive of painting. This showed itself largely in church ornament, garments, tapestries, miniatures, and illuminations. . . . Francis I., at Fontainebleau, seems to have encouraged two schools of painting, one the native French and the other an imported Italian, which afterward took to itself the name of the ‘School of Fontainebleau.’ Of the native artists the Clouets were the most conspicuous. They were of Flemish origin, and followed Flemish methods both in technic and mediums. [The seventeenth century] . . . was a century of great development and production in France, the time of the founding of the French Academy of Painting and Sculpture, and the formation of many picture collections. . . . By all odds the best painter of this time was Nicolas Poussin (1593-1665). . . . He was the founder of the classic and academic in French art, and in influence was the most important man of the century. . . . The landscape painter of the period, however, was Claude Lorrain (1600-1682) . . . the man who first put a real sun in the heavens and shed its light upon earth. There is a soft summer's day

drowsiness, a golden haze of atmosphere, a feeling of composure and restfulness about his pictures that are attractive. Like Poussin he depended much upon long sweeping lines in composition, and upon effects of linear perspective. . . . When Louis XIV. came to the throne painting took on a decided character, but it was hardly national or race character. . . . In method the French painters followed the late Italians, and imitated an imitation; in matter they bowed to the dictates of the court and reflected the king's mock-heroic spirit."—J. C. Van Dyke, *Textbook of the history of painting*, pp. 132-139.—"Louis encouraged Art sincerely if not altogether wisely, and his example was followed by the nobility. He was ably seconded in this respect by his ministers, Colbert and Louvois, and his favourite painter, Lebrun, and to their efforts were due, at least all the outward and material appliances which could serve to promote the progress of Art. . . . All this fostering care of Art, was, however, rendered nugatory, to a great extent, by the prevailing tendencies of the times, which forced every artist to follow in the same groove." Two artists, however, stood "outside the influence of the France of their day, yet sum up in their work the characteristic merits and defects of the French school." These were Nicolas Poussin, "the greatest painter whom France can claim,"—a native of Normandy,—and Eustache le Sueur, born at Paris in 1617. "In the extraordinary fertility and variety of his genius Poussin recalls Rubens and Murillo."—"Le Sueur has been called the 'French Raphael,' and, although the comparison must not be strained too much, it is not wholly unjust." But the painter most distinctly representative of the period was Charles Le Brun, called "the Louis XIV. of Art," who painted with ostentation, on a grand scale, much to the liking of the ostentatious king. He founded the French Academy of Painting and the French School at Rome. Under the Regency, and during the reign of Louis XV, "the deterioration of government and of society found their analogue in the steady decline of painting."—G. W. Smith, *Painting, Spanish and French*, pp. 97-212.—"With the advent of Louis XV. art took upon itself another character, and one that reflected perfectly the moral, social, and political France of the eighteenth century. The first Louis clamored for glory, the second Louis revelled in gayety, frivolity, and sensuality. This was the difference between both monarchs and both arts. The gay and the coquettish in painting had already been introduced by the Regent, himself a dilettante in art, and when Louis XV. came to the throne it passed from the gay to the insipid, the flippant, even the erotic. . . . Yet, in spite of the lack of moral and intellectual elevation, in spite of frivolity and make-believe, this art was infinitely better than the pompous imitation of foreign example set up by Louis XIV. It was more spontaneous, more original, more French. The influence of Italy began to fail, and the painters began to mirror French life. It was largely court life, lively, vivacious, licentious, but in that very respect characteristic of the time. Moreover, there was another quality about it that showed French taste at its best—the decorative quality. It can hardly be supposed that the fairy creations of the age were intended to represent actual nature. They were designed to ornament hall and boudoir, and in pure decorative delicacy of design, lightness of touch, color charm, they have never been excelled. The serious spirit was lacking, but the gayety of line and color was well given. Watteau (1684-1721) was the one chiefly responsible for the co-

quette and soubrette of French art, and Watteau was, practically speaking, the first French painter. . . . All his characters played at life in parks and groves that never grew, and most of his color was beautifully unreal; but for all that the work was original, decorative, and charming. Moreover, Watteau was a brushman, and introduced not only a new spirit and new subject into art, but a new method. The epic treatment of the Italians was laid aside in favor of a *genre* treatment, and instead of line and flat surface Watteau introduced color and cleverly laid pigment. . . . Van Loo (1705-1765), Boucher (1703-1770), . . . Fragonard (1732-1806) followed in a similar style. . . . Chardin (1699-1779) and Greuze (1725-1805), clung to portrayals of humble life and sought to popularize the *genre* subject [Greuze in a theatrical fashion, Chardin with utmost repose and sincerity]." J. C. Van Dyke, *Textbook of the history of painting*, pp. 132-142.—See also LOUVRE: 1548-1921.

Flemish (15th-16th centuries).—Art in northern Europe.—It is common to fancy that only in Italy did the period of intellectual energy and achievement known as the Renaissance begin so early as the fourteenth century. This is perhaps true so far as the classical element is concerned. But it is equally true that both the painting and the sculpture of northern Europe possessed at that time a merit and vitality fully equal to the Italian. Ireland had been the refuge of learning during the Dark Ages. The most beautiful of illuminated manuscripts were the product of Irish and English monasticism. Both in Germany and in England there are indications of a fine native school of mural painting which flourished in the twelfth, thirteenth and fourteenth centuries. Certain it is that about 1420 the brothers van Eyck, painters at the prosperous court of Burgundy, knew more of perspective and the treatment of landscape, and were far more expert in the handling of their medium, than any of their contemporaries in Italy. To them is attributed—falsely—the invention of oil colors. Their famous secret seems to have consisted in an improvement in the quality of the oils and a new technique in applying the colors. "All the distinguishing features of Flemish art can be studied in the Van Eycks. A splendid example is afforded by the 'Madonna and the Donor' by Jan van Eyck in the Louvre. This picture attracts us at first on account of its beautiful color; then we are repelled because we find none of that beauty of form which we instinctively expect. As, in spite of all of this, the picture continues to hold our interest, we finally realize that this is not a Madonna at all in the true sense that Raphael's was or Bellini's. What really interests us is the Donor. Who was he? What is he thinking about? Why do his hands say one thing and his eyes another? For it never occurs to us to doubt that he was a real person. In short, interest in reality has taken the place of interest in an ideal; character in place of beauty. Our longing for beauty, however, is ministered to by the wonderful color, the pleasing composition, the skilful rendering of the different textures, the splendid effect of the robes and jewels, and especially by the landscape that keeps receding until lost to our view. The Van Eycks have a number of noteworthy successors: Roger van der Weyden; . . . Hans Memling; . . . Hugo van der Goes; . . . Quentin Matsys; finally all the genius of Flanders culminated in one stupendous genius—Rubens (1577-1640)."—J. B. Glen, *Great schools of painting (Chautauquan, July, 1911).*—"Antwerp at the beginning of the 16th century occupied the first

place as a School of Art in the Netherlands. The founder of this school was Quinten Massijs (1466-1531), usually called Matsys, and sometimes Metsys: he is popularly known as 'the Blacksmith of Antwerp.' Born at Louvain, the son of a locksmith, Quinten Matsys probably worked at first at his father's trade. . . . From the death of . . . Quinten Matsys we may trace the gradual decline of art in the Netherlands. The manly, robust, and realistic style of the Flemish painters . . . was now to be abandoned for the dreams and idealism of Italy. Flemish art ceased to be national, and its painters forsook the delineation of their own homely people, their quaint old-world cities, and their flat landscapes, to struggle after the azure skies and unveiled beauties of the Florentine and Venetian schools. . . . The commencement of the 17th century witnessed the return of art in the Netherlands to the honest realism of the North, after its long banishment amid the idealism of the South. . . . It required, however, a potent magician to recall the Art of the Netherlands to life, and that magician appeared in the person of Peter Paul Rubens. Few men have led more stirring and successful lives. No painter except Titian was ever so courted by the great and wealthy. Handsome, well-born, fascinating in manner, Rubens succeeded in all which he undertook, and was equally praised as a diplomatist, a courtier, a patron, and a painter. He was essentially a man of the world, and born under a lucky star. His very pictures may be described as worldly, since though by no means irreligious as a man, there is no religion, no spirituality, in his works. . . . Rubens was an almost universal genius in his art, and has left a vast number of pictures dealing with nearly every kind of subject. . . . The great number of works attributed to him would seem also fabulous, if we did not believe that many of them were really executed under the eye of the master by the pupils who worked from his designs."—H. J. W. Buxton and E. J. Poynter, *German, Flemish and Dutch painting, bk. 2, ch. 2-3*.—"As a colourist, Rubens was a Venetian in his early career; but in time his individuality and virility made him more. He mastered, then seemed to defy, the laws of art in obeying them. He painted human flesh as no one before him had done and as few since have equalled. . . . While his sensuousness has the air of spontaneity guided by chance, it will bear careful checking by the scientific method. He massed his amplitudes of light and shade in seeming abandon, and yet, so far as I can recall, they always balance. His power over luminous colour, his success in portraiture, *genre*, landscape, animal painting, imagination, and feeling, all stand forth in amazing array,—an enduring evidence of the man's superb genius."—R. H. Bell, *Philosophy of painting, pp. 141-142*.—Antoon van Dijck [or Van Dyck], the greatest of the pupils of Rubens, the son of a merchant of good standing, was born at Antwerp in 1599. At ten years of age he was studying art under Van Balen, and was registered in the Guild as his pupil; from him he proceeded to the studio of Rubens. . . . In 1620 he was engaged as an assistant by Rubens, and in the following year he was in England employed by James I. . . . His first visit to England seems to have been unfruitful, but in 1632 he became one of the court painters of Charles I. . . . Van Dyck died in Blackfriars on the 9th of December in 1641, and was buried hard by the tomb of John of Gaunt in old St. Paul's. . . . As a portrait painter Van Dyck occupies with Titian and Velasquez the first place. In fertility and production he was equal to Rubens,

if we remember that his artistic life was very brief, and that he died at the age of 42. He lacked the inexhaustible invention which distinguishes his teacher."—H. J. W. Buxton and E. J. Poynter, *German, Flemish and Dutch painting, bk. 2, ch. 2-3*.—"Lucas Cranach (1472-1553), the founder of the Saxon School, was a very different personality. . . . Cranach is the most diverting of painters, not only because he is eager to amuse, but because his artlessness and his false ideal of elegance often provoke a smile at his expense. But he painted certain realistic portraits which are among the best works of the school. . . . But from the second half of the sixteenth century German art may be considered dead, stifled on the one hand by imitators of the Italians, who produced only mediocre works without any character, and on the other by the religious wars, which devastated Germany and threw civilization back by a full century. When the storm abated, the country was impoverished, and national tradition was interrupted. French and Italian art reigned alone."—S. Reinach, *Apollo, pp. 243-244*.—See also EDUCATION, ART: Medieval and Renaissance.

Dutch (16th-18th centuries).—Rembrandt, its dominant genius.—"The Dutch school, in so far as it has left its mark upon the story of modern art, endured for less than a hundred years, and is dominated by the genius of Rembrandt. Frans Hals, the eldest of the gifted group of men who have made it famous, was still a youth at the opening of the seventeenth century, and Hobbema, the latest of its great representatives, died before the eighteenth century had passed its first decade. . . . At the close of the sixteenth century painting throughout the whole of Europe was staggering under the weight of associated ideas both ethical and intellectual. . . . It was the task of Dutch painting . . . to renew in its primitive simplicity the elemental compact between art and nature. . . . It no longer affected to interpret the higher aspirations of the human spirit or to mirror its larger emotions. It was content to image only the more intimate and familiar moods of feeling that are born of the uneventful happenings of daily life, sometimes descending, as we know, to the portrayal of the grosser and more sordid aspects of national character. . . . Their attention was riveted upon the facts of the world about them and they acknowledged and revealed in their work no other source of inspiration."—J. W. C. Carr, *Ideals of painting, pp. 235-239*.—"Rembrandt (1606-1669) was that entirely inexplicable thing, a great original genius. . . . It is always with light and shade that Rembrandt performs his miracles, that he expresses the inexpressible and realizes the supernatural. . . . Neither Tintoretto nor Correggio himself understood Correggio's invention as Rembrandt understood it—neither of them makes it the warp and woof of his art as Rembrandt does. . . . Without some suggestion of his light and shade no composition of Rembrandt's would be intelligible, and he thinks so habitually in light and shade that his merest scratch of outline always gives this suggestion."—K. Cox, *Concerning painting, pp. 151, 155-156*.—"Other men who have practised the art have left a richer record of varied objective personality, but no one has approached him in rendering individual features finely responsive to those deeper moods of feeling he sought to mirror. In this rare quality of vision, perhaps the rarest of which pictorial art is capable, Rembrandt claims kinship with Michelangelo."—J. W. C. Carr, *Ideals of painting, p. 250*.—"The very qualities which have made Rembrandt one of our gods of art and have caused him to be reckoned, by many, the

very greatest of masters, rendered him incomprehensible to his own countrymen and contemporaries, and the painters understood him little better than the public. Ruysdael had, perhaps, a little of his romantic temper. . . . The typical Dutch painters are those who, with as little of Rembrandt's intensity of feeling as of the Italian love for decorative splendor, carried out the truly Dutch task of embodying in an exemplary technic a prosaic and exact portraiture of the familiar world about them. There are a host of them, almost all admirable after their degree, and they painted everything in Holland and in the narrow seas, indoors and out. . . . One man painted only drunken boors, another the lower middle classes, a

158-159.—Besides Rembrandt the most important artists of the school were: Frans Hals (1584-1666), Albert Cuyp (1606-1673), Paul Potter (1625-1654), Jacob van Ruysdael (1636-1681), Meindert Hobbema (c. 1638-1709), Jan Steen (1636-1680), Gerard Terburg (1606-1681), and Gerhard Douw (1613-1674).

Spanish (17th-18th centuries).—Velazquez, Murillo and Goya.—"Spanish painting until the seventeenth century can hardly be called an original art. The art that is first known is plainly derived from the Italian, besides showing some influence of the Flemish. . . . Although these foreign influences shaped Spanish art, especially in its methods, there was a decided Spanish spirit in it,

JACOB VAN RUYSDAEL, "THE WINDMILL"
(Original in the Van der Hoop Museum, Amsterdam)

third ladies and gentlemen. They were the first pure landscape painters, the first marine-painters, the first painters of cattle, the first still-life painters. . . . Little as they had in common with Rembrandt, he had yet furnished them with their necessary tool. If they could not make light and shade express the supernatural, they found expression of the natural, and the whole Dutch school became a school of chiaroscurists who devoted their best efforts to rendering the gradations and reverberations of light. Indeed, it is often their interest in light that alone makes their choice of subject comprehensible. . . . And if the Dutchmen were all naturalists and chiaroscurists, they were all admirable and impeccable craftsmen. Such sound, enduring, beautiful workmanship, such thoroughness of education, such precision and delightfulness of handling, had seldom been seen in the world and are hardly likely to be seen again."—K. Cox, *Concerning painting*, pp.

a dark, gloomy, morose, spirit, full of horror, an outgrowth of the inquisition. . . . There were some portraits and genre subjects done; but until the time of Velazquez, the great bulk of Spanish art was religious. The nude was strictly forbidden by the inquisition, and the censorship went so far as to dispute whether an artist had the right to paint the Savior nailed to the cross with three nails or with four."—O. M. Brauner, *Painting: The Renaissance in Spain* (*Progress, Mar.*, 1901, pp. 409-410).—"The principal works undertaken in Spain date from the time of Philip II.: they were chiefly executed by Italians, and the principal Spanish painters studied in Italy. . . . The painters of Spain have been classified in three principal schools: . . . they are those of Valencia, Madrid, and Seville."—R. N. Wornum, *Epochs of painting*, ch. 29.—José Ribera (1588-1656), who worked in Italy, was the first of a series of rebellious real-

ists, who "loved to paint textures with the most brutal truth." This strain is also seen in the more restrained, impersonal work of Velazquez (1599-1660).—"Diego Velazquez de Silva, the head of the school of Madrid, and the prince of Spanish painters, was born at Seville in the spring of 1599. . . . He visited Madrid first in 1622, and was invited back the year afterwards by the Count Duke of Olivares, who procured him then the appointment of painter to Philip IV.; from this time Velazquez was established as a royal favourite. Velazquez being better known than any of the preceding painters, out of Spain, is accordingly better appreciated out of Spain. He visited Italy in 1629, but had formed his style before he went there. He belongs strictly to the naturalist school. . . . Velazquez ranks as a portrait-painter with Titian and Vandyck; and he had besides the great power of objective imitation characteristic of the naturalist school. There is, however, no laboured imitation in the works of Velazquez."—*Ibid.*—"One suspects that the ecclesiastics did not admire him, or possibly feared him, as few church decorations claimed his time. Instead, he executed large historical subjects, magnificently painted. . . . [He] was a masterful draughtsman, and that means a great deal; something more than correctness. Not alone were his outlines good, but also his construction of every part. . . . When he was young he painted much still life and the usual beggar boy with holes in his clothes; painted him well, worked hard at it, as even genius gains by hard study. He kept on painting what the anarchists call 'royal beggars' all his life with just as much faithfulness and sincerity. . . . A strong colorist but very refined, his work stands today the model for painters of all lands. [His free technique and brushwork is especially admired] . . . The men who do it in this day learned how by studying such pictures as [his]. . . . Francisco Zurbaran (1598-1662) . . . was like Ribera, a fiery character, and a painter of textures and stuffs, of expression, and movement that passed under his eye. . . . Bartholomé Estaban Murillo (1618-1682) is in many respects the Carlo Dolci of Spain, a painter of pretty pictures, smooth and sweet, a popular artist."—J. W. Pattison, *Painting of the seventeenth and eighteenth centuries (Progress, Apr., 1901, pp. 449-453)*.—"Although Murillo was a realist as regards employing for his sacred characters some ordinary Andalusian model, he succeeded in infusing into them a certain dignity and aloofness which is full of religious mysticism. In the province of sacred art Murillo may be considered as the last of the 'Old Masters.' Yet his pictures have of late years been steadily declining in popular favour. As contrasted with Velazquez, the uncompromising realist, the work of Murillo shows a strain of effeminate softness which to some suggests affectation."—M. Inness, *Schools of painting, p. 286*.—"It was not until the end of the eighteenth [century] that another genius arose, in the person of Francisco Goya (1746-1828). . . . As a court painter he was an unqualified success, . . . but his official productions are not the less devoid of interest on that account, and are sometimes the more satirical from the necessity of concealment. In his more outspoken works . . . he is too brutal not to affect the ordinary observer's judgment upon his artistic qualities. . . . But between the extremes of brutality and conventionalism there is such a wide expanse of pure joy of painting that nothing can diminish the reputation of Goya however much it is likely to be enhanced. To the modern Spanish painter he is probably as fixed a beacon as Velazquez."—

R. Davies, *Six centuries of painting, pp. 119-1200*. See also **ANDALUSIAN SCHOOL**.

German (15th-17th centuries).—Art in northern Europe.—"Italian art dreamed of beauty and realised its dream. Flemish art was in love with truth, and 'held the mirror up to nature.' German art rarely achieved either truth or beauty. But it succeeded in rendering, with a fidelity that was often brutal, the character of the German people immediately before and after the Reformation. The first School of German painting of which we have any knowledge flourished at Prague about the year 1360 under the Emperor Charles IV. . . . Somewhat later, in 1380, we hear of one master Wilhelm, of Cologne, who is much lauded by the chronicles of the time. Wilhelm was succeeded by Stephen Lochner, from the neighbourhood of Constance. About the year 1435, during the lifetime of Van Eyck, he completed the most important work produced by the German School in the Middle Ages, the famous *Adoration of the Magi* in Cologne Cathedral. Lochner has been called the German Fra Angelico; his art is devout, radiant, and sentimental. . . . A novel tendency towards realism made its appearance towards 1460 in the numerous pictures of the Cologne masters. . . . Henceforth, though it remained very German in its defects, the School of Cologne, which existed till the middle of the sixteenth century, was merely a Rhenish off-shoot of Flemish art."—S. Reinach, *Apollo, pp. 233-234*.—"With far more independence and freedom, the Flemish influence was received by the schools of Upper and Central Germany. They do not so fully abandon the beautiful soft feeling and ideal spirit of the former period, nor do they adopt the same exactness of execution, but by a more middle course they arrive at a thoroughly peculiar style, in which occasionally we find a happy blending of the two fundamental elements. It may have partially contributed to this, that in Swabia, more than elsewhere in the North, extensive wall painting were executed, many traces of which are to be found in the numerous late Gothic churches of the country. . . . Next to Ulm, the rich and ancient Augsburg was the second central point of Swabian art. We here find in successive generations the painter family Holbein. About the middle of the century, the family begins with a Hans Holbein, the grandfather of the famous later master. . . . His son, Hans Holbein, the elder, who was born about 1460, worked at first in his native city, and subsequently at Basle, whither he was summoned in 1504, and where he died in 1523. . . . Far more important than . . . these is, however, the son of the elder Holbein, Hans Holbein, the younger, one of the greatest and noblest masters of German art. He was born at Augsburg in 1497, worked at Lucerne in 1517, settled at Basle two years subsequently, and was summoned to England in 1526, where, through the influence of Sir Thomas More, he entered the service of King Henry VIII. In the year 1520, he went again to Basle, and spent several years there, engaged, by order of the Council, in the execution of larger works. He then returned to England, where, as has been recently proved, he died in London in 1543. While he is one of the most precocious geniuses of art history—appearing as an able painter at the age of fourteen—he is also among the few masters of the North who evidenced the decided influence of Italian art, and used it with perfect independence. Among the northern painters of that time, he is the only one, Dürer not even excepted, who reached a perfectly free and grand style, freed himself from the petty taste-

lessness of those around him, and conceived the human figure in its perfect truth and beauty."—W. Lübke, *History of art*, v. 2, bk. 4, ch. 5.—Nuremberg, with its rich commercial class, was the Florence of Germany about the year 1500, but it was a coarser Florence, intent on expression rather than on beauty. It produced many masterpieces of wood-carving. The head of its school of painting was Michael Wöhlgegemut (b. in 1434), a prolific but mediocre artist, whose chief title to fame is that he was the master of Dürer. During the first half of the sixteenth century, Germany could boast two painters of genius, and one very richly gifted artist: Albert Dürer, Hans Holbein, and Lucas Cranach. Dürer (1471-1528) was a thinker as well as an artist, and in this connection claims a place in the history of art side by side with Leonardo da Vinci and Michelangelo. . . . When Dürer attempted to imitate the antique after the manner of the Italian masters, the result was almost grotesque, as in his *Lucretia*, at Munich. The Germans in general were even less skillful than the Flemings in the treatment of the nude. . . . But where Dürer was superior to the Italians, and equal to the greatest geniuses of all times, was in engraving. Compositions such as his *Rest in Egypt*, *St. Jerome in his Cell*, *Melancholy*, and *Death and the Knight*, show a profundity of thought, a reticent poetry, and at the same time a knowledge of form only equalled in the works of Leonardo and Michelangelo."—S. Reinach, *Apollo*, pp. 238-240.—In 1494, Dürer "settled as a painter in his native city [Nuremberg]. He here worked for ten years, not merely as a painter, but also engaged in extensive works in engraving and woodcuts; until, in 1505, he made a journey to Italy, in which, however, he only became acquainted with Venice, Padua, and Bologna. Towards the end of the following year, he returned to Nuremberg, where, with fresh and restless activity, he executed a countless number of important works, not merely paintings, drawings, engravings, and woodcuts, but even produced excellent carved works in boxwood and steatite. In 1520 he made a second journey, this time to the Netherlands, from whence he returned in the following year. From this period he lived and worked uninterruptedly in his native city until his death in 1528. (He died, like Raphael, on a Good Friday.) In these latter years, besides his artistic works, he produced many scientific works—instructions on geometry, the art of fortification, and the proportions of the human body, thus evidencing his extensive and thorough information. All this astonishing fertility of mind unfolded in him wholly from personal inclination without outward stimulus, and indeed under the pressure of sad domestic circumstances and unfavourable relations of life. Germany had no Julius II. or Leo X., no Medici or Gonzaga, no art-loving aristocracy, no noble-minded governments."—W. Lübke, *History of art*, v. 2, bk. 4, ch. 5.—Holbein "is not so mystical, so fanciful, so deep as Dürer, but . . . he is generally simpler in composition, putting forth what he has to say in a clear pictorial manner. As a draughtsman—in the ability to follow a line in all its qualities, as it glides over a bone here or a fleshy part there; in the ability to model and indicate planes with the surest and most exquisite feeling, he stands second to none. . . . His power of characterization is so keen, so sure, that his portraits live with a presence and personality unmistakable. . . . 'A less powerful personality than Dürer, he was a far superior painter' (Leighton)." —O. M. Brauner, *Painting: The Renaissance in Germany* (*Progress, Mar.*, 1901, p. 432).—Dürer

had many imitators, but one man carried the Franconian influence to a new school in Saxony.

English (17th-19th centuries).—**Foreign influence before Hogarth.**—**Eighteenth century school of portraiture.**—"English painting was dominated by foreign influences until the time of Hogarth. There was no dearth of native talent but rather a preponderance of foreign. Holbein was first in point of time and mastery. As Court painter, he set the pace and style which influenced his contemporaries and successors for a generation of portraiture, especially in miniature. Van Dyck, as Court painter to Charles I., put his stamp upon the art down through the eighteenth century. His influence may be said to have been dominant, although it was slightly modified by that of Lely and of Kneller. Other succeeding men had their followers, . . . but their work made no lasting impression. . . . Then came Hogarth [1697-1764], the first British painter to interpose any original ideas; or, at least, the first who was strong enough to impress them on painting. The most striking quality of his work was its democratic strength; the next was a puritanical power of satire; and next, an element which may be called moral sermonizing. . . . That he had powers beyond those of story-telling and of preaching is evident in the brush-work, colour, and composition of some of his pictures, wherein there is shown a pure joy of beauty. . . . During the second half of the eighteenth century, a great English school of portraiture arose with Gainsborough [1727-1788] at its head. Reynolds [1723-1792] and Raeburn [1756-1823] were the two other most distinguished members of this group. Gainsborough upheld the aristocratic traditions with his portrayal of elegance, refinement, and of overdressed individuals of society. His technic was masterful, and his colour-schemes pleasing. His artistic kinship with Van Dyck is obvious; it is shown particularly in the *Blue Boy* which he painted, by the way, to demonstrate the possibility of making blue 'the dominating colour of a successful scheme.' This, Reynolds had said could not be done. Reynolds, on the other hand, advocated the democratic traditions also with success. In his way, he had made a close study of the old masters; and his knowledge of the art of the past enabled him to arrange his designs, style, and colour according to well established canons. . . . Unknown to himself, his great forte was not so much the painting of 'histories' in noble design and colour as of portraits; an occupation which he regarded as the merest drudgery. . . . In technic and colour, Reynolds is quite opposite to Gainsborough, whose touches were thin and whose colours were cool and musical. Reynolds' scheme inclines to be hot and his sumptuous colours are laid on thickly. . . . Romney, . . . Raeburn, . . . Coates, Opie, and Hoppner were also painters of considerable power. . . . Sir Thomas Lawrence was the connecting link between this brilliant period of English painting and the later academic slump into monotony and sloth."—R. H. Bell, *Philosophy of painting*, pp. 185-190."—See also EDUCATION, ART: Modern: England, Ireland, Scotland.

American (18th-19th centuries).—**Influence of England and the continent during early history.**—**Later developments.**—"The most celebrated painters of [the colonial] period . . . and the only ones whose fame is more than local, are John Singleton Copley [1737-1815] and Benjamin West [1738-1820]. But as both of them left their country at an early age, never to return, they belong to England rather than to America. . . . The Revolutionary Period . . . brought forth two painters

who, while they were thoroughly American in their aspirations, were at the same time endowed with artistic qualities of a very high order. Gilbert Stuart [1755-1828] and John Trumbull [1756-1843], the two painters alluded to, have a right to be considered the best of the American painters of the past, and will always continue to hold a prominent place in the history of their art. . . . Trumbull must not be judged as an artist by his large paintings in the Capitol at Washington, the commission for which he did not receive until 1817. To know him one must study him in his smaller works and sketches now gathered in the gallery of Yale College."—S. R. Koehler, *American painters*, pp. 192-218.—At his death the aristocratic British quality was superseded by continental influence. William Morris Hunt (1824-1879) studied under Millet. The Hudson River school discovered an enthusiasm for native scenery, in which Inness (1825-1894), the most significant of the group, shows a spirit very similar to that of the Barbizon painters. All this, however was prior to the first World's Fair held in America in 1876. "On this occasion there were exhibited in this country collections of pictures from abroad, which made such a powerful impression on the native artists that 1876 is generally taken as the date when the third period of American art begins—a period during which the technical skill of the artists has been developed to such a degree that it may be said to be inferior to none. . . . After 1876 most art students went to France."—E. von Mach, *Art of painting in the nineteenth century*, p. 107.—Whistler (1834-1903) had already received his training under Courbet. Influenced somewhat by Velasquez and by Japanese art, he is nevertheless one of the most original artists of America or of Europe in the nineteenth century. Sargent (1856-) is the foremost portraitist. In mural painting Abbey (1852-1911), La Farge (1835-1910) and Blashfield (1848 —), as well as Sargent and many others, have been pioneers. In landscape and marine views Enneking (1841-), Martin (1836-1897), and Homer (1836-1910), are perhaps the best known of a large number of distinguished painters.—See also AMERICAN ACADEMY IN ROME; ART INSTITUTE, CHICAGO; NEW YORK CITY: 1870-1921.

Europe (19th century).—Modern tendencies. —Painting in the nineteenth century displays such variety and complexity that little more is possible than a mere enumeration of names. "In France, painting reflected social conditions more accurately, perhaps, than elsewhere. Following the collapse of Court influence [there] arose in art a cold classicism of which Louis David [1748-1825] stood at the head. This man, who was a child of the Revolution, became Court painter to Napoleon, and originated the 'Empire' or Neo-Greek style. . . . After the Restoration . . . Ingres [1780-1867] was at the head of the Classicist school which harked back to the antique and which put its trust in perfect draughtsmanship; while Delacroix [1798-1863], a great colourist of fine imagination, was at the head of the Romanticists. Battles raged between the two groups and their respective followers. This state of affairs was succeeded by the Barbizon revolt [headed by Rousseau, and including Tryon, Dupré, Jacque, Daubigny, Diaz, and others, besides the poet-painter, Corot (1796-1875) and the great interpreter of peasant-life, Millet (1814-1875)]. . . . Then arose the plein-airists, and at their front Bastien-Lepage, and finally the Impressionists . . . represented by such men as Monet and Manet and Degas. . . . The Academic school continued to

flourish in France during the nineteenth century as revealed in the work of such accomplished painters as Meissonier, Bouguereau, Delaroche, Fleury, Gérôme, and others almost as well known. A certain sub-group of this school, called Orientalists, went to the East for their subjects, colour, and general picturesque sumptuousness. Among these were Decamps, Fromentin, Marilhat, Gérôme. The most noted decorative wall painters were P. de Chavannes (1824-1898) and Besnard; and finally, among the so-called Intimists, Le Sidaner was first."—R. H. Bell, *Philosophy of painting*, pp. 192-193.—The work of the Post-Impressionists, Cezanne, Matisse, Picasso (Spanish) and Gauguin, which was vehemently fought over by the critics in the years immediately before the World War, was a return to primitive forms and methods, even so primitive as Negro and Polynesian art, in a search for "significant form." The movement has a considerable following, both in France and America. In England the century began with a new movement in landscape painting, in which the greatest names are those of Constable (1776-1837) and Turner (1775-1851). The former was "the prototype of the 1830 movement in France; indeed, he was the great leavening spirit of landscape art. . . . It was he who interpreted with profound sympathy the meaning of field and wood and the changing moods of weather. . . . Turner, in his turn, was the spiritual link between Lorrain and the French Impressionists."—*Ibid.*, pp. 169-171.—Aside from the landscapists there were also a number of genre and animal painters, Wilkie, Morland, Landseer, etc. But in general the level of art was very low when in 1848 Rossetti, Millais and Hunt formed the Pre-Raphaelite Brotherhood. (See ENGLISH LITERATURE: 1833-1909.) They believed that honesty of workmanship and truth were to be seen only in works antedating Raphael, and found their inspiration in medieval romance and legend. Later adherents of the school were Burne-Jones, Crane, whose illustrations are one of its finest products, and Watts. At the same time Scotch painting achieved distinction under Orchardson (1835-1910) and Lavery (1857 —). At present the best known painters are perhaps Frank Brangwyn (1867 —), illustrator, decorator and colorist, and Sir William Orpen (1878 —), the official portrait painter of the war, and of the peace conference. German painting has run a similar course to that in other countries. "The classic enthusiasm kindled among German artists in the eighteenth century by Carstens and Mengs continued in the early nineteenth century with Genelli, Preller, and Rottmann, all of whom sought inspiration in the study of the antique. . . . There is a strong similarity of aim between the German Classicists and those other Germans who did not go quite so far back for their inspiration, but sought it in the Middle Ages. These men are known as Romanticists, and since their leaders were deeply religious men, most of them Roman Catholics who loved to tell the story of Christ, they are also called Nazarenes. The best representative of the Nazarenes was *Overbeck* (1780-1869). . . . The pioneer Realist of Germany was *Leibl* (1846-1900). . . . A greater man than Leibl was *Menzel* (1815-1904). . . . *Franz von Lenbach* (1836-1904) vied with him in popular favor. . . . In recent years a school of open-air (*plein air*) painters has risen in Germany,—the so-called Impressionists, or, as they are better known, Secessionists, because since 1883 they have withdrawn from participation in official exhibitions. . . . Their point of view is very much akin to that prevalent in America. . . . *Max Liebermann*

(1849 —) may be said to be the father of the movement."—E. von Mach, *Art of painting in the nineteenth century*, pp. 38-56.—Painting in Spain, Flanders and Holland, has never regained its seventeenth century splendor. The modern Belgian school, however, has magnificent ease and beauty of execution. The Spanish Fortuny (1838-1874) and Zuloaga (1870 —) have had great influence. The Dutch Jozef Israëls (1824-1911) has continued in the spirit of Millet. Russia and the Scandinavian countries show, especially brilliantly in the case of Sweden (Anders Leonard Zorn, 1860 —) the influence of the various French schools. Except perhaps for England, modern painting is acquiring an international character. The currents are less and less national, determined rather by individual ideals of art. In every country there are impressionists, classicists, realists. Not only Europe, but the older arts of Asia are experiencing this growth of cosmopolitan character. In this last case the result is probably merely a phase of decadence. Developed almost wholly independently of Europe, painting in Asia attained its climax centuries ago.

Asiatic.—India and Persia.—"The traditions of craftsmanship in the East are fixed and persistent. Everywhere, in India, in Turkestan, in China, in Japan, we find the same method of fresco-painting on lime, with a strong expressive outline and clear coloring. It corresponds to what is known of the earlier type of painting in Greece itself. The presumption of an Early Asiatic style of painting diffused as widely as the shores of the Mediterranean is one that is likely to win general acceptance. It was from this primitive style, we may presume, that the various countries of Asia developed each a national character of art, always however retaining a common base of character. In the greatest series of early Indian frescoes which are still preserved, art has become mature. . . . Ajanta is not less worthy of a pilgrimage than is Assisi; and these paintings are more important in the history of the art of Asia than is any one group of Italian frescoes in the history of the art of Europe. Indian painting here dawns in splendor. Besides Ajanta, there are a few other sites where frescoes, similar in style and inspiration, and belonging to the same period, have been found. But the destruction by Mohammedan invaders, one must surmise, has been immense, to say nothing of the ravages of time and neglect; for from the seventh century onward, so far as is known, practically nothing seems to have survived till the sixteenth and seventeenth centuries, when the art of painting reappears in a different form and on a smaller scale. Buddhist art was to flourish exceedingly outside the borders of India,—in Turkestan, in China, in Tibet, in Japan; but in the land of its birth it died out, like the religion itself. . . . [The later Indian style was derived from that of Persia.] Persian painting really begins with the fall of Bagdad and its destruction by the Mongols in the thirteenth century. The Mongols had conquered China in the same century. But now the invading Mongols brought in their wake Chinese artists, and China from that time exercised a constant influence on Persian painting. . . . Whatever the influence of China, the creative and essential part of Persian painting is truly Persian; and the race of Ivan seems always to have been gifted with a fine sense of color, and with the instinct for design. . . . Persian painting, as we know it in its purest and finest form, is an art of miniature. It is small in scale, whether in the form of illustrations to manuscripts or of albums of single drawings. The drawings are often

in outline of an exquisite quality, with perhaps a few touches of color. . . . But the most characteristic Persian painting is richly colored. And in certain qualities Persian color is unsurpassed. . . . The high horizon and bird's-eye-view perspective are common to Asiatic art and to much of the earlier art of Europe. But in Persia there is no development, as with the Chinese and Japanese, in the direction of a landscape art. . . . The painters remain content with a prescribed convention and their efforts seem wholly absorbed in getting the utmost possible richness from their chosen materials. Accepting these narrow limitations, they achieved wonderful things. . . . Persian painting corresponds most nearly, I suppose, to the popular conception of the East and Eastern art, founded on the glowing pages of the Arabian Nights. In the history of the world's art it is a kind of backwater; but it is certainly a chapter that we could ill afford to lose. The Persian style and Persian example were carried into India by the Mogul conquerors and the descendants of Tamerlane. The great emperor, Akbar, who died at the beginning of the seventeenth century, encouraged art at his court. Though the Persian tradition by this time was enfeebled and degenerate, it was taken up by the Hindus. The great majority of the Indian paintings generally seen belong to the Mogul school thus created. . . . But after all the Mogul school represents a hybrid art. It is neither wholly Indian nor wholly Persian. And there is more living interest in the purely Indian styles which existed side by side with the Mogul school. This genuine Indian painting, the product chiefly of valleys of the Himalayas to which the Mohammedan conquerors had not penetrated, is still very little known. . . . Untouched by Persian influence, these Indian drawings contrast strongly in their airy delicacy and intimate humanity with the extravagant, feverish effort, the loaded ornament and inchoate design, which mark so much of later Indian sculpture."—L. Binyon, *Art of Asia (Atlantic Monthly, Sept., 1915, pp. 349-357)*.—"Very recently there has been a revival of painting in Calcutta, led by Abanindronath and Gogonendronath Tagore, nephews of the poet, and their pupils. This new school is at once archaic and eclectic, and marks a restoration in taste rather than a new development of creative power."—A. K. Coomaraswamy, *Arts and Decoration, Nov., 1918, p. 8*.

Chinese.—Antiquity.—Development to the close of the Ming dynasty.—Decadence under Manchu Tatars.—"Through a legend we learn that the art of China goes as far back as 4,500 years, when the Chinamen were ruled by the Yellow Emperor, from whose reign date the arts and crafts of mankind. . . . Already in 220 B. C. Chinese art attained such a degree of perfection that it was said of an artist of the name of Lieh Yü, that he painted phoenixes and dragons without pupils in their eyes lest they should fly away. . . . The Wei dynasty, 220-265 A. D., furnished only four painters, while that of the Chin, 265-420, produced twenty-two artists whose names have been handed down. Amongst those was Wang Hsi-chieh, 321-379 A. D., China's greatest calligraphist, whose writing was 'light as floating clouds, vigorous as a startled dragon.' We see them—although we cannot judge the artistic value of the pictures of this period, for we do not know of any till we come to the fourth century—that there was an active and vigorous artistic movement in China; for we find names of artists, art criticism, and artistic allusions. The Chinese literature refers so often to art that we are able to

form a clear idea as to what kind of art flourished then. The favorite subjects were the phoenix, dragon, and lion; pictures of animals were common, and portrait-painting was prevalent. . . . It is plain that the art that was capable of producing such a masterpiece as [that] . . . painted by Ku K'ai-chih, entitled 'Admonitions of the Instructress in the Palace,' the greatest art treasure of the whole collection of the British Museum, . . . was not in its infancy. This unsurpassable masterpiece was painted between 364 and 405 A.D. . . . There is not one picture painted between the fourth and eighth centuries in existence—except perhaps somewhere in China—although history has on its roll a great many artists. But during this long period two symbolic conceptions were constantly reproduced; these were the Tiger and the Dragon—both emblems of power. The Dragon was the genius of water, producing mists and clouds; he represented also the power of the spirit of the infinite, of change. The Tiger was the genius of the mountains, whose roaring is heard in the wind; he represents the power of material forces. . . . The introduction of Buddhism brought into Chinese art numberless deities, not only various personifications of Buddha and Budhisattva, but hundreds of other forms, borrowed from Indian mythology, from which was also derived grotesqueness. . . . Such were the state and tendency of Chinese art, when, in 618, the era of the T'ang dynasty opened; it lasted until 905, and was not only the period of China's greatest political power, but also of her most vigorous, although not most perfect art, and of important poetry. The efforts of the artists of this period were to develop and to perfect the art of line—which was the ordinary Asiatic style—to make it express not only the forms of reality but also the much-desired rhythmical beauty. This union of painting with calligraphy was best effected by Wu Tao-Tzu, who is one of the most celebrated names in the history of Chinese art. . . . In 907 the T'ang dynasty succumbed to its destiny, and before the rise of the Sung house, which lasted from 960 to 1280, five unimportant dynasties emerged only soon to disappear. The Sung period of three hundred years is the one most splendid for art, which then reached its zenith, in spite of the dwindling power of the Empire. The love of Nature introduced by Lao Tzu, and developed by the Zen sect,—the Conversationalists,—into a doctrine of contemplation of the world, became the dominating thought of the age. . . . The characteristics of this period are a supreme refinement and most exquisite finish, the brush-line temperate and quiet, yet sensitive and alive; the space perfectly balanced; the coloring noble and harmonious, although subordinate, to form and very often eliminated. . . . The over-refined Sung could not withstand the pressing power of the barbarous Mongols. . . . However, the civilizing power of the Chinese was so strong that the Mongols soon became imbued with it, and Kub-lai Khan, having elevated Peking to the dignity of his capital, fostered literature and art, and so continued the glorious Sung period. . . . The Mongols were expelled from China in 1368; the Ming dynasty sat on the throne of the Dragon until 1644. In the first part of this period art continued the tradition of the house of Sung, was flourishing and important, notwithstanding that Chinese artists forsook the loftiness of the eleventh and twelfth centuries for an external magnificence, and abandoned the simple beauty of monochrome for sensuous coloring. . . . The year 1644 witnessed the downfall of the house of Ming. . . . Pedantry,

which began to show its destructive power on literature and art during the Ming period, caused a decadence under the Manchu Tartars. . . . A Chinese art critic, named Chang Keng, describes what an unfortunate result was obtained by Chinese artists who wished to imitate the European manner of painting. 'He depicted,' says the Chinese *littérateur* of a European artist, 'a woman holding a little child, declaring that this last was a representation of God.' The projection and coloring of these were very fascinating; and the artist himself maintained that the Chinese could only paint flat surfaces, consequently there was no projection or depression—relief—on their pictures. "We, in our country," he said, "paint both the light and the dark, so that the result shows projection and depression. A man's full face is light, and the side parts are dark. If the side parts are colored dark in a picture the face will appear in relief." Chiao acquired this art, and modified his style accordingly, but the result was not refined or convincing. Lovers of antiquity would do well not to adopt this method.' This judicious advice, however, was not followed; and some Chinese artists took a fancy to European naturalism, with the result that modern Chinese art is in decay, especially with those artists who do not even follow their great old masters, if they are incapable of creative work."—Comte de Soissons, *Pictorial art of Asia* (*Living Age*, June 17, 1911, pp. 711-717).

Japanese.—Influence of China.—Development at the time of Hideyoshi.—Koyetsu and the Korin school.—Shijo and Ukio-ye schools.—Painting in Japan, like nearly all the other arts, was originally derived from that of China. "The vogue of the Kano masters grew as that of Tosa waned, until the extravagant splendor of a Napoleonic conqueror, Hideyoshi, at the end of the sixteenth century gave to Japan an entirely new style of gorgeous decoration. This culminated with the grandson of Motonobu, Kano Yeitoku and his followers. Castles and palaces of hitherto unknown magnificence arose everywhere. They had to be furnished with pictures and wall paintings in keeping, heavy with gold and richly coloured. Screens in this style were set up along the road for miles when the great lord traveled. The reaction was quick in coming. Japan was closed once more by the Tokugawa Shoguns (1587-1867) and her artists turned again toward an earlier simplicity. Again Japan devoted herself to assimilating Chinese elements received during the preceding era, and giving them a new expression, with a richness of invention in the use of natural forms and a brilliancy of colour hitherto unknown. All through the eighteenth and early nineteenth centuries the Kano academy remained the aristocratic school at the Shogun's court, with Tanyu, the last great master, as its leader. But there came several new developments in the native Japanese art. Another aristocratic school more characteristically Japanese, that of Korin, centered about the court of the Mikado, while equally important, among the lower classes, entirely new and different schools of art arose. The times were changing. The people were beginning to have a voice. The school of Korin, whose great master was Koyetsu, flourished during the seventeenth century, and united the splendor of gold leaf, colour and noble design, of Kano Yeitoku, with the more national spirit of the older Tosa painters. . . . Line was subordinated. Flat masses of colour, sometimes glowing and sometimes somberly revealing themselves in rare gleams, lent a refinement to screens which might otherwise have de-

generated into the merely gorgeous. Gold was used lavishly, in the delicate veining of a leaf as well as in great solid bands forming the backgrounds. It was an art which utilized as never before the decorative values of masses of flowers. Yet it was like nothing in nature. It was, rather, a new convention, a realization of the pure beauty of

tradition alive for many generations. Often it was by an undeniable streak of inherited genius, and when that failed, it was maintained by adoption. As official painters of the Fujiwara Shoguns (794-1186), the Tosa maintained a 'strange and sumptuous art far removed from Chinese impressionism,' in essence purely Japanese. Here we

GANKU (1798-1837)

colour, bold and yet refined, and of a composition in which decorative, rather than pictorial, values were emphasized. The main schools or styles into which Japanese painting is divided are . . . in general, . . . the Tosa, the Kano with its later development into the decorative school of Korin, and finally the more popular Shijo and Ukio-Ye schools. The earliest of these schools was a fusion of the early styles which, following the first impetus from China, flourished before the eleventh century. The name, Tosa, was that of one of those painter families which kept a single

see those interiors seen as though below the level of the eye, with the roofs off—rich with incusted gold. Flat masses represent conventional clouds and cut off the non-essential, affording a richly decorative whole, finely balanced and perfectly related to its architectural setting. Whenever Japanese art breaks with its Chinese antecedents it reverts to the principles of design which this style inaugurated. Following the early magnificence of the Tosa painters there came a return under the Ashikaga Shoguns (1368-1644) to the Chinese influence, particularly the landscape painters of the

Sung Dynasty in which Sesshu, perhaps Japan's greatest painter, was the leading spirit. This was the period of the idealism and chivalry of Zen Buddhism, which took a great hold upon the people, replacing the lofty abstractions of preceding sects. Chinese ideals were also powerful in painters of the Kano family, a style which has continued to the present from the era of Kano Masonobu, who lived in the latter part of the fifteenth century. For a time he was the single thread which continued the Chinese tradition, maintaining the classical style of Sesshu and his followers, but at the same time adding a certain freedom and intensity, born of a supreme need of self-control in an epoch of internal struggle. With his son, Kano Motonobu, classed with Sesshu among the great painters of Japan, there began a second general assimilation of the Chinese idealism with the freer, more vital spirit of Japan. Meanwhile the populace was becoming interested in art, heretofore a prerogative of the nobility [largely as a result of the perfecting of wood-block printing, a process which made art accessible to them]. Among the artificers and tradesmen of the two capitals, Kioto and Yedo (Tokio), there arose popular bourgeois schools, of which the best known are the Shijo and Ukio-ye. . . . Under Okio and his followers, the Shijo painters introduced a new realism. They chose familiar landscapes about Kioto, and the birds and beasts which their public knew, upon which to found a style, at once intimate and vigorous, even though it lacked in great part the spirituality and depth of earlier masters. Similarly, the Ukio-ye school was characterized by its scenes from the gay life of the people—the theatres and *yoshiwara*—and corresponds somewhat to the late growth of *genre* with us. This was the art of the East which first became recognized in the West.—*Japanese art (International Studio, Aug., 1917, pp. 34-35)*.—This popular art, which has received so much praise from other countries, is considered by the Japanese very inferior in conception and in delicacy of line. So also the recent adoption of western forms and ideals of painting, in which the Japanese have shown their characteristic facility, is considered a decadent movement. It must not be thought, however that the greatest painting of the world is already done. "The realm of the Art of Painting, so far from being exhausted, increases its domain in every century—at times by such small advances as almost to show no advance. But steadily, as man's sensations of the experience of life increase, so increases generosity of soul to share those sensations of experience with his fellows. His path thereto is through the faculty of the arts. Therefore it is by the arts alone that man shall reach to the fulness of life."—H. Macfall, *Concerning the art of painting, pp. 7-8*.—See EDUCATION, ART: Modern: Japan.

PALACE, Origin of name.—The house of the first of the Roman emperors, Augustus, was on the Palatine hill, which has been appropriated by the nobility for their residence from the earliest age of the republic. The residence of Augustus was a quite ordinary mansion until A. U. C. 748 (6 B. C.) when it was destroyed by fire. It was then rebuilt on a grander scale, the people contributing, in small individual sums—a kind of popular testimonial—to the cost. Augustus affected to consider it public property, and gave up a large part of it to the recreation of the citizens. His successors added to it, and built more and more edifices connected with it; so that, naturally, it appropriated to itself the name of the hill, and came to be known as the Palatium, or Palace.—Based on C. Merivale, *History of the Romans, ch. 40*.

PALATINATE OF THE RHINE.—The Palatine Electorate or Palatinate (Pfalz in German), arose in the breaking up of the old Duchy of Franconia. See FRANCONIA; PALATINE, COUNTS; GERMANY: 1125-1272.

1214.—Acquisition by Wittelsbach or Bavarian House.—The House of Wittelsbach (or Wesselbach), which acquired the Duchy of Bavaria in 1180, came also into possession of the Palatinate of the Rhine in 1214. (See BAVARIA: 1180-1350.)

In the next century the two possessions were divided. "Rudolph, the elder brother of Louis III [the emperor, known as Louis the Bavarian] inherited the County Palatine, and formed a distinct line from that of Bavaria for many generations. The electoral dignity was attached to the Palatine branch."—A. Halliday, *Annals of the House of Hanover*, v. 1, p. 424.

1512.—Formation of the circle. See GERMANY: 1493-1519.

1518-1572.—Protestant Reformation.—Ascendancy of Calvinism.—"The Electors Palatine of the Rhine might be justly regarded, during the whole course of the 16th century, as more powerful princes than those of Brandenburg. The lower Palatine, of which Heidelberg was then the capital, formed a considerable tract of country, situate on the banks of the Rhine and the Neckar, in a fertile, beautiful, and commercial part of Germany. . . . The upper Palatinate, a detached and distant province situated between Bohemia, Franconia, and Bavaria, which constituted a part of the Electoral dominions, added greatly to their political weight, as members of the Germanic body. . . . Under Louis V., Luther began to disseminate his doctrines at Heidelberg, which were eagerly and generally imbibed; the moderate character of the Elector, by a felicity rare in that age, permitting the utmost freedom of religious opinion, though he continued, himself, to profess the Catholic faith. His successors, who withdrew from the Romish see, openly declared their adherence to Lutheranism; but, on the accession of Frederic III., a new ecclesiastical revolution took place. He was the first among the Protestant German princes who introduced and professed the reformed religion denominated Calvinism. As the toleration accorded by the 'Peace of religion' to those who embraced the 'Confession of Augsburg,' did not in a strict and legal sense extend to or include the followers of Calvin, Frederick might have been proscribed and put to the Ban of the Empire; nor did he owe his escape so much to the lenity of friendship of the Lutherans, as to the mild generosity of Maximilian II., who then filled the Imperial throne, and who was an enemy to every species of persecution. Frederic III., animated with zeal for the support of the Protestant cause, took an active part in the wars which desolated the kingdom of France under Charles IX., protected all the French exiles who fled to his court or dominions; and twice sent succours, under the command of his son John Casimir, to Louis, Prince of Condé, then in arms, at the head of the Hugonots."—N. W. Wrexall, *History of France*, v. 2, pp. 163-165.—See also PAPACY: 1570-1597.

1608.—Elector at head of Evangelical Union. See GERMANY: 1608-1618.

1705.—Upper Palatinate restored to the elector. See GERMANY: 1705.

1709-1710.—Emigration of inhabitants to England, thence to Ireland and America. See PALATINES: 1709-1710.

1714.—Upper Palatinate ceded to elector of Bavaria in exchange for Sardinia. See UTRECHT: 1712-1714.

1755-1756.—In alliance against Prussia.—Seven Years' War. See GERMANY: 1755-1756.

1801-1815.—Division by treaties of Lunéville and Vienna.—The Palatinate was made a pawn of war during the Napoleonic period. By the Treaty of Lunéville (1801) it was divided between France (to whom the territory on the right bank of the Rhine was ceded), Baden, Hesse-Darmstadt, Leiningen and Nassau. The right bank was returned by France under the terms of the Treaty of Vienna (1815), but was divided between Bavaria, Hesse-Darmstadt and Prussia, and the Palatinate as a political entity ceased to exist.—See also GERMANY: 1801-1803.

PALATINE, Counts.—In Germany, under the early emperors, after the dissolution of the dominion of Charlemagne, an office came into existence called that of the "comes palatii"—count palatine. This office was created in the interest of the sovereign, as a means of diminishing the power of the local rulers. The counts palatine were appointed as their coadjutors, often with a concurrent and sometimes with a sole jurisdiction. Their "functions were more extensive than those of the ancient 'missi dominici.' Yet the office was different. Under the Carolingian emperors there had been one dignitary with that title, who received appeals from all the secular tribunals of the empire. The missi dominici were more than his mere colleagues, since they could convoke any cause pending before the ordinary judges and take cognizance of more serious cases even in the first instance. As the missi were disused, and as the empire became split among the immediate descendants of Louis le Debonnaire, the count palatine (comes palatii) was found inadequate to his numerous duties; and coadjutors were provided him for Saxony, Bavaria, and Swabia. After the elevation of Arnulf, however, most of these dignities ceased; and we read of one count palatine only—the count or duke of Franconia or Rhenish France. Though we have reason to believe that this high functionary continued to receive appeals from the tribunals of each duchy, he certainly could not exercise over them a sufficient control; nor, if his authority were undisputed, could he be equal to his judicial duties. Yet to restrain the absolute jurisdiction of his princely vassals was no less the interest of the people than the sovereign; and in this view Atho I. restored, with even increased powers, the provincial counts palatine. He gave them not only the appellat jurisdiction of the ancient comes palatii, but the primary one

of the *missi dominici*. . . They had each a castle, the wardenship of which was intrusted to officers named *burgaves*, dependent on the count palatine of the province. In the sequel, some of these *burgaves* became princes of the empire."—S. A. Dunbarn, *History of the Germanic empire*, v. 1, pp. 120-121.

PALATINE, Elector. See GERMANY: 1125-1272; PALATINATE OF THE RHINE.

PALATINE, English counties.—"The policy of the Norman kings stripped the earls of their official character. They ceased to have local jurisdiction or authority. Their dignity was of a personal nature, and they must be regarded rather as the foremost of the barons, and as their peers, than as a distinct order in the state. . . . An exception to the general policy of William [the Conqueror] as to earldoms was made in those governments which, in the next century, were called palatine. These were founded in Cheshire, and perhaps in Shropshire, against the Welsh, and in the bishopric of Durham both to oppose the Scots, and to restrain the turbulence of the northern people, who slew Walcher, the first earl-bishop, for his ill government. An earl palatine had royal jurisdiction within his earldom. So it was said of Hugh, earl of Chester, that he held his earldom in right of his sword, as the king held all England in right of his crown. All tenants-in-chief held of him; he had his own courts, took the whole proceeds of jurisdiction, and appointed his own sheriff. The statement that Bishop Odo had palatine jurisdiction in Kent may be explained by the functions which he exercised as justiciary."—W. Hunt, *Norman Britain*, pp. 118-119.—"The earldom of Chester has belonged to the eldest son of the sovereign since 1306; the palatinate jurisdiction of Durham was transferred to the crown in 1836 by act of Parliament, 6 Will. IV, c. 19."—W. Stubbs, *Constitutional history of England*, v. 1, ch. 9, sect. 98, footnote.

PALATINE, Hungarian. See HUNGARY: 1301-1442.

PALATINE, Irish counties.—"The franchise of a county palatine gave a right of exclusive civil and criminal jurisdiction; so that the king's writ should not run, nor his judges come within it, though judgment in its courts might be reversed by writ of error in the king's bench. The lord might enfeoff tenants to hold by knights' service of himself; he had almost all regal rights; the lands of those attained for treason escheated to him; he acted in every thing rather as one of the great feudatories of France or Germany than a subject of the English crown. . . . In Ireland this dangerous independence was permitted to Strongbow in Leinster, to Lacy in Meath, and at a later time to the Butlers and Geraldines in parts of Munster. Strongbow's vast inheritance soon fell to five sisters, who took to their shares, with the same palatine rights, the counties of Carlow, Wexford, Kilkenny, Kildare, and the district of Leix, since called the Queen's County. In all these palatinates, forming by far the greater portion of the English territories, the king's process had its course only within the lands belonging to the church."—H. Hallam, *Constitutional history of England*, v. 3, ch. 18.

PALATINE GUARD, guard of honor in the papal service. See VATICAN: 1744.

PALATINE HILL: Palatine city.—Seven mounts.—"The town which in the course of centuries grew up as Rome, in its original form embraced according to trustworthy testimony only the Palatine, or 'square Rome' (*Roma quadrata*), as it was called in later times from the irregularly quadrangular form of the Palatine hill. The gates

and walls that enclosed this original city remained visible down to the period of the empire. . . . Many traces indicate that this was the centre and original seat of the urban settlement. . . . The 'festival of the Seven Mounts' (*septimontium*), again, preserved the memory of the more extended settlement which gradually formed round the Palatine. Suburbs grew up one after another, each protected by its own separate though weaker circumvallation and joined to the original ring-wall of the Palatine. . . . The 'Seven Rings' were, the Palatine itself, the *cermalus*, the slope of the Palatine in the direction of the morass that in the earliest times extended between it and the Capitoline (*velabrum*); the *Velia*, the ridge which connected the Palatine with the *Esquiline*, but in subsequent times was almost wholly obliterated by the buildings of the empire; the *Fagatal*, the *Oppius*, and the *Cispius*, the three summits of the *Esquiline*; lastly, the *Sucusa*, or *Subura*, a fortress constructed outside of the earthen rampart which protected the new town on the *Carinae*, in the low ground between the *Esquiline* and the *Quirinal*, beneath *S. Pietro in Vincoli*. These additions, manifestly the result of a gradual growth, clearly reveal to a certain extent the earliest history of the Palatine Rome. . . . The Palatine city of the Seven Mounts may have had a history of his own; no other tradition of it has survived than simply that of its having once existed. But as the leaves of the forest make room for the new growth of spring, although they fall unseen by human eyes, so has this unknown city of the Seven Mounts made room for the Rome of history."—T. Mommsen, *History of Rome*, v. 1, bk. 1, ch. 4.—See also **PALLIA**; **QUIRINAL**; **ROME: Ancient kingdom: B. C. 753-510**; **SEVEN HILLS OF ROME**.

PALATINE LIBRARY. See **LIBRARIES: Ancient: Rome**.

PALATINES: 1709-1710.—Migration to Ireland and America.—"The citizens of London [England] were astonished to learn, in May and June, 1709, that 5,000 men, women and children, Germans from the Rhine, were under tents in the suburbs. By October the number had increased to 13,000, and comprised husbandmen, tradesmen, school teachers and ministers. These emigrants had deserted the Palatinate, owing to French oppression and the persecution by their prince, the elector John William, of the House of Newburgh, who had become a devoted Romanist, though his subjects were mainly Lutherans and Calvinists. Professor Henry A. Homes, in a paper treating of this emigration, read before the Albany Institute in 1871, holds that the movement was due not altogether to unbearable persecutions, but largely to suggestions made to the Palatines in their own country by agents of companies who were anxious to obtain settlers for the British colonies in America, and thus give value to the company's lands. The emigrants were certainly seized with the idea that by going to England its government would transport them to the provinces of New York, the Carolinas, and Pennsylvania. Of the latter province they knew much, as many Germans were already there. . . . Great efforts were made to prevent suffering among these poor people; thousands of pounds were collected for their maintenance from churches and individuals all over England; they were lodged in warehouses, empty dwellings and in barns, and the Queen had a thousand tents pitched for them back of Greenwich, on Blackheath. . . . Notwithstanding the great efforts made by the English people, very much distress followed this unhappy hegira. . . . Numbers of the younger men enlisted in the British army serving

in Portugal, and some made their own way to Pennsylvania. . . . The Lord Lieutenant of Ireland petitioned the Queen that some of the people might be sent to him, and by February, 1710, 3,800 had been located across the Irish Sea, in the province of Munster, near Limerick. . . . Professor Homes recites in his monograph that they 'now number about 12,000 souls, and, under the name of Palatines, continue to impress a peculiar character upon the whole district they inhabit.' . . . According to 'Luttrell's Diary,' about one-tenth of the whole number that reached England were returned by the Crown to Germany.' A Swiss land company, which had bought 10,000 acres of land from the lords proprietors of Carolina, "covenanted with the English authorities for the transfer of about 700 of these poor Heidelberg refugees to the colony. Before the end of the year they had arrived with them at a point in North Carolina where the rivers Neuse and Trent join. Here they established a town, calling it New Berne, in honor of Berne, Switzerland. . . . It has not been found possible to properly account for all the 13,000 Palatines who reached England. Queen Anne sent some of them to Virginia, settling them above the falls of the Rappahanock, in Spottsylvania County, from whence they spread into several adjoining counties, and into North Carolina. . . . After the Irish transportation, the largest number that was moved in one body, and probably the final one under government auspices, was the fleet-load that in the spring of 1710 was despatched to New York. . . . A fleet of ten ships set sail with Governor Hunter in March, having on board, as is variously estimated, between 3,000 and 4,000 Germans. . . . The immigrants were encamped on Not, now Governor's Island, for about three months, when a tract of 6,000 acres of the Livingston patent was purchased for them, 100 miles up the Hudson, the locality now being embraced in Germantown, Columbia County. Eight hundred acres were also acquired on the opposite side of the river at the present location of Saugerties, in Ulster County. To these two points most of the immigrants were removed. [But dissatisfaction with their treatment and difficulties concerning land titles impelled many of these Germans to move off, first into Schoharie county, and afterwards to Palatine Bridge, Montgomery county and German Flats, Herkimer county, N. Y., to both of which places they have affixed the names. Others went into Pennsylvania, which was for many years the favorite colony among German immigrants.]"—A. D. Mellick, Jr., *Story of an old farm*, ch. 4.

PALATINI.—"Diocletian . . . was the first to raise a huge Imperial guard, . . . the *Palatini*, who practically superseded the Old Praetorians, a body which Diocletian rightly distrusted, as having for the last century been far too much given to making and unmaking of emperors. . . . How numerous the *Palatini* were at their creation we cannot say; but by the end of the century they appear . . . as a very considerable body. . . . This was, no doubt, a very much stronger force than the original Palatine regiments raised by Diocletian. Each of his successors had added new units to it, as the names 'Honorian,' 'Theodosian,' etc., show. . . . By the end of the century the Imperial guard mustered about twelve thousand horse and eighty thousand foot."—C. Oman, *History of the art of war*, p. 10.

PALE, English.—"That territory within which the English retreated and fortified themselves when a reaction began to set in after their first success [under Henry II] in Ireland," acquired the name of the Pale or the English Pale. But "that term did not really come into use until about the beginning of the 16th century. In earlier times this territory was called the English Land. It is generally called Galdacht, or the 'foreigner's territory,' in the Irish annals, where the term Galls comes to be applied to the descendants of the early adventurers, and that of Saxons to Englishmen newly arrived. The formation of the Pale is generally considered to date from the reign of Edward I. About the period of which we are now treating [reign of Henry IV—beginning of fifteenth century] it began to be limited to the four counties of Louth, Meath, Kildare, and Dublin, which formed its utmost extent in the reign of Henry VIII. Beyond this the authority of the king of England was a nullity."—M. Haverty, *History of Ireland*, pp. 313-314, *foot-note*.—See IRELAND: 1169-1200; 1327-1367; 1413-1467; 1513-1535; 1541-1555; 1641.

PALERMO, capital of the province of the same name, Sicily, in the western part of the north coast. In 1021 the population was 400,348. It was taken by the Romans from the Carthaginians in 254 B. C., and Augustus established a colony here. In 535 it passed from the Goths into the possession of the Byzantines. It was taken by the Saracens in 835, and became the Moslem capital under the name of Bulirna. In 1071 Palermo, or as it was then known, Panormus, was captured by the Normans, who made it their capital. In 1146 silk culture was introduced (see BYZANTINE EMPIRE: 1146). In 1104 the city passed to the Hohenstaufens, and Frederick II evoked a premature Renaissance at his southern court which became one of the most brilliant in Europe. Palermo was the scene of revolts in 1820, 1848-1849 and 1860. In 1800 a national exposition was held here.—See also ITALY (SOUTHERN): 1282-1300; 1848-1849; 1850-1861; PANORMUS.

ALSO IN: E. A. Freeman, *History of Sicily*.

PALESTINE: Land.—"Palestine lies between the eastern shore of the Mediterranean Sea and the Arabian desert. Its northern boundary is the southern slope of Mount Hermon and the River Litany, as it turns abruptly to flow westward into the Mediterranean. Palestine begins where the Lebanons and Anti-Lebanons break into a series of elevated plateaus. Its southern boundary is the varying line drawn east from the southeastern end of the Mediterranean a little south of the Dead Sea at the point where the hills of Judah and the South Country descend to the desert. Palestine therefore lies between 33° 30' and 31° north lati-

tude and 34° and 37° east longitude. Its approximate width is about a hundred miles and its length from north to south only about a hundred and fifty miles. It is, therefore, about the size of the State of Vermont. . . . Palestine is sharply divided by nature into four divisions or zones, which extend in parallel lines from north to south. Along the Great Sea lie the narrow coast plains which broaden in the south into the plains of Sharon and Philistia. The second zone is the central plateau, with hills three or four thousand feet in height in the north, which sink by stages to the large Plain of Esdraclon. South of this

Present-day inhabitants.—“Before the . . . [World War], the country now known as Palestine . . . formed part of the province of Syria under a Turkish Governor-General at Beyrout, together with the small *sanjak* of Jerusalem, corresponding roughly with the ancient *Juæa*, under a Turkish prefect in direct relation with the central government at Constantinople. There are no physical or ethnical boundaries separating it from Syria. . . . In their origin the people present almost as amazing a kaleidoscope as Palestine

SHORE OF GALILEE, PALESTINE

©Underwood & Underwood

great plain lie the fertile hills of Samaria which in turn merge into the stern hills of Judah. These again descend into the low, rocky, rolling hills of the South Country. The third zone is the Jordan and Dead Sea valley which begins at the foot of Mount Hermon and rapidly sinks, until at the Dead Sea it is one thousand two hundred and ninety-two feet below the surface of the ocean. The fourth zone includes the elevated plateaus which extend east of the Jordan and Dead Sea out into the rocky Arabian desert.”—C. F. Kent, *Biblical geography and history*, pp. 13-15.—See also CHRISTIANITY: Map of Palestine in the time of Christ; HOLY LAND.

Early Inhabitants. See AMALEKITES; AMMO-

itself. Old Phœnician blood enters largely into their composition with that of Italian, English, and French crusaders; and they are proud of their long pedigrees. There is an Arab strain from the east, and a Philistine-Egyptian from the south. At the cross-roads between north and south and east and west all these elements have conspired to form a type that is refined and beautiful as it is intellectually intelligent. From the language that they speak the [majority of the] people are known collectively as Arabs. They are of a docile, frugal and law-abiding disposition, and are very easily governed by anyone who wins and holds their confidence. . . . The total number at the present time is between 750,000 and 800,000

or about 100 to the square mile. . . . Over 80 per cent. are Moslem, [1921] over 10 per cent. Christian, and the remainder Jews. To the whole of this population the outstanding feature of the country lies in the Holy Places, and they feel responsibility as the people of the Holy Land. . . . The Jews in Palestine are divided into three groups. The first consists of Jews who have lived

Troubles of the Holy Land (Edinburgh Review, Jan., 1922).

Name.—After the suppression of the revolt of the Jews in 130 A. D., by Hadrian, the name of their province was changed from Judæa to Syria Palæstina, or Syria of the Philistines, as it had been called by Herodotus six centuries before. Hence the modern name, Palestine. See **Jews**:

KING'S POOL, HEBRON

Where David hanged the murderers of the sons of King Saul

for centuries in the country, many being of Spanish origin and still speaking Spanish among themselves. The second is a more recent importation, mostly fugitives from Central European persecution in the period before the war, speaking German and Yiddish among themselves. The third group, also from Central Europe and Russia, has immigrated under the auspices of the Zionist organizations during the time of Sir Herbert Samuel . . . [subsequent to the British acceptance of a mandate from the Peace Conference].—V. Gabriel,

Early Semitic migrations; 130-134.—“The name Palaistina, which Josephus himself uses only of Philistia, was employed by the Greeks to distinguish all Southern Syria, inclusive of Judæa, from Phœnicia and Cœle-Syria. They called it Syria Palaistiné, using the word as an adjective, and then Palaistina, the noun alone. From this the Romans got their Palæstina, which in the second century was a separate province, and later on divided into Palæstina Prima, Secunda, Tertia. It still survives in the name of the Arab *gund* or

canton—Filistin."—G. A. Smith, *Atlas of the historical geography of the Holy Land*, p. 4.—See also CANAAN; JERUSALEM; PHILISTINES.

c. B. C. 165-c. A. D. 33.—Under Roman dominion.—"Palestine in Jesus' time was extremely different from what it is now. It was a fat and fertile land, and intensively cultivated, for the ancient Hebrews had a passion for agriculture. Its diverse altitudes, which gave it a varied climate, also made it yield a vast variety of products. It was well watered and timbered and crossed by the great caravan routes between Africa and Asia. It was rather densely populated (one writer estimates five million inhabitants) although we have no reliable data on this point. [See CENSUS: Ancient.] It was indeed a land of plenty, flowing with milk and honey. It was beautiful, and its people were very industrious. Of old it was the land promised to their fathers, and had been looked forward to through all the forty years in the wilderness. To see the Children of Israel established in it was the goal of Moses' endeavour, and under Joshua their blood had been poured out to take the land from the corrupt Canaanites. Throughout the *diaspora* and in all the captivities their soul had yearned for and idealized it. Here they had multiplied and prospered. It had been given them as a patrimony by their deity, and no fatherland has ever been more passionately loved. It had been hallowed by associations with the theocracy and the great prophets, and the memory of the splendid kingdom under David and Solomon. Thus few lands and races in history have been so closely mated. Despite these great advantages the people at the dawn of our era were wretched, depressed, and miserable. Some three score years before, the Romans had feudalized the land and practically made the Hebrews captive in it. Liberty was gone. There were taxes on persons, income, cattle, roads, bridges, movable property, and market sales, and, worst of all, these taxes were farmed out to the highest bidders, who often sublet them and extorted more in the form of forced presents, if not by more aggressive means. These resources went to sustain the Roman courts and armies. Thus the people were kept in bitter poverty in their own land of abundance. They were in perpetual dread of their creditors and venal judges who could enslave debtors, sell their wives and children, and even put them to death. There was thus great economic as well as political tension, and there were occasional outbreaks of revolt, while the strong and long-repressed hope of a great deliverer, which had flamed up in the days of Judas Maccabeus . . . had in the two centuries since this event almost died out. Not only was their kingdom lost, but their religion had reached perhaps its lowest ebb."—G. S. Hall, *Jesus Christ in the light of psychology*, pp. 288-280.

1914-1919.—During World War.—Military government.—Crane commission.—Friction between Arabs and Jews.—"During the war, the people of Palestine suffered very badly. They were treated by the Turks as an alien hostile race, for their pro-Ally sympathies were well known: they were robbed and starved; their crops were seized, their fields cut up for trenches; their businesses were ruined and their able-bodied men were forcibly conscripted, even after three payments of exemption tax; tens of thousands of them died from pestilence or famine. When therefore the British and Allied forces over-ran the Holy Land, they were welcomed with such joy as had not been known before. . . . The retiring Turks and Germans took with them in their flight not only the personnel but even the most elementary material of government, and they rifled all the treasure chests. So complete was the evacuation that the British who came in had to send to Oxford for copies of the Turkish code, and with much difficulty were only able to find a few old retired officials who knew what had been done before. A new government had to be made from nothing. . . . As peace had not been signed, this government was obliged to reintroduce the old Turkish laws. . . . Taxes collected were only those estimated to be necessary for the essential functions of the State, and the incidence came to about sixteen shillings a head. The country revived so quickly however under the policy of fiscal moderation, fiscal security and fiscal equity thus introduced that after the first two years the [British] Chancellor of the Exchequer was able in the House of Commons to point to Palestine as the only State within his estimates that had cost nothing, and even had a surplus. All the ordinary functions of government were provided from the revenues, including free education, sanitation and an anti-malaria campaign, the improvement of the ports and roads, the conservation of antiquities, reforestation on a gradual scheme, the administration of justice, and the enrollment and training of a civil gendarmerie and police. Loans were granted to assist recovery from the devastation of the war, farm animals and implements were supplied, and in addition the revenues had to bear some heavy charges that were specifically military. . . . [Friction unfortunately developed between the Arabs and the Zionist leaders, especially after the arrival of the Zionist commission, under Dr. C. Weizmann.] Difficulties were still further increased by the formation and location in Palestine of two Jewish battalions of the Royal Fusiliers, which wore Zionist badges on British uniforms. . . . The people also resented the introduction of Hebrew as an official language [in 1918]. . . .

They found cause of grievance likewise in the suspension of developments on the ground that the Zionists had an option to undertake the work. . . . Matters reached such a pass towards the end of 1918 that the chief administrator of Palestine was compelled to ask either for a military force to repress the civil population, or for a definite pronouncement of policy that would enable him to allay the popular excitement. On 7th November, 1918, therefore, the British and French Governments issued a Proclamation, which was published in every village throughout Palestine, declaring that the object of England and France 'In carrying on in the Near East the war let loose by Germany's ambitions is to assure the complete and final liberation of the people so long oppressed by the Turks and the establishment of governments and administrations deriving their authority from the initiative and free choice of the native populations.' [Feeling was not allayed, however, and, by March, 1919, it was only by calling in troops that a serious revolt was averted. The chief administrator asked for instructions, and was informed] . . . that an international commission would come out to Palestine to ascertain what government the country now desired. Eventually, in April, 1919, a commission consisting of two Americans, Mr. Ambassador Crane and Dr. King, arrived and made a most careful and minute enquiry, hearing delegates from every village. . . . There was further friction over the grant of agricultural loans for the relief of those who had been ruined in the war. The chief administrator resigned and the financial adviser went to London, and, although the question was settled in accordance with his advice, he was actually superseded by Sir Herbert Samuel, who was sent out 'to advise on the finances and administration of Palestine.'—V. Gabriel, *Troubles of the Holy Land* (*Edinburgh Review*, Jan., 1922).

1919.—Plan for Zionist state.—"The project of the Zionists again to form a nation of Jews after two thousand years has received the enthusiastic support of President Wilson; France, Italy, and Japan have also indorsed the declaration of Balfour on Nov. 2, 1917, which is the modern Jewish charter. . . . As nearly as possible, the new Palestine under the Union Jack is intended to be coterminous with the territory from 'Dan to Beer-sheba' of the Old Testament. Thus no foreign power can wedge itself between Lebanon and the Egyptian border. The territory extends on both sides of the Jordan, but it does not include the desert, though that belonged to ancient Palestine. It stops short at the Hedjaz Railway as a recognition of Arab rights. Nor does it take in Damascus, which is regarded as the Arab capital. For practical purposes, therefore, it is the old historic Palestine, with certain adjustments of an economic order, such as complete possession of the essential waterways."—*New York Times Current*

ALSO IN: H. B. Samuel, *Palestine government* (*Fortnightly Review*, Aug., Sept., 1921).

1920.—British mandate.—Continued friction between Jews and Arabs.—The Supreme Council of the Allied Powers, on April 25, 1920 gave a mandate for Palestine to the British government, with the object of establishing a national home there for the Jewish people, in accordance with the terms of the declaration made in November, 1917, by Lord Balfour, as follows: "His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of that object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country." See SÈVRES, TREATY OF 1920: Part III: Political clauses: Palestine; JERUSALEM: 16th-20th centuries; 1920.

"The key-problem of modern Palestine is that of the relations of the Jews with the local Christian and Moslem inhabitants. . . . But the problem presents itself in Palestine in a distinctive form, owing to the Zionist Movement with its ideal of a return of a proportion of Jews from all countries to found a 'national home' in a re-generated Palestine and of the ultimate creation of a Jewish national state in that land. These aspirations, which found diplomatic expression in Mr. Balfour's famous pronouncement in 1917, received formal recognition in the San Remo agreement of the Great Powers [see SYRIA: 1908-1921], and the consequent appointment of the Jewish Sir Herbert Samuel as High Commissioner. The Zionist ambitions are stoutly and fiercely resisted by the Palestinian Christian and Moslem communities. The resulting clash of interests and feelings is a factor of the gravest import for the preservation of law and order in those parts—as indeed the riots of Easter at Jerusalem in 1920 (resulting in nearly 200 casualties) and the . . . disturbances in Haifa offer some indication."—A. E. Prince, *Palestine in transition from war to peace*, pp. 12-13.

1920.—Secretary Colby's note to Great Britain concerning equality in oil fields. See U.S.A.: 1920 (November).

1921-1922.—Appointment of Sir Herbert Samuel.—Report of Disturbances Commission.—Arab demands.—Civil administration in 1922.—Sir Herbert Samuel, who was appointed high commissioner in 1921, was not favorably received by the native Arab population, who identified him with the Zionist movement. Statements made by some Zionist leaders again provoked discontent, and the Palestine Disturbances Commission, sent out in 1921, to enquire into the situation, reported their view 'that the attitude of prominent Zionists is one of the irritant causes of the present discontent.' . . . The military garrison had again to be augmented . . . and there was a serious outbreak in Jerusalem in 1920 . . . [and another at Jaffa in 1921. Fear of the Zionist movement seemed to have overcome the Arab population, and in fact, in 1921, a judicial commission of three British officials reported that:] 'It is impossible to avoid the conclusion that practically the whole of the non-Jewish population was united in hostility to the Jews.' . . . [The main grievances, as summarized by the Disturbances Commission of 1921 were:] (1) That the policy adopted by Great Britain was directed towards the establishment of

a Jewish National Home and not to the equal benefit of all the people in Palestine; (2) that the official advisory body was a Zionist Commission bound by its ideals and its conception of its rôle to regard Jewish interests before all others, and constituted by its singular prerogatives into an *imperium in imperio*; (3) that there was an undue proportion of Jews in Government offices; (4) that the Zionist programme included an influx of Jews who would eventually obtain the upper hand over the rest of the population; (5) that the immigrants are an economic danger to the people because they are favoured in their competition; (6) that the immigrants offend by their arrogance and contempt of Arab social prejudices; (7) that Bolshevik Jew immigrants have endeavoured to introduce social strife and economic unrest in Palestine. [In August 1921, the Arabs refused an invitation to confer with Sir Herbert Samuel, but sent a delegation to London. An Arab congress, which had already met, enunciated the following demands:] (1) The formation of a Palestine national government, responsible, with the advice of a British High Commissioner, to a 'parliament elected by those inhabitants of Palestine who lived there before the war, Moslem, Christian and Jewish.' (2) The abandonment of the present partizan Zionist policy. (3) The regulation and control of immigration, in accordance with the capacity of the country, by the national government itself. (4) The freedom of the Holy Places, which should be left in the custody of their present guardians, from any interference by the national parliament or any other external authority. (5) The creation of a local force for internal purposes, subject to and at the expense of the national government, without any imposition of British regular troops, save if and when required for imperial defence."—V. Gabriel, *Troubles of the Holy Land* (*Edinburgh Review*, Jan., 1922).—Meantime, opinion as to the advisability of accepting the mandate was not unanimous in Great Britain. In the House of Lords, sixty of the members voted against it, as opposed to twenty-nine in its favor. The House of Commons, however, voted for it by a majority of 257, on July 4, and on July 24, it was approved by the Council of the League of Nations. [See ENGLAND: 1022 (July-September).] "The military administration had, admittedly, conferred many benefits upon the land, but much remained to be done. The local police, or gendarmerie, had been reorganized, the postal, telegraph and telephone systems had been somewhat extended, honesty had been brought into the collection of the taxes, tithes, and customs duties, improvements had been made in the native schools, railroad facilities were developed and some roads made passable for motor cars. The wholesome influence of the military administration had made itself felt in every town and village. Now the civil administration was called upon to enact a nationality law under which Jews from all over the world could acquire citizenship in Palestine, at the same time providing that no discrimination should be used against the nationals of any state belonging to the League of Nations. It decreed that English, Arabic and Hebrew should be the official languages of Palestine, and these three languages promptly appeared on the postage stamps as a sign which everybody could understand. The land registry, which had been kept hermetically sealed under the military administration, was opened, permitting sales and purchases of land and exciting the hope that excessive land values might drop. The railroad between Jerusalem and Jaffa was reopened as a

wide gauge road; new Jewish farming colonies were organized. The process of substituting native Palestinians for British employees of the government was carried forward, so that, . . . [in 1022 there were] 2,513 Palestinians and only 417 British so employed. The health statistics are improving steadily and schools are being established in many parts of the country, at one time at the rate of about one a week. More money . . . [at that time was] being spent on education by the government than on any other branch of administration, except that of public security. At the end of 1020, it was officially stated that of 134,000 children of school age in Palestine about 100,000 were receiving no education at all. What [had] been done so far by the government, . . . was mainly in behalf of the Arabs, who were in sore need of the most elementary general knowledge. Much needed girls' schools . . . had also been opened for the Arabs. The use of public school funds for the Arabs alone, seems hardly in accordance with strict justice to the Christians and Jews, but the Christians and Jews . . . [had] been asked to exercise patience, because the need of bringing up the generation of young Arabs out of the dangerous condition of illiteracy in which they were plunged, . . . [was] really a matter of public safety for the whole country, and in the meantime the Christians and Jews . . . [had] well provided themselves with a great variety of educational institutions."—M. D. McCrackan, *New Palestine*, pp. 365-367.

PALESTRINA, Giovanni Pierluigi da (c. 1526-1504), Italian composer. Chapel master at St. John Lateran, 1555; appointed composer of the pontifical chapel, 1505; succeeded Animuccia as master of St. Peter's, 1571, and remained there till his death. Palestrina's works mark the highest development of church music of strict contrapuntal composition. See MUSIC: Modern: 1535-1674.

PALFREYS, or Palafreni. See **D'ESTRIERS**.

PALI.—The earlier form of the ancient spoken language [of the Aryan race in India], called Pali or Magadhi, . . . was introduced into Ceylon by Buddhist missionaries from Magadha when Buddhism began to spread, and is now the sacred language of Ceylon and Burmah, in which all their Buddhist literature is written. [The Pali language is thought to represent one of the stages in the development of the Prakrit, or common speech of the Hindus, as separated from the Sanskrit, or language of the learned.]—M. Williams, *Indian wisdom*, introduction, pp. xxix-xxx, footnote.—See also **SANSKRIT**.

PALIKAO, Charles Guillaume Marie Appollinaire Antoine Cousin Montauban, Comte de (1700-1878), French general and statesman. Formed a ministry in France, on the resignation of Ollivier, 1870. See FRANCE: 1870 (September).

PALILIA, Festival of.—"The festival named Palilia [at Rome] was celebrated on the Palatine every year on the 21st April, in honour of Pales, the tutelary divinity of the shepherds, who dwelt on the Palatine. This day was held sacred as an anniversary of the day on which Romulus commenced the building of the city."—H. M. Westropp, *Early and imperial Rome*, p. 40.

PALIMPESTS. See **BIBLE**. ENGLISH: Modern Biblical research.

PALISSY, Bernard (1510-1580). French potter. See **FERTILIZERS**: Origin.

PALLA, garment worn by Roman women. See **STOLA**.

PALLADIO, Andrea (1518-1580), Italian architect. Designed the two-story arcade around the basilica of Vicenza and the Teatro degli Olimpici, also many buildings at Venice, and two in England; left several works on architecture, based upon the principles of Roman architecture.

PALLADIUM.—"The Palladium, kept in the temple of Vesta at Rome, was a small figure of Pallas, roughly carved out of wood, about three feet high. Ilos, King of Troy, grandfather of Priam, after building the city asked Zeus to give him a visible sign that he would take it under his special protection. During the night the Palladium fell down from heaven, and was found the next morning outside his tent. The king built a temple for it, and from that time the Trojans firmly believed that as long as they could keep this figure their town would be safe; but if at any time it should be lost or stolen, some dreadful calamity would overtake them. The story further relates that, at the siege of Troy, its whereabouts was betrayed to Diomed, and he and the wily Ulysses climbed the wall at night and carried it off. The Palladium, enraged at finding itself in the Grecian camp, sprang three times in the air, its eyes flashing wildly, while drops of sweat stood on its brow. The Greeks, however, would not give it up, and Troy, robbed of her guardian, was soon after conquered by the Greeks. But an oracle having warned Diomed not to keep it, he, on landing in Italy, gave it to one of Æneas' companions, by whom it was brought into the neighbourhood of the future site of Rome. Another legend relates that Æneas saved it after the destruction of Troy, and fled with it to Italy, where it was afterwards placed by his descendants in the Temple of Vesta, in Rome. Here the inner and most sacred place in the Temple was reserved for it, and no man, not even the chief priest, was allowed to see it except when it was shown on the occasion of any high festival. The Vestals had strict orders to guard it carefully, and to save it in case of fire, as the welfare of Rome depended on its preservation."—F. Nösselt, *Mythology, Greek and Roman*, p. 3.

PALLESCHI, Florentine political party. See FLORENCE: 1498-1500.

PALLIUM.—"The pallium, or mantle of the Greeks, from its being less cumbersome and trailing than the toga of the Romans, by degrees superseded the latter in the country and in the camp. When worn over armour, and fastened on the right shoulder with a clasp or button, this cloak assumed the name of paludamentum."—T. Hope, *Costume of the ancients*, v. 1, p. 37.—See also COSTUME: Egyptian, etc.; PALUDAMENTUM.

PALMYRA, ancient city in an oasis in the Syrian desert, 150 miles northeast of Damascus, of which remarkable ruins still remain.

Earliest knowledge of.—"The outlying city of Palmyra—the name of which is first mentioned during the wars of M. Antony in Syria [41 B. C.]—was certainly at this period [of Augustus, 31 B. C.-14 A. D.] independent and preserved a position of neutrality between the Romans and Parthians, while it carried on trade with both. It does not appear however to have as yet risen to a place of great importance, as its name is not mentioned by Strabo. The period of its prosperity dates only from the time of Hadrian."—E. H. Bunbury, *History of ancient geography*, v. 1, ch. 20, sect. 1.

Rise and fall.—"Amidst the barren deserts of Arabia a few cultivated spots rise like islands out of the sandy ocean. Even the name of Tadmor, or Palmyra, by its signification in the Syriac as well as in the Latin language, denoted the multitude of palm-trees which afforded shade and verdure to that temperate region. The air was pure, and the soil, watered by some invaluable springs, was capable of producing fruits as well as corn. A place possessed of such singular advantages, and situated at a convenient distance between the gulf of Persia and the Mediterranean, was soon frequented by the caravans which conveyed to the nations of Europe a considerable part of the rich commodities of India. [It has been the opinion of some writers that Tadmor was founded by Solomon as a commercial station, but the opinion is little credited at present.] Palmyra insensibly increased into an opulent and independent city, and, connecting the Roman and the Parthian monarchies by the mutual benefits of commerce, was suffered to observe an humble neutrality, till at length, after the victories of Trajan, the little republic sunk into the bosom of Rome, and flourished more than one hundred and fifty years in the subordinate though honourable rank of a colony. On the occasion of the invasion of Syria by the Persian king, Sapor, when the Emperor Valerian was defeated and taken prisoner (260-261), the only effectual resistance opposed to him was organized and led by a wealthy senator of Palmyra, Odenathus (some ancient writers call him a Saracen prince), who founded, by his exploits at that time, a substantial military power. Aided and seconded by his famous wife, Zenobia, who is one of the great heroines of history, he extended his authority over the Roman East and defeated the Persian king in several campaigns. On

his death, by assassination, in 267, Zenobia ascended the Palmyrenian throne and ruled with masculine firmness of character. Her dominions were extended from Bithynia to Egypt, and are said, with some doubtfulness, to have included even that rich province for a time. But the Romans, who had acquiesced in the rule of Odenathus, and recognized it, in the day of their weakness, now resented the presumption and the power of his widowed queen. Perhaps they had reason to fear her ambition and her success. Refusing to submit to the demands that were made upon her, she boldly challenged the attack of the warlike emperor, Aurelian, and suffered defeat in two great battles, fought 272 or 273, near Antioch and near Emesa. A vain attempt to hold Palmyra against the besieging force of the Roman, an unsuccessful flight and a capture by pursuing horsemen, ended the political career of the Brilliant 'Queen of the East.' She saved her life somewhat ignobly by giving up her counsellors to Aurelian's vengeance. The philosopher Linginus was one who perished. Zenobia was sent to Rome and figured among the captives in Aurelian's triumph. She was then given for her residence a splendid villa at Tibur (Tivoli) twenty miles from Rome, and lived quietly through the remainder of her days, connecting herself, by the marriage of her daughters, with the noble families of Rome. Palmyra, which had been spared on its surrender, rashly rose in revolt quickly after Aurelian had left its gates. The enraged emperor returned and inflicted on the fated city a chastisement from which it never rose."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 10-11.

PALMYRÈNE, or Syrian Desert, tract lying between Cule-Syria on the one hand and the valley of the middle Euphrates on the other, and abutting towards the south on the great Arabian desert, to which it is sometimes regarded as belonging.

PALO ALTO, Battle of (1846). See MEXICO: 1846-1847.

PALOS, town in the province of Huelva, Spain, at the mouth of the Rio Tinto. Columbus started from here on his voyage (1492) which resulted in the discovery of America.

PALSGRAVE, Anglicized form of Pfalzgraf, Palatine count. See PALATINE, COUNTS.

PALUDAMENTUM.—"As soon as the [Roman] consul entered upon his military career, he assumed certain symbols of command. The cloak of scarlet or purple which the emperor threw over his corslet was named the paludamentum, and this, which became in later times the imperial robe, he never wore except on actual service."—C. Merivale, *History of the Romans*, ch. 31.—See also PALLIUM.

PALUS MÆOTIS, or Mæotis Palus, ancient Greek name of the sea of Azov.

PAMIR.—"There are . . . in one sense many 'Pamiras,' and as a *tout-ensemble*, one 'Pamir,' or geographically, the 'Pamir.' . . . Indeed, the obvious and popular idea which has always attached to the word 'Pamir,' is the correct one, whether it is the geographical 'roof of the world,' the 'Bâm-i-dunya' of the poet, or the 'Pamir-dunya' of the modern journalist. We have . . . to deal with a series of plateaux, the topographical limits of which coincide with linguistic, ethnographical, and political limits. To the North, the Pamirs have the Trans-Altai mountain range marking the Turki element, under Russian influence; the Panja river, by whatever name, on the West, is a Tadjik or Iranian Frontier [Afghan]. The Sarikol on the East is a Tibetan, Mongolian, or Chinese Wall, and the South

is . . . the Hindukush."—G. W. Leitner, *Hunza, Nagyr, and other Pamir regions* (*Imperial and Asiatic Quarterly Review*, Jan., 1892).—"The Pamir and Tibet, which converge north of India and east of the Oxus, form jointly the culminating land of the continent. Disposed at right angles, and parallel, the one to the equator, the other to the meridian, they constitute the so-called 'Roof,' or 'Crown of the World,' though this expression is more usually restricted to the Pamir alone. With its escarpments, rising above the Oxus and Tarim plains west and east, the Pamir occupies, in the heart of the continent, an estimated area of 30,000 square miles. . . . It completely separates the two halves of Asia, and forms an almost impassable barrier to migration and warlike incursions."—E. Reclus, *Earth and its inhabitants: Asia*, v. 1, ch. 3, sect. 2.—During the latter part of the nineteenth century, Russian influence increased in the Pamir, and the boundaries of Bokhara and Turkestan were made to include that region in the Russian sphere. (See also AFGHANISTAN: 1895.) To the south the British Indian government occupied Chitral, but between the latter and the Russian dependencies was a tongue of Afghan territory. This narrow strip of the buffer state of Afghanistan was intended as a permanent barrier between the rival empires. After the Russian Revolution (1917), there were reports of Bolshevik activity in the Pamir and throughout central Asia.

PAMLICOS, North American Indian tribe. See ALGONQUIAN FAMILY.

PAMPANGAS, natives of central Luzon, Philippine islands. See PHILIPPINE ISLANDS: People.

PAMPAS, LLANOS.—"In the southern continent [of America], the regions which correspond with the prairies of the United States are the 'pampas' of the La Plata and the 'llanos' of Columbia [both 'pampa' and 'llano' having in Spanish the signification of 'a plain']. . . . The llanos of Venezuela and New Granada have an area estimated at 154,000 square miles. . . . The Argentine pampas . . . have a much more considerable extent, probably exceeding 500,000 square miles."—E. Reclus, *Earth and its inhabitants*, ch. 15.—See also INDIANS, AMERICAN: Cultural areas in South America: Pampean area; PAMPAS TRIBES.

PAMPAS TRIBES.—"The chief tribe of the Pampas Indians was entitled Querandía by the Spaniards, although they called themselves Pehuelches [or Puelts—that is, the Eastern]. Various segments of these, under different names, occupied the immense tract of ground, between the river Parana and the republic of Chili. The Querandis . . . were the great opponents to settlement of the Spaniards in Buenos Ayres. . . . The Aneas or Araucaunos Indians [see CHILE: Origin of the name; Aborigines] resided on the west of the Pampas near Chili, and from time to time assisted the Querandis in transporting stolen cattle across the Cordilleras. The southern part of the Pampas was occupied by the Balchitas, Uhilches, Telmelches, and others, all of whom were branches of the original Quelches horde. The Guarani Indians were the most famous of the South American races. . . . Of the Guayanas horde there were several tribes— independent of each other, and speaking different idioms, although having the same title of race. Their territory extended from the river Guarai, one of the affluents into the Uruguay, for many leagues northwards, and stretched over to the Parana opposite the city of Corpus Christi. They were some of the most vigorous opponents of the Spanish in

vaders. . . . The Nalicurgas Indians, who lived up to near 21° S. lat. were reputed to dwell in caves, to be very limited in number, and to go entirely naked. The Gausarapos, or Guuchies dwell in the marshy districts near where the river Gausarapo, or Guuchie, has its source. This stream enters from the east into the Paraguay, at 19° 16' 30" S. lat. . . . The Cuatos lived inside of a lake to the west of the river Paraguay, and constituted a very small tribe. . . . The Orejones dwelt on the eastern brows of the mountains of Santa Lucia or San Fernando—close to the western side of Paraguay river. . . . Another tribe, the Niniquillas, had likewise the names of Potrerros, Simanos, Barcenos, and Lathanos. They occupied a forest which began at about 19° S. lat., some leagues backward from the river Paraguay, and separated the Gran Chaco from the province of Los Chuiutos in Peru. . . . The Guanas Indians were divided into eight separate segments, for each of which there was a particular and different name. They lived between 20° and 22° of S. lat. in the Gran Chaco to the west of Paraguay, and they were not known to the Spaniards till the latter crossed the last-named river in 1673. . . . The Albaiaes and Payaguas Indians . . . in former times, were the chief tribes of the Paraguay territory. . . . The Albaiaes were styled Machicuis and Enimgas by other authors. At the time of the Spaniards' arrival here, the Albaiaes occupied the Gran Chaco side of the river Paraguay from 20° to 22° S. lat. Here they entered into a treaty offensive and defensive with the Payaguas. . . . The joined forces of Albaiaes and Payaguas had managed to extend their territory in 1673 down to 24° 7' S. on the eastern side of Paraguay river. . . . The Albaiaes were a very tall and muscular race of people. . . . The Payagua Indians, before and up to, as well as after, the period of the conquest, were sailors, and dominated over the river Paraguay. . . . The Guaiacarus lived on the Chaco side of Paraguay river and subsisted entirely by hunting. From the barbarous custom which their women had of inducing abortion to avoid the pain or trouble of child-bearing, they became exterminated soon after the conquest. . . . The Tobas, who have also the titles of Natecæt and Yncanahaite, were among the best fighters of the Indians. They occupy the Gran Chaco, chiefly on the banks of the river Vermejo, and between that and the Pilcomayo. Of these there are some remains in the present day. . . . The Mocoavis are likewise still to be found in the Chaco. . . . The Abipones, who were also styled Ecusgina and Quiabanabaite, lived in the Chaco, so low down as 28° south. This was the tribe with whom the Jesuits incorporated, when they erected the city of San Geronimo, in the Gran Chaco, and nearly opposite Goya, in 1748."—T. J. Hutchinson, *Parana*, ch. 6-7.—"The Abipones inhabit [in the 18th century] the province Chaco, the centre of all Paraguay; they have no fixed abodes, nor any boundaries, except what fear of their neighbours has established. They roam extensively in every direction, whenever the opportunity of attacking their enemies, or the necessity of avoiding them renders a journey advisable. The northern shore of the Rio Grande or Bermejo, which the Indians call Inatè, was their native land in the last century [the 17th]. Thence they removed, to avoid the war carried on against Chaco by the Spaniards . . . and, migrating towards the south, took possession of a valley formerly held by the Calchaquis. . . . From what region their ancestors came there is no room for conjecture."—M. Dobrzhoffer, *Account of the Abipones*, v. 2, ch. 1.—The

Abipones are in general above the middle stature, and of a robust constitution. In summer they go quite naked; but in winter cover themselves with skins. . . . They paint themselves all over with different colours."—Father Charlevoix, *History of Paraguay*, v. 1, bk. 7.—See also INDIANS, AMERICAN: Cultural areas in South America: Pampean area; TUPÍ.

PANAMA: Geographic description.—"The Republic of Panama occupies the center of the American continent. It is a thin strip of land which unites Central America, of which it forms part, with South America. . . . Panama extends from 6° 50' to 9° 41' of North Latitude, and from 77° 15' 45" West to the limit line with Colombia in South America to 83° 32' of Western Longitude on the Costa Rican frontier. [See CENTRAL AMERICA: Map.] Its greatest extension is 435 miles; its widest part measures 114 miles and the narrowest between Gulf of San Blas and the mouth of the river Bayano, 30 miles. From the city of Panama to the city of Colon it is 42 miles in a straight line, and following the course of the Canal from Balboa on the Pacific to Christobal on the Carribean sea, the distance is 48 miles. The configuration of the Isthmus is extremely interesting. Through it pass the chain of the Andes whose numerous foothills fall away some near the Atlantic and others near the shores of the Pacific. Nevertheless, Panama is not so mountainous as would seem at first sight. The lowest part of the famous chain of the Andes is in Panamanian territory and by means of the great engineering work done by the United States, through this point which is situated at the Culebra Cut, daily pass the great transatlantic steamers which carry the traffic of the world and today it only remains 40 feet above the level of the sea. . . . Panama has 88,500 square kilometers of territory of which 62,700 are mountainous, 18,500 meadows, and the islands have an area of 7,500 kilometers. Of this total it is necessary to deduct 1,260 square kilometers which are under the jurisdiction of the Canal Zone authorities which depend on the government of the United States."—S. A. Villegas, *Republic of Panama*, pp. 9-10.

1695-1699.—Darién project. See SCOTLAND: 1695-1699.

1700-1821.—Condition during end of 18th century.—Revolt against Spain.—"On the 30th of November of the . . . year [1699] another expedition arrived [at Darién] with 1300 men and after sustaining a primitive campaign against the Spaniards who in increasing numbers came from Panama and Cartagena, surrendered on April 24th, 1700, and abandoned the colony with military honors. The situation of the Isthmus became considerably worse on account of the attacks of the pirates, the uprisings of Indians and negroes and the paralyzation of commercial operations, as Spain no longer communicated with her other colonies by way of Panama. This state of affairs lasted for some time, practically through all of the seventeenth century until the new ideas of liberty which the French revolution brought [began to penetrate among the people]. Owing to the moral decadence which Spain suffered, independent ideas surged up in the colonies and took shape in 1809 when the first cry of liberty was given in Quito. During the second fifteen years of the nineteenth century the remainder of the Spanish Colonies on this continent rose in arms but the Isthmus remained faithful. The Spaniards thereupon made it a centre for the provisioning of troops who defended the royalists' cause in Venezuela, Colombia, Ecuador and Peru, and organized here expeditions the last of which left on October 22nd, 1821, for the coast of Ecuador. . . . The promotion of Fabrega at the moment when Spain had practically lost all her colonies in America gave great hopes to the Panamanians who wished for independence and the chiefs of the movement started to provoke desertions amongst the Spanish garrison in the capital. On November 13th, 1821, liberty was proclaimed in Los Santos, and a short time afterwards the same was done in Pese and Nata, which contributed to raise up the patriotic spirit in the rest of the country. The plan of getting the Spanish soldiers to desert gave such good results that at the end of November only the troops necessary for the custody of the jails remained in the city of Panama, and as on the night of the 27th, 60 soldiers deserted taking their arms with them the government took precautions to prevent the impending blow, placing the troops in strategic places around the city. The people, however, invaded the Cathedral plaza and asked the municipal body to meet and to decide the fate of the Isthmus, with the result that a short time afterwards in the consistory house, the Governor, the captain General, the Bishop, the representatives of the provinces and a number of high military and civil authorities met and decided that Panama should be freed from the Spanish dominion and joined with Colombia. . . . This declaration of independence was favourably received throughout the Isthmus."—S. A. Villegas, *Republic of Panama*, pp. 17-18.

1826.—Pan-American congress. See COLOMBIA: 1826.

1840-1900.—Revolution.—Independent State of the Isthmus.—"In 1840 revolutions broke out in most of the provinces. An independent 'State of the Isthmus,' containing the provinces of Panama and Veragua, was proclaimed in 1841, but the Centralists were successful, the revolution was suppressed, and the old régime restored. The sentiment against this method of government steadily increased until, in 1855, by an act of the Congress of New Granada at Bogotá the autonomous state of Panama was erected out of the Isthmian provinces. But the sincerity of this act may well be questioned and its aim was probably political and the purpose to crush the Federalist party for good and all. But the attempt of the national government to revoke its act, and, it seems to provoke a revolution, and then in crushing that revolution to put a stop to all Federal agitation, overreached itself. The revolution in behalf of the new constitution was completely successful. For a score of years and more Panama, like the other states in the Colombian Union, enjoyed (more or less interruptedly) its individual regrets. A centralist uprising in 1885, however, effected a return to old conditions. The former state of Panama was again ruled from Bogotá, and became a department called Panama. This department was divided into four provinces, Chiriqui, Veraguas, Azuero, and Panama, the last named province occupied the eastern half, approximately, of the department of the same name, with which it is very easily confused. . . . After 1885 the relations of Panama with Colombia were no closer nor more familiar than before. Several revolts took place, and in July 1900 under the lead of Porras, later a leading candidate for the vice-presidency of the republic, a desperate but unsuccessful attempt was made by a Liberal army to get control of the city of Panama."—M. Wilcox, *Encyclopedia of Latin America*, pp. 501-502.

1855.—Independence declared. See COLOMBIA: 1830-1886.

1900.—Boundary determined between Costa Rica and Panama. See COSTA RICA: 1000.

1901.—Represented at third international American congress at Mexico City. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902.

1903.—Secession from Colombia.—Recognized independence.—Treaty with the United States for building of Panama canal.—"Two routes [for the canal] were considered, one across Nicaragua, the other at Panama. Opinion favored the Panama route, where a French company, which had begun work in 1883 and had sunk many millions of dollars in the enterprise, was anxious to sell its rights for \$40,000,000. Colombia, to which Panama belonged, also seemed willing to lease the necessary ground for the canal; but, after negotiations which continued throughout 1902, the terms offered by the United States were rejected by the Colombian Congress. The people of Panama were anxious to see the work of digging begin and in November, 1903, revolted against Colombia and set up the Republic of Panama. President Roosevelt at once recognized the new Republic and interferred by force to prevent Colombia from putting down the revolt. The Panama Republic ceded to the United States a strip of land ten miles wide extending across the Isthmus, for which they were to be paid \$10,000,000 down and \$250,000 a year, beginning in 1913."—J. P. O'Hara, *History of the United States*, pp. 378-379.—See also PANAMA CANAL: 1889-1903; COLOMBIA: 1902-1903; U.S.A.: 1914-1921.

ALSO IN: S. Bonsal, *American Mediterranean*, pp. 461-473.

1903.—Bombardment of Panama city. See U. S. A.: 1914-1921.

1904.—United States Bank begins work on Panama canal. See PANAMA CANAL: 1904-1905.

1904.—Manuel Amador Guerrero appointed president by national convention.—“On January 15th, 1904, the National Convention met which in acknowledgment of the valuable services rendered by Dr. Manuel Amador Guerrero to the cause of independence, unanimously appointed him President of the Republic, of which office he took possession February 20.”—S. A. Villegas, *Republic of Panama*, p. 21.

1904.—Constitution of republic.—First election.—The constitution of the new republic was promulgated on February 16, 1904, and the election of president and three vice presidents took place, resulting in the choice of the following: president, Dr. Manuel Amador; first vice-president, Dr. Pablo Arosemena; second vice-president, Don Domingo de Obaldia; third vice-president, Dr. Carlos Mendoza. The third article of the Constitution declares: “The territory of the Republic is composed of all the territory from which the State of Panama was formed by the amendment to the Granada constitution of 1853, on February 27, 1855, and which was transformed in 1886 into the Department of Panama, together with its islands, and of the continental and insular territory, which was adjudged to the Republic of Colombia in the award made by the President of the French Republic on September 11, 1900. The territory of the Republic remains subject to the jurisdictional limitations stipulated or which may be stipulated in public treaties concluded with the United States of North America for the construction, maintenance, or sanitation of any means of interoceanic transit. The boundaries with the Republic of Colombia shall be determined by public treaties.”

1906.—Visit of President Roosevelt.—“For the first time in the history of the United States,” said President Roosevelt, when he landed at Colon, November 14, 1906, preliminary to a visit and inspection of the Panama Canal, “it has become advisable for a President of the United States to step on territory not beneath the flag of the United States.” He received a most hospitable welcome and entertainment in the young republic.

1906.—Participation in third international conference of American republics. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1906.

1908.—Presidential election.—José Domingo de Obaldia.—In 1908 there were two candidates for the presidency, Ricardo Arias and José Domingo de Obaldia. On July 4 Arias withdrew from the contest, his withdrawal being dictated he said, by a patriotic desire to prevent the military occupation of the republic of the United States and to enable the re-establishment of a union of political parties. The election was held on July 12, the supporters of Arias refraining from voting. The ballots were almost unanimous for Obaldia. On August 1, the electors met in the capitals of the provinces and officially declared the election of Obaldia as president. He assumed office in October.

1909.—Proposed tripartite treaty with Colombia and the United States. See COLOMBIA: 1009.

1910.—Death of President Obaldia.—“The President of Panama, Señor Obaldia, died in March, and was succeeded temporarily by the Vice President, Dr. C. H. Mendoza. The new President of

the Republic is Señor Arosemena.”—*Annual Register*, 1910, p. 467.

1910.—Protocol signed by Costa Rica and Panama. See COSTA RICA: 1910.

1910.—Represented at fourth international American congress. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910.

1913.—Arbitration treaty with the United States. See LATIN AMERICA: 1913.

1913-1914.—Opening of Panama canal. See PANAMA CANAL: 1913-1914.

1914.—New constitution.—“The Constitution adopted February 13, 1914, and . . . now in force, provides for a Chamber of Deputies of 33 members, one for every 10,000 inhabitants, which meets bi-annually on September 1, and for a President of the Republic, elected for 4 years, and not eligible for re-election. There are three Vice-Presidents and a Cabinet of five ministers. Each of the provinces into which the Republic is divided, is under a Governor.”—*Latin American Year Book*, 1920, p. 540.

PANAMA CANAL: Geographic description.—Plan of canal.—“The curve of the isthmus of Panama between the canal zone and the South American mainland becomes narrower at one point, measuring at San Blas only thirty-one miles [see CENTRAL AMERICA: Map]. The divide or water-parting of Panama is not the lowest on the continent, moreover. Its least elevation above mean tide, before the cutting of the Canal, was 200 feet, at the Culebra Pass, on the site of the Canal. The lowest point in Central America is in Nicaragua, some 500 miles to the northwest of Panama, and is only 153 feet. The problem of the canal, then, apart from matters of climate and disease, was to cut through thirty-six miles of ground, with a height at one point of 200 feet. Taking into account the windings of the route and the dredging necessary in the sea-bed of the approaches,

this thirty-six miles was increased to fifty; but . . . it has not, in the canal as now built, been necessary to excavate for more than a part of this length. . . . A large river, the Chagres, flowing into the sea near Colon, affords a valley which leads more than half-way across the isthmus towards the Pacific Ocean. This broad, alluvial valley, at a point twenty-six miles from the head of Limon Bay, upon which Colon is situated, turns suddenly at right angles to its general course and becomes narrow and steeper, and ceases to be of service. But this point is only nine miles from the low valley of another river, the Rio Grande, which flows into the Pacific. The water-parting or intervening ridge between the two is about 300 feet above sea-level, and is known as the Culebra Pass, and the huge excavation through it is the famous Culebra Cut, [now known as the Gaillard Cut], the greatest piece of earthwork that has ever been undertaken in the history of engineering. To utilize these two river valleys, cutting through the ridge to connect them, was in principle the plan of the Canal. . . . At the Atlantic side an enormous dam creates an artificial lake twenty-three miles long, forming part of the waterway—a vast economy of excavation. . . . It was not the time and expense of cutting through the ground only that determined the choice of a lock canal. . . . The Chagres . . . is a river subject to heavy floods, and at certain periods has been known to rise as much as thirty-five feet in twenty-four hours. This means an enormous body of water and a swift current, which would have flowed into the canal in the form of a huge cascade—an impossible condition. . . . Under any system of canal at Panama two features were necessary—the cutting through of the Culebra Ridge, and the dredging out of a channel, about five miles along, at each end of the waterway, to give depth for ships to enter. These two pieces of work were begun by the French engineers, and much of what they carried out in that connection was of subsequent utility and value. . . . Under its present type the canal is a 'water-bridge' rather than a canal, and the first of its kind in the history of the world. Vessels are lifted up three water-steps at one end, propelled across the connecting waterway, and lowered again three steps at the other end."—R. Enock, *Panama canal*, pp. 15-18, 20.

Projects for building canal prior to 1800.—"It appears that the honour of first conceiving and proposing the project of an artificial waterway through the isthmus [of Panama] belongs to Alvaro de Saavedra Ceron, a cousin of Cortez, who had been with Balboa at Panama. Ceron had been for twelve years engaged in the search for the strait, [which was believed to exist] and had finally begun to doubt its existence. His thoughts turned to the isthmus at Panama, where the narrowness and low elevation of the land seemed to offer the likeliest chance of an artificial canal. We learn from the old historian Galvano that Ceron prepared plans for the construction of a waterway there—almost precisely along the route chosen for the American canal nearly four hundred years later. Ceron's death, however, put an end to this early project. It is interesting to find the Portuguese historian Galvano, who flourished in the middle of the sixteenth century, mentioning four possible routes for the canal—namely, Darien, Panama, Nicaragua, and Tehuantepec. The choice, however, quickly confined itself to the Panama and Nicaraguan lines. The reader may feel some surprise that at such an early date as this an engineering project should be seriously considered which was

only accomplished in the end by the wealth and mechanical resources of one of the greatest of modern Powers. The explanation is that the tiny vessels of the early sixteenth century could have taken advantage of the natural rivers and lakes in the isthmus, especially those on the Nicaraguan route, and that far less artificial construction would have been necessary than in these days of the mammoth liner and warship. Charles V., King of Spain, seems to have been quite alive to the importance of these canal projects. In 1534 he directed the Governor of Costa Firme, the old name for the Panama district, to survey the valley of the Chagres, the river which supplies the water for the upper reaches of the American canal. This gentleman, however, seems scarcely to have shared the royal enthusiasm. He may be supposed to have known the isthmus at these points very well, and his scepticism about the prospect of canal construction there in those days was not wholly groundless. The Spanish historian Gomara, who wrote a history of the Indies in 1551 and dedicated it to Charles V., declared a canal to be quite feasible along any of the four routes mentioned by Galvano. . . . But Charles V. died without making any practical advance in this enterprise, and a rather remarkable reaction took place under his successor, Philip II. It should be noted that by this time a permanent roadway had been established across the isthmus from Panama to Porto Bello, along which the Spanish treasure-convoys passed from sea to sea without much interruption. The rapidly growing power of the English at sea made Philip fear that, if a canal were built, he would be unable to control it, and would probably lose his existing monopoly of isthmian transit. So he issued a veto against all projects of canal construction. He even persuaded himself that it would be contrary to the Divine purpose to link together two great oceans which God had set asunder, and that any such attempt would be visited by a terrible nemesis. . . . The project of a canal across the isthmus was never allowed entirely to disappear. In 1604 a very determined attempt was made to plant a British colony on the isthmus at Darien, a little east of the Panama route. The Pioneer was William Paterson, a Scotsman, who founded 'the Company of Scotland Trading to Africa and the Indies.' . . . 1,200 settlers set sail from Leith in July 1608, no doubt with a high hope and courage. In November the expedition arrived and established itself at a point of the coast still called Puerto Escozes, or Scotch Port, in Caledonian Bay, also named from the same event. 'New Edinburgh' and 'New St. Andrews' were founded, but the settlers soon got into difficulties. The climate was intolerable, and the project was opposed from the outset by the English and Dutch East India Companies, who were alarmed on the score of their own exclusive rights, while Spaniards and Indians were a perpetual menace. Broken down by these adversities the original settlers left the place, but were succeeded at once by another company which, after some successful fighting with the Spaniards, were compelled by the superior forces of the enemy to evacuate the settlements in the year 1700. . . . Paterson, who had personally surveyed the isthmus, positively declared that the construction of a canal was a feasible undertaking. During the eighteenth century, though surveying was carried out in many parts of the isthmus by European engineers, the project of a canal was never seriously taken up."—J. S. Mills, *Panama canal*, pp. 23-30.

1800-1850.—Humboldt on future of projected canal.—French projects.—Treaty of the United

States with New Granada.—British and American controversy apropos of Nicaragua route.—Clayton-Bulwer Treaty.—“With the nineteenth century, . . . events began to move at the isthmus. The great scientist, Alexander von Humboldt, spent the first few years of the new century in Mexico and Central America. . . . Humboldt described six routes in Central America where a canal would be practicable, including that which was afterwards adopted at Panama. He investigated and discussed many physiographical questions in connection with the subject. There had arisen a general belief that the level of the Pacific was much higher than that of the Atlantic, and that a sea-level canal would therefore be impossible. Humboldt declared against this theory. But it is curious to find him favouring the idea that the construction of a tide-level canal might have the effect of diverting the Gulf Stream, . . . and thus making the climate of . . . [the] British islands much more rigorous and inhospitable. . . . In 1825 [after the Spanish-American provinces had achieved independence] the Central American envoy to the United States urged the American government to co-operate in the canal enterprise with the states he represented. The result was that Henry Clay, the American Secretary of State, ordered an official survey at Nicaragua, and scheme followed scheme in quick succession. In 1820 the King of Holland was granted a canal concession by the Nicaraguan government. This enterprise was frustrated by the outbreak of the revolution in the Netherlands and Belgium. It would be tedious to enumerate the many projects started during the following years. But it is worth recalling that Louis Napoleon Bonaparte, who was then a prisoner in the fortress of Ham, became interested in the subject, and while still a captive obtained a concession and franchise for a canal company from the Nicaraguan government. . . . The idea of a trans-isthmian canal seemed likely in the ‘fifties’ of last century to prove a cause of discord, if not of war, between England and the United States. Under the rather ‘pushful’ foreign policy of Lord Palmerston, England rapidly increased her influence and possessions in Central America. In 1835 ‘British Honduras’ was practically constituted a British colony, and British influence was subsequently extended into Nicaragua and Mosquitia, thus covering the favourite route for an isthmian waterway. The United States were establishing themselves on the Pacific . . . and naturally began to attach more importance to the canal project and to feel more sensitive as regards rival ambitions in Central America. Soon after they had acquired their Pacific territories, began the great rush for gold to California, and some shorter way from east to west became necessary than the sea-trail round the Horn or the weary wagon-trek over the broad North American continent. Already in 1846, before the Mexican War and the discovery of gold in California, the United States had made a treaty with New Granada, by which the former secured rights of transit over the isthmus ‘upon any modes of communication that now exist or may hereafter be constructed,’ and by which they guaranteed the sovereignty of New Granada over all the territories at the isthmus. It was under this treaty that the Panama Railway was constructed which brought the town of Colon (formerly Aspinwall) into existence, and was subsequently taken over by the United States government. This railroad made the isthmus for the first time a highway of world-traffic. It had a monopoly of isthmian transportation, and was able to make any charges it

pleased. Steamship services to the southern and northern coasts of America from Panama were developed, and the railway succeeded so well that it paid down to 1895 an average dividend of 15 per cent. It was bought [in 1881] by the first French Panama Company for the outrageously high sum of £5,100,000 [\$18,004,000 or \$250 a share for sixty-eight seventieths of the capital stock.] The existence of the railway really determined De Lesseps’ choice of the Panama route, and the immense amount of excavation done by the French had a great deal to do in turn with the American choice of the same route, so that the construction of the Panama Railway was a highly important event at the isthmus. The United States took over the railroad from the French with the unfinished canal, together with a steamship service from Colon to New York, owned by the railroad. The rivalry between England and the United States along the Nicaraguan route became so acute and dangerous that a very important treaty was concluded between the two countries in 1850, when we may say that the Panama Canal question entered the domain of modern politics. The Clayton-Bulwer Treaty, so-called from Mr. John M. Clayton, the American Secretary of State, and Sir Henry Bulwer, British Minister at Washington, who negotiated it, held the field for fifty years, and became the subject of endless discussion between England and the United States.”—J. S. Mills, *Panama canal*, pp. 32-33, 36, 38-41.—The Clayton-Bulwer Treaty guaranteed that the projected canal, whether at Panama or Nicaragua, should be neutral.—See also NICARAGUA: 1850.

1869-1894.—Panama Canal Company.—Beginning of work.—Bankruptcy of company and trial of officers.—Organization of new Panama Canal Company.—The opening of the Suez canal again stirred Great Britain, France, and the United States to an interest in the Panama canal. In 1870 an international congress, representing the United States, Great Britain, Germany, and France, but mainly composed of French delegates, met in Paris to consider plans for the canal. This resulted in the organization of the Panama Canal Company under French law, with Ferdinand de Lesseps as president. “In adopting a sea-level instead of a lock canal, de Lesseps and his associates had run counter to the deliberate opinion of many experienced engineers, and some of those most competent to judge thought they saw danger ahead. But all warnings were lost in the vortex of the popularity of the hero of Suez. With exuberant confidence de Lesseps waved every obstacle aside, and his reputation was so great and his optimism so infectious that the public gladly followed his lead. Hundreds of thousands of his fellow-countrymen rushed to invest their savings in the company at the head of which was the great Frenchman. The construction of the canal [which was begun in 1882] was thus entered on with great enthusiasm and high hopes. Several causes, however, conspired to militate against its success. The principal of these may briefly be described as lack of foresight, inability to cope with disease, extravagance, and bribery and corruption. . . . Finally, as investigation afterwards brought out, there was so much money spent on secret commissions and in other corrupt ways that it has been said with some show of truth that not more than one-third of the total amount expended was actually laid out on the canal. In 1887 it became evident that a sea-level canal could not be built at a reasonable

cost nor within a reasonable time, and accordingly there was substituted a plan for a lock canal, estimated to cost \$300,000,000. Work was continued along the latter line until December, 1888, when the company suspended payment and became bankrupt. It was dissolved by a judgment of the Tribunal Civile de la Seine on February 4, 1889, and a receiver was appointed by the court to take charge of its affairs. A sum of \$262,000,000 had been spent, and in eight and a half years less than a quarter of the canal had been constructed. There was naturally a great scandal and a great outburst of popular indignation in France. Criminal charges were brought against de Lesseps, and in 1893 he was condemned to five years' imprisonment—a sentence which, owing to his advanced age and honorable record, was never enforced. Many others were also brought to trial; some committed suicide, others were fined and sent to prison. Investigation proved that between 1881 and 1887 seven different directors-general had been appointed; that white mechanics had been paid \$5 a day, skilled black laborers \$2.50 a day, and unskilled black laborers \$1.75 a day. . . . The Dutch company which had contracted to do the work of excavation agreed to remove 793,000 cubic yards a month for the first eighteen months and 429,000 cubic yards a month thereafter. It was never able to handle more than 130,000 cubic yards a month. The trial in Paris disclosed the fact that \$400,000 had gone to the genius who proposed a lottery for the purpose of keeping the canal company afloat; \$400,000 went for 'publicity'; \$580,000 was charged to 'banking expenses'; and \$280,000 was paid to politicians, journalists, and members of the chamber of deputies. The Minister of Public Works had demanded \$200,000 for his services, and was paid \$75,000. Baron Reinach was paid \$1,200,000 to float a loan of \$120,000,000, and only half of this loan was subscribed. M. Eiffel, builder of the famous Eiffel tower, was drawn in as the new contractor for the lock-type canal, and a lottery loan was floated. But the money was soon gone, and the collapse followed. It was shown that of the \$262,000,000 raised by the French people, less than \$100,000,000 had been expended at Panama. Salaries and office expenses consumed \$80,000,000; it cost \$32,000,000 to float the loans; and the expenses in Paris were over \$75,000,000. The receiver having finally suspended the works in May, 1880, applied his energies to saving whatever was possible from the wreck, and for that purpose assisted in the reorganization of another company. But this was now by no means easy to do, and it was not until 1894 that the new Panama Canal Company with a capital of \$10,000,000 was successfully established. In the meantime a fresh concession for ten years had been obtained from Colombia in 1890, and in 1893 a further extension had been granted on the understanding that the canal should be completed by October 31, 1904. [See also COLOMBIA: 1895-1900.] In 1900 this term was finally extended to 1910 by the President, but not by the Congress of Colombia—a fact which at a critical juncture in a later period was seized upon to make the concession appear invalid. The New Panama Canal Company did excellent work, and with a comparatively small capital excavated about 11,400,000 cubic yards, as well as making engineering surveys which were afterwards found to be of the greatest value."—I. E. Bennett, *History of the Panama canal*, pp. 102-104.

1889-1903.—Evolution of American projects.—Maritime Canal Company of Nicaragua.—Purchase of Panama franchises from French Company.—Hay-Pauncefote Treaty.—Treaty with Colombia.—Revolt of Panama.—Treaty with Republic of Panama.—At that time the proposed Nicaragua route was principally contemplated, for the reason that the rights in Panama held by the bankrupt French Company of de Lesseps seemed unobtainable, on any terms which the American Government could accept. A commission appointed by President McKinley to investigate the situation had reported to that effect in November, 1900, and had recommended the building of a canal on the Nicaragua route. "In their study of the Panama route the American Commission had made a valuation of the French works and property, which they placed at 40,000,000 dollars. . . . (The French official receiver had conservatively placed the value at 00,000,000.) [The French company owners valued the property at \$100,000,000.] But deeming it their only wise course, the company in Paris cabled an offer to Washington to sell out at that figure [\$40,000,000]. Consequent upon this turn of affairs, the Commission issued a supplementary report, reversing its former conclusion, and advising the adoption of the Panama route and the purchase of the property of the French company. A few days before, a bill had been carried in the American House of Representatives by a large majority, authorizing the construction of the Nicaragua canal at a cost of 180,000,000 dollars. When it reached the Senate, however, an amendment was moved, the so-called 'Spooner Bill,' authorizing the President to acquire the French property at Panama; and this became law in June, 1902. The sum of 40,000,000 dollars was to be paid in purchase, which was to include not less than 66,860 shares of the Panama Railroad Company. Further a strip of land was to be obtained from Colombia, in perpetual control by the United States, as the Canal Zone. The President was authorized, in the event of these measures not being successful, to enter into a treaty with Nicaragua and Costa Rica for the territory necessary for a Nicaragua canal."—C. R. Enoch, *Panama canal*, pp. 76-77.—Meantime the Hay-Pauncefote treaty with Great Britain which modified the Clayton-Bulwer treaty in such a way as to grant the United States the right to build the canal, and which the American Senate had amended in a manner objectionable to the British Government, was modified to the satisfaction of the latter, and the enterprise was cleared of questions except those between Colombia and the United States. The next ensuing events can be told in the words of President Roosevelt's report of them to Congress, in his message at the opening of the session convened on the 7th of December, 1903: "By the act of June 28, 1902," (known as the Spooner Act) wrote the President, "the Congress authorized the President to enter into treaty with Colombia for the building of the canal across the Isthmus of Panama; it being provided that in the event of failure to secure such treaty, after the lapse of a reasonable time, recourse should be had to the building of a canal through Nicaragua. It has not been necessary to consider this alternative, as I am enabled to lay before the Senate a treaty providing for the building of the canal across the Isthmus of Panama. This was the route which commended itself to the deliberate judgment of the Congress, and we can now acquire by Treaty the right to

construct the canal over this route. The question now, therefore, is not by which route the isthmian canal shall be built, for that question has been definitely and irrevocably decided. The question is simply whether or not we shall have an isthmian canal. When the Congress directed that we should take the Panama route under treaty with Colombia, the essence of the condition, of course, referred not to the Government which controlled that route, but to the route itself; to the territory across which the route lay, not to the name which for the moment the territory bore on the map. The purpose of the law was to authorize the President to make a treaty with the power in actual control of the Isthmus of Panama. This purpose has been fulfilled. In the year 1846 this Government entered into a treaty with New Granada, the predecessor upon the Isthmus of the Republic of Colombia and of the present Republic of Panama, by which treaty it was provided that the Government and citizens of the United States should always have free and open right of way or transit across the Isthmus of Panama by any modes of communication that might be constructed, while in return our Government guaranteed the perfect neutrality of the above-mentioned Isthmus with the view that the free transit from the one to the other sea might not be interrupted or embarrassed. The treaty vested in the United States a substantial property right carved out of the rights of sovereignty and property which New Granada then had and possessed over the said territory. The name of New Granada has passed away and its territory has been divided. Its successor, the Government of Colombia, has ceased to own any property in the Isthmus. A new Republic, that of Panama, which was at one time a sovereign state, and at another time a mere department of the successive confederations known as New Granada and Colombia, has now succeeded to the rights which first one and then the other formerly exercised over the Isthmus. But as long as the Isthmus endures, the mere geographical fact of its existence, and the peculiar interest therein which is required by our position, perpetuate the solemn contract which binds the holders of the territory to respect our right to freedom of transit across it, and binds us in return to safeguard for the Isthmus and the world the exercise of that inestimable privilege. The true interpretation of the obligations upon which the United States entered in this treaty of 1846 has been given repeatedly in the utterances of Presidents and Secretaries of State. . . . Attorney-General Speed, under date of November 7, 1865, advised Secretary Seward as follows: 'From this treaty it can not be supposed that New Granada invited the United States to become a party to the intestine troubles of that Government, nor did the United States become bound to take sides in the domestic broils of New Granada. The United States did guarantee New Granada in the sovereignty and property over the territory. This was as against other and foreign governments.' For four hundred years, ever since shortly after the discovery of this hemisphere, the canal across the Isthmus has been planned. For two score years it has been worked at. When made it is to last for the ages. It is to alter the geography of a continent and the trade routes of the world. We have shown by every treaty we have negotiated or attempted to negotiate with the peoples in control of the Isthmus and with foreign nations in reference thereto our consistent good faith in observing our obligations; on the one hand to the peoples of the Isthmus,

and on the other hand to the civilized world whose commercial rights we are safe-guarding and guaranteeing by our action. We have done our duty to others in letter and in spirit, and we have shown the utmost forbearance in exacting our own rights. Last spring, under the act above referred to, a treaty concluded between the representatives of the Republic of Colombia and of our Government was ratified by the Senate. This treaty was entered into at the urgent solicitation of the people of Colombia and after a body of experts appointed by our Government especially to go into the matter of the routes across the Isthmus had pronounced unanimously in favor of the Panama route. In drawing up this treaty every concession was made to the people and to the Government of Colombia. We were more than just in dealing with them. Our generosity was such as to make it a serious question whether we had not gone too far in their interest at the expense of our own; for in our scrupulous desire to pay all possible heed, not merely to the real but even to the fancied rights of our weaker neighbor, who already owed so much to our protection and forbearance, we yielded in all possible ways to her desires in drawing up the treaty. Nevertheless the Government of Colombia not merely repudiated the treaty, but repudiated it in such a manner as to make it evident by the time the Colombian Congress adjourned that not the scantiest hope remained of ever getting a satisfactory treaty from them. The Government of Colombia made the treaty, and yet when the Colombian Congress was called to ratify it the vote against ratification was unanimous. It does not appear that the Government made any real effort to secure ratification. Immediately after the adjournment of the Congress a revolution broke out in Panama. [See also COLOMBIA: 1902-1903.] The people of Panama had long been discontented with the Republic of Colombia, and they had been kept quiet only by the prospect of the conclusion of the treaty, which was to them a matter of vital concern. When it became evident that the treaty was hopelessly lost, the people of Panama rose literally as one man. Not a shot was fired by a single man on the Isthmus in the interest of the Colombian Government. Not a life was lost in the accomplishment of the revolution. The Colombian troops stationed on the Isthmus, who had long been unpaid, made common cause with the people of Panama, and with astonishing unanimity the new Republic was started. The duty of the United States in the premises was clear. In strict accordance with the principles laid down by Secretaries Cass and Seward . . . the United States gave notice that it would permit the landing of no expeditionary force, the arrival of which would mean chaos and destruction along the line of the railroad and of the proposed canal, and an interruption of transit as an inevitable consequence. The de facto Government of Panama was recognized in the following telegram to Mr. Ehrman: 'The people of Panama have, by apparently unanimous movement, dissolved their political connection with the Republic of Colombia and resumed their independence. When you are satisfied that a de facto government, republican in form and without substantial opposition from its own people, has been established in the State of Panama, you will enter into relations with it as the responsible government of the territory and look to it for all due action to protect the persons and property of citizens of the United States and to keep open the isthmian transit in accordance with the obligations of existing treaties governing the relations of the United

States to that territory.' The government of Colombia was notified of our action by the following telegram to Mr. Beaupré: 'The people of Panama having, by an apparently unanimous movement, dissolved their political connection with the Republic of Colombia and resumed their independence, and having adopted a Government of their own, republican in form, with which the Government of the United States of America has entered into relations, the President of the United States, in accordance with the ties of friendship which have so long and so happily existed between the respective nations, most earnestly commends to the Governments of Colombia and of Panama the peaceful and equitable settlement of all questions at issue between them. He holds that he is bound not merely by treaty obligations, but by the interests of civilization, to see that the peaceful traffic of the world across the Isthmus of Panama shall not longer be disturbed by a constant succession of unnecessary and wasteful civil wars.' When these events happened, fifty-seven years had elapsed since the United States had entered into its treaty with New Granada. During that time the Governments of New Granada and of its successor, Colombia, have been in a constant state of flux. [The President then gives a list, by date, of 53 more or less serious disturbances of the public peace on the isthmus which United States consuls had reported to the government at Washington between May, 1850, and July, 1902. From this he proceeds:] The above is only a partial list of the revolutions, rebellions, insurrections, riots, and other outbreaks that have occurred during the period in question; yet they number 53 for the 57 years. It will be noted that one of them lasted for nearly three years before it was quelled; another for nearly a year. In short, the experience of over half a century has shown Colombia to be utterly incapable of keeping order on the Isthmus. Only the active interference of the United States has enabled her to preserve so much as a semblance of sovereignty. Had it not been for the exercise by the United States of the police power in her interest, her connection with the Isthmus would have been sundered long ago. In 1856, in 1860, in 1873, in 1885, in 1901, and again in 1902, sailors and marines from United States war-ships were forced to land in order to patrol the Isthmus, to protect life and property, and to see that the transit across the Isthmus was kept open. In 1861, in 1862, in 1885, and in 1900, the Colombian Government asked that the United States Government would land troops to protect its interests and maintain order on the Isthmus. . . . The control, in the interest of the commerce and traffic of the whole civilized world, of the means of undisturbed transit across the Isthmus of Panama has become of transcendent importance to the United States. We have repeatedly exercised this control by intervening in the course of domestic dissension, and by protecting the territory from foreign invasion. In 1853 Mr. Everett assured the Peruvian minister that we should not hesitate to maintain the neutrality of the Isthmus in the case of war between Peru and Colombia. In 1864 Colombia, which has always been vigilant to avail itself of its privileges conferred by the treaty, expressed its expectation that in the event of war between Peru and Spain the United States would carry into effect the guaranty of neutrality. There have been few administrations of the State Department in which this treaty has not, either by the one side or the other, been used as a basis of more or less important demands. It was said

by Mr. Fish in 1871 that the Department of State had reason to believe that an attack upon Colombian sovereignty on the Isthmus had, on several occasions, been averted by warning from this Government. In 1886, when Colombia was under the menace of hostilities from Italy in the Cerruti case, Mr. Bayard expressed the serious concern that the United States could not but feel, that a European power should resort to force against a sister republic of this hemisphere, as to the sovereign and uninterrupted use of a part of whose territory we are guarantors under the solemn faith of a treaty. The above recital of facts establishes beyond question: First, that the United States has for over half a century patiently and in good faith carried out its obligations under the treaty of 1846; second, that when for the first time it became possible for Colombia to do anything in requittal of the services thus repeatedly rendered to it for fifty-seven years by the United States, the Colombian Government peremptorily and offensively refused thus to do its part, even though to do so would have been to its advantage and immeasurably to the advantage of the State of Panama, at that time under its jurisdiction; third, that throughout this period revolutions, riots, and factional disturbances of every kind have occurred one after the other in almost uninterrupted succession, some of them lasting for months and even for years, while the central government was unable to put them down or to make peace with the rebels; fourth, that these disturbances instead of showing any sign of abating have tended to grow more numerous and more serious in the immediate past; fifth, that the control of Colombia over the Isthmus of Panama could not be maintained without the armed intervention and assistance of the United States. In other words, the Government of Colombia, though wholly unable to maintain order on the Isthmus, has nevertheless declined to ratify a treaty the conclusion of which opened the only chance to secure its own stability and to guarantee permanent peace on, and the construction of a canal across, the Isthmus. Under such circumstances the Government of the United States would have been guilty of folly and weakness, amounting in their sum to a crime against the Nation, had it acted otherwise than it did when the revolution of November 3 last took place in Panama. This great enterprise of building the interoceanic canal can not be held up to gratify the whims, or out of respect to the governmental impotence, or to the even more sinister and evil political peculiarities, of people who, though they dwell afar off, yet against the wish of the actual dwellers on the Isthmus, assert an unreal supremacy over the territory. The possession of a territory fraught with such peculiar capacities as the Isthmus in question carries with it obligations to mankind. The course of events has shown that this canal can not be built by private enterprise, or by any other nation than our own; therefore it must be built by the United States. 'Every effort has been made by the Government of the United States to persuade Colombia to follow a course which was essentially not only to our interests and to the interests of the world, but to the interests of Colombia itself. These efforts have failed; and Colombia, by her persistence in repulsing the advances that have been made, has forced us, for the sake of our own honor, and of the interest and well-being, not merely of our own people, but of the people of the Isthmus of Panama and the people of the civilized countries of the world, to take decisive steps to bring to an end a condition of affairs which had become

intolerable. The new Republic of Panama immediately offered to negotiate a treaty with us. This treaty I herewith submit. By it our interests are better safeguarded than in the treaty with Colombia which was ratified by the Senate at its last session. It is better in its terms than the treaties offered to us by the Republics of Nicaragua and Costa Rica. At last the right to begin this great undertaking is made available. Panama has done her part. All that remains is for the American Congress to do its part and forthwith this Republic will enter upon the execution of a project colossal in its size and of well-nigh incalculable possibilities for the good of this country and the nations of mankind. By the provisions of the treaty the United States guarantees and will maintain the independence of the Republic of Panama. There is granted to the United States in perpetuity the use, occupation, and control of a strip ten miles wide and extending three nautical miles into the sea at either terminal, with all lands lying outside of the zone necessary for the construction of the canal or for its auxiliary works, and with the islands in the Bay of Panama. The cities of Panama and Colon are not embraced in the canal zone, but the United States assumes their sanitation and, in case of need, the maintenance of order therein; the United States enjoys within the granted limits all the rights, power, and authority which it would possess were it the sovereign of the territory to the exclusion of the exercise of sovereign rights by the Republic. All railway and canal property rights belonging to Panama and needed for the canal pass to the United States, including any property of the respective companies in the cities of Panama and Colon; the works, property, and personnel of the canal and railways are exempted from taxation as well in the cities of Panama and Colon as in the canal zone and its dependencies. Free immigration of the personnel and importation of supplies for the construction and operation of the canal are granted. Provision is made for the use of military force and the building of fortifications by the United States for the protection of the transit. In other details, particularly as to the acquisition of the interests of the New Panama Canal Company and the Panama Railway by the United States and the condemnation of private property for the uses of the canal, the stipulations of the Hay-Herran treaty are closely followed, while the compensation to be given for these enlarged grants remains the same, being ten millions of dollars payable on exchange of ratifications; and, beginning nine years from that date, an annual payment of \$250,000 during the life of the convention."

—*President's message, Dec. 7, 1903.*

1904-1905.—Assumption of control of canal by United States.—Administration of John F. Wallace as chief engineer.—Preliminary difficulties.—Achievements of first year.—Comparison of French and American methods in engineering and sanitation.—Reasons for American success.—"American control of the Canal . . . was taken over without any particular ceremony immediately after the payment to Panama of the \$10,000,000 provided for in the treaty. Indeed so slight was the friction incident to the transfer of ownership from the French to the Americans that several hundred laborers employed on the Culebra Cut went on with their work serenely unconscious of any change in management. But though work was uninterrupted the organization of the directing force . . . demanded the testing out of men in high place and the rejection of the unfit; patient experimenting with methods and the

abandonment of those that failed to produce results. There was a long period of this experimental work which sorely tried the patience of the American people before the canal-digging organization fell into its stride and moved on with a certain and resistless progress toward the goal. In accordance with the Spooner act President Roosevelt on March 8, 1904, appointed the first Isthmian Canal Commission with the following personnel: Admiral John G. Walker, U. S. N., Chairman, Major General George W. Davis, U. S. A., William Barclay Parsons, William H. Burr, Benjamin M. Harrod, Carl Ewald Gunsky, Frank J. Hecker. . . . The first commission visited the Isthmus, stayed 24 days, ordered some new surveys and returned to the United States. . . . It was accompanied to the scene of work by an army surgeon, one Dr. W. C. Gorgas, who . . . was not at this time a member of the Commission but had been appointed Chief Sanitary Officer. . . . [Neither was Col. Goethals] at this time associated with the canal work. Coincidentally with the Commission's visit the President appointed as chief engineer, John F. Wallace, at the moment general manager of the Illinois Central Railroad. His salary was fixed at \$25,000 a year. . . . Wallace at the very outset had to overcome one grim and unrelenting enemy which was largely subdued before his successors took up the work. Yellow fever and malaria ravaged the Isthmus, as they had done from time immemorial, and although Sanitary Officer Gorgas was there with knowledge of how to put that foe to rout the campaign was yet to be begun. . . . The new chief engineer tackled the job with energy. There was quite enough to enlist his best energies. It must be remembered that at this date the fundamental problem of a sea level vs. a lock canal had not been determined—was not definitely settled indeed until 1906. Accordingly Engineer Wallace's first work was getting ready to work. . . . While the French had left great quantities of serviceable machinery it had been abandoned in the open and required careful overhauling before being fit for use; the railroad was inadequate in track mileage and in equipment. Above all the labor problem was yet to be successfully solved. In his one year's service Wallace repaired 357 French houses and built 48 new ones, but the task of housing the employees was still far from completed. Men swarmed over the old French machinery, cutting away the jungle, dousing the metal with kerosene and cleaning off the rust. Floating dredges were set to work in the channel at the Atlantic end. . . . Meanwhile the surveying parties were busy in the field collecting the data from which after a prolonged period of discussion, the vexed question of the type of canal should be determined. Two factors in the situation made Wallace's job the hardest. The Commission made its headquarters in Washington, 2,000 miles or a week's journey away from the job, and the American people, eager for action, were making the air resound with cries of 'make the dirt fly!' . . . No thought was given to the obstacles in the path, or the wisdom of preparing fully for the campaign before it was begun. . . . Red tape immeasurable wound about the Chief Engineer and all his assistants. Requisitions had to go to the Commission for approval and the Commission clung to Washington tenaciously. . . . Allowing for the disadvantages under which he labored Mr. Wallace achieved great results in his year of service on the Isthmus. . . . He complained bitterly, persistently and justly about the conditions in which he was compelled to work and found in

President Roosevelt a sympathetic and a reasonable auditor. Indeed, moved by the Chief Engineer's appeals, the President endeavored to secure from Congress authority to substitute a Commission of three for the unwieldy body of seven with which Wallace found it so hard to make headway. Failing in this, the President characteristically enough did by indirection what Congress would not permit him to do directly. He demanded and received the resignations of all the original commissioners and appointed a new board with the following members: Theodore P. Shonts, Chairman, Charles E. Magoon, Governor of the Canal Zone, John F. Wallace, Chief Engineer, Mordecai T. Endicott, Peter C. Hains, Oswald H. Ernst, Benjamin M. Harrod. . . . The commission, though similar in form, was vastly different in fact from its predecessor. The President in ap-

Isthmus . . . [Mr. Wallace's] work had been good, so far as it went. In office a little more than a year, he had spent more than three months of the time in Washington or at sea. But he had made more than a beginning in systematizing the work, in repairing the railroad, in renovating the old machinery and actually making 'the dirt fly' Of that objectionable substance . . . he had excavated 744,644 yards. Not much of a showing judged by the records of 1913, but excellent for the machinery available in 1905. The first steam shovel was installed during his régime and before he left nine were working. The surveys, under his direction, were of great advantage to his successor, who never failed to acknowledge their merit."—W. J. Abbot, *Panama and the canal*, pp 170-170, 182-184 —"When we compare the excavation equipment of the French with that assembled

SECTION OF THE PANAMA CANAL, UNDER AMERICAN CONSTRUCTION

pointing it had directed that its first three members should constitute an executive committee, and that two of these, Gov. Magoon and Engineer Wallace, should reside continuously on the Zone. To further concentrate power in Mr. Wallace's hands he was made Vice-President of the Panama Railroad. The President thus secured practically all he had asked of Congress, for the executive committee of three was as powerful as the smaller commission which Congress had refused him. . . . It was therefore with the utmost amazement that the President received from him, shortly after his return to the Isthmus, a cable requesting a new conference and hinting at his resignation. . . . Probably the rather savage letter of dismissal with which Secretary Tait met the Chief Engineer's letter of resignation, and the instantaneous appointment in his place of John F. Stevens, long associated with James J. Hill in railroad building, at a salary of \$5,000 a year greater, was the best tonic for the tired feeling of those on the

by the Americans a quarter of a century later . . . picturesque simile of Mr. Stevens—as a baby carriage to an automobile—does not seem far out of the way. The French, like all construction workers of the time, used hand-work mainly. The Americans, with all the remarkable improvements and developments of mechanical science at their command, were able to substitute for hand-work machines which did the work of hundreds, and in some instances, of thousands, of men. The four great instruments of excavation in the American plant were steam-shovels, unloaders, spreaders, and trackshifters. None of these, except the first in crude form, was known to the French. The greatest of the four is the steam-shovel, capable in its most powerful form of removing in an eight-hour day 4,823 cubic yards of rock and earth, or 8,305 tons. This was the highest record attained during American work, and it was accomplished by a 60-ton shovel with a 5-cubic-yard dipper . . . During the busiest season of work

in Culebra Cut there was a daily average of 43 of these shovels in operation, and the monthly output of each averaged 36,786 cubic yards, or a daily average of 1,415 cubic yards. . . . It is estimated that from two to three times as much drilling was required under the French conditions, twice as large a quantity of explosives, and three times as many men as under American conditions. The average amount of dynamite used by the Americans in the Culebra Cut is about one-half pound for every cubic yard of material blasted, while the French used not less than a pound for every cubic yard. . . . Most of the material excavated in Culebra Cut consisted of rock varying from very soft, which readily disintegrates on exposure to the atmosphere, to very dense rock of great hardness. It was necessary before excavating this material to drill and blast it. Two kinds of drills were used—tripod and well. . . . The maximum number of drills in use at any one time in Culebra Cut was 377, of which 221 were tripod and 156 well. With these over 90 miles of holes have been drilled in a single month. With the modern unloader, the second of the great American excavation instruments, the saving in labor was greater than in the case of the steam-shovels. This machine was unknown to the French. It consists of a steel plough, weighing about 3½ tons, which is drawn from one end of a train of flat cars to the other by means of a cable which is wound on a steam-driven drum. The flat cars upon which it is operated have one high and one open side, and are connected by steel aprons which convert their floor into a continuous surface throughout the train's entire length. As the wedge-shaped plough, which has a surface sloping backward on the open side of the car, moves forward, the material runs off in a continuous stream. . . . Another machine, also unknown to the French, is the spreader, which is a car operated by compressed air, which has steel wings on each side that can be raised and lowered and when lowered reach out from the rails with a backward slope, for a distance of 11½ feet. As the car moves forward the material left in a ridge along the side of the track by the unloader is spread out on a level with that on which the tracks rest. . . . [Finally] there comes still another labor-saving machine, also unknown to the French, the track-shifter, . . . [the invention of W. G. Bierd, the general manager of the Panama Railroad Company which] was first put in service in January, 1907. It consists of a flat car from which a steel truss boom extends 35 feet in front over the track, and a second boom extends 30 feet from the side parallel to and above the level of the track. A cable running over the end of the first boom lifts a section of the track, rails and ties together, and a cable running through the end of the second boom pulls the raised section sidewise. As first operated the machine carried its own engine, and swung a section of track five feet to one side. It now takes its steam from a locomotive and is capable of swinging track a distance of 6 feet. . . . There was removed from Culebra Cut in March, 1913, 1,183,200 cubic yards of material. The highest monthly total of the French at the same time point was 282,528 cubic yards. The American force in the Cut in March, 1913, was about 7,000 men. The working French force, thirty years earlier, was about 9,000 as nearly as can be ascertained. The monthly results per man, as shown by these figures, were for the American 176 cubic yards and for the French 32 cubic yards, or more than five to one in favor of the Americans."—J. B. Bishop, *Panama*

gateway, pp. 335-340.—"The general impression seems to be that the French accomplished practically nothing on the Isthmus of Panama, and that the \$40,000,000 we paid them was money thrown away. The fact is that we got more in value than we paid. According to an estimate made by a board of engineers in 1908 the work done in the twelve-mile excavation by the French was worth to us more than \$25,000,000 at our own yardage rates. The same experts valued the Panama Railroad at \$9,500,000; the plant and material, used and sold for scrap, the buildings along the line of the Canal, the surveys, plans, maps, and records, at \$6,000,000, and land, clearings, and roads with four years' use of the ship channel in Panama Bay at another \$1,500,000. The maps on which we built the Canal were made by the French, the surveys on which they were founded having previously been verified by our engineers. And, in addition to the twelve miles of excavation in the present waterways, the French had completed two-thirds of the fourteen-mile canal that was to divert the water of the Chagres River under the sea-level plan. . . . There was inefficiency and there was extravagance under the French régime undoubtedly, but the reports as to the enormous salaries paid French Canal officials—said to range from \$50,000 to \$100,000 per year—have been shown to be without foundation. M. Philippe Bunau-Varilla, who was Chief Engineer and General Manager in 1885 and 1886, has made public and unrefuted statements, to the effect that the highest salary paid to a Canal official during the French administration was \$20,000, that sum being received by M. Dingler, the first Director General of the work on the Isthmus. M. Bunau-Varilla's own salary was only \$10,000 per year at first, being later increased to \$12,000. Moreover, the fact that the official valuation of what the Americans obtained for the \$40,000,000 paid the French Company shows it to be worth over \$43,000,000 is seldom recorded."—W. L. Pepperman, *Who built the Panama canal?* pp. 36-37, 43.—"It has been a pleasing feature of the building of the canal by the Americans that the work of the French, which had been held up to derision largely, has been shown in actual experience to have been effective and necessary, and praise has taken the place of former ignorant censure. Where the French failed was in lack of sanitary measures and funds, and in extravagance and corruption in disposing of funds, and in efficient mechanical appliances—not in their engineering knowledge."—C. R. Enock, *Panama canal*, p. 21.—"Plans were adopted by the first commission almost immediately after its appointment for the construction of reservoirs to supply the cities of Panama and Colon with water, and later similar plans were adopted for all labor centres along the line of the canal. At the same time plans were adopted for a system of sewers for the cities and the paving or resurfacing of their streets. This work, which was begun in the first six months of American occupation, . . . was performed by the Division of Municipal Engineering, which . . . was in existence till August 1, 1908, when, its work having been completed, it was abolished. During the four years of its activity it expended nearly \$6,000,000, of which about \$2,250,000 was for water-works, sewers, and pavements in the cities of Panama and Colon, and about \$3,500,000 was for work in the Canal Zone. Subsequent expenditures in Colon and Panama brought the total cost of improvements made in them by the commission up to nearly \$3,500,000. All of this, in accordance with the treaty between the United States and Panama,

will be paid back to the United States, through water and sewerage rates, within a period of fifty years, at the expiration of which the system of water-works and sewers within city limits will revert to the cities. . . . Through these expenditures pure water was supplied to the cities of Panama and Colon and all settlements in the Canal Zone, the cities were converted from hotbeds of disease, without water-supply or decent pavements or sewers, into the best-paved, best-watered, and best-sewered cities in Central or South America. Moving side by side with the work of the Division of Municipal Engineering, though separate and distinct from it, was the work of the Sanitary Department. The new methods of fighting disease, which had been shown to be effective by the mosquito tests in Cuba, were put into operation. . . . When the Americans took possession of the Canal Zone in 1904 there were a few scattered cases of yellow fever, but as this was the usual condition between periodic epidemics of the disease, little concern was felt. In January, 1905, however, there was an increase in cases to 19. . . . Eight died, among them a canal employe. There were 14 cases in February, 11 in March, and 9 in April, and of these 18 were employes, 6 of whom died. The 7 cases in April were among employes in the French administration building, which had become the headquarters of the commission in Panama, where about 300 Americans were engaged. When 3 of them died a panic arose among Americans on the isthmus, and all steamers outward bound were laden to the full capacity with frightened employes. An increase of the number of cases in May to 33, including 22 employes, 3 of whom died, and a further increase in June to 62, including 34 employes, 6 of whom died, added to the panic, and nothing except lack of sailing accommodations prevented the scattering of the entire force. In July the number of cases began to decline, showing that the progress of the disease had been checked. . . . By the first of September the disease was shown to be under control, and in December the last case was registered and there was no death. There had been among employes of the commission and Panama Railroad employes 133 cases and 35 deaths."—J. B. Bishop, *Panama gateway*, pp. 241-243.

1905-1907.—Administration of John F. Stevens.—Discussion of type of canal to be adopted.—International board of engineers.—Decision in favor of lock canal.—"Mr. Stevens, . . . [the new chief engineer] adopted at the outset the wise determination to reduce construction work to the minimum and concentrate effort on completing arrangements for housing and feeding the army of workers which might be expected as soon as the interminable question of the sea level or lock canal could be finally determined. . . . At the same time Gov. Magoon was working over the details of civil administration, the schools, courts, police system and road building. The really fundamental work of Canal building, the preparation of the ground for the edifice yet to be erected, made great forward strides at this period. But the actual record of excavation was but small. One reason for this was the hesitation over the type of canal to be adopted."—W. J. Abbott, *Panama and the canal*, p. 184.—"As a consequence of the difficulties and dissensions attending the work, it was found advisable to appoint a board of consulting engineers, of an international character, to consider the positive plan to be followed. Five of these engineers were Europeans, including the chief engineers of the Kiel and the Manchester Ship canals, the directors of the Suez Canal, and

the state waterways of Holland, and of the French *Ponts et Chaussées*; with eight eminent American engineers. The question to be decided by these thirteen gentlemen was: Should the canal be a sea-level or lock canal? Majority and minority reports were given in. The first was signed by eight of the consultants, including all the Europeans, and was in favour of a sea-level canal. The minority report, by five American engineers, was for a lock canal. Both reports agreed that the sea-level type would probably cost double, both in money and time, that of the lock type; but the majority report held that the advantages of their plan warranted the outlay. The canal engineer, Mr. Stevens, voted for the lock canal. The arguments for the lock canal were that it would be as safe and useful as the other type, that it would provide the best solution of the problem of the Chagres River flood waters, that its enlargement, if necessary, would involve much less expense, that the cost of operation and maintenance would be less, and the time and cost of construction only half that of the sea-level canal. The reports were considered by the regular Isthmian Canal Commission, who, with the exception of one member, indorsed the lock type."—C. R. Enock, *Panama canal*, pp. 109-110.—"The action of his Advisory Board put President Roosevelt for the moment in an embarrassing position. A swinging majority declared for a sea-level canal, and even when the influence of Engineer Stevens, who was not a member of the Board, was exerted for the lock type it left the advocates of that form of canal still in the minority. . . . [The president] threw his influence for the lock type, sent a resounding message to Congress and had the satisfaction of seeing his views approved by that body June 20, 1906. . . . The Americans on the Isthmus now got fairly into their stride. Determination of the type of canal at once determined the need for the Gatun Dam, spillway and locks. It necessitated the shifting of the roadbed of the Panama Railroad, as the original bed would be covered by the new lake. The development of the commissary system which supplied everything needful for the daily life of the employe, the establishment of quarters, the creation of a public-school system were all well under way. Then arose a new issue which split the second Commission and again threatened to turn things topsyturvy. Chairman Shonts, himself a builder of long experience and well accustomed to dealing with contractors, was firmly of the opinion that the Canal could best be built by letting contracts to private bidders for the work. In this he was opposed by most of his associates, and particularly by Mr. Stevens, who had been working hard and efficiently to build up an organization that would be capable of building the Canal without the interposition of private contractors looking for personal profit. . . . The President approved of the Chairman's plan, and directed the Secretary of War, Mr. Taft, to advertise for bids. Mr. Stevens was discontented and showed it. . . . His complaints to the Secretary of War were many, and not of a sort to contribute to that official's peace of mind. When the bids came in from the would-be contractors they were all rejected on the ground that they did not conform to the specifications, but the real reason was that the President at heart did not believe in that method of doing the work, and was sure that the country agreed with him. This . . . offended Chairman Shonts, who stood for the contract system, and when the bids were rejected and that system set aside, promptly resigned. The President thereupon

consolidated the officers of Chairman of the Commission and Chief Engineer in one, Mr. Stevens being appointed that one. Given thus practically unlimited power Mr. Stevens might have been expected to be profoundly contented with the situation. Instead he too resigned on the first of April, 1907. . . . Two weeks before Stevens resigned the other members of the Commission, excepting Col. Gorgas, in response to a hint from the President had sent in their resignations."—W. J. Abbot, *Panama and the canal*, pp. 187-190.

1907-1914.—Completion of canal under administration of Colonel G. W. Goethals.—Construction of locks.—Culebra cut.—Gatun dam.—"Mr. Roosevelt had determined that henceforward the work should be done by army and navy officers, trained to go where the work was to be done and to stay there until recalled; men who had entered the service of the nation for life and were not looking about constantly to 'better their conditions.' He had determined further that the government should be the sole contractor, the only employer, the exclusive paymaster, landlord and purveyor of all that was needful on the Zone. In short he

date. By December, 1907, . . . dredging in the Atlantic and Pacific entrances of the canal had gone ahead steadily, though not extensively, the amount removed in the Atlantic entrance being 1,732,712 yards, and in the Pacific entrance, 1,950,895 yards, from 1904 to April 1, 1907. In August, four months after Col. Goethals arrived, the organization in the department of construction had developed such a momentum that it was necessary to ask authority from the President to exceed the regular appropriation by \$8,000,000 for the fiscal year to end in June, 1908. The fall of 1907 and the month of October presented a new problem in the canal construction which ever since has been one of the most formidable and uncertain factors in the project. A slide began at Cucaracha on the east side of the Cut near the town of Culebra and suddenly filled the Cut, closing it for transportation. In 1884, the French had noted this earth movement, and during Col. Goethals' first years on the canal it involved an area of forty-seven acres. Before dirt trains could move through the Cut, steam shovels had to work night and day for several weeks, and from that time onward the

WILLIAM C. GORGAS

GEORGE W. GOETHALS

FERDINAND DE LESSEPS

had planned for the Canal Zone a form of administration which came to be called socialistic and gave cold chills to those who stand in dread of that doctrine. To carry out these purposes he appointed on April 1, 1907, the following commission: Lieut.-Col. George W. Goethals, Chairman and Chief Engineer, Major D. D. Gaillard, U.S.A., Major William L. Sibert, U.S.A., Mr. H. H. Rousseau, U.S.N., Col. W. C. Gorgas, U.S.A., Medical Corps, Mr. J. C. S. Blackburn, Mr. Jackson Smith, Mr. Joseph Bucklin Bishop, Secretary. . . . With the creation of this commission began the forceful and conclusive administration of Col. Goethals, the man who finished the Canal."—W. J. Abbot, *Panama and the canal*, pp. 101-102.—"Taking a survey of the conditions when he took charge, Col. Goethals found that 80 per cent of the plant for finishing the canal was on the ground or ordered. The preliminary work for relocating the Panama Railroad had been done, and actual construction of the new line was begun in June, 1907, shortly after his arrival. Excavations in the lock sites were uncompleted, and it was two years later, in 1909, before any concrete was laid. In April, the month he arrived, nearly 900,000 yards were removed from the Culebra cut, the best month's work to that

slides . . . [were] the bugbear of the organization, not because they were insuperable, but from the extra work they involved and the possibility that they might delay the completion of the project."—W. R. Scott, *Americans in Panama*, pp. 133-135.—"The special wonder of the canal, its spectacular show piece, was and still is the Culebra Cut . . . [afterwards named the Gaillard Cut for the man in charge of the work]. To stand at the southern end of the Cut, between the towering, majestic hills of the Great Divide, was an experience which few who had ever had it could easily forget. On either side were the grim, forbidding, perpendicular walls of rock, and in the steadily widening and deepening chasm between—the first man-made canyon of the world—a swarming mass of men and rushing railway trains, monster-like machines, all working with ceaseless activity, all animated seemingly by human intelligence, without confusion or conflict anywhere. Throughout the eight miles of the Cut the scene varied only in the setting. The rock walls gave place here and there to the ragged sloping banks of rock and earth left by the great slides, covering many acres and reaching far back into the hills, but the ceaseless human activity prevailed everywhere. . . . Instead of detracting from the spectacular or picturesque

effects of the natural setting of the work, the slides enhanced them by adding a distinct touch of awe, possibly of terror. They revealed more clearly than ever the tremendous difficulties of the task and the magnitude of the victory which was being achieved in surmounting them. . . . During 1907 work was prosecuted with such vigor at all points along the line of the canal that a grand total of 15,765,200 yards of excavation was accomplished. In March the million cubic-yard limit was reached for the first time and passed. There was a decrease in May and June, due partly to the rainy season and partly to temporary trouble with steam-shovel operators over the question of wages, but in August a total of 1,274,000 yards was reached. . . . There was a large increase in September, October, and November, and in December the 2,000,000 mark was reached and passed in a total of 2,200,000 cubic yards, making the grand total for the year 15,765,200, or an average of over 1,300,000 a month. This was more than double the amount excavated during the preceding three years, which had aggregated less than 7,000,000 cubic yards. . . . The total excavation of 1908 exceeded 37,000,000 cubic yards, and the average for each month of the year, wet or dry, was about 3,090,000 cubic yards. The highest total for a single month in 1908 was that of March, 1909, when for the first and only time during canal construction the four-billion mark was reached, with a total of 4,062,632 cubic yards. This was the record-mark in excavation. The monthly totals began to drop after that date, for the reason that in several localities the work had been completed and the field of operation had been narrowed. From that time forward excavation ceased to be the primary and became the secondary element in canal work, the construction of locks and dams passing into the first position. . . . Credit for the first suggestion of Gatun as the site for a great dam belongs to Godin de Lépinay, chief engineer of bridges and roads, who was one of the French delegates to the Lesseps International Congress at Paris, in 1879. . . . The Gatun suggestion had evidently attracted attention in the United States, for in 1880 it was advanced by Ashbel Welch, an American engineer, in a paper before the American Society of Civil Engineers, and again by C. D. Ward before the same society in 1904. It was not included in the lock-canal project adopted by Lesseps and the new Panama Canal company in 1887, when he was compelled to abandon his sea-level plan, for that project included one dam at Bohio and another at Bas Obispo, on the Atlantic side, with a double flight of two locks at each point, and duplicate single locks at Paraiso, Pedro Miguel, and Miraflores, on the Pacific side, with a summit elevation of about one hundred feet above sea-level. The Isthmian Canal Commission of 1899-1901 . . . followed the suggestion of the new Panama Canal company and recommended Bohio as the site for a dam. . . . When the first commission that was appointed to it was proceeding under the authority of the Spooner Act of 1902, which provided merely for the construction of a 'canal of sufficient capacity and depth as shall afford convenient passage for vessels of the largest tonnage and greatest draft now in use, and such as may be reasonably anticipated.' No specific type of canal was designated, but the general expectation was that the lock type would be adopted. Operations were begun with that type in view, and the engineers in charge showed that they had the Gatun site in mind by making surveys and soundings at that point as well as at Bohio. These had been under way for some

weeks when the first chief engineer, Mr. Wallace, took charge on July 1, 1904. He continued the work during the eleven months of his administration, but he had in the meantime reached the conclusion that a sea-level canal was preferable to one with locks and took little interest in the investigations and did not make them sufficiently thorough to be decisive. Mr. Stevens, who succeeded him in July, 1905, was impressed on his first careful study of the field by the superior advantages of the Gatun site, and had such additional borings made as convinced him of its suitability. He recommended it earnestly both to canal commission and to the International Board of Consulting Engineers when that body visited the isthmus, in 1905. Its adoption by the minority members of that board in the plan recommended by them and approved subsequently by Congress was due largely to his advocacy. . . . [On the Pacific side] the task was much simpler than at Gatun. It is a curious fact that the most vulnerable feature of the original plan for an eighty-five foot level canal was assailed scarcely at all by the opponents of the project. They directed their assault upon the Gatun site, paying little or no heed to the fact that at the Pacific end a site for two great dams and a double flight of two locks had been selected which had far more questionable features. Work had only begun at this site when it was demonstrated that no suitable foundations for the proposed dams could be secured save at much larger expense than had been estimated."—J. B. Bishop, *Panama gateway*, pp. 193, 195-196, 198, 200, 202-205, 217.—The decision, in June, 1906, in favor of the lock type of canal "did not put an end to the discussion, nor the attacks on the dams and the foundations of the Gatun locks; the latter were passed upon as sufficient for the purpose in April, 1907, by a board consisting of Alfred Noble, Frederick P. Stearns, and John R. Freeman. In 1908, a slip occurred in a rock pile which formed part of the Gatun dam, and revived the question of the sea level versus the lock type of the canal. A rock pile was being constructed to elevation 60 on the upstream side, to form the south toe of the dam, and was being carried across the old French canal, when, because of the steepness of the slope on the downstream side and the amount of silt and soft material in the canal, a movement downstream occurred, carrying with it part of the downstream side of the rock pile. . . . The whole question was gone over again early in 1909 by a board of engineers appointed by the President for the purpose of determining whether or not a change in plans should be made. The board consisted of Frederick P. Stearns, Arthur P. Davis, Henry A. Allen, James D. Schuyler, Isham Randolph, John R. Freeman, and Allen Hazen. . . . This board recommended adherence to the original project. By Executive Order [January, 1908] the dimensions of the locks were changed to a length in the clear of 1,000 feet and a width of 100 feet. These dimensions were criticised in the public press and by officers of the Navy. As the canal was for naval use it was thought that the Navy Department should pass upon the question. . . . In a memorandum dated October 20, 1907, the President of the General Board of the Navy submitted a memorandum stating it was their opinion that sound policy would dictate an increase to a clear width of 110 feet; that the length of the locks as then planned—1,000 feet—was deemed to be sufficient for all naval purposes for an indefinite time to come; the width of 110 feet was adopted. In recommending the lock type of canal to Presi-

dent Roosevelt, the Secretary of War, Mr. Taft, called attention to the exposed location of the locks on the Pacific side to hostile fire in case of war, and recommended their withdrawal, if practicable. . . . On recommendation of the Isthmian Canal Commission the Sosa Hill site with its adjacent dams was abandoned. [By the revised plan two of the locks were built seven miles inland, at Miraflores, instead of at La Boca, as originally intended. The Pedro Miguel locks are separated from the Miraflores locks by a small artificial lake a mile and a half across.] At the same time this change was adopted, the question of concentrating all the locks on the Pacific side in a flight at Miraflores was brought up and considered, but the plan was not adopted because of the extent and character of the foundations. The direction of the breakwaters was changed. These were intended to protect the channel as well as the harbor against the 'northers' that occur on the Atlantic coast, and to give a place of shelter and refuge for shipping. Breakwaters built practically parallel to the channel gave an area but little greater than the channel, in which waves could dissipate after their entrance between the breakwaters, so they could not accomplish the purpose for which they were intended. The west breakwater was projected from Toro Point, and the second one . . . was planned on the east side of the entrance running out from Coco Solo. . . . In 1908, the President, by Executive Order, increased the bottom width of the canal through Culebra Cut to 300 feet. The channel just north of Pedro Miguel was increased to 600 feet in width for a distance of 1,050 feet, gradually reducing to 300 feet in the next 1,600 feet, to provide for the draw that results from filling the locks. The Panama Railroad was relocated throughout its entire length. In 1910, when it became apparent that the available balance would permit the construction of dry docks, machine shops and coaling stations, these were advocated as adjuncts to the canal, but, as they were not authorized by Congress until the latter part of August, 1912, they are completed only in part. The Minority of the Board of Consulting Engineers estimated that nine years would be required to complete the summit-level canal, or to January 1, 1915; this date was accepted, and the work adjusted and prosecuted to this end. The result was that the work in all its parts was advanced to such a stage that the first ocean steamer was passed through the canal on August 3, 1914, and, but for the unexpected slide which occurred north of Gold Hill on October 14, 1914, the canal would have been completed in its entirety within the estimated time."—G. W. Goethals, *Introductory paper (Transactions of the International Engineering Congress, 1915, v. 1, pp. 23-28)*.—"The change of plan delayed somewhat the beginning of work on the Pacific side. There was much less clearing required than at Gatun, and this was begun early in January, 1908. . . . The lock site at Miraflores was crossed from the west by the Cocoli River, a tributary of the Rio Grande. It is quite a formidable stream in times of heavy rains. In order to divert it from the lock site during the period of construction, and to have the use of its waters afterwards in the Miraflores Lake, the dam on the west side, constructed in the same manner as that at Gatun, was run on a line nearly parallel to the axis of the locks from the head of them to Cocoli Hill, a distance of two thousand three hundred feet. By this means the river was made to enter the Miraflores Lake site at its upper end, flowing through it and out

through a diversion channel on the east side of the locks. When the lock work was finished this channel was closed with a concrete dam, extending from the lock walls to the hills. In the dam a spillway allows the surplus water of the lake to escape and be used to supply power to the electric plant near by."—J. B. Bishop, *Panama gateway, pp. 220-221*.—"The construction of the Panama Canal required the construction of three dams, two on the Pacific side [at Pedro Miguel and Miraflores] and one on the Atlantic side. The dam at Gatun [built where the hills converge] is so huge in its proportions, . . . that it eclipses the two dams on the Pacific side. . . . It is really nothing more or less than a hill thrown across the Chagres valley, so as to impound the waters of the Chagres River, converting them into a lake with an area of 164 square miles, and with a shore line of 1,016 miles. The Chagres River drains a watershed of 1,320 square miles. . . . As you approach Gatun, coming down the valley . . . [the hills] swing in toward the canal on both sides, and at that point are only a mile and a half apart. Midway across this valley there was a small hill with a foundation of rock. The problem was simply one of building a dam between the hills at the two sides of the valley, utilizing the small hill in the middle of the valley as a site for the spillway, through which the surplus waters in the lake should be passed over the dam into the sea. The dam which was built is a mile and a half long, half a mile wide at the base [388 feet at 85 feet above sea level—that is at the normal water level], and 100 feet at its crest. It is 105 feet high, making the crest twenty feet higher than the normal surface of the water in the lake. In the construction of the dam two parallel ridges of stone 1,200 feet apart were first thrown across the Chagres valley. . . . The central portion of this earth-dam is known as the hydraulic core. Huge dredges were put to work breaking loose the soft natural cement of the valley below the dam and pumping it into the great pond maintained on the surface of the dam as it rose upward. The material carried in suspension in the water was allowed to settle, and then the water was drawn off and sent back for another load of liquid silt. In this way there was built across the valley, in the heart of the dam, a wall of natural cement 850 feet wide at the base and as high as the dam itself."—I. E. Bennett, *History of Panama canal, p. 146*.—"The mammoth Gatun dam had been begun in 1906, and by 1908 was taking form under the constant dumping of rock and earth from the Culebra cut. On November 20, 1908, a toe of the great dam slipped, where the dam intersected the old French canal channel, carrying about 200 feet of the structure away. The six years from January 1, 1907, to January 1, 1913, constitute the main construction period of the Panama Canal. . . . By October, 1908, the preparatory work, substantially accomplished by Mr. Stevens, passed its highest point, and all energies were centered on the work of construction. Sixty-three steam shovels, in 1907, were increased to 100; the 284 locomotives were augmented to 315; cars of all kinds from 2,700 to 4,356; the mileage in the Canal Zone was increased from 185 to about 500 miles for the Panama Railroad and Commission tracks; the number of unloaders, bank spreaders, track shifters and pile drivers was increased from a third to three times the number left by Mr. Stevens; twenty dredges were put in service, 500 drills for blasting, fifty-seven cranes, twelve tow boats, eleven clappers, seventy barges and lighters, fourteen launches, beside much other

machinery and equipment not so noteworthy. The foregoing figures do not include the Panama Railroad equipment. . . . Practically all repairs and creative mechanical work was concentrated in the Gorgona and Empire shops, with capacities commensurate with the equipment. Dredging had progressed in the Pacific entrance to a point where five miles of the canal could be opened to navigation on February 1, 1909. [This was part of the sea level, five hundred foot wide channel from Miraflores to the Pacific.] The first concrete for the Pacific side locks was laid at Pedro Miguel on September 1, 1900, seven days after the beginning of operations at Gatun. It was in February, 1910, that concrete work was started in the two locks at Miraflores, which in 1912, were the most backward feature of canal construction. . . . Three years after beginning the concrete work, or in August, 1912, the locks were more than 90 per cent completed, the one at Pedro Miguel being the nearest done with 95 per cent of the estimated concrete in place. The three locks at Gatun then had about 95 per cent in place and the two at Miraflores about 80 per cent."—W. R. Scott, *Americans in Panama*, pp. 144-145, 162.

1910-1914.—Fortification of the canal.—"The Hay-Pauncefote treaty, ratified December 16, 1901, makes the following provisions: First, abrogates the Clayton-Bulwer treaty. Second, gives the United States power to construct, operate and control a canal. Third, gives the United States a free hand over the canal in time of war. Fourth, forbids the blockading of the canal but does not forbid . . . [its fortification]. Thus ended the years of diplomacy leading up to the construction of the canal. . . . The matter of fortification was definitely settled in the spring of 1911, when the House of Representatives of the United States voted an appropriation of \$3,000,000 for that purpose. This action of the American Congress, and the steps since taken to stud the Isthmian ports with forts, settles forever the diplomatic question of whether or not we have actually acquired from England the right to fortify the canal. Even after the Hay-Pauncefote treaty was ratified and as late as the fall of 1910, there were people in the United States who insisted that the American government had bound itself not to fortify this great waterway. However a careful investigation of the diplomatic provisions of the Anglo-American treaty convinced the Administration and the Congress of the United States, that, by omitting all reference to the question of fortification, the makers of the treaty meant to leave the government of the United States free to do just as it chose in the matter. Naturally, it chose to fortify the canal."—F. A. Gause and C. C. Carr, *Story of Panama*, pp. 276-279.

"The radical view in favor of fortification was represented by ex-President Roosevelt and ex-President Taft. Mr. Roosevelt, it is asserted, had asked Mr. Hay at the time when the second proposal for a treaty with Great Britain was under consideration whether the dropping of the prohibition against fortification meant what it intimated—that the United States was to be free to fortify it if it wished. He received an affirmative reply, which was one of the elements deciding him to forward the treaty to the Senate for its approval. President Taft declared, in 1910, that he was in favor of fortification and had been from the time he was Secretary of War. Colonel Goethals, in charge of the construction of the waterway, and General Leonard Wood, Chief of Staff, were among the other prominent men who believed we had the right to fortify and should do so. . . . The ques-

tion has now become academic. The British Government has recognized that the United States is free to use the canal as a military asset. Sir Edward Grey in a note to Secretary of State Knox, dated November 14, 1912, declared in discussing the Canal treaties, "now that the United States has become the practical sovereign of the canal, His Majesty's Government do not question its title to exercise belligerent rights for its protection."—C. L. Jones, *Caribbean interests of the United States*, p. 221.—"The right of the United States to fortify the canal was at first disputed, not only abroad, but by some Americans. The confusion of thought on this subject was caused, in part, by the ambiguous language of the first and second Hay-Pauncefote treaties. While the first treaty seemed to deny the right to fortify, which in part led to the amendment of the treaty by the Senate and its consequent rejection by Great Britain, the second treaty, now in effect, tacitly recognizes the right of the United States to erect fortifications. In the notes exchanged between the two governments Great Britain explicitly recognizes this right."—I. E. Bennett, *History of the Panama canal*, p. 174.

1912-1914.—Panama Canal Act.—Tolls provision.—Repeal.—"When eventually the work had so far advanced that Colonel Goethals and his associates advised the President that the opening of the canal might be expected along about July 1, 1915, the President, who at that time was Mr. Taft, suggested to Congress the propriety of preparing for the actual work of operation and government. The act [see also U. S. A.: 1912 (August); COMMERCE: Commercial act: 1780-1920] to provide for the opening, maintenance, protection, and operation of the Panama Canal, and the sanitation and government of the Canal Zone, approved August 24, 1912, was the result. This act . . . evoked much discussion. It was argued at great length in Senate and House, the discussion centering largely upon the question of tolls,—a question which was destined to become an issue in the succeeding political campaign. The canal was opened nearly a year ahead of the predictions of the engineers, not formally, but sufficient for the passage of small boats connected with the work, and ultimately for regular vessels of commerce, from which, up to about the 1st of February, 1915, tonnage tolls were collected to the extent of about \$2,000,000. While the act approved by President Taft, August 24, 1912, embodied many preceding provisions of law with respect to the operations of the canal, it also contained a number of new provisions, some of them made necessary by the actual operation and maintenance of the property as a canal. . . . The first section defines the Canal Zone and distinguishes the canal by title as 'The Panama Canal.' It authorizes the President, by treaty with the Republic of Panama, to acquire any land above or under the water that may be desired in addition to the ten-mile strip. Section 2 gives validity to all laws, orders, regulations and ordinances heretofore adopted and promulgated in the Canal Zone by order of the President, and continues the courts, subject in each instance to the direction of Congress. Upon the discontinuance of the Isthmian Canal Commission, the President was authorized to complete, govern, and operate the canal and the Canal Zone, or to direct that it be done, 'through a governor of the Panama Canal and such other persons as he may deem competent to discharge the various duties connected with the completion, care, maintenance, sanitation, operation, govern-

ment, and protection of the Canal and Canal Zone.' The President, acting upon this authority, made Colonel Goethals governor of the canal. The formal opening of the canal . . . attaches to the administration of President Wilson, but owing to foreign war conditions and other considerations, action was deferred, although the canal was open for business. The tolls question was provided for in section 5, and this section, by the way, soon proved to be the most important in the bill. First the President was authorized 'to prescribe and from time to time change the tolls that shall be levied by the Government of the United States for the use of the Panama Canal: *Provided*, That no tolls, when prescribed as above, shall be changed, unless six months' notice thereof shall have been given by the President by proclamation. No tolls shall be levied upon vessels engaged in the coastwise trade of the United States.' The tolls question at once became the great bone of contention in Congress and outside. During the latter part of President Taft's term, and by reason of a plank in the Democratic platform, declaring for free passage of American ships using the canal, it continued to be a source of annoyance to President Wilson, who, shortly after he entered the White House . . . demanded of Congress the passage of a bill requiring the vessels of all nations, including our own, to pay tolls on equal terms with all other nations, in accordance with the contention of those who insisted that we were obligated, by the Hay-Pauncefote treaty, to treat ourselves in the matter of tolls exactly as we would treat the other nations. The discussion over the repeal of the tolls exemption clause was one of the most exciting of the Sixty-third Congress. Democrats and Republicans divided upon the question, but most of the former supported the repeal bill because of the attitude of President Wilson. Distinguished leaders like Speaker Clark and Mr. Underwood opposed the President in the House, while Senator O'Gorman, of New York, and others in the Senate fought earnestly for freedom from tolls. Senator Root made one of the most remarkable speeches of his career in the Senate, insisting that the United States was 'morally bound to repeal the free tolls exemption provision of the Panama Canal Act. In both houses, treaty provisions and diplomatic correspondence were raked over with a fine-tooth comb. All previous laws that had any bearing upon the subject were dragged into the discussion. This measure . . . gives a wide latitude to the President in authorizing the registry of ships and in suspending laws . . . hitherto regarded as protecting American interests with respect to ships and seamen.'—I. E. Bennett, *History of the Panama canal*, pp. 237-238, 241, 243.—'Besides its bearing on our relation with other countries, President Wilson advocated the repeal on the ground that it involved an unwise domestic policy. Many had already argued this point. It was urged that the exemption would work out, not as a stimulus to independent steamship lines to enter the coastwise trade, but as a veiled subsidy to the shipping trust. When the bill for repeal came up in Congress, therefore, it no longer stood as a measure on which action was to be taken with a consideration only of our duties under our treaty with Great Britain, but our general diplomatic position was involved and its merits as a domestic measure were questioned. After a long contest in Congress in which some Democrats refused to support the President, because they believed in the programme advocated by the previous Administration, and some protested against the repeal as the breaking of a platform pledge, the

measure passed and received the approval of the President on June 15, 1914. [See also U.S.A.: 1914 (March-June). Before it took its final form, the Senate incorporated an amendment which declared] 'the passage of this act shall not be construed or held as a waiver or relinquishment of any right the United States may have under the treaty with Great Britain . . . or the treaty with the Republic of Panama . . . to discriminate in favor of its vessels by exempting the vessels of the United States or its citizens from the payment of tolls for passage through said canal.'—C. L. Jones, *Caribbean interests of the United States*, pp. 214-216.—During the debate on the repeal of the tolls exemption, Representative F. C. Stevens made a long speech in which he reviewed the policy of the United States with respect to international rights in maritime canals, and freedom of the seas. In the course of this speech he said: "In many of . . . [the great straits and connecting waterways and canals in the world] the United States has asserted its right of equal treatment; and wherever any question has arisen, our Government has insisted upon its right of equal treatment for its commerce and its citizens in every one of those waterways. The first time there has been any departure by our country from this invariable rule as to equal treatment in the use of any of this class of waterways, was the enactment of this Panama bill of two years ago. . . . [The] great influence of the United States for an open and an equal sea began when it was only a little fringe of States, with a feeble Navy and almost no Treasury, and it has continued with the approval of all our people throughout all administrations of all parties. Today, when the population and resources of this Nation of 100,000,000 people has enabled it to construct with glory the greatest work known to man, it is now proposed to reverse the policy which always has been both the profit and pride of our people. When this reversal is really understood it will not be permitted by a just and generous people. The very basis for the acquisition by our Government of the Canal Zone, and the acquiescence of the nations in such action, was that it was an act of international eminent domain for the welfare of the world and the equal benefit of the commerce of all nations, and not for our national and selfish purposes. That was the pledge given to the world at the time of our action and as contained in the diplomatic documents of our Government relating to that stirring episode. The other nations took us at our word, believed in our integrity and pledges, and recognized and adopted our action. By the discriminating tolls act of two years ago we repudiate the very basis for our proceedings in our treatment of Colombia and Panama. Instead of an act of international eminent domain for the equal benefit of the world's commerce, we now insist that 'might makes right,' and selfish citizens of ours under the plea that it is an 'American policy' shall be permitted to utilize for their own profit the generous forbearance and confidence of the other nations in the integrity and honor of the United States. No wonder President Wilson is finding it difficult to treat with the representatives of these powers on a basis of sincerity and fair-mindedness. The one document in which these facts are best set forth is the report of Senator Cushman K. Davis, of Minnesota, the chairman of the Senate Committee on Foreign Relations, presenting to the Senate the first Hay-Pauncefote treaty, and I commend the reading of that remarkable report to everyone who is interested in a proper understanding and solution of this great

question. If the time shall come when it will be necessary for our Government to contend before an international tribunal concerning our rights and obligations and duties under these isthmian treaties, this report of Senator Davis will be the best evidence and almost conclusive evidence that by the terms of them the United States is bound to give equal rights to all nations and to all commerce and all citizens in the use of this transoceanic waterway. . . . If the time shall ever come—and it may—when the bulk of the commerce through the canal shall be for our domestic benefit, and it will be of greater advantage to us to make a free waterway at Panama, just as we have everywhere else, we have a perfect right to do it. But other nations can fairly claim to be included in our policy, just as we have included them in our policy as to treatment of our other canals and rivers and harbors. It is a business proposition as to whether we want the nations of the world to contribute their share to the cost of construction, maintenance, and upkeep of that tremendous project. Our contention is that as a business proposition it ought to be done; that our people ought not to pay it alone; and, if it ought to be done, then we must compel these nations, and if they do pay, then we ought to pay also. We have agreed to do so. We pursue that policy everywhere else. It is the only safe policy for us in our international dealings, and those who use the canal can very well afford to pay their share of its maintenance and the expense for the blessings which they directly receive.”—F. C. Stevens, *Speech in the House of Representatives, Mar. 28, 1914 (Congressional Record, Apr. 6, 1914)*.—The Canal Zone is a military reservation, and is strongly fortified. “At the Atlantic side the entrance to Limon Bay is somewhat narrow, and the big guns mounted at Toro Point, on one side of the mouth of the canal, and at Margarita Island, on the other side, completely command this entrance from the sea. . . . At the Pacific end all the defenses are on the east side of the channel. Several islands, among them Naos, Flamenco, and Perico, are situated a little distance east of the Panama Bay section of the canal, and some three miles from the mainland. These islands rise precipitously out of the sea and afford excellent sites for heavy armament. They have been connected with the mainland by a breakwater built from Balboa to Naos Island. . . . A railroad and a driveway provide military communication between the mainland and the fortifications. The heaviest armament at each end of the canal consists of a 16-inch gun. . . . At an elevation of forty-five degrees the range is over twenty-four miles, but as mounted the range is something over eleven miles. . . . The secondary defenses on each side consist of six 14-inch guns, six 6-inch guns, sixteen 12-inch mortars, and eight 4 7/10-inch howitzers. The mortar shells have a range of 20,000 yards, or over eleven miles. . . . At extreme range the shell reaches an altitude of over eight miles, its target being the deck of the hostile warship. The small guns and howitzers will come into play only when an enemy approaches within a mile of the fortification and attempts to effect a landing. These howitzers may be moved from place to place to meet the needs of the mobile forces in case of attack by land. . . . The guns of the permanent forts are all mounted on disappearing carriages of the very latest models known to military science, which were especially designed and put through a most exacting test before being adopted. . . . Surprise attacks are guarded against by a complete searchlight equipment at the fortifications. There are 14 searchlights, each with a sixty-inch reflector, capable of

sweeping the entire horizon. . . . When it was decided to fortify the canal, it was generally agreed that the fortifications should be impregnable. The General Board believed that such fortifications would be an invaluable aid in the transfer of a United States fleet from one ocean to the other in the face of an opposing fleet. It pointed out that guns mounted on shore are on an unsinkable and steady platform.”—I. E. Bennett, *History of the Panama canal, ch. 31, pp. 172-174*.

1913-1914.—Opening of the canal.—“On January 27, 1914, President Wilson signed an executive order putting into effect the Canal Act of August 24, 1914 . . . and thereby abolishing the Isthmian Canal Commission. On January 29, 1914, President Wilson nominated Colonel George W. Goethals first governor of the Canal Zone, under the new act, and on February 4 the nomination was confirmed by the Senate unanimously. . . . The first passage of the Gatun Locks was made on September 26, 1913, when the sea-going tug Gatun was lifted from the Pacific entrance to Gatun Lake. The first lockage on the Pacific side was made by the tug *Miraflores* on October 14, 1913. Water was admitted into Culebra Cut by the blowing up of the Gamboa Dike on October 10, 1913, the level of Gatun Lake at that time being about sixty-seven feet. The first use of the canal for commercial purposes was in May, 1914, when tugs began to tow from ocean to ocean barges laden with freight from vessels of the American-Hawaiian Steamship line which had been diverted to the isthmus by the interruption of traffic on the Tehuantepec Railway because of revolutionary troubles in Mexico. This continued until the opening of the canal to all vessels of commerce, and netted over eleven thousand dollars in tolls. The first test trip through the entire canal from ocean to ocean was made by the Panama Railroad steam-ship *Cristobal*, 9,600 tons, on August 3, 1914. The canal was opened to all vessels on August 15, 1914, when the Panama Railroad steamship *Ancon*, same tonnage as the *Cristobal*, made the official trip, carrying about two hundred guests of the Secretary of War. She made the passage in nine hours and forty minutes. During the first three months after the opening, two hundred and fifty-seven vessels were passed and tolls exceeding one million dollars in amount were collected.”—J. B. Bishop, *Panama gateway, pp. 347-348*.—See also U. S. A.: 1914 (August): Opening of Panama canal; CUBA: 1914-1918.

1914.—Description of completed canal.—Slides.—“The first evidence of this vast work . . . from the Atlantic side is the great rock breakwater, which has been built out from Toro Point into Limon Bay, or Colon Harbor, for a distance of over two miles to convert the bay into a safe anchorage, to protect shipping in the Harbor of Colon, and to shelter vessels which are making the Canal. To the left, extending from *Cristobal*, is a great artificial mole, from which six fine piers reach into the bay. Beyond the end of the lighthouse commences a channel with a depth of 45 feet and a width of 500 feet which extends in an almost straight line for 7 1/2 miles to the Gatun locks. The locks are on the left side of the Chagres valley, and to the right of them the valley has been closed by . . . [the] huge dam. . . . The height of water in the lake is controlled by regulating gates, at the top of the spillway dam, which slide between vertical concrete piers. They are raised and lowered by electric power from a power plant at the spillway, which serves also to provide power for

the electric operation and lighting of the locks and the general plant throughout the full length of the Panama Canal. . . . On emerging from the upper lock, the ship passes into Gatun Lake and proceeds under its own power . . . 24 miles until it reaches the Continental Divide. . . . Here the hills begin to close in on the channel, and for the next eight miles or so, it passes through . . . [the Cut]. Emerging from the [winding channel of] Gaillard Cut, the ship arrives at the locks on the Pacific side known as Pedro Miguel. Here in a single flight the ship is lowered from the elevation of 85 feet of Gatun Lake, to Miraflores Lake which has an elevation of $54\frac{2}{3}$ feet. [Across the lake] . . . it reaches the Miraflores locks, where in two flights it is lowered to sea level. From Miraflores locks, it passed through a dredged channel some 8 miles in length, at the end of which it finds itself in deep water."—*Scientific American*, Mar. 27, 1920, p. 344.—Almost immediately after the opening of the canal it was closed again by one of the worst of the slides, which had caused so much trouble throughout the work. "The greatest difficulty in excavating Culebra Cut was caused by the slides, an unanticipated source of trouble. It is true that Cucaracha slide existed, beginning in 1884 during the French régime, but this was considered a movement of the surface clay, which could be easily overcome. The slide resumed its activity in January, 1905, and a very serious disturbance took place in the fall of 1907, when a large section of the surface of the hill moved entirely across the Cut. . . . By piping water from the Rio Grande reservoir, the material, consisting of clay, was sluiced, until traffic through the slide was opened and the shovels resumed work. Cucaracha in its earlier stages was a typical slide, in that it consisted of clay and other material moving on a surface inclined towards the prism, and it was believed that the removal from the prism of the overlying mass, as it moved in, would overcome all further trouble. These hopes were apparently realized when, except for an occasional slight surface sloughing, the slide ceased to be troublesome in the dry season of 1910-11. The bottom grade of the canal was secured and the widening cuts were progressive towards completion of the section, when, in January, 1913, the rock formation supporting the mass above and back of it gave way, completely closing the prism, reaching an elevation of 60 on the opposite face of the excavated area. In January, 1907, on the east side opposite the village of Culebra, a slide developed and though it was troublesome, nothing very serious was anticipated. . . . In October, 1907, a crack developed fifty or more feet from the face of the bank on the west side of the canal near the old railroad station at Culebra. . . . The masses moving into the Cut materially interfered with the work by overturning or blocking tracks, interrupting drainage, and putting shovels out of service. . . . [When the] canal was opened to commerce on August 15, 1914. . . . a channel 150 feet wide and 35 feet deep had been secured through Cucaracha slide, and there was every hope of maintaining it. . . . [but] on October 15, as work at Cucaracha was drawing to a close, the east bank of the Cut north of Gold Hill for a length of 2100 feet and extending back 1000 feet from the center line of the channel, settled down, and about 725,000 cubic yards of rock and earth were squeezed out and into the canal prism. When the movement occurred there were 45 feet of water; an hour later there were only nine inches in some parts. There were 22 slides at different points along the line, involving the removal of amounts of material varying

from 3300 cubic yards in the slide at Pedro Miguel to over 9,000,000 cubic yards from the West Culebra slide, before the admission of water in October, 1913. The total amount removed by steam shovels because of the slides was . . . 25.32 per cent of the total removed in the dry from the Cut."—G. W. Goethals: *Dry excavation of the Panama canal* (*Transactions of the International Engineering Congress*, 1915, v. 1, pp. 371-372, 370-377).—"A total of 200 miles of railroad track was covered up, destroyed, or dislocated in a single year by these slides. The very bottom of the cut itself was upraised sometimes as much as 18 feet, as if to recover the ground lost by the operation of the steam shovels and the dirt trains. It was more than the mere digging of a ditch that Colonel Goethals had to encounter when seventy-five acres of the town of Culebra broke away and moved foot by foot into the canal; carrying hotels and club houses with them until these buildings were removed. Cucaracha slide carried into the cut many millions of cubic yards of material, bottling up the channel, and sending its 'toe' sixty-odd feet up the other side. It was fight, fight, fight, now with dynamite, now with steam shovels, now with hydraulic excavators, and now with dredges. The campaign finally resolved itself into one of inviting the slides to do their worst, and then meeting them as they came. Some of them, like Cucaracha, were mere masses of material slipping by force of gravity into the channel; others, like the West Culebra slide, were breaks."—I. E. Bennett, *History of the Panama canal*, p. 144.—"There are twelve locks in the Canal, all in duplicate; three pairs in flight at Gatun, with a combined lift of 85 feet; one pair at Pedro Miguel, with a lift of $30\frac{1}{3}$ feet; and two pairs at Miraflores, with a total lift of $54\frac{2}{3}$ feet at meantime. The dimensions of all are the same—a usable length of 1,000 feet, and a usable breadth of 110 feet. Each lock is a chamber, with walls and floor of concrete, and water-tight gates at each end. The side walls are 45 to 50 feet thick at the surface of the floor; they are perpendicular on the face, and narrow from a point $24\frac{1}{3}$ feet above the floor, until they are eight feet wide at the top. The middle wall is 60 feet thick and 81 feet high, with vertical faces. At a point $42\frac{1}{2}$ feet above the surface of the floor, and 15 feet above the top of the middle culvert, this wall divides into two parts, leaving a U-shaped space down the center, which is 19 feet broad at the bottom and 44 feet broad at the top. In this space is a tunnel, divided into three stories or galleries. The lowest of these divisions is for drainage; the middle for the wires . . . [for] the electric current to operate the gate and valve machinery, which is installed in the central wall, and the upper division forms a passage-way for the operators. The lock chambers are filled and emptied through lateral culverts in the floors, connecting with main culverts, 18 feet in diameter in the walls, the water flowing in and out by gravity. The lock gates are steel structures, seven feet thick, 65 feet long, and from 47 to 82 feet high. They weigh from 300 to 600 tons each. Ninety-two leaves are required for the several locks, the total weighing 57,000 tons. Intermediate gates are . . . used, in order to save water and time, and permit of the division of each lock into two chambers, respectively, 600 and 300 feet long. In the construction of the locks there were used 4,500,000 cubic yards of concrete, which required about the same number of barrels of cement. The time spent in filling and emptying a lock average about fifteen minutes, without opening the valves so suddenly as to create disturbing currents in the

locks or approaches. The time required to pass a vessel through all the locks is estimated at 3 hours; one hour and a half in the three locks at Gatun, and about the same time in the three locks on the Pacific side. The time of passage of a vessel through the entire Canal is estimated as ranging from 10 to 12 hours, according to the size of the ship, and the rate of speed at which it can travel, since the twenty four mile passage of Gatun Lake may be made at full speed. . . . No ship is allowed to pass through the locks under its own power, but is towed through by electric locomotives operating on tracks on the lock walls, . . . at the rate of 2 miles an hour. The number of locomotives varies with the size of the vessel. The usual number required is 4: 2 ahead, 1 on each wall, imparting motion to the vessel, and 2 astern, 1 on

are made with watertight and airtight compartments, and thus, since they tend to float, the weight is diminished. The whole aspect of the massive towering walls with their colossal equipment of ponderous steel gates is very imposing. . . . In a building above the locks is situated a control-board, sixty-four feet long, with a complete model of the locks and their appurtenances. . . . A special machine was invented on the spot for opening and closing the gates. . . . The heavy doors, weighing from 400 to 700 tons each, open and close as steadily as an ordinary door, each movement occupying only two minutes. In addition to the safeguards against accidental ramming of the gates . . . there is a further device, known as an emergency dam; a structure in the form of a steel truss bridge of cantilever type . . . so disposed that it can be

PANAMA CANAL LOCKS AT GATUN.

© Publishers Photo

each wall, to aid in keeping the vessel in a central position and to bring it to rest when entirely within the lock chamber. . . . [To permit of examination and repair of] the lower guard gates of the locks, and the Stoney gates of the Spillway dam, and for access in the dry to the sills of the emergency dams, there have been provided floating caisson gates of the molded ship type. When their use is required the caissons are towed into position in the forebay of the upper lock, above the emergency dam, or between the piers of the Spillway, and sunk. The caissons are equipped with electric motor driven pumps for use in pumping out the caissons and for unwatering the locks."—L. Marshall, *Story of the Panama canal*, pp. 168-170, 174.—The gates, although presenting the appearance [of being] solid, "are in reality hollow. With the object of taking the enormous weight off the top hinge and bottom pivot supporting the gates, they

swung across the entrance to the lock in two minutes, and in the event of destruction of a gate . . . this emergency dam can be lowered to stop the flow. . . . The spillway to the Gatun Dam is in the form of an arc of a circle, 1,200 feet long and 85 feet wide, cut . . . through the centre of the hill of rock in the middle of the dam, with the convex side towards the lake. This heavy concrete structure comprises some 140,000 cubic yards of material. It rises to a point of 69 feet above sea-level, thus reaching to 16 feet below the 85-foot level of the lake."—C. R. Enock, *Panama canal*, pp. 138, 141-143.

1914-1915.—Traffic in first year of operation.—Cost of operation.—The European War, which began just before the opening of the canal, greatly reduced the volume of ocean commerce and the tonnage of ships employed. . . . Then, as a second interference with the development of traffic during

the early years of the canal, came the slides that closed the waterway to all shipping from September 18, 1915, to April 15, 1916, a period of seven months. In spite of the fact that international trade was greatly reduced by the European war, the traffic through the canal had reached a relatively large volume before the waterway was closed by the slides that occurred September 18, 1915. During July of that year 170 vessels loaded with 705,000 tons of cargo were passed through the canal; and, although this was the largest traffic of any month preceding the closing of the canal, the volume for that month was not greatly above the monthly average which the traffic had attained. During June, July, and August 1915, 474 vessels, carrying 1,884,000 tons of cargo, made use of the waterway. The sudden stopping of so large a current of trade necessarily involved many expensive readjustments of industry and trade. The Culebra slides, with the consequent closing of the canal, could hardly have come at a more inopportune time. The industries and trade of the United States, after about three years of business depression, had entered upon a period of exceptional prosperity in August 1915."—E. R. Johnson, *Panama canal and commerce*, pp. 229, 276, 281.—"The Canal was opened for commercial traffic in the spring of 1914, and was used for over a year before the great slides in the latter part of August, 1915, closed the Canal. It is to be particularly noted that the figures for this first year are unusually conservative. Aside from the fact that commerce was just beginning to adjust itself to this new trade route, there must be taken into consideration the strong adverse influence of the first year of the great war. During the first twelve months of operation the Canal passed four million six hundred thousand tons, which earned five million two hundred thousand dollars. The cost of maintenance and operation during this period was four million one hundred thousand dollars. Included in this cost of operation is an item of one million four hundred thousand dollars for dredging the Gaillard [Culebra] Cut, which should properly be charged to 'Construction.' Making this allowance we find the net income from the Canal for the first year to be two and one half million dollars."—G. M. Bacon, *Panama canal* (*Journal of the Utah Society of Engineering*, July, 1917).

1919-1920.—Commercial value of canal.—Traffic statistics.—"It is evident that the Panama Canal is gradually reaching the point hoped for it during the years when it was under construction but which was immeasurably retarded by the world war. The war set the canal back at least three years and it is only now that the trade routes over which the commerce of the world will in the future be carried are being definitely mapped out. This situation lends interest to the report of the Canal authorities for the year 1920, in which canal traffic showed a steady and cumulative increase.

"Traffic through the Canal during the calendar year 1920 reached a new high record. The commercial ships passing through the Canal during the 12 months numbered 2,814, as compared with 2,478 during the fiscal year ending June 30, 1920, and 2,134 during the calendar year 1919. The gain was 13.50 per cent. in ships over the fiscal year 1920 and 31.87 per cent. over the calendar year 1919. There were 336 more vessels making the transit in commercial service in the calendar year 1920 than in the fiscal year, and 680 more than in the calendar year 1919. The fiscal year ending June 30, 1920, was the previous record period of 12 months of operation.

"The net tonnage of the commercial vessels in

the calendar year 1920 aggregated 10,378,265 tons, as compared with 8,546,044 net tons in the fiscal year 1920 and 6,919,149 net tons in the calendar year 1919. The gain was 1,832,221 tons, or 21.44 per cent., over the fiscal year; and 3,459,116 tons, or 49.44—practically 50—per cent. over the calendar year 1919.

"The tolls levied during the year aggregated \$10,295,392.96, as compared with \$8,513,933.15 in the fiscal year ending June 30, 1920, and \$6,992,218.39 in the calendar year 1919. This was a gain of \$1,781,459.81, or 20.92 per cent., over the fiscal year 1920, and \$3,303,174.57, or 47.24 per cent., over the calendar year 1919.

"The cargo carried through the Canal by the commercial vessels aggregated 11,236,119 tons of 2,240 pounds. The cargo in the fiscal year 1920 was 9,374,400 tons, and in the calendar year 1919 it was 7,468,167 tons. The gain was 1,816,620 tons, or 19.86 per cent., over the fiscal year 1920, and 3,767,952 tons, or 50.47 per cent., over the calendar year 1919.

"In summary, the gain over the fiscal year ending June 30, 1920, was: Vessels, 13.6; net tonnage, 21.4; tolls, 20.9; and cargo, 19.9 per cent. Over the calendar year 1919 the gain was: Vessels, 31.9; net tonnage, 50; tolls, 47.2; and cargo, 50.5 per cent."—*The Americas*, Feb., 1921.

1920-1922.—Increase in traffic.—Proclamation of official opening.—Revenue in 1921.—Statistics for 1922.—Culebra slide 1922.—"The Canal was informally opened to traffic in August, 1914. On July 12, 1920, the President issued the following proclamation formally announcing the completion of the Canal and declaring it open to commerce:

BY THE PRESIDENT OF THE UNITED STATES OF
AMERICA
A PROCLAMATION

Whereas section 4 of the act of Congress entitled "An act to provide for the opening, maintenance, protection and operation of The Panama Canal, and the sanitation and government of the Canal Zone," approved August 24, 1912, . . . and known as the Panama Canal act, provides that upon the completion of The Panama Canal the President shall cause it to be officially and formally opened for use and operation; and

Whereas the canal is completed and is open for commerce;

Now, therefore, I, Woodrow Wilson, President of the United States of America, acting under the authority of the Panama Canal act, do hereby declare and proclaim the official and formal opening of The Panama Canal for use and operation in conformity with the laws of the United States.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done in the District of Columbia this 12th day of July, in the year of our Lord one thousand nine hundred and twenty, and of the independence of the United States of America the one hundred and forty-fifth.

[Seal]

WOODROW WILSON

By the President

NORMAN H. DAVIS

Acting Secretary of State.

This formality was necessary in order to comply with the requirements of the Panama Canal act. During the six years of operation [1914-1920] there has been a marked increase in traffic through

the Canal notwithstanding the fact that the World War has everywhere prevented the normal development of ocean-going commerce. After the entry of the United States into the war there was a decrease in commercial traffic, due to the diversion of certain lines of ships to trans-Atlantic service, which was more than offset by the increase in traffic growing out of the war, chiefly on account of the development of the nitrate trade with the Pacific coast of South America."—C. Harding, *Annual report of the governor of the Panama canal*, 1920, p. 1.—"In terms of money [in the year ending June 1921], The Panama Canal had gross revenues of more than twenty-seven million dollars; increased investment in capital additions, stock, etc., of eight millions; gross operating expenses of twenty-four and one-half millions. The excess of revenues over operating expenses was two and three-fourths million dollars. No interest on capital cost of the canal is included in this. Vessels of the United States had a larger share than those of any other nation in canal traffic, and vessels of the British Empire followed. Japanese and Norwegian ships held third and fourth places, respectively. In cargo tons, American vessels carried approximately 45 per cent of the total; British vessels, 32 per cent; Japanese vessels 7 per cent; and Norwegian vessels, a little less than 6 per cent. The vessels of these four countries carried, between them, 89 per cent of all the cargo that passed through the canal. The most important trade served by the canal, rated on the basis of cargo tonnage, was that between the east coast of the United States and the west coast of South America. More than 900,000 tons of cargo moved in each direction in this trade."—J. J. Morrow, *Annual report of the governor of the Panama canal*, 1921, pp. 2-9.—"In spite of the fact that [in 1922] gross receipts from tolls and other miscellaneous receipts grouped under the head of 'transit revenue' were slightly less than in 1921, the net transit revenue of The Panama Canal in 1922 was \$3,466,574.60, as compared with \$2,711,816.56 in the previous year. This result was obtained by a material reduction in operating expenses. The number of vessels making the transit (2,736) was less than in the preceding year (2,802), and they carried less cargo (10,844,010 tons, as compared with 11,500,214 tons). Their aggregate net tonnage, however, was slightly greater, being 11,417,450, as compared with 11,415,876 in 1921. This denotes, of course, an increase in the average size of vessels using the canal. There was a decrease in the number of American vessels using the canal but an increase in their aggregate net tonnage. British vessels show a falling off both in number and tonnage, and the same is true of Norwegian, Danish, Italian, and Chilean vessels. The number of Japanese vessels increased from 136 to 180, and their aggregate net tonnage from 613,245 to 872,466. French, German, Dutch, and Swedish vessels register an increase. American vessels carried 45.5 per cent of the cargo moving through the canal, British vessels 30.5 per cent, Japanese vessels 0.5 per cent, and Norwegian vessels 3.7 per cent. This represents a relative increase for the Japanese and a loss for the Norwegians, while Americans and British hold approximately the same share in the traffic as in 1921. The paramount interest of the United States in Panama Canal business is indicated by the fact that 68.6 per cent of all westbound cargo moving through the canal in 1922 was shipped from our Atlantic ports, and 53.2 per cent of all eastbound cargo was shipped from our Pacific ports. Cargo moving in the United States coast-wise trade represented 23.5 per cent of all cargo handled. The maintenance of the channel involves

the removal of silt and of material carried into the canal prism by slides in the Gaillard Cut. The Cucuracha slide and the Culebra slides showed intermittent movements during the year, but were controlled without difficulty. . . . A general movement occurred on the afternoon of July 14, 1921, on the east side of the cut one-half mile north of the Culebra slides and opposite the barge repair station, carrying a mass of earth and rock into the channel amounting to 185,000 cubic yards. This slide caused such shoaling in the canal that a channel only 120 feet wide and 30 feet deep along the west bank was available for the passage of ships"—J. J. Morrow, *Annual report of the governor of the Panama canal*, 1922, pp. 1, 3-4, 6, 11.

Fifth (1023).—"The Fifth Pan-American Conference, which opened in Santiago, Chile, on March 25, closed its deliberations on May 4, 1923. No decision was reached on any of the principal subjects proposed for discussion. The sovereign status of each participating State, making it impossible to take any resolution without unanimous consent, prevented the solution of any question involving matters in which opposed points of view and conflicting interests were involved. Thus is explained the failure of the disarmament proposal made by Chile; of the plan for a Latin-American League, originated by Uruguay, but not even discussed; and of the momentous arbitration question."—*Results of the Pan-American congress* (*New York Times Current History*, June, 1923, pp. 500-501).—Among the practical achievements of the congress were the adoption of The Hague convention with regard to the drug traffic and a number of hygienic and commercial measures including provision for the protection of trademarks. "The changes effected by the conference in the present organization of the Pan American Union,

were as follows: 1. The creation of four permanent committees to assist the Pan American Union in the study of the following subjects: Economic and commercial relations between the American States; International organization of labor in America; questions of hygiene in the countries of the continent; and the development of intellectual coöperation, with special reference to coöperation between American universities. 2. The redrafting of the article providing for the composition of the governing board of the Pan American Union, so as to authorize an American Republic which may not have a diplomatic representative accredited to the Government of the United States to appoint a special representative on the governing board. It was also provided that the chairman of the governing board, who has heretofore been ex officio the Secretary of State of the United States, should be elected by the board."—*Brief summary of conference achievements (Pan American Union Bulletin, 5th International Conference of American States, Aug., 1923, p. 164).*

PAN-AMERICAN FINANCIAL CONFERENCE.—May, 1915, the Pan-American Financial Conference met in Washington. "The Ministers of Finance and prominent bankers of practically every one of the twenty southern countries, as well as the leading financiers of the United States, attended the conference. By it was established the International High Commission, a composite body with official representatives from each American republic. The program of the Commission, as laid down, covered a wide but well-considered range, embracing: (1) The establishment of a gold standard of value; (2) uniform customs regulations; (3) the international protection of trademarks, copyrights and patents; (4) the establishment of a uniform low rate of postage and the improvement of the money order and parcels post facilities between the countries of the Americas; and (5) the extension of the principle of arbitration to include the adjustment of commercial disputes. In addition to these subjects the International High Commission, at a later meeting in Buenos Aires, dealt with the extension of banking facilities and credits, international agreements for uniform labor legislation, and improved telegraph and transportation facilities between the American republics, including the use of wireless telegraphy for commercial purposes. The work of this Commission and other influences have had remarkable results in developing Inter-American commercial relations."—S. G. Inman, *Problems in Pan Americanism*, pp. 227-228.—"The International High Commission, at its meeting in Buenos Aires, besides dealing with questions of finance and administration, constituted a Central Executive Council for the purpose of systematizing and co-ordinating its work, carrying out its recommendations, and preparing the programs of future meetings. This council consists of three members—a president, vice-president, and a secretary-general. These three places are occupied by the chairman, vice-chairman, and secretary of the national section of the country chosen for the time being as headquarters of the International High Commission. On motion of a member from Argentina, Washington was unanimously designated as the headquarters of the commission till the next meeting, and the chairman, vice-chairman, and secretary of the United States section thus became the constituent members of the Central Executive Council.

The Central Executive Council, on entering upon its labors, decided that the best plan of procedure would be, while pressing the work of the conference as a whole, to select certain subjects for more immediate, definite treatment. With this view, it selected five subjects: (1) The establishment of an international gold clearance fund; (2) an international agreement to facilitate the work of commercial travellers; (3) legislation concerning negotiable instruments (including The Hague rules on bills of exchange), checks and bills of lading and warehouse receipts; (4) the arbitration of commercial disputes; (5) the ratification of the conventions adopted by the Fourth International American Conference at Buenos Aires in 1910 on trade-marks, copyrights, and patents. In pursuance of this plan the Central Executive Council . . . formulated drafts of treaties concerning commercial travellers and the establishment of an international gold clearance fund, and these drafts . . . [were] submitted through the Department of State of the United States to the governments concerned, together with explanatory memoranda."—J. B. Moore, *Principles of American diplomacy*, pp. 306-307.

PAN-AMERICAN POSTAL UNION. See **U. S. A.:** 1921; **Pan-American Postal Union.**

PAN-AMERICAN RAILWAY.—"The most grandiose project of railway construction in the new world is that connected with the building of the Inter-continental Railway commonly called the 'Pan-American Railway,' which was first broached at the meeting of the Pan-American Conference at Mexico in 1901. The plan then devised was to have a trunk line stretching all the way from New York to Buenos Aires."—W. R. Shepherd, *Latin America*, p. 188.—See also **AMERICAN REPUBLICS, INTERNATIONAL UNION OF:** 1901-1902; **RAILROADS:** 1912-1922.

PAN-AMERICAN SCIENTIFIC CONGRESS.—"Invitations to the First Pan-American Scientific Congress [proposed as a result of the successful Latin-American scientific congresses] were issued in 1907 by the president of the University of Chile. Members of that Congress met in Santiago de Chile in December, 1908, where many interesting papers were read concerning topics of common interest to the Three Americas. In December, 1915, the Second Pan-American Scientific Congress met at Washington. Delegates from the independent nations of America read to that Congress articles upon topics of mutual interest. That Congress was of special Pan-American significance because the President of the United States in a noteworthy address took occasion to develop certain ideas about the relations of the American nations."—W. S. Robertson, *History of the Latin-American nations*, p. 563.—"The Washington Congress, which was presided over by His Excellency Eduardo Suárez Mujica, ambassador of Chile and chairman of the Chilean delegation, embraced in its program anthropology and allied subjects; astronomy, meteorology, and seismology; conservation of natural resources, agriculture, irrigation, and forestry; education; engineering; international law, public law, and jurisprudence; mining and metallurgy, economic geology, and applied chemistry; public health and medical science; transportation, commerce, finance, and taxation. In order to discuss these subjects the Congress, whose sessions opened on the 27th of December and closed on the 8th of January, was divided into nine sections and forty-five subsections."—J. B. Moore, *Principles of American diplomacy*, p. 307.

PAN-AMERICANISM.—"The term Pan-Americanism was first used in newspaper discus-

sions relating to the International American Conference held at Washington in 1889-90. The New York Evening Post appears to have been the first to employ it. To the Post is also to be credited the first use of the adjective, Pan-American. This term was introduced into the columns of the Post in 1882, during the agitation of Mr. Blaine's first proposal for a conference of American states at Washington. But it was little used until the conference convened in 1889, when, having been adopted by other leading dailies it soon won universal acceptance."—J. B. Lockey, *Pan-Americanism, its beginnings*, p. 2.—"To some, Pan-Americanism is the Utopia of peace, a demonstration of the superior morality of the Western over the Eastern Hemisphere, of the New World and its Christianity over the Old. To some it is a dream of the monopolization of South American trade by the United States; to others, the Monroe Doctrine and our chivalrous protection of the weak against aggression; to others, a vision of empire in the Western Hemisphere. To many in South America, Pan-Americanism stands for the peculiarly hypocritical fashion in which the elder brother makes known his demands for the deference due to him and for the privilege justly his. Pan-Americanism is not yet a reality. The word still connotes a varied and inconsistent complex of ideas: pacifists, capitalists, imperialists, have built in its name structures framed in the image of their own desires and ambitions. . . . While the premise of Pan-Americanism obviously cannot be that of racial unity, as in the case of the European movements similarly designated, it does assume that the geographical proximity of North and South America results in something approaching the isolation of the two from Europe, so that the geographical connection between them is closer than that of either with Europe or Africa. It also predicates quite clearly the political and economic independence of the Western Hemisphere against the rest of the world."—R. G. Usher, *Pan-Americanism*, pp. 203, 205.—See also AMERICAN REPUBLICS, INTERNATIONAL UNION OF; LATIN AMERICA: 1822-1830; 1017-1018; Part played in World War; PAN-AMERICAN FINANCIAL CONFERENCE; PAN-AMERICAN SCIENTIFIC CONGRESS.

PAN-GERMANISM: Doctrine defined.—Its genesis and steps taken towards its fulfilment.—"What is Pan-Germanism? It may be doubted whether all that is implied in that term is fully realized in this country [Great Britain]. One in-

terpretation may be given to the word, which is not merely innocuous, but which may even reasonably appeal to the sympathies of those who approve of the new map of Europe being constituted with a view to applying that nationalist principle, which finds almost universal favour in all democratic countries. It cannot be too distinctly understood that the political programme now [1916] advocated by Germany has no sort of affinity with a plan of this sort. The Germans contend not only that all those who are of what is termed 'German origin' should be brought into the German fold. Moreover, they give to this latter phrase an expansion and a signification which is condemned and derided by all who have paid serious attention to ethnological studies. This, however, is far from stating the whole case. The object of the German Government is to effect the whole or partial Germanization of countries inhabited by races which cannot by any conceivable ethnological process of reasoning, be held to be of German stock. In fact, M. Chéradame very correctly describes Pan-Germanism when he says that its object is to disregard all questions of racial and linguistic affinity and to absorb huge tracts of country the possession of which is considered useful to advance Hohenzollern interests. In other words, what they wish is to establish, under the name of Pan-Germanism, a world system whose leading and most immediate feature is the creation of an empire stretching from the Persian Gulf to the North Sea."—Lord Cromer, *Introduction to A. Chéradame, Pangerman plot unmasked*, pp. xiv-xv.—"Its genesis is as follows: In the year 1886 the well-known traveller, Dr. Karl Peters, convened a congress at Berlin, which was to be called the 'General German Congress,' and to which all German national associations were invited. There a so-called 'German League' was founded, in which all the various 'national' German organizations were amalgamated. But soon they began to quarrel among one another, and when, shortly afterwards, Karl Peters went to Africa, there was nothing left to hold them together, and the League was dissolved. Bismarck's fall, and the feeling that Germany had been 'done' over the Zanzibar Treaty of 1890, rekindled the desire among the old members to belong to some national league or other strong enough to influence the policy of the Government, which the people were then somewhat suspicious of. The 'German League' was therefore reconstituted in the year 1891. Membership was open to all on payment of an annual subscription of one mark. For a year it did well; but anti-Semitism broke out and infected the League, while Saxony and Bavaria were too particularist to have anything in common with a Prussian-German movement. The League contracted debts, which from 21,000 members its numbers sank rapidly to 5,000. Its dissolution appeared imminent. Then there appeared on the scene the Reichstag deputy for Leipzig, Professor Hasse, who was elected president. He took over the entire management of the society, and set to work to restore order. He issued an appeal for help, which was meagrely responded to. Still, it was enough. In 1894 the *Alldeutsche Blätter*, or *Pan-German Leaves* was issued for the first time, under the editorship of the late Dr. Lehr, to whom, with Professor Hasse, the chief credit for the success of Pan-Germanism is due. In the same year the German League changed its name again, and has ever since been known as the 'Pan-German League' [*Alldeutscher Verband*]."—*Pan-Germanic doctrine*, pp. 25-26

German presentation of Pan-Germanism.—"It

was in the year 1806 . . . that the Emperor [William II] gave formal expression to the Pan-Germanic idea, which has ever since been appraised by the Pan-German press as a 'true Pan-German speech,' and certainly seemed to indicate that such was His Majesty's intention. This speech, the opening paragraph of which now [1904] adorns Pan-German pamphlets, was as follows: 'Out of the German Empire a world Empire has arisen. Everywhere in all parts of the earth thousands of our countrymen reside. German riches, German knowledge, German activity, make their way across the ocean. The value of German possessions on the sea is some thousands of millions. Gentlemen, the serious duty devolves on you to help me to link this greater German Empire close to the home country, by helping me, in complete unity, to fulfil my duty also towards the Germans in foreign parts.' These words in the mouth of the German Emperor . . . created a great sensation at the time throughout Germany, and were generally interpreted as heralding something in the shape of a Pan-German policy—a policy of reclaiming Deutschland, or Germanism, across the seas."—*Pan-Germanic doctrine*, p. 13.—"When the new Prussian 'House of Lords' was opened at the beginning of 1904, Count von Bülow solemnized the occasion with a Pan-German speech. 'Prussia,' he said, 'first in Germany; Germany first in the world.' . . . Germans must acquire land, asseverate Pan-German leaders. . . . 'Germany's future lies on the seas,' said the Emperor. Germany wants her place 'in the sun,' repeats Count von Bülow, somewhat more modestly."—*Pan-Germanic doctrine*, pp. 36, 50.—"The Allies have denounced the Germans as barbarians. If this were meant to imply that Germany was not a civilized nation (*Kulturnation*) such an accusation would, of course, be absurd. Germany is unquestionably a civilized nation, and none of the spokesmen of the Allied Powers would think of denying that she has produced rich treasures of 'Kultur.' Wherever the German mind has laboured, wonderful riches have been the outcome. In the most diverse domains, but especially in those of music, of literature, of science and religion, it would be easy to mention names that shine with the lustre of renown throughout the whole world. But . . . even the highest Kultur can turn to barbarism when it becomes subservient to utterly false and immoral ideas. Any reference to Germany's great Kultur in the past is of no use here. That we acknowledge, and from that we shall continue to learn; it can never perish. But the non-German nations, especially Germany's neighbours and those who feel their position threatened by Germany's increasing strength and world-power, must of necessity ask: to what ends is all this highly-developed Kultur to be applied? In Germany, such a craving for power, such a worship of mere strength, has taken root and grown that the claim of right to be the determining factor in international relations has been entirely pushed aside."—J. P. Bang, *Hurrah and hallelujah, teaching of Germany's poets, prophets, professors and preachers*, pp. 17-18.—In 1911 a "book written in German by a distinguished cavalry soldier, General von Bernhardt . . . has for its title and subject matter 'Germany and the Next War'—'Deutschland und der nächste Krieg'—a problematical war, observe. . . . General von Bernhardt is something of a scholar as well as a distinguished soldier. Like many German officers, he has attempted to understand not only his profession as a soldier but the 'why' of that profession; studying the history, the literature, the

politics and even the philosophy of his nation, seeking the answer to the question: What is Germany? And by 'Germany' he understands the vital, onward-striving force flowing in German blood from an endless time down to the present, and from the present flowing onwards into an endless future. What, he asks, is the precise value, the precise significance of that force in its present manifestation—"Germany"? And he has a perfectly definite answer: It is strife; it is war. And the direction of that strife? It is the isolation of Russia by bribes; the destruction of the antagonistic force named France beyond the power of raising her head; and thereafter Germany will be face to face with the day of reckoning with England. . . . To him this war with England is inevitable. And his book is symptomatic; that is to say, it represents the mood, the conviction, the fervent faith of thousands and tens of thousands of Germans—Prussians, Saxons, Svanians, Bavarians. Its philosophy is derived from Nietzsche and Treitschke. . . . An empire . . . [Germany] once had, centuries before France and England fought. That empire is lost. But in the German race the instinct for empire is as ancient and as deeply rooted as it is in the English race; and in the Germany of the present time [1913], above all, this instinct, by reason of the very strength of Germany within herself, her conscious and vital energy, her sense of deep and repressed forces, is not a mere cloud in the brain, but is almost an imperious necessity. This is the real driving-force in German politics, the essential thing. Hence the further question which young Germany asks is the question which Treitschke asks: At what point in her history did Germany swerve from the path to empire? Can she again find that path, or is it irrecoverably lost? Germany, from her own inward resources, produces year by year greater surplus energy, mental and physical, than any other nation in the world; yet year by year, by emigration to America, to England, and to other lands, that surplus energy is lost to her. . . . These are the problems which, at the present hour, press in upon the mind of every thinking German. They have been the study of serious historians like Oncken, Treitschke, Mommsen, Sybel, even of Droysen. They are the questions which find their answer in novelists, poets, publicists and politicians. Pamphleteers like Eisenhart and Bley here agree with men of academic rank like Schmoller and Maurenbrecher, Franke, and Müller. And the answer now given to the inevitable question, What stands in the way of those desires and aspirations? is: Germany has one enemy. One nation blocks the way. That nation is England. . . . England may gradually sink from internal decay, as Venice gradually sank after 1500, dying of senility, until at a touch from Napoleon's sword she crumbled; or, if she has spirit enough, England may perish from a bayonet-thrust to the heart. But perish she must. And the judgment of the great national historian of Germany is quoted—Heinrich von Treitschke, a man whose position is almost as if he were the poet-laureate in prose of Bismarckism and of the Hohenzollern dynasty. In Treitschke's phrase, 'a thing that is wholly a sham cannot in this universe of ours endure for ever. It may endure for a day, but its doom is certain; there is no room for it in a world governed by valour, by the Will to Power.' And it was of England that he spoke. The prophecy of Niebuhr eighty years ago, the fall of Britain which Stein in his dying years augured, is thus for these critics nearer fulfilment. The mode of the fulfilment is uncertain. The question of

questions to young Germans, eager with historical analogies, exuberant with life, is: Who is to be the inheritor of this moribund, or quasi-moribund, empire? This Venice-Carthage of the twentieth century—who is to destroy her? . . . To the students of Sybel, who, awed and solemn, saw in 1870 the manifest finger of God; to the students of Giesebrecht, who saw in Germany the nation of nations, God's chosen for the accomplishment of His inscrutable will, the answer is obvious; and when from the writings of Giesebrecht they turn to Treitschke, and from Treitschke to Droysen and Häusser, the old crude idea of a day of reckoning with England acquires a new significance. Germany is watching and waiting. Year by year silently she prepares. . . . And here let me say with regard to Germany that of all England's enemies she is by far the greatest. . . . She is the greatest and most heroic enemy—if she is our enemy—that England, in the thousand years of her history, has ever confronted."—J. A. Cramb, *Germany and England*, pp. 9-13, 31-33, 45.—See also *WORLD WAR: Causes: Indirect: h, 1; h, 2.*—"Every nation is convinced of the higher value and consequently of the better right of its own civilisation, and is inspired by a strong desire, which is like an unconscious natural force, to attain more and more authority for its own civilisation. Not every nation is conscious of this force. The great Roman generals and statesmen were well aware of it, when they advanced, conquering as they went, into Greece, Asia Minor, North Africa, above all into Gaul and Germany where they followed up the conquest by arms, with the conquest by superior Roman civilisation. Such a steady consciousness of national civilisation exists to-day [1913] among the English people. The Englishman is deeply imbued with the idea of the superiority of Anglo-Saxon culture. . . . He is convinced that English rule and the consequent Anglicising is a blessing, and he bases his right to expansion and conquest on his sense of the superiority of Anglo-Saxon civilisation and Anglo-Saxon institutions. The grand fabric of the British Empire, the greatest the world has seen since the Roman Empire, for which no sacrifice of life or property was ever refused, was and is supported by the steadfast consciousness and firm intention on the part of English people of being bearers of a higher civilisation to every spot where English power extends. The English belief in the superiority of their own intellectual, moral, religious, legal, and economic life is the vital force in English national policy. Higher civilisation has always bestowed political rights. The belief in a real or supposed higher civilisation has always provoked a claim to rights. When France, after the Great Revolution, flooded Europe with her armies, she based her right to conquest on the supposed blessings of Republican freedom. She felt herself the bearer of superior political culture to other nations, especially the Germans and Italians. In our country [that which later became Germany] in particular there were not a few who recognised this right, and were only cured of their error by the bitter experiences of Napoleonic despotism. The civilising mission of the French Revolution was based on a fundamental misconception of the nature of civilisation in which, compared with religion, morals, law and education, political institutions have a subordinate value, and it condemned itself by the growing brutality of Napoleonic rule. But there are civilising missions which are justified. For instance, those that the Christian Colonial Powers have to fulfil in Africa at the present time. Thus Russia

is justified as a bearer of higher civilisation to Asia. And if ever the battle between the higher and lower civilisation should cease in the world's history, our belief in the further development of mankind would lose its foundation. We should be bereft of a great and ideal hope."—B. von Bulow, *Imperial Germany*, pp. 292-294.—See also *KULTUR*.

Pan-German League and its branches.—Political program.—"But in reality the League was *in process of potential formation*, if we can use such an expression, from the morrow of the victorious war of 1870. By a delicate irony its virtual promoter seems to have been William II himself, in the days when, as Crown Prince, he professed ideas which he repudiated as Emperor. It is said that he liked to encourage the early doctrinaires of Pan-Germanism. A certain pamphlet, entitled *A Universal German Empire*, which was disseminated broadcast throughout the Empire, was popularly supposed to have been drawn up in the immediate circle of the Prince Imperial. It contained these words: 'Our aim must be the development of German power with all that it involves. The grouping of all its members into one political whole has always been the object of the efforts of a virile nation. It must be well done; we must confine our efforts within just limits; we must go forward gradually till the moment arrives when we can unmask our batteries without danger; then Europe will find herself faced by a situation whose smallest details have been prepared, and against which she will be powerless.' The League . . . claimed 'to implant in the masses of the German nation the conviction that German development by no means reached its highest point after the events of 1870 and 1871. The German Empire has become a world empire, but we have not yet derived from this fact all its consequences. Above the interests of the State, should be the interests of the Nation; even more sacred than love for the Fatherland should be love for the Mother country.' 'Love for the Mother country' is to be shown at home by assimilating with energy all refractory elements, Poles, Danes, Alsations, and abroad by more and more extensive and 'active dealings' with the Germans of Austria, Switzerland, and elsewhere, with the Flemish, etc. . . . We must also make special mention of the powerful and active *Deutsche Kolonialgesellschaft*, the Colonial Association. . . . When the question arose of increasing the German fleet, the Pan-German League headed the movement, and the better to cope with the situation created a special society, the *Deutscher Flottenverein*. . . . The success of this organization for increased naval armaments was so great, that it was thought advisable to start a similar association for the army. This was the object of the *Deutscher Wehrverein* (Society for German Defense) which was founded in 1912, and has [1915] 278,000 members and more than 450 branches. Each portion of territory that is 'threatened' by a non-German population is under the protection of a special society. Since 1804 the *Deutscher Ostmarken-Verein* has undertaken to oppose the Poles in East Prussia. . . . The borders of Denmark are watched over by the *Deutscher Verein für das nördliche Schleswig*, a society of 13,000 members, founded in 1801. Since 1881, the *Verein für das Deutschtum in Ausland* has dealt with emigrants, kept them in touch with the Mother country, started German schools, etc. It has 50,000 members, 340 branches, and has already spent more than 4,000,000 marks on maintaining German education abroad. Other specialized associations, which it would take too long to

enumerate, are all working for the same end. Many of these societies have different branches for men and women, and there are also branches for young people, who are united in virtue of the most varied pretexts under the aegis of Pan-Germanism. For example, there is the *Deutsche Jugendwehr* for young folk at the seaside, the *Deutsch-nationaler Handlungs-Gehilfen-Verband* for young tradespeople, the *Jung-Deutschland Bund* for physical preparation for military service, the *Verein Deutscher Studenten* for all Pan-German students. The Pan-German League is . . . merely the center round which revolve an infinite number of associations of similar tendencies. . . . With the exception of the adherents of Socialism—and not all of them even—the whole of Germany is [1915] Pan-German in sympathy, which means that she is possessed by a clear and reasoned ideal of expansion, conquest, and universal domination.”—P. Vergnet, *France in danger*, pp. 12-18.

“The Austrian Pan-German party was founded by Schoenerer . . . when he announced in the Reichsrat (December 18, 1878) that there was a growing desire among German Austrians for union with Germany. And in 1882 what is known as the Linz programme was formulated. This programme, among other things, demanded the excision from Cisleithania of Galicia, Bukovina, and Dalmatia, and the inclusion of Cisleithania in the German Customs Union. But, repelled by Bismarck, who never coquetted with Pan-Germanism, Schoenerer met with indifferent success until the year 1896, when, in co-operation with Professor Hasse, he sent two trusty henchmen, Bley and von Pfister-Schwanghusen, on a mission to establish Pan-German bases in Austria. These two gentlemen, after visiting a number of towns, were very successful, and Pan-German propaganda began to bear fruit. . . . The historical relations between Germany and Holland have not been particularly happy or warm since the days when Belgium and Holland ceased to form part of the old Roman-Germanic Empire. In 1787 Prussia was practically in possession of Holland, but, being in those days unconscious of her historical mission, she naively restored the House of Orange. After the Napoleonic wars Prussia was unpopular among the Dutch, who developed strong nationalist tendencies, instead of allying themselves . . . with Prussia. . . . In dealing with the Pan-German claims upon Holland it is [1904] well to bear in mind that they are threefold in kind, which explains the various methods of pressure brought to bear upon Holland, to induce her to mend her ways and lean upon Germany. . . . The most obvious basis for Germany’s claim is, of course, the question of the Rhine. . . . Treitschke, commenting upon this, wrote in his history: ‘The Dutch regard the Rhine as open to Dutchmen, to the French and Swiss, but not to Germans.’ However, this has since been remedied.” Dutch policy during the World War, however, proved to be one of strict neutrality, leaning no more to the side of Germany than to that of the Allies. “The case is the same with Denmark. . . . Indeed, the history of Denmark in the last . . . [eighty] years has been nothing more than the struggle of a small people for national existence, in which pronounced hostility to Prussia has played a prominent part. . . . In the year 1901 the celebrated Norwegian writer, Björnson, delivered an address in Berlin—spoke of the civilizing influence of German culture, of union in the future among all Germanic peoples, and referred to himself as a Pan-German. This perfectly voluntary confession

of faith led Pan-Germans to believe that Scandinavia was coming round to the good cause, and led German newspapers to speak of the author as an ‘Alldentscher,’ which is the German for Pan-German. But when subsequently Björnson’s attention was drawn to the appellation—Alldentscher—he would have none of it, and wrote to the newspapers begging them not to confuse him—a Pan-German in the peaceful sense of the word . . . with Pan-Germanism as interpreted by the League: which ‘pursued political aims, desired new lands, and was an aggressive organization’ with which he, as a ‘Pan-Germane,’ had nothing in common. . . . Now, of all countries in Europe, Sweden and Norway are the two where the German personally is the least liked. . . . Early in the year 1902 the question of neutralizing Scandinavia and of forming an alliance of a defensive nature with Germany was actually discussed in the Swedish Parliament, on a motion moved by the Socialist Deputy, Hedin. And in reply the Minister President, Baron Lagerheim, rejected the idea of alliance with Germany, as also that of neutralization, which he held to be entirely unnecessary. . . . As a matter of fact, neither politically nor economically has Scandinavia betrayed the slightest desire to approach Germany.”—*Pan-German doctrine*, pp. 73, 106, 107-108, 147, 141-142, 145, 144.—“The Pangerman plan of 1911 had provided for the permanent exclusion of Russia as a great power by means of two measures: 1. To carve out of the Empire of the Tsars and annex to the German Confederation a slice of territory large enough to cut off Russia entirely from the West. 2. To constitute at the expense of Russia, thus reduced, new States which should bow the knee to Berlin. Mr. Dietrich Schaefer, the well-known historian, in the Review *Panther*, affirmed, early in February, 1915: ‘It is absolutely necessary for us to expand the sphere of our power, especially eastward . . . the immense Russian force must recede behind the Dnieper’ (quoted by *L’Information*, 5th February, 1915). . . . Up to 1911, when Tannenberg published the programme of annexations, all previous great events had favoured William II.’s aims; but from 1912 onward events suddenly raised very serious and quite unexpected obstacles to the execution of the Pangerman plan. In 1912, Italy conquered Libya at the cost of Turkey and against the will and pleasure of Berlin. Again in 1912 Greece, Montenegro, Serbia and Bulgaria became united against the Ottoman Empire; this also was contrary to the will and pleasure of Berlin. What was quite unexpected by the Kaiser’s Staff was the victory of the Balkan peoples over the Turks. As Germany had upheld the latter she felt profoundly humiliated. Then, in order to hinder the foundation of an efficient Balkanic Confederation—that is, one constituted on the principle of a fair balance—Vienna, and above all, Berlin, used as their tool the Tsar Ferdinand’s well-known ambition to establish Bulgarian supremacy in the peninsula.”—A. Chéradame, *Pangerman plot unmasked*, pp. 26, 52.—See BALKAN STATES: 1912-1913.—Perhaps one of the most remarkable interpretations of the Pan-Germanic programme was that published by Field Marshal Bronsart von Schellendorf: “Do not let us forget the civilizing task which the decrees of Providence have assigned to us. Just as Prussia was destined to be the nucleus of Germany, so the regenerated Germany shall be the nucleus of a future Empire of the West. And in order that no one shall be left in doubt, we proclaim from henceforth that our continental nation has a right to the sea, not only to the North Sea, but to the

Mediterranean and Atlantic. Hence we intend to absorb one after another all the provinces which neighbor on Prussia. We will successfully annex Denmark, Holland, Belgium, Northern Switzerland, and then Trieste and Venice; finally Northern France from the Sambre to the Loire. This programme we fearlessly pronounce. It is not the work of a madman. The Empire we intend to found will be no Utopia. We have ready to our hands the means of founding it and no coalition can stop us."

PAN-ISLAMIC CONFERENCE. See TURKEY: 1921 (January-February).

PAN-ISLAMISM.—"Pan-Islamism is a movement with the purpose . . . to unite for defensive and aggressive action. It aims to combine by the ties of the religion Moslems of every race and country, in the work of conserving and propagating the faith and of freeing it by means of political and military force from alien rule and thus making it again a triumphant world power. It has a religious side and a political side. On the religious side it is conservative and would strenuously maintain Islam. Yet it would have a platform broad enough to include all sects and parties. On the political side it would weld into an alliance all Moslem peoples and governments. . . . Uniting Islam in a great final struggle is in accordance with its alleged prophecies, and the ever-present hope of its complete triumph. A Holy War is expected to precede the judgment and by means of it all authority is to pass into the hands of Moslems. . . . One difficulty to be overcome was the condition of division into sects and nationalities. Islam has not been a unit since the twelfth year after the Prophet's death, [when it split into the two great divisions of Shiites and Sunnites] nor since the second century of the Hegira has it maintained outward unity. It has abounded in opposing sects whose hostility oftentimes unsheathed the sword. . . . New movements have led to new schisms. The Wahabis [see WAHHABIS], the Bahis [see BABISM], the Sudan Mahdists [see MAHDI], each in its turn created antagonisms . . . jealousies and hatred. . . . These exist among Islamic peoples just as between Christians. By race Moslems have been divided into 80,000,000 Caucasians, 70,000,000 Mongol-Turks, 44,000,000 Malay-Dravidians, and 36,000,000 Negroes or Negroids, Arabs, Turks, and Kurds have their racial and political antagonisms. Iran and Turan did not forsake their age-long warfare by accepting Mohammed. The national ambitions of the Albanians

and Egyptians are in opposition to those of the Ottomans. Berbers and Arabs fought through centuries and the Berbers twelve times threw off the yoke of Islam. Even in Central Africa Islam has not had influence enough to overcome the national peculiarities of the races who have adopted it. . . . These difficulties did not seem insuperable and the task was entered upon with strong determination. —S. G. Wilson, *Modern movements among Moslems*, pp. 59-62.—"The first spark was fittingly struck in the Arabian desert, the cradle of Islam. Here, at the opening of the nineteenth century, arose the Wahabi movement for the reform of Islam, which presently kindled the far-flung 'Mohammedan Revival,' which in its turn beget the movement known as 'Pan-Islamism.' . . . Secure in his autocratic power, Abdul Hamid now began to evolve his own peculiar policy, which, from the first, had a distinctly Pan-Islamic trend. . . . Emphasizing his spiritual headship of the Mohammedan world rather than his political headship of the Turkish state, he endeavored to win the active support of all Moslems and, by that support, to intimidate European Powers who might be formulating aggressive measures against the Ottoman Empire. Before long Abdul Hamid had built up an elaborate Pan-Islamic propaganda organization, working mainly by secretive, tortuous methods. . . . The Young-Turk revolution of 1908 greatly complicated the situation. . . . By 1912 Pan-Islamism had recovered its poise and was moving forward once more. The reason was renewed pressure from the West. In 1911 came Italy's barefaced raid on Turkey's African dependency of Tripoli, while in 1912 the allied Christian Balkan states attacked Turkey in the Balkan War, which sheared away Turkey's European provinces to the very walls of Constantinople and left her crippled and discredited. Moreover, in those same fateful years Russia and England strangled the Persian revolution, while France, as a result of the Agadir crisis, closed her grip on Morocco. Thus, in a scant two years, the Moslem world had suffered at European hands assaults not only unprecedented in gravity but, in Moslem eyes, quite without provocation. The effect upon Islam was tremendous. A flood of mingled despair and rage swept the Moslem world from end to end. And, of course, the Pan-Islamic implication was obvious. . . . But with the coming of the Balkan War the wrath of Islam knew no bounds. . . . Most significant of all were the appeals made at this time by Moslems to non-Mohammedan Asiatics for sympathy and solidarity against the hated West. This was a development as unprecedented as it was startling. . . . The Great War thus found Islam everywhere deeply stirred against European aggression, keenly conscious of its own solidarity, and frankly reaching out for Asiatic allies in the projected struggle against European domination. Under these circumstances it may at first sight appear strange that no general Islamic explosion occurred when Turkey entered the lists at the close of 1914 and the Sultan-Caliph issued a formal summons to the Holy War. . . . The attitude of these leaders does credit to their discernment. They recognized that this was neither the time nor the occasion for a decisive struggle with the West. . . . [The most decisive setback to Pan-Islamic ambitions in recent years was the entrance of the shریف of Mecca into the war, on the side of the Allies, as a result of powerful British support. Other factors of importance have been the forced abdication of the sultan-caliph in 1922 and the recent successes of the Nationalist government in Turkey, which have a tendency to

emphasize racial rather than religious solidarity. But] the whole trend of events betokens an increasing solidarity of the Near Eastern peoples against Western political control. A most remarkable portent in this direction is the Pan-Islamic conference held at Sivas early in 1921. This conference, called to draw up a definite scheme for effective Moslem co-operation the world over, was attended not merely by the high orthodox Moslem dignitaries and political leaders, but also by heterodox chiefs . . . between whom and the orthodox Sunnis co-operation had previously been impossible."—L. Stoddard, *New world of Islam*, pp. 23, 66-70, 73-74, 236.

PANNONIA AND NORICUM.—"The wide extent of territory which is included between the Inn, the Danube, and the Save—Austria, Styria, Carinthia, Carniola, the Lower Hungary, and Sclavonia—was known to the ancients under the names of Noricum and Pannonia. In their original state of independence their fierce inhabitants were intimately connected. Under the Roman government they were frequently united."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 1. Pannonia embraced much the larger part of the territory described above, covering the center and heart of the modern Austro-Hungarian empire. It was separated from Noricum, lying west and northwest of it, by Mons Cælius.—For the settlement of the Vandals in Pannonia, and its conquest by the Huns and Goths, see VANDALS: etc.; HUNS: 441-446; 453; GOTHIS: 473-474.

PAN-SLAV CONGRESSES. See SLAVS: 1830-1914; BOHEMIA: 1848-1897.

PAN-SLAVISM.—Pan-Slavism came into existence about 1830. In 1848 the leaders of the movement called a congress at Prague, which was attended by representatives from Bohemia, Poland, Croatia, Moravia, Dalmatia, Silesia and Serbia. They met again in Moscow in 1867, and in Prague in 1908. The movement exerted considerable influence on affairs in Europe, and was largely responsible for the war between Russia and Turkey (1877-1878), which Alexander II claimed to wage

in order to protect the oppressed Slavs of the Balkan peninsula. "Pan-Slavism is a very difficult movement to define because it undoubtedly meant different things to different men. Originally it was merely a movement to organize, protect, and assist Slavonic culture: music, literature, art. But gradually it took on a political meaning: the union, so far as possible, of all the Slavonic peoples into one political whole. And as it was expressed by the Russian government, it almost certainly meant the extension of Russian power and influence over all the Slavonic race. In its hands it became a tool of Russian imperialism, a movement to be utilized if it served Russian ends, if not, to be abandoned. But it is very doubtful if it meant this to the Russian peasant. To him all Slavs were brothers, the sorrows of one were the sorrows of all, the advantages of one should be the advantages of all."—W. S. Davis, *Roots of the war*, p. 457.—"The Balkan Peninsula presented an obvious field for the activity of those zealous for the cause of Slavic welfare. . . . But here the interests of Austria would at once be vitally affected. . . . However cordial the intercourse might be between Austria and Russia, however specific the political agreements, however friendly the sovereigns, experience has shown again and again that the raising of the Eastern Question was fraught with danger to good relations between the two empires."—A. C. Coolidge, *Origins of the Triple Alliance*, pp. 79, 82-84.—During the course of the World War, Pan-Slavic congresses were held at Prague on January 6, 1918, at Agram on March 2, 1918, and at Laibach during July of the same year.

PANTHEON AT ROME.—"At the same time with his Thermae, Agrippa [son-in-law and friend of Augustus] built the famous dome, called by Pliny and Dion Cassius, and in the inscription of Severus on the architrave of the building itself, the Pantheon, and still retaining that name, though now consecrated as a Christian church under the name of S. Maria ad Martyres or della Rotonda. This consecration, together with the colossal thickness of the walls, has secured the building against the attacks of time, and the still more destructive attacks of the barons of the Middle Ages. . . . The Pantheon will always be reckoned among the masterpieces of architecture for solid durability combined with beauty of interior effect. The Romans prided themselves greatly upon it as one of the wonders of their great capital, and no other dome of antiquity could rival its colossal dimensions. . . . The inscription assigns its completion to the year A. D. 27, the third consulship of Agrippa. . . . The original name Pantheon, taken in connection with the numerous niches for statues

of the gods in the interior, seems to contradict the idea that it was dedicated to any peculiar deity or class of deities. The seven principal niches may have been intended for the seven superior deities, and the eight *adniculæ* for the next in dignity, while the twelve niches in the upper ring were occupied by the inferior inhabitants of Olympus. Dion hints at this explanation when he suggests that the name was taken from the resemblance of the dome to the vault of heaven."—R. Burn, *Rome and the Campagna*, ch. 13, pt. 2.—"The world has nothing else like the Pantheon. . . . The rust and dinginess that have dimmed the precious marble on the walls; the pavement, with its great squares and rounds of porphyry and granite, cracked crosswise and in a hundred directions, showing how roughly the troublesome ages have trampled here; the gray dome above, with its opening to the sky, as if heaven were looking down into the interior of this place of worship, left unimpeded for prayers to ascend the more freely: all these things make an impression of solemnity, which Saint Peter's itself fails to produce. 'I think,' said the sculptor, 'it is to the aperture in the dome—that great Eye, gazing heavenward—that the Pantheon owes the peculiarity of its effect.'"—N. PAN-TURANISM.—"In the two portions of the Arab world most open to western ideas (Syria and Egypt), Arab nationalist movements appeared years ago, and the leaven has since been permeating the whole Arab world. In great part these movements have been specifically directed against the menace of European domination, but they are also self-consciously nationalist and as such hostile to the ruling Turk. . . . [The] rapid growth of Arab national consciousness was undoubtedly stimulated by the hostile reaction of the corresponding development which has been taking place in the Turkish world. [See PAN-ISLAMISM.] . . . But we should also note that Turkish nationalism, like Arab nationalism, has already reached the second or 'racial' stage of development. . . . It has . . . passed the bounds of what might strictly be termed 'Pan-Turkism' and . . . arrived at the truly momentous concept known as 'Pan-Turanism.' The Ottoman Turks do not stand racially alone in the world. Right across northern Europe and Asia, from the Baltic to the Pacific and from the Mediterranean to the Arctic ocean, there stretches a vast band of peoples to whom ethnologists have assigned the name of 'Uralo-Altaic race,' but who are more generally termed 'Turanians.' This group embraces the most widely scattered folk—the Ottoman Turks of Constantinople and Anatolia, the Turcomans of Central Asia and Persia, the Tartars of Central Russia and Transcaucasia, the Magyars of Hungary, the Finns of Finland and the Baltic provinces, the aboriginal tribes of Siberia, and even the distant Mongols and Manchus. . . . The normality of the Turanian movement is shown by its simultaneous appearance at such widely sundered points as Turkish Constantinople and the Tartar centers along the Russian Volga. . . . The first stirrings of national self-consciousness among the Rus-

sian Tartars appeared as far back as 1895, and from then on the movement grew with astonishing rapidity. . . . In fact, it was a Volga Tartar, Yusuf Bey Akchura Oglu, who was the real founder of the first Pan-Turanian circle at Constantinople. Up to the Young-Turk revolution of 1908, Pan-Turanism was somewhat under a cloud at Stambul. Abdul-Hamid had an instinctive aversion to all national movements. He pinned his faith on Pan-Islamism, and furthermore was much under Arab influence. Accordingly, the Pan-Turaniens, while not actually persecuted, were decidedly out of favor. With the advent of Young-Turk nationalism to power, however, all was changed. The Ottomanizing leaders of the Committee of Union and Progress listened eagerly to Pan-Turanian preaching, and it is safe to say that all the chief men among the Young-Turks have been for years affiliated with the Pan-Turaniens. . . . It was the second Balkan war of 1913 which really precipitated full-fledged Pan-Turanism. That war brought a new recruit into the Turanian camp—Bulgaria. . . . It is apparently not too much to say that since their entrance into the European war the Bulgars have formally renounced Slavism and have embraced the Turanian ethnic gospel. . . . Pan-Turanian thinkers . . . emphasizing as they do the great virility and nerve-force everywhere patent in Turanian stocks, see in Turan the dominant race of the morrow. . . . According to Pan-Turanian teaching, the historic peoples of Southern Asia—Persians, Egyptians and Hindus—are hopelessly degenerate. As for the Europeans, they have recently passed their apogee, and, exhausted by the consuming fires of modern industrialism, are already entering upon their decline. It is the Turaniens, with their inherent virility and steady nerves unspoiled by the wear-and-tear of western civilization, who must be the great dynamic of the future."—T. L. Stoddard, *Pan-Turanism* (*American Political Science Review*, Feb., 1917, pp. 12-23.—"Pan-Turanian aspirations undoubtedly had a great deal to do with driving Turkey into the Great War on the side of the Central Empires. . . . With the collapse of Russia after the Bolshevik revolution at the end of 1917, Pan-Turanian hopes knew no bounds. So certain were they of triumph that they began to flout even their German allies, thus revealing that hatred of all Europeans which had always lurked at the back of their minds. Then came the German collapse in the West and the end of the war, apparently dooming Turkey to destruction."—T. L. Stoddard, *New world of Islam*, pp. 199-201.—In 1920 and thereafter, as the Turkish Nationalists gradually fought their way to victory, the Nationalist leader, Mustapha Kemal, found enthusiastic support among the Tatar-Turkomans in Transcaucasia and Azerbaidjan, who had been greatly influenced by Pan-Turanian propaganda.

PAPACY

Saint Peter and the Church at Rome.—"The generally received account among Roman Catholics, and one which can claim a long traditional acceptance, is that Peter came to Rome in the second year of Claudius (that is, A.D. 42), and that he held the see twenty-five years, a length of episcopate never reached again until by Pío Nono, who exceeded it. . . . Now if it is possible to prove a negative at all, we may conclude, with at least high probability, that Peter was not at Rome during any of the time on which the writings of the canonical Scriptures throw much light, and almost certainly that during that time he was not its bishop. We have an Epistle of Paul to the Romans full of salutations to his friends there, but no mention of their bishop. Nor is anything said of work done by Peter in founding that Church. On the contrary, it is implied that no Apostle had as yet visited it; for such is the inference from the passage already cited, in which Paul expresses his wish to see the Roman Christians in order that he might impart some spiritual gift to the end that they might be established. We have letters of Paul from Rome in which no message is sent from Peter; and in the very last of these letters Paul complains of being left alone, and that only Luke was with him. Was Peter one of the deserters? The Scripture accounts of Peter place him in Judæa, in Antioch, possibly in Corinth, but finally in Babylon. . . . Plainly, if Peter was ever at Rome, it was after the date of Paul's second Epistle to Timothy. Some Protestant controversialists have asserted that Peter was never at Rome; but though the proofs that he was there are not so strong as I should like them to be if I had any doctrine depending on it, I think the historic probability is that he was; though, as I say, at a late period of the history, and not long before his death. . . . From the question, whether Peter ever visited Rome, we pass now to a very different question, whether he was its bishop. . . . If he became bishop of Rome in the second year of Claudius, he appears never afterwards to have gone near his see until close upon his death. Nay, he never even wrote a letter to his Church while he was away; or if he did, they did not think it worth preserving. Baronius (in Ann. lviii. § 51) owns the force of the Scripture reasons for believing that Peter was not in Rome during any time on which the New Testament throws light. His theory is that, when Claudius commanded all Jews to leave Rome, Peter was forced to go away. And as for his subsequent absences, they were forced on him by his duty as the chief of the Apostles, having care of all the Churches. . . . These, no doubt, are excellent reasons for Peter's not remaining at Rome; but why, then, did he undertake duties which he must have known he could not fulfil?"—G. Salmon, *Infallibility of the church*, pp. 347-350.—The Roman Catholic belief as to Saint Peter's episcopacy, and the primacy conferred by it on the Roman See, is stated by Dr. Döllinger as follows: "The time of . . . [St. Peter's] arrival in Rome, and the consequent duration of his episcopacy in that city, have been the subjects of many various opinions amongst the learned of ancient and modern times; nor is it possible to reconcile the apparently conflicting statements of ancient writers, unless we suppose that the prince of the apostles resided at two distinct periods in the imperial capital. According to St. Jerome, Eusebius, and Orosius, his first ar-

rival in Rome was in the second year of the reign of Claudius (A.D. 42); but he was obliged, by the decree of the emperor, banishing all Jews from the city, to return to Jerusalem. From Jerusalem he undertook a journey through Asia Minor, and founded, or at least, visited, the Churches of Pontus, Gallacia, Cappadocia, and Bythina. To these Churches he afterwards addressed his epistle from Rome. His second journey to Rome was in the reign of Nero; and it is of this journey that Dionysius, of Corinth, and Lactantius, write. There, with the blessed Paul, he suffered, in the year 67, the death of a martyr. We may now ascertain that the period of twenty-five years assigned by Eusebius and St. Jerome, to the episcopacy of St. Peter in Rome, is not a fiction of their imaginations; for from the second year of Claudius, in which the apostle founded the Church of Rome, to the year of his death, there intervene exactly twenty-five years. That he remained during the whole of this period in Rome, no one has pretended. . . . Our Lord conferred upon his apostle, Peter, the supreme authority in the Church. After he had required and obtained from him a public profession of his faith, he declared him to be the rock, the foundation upon which he would build his Church; and, at the same time, promised that he would give to him the keys of the kingdom of heaven. . . . In the enumeration of the apostles, frequently repeated by the Evangelists, we find that Peter is always the first named;—he is sometimes named alone, when the others are mentioned in general. After the ascension of our Lord, it is he who directs and governs: he leads the assembly in which a successor to the apostle who had prevaricated, is chosen: after the descent of the Holy Ghost, he speaks first to the people, and announces to them Jesus Christ: he performs the first miracle, and, in the name of his brethren, addresses the synedrium: he punishes the crime of Ananias: he opens the gates of the Church to the Gentiles, and presides at the first council at Jerusalem. . . . The more the Church was extended, and the more its constitution was formed, the more necessary did the power with which Peter had been invested become,—the more evident was the need of a head which united the members in one body, of a point and centre of unity. . . . Succession by ordination was the means, by which from the beginning the power left by Christ in his Church was continued: thus the power of the apostles descended to the bishops, their successors, and thus as Peter died bishop of the Church of Rome, where he sealed his doctrine with his blood, the primacy which he had received would be continued in him by whom he was there succeeded. It was not without a particular interposition of Providence that this pre-eminence was granted to the city of Rome, and that it became the depository of ecclesiastical supremacy. This city, which rose in the midway between the east and the west, by its position, by its proximity to the sea, by its dignity, as capital of the Roman empire, being open on all sides to communication even with the most distant nations, was evidently more than any other adapted to become the centre of the universal Church. . . . There are not wanting, in the first three centuries, testimonies and facts, some of which directly attest, and others presuppose, the supremacy of the Roman Church and of its bishops."—J. J. I. Döllinger, *History of the church*,

Supremacy of Roman See: Grounds of claim.

—The historical ground of the claim to supremacy over the Christian church asserted on behalf of the Roman See is stated by Cardinal Gibbons as follows: "I shall endeavor to show, from incontestable historical evidence, that the Popes have always, from the days of the Apostles, continued to exercise supreme jurisdiction, not only in the Western church, till the Reformation, but also throughout the Eastern church, till the great schism of the ninth century. 1. Take the question of appeals. An appeal is never made from a superior to an inferior court, nor even from one court to another of co-ordinate jurisdiction. . . . Now if we find the See of Rome, from the foundation of Christianity, entertaining and deciding cases of appeal from the Oriental churches; if we find that her decision was final and irrevocable, we must conclude that the supremacy of Rome over all the churches is an undeniable fact. Let me give you a few illustrations: To begin with Pope St. Clement, who was the third successor of St. Peter, and who is laudably mentioned by St. Paul in one of his Epistles. Some dissension and scandal having occurred in the church of Corinth, the matter is brought to the notice of Pope Clement. He at once exercises his supreme authority by writing letters of remonstrance and admonition to the Corinthians. And so great was the reverence entertained for these Epistles, by the faithful of Corinth, that for a century later it was customary to have them publicly read in their churches. Why did the Corinthians appeal to Rome far away in the West, and not to Ephesus so near home in the East, where the Apostle St. John still lived? Evidently because the jurisdiction of Ephesus was local, while that of Rome was universal. About the year 100, the question regarding the proper day for celebrating Easter was agitated in the East, and referred to Pope St. Victor I. The Eastern church generally celebrated Easter on the day on which the Jews kept the Passover; while in the West it was observed then, as it is now, on the first Sunday after the full moon of the vernal equinox. St. Victor directs the Eastern churches, for the sake of uniformity, to conform to the practice of the West, and his instructions are universally followed. Dionysius, Bishop of Rome, about the middle of the third century, having heard that the Patriarch of Alexandria erred on some points of faith, demands an explanation of the suspected Prelate, who, in obedience to his superior, promptly vindicates his own orthodoxy. St. Athanasius, the great Patriarch of Alexandria, appeals in the fourth century, to Pope Julius I, from an unjust decision rendered against him by the Oriental bishops; and the Pope reverses the sentence of the Eastern council. St. Basil, Archbishop of Cæsarea, in the same century, has recourse, in his afflictions, to the protection of Pope Damasus. St. John Chrysostom, Patriarch of Constantinople, appeals in the beginning of the fifth century, to Pope Innocent I, for a redress of grievances inflicted on him by several Eastern Prelates, and by the Empress Eudoxia of Constantinople. St. Cyril appeals to Pope Celestine against Nestorius; Nestorius also appeals to the same Pontiff, who takes the side of Cyril. Theodoret, the illustrious historian and Bishop of Cyrrhus, is condemned by the pseudo-council of Ephesus in 449, and appeals to Pope Leo. . . . John, Abbot of Constantinople, appeals from the decision of the Patriarch of that city to Pope

St. Gregory I, who reverses the sentence of the Patriarch. In 850, Photius addressed a letter to Pope Nicholas I, asking the Pontiff to confirm his election to the Patriarchate of Constantinople. In consequence of the Pope's conscientious refusal, Photius broke off from the communion of the Catholic Church, and became the author of the Greek schism. Here are a few examples taken at random from Church History. We see Prelates most eminent for their sanctity and learning, occupying the highest position in the Eastern church, and consequently far removed from the local influences of Rome, appealing in every period of the early church, from the decisions of their own Bishops and their Councils to the supreme arbitration of the Holy See. If this does not constitute superior jurisdiction, I have yet to learn what superior authority means. 2. Christians of every denomination admit the orthodoxy of the Fathers of the first five centuries of the Church. No one has ever called in question the faith of such men as Basil, Chrysostom, Cyprian, Augustine, Jerome, Ambrose, and Leo. . . . Now the Fathers of the Church, with one voice, pay homage to the Bishops of Rome as their superiors. . . . 3. Ecumenical Councils afford another eloquent vindication of Papal supremacy. An Ecumenical or General Council is an assemblage of Prelates representing the whole Catholic Church. . . . Up to the present time, nineteen Ecumenical Councils have been convened, including the Council of the Vatican. . . . The first General Council was held in Nicæa, in 325; the second, in Constantinople, in 381; the third, in Ephesus, in 431; the fourth, in Chalcedon, in 451; the fifth, in Constantinople, in 553; the sixth, in the same city, in 680; the seventh, in Nicæa, in 787; and the eighth, in Constantinople, in 860. The Bishops of Rome convoked these assemblages, or at least consented to their convocation; they presided by their legates over all of them, except the first and second councils of Constantinople, and they confirmed all these eight by their authority. Before becoming a law, the acts of the Councils required the Pope's signature. 4. I shall refer to one more historical point in support of the Pope's jurisdiction over the whole Church. It is a most remarkable fact that every nation hitherto converted from Paganism to Christianity, since the days of the Apostles, has received the light of faith from missionaries who were either especially commissioned by the See of Rome, or sent by Bishops in open communion with that See. This historical fact admits of no exception. Let me particularize: Ireland's Apostle is St. Patrick. Who commissioned him? Pope St. Celestine, in the fifth century. St. Palladius is the Apostle of Scotland. Who sent him? The same Pontiff, Celestine. The Anglo-Saxons received the faith from St. Augustine, a Benedictine monk, as all historians Catholic and non-Catholic testify. Who empowered Augustine to preach? Pope Gregory I, at the end of the sixth century. St. Remigius established the faith in France, at the close of the fifth century. He was in active communion with the See of Peter. Flanders received the Gospel in the seventh century from St. Eligius, who acknowledged the supremacy of the reigning Pope. Germany and Bavaria venerated as their Apostle St. Boniface, who is popularly known in his native England by his baptismal name of Winfrid. He was commissioned by Pope Gregory II, in the beginning of the eighth century, and was consecrated Bishop by the same Pontiff. In the ninth century, two saintly brothers, Cyril and Methodius, evangelized Russia, Slavonia, and Moravia, and other parts of Northern Europe. They recognized

the supreme authority of Pope Nicholas I, and of his successors, Adrian II and John VIII. In the eleventh century, Norway was converted by missionaries introduced from England by the Norwegian King St. Olave. The conversion of Sweden was consummated in the same century by the British Apostles Saints Ulfrid and Eskill. Both of these nations immediately after their conversion commenced to pay Rome-scot, or a small annual tribute to the Holy See,—a clear evidence that they were in communion with the Chair of Peter. All the other nations of Europe, having been converted before the Reformation, received likewise the light of faith from Roman Catholic missionaries, because Europe then recognized only one Christian Chief.”—Cardinal Gibbons, *Faith of our fathers*, ch. 10.—“Not only the heathen authorities, but also the heretics and schismatics, were perfectly well aware which bishop possessed the leading influence in church matters. Their conduct shows that they believed that the Church and her rights were, above all, embodied in Peter’s successor. Hence their ceaseless efforts to obtain Papal sanction. To establish themselves by deceit and dissimulation in the bosom of the Catholic Church was their constant, steady aim. This is true of the Montanists, the Gnostics, the anti-Trinitarians of the school of Theodotus and Artemon, the Patripassians, the Sabellians, the Subordinatists, and so on. [See also Gnostics; MONTANISTS; NOËTIANS AND SABELLIANS.] . . . It is certain that Rome, as capital of the Empire, exercised in every field a great power of attraction. Everything and everybody was gathered together in this heart and centre of the circulation of the whole world. No one would go so far as to say that the countless believers, true or false, that found their way to Rome were induced to come thither solely by the fame of its bishops or of the Tombs of Peter and Paul. . . . Unquestionably the Roman Primacy rose more rapidly into notice owing to the See having been established in the very focus of Roman Imperial power. At the same time it is entirely false to insinuate, as has been done, that the Bishops of Rome derived their spiritual authority merely from this external circumstance of their See. They did not hold it from the State, nor was it a result of the importance of the city, nor had they it by delegation from the other Churches, who, in deference to the seat of Empire, had acquiesced in the Roman bishop’s claim to supreme power. How could even the most venerable traditions of a city or its greater brilliancy have decided so many high-minded members of the episcopacy—all jealous, too, of their independence—to submit to the dictation of a single bishop without the justice of his pretensions being made the subject of a general inquiry? Were such the case, we should have here the veriest riddle of history. . . . Perhaps, after all, the favour of the Roman State was less useful to the Bishop of Rome than its opposition to his increase of dignity. . . . The Emperors, time after time, allowed themselves to be led astray by the Arian heresy [see ARIANISM]; in these circumstances the Popes never failed to contend against the rulers, in spite of the latter being surrounded by a slavish court, which almost worshipped them as deities. At such times of stress it was no uncommon thing for the Churches of the provinces to seek refuge on the immovable Rock of Peter. The need of a firm common centre during the disorders was strongly expressed by the writers who then undertook to advocate the claims of the Roman See, whilst the measures taken by the Popes, in response to the dictates of duty and carried out with a deep

sense of responsibility, were eventually crowned with success.”—H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 1, pp. 313, 315-316, 322.

ALSO IN: Francis P. Kenrick, *Primacy of the Apostolic See vindicated*.

Supremacy of Roman See: Grounds of denial.—“The first document by which the partisans of the Papal sovereignty justify themselves, is the letter written by St. Clement in the name of the Church at Rome to the Church at Corinth. They assert, that it was written by virtue of a superior authority attached to his title of Bishop of Rome. Now, it is unquestionable, 1st. That St. Clement was not Bishop of Rome when he wrote to the Corinthians. 2d. That in this matter he did not act of his own authority, but in the name of the Church at Rome, and from motives of charity. The letter signed by St. Clement was written A. D. 69, immediately after the persecution by Nero, which took place between the years 64 and 68, as all learned men agree. . . . It may be seen from the letter itself that it was written after a persecution; if it be pretended that this persecution was that of Domitian, then the letter must be dated in the last years of the first century, since it was chiefly in the years 95 and 96 that the persecution of Domitian took place. Now, it is easy to see from the letter itself, that it was written before that time, for it speaks of the Jewish sacrifices as still existing in the temple of Jerusalem. The temple was destroyed with the city of Jerusalem, by Titus A. D. 70. Hence, the letter must have been written before that year. Besides, the letter was written after some persecution, in which had suffered, at Rome, some very illustrious martyrs. There was nothing of the kind in the persecution of Domitian. The persecution of Nero lasted from the year 64 to the year 68. Hence it follows, that the letter to the Corinthians could only have been written in the year 69, that is to say, twenty-four years before Clement was Bishop of Rome. In presence of this simple calculation what becomes of the stress laid by the partisans of Papal sovereignty, upon the importance of this document as emanating from Pope St. Clement? Even if it could be shown that the letter of St. Clement was written during his episcopate, this would prove nothing, because this letter was not written by him by virtue of a superior and personal authority possessed by him, but from mere charity, and in the name of the Church at Rome. Let us hear Eusebius upon this subject: ‘Of this Clement there is one epistle extant, acknowledged as genuine, . . . which he wrote in the name of the Church at Rome to that of Corinth, at the time when there was a dissension in the latter.’ . . . He could not say more explicitly, that Clement did not in this matter act of his own authority, by virtue of any power he individually possessed. Nothing in the letter itself gives a suspicion of such authority. It thus commences: ‘The Church of God which is at Rome, to the Church of God which is at Corinth.’ . . . There is every reason to believe that St. Clement draughted this letter to the Corinthians. From the first centuries it has been considered as his work. It was not as Bishop of Rome, but as a disciple of the Apostles, that he wrote it. . . . In the second century the question concerning Easter was agitated with much warmth. Many Oriental Churches wished to follow the Judicial traditions, preserved by several Apostles in the celebration of that feast, and to hold it upon the fourteenth day of the March moon; other Eastern Churches, in agreement with the Western Churches according to an equally Apostolic tradition, celebrated the

festival of Easter the Sunday following the fourteenth day of the March moon. The question in itself considered was of no great importance; and yet it was generally thought that all the Churches should celebrate at one and the same time the great Christian festival, and that some should not be rejoicing over the resurrection of the Saviour, while others were contemplating the mysteries of his death. How was the question settled? Did the Bishop of Rome interpose his authority and overrule the discussion, as would have been the case had he enjoyed a supreme authority? Let us take the evidence of History. The question having been agitated, 'there were synods and convocations of the Bishops on this question,' says Eusebius, 'and all unanimously drew up an ecclesiastical decree, which they communicated to all the Churches in all places. . . . There is an epistle extant even now of those who were assembled at the time; among whom presided Theophilus, Bishop of the Church in Cesarea and Narcissus, Bishop of Jerusalem. There is another epistle' (of the Roman Synod) 'extant on the same question, bearing the name of Victor. An epistle also of the Bishops in Pontus, among whom Palmas, as the most ancient, presided; also of the Churches of Gaul over whom Irenæus presided. Moreover, one from those in Osrhoene, and the cities there. And a particular epistle from Bacchylus, Bishop of the Corinthians; and epistles of many others who, advancing one and the same doctrine, also passed the same vote.' It is evident that Eusebius speaks of the letter of the Roman synod in the same terms as of the others; he does not attribute it to Bishop Victor, but to the assembly of the Roman Clergy; and lastly, he only mentions it in the second place after that of the Bishops of Palestine. Here is a point irrefragably established; it is that in the matter of Easter, the Church of Rome discussed and judged the question in the same capacity as the other churches, and that the Bishop of Rome only signed the letter in the name of the synod which represented that Church.—Abbé Guettée, *Papacy*, pp. 53-58.—'At the time of the Council of Nicæa it was clear that the metropolitans of Rome, Alexandria, and Antioch, held a superior rank among their brethren, and had a kind of ill-defined jurisdiction over the provinces of several metropolitans. The fathers of Nicæa recognized the fact that the privileges of these sees were regulated by customs already regarded as primitive, and these customs they confirmed. . . . The empire was afterwards divided for the purposes of civil government into four Prefectures. . . . The organization of the Church followed in its main lines that of the empire. It also had its dioceses and provinces, coinciding for the most part with the similarly named political divisions. Not only did the same circumstances which marked out a city for political preëminence also indicate it as a fit centre of ecclesiastical rule, but it was a recognized principle with the Church that the ecclesiastical should follow the civil division. At the head of a diocese was a patriarch, at the head of a province was a metropolitan; the territory of a simple bishop was a parish. . . . The see of Constantinople . . . became the oriental counterpart of that of Rome. . . . But the patriarchal system of government, like every other, suffered from the shocks of time. The patriarch of Antioch had, in the first instance, the most extensive territory, for he claimed authority not only over the civil diocese of the East, but over the Churches in Persia, Media, Parthia, and India, which lay beyond the limits of the empire. But this large organization was but loosely knit, and constantly tended to dissolu-

tion. . . . After the conquests of Caliph Omar the great see of Antioch sank into insignificance. The region subject to the Alexandrian patriarch was much smaller than that of Antioch, but it was better compacted. Here too however the Monophysite tumult so shook its organization that it was no longer able to resist the claims of the patriarch of Constantinople. It also fell under the dominion of the Saracens—a fate which had already befallen Jerusalem. In the whole East there remained only the patriarch of Constantinople in a condition to exercise actual authority. . . . According to Rufinus's version of the sixth canon of the Council of Nicæa, the Bishop of Rome had entrusted to him the care of the suburbicarian churches [probably including Lower Italy and most of Central Italy, with Sicily, Sardinia and Corsica]. . . . But many causes tended to extend the authority of the Roman patriarch beyond the modest limits. The patriarch of Constantinople depended largely for his authority on the will of the emperor, and his spiritual realm was agitated by the constant intrigues of opposing parties. His brother of Rome enjoyed generally more freedom in matters spiritual, and the diocese over which he presided, keeping aloof for the most part from controversies on points of dogma, was therefore comparatively calm and united. Even the Orientals were impressed by the majesty of old Rome, and gave great honour to its bishop. In the West, the highest respect was paid to those sees which claimed an Apostle as founder, and among these the Church of St. Peter and St. Paul naturally took the highest place. It was, in fact, the one apostolic see of Western Europe, and as such received a unique regard. . . . Doubtful questions about apostolic doctrine and custom were addressed certainly to other distinguished bishops, as Athanasius and Basil, but they came more readily and more constantly to Rome, as already the last appeal in many civil matters. We must not suppose however that the Churches of the East were ready to accept the sway of Rome, however they might respect the great city of the West. . . . The authority of the Roman see increased from causes which are sufficiently obvious to historical enquirers. But the greatest of the Roman bishops were far too wise to tolerate the supposition that their power depended on earthly sanctions. They contended steadfastly that they were the heads of the Church on earth, because they were the successors of him to whom the Lord had given the keys of the kingdom of heaven, St. Peter. And they also contended that Rome was, in the most emphatic sense, the mother-church of the whole West. Innocent I claims that no Church had ever been founded in Italy, Gaul, Spain, Africa, Sicily, or the Mediterranean islands, except by men who had received their commission from St. Peter or his successors. At the same time, they admitted that the privileges of the see were not wholly derived immediately from its founder, but were conferred by past generations out of respect for St. Peter's see. But the bishop who most clearly and emphatically asserted the claims of the Roman see to preëminence over the whole Church on earth was no doubt Leo I, a great man who filled a most critical position with extraordinary firmness and ability. Almost every argument by which in later times the authority of the see of St. Peter was supported is to be found in the letters of Leo. . . . The Empire of the West never seriously interfered with the proceedings of the Roman bishop; and when it fell, the Church became the heir of the empire. In the general crash, the Latin Christians found themselves compelled to drop their

smaller differences, and rally round the strongest representative of the old order. The Teutons, who shook to pieces the imperial system, brought into greater prominence the essential unity of all that was Catholic and Latin in the empire, and so strengthened the position of the see of Rome. . . . It must not however be supposed that the views of the Roman bishops as to the authority of Rome were universally accepted even in the West. Many Churches had grown up independently of Rome and were abundantly conscious of the greatness of their own past. . . . And in the African Church the reluctance to submit to Roman dictation which had showed itself in Cyprian's time was maintained for many generations. . . . In Gaul too there was a vigorous resistance to the jurisdiction of the see of St. Peter."—S. Cheetham, *History of the Christian church during the first six centuries*, pp. 181-195.—"A colossal city makes a colossal bishop, and this principle reached its maximum embodiment in Rome. The greatest City of the World made the greatest Bishop of the World. Even when the Empire was heathen the City lifted the Bishop so high that he drew to himself the unwelcome attention of the secular power, and in succession, in consequence, as in no other see, the early Bishops of Rome were martyrs. When the Empire became Christian, Rome's place was recognized as first, and the principle on which that primacy rested was clearly and accurately defined when the Second General Council, acting on this principle, assigned to the new seat of empire, Constantinople, the second place; it was the principle, namely, of honor, based upon material greatness. . . . The principle of the primacy, as distinguished from the supremacy growing out of Petrine claims was the heart and soul of Gallicanism in contrast to Ultramontaniam, and was crushed out even in the Roman communion not twenty years ago."—G. F. Seymour, *Church of Rome in her relation to Christian unity (History and teachings of the early church, lecture 5)*.—See also **ARIANISM**; **MONOTHELITE CONTROVERSY**; **NESTORIAN AND MONOPHYSITE CONTROVERSY**; **PELAGIANISM**.

ALSO IN: H. Hallam, *Middle Ages, ch. 7, pt. 1*.

Origin of papal title.—"Papa," that strange and universal mixture of familiar endearment and of reverential awe, extended in a general sense to all Greek Presbyters and all Latin Bishops, was the special address which, long before the names of patriarch or archbishop, was given to the head of the Alexandrian church. . . . He was the Pope. The Pope of Rome was a phrase which had not yet [at the time of the meeting of the Council of Nicæa, 325] emerged in history. But Pope of Alexandria was a well-known dignity. . . . This peculiar Alexandrian application of a name, in itself expressing simple affection, is thus explained:—Down to Heraclas (230), the Bishop of Alexandria, being the sole Egyptian Bishop, was called 'Abba' (father), and his clergy 'elders.' From his time more bishops were created, who then received the name of 'Abba,' and consequently the name of 'Papa' ('ab-aba,' pater patrum=grandfather) was appropriated to the primate. The Roman account (inconsistent with facts) is that the name was first given to Cyril, as representing the Bishop of Rome in the Council of Ephesus. (Suicer, in voce.) The name was fixed to the Bishop of Rome in the 7th century."—A. P. Stanley, *Lectures on the history of the Eastern church, lecture 3*.—See also **CHRISTIANITY**: 312-337.

42-461.—Early bishops of Rome, to **Leo the Great**.—The following is the succession of the popes, according to Roman Catholic authorities, during the first four hundred and twenty years: "Peter, to the year of Christ 67; Linus, Anencletus, Clement; (to 77?) Evaristus, Alexander, Xystus, Telesphorus, Hyginus, to 142; Pius, to 157; Anicetus, to 168; Soter, to 177; Eleutherius, to 193; Victor, to 202; Zephyrinus, to 219; Callistus, to 223; Urban, to 230; Pontianus, to 235; Anterus, to 236; Fabian, to 250; Cornelius, from 251 to 252; Lucius, to 253; Stephan, to 257; Xystus II, to 258; Dionysius, from 259 to 269; Felix, to 274; Eutychianus, to 283; Caius, to 296; Marcellinus, to 304; Marcellus, after a vacancy of four years, from 308 to 310; Eusebius, from the 20th of May to the 26th of September, 310; Melchisedes, from 311 to 314; Silvester, from 314 to 335. . . . Mark was chosen on the 18th of January 336, and died on the 7th of October of the same year. Julius I, from 337 to 352, the steadfast defender of St. Athanasius. . . . The less steadfast Liberius, from 352 to 366, purchased, in 358, his return from exile by an ill-placed condescension to the demands of the Arians. He, however, soon redeemed the honour which he had forfeited by this step, by his condemnation of the council of Rimini, for which act he was again driven from his Church. During his banishment, the Roman clergy were compelled to elect the deacon Felix in his place, or probably only as administrator of the Roman Church. When Liberius returned to Rome, Felix fled from the city, and died in the country, in 365. Damasus, from 366 to 384, by birth a Spaniard, had, at the very commencement of his pontificate, to assert his rights against a rival named Ursicinus, who obtained consecration from some bishops a few days after the election of Damasus. The faction of Ursicinus was the cause of much bloodshed. . . . Siricius, from 385 to 389, was, although Ursicinus again endeavoured to intrude himself, unanimously chosen by the clergy and people. . . . Anastasius, from 398 to 402; a pontiff, highly extolled by his successor, and by St. Jerome, of whom the latter says, that he was taken early from this earth, because Rome was not longer worthy of him, and that he might not survive the desolation of the city by Alaric. He was succeeded by Innocent I, from 402 to 417. . . . During the possession of Rome by Alaric [see **ROME: Empire**: 408-410], Innocent went to Ravenna, to supplicate the emperor, in the name of the Romans, to conclude a peace with the Goths. The pontificate of his successor, the Greek Zosimus, was only of twenty one months. The election of Boniface, from 418 to 422, was disturbed by the violence of the archdeacon Eulalius, who had attached a small party to his interests. . . . He was followed by Celestine I, from 422 to 432, the combatant of Nestorianism and of Semipelagianism. To Sixtus III, from 432 to 440, the metropolitans, Helladius of Tarsus, and Eutherius of Tyana, appealed, when they were threatened with deposition at the peace between St. Cyril and John of Antioch. Leo the Great, from 440 to 461, is the first pope of whom we possess a collection of writings: they consist of 96 discourses on festivals, and 141 epistles. By his high and well-merited authority, he saved Rome, in 452, from the devastation of the Huns; and induced Attila, named 'the scourge of God,' to desist from his invasion of Italy [see **HUNS**: 452]. Again, when, in 457 [455], the Vandal king Geiseric entered Rome [see **ROME: Empire**: 455], the Romans were indebted to the eloquent persuasions of their holy bishop for the preservation, at least, of their lives."—J. J. I.

Döllinger, *History of the church*, v. 2, pp. 213-215.—“For many centuries the bishops of Rome had been comparatively obscure persons: indeed, Leo was the first really great man who occupied the see, but he occupied it under circumstances which tended without exception to put power in his hand. . . . Circumstances were thrusting greatness upon the see of St. Peter: the glory of the Empire was passing into her hands, the distracted Churches of Spain and Africa, harassed and torn in pieces by barbarian hordes and wearied with heresies, were in no position to assert independence in any matter, and were only too glad to look to any centre whence a measure of organization and of strength seemed to radiate; and the popes had not been slow in rising to welcome and promote the greatness with which the current and tendency of the age was investing them. Their rule seems to have been, more than anything else, to make the largest claim, and enforce as much of it as they could, but the theory of papal power was still indeterminate, vague, unfixed. She was Patriarch of the West—what rights did that give her? . . . Was her claim . . . a claim of jurisdiction merely, or did she hold herself forth as a doctrinal authority in a sense in which other bishops were not? In this respect, again, the claim into which Leo entered was indefinite and unformulated. . . . The Imperial instincts of old Rome are dominant in him, all that sense of discipline, order, government—all the hatred of uniformity, individuality, eccentricity. These are the elements which make up Leo’s mind. He is above all things a governor and an administrator. He has got a law of ecclesiastical discipline, a supreme canon of dogmatic truth, and these are his instruments to subdue the troubled world. . . . The rule which governed Leo’s conduct as pope was a very simple one, it was to take every opportunity which offered itself for asserting and enforcing the authority of his see: he was not troubled with historical or scriptural doubts or scruples which might cast a shadow of indecision, ‘the pale cast of thought,’ on his resolutions and actions. To him the papal authority had come down as the great inheritance of his position; it was identified in his mind with the order, the authority, the discipline, the orthodoxy which he loved so dearly; it suited exactly his Imperial ambition, in a word, his ‘Roman’ disposition and character, and he took it as his single great weapon against heresy and social confusion.”—C. Gore, *Leo the Great*, ch. 6-7.—“Clear insight, prompt action, unwavering firmness in all that his office demanded of him, these were the characteristics of this great Pope [Leo]. Filled as he was with the lofty consciousness of his Primacy, his individuality was to him of small account. Confidence never for a moment deserted him, just because no action of his was an outcome of mere self-will. . . . Paschase Quesnel, the author of several profound essays on our hero, in spite of his difference in theological outlook, says of Leo: ‘He remarkably furthered the cause of Christianity with an unselfishness equalled only by his fervent devotion. . . . His virtues glow like stars in the firmament of the Papacy. . . . This Bishop of Rome unflinchingly faced the storms which human passion brought upon the church; his battles and his victories were all for the sake of the Faith’”—H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 2, pp. 64, 66.

330-606.—Comparison of Roman Catholic and Orthodox (Greek) churches. See CHRISTIANITY 330-606.

461-604.—Succession of popes from Leo the

Great to Gregory the Great.—The successor of Leo the Great, “the Sardinian Hilarius, from 461 to 468, had been one of his legates at the council of Ephesus in 449. . . . The zeal of Simplicius, from 468 to 483, was called into action chiefly by the confusion occasioned in the east by the Monophysites. [See NESTORIAN AND MONOPHYSITE CONTROVERSY.] The same may be said of Felix II (or III) from 483 to 492, in whose election the prefect Basilius concurred, as plenipotentiary of king Odoacer. Gelasius I, from 492 to 496, and Anastasius II, laboured, but in vain, in endeavouring to heal the schism, formed by Acacius, at Constantinople. This schism occasioned a division in Rome at the election of a new pontiff. The senator Festus had promised the emperor that he would enforce the reception of the Henoticon at Rome; and by means of corruption established against the deacon Symmachus, who had in his favour the majority of voices, a powerful party,

POPE LEO I, THE GREAT

which chose Laurence as antipope. Again was a double election the cause of bloody strife in the streets of Rome, until the Arian king, Theodoric, at Ravenna, declared for Symmachus, who gave to his rival the bishopric of Luceria. . . . More tranquil was the pontificate of the succeeding pope, Hormisdas, from 514 to 523, and made illustrious by the restoration of peace, in 510, in the eastern Church”—J. J. I. Döllinger, *History of the church*, pp. 213-215.—“Hormisdas was consecrated on July 20, 514, the day following the death of Symmachus. . . . From what Ennodius says we may gather that Hormisdas was recommended or designated by his predecessor for succession in the Papacy. . . . Through the intermediary of Gratus, a *Comes* of the Imperial consistory, written requests of the new sovereign, of his nephew Justinian, and John II, the Patriarch of Byzantium, were presented to Hormisdas, praying him to come personally to the East to establish peace, or at least to despatch legates with conditions of peace and full powers for its conclusion. After having sought King Theodoric’s advice, the

Pope deputed Germanus, Bishop of Capua, a certain Bishop John, the presbyter Blandus, Felix and Dioscorus, deacons of the Apostolic See, and Peter, the church notary. . . . The envoys from Hormisdas brought to Constantinople a formulary (*libellus*) by signing which the schismatics would show their submission to the See of Peter, and secure their re-incorporation in the Catholic Church. This famous *formulae Hormisdæ* had been drafted some years previously, and had been submitted and accepted in the provinces of Illyricum and in Spain. . . . In Constantinople, John II, the Patriarch, subscribed to the formula on Maundy Thursday, March 28, 515. The formula of Hormisdas went the round of the Greek Empire. John II of Constantinople, and Epiphanius, his successor, laboured for its acceptance throughout the other dioceses of the Empire. . . . To com-

POPE GREGORY I, THE GREAT

plete the success and satisfaction of Pope Hormisdas, shortly before his death, there came over the see from Africa the good tidings that the last great persecution of the Catholics, begun by the Vandal King Trasamund, had been terminated by this Arian's death. To the joy of the Roman Church, there was nothing more to hinder the triumphant return of the banished bishops and their reinstatement in their sees."—H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 2, pp. 240-251, 253.—"John I died at Ravenna, in 510, in prison, into which he was cast by the suspicious Theodorice, after his return from Constantinople.—Felix III (or IV) from 526 to 530, was chosen by the Romans, at the command of the king. At short intervals, followed Boniface II, from 530 to 532; and John II, from 533 to 535.—Agapite I went, at the desire of the Gothic king, Theodatus, to obtain peace from the emperor, to Constantinople, where he died in 536.—Sylverius died, in 540, during his second exile, on the island of Palmaria. . . . Vigilius, who was ordained in

537, and who became lawful pope in 540, was compelled to remain in the east, from 546 to 554, sometimes a prisoner in Constantinople, and sometimes in exile. He died at Syracuse, on his return to Rome, in 555. Pelagius I, from 555 to 560, found difficulty in obtaining an acknowledgement of his election, as, by his condemnation of the three articles, he was considered in the west as a traitor to the council of Chalcedon, and because there existed a suspicion that he was accessory to the death of Vigilius.—John III, from 560 to 573, beheld the commencement of the Lombard dominion in Italy.—Benedict I, from 574 to 578, and Pelagius II, from 578 to 590, ruled the Church during the melancholy times of the Lombard devastations. One of the most splendid appearances in the series of the Roman pontiffs was that of Gregory the Great, from 590 to 604."—J. J. I. Döllinger, *History of the church*, v. 2, pp. 215-217.—"Pope Pelagius died on the 8th of February, 590. The people of Rome . . . were at this time in the utmost straits. Italy lay prostrate and miserable under the Lombard invasion; the invaders now threatened Rome itself, and its inhabitants trembled; famine and pestilence within the city produced a climax of distress; an overflow of the Tiber at the time aggravated the general alarm and misery; Gregory himself, in one of his letters, compares Rome at this time to an old and shattered ship, letting in the waves on all sides, tossed by a daily storm, its planks rotten and sounding of wreck. In this state of things all men's thoughts at once turned to Gregory. The pope was at this period the virtual ruler of Rome, and the greatest power in Italy; and they must have Gregory as their pope; for, if any one could save them, it was he. His abilities in public affairs had been proved; all Rome knew his character and attainments; he had now the further reputation of eminent saintliness. He was evidently the one man for the post; and accordingly he was unanimously elected by clergy, senate, and people. But he shrank from the proffered dignity. There was one way by which he might possibly escape it. No election of a pope could at this time take effect without the emperor's confirmation, and an embassy had to be sent to Constantinople to obtain it. Gregory therefore sent at the same time a letter to the emperor (Mauricius, who had succeeded Tiberius in 582), imploring him to withhold his confirmation; but it was intercepted by the prefect of the city, and another from the clergy, senate, and people sent in its place, entreating approval of their choice. . . . At length the imperial confirmation of his election arrived. He still refused; fled from the city in disguise, eluding the guards set to watch the gates, and hid himself in a forest cave. Pursued and discovered by means, it is said, of a supernatural light, he was brought back in triumph, conducted to the church of St. Peter, and at once ordained on the 3rd of September, 590. . . . Having been once placed in the high position he so little coveted, he rose to it at once, and fulfilled its multifarious duties with remarkable zeal and ability. His comprehensive policy, and his grasp of great issues, are not more remarkable than the minuteness of the details, in secular as well as religious matters, to which he was able to give his personal care. And this is the more striking in combination with the fact that, as many parts of his writings show, he remained all the time a monk at heart, thoroughly imbued with both the ascetic principles and the narrow credulity of contemporary monasticism. His private life, too, was still in a measure monastic:

the monastic simplicity of his episcopal attire is noticed by his biographer; he lived with his clergy under strict rule, and in 505 issued a synodal decree substituting clergy for the boys and secular persons who had formerly waited on the pope in his chamber."—J. Baraby, *Gregory the Great*, ch. 2.—"Of the immense energy shown by St. Gregory in the exercise of his Principate, of the immense influence wielded by him both in the East and in the West, of the acknowledgment of his Principate by the answers which emperor and patriarch made to his demands and rebukes, we possess an imperishable record in the fourteen books of his letters which have been preserved to us. They are somewhat more than 850 in number. They range over every subject, and are addressed to every sort of person. If he rebukes the ambition of a patriarch, and complains of an emperor's unjust law, he cares also that the tenants on the vast estates of the Church which his officers superintend at a distance should not be in any way harshly treated. . . . The range of his letters is so great, their detail so minute, that they illuminate his time and enable us to form a mental picture, and follow faithfully that pontificate of fourteen years, incessantly interrupted by cares and anxieties for the preservation of his city, yet watching the beginnings and strengthening the polity of the western nations, and counterworking the advances of the eastern despotism. The divine order of greatness is, we know, to do and to teach. Few, indeed, have carried it out on so great a scale as St. Gregory. The mass of his writing preserved to us exceeds the mass preserved to us from all his predecessors together, even including St. Leo, who with him shares the name of Great, and whose sphere of action the mind compares with his. If he became to all succeeding times an image of the great sacerdotal life in his own person, so all ages studied in his words the pastoral care, joining him with St. Gregory of Nazianzum and St. Chrysostom. The man who closed his life at sixty-four, worn out, not with age, but with labour and bodily pains, stands, beside the learning of St. Jerome, the perfect episcopal life and statesmanship of St. Ambrose, the overpowering genius of St. Augustine, as the fourth doctor of the western Church, while he surpasses them all in that his doctorship was seated on St. Peter's throne. If he closes the line of Fathers, he begins the period when the Church, failing to preserve a rotten empire in political existence, creates new nations; nay, his own hand has laid for them their foundation-stones."—T. W. Allies, *Holy See and the wandering of the nations, from Saint Leo I to Saint Gregory I*, pp. 309-355.—See also CHRISTIANITY: 553-800; ROME: Medieval city: 590-640.

ALSO IN: H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 3, pp. 25-55.

555.—Pragmatic Sanction.—Power of bishops.—"Now that the Sovereign [Justinian] had gained his end, Vigilius was allowed to return in the sunshine of Imperial favour. As a mark of regard he took back with him something valuable for Italy, for the City of Rome, and in a certain sense even for the Papacy. This was the promise of a Pragmatic Sanction [see PRAGMATIC SANCTION], or Imperial law, regulating Italian affairs. Such an ordinance was promulgated at Constantinople on August 13, 554. . . . What we now possess of the Sanction is not the original law, but a collection of statutes by which was modified and improved the great law which heralded a brighter day for Italy. . . . The legal re-arrangement which had been introduced into Italy by means of the Pragmatic Sanction might have succeeded

even better had it been carried out by those in power. According to what we know of its articles, they first laid it down as a principle that the Imperial code should hold in Italy as elsewhere. Further they enacted, to the advantage of both Church and country, that the election of governors in each province . . . should be conducted by the Bishops and provincial magnates in joint session; also that the Bishop was to have say in the choice of city officials; likewise that the Bishop and leading citizens were to audit the accounts of officials who retired; that he was to report to the Emperor any ordinary judge who refused to render justice; that he could claim a joint right to try any case when the judge's impartiality had been impugned by either side; finally, that he was to decide between the governor himself and such subjects as might consider they had been wronged by him. Such enactments meant that the Church received a sort of oversight over the officials of the State. . . . The State decided on thus including the Church in the system of government, not only out of regard for the actual position, wealth, and property of the bishops who . . . had exercised great influence over civil affairs, chiefly owing to the power which came from the landed property conferred on them. The Eastern autocrats were moved . . . by their consciousness of the great moral weight of the bishops and the social power of religion; by their knowledge of the corruption rampant among the officials, and their certainty that it would be hopeless to dream of extirpating bribery and oppression without the help of some authority guided by loftier principles, and above bureaucratic influence. We must also remember that the civil and military authorities, owing to the lack of public funds, or to incapable administration, often stood helpless and without resource when cities and whole provinces were in the direst need. In such cases the bishops were wont to intervene. In this wise, in most of the cities, a large part of the administration had, little by little, passed into the hands of the bishops. Among such bishops who thus saw their influences increase, the Bishop of Rome was certainly not the last. Seeing that the Pragmatic Sanction gave such powers to the bishops, we shall not be surprised to learn that it also acknowledged their right to exercise ecclesiastical jurisdiction. Complaints against clerics and monks were to be tried before the bishop. As in the Eastern half of the Empire, the secular arm was ready to execute the sentence of the ecclesiastical courts. The *defensores* of the Roman Church, acting as the standing representatives of the Popes, tried charges against bishops quite independently of the State. At first in criminal cases the clergy could claim ecclesiastical immunity only for trifling offences; in more serious cases, after having been deposed and degraded by the church authorities, they were handed over for punishment to the secular court. But, towards the end of the sixth century, even this intervention of the State ceased, and the Church, acting alone, imposed on the clerical evil-doer a more or less heavy penance accompanied by imprisonment which sometimes lasted for life; it was then laid down as an axiom that secular judges have no competence in matters concerning the Church alone."—H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 3, pp. 33, 40-51.

6th-11th centuries.—Elections of popes.—Ratification by emperor.—Constitution of Otto,—“Custom, as well as necessity, had established that debated questions of any importance were to be referred to councils, consisting at least of the presbyters of the city, the neighbouring bishops, and any foreign bishops who happened to be staying in Rome. These were the petty synods to which Cyprrian refers in the third century, when he speaks of the Roman Bishop’s Presbyterium. In the sixth century special meeting-places, termed Consistories, existed for this purpose. . . . Boniface II organised a small synod (531) in the ‘Consistory of St. Andrew.’ [See CURIA, PAPAL.] . . . It is the earliest example of a Roman synod, of which the minutes incidentally give us a glimpse into the details of official routine at the time, showing us how the proceedings were conducted, for which reason it deserves our attention. In the first session Pope Boniface is surrounded by four bishops. Two come from the immediate neighbourhood of Rome, Felix of Numentum and Carus of Centumcellæ; the others are Sabinus of Canusium . . . and Abundantius of Demetrias in Thessaly. The latter was accidentally present in Rome, bringing a complaint against another bishop who had usurped his see. Besides the bishops, thirty-nine Roman presbyters took part in the session. Four ‘deacons of the Apostolic See’ were also present, but remained standing. . . . One is struck by the resemblance in a whole number of points between the procedure of this assembly and that usual in the secular Roman law-courts. In its own courts of justice the Church has taken over bodily the rules obtaining in the secular courts, even down to small outward observances.”—H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 2, pp. 306-309.—“In 536, Rome was in the power of Constantinople. It submitted to the Byzantine domination, which was to be maintained until the fall of the exarchate of Ravenna (751). Of what sort were the pontifical elections to be during this period? To judge by those of Vigilius and Pelagius, it might have been inferred that the emperor would impose his own candidates upon the Roman Church. But the elections of Vigilius and Pelagius were exceptions. After these two popes, the emperor, as a rule, ceased to interfere in the election, and reserved for himself the right of ratification. The third day after the Pope’s death, the clergy, the people, and the soldiery met at the Lateran and proceeded to appoint some one in his place. When the majority agreed upon a name, what was known as the *consensus*, that is, the report of the election, was prepared, and was presented to the prefect, who dispatched it to Constantinople. The emperor replied with a *jussio* or *præceptio*, which authorized the consecration of him who had been elected. So soon as the imperial authorization was obtained the Pope elect, who was usually a deacon and sometimes a priest, received episcopal consecration at St. Peter’s at the hands of the bishop of Ostia, assisted by the bishops of Albano and Porto, and by the archdeacon. Between the sending of the *consensus* to Constantinople and the arrival of the *jussio* at Rome, sometimes a period of a year elapsed, at the very least several months. In the meantime the Roman Church was governed by a council of administration. The Pope elect was a member of this council. He and his colleagues signed the acts of importance; yet sometimes he alone signed them. In any case, he could not be consecrated bishop

of Rome before he had obtained the authorization of the emperor.”—A. La Garde, *Latin Church in the Middle Ages*, pp. 130-131.—“The Emperor Justinian had reserved to the Crown the right of ratifying the papal elections. Hence, each time, after the election had been concluded in Rome, the clergy had to send an embassy to the Greek capital to crave permission for the consecration of their candidate. In the *Liber pontificalis* this custom is mentioned not long after, for we are there told that, owing to the wars, it was impossible to undertake the embassy to Constantinople, and that the Pope-elect (Pelagius II.) had therefore been consecrated without awaiting the Emperor’s ‘command.’ So close, then, was the alliance into which the Roman Church entered, or was forced to enter, with the Roman State, that even the appointment of its head, the Supreme Pontiff of the whole Church, was made dependent upon the consent of the secular power. The Roman Church was also obligated to pay a large sum of money to the Court, agreeably with invariable Byzantine usage, in exchange for the act of ratification. This remained the rule for a whole century; for it was not until 684 that the Emperor Constantine Pogonatus renounced the privilege of confirmation in an edict addressed to Benedict II. . . . The Church acquiesced in the claim only in view of the benefit accruing to both Church and State from such a peaceful union of both Powers. In canonical language, she was willing to account the Papal election as yet incomplete and illegal until the Imperial assent had been secured. Not until this assent had been obtained did the candidate complete the election by giving his own consent.”—H. Grisar, *History of Rome and the popes in the Middle Ages*, v. 3, pp. 56-57.—“In 579, at the election of the predecessor of Gregory, as the city was besieged by the Lombards it was impossible to ask the *jussio* of the emperor at Constantinople, and so the episcopal consecration was at once performed. In the seventh century, critical circumstances of another kind prevented submitting the elections of Honorius (625) and Theodorus (642) for ratification. Emboldened by these precedents, the Romans believed they could put Pope Martin I at the head of their Church without the authorization of the court of Constantinople (649). Unfortunately the emperor, who had no taste for the theology of Martin, made a pretext of the nullity of the election to deprive him of his office. On the whole, apart from insignificant cases which with a single exception were due to circumstances, the pontifical elections were submitted for about two centuries to the emperor for ratification. . . . The emperor Constantine Pogonatus decided in 684 that the decree of election should thereafter be submitted to the exarch of Ravenna, and that this official should grant the authorization necessary for proceeding with the consecration of the Pope elect. . . . By virtue of a practice dating from the time of the Gothic kings, the Pope elect was obliged to pay a sum of money into the imperial treasury in order to secure his ratification. In 680, Constantine Pogonatus did not exact this pecuniary contribution. After this date the popes no longer had to pay in order to ascend the throne of St. Peter. . . . In 731, Pope Gregory III had his election confirmed by the exarch. This was the last time. The exarchate of Ravenna was then approaching its end; twenty years later it had ceased to exist. The pontifical elections by the force of events were withdrawn from the control of the empire. . . . John XII, beset by many difficulties, called Otto I to his assistance;

and to assure his own protection, offered him the imperial crown. Otto accepted the offer; the empire was re-established (February 962). . . . It was agreed that the pontifical election should be submitted for the imperial approval, and that the Pope-elect, before being consecrated, should swear fidelity in the presence of the emperor's representative. But about the end of the following year, Otto learned that he had been betrayed by John XII; he returned to Rome and deposed him, appointed Leo VIII in his place, and then issued the famous 'constitution of Otto,' . . . [which] reserves to the emperor the right of choosing the Pope; it suppresses, at least *de facto* the pontifical election, which, nevertheless, continues in force *pro forma*. The emperor designates the candidate whom he considers most worthy to occupy the pontifical chair; then the Pope-elect is installed at the Lateran and consecrated at St. Peter's. Inaugurated in November 963, the constitution of Otto was in force as long as the three Ottos occupied the imperial throne, that is, until 1002."—A. La Garde, *Latin church in the Middle Ages*, pp. 131-132, 130-137.

604-731.—Succession of popes.—Sabinian, 604-606; Boniface III, 607; Boniface IV, 608-615; Deusdedit, 615-618; Boniface V, 610-623; Honorius I, 625-638; Severinus, 640; John IV, 640-642; Theodore I, 642-649; Martin I, 640-655; Eugenius I, 655-657; Vitalian, 657-672; Adeodatus II, 672-676; Donus I, 676-678; Agatho, 678-682; Leo II, 682-683; Benedict II, 684-685; John V, 685-686; Conon, 686-687; Sergius I, 687-701; John VI, 701-705; John VII, 705-707; Sisinnius, 708; Constantine, 708-715; Gregory II, 715-731.

728-774.—Rise of papal sovereignty at Rome.—The extinguishment of the authority of the Eastern emperors at Rome and in Italy began with the revolt provoked by the attempts of the iconoclastic Leo, the Isaurian, to abolish image-worship in the Christian churches (see *ICONOCLASTIC CONTROVERSY*). The Pope, Gregory II, remonstrated vehemently, but in vain. At his signal all central Italy rose in revolt. "The exarch was compelled to shut himself up in Ravenna; for the cities of Italy, instead of obeying the imperial officers, elected magistrates of their own, on whom they conferred, in some cases, the title of duke. Assemblies were held, and the project of electing an emperor of the West was adopted." But another danger showed itself at this juncture which alarmed Rome and Italy more than the iconoclastic persecutions of the Byzantine emperor. The king of the Lombards took advantage of the insurrection to extend his own domains. He invaded the exarchate and got actual possession of Ravenna; whereat Pope Gregory turned his influence to the Byzantine side, with such effect that the Lombards were beaten back and Ravenna recovered. In 731 Gregory II died and was succeeded by Pope Gregory III. "The election of Gregory III to the papal chair was confirmed by the Emperor Leo in the usual form; nor was that pope consecrated until the mandate from Constantinople reached Rome. This was the last time the emperors of the East were solicited to confirm the election of a pope." Leo continued to press his severe measures against image-worship, and the pope boldly convened at Rome a synod of ninety-three bishops which excommunicated the whole body of the Iconoclasts, emperor and all. The latter now dispatched a strong expedition to Italy to suppress the threatening papal power; but it came to naught, and the Byzantine authority was practically at an end, already, within the range of papal leadership. "From this time, 733, the city of

Rome enjoyed political independence under the guidance and protection of the popes; but the officers of the Byzantine emperors were allowed to reside in the city, justice was publicly administered by Byzantine judges, and the supremacy of the Eastern Empire was still recognised. So completely, however, had Gregory III thrown off his allegiance, that he entered into negotiations with Charles Martel, in order to induce that powerful prince to take an active part in the affairs of Italy. The pope was now a much more powerful personage than the Exarch of Ravenna, for the cities of central Italy, which had assumed the control of their local government, intrusted the conduct of their external political relations to the care of Gregory, who thus held the balance of power between the Eastern emperor and the Lombard king. In the year 742, while Constantine V, the son of Leo, was engaged with a civil war, the Lombards were on the eve of conquering Ravenna, but Pope Zacharias threw the whole of the Latin influence into the Byzantine scale, and enabled the exarch to maintain his position until the year 751, when Astolph, king of the Lombards, captured Ravenna. The exarch retired to Naples, and the authority of the Byzantine emperors in central Italy ended."—G. Finlay, *History of the Byzantine empire*, bk. 1, ch. 1, sect. 2.—The Lombards, having obtained Ravenna and overturned the throne of the Byzantine exarchs, were now bent on extending their sovereignty over Rome. But the popes found an ally beyond the Alps whose interests coincided with their own. Pepin, the first Carolingian king of the Franks, went twice to their rescue and broke the Lombard power; his son Charlemagne finished the work [see *LOMBARDS*: 754-774], and by the acts of both these kings the bishops of Rome were established in a temporal no less than a spiritual principality.—Based on E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 40.—See also *FRANKS*: 768-814.

731-816.—Succession of popes.—Gregory III, 731-741; Zacharias, 741-752; Stephen I (or II), 752; Stephen II (or III), 752-757; Paul I, 757-767; Stephen III (or IV), 768-772; Hadrian I, 772-795; Leo III, 795-816.

755-774.—Origin of Papal States.—Donations of Pepin and Charlemagne.—As the result of Pepin's second expedition to Italy (755), "the Lombard king sued for quarter, promised to fulfil the terms of the treaty made in the preceding year, and to give up all the places mentioned in it. Pepin made them all over to the Holy See, by a solemn deed, which was placed in the archives of the Roman Church. [See *GERMANY*: 687-800.] . . . Pepin took such steps as should insure the execution of the Lombard's oath."—J. E. Darras, *General history of the Catholic church*, period 3, ch. 10.—"To ensure the proper carrying out of . . . [the] compact, the Abbot Fulrad, who had stayed behind in Italy with a military detachment, made a tour of the towns with the Lombard commissioners, everywhere demanding the delivery up of the city keys, hostages and delegates from the aristocracy. Then, together with these representatives of the conquered territory, he proceeded to Rome, and deposited in the Confession at St Peter's, not only the keys of the towns, but the deed by which King Pepin made them over to the Apostle, to his Vicar, and to all his successors. The exact wording of this deed of gift is no longer preserved to us, but in the life of Stephen II we have the list of territories given up to the Holy

See. They include, first of all, Comacchio and Ravenna, and then the tract of land between the Apennines and the sea, from Forlì in the north as far as Jesi Sinigaglia in the south. There is no mention of Ancona and the remains of what was known later as the Marches, nor of Faenza, Imola, Bologna, and Ferrara. The papal State had still therefore much to acquire north of the Apennines. To the south of the chain, Eugubium (Gubbio) alone appears to be included. Perugia, which was a near neighbour, still belonged to the Romans. With the exception of Narni, which had formerly been annexed by the duchy of Spoleto, and which was restored in 756, the Lombard king's 'restitutions' were what he himself had seized."—L. Duchesne, *Beginnings of the temporal sovereignty of the popes*, pp. 45-46.—"An embassy from the Byzantine emperor asserted, during the negotiation of the treaty, the claims of that sovereign to a restoration of the exarchate; but their petitions and demands failed of effect on 'the steadfast heart of Pippin' [or Pepin], who declared that he had fought alone in behalf of St. Peter, on whose Church he would bestow all the fruits of victory. Fulrad, his abbot, was commissioned to receive the keys of the twenty-two towns his arms had won, and to deposit them as a donation on the grave of the apostle at Rome. Thus the Pope was made the temporal head of that large district . . . which, with some few changes [was held by his successors until 1870]."—P. Godwin, *History of France: Ancient Gaul*, bk. 4, ch. 15.—"When on Pipin's death the restless Lombards again took up arms and menaced the possessions of the Church, Pipin's son Charles or Charlemagne swept down like a whirlwind from the Alps at the call of Pope Hadrian [774], seized king Desiderius in his capital, assumed himself the Lombard crown, and made northern Italy thenceforward an integral part of the Frankish empire. . . . Whether out of policy or from that sentiment of reverence to which his ambitious mind did not refuse to bow, he was moderate in claims of jurisdiction, he yielded to the pontiff the place of honour in processions, and renewed, although in the guise of a lord and conqueror, the gift of the Exarchate and Pentapolis, which Pipin had made to the Roman Church twenty years before."—J. Bryce, *Holy Roman empire*, ch. 4.—"It is reported, also . . . that, jealous of the honor of endowing the Holy See in his own name, he [Charlemagne] amplified the gifts of Pippin by annexing to them the island of Corsica, with the provinces of Parma, Mantua, Venice, and Istria, and the duchies of Spoleto and Beneventum. . . . This rests wholly upon the assertion of Anastasius; but Karl could not give away what he did not possess, and we know that Corsica, Venice and Beneventum were not held by the Franks till several years later. . . . Of the nature and extent of these gifts nothing is determined: that they did not carry the right of eminent domain is clear from the subsequent exercise of acts of sovereignty within them by the Frankish monarchs; and the probability is, according to the habits of the times, that the properties were granted only under some form of feudal vassalage."—P. Godwin, *History of France: Ancient Gaul*, bk. 4, ch. 16.—"Indefinite in their terms, these grants were never meant by the donors to convey full dominion over the districts—that belonged to the head of the Empire—but only as in the case of other church estates, a perpetual usufruct or 'dominium utile.' They were, in fact, mere endowments. Nor had the gifts been ever actually reduced into possession."—J. Bryce, *Holy Roman empire*, ch. 10.

c. 774.—**Forgery of Donation of Constantine.**—"Before the end of the 8th century some apostolical scribe, perhaps the notorious Isidore, composed the decretals and the donation of Constantine, the two magic pillars of the spiritual and temporal monarchy of the popes [see below: 829-847]. This memorable donation was introduced to the world by an epistle of Adrian I, who exhorts Charlemagne to imitate the liberality and revive the name of the great Constantine. According to the legend, the first of the Christian emperors was healed of the leprosy, and purified in the waters of baptism by St. Silvester, the Roman bishop; and never was physician more gloriously recompensed. His royal proselyte withdrew from the seat and patrimony of St. Peter, declared his resolution of founding a new capital in the East; and resigned to the popes the free and perpetual sovereignty of Rome, Italy, and the provinces of the West. This fiction was productive of the most beneficial effects. The Greek princes were convicted of the guilt of usurpation; and the revolt of Gregory was the claim of his lawful inheritance. The popes were delivered from their debt of gratitude; and the nominal gifts of the Carolingians were no more than the just and irrevocable restitution of a scanty portion of the ecclesiastical State."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 49.—"But this is not all, although this is what historians, in admiration of its splendid audacity, have chiefly dwelt upon. The edict proceeds to grant to the Roman pontiff and his clergy a series of dignities and privileges, all of them enjoyed by the emperor and his senate, all of them shewing the same desire to make the pontifical a copy of the imperial office. The Pope is to inhabit the Lateran palace, to wear the diadem, the collar, the purple cloak, to carry the sceptre, and to be attended by a body of chamberlains. . . . The practice of kissing the Pope's foot was adopted in imitation of the old imperial court. It was afterwards revived by the German Emperors."—J. Bryce, *Holy Roman empire*, ch. 7, and footnote.

8th-16th centuries.—**Medieval finances.**—**Camera.**—**Revenues.**—**Income taxes.**—**Beneficent taxes.**—"During the early middle ages the papacy may scarcely be said to have had a financial department. The papal income was derived mainly from the patrimonies, which necessitated organization for the management of estates rather than for the administration of finances. After the eighth century new sources of income were found in Peter's pence and the census paid by exempt churches and monasteries, but these new revenues were rendered at the Holy See by the payers themselves or were forwarded irregularly as opportunity offered. . . . The first impulse towards the formation of an administrative department for finance was given by the necessity of increasing the papal income. In the latter part of the twelfth century, with expanding political and ecclesiastical interests, the popes were outgrowing the revenues from the States of the Church. . . . The financial difficulties of the Holy See were becoming apparent as early as the time of Alexander III. (1150-1181), who was forced by the exigencies of the schism to contract many loans. . . . It was frequently impossible to determine who the tax

payers were or how much they owed. It was to remedy this disorder that Cencio drew up the *Liber Censuum* in 1192. Under Innocent III. (1198-1216) we hear of a few special agents sent out to enforce the better payment of this revenue, and Honorius III. (1216-27) devised, and for a brief time put into execution, a plan for the systematic gathering of census by collectors despatched for this purpose into all parts of Europe. . . . In the first half of the thirteenth century, in addition to the burdens imposed by the costly struggle with the Hohenstaufen, the papacy undertook to finance the crusades. This was the point of departure for a new tax on clerical incomes which ultimately made necessary the creation of a strongly centralized department for the administration of the papal finances. . . . Under its new responsibilities the papal exchequer, known as the camera, changed from a position of comparative insignificance to one of great importance. As representing the curia to the outside world, it came to rival the great department of the chancery. The powers of the camera continued to grow until well into the fourteenth century. . . . In the development of the papal finances an epoch is marked by the pontificate of John XXII. [1316-1334]. Not only were several new taxes instituted by this great administrator, but the application of old taxes was expanded and their exaction more strictly enforced. The work of the collectors was more closely supervised, the duties of the officials composing the camera became more sharply defined, and a uniform system of bookkeeping was adopted. . . . The most important member of the staff composing the papal camera was the *camerarius* who . . . not only directed the fiscal policy, but also intervened in the smallest details of administrative work. The member of the camera who ranked next to its chief was the treasurer. He received the money, was responsible for its safe-keeping, and made the necessary disbursements. . . . The money gathered by the collectors arrived at the curia in various ways . . . but ordinarily it was transferred to representatives of the Italian banking-houses employed by the camera for the purpose of receiving deposits and transmitting them to Rome. In the early part of the thirteenth century the Templars had been used for these purposes. . . . By the second half of the century the Italian bankers had almost entirely superseded the Templars. . . . 'A complete list of the revenues of the Holy See in the middle ages,' says Fabre, 'would be the best picture that could be given of the temporal and even of the spiritual prerogatives of the papacy at this epoch.' The pope received an income in each of his capacities as vicar of the apostle, metropolitan of central Italy, bishop of Rome, temporal sovereign, feudal suzerain, and landlord. Of revenues so diverse in nature it is difficult to make any strictly logical classification, but for convenience the regular sources of income may be grouped in five classes,—a grouping which follows approximately the order of their historical development, namely:—1. Revenues from the Papal States. 2. Census. 3. Income taxes. 4. Benefice taxes. 5. Fees and miscellaneous receipts. The revenues from the estates were of the kind ordinarily received by a landed proprietor in the middle ages. . . . By the fourteenth century the census had become a relatively unimportant source of income. . . . Originally the term was employed to designate the rents paid for the effective use and enjoyment of portions of the domains. . . . [By analogy the term was applied to other revenues, as, for instance those derived from monasteries which placed themselves under the pope for pro-

tection. The bare title only rested with the pope.] In recognition, however, of the theoretical property right the monastery paid annually a nominal sum, which by analogy was called census. The essential object desired by the monastery was protection and the accompanying exemption from the temporal, especially the financial, jurisdiction of the bishop. . . . In the time of John XXII. the heaviest payer in the British Isles owed only two pounds annually. Furthermore, the number of cases of exemption was not large, and by the close of the thirteenth century the creation of new ones had almost ceased. . . . In the *Liber Censuum*, under the same rubrics with the exempt monasteries, are entered many temporal rulers who were bound to make regular payments to the Holy See. For the most part the kings, princes, lords, and cities under this obligation had undertaken it in order to secure the protection of Saint Peter for their temporal possessions. . . . The best-known example of such tribute is the thousand marks which King John of England promised in 1213 to pay annually in acknowledgment of his vassalage to the Holy See. Under Boniface VIII. the rulers of Naples, Sicily, and the islands of Sardinia and Corsica became tributary, and there were many lords of smaller importance with some of whom the relation extended as far back as the eleventh century. . . . [This payment ceased in England in the reign of Edward III. In 1366 Parliament formally denied the validity of the tax and arrears which had accrued for years were never recovered by the papacy.] The fourth payment included by Cencio in his catalogue of the census was that commonly called Peter's pence, which was received from England, Norway, and some other northern kingdoms. To the compiler of the *Liber Censuum* the kingdoms which paid Peter's pence occupied the same position as those which paid tribute: they were all in the ownership of the papacy. In its origin, however, the contribution seems to have had no such meaning, and the attempt of the popes to connect Peter's pence with the idea of dependence of the Holy See does not appear to have begun until the eleventh century, when the papal policy became strongly tinged with feudal principles. . . . For ascertaining the actual significance of Peter's pence no country furnishes a better field than England, which was the first nation to make the payment. Contemporary evidence on the beginnings of Peter's pence in England is almost entirely lacking. In chronicles of a later day three distinct traditions of its origin are preserved, but the only one which seems to have any support in contemporary evidence attributes its establishment to Ethelwulf, who, on a pilgrimage to Rome in 855, was moved by pious motives to promise an annual gift of 300 marks to the pope. By the time of Alfred, if not before, the contribution was levied wholly or in part from the people. Peter's pence continued to be paid regularly until the latter part of the Anglo-Saxon period, when it fell into abeyance for a time, but was resumed by William the Conqueror, and not finally abolished until the sixteenth century. . . . The use of income taxes by the papacy began in connection with the crusades. The first crusading subsidy was imposed by Innocent III., who decreed in 1199 that the clergy should pay one-fortieth of their incomes for one year. . . . Under the successors of Innocent III. crusading taxes became frequent. After Honorius III. and Gregory IX. had tried without success to compel laymen to contribute, the tax was confined to ecclesiastics. . . . When the right had once been established, the taxation of the clergy for other objects could be

introduced with less opposition. Gregory IX. [1227-1241] used the proceeds of a tenth for purposes other than the defence of the Holy Land, and his successors frequently did the same. By the close of the thirteenth century 'the burdens and necessities of the Roman church' had become a sufficient reason for placing a tax on clerical incomes. . . . The income taxes produced much greater sums than any of the earlier papal revenues. A tenth in England, for example, yielded according to the valuation of 1291-92 about £21,000. . . . The benefice taxes constituted in the fourteenth century one of the most important sources of papal income. . . . The payments of this nature which earliest assumed a sufficiently fixed and regular character to be considered taxes were the *servitia*. They were charges paid by patriarchs, archbishops, bishops, abbots, and some priors on the occasion of their appointment or confirmation by the pope. . . . The greatest of the benefice taxes were the annates. By this term is meant the revenues of the first year of a benefice, which were reserved to the pope on the occasion of a new collation, provided the benefice was not one of the higher dignities which paid *servitia*. . . . The almost traditional account of the establishment of the annates by Boniface IX. [1389-1404] is false. The annates were used by the papacy as early as the time of Clement V. [1305-1314]. . . . A charge which the pope sometimes imposed on the holders of benefices was that of *fructus male percepti*, . . . revenues collected by a clerk from a benefice which he held uncanonically, because he was too young, held more than one benefice with cure of souls, or was disqualified in some other manner. . . . A fifth class of regular income received by the papal camera is found in the chancery taxes. These were fees demanded by the chancery for the redaction and expedition of all bulls and instruments, except for such as were concerned with the political or administrative business of the curia, or with cases of charity, or were issued to certain privileged classes of the curia. . . . The miscellaneous revenues of the papacy consisted of a number of irregular receipts ordinarily of small importance. Among them are included the *fructus male percepti* . . . gifts and legacies from the faithful . . . pecuniary penances imposed by the penitentiary, and fines inflicted by papal tribunals. Sums received for indulgences . . . constituted in the fourteenth century an income of growing, but not yet of great, importance. Indulgences granted in return for alms contributed to the crusades had possessed a pecuniary significance since the first part of the thirteenth centuries, but it was not until the latter fifteenth and sixteenth centuries that the papacy began to count the sale of ordinary indulgences as a serious financial resource. Another occasional source of income was found in the procurations. These were sums due the bishop from the clergy of his diocese on the occasion of his visitation. The pope simply appropriated the episcopal procurations, which were levied in such a case by a papal collector instead of by the bishop. By the latter part of the fourteenth century the procurations had become a revenue of considerable importance."

—W. E. Lunt, *Financial system of the mediæval papacy in the light of recent literature* (*Quarterly Journal of Economics*, Feb., 1909).

829-847.—False decretals.—"There existed in each of the national churches, a collection of ecclesiastical laws, or canons, which were made use of as circumstances required. One of these collections was in use in Spain as early as the sixth century, and was subsequently attributed to Isidore, Bishop of Seville. Towards the middle of the ninth century, a new recension of these canons appeared in France, based upon the so-called Isidorian collection, but into which many spurious fragments, borrowed from private collections and bearing upon their face incontestable evidence of the ignorance of their authors, had been introduced. This recension contained also a number of forged documents. There were, altogether, above a hundred spurious decrees of popes, from Clement to Damasus (384), not to mention some of other popes, and many false canons of council. It also contained the forged Deed of Donation ascribed to Constantine [see above: c. 774]. However, these decretals, which, as they stand, are now proved, both by intrinsic and extrinsic arguments, to be impudent forgeries, are nevertheless, in matter of fact, the real utterances of popes, though not of those to whom they are ascribed, and hence the forgery is, on the whole, one of chronological location, and does not affect their essential character."

—J. Alzog, *Manual of universal church history*, v. 2, p. 195.—"Various opinions exist as to the time at which this collection was made, and the precise date of its publication. Mabillon supposes the compilation to have been made about 785; and in this opinion he is followed by others. But the collection did not appear until after the death of Charlemagne. Some think that these Decretals cannot be of an earlier date than 829, and Blondel supposed that he discovered in them traces of the acts of a council at Paris held in that year. All that can be determined is that most probably the Decretals were first published in France, perhaps at Mayence, about the middle of the ninth century; but it is impossible to discover their real author. The spuriousness of these Decretals was first exposed by the Magdeburg Centuriators, with a degree of historical and critical acumen beyond the age in which they lived. The Jesuit Turianus endeavoured, but in vain, to defend the spurious documents against this attack. . . . Of these

Epistles none (except two, which appear on other grounds to be spurious) were ever heard of before the ninth century. They contain a vast number of anachronisms and historical inaccuracies. Passages are quoted from more recent writings, including the Vulgate, according to the version of Jerome; and, although the several Epistles profess to have been written by different pontiffs, the style is manifestly uniform, and often very barbarous, such as could not have proceeded from Roman writers of the first century. . . . The success of this forgery would appear incredible did we not take into account the weak and confused government of the successors of Charlemagne, in whose time it was promulgated; the want of critical acumen and resources in that age; the skill with which the pontiffs made use of the Decretals only by degrees; and the great authority and power possessed by the Roman pontiffs in these times. The name of Isidore also served to recommend these documents, many persons being ready to believe that they were in fact only a completion of the genuine collection of Isidore, which was highly esteemed. . . . The unknown compiler was subsequently called Pseudo-Isidorus."—J. E. Riddle, *History of the papacy*, v. 1, pp. 405-407.

887-1046.—Demoralization of the church.—Degradation of the Holy See.—Reforms of the emperor, Henry III.—"No exaggeration is possible of the demoralized state into which the Christian world, and especially the Church of Rome, had fallen in the years that followed the extinction of the Carolingian line (887). The tenth century is even known among Protestants 'par excellence' as the *sæculum obscurum*, and Baronius expresses its portentous corruption in the vivid remark that Christ was as if asleep in the vessel of the Church. 'The infamies prevalent among the clergy of the time,' says Mr. Bowden [Life of Hildebrand], 'as denounced by Damiani and others, are to be alluded to, not detailed.' . . . When Hildebrand was appointed to the monastery of St. Paul at Rome, he found the offices of devotion systematically neglected, the house of prayer defiled by the sheep and cattle who found their way in and out through its broken doors, and the monks, contrary to all monastic rule, attended in their refectory by women. The excuse for these irregularities was the destitution to which the holy house was reduced by the predatory bands of Campagna; but when the monastic bodies were rich, as was the case in Germany, matters were worse instead of better. . . . At the close of the ninth century, Stephen VI dragged the body of an obnoxious predecessor from the grave, and, after subjecting it to a mock trial, cut off its head and three fingers, and threw it into the Tiber. He himself was subsequently deposed, and strangled in prison. In the years that followed, the power of electing to the popedom fell into the hands of the intriguing and licentious Theodora, and her equally unprincipled daughters, Theodora and Marozia [see *ROME: Medieval city*: 003-064]. These women, members of a patrician family, by their arts and beauty, obtained an unbounded influence over the aristocratic tyrants of the city. One of the Theodoras advanced a lover, and Marozia a son, to the popedom. The grandson of the latter, Octavian, succeeding to her power, as well as to the civil government of the city, ele-

vated himself, on the death of the then Pope, to the apostolic chair, at the age of eighteen, under the title of John XII. (956). His career was in keeping with such a commencement. 'The Lateran Palace,' says Mr. Bowden, 'was disgraced by becoming a receptacle for courtizans; and decent females were terrified from pilgrimages to the threshold of the Apostles by the reports which were spread abroad of the lawless impurity and violence of their representative and successor.' . . . At length he was carried off by a rapid illness, or by the consequences of a blow received in the prosecution of his intrigues. Boniface VII. (974), in the space of a few weeks after his elevation, plundered the treasury and basilica of St. Peter of all he could conveniently carry off, and fled to Constantinople. John XVIII. (1003) expressed his readiness, for a sum of money from the Emperor Basil, to recognize the right of the Greek Patriarch to the title of ecumenical or universal bishop, and the consequent degradation of his own see; and was only prevented by the general indignation excited by the report of his intention. Benedict IX. (1033) was consecrated Pope, according to some authorities, at the age of ten or twelve years, and became notorious for adulteries and murders. At length he resolved on marrying his first cousin; and, when her father would not assent except on the condition of his resigning the popedom, he sold it for a large sum, and consecrated the purchaser as his successor. Such are a few of the most prominent features of the ecclesiastical history of these dreadful times, when, in the words of St. Bruno, 'the world lay in wickedness, holiness had disappeared, justice had perished, and truth had been buried; Simon Magus lording it over the Church, whose bishops and priests were given to luxury and fornication.' Had we lived in such deplorable times as have been above described. . . . we should have felt for certain, that if it was possible to retrieve the Church, it must be by some external power; she was helpless and resourceless; and the civil power must interfere, or there was no hope. So thought the young and zealous emperor, Henry III. (1039), who, though unhappily far from a perfect character, yet deeply felt the shame to which the Immaculate Bride was exposed, and determined with his own right hand to work her deliverance. . . . This well-meaning prince did begin that reformation which ended in the purification and monarchical estate of the Church. He held a Council of his Bishops in 1047; in it he passed a decree that 'Whosoever should make any office or station in the Church a subject of purchase or sale, should suffer deprivation and be visited with excommunication'; at the same time, with regard to his own future conduct, he solemnly pledged himself as follows:—'As God has freely of His mere mercy bestowed upon me the crown of the empire, so will I give freely and without price all things that pertain unto His religion.' This was his first act; but he was aware that the work of reform, to be thoroughly executed, must proceed from Rome, as the centre of the ecclesiastical commonwealth, and he determined, upon those imperial precedents and feudal principles which Charlemagne had introduced, himself to appoint a Pope, who should be the instrument of his general reformation. The reigning Pope at this time was Gregory VI., and he introduces us to so curious a history that we shall devote some sentences to it. Gregory was the identical personage who had bought the papal office of the profligate Benedict IX. for a large sum, and was consecrated by him, and yet he was far from a bad sort of man after all. . . . He had been known in the world as John Gratianus; and at

the time of his promotion was arch-priest of Rome. 'He was considered,' says Mr. Bowden, 'in those bad times more than ordinarily religious; he had lived free from the gross vices by which the clergy were too generally disgraced.' . . . He could not be quite said to have come into actual possession of his purchase; for Benedict, his predecessor, who sold it to him, being disappointed in his intended bride, returned to Rome after an absence of three months, and resumed his pontifical station, while the party of his intended father-in-law had had sufficient influence to create a Pope of their own, John, Bishop of Sabina, who paid a high price for his elevation, and took the title of Sylvester III. And thus there were three self-styled Popes at once in the Holy City, Benedict performing his sacred functions at the Lateran, Gregory at St. Peter's, and Sylvester at Santa Maria Maggiore. Gregory, however, after a time, seemed to preponderate over his antagonists; he maintained a body of troops, and with these he suppressed the suburban robbers who molested the pilgrims. Expelling them from the sacred limits of St. Peter's, he carried his arms further, till he had cleared the neighbouring towns and roads of these marauders. . . . This was the point of time at which the Imperial Reformer made his visitation of the Church and See of the Apostles. He came into Italy in the autumn of 1046, and held a Council at Sutri, a town about thirty miles to the north of Rome. Gregory was allowed to preside; and, when under his auspices the abdication of Benedict had been recorded, and Sylvester had been stripped of his sacerdotal rank and shut up in a monastery for life, Gregory's own turn came" and he was persuaded to pronounce a sentence of condemnation upon himself and to vacate the pontifical chair. The new Pope whom the Emperor gave to the Church instead of Gregory VI., Clement II., a man of excellent character, died within the year. Damasus II. also, who was his second nomination, died in three or four weeks after his formal assumption of his pontifical duties. Bruno, Bishop of Toul [Leo IX.], was his third choice. . . . And now we are arrived at the moment when the State reformer struck his foot against the hidden rock. . . . He had chosen a Pope, but 'quis custodiat ipsos custodes?' What was to keep fast that Pope in that very view of the relation of the State to the Church, that plausible Erastianism, as it has since been called, which he adopted himself? What is to secure the Pope from the influences of some Hildebrand at his elbow, who, a young man himself, shall rehearse, in the person of his superior, that part which he is one day to play in his own, as Gregory VII.? Such was the very fact; Hildebrand was with Leo, and thus commences the ecclesiastical career of that wonderful man."—J. H. 1056-1122.—Hildebrand and Henry IV.—Imperious pontifical reign of Gregory VII.—Empire and papacy in conflict.—War of investitures.—"Son of a Tuscan carpenter, but, as his name shows, of German origin, Hildebrand had been from childhood a monk in the monastery of Sta. Maria, on Mount Aventine, at Rome, where his uncle was abbot, and where he became the pupil of a learned Benedictine archbishop, the famous Laurentius of Amalî, and formed a tender friendship with St. Odilon of Cluny [or Clugny]. Having early attached himself to the virtuous Pope Gregory VI., it was with indignation that he saw him confounded with two unworthy competitors, and deposed together with them by the arbitrary influence of the emperor at Sutri. He followed the exiled pontiff to France, and, after his death, went to enroll himself among the monks of Cluny, where he had previously resided, and where, according to several writers, he held the office of prior. During a part of his youth, however, he must have lived at the German Court, where he made a great impression on the Emperor Henry III., and on the best bishops of the country, by the eloquence of his preaching. . . . It was at Cluny that Hildebrand met, in 1049, the new Pope, Bruno, Bishop of Toul. . . . Bruno himself had been a monk: his cousin, the Emperor Henry III., had, by his own authority, caused him to be elected at Worms, December, 1048, and proclaimed under the name of Leo IX. Hildebrand, seeing him already clothed with the pontifical purple, reproached him for having accepted the government of the Church, and advised him to guard ecclesiastical liberty by being canonically elected at Rome. Bruno yielded to this salutary remonstrance; laying aside the purple and the pontifical ornaments, he caused Hildebrand to accompany him to Rome, where his election was solemnly renewed by the Roman clergy and people. This was the first blow given to the usurped authority of the emperor. From that moment Hildebrand was withdrawn from Cluny by the Pope, in spite of the strong resistance of the Abbot St. Hugh. Created Cardinal Subdeacon of the Roman Church, and Abbot of San Paolo fuori le Mura, he went on steadily towards the end he had in view. Guided by his advice, Leo IX., after having renewed his courage at Monte Cassino, prepared several decrees of formal condemnation against the sale of benefices and against the marriage of priests; and these decrees were fulminated in a series of councils on both sides the Alps, at Rome, Verceil, Mayence, and Reims. The enemy, till then calm in the midst of his usurped rule, felt himself sharply wounded. Nevertheless, the simoniacal bishops, accomplices or authors of all the evils the Pope wished to cure, pretended as well as they could not to understand the nature and drift of the pontiff's act. They hoped time would be their friend; but they were soon undeceived. Among the many assemblies convoked and presided over by Pope Leo IX., the Council of Reims, held in 1094, was the most important. . . . Henry I., King of France, opposed the holding of this Council with all his might. . . . The Pope stood his ground: he was only able to gather round him twenty bishops; but, on the other hand, there came fifty Benedictine abbots. Thanks to their support, energetic canons were promulgated

against the two great scandals of the time, and several guilty prelates were deposed. They went still further: a decree pronounced by this Council vindicated, for the first time in many years, the freedom of ecclesiastical elections, by declaring that no promotion to the episcopate should be valid without the choice of the clergy and people. This was the first signal of the struggle for the enfranchisement of the Church, and the first token of the preponderating influence of Hildebrand. From that time all was changed. A new spirit breathed on the Church—a new life thrilled the heart of the papacy. . . . Vanquished and made prisoner by the Normans—not yet, as under St. Gregory VII., transformed into devoted champions of the Church—Leo IX. vanquished them, in turn, by force of courage and holiness, and wrested from them their first oath of fidelity to the Holy See while granting to them a first investiture of their conquests. Death claimed the pontiff when he had reigned five years. . . . At the moment when the struggle between the papacy and the Western empire became open and terrible, the East, by a mysterious decree of Providence, finally separated itself from Catholic unity. . . . The schism was completed by Michael Cerularius, whom the Emperor Constantine Monomachus had placed, in 1043, on the patriarchal throne. The separation took place under the vain pretext of Greek and Latin observances on the subject of unleavened bread, of strangled meats, and of the singing of the Alleluia. . . . Leo IX., being dead, the Romans wished to elect Hildebrand, and only renounced their project at his most earnest entreaties. He then hastened to cross the Alps, and directed his steps to Germany [1054], provided with full authority from the Roman clergy and people to choose, under the eyes of the Emperor Henry III., whoever, among the prelates of the empire, that prince should judge most worthy of the tiara. . . . Hildebrand selected Gebhard, Bishop of Eichstadt; and in spite of the emperor, who desired to keep near him a bishop who enjoyed his entire confidence—in spite even of Gebhard himself—he carried him off to Rome, where, according to the ancient custom, the clergy proceeded to his election under the name of Victor II. The new Pope, at the risk of his life, adhered to the counsels of Hildebrand, and continued the war made by his predecessor on simoniacal bishops and married priests. . . . At this crisis [October, 1056] the Emperor Henry III. died in the flower of his age, leaving the throne of Germany to his only son, a child of six years old, but already elected and crowned—the regent being his mother, the Empress Agnes. . . . Victor II. had scarcely followed the emperor to the tomb [July, 1057] when the Roman clergy hastened, for the first time, to elect a Pope without any imperial intervention. In the absence of Hildebrand, the unanimous choice of the electors fixed on the former chancellor and legate at Constantinople of Leo IX., on Frederic, monk and abbot of Monte Cassino [raised to the throne by the name of Stephen, sometimes numbered as the ninth, but generally as the tenth Pope of that name].—Count de Montalembert, *Monks of the West*, v. 6, bk. 10, ch. 2.—Stephen X died in the year following his election, and again the papal chair was filled during the absence of Hildebrand from Rome. The new pope, who took the name of Benedict X, was obnoxious to the reforming party, of which Hildebrand was the head, and the validity of his election was denied. With the support of the imperial court in Germany, Gerard, bishop of Florence, was raised to the throne, as Nicholas II., and his rival gave way to him. Nicholas II., dying in 1061, was succeeded by Alexander

II elected equally under Hildebrand's influence. On the death of Alexander in 1073, Hildebrand himself was forced against his will, to accept the papal tiara (under the name of Gregory VII). He "knew well the difficulties that would beset one who should endeavour to govern the Church as became an upright and conscientious Pope. Hence, dreading the responsibility, he protested, but to no purpose, against his own elevation to the papal throne. . . . Shrinking from its onerous duties, Gregory thought he saw one way still open by which he might escape the burden. The last decree on papal elections contained an article requiring that the Pope-elect should receive the approval of the Emperor of Germany. Gregory, who still assumed only the title of 'Bishop-elect of Rome,' notified Henry IV, King of Germany and Emperor-elect, of what had taken place, and begged him not to approve the action or confirm the choice of the Romans 'But should you,' he went on to say, 'deny my prayer, I beg to assure you that I shall most cer-

POPE GREGORY VII

tantly not allow your scandalous and notorious excesses to go unpunished.' Several historians, putting this bold declaration beside the decree of Nicholas II (1059), which went on the assumption that the King of Germany did not enjoy the right of approving the Pope-elect until after he had been crowned Emperor, and then, only by a concession made to himself personally, have pronounced it supposititious. But when it is recollected that its authenticity rests upon the combined testimony of Bonizo, Bishop of Sutri, the friend of Hildebrand, and of William, abbot of Metz, as well as on the authority of the *Acta Vaticana*, it is difficult to see how the objection can be sustained. . . . Henry IV, on receiving news of Hildebrand's election, sent Count Eberhard, of Nellenburg, as his plenipotentiary to Rome to protest against the proceeding. The politic Hildebrand was careful not to be taken at a disadvantage. 'I have indeed' said he, 'been elected by the people, but against my own will. I would not, however, allow myself to be forced to take priest's orders until my election should have been ratified by the king and the princes of Germany.' Lambert of Hersfeld informs us that Henry was so pleased with this manner of speech

that he gave orders to allow the consecration to go on and the ceremony was accordingly performed on the Feast of the Purification in the following year (1074). This is the last instance of a papal election being ratified by an emperor."—J. Alzog, *Manual of universal church history*, v. 2, pp. 347-348.—"From the most remote Christian antiquity, the marriage of clergymen had been regarded with the dislike, and their celibacy rewarded by the commendation, of the people. . . . This prevailing sentiment had ripened into a customary law, and the observance of that custom had been enforced by edicts and menaces, by rewards and penalties. But nature had triumphed over tradition, and had proved too strong for Councils and for Popes. When Hildebrand ascended the chair first occupied by a married Apostle, his spirit burned within him to see that marriage held in her impure and unhallowed bonds a large proportion of those who ministered at the altar, and who handled there the very substance of the incarnate Deity. It was a profanation well adapted to arouse the jealousy, not less than to wound the conscience, of the Pontiff. Secular cares suited ill with the stern duties of a theocratic ministry. Domestic affections would choke or enervate in them that corporate passion which might otherwise be directed with unmitigated ardour towards their chief and centre. Clerical celibacy would exhibit to those who trod the outer courts of the great Christian temple, the impressive and subjugating image of a transcendental perfection, too pure not only for the coarser delights of sense, but even for the alloy of conjugal or parental love. It would fill the world with adherents of Rome, in whom every feeling would be quenched which could rival that sacred allegiance. . . . With such anticipations, Gregory, within a few weeks from his accession, convened a council at the Lateran, and proposed a law, not, as formerly, forbidding merely the marriage of priests, but commanding every priest to put away his wife, and requiring all laymen to abstain from any sacred office which any wedded priest might presume to celebrate. Never was legislative foresight so verified by the result. What the great Council of Nicæa had attempted in vain, the Bishops assembled in the presence of Hildebrand accomplished, at his instance, at once, effectually, and for ever. Lamentable indeed were the complaints, bitter the reproaches, of the sufferers. Were the most sacred ties thus to be torn asunder at the ruthless bidding of an Italian priest? Were men to become angels, or were angels to be brought down from heaven to minister among men? Eloquence was never more pathetic, more just, or more unavailing. Prelate after prelate silenced these complaints by austere rebukes. Legate after legate arrived with papal menaces to the remonstrants. Monks and abbots preached the continency they at least professed. Kings and barons laughed over their cups at many a merry tale of compulsory divorce. Mobs pelted, hooted, and besmeared with profane and filthy baptisms the unhappy victims of pontifical rigour. It was a struggle not to be prolonged. . . . Expostulations subsided into murmurs, and murmurs were drowned in the general shout of victory. Eight hundred years have since passed away. Amidst the wreck of laws, opinions, and institutions, this decree of Hildebrand's still rules the Latin Church, in every land where sacrifices are offered on her altars. . . . With this Spartan rigour towards his adherents, Gregory combined a more than Athenian address and audacity towards his rivals and antagonists. So long as the monarchs of the West might freely bestow on the objects of their choice the sees and abbeys of their states, papal dominion could be but

a passing dream, and papal independency an empty boast. Corrupt motives usually determined that choice; and the objects of it were but seldom worthy. Ecclesiastical dignities were often sold to the highest bidder, and then the purchaser indemnified himself by a use no less mercenary of his own patronage; or they were given as a reward to some martial retainer, and the new churchman could not forget that he had once been a soldier. The cope and the coat-of-mail were worn alternately. The same hand bore the crucifix in the holy festival, and the sword in the day of battle. . . . In the hands of the newly consecrated Bishop was placed a staff, and on his finger a ring, which, received as they were from his temporal sovereign, proclaimed that homage and fealty were due to him alone. And thus the sacerdotal Proconsuls of Rome became, in sentiment at least, and by the powerful obligation of honour, the vicegerents, not of the Pontifex Maximus, but of the Imperator. To dissolve this 'trinoda necessitas' of simoniacal preferences, military service, and feudal vassalage, a feeble spirit would have exhorted, negotiated, and compromised. To Gregory it belonged to subdue men by courage, and to rule them by reverence. Addressing the world in the language of his generation, he proclaimed to every potentate, from the Baltic to the Straits of Calpè, that all human authority being holden of the divine, and God himself having delegated his own sovereignty over men to the Prince of the Sacred College, a divine right to universal obedience was the inalienable attribute of the Roman Pontiffs. . . . In turning over the collection of the epistles of Hildebrand, we are every where met by this doctrine asserted in a tone of the calmest dignity and the most serene conviction. Thus he informs the French monarch that every house in his kingdom owed to Peter, as their father and pastor, an annual tribute of a penny, and he commands his legates to collect it in token of the subjection of France to the Holy See. He assures Solomon the King of Hungary, that his territories are the property of the Holy Roman Church. Solomon being incredulous and refractory, was dethroned by his competitor for the Hungarian crown. His more prudent successor, Ladislaus, acknowledged himself the vassal of the Pope, and paid him tribute. . . . From every part of the European continent, Bishops are summoned by these imperial missives to Rome, and there are either condemned and deposed, or absolved and confirmed in their sees. In France, in Spain, and in Germany, we find his legates exercising the same power; and the correspondence records many a stern rebuke, sometimes for their undue remissness, sometimes for their misapplied severity. The rescripts of Trajan scarcely exhibit a firmer assurance both of the right and the power to control every other authority, whether secular or sacerdotal, throughout the civilized world."—J. Stephen, *Hildebrand (Edinburgh Review, Apr., 1845)*.—"By investiture in mediæval church law is meant the act of bestowing a church office, with the use of symbols, on the clergyman who has been appointed to fill it. It is especially to signify the act by which secular princes conferred on the chosen candidates the offices of bishop and abbot that the word is used since the eleventh century. The struggle which the papacy and the church carried on in the last half of the 11th and on into the 12th century for the purpose of doing away with this same right of the princes to confer such offices is called in consequence the war of the investitures. That the nomination of the bishops was a right pertaining to the sovereign was a view of the matter which had gained ground already in the time of the Frankish

monarchy. The German kings up to the eleventh century insisted all the more on this right from the fact that the bishoprics and imperial abbeys had in course of time lost their original character of church organizations. They had been appanaged with imperial and other lands, with political and public rights, with immunities, rights of coinage, etc. . . . They had, in consequence, become transformed into political districts, on a par with those of the secular princes and obliged, like the latter, to bear the public burdens, especially that of providing war-contingents and supplies. It is true that in the period in question, although for the most part the king openly and freely filled the bishoprics and abbeys of his own accord, some elections had been carried through by the cathedral chapter, the other secular canons, the nobles, vassals and ministeriales of the bishopric. This was usually on the ground of royal privileges, of special royal permission, or of a designation of the candidate by the king. However the person might have been elected he could only enter into possession of the bishopric or abbacy after the king had formally conferred the office upon him. The death of a bishop would be announced to the king by envoys from the episcopal residence who at the same time, handing over the episcopal crosier and ring, would beg that the king would see to the refilling of the vacant office. It need hardly be said that any new candidate who might in the meantime have been elected presented himself at court. The king discussed the matter of the bestowal of the vacant bishopric or abbacy with his secular and ecclesiastical nobles and councillors. His next step was to confer the office on the candidate he had chosen by means of investiture, that is by handing him the episcopal crosier and ring. The candidate in return had to take the oath of fealty and to perform the act of homage, the so-called hominium. This is how an episcopal office, at that time regarded as a conglomeration of ecclesiastical and secular rights, was regularly filled . . . After the middle of the 11th century there began to show itself within the reform-party, which at that time gave the tone at Rome, a tendency, ever growing stronger, in favor of achieving the complete liberation of the church from the secular influence. The German kingdom and empire were to be subordinated to the papacy as to the proper controlling power. Those who held these views declared that the investiture of the bishops and abbots by the king was simony because, as was the custom on the part of those receiving other feudal grants, certain presents were made in return. It was demanded that the episcopal symbols, the ring and the crosier, should no longer be disposed of at the hand of a layman. As a matter of fact there had frequently been carried on an unworthy traffic with the bishoprics in consequence of the manner of conferring them. The ecclesiastical legislators, besides passing general laws against simony, came forward at first cautiously enough with the regulation that the clergy should accept no churches from the hands of a layman. The direct clash with the German court came later, in 1068, where the king had conferred the bishopric of Milan as usual through investiture, while the people, under the influence of the papal reform-party, demanded a bishop elected canonically and with Rome's consent. The king did not give way and Gregory VII., in the Roman synod of 1074, increased the severity of the earlier laws against simony, opening the struggle in a synod of the following year by ordaining that the people should not be present at ecclesiastical functions performed by those clergy who had gained office through simony, the reference being to those

bishops who adhered to the king. Furthermore the royal right of conferring bishoprics by investiture was now directly denied. With this attack on an old and customary prerogative of the German king, one too which in earlier times had even been expressly acknowledged by the pope, an attempt was made to thoroughly undermine the foundations of the German empire and to rob the royal power of one of its chief supports. The bishops and abbots were princes of the realm, possessing, besides a number of privileges, the large feudal and allodial holdings which went with their churches. They had, on behalf of their bishoprics, to sustain the largest share of the empire's burdens. The crown found in them the chief props and supports of its power, for the ecclesiastical principalities could be freely granted to devoted adherents without regard to the hereditary dynastic claims of families. The only legal bond by which these princes were bound to the crown was the investiture with its oath of fealty and homage. The prohibition of this, then, denoted the cessation of the relationship which assured the dependence of the ecclesiastical princes on the king and on the empire and the performance of their duties to that empire. It delivered over the considerable material wealth and power of the imperial bishoprics and abbeys to a clergy that was loosed from all connection with the crown. With regard to the manner in which in future, according to the opinion of Gregory VII. or the church-reform party, the bishoprics were to be filled, the above-mentioned synod does not express itself. The decrees of the Roman synod of 1080, as well as Gregory's own further attitude, however, make it appear unquestionable that, with the formal restoration of the old so-called canonical election by clergy and people in common with the metropolitan and his suffragans, he purposed the actual subjection to the pope of the episcopacy and of the resources which in consequence of its political position stood at its command. From the election of a secular clergy which should be freed from national and state interests by the carrying out of the celibacy laws . . . there could result as a rule only bishops submissive to the papal court."—Hinschius, *Investiturstreit (Herzog's Realencyklopädie für protestantische Theologie und Kirche, v. 6)*.—"At first Gregory appeared to desire to direct his weapons against King Philip of France, 'the worst of the tyrants who enslaved the Church.' . . . But with a more correct estimate of the circumstances of Germany and the dangers which threatened from Lombardy, he let this conflict drop and turned against Henry IV. The latter had so alienated Saxony and Thuringia by harsh proceedings, that they desired to accuse him to the Pope of oppression and simony. Gregory immediately demanded the dismissal of the councillors who had been excommunicated by his predecessor. His mother, who was devoted to the Pope, sought to mediate, and the Saxon revolt which now broke out (still in 1073) still further induced him to give way. He wrote a submissive letter to the Pope, rendered a repentant confession at Nuremberg in 1074 in the presence of his mother and two Roman cardinals, and, along with the excommunicated councillors, who had promised on oath to surrender all church properties obtained by simony, was received into the communion of the Church. . . . [But] Henry, after overthrowing his enemies, soon returned to his old manner, and the Germany clergy resisted the interference of the Pope. At the Roman Synod (February, 1075) Gregory then decreed numerous ecclesiastical penalties against resistant German and Lombard bishops, and five councillors of the King were once more laid under

the ban on account of simony. But in addition, at a Roman synod of the same year, he carried through the bold law of investiture, which prohibited bishops and abbots from receiving a bishopric or abbacy from the hands of a layman, and prohibited the rulers from conferring investiture on penalty of excommunication. Before the publication of the law Gregory caused confidential overtures to be made to the King, in order, as it seems, to give the King an opportunity of taking measures to obviate the threatening dangers which were involved in this extreme step. At the same time he himself was threatened and entangled on all hands; Robert Guiscard, whom he had previously excommunicated, he once more laid under the ban. . . . Henry, who in the summer of 1075 still negotiated directly with the Pope through ambassadors, after completely overthrowing the Saxons now ceased to pay any attention. . . . At Worms (24th January 1076) he caused a great portion of the German bishops to declare the deposition of the Pope who, as was said, was shattering the Empire and degrading the bishops. The Lombard bishops subscribed the decree of deposition at Piacenza and Pavia. Its hearers aroused a fearful storm against themselves at the Lenten Synod of Rome (1076), and Gregory now declared the excommunication and deposition of Henry, and released his subjects from their oath. Serious voices did indeed deny the Pope's right to the latter course; but a portion of the German bishops at once humbled themselves before the Pope, others began to waver, and the German princes, angered over Henry's government, demanded at Tribur in October, 1076, that the King should give satisfaction to the Pope, and the Pope hold judgment on Henry in Germany itself; if by his own fault Henry should remain under the ban for a year's time, another King was to be elected. Henry then resolved to make his peace with the Pope in order to take their weapon out of the hands of the German princes. Before the Pope came to Germany, he hastened in the winter with his wife and child from Besançon, over Mont Cenis, and found a friendly reception in Lombardy, so that the Pope, already on the way to Germany, betook himself to the Castle of Canossa to the Margravine Matilda of Tuscany, fearing an evil turn of affairs from Henry and the Lombards who were hostile to the Pope. But Henry was driven by his threatened position in Germany to seek release from the ban above every thing. This brought him as a penitent into the courtyard of Canossa (January 1077), where Gregory saw him stand from morning till evening during three days before he released him from the ban at the intercession of Matilda."—W. Moeller, *History of the Christian church in the Middle Ages*, pp. 256-258.—"It was on the 25th of January, 1077, that the scene took place, which, as is natural, has seized so strongly upon the popular imagination, and has so often supplied a theme for the brush of the painter, the periods of the historian, the verse of the poet. . . . The king was bent upon escaping at any sacrifice from the bond of excommunication and from his engagement to appear before the Pontiff, at the Diet summoned at Augsburg for the Feast of the Purification. The character in which he presented himself before Gregory was that of a penitent, throwing himself in deep contrition upon the Apostolic clemency, and desirous of reconciliation with the Church. The Pope, after so long experience of his duplicity, disbelieved in his sincerity, while, as a mere matter of policy, it was in the highest degree expedient to keep him to his pact with the German princes and prelates. . . . On three successive days did he appear barefooted in

the snowy court-yard of the castle, clad in the white garb of a penitent, suing for relief from ecclesiastical censure. It was difficult for Gregory to resist the appeal thus made to his fatherly compassion, the more especially as Hugh, Abbot of Cluny, and the Countess Matilda besought him 'not to break the bruised reed.' Against his better judgment, and in despite of the warnings of secular prudence, the Pope consented on the fourth day to admit to his presence the royal suppliant. . . . The conditions of absolution imposed upon the king were mainly four: that he should present himself upon a day and at a place, to be named by the Pontiff, to receive the judgment of the Apostolic See, upon the charges preferred by the princes and prelates of Germany, and that he should abide the Pontifical sentence—his subjects meanwhile remaining released from their oath of fealty; that he should respect the rights of the Church and carry out the papal decrees; and that breach of this engagement should entitle the Teutonic magnates to proceed to the election of another king. Such were the terms to which Henry solemnly pledged himself, and on the faith of that pledge the Pontiff, assuming the vestments of religion, proceeded to absolve him with the appointed rites. . . . So ends the first act in this great tragedy. Gregory's misgivings as to the king's sincerity soon receive too ample justification. 'Fear not,' the Pontiff is reported to have said, with half contemptuous sadness to the Saxon envoys who complained of his lenity to the monarch: 'Fear not, I send him back to you more guilty than he came.' Henry's words to the Pope had been softer than butter; but he had departed with war in his heart. . . . Soon he lays a plot for seizing Gregory at Mantua, whither the Pontiff is invited for the purpose of presiding over a Council. But the vigilance of the Great Countess foils the proposed treachery. Shortly the ill-advised monarch again assumes an attitude of open hostility to the Pope. . . . The Teutonic princes, glad to throw off an authority which they loathe and despise—not heeding the advice to pause given by the Roman legates—proceed at the Diet of Forchein to the election of another king. Their choice falls upon Rudolph of Swabia, who is crowned at Metz on the 26th of March, 1077. The situation is now complicated by the strife between the two rival sovereigns. . . . At last, in Lent, 1080, Gregory, no longer able to tolerate the continual violation by Henry of the pledges given at Canossa, and greatly moved by tidings of his new and manifold sacrileges and cruelties, pronounces again the sentence of excommunication against him, releasing his subjects from their obedience, and recognizing Rudolph as king. Henry thereupon calls together some thirty simoniacal and incontinent prelates at Brixen, and causes them to go through the form of electing an anti-pope in the person of Guibert, Archbishop of Ravenna, an ecclesiastic some time previously excommunicated by Gregory for grave offences. Then the tide turns in Henry's favour. At the battle of the Elster (15th October, 1080), Rudolph is defeated and mortally wounded, and on the same day the army of the Great Countess is overthrown and dispersed at La Volta in the Mantuan territory. Next year, in the early spring, Henry crosses the Alps and advances towards Rome. . . . A little before Pentecost Henry appears under the walls of the Papal city, expecting that his party within it will throw open the gates to him; but his expectation is disappointed. . . . In 1082, the monarch again advances upon Rome and ineffectually assaults it. In the next year he makes a third and more successful attempt, and captures the Leonine city. . . . On the 21st of March, 1084, the

Lateran Gate is open to Henry by the treacherous Romans, and the excommunicated monarch, with the anti-pope by his side, rides in triumph through the streets. The next day, Guibert solemnly takes possession of St. John Lateran, and bestows the Imperial Crown upon Henry in the Vatican Basilica.

of his once beautiful Rome, and after pausing for a few days, at Monte Casino, reaches Salerno, where his life pilgrimage is to end."—W. S. Lilly, *Turning-point of the Middle Ages* (*Contemporary Review*, Aug., 1882).—Gregory died at Salerno, May 25th, 1085, leaving Henry apparently trium-

HENRY IV AT CANOSSA

(After the painting by W. Paget)

Meanwhile Gregory is shut up in the Castle of St. Angelo. Thence, after six weeks, he is delivered by Guiscard, Duke of Calabria, the faithful vassal of the Holy See. But the burning of the city by Guiscard's troops, upon the uprising of the Romans, turns the joy of his rescue into mourning. Eight days afterwards he quits the smoking ruins

phant, but he had inspired the papacy with his will and mind, and the battle went on. At the end of another generation—in 1122—the question of investitures was settled by a compromise called the Concordat of Worms. "Both of the contending parties gave up something, but one much more than the other; the Church shadows, the State substance.

The more important elections should be henceforth made in the presence of the Emperor, he engaging not to interfere with them, but to leave to the Chapter or other electing body the free exercise of their choice. This was in fact to give over in most instances the election to the Pope; who gradually managed to exclude the Emperor from all share in Episcopal appointments. The temporalities of the See or Abbey were still to be made over to the Bishop or Abbot elect, not, however, any longer by the delivering to him of the ring and crozier, but by a touch of the sceptre, he having done homage for them, and taken the oath of obedience. All this was in Germany to find place before consecration, being the same arrangement that seven years earlier had brought the conflict between Anselm and our Henry I. to an end."—R. C. Trench, *Lectures on medieval church history*, lecture 9.—See also GERMANY: 973-1056; 1056-1122; CANOSSA, HENRY IV AT; ROME: Medieval city: 1081-1084.

1059.—Institution of procedure of papal election.—"According to the primitive custom of the church, an episcopal vacancy was filled up by election of the clergy and people belonging to the city or diocese. . . . It is probable that, in almost every case, the clergy took a leading part in the selection of their bishops; but the consent of the laity was absolutely necessary to render it valid. They were, however, by degrees excluded from any real participation, first in the Greek, and finally in the western church. . . . It does not appear that the early Christian emperors interfered with the freedom of choice any further than to make their own confirmation necessary in the great patriarchal sees, such as Rome and Constantinople, which were frequently the objects of violent competition, and to decide in controverted elections. . . . The bishops of Rome, like those of inferior sees, were regularly elected by the citizens, laymen as well as ecclesiastics. But their consecration was deferred until the popular choice had received the sovereign's sanction. The Romans regularly despatched letters to Constantinople or to the exarchs of Ravenna, praying that their election of a pope might be confirmed. Exceptions, if any, are infrequent while Rome was subject to the eastern empire. This, among other imperial prerogatives, Charlemagne might consider as his own. . . . Otho the Great, in receiving the imperial crown, took upon him the prerogatives of Charlemagne. There is even extant a decree of Leo VIII., which grants to him and his successors the right of naming future popes. But the authenticity of this instrument is denied by the Italians. It does not appear that the Saxon emperors went to such a length as nomination, except in one instance (that of Gregory V. in 996); but they sometimes, not uniformly, confirmed the election of a pope, according to ancient custom. An explicit right of nomination was, however, conceded to the emperor Henry III. in 1047, as the only means of rescuing the Roman church from the disgrace and depravity into which it had fallen. Henry appointed two or three very good popes. . . . This high prerogative was perhaps not designed to extend beyond Henry himself. But even if it had been transmissible to his successors, the infancy of his son Henry IV., and the factions of that minority, precluded the possibility of its exercise. Nicholas II., in 1059, published a decree which restored the right of election to the

Romans, but with a remarkable variation from the original form. The cardinal bishops (seven in number, holding sees in the neighbourhood of Rome, and consequently suffragans of the pope as patriarch or metropolitan) were to choose the supreme pontiff, with the concurrence first of the cardinal priests and deacons (or ministers of the parish churches of Rome), and afterwards of the laity. Thus elected, the new pope was to be presented for confirmation to Henry, 'now king, and hereafter to become emperor,' and to such of his successors as should personally obtain that privilege. This decree is the foundation of that celebrated mode of election in a conclave of cardinals which has ever since determined the headship of the church. . . . The real author of this decree, and of all other vigorous measures adopted by the popes of that age, whether for the assertion of their independence or the restoration of discipline, was Hildebrand [afterwards Pope Gregory VII]."—H. Hallam, *Middle Ages*, v. 2, ch. 7, pt. 1.

1066-1534.—Relations with England. See CHURCH OF ENGLAND: 1066-1534.

1077-1102.—Donation of Countess Matilda.—"The Countess Matilda, born in 1040, was daughter of Boniface, Marquis of Tuscany, and Beatrice, sister of the Emperor Henry III. On the death of her only brother, without issue, she succeeded to all his dominions, of Tuscany, Parma, Lucca, Mantua and Reggio. Rather late in life, she married Guelpho, son of the Duke of Bavaria—no issue resulting from their union. This princess displayed great energy and administrative ability in the troubled times in which she lived, occasionally appearing at the head of her own troops. Ever a devoted daughter of the Church, she specially venerated Pope Gregory VII., to whom she afforded much material support, in the difficulties by which he was constantly beset. To this Pontiff, she made a donation of a considerable portion of her dominions, for the benefit of the Holy See, 1077, confirming the same in a deed to Pope Pascal II., in 1102, entitled 'Cartula donationis Comitissæ Mathildis facta S. Gregorio PP. VII., et innovata Paschali PP.?'; apud Theiner 'Codex Diplomaticus,' etc., tom. 1, p. 10. As the original deed to Gregory VII. is not extant, and the deed of confirmation or renewal does not recite the territories conveyed, there is some uncertainty about their exact limits. However, it is generally thought that they comprised the district formerly known as the Patrimony of Saint Peter, lying on the right bank of the Tiber, and extending from Aquapendente to Ostia. The Countess Matilda died in 1115, aged 75."—J. N. Murphy, *Chair of Peter*, p. 235, footnote.—See below: 1122-1250.

1122-1250.—Continued conflict with the empire.—Influence of mendicant orders.—Popes and Hohenstaufen emperors.—"The struggle about investiture ended, as was to be expected, in a compromise; but it was a compromise in which all the glory went to the Papacy. Men saw that

the Papal claims had been excessive, even impossible; but the object at which they aimed, the freedom of the Church from the secularising tendencies of feudalism, was in the main obtained. . . . But the contest with the Empire still went on. . . . Some of the lands . . . [which Matilda had bequeathed to the Pope] were allodial, some were fiefs of the Empire; and the inheritance of Matilda was a fruitful source of contention to two powers already jealous of one another. The constant struggle that lasted for two centuries gave full scope for the development of the Italian towns. . . . The old Italian notion of establishing municipal freedom by an equilibrium of two contending powers was stamped still more deeply on Italian politics by the wars of Guelfs and Ghibellins. The union between the Papacy and the Lombard Republics was strong enough to humble the mightiest of the Emperors. Frederic Barbarossa, who held the strongest views of the Imperial prerogative, had to confess himself vanquished by Pope Alexander III. [see ITALY: 1154-1162, to 1174-1183], and the meeting of Pope and Emperor at Venice was a memorable ending to the long struggle; that the great Emperor should kiss the feet of the Pope whom he had so long refused to acknowledge, was an act which stamped itself with dramatic effect on the imagination of men and gave rise to fables of a still more lowly submission [see VENICE: 1177]. The length of the strife, the renown of Frederic, the unswerving tenacity of purpose with which Alexander had maintained his cause, all lent lustre to this triumph of the Papacy. The consistent policy of Alexander III., even in adverse circumstances, the calm dignity with which he asserted the Papal claims, and the wisdom with which he used his opportunities, made him a worthy successor of Gregory VII. at a great crisis in the fortunes of the Papacy. It was reserved, however, for Innocent III. to realise most fully the ideas of Hildebrand. If Hildebrand was the Julius, Innocent was the Augustus, of the Papal Empire. He had not the creative genius nor the fiery energy of his great forerunner; but his clear intellect never missed an opportunity, and his calculating spirit rarely erred from its mark. . . . On all sides Innocent III. enjoyed successes beyond his hopes. In the East, the crusading zeal of Europe was turned by Venice to the conquest of Constantinople [see CRUSADES: 1201-1203], and Innocent could rejoice for a brief space in the subjection of the Eastern Church. In the West, Innocent turned the crusading impulse to the interest of the Papal power, by diverting it against heretical sects which, in Northern Italy and the South of France, attacked the system of the Church [see ALBIGENSES]. . . . Moreover Innocent saw the beginning, though he did not perceive the full importance, of a movement which the reaction against heresy produced within the Church. The Crusades had quickened men's activity, and the heretical sects had aimed at kindling greater fervour of spiritual life. . . . By the side of the monastic aim of averting, by the prayers and penitence of a few, God's anger from a wicked world, there grew up a desire for self-devotion to missionary labour. Innocent III. was wise enough not to repulse this new enthusiasm, but find a place for it within the ecclesiastical system. Francis of Assisi gathered round him a body of followers who bound themselves to a literal following of the Apostles, to a life of poverty and labour, amongst the poor and outcast; Dominic of Castile formed a society which aimed at the suppression of heresy by assiduous teaching of the truth. The Franciscan and Dominican orders grew almost at once into power and importance,

and their foundation marks a great reformation within the Church [see DOMINICAN FRIARS; FRANCISCAN FRIARS]. The reformation movement of the eleventh century, under the skilful guidance of Hildebrand, laid the foundations of the Papal monarchy in the belief of Europe. The reformation of the thirteenth century found full scope for its energy under the protection of the Papal power; for the Papacy was still in sympathy with the conscience of Europe, which it could quicken and direct. These mendicant orders were directly connected with the Papacy, and were free from all episcopal control. Their zeal awakened popular enthusiasm; they rapidly increased in number and spread into every land. The Friars became the popular preachers and confessors, and threatened to supersede the old ecclesiastical order. Not only amongst the common people, but in the universities as well, did their influence become supreme. They were a vast army devoted to the service of the Pope, and overran Europe in his name. They

POPE INNOCENT III

preached Papal indulgences, they stirred up men to crusades in behalf of the Papacy, they gathered money for the Papal use. . . . The Emperor Frederic II., who had been brought up under Innocent's guardianship, proved the greatest enemy of the newly-won sovereignty of the Pope. King of Sicily and Naples, Frederic was resolved to assert again the Imperial pretensions of North Italy, and then win back the Papal acquisitions in the centre; if his plan had succeeded, the Pope would have lost his independence and sunk to be the instrument of the house of Hohenstaufen. Two Popes of inflexible determination and consummate political ability were the opponents of Frederic. Gregory IX. and Innocent IV. flung themselves with ardour into the struggle, and strained every nerve till the whole Papal policy was absorbed by the necessities of the strife. [See ITALY: 1183-1250; GERMANY: 1138-1197.] . . . Frederic II. died [1250], but the Popes pursued with their hostility his remotest descendants, and were resolved to sweep the very remembrance of him out of Italy. To accomplish their purpose, they did not hesitate to summon the aid of the stranger. Charles of Anjou appeared as their

champion, and in the Pope's name took possession of the Sicilian kingdom [see ITALY (Southern): 1250-1268]. By his help the last remnants of the Hohenstaufen house were crushed, and the claims of the Empire to rule over Italy were destroyed for ever. But the Papacy got rid of an open enemy only to introduce a covert and more deadly foe. The Angevin influence became superior to that of the Papacy, and French popes were elected that they might carry out the wishes of the Sicilian king. By its resolute efforts to escape from the power of the Empire, the Papacy only paved the way for a connexion that ended in its enslavement to the influence of France."—M. Creighton, *History of the papacy during the period of the Reformation*, v. 1, pp. 18-23.

1198-1216.—Establishing of papal sovereignty in the states of the church.—"Innocent III. may be called the founder of the States of the Church. The lands with which Pippin and Charles had invested the Popes were held subject to the suzerainty of the Frankish sovereign and owned his jurisdiction. On the downfall of the Carolingian Empire the neighbouring nobles, calling themselves Papal vassals, seized on these lands; and when they were ousted in the Pope's name by the Normans, the Pope did not gain by the change of neighbours. Innocent III. was the first Pope who claimed and exercised the rights of an Italian prince. He exacted from the Imperial Prefect in Rome the oath of allegiance to himself; he drove the Imperial vassals from the Matildan domain [see TUSCANY: 685-1115], and compelled Constance, the widowed queen of Sicily, to recognise the Papal suzerainty over her ancestral kingdom. He obtained from the Emperor Otto IV. (1201) the cession of all the lands which the Papacy claimed, and so established for the first time an undisputed title to the Papal States."—M. Creighton, *History of the papacy during the period of the Reformation*, v. 1, p. 21.

1198-1303.—Acme of papal power.—Pontificates from Innocent III to Boniface VIII.—"The epoch when the spirit of papal usurpation was most strikingly displayed was the pontificate of Innocent III. In each of the three leading objects which Rome had pursued, independent sovereignty, supremacy over the Christian church, control over the princes of the earth, it was the fortune of this pontiff to conquer. He realized . . . that fond hope of so many of his predecessors, a dominion over Rome and the central parts of Italy. During his pontificate Constantinople was taken by the Latins; and however he might seem to regret a diversion of the crusaders, which impeded the re-

covery of the Holy Land, he exulted in the obedience of the new patriarch and the reunion of the Greek church. Never, perhaps either before or since, was the great eastern schism in so fair a way of being healed; even the kings of Bulgaria and Armenia acknowledged the supremacy of Innocent, and permitted his interference with their ecclesiastical institutions. The maxims of Gregory VII. were now matured by more than a hundred years, and the right of trampling upon the necks of kings had been received, at least among churchmen, as an inherent attribute of the papacy. 'As the sun and the moon are placed in the firmament' (such is the language of Innocent), 'the greater as the light of the day, and the lesser of the night, thus are there two powers in the church—the pontifical, which, as having the charge of souls, is the greater; and the royal, which is the less, and to which the bodies of men only are intrusted.' Intoxicated with these conceptions (if we may apply such a word to successful ambition), he thought no quarrel of princes beyond the sphere of his jurisdiction. 'Though I cannot judge of the right to a fief,' said Innocent to the kings of France and England, 'yet it is my province to judge where sin is committed, and my duty to prevent all public scandals.' . . . Though I am not aware that any pope before Innocent III. had thus announced himself as the general arbiter of differences and conservator of the peace throughout Christendom, yet the scheme had been already formed, and the public mind was in some degree prepared to admit it. . . . The noonday of papal dominion extends from the pontificate of Innocent III. inclusively to that of Boniface VIII.; or, in other words, through the 13th century. Rome inspired during this age all the terror of her ancient name. She was once more the mistress of the world, and kings were her vassals."—H. Hallam, *Middle Ages*, v. 2, ch. 7, pt. 1-2.

1294-1348.—Stormy pontificate of Boniface VIII.—Conflict with Philip IV of France.—

"Babylonish Captivity."—Purchase of Avignon. —Boniface VIII, who came to the Papal throne in 1294, "was a man of so much learning that Petrarch extols him as the wonder of the world. His craft and cruelty, however, were shown in his treatment of Celestine V. [his predecessor], whom he first persuaded to resign the pontificate, five months after his election, on account of his inexperience in politics; and then, having succeeded to the chair, instead of letting the good man return to the cloister for which he panted, he kept him in confinement to the day of his death. His resentment of the opposition of the two cardinals Colonna to his election was so bitter, that not content with degrading them, he decreed the whole family—one of the most illustrious in Rome—to be for ever infamous, and incapable of ecclesiastical dignities. He pulled down their town of Præneste, and ordered the site to be sown with salt to extinguish it, like Carthage, for ever. This pontificate is famous for the institution of the Jubilee, though, according to some accounts, it was established a century before by Innocent III. By a bull dated 22nd February 1300, Boniface granted a plenary remission of sins to all who, before Christmas, in that and every subsequent hundredth year, should visit the churches of St. Peter and St. Paul daily, for 30 days if inhabitants of Rome, and for half that time if strangers. His private enemies, the Colonnas, Frederic of Sicily, who had neglected to pay his tribute, and the abettors of the Saracens, were the only persons excluded. The city was crowded with strangers, who flocked to gain the indulgence; enormous sums were offered at the holy tombs; and the solemnity became so profitable that Clement VI. reduced the period for its observance from 100 years to 50, and later popes have brought it down to 25. Boniface appeared at the jubilee with the spiritual and temporal swords carried before him, the bearers of which proclaimed the text,—'Behold, here are two swords.' . . . The pope had the pleasure of receiving a . . . respectful recognition from the barons of Scotland. Finding themselves hard pressed by the arms of Edward I., they resolved to accept a distant, in preference to a neighbouring, master; accordingly, they tendered the kingdom to the pope, pretending that, from the most ancient times, Scotland had been a fief of the holy Roman See. Boniface, eagerly embracing the offer, commanded the archbishop of Canterbury to require the king to withdraw his troops, and submit his pretensions to the apostolic tribunal. . . . Boniface got no other satisfaction than to be told that the laws of England did not permit the king to subject the rights of his crown to any foreign tribunal. His conflict with the king of France was still more unfortunate. [See also FRANCE: 1285-1314.] Philip the Fair, like . . . Edward I., thought fit to compel the clergy to contribute towards the expenses of his repeated campaigns. The pope thereupon issued a bull entitled 'Clericis laicos' (1296), charging the laity with inveterate hostility to the clergy, and prohibiting, under pain of excommunication, any payment out of ecclesiastical revenues without his consent. [See also BULLS, PAPAL: 1206.] The king retorted by prohibiting the export of coin or treasure from his dominions, without license from the crown. This was cutting off the pope's revenue at a blow, and so modified his anger that he allowed the clergy to grant a 'free benevolence' to the king, when in urgent need. A few years after (1301), Philip imprisoned a bishop on charge of sedition, when Boniface thundered out his bulls 'Salvator mundi,' and 'Ausculata fili,' the first of which suspended all privileges accorded by the Holy See

to the French king and people, and the second, asserting the papal power in the now familiar text from Jeremiah [Jer. i. 10], summoned the superior clergy to Rome. Philip burned the bull, and prohibited the clergy from obeying the summons. The peers and people of France stood by the crown, treating the exhortations of the clergy with defiance. The pope, incensed at this resistance, published the decretal called 'Unam sanctam,' which affirms the unity of the Church, without which there is no salvation, and hence the unity of its head in the successor of St. Peter. Under the pope are two swords, the spiritual and the material—the one to be used by the church, the other for the church. . . . The temporal sword is . . . subject to the spiritual, and the spiritual to God only. The conclusion is, 'that it is absolutely essential to the salvation of every human being that he be subject unto the Roman pontiff.' The king, who showed great moderation, appealed to a general council, and forbade his subjects to obey any orders of Boniface till it should be assembled. The pope

POPE BONIFACE VIII

resorted to the usual weapons. He drew up a bull for the excommunication of the king; offered France to Albert of Austria, king of the Romans, and wrote to the king of England to incite him to prosecute his war. Meantime, Philip having sent William de Nogaret on an embassy to the pope, this daring envoy conceived the design of making him prisoner. Entering Anagni [the pope's native town and frequent residence, forty miles from Rome] at the head of a small force, privately raised in the neighbourhood, the conspirators, aided by some of the papal household, gained possession of the palace and burst into the pope's presence. Boniface, deeming himself a dead man, had put on his pontifical robes and crown, but these had little effect on the irreverent intruders. De Nogaret was one of the Albigenses; his companion, a Colonna, was so inflamed at the sight of his persecutor that he struck him on the face with his mailed hand, and would have killed him but for the intervention of the other. The captors unaccountably delaying to carry off their prize, the people of the place rose and rescued the Holy Father. He hastened back to Rome, but died of the shock a month after, leaving a dangerous

feud between the Church and her eldest son."—G. Trevor, *Rome: From the fall of the Western empire, ch. 9.*—"Boniface has been consigned to infamy by contemporary poets and historians, for the exhibition of some of the most revolting features of the human character. Many of the charges, such as that he did not believe in eternal life; that he was guilty of monstrous heresy; that he was a wizard; and that he asserted that it is no sin to indulge in the most criminal pleasures—are certainly untrue. They are due chiefly to his cruelty to Celestine and the Celestinians, and his severity to the Colonnas, which led the two latter to go everywhere blackening his character. They have been exaggerated by Dante; and they may be ascribed generally to his pride and violence, and to the obstinate determination, formed by a man who 'was born an age too late,' to advance claims then generally becoming unpopular, far surpassing in arrogance those maintained by the most archbi-

of his quarrel against Philip. The archbishop, however, had secretly come to terms with the king, and his first act, as Clement V., was to summon the cardinals to attend him at Lyons, where he resolved to celebrate his coronation. The Sacred College crossed the Alps with undissembled repugnance, and two-and-seventy years elapsed before the Papal court returned to Rome. This period of humiliation and corruption the Italian writers not inaptly stigmatise as the 'Babylonish captivity.' Clement began his pontificate by honourably fulfilling his engagements with the French. He absolved the king and all his subjects. . . . If it be true that the king claimed . . . the condemnation of Boniface as a heretic, Clement had the manliness to refuse. He ventured to inflict a further disappointment by supporting the claim of Henry of Luxembourg to the empire in preference to the French king's brother. To escape the further importunities of his too powerful ally, the pope re-

The seat of the papal court, 1309-1377

trary of his predecessors. . . . This victory of Philip over Boniface was, in fact, the commencement of a wide-spread reaction on the part of the laity against ecclesiastical predominance. The Papacy had first shown its power by a great dramatic act, and its decline was shown in the same manner. The drama of Anagni is to be set against the drama of Canossa."—A. R. Pennington, *Church in Italy, ch. 6.*—"The next pope, Benedict XI., endeavoured to heal the breach by annulling the decrees of Boniface against the French king, and reinstating the Colonnas; but he was cut off by death in ten months from his election [1304], and it was generally suspected that his removal was effected by poison. . . . On the death of Benedict, many of the cardinals were for closing the breach with France by electing a French pope; the others insisted that an Italian was essential to the independence of the Holy See. The difference was compromised by the election of the archbishop of Bordeaux, a Frenchman by birth, but owing his preferments to Boniface, and an active supporter

moved into the dominions of his own vicar, the king of Naples (1309). The place selected was Avignon, belonging to Charles the Lame as count of Provence. . . . In the 9th century, it [Avignon] passed to the kings of Arles, or Burgundy, but afterwards became a free republic, governed by its own consuls, under the suzerainty of the count of Provence. . . . The Neapolitan dynasty, though of French origin, was independent of the French crown, when the pope took up his residence at Avignon. Charles the Lame was soon after succeeded by his third son Robert, who, dying in 1343, left his crown to his granddaughter Joanna, the young and beautiful wife of Andrew, prince of Hungary. . . . In one of her frequent exiles Clement took advantage of her necessities to purchase her rights in Avignon for 80,000 gold florins, but this inadequate price was never paid. The pope placed it to the account of the tribute due to himself from the Neapolitan crown, and having procured a renunciation of the paramount suzerainty of the emperor, he took possession of the city and

territory as absolute sovereign (1348).”—G. Trevor, *Rome: From the fall of the Western empire, ch. 9-10.*

1305-1377.—Popes of “the Babylonish Captivity” at Avignon.—The following is the succession of the popes during the Avignon period: Boniface VIII, 1294-1303; Benedict XI, 1303-1304; Clement V, 1305-1314; John XXII, 1316-1334; Benedict XII, 1334-1342; Clement VI, 1342-1352; Innocent VI, 1352-1362; Urban V, 1362-1370; Gregory XI, 1371-1378.—“The Avignon Popes without exception, were all more or less dependent upon France. Frenchmen themselves, and surrounded by a College of Cardinals in which the French element predominated, they gave a French character to the government of the Church. This character was at variance with the principle of universality inherent in it and in the Papacy. . . . The migration to France, the creation of a preponderance of French Cardinals, and the consequent election of seven French Popes in succession, necessarily compromised the position of the Papacy in the eyes of the world, creating a suspicion that the highest spiritual power had become the tool of France. This suspicion, though in many cases unfounded, weakened the general confidence in the Head of the Church, and awakened in the other nations a feeling of antagonism to the ecclesiastical authority which had become French. The bonds which united the States of the Church to the Apostolic See were gradually loosened. . . . The dark points of the Avignon period have certainly been greatly exaggerated. The assertion that the Government of the Avignon Popes was wholly ruled by the ‘will and pleasure of the Kings of France,’ is, in this general sense, unjust. The Popes of those days were not all so weak as Clement V., who submitted the draft of the Bull, by which he called on the Princes of Europe to imprison the Templars, to the French King. Moreover, even this Pope, the least independent of the 14th century Pontiffs, for many years offered a passive resistance to the wishes of France, and a writer [Wenck], who has thoroughly studied the period, emphatically asserts that only for a few years of the Pontificate of Clement V. was the idea so long associated with the ‘Babylonian Captivity’ of the Popes fully realized. The extension of this epithet to the whole of the Avignon sojourn is an unfair exaggeration.”—L. Pastor, *History of the popes from the close of the Middle Ages, v. 1, pp. 58-60.*

1352-1378.—Subjugation of states of the church and the return from Avignon to Rome.—Revolt and war in Papal States, supported by Florence.—“Under the pontificate of Innocent VI. the advantages reaped by the Papal See from its sojourn at Avignon seemed to have come to an end. The disturbed condition of France no longer

offered them security and repose. . . . Moreover, the state of affairs in Italy called loudly for the Pope’s intervention. . . . The desperate condition of the States of the Church, which had fallen into the hands of small princes, called for energetic measures, unless the Popes were prepared to see them entirely lost to their authority. Innocent VI. sent into Italy a Spanish Cardinal, Gil Albornoz, who had already shown his military skill in fighting against the Moors. The fiery energy of Albornoz was crowned with success, and the smaller nobles were subdued in a series of hard fought battles. In 1367 Urban V. saw the States of the Church once more reduced into obedience to the Pope.” Several motives, accordingly, combined “to urge Urban V., in 1367, to return to Rome amid the cries of his agonised Cardinals, who shuddered to leave the luxury of Avignon for a land which they held to be barbarous. [See ROME: Modern city: 1367-1369.] A brief stay in Rome was sufficient to convince Urban V. that the fears of his Cardinals were not unfounded. . . . After a visit of three years Urban returned to Avignon; his death, which happened three months after his return, was regarded by many as a judgment of God upon his desertion of Rome. Urban V. had returned to Rome because the States of the Church were reduced to obedience: his successor, Gregory XI., was driven to return through dread of losing entirely all hold upon Italy. The French Popes awakened a strong feeling of natural antipathy among their Italian subjects, and their policy was not associated with any of the elements of state life existing in Italy. Their desire to bring the States of the Church immediately under their power involved the destruction of the small dynasties of princes, and the suppression of the democratic liberties of the people. Albornoz had been wise enough to leave the popular governments untouched, and to content himself with bringing the towns under the Papal obedience. But Urban V. and Gregory XI. set up French governors, whose rule was galling and oppressive; and a revolt against them was organised by Florence [1370], who, true to her old traditions, unfurled a banner inscribed only with the word ‘Liberty.’ The movement spread through all the towns in the Papal States, and in a few months the conquests of Albornoz had been lost. The temporal dominion of the Papacy might have been swept away if Florence could have brought about the Italian league which she desired. But Rome hung back from the alliance, and listened to Gregory XI., who promised to return if Rome would remain faithful. The Papal excommunication handed over the Florentines to be the slaves of their captors in every land, and the Kings of England and France did not scruple to use the opportunity offered to their cupidity. Gregory XI. felt that only the Pope’s presence could save Rome for the Papacy. In spite of evil omens—for his horse refused to let him mount when he set out on his journey—Gregory XI. left Avignon; in spite of the entreaties of the Florentines Rome again joyfully welcomed the entry of its Pope in 1377. But the Pope found his position in Italy to be surrounded with difficulties. His troops met with some small successes, but he was practically powerless, and aimed only at settling terms of peace with the Florentines. A congress was called for this purpose, and Gregory XI. was anxiously awaiting its termination that he might return to Avignon, when death seized him, and his last hours were embittered by the thoughts of the crisis that was now inevitable.”—M. 1377-1417.—Election of Urban VI and Clement VII.—Great western schism.—Council of Pisa.—Forty years of popes and anti-popes.—“Gregory XI. returned [to Rome], in January, 1377. The keys of the Castle St. Angelo were sent to him at Corneto; the papal Court was re-established in Rome; but he survived only about a year, and died in March, 1378. Then came the election of a new Pope, which was held in the Castle St. Angelo. While the conclave was sitting, a crowd gathered round the place, crying out, ‘Romano lo volemo’—we will have a Roman for Pope. Yet, notwithstanding this clamour, Cardinal Prignano, Archbishop of Bari, and a Neapolitan by birth, was finally chosen, under the title of Urban VI.—[this being an intended compromise between the Italian party and the French party in the college of cardinals]. When Cardinal Orsini presented himself at the window to announce that a new Pope had been elected, the mob below cried out, ‘His name, his name!’ ‘Go to St. Peter’s and you will learn,’ answered the Cardinal. The people, misunderstanding his answer, supposed him to announce the election of Cardinal Tebaldeschi, who was arch-priest of St. Peter’s, and a Roman by birth. This news was received with great joy and acclamation, [which turned to rage when the fact was known. Then] the people . . . broke into still fiercer cries, rushed to arms, and gathering round the conclave, threatened them with death unless a Roman was elected. But the conclave was strong in its position, and finally the people were pacified, and accepted Urban VI. Such, however, was the fear of the Cardinals, that they were with difficulty persuaded to proceed to the Vatican and perform the ceremonies necessary for the installation of the new Pope. This, however, finally was done, and the Castle was placed in the charge of Pietro Guntellino, a Frenchman, and garrisoned by a Gallic guard, the French Cardinals remaining also within its walls for safety.”—W. W. Story, *Castle of St. Angelo, ch. 5.*—See also CASTLE ST. ANGELO.—“Urban was a learned, pious, and austere man; but, in his zeal for the reformation of manners, the correction of abuses, and the retrenchment of extravagant expenditure, he appears to have been wanting in discretion; for immediately after his election he began to act with harshness to the members of the Sacred College, and he also offended several of the secular princes. Towards the end of June, 12 of the cardinals—11 Frenchmen and one Spaniard—obtained permission to leave Rome, owing to the summer heats, and withdrew to Anagni. Here, in a written instrument, dated 9th August, 1378, they protested against the election, as not having been free, and they called on Urban to resign. A few days later, they removed to Fondi, in the kingdom of Naples, where they were joined by three of the Italians whom they had gained over to their views; and, on the 10th of September, the 15 elected an anti-pope, the French Cardinal Robert of Cevennes [more frequently called Robert of Geneva], who took the name of Clement VII. and reigned at Avignon 16 years, dying September 16, 1394. Thus there were two claimants of the Papal throne—Urban holding his court at Rome, and Clement residing with his followers at Avignon. The latter was

strong in the support of the sovereigns of France, Scotland, Naples, Aragon, Castile, and Savoy; while the remainder of Christendom adhered to Urban. Clement was succeeded by Peter de Luna, the Cardinal of Aragon, who, on his election, assumed the name of Benedict XIII., and reigned at Avignon 23 years—1394-1417. This lamentable state of affairs lasted altogether 40 years. Urban’s successors at Rome, duly elected by the Italian cardinals and those of other nations acting with them, were, Boniface IX., a Neapolitan, 1389-1404; Innocent VII., a native of Sulmona, 1404-1406; Gregory XII., a Venetian, 1406-1409; Alexander V., a native of Candia, who reigned ten months, 1409-1410; and John XXIII., a Neapolitan, 1410-1417. . . . Although the Popes above enumerated, as having reigned at Rome, are now regarded as the legitimate pontiffs, and as such, are inscribed in the Catalogues of Popes, while Clement and Benedict are classed as anti-popes, there prevailed at the time much uncertainty on the subject. . . . In February, 1395, Charles VI. of France convoked an assembly of the clergy of his dominions, under the presidency of Simon Cramaud, Patriarch of Alexandria, in order, if possible, to terminate the schism. The assembly advised that the rival Pontiffs, Boniface IX. and Benedict XIII., should abdicate. The same view was taken by most of the universities of Europe,” but the persons chiefly concerned would not accept it. Nor was it found possible in 1408 to bring about a conference of the two popes. The cardinals, then, of both parties, withdrew support from the factious pontiffs and held a general meeting at Leghorn. There they agreed that Gregory XII and Benedict XIII had equally lost all claim to obedience, and they resolved to convoke, on their own authority “a General Council, to meet at Pisa, on the 25th of March, 1409. Gregory and Benedict were duly informed thereof, and were requested to attend the council. . . . The Council of Pisa sat from March 25th to August 7th, 1409. There were present 24 cardinals of both ‘obediences,’ 4 patriarchs, 12 archbishops, 80 bishops, 87 abbots; the procurators of 102 absent archbishops and bishops, and of 200 absent abbots; the generals of 4 mendicant orders; the deputies of 13 Universities; . . . the representatives of over 100 cathedral and collegiate chapters, 282 doctors and licentiates of canon and civil law; and the ambassadors of the Kings of England, France, Poland, Bohemia, Portugal, Sicily, and Cyprus.” Both claimants of the papacy were declared unworthy to preside over the church, and forbidden to act as pope. In June, the conclave of cardinals assembled and elected a third pope—one Peter Filargo, a friar minor, who took the name of Alexander V, but who died ten months afterwards. The cardinals then elected as his successor Cardinal Cossa, “a politic worldly man, who assumed the name of John XXIII.” But, meantime, Germany, Naples and some of the other Italian states still adhered to Gregory, and Benedict kept the support of Scotland, Spain and Portugal. The church was as much divided as ever. “The Council of Pisa . . . only aggravated the evil which it laboured to cure. Instead of two, there were now three claimants of the Papal Chair. It was reserved for the General Council of Constance to restore union and peace to the Church.”—J. N. Murphy, *Chair of Peter, ch. 20.*—“The amount of evil wrought by the schism of 1378, the longest known in the history of the Papacy, can only be estimated, when we reflect that it occurred at a moment, when thorough reform in ecclesiastical affairs was a most urgent need. This was now

utterly out of the question, and, indeed, all evils which had crept into ecclesiastical life were infinitely increased. Respect for the Holy See was also greatly impaired, and the Popes became more than ever dependent on the temporal power, for the schism allowed each Prince to choose which Pope he would acknowledge. In the eyes of the people, the simple fact of a double Papacy must have shaken the authority of the Holy See to its very foundations. It may truly be said that these fifty years of schism prepared the way for the great Apostasy of the 16th century."—L. 1414-1418.—Council of Constance.—Election of Martin V.—Ending of great schism and failure of church reform.—"In April, 1412, the Pope [John XXIII], to preserve appearances, opened at Rome the council which had been agreed upon at Pisa for the reformation of the Church in her Head and members. Quite a small number of bishops put in an appearance, who, after having condemned the antipopes, and some heretical propositions of Wycliffe and John Huss, hastily adjourned. John, who does not seem to have had any very earnest wish to correct his own life, and who, consequently, could not be expected to be over solicitous about the correction of those of others, was carefully provident to prevent the bishops coming to Rome in excessive numbers. He had come to a secret understanding with Ladislaus, [king of Naples] his former enemy, that the latter should have all the roads well guarded. Ladislaus soon turned against the Pope, and forced him to quit Rome, and seek refuge, first at Florence, and next at Bologna (A. D. 1413). From this city John opened communications with the princes of Europe with the purpose of fixing a place for holding the council. . . . The Emperor Sigismund appointed the city of Constance, where the council did, in fact, convene, November 1, A. D. 1414. . . . The abuses which prevailed generally throughout the Church, and which were considerably increased by the existence of three rival Popes, and by the various theories on Church government called forth by the controversy, greatly perplexed men's minds, and created much anxiety as to the direction affairs might eventually take. This unsettled state of feeling accounts for the unusually large number of ecclesiastics who attended the council. There were 18,000 ecclesiastics of all ranks, of whom, when the number was largest, 3 were patriarchs, 24 cardinals, 33 archbishops, close upon 150 bishops, 124 abbots, 50 provosts, and 300 doctors in the various degrees. Many princes attended

in person. There were constantly 100,000 strangers in the city, and, on one occasion, as many as 150,000, among whom were many of a disreputable character. Feeling ran so high that, as might have been anticipated, every measure was extreme. Owing to the peculiar composition of the Council, at which only a limited number of bishops were present, and these chiefly in the interest of John XXIII., it was determined to decide all questions, not by a majority of episcopal suffrages, but by that of the representatives of the various nations, including doctors. The work about to engage the Council was of a threefold character, viz., 1. To terminate the papal schism; 2. To condemn errors against faith, and particularly those of Huss; and 3. To enact reformatory decrees. . . . It was with some difficulty that John could be induced to attend at Constance, and when he did finally consent, it was only because he was forced to take the step by the representations of others. . . . Regarding the Council as a continuation of that of Pisa, he naturally thought that he would be recognized as the legitimate successor of the Pope chosen by the latter. . . . All questions were first discussed by the various nations, each member of which had the right to vote. Their decision was next brought before a general conference of nations, and this result again before the next session of the Council. This plan of organisation destroyed the hopes of John XXIII., who relied for success on the preponderance of Italian prelates and doctors. . . . To intimidate John, and subdue his resistance, a memorial, written probably by an Italian, was put in circulation, containing charges the most damaging to that pontiff's private character. . . . So timely and effective was this blow that John was thenceforth utterly destitute of the energy and consideration necessary to support his authority, or direct the affairs of the Council." In consequence, he sent a declaration to the Council that, in order to give peace to the Church, he would abdicate, provided his two rivals in the Papacy, Gregory XII and Benedict XIII, would also resign. Later, in March, 1415, he repeated this promise under oath. The Emperor, Sigismund, was about to set out to Nizza [Nice] to induce the other claimants to resign, when John's conduct gave rise to a suspicion that he did not intend to act in good faith. He was charged with an intention to escape from the Council, with the assistance of Frederic, Duke of Austria. He now gave his promise under oath not to depart from the city before the Council had dissolved. "But, notwithstanding these protestations, John escaped (March 21, 1415), disguised as a groom, during a great tournament arranged by the duke, and made his way to Schaffhausen, belonging to the latter, thence to Lautenburg and Freiburg, thence again to the fortress of Brisac, whence he had intended to pass to Burgundy, and on to Avignon. That the Council went on with its work after the departure of John, and amid the general perplexity and confusion, was entirely due to the resolution of the emperor, the eloquence of Gerson [of the University of Paris], and the indefatigable efforts of the venerable master, now cardinal, d'Ailly. The following memorable decrees were passed: . . . 'A Pope can neither transfer nor dissolve a general Council without the consent of the latter, and hence the present Council may validly continue its work even after the flight of the Pope. All persons, without distinction of rank, even the Pope himself, are bound by its decisions, in so far as these relate to matters of faith, to the closing of the present schism, and to the reformation of the

Church of God in her Head and members. All Christians, not excepting the Pope, are under obligation to obey the Council.' . . . Pope John, after getting away safe to Schaffhausen, complained formally of the action of the Council towards himself, summoned all the cardinals to appear personally before him within six days, and sent memorials to the King of France [and others], . . . justifying his flight. Still the Council went on with its work; disposed, after a fashion, of the papal difficulty, and of the cases of Huss and Jerome of Prague [whom it condemned and delivered to the civil authorities, to be burned. (See BOHEMIA: 1405-1415.)]. . . In the meantime, Frederic, Margrave of Brandenburg, acting under the joint order of Council and Emperor, arrested the fugitive Pope at Freiburg, and led him a prisoner to Radolfzell, near Constance, where 54 (originally 72) charges—some of them of a most disgraceful character—extracted from the testimony of a host of witnesses, were laid before him by a committee of the Council." He attempted no defense, and on May 20, 1415, John XXIII was formally and solemnly deposed and was kept in confinement for the next three years. In July, Gregory XII was persuaded to resign his papal claims and to accept the dignity of Cardinal Legate of Ancona. Benedict XIII, more obstinate, refused to give up his pretensions, though abandoned even by the Spaniards, and was deposed, on July 26th, 1417. "The three claimants to the papacy having been thus disposed of, it now remained to elect a legitimate successor to St. Peter. Previously to proceeding to an election, a decree was passed providing that, in this particular instance, but in no other, six deputies of each nation should be associated with the cardinals in making the choice." It fell upon Otho Colonna, "a cardinal distinguished for his great learning, his purity of life, and gentleness of disposition." In November, 1417, he was anointed and crowned under the name of Martin V. The council was formally closed on the 10th of May following, without having accomplished the work of church reformation which had been part of its intended mission. "Sigismund and the German nation, and for a time the English also, insisted that the question of the reformation of the Church, the chief points of which had been sketched in a schema of 18 articles, should be taken up and disposed of before proceeding to the election of a Pope." But in this they were baffled. "Martin, the newly elected Pope, did not fully carry out all the proposed reforms. It is true, he appointed a committee composed of six cardinals and deputies from each nation, and gave the work into their hands; but their councils were so conflicting that they could neither come to a definite agreement among themselves, nor would they consent to adopt the plan of reform submitted by the Pope."—J. Alzog, *Manual of universal church history*, v. 3, sect. 270-271.—"The election of Martin V. might have been a source of unalloyed happiness to Christendom, if he had at once taken the crucial question of Church Reform vigorously in hand; but the Regulations of the Chancery issued soon after his accession showed that little was to be expected from him in this respect. They perpetuated most of the practices in the Roman Court which the Synod had designated as abuses. Neither the isolated measures afterwards substituted for the universal reform so urgently required, nor the Concordats made with Germany, the three Latin nations, and England, sufficed to meet the exigencies of the case, although they produced a certain amount of good. The Pope was indeed placed in a most difficult

position, in the face of the various and opposite demands made upon him, and the tenacious resistance offered by interests now long established to any attempt to bring things back to their former state. The situation was complicated to such a degree that any change might have brought about a revolution. It must also be borne in mind that all the proposed reforms involved a diminution of the Papal revenues; the regular income of the Pope was small and the expenditure was very great. For centuries, complaints of Papal exactions had been made, but no one had thought of securing to the Popes the regular income they required. . . . The delay of the reform, which was dreaded by both clergy and laity, may be explained, though not justified, by the circumstances we have described. It was an unspeakable calamity that ecclesiastical affairs still retained the worldly aspect caused by the Schism, and that the much needed amendment was again deferred."—L. Pastor, *History of the popes, from the close of the Middle Ages*, v. 1, pp. 209-210.

1431.—Election of Eugenius IV.
 1431-1448.—Council of Basel.—Triumph of the pope and defeat, once more, of church reform.—"The Papacy had come forth so little scathed from the perils with which at one time these assemblies menaced it, that a Council was no longer that word of terror which a little before it had been. There was more than one motive for summoning another, if indeed any help was to be found in them. Bohemia, wrapt in the flames of the Hussite War, was scorching her neighbours with fiercer fires than those by which she herself was consumed. The healing of the Greek Schism was not yet confessed to be hopeless, and the time seemed to offer its favourable opportunities. No one could affirm that the restoration of sound discipline, the reformation of the Church in head and in members, had as yet more than begun. And thus, in compliance with the rule laid down at the Council of Constance,—for even at Rome they did not dare as yet openly to set at nought its authority,—Pope Eugenius IV called a third Council together [1431], that namely of Basel. . . . Of those who sincerely mourned over the Church's ills, the most part, after the unhappy experience of the two preceding Councils, had so completely lost all faith in these assemblies that slight regard was at first yielded to the summons; and this Council seemed likely to expire in its cradle as so many had done before, as not a few should do after. The number of Bishops and high Church dignitaries who attended it was never great. A democratic element made itself felt throughout all its deliberations; a certain readiness to resort to measures of a revolutionary violence, such as leaves it impossible to say that it had not itself to blame for much of its ill-success. At the first indeed it displayed unlooked-for capacities for work, entering into important negotiations with the Hussites for their return to the bosom of the Church; till the Pope, alarmed at these tokens of independent activity, did not conceal his ill-will, making all means in his power to dissolve the Council. This, meanwhile, growing in strength and in self-confidence, re-affirmed all of strongest which had been affirmed already at Pisa and Constance, concerning the superiority of Councils over Popes; declared of itself that, as a lawfully assembled Council, it

could neither be dissolved, nor the place of its meeting changed, unless by its own consent; and, having summoned Eugenius and his Cardinals to take their share in its labours, began the work of reformation in earnest. Eugenius yielded for the time; recalled the Bull which had hardly stopped short of anathematizing the Council; and sent his legates to Basel. Before long, however, he and the Council were again at strife; Eugenius complaining, apparently with some reason, that in these reforms one source after another of the income which had hitherto sustained the Papal Court was being dried up, while no other provision was made for the maintenance of its due dignity, or even for the defraying of its necessary expenses. As the quarrel deepened the Pope removed the seat of the Council to Ferrara (Sept. 18, 1437), on the plea that negotiations with the envoys of the Greek Church would be more conveniently conducted in an Italian city; and afterwards to Florence. The Council refused to stir, first suspending (Jan. 24, 1438), then deposing the Pope (July 7, 1430), and electing another, Felix V, in his stead; this Felix being a retired Duke of Savoy, who for some time past had been playing the hermit in a villa on the shores of the lake of Geneva [see SAVOY: 11th-15th centuries]. The Council in this extreme step failed to carry public opinion with it. It was not merely that Eugenius denounced his competitor by the worst names he could think of, declaring him a hypocrite, a wolf in sheep's clothing, a Moloch, a Cerberus, a Golden calf, a second Mahomet, an anti-Christ; but the Church in general shrank back in alarm at the prospect of another Schism, to last, it might be, for well-nigh another half century. And thus the Council lost ground daily; its members fell away; its confidence in itself departed; and, though it took long in dying, it did in the end die a death of inanition (June 23, 1448). Again the Pope remained master of the situation, the last reforming Council,—for it was the last,—having failed in all which it undertook as completely and as ingloriously as had done the two which went before.”—R. C. Trench, *Lectures on medieval church history, lecture 20*.—“In the year 1438 the Emperor John and the Greek Patriarch made their appearance at the council of Ferrara. In the following year the council was transferred to Florence, where, after long discussions, the Greek emperor, and all the members of the clergy who had attended the council, with the exception of the Bishop of Ephesus, adopted the doctrine of the Roman church concerning the possession of the Holy Ghost, the addition to the Nicene Creed, the nature of purgatory, the condition of the soul after its separation from the body until the day of judgment, the use of unleavened bread in the sacrament of the Lord's Supper, and the papal supremacy. The union of the two churches was solemnly ratified in the magnificent cathedral of Florence on the 6th of July 1430, when the Greeks abjured their ancient faith in a vaster edifice and under a loftier dome than that of their own much-vaunted temple of St. Sophia. The Emperor John derived none of the advantages he had expected from the simulated union of the churches. Pope Eugenius, it is true, supplied him liberally with money, and bore all the expenses both of the Greek court and clergy during their absence from Constantinople; he also presented the emperor with two galleys, and furnished him with a guard of 300 men, well equipped, and paid at the cost of the papal treasury; but his Holiness forgot his promise to send a fleet to defend Constantinople, and none of the Christian princes

showed any disposition to fight the battles of the Greeks, though they took up the cross against the Turks. On his return John found his subjects indignant at the manner in which the honour and doctrines of the Greek church had been sacrificed in an unsuccessful diplomatic speculation. The bishops who had obsequiously signed the articles of union at Florence, now sought popularity by deserting the emperor, and making a parade of their repentance, lamenting their wickedness in falling off for a time from the pure doctrine of the orthodox church. The only permanent result of this abortive attempt at Christian union was to increase the bigotry of the orthodox, and to furnish the Latins with just grounds for condemning the perfidious dealings and bad faith of the Greeks. In both ways it assisted the progress of the Othoman power. The emperor John, seeing public affairs in this hopeless state, became indifferent to the future fate of the empire, and thought only of keeping on good terms with the sultan.”—G. Finlay, *History of the Byzantine and Greek empires, v. 2, bk. 4, ch. 2, sect. 6*.—Pope “Eugenius died, February 23, 1447; . . . but his successors were able to secure the fruits of the victory [over the Council of Basel] for a long course of years. The victory was won at a heavy cost, both for the Popes and for Christendom; for the Papacy recovered its ascendancy far more as a political than as a religious power. The Pope became more than ever immersed in the international concerns of Europe, and his policy was a tortuous course of craft and intrigue, which in those days passed for the new art of diplomacy. . . . To revert to a basis of spiritual domination lay beyond the vision of the energetic princes, the refined dilettanti, the dexterous diplomatists, who sat upon the chair of St. Peter during the age succeeding the Council of Basel. Of signs of uneasiness abroad they could not be quite ignorant; but they sought to divert men's minds from the contemplation of so perplexing a problem as Church reform, by creating or fostering new atmospheres of excitement and interest; . . . or at best (if we may adopt the language of their apologists) they took advantage of the literary and artistic movement then active in Italy as a means to establish a higher standard of civilisation which might render organic reform needless.”—R. L. Poole, *Wycliffe and movements for reform, ch. 12*.—See also FRANCE: 1438.

1471-1513.—Darkest age of papal crime and vice.—Sixtus IV and the Borgias.—Warrior pontiff, Julius II.—“The impunity with which the Popes escaped the councils held in the early part of the 15th century was well fitted to inspire them with a reckless contempt for public opinion; and from that period down to the Reformation, it would be difficult to parallel among temporal princes the

ambitious, wicked, and profligate lives of many of the Roman Pontiffs. Among these, Francesco della Rovere, who succeeded Paul II with the title of Sixtus IV, was not the least notorious. Born at Savona, of an obscure family, Sixtus raised his nephews, and his sons who passed for nephews, to the highest dignities in Church and State, and sacrificed for their aggrandisement the peace of Italy and the cause of Christendom against the Turks. Of his two nephews, Julian and Leonard della Rovere, the former, afterwards Pope Julius II, was raised to the purple in the second year of his uncle's pontificate." It was this pope—Sixtus IV—who had a part in the infamous "Conspiracy of the Pazzi" to assassinate Lorenzo de' Medici and his brother (see FLORENCE: 1469-1492.) "This successor of St. Peter took a pleasure in beholding the mortal duels of his guards, for which he himself sometimes gave the signal. He was succeeded [1484] by Cardinal Gian Batista Cibò, a Genoese, who assumed the title of Innocent VIII. Innocent

POPE ALEXANDER VI (RODRIGO BORGIA)

was a weak man, without any decided principle. He had seven children, whom he formally acknowledged, but he did not seek to advance them so shamelessly as Sixtus had advanced his 'nephews.' . . . Pope Innocent VIII [who died July 25, 1492] was succeeded by the atrocious Cardinal Roderigo Borgia, a Spaniard of Valencia, where he had at one time exercised the profession of an advocate. After his election he assumed the name of Alexander VI. Of 20 cardinals who entered the conclave, he is said to have bought the suffrages of all but five; and Cardinal Ascanio Sforza, whom he feared as a rival, was propitiated with a present of silver that was a load for four mules. Alexander's election was the signal for flight to those cardinals who had opposed him. . . . Pope Alexander had by the celebrated Vanzoza, the wife of a Roman citizen, three sons: John, whom he made Duke of Gandia, in Spain; Cæsar and Geoffrey; and one daughter, Lucretia."—T. H. Dyer, *History of modern Europe*, v. 1, pp. 105, 108, 175, 177-178.—Under the Borgias, "treasons, assassinations, tortures, open debauchery, the practice of poisoning, the worst and most shameless outrages, are unblushingly and publicly tolerated in the open

light of heaven. In 1490, the Pope's vicar having forbidden clerics and laics to keep concubines, the Pope revoked the decree, 'saying that that was not forbidden, because the life of priests and ecclesiastics was such that hardly one was to be found who did not keep a concubine, or at least who had not a courtesan.' Cæsar Borgia at the capture of Capua 'chose forty of the most beautiful women, whom he kept for himself; and a pretty large number of captives were sold at a low price at Rome.' Under Alexander VI, 'all ecclesiastics, from the greatest to the last, have concubines in the place of wives, and that publicly. If God hinder it not,' adds this historian, 'this corruption will pass to the monks and religious orders, although, to confess the truth, almost all the monasteries of the town have become bawdy-houses, without any one to speak against it.' With respect to Alexander VI., who loved his daughter Lucretia, the reader may find in Burchard the description of the marvellous orgies in which he joined with Lucretia and Cæsar and the enumeration of the prizes which he distributed. Let the reader also read for himself the story of the bestiality of Pietro Luigi Farnese, the Pope's son, how the young and upright Bishop of Fano died from his outrage, and how the Pope, speaking of this crime as 'a youthful levity,' gave him in this secret bull 'the fullest absolution from all the pains which he might have incurred by human incontinence, in whatever shape or with whatever cause.' As to civil security, Bentivoglio caused all the Marescotti to be put to death; Hippolyto d'Este had his brother's eyes put out in his presence; Cæsar Borgia killed his brother; murder is consonant with their public manners, and excites no wonder. A fisherman was asked why he had not informed the governor of the town that he had seen a body thrown into the water; 'he replied that he had seen about a hundred bodies thrown into the water during his lifetime in the same place, and that no one had ever troubled about it.' 'In our town,' says an old historian, 'much murder and pillage was done by day and night, and hardly a day passed but some one was killed.' Cæsar Borgia one day killed Peroso, the Pope's favourite, between his arms and under his cloak, so that the blood spurted up to the Pope's face. He caused his sister's husband to be stabbed and then strangled in open day, on the steps of the palace; count, if you can, his assassinations. Certainly he and his father, by their character, morals, open and systematic wickedness, have presented to Europe the two most successful images of the devil. . . . Despotism, the Inquisition, the Cicisbei, dense ignorance and open knavery, the shamelessness and the smartness of harlequins and rascals, misery and vermin,—such is the issue of the Italian Renaissance."—H. A. Taine, *History of English literature*, v. 1, pp. 354-355.—"It is certain . . . that the profound horror with which the name of Alexander VI. strikes a modern ear, was not felt among the Italians at the time of his election. The sentiment of hatred with which he was afterwards regarded arose partly from the crimes by which his Pontificate was rendered infamous, partly from the fear which his son Cæsar inspired, and partly from the mysteries of his private life which revolted even the corrupt conscience of the 16th century. This sentiment of hatred had grown to universal execration at the time of his death. In course of time, when the attention of the Northern nations had been directed to the iniquities of Rome, and when the glaring discrepancy between Alexander's pretension as a Pope and his conduct as a man had been apprehended, it inspired a legend, which, like all

legends, distorts the facts which it reflects. Alexander was, in truth, a man eminently fitted to close an old age and to inaugurate a new, to demonstrate the paradoxical situation of the Popes by the inexorable logic of his practical impiety, and to fuse two conflicting world-forces in the cynicism of supreme corruption. . . . Alexander was a stronger and a firmer man than his immediate predecessors. 'He combined,' says Guicciardini, 'craft with singular sagacity, a sound judgment with extraordinary powers of persuasion; and to all the grave affairs of life he applied ability and pains beyond belief.' His first care was to reduce Rome to order. The old factions of Colonna and Orsini, which Sixtus had scotched, but which had raised their heads again during the dotage of Innocent, were destroyed in his pontificate. In this way, as Machiavelli observed, he laid the real basis for the temporal power of the Papacy. Alexander, indeed, as a sovereign, achieved for the Papal See what Louis XI. had done for the throne of France, and made Rome on its small scale follow the type of the large European monarchies. . . . Former Pontiffs had raised money by the sale of benefices and indulgences: this, of course, Alexander also practised—to such an extent, indeed, that an epigram gained currency; 'Alexander sells the keys, the altars, Christ. Well, he bought them; so he has a right to sell them.' But he went further and took lessons from Tiberius. Having sold the scarlet to the highest bidder, he used to feed his prelate with rich benefices. When he had fattened him sufficiently, he poisoned him, laid hands upon his hoards, and recommenced the game. . . . Former Popes had preached crusades against the Turk, languidly or energetically according as the coasts of Italy were threatened. Alexander frequently invited Bajazet to enter Europe and relieve him of the princes who opposed his intrigues in the favour of his children. The fraternal feeling which subsisted between the Pope and the Sultan was to some extent dependent on the fate of Prince Djem, a brother of Bajazet and son of the conqueror of Constantinople, who had fled for protection to the Christian powers, and whom the Pope kept prisoner, receiving 40,000 ducats yearly from the Porte for his jail fee. . . . Lucrezia, the only daughter of Alexander by Vannoza, took three husbands in succession, after having been formally betrothed to two Spanish nobles. . . . History has at last done justice to the memory of this woman, whose long yellow hair was so beautiful, and whose character was so colourless. The legend which made her a poison-brewing Mænad, has been proved a lie—but only at the expense of the whole society in which she lived. . . . It seems now clear enough that not hers, but her father's and her brother's, were the atrocities which made her married life in Rome a byword. She sat and smiled through all the tempests which tossed her to and fro, until she found at last a fair port in the Duchy of Ferrara."—J. A. Symonds, *Renaissance in Italy: The age of the despots*, ch. 6.—"The ambition of Cæsar Borgia involved the Pope in war again and again. He had . . . married Charlotte d'Albret, and brought the papal policy round to assist the new French king, Louis XII., in his designs on Milan. The Orsini and Colonna at home, as well as Spain and Portugal abroad, threatened Alexander with evil consequences, but Louis XII., entered Milan in triumph through the papal aid. In like manner the same means secured for the French king part of Naples, the rest going to Ferdinand of Spain. Next Cæsar turned to the work of the subjection of the great Roman nobles, and all the power of a Captain General of the

Holy Roman Church was his. The Orsini, the Savelli, the Colonna, were successively attacked and subdued, and their possessions added to the Borgia domains. . . . At last nearly all the States of the Church and the Duchies of Central Italy were either directly or indirectly in the hands of the Borgia house. Further designs were planned, but the summer of 1503 was very unhealthy, and both Alexander and Cæsar fell ill. Cæsar, through his youth and greater strength, eventually rallied, but Alexander succumbed on the 18th of August, 1503. The suspicion of poison is rejected by the best authorities. The aged and infirm but exemplary Cardinal Francesco Piccolomini, nephew of Pius II., was chosen after a sort of deadlock had arisen, and became Pius III. . . . He was only Pope from 22nd September to 18th October, 1503. This time there was little delay and no hesitation in the papal election. Cardinal delle Rovere had practically secured the Tiara before the conclave began. Persuasion, liberal promises and monetary

POPE JULIUS II

bribes, it seems certain, had been used, and after the shortest conclave known, Cardinal Giuliano delle Rovere came forth as Julius II. He had played a great part in the affairs of the Church for many years, and was now an old man. The fiery spirit within, all the same, still burned keen and bright."—G. Stebbing, *Story of the Catholic Church*, pp. 454-455.—"Whatever opinion may be formed of him considered as the high-priest of the Christian faith, there can be no doubt that Julius II. was one of the greatest figures of the Renaissance, and that his name, instead of that of Leo X., should by right be given to the golden age of letters and of arts in Rome. He stamped the century with the impress of a powerful personality. It is to him we owe the most splendid of Michael Angelo's and Raphael's masterpieces. The Basilica of St. Peter's, that materialized idea, which remains to symbolize the transition from the Church of the Middle Ages to the modern semi-secular supremacy of Papal Rome, was his thought. No nepotism, no loathsome sensuality, no flagrant violation of ecclesiastical justice stain his pontificate. His one purpose was to secure and extend

the temporal authority of the Popes; and this he achieved by curbing the ambition of the Venetians, who threatened to enslave Romagna, by reducing Perugia and Bologna to the Papal sway, by annexing Parma and Piacenza, and by entering on the heritage bequeathed to him by Caesar Borgia. At his death he transmitted to his successors the largest and most solid sovereignty in Italy. But restless, turbid, never happy unless fighting, Julius drowned the peninsula in blood. He has been called a patriot, because from time to time he raised the cry of driving the barbarians from Italy: it must, however, be remembered that it was he, while still Cardinal di San Pietro in Vincoli, who finally moved Charles VIII. from Lyons; it was he who stirred up the League of Cambray [see VENICE: 1508-1509] against Venice, and who invited the Swiss mercenaries into Lombardy [see ITALY: 1510-1513]; in each case adding the weight of the Papal authority to the forces which were enslaving his country. . . . Leo X. succeeded Julius in 1513, to the great relief of the Romans, wearied with the continual warfare of the old 'Pontefice terrible.'—J. A. Symonds, *Renaissance in Italy: The age of despots*, ch. 6.

15th-16th centuries.—Prelude to Reformation movement.—"An increase in pilgrimages first begins to mark a new phase of religious life which was encouraged by the admonitions of preachers of repentance like Capistrano. Like an avalanche did the numbers grow of the pilgrims who streamed together from all parts of Upper and Central Germany, from the foot of the Alps to the Harz Mountains. . . . If that way of striving after righteousness before God, vain and mistaken as it seems to us, may be looked upon as religion, then the last fifty or sixty years before the reformation show an exceptionally high degree of religious feeling, or at least of religious need; a feeling ever increasing through lack of means to satisfy it. With regard to the clergy, indeed, things looked dark enough, especially in North and Central Germany. One does not know which was greater, their lack of knowledge or their lack of morality. . . . That period of history, indeed, might be called a prosperous one by any one regarding merely superficially the condition of social and political affairs. It is well known how German commerce prospered at that time, extending to all parts of the world and ever having new paths opened up for it by the new discoveries. Frenchmen and Italians, astounded at the riches and princely splendor which the commercial magnates in the South German trade-centres were able to display, sang the praises of the prosperity and culture of the land. Industry and commerce were on the increase, and art, realizing its highest aims, found an abiding-place and self-sacrificing patrons in the houses of the citizens. With every year the number of high and low-grade schools on the Rhine and in South Germany increased in number, and were still scarcely able to do justice to the pressing educational needs.

An undercurrent of fresh and joyous creative impulse, full of promise for the future, can be traced among the burghers. But if one regards the age as a whole one sees everywhere not only a threatening, but actually a present decline. The abundant popular literature, more even than the writings of scholars, gives a clear insight into these matters. . . . There is reason to believe that never, even counting the present day, have there been so many beggars as in those decades. It must be borne in mind that, both practically and theoretically, beggary was furthered by the church. Much from her rich table fell into the lap of the poor man, and actually not only was it no shame to beg, but beggary was a vocation like any other. . . . Men did, on the other hand, have the consciousness that the great accumulation of capital in the hands of individuals furthered poverty as it always does. The complaints are general against 'selfishness'; the pauper, the town artisan, the noble and the scholar are remarkably in accord on this one point that deception, usury and cheating are the only explanation of the prosperity of the merchant. When the knight attacked the goods-wagons of the traders he believed that he was only taking what rightfully belonged to himself. The merchants and the rich prelates were responsible to his mind for the deterioration of his own class or estate which can no longer hold its own against the rich civilians. All the more does he oppress his own serfs. Only seldom among the higher classes do we hear a word of pity for the poor man, a word of blame against the fleecing and harassing of the peasants; much oftener bitter scorn and mockery, which nevertheless is founded on fear; for men know well enough in their inmost souls that the peasant is only waiting for a suitable moment in which to strike out and take bloody vengeance, and anxiously do they await the future. Even among the citizens themselves those who were without possessions were filled with hatred against the rich and against those of high degree. The introduction of Roman law, unintelligible to the burgher and peasant, made the feeling of being without law a common one. The more firmly did men pin their faith on that future in which the Last Judgment of God was to come and annihilate priests and lords. Such impressions which were kept vivid by an ever-spreading popular literature, by word of mouth and by pictorial representations, could only be heightened by the state of political affairs in the last decades of the 15th century and the first years of the 16th. . . . With intense interest did men follow the transactions of the diets which promised to better affairs. One plan of taxation followed on the heels of another. What project was left undiscussed for the better carrying out of the Peace of the Land! In the end everything remained as it had been save the want and general discomfort which increased from year to year. Bad harvests and consequent rise in prices, famine, severe sicknesses and plagues are once more the stock chapters in the chronicles. Frightful indeed were the ravages caused by the first, almost epidemic, appearance of the Syphilis; with regard to which, during the whole period of the reformation, the moral judgment wavered. . . . It is a wondrous, gloomy time, torn by contradictions, a time in which all is in a ferment, everything seems to totter. Everything but one institution, the firmly welded edifice of the Roman church. To Germany also came the news of the horrible vices with which the popes just at this time disgraced the Holy See: people knew that no deed was too black for them when it was a

question of satisfying their greed of power and their lust. But nevertheless they remained the successors of Peter and the representatives of Christ, and so little can one speak of a process of dissolution in the church, that the latter appears on the contrary the only stable power and the religious-ecclesiastical idea is rather the one that rules all things. Although men to a great extent scorn and mock her servants and long often with burning hatred for their annihilation, yet it continues always to be the church that holds the keys of the Kingdom of Heaven and that can avert the wrath of God; the church, to which the anxious soul turns as the last anchor of hope and tries to outdo itself in her service. It is not indeed pious reverence for a God who is holy and yet gracious that draws the sinners to their knees, but the dread of the tortures of purgatory and of the wrath of Him who sits above the world to judge it. This causes the soul, restless, dissatisfied, to be ceaseless in its endeavors to conciliate the Angry One through sacrificial service—the whole religious activity being one half-despairing 'Miserere' called forth by fear. Such was the spirit of the age in which Martin Luther was born and in which he passed his youth."—Th. Kolde, *Martin Luther* (tr. from the German), v. 1, pp. 5-27.—See also EUROPE: Middle Ages: Background of the Protestant Reformation; Political background; Renaissance and Reformation: Characteristics of the period; Erasmus and the Reformation; Luther, his motives, etc.; Catholic reformation.

1516-1517.—Monetary demands of the court and family of Pope Leo X, and his financial expedients.—Theory of indulgences and their marketability.—"The position which the pope [Leo X], now absolute lord of Florence and master of Siena, occupied, the powerful alliances he had contracted with the other powers of Europe, and the views which his family entertained on the rest of Italy, rendered it absolutely indispensable for him, spite of the prodigality of a government that knew no restraint, to be well supplied with money. He seized every occasion of extracting extraordinary revenues from the church. The Lateran council was induced, immediately before its dissolution (15th of March, 1517), to grant the pope a tenth of all church property throughout Christendom. Three different commissions for the sale of indulgences traversed Germany and the northern states at the same moment. These expedients were, it is true, resorted to under various pretexts. The tenths were, it was said, to be expended in a Turkish war, which was soon to be declared; the produce of indulgences was for the building of St. Peter's Church, where

the bones of the martyrs lay exposed to the inclemency of the elements. But people had ceased to believe in these pretences. . . . For there was no doubt on the mind of any reasonable man, that all these demands were mere financial speculations. There is no positive proof that the assertion then so generally made—that the proceeds of the sale of indulgences in Germany was destined in part for the pope's sister Madelena—was true. But the main fact is indisputable, that the ecclesiastical aids were applied to the uses of the pope's family."—L. von Ranke, *History of the Reformation in Germany*, v. 1, bk. 2, ch. 1.—"Indulgences, in the earlier ages of the Church, had been a relaxation of penance, or of the discipline imposed by the Church on penitents who had been guilty of mortal sin. The doctrine of penance required that for such sin satisfaction should be superadded to contrition and confession. Then came the custom of commuting these appointed temporal penalties. When Christianity spread among the northern nations, the canonical penances were frequently found to be inapplicable to their condition. The practice of accepting offerings of money in the room of the ordinary forms of penance, harmonized with the penal codes in vogue among the barbarian peoples. At first the priest had only exercised the office of an intercessor. Gradually the simple function of declaring the divine forgiveness to the penitent transformed itself into that of a judge. By Aquinas, the priest is made the instrument of conveying the divine pardon, the vehicle through which the grace of God passes to the penitent. With the jubilees, or pilgrimages to Rome, ordained by the popes, came the plenary indulgences, or the complete remission of all temporal penalties—that is, the penalties still obligatory on the penitent—on the fulfillment of prescribed conditions. These penalties might extend into purgatory, but the indulgence obliterated them all. . . . In the 13th century, Alexander of Hales and Thomas Aquinas set forth the theory of supererogatory merits, or the treasure of merit bestowed upon the Church through Christ and the saints, on which the rulers of the Church might draw for the benefit of the less worthy and more needy. This was something distinct from the power of the keys, the power to grant absolution, which inhered in the priesthood alone. The eternal punishment of mortal sin being remitted or commuted by the absolution of the priest, it was open to the Pope or his agents, by the grant of indulgences, to remit the temporal or terminable penalties that still rested on the head of the transgressor. Thus souls might be delivered forthwith from purgatorial fire. Pope Sixtus IV., in 1477, had officially declared that souls already in purgatory are emancipated 'per modum suffragii'; that is, the work done in behalf of them operates to effect their release in a way analogous to the efficacy of prayer. Nevertheless, the power that was claimed over the dead, was not practically diminished by this restriction. The business of selling indulgences had grown by the profitableness of it. 'Everywhere,' says Erasmus, 'the remission of purgatorial torment is sold; nor is it sold only, but forced upon those who refuse it.' As managed by Tetzel and the other emissaries sent out to collect money for the building of St. Peter's Church, the indulgence was a simple bargain, according to which, on the payment of a stipulated sum, the individual received a full discharge from the penalties of sin or procured the release of a soul from the flames of purgatory. The forgiveness of sins was offered in the market for money."—G. P. Fisher, *Reformation*, ch. 4.—The doctrine con-

cerning indulgences which the Roman Catholic church maintains at the present day is stated by one of its most eminent prelates as follows: "What then is an Indulgence? It is no more than a remission by the Church, in virtue of the keys, or the judicial authority committed to her, of a portion, or the entire, of the temporal punishment due to sin. The infinite merits of Christ form the fund whence this remission is derived: but besides, the Church holds that, by the communion of Saints, penitential works performed by the just, beyond what their own sins might exact, are available to other members of Christ's mystical body; that, for instance, the sufferings of the spotless Mother of God, afflictions such as probably no other human being ever felt in the soul,—the austerities and persecutions of the Baptist, the friend of the Bridegroom, who was sanctified in his mother's womb, and chosen to be an angel before the face of the Christ,—the tortures endured by numberless martyrs, whose lives had been pure from vice and sin,—the prolonged rigours of holy anchorites, who, flying from the temptations and dangers of the world, passed many years in penance and contemplation, all these made consecrated and valid through their union with the merits of Christ's passion,—were not thrown away, but formed a store of meritorious blessings, applicable to the satisfaction of other sinners. It is evident that, if the temporal punishment reserved to sin was anciently believed to be remitted through the penitential acts, which the sinner assumed, any other substitute for them, that the authority imposing or recommending them received as an equivalent, must have been considered by it truly of equal value, and as acceptable before God. And so it must be now. If the duty of exacting such satisfaction devolves upon the Church,—and it must be the same now as it formerly was,—she necessarily possesses at present the same power of substitution, with the same efficacy, and, consequently, with the same effects. And such a substitution is what constitutes all that Catholics understand by the name of an Indulgence. . . . Do I then mean to say, that during the middle ages, and later, no abuse took place in the practise of indulgences? Most certainly not. Flagrant and too frequent abuses, doubtless, occurred through the avarice, and rapacity, and impiety of men; especially when indulgence was granted to the contributors towards charitable or religious foundations, in the erection of which private motives too often mingle. But this I say, that the Church felt and ever tried to remedy the evil. . . . The Council of Trent, by an ample decree, completely reformed the abuses which had subsequently crept in, and had been unfortunately used as a ground for Luther's separation from the Church."—N. Wiseman, *Lectures on the principal doctrines and practices of the Catholic church, lecture 12.*

1517.—Tetzel and the hawking of indulgences through Germany.—"In Germany the people were full of excitement. The Church had opened a vast market on earth. The crowd of customers, and the cries and jests of the sellers, were like a fair—and that, a fair held by monks. The article which they puffed off and offered at the lowest price, was, they said, the salvation of souls. These dealers travelled through the country in a handsome carriage, with three outriders, made a great show, and spent a great deal of money. . . . When the cavalcade was approaching a town, a deputy was dispatched to the magistrate: 'The grace of God and St. Peter is before your gates,' said the envoy; and immediately all the place was in commotion. The clergy, the priests, the nuns, the

council, the schoolmasters, the schoolboys, the trade corporations with their banners, men and women, young and old, went to meet the merchants, bearing lighted torches in their hands, advancing to the sound of music and of all the bells, 'so that,' says a historian, 'they could not have received God Himself in greater state.' The salutations ended, the whole cortège moved towards the church, the Pope's bull of grace being carried in advance on a velvet cushion, or on a cloth of gold. The chief indulgence-merchant followed next, holding in his hand a red wooden cross. In this order the whole procession moved along, with singing, prayers, and incense. The organ pealed, and loud music greeted the hawker monk and those who accompanied him, as they entered the temple. The cross he bore was placed in front of the altar; the Pope's arms were suspended from it. . . . One person especially attracted attention at these sales. It was he who carried the great red cross and played the principal part. He wore the garb of the Dominicans. He had an arrogant bearing and a thundering voice, and he was in full vigour, though he had reached his sixty-third year. This man, the son of a goldsmith of Leipsic, named Dietz, was called John Dietzel, or Tetzel. He had received numerous ecclesiastical honours. He was Bachelor in Theology, prior of the Dominicans, apostolic commissioner and inquisitor, and since the year 1502 he had filled the office of vendor of indulgences. The skill he had acquired soon caused him to be named commissioner-in-chief. . . . The cross having been elevated and the Pope's arms hung upon it, Tetzel ascended the pulpit, and with a confident air began to extol the worth of indulgences, in presence of the crowd whom the ceremony had attracted to the sacred spot. The people listened with open mouths. Here is a specimen of one of his harangues:—'Indulgences,' he said, 'are the most precious and sublime gifts of God. This cross (pointing to the red cross) has as much efficacy as the cross of Jesus Christ itself. Come, and I will give you letters furnished with seals, by which, even the sins that you may have a wish to commit hereafter, shall be all forgiven you. I would not exchange my privileges for those of St. Peter in heaven; for I have saved more souls by my indulgences than the Apostle by his discourses. There is no sin so great, that an indulgence cannot remit it. Repentance is not necessary. But, more than that; indulgences not only save the living, they save the dead also. Priest! noble! merchant! woman! young girl! young man!—hearken to your parents and your friends who are dead, and who cry to you from the depths of the abyss: "We are enduring horrible tortures! A small alms would deliver us. You can give it, and you will not!"' The hearers shuddered at these words pronounced in the formidable voice of the charlatan monk. 'The very instant,' continued Tetzel, 'the piece of money chinks at the bottom of the strong box, the soul is freed from purgatory, and flies to heaven.' . . . Such were the discourses heard by astonished Germany in the days when God was raising up Luther. The sermon ended, the indulgence was considered as 'having solemnly established its throne' in that place. Confessionals were arranged, adorned with the Pope's arms; and the people flocked in crowds to the confessors. They were told, that, in order to obtain the full pardon of all their sins, and to deliver the souls of others from purgatory, it was not necessary for them to have contrition of heart, or to make confession by mouth; only, let them be quick and bring money to the box. Women

and children, poor people, and those who lived on alms, all of them soon found the needful to satisfy the confessor's demands. The confession being over—and it did not require much time—the faithful hurried to the sale, which was conducted by a single monk. His counter stood near the cross. He fixed his sharp eyes upon all who approached him, scrutinized their manners, their bearing, their dress, and demanded a sum proportioned to the appearance of each. Kings, queens, princes, archbishops, bishops, had to pay, according to regulation, twenty-five ducats; abbots, counts, and barons, ten; and so on, or according to the discretion of the commissioner. For particular sins, too, both Tetzel in Germany, and Samson in Switzerland, had a special scale of prices."—J. N. Merle D'Aubigne, *Story of the Reformation*, pt. 1, ch. 6 (or *History of the Refor-*

money, and that the whole thing was a cheat. This his Augustinian theology had taught him, and he was not a man to hold back when he saw what ought to be done. He did see it. On the day [October 31] before the festival of All Saints, on which the relics of the Church were displayed to the crowds of country people who flocked into the town, Luther passed down the long street with a copy of ninety-five theses or Statements [see text below] against indulgences in his hand, and nailed them upon the door of the palace church ready for the festival on the morrow. Also on All Saints' day he read them to the people in the great parish church. It would not have mattered much to Tetzel or the Pope that the Monk of Wittenberg had nailed up his papers on the palace church, had it not been that he was backed by the Elector of Saxony."—F. Seebohm,

ALLEGORY ON LUTHER'S PROTEST AGAINST ABSOLUTION

(After an old engraving in the Royal Library at Berlin)

1517.—Luther's attack upon indulgences.—Ninety-five theses nailed to the Wittenberg church.—Silent support of Elector Frederick of Saxony.—Satisfaction of awakened Germany.—To Wittenberg, "the town in which Luther had been preaching for years . . . [came] Tetzel, the seller of indulgences, . . . just as he did to other towns, vending his 'false pardons'—granting indulgences for sins to those who could pay for them, and offering to release from purgatory the souls of the dead, if any of their friends would pay for their release. As soon as the money chinked in his money-box, the souls of their dead friends would be let out of purgatory. This was the gospel of Tetzel. It made Luther's blood boil. He knew that what the Pope wanted was people's

Era of the Protestant revolution, pt. 2, ch. 3 (c).— "As the abuse complained of had a double character, religious and political, or financial, so also political events came in aid of the opposition emanating from religious ideas. Frederick of Saxony [on the occasion of an indulgence proclaimed in 1501] . . . had kept the money accruing from it in his own dominions in his possession, with the determination not to part with it, till an expedition against the infidels, which was then contemplated, should be actually undertaken; the pope and, on the pope's concession, the emperor, had demanded it of him in vain: he held it for what it really was—a tax levied on his subjects; and after all the projects of a war against the Turks had come to nothing, he had at length applied the money to his university. Nor was he now inclined to consent to a similar scheme of taxation. . . . The sale of indulgences at Jüterbock and the resort of his subjects thither, was not less offensive to him on financial grounds than to Luther on

spiritual. Not that the latter were in any degree excited by the former; this it would be impossible to maintain after a careful examination of the facts; on the contrary, the spiritual motives were more original, powerful, and independent than the temporal, though these were important, as having their proper source in the general condition of Germany. The point whence the great events arose which were soon to agitate the world, was the coincidence of the two. There was . . . no one who represented the interests of Germany in the matter. There were innumerable persons who saw through the abuse of religion, but no one who dared to call it by its right name and openly to denounce and resist it. But the alliance between the monk of Wittenberg and the sovereign of Saxony was formed; no treaty was negotiated; they had never seen each other; yet they were bound together by an instinctive mutual understanding. The intrepid monk attacked the enemy; the prince did not promise him his aid—he did not even encourage him; he let things take their course. . . . Luther's daring assault was the shock which awakened Germany from her slumber. That a man should arise who had the courage to undertake the perilous struggle, was a source of universal satisfaction, and as it were tranquillised the public conscience. The most powerful interests were involved in it;—that of sincere and profound piety, against the most purely external means of obtaining pardon of sins; that of literature, against fanatical persecutors, of whom Tetzel was one; the renovated theology against the dogmatic learning of the schools, which lent itself to all these abuses; the temporal power against the spiritual, whose usurpations it sought to curb; lastly, the nation against the rapacity of Rome.”—L. von Ranke, *History of the Reformation in Germany*, v. 1, bk. 2, ch. 1.—See also GERMANY: 1517-1523.

1517.—Ninety-five theses of Luther.—The following is a translation of the ninety-five theses: “In the desire and with the purpose of elucidating the truth, a disputation will be held on the under-written propositions at Wittenberg, under the presidency of the Reverend Father Martin Luther, Monk of the Order of St. Augustine, Master of Arts and of Sacred Theology, and ordinary Reader of the same in that place. He therefore asks those who cannot be present and discuss the subject with us orally, to do so by letter in their absence. In the name of our Lord, Jesus Christ. Amen. (1) Our Lord and Master Jesus Christ in saying: ‘Repent ye,’ etc., intended that the whole life of believers should be penitence. (2) This word cannot be understood of sacramental penance, that is, of the confession and satisfaction which are performed under the ministry of priests. (3) It does not, however, refer solely to inward penitence; nay such inward penitence is naught, unless it outwardly produces various mortifications of the flesh. (4) The penalty thus continues as long as the hatred of self—that is, true inward penitence—continues; namely, till our entrance into the kingdom of heaven. (5) The Pope has neither the will nor the power to remit any penalties, except those which he has imposed by his own authority, or by that of the canons. (6) The Pope has no power to remit any guilt, except by declaring and warranting it to have been remitted by God; or at most by remitting cases reserved for himself; in which cases, if his power were despised, guilt would certainly remain. (7) God never remits any man's guilt, without at the same time subject-

ing him, humbled in all things, to the authority of his representative the priest. (8) The penitential canons are imposed only on the living, and no burden ought to be imposed on the dying, according to them. (9) Hence the Holy Spirit acting in the Pope does well for us, in that, in his decrees, he always makes exception of the article of death and of necessity. (10) Those priests act wrongly and unlearnedly, who, in the case of the dying, reserve the canonical penances for purgatory. (11) Those tares about changing of the canonical penalty into the penalty of purgatory seem surely to have been sown while the bishops were asleep. (12) Formerly the canonical penalties were imposed not after, but before absolution, as tests of true contrition. (13) The dying pay all penalties by death, and are already dead to the canon laws, and are by right relieved from them. (14) The imperfect soundness or charity of a dying person necessarily brings with it great fear, and the less it is, the greater the fear it brings. (15) This fear and horror is sufficient by itself, to say nothing of other things, to constitute the pains of purgatory, since it is very near to the horror of despair. (16) Hell, purgatory, and heaven appear to differ as despair, almost despair, and peace of mind differ. (17) With souls in purgatory it seems that it must needs be that, as horror diminishes, so charity increases. (18) Nor does it seem to be proved by any reasoning or any scriptures, that they are outside of the state of merit or of the increase of charity. (19) Nor does this appear to be proved, that they are sure and confident of their own blessedness, at least all of them, though we may be very sure of it. (20) Therefore the Pope, when he speaks of the plenary remission of all penalties, does not mean simply of all, but only of those imposed by himself. (21) Thus those preachers of indulgences are in error who say that, by the indulgence of the Pope, a man is loosed and saved from all punishment. (22) For in fact he remits to souls in purgatory no penalty which they would have had to pay in this life according to the canons. (23) If any entire remission of all penalties can be granted to any one, it is certain that it is granted to none but the most perfect, that is, to very few. (24) Hence the greater part of the people must needs be deceived by this indiscriminate and high-sounding promise of release from penalties. (25) Such power as the Pope has over purgatory in general, such has every bishop in his own diocese, and every curate in his own parish, in particular. (26) The Pope acts most rightly in granting remission to souls, not by the power of the keys (which is of no avail in this case) but by the way of suffrage. (27) They preach man, who say that the soul flies out of purgatory as soon as the money thrown into the chest rattles. (28) It is certain that, when the money rattles in the chest, avarice and gain may be increased, but the suffrage of the Church depends on the will of God alone. (29) Who knows whether all the souls in purgatory desire to be redeemed from it, according to the story told of Saints Severinus and Paschal. (30) No man is sure of the reality of his own contrition, much less of the attainment of plenary remission. (31) Rare as is a true penitent, so rare is one who truly buys indulgences—that is to say, most rare. (32) Those who believe that, through letters of pardon, they are made sure of their own salvation, will be eternally damned along with their teachers. (33) We must especially beware of those who say that these pardons from the Pope are that inestimable gift of God by which man is reconciled to God. (34) For the grace conveyed by these pardons has

LUTHER AT THE DIET OF WORMS
(After mural painting of Hermann Wislicenus in the Kaiserhaus at Goslar, Prussia)

respect only to the penalties of sacramental satisfaction, which are of human appointment. (35) They preach no Christian doctrine, who teach that contrition is not necessary for those who buy souls out of purgatory or buy confessional licenses. (36) Every Christian who feels true compunction has of right plenary remission of pain and guilt, even without letters of pardon. (37) Every true Christian, whether living or dead, has a share in all the benefits of Christ and of the Church, given him by God, even without letters of pardon. (38) The remission, however, imparted by the Pope is by no means to be despised, since it is, as I have said, a declaration of the Divine remission. (39) It is a most difficult thing, even for the most learned theologians, to exalt at the same time in the eyes of the people the ample effect of pardons and the necessity of true contrition. (40) True contrition seeks and loves punishment; while the ampleness of pardons relaxes it, and causes men to hate it, or at least gives occasion for them to do so. (41) Apostolic pardons ought to be proclaimed with caution, lest the people should falsely suppose that they are placed before other good works of charity. (42) Christians should be taught that it is not the mind of the Pope that the buying of pardons is to be in any way compared to works of mercy. (43) Christians should be taught that he who gives to a poor man, or lends to a needy man, does better than if he bought pardons. (44) Because, by a work of charity, charity increases, and the man becomes better; while, by means of pardons, he does not become better, but only freer from punishment. (45) Christians should be taught that he who sees any one in need, and, passing him by, gives money for pardons, is not purchasing for himself the indulgences of the Pope, but the anger of God. (46) Christians should be taught that, unless they have superfluous wealth, they are bound to keep what is necessary for the use of their own households, and by no means to lavish it on pardons. (47) Christians should be taught that, while they are free to buy pardons, they are not commanded to do so. (48) Christians should be taught that the Pope, in granting pardons, has both more need and more desire that devout prayer should be made for him, than that money should be readily paid. (49) Christians should be taught that the Pope's pardons are useful, if they do not put their trust in them, but most hurtful, if through them they lose the fear of God. (50) Christians should be taught that, if the Pope were acquainted with the exactions of the preachers of pardons, he would prefer that the Basilica of St. Peter should be burnt to ashes, than that it should be built up with the skin, flesh, and bones of his sheep. (51) Christians should be taught that, as it would be the duty, so it would be the wish of the Pope, even to sell, if necessary, the Basilica of St. Peter, and to give of his own money to very many of those from whom the preachers of pardons extract money. (52) Vain is the hope of salvation through letters of pardon, even if a commissary—nay the Pope himself—were to pledge his own soul for them. (53) They are enemies of Christ and of the Pope, who, in order that pardons may be preached, condemn the word of God to utter silence in other churches. (54) Wrong is done to the word of God when, in the same sermon, an equal or longer time is spent on pardons than on it. (55) The mind of the Pope necessarily is that, if pardons, which are a very small matter, are celebrated with single bells, single processions, and single ceremonies, the Gospel, which is a very great matter, should be preached with a

hundred bells, a hundred processions, and a hundred ceremonies. (56) The treasures of the Church, whence the Pope grants indulgences, are neither sufficiently named nor known among the people of Christ. (57) It is clear that they are at least not temporal treasures, for these are not so readily lavished, but only accumulated, by many of the preachers. (58) Nor are they the merits of Christ and of the saints, for these, independently of the Pope, are always working grace to the inner man, and the cross, death, and hell to the outer man. (59) St. Lawrence said that the treasures of the Church are the poor of the Church, but he spoke according to the use of the word in his time. (60) We are not speaking rashly when we say that the keys of the Church, bestowed through the merits of Christ, are that treasure. (61) For it is clear that the power of the Pope is alone sufficient for the remission of penalties and of reserved cases. (62) The true treasure of the Church is the Holy Gospel of the glory and grace of God. (63) This treasure, however, is deservedly most hateful, because it makes the last to be last. (64) While the treasure of indulgences is deservedly most acceptable, because it makes the last to be first. (65) Hence the treasures of the Gospel are nets, wherewith of old they fished for the men of riches. (66) The treasures of indulgences are nets, wherewith they now fish for the riches of men. (67) Those indulgences, which the preachers loudly proclaim to be the greatest graces, are seen to be truly such as regards the promotion of gain. (68) Yet they are in reality in no degree to be compared to the grace of God and the piety of the cross. (69) Bishops and curates are bound to receive the commissaries of apostolic pardons with all reverence. (70) But they are still more bound to see to it with all their eyes, and take heed with all their ears, that these men do not preach their own dreams in place of the Pope's commission. (71) He who speaks against the truth of apostolic pardons, let him be anathema and accursed. (72) But he, on the other hand, who exerts himself against the wantonness and licence of speech of the preachers of pardons, let him be blessed. (73) As the Pope justly thunders against those who use any kind of contrivance to the injury of the traffic in pardons. (74) Much more is it his intention to thunder against those who, under the pretext of pardons, use contrivances to the injury of holy charity and of truth. (75) To think that Papal pardons have such power that they could absolve a man even if—by an impossibility—he had violated the Mother of God, is madness. (76) We affirm on the contrary that Papal pardons cannot take away even the least of venial sins, as regards its guilt. (77) The saying that, even if St. Peter were now Pope, he could grant no greater graces, is blasphemy against St. Peter and the Pope. (78) We affirm on the contrary that both he and any other Pope has greater graces to grant, namely, the Gospel, powers, gifts of healing, etc. (1 Cor. xii. 9). (79) To say that the cross set up among the insignia of the Papal arms is of equal power with the cross of Christ, is blasphemy. (80) Those bishops, curates, and theologians who allow such discourses to have currency among the people, will have to render an account. (81) This licence in the preaching of pardons makes it no easy thing, even for learned men, to protect the reverence due to the Pope against the calumnies, or, at all events, the keen questionings of the laity. (82) As for instance:—Why does not the Pope empty purgatory for the sake of most holy charity and of the supreme necessity of souls—this being the

most just of all reasons—if he redeems an infinite number of souls for the sake of that most fatal thing money, to be spent on building a basilica—this being a very slight reason? (83) Again; why do funeral masses and anniversary masses for the deceased continue, and why does not the Pope return, or permit the withdrawal of the funds bequeathed for this purpose, since 'it is a wrong to pray for those who are already redeemed?' (84) Again; what is this new kindness of God and the Pope, in that for money's sake, they permit an impious man and an enemy of God to redeem a pious soul which loves God, and yet do not redeem that same pious and beloved soul, out of free charity, on account of its own need? (85) Again; why is it that the penitential canons, long since abrogated and dead in themselves in very fact and not only by usage, are yet still redeemed with money, through the granting of indulgences, as if they were full of life? (86) Again; why does not the Pope, whose riches are at this day more ample than those of the wealthiest of the

POPE LEO X

wealthy, build the one basilica of St. Peter with his own money, rather than with that of poor believers? (87) Again; what does the Pope remit or impart to those who, through perfect contrition, have a right to plenary remission and participation? (88) Again; what greater good would the Church receive if the Pope, instead of once, as he does now, were to bestow these remissions and participations a hundred times a day on any one of the faithful? (89) Since it is the salvation of souls, rather than money, that the Pope seeks by his pardons, why does he suspend the letters and pardons granted long ago, since they are equally efficacious. (90) To repress these scruples and arguments of the laity by force alone, and not to solve them by giving reasons, is to expose the Church and the Pope to the ridicule of their enemies, and to make Christian men unhappy. (91) If then pardons were preached according to the spirit and mind of the Pope, all these questions would be resolved with ease; nay, would not exist. (92) Away then with all those prophets who say to the people of Christ: 'Peace, peace,' and there is no peace. (93) Blessed be all those prophets, who say to the people of Christ: 'The cross, the

cross,' and there is no cross. (94) Christians should be exhorted to strive to follow Christ their head through pains, deaths, and hells. (95) And thus trust to enter heaven through many tribulations, rather than in the security of peace."—H. Wace and C. A. Buchheim, *First principles of the Reformation*, pp. 6-13.

1517-1521.—Favoring circumstances under which the Reformation in Germany gained ground.—Bull "Exurge Domine."—Excommunication of Luther.—Imperial summons from Worms.—"It was fortunate for Luther's cause that he lived under a prince like the Elector of Saxony. Frederick, indeed, was a devout catholic. . . . His attention, however, was now entirely engrossed by his new university, and he was unwilling to offer up to men like Tetzel so great an ornament of it as Dr. Martin Luther, since whose appointment at Wittenberg the number of students had so wonderfully increased as to throw the universities of Erfurt and Leipsic quite into the shade. . . . As one of the principal Electors, he was completely master in his own dominions, and indeed throughout Germany he was as much respected as the Emperor; and Maximilian, besides his limited power, was deterred by his political views from taking any notice of the quarrel. Luther had thus full liberty to prepare the great movement that was to ensue. . . . The contempt entertained by Pope Leo X. for the whole affair was also favourable to Luther; for Frederick might not at first have been inclined to defend him against the Court of Rome. . . . The Court of Rome at length became more sensible of the importance of Luther's innovations and in August 1518, he was commanded either to recant, or to appear and answer for his opinions at Rome, where Silvester Prierias and the bishop Ghenucci di Arcoli had been appointed his judges. Luther had not as yet dreamt of throwing off his allegiance to the Roman See. In the preceding May he had addressed a letter to the Pope himself, stating his views in a firm but modest and respectful tone, and declaring that he could not retract them. The Elector Frederick, at the instance of the university of Wittenberg, which trembled for the life of its bold and distinguished professor, prohibited Luther's journey to Rome, and expressed his opinion that the question should be decided in Germany by impartial judges. Leo consented to send a legate to Augsburg to determine the cause, and selected for that purpose Cardinal Thomas di Vio, better known by the name of Cajetan, derived from his native city of Gaeta. . . . Luther set out for Augsburg on foot provided with several letters of recommendation from the Elector, and a safe conduct from the Emperor Maximilian. . . . Luther appeared before the cardinal for the first time, October 12th, at whose feet he fell; but it was soon apparent that no agreement could be expected. . . . Cajetan, who had at first behaved with great moderation and politeness, grew warm, demanded an unconditional retraction, forbade Luther again to appear before him till he was prepared to make it, and threatened him with the censures of the Church. The fate of Huss stared Luther in the face, and he determined to fly. His patron Staupitz procured him a horse, and on the 20th of October, Langemantel, a magistrate of Augsburg, caused a postern in the walls to be opened for him before day had well dawned. . . . Cajetan now wrote to the Elector Frederick complaining of Luther's refractory departure from Augsburg, and requiring either that he should be sent to Rome or at least be banished from Saxony. . . . So uncertain were Luther's prospects

that he made preparations for his departure. . . . At length, just on the eve of his departure, he received an intimation from Frederick that he might remain at Wittenberg. Before the close of the year he gained a fresh accession of strength by the arrival of Melancthon, a pupil of Reuchlin, who had obtained the appointment of Professor of Greek in the university. Frederick offered a fresh disputation at Wittenberg; but Leo X. adopted a course more consonant with the pretensions of an infallible Church by issuing a Bull dated November 9th 1518, which, without adverting to Luther or his opinions, explained and enforced the received doctrine of indulgences. It failed, however, to produce the desired effect. . . . Leo now tried the effects of seduction. Carl Von Miltitz, a Saxon nobleman, canon of Mentz, Trèves, and Meissen, . . . was despatched to the Elector Frederick with the present of a golden rose, and with instructions to put an end, as best he might, to the Lutheran schism. On his way through Germany, Miltitz soon perceived that three fourths of the people were in Luther's favour; nor was his reception at the Saxon Court of a nature to afford much encouragement. . . . Miltitz saw the necessity for conciliation. Having obtained an interview with Luther at Altenburg, Miltitz persuaded him to promise that he would be silent, provided a like restraint were placed upon his adversaries. . . . Luther was even induced to address a letter to the Pope, dated from Altenburg, March 3rd 1519, in which, in humble terms, he expressed his regret that his motives should have been misinterpreted, and solemnly declared that he did not mean to dispute the power and authority of the Pope and the Church of Rome, which he considered superior to everything except Jesus Christ alone. . . . The truce effected by Miltitz lasted only a few months. It was broken by a disputation to which Dr. Eck challenged Bodenstein, a Leipsic professor, better known by the name of Carlstadt. . . . The Leipsic disputation was preceded and followed by a host of controversies. The whole mind of Germany was in motion, and it was no longer with Luther alone that Rome had to contend. All the celebrated names in art and literature sided with the Reformation; Erasmus, Ulrich von Hutten, Melancthon, Lucas Cranach, Albert Dürer, and others. Hans Sachs, the Meistersänger of Nuremberg, composed in his honour the pretty song called 'the Wittenberg Nightingale.' Silvester von Schaumburg and Franz von Sickingen invited Luther to their castles, in case he were driven from Saxony; and Schaumburg declared that 100 more Franconian knights were ready to protect him. . . . The Elector Frederick became daily more convinced that his doctrines were founded in Scripture. . . . Meanwhile, Luther had made great strides in his opinions since the publication of his Theses. . . . He had begun to impugn many of the principles of the Romish church; and so far from any longer recognising the paramount authority of the Pope, or even of a general council, he was now disposed to submit to no rule but the Bible. The more timid spirits were alarmed at his boldness, and even Frederick himself exhorted him to moderation. It must be acknowledged, indeed, that Luther sometimes damaged his cause by the intemperance of his language; an instance of which is afforded by the remarkable letter he addressed to Leo X., April 6th 1520, as a dedication to his treatise 'De Libertate Christiana.' . . . The letter just alluded to was, perhaps, the immediate cause of the famous Bull, 'Exurge Domine,' which Leo fulminated against Luther, June 15th 1520. The Bull, which is con-

ceived in mild terms, condemned forty-one propositions extracted from Luther's works, allowed him sixty days to recant, invited him to Rome, if he pleased to come, under a safe conduct, and required him to cease from preaching and writing, and to burn his published treatises. If he did not conform within the above period, he was condemned as a notorious and irreclaimable heretic; all princes and magistrates were required to seize him and his adherents, and to send them to Rome; and all places that gave them shelter were threatened with an interdict. The Bull was forwarded to Archbishop Albert of Mentz; but in North Germany great difficulty was found in publishing it. . . . On December 10th Luther consummated his rebellion by taking that final step which rendered it impossible for him to recede. On the banks of the Elbe before the Elster Gate of Wittenberg, . . . Luther, in the presence of a large body of professors and students, solemnly committed with his own hands to the flames the Bull by which he had been condemned, together with the code of the canon law, and the writings of Eck and Emser, his opponents. . . . On January 3rd 1521, Luther and his followers were solemnly excommunicated by Leo with bell, book, and candle, and an image of him, together with his writings, was committed to the flames. . . . At the Diet of Worms which was held soon after, the Emperor [Charles V, who succeeded Maximilian in 1519] having ordered that Luther's books should be delivered up to the magistrates to be burnt, the States represented to him the uselessness and impolicy of such a step, pointing out that the doctrines of Luther had already sunk deep into the hearts of the people; and they recommended that he should be summoned to Worms and interrogated whether he would recant without any disputation. . . . In compliance with the advice of the States, the Emperor issued a mandate, dated March 6th 1521, summoning Luther to appear at Worms within twenty-one days. It was accompanied with a safe conduct."—T. H. Dyer, *History of modern Europe*, v. 1, bk. 2, ch. 3.—"At Rome the trouble in Germany was one of the main subjects that engaged the attention of the Curia. It was felt that the time had come when decisive measures must be taken. After long and anxious deliberations Leo X. published the Bull, *Exurge Domine* (June 1520), in which forty propositions taken from Luther's writings were condemned, his works were ordered to be burned, the full penalties of excommunication were proclaimed against him unless he withdrew his errors and made his submission within sixty days, while his aiders and abettors were besought in the most touching terms to abandon the dangerous path into which they had been betrayed. Had such a pronouncement been issued at the beginning of the movement it might have done much to restore peace to the Church, but, coming as it did at a time when Luther's movement, backed by all the revolutionary forces of Germany, had already acquired considerable dimensions, it failed to put an end to the tumult. Besides, the papal decision was deprived of much of its force by the fact that Eck, Caraccioli, and Aleandro were appointed as a commission to superintend its execution. The appointment of Eck was a great tactical blunder, as it afforded Luther and his friends an opportunity of proclaiming that the sentence of excommunication was procured by the intrigues and misrepresentations of their personal enemies; while the fact that the German bishops were disregarded in the execution of the Bull as if they were not above suspicion themselves, was looked upon by

many as a studied insult to the entire German hierarchy. Even though Luther had entertained any thoughts of submission, the triumph of Eck would have created very serious obstacles, but, knowing as he did, that even at the worst he could reckon upon the support of a certain number of the discontented nobles who had pledged themselves to put their swords at his disposal, he had no intention of making his submission. The reception accorded to the papal document varied according to the views of the local authorities and the state of public feeling in the different cities and provinces. Thus, while its publication was welcomed in Cologne, Mainz, Halberstadt, and Freising, it was received with very mixed feelings at Leipzig and at Erfurt. Frederick of Saxony, to whom Leo X. had addressed a personal appeal, refused to abandon Luther's cause unless it were proved from the Scriptures that he was wrong. He did, indeed, suggest that Luther should write a respectful letter to the Pope, but his suggestion passed unheeded. At first Luther pretended that the Bull was a forgery brought forward by Eck to discredit him, but when this line of defence proved useless, he boldly attacked the papal pronouncement in his pamphlet, *Against the Bull of Anti-Christ*, in which he denounced Leo X. as a heretic and apostate, an enemy of the Holy Scriptures, a tyrant, and a calumniator. Lest, however, the courage of his supporters might be overcome by the terrors of excommunication, he issued an appeal from the sentence of the Pope to the judgment of a future General Council. Finally, on the 10th December, 1520, in the presence of an immense concourse of the citizens and students of Wittenberg, he burned publicly the papal Bull and the writings of his principal opponents. On this occasion he proclaimed his intention of overthrowing the ecclesiastical organisation, and of introducing a new theological system."—J. McCaffrey, *History of the Catholic church*, v. 1, pp. 73-75.

1519-1524.—Sale of indulgences in Switzerland.—Beginning of the Reformation under Zwingli.—Near the close of the year 1518, Ulric Zwingli, or Zwingle, or Zuinglius, already much respected for his zealous piety and his learning, "was appointed preacher in the collegiate church at Zurich. The crisis of his appearance on this scene was so extraordinary as to indicate to every devout mind a providential dispensation, designed to raise up a second instrument in the work of reformation, and that, almost by the same means which had been employed to produce the first. One Bernhard Samson, or Sanson, a native of Milan, and a Franciscan monk, selected this moment to open a sale of indulgences at Zurich. He was the Tetzel of Switzerland. He preached through many of its provinces, exercising the same trade, with the same blasphemous pretensions and the same clamorous effrontery; and in a land of greater political freedom his impostures excited even a deeper and more general disgust. . . . He encountered no opposition till he arrived at Zurich. But here appears a circumstance which throws a shade of distinction between the almost parallel histories of Samson and Tetzel. The latter observed in his ministrations all the necessary ecclesiastical forms; the former omitted to present his credentials to the bishop of the diocese, and acted

solely on the authority of the pontifical bulls. Hugo, Bishop of Constance, was offended at this disrespectful temerity, and immediately directed Zwingle and the other pastors to exclude the stranger from their churches. The first who had occasion to show obedience to this mandate was John Frey, minister of Staufberg. Bullinger, Dean of Bremgarten, was the second. From Bremgarten, after a severe altercation which ended by the excommunication of that dignitary, Samson proceeded to Zurich. Meanwhile Zwingle had been engaged for about two months in rousing the indignation of the people against the same object; and so successfully did he support the instruction of the Bishop, and such efficacy was added to his eloquence by the personal unpopularity of Samson, that the senate determined not so much as to admit him within the gates of the city. A deputation of honour was appointed to welcome the pontifical legate without the walls. He was then commanded to absolve the Dean from the sentence launched against him, and to depart from the canton. He obeyed, and presently turned his steps towards Italy and repassed the mountains. This took place at the end of February, 1519. The Zurichers immediately addressed a strong remonstrance to the Pope, in which they denounced the misconduct of his agent. Leo replied, on the last of April, with characteristic mildness; for though he maintained, as might be expected, the Pope's authority to grant those indulgences, . . . yet he accorded the prayer of the petition so far as to recall the preacher, and to promise his punishment, should he be convicted of having exceeded his commission. . . . But Zwingle's views were not such as long to be approved by an episcopal reformer in that [the Roman] church. . . . He began to invite the Bishop, both by public and private solicitations, with perfect respect but great earnestness, to give his adhesion to the evangelical truth . . . and to permit the free preaching of the gospel throughout his diocese. . . . From the beginning of his preaching at Zurich it was his twofold object to instruct the people in the meaning, design, and character of the scriptural writings; and at the same time to teach them to seek their religion only there. His very first proceeding was to substitute the gospel of St. Matthew, as the textbook of his discourses, for the scraps of Scripture exclusively treated by the papal preachers; and he pursued this purpose by next illustrating the Acts of the Apostles, and the epistles of Paul and Peter. He considered the doctrine of justification by faith as the corner-stone of Christianity, and he strove to draw away his hearers from the gross observances of a pharasaical church to a more spiritual conception of the covenant of their redemption. . . . His success was so considerable, that at the end of 1519 he numbered as many as 2,000 disciples; and his influence so powerful among the chiefs of the commonwealth, that he procured, in the following year, an official decree to the effect: That all pastors and ministers should thenceforward reject the unfaithful devices and ordinances of men, and teach with freedom such doctrines only as rested on the authority of the prophecies, gospels, and apostolical epistles."—G. Waddington, *History of the Reformation*, v. 2, ch. 27.—"With unflagging zeal and courage Zwingli followed his ideal in politics, viz., to rear a republic on the type of the Greek free states of old, with perfect national independence. Thanks to his influence Zurich in 1521 abolished 'Reislaufen,' and the system of foreign pay [mercenary military service]. This step, however, brought down on the head of Zurich the wrath of the twelve sister

republics, which had just signed a military contract with Francis I. . . . It was only in 1522 that he began to launch pamphlets against the abuses in the Church—fasting, celibacy of the clergy and the like. On the 20th of January, 1523, Zwingli obtained from the Council of Zurich the opening of a public religious discussion in presence of the whole of the clergy of the canton, and representatives of the Bishop of Constance, whose assistance in the debate the Council had invited. In 67 theses, remarkable for their penetration and clearness, he sketched out his confession of faith and plan of reform. . . . On the 25th of October, 1523, a second discussion initiated the practical consequences of the reformed doctrine—the abrogation of the mass and image worship. Zwingli's system was virtually that of Calvin, but was conceived in a broader spirit, and carried out later on in a far milder manner by Bullinger. . . . The Council gave the fullest approval to the Reformation. In 1524 Zwingli married Anne Reinhard, the widow of a Zurich nobleman (Meyer von Knonau), and so discarded the practice of celibacy obtaining amongst priests. . . . In 1524 Zwingli began to effect the most sweeping changes with the view of overthrowing the whole fabric of mediæval superstition. In the direction of reform he went far beyond Luther, who had retained oral confession, altar pictures, &c. The introduction of his reforms in Zurich called forth but little opposition. True, there were the risings of the Anabaptists, but these were the same everywhere. . . . Pictures and images were removed from the churches, under government direction. . . . At the Landgemeinden [parish gatherings] called for the purpose, the people gave an enthusiastic assent to his doctrines, and declared themselves ready 'to die for the gospel truth.' Thus a national Church was established, severed from the diocese of Constance, and placed under the control of the Council of Zurich and a clerical synod. The convents were turned into schools, hospitals, and poorhouses."—Mrs. L. Hug and R. Stead, *Switzerland*, ch. 22.—See also EUROPE: Renaissance and Reformation: Genevan reformers.

1521-1522.—Luther before the Diet at Worms.—Friendly abduction and concealment at Wartburg.—Translation of the Bible.—"The Diet met in January 1521, but despite the efforts of Aleandro the majority of the princes still failed to realise the gravity of the situation. Feeling against Rome was running very high in Germany at the time. Many of the princes insisted on presenting a document embodying the grievances of Germany (*Centum Gravamina*) to the papal ambassador, while even such an orthodox supporter of the Church as Duke George of Saxony, brought forward very serious complaints against the clergy, accompanied by a demand that a General Council should be summoned to restore peace to the Church."—J. McCaffrey, *History of the Catholic church*, v. 1, p. 76.—"On the 2nd of April [1521], the Tuesday after Easter, Luther set out on his momentous journey. He travelled in a cart with three of his friends, the herald riding in front in his coat of arms. . . . The Emperor had not waited for his appearance to order his books to be burnt. When he reached Erfurt on the way the sentence had just been proclaimed. The herald

asked him if he still meant to go on. 'I will go,' he said, 'if there are as many devils in Worms as there are tiles upon the house-tops. Though they burnt Huss, they could not burn the truth.' The Erfurt students, in retaliation, had thrown the Bull into the water. The Rector and the heads of the university gave Luther a formal reception as an old and honoured member; he preached at his old convent, and he preached again at Gotha and at Eisenach. Caietan had protested against the appearance in the Diet of an excommunicated heretic. The Pope himself had desired that the safe conduct should not be respected, and the bishops had said that it was unnecessary. Manœuvres were used to delay him on the road till the time allowed had expired. But there was a fierce sense of fairness in the lay members of the Diet, which it was dangerous to outrage. Franz von Sickingen hinted that if there was foul play it might go hard with Cardinal Caietan—and Von Sickingen was a man of his word in such matters. On the 10th of April, at ten in the morning, the cart entered Worms, bringing Luther in his monk's dress, followed and attended by a crowd of cavaliers. The town's people were all out to see the person with whose name Germany was ringing. As the cart passed through the gates the warder on the walls blew a blast upon his trumpet. . . . Luther needed God to stand by him, for in all that great gathering he could count on few assured friends. The princes of the empire were resolved that he should have fair play, but they were little inclined to favour further a disturber of the public peace. The Diet sat in the Bishop's palace, and the next evening Luther appeared. The presence in which he found himself would have tried the nerves of the bravest of men; the Emperor, sternly hostile, with his retinue of Spanish priests and nobles; the archbishops and bishops, all of opinion that the stake was the only fitting place for so insolent a heretic; the dukes and barons, whose stony eyes were little likely to reveal their sympathy, if sympathy any of them felt. One of them only, George of Frundsberg, had touched Luther on the shoulder as he passed through the ante-room. 'Little monk, little monk,' he said, 'thou hast work before thee, that I, and many a man whose trade is war, never faced the like of. If thy heart is right, and thy cause good, go on in God's name. He will not forsake thee.' A pile of books stood on a table when he was brought forward. An officer of the court read the titles, asked if he acknowledged them, and whether he was ready to retract them. Luther was nervous, not without cause. He answered in a low voice that the books were his. To the other question he could not reply at once. He demanded time. His first appearance had not left a favourable impression; he was allowed a night to consider. The next morning, April 18, he had recovered himself; he came in fresh, courageous, and collected. His old enemy, Eck, was this time the spokesman against him, and asked what he was prepared to do. He said firmly that his writings were of three kinds: some on simple Gospel truth, which all admitted, and which of course he could not retract; some against Papal laws and customs, which had tried the consciences of Christians and had been used as excuses to oppress and spoil the German people. If he retracted these he would cover himself with shame. In a third sort he had attacked particular persons, and perhaps had been too violent. Even here he declined to retract simply, but would admit his fault if fault could be proved. He gave his answers in a clear strong voice, in Latin first, and

then in German. There was a pause, and then Eck said that he had spoken disrespectfully; his heresies had been already condemned at the Council at Constance; let him retract on these special points, and he should have consideration for the rest. He required a plain Yes or No from him, 'without horns.' The taunt roused Luther's blood. His full brave self was in his reply. 'I will give you an answer,' he said, 'which has neither horns nor teeth. Popes have erred and councils have erred. Prove to me out of Scripture that I am wrong, and I submit. Till then my conscience binds me. Here I stand. I can do no more. God help me. Amen.' All day long the storm raged. Night had fallen, and torches were lighted in the hall before the sitting closed. Luther was dismissed at last. . . . When he had reached his lodging again, he flung up his hands. 'I am through!' he cried. 'I am through! If I had a thousand heads they should be struck off one by one before I would retract.' The same evening the Elector Frederick sent for him, and told him he had done well and bravely. But though he had escaped so far, he was not acquitted. Charles conceived that he could be now dealt with as an obstinate heretic. At the next session (the day following), he informed the Diet that he would send Luther home to Wittenberg, there to be punished as the Church required. The utmost that his friends could obtain was that further efforts should be made. The Archbishop of Treves was allowed to tell him that if he would acknowledge the infallibility of councils, he might be permitted to doubt the infallibility of the Pope. But Luther stood simply upon Scripture. There, and there only, was infallibility. The Elector ordered him home at once, till the Diet should decide upon his fate."—J. A. Froude, *Luther: A short biography*, p. 28.—"He [Luther] refused to retract his opinions, and made it clear that he acknowledged no longer the authority of the Pope or of General Councils as a safe guide in matters religious. Thereupon the Emperor intimated to the princes that he was determined to take vigorous action against such a heretic and disturber of the public peace, though at the request of some of the princes he allowed time for private conferences between Luther and representative Catholic theologians, notably Eck and Cochlaeus. These conferences having failed to produce any result the Emperor issued an order (25th April) commanding Luther to depart from Worms without delay, and forbidding him to preach to the people on his journey under pain of forfeiting his safe conduct. A month later Charles V. published a decree placing Luther under the ban of the Empire. He was denounced as a public heretic whom no one should receive or support; he was to be seized by any one who could do so, and delivered to the Emperor; his writings were to be burned, and all persons proved guilty of countenancing himself or his errors were liable to severe punishment. Many hoped that the decree might put an end to the confusion, but in reality Charles V. was powerless to enforce it, especially as the majority of the princes were unwilling to carry out its terms in their territories. Hence, outside the hereditary dominions of the House of Habsburg, the lands of Joachim I. of Brandenburg and of Duke George of Saxony, and in Bavaria, it remained a dead letter."—J. McCaffrey, *History of the Catholic Church*, v. 1, pp. 76-77.—"It was decided [by Luther's friends] that he should disappear, and disappear so completely that no trace of him should be discernible. On his way back through the Thuringian Forest, three or four miles from Alten-

stein, a party of armed men started out of the wood, set upon his carriage, seized and carried him off to Wartburg Castle. There he remained, passing by the name of the Ritter George, and supposed to be some captive knight. The secret was so well kept, that even the Elector's brother was ignorant of his hiding place. Luther was as completely lost as if the earth had swallowed him. . . . The revolution, deprived of its leader, ran wild meanwhile. An account of the scene at Worms, with Luther's speeches, and wood cut illustrations, was printed on broadsheets and circulated in hundreds of thousands of copies. The people were like schoolboys left without a master. Convents and monasteries dissolved by themselves; monks and nuns began to marry; there was nothing else for the nuns to do, turned as they were adrift without provision. The Mass in most of the churches in Saxony was changed into a Communion. But without Luther it was all chaos, and no order could be taken. So great was the need of him, that in December he went to Wittenberg in disguise; but it was not yet safe for him to remain there. He had to retreat to his castle again, and in that compelled retreat he bestowed on Germany the greatest of all the gifts which he was able to offer. He began to translate the Bible into clear vernacular German. . . . He had probably commenced the work at the beginning of his stay at the castle. In the spring of 1522 the New Testament was completed. In the middle of March, the Emperor's hands now being fully occupied, the Elector sent him word that he need not conceal himself any longer; and he returned finally to his home and his friends. The New Testament was printed in November of that year, and became at once a household book in Germany. . . . The Old Testament was taken in hand at once, and in two years half of it was roughly finished."—J. A. Froude, *Luther: A short biography*, pp. 28-35.

1521-1535.—Beginning of Protestant reform movement in France.—Hesitation of Francis I.—Final persecution of reformers.—"The long contest for Gallican rights had lowered the prestige of the popes in France, but it had not weakened the Catholic Church, which was older than the monarchy itself, and, in the feeling of the people, was indissolubly associated with it. The College of the Sorbonne, or the Theological Faculty at Paris, and the Parliament, which had together maintained Gallican liberty, were united in stern hostility to all doctrinal innovations. . . . In Southern France a remnant of the Waldenses had survived, and the recollection of the Catharists was still preserved in popular songs and legends. But the first movements towards reform emanated from the Humanist culture. A literary and scientific spirit was awakened in France through the lively intercourse with Italy which subsisted under Louis XII and Francis I. By Francis especially, Italian scholars and artists were induced in large numbers to take up their abode in France. Frenchmen likewise visited Italy and brought home the classical culture which they acquired there. Among the scholars who cultivated Greek was Budæus, the foremost of them, whom Erasmus styled the 'wonder of France.' After the 'Peace of the Dames' was concluded at Cambrai, in 1520, when Francis surrendered Italy to Charles V, a throng of patriotic Italians who feared or

hated the Spanish rule, streamed over the Alps and gave a new impulse to literature and art. Poets, artists, and scholars found in the king a liberal and enthusiastic patron. The new studies, especially Hebrew and Greek, were opposed by all the might of the Sorbonne, the leader of which was the Syndic, Beda. He and his associates were on the watch for heresy, and every author who was suspected of overstepping the bounds of orthodoxy was immediately accused and subjected to persecution. Thus two parties were formed, the one favorable to the new learning, and the other inimical to it and rigidly wedded to the traditional theology. The Father of the French Reformation, or the one more entitled to this distinction than any other, is Jacques Lefèvre. . . . Lefèvre was honored among the Humanists as the restorer of philosophy and science in the University. Deeply imbued with a religious spirit, in 1509 he put forth a commentary on the Psalms, and in 1512 a commentary on the Epistles of Paul. As early as about 1512, he said to his pupil Farel: 'God will renovate the world, and you will be a witness of it'; and in the last named work, he says that the signs of the times betoken that a renovation of the Church is near at hand. He teaches the doctrine of gratuitous justification, and deals with the Scriptures as the supreme and sufficient authority. But a mystical, rather than a polemical vein characterizes him; and while this prevented him from breaking with the Church, it also blunted the sharpness of the opposition which his opinions were adapted to produce. One of his pupils was Briçonnet, Bishop of Meaux, who held the same view of justification with Lefèvre, and fostered the evangelical doctrine in his diocese. The enmity of the Sorbonne to Lefèvre and his school took a more aggressive form when the writings of Luther began to be read in the University and elsewhere. . . . The Sorbonne [1521] formally condemned a dissertation of Lefèvre on a point of evangelical history, in which he had controverted the traditional opinion. He, with Farel, Gérard Roussel, and other preachers, found an asylum with Briçonnet. Lefèvre translated the New Testament from the Vulgate, and, in a commentary on the Gospels, explicitly pronounced the Bible the sole rule of faith, which the individual might interpret for himself, and declared justification to be through faith alone, without human works or merit. It seemed as if Meaux aspired to become another Wittenberg. At length a commission of parliament was appointed to take cognizance of heretics in that district. Briçonnet, either intimidated, as Beza asserts, or recoiling at the sight of an actual secession from the Church, joined in the condemnation of Luther and of his opinions, and even acquiesced in the persecution which fell upon Protestantism within his diocese. Lefèvre fled to Strasburg, was afterwards recalled by Francis I., but ultimately took up his abode in the court of the King's sister, Margaret, the Queen of Navarre. Margaret, from the first, was favorably inclined to the new doctrines. There were two parties at the court. The mother of the King, Louisa of Savoy, and the Chancellor Duprat, were allies of the Sorbonne. . . . Margaret, on the contrary, a versatile and accomplished princess, cherished a mystical devotion which carried her beyond Briçonnet in her acceptance of the teaching of the Reformers. . . . Before the death of her first husband, the Duke of Alençon, and while she was a widow, she exerted her influence to the full extent in behalf of the persecuted Protestants, and in opposition to the Sorbonne. After her marriage to Henry d'Albret, the King of Navarre, she con-

tinued, in her own little court and principality, to favor the reformed doctrine and its professors. [See NAVARRE: 1528-1563.] . . . The Gift of her influence appears in the character of her daughter, the heroic Jeanne d'Albret, the mother of Henry IV.; and in the readiness of the people over whom Margaret immediately ruled to receive the Protestant faith. . . . Francis I., whose generous patronage of artists and men of letters gave him the title of 'Father of Science,' had no love for the Sorbonne, for the Parliament, or for the monks. He entertained the plan of bringing Erasmus to Paris, and placing him at the head of an institution of learning. He read the Bible with his mother and sister, and felt no superstitious aversion to the leaders of reform. . . . The revolt of the Constable Bourbon [see FRANCE: 1520-1523] made it necessary for Francis to conciliate the clergy; and the battle of Pavia, followed by the captivity of the King, and the regency of his mother, gave a free rein to the persecutors. An inquisitorial court, composed partly of laymen, was ordained by Parliament. Heretics were burned at Paris and in the provinces. Louis de Berquin, who combined a culture which won the admiration of Erasmus, with the religious earnestness of Luther, was thrown into prison. [Three times the King interposed and rescued him from the persecutors; but at last, in November, 1520, Berquin was hanged and burned.]—G. P. Fisher, *Reformation*, ch. 8.—"Such scenes [as the execution of Berquin], added to the preaching and dissemination of the Scriptures and religious tracts, caused the desire for reform to spread far and wide. In the autumn of 1534, a violent placard against the mass was posted about Paris, and one was even fixed on the king's own chamber. The cry was soon raised, 'Death! death to the heretics!' Francis had long dallied with the Reformation. . . . Now . . . he develops into what was quite contrary to his disposition, a cruel persecutor. A certain bourgeois of Paris, unaffected by any heretical notions, kept in those days a diary of what was going on in Paris, and from this precious document . . . we learn that between the 13th of November, 1534, and the 13th of March, 1535, twenty so-called Lutherans were put to death in Paris. . . . The panic caused by the Anabaptist outbreak at Munster may perhaps account for the extreme cruelty. . . . as the siege was in actual progress at the time. It was to defend the memories of the martyrs of the 20th of January, 1535, and of others who had suffered elsewhere, and to save, if possible, those menaced with a similar fate, that Calvin wrote his 'Institution of the Christian Religion.' A timid, feeble-bodied young student, he had fled from France [1535], in the hope of finding some retreat where he might lose himself in the studies he loved. Passing through Geneva [1536] with the intention of staying there only for a night, he met the indefatigable, ubiquitous, enterprising, courageous Farel, who, taking him by the hand, adjured him to stop and carry on the work in that city. Calvin shrank instinctively, but . . . was forced to yield. . . . Calvin once settled at Geneva had no more doubt about his calling than if he had been Moses himself."—R. Heath, *Reformation in France*, bk. 1, ch. 2-3.—See also EUROPE: Renaissance and Reformation: Genevan reformers.

1522.—Election of Adrian VI.

1522-1525.—Deepening and strengthening of Lutheran Reformation and its systematic organization.—Two diets of Nuremberg.—Catholic league of Ratisbon.—Formal adoption of reformed religion in northern Germany.—“Fortunately for the reformation, the emperor was prevented from executing the edict of Worms by his absence from Germany, by the civil commotions in Spain, and still more by the war with Francis I., which extended into Spain, the Low Countries, and Italy, and for above eight years involved him in a continued series of contests and negotiations at a distance from Germany. His brother, Ferdinand, on whom, as joint president of the council of regency, the administration of affairs devolved, was occupied in quelling the discontents in the Austrian territories, and defending his right to the crowns of Hungary and Bohemia; and thus the government of the empire was left to the council of regency, of which several members were inclined to favour innovation. In consequence of these circumstances, the Lutherans were enabled to overcome the difficulties to which innovators of every kind are exposed; and they were no less favoured by the changes at the court of Rome. Leo dying in 1521, Adrian, his successor, who, by the influence of Charles, was raised to the pontifical chair, on the 9th of January, 1522, saw and lamented the corruptions of the church, and his ingenuous, but impolitic confessions, that the whole church, both in its head and members, required a thorough reformation, strengthened the arguments of his opponents. . . . Nothing, perhaps, proved more the surprising change of opinion in Germany, the rapid increase of those whom we shall now distinguish by the name of Lutherans, and the commencement of a systematic opposition to the church of Rome, than the transactions of the two diets of Nuremberg, which were summoned by the archduke Ferdinand, principally for the purpose of enforcing the execution of the edict of Worms. In a brief dated in November, 1522, and addressed to the first diet, pope Adrian, after severely censuring the princes of the empire for not carrying into execution the edict of Worms, exhorted them, if mild and moderate measures failed, to cut off Luther from the body of the church, as a gangrened and incurable member. . . . At the same time, with singular inconsistency, he acknowledged the corruptions of the Roman court as the source of the evils which overspread the church, [and] promised as speedy a reformation as the nature of the abuses would admit. . . . The members of the diet, availing themselves of his avowal, advised him to assemble a council in Germany for the reformation of abuses, and drew up a list of a hundred grievances which they declared they would no longer tolerate, and, if not speedily delivered from such burdens, [they] would procure relief by the authority with which God had intrusted them. . . . The recess of the diet, published in March, 1523, was framed with the same spirit; instead of threats of persecution, it only enjoined all persons to wait with patience the determination of a free council, forbade the diffusion of doctrines likely to create disturbances, and subjected all publications to the approbation of men of learning and probity appointed by the magistrate. Finally, it declared, that as priests who had married, or monks who had quitted their convents, were not guilty of a civil crime, they were only amenable to an ecclesiastical jurisdiction, and liable at the discretion of the ordinary to be deprived of their ecclesiastical privileges and benefices. The Lutherans derived their greatest advantages from these proceedings, as the gross corruptions of the

church of Rome were now proved by the acknowledgment of the pontiff himself. . . . From this period they confidently appealed to the confession of the pontiff, and as frequently quoted the hundred grievances which were enumerated in a public and authentic act of the Germanic body. They not only regarded the recess as a suspension of the edict of Worms, but construed the articles in their own favour. . . . Hitherto the innovators had only preached against the doctrines and ceremonies of the Roman church, without exhibiting a regular system of their own. [But now] Luther was persuaded, at the instances of the Saxon clergy, to form a regular system of faith and discipline; he translated the service into the German tongue, modified the form of the mass, and omitted many superstitious ceremonies; but he made as few innovations as possible, consistently with his own principles. To prevent also the total alienation or misuse of the ecclesiastical revenues, he digested a project for their administration, by means of an annual committee, and by his writings and influence effected its introduction. Under this judicious system the revenues of the church, after a provision for the clergy, were appropriated for the support of schools; for the relief of the poor, sick, and aged, or orphans and widows; for the reparation of churches and sacred buildings; and for the erection of magazines and the purchase of corn against periods of scarcity. These regulations and ordinances, though not established with the public approbation of the elector, were yet made with his tacit acquiescence, and may be considered as the first institution of a reformed system of worship and ecclesiastical polity; and in this institution the example of the churches of Saxony was followed by all the Lutheran communities in Germany. The effects of these changes were soon visible, and particularly at the meeting of the second diet of Nuremberg, on the 10th of January, 1524. Faber, canon of Strasburgh, who had been enjoined to make a progress through Germany for the purpose of preaching against the Lutheran doctrines, durst not execute his commission, although under the sanction of a safe conduct from the council of regency. Even the legate Campegio could not venture to make his public entry into Nuremberg with the insignia of his dignity, . . . for fear of being insulted by the populace. . . . Instead, therefore, of annulling the acts of the preceding diet, the new assembly pursued the same line of conduct. . . . The recess was, if possible, still more galling to the court of Rome, and more hostile to its prerogatives than that of the former diet. . . . The Catholics, thus failing in their efforts to obtain the support of the diet, on the 6th of July, 1524, entered into an association at Ratisbon, under the auspices of Campegio, in which the archduke Ferdinand, the duke of Bavaria, and most of the German bishops concurred, for enforcing the edict of Worms. At the same time, to conciliate the Germans, the legate published 20 articles for the amendment of some abuses; but these being confined to points of minor importance, and regarding only the inferior clergy, produced no satisfaction, and were attended with no effect. Notwithstanding this formidable union of the Catholic princes, the proceedings of the diet of Nuremberg were but the prelude to more decisive innovations, which followed each other with wonderful rapidity. Frederic the Wise, elector of Saxony, dying in 1525, was succeeded by his brother, John the Constant, who publicly espoused and professed the Lutheran doctrines. The system recently digested by Luther, with many additional alterations, was introduced by his

authority, and declared the established religion; and by his order the celebrated Melancthon drew up an apology in defence of the reformed tenets for the princes who adopted them. Luther himself, who had in the preceding year thrown off the monastic habit, soon after the accession of the new sovereign ventured to give the last proof of his emancipation from the fetters of the church of Rome, by espousing, on the 13th of July, 1525, Catherine Bora, a noble lady, who had escaped

profession of the Lutheran tenets, and, with the consent of Sigismund, king of Poland, secularised Eastern Prussia."—W. Coxe, *History of the house of Austria*, v. 1, ch. 28.

1523.—Election of Clement VII.—Demand for general council.—"Clement VII (1523-34), one of

CLEMENT VII AND CHARLES V IN CEREMONIAL PROCESSION TO THE CORONATION AT BOLOGNA

from the nunnery at Nimptschen, and taken up her residence at Wittenberg. The example of the elector of Saxony was followed by Philip, landgrave of Hesse Cassel, a prince of great influence and distinguished civil and military talents; by the dukes of Mecklenburgh, Pomerania, and Zell; and by the imperial cities of Nuremberg, Strasburgh, Frankfort, Nordhausen, Magdeburgh, Brunswick, Bremen, and others of less importance. . . . Albert, margrave of Brandenburg, grand-master of the Teutonic order, . . . in 1525, renounced his vow of celibacy, made a public

the de'Medici family, succeeded to the Papacy at a most critical period in the civil and religious history of Europe. The time that he spent at the court of his cousin, Leo X., and the traditions of his family and of his native city of Florence made it almost impossible for him to throw himself into the work of reform or to adopt the stern measures that the situation demanded. . . . During the earlier years of Clement VII's reign the German people, Catholic as well as Lutheran, demanded the convocation of a general or at least a national council, and their demands met with the

approval of Charles V. The naturally indolent temperament of the Pope, the fear that the eagerness for reform might develop into a violent revolution, and the danger that a council dominated by the Emperor might be as distasteful to France and England as dangerous to the rights and prerogatives of the Holy See, made him more willing to accept the counsels of those who suggested delay. When peace was at last concluded between the Pope and the Emperor (1529) Charles V. had changed his mind about the advisability of a General Council, having convinced himself in the meantime that more could be done for the cause of peace in his territories by private negotiations between the different parties."—J. McCaffrey, *History of the Catholic Church*, v. 1, pp. 182-183.

1525-1529.—League of Torgau.—Contradictory action of the Diets at Spires.—Protest of Lutheran princes which gave rise to the name "Protestants."—"At the Diet of Nuremberg it had been determined to hold an assembly shortly after at Spires for the regulation of ecclesiastical affairs. The princes were to procure beforehand from their councillors and scholars a statement of the points in dispute. The grievances of the nation were to be set forth, and remedies were to be sought for them. The nation was to deliberate and act on the great matter of religious reform. The prospect was that the evangelical party would be in the majority. The papal court saw the danger that was involved in an assembly gathered for such a purpose, and determined to prevent the meeting. At this moment war was breaking out between Charles and Francis. Charles had no inclination to offend the Pope. He forbade the assembly at Spires, and, by letters addressed to the princes individually, endeavored to drive them into the execution of the edict of Worms. In consequence of these threatening movements, the Elector of Saxony and the Landgrave of Hesse entered into the defensive league of Torgau, in which they were joined by several Protestant communities. The battle of Pavia and the capture of Francis I. [see FRANCE: 1523-1525] were events that appeared to be fraught with peril to the Protestant cause. In the Peace of Madrid (January 14, 1526) both sovereigns avowed the determination to suppress heresy. But the dangerous preponderance obtained by the Emperor created an alarm throughout Europe; and the release of Francis was followed by the organization of a confederacy against Charles, of which Clement was the leading promoter [see ITALY: 1523-1527]. This changed the imperial policy in reference to the Lutherans. The Diet of Spires in 1526 unanimously resolved that, until the meeting of a general council, every state should act in regard to the edict of Worms as it might answer to God and his imperial majesty. Once more Germany refused to stifle the Reformation, and adopted the principle that each of the component parts of the Empire should be left free to act according to its own will. It was a measure of the highest importance to the cause of Protestantism. It is a great landmark in the history of the German Reformation. The war of the Emperor and the Pope involved the necessity of tolerating the Lutherans. In 1527, an imperial army, composed largely of Lutheran infantry, captured and sacked the city of Rome. For several months the Pope was held a prisoner. For a num-

ber of years the position of Charles with respect to France and the Pope, and the fear of Turkish invasion, had operated to embolden and greatly strengthen the cause of Luther. But now that the Emperor had gained a complete victory in Italy, the Catholic party revived its policy of repression."—G. P. Fisher, *Reformation*, ch. 4.—"While Charles and Clement were arranging matters in 1529, a new Diet was held at Spires, and the reactionists exerted themselves to obtain a reversal of that ordinance of the Diet of 1526 which had given to the reformed doctrines a legal position in Germany. Had it been possible, the Papist leaders would have forced back the Diet on the old Edict of Worms, but in this they were baffled. Then they took up another line of defence and aggression. Where the Worms Edict had been enforced, it was, they urged, to be maintained; but all further propagation of the reformed doctrines, all religious innovation whatever, was to be forbidden, pending the assembling of a General Council. . . . This doom of arrest and paralysis—this imperious mandate, 'Hitherto shall ye come, but no further,'—could not be brooked by the followers of Luther. They possessed the advantage of being admirably led. Philip of Hesse supplied some elements of sound counsel that were wanting in Luther himself. . . . Luther regarded with favour . . . the doctrine of passive obedience. It was too much his notion that devout Germans, if their Emperor commanded them to renounce the truth, should simply die at the stake without a murmur. . . . The most ripe and recent inquiries seem to prove that it was about this very time, when the Evangelical Princes and Free Cities of Germany were beginning to put shoulder to shoulder and organise resistance, in arms if necessary, to the Emperor and the Pope, that Luther composed 'Ein feste Burg ist unser Gott,' a psalm of trust in God, and in God only, as the protector of Christians. He took no fervent interest, however, in the Diet; and Philip and his intrepid associates derived little active support from him. These were inflexibly determined that the decree of the majority should not be assented to. Philip of Hesse, John of Saxony, Markgraf George the Pious of Brandenburg-Anspach, the Dukes of Lunenburg and Brunswick, the Prince of Anhalt, and the representatives of Strasburg, Nürnberg, and twelve other free cities [Ulm, Constance, Reutlingen, Windsheim, Memmingen, Lindau, Kempten, Heilbron, Isna, Weissemburgh, Nordlingen, and St. Gallen], entered a solemn protest against the Popish resolution. They were called Protestants. The name, as is customary with names that felicitously express and embody facts, was caught up in Germany and passed into every country in Europe and the world."—P. Bayne, *Martin Luther: His life and work*, v. 2, bk. 14, ch. 4.

1530-1531.—Diet at Augsburg.—Presentation and condemnation of the protestant confession of faith.—Breach with the Reformation complete.—"In the year 1530, Charles V, seeing France prostrate, Italy quelled, and Solymam driven within his own boundaries, determined upon undertaking the decision of the great question of the Reforma-

tion. The two conflicting parties were summoned, and met at Augsburg. The sectaries of Luther, known by the general name of protestants, were desirous to be distinguished from the other enemies of Rome, the excesses committed by whom would have thrown odium upon their cause; to be distinguished from the Swinglian republicans of Switzerland, odious to the princes and to the nobles; above all, they desired not to be confounded with the anabaptists, proscribed by all as the enemies of society and of social order. Luther, over whom there was still suspended the sentence pronounced against him at Worms, whereby he was declared a heretic, could not appear at Augsburg; his place was supplied by the learned and pacific Melancthon, a man timid and gentle as Erasmus, whose friend he continued to be, despite of Luther. The elector, however, conveyed the great reformer as near to the place of convocation as regard to his friend's personal safety rendered advisable. He had him stationed in the strong fortress of Co-burg. From this place, Luther was enabled to maintain with ease and expedition a constant intercourse with the protestant ministers. . . . Melancthon believed in the possibility of effecting a reconciliation between the two parties. Luther, at a very early period of the schism, saw that they were utterly irreconcilable. In the commencement of the Reformation, he had frequently had recourse to conferences and to public disputations. It was then of moment to him to resort to every effort, to try, by all the means in his power to preserve the bond of Christianity, before he abandoned all hope of so doing. But towards the close of his life, dating from the period of the Diet of Augsburg, he openly discouraged and disclaimed these wordy contests, in which the vanquished would never avow his defeat. On the 26th of August, 1530, he writes: 'I am utterly opposed to any effort being made to reconcile the two doctrines; for it is an impossibility, unless, indeed, the pope will consent to abjure papacy. Let it suffice us that we have established our belief upon the basis of reason, and that we have asked for peace. Why hope to convert them to the truth?' And on the same day (26th August), he tells Spalatin: 'I understand you have undertaken a notable mission—that of reconciling Luther and the pope. But the pope will not be reconciled and Luther refuses. Be mindful how you sacrifice both time and trouble.' . . . These prophecies were, however, unheeded; the conferences took place, and the protestants were required to furnish their profession of faith. This was drawn up by Melancthon. [The Confession, as drawn up by Melancthon, was adopted and signed by five electors, 30 ecclesiastical princes, 23 secular princes, 22 abbots, 32 counts and barons, and 30 free and imperial cities, and has since been known as the Augsburg Confession.]—J. Michelet, *Life of Luther* (tr. by W. Hazlitt), bk. 3, ch. 1.—"A difficulty now arose as to the public reading of the Confession in the Diet. The Protestant princes, who had severally signed it, contended against the Catholic princes, that, in fairness, it should be read; and, against the emperor, that, if read at all, it should be read in German, and not in Latin. They were successful in both instances, and the Confession was publicly read in German by Bayer, one of the two chancellors of the Elector of Saxony, during the afternoon session of June 25, held in the chapel of the imperial palace. Campeggio, the Papal Legate, was absent. The reading occupied two hours, and the powerful effect it produced was, in a large measure, due to the rich, sonorous voice of Bayer, and to his distinct articulation and the

musical cadence of his periods. Having finished, he handed the Confession to the Emperor, who submitted it for examination to Eck, Conrad Wimpina, Cochleus, John Faber, and others of the Catholic theologians present in the Diet." These prepared a "Confutation" which was "finally agreed upon and read in a public session of the Diet, held August 3rd, and with which the Emperor and the Catholic princes expressed themselves fully satisfied. The Protestant princes were commanded to disclaim their errors, and return to the allegiance of the ancient faith, and 'should you refuse,' the Emperor added, 'we shall regard it a conscientious duty to proceed as our coronation oath and our office of protector of Holy Church require.' This declaration roused the indignant displeasure of the Protestant princes. Philip of Hesse . . . excited general alarm by abruptly breaking off the transactions, lately entered upon between the princes and the bishops, and suddenly quitting Augsburg. Charles V. now ordered the controverted points to be discussed in his presence, and appointed seven Protestants and an equal number of Catholics to put forward and defend the views of their respective parties." Subsequently Melancthon "prepared and published his 'Apology for the Augsburg Confession,' which was intended to be an answer to the 'Confutation' of the Catholic theologians. The Protestant princes laid a copy of the 'Apology' before the emperor, who rejected both it and the Confession. . . . After many more fruitless attempts to bring about a reconciliation, the emperor, on the 22nd of September, the day previous to that fixed for the departure of the Elector of Saxony, published an edict, in which he stated, among other things, that 'the Protestants have been refuted by sound and irrefragable arguments drawn from Holy Scripture.' 'To deny free will,' he went on to say, 'and to affirm that faith without works avails for man's salvation, is to assert what is absurdly erroneous; for, as we very well know from past experience, were such doctrines to prevail, all true morality would perish from the earth. But that the Protestants may have sufficient time to consider their future course of action, we grant them from this to the 15th of April of next year for consideration.' On the following day, Joachim, Elector of Brandenburg, speaking in the emperor's name, addressed the evangelic princes and deputies of the Protestant cities as follows: 'His majesty is extremely amazed at your persisting in the assertion that your doctrines are based on Holy Scripture. Were your assertion true, then would it follow that his Majesty's ancestors, including so many kings and emperors, as well as the ancestors of the Elector of Saxony, were heretics!' . . . The Protestant princes forthwith took their leave of the emperor. On the 13th of October, the 'Recess,' or decree of the Diet, was read to the Catholic States, which on the same day entered into a Catholic League. On the 17th of the same month, sixteen of the more important German cities refused to aid the emperor in repelling the Turks, on the ground that peace had not yet been secured to Germany. The Zwinglian and Lutheran cities were daily becoming more sympathetic and cordial in their relations to each other. Charles V. informed the Holy See, October 23, of his intention of drawing the sword in defence of the faith. The 'Recess' was read to the Protestant princes November 11, and rejected by them on the day following, and the deputies of Hesse and Saxony took their departure immediately after. . . . The decree was rather more severe than the Protestants had anticipated, inasmuch as the emperor declared that he felt it to be his conscientious duty

to defend the ancient faith, and that 'the Catholic princes had promised to aid him to the full extent of their power.' . . . The appointment of the emperor's brother, Ferdinand, as King of the Romans (1531), gave deep offence to the Protestant princes, who now expressed their determination of withholding all assistance from the emperor until the 'Recess' of Augsburg should have been revoked. Assembling at Smalkald, . . . they entered into an alliance offensive and defensive, known as the League of Smalkald, on March 29, 1531, to which they severally bound themselves to remain faithful for a period of six years."—J. Alzog, *Manual of universal church history*, v. 3, sect. 312.—See also GERMANY: 1530-1532.

1534-1540.—Election of Paul III.—Beginnings of the Counter-Reformation.—"Clement VII. died in September (1534) and was succeeded by Paul III. (1534-49). He convoked a General Council to meet at Mantua in 1537, but the League refused once more to attend (1535). Even had there been no other difficulties in the way, the war that broke out with renewed bitterness between Charles V. and Francis I. would have made it impossible for such a body to meet with any hope of success. The helpless condition of the Emperor, confronted, as he was, on the one side by the French and on the other by the Turks, raised the hopes of the Protestant party, and made them more determined than ever to attend no Council in which the authority of the bishops or the jurisdiction of the Pope should be recognised. Moreover, each year brought new accessions to their ranks. The appearance of organised Christian bodies, completely national in character, accepting the civil rulers as their head, and conceding to them full power to deal as they liked with ecclesiastical property, created a deep impression on several princes and free cities, and made them not averse to giving the new religion a fair trial. In 1530, the Elector of Saxony, Philip of Hesse and the rulers of Ansbach, Anhalt, Brunswick-Lüneburg, Bayreuth, East Friesland, and a few of the larger cities had gone over to Luther. Before ten years had elapsed the greater part of Northern Germany had fallen from the Catholic Church, and even in Southern Germany Protestantism had made serious inroads. Several of the more important cities such as Wittenberg, Strassburg, Nürnberg, Magdeburg, Frankfurt-on-Main, Hamburg, and Erfurt became leading centres for the spread of the new teaching, while many of the German universities, for example, Erfurt, Basel, Frankfurt, Rostock, and Marburg supported strongly the efforts of Luther."—J. McCaffrey, *History of the Catholic church*, v. 1, pp. 97-98.—"A well-known sentence in Macaulay's Essay on Ranke's 'History

of the Popes', asserts, correctly enough, that in a particular epoch of history 'the Church of Rome, having lost a large part of Europe, not only ceased to lose, but actually regained nearly half of what she had lost.' Any fairly correct use of the familiar phrase 'the Counter-Reformation' must imply that this remarkable result was due to a movement pursuing two objects, originally distinct, though afterwards largely blended, viz., the regeneration of the Church of Rome, and the recovery of the losses inflicted upon her by the early successes of Protestantism. . . . The earliest continuous endeavour to regenerate the Church of Rome without impairing her cohesion dates from the Papacy of Paul III. [1534-1549], within which also falls the outbreak of the first religious war of the century [see GERMANY: 1546-1552]. Thus the two impulses which it was the special task of the Counter-Reformation to fuse were brought into immediate contact. The onset of the combat is marked by the formal establishment of the Jesuit Order [1540] as a militant agency devoted alike to both the purposes of the Counter-Reformation, and by the meeting of the Council of Trent [1545] under conditions excluding from its programme the task of conciliation."—A. W. Ward, *Counter-Reformation*, pp. vii-viii.—"I intend to use this term Counter-Reformation to denote the reform of the Catholic Church, which was stimulated by the German Reformation, and which, when the Council of Trent had fixed the dogmas and discipline of Latin Christianity, enabled the Papacy to assume a militant policy in Europe, whereby it regained a large portion of the provinces that had previously lapsed to Lutheran and Calvinistic dissent. . . . The centre of the world-wide movement which is termed the Counter-Reformation was naturally Rome. Events had brought the Holy See once more into a position of prominence. It was more powerful as an Italian State now, through the support of Spain and the extinction of national independence, than at any previous period of history. In Catholic Christendom its prestige was immensely augmented by the Council of Trent. At the same epoch, the foreigners who dominated Italy, threw themselves with the enthusiasm of fanaticism into this Revival. Spain furnished Rome with the militia of the Jesuits and with the engines of the Inquisition. The Papacy was thus able to secure successes in Italy which were elsewhere only partially achieved. . . . In order to understand the transition of Italy from the Renaissance to the Counter-Reformation manner, it will be well to concentrate attention on the history of the Papacy during the eight reigns [1534-1605] of Paul III., Julius III., Paul IV., Pius IV., Pius V., Gregory XIII., Sixtus V., and Clement VIII. In the first of these reigns we hardly notice that the Renaissance has passed away. In the last we are aware of a completely altered Italy."—J. A. Symonds, *Renaissance in Italy: Catholic reaction*, v. 1, ch. 2, with footnote.

1535.—Perugia captured. See PERUGIA.

1537-1563.—Popular weakness of Reformation in Italy.—Momentary inclination towards the reform at Rome.—Beginning of Catholic reaction.—Council of Trent and its consolidating work.—"The conflict with the hierarchy did not take the same form in Italy as elsewhere. . . . There is no doubt that the masses saw no cause for discontent under it. We have proof that the hierarchy was popular—that among the people, down to the lowest grades, the undiminished splendour of the Papacy was looked upon as a pledge of the power of Italy. But this did not prevent reform movements from taking place. The Humanistic school had its home here; its opposition ten-

dencies had not spared the Church any more than Scholasticism; it had everywhere been the precursor and ally of the intellectual revolt, and not the least in Italy. There were from the first eminent individuals at Venice, Modena, Ferrara, Florence, even in the States of the Church themselves, who were more or less followers of Luther. The cardinals Contarini and Morone, Bembo and Sadoleto, distinguished preachers like Peter Martyr, Johann Valdez, and Bernardino Ochino, and from among the princely families an intellectual lady, Renata of Ferrara, were inclined to the new doctrines. But they were leaders without followers; the number of their adherents among the masses was surprisingly small. The Roman Curia, under the Pontificate of Paul III., 1534-49, vacillated in its policy for a time; between 1537-41, the prevailing sentiments were friendly and conciliatory towards Reform. . . . They were, in fact, gravely entertaining the question at Rome, whether it would not be better to come to terms with Reform, to adopt the practicable part of its programme, and so put an end to the schism which was spreading so fast in the Church. . . . An honest desire then still prevailed to effect a reconciliation. Contarini was in favour of it with his whole soul. But it proceeded no further than the attempt; for once the differences seemed likely to be adjusted, so far as this was possible; but in 1542, the revulsion took place, which was never again reversed. Only one result remained. The Pope could no longer refuse to summon a council. The Emperor had been urging it year after year; the Pope had acceded to it further than any of his predecessors had done; and, considering the retreat which now took place, this concession was the least that could be demanded. At length, therefore, three years after it convened, in May, 1542, the council assembled at Trent in December, 1545. It was the Emperor's great desire that a council should be held in Germany, that thus the confidence of the Germans in the supreme tribunal in the great controversy might be gained; but the selection of Trent, which nominally belonged to Germany, was the utmost concession that could be obtained. The intentions of the Emperor and the Pope with regard to the council were entirely opposed to each other. The Pope was determined to stifle all opposition in the bud, while the Emperor was very desirous of having a counterpoise to the Pope's supremacy in council, provided always that it concurred in the imperial programme. . . . The assembly consisted of Spanish and Italian monks in overwhelming majority, and this was decisive as to its character. When consulted as to the course of business, the Emperor had expressed a wish that those questions on which agreement between the parties was possible should first be discussed. There were a number of questions on which they were agreed, as, for example, Greek Christianity. Even now there are a number of points on which Protestants and Catholics are agreed, and differ from the Eastern Church. If these questions were considered first, the attendance of the Protestants would be rendered very much easier; it would open the door as widely as possible, they would probably come in considerable numbers, and might in time take a part which at least might not be distasteful to the Emperor, and might influence his ideas on Church reform. The thought that they were heretics was half concealed. But Rome was determined to pursue the opposite course, and at once to agitate those questions on which there was the most essential disagreement, and to declare all who would not submit to be incorrigible heretics. . . . The first subjects of discussion were, the authority of the

Scriptures in the text of the Vulgate, ecclesiastical tradition, the right of interpretation, the doctrine of justification. These were the questions on which the old and new doctrines were irreconcilably at variance; all other differences were insignificant in comparison. And these questions were decided in the old Roman Catholic sense; not precisely as they had been officially treated in 1517—for the stream of time had produced some little effect—but in the main the old statutes were adhered to, and everything rejected which departed from them. This conduct was decisive. . . . Nevertheless some reforms were carried out. Between the time of meeting and adjournment, December, 1545, to the spring of 1547, the following were the main points decided on:—1. The bishops were to provide better teachers and better schools. 2. The bishops should themselves expound the word of God. 3. Penalties were to be enforced for the neglect of their duties, and various rules were laid down as to the necessary qualifications for the office of a bishop. Dispensations, licenses, and privileges were abolished. The Church was therefore to be subjected to a reform which abolished sundry abuses, without conceding any change in her teaching. The course the council was taking excited the Emperor's extreme displeasure. . . . He organized a sort of opposition to Rome; his commissaries kept up a good understanding with the Protestants, and it was evident that he meant to make use of them for an attack on the Pope. This made Rome eager to withdraw the assembly from the influence of German bishops and imperial agents as soon as possible. A fever which had broken out at Trent, but had soon disappeared, was made a pretext for transferring the council to Bologna, in the spring of 1547. The imperial commissioners protested that the decrees of such a hole-and-corner council would be null and void. The contest remained undecided for years. Paul III. died in the midst of it, in November, 1549, and was succeeded by Cardinal del Monte, one of the papal legates at the council, as Pope Julius III. The Emperor at length came to an understanding with him, . . . the council was again opened at Trent. . . . The assembly remained Catholic; the Protestant elements, which were represented at first, all disappeared after the turn of affairs in 1552 [see GERMANY: 1546-1552; 1552-1561]. After that there was no further thought of an understanding with the heretics. The results for reform were very small indeed. The proceedings were dragging wearily on when a fresh adjournment was announced in 1552. Pope Julius III. died in March, 1555. His successor, the noble Cardinal Cervin, elected as Marcellus II. died after only twenty-two days, and was succeeded by Cardinal Caraffa as Paul IV., 1555-6. . . . He was the Pope of the Restoration. The warm Neapolitan blood flowed in his veins, and he was a fiery, energetic character. He was not in favour of any concessions or abatement, but for a complete breach with the new doctrines, and a thorough exclusiveness for the ancient Church. He was one of the ablest men of the time. As early as in 1542, he had advised that no further concessions should be made, but that the Inquisition, of which indeed he was the creator, should be restored. It was he who decidedly initiated the great Catholic reaction. He established the Spanish Inquisition in Italy, instituted the first Index, and gave the Jesuits his powerful support in the interest of the restoration. This turn of affairs was the answer to the German religious Peace. Since the Protestants no longer concerned themselves about Rome, Rome was about to set her house in order without them, and as a matter of course the council stood still." But

in answer to demands from several Catholic princes, "the council was convened afresh by the next Pope, Pius IV. (1550-65), in November, 1560, and so the Council of Trent was opened for the third time in January, 1562. Then began the important period of the council, during which the legislation to which it has given a name was enacted. . . . The Curia reigned supreme, and, in spite of the remonstrances of the Emperor and of France, decided that the council should be considered a continuation of the previous ones, which meant—"All the decrees aimed against the Protestants are in full force; we have no further idea of coming to terms with them." The next proceeding was to interdict books and arrange an Index. [See below: 1559-1595.] . . . The restoration of the indisputable authority of the Pope was the ruling principle of all the decrees. . . . The great achievement of the council for the unity of the Catholic Church was this: it formed into a code of laws, on one consistent principle, that which in ancient times had been variable and uncertain, and which had been almost lost sight of in the last great revolution. Controverted questions were replaced by dogmas, doubtful traditions by definite doctrines; a uniformity was established in matters of faith and discipline which had never existed before, and an impregnable bulwark was thus erected against the sectarian spirit and the tendency to innovation. Still when this unity was established upon a solid basis, the universal Church of former times was torn asunder." The Council of Trent was closed December 4, 1563, 18 years after its opening.—L. Häusser, *Period of the Reformation*, ch. 19, 16.—"It was one of the greatest benefits that Paul III. conferred on the Church, that he remodelled this all-important body [the Council of Trent], and made it a fit instrument for reform. And it would be hard to exaggerate the influence of the General Council held at Trent, so surrounded with obstacles, and so sparsely attended at first, and yet patiently pursuing its labours under the encouragement of pontiff after pontiff, and cardinal legates one after the other, till after eighteen years. . . . It had given system and unity to a multitude of disciplinary decrees, which meant, when they were put into execution, a thorough renewal of the interior life of the Church. It had set on foot a restoration of liturgy and worship which afterwards, in the hands of such men as Pius V. and Sixtus V., had helped largely to a new order of things, replacing variety, and to some extent disorder, by a world-wide unity and regularity. It had defined what was vague, it had drawn clearly the dividing line between the . . . reformers."—G. Stebbing, *Story of the Catholic church*, p. 530.

1555-1603.—Aggressive age of the reinvigorated church.—Attachment and subserviency to Spain.—Giovanni Piero Caraffa, founder of the Order of the Theatines, was raised to the papal chair in 1555, assuming the title of Paul IV. He "entered on his station with the haughty notions of its prerogatives which were natural to his austere and impetuous spirit. Hence his efforts in concert with France, unsuccessful as they proved, to overthrow the Spanish greatness, that he might extricate the popedom from the galling state of dependence to which the absolute ascendancy of that power in Italy had reduced it. Paul IV. is remarkable as the last pontiff who embarked in a contest which had now become hopeless, and as the first who, giving a new direction to the policy of the holy see, employed all the influence, the arts, and the resources of the Roman church against the protestant cause. He had, during the pontificate of Paul III. [1534-1549], already made himself conspicuous for his persecuting zeal. He had been the principal agent in the establishment of the inquisition at Rome, and had himself filled the office of grand inquisitor. He seated himself in the chair of St. Peter with the detestable spirit of that vocation; and the character of his pontificate responded to the violence of his temper. His mantle descended upon a long series of his successors. Pius IV., who replaced him on his death in 1559; Pius V., who received the tiara in the following year; Gregory XIII., who was elected in 1572, and died in 1585; Sixtus V., who next reigned until 1590; Urban VII., Gregory XIV., and Innocent IX., who each filled the papal chair only a few months; and Clement VIII., whose pontificate commenced in 1592 and extended beyond the close of the century [1603]: all pursued the same political and religious system. Resigning the hope, and perhaps the desire, of re-establishing the independence of their see, they maintained an intimate and obsequious alliance with the royal bigot of Spain; they seconded his furious persecution of the protestant faith; they fed the civil wars of the Low Countries, of France, and of Germany."—G. Procter, *History of Italy*, ch. 9.—"The Papacy and Catholicism had long maintained themselves against these advances of their enemy [the Protestant Reformation], in an attitude of defence it is true, but passive only; upon the whole they were compelled to endure them. Affairs now assumed a different aspect. . . . It may be affirmed generally that a vital and active force was again manifested, that the church had regenerated her creed in the spirit of the age, and had established reforms in accordance with the demands of the times. The religious tendencies which had appeared in southern Europe were not suffered to become hostile to herself, she adopted them, and gained the mastery of their movements; thus she renewed her powers, and infused fresh vigour into her system. . . . The influence of the restored Catholic system was first established in the two southern peninsulas, but this was not accomplished without extreme severities. The Spanish Inquisition received the aid of that lately revived in Rome; every movement of Protestantism was violently suppressed. But at the same time those tendencies of the inward life which renovated Catholicism claimed and enchained as her own, were peculiarly powerful in those countries. The sovereigns also attached themselves to the interests of the church. It was of the highest

importance that Philip II., the most powerful of all, adhered so decidedly to the popedom; with the pride of a Spaniard, by whom unimpeachable Catholicism was regarded as a sign of a purer blood and more noble descent, he rejected every adverse opinion; the character of his policy was however not wholly governed by mere personal feeling. From remote times, and more especially since the regulations established by Isabella, the kingly dignity of Spain had assumed an ecclesiastical character; in every province the royal authority was strengthened by the addition of spiritual power; deprived of the Inquisition, it would not have sufficed to govern the kingdom. Even in his American possessions, the king appeared above all in the light of a disseminator of the Christian and Catholic faith. This was the bond by which all his territories were united in obedience to his rule; he could not have abandoned it, without incurring real danger. The extension of Huguenot opinions in the south of France caused the utmost alarm in Spain; the Inquisition believed itself bound to redoubled vigilance. . . . The power possessed by Philip in the Netherlands secured to the southern system an immediate influence over the whole of Europe; but besides this, all was far from being lost in other countries. The emperor, the kings of France and Poland, with the duke of Bavaria, still adhered to the Catholic church. On all sides there were spiritual princes whose expiring zeal might be reanimated; there were also many places where Protestant opinions had not yet made their way among the mass of the people. The majority of the peasantry throughout France, Poland, and even Hungary, still remained Catholic. Paris, which even in those days exercised a powerful influence over the other French towns, had not yet been affected by the new doctrines. In England a great part of the nobility and commons were still Catholic; and in Ireland the whole of the ancient native population remained in the old faith. Protestantism had gained no admission into the Tyrolese or Swiss Alps, nor had it made any great progress among the peasantry of Bavaria. Canisius compared the Tyrolese and Bavarians with the two tribes of Israel, 'who alone remained faithful to the Lord.' The internal causes on which this pertinacity, this immovable attachment to tradition, among nations so dissimilar, was founded, might well repay a more minute examination. A similar constancy was exhibited in the Walloon provinces of the Netherlands. And now the papacy resumed a position in which it could once more gain the mastery of all these inclinations, and bind them indissolubly to itself. Although it had experienced great changes, it still possessed the inestimable advantage of having all the externals of the past and the habit of obedience on its side. In the council so prosperously concluded, the popes had even gained an accession of that authority which it had been the purpose of the temporal powers to restrict; and had strengthened their influence over the national churches; they had moreover abandoned that temporal policy by which they had formerly involved Italy and all Europe in confusion. They attached themselves to Spain with perfect confidence and without any reservations, fully returning the devotion evinced by that kingdom to the Roman church. The Italian principality, the enlarged dominions of the pontiff, contributed eminently to the success of his ecclesiastical enterprises; while the interests of the universal Catholic church were for some time essentially promoted by the overplus of its revenues. Thus strengthened internally, thus supported by powerful adherents, and by the idea of which they were the representatives,

the popes exchanged the defensive position, with which they had hitherto been forced to content themselves, for that of assailants."—L. von Ranke, *History of the popes*, v. 1, bk. 5, sect. 2.

1559-1595.—Institution of the Index.—"The first 'Index' of prohibited books published by Papal authority, and therefore, unlike the 'catalogi' previously issued by royal, princely, or ecclesiastical authorities, valid for the whole Church, was that authorised by a bull of Paul IV. in 1559. In 1564 followed the Index published by Pius IV., as drawn up in harmony with the decrees of the Council of Trent, which, after all, appears to be a merely superficial revision of its predecessor. Other Indices followed, for which various authorities were responsible, the most important among them being the Index Expurgatorius, sanctioned by a bull of Clement VIII. in 1595, which proved so disastrous to the great printing trade of Venice."—A. W. Ward, *Counter-Reformation*, ch. 2.—See also CENSORSHIP: Press and speech; PRINTING AND THE PRESS: 1564-1581.

1570-1597.—Catholic reaction in Germany.—"Altogether about the year 1570 the spread of protestantism in Germany and the lands under its influence had reached its zenith. . . . Yet beyond a doubt its lasting success was only legally assured in places where it had won over the governing power and could stand on the generally recognized basis of the religious peace. This was the case in the secular principalities of the protestant dynasties, but not in the Wittelsbach and Hapsburgh lands, where its lawful existence depended only on the personal concessions of the existing ruler, and still less in the ecclesiastical territories. . . . To give it here the secure legal basis which it lacked was the most important problem, as regarded internal German affairs, of the protestant policy. . . . The only way to attain this was to secure the recognition on the part of the empire of the free right of choosing a confession in the bishoprics; in other words the renunciation of the 'Ecclesiastical Reservation.' . . . This goal could only be attained if the protestants advanced in a solid phalanx. This is, however, just what they could not do. For they themselves were torn by bitter contentions with regard to the faith. . . . From this point of view it was no boon that Calvinism, the specifically French form of protestantism, found entrance also into Germany. . . . Under its influence, to begin with, the Saxon-Thuringian church became divided in its interpretation of the teachings concerning justification and the Lord's Supper. . . . The complications were still further increased when Frederick III. of the Palatinate, elector since 1550, disgusted at the quarrelsomeness of the Lutheran theologians, dismissed the zealot Tilemann in August 1560, and in 1563 gave over the recognized church of the Palatinate to Calvinism. Herewith he completely estranged the Lutherans who did not regard the Calvinists as holding the same faith. . . . Germany could no longer count itself among the great powers and at home the discord was ever increasing. The motion of the Palatinate in the electoral diet of October 1575 to incorporate in the religious peace the so-called 'Declaration of King Ferdinand' with regard to it, and thus to se-

cure the local option with regard to a creed in the bishoprics, was opposed not only by the ecclesiastical members of the electoral college but also by the electorate of Saxony. In consequence of the same party strife a similar motion of the Palatinate, made in the diet of Regensburg, was lost. . . . On the one hand hostilities grew more bitter among the German protestants, on the other the Roman church, supported by the power of the Spanish world-monarchy, advanced everywhere, within and without the German empire, to a well-planned attack. . . . She had won her first victory in the empire with the refusal in 1576 to grant the local option of creed, for this was almost equivalent to a recognition on the protestant side of the 'Ecclesiastical Reservation.' The more eagerly did Rome, by demanding the oath drawn up in the council of Trent, strive to chain fast her bishops to her, to

healthy, natural development and wrought havoc in the moral life of the people. Thus did the reaction gain the ascendancy in most of the ecclesiastical principalities of the South; in the North the scale still hung in the balance. . . . And in this condition of affairs the discord among the protestants grew worse year by year! 'Their war is our peace,' was the exultant cry of the catholics when they looked upon this schism. In order to preserve pure Lutheranism from any deviation, the electoral court of Saxony caused the 'Formula of Concord' to be drawn up by three prominent theologians in the monastery of Bergen near Magdeburg (20 May 1577), and compelled all pastors and teachers of the land to accept them under pain of dismissal from office. As this necessarily accentuated the differences with the Calvinists, John Casimir of the Palatinate endeavored, in the Convention of Frank-

BESTOWING THE PAPAL BLESSING IN THE FORECOURT OF ST. PETER'S

In the rear are the old basilica and the cupola in the course of construction. At the right is the Vatican (After a 16th century engraving. Part of the Fresco of the Coronation of Sixtus V (1585) in the Vatican Library)

remove those who made opposition even if it had to happen by disregarding the law of the land and the religious treaties, to bring zealous catholic men into the episcopal sees—everywhere to set the reaction in motion. The manner of proceeding was always the same: the protestant pastors and teachers were banished; the catholic liturgy, in which the utmost splendor was unfolded, was reintroduced into the churches, and competent catholic clergy were put in office. The members of the community, left without a leader, had now only the choice allowed to them of joining the catholic church or of emigrating; the protestant officials were replaced by catholic ones; new institutions of learning, conducted by Jesuits, were founded for the purpose of winning the rising generation, inwardly also, for catholicism. Beyond a doubt this whole work of restoration put an end in many cases to a confused and untenable state of affairs, but at least as often it crushed down by force a

fort on the Main in 1577, to unite the protestants of all denominations and all lands . . . in a common effort at defence; but his appeal and the embassy which he sent to the evangelical princes met with no very favorable reception. On the contrary in course of time 86 estates of the empire accepted the Formula of Concord which was now published in Dresden, together with the names of those who had signed it, on the 25th of June 1580, the 50th anniversary of handing in the Augsburg Confession. What a pass had matters come to since that great epoch! . . . At any rate the unity of the German protestants was completely at an end, and especially any joint action between Saxony and the Palatinate had been rendered impossible. . . . In 1582 the Roman party opened a well-planned campaign for the purpose of putting itself in full possession of the power in the empire. The emperor belonged as it was to their confession, so all depended on the manner in which the diet

should be made up; and this again depended on who should be members of the college of princes: for in the college of electors the votes of the protestants and catholics were equal inasmuch as the Bohemian vote was 'dormant,' and of the imperial cities only a few were still catholic. In the electoral college, then, the protestants possessed the majority so long as the 'administrators' [of the bishoprics] maintained as hitherto their seat and their vote." But the Catholics, acting unitedly, while the Protestants were hopelessly divided, succeeded at last in expelling Archbishop Gebhard, who had renounced their communion, from the princely see of Cologne, and finally (1597) they secured a majority in the electoral college.—Kæmmel, *Deutsche Geschichte* (tr. from the German), pp. 701-715.

1597.—Annexation of Ferrara to the states of the church.—"The loss which the papal states sustained by the alienation of Parma and Placentia was repaired, before the end of the 16th century, by the acquisition of a duchy little inferior in extent to those territories:—that of Ferrara." With the death, in 1597, of Alfonso II, the persecutor of Tasso, "terminated the legitimate Italian branch of the ancient and illustrious line of Este. But there remained an illegitimate representative of his house, whom he designed for his successor; don Cesare da Este, the grandson of Alfonso I. by a natural son of that duke. The inheritance of Ferrara and Modena had passed in the preceding century to bastards, without opposition from the popes, the feudal superiors of the former duchy. But the imbecile character of don Cesare now encouraged the reigning pontiff, Clement VIII., to declare that all the ecclesiastical fiefs of the house of Este reverted, of right, to the holy see on the extinction of the legitimate line. The papal troops, on the death of Alfonso II, invaded the Ferrarese state; and Cesare suffered himself to be terrified by their approach into an ignominious and formal surrender of that duchy to the holy see. By the indifference of the Emperor Rodolph II. he was permitted to retain the investiture of the remaining possessions of his ancestors: the duchies of Modena and Reggio, over which, as imperial and not papal fiefs, the pope could not decently assert any right. In passing beneath the papal yoke, the duchy of Ferrara, which, under the government of the house of Este, had been one of the most fertile provinces of Italy, soon became a desert and marshy waste. The capital itself lost its industrious population and commercial riches; its architectural magnificence crumbled into ruins, and its modern aspect retains no trace of that splendid court in which literature and art repaid the fostering protection of its sovereigns, by reflecting lustre on their heads."—G. Procter, *History of Italy*, ch. o.

1605 (April).—Election of Leo XI.

1605 (May).—Election of Paul V.

1605-1700.—Conflict with Venice.—Opposition of Urban VIII to the Emperor.—Annexation of Urbino to the states of the church.—Half a century of unimportant history.—"Paul V. (1605-1621) was imbued with mediæval ideas as to the papal authority and the validity of the canon-law. These speedily brought him into collision with the secular power, especially in Venice, which had always maintained an attitude of independence towards the papacy. Ecclesiastical disputes [growing out of a Venetian decree forbidding alienations of secular property in favor of the churches] were aggravated by the fact that the acquisition of Ferrara had extended the papal states to the frontiers of Venice, and that frequent differences arose as to the boundary line between them. The defence of the republic and of the secular authority in church affairs was undertaken with great zeal and ability by Fra Paolo Sarpi, the famous historian of the Council of Trent. Paul V. did not hesitate to excommunicate the Venetians [1606], but the government compelled the clergy to disregard the pope's edict. The Jesuits, Theatines, and Capuchins were the only orders that adhered to the papacy, and they had to leave the city. If Spain had not been under the rule of the pacific Lerma, it would probably have seized the opportunity to punish Venice for its French alliance. But France and Spain were both averse to war, and Paul V. had to learn that the papacy was powerless without secular support. By the mediation of the two great powers, a compromise was arranged in 1607. The Jesuits, however, remained excluded from Venetian territory for another half-century. This was the first serious reverse encountered by the Catholic reaction. [See VENICE: 1606-1607.] . . . The attention of the Catholic world was now absorbed in the Austrian schemes for the repression of Protestantism in Germany, which received the unhesitating support, both of Paul and of his successor, Gregory XV. [1621-1623]. The latter was a great patron of the Jesuits. Under him the Propaganda was first set on foot. . . . The pontificate of Urban VIII. (1623-1644) was a period of great importance. He regarded himself rather as a temporal prince than as head of the Church. He fortified Rome and filled his states with troops. The example of Julius II. seemed to find an imitator. Urban was imbued with the old Italian jealousy of the imperial power, and allied himself closely with France. . . . At the moment when Ferdinand II. had gained his greatest success in Germany he was confronted with the hostility of the pope. Gustavus Adolphus landed in Germany, and by a strange coincidence Protestantism found support in the temporal interests of the papacy. The Catholics were astounded and dismayed by Urban's attitude. . . . Urban VIII. succeeded in making an important addition to the papal states by the annexation of Urbino, in 1631, on the death of Francesco Maria, the last duke of the Della Rovere family. But in the government of the states he met with great difficulties. . . . Urban VIII.'s relatives, the Barberini, quarreled with the Farnesi, who had held Parma and Piacenza since the pontificate of Paul III. The pope was induced to claim the district of Castro, and this claim aroused a civil war (1641-1644) in which the papacy was completely worsted. Urban was forced to conclude a humiliating treaty and directly afterwards died. His successors [Innocent X. 1644-1655; Alexander VII. 1655-1667; Clement IX. 1667-1669; Clement X. 1670-1676; Innocent XI. 1676-1680; Alexander VIII. 1680-1691; Innocent XII. 1691-1700] are of very slight importance to the history of Europe. . . . The only important

questions in which the papacy was involved in the latter half of the century were the schism of the Jansenists and the relations with Louis XIV."—R. Lodge, *History of modern Europe*, ch. 12.

1621.—Election of Gregory XV.

1622.—Founding of College of the Propaganda.—Cardinal Alexander Ludovisi, elected pope on February 9th, 1621, taking the name of Gregory XV, "had always shown the greatest zeal for the conversion of infidels and heretics; this zeal inspired the design of founding the College of the Propaganda (1622). The origin of the Propaganda is properly to be traced to an edict of Gregory XIII., in virtue of which a certain number of cardinals were charged with the direction of missions to the East, and catechisms were ordered to be printed in the less-known languages. But the institution was neither firmly established nor provided with the requisite funds. Gregory XV. gave it a constitution, contributed the necessary funds from his private purse, and as it met a want the existence of which was really felt and acknowledged, its success was daily more and more brilliant. Who does not know what the Propaganda has done for philological learning? But it chiefly labored, with admirable grandeur of conception and energy, to fulfil its great mission—the propagation of the Catholic faith—with the most splendid results. Urban VIII., the immediate successor of Gregory XV., completed the work by the addition of the 'Collegium de Propaganda Fide,' where youth are trained in the study of all the foreign languages, to bear the name of Christ to every nation on the globe."—J. E. Darras, *General history of the Catholic church, period 7, v. 4, ch. 7, sect. 10*.

1644-1667.—Pontificates of Innocent X and Alexander VII.—Growth of nepotism.—Sixtus V had "invented a system of nepotism which was so actively followed up by his successors, that even a short reign provided the means of accumulating a brilliant fortune. That pontiff raised one nephew to the rank of cardinal, with a share of the public business and an ecclesiastical income of a hundred thousand crowns. Another he created a marquess, with large estates in the Neapolitan territory. The house of Ferretti thus founded, long maintained a high position, and was frequently represented in the College of Cardinals. The Aldobrandini, founded in like manner by Clement VIII., the Borghesi by Paul V., the Ludovisi by Gregory XV., and the Barberini by Urban VIII., now vied in rank and opulence with the ancient Roman houses of Colonna and Orsini, who boasted that for centuries no peace had been concluded in Christendom in which they were not expressly included. On the death of Urban VIII. (20th July, 1644) the Barberini commanded the votes of eight-and-forty cardinals, the most powerful faction ever seen in the conclave. Still, the other papal families were able to resist their dictation, and the struggle terminated in the election of Cardinal Pamfilii, who took the name of Innocent X. During the interval of three months, the city was abandoned to complete lawlessness; assassinations in the streets were frequent; no private house was safe without a military guard,

and a whole army of soldiers found occupation in protecting the property of their employers. This was then the usual state of things during an interregnum. Innocent X., though seventy-two years of age at his election, was full of energy. He restrained the disorders in the city. . . . Innocent brought the Barberini to strict account for malpractices under his predecessor, and wrested from them large portions of their ill-gotten gain. So far, however, from reforming the system out of which these abuses sprung, his nepotism exhibited itself in a form which scandalised even the Roman courtiers. The pope brought his sister-in-law, Donna Olimpia Maidalchini, from Viterbo to Rome, and established her in a palace, where she received the first visits of foreign ambassadors on their arrival, gave magnificent entertainments, and dispensed for her own benefit the public offices of the government. . . . Her daughters were married into the noblest families. Her son, having first been appointed the cardinal-nephew, soon after renounced his orders, married, and became the secular-nephew. The struggle for power between his mother and his wife divided Rome into new factions, and the feud was enlarged by the ambition of a more distant kinsman, whom Innocent appointed to the vacant post of cardinal-nephew. The pontiff sank under a deep cloud from the disorders in his family and the palace, and when he died (5th January, 1655) the corpse lay three days uncaired for, till an old canon, who had been long dismissed from his household, expended half-a-crown on its interment. . . . Fabio Chigi, who came next as Alexander VII. [VII] brought to the tottering chair a spotless reputation, and abilities long proved in the service of the church. His first act was to banish the scandalous widow; her son was allowed to retain her palace and fortune. Beginning with the loudest protestations against nepotism, now the best established institution at Rome, in the phrase of the time, the pope soon 'became a man.' The courtiers remonstrated on his leaving his family to live a plain citizen's life at Siena: it might involve the Holy See in a misunderstanding with Tuscany. . . . The question was gravely proposed in consistory, and the flood-gates being there authoritatively unclosed, the waters of preferment flowed abundantly on all who had the merit to be allied with Fabio Chigi. After discharging this arduous duty, the pope relieved himself of further attention to business, and spent his days in literary leisure. His nephews, however, had less power than formerly, from the growth of the constitutional principle. The cardinals, in their different congregations, with the official secretaries, aspired to the functions of responsible advisers."—G. Trevor, *Rome, from the fall of the Western empire*, pp. 416-418.—See also ROME: Modern city: 1664.

1667.—Election of Clement IX.

1670.—Election of Clement X.

1676.—Election of Innocent XI.

1676-1689.—End of nepotism.—Doctrine of casuistry.—"Innocent XI. [1676-1689] . . . found the revenues of the See of Rome in a lamentable state of deficiency, and by various reforms, such as by abolishing the College of Secretaries, lowering the rate of interest on loans, and by differ-

ent sumptuary reforms, he succeeded in balancing his accounts, and even providing the papal treasury with a surplus. . . . He made laws against the luxury of women's attire, suppressed gambling houses, and enforced a stricter standard of living on religious, both men and women, but the Pope was inflexible and incorruptible, and by his steady refusal to have his family around him, or to enrich them, he gave almost the final blow to nepotism. Out of moral theology grew the practical science of casuistry, or the art of applying the various principles of that science to the particular cases of conscience which might call for solution."—G. Stebbing, *Story of the Catholic Church*, p. 552.

1682-1693.—Successful contest with Louis XIV.—Gallicanism.—“When Alexander died in 1667, a unanimous vote of his colleagues raised Cardinal Rospigliosi to the papal chair. Perhaps Clement IX. was the most amiable pope that ever sat in Peter's place. . . . His influence was felt on a large scale in the great work of the pacification of Europe. The ‘Pax Clementina,’ giving some interval of repose in the Jansenist controversy, was his work; so also was, to a great extent, the Treaty of Aix-la-Chapelle, 1667, which ended the strife between France and Spain on a basis very honourable, to the power of Louis XIV. . . . In 1669, when he [Clement] died in his seventieth year, the conclave was a long and troublesome one. It was more than four months before, all the leading candidates being set aside, the votes were united upon the aged Cardinal Altieri, eighty years of age. . . . It was an expedient to secure a short reign. But it was not to be so very short after all. Altieri assumed the name of Clement X., and filled in the greater part of his ninth decade, dying in his eighty-seventh year. . . . Cardinal Odescalchi had been a strong candidate in the conclave which elected Clement X., but Louis XIV. had instructed the French cardinals to oppose him, and now the same difficulty turned up again. There was the same French opposition, and the same deadlock. But cardinals and Roman people were united in their wish to have the cardinal [who was elected and took the title of Innocent XI.] . . . At once the new Pope had to take up the contest against the usurpations on ecclesiastical right which the French Court was practising under the pretext of ‘*Jus Regalium*,’ which meant that the revenues of all vacant sees were to go to the Crown. A limited right of this kind, with regard to some dioceses, had been admitted even in the thirteenth century, but the Council of Lyons (1274) had forbidden its further extension, and this was what the French king was now doing. . . . A wearisome and hot controversy was carried on, but neither Pope nor king would yield.”—G. Stebbing, *Story of the Catholic Church*, pp. 550-551.—“Ever since the days of Hugh Capet, the French bishops had complained of Rome's encroachments, and had made much of the comparative independence of the Gallican Church [see GALLICAN CHURCH] with regard to Rome, in which sentiment they had the sympathies of the Crown. In the days of Henry IV. (1504), when the reaction against the League had again exalted the Crown, and when the thought of the power and significance of the State had gained greater distinctness, Pithou had collected the documents upon which were founded the so-called Gallican rights. The programme of Gallicanism turned upon these two chief propositions; that the Kings of France were in secular matters independent of the Pope; and that the Pope's spiritual authority was limited by the laws of the Church. From the first

proposition they concluded that the King, as the born protector of the Church, had the right of calling together national and provincial Councils in his dominions, in order with their help to legislate for the Church, and that the Pope's Bulls could not be published in France without the King's consent (*pareatis, placet*). Gallicanism took a strong hold, partly because the bishops were indisposed to submit to Rome, and partly because the sense which the Parliaments entertained of their own independence was steadily on the increase; and with the national movement in the beginning of the 17th century the Gallican theory gained still more adherents. . . . The Crown gained much by the spread of Gallicanism. Gallicanism was to no small degree promoted by legists who had studied the Roman law and who sought to introduce the conceptions of Roman law into French territory. Without reserve it allowed to the King divine authority and made him the equal of the Pope. . . . On the strength of his divine authority the King is lord over the property of the Church, and in this way he acquires the means to satisfy the nobles, and to keep the third estate in check. But power brings its duties. Just as the Roman Empire from the beginning was tinged with a spiritual character, so the Most Christian King in France had, according to the theory of the Gallicans, ecclesiastical obligations. He was not only bound to watch over Church and school, but also to extirpate all heresies. . . . Gallicanism reached its height under Louis XIV. The Gallican theory concerning the origin and rights of the Crown gave the basis for his autocracy. He believed fully in his ecclesiastical mission, but he also took a firm stand upon the fundamental Gallican propositions. When Ultramontanism [see ULTRAMONTANE] began to raise its head, the Sorbonne fearlessly declared (in 1663) that it was not the doctrine of that renowned faculty that the Pope had any authority whatever over the Most Christian King in secular concerns, or that the Pope could take any measures which conflicted with the law of the French Church. At the same time the Sorbonne repudiated the assertion that the Pope was above a General Council or could be infallible without the consent of the Church (*nullo accedente Ecclesie consensu*). This declaration was confirmed by Louis XIV., and he forbade any other teaching in his kingdom. Following upon this, the Sorbonne pronounced censure upon several works of an ultramontane tendency, and when Alexander VII. in a severe Bull disapproved of the censure, the Parliament of Paris, with the King's consent, opposed the publication of the papal Bull. . . . At that time the French priesthood was assembled in synod at Paris (1681-1682). The Gallican spirit which prevailed amongst the prelates present displayed itself. . . . The assembly approved of Louis XIV's extension of the *droit de régale*, and accepted the four Gallican propositions, which maintained that the secular power was independent of the spiritual, that a General Council was above the Pope, that the ancient rules of the Gallican Church were not to be violated, and that it was a valid affirmation that the Pope's decrees in matters of faith are only incapable of being reversed (*irreformables*) when they have the Church's assent (*Ecclesie consensu*). This famous Gallican declaration for a while obtained in France the authority of a religious formula. Louis XIV. made it the basis of religious instruction in all French schools, and required that everyone who wished to take a degree in divinity or law should take his oath to observe it. The Pope felt his spiritual authority

greatly outraged by the four Gallican propositions, and never since the days of Francis I. had the relations between the papal power and the French King been so strained. When Louis XIV. went on to fill the French sees with prominent members of this Gallican-minded synod, the patience of Innocent XI. gave way, and he refused to permit the new bishops to receive the canonical institution, without which they could not perform a bishop's duties. It was in vain that Louis XIV. sought to appease the angry Pope by crowning his persecutions of the Protestants with the treacherous revocation of the Edict of Nantes, the token of a complete break with Richelieu's policy, and forming a challenge to all the Protestant powers of Europe. . . . As Louis XIV. would not yield, Innocent at last laid an interdict upon the church of St. Louis at Rome, where the French embassy used to hear Mass. By way of a rejoinder, Louis laid siege to Avignon, and appealed to a General Council. . . . The situation at this time was so dangerous for Rome, that Innocent XI. in spite of his dislike of Protestantism found it expedient to promise great subsidies to the Prince of Orange, in the hope that he might defend the interests of the Roman Church against Louis XIV. upon the Rhine. By this means the Papacy unwillingly came to pave the Protestant prince's way to the English throne. . . . The seriousness of the circumstances soon compelled Louis XIV. to show a conciliatory disposition towards the Papacy. Already under Innocent XI.'s successor, Alexander VIII. [1689] he restored Avignon and opened negotiations. But not until the time of Innocent XII. [who assumed the tiara July 12, 1691] was peace with Rome concluded, upon the condition that the French bishops, who had hitherto been unable to obtain the recognition of Rome, should profess their 'inexpressible grief' at the declaration of 1682, while Louis XIV. informed the Pope that he had given the necessary orders for depriving the four Gallican propositions of their rank as an authoritative formula in France. Thus the Papacy came victorious out of the conflict; but the strife over the Gallican rights was nevertheless in the highest degree fraught with consequences for Rome."—F. Nielsen, *History of the papacy in the XIXth century*, v. 1, pp. 7-12.

1700.—Election of Clement XI.

1700-1790.—Effects of the War of the Spanish Succession.—Declining Powers.—The issue of the War of the Spanish Succession "will serve to show us that when the Pope was not, as in his contest with Louis XIV., favoured by political events, he could no longer laugh to scorn the edicts of European potentates. Charles II. of Spain, that wretched specimen of humanity, weak in body, and still weaker in mind, haunted by superstitious terrors which almost unsettled his reason, was now, in the year 1700, about to descend to a premature grave. He was without male issue, and was uncertain to whom he should bequeath the splendid inheritance transmitted to him by his ancestors. The Pope, Innocent XII., who was wholly in the interests of France, urged him to bequeath Spain, with its dependencies, to Philip, Duke of Anjou, the grandson of Louis XIV., who claimed through his grandmother, the eldest sister of Charles. He would thus prevent the execution of the partition treaty concluded between France, England, and Holland, according to which the Archduke Charles . . . was to have Spain, the

Indies, and the Netherlands, while France took the Milanese, or the Province of Lorraine. The Archbishop of Toledo seconded the exhortation of the Pope, and so worked on the superstitious terrors of the dying monarch that he signed a will in favour of the Duke of Anjou, which was the cause of lamentation, and mourning, and woe, for twelve years, throughout Europe, from the Vistula to the Atlantic Ocean. [See SPAIN: 1701-1702; ENGLAND: 1701-1702.] . . . The Duke of Marlborough's splendid victories of Blenheim and Ramillies . . . placed the Emperor Joseph (1705-11), the brother of the Archduke Charles, in possession of Germany and the Spanish Netherlands [see GERMANY: 1704; NETHERLANDS: 1706-1707]; and the victory of Prince Eugene before Turin made him supreme in the north of Italy and the kingdom of Naples [see ITALY: 1701-1713]. The Pope, Clement XI., was now reduced to a most humiliating position. Political events had occurred . . . which served to show very plainly that the Pope, without a protector, could not, as in former days, bid defiance to the monarchs of Europe. [See ROME: Modern city: 1707.] His undutiful son, the Emperor, compelled him to resign part of his territories as a security for his peaceful demeanour, and to acknowledge the Archduke Charles, the Austrian claimant to the Spanish throne. The peace of Utrecht, concluded in 1713 [see UTRECHT: 1712-1714], which produced the dismemberment of the monarchy, but left Philip in the peaceful occupation of the throne of Spain, did indeed release him from that obligation; but it did not restore him to the 'high and palmy state' which he occupied before he was obliged to submit to the Imperial arms. It inflicted a degradation upon him, for it transferred to other sovereigns, without his consent, his fiefs of Sicily and Sardinia. Now, also, it became manifest that the Pope could no longer assert an indirect sovereignty over the Italian States; for, notwithstanding his opposition, it conferred a large extent of territory on the Duke of Savoy, which has, in our day, been expanded into a kingdom under the sceptre of Victor Emmanuel and his successor. We have a further evidence of the decline of the Papacy in the change in the relative position of the States of Europe as Papal and anti-Papal during the eighteenth century, after the death of Louis XIV. The Papal powers of Spain in the sixteenth century, and of France, Spain, and Austria, in the latter half of the seventeenth century, determined the policy of Europe. . . . On the other hand, England, Prussia, and Russia became, in the eighteenth century, the great leading powers in the world. . . . The Pope, then, no longer stood at the head of those powers which swayed the destinies of Europe. . . . The Papacy, from the death of Louis XIV. till the time of the French Revolution, led a very quiet and obscure life. It had no part in any of the great events which during the eighteenth century were agitating Europe, and gained no spiritual or political victories."—A. R. Pennington, *Epochs of the papacy*, ch. 10.

1740.—Election of Benedict XIV.

1740-1758.—Reign of Benedict XIV.—Conces-

sions in temporalities to Portugal and Spain.—Benedict XIV “was crowned in St. Peter’s on the 22nd August, 1740. . . . The first steps were taken with regard to Portugal. Here, by an arrangement which the Pope ratified, the king gained the right of presentation to all the sees and abbeys in the kingdom, and later on the title of Most Faithful King. These were large concessions, but Spain was treated with almost equal liberality. Permission was granted for the State to tax the income of the clergy by special taxation, and the presentation to the greater part of the benefices was put into the king’s hands. Then came the turn of the King of Sardinia. He was named Vicar of the Holy See, and it was understood that this carried with it the right of nomination to all the Church benefices in his dominions, and the right to the income of the pontifical fiefs comprised within the same frontiers. . . . Benedict successfully mediated between the King of Naples and the Knights of Malta in a matter of deep controversy between them; and with a view to adjust the rival claims of Austria and Venice on the Patriarchate of Aquileia, . . . [he] strove to make peace by suppressing the see, and dividing the jurisdiction between two dioceses. In this way, when Benedict had come to the close of his career in 1758, there remained, outwardly at least, but very few causes of quarrel with the Roman See in any part of the world. . . . Benedict was a sagacious and moderate ruler of the Papal States. The great outlay incurred for buildings and extravagant display in former reigns was cut down, usury was condemned and legislated against, agriculture and commerce were both equally encouraged, and order introduced into places where corruption and disorder had gained the upper hand. . . . Benedict XIV. grappled with the difficult subject of mixed marriages between Catholics and non-Catholics which were becoming more and more frequent, and the bulls of this Pontiff, with the conditions he laid down, have been the guiding stars for the Church almost to our own times.”—G. Stebbing, *Story of the Catholic church*, pp. 576-577.—See also ROME: Modern city: 1740-1700.

1741-1783.—Febronianism.—Articles of Coblenz.—Visit of the pope to Vienna.—Illuminati.—“In 1741, after the death of Charles VI., when the German electors met to choose a new emperor, the papal nuncio, Doria, like former nuncios on similar occasions, did his best to induce the ecclesiastical electors to cancel the fourteenth article in the stipulations of election, obliging the emperor to oppose certain Roman encroachments, and to acknowledge the rights of Protestantism in accordance with the terms of the Peace of Westphalia, and with various Acts of the Diet. Instead of giving in upon this point, the electors expressed the wish that Rome would satisfy those complaints which for many centuries had found vent in the so-called *gravamina nationis Germanicæ*. A privy councillor of the Elector of Trier, named Von Spangenberg, . . . was commissioned, together with an official of Trier, Johann von Hontheim, to enquire what was the real state of the case with regard to these *gravamina*, which had played a particularly prominent part at the time of the Reformation, and how far the constitution of the German Catholic Church was in accordance with existing laws. . . . Under the name of *Justinus Febronius*, Hontheim brought out a book *De statu ecclesie et legitima potestate Romani Pontificis*, which contains the Gallican system transplanted to German soil. . . . In France, Gallicanism supported the rights of the French king; . . . to Febronius it became the assertions of the rights

of each territorial prince. At the Council of Trent it had not been decided whether the bishops received their authority directly from God or from the Pope. Febronius held the former view; and he believed that the Roman Church would regain its old power of attracting, if this view were universally enforced. . . . The nuncios at Cologne and Vienna at once sent Febronius’ book to Rome, and in February 1764 it was placed on the Index. [Hontheim was later obliged to recant; but the book was widely read and] Febronianism had made many conquests. Even before the appearance of Hontheim’s famous book, the ultramontane system and the doctrine of the Pope’s infallibility had begun to be put in the background in the Roman Catholic schools and class books of Germany. The Jesuits were in reality overthrown in Germany before the order was abolished. When Clement XIV. had succeeded Clement XIII. in 1769, Emmerich Joseph of Breitenbach, Elector of Mainz (1763-1774), . . . proposed that commissioners from the three Rhenish electors should meet at Coblenz and consult on the question of demanding ‘the correction of various abuses,’ and especially with regard to the best way of securing ‘the restoration of the original episcopal power.’ These deliberations, which lasted from September till December, led to the drawing up of the thirty Latin ‘Articles of Coblenz,’ of which nearly all are aimed at the arrogance of Rome and the extortions of the Roman chancery. . . . After the fall of the Jesuits, Febronianism rushed to the front everywhere in Germany. The German Benedictines, Cistercians, Franciscans, and Augustinians, and especially the numerous professors in Germany, who after the disappearance of the Jesuits were not members of any order, fearlessly acknowledged the doctrine of the Council of Constance, that a General Council of the Church was superior to the Pope, and professed the Gallican principles of ecclesiastical law. . . . Even crowned heads fell more and more under the power of the Gallicanism and Febronianism which was in the air. . . . At Vienna there was a circle of administrative officers and of professors, who not only maintained the superiority of the Councils to the Papacy, but also the power of the State in church matters and the civil duties owed by the priesthood to the State. Their doctrine of the ‘omnipotent’ State, made an early impression upon Joseph II. [who, when he became sole ruler, soon began to limit the power of the papacy in the Austrian dominions. He granted freedom of the press, directed religious orders to confer with their generals in Rome only through the Austrian envoy at the papal court, permitted Protestants to have meeting houses, in places where there were at least a hundred Protestant families, and gave some measure of freedom to the Jews. In 1782 he issued a rescript to abolish monasteries not useful for the purpose of education, sick-nursing or study. Under this rescript 783 monastic establishments were dissolved. This reduction of convents by Joseph was imitated] in the beginning of the following century in Baden, Bavaria, and Würtemberg. . . . Before Joseph II.’s reforms three-eighths of all landed property was in the hands of the Church, and the wealth of the convents was enormous. . . . In defence of these reforms the Bishop of Laibach issued a pastoral letter (1783) in which he maintained that all bishops had equal power, and that the first among them, although he was the successor of St. Peter, had no rights of jurisdiction over the others; to him was only given the task of preventing schisms and maintaining unity, and also of watching over the purity of the Catholic Faith. The monastic

orders were human institutions which had degenerated in the course of time; the Church could well do without them, and the closing of convents would in no wise injure religion. [The pope visited Vienna, but found the emperor obdurate and after his visit] Joseph II. continued in the path of reforms, but 'quite gently.' . . . [Later on, however, he was in a measure reconciled to the Pope.] Leopold II., who succeeded his brother on the imperial throne, approved of the church policy of Joseph. . . . Before he became Emperor he had endeavoured to the best of his power to pave the way for Jansenism and Gallicanism in his Grand Duchy. . . . Just as Gallicanism, in the course of time, was in many cases influenced by the philosophical school, so Febronianism was influenced both by *l'esprit philosophique*, and by German rationalism. In 1776 a secret order was formed in Germany, the so-called 'Illuminati.' Their organisation was framed after the pattern of both the Jesuit order and the Freemasons; and their object was to fight for the light against the darkness of superstition, and especially against all Jesuitism. [Thus, even in this stronghold, the power of the papacy began to decline.]—F. Nielsen, *History of the papacy in the XIXth century*, v. 1, pp. 109-110, 112-113, 115-117, 120-121, 124-125, 135.—See also FEBRONIUS; EUROPE: Modern: Revolutionary period.

1808-1814.—Conflict of Pius VII with Napoleon.—French seizure of Rome and Papal States.—Captivity of the pope at Savona and Fontainebleau.—Concordat of 1813 and its retraction.—Napoleon "had long been quarrelling with Pius VII., to make a tool of whom he had imposed the concordat on France. The Pope resisted, as the Emperor might have expected, and, not obtaining the price of his compliance, hindered the latter's plans in every way that he could. He resisted as head of the Church and as temporal sovereign of Rome, refusing to close his dominions either to the English or to Neapolitan refugees of the Bourbon party. Napoleon would not allow the Pope to act as a monarch independent of the Empire, but insisted that he was amenable to the Emperor, as temporal prince, just as his predecessors were amenable to Charlemagne. They could not agree, and Napoleon, losing patience, took military possession of Rome and the Roman State."—H. Martin, *Popular history of France, since 1789*, v. 2, ch. 12.—In February, 1808, "the French troops, who had already taken possession of the whole of Tuscany, in virtue of the resignation forced upon the Queen of Etruria, invaded the Roman territories, and made themselves masters of the ancient capital of the world. They immediately occupied the castle of St. Angelo, and the gates of the city, and entirely dispossessed the papal troops. Two months afterwards, an imperial decree of Napoleon severed the provinces of Ancona, Urbino, Macerata, and Camerino, which had formed part of the ecclesiastical estates, . . . for nearly a thousand years, and annexed them to the kingdom of Italy. The reason assigned for this spoliation was, "That the actual sovereign of Rome has constantly declined to declare war against the English, and to coalesce with the Kings of Italy and Naples for the defence of the Italian peninsula. The interests of these two kingdoms, as well as of the armies of Naples and Italy, require that their communications should not be interrupted by a hostile power."—A. Alison, *History of Europe, 1789-1815*, v. 11, ch. 51.—"The pope protested in vain against such violence. Napoleon paid no attention. . . . He confiscated the wealth of the cardinals who did not return to the place of their birth. He disarmed nearly all the guards of the Holy Father—the nobles of this guard were imprisoned. Finally, Miollis [the French commander] had Cardinal Gabrielle, pro-Secretary of State, carried off, and put seals upon his papers. On May 17, 1809, a decree was issued by Napoleon, dated from Vienna, proclaiming the union (in his quality of successor to Charlemagne) of the States of the pope with the French Empire, ordaining that the city of Rome should be a free and imperial city; that the pope should continue to have his seat there, and that he should enjoy a revenue of 2,000,000 francs. [See also ROME: Modern city: 1800-1814.] On June 10, he had this decree promulgated at Rome. On this same June 10, the pope protested against all these spoliations, refused all pensions, and recapitulating all the outrages of which he had cause to complain, issued the famous and imprudent bull of excommunication against the authors, favourers, and executors of the acts of violence against him and the Holy See, but without naming any one. Napoleon was incensed at it, and on the first impulse he wrote to the bishops of France a letter in which he spoke in almost revolutionary terms 'of him who wished,' said he, 'to make dependent upon a perishable

temporal power the eternal interest of consciences, and that of all spiritual affairs.' On the 6th of July, 1809, Pius VII, taken from Rome, after he had been asked if he would renounce the temporal sovereignty of Rome and of the States of the Church, was conducted by General Radet as far as Savona, where he arrived alone, August 10, the cardinals having all been previously transported to Paris. And to complete the spoliation of the pope, Napoleon issued on the 17th of February, 1810, a *senatus-consultum* which bestowed upon the eldest son of the emperor the title of King of Rome, and even ordained that the emperor should be consecrated a second time at Rome, in the first ten years of his reign. It was while oppressed, captive and deprived of all council, that the pope refused the bulls to all the bishops named by the emperor, and then it was that all the discussions relative to the proper measures to put an end to the vidity of the churches were commenced. . . . The year 1810, far from bringing any alleviation to the situation of the pope and giving him, according to the wishes and prayers of the ecclesiastic commission, a little more liberty, aggravated, on the contrary, this situation, and rendered his captivity harder. In effect, on February 17, 1810, appeared the *senatus-consultum* pronouncing the union of the Roman States with the French Empire; the independence of the imperial throne of all authority on earth, and annulling the temporal existence of the popes. This *senatus-consultum* assured a pension to the pope, but it ordained also that the pope should take oath to do nothing in opposition to the four articles of 1682. [See above: 1682-1693.] . . . The pope must have consoled himself, . . . even to rejoicing, that they made the insulting pension they offered him depend upon the taking of such an oath, and it is that which furnished him with a reply so nobly apostolic: that he had no need of this pension, and that he would live on the charity of the faithful. . . . The rigorous treatment to which the Holy Father was subjected at Savona was continued during the winter of 1811-1812, and in the following spring. At this time, it seems there was some fear, on the appearance of an English squadron, that it might carry off the pope; and the emperor gave the order to transfer him to Fontainebleau. This unhappy old man left Savona, June 10, and was forced to travel day and night. He fell quite ill at the hospice of Mont Cenis; but they forced him none the less to continue his journey. They had compelled him to wear such clothes . . . as not to betray who he was on the way they had to follow. They took great care also to conceal his journey from the public, and the secret was so profoundly kept, that on arriving at Fontainebleau, June 10, the concierge, who had not been advised of his arrival, and who had made no preparation, was obliged to receive him in his own lodgings. The Holy Father was a long time before recovering from the fatigue of this painful journey, and from the needlessly rigorous treatment to which they had subjected him. The cardinals not disgraced by Napoleon, who were in Paris, as well as the Archbishop of Tours, the Bishop of Nantes, the Bishop of Evreux, and the Bishop of Trèves, were ordered to go and see the pope. . . . The Russian campaign, marked by so many disasters, was getting to a close. The emperor on his return to Paris, December 18, 1812, still cherished chimerical hopes, and was meditating without doubt, more gigantic projects. Before carrying them out, he wished to take up again the affairs of the Church, either because he repented not having finished with

them at Savona, or because he had the fancy to prove that he could do more in a two hours' tête-à-tête with the pope, than had been done by the council, its commissions, and its most able negotiators. He had beforehand, however, taken measures which were to facilitate his personal negotiation. The Holy Father had been surrounded for several months by cardinals and prelates, who, either from conviction or from submission to the emperor, depicted the Church as having arrived at a state of anarchy which put its existence in peril. They repeated incessantly to the pope, that if he did not get reconciled with the emperor and secure the aid of his power to arrest the evil, schism would be inevitable. Finally, the Sovereign pontiff overwhelmed by age, by infirmities, by the anxiety and cares with which his mind was worried, found himself well prepared for the scene Napoleon had planned to play, and which was to assure him what he believed to be a success. On January 10, 1813, the emperor, accompanied by the Empress Marie Louise, entered the apartment of the Holy Father unexpectedly, rushed to him and embraced him with effusion. Pius VII., surprised and affected, allowed himself to be induced, after a few explanations, to give his approbation to the propositions that were imposed, rather than submitted to him. They were drawn up in eleven articles, which were not yet a compact, but which were to serve as the basis of a new act. On January 24, the emperor and the pope affixed their signatures to this strange paper, which was lacking in the usual diplomatic forms, since they were two sovereigns who had treated directly together. It was said in these articles, that the pope would exercise the pontificate in France, and in Italy;—that his ambassadors and those in authority near him, should enjoy all diplomatic privileges;—that such of his domains which were not disposed of should be free from taxes, and that those which were transferred should be replaced by an income of 2,000,000 francs;—that the pope should nominate, whether in France or in Italy, to episcopal sees which should be subsequently fixed; that the suburban sees should be re-established, and depend on the nomination of the pope, and that the unsold lands of these sees should be restored; that the pope should give bishoprics 'in partibus' to the Roman bishops absent from their diocese by force of circumstances, and that he should serve them a pension equal to their former revenue, until such time as they should be appointed to vacant sees; that the emperor and the pope should agree in opportune time as to the reduction to be made if it took place, in the bishoprics of Tuscany and of the country about Geneva, as well as to the institution of bishoprics in Holland, and in the Hanseatic departments; that the propaganda, the confessional, and the archives should be established in the place of sojourn of the Holy Father; finally, that His Imperial Majesty bestowed his good graces upon the cardinals, bishops, priests, and laymen, who had incurred his displeasure in connection with actual events. . . . The news of the signing of the treaty occasioned great joy among the people, but it appears that that of the pope was of short duration. The sacrifices he had been led to make were hardly consummated, than he experienced bitter grief; this could but be increased in proportion as the exiled and imprisoned cardinals, Consalvi, Pacca, di Pietro, on obtaining their liberty, received also the authorization to repair to Fontainebleau. What passed then between the Holy Father and these cardinals I do not pretend to know; but it must be that Napoleon had been warned by some symptoms of what was about to

happen; for, in spite of the agreement he had made with the pope to consider the eleven articles only as preliminaries which were not to be published, he decided nevertheless to make them the object of a message that the arch-chancellor was charged to submit to the senate. This premature publicity given to an act which the pope so strongly regretted having signed must have hastened his retraction which he addressed to the emperor by a brief, on March 24, 1813. . . . This time, the emperor, although greatly irritated by the retraction, believed it was to his interest not to make any noise about it, and decided to take outwardly no notice of it. He had two decrees published: one of February 13, and the other of March 25, 1813. By the first, the new Concordat of January 25 was declared state law; by the second, he declared it obligatory upon archbishops, bishops, and chapters, and ordered, according to Article IV of this Concordat that the archbishops should confirm the nominated bishops, and in case of refusal, ordained that they should be summoned before the tribunals. He restricted anew the liberty that had been given momentarily to the Holy Father, and Cardinal di Pietro returned to exile. Thereupon, Napoleon started, soon after, for that campaign of 1813 in Germany, the prelude to that which was to lead to his downfall. The decrees issued 'ab irato' were not executed, and during the vicissitudes of the campaign of 1813, the imperial government attempted several times to renew with the pope negotiations which failed. Matters dragged along thus, and no one could foresee any issue when, on January 23, 1814, it was suddenly learned that the pope had left Fontainebleau that very day, and returned to Rome. . . . Murat, who had abandoned the cause of the emperor, and who . . . had treated with the coalition, was then occupying the States of the Church, and it is evident that Napoleon in his indignation against Murat, preferred to allow the pope to re-enter his States, to seeing them in the hands of his brother-in-law. While Pius VII was en route and the emperor was fighting in Champagne, a decree of March 10, 1814, announced that the pope was taking possession again of the part of his States which formed the departments of Rome and Trasmania. The lion, although vanquished, would not yet let go all the prey he hoped surely to retake. . . . The pope arrived on April 30, at Cesena, on May 12, at Ancona, and made his solemn entry into Rome on May 24, 1814."—Talleyrand, *Memoirs*, v. 2, pt. 6.

1848-1850.—Increased influence of the papacy.

—"It was not till April, 1850, that . . . [the pope, Pius IX, returned from Naples. (See ROME: Modern city: 1815-1849.)] The Romans remained coldly silent; his only support was the French bayonets. The capital of Christendom did not thereby become more churchly-minded. . . . During the same year, 1848, in which the pope, after having been idolised, became a hated exile, the power of the Papacy was in almost all countries extraordinarily increased. A number of very dissimilar causes co-operated towards this result, the mistakes of opponents no less than the efforts of friends. The governments above all, seduced by the magic formula of the 'solidarity of conservative interests,' increased the favour formerly shown to the Curia as the 'oldest conservative power.' So-called 'orthodox' Protestants coquetted with Roman ecclesiasticism; in all Protestant churches the crypto-papal tendencies gained in influence and partially succeeded in capturing the ecclesiastical authorities. Even more effective were the operations of the revolutionary party, which, blind to the true significance of religion, tended to strengthen the influence of the priesthood. The public elections often showed that the cities were outvoted by the people of the country under the leadership of the priests; unbelief, as always, brought superstition in its wake. All external conditions were shaping themselves favourably to the Papacy; Protestantism was powerless, or else its representatives gave open aid to the enemy; and all the while the compact force of Curialism, working with immense and magnificent energy, knew how to use the right moment to fish in troubled waters. . . . The rushing waters of the revolution were led into the bed of clerical societies; there was formed a whole series of German 'Catholic' associations, the deposit of revolutionary fermentation. Alongside of the open societies were the secret congregations and fraternities, and in the track of both came the Jesuit missions. All these separate, apparently scattered forces were not split up, but were made to operate toward the same common end: not only to make the Church into a state within a state, but also to subject to it the whole spiritual life of the people, in the school, in matrimony, and in the press; and this end was achieved by the wise policy of the episcopate, which from the first moment made it the object of their efforts to exploit the triumphs of the revolution in their own interests. To all this are to be added the tactics of the Vatican itself, turning all circumstances to immediate advantage. Thus it was enabled, by its direction of the army of auxiliaries, to convert the year of its adversity into a year of triumph."—F. Nippold, *Papacy in the 19th century*, pp. 125-128.—See also ROME: Modern city: 1850-1870.

1850.—Restoration of Roman episcopate in England.—"The Reformation had deprived the Church of Rome of an official home on English soil. . . . But a few people had remained faithful to the Church of their forefathers, and a handful of priests had braved the risks attendant on the discharge of their duties to it. Rome, moreover, succeeded in maintaining some sort of organisation in England. In the first instance her Church was placed under an archpriest. From 1623 to 1688 it was placed under a Vicar Apostolic, that is a Bishop, nominally appointed to some foreign see, with a brief enabling him to discharge episcopal duties in Great Britain. This policy was not very successful. Smith, the second Vicar Apostolic, was banished in 1620, and, though he lived till 1655, never returned to England. The Pope did not venture on appointing a successor to him for thirty

years. . . . On the eve of the Revolution [in 1688] he divided England into four Vicariates. This arrangement endured till 1840. In that year Gregory XVI doubled the vicariates, and appointed eight Vicars Apostolic. The Roman Church is a cautious but persistent suitor. She had made a fresh advance; she was awaiting a fresh opportunity. The eight Vicars Apostolic asked the Pope to promote the efficiency of their Church by restoring the hierarchy. The time seemed ripe for the change. . . . The Pope prepared Apostolic letters, distributing the eight vicariates into eight bishoprics. . . . The Revolution, occurring immediately afterwards, gave the Pope other things to think about than the re-establishment of the English hierarchy. For two years nothing more was heard of the conversion of vicariates into bishoprics. But the scheme had not been abandoned; and, in the autumn of 1850, the Pope, restored to the Vatican by French bayonets, issued a brief for 're-establishing and extending the Catholic faith in England.' England and Wales were divided into twelve sees. One of them, Westminster, was made into an archbishopric; and Wiseman, an Irishman by extraction, who had been Vicar Apostolic of the London District, and Bishop of Melipotamus, was promoted to it. Shortly afterwards a new distinction was conferred upon him, and the new archbishop was made a cardinal. The publication of the brief created a ferment in England. The effect of the Pope's language was increased by a pastoral from the new archbishop, in which he talked of governing, and continuing to govern, his see with episcopal jurisdiction; and by the declaration of an eminent convert that the people of England, who for so many years have been separated from the see of Rome, are about of their own free will to be added to the Holy Church. For the moment, High Churchmen and Low Churchmen forgot their differences in their eagerness to punish a usurpation of what was called the Queen's prerogative. The Prime Minister, instead of attempting to moderate the tempest, added violence to the storm by denouncing, in a letter to the Bishop of Durham, the late aggression of the Pope as 'insolent and insidious, . . . inconsistent with the Queen's supremacy, with the rights of our bishops and clergy, and with the spiritual independence of the nation.' . . . Amidst the excitement which was thus occasioned, Parliament met. The Speech from the Throne alluded to the strong feelings excited by 'the recent assumption of ecclesiastical titles conferred by a foreign Power.' . . . It declared that a measure would be introduced into Parliament to maintain 'under God's blessing, the religious liberty which is so justly prized by the people.' It hardly required such words as these to fan the spreading flame. In the debate on the Address, hardly any notice was taken of any subject except the 'triple tyrant's insolent pretension.' On the first Friday in the session, Russell introduced a measure forbidding the assumption of territorial titles by the priests and prelates of the Roman Catholic Church; declaring all gifts made to them, and all acts done by them, under those titles null and void; and forfeiting to the Crown all property bequeathed to them." Action on the bill was interrupted in the House by a ministerial crisis, which ended, however, in the return of Lord John Russell and his colleagues to the administration; but the Ecclesiastical Titles Bill, when it was again brought forward, was greatly changed. In its amended shape the bill merely made it illegal for Roman Catholic prelates to assume territorial titles. According to the criticism of one of the Conservatives, "the

original bill . . . was milk and water; by some chemical process the Government had extracted all the milk. [After much debate the emasculated bill became a law, but it was never put into execution.]"—S. Walpole, *History of England from 1815*, v. 5, ch. 23.—See also IRELAND: 1847-1860.

1854.—Promulgation of the Dogma of the Immaculate Conception of the Virgin Mary.—"The thought of defining dogmatically the belief of all ages and all Catholic nations in the Immaculate Conception of the Blessed Virgin dated back to the beginning of his [Pius IX's] pontificate. By an encyclical letter dated from his exile at Gaeta, he had asked the opinion of all the patriarchs, primates, archbishops and bishops of the universe as to the seasonableness of this defi-

POPE PIUS IX

inition. The holding of a general council is attended with many embarrassments, and cannot be freed from the intrigues and intervention of the so-called Catholic powers. Pius IX . . . initiated a new course. All, even the most Gallican in ideas, acknowledge that a definition in matters of faith by the pope, sustained by the episcopate, is infallible. The rapid means of communication and correspondence in modern times, the more direct intercourse of the bishops with Rome, makes it easy now for the pope to hear the well-considered, deliberate opinion of a great majority of the bishops throughout the world. In this case the replies of the bishops coming from all parts of the world show that the universal Church, which has one God, one baptism, has also one faith. As to the dogma there was no dissension, a few doubted the expediency of making it an article of faith. These replies determined the Holy Father to proceed to the great act, so long demanded by [the] Catholic heart. . . . A number of bishops were convoked to Rome for the 8th of December, 1854; a still greater number hastened to the Eternal City. . . . That day the bishops assembled in the Vatican to the number of 170. [In the Sistine chapel, after befitting ceremonies, the pontiff made

formal proclamation of the dogma of the Immaculate Conception, in the following words:] 'By the authority of Jesus Christ our Lord, of the blessed apostles, Peter and Paul, and our own, we declare, pronounce, and define that the doctrine which holds that the Blessed Virgin Mary, at the first instant of her conception, by a singular privilege and grace of the Omnipotent God, in virtue of the merits of Jesus Christ, the Saviour of mankind, was preserved immaculate from all stain of original sin, has been revealed by God, and therefore should firmly and constantly be believed by all the faithful. Wherefore, if any shall dare—which God avert—to think otherwise than as it has been defined by us, let them know and understand that they are condemned by their own judgment, that they have suffered shipwreck of the faith, and have revolted from the unity of the Church; and besides, by their own act, they subject themselves to the penalties justly established, if what they think they should dare to signify by word, writing, or any other outward means.' . . . The next day the sovereign pontiff assembled the sacred college and the bishops in the great consistorial hall of the Vatican, and pronounced the allocution which, subsequently published by all the bishops, announced to the Catholic world the act of December 8th.—A. de Montor, *Lives and times of the Roman pontiffs*, v. 2, pp. 924-926.—See also BULLS, PAPAL: 1854.

1864.—Encyclical and the syllabus.—"On the 8th of December 1864, Pius IX. issued his Encyclical [a circular letter addressed by the pope to all the patriarchs, primates, archbishops and bishops of the church throughout the world] 'Quanta cura,' accompanied by the Syllabus, or systematically arranged collection of errors, condemned from time to time, by himself and his predecessors. The Syllabus comprises 80 erroneous propositions. These are set forth under 10 distinct heads: viz. 1. Pantheism, Naturalism, and Absolute Rationalism; 2. Moderated Rationalism; 3. Indifferentism, Latitudinarianism; 4. Socialism, Communism, Secret Societies, Biblical Societies, Clerico-Liberal Societies; 5. Errors concerning the Church and her rights; 6. Errors concerning Civil Society, as well in itself as in its relations with the Church; 7. Errors concerning Natural and Christian Ethics; 8. Errors concerning Christian marriage; 9. Errors concerning the Civil Prerogative of the Roman Pontiff; 10. Errors in relation with Modern Liberalism. Immediately under each error are given the two initial words, and the date, of the particular Papal Allocution, Encyclical, Letter Apostolic, or Epistle, in which it is condemned. Whilst, on the one hand, the publication of the Encyclical and Syllabus was hailed by many as the greatest act of the pontificate of Pius IX., on the other hand, their appearance excited the angry feelings, and intensified the hostility, of the enemies of the Church."—J. N. Murphy, *Chair of Peter*, ch. 33.

The following is a translation of the text of the Encyclical, followed by that of the Syllabus or Catalogue of Errors:

To our venerable brethren all the Patriarchs, Primates, Archbishops, and Bishops in communion with the Apostolic See, we, Pius IX. Pope, send

greeting, and our apostolic blessing: You know, venerable brethren, with what care and what pastoral vigilance the Roman Pontiffs, our predecessors—fulfilling the charge intrusted to them by our Lord Jesus Christ himself in the person of the blessed Peter, chief of the apostles—have unflinchingly observed their duty in providing food for the sheep and the lambs, in assiduously nourishing the flock of the Lord with the words of faith, in imbuing them with salutary doctrine, and in turning them away from poisoned pastures; all this is known to you, and you have appreciated it. And certainly our predecessors, in affirming and in vindicating the august Catholic faith, truth, and justice, were never animated in their care for the salvation of souls by a more earnest desire than that of extinguishing and condemning by their letters and their constitutions all the heresies and errors which, as enemies of our divine faith, of the doctrines of the Catholic Church, of the purity of morals, and of the eternal salvation of man, have frequently excited serious storms, and precipitated civil and Christian society into the most deplorable misfortunes. For this reason our predecessors have opposed themselves with vigorous energy to the criminal enterprise of those wicked men, who, spreading their disturbing opinions like the waves of a raging sea, and promising liberty when they are slaves to corruption, endeavor by their pernicious writings to overturn the foundations of the Christian Catholic religion and of civil society; to destroy all virtue and justice; to deprave all minds and hearts; to turn away simple minds, and especially those of inexperienced youth, from the healthy discipline of morals; to corrupt it miserably, to draw it into the meshes of error, and finally to draw it from the bosom of the Catholic Church. But as you are aware, venerable brethren, we had scarcely been raised to the chair of St. Peter above our merits, by the mysterious designs of Divine Providence, then seeing with the most profound grief of our soul the horrible storm excited by evil doctrines, and the very grave and deplorable injury caused specially by so many errors to Christian people, in accordance with the duty of our apostolic ministry, and following in the glorious footsteps of our predecessors, we raised our voice, and by the publication of several encyclicals, consistorial letters, allocutions, and other apostolic letters, we have condemned the principal errors of our sad age, re-animated your utmost episcopal vigilance, warned and exhorted upon various occasions all our dear children in the Catholic Church to repel and absolutely avoid the contagion of so horrible a plague. More especially in our first encyclical of the 8th November, 1846, addressed to you, and in our two allocutions of the 9th December, 1854, and the 9th June, 1862, to the consistories, we condemned the monstrous opinions which particularly predominated in the present day, to the great prejudice of souls and to the detriment of civil society—doctrines which not only attack the Catholic Church, her salutary instruction, and her venerable rights, but also the natural, unalterable law inscribed by God upon the heart of man—that of sound reason. But although we have not hitherto omitted to proscribe and reprove the principal errors of this kind, yet the cause of the Catholic Church, the safety of the souls which have been confided to us, and the well-being of human society itself, absolutely demand that we should again exercise our pastoral solicitude to destroy new opinions which spring out of these same errors as from so many sources. These false and perverse opinions are the more detestable as they especially tend to shackle

and turn aside the salutary force that the Catholic Church, by the example of her Divine author and his order, ought freely to exercise until the end of time, not only with regard to each individual man, but with regard to nations, peoples, and their rulers, and to destroy that agreement and concord between the priesthood and the government which have always existed for the happiness and security of religious and civil society. For as you are well aware, venerable brethren, there are a great number of men in the present day who, applying to civil society the impious and absurd principle of naturalism, as it is called, dare to teach that the perfect right of public society and civil progress absolutely require a condition of human society constituted and governed without regard to all considerations of religion, as if it had no existence, or, at least, without making any distinction between true religion and heresy. And, contrary to the teaching of the Holy Scriptures, of the church, and of the fathers, they do not hesitate to affirm that the best condition of society is that in which the power of the laity is not compelled to inflict the penalties of law upon violators of the Catholic religion unless required by considerations of public safety. Actuated by an idea of social government so absolutely false, they do not hesitate further to propagate the erroneous opinion, very hurtful to the safety of the Catholic Church and of souls, and termed "delirium" by our predecessor, Gregory XVI, of excellent memory, namely: "Liberty of conscience and of worship is the right of every man—a right which ought to be proclaimed and established by law in every well-constituted State, and that citizens are entitled to make known and declare, with a liberty which neither the ecclesiastical nor the civil authority can limit, their convictions of whatever kind, either by word of mouth, or through the press, or by other means." But in making these rash assertions they do not reflect, they do not consider, that they preach the liberty of perdition (St. Augustine, Epistle 105, Al. 166), and that "if it is always free to human conviction to discuss, men will never be wanting who dare to struggle against the truth and to rely upon the loquacity of human wisdom, when we know by the example of our Lord Jesus Christ how faith and Christian sagacity ought to avoid this culpable vanity." (St. Leon, Epistle 164, Al. 133, sec. 2, Boll. Ed.) Since also religion has been banished from civil government, since the doctrine and authority of divine revelation have been repudiated, the idea intimately connected therewith of justice and human right is obscured by darkness and lost sight of, and in place of true justice and legitimate right brute force is substituted, which has permitted some, entirely oblivious of the plainest principles of sound reason, to dare to proclaim "that the will of the people, manifested by what is called public opinion or by other means, constitutes a supreme law superior to all divine and human right, and that accomplished facts in political affairs, by the mere fact of their having been accomplished, have the force of law." But who does not perfectly see and understand that human society, released from the ties of religion and true justice, can have no further object than to amass riches, and can follow no other law in its actions than the indomitable wickedness of a heart given up to pleasure and interest? For this reason, also, these same men persecute with so relentless a hatred the religious orders, who have deserved so well of religion, civil society, and letters. They loudly declare that the orders have no right to exist, and in so doing make common

cause with the falsehoods of the heretics. For, as taught by our predecessor of illustrious memory, Pius VI, "the abolition of religious houses injures the state of public profession, and is contrary to the counsels of the Gospel, injures a mode of life recommended by the church and in conformity with the Apostolic doctrine, does wrong to the celebrated founders whom we venerate upon the altar, and who constituted these societies under the inspiration of God." (Epistle to Cardinal de la Rochefoucauld, March 10, 1791.) In their impety these same persons pretend that citizens and the church should be deprived of the opportunity of openly "receiving alms from Christian charity," and that the law forbidding "servile labor on account of divine worship" upon certain fixed days should be abrogated, upon the fallacious pretext that this opportunity and this law are contrary to the principles of political economy. Not content with eradicating religion from public society, they desire further to banish it from families and private life. Teaching and professing these most fatal errors of Socialism and Communism, they declare that "domestic society, or the entire family, derives its right of existence solely from civil law, whence it is to be concluded that from civil law descend all the rights of parents over their children, and above all, the right of instructing and educating them." By such impious opinions and machinations do these false spirits endeavor to eliminate the salutary teaching and influences of the Catholic Church from the instruction and education of youth, and to infect and miserably deprave by their pernicious errors and their vices the pliant minds of youth. All those who endeavor to trouble sacred and public things, to destroy the good order of society, and to annihilate all divine and human rights, have always concentrated their criminal schemes, attention, and efforts upon the manner in which they might above all deprave and delude unthinking youth, as we have already shown. It is upon the corruption of youth that they place all their hopes. Thus they never cease to attack the clergy, from whom have descended to us in so authentic manner the most certain records of history, and by whom such desirable benefit has been bestowed in abundance upon Christian and civil society and upon letters. They assail them in every shape, going so far as to say of the clergy in general—"that being the enemies of the useful sciences, of progress, and of civilization, they ought to be deprived of the charge of instructing and educating youth." Others, taking up wicked errors many times condemned, presume with notorious impudence to submit the authority of the church and of this Apostolic See, conferred upon it by God himself, to the judgment of civil authority, and to deny all the rights of this same church and this see with regard to exterior order. They do not blush to affirm that the laws of the church do not bind the conscience if they are not promulgated by the civil power; that the acts and decrees of the Roman Pontiffs concerning religion and the church require the sanction and approbation or, at least, the assent, of the civil power; and that the Apostolic constitutions condemning secret societies, whether these exact, or do not exact, an oath of secrecy, and branding with anathema their secretaries and promoters, have no force in those regions of the world where these associations are tolerated by the civil government. It is likewise affirmed that the excommunications launched by the Council of Trent and the Roman Pontiffs against those who invade the possessions of the church and usurp its rights, seek, in confound-

ing the spiritual and temporal powers, to attain solely a terrestrial object; that the church can decide nothing which may bind the consciences of the faithful in a temporal order of things; that the law of the church does not demand that violations of sacred laws should be punished by temporal penalties; and that it is in accordance with sacred theology and the principles of public law to claim for the civil government the property possessed by the churches, the religious orders, and other pious establishments. And they have no shame in avowing openly and publicly the thesis, the principle of heretics from whom emanate so many errors and perverse opinions. They say: "That the ecclesiastical power is not of right divine, distinct and independent from the civil power; and that no distinction, no independence of this kind can be maintained without the church invading and usurping the essential rights of the civil power." Neither can we pass over in silence the audacity of those who, insulting sound doctrines, assert that "the judgments and decrees of the Holy See, whose object is declared to concern the general welfare of the church, its rights, and its discipline, do not claim the acquaintance and obedience under pain of sin and loss of the Catholic profession, if they do not treat of the dogmas of faith and manners." How contrary is this doctrine to the Catholic dogma of the full power divinely given to the sovereign Pontiff by our Lord Jesus Christ, to guide, to supervise, and govern the universal church, no one can fail to see and understand clearly and evidently. Amid so great a diversity of depraved opinions, we, remembering our apostolic duty, and solicitous before all things for our most holy religion, for sound doctrine, for the salvation of the souls confided to us, and for the welfare of human society itself, have considered the moment opportune to raise anew our apostolic voice. And therefore do we condemn and proscribe generally and particularly all the evil opinions and doctrines specially mentioned in this letter, and we wish that they may be held as rebuked, proscribed, and condemned by all the children of the Catholic Church. But you know further, venerable brothers, that in our time insulters of every truth and of all justice, and violent enemies of our religion, have spread abroad other impious doctrines by means of pestilent books, pamphlets, and journals which, distributed over the surface of the earth, deceive the people and wickedly lie. You are not ignorant that in our day men are found who, animated and excited by the spirit of Satan, have arrived at that excess of impiety as not to fear to deny our Lord and Master Jesus Christ, and to attack his divinity with scandalous persistence. We cannot abstain from awarding you well-merited eulogies, venerable brothers, for all the care and zeal with which you have raised your episcopal voice against so great an impiety.

Catalogue of the Principal Errors of our Time Pointed Out in the Consistorial Allocutions, Encyclical and other Apostolic Letters of Pope Pius IX.

I.—PANTHEISM, NATURALISM, AND ABSOLUTE RATIONALISM.

1. There is no divine power, supreme being, wisdom, and providence distinct from the universality of things, and God is none other than the nature of things, and therefore immutable. In effect God is in man, and in the world, and

all things are God, and have the very substance of God. God is, therefore, one and the same thing with the world, and thence mind is confounded with matter, necessity with liberty of action, true with false, good with evil, just with unjust.—(See Allocution, "Maxima quidem," June 9, 1862.)

2. All action of God upon man and the world should be denied.—(See Alloc., "Maxima quidem," June 9, 1862.)

3. Human reason, without any regard to God, is the sole arbiter of true and false, good and evil; it is its own law in itself, and suffices by its natural force for the care of the welfare of men and nations.—(See Alloc., "Maxima quidem," June 9, 1862.)

4. All the truths of religion are derived from the native strength of human reason, whence reason is the principal rule by which man can and must arrive at the knowledge of all truths of every kind.—(See Encyclicals, "Qui pluribus," Nov. 9, 1846, and "Singulari quidem," March 17, 1856, and Alloc., "Maxima quidem," June 9, 1862.)

5. Divine revelation is imperfect, and therefore subject to the continual and indefinite progress corresponding to the progress of human reason.—(See Encyc., "Qui pluribus," Nov. 9, 1846, and Alloc., "Maxima quidem," June 9, 1862.)

6. Christian faith is in opposition to human reason, and divine revelation is not only useless but even injurious to the perfection of man.—(See Encyc., "Qui pluribus," Nov. 9, 1846, and Alloc., "Maxima quidem," June 9, 1862.)

7. The prophecies and miracles told and narrated in the sacred books are the fables of poets, and the mysteries of the Christian faith the sum of philosophical investigations. The books of the two Testaments contain fabulous fictions, and Jesus Christ is himself a myth.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Maxima quidem," June 9, 1862.)

II.—MODERATE RATIONALISM.

8. As human reason is rendered equal to religion itself, theological matters must be treated as philosophical matters.—(Alloc., "Singulari quidem perfusi.")

9. All the dogmas of the Christian religion are indistinctly the object of natural science or philosophy, and human reason, instructed solely by history, is able by its natural strength and principles to arrive at a comprehension of even the most abstract dogmas from the moment when they have been proposed as objective.—(Letter to Archbishop Frising, "Gravissimus," Dec. 4, 1862. Letter to the same, "Tuas libenter," Dec. 21, 1863.)

10. As the philosopher is one thing and philosophy is another, it is the right and duty of the former to submit himself to the authority of which he shall have recognized the truth; but philosophy neither can nor ought to submit to authority.—(Letter to Archbishop Frising, "Gravissimus," Dec. 11, 1862; to the same, "Tuas libenter," Dec. 21, 1863.)

11. The church not only ought in no way to concern herself with philosophy, but ought further herself to tolerate the errors of philosophy, leaving to it the care of their correction.—(Letter to Archbishop Frising, Dec. 11, 1862.)

12. The decrees of the Apostolic See and of the Roman congregation fetter the free progress of science.—(Id., *ibid.*)

13. The methods and principles by which the old scholastic doctors cultivated theology are no longer suitable to the demands of the age and the

progress of science.—(Id., "Tuas libenter," Dec. 21, 1863.)

14. Philosophy must be studied without taking any account of supernatural revelation.—(Id., *ibid.*)

N. B.—To the rationalistic system are due in great part the errors of Antony Gunther, condemned in the letter to the Cardinal Archbishop of Cologne "Eximiam tuam," June 15, 1847, and in that to the Bishop of Breslau, "Dolore haud medicri," April 30, 1860.

III.—INDIFFERENTISM, TOLERATION.

15. Every man is free to embrace and profess the religion he shall believe true, guided by the light of reason.—(Apost. Let., "Multiplices inter," June 10, 1851; Alloc., "Maxima quidem," June 9, 1862.)

16. Men who have embraced any religion may find and obtain eternal salvation.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Ubi primum," Dec. 17, 1847; Encyc., "Singulari quidem," March 17, 1856.)

17. At least the eternal salvation may be hoped for of all who have never been in the true church of Christ.—(Alloc., "Singulari quidem," Dec. 9, 1865; Encyc., "Quanto conficiamur mærore," Aug. 17, 1863.)

18. Protestantism is nothing more than another form of the same true religion in which it is possible to be equally pleasing to God, as in the Catholic church.—(Encyc., "Nescitis et vobiscum," Dec. 8, 1849.)

IV.—SOCIALISM, COMMUNISM, CLANDESTINE SOCIETIES, BIBLICAL SOCIETIES, CLERICO-LIBERAL SOCIETIES.

Pests of this description have been frequently rebuked in the severest terms in the Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Quibus, quantisque," Aug. 20, 1849; Encyc., "Nescitis et vobiscum," Dec. 8, 1849; Alloc., "Singulari quidem," Dec. 9, 1854; Encyc., "Quanto conficiamur mærore," Aug. 10, 1863.

V.—ERRORS RESPECTING THE CHURCH AND HER RIGHTS.

19. The church is not a true and perfect entirely free association; she does not rest upon the peculiar and perpetual rights conferred upon her by her divine founder; but it appertains to the civil power to define what are the rights and limits within which the church may exercise authority.—(Alloc., "Singulari quidem," Dec. 9, 1854; "Multis gravibus," Dec. 17, 1860; "Maxima quidem," June, 1862.)

20. The ecclesiastical power must not exercise its authority without the toleration and assent of the civil government.—(Alloc., "Meminit unusquisque," Sept. 30, 1851.)

21. The church has not the power of disputing dogmatically that the religion of the Catholic church is the only true religion.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

22. The obligation which binds Catholic masters and writers does not apply to matters proposed for universal belief as articles of faith by the infallible judgment of the church.—(Let. to Archbishop Frising, "Tuas libenter," Dec. 21, 1863.)

23. The church has not the power of availing herself of force, or any direct or indirect temporal power.—(Lit. Apost., "Ad apostolicas," August 22, 1851.)

24. The Roman pontiffs and œcumenical councils have exceeded the limits of their power, have usurped the rights of princes, and have even com-

mitted errors in defining matter relating to dogma and morals.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

25. In addition to the authority inherent in the episcopate, further temporal power is granted to it by the civil power, either expressly or tacitly, but on that account also revocable by the civil power whenever it pleases.—(Lit. Apost., "Ad Apostolicas," August 22, 1851.)

26. The church has not the natural and legitimate right of acquisition and possession.—("Nunquam," December 18, 1856; Encyc., "Incredibili," September 17, 1862.)

27. The ministers of the church and the Roman pontiff ought to be absolutely excluded from all charge and dominion over temporal affairs.—(Alloc., "Maximum quidem," June 9, 1862.)

28. Bishops have not the right of promulgating their apostolical letters without the sanction of the government.—(Alloc., "Nunquam fore," December 15, 1856.)

29. Spiritual graces granted by the Roman pontiff must be considered null unless they have been requested by the civil government.—(Id., *ibid.*)

30. The immunity of the church and of ecclesiastical persons derives its origin from civil law.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

31. Ecclesiastical jurisdiction for temporal lawsuits, whether civil or criminal, of the clergy, should be abolished, even without the consent and against the desire of the Holy See.—(Alloc., "Acerbissimum," September 27, 1852; Id., "Nunquam fore," December 15, 1856.)

32. The personal immunity exonerating the clergy from military law may be abrogated without violation either of natural right or of equity. This abrogation is called for by civil progress, especially in a society modelled upon principles of liberal government.—(Let. to Bishop Montisregal, "Singularis nobilisque," September 29, 1864.)

33. It does not appertain to ecclesiastical jurisdiction, by any right, and inherent to its essence, to direct doctrine in matters of theology.—(Let. to Archbishop Frising, "Tuas libenter," Dec. 21, 1863.)

34. The doctrine of those who compare the sovereign pontiff to a free sovereign acting in the universal church is a doctrine which prevailed in the middle ages.—(Lit. Apost., Aug. 22, 1851.)

35. There is no obstacle to the sentence of a general council, or the act of all the nation transferring the pontifical sovereign from the bishopric and city of Rome to some other bishopric in another city.—(Id., *ibid.*)

36. The definition of a national council does not admit of subsequent discussion, and the civil power can require that matters shall remain as they are.—(Id., *ibid.*)

37. National churches can be established without, and separated from, the Roman pontiff.—(Alloc., "Multis gravibusque," Dec. 17, 1860; "Jam dudum cernimus," March 18, 1861.)

38. Many Roman pontiffs have lent themselves to the division of the church in Eastern and Western churches.—(Lit. Apost., "Ad Apostolicas," August 22, 1851.)

VI.—ERRORS OF CIVIL SOCIETY, AS MUCH IN THEMSELVES AS CONSIDERED IN THEIR RELATIONS TO THE CHURCH.

39. The state of a republic, as being the origin and source of all rights, imposes itself by its rights, which is not circumscribed by any limit.—(Alloc., "Maxima quidem," June 9, 1862.)

40. The doctrine of the Catholic church is opposed to the laws and interests of society.—(Encyc.,

"Qui pluribus," Nov. 9, 1846; Alloc., "Quibus quantisque," April 20, 1849.)

41. The civil government, even when exercised by a heretic sovereign, possesses an indirect and negative power over religious affairs.—(Lit. Apost., August 22, 1851.)

42. In a legal conflict between the two powers, civil law ought to prevail.—(Id., *ibid.*)

43. The lay power has the authority to destroy, declare, and render null solemn conventions or concordats relating to the use of rights appertaining to ecclesiastical immunity, without the consent of the priesthood, and even against its will.—(Alloc., "In consistoriali," Nov. 1, 1850; "Multis gravibusque," Dec. 17, 1860.)

44. The civil authority may interfere in matters regarding religion, morality, and spiritual government, whence it has control over the instructions for the guidance of consciences issued, conformably with their mission, by the pastors of the church. Further, it possesses full power in the matter of administering the divine sacraments and the necessary arrangements for their reception.—("In consistoriali," Nov. 1, 1858; Alloc., "Maxima quidem," June 9, 1862.)

45. The entire direction of public schools in which the youth of Christian States are educated, save an exception in the case of Episcopal seminaries, may and must appertain to the civil power, and belong to it so far that no other authority shall be recognized as having any right to interfere in the discipline of the schools, the arrangement of the studies, the taking of degrees, or the choice and approval of teachers.—(Alloc., "In consistoriali," Nov. 1, 1850; "Quibus luctuosissimis," Sept. 5, 1861.)

46. Further, even in clerical seminaries the mode of study must be submitted to the civil authority.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

47. The most advantageous conditions of civil society require that popular schools open without distinction to all children of the people, and public establishments destined to teach young people letters and good discipline, and to impart to them education, should be freed from all ecclesiastical authority and interference, and should be fully subjected to the civil and political power for the teaching of masters and opinions common to the times.—(Letter to Archbishop of Friburg, "Quum none sine," July 14, 1864.)

48. This manner of instructing youth, which consists in separating it from the Catholic faith and from the power of the church, and in teaching it above all a knowledge of natural things and the objects of social life, may be perfectly approved by Catholics.—(Id., *ibid.*)

49. The civil power is entitled to prevent ministers of religion and the faithful from communicating freely and mutually with the Roman Pontiff.—(Alloc., "Maxima quidem," June 9, 1862.)

50. The lay authority possesses of itself the right of presenting bishops, and may require of them that they take possession of their diocese before having received canonical institution and the Apostolic letter of the Holy See.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

51. Further, the lay authority has the right of deposing bishops from their pastoral functions, and is not forced to obey the Roman Pontiff in matters affecting the filling of sees and the institution of bishops.—(Lit. Apost., "Multiplices inter," June 10, 1851; Alloc., "Acerbissimum.")

52. The government has a right to alter a period fixed by the church for the accomplishment of the religious duties of both sexes, and may enjoin upon all religious establishments to admit nobody to take

solemn vows without permission.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

53. Laws respecting the protection, rights, and functions of religious establishments must be abrogated; further, the civil government may lend its assistance to all who desire to quit a religious life, and break their vows. The government may also deprive religious establishments of the right of patronage to collegiate churches and simple benefices, and submit their goods to civil competence and administration.—(Alloc., "Acerbissimum," Sept. 27, 1862; "Probe memineritis," Jan. 22, 1885; and "Quum sæpe," July 26, 1858.)

54. Kings and princes are not only free from the jurisdiction of the church, but are superior to the church even in litigious questions of jurisdiction.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

55. The church must be separated from the State and the State from the church.—(Alloc., "Acerbissimum," Sept. 27, 1862.)

VII.—ERRORS IN NATURAL AND CHRISTIAN MORALS.

56. Moral laws do not stand in need of the Divine sanction, and there is no necessity that human laws should be conformable to the laws of nature and receive their sanction from God.—(Alloc., "Maxima quidem," June 9, 1862.)

57. Knowledge of philosophical and moral things and civil laws may and must be free from Divine and ecclesiastical authority.—(Id., *ibid.*)

58. No other forces are recognized than those which reside in matter, and which, contrary to all discipline and all decency of morals, are summed up in the accumulation and increase of riches by every possible means and in the satisfaction of every pleasure.—(Id., *ibid.*; Alloc., "Maxima quidem," Encyc., "Quanto conficiamur," August 10, 1863.)

59. Right consists in material fact. All human duties are vain words, and all human facts have the force of right.—(Alloc., "Maxima quidem," June 9, 1862.)

60. Authority is nothing but the sum of numbers and material force.—(Id., *ibid.*)

61. The happy injustice of a fact inflicts no injury upon the sanctity of right.—(Alloc., "Jamdudum cernimus," March 18, 1861.)

62. The principle of non-intervention must be proclaimed and observed.—(Alloc., "Novos et ante," Sept. 27, 1860.)

63. It is allowable to withdraw from obedience to legitimate princes and to rise in insurrection against them.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Quisque vestrum," Oct. 4, 1847; Encyc., "Noscitis et nobiscum," Dec. 8, 1849; Lit. Apost., "Cum Catholica," March 25, 1860.)

64. The violation of a solemn oath, even every guilty and shameful action repugnant to the eternal law, is not only undeserving rebuke, but is even allowable and worthy of the highest praise when done for the love of country.—(Alloc., "Quibus quantisque," April 20, 1849.)

VIII.—ERRORS AS TO CHRISTIAN MARRIAGE.

65. It is not admissible, rationally, that Christ has raised marriage to the dignity of a sacrament.—(Lit. Apost., August 22, 1852.)

66. The sacrament of marriage is only an adjunct of the contract, from which it is separable, and the sacrament itself only consists in the nuptial benediction.—(Id., *ibid.*)

67. By the law of nature the marriage tie is not indissoluble, and in many cases divorce, properly so called, may be pronounced by the civil authority.—(Id., *ibid.*; Alloc., "Acerbissimum," Sept. 27, 1852.)

68. The church has not the power of pronouncing upon the impediments to marriage. This belongs to civil society, which can remove the existing hindrances.—(Lit. Apost., "Multiplies inter," June 10, 1851.)

69. It is only more recently that the church has begun to pronounce upon invalidating obstacles, availing herself, not of her own right, but of a right borrowed from the civil power.—(Lit. Apost., August 22, 1851.)

70. The canons of the Council of Trent, which invoke anathema against those who deny the church the right of pronouncing upon invalidating obstacles, are not dogmatic, and must be considered as emanating from borrowed power.—(Lit. Apost., *ibid.*)

71. The form of the said council, under the penalty of nullity, does not bind in cases where the civil law has appointed another form, and desires that this new form is to be used in marriage.—(Id., *ibid.*)

72. Boniface VIII is the first who declared that the vow of chastity pronounced at ordination annuls nuptials.—(Id., *ibid.*)

73. A civil contract may very well, among Christians, take the place of true marriage, and it is false, either that the marriage contract between Christians must always be a sacrament, or that the contract is null if the sacrament does not exist.—(Id., *ibid.*; Let. to King of Sardinia, Sept. 9, 1852; Allocs., "Acerbissimum," Sept. 27, 1852; "Multis gravibusque," Dec. 17, 1860.)

74. Matrimonial or nuptial causes belong by their nature to civil jurisdiction.—(Lit. Apost., August 22, 1851; Alloc., "Acerbissimum," Sept. 27, 1852.)

N. B.—Two other errors are still current upon the abolition of the celibacy of priests and the preference due to the state of marriage over that of virginity. These have been refuted—the first in Encyc., "Qui pluribus," Nov. 9, 1846; the second in Lit. Apost., "Multiplies inter," June 10, 1851.

X.—ERRORS REGARDING THE CIVIL POWER OF THE SOVEREIGN PONTIFF.

75. The children of the Christian and Catholic Church are not agreed upon the compatibility of the temporal with the spiritual power.—(Lit. Apost., August 22, 1852.)

76. The cessation of the temporal power, upon which the Apostolic See is based, would contribute to the happiness and liberty of the church.—(Alloc., "Quibus quantisque," April 20, 1849.)

N. B.—Besides these errors explicitly pointed out, still more, and those numerous, are rebuked by the certain doctrine which all Catholics are bound to respect touching the civil government of the Sovereign Pontiff. These doctrines are abundantly explained in Allocs., "Quantis quantumque," April 20, 1850, and "Si semper antea," May 20, 1850; Lit. Apost., "Quum Catholica Ecclesia," March 26, 1860; Allocs., "Novos," Sept. 28, 1860; "Jamdudum," March 18, 1861; and "Maxima quidem," June 9, 1862.

X.—ERRORS REFERRING TO MODERN LIBERALISM.

77. In the present day it is no longer necessary that the Catholic religion shall be held as the only religion of the State, to the exclusion of all other modes of worship.—(Alloc., "Nemo vestrum," July 26, 1855.)

78. Whence it has been wisely provided by law, in some countries called Catholic, that emigrants shall enjoy the free exercise of their own worship.—(Alloc., "Acerbissimum," Sept. 27, 1852.)

79. But it is false that the civil liberty of every mode of worship and the full power given to all of overtly and publicly displaying their opinions and their thoughts conduce more easily to corrupt the morals and minds of the people and to the propagation of the evil of indifference.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

80. The Roman pontiff can and ought to reconcile himself to and agree with progress, liberalism, and modern civilization.—(Alloc., "Jamdudum cernimus," March 18, 1861.)

Also in: F. Nielson, *History of the papacy in the XIXth century*, pp. 258-270.

1869-1870.—Œcumenical council of the Vatican.—Adoption and promulgation of the Dogma of Papal Infallibility.—"It is not easy to say when Pius IX. first conceived the idea of calling together a General Council. . . . Certain it is, that on 6th December 1864—two days before the issue of the encyclical *Quanta cura*—after the usual discussions were ended, he confided to the members of the Congregation of Rites, in the greatest secrecy . . . that for a long time . . . he had been thinking of meeting the great need of the Church by resorting to the unusual measure of holding an œcumenical council. In the course of two months twenty-one of the cardinals who formed the Congregation of Rites sent in writing their opinions regarding this important project. Only two of the twenty-one considered it unnecessary. . . . As to subjects which ought to be laid before the assembly, the cardinals suggested the condemnation of the errors of modern times, various disciplinary questions, the freedom of the Press, civil marriage, and so forth. Only two mentioned the Infallibility of the Pope, but one or two suggested that the question whether the Pope's temporal power is a necessity should also be discussed. . . . When the bishops were assembled at Rome in June 1867 for the eighteenth centenary of St. Peter, Pius IX., . . . mentioned in his allocution the great project he had in his mind, and it was received with enthusiasm. . . . Manning in particular agitated early and late for the Infallibility. Shortly after the centenary festival, Pius IX. received two addresses from England, one from the Chapter at Westminster, and one from the Fathers of the Oratory in London, both of which contained petitions for the definition of Infallibility. . . . On 28th June 1868, the long expected Bull appeared, which summoned the Council to meet on 8th December 1869. . . . Letters were afterwards issued, which invited the Orthodox Greek bishops together with the Protestants and other Non-Catholics; a similar invitation to the Protestants had been put forth at the time of the Council of Trent, . . . [more than 300 years before]. Famous native [Italian] and foreign theologians were summoned to put their learning and acumen at the service of the Church; but in the choice, and in the use of those chosen, more regard was generally paid to the attitude of the persons in question towards the doctrine of Infallibility and towards Ultramontanism than to their scientific ability. It seems as if it had been intended to invite Newman among others, but by certain clever manœuvres Manning and the Jesuits succeeded in evading this unpleasant selection."—F. Nielsen, *History of the papacy in the XIXth century*, v. 2, pp. 290-291, 293-295, 297.—"The call was issued by an Encyclical, commencing 'Eterni Patris Unigenitus Filius,' in the 23rd year of his Pontificate, on the feast of St. Peter and Paul, June 29, 1868. It created at once a universal commotion in the Christian world, and called forth a multitude of books and pamphlets even before the Council convened."—P. Schaff, *History of the Vat-*

ican council (*Appendix to Gladstone's "Vatican decrees,"* American ed.)—On October 12, 1869, Pius IX issued the bull *Apostolical sedis moderatoni*, to regulate and simplify the system of censures and reservations in the church. (See BULLS, PAPAL: 1869.) In the course of centuries, the penal statutes of the church which had been simplified at the Council of Trent, had again become very complicated, and difficult to understand. The pope, therefore, had them revised, and declared that thereafter "Those only which We insert in this Constitution and in that manner in which We insert them, are to be in force in future." "It was even hoped that the Council might become a general feast of reconciliation of divided Christendom, . . . but the Eastern Patriarchs spurned the invitation. . . . The Protestant communions either ignored or respectfully declined it. Thus the Vatican Council, like that of Trent, turned out to be simply a general Roman Council, and apparently put the prospect of a reunion of Christendom farther off than ever before. While these sanguine expectations of Pius IX., were doomed to disappointment, the chief object of the Council was attained in spite of the strong opposition of the minority of liberal Catholics. This object . . . was nothing less than the proclamation of the personal Infallibility of the Pope, as a binding article of the Roman Catholic faith for all time to come. Herein lies the whole importance of the Council; all the rest dwindles into insignificance, and could never have justified its convocation. . . . [The council opened on] Dec. 8, 1869, in the Basilica of the Vatican. It reached its height at the fourth public session, July 18, 1870, when the decree of Papal Infallibility was proclaimed. After this it dragged on a sickly existence till October 20, 1870, when it was adjourned till Nov. 11, 1870, but indefinitely postponed on account of the extraordinary change in the political situation of Europe. For on the second of September the French Empire, which had been the main support of the temporal power of the Pope, collapsed with the surrender of Napoleon III. . . . [10] King William of Prussia, and on the 20th of September the Italian troops, in the name of King Victor Emmanuel, took possession of Rome, as the future capital of United Italy. . . . The whole number of prelates of the Roman Catholic Church, who are entitled to a seat in an Œcumenical Council, is 1,037. Of these there were present at the opening of the Council 719, viz., 49 Cardinals, 0 Patriarchs, 4 Primate, 121 Archbishops, 479 Bishops, 57 Abbots and Generals of monastic orders. This number afterwards increased to 764, viz., 49 Cardinals, 10 Patriarchs, 4 Primate, 105 diocesan Archbishops, 22 Archbishops in partibus infidelium, 424 diocesan Bishops, 98 Bishops in partibus, and 52 Abbots, and Generals of monastic orders. Distributed according to continents, 541 of these belonged to Europe, 83 to Asia, 14 to Africa, 113 to America, 13 to Oceanica. At the proclamation of the decree of Papal Infallibility, July 18, 1870, the number was reduced to 535, and afterwards it dwindled down to 200 or 180. Among the many nations represented, the Italians had a vast majority of 276, of whom 143 belonged to the former Papal States alone. France with a much larger Catholic population, had only 84, Austria and Hungary 48, Spain 41, Great Britain 35, Germany 10, the United States 48, Mexico 10, Switzerland 8, Belgium 6, Holland 4, Portugal 2, Russia 1. The disproportion between the representatives of the different nations and the number of their constituents was overwhelmingly in favor of the Papal influence."—

P. Schaff, *History of the Vatican council (Appendix to Gladstone's "Vatican decrees,"* American ed.)—"The first subject dealt with [at the Council of the Vatican] was the definition of the Catholic doctrine on Faith against the errors of the Rationalists and other unbelievers. A draft of this was sent by the tenth general congregation to the deputation on Faith for revision, and the council turned to other matters. . . . The progress made was slow, and meantime opposition and difference of opinion made themselves acutely felt both within the council and without. It was not that the Dogmatic Constitution on Faith provoked such controversy, but it was well known that it was the intention and wish of the Pope and of many Fathers to propose a Definition of the Infallibility of the Roman Pontiff, and the storm gathered round that point. . . . As to the definition . . . there were contending views amongst the Fathers. Very few of the bishops seem not to have believed in it in some form, but there was a considerable minority who were opposed to the expediency of any precise definition of it being promulgated by the council. . . . An agitation also gradually sprang up among the European Governments, always ready to oppose anything which seemed likely to add to the ecclesiastical power. Prince Hohenlohe, instigated by Dr. Döllinger, Professor of History at Munich, seems to have been the first to move. From Bavaria the wave of opinion in favour of intervention to prevent the definition passed on to Austria and France, in both of which countries the Foreign Ministers, Beust and Daru, lodged protests at Rome. Arnim, the Prussian envoy, at Rome also wished to intervene, but Bismarck was not to be moved from a passive attitude. So also in England, Gladstone's desire to act in the same sense was overruled by his own cabinet, and especially by the strong opposite view of Lord Carnarvon. Meanwhile, a war was going on among the men of letters and the theologians. Here Döllinger (Janus) was foremost, but was opposed by his pupil Hergenroether (anti-Janus). . . . In France the Oratorian Gratry, and Dupanloup, Bishop of Orleans, wrote strongly against the definition, and were opposed by Dechamps, Archbishop of Mechlin. A somewhat similar controversy raged in England between Lord Acton and Mr. Simpson in the *Home and Foreign Review*, and Dr. Ward and others in the *Dublin Review*. . . . About one-fifth of the council were against the definition, and in this number were comprised most of the German and Austrian prelates, nearly half of the North Americans, and a third of the French. The minority also contained two English and two Irish bishops and only seven Italians. Spain, Portugal, Holland, Belgium and South America were unanimous for the definition. A petition asking for the definition first made by Dechamps, was followed by others, which aggregated about five hundred names, while opposing petitions got at least one hundred and thirty-six signatures. The subject continued the matter of debate until the eighty-fifth congregation, when a general vote was taken of the whole draft of the proposed constitution. Out of six hundred and one Fathers, four hundred and fifty-seven voted placet, sixty-two a conditional placet, and eighty-eight non-placet. The threatened outbreak of war between France and Germany became the occasion of many prelates of both views returning to their homes, and besides these, just before the last session, a considerable number of the opposition Fathers asked permission from the officials of the council to leave Rome. Hence it came to pass that when

OPENING OF THE FIRST SESSION OF THE VATICAN COUNCIL, DEC. 8, 1869

the final vote was taken in the fourth general session on the 18th of July, under the presidency of the Pope, five hundred and thirty-three Fathers voted placet and only two non-placet. The definition was then promulgated by the Pontiff. . . . On the following day war was declared between France and Germany, and the chances of continuance of the council grew less. Still . . . several other general congregations took place, the last of which, the eighty-ninth, was on the 1st of September. A week later the occupation of Rome by the Piedmontese troops was decreed, and on the 20th of September, after a merely formal resistance on the part of the papal troops, they took possession of the city. [See also ROME: Modern city: 1870-1871.] Pius IX. waited for another month, and then on the 20th of October prorogued the council indefinitely. . . . The two bishops who had voted non-placet at once submitted, and so did most of those well-known Catholics who had opposed the definition on the ground of its not being expedient. Such were Newman, Montalembert, Darboy, Kenrick, and Acton."—G. Stebbing, *Story of the Catholic Church*, pp. 628-631.—Most of the German bishops who had opposed the dogma of infallibility surrendered to it in the end; but Dr. Döllinger, the Bavarian theologian, held his ground. "He had now become the acknowledged leader of all those who, within the pale of the Romish Church, were disaffected towards the Holy See; but he was to pay for this position of eminence. The Old Catholic movement soon drew upon itself the hostility of the ecclesiastical authorities. On the 19th of April 1871 Dr. Döllinger was formally excommunicated by the Archbishop of Munich, on account of his refusal to retract his opposition to the dogma of infallibility. . . . A paper war of great magnitude followed the excommunication. Most of the doctor's colleagues in his own divinity school, together with not a few canons of his cathedral, a vast number of the Bavarian lower clergy, and nearly all the laity, testified their agreement with him. The young King of Bavaria, moreover, lent the support of his personal sympathies to Dr. Döllinger's movement. . . . A Congress of Old Catholics was held at Munich in September, when an Anti-Infallibility League was formed; and the cause soon afterwards experienced a triumph in the election of Dr. Döllinger to the Rectorship of the University of Munich by a majority of fifty-four votes against six. At Cologne in the following year an Old Catholic Congress assembled, and delegates attended from various foreign States. . . . Dr. Döllinger . . . was always glad to give the Old Catholic body the benefit of his advice, and he presided over the Congress, mainly of Old Catholics, which was held at Bonn in 1874 to promote the reunion of Christendom; but we believe he never formally joined the Communion, and, at the outset, at any rate, he strongly opposed its constitution as a distinct Church. From the day of his excommunication by the Archbishop of Munich he abstained from performing any ecclesiastical function. He always continued a strict observer of the disciplinary rules and commandments of the Roman Catholic Church. . . . The Old Catholic movement did not generally make that headway upon the Continent which its sanguine promoters had hoped speedily to witness, though it was helped in Germany by the passing of a Bill for transferring ecclesiastical property to a committee of the rate-payers and communicants in each parish of the empire. When the third synod of the Old Catholics was held at Bonn in June 1876 it was stated

by Dr. von Schulte that there were then 35 communities in Prussia, 44 in Baden, 5 in Hesse, 2 in Birkenfeld, 31 in Bavaria, and 1 in Würtemberg. The whole number of persons belonging to the body of Old Catholics was—in Prussia, 17,203; Bavaria, 10,110; Hesse, 1,042; Oldenburg, 249; and Würtemberg, 223. The number of Old Catholic priests in Germany was sixty. Subsequently some advance was recorded over these numbers."—*Eminent persons: Biographies reprinted from the Times*, v. 4, pp. 213-216.

JOHANN VON DOLLINGER

opening of the œcumenical council.—W. E. Gladstone, *Vatican decrees*.

The following is a translation of the text of the Constitution "Pastor æternus" in which the Dogma of Infallibility was subsequently promulgated by the Pope:

Pius Bishop, Servant of the Servants of God, with the approval of the Sacred Council, for an everlasting remembrance. The eternal Pastor and Bishop of our souls, in order to continue for all time the life-giving work of His Redemption, determined to build up the Holy Church, wherein, as in the House of the living God, all faithful men might be united in the bond of one faith and one charity. Wherefore, before he entered into His glory, He prayed unto the Father, not for the Apostles only, but for those also who through their preaching should come to believe in Him, that all might be one even as He the Son and the Father are one. As then the Apostles whom He had chosen to Himself from the world were sent by Him, not otherwise than He Himself had been sent by the Father; so did He will that there should ever be pastors and teachers in His Church to the end of the world. And in order

that the Episcopate also might be one and undivided, and that by means of a closely united priesthood the body of the faithful might be kept secure in the oneness of faith and communion, He set Blessed Peter over the rest of the Apostles, and fixed in him the abiding principle of this twofold unity, and its visible foundation, in the strength of which the everlasting temple should arise, and the Church in the firmness of that faith should lift her majestic front to Heaven. And seeing that the gates of hell with daily increase of hatred are gathering their strength on every side to upheave the foundation laid by God's own hand, and so, if that might be, to overthrow the Church; We, therefore, for the preservation, safe-keeping, and increase of the Catholic flock, with the approval of the Sacred Council, do judge it to be necessary to propose to the belief and acceptance of all the faithful, in accordance with the ancient and constant faith of the universal Church, the doctrine touching the institution, perpetuity, and nature of the sacred Apostolic Primacy, in which is found the strength and sureness of the entire Church, and at the same time to inhibit and condemn the contrary errors, so hurtful to the flock of Christ.

CHAPTER I. *Of the institution of the apostolic primacy in Blessed Peter.* We, therefore, teach and declare that, according to the testimony of the Gospel, the primacy of jurisdiction was immediately and directly promised to Blessed Peter the Apostle, and on him conferred by Christ the Lord. For it had been said before to Simon: Thou shalt be called Cephas, and afterwards on occasion of the confession made by him: Thou art the Christ, the Son of the living God, it was to Simon alone that the Lord addressed the words: Blessed art thou, Simon Bar-Jona, because flesh and blood hath not revealed it to thee, but my Father who is in Heaven. And I say to thee that thou art Peter; and upon this rock I will build my Church, and the gates of hell shall not prevail against it. And I will give to thee the keys of the kingdom of Heaven. And whatsoever thou shalt bind upon earth, it shall be bound also in heaven, and whatsoever thou shalt loose on earth it shall be loosed also in heaven. And it was upon Simon alone that Jesus after His resurrection bestowed the jurisdiction of Chief Pastor and Ruler over all His fold in the words: Feed my lambs: feed my sheep. At open variance with this clear doctrine of Holy Scripture as it has been ever understood by the Catholic Church are the perverse opinions of those who, while they distort the form of government established by Christ the Lord in His Church, deny that Peter in his single person, preferably to all the other Apostles, whether taken separately or together, was endowed by Christ with a true and proper primacy of jurisdiction: or of those who assert that the same primacy was not bestowed immediately and directly upon Blessed Peter himself, but upon the Church, and through the Church on Peter as her Minister. If anyone, therefore, shall say that Blessed Peter the Apostle was not appointed the Prince of all the Apostles and the visible Head of the whole Church Militant; or that the same directly and immediately received from the same Our Lord Jesus Christ a Primacy of honour only, and not of true and proper jurisdiction; let him be anathema.

CHAPTER II. *On the perpetuation of the primacy of Peter in the Roman Pontiffs.* That which the Prince of Shepherds and great Shepherd of the

sheep, Jesus Christ our Lord, established in the person of the Blessed Apostle Peter to secure the perpetual welfare and lasting good of the Church, must, by the same institution, necessarily remain unceasingly in the Church; which, being founded upon the Rock, will stand firm to the end of the world. For none can doubt, and it is known to all ages, that the holy and Blessed Peter, the Prince and Chief of the Apostles, the pillar of the faith and foundation of the Catholic Church, who received the keys of the kingdom from Our Lord Jesus Christ, the Saviour and Redeemer of the race of man, continues up to the present time, and ever continues, in his successors the Bishops of the Holy See of Rome, which was founded by Him, and consecrated by His blood, to live and preside and judge. Whence, whosoever succeeds to Peter in this See, does by the institution of Christ Himself obtain the Primacy of Peter over the whole Church. The disposition made by Incarnate Truth therefore remains, and Blessed Peter, abiding through the strength of the Rock in the power that he received, has not abandoned the direction of the Church. Wherefore it has at all times been necessary that every particular Church—that is to say, the faithful throughout the world—should agree with the Roman Church, on account of the greater authority of the principedom which this has received; that all being associated in the unity of that See whence the rights of communion spread to all, as members in the unity of the Head, might combine to form one connected body. If, then, any should deny that it is by the institution of Christ the Lord, or by divine right, that Blessed Peter should have a perpetual line of successors in the Primacy over the Universal Church, or that the Roman Pontiff is the successor of Blessed Peter in this Primacy; let him be anathema.

CHAPTER III. *On the force and character of the primacy of the Roman Pontiff.* Wherefore, resting on plain testimonies of the Sacred Writings, and in agreement with both the plain and express decrees of our predecessors, the Roman Pontiffs, and of the General Councils, We renew the definition of the Œcumenical Council of Florence, in virtue of which all the faithful of Christ must believe that the Holy Apostolic See and the Roman Pontiff possesses the Primacy over the whole world, and that the Roman Pontiff is the successor of Blessed Peter, Prince of the Apostles, and is true Vicar of Christ, and Head of the whole Church, and Father and teacher of all Christians; and that full power was given to him in Blessed Peter to rule, feed, and govern the Universal Church by Jesus Christ our Lord; as is also contained in the acts of the General Councils and in the Sacred Canons. Further we teach and declare that by the appointment of our Lord the Roman Church possesses the chief ordinary jurisdiction over all other Churches, and that this power of jurisdiction possessed by the Roman Pontiff being truly episcopal is immediate; which all, both pastors and faithful, both individually and collectively, are bound, by their duty of hierarchical submission and true obedience, to obey, not merely in matters which belong to faith and morals, but also in those that appertain to the discipline and government of the Church throughout the world, so that the Church of Christ may be one flock under one supreme pastor through the preservation of unity both of communion and of profession of the same faith with the Roman Pontiff. This is the teaching of Catholic truth, from which no one can deviate without loss of

faith and of salvation. But so far is this power of the Supreme Pontiff from being any prejudice to the ordinary power of episcopal jurisdiction, by which the Bishops who have been set by the Holy Spirit to succeed and hold the place of the Apostles feed and govern, each his own flock, as true Pastors, that this episcopal authority is really asserted, strengthened, and protected by the supreme and universal Pastor; in accordance with the words of S. Gregory the Great: My honour is the honour of the whole Church. My honour is the firm strength of my Brethren. I am then truly honoured, when due honour is not denied to each of their number. Further, from this supreme power possessed by the Roman Pontiff of governing the Universal Church, it follows that he has the right of free communication with the Pastors of the whole Church, and with their flocks, that these may be taught and directed by him in the way of salvation. Wherefore we condemn and reject the opinions of those who hold that the communication between this supreme Head and the Pastors and their flocks can lawfully be impeded; or who represent this communication as subject to the will of the secular power, so as to maintain that whatever is done by the Apostolic See, or by its authority, cannot have force or value, unless it be confirmed by the assent of the secular power. And since by the divine right of Apostolic primacy, the Roman Pontiff is placed over the Universal Church, we further teach and declare that he is the supreme judge of the faithful, and that in all causes, the decision of which belongs to the Church, recourse may be had to his tribunal: and that none may meddle with the judgment of the Apostolic See, the authority of which is greater than all other, nor can any lawfully depart from its judgment. Wherefore they depart from the right course who assert that it is lawful to appeal from the judgments of the Roman Pontiffs and an Œcumenical Council, as to an authority higher than that of the Roman Pontiff. If then any shall say that the Roman Pontiff has the office merely of inspection or direction, and not full and supreme power of jurisdiction over the Universal Church, not alone in things which belong to faith and morals, but in those which relate to the discipline and government of the Church spread throughout the world; or who assert that he possesses merely the principal part, and not all the fulness of this supreme power; or that this power which he enjoys is not ordinary and immediate, both over each and all the Churches and over each and all the Pastors and the faithful; let him be anathema.

CHAPTER IV. *Concerning the infallible teaching of the Roman Pontiff.* Moreover that the supreme power of teaching is also included in the Apostolic Primacy, which the Roman Pontiff, as successor of Peter, Prince of the Apostles, enjoys over the whole Church, this Holy See has always held, the perpetual practice of the Church attests, and Œcumenical Councils themselves have declared, especially those in which the East with the West met in the union of faith and charity. For the Fathers of the Fourth Council of Constantinople, following in the footsteps of their predecessors, gave forth this solemn profession: The first condition of salvation is to keep the rule of the true faith. And because the sentence of our Lord Jesus Christ cannot be passed by, who said: Thou art Peter, and upon this Rock I will build my Church, these things which have been said are approved by events, because in the Apostolic See the Catholic Religion and her holy solemn doctrine has always been kept immaculate. Desiring, therefore, not to

be in the least degree separated from the faith and doctrine of that See, we hope that we may deserve to be in the one communion, which the Apostolic See preaches, in which is the entire and true solidity of the Christian religion. And, with the approval of the Second Council of Lyons, the Greeks professed that the Holy Roman Church enjoy supreme and full Primacy and preeminence over the whole Catholic Church, which it truly and humbly acknowledges that it has received with the plenitude of power from our Lord Himself in the person of blessed Peter, Prince or Head of the Apostles, whose successor the Roman Pontiff is; and as the Apostolic See is bound before all others to defend the truth of faith, so also if any questions regarding faith shall arise, they must be defined by its judgment. Finally, the Council of Florence defined: That the Roman Pontiff is the true Vicar of Christ, and the Head of the whole Church, and the Father and Teacher of all Christians; and that to him in blessed Peter was delivered by our Lord Jesus Christ the full power of feeding, ruling, and governing the whole Church. To satisfy this pastoral duty our predecessors ever made unwearied efforts that the salutary doctrine of Christ might be propagated among all the nations of the earth, and with equal care watched that it might be preserved sincere and pure where it had been received. Therefore the Bishops of the whole world, now singly, now assembled in synod, following the long-established custom of Churches, and the form of the ancient rule, sent word to this Apostolic See of those dangers which sprang up in matters of faith, that there especially the losses of faith might be repaired where faith cannot feel any defect. And the Roman Pontiffs, according to the exigencies of times and circumstances, sometimes assembling Œcumenical Councils, or asking for the mind of the Church scattered throughout the world, sometimes by particular Synods, sometimes using other helps which Divine Providence supplied, defined as to be held those things which with the help of God they had recognised as conformable with the Sacred Scriptures and Apostolic Traditions. For the Holy Spirit was not promised to the successors of Peter that under His revelation they might make known new doctrine, but that under His assistance they might scrupulously keep and faithfully expound the revelation or deposit of faith delivered through the Apostles. And, indeed, all the venerable Fathers have embraced, and the holy orthodox Doctors have venerated and followed, their Apostolic doctrine; knowing most fully that this See of holy Peter remains ever free from all blemish of error, according to the divine promise of the Lord our Saviour made to the Prince of His disciples: I have prayed for thee that thy faith fail not, and thou, at length converted, confirm thy brethren. This gift, then, of truth and never-failing faith was conferred by Heaven upon Peter and his successors in this Chair, that they might perform their high office for the salvation of all; that the whole flock of Christ, kept away by them from the poisonous food of error, might be nourished with the pasture of heavenly doctrine; that the occasion of schism being removed the whole Church might be kept one, and, resting on its foundation, might stand firm against the gates of hell. But since in this very age, in which the salutary efficacy of the Apostolic office is even most of all required, not a few are found who take away from its authority. We judge it altogether necessary solemnly to assert the prerogative which the only-begotten Son of God vouchsafed to join with the supreme pastoral office. Therefore We,

faithfully adhering to the tradition received from the beginning of the Christian faith, for the glory of God our Saviour, the exaltation of the Roman Catholic Religion, and the salvation of Christian people, with the approbation of the Sacred Council, teach and define that it is a dogma divinely revealed: that the Roman Pontiff, when he speaks *ex cathedra*, that is, when in discharge of the office of Pastor and Doctor of all Christians by virtue of his supreme Apostolic authority he defines a doctrine regarding faith or morals to be held by the Universal Church, by the divine assistance promised to him in blessed Peter, enjoys that infallibility with which the divine Redeemer wished that His Church be provided for defining doctrine regarding faith or morals; and that therefore such definitions of the Roman Pontiff are irreformable of themselves, and not from the consent of the Church. But if anyone—which may God avert—presume to contradict this Our definition; let him be anathema.

1870.—End of the temporal sovereignty.—Rome made the capital of the kingdom of Italy.—Law of the Papal Guarantees: Summary and text.—The events which extinguished the temporal sovereignty of the pope and made Rome the capital of the kingdom of Italy will be found narrated under ITALY: 1870. "The entry of the Italian troops into Rome, and its union to Italy . . . [were] acquiesced in by all the powers of Europe, both Protestant and Roman Catholic. The French Government of National Defence, which had succeeded to power after the fall of the Second Empire, expressed through M. Jules Favre, the Minister of Foreign Affairs, its desire that the Italians should do what they liked, and avowed its sympathy with them. . . . The Austro-Hungarian Cabinet was asked by the Papal Court to protest against the occupation of Rome. To this the Imperial and Royal Government gave a direct refusal, alleging among other reasons that 'its excellent relations' with Italy, upon which it had 'cause to congratulate itself ever since reconciliation had been effected' prevented its acceding to the desire of the Vatican. . . . The Spanish Government of the Regency, which succeeded to that of Queen Isabella, adopted much the same line of conduct; it praised Signor Visconti-Venosta's circular, and spoke of the 'wise and prudent' measures it proposed to adopt with regard to the Pope. . . . Baron d'Anethan, at that time Prime Minister of Belgium, who was the leader of the conservative or clerical party in the country, admitted to the Italian Minister at Brussels: 'that speaking strictly, the temporal power was not, in truth, an indispensable necessity to the Holy See for the fulfilment of its mission in the world.' As to the course Belgium would take the Baron said—'If Italy has a territorial difficulty to discuss with the Holy See, that is a matter with which Belgium has nothing to do, and it would be to disown the principles on which our existence reposes if we expressed an opinion one way or the other on the subject.' . . . The Italian Chamber elected in March, 1867, was dissolved, and on the 5th December, 1870, the newly elected Parliament met in Florence for the last time. Among its members now sat those who represented Rome and the province, in which it is situated. The session of 1871 was occupied with the necessary arrangements for the transfer of the capital to Rome, and by the discussion of an act defining the position of the Pope in relation to the kingdom of Italy. The labours of Parliament resulted in the Law of the Papal Guarantees, which, after long and full

debate in both Houses, received the royal assent on the 13th of May, 1871."—J. W. Probyn, *Italy, 1815 to 1878, ch. 11.*

"What is the exact legal position of the Vatican at present surrounded as it is by Italian territory and possessing no free outlet to other countries? The answer to this question is furnished by the Law of Guarantees of May 13, 1871. When the Piedmontese entered Rome through the breach in the Porta Pia on September 20, 1870, they seized immediately all the possessions of the Papal States, whereupon the independent existence of these States came to an end. Pius IX, who had resided earlier in the Quirinal Palace, then occupied the Vatican. Halting before the Vatican, and abstaining also from occupying the Lateran, the victors proceeded to study the question of the legal position of the Pope under the new conditions. . . . After long negotiations, the Italian authorities decided upon the draft of a law which was to guarantee the position of the Pope as the supreme head of the Catholic Church. In the extended discussions in the Italian Chambers the intentions of the Government were fully explained by its representatives, so that the character of the law executed by Victor Emmanuel on May 13 was established beyond possible doubt: (1) The law had for its basis, not Italian, but international law; (2) consequently, all alteration of this law at any future date by the Italian legislature, without consulting the Vatican, was excluded; (3) the law thus became binding for the Italian Government, regardless of the fact whether it was recognized or not by the other party as of valid origin; (4) the Italian State bound itself so completely that only by an act of violence, in violation of an international public obligation voluntarily undertaken, can it alter any portion or the whole of this law. . . . It may be asked what are the special provisions of the Law of Guarantees. In the first place, the Italian State undertakes to pay to the Pope a yearly sum of 3,225,000 lire (\$650,000). Should no claim be entered for this sum, it is allowed to accumulate for five years and then reverts to the Italian exchequer. Although the sum has never been claimed by the Pope, it is still included without debate in each annual Budget. . . . In the second place, the Law of Guarantees provides that the palaces of the Vatican and the Lateran, and also the summer residence of Castel Gandolfo, shall be extra-territorial. This means that the Italian Government may exercise no authority whatever in these places; its powers end at the gates of these buildings. They cannot subpoena or tax any person in the papal service. In these palaces the Pope rules as an independent sovereign. In the third place, the Law of Guarantees gives the Pope the right to receive accredited ambassadors and envoys from all powers with which he desires to cultivate diplomatic relations. Of this right he has always availed himself, so that there are in Rome two diplomatic corps—one accredited to the Quirinal (where the King lives), and the other to the Vatican. As a consequence, the Italian Government must concede to these Vatican diplomats and their residences all the privileges granted to the persons and residences of diplomats throughout the entire civilized world. . . . In the fourth place, the Italian State is bound to send free to every part of the world all official telegrams of the Pope and the Holy See, whenever these are provided with the stamp of the Secretariate of State. All letters posted in Italy are delivered free to the Pope. . . . The Pope has never recognized the law as of valid origin. The Italian Government, however, has repeatedly declared that it regards itself bound by

every provision of the Law of Guarantees."—*Ibid.*, pp. 543-546.

"In the extensive dealings which the household administration of the Apostolic Palaces necessarily has with contractors and purveyors, and upon numerous questions of equity and law, some differences of opinion and disputes cannot but arise. Since the Vatican boards cannot be cited before the Italian courts, some provision had to be made so that outside parties might seek and find justice in the Vatican. Under the name of Commissions of Prelates, courts of law have been established 'to settle all disputes with, and claims against the Palatine Administration.'"—E. Bagni, *Vatican, its history, its treasures*, pp. 544-547.

The Law of Guarantees runs as follows:

Article I. The person of the Sovereign Pontiff is sacred and inviolable.

Art. II. An attack (attentato) directed against the person of the Sovereign Pontiff, and any instigation to commit such attack, is punishable by the same penalties as those established in the case of an attack directed against the person of the king, or any instigation to commit such an attack. Offences and public insults committed directly against the person of the Pontiff by discourses, acts, or by the means indicated in the 1st article of the law on the press, are punishable by the penalties established by the 19th article of the same law. These crimes are liable to public action, and are within the jurisdiction of the court of assizes. The discussion of religious subjects is completely free.

Art. III. The Italian Government renders throughout the territory of the kingdom royal honours to the Sovereign Pontiff, and maintains that pre-eminence of honour recognised as belonging to him by Catholic princes. The Sovereign Pontiff has power to keep up the usual number of guards attached to his person, and to the custody of the palaces, without prejudice to the obligations and duties resulting to such guards from the actual laws of the kingdom.

Art. IV. The endowment of 3,225,000 francs (lire italiane) of yearly rental is retained in favour of the Holy See. With this sum, which is equal to that inscribed in the Roman balance-sheet under the title, "Sacred Apostolic Palaces, Sacred College, Ecclesiastical Congregations, Secretary of State, and Foreign Diplomatic Office," it is intended to provide for the maintenance of the Sovereign Pontiff, and for the various ecclesiastical wants of the Holy See for ordinary and extraordinary maintenance, and for the keeping of the apostolic palaces and their dependencies; for the pay, gratifications, and pensions of the guards of whom mention is made in the preceding article, and for those attached to the Pontifical Court, and for eventual expenses; also for the ordinary maintenance and care of the annexed museums and library, and for the pay, stipends, and pensions of those employed for that purpose. The endowment mentioned above shall be inscribed in the Great Book of the public debt, in form of perpetual and inalienable revenue, in the name of the Holy See; and during the time that the See is vacant, it shall continue to be paid, in order to meet all the needs of the Roman Church during that interval of time. The endowment shall remain exempt from any species of government, communal, or provincial tax; and it cannot be diminished in future, even in the case of the Italian Government resolving ultimately itself to assume the expenses of the museums and library.

Art. V. The Sovereign Pontiff, besides the en-

dowment established in the preceding article, will continue to have the use of the apostolic palaces of the Vatican and Lateran with all the edifices, gardens, and grounds annexed to and dependent on them, as well as the Villa of Castel Gondolfo with all its belongings and dependencies. The said palaces, villa, and annexes, like the museums, the library, and the art and archæological collections there existing, are inalienable, are exempt from every tax or impost, and from all expropriation on the ground of public utility.

Art. VI. During the time in which the Holy See is vacant, no judiciary or political authority shall be able for any reason whatever to place any impediment or limit to the personal liberty of the cardinals. The Government provides that the meetings of the Conclave and of the Œcumenical Councils shall not be disturbed by any external violence.

Art. VII. No official of the public authority, nor agent of the public forces, can in the exercise of his peculiar office enter into the palaces or localities of habitual residence or temporary stay of the Sovereign Pontiff, or in those in which are assembled a Conclave or Œcumenical Council, unless authorised by the Sovereign Pontiff, by the Conclave, or by the Council.

Art. VIII. It is forbidden to proceed with visits, perquisitions, or seizures of papers, documents, books, or registers in the offices and pontifical congregations invested with purely spiritual functions.

Art. IX. The Sovereign Pontiff is completely free to fulfil all the functions of his spiritual ministry, and to have affixed to the doors of the basilicas and churches of Rome all the acts of the said ministry.

Art. X. The ecclesiastics who, by reason of their office, participate in Rome in the sending forth of the acts of the spiritual ministry of the Holy See, are not subject on account of those acts to any molestation, investigation, or act of magistracy, on the part of the public authorities. Every stranger invested with ecclesiastical office in Rome enjoys the personal guarantees belonging to Italian citizens in virtue of the laws of the kingdom.

Art. XI. The envoys of foreign governments to the Holy See enjoy in the kingdom all the prerogatives and immunities which belong to diplomatic agents, according to international right. To offences against them are extended the penalties inflicted for offences against the envoys of foreign powers accredited to the Italian Government. To the envoys of the Holy See to foreign Governments are assured throughout the territory of the kingdom the accustomed prerogatives and immunities, according to the same (international) right, in going to and from the place of their mission.

Art. XII. The Supreme Pontiff corresponds freely with the Episcopate and with all the Catholic world without any interference whatever on the part of the Italian Government. To such end he has the faculty of establishing in the Vatican, or any other of his residences, postal and telegraphic offices worked by clerks of his own appointment. The Pontifical post-office will be able to correspond directly, by means of sealed packets, with the post-offices of foreign administrations, or remit its own correspondence to the Italian post-offices. In both cases the transport of despatches or correspondence furnished with the official Pontifical stamp will be exempt from every tax or expense as regards Italian territory. The couriers sent out in the name of the Supreme Pontiff are placed on the same footing in the kingdom, as the cabinet couriers or those of foreign government. The

Pontifical telegraphic office will be placed in communication with the network of telegraphic lines of the kingdom, at the expense of the State. Telegrams transmitted by the said office with the authorised designation of 'Pontifical' will be received and transmitted with the privileges established for telegrams of State, and with the exemption in the kingdom from every tax. The same advantages will be enjoyed by the telegrams of the Sovereign Pontiff or those which, signed by his order and furnished with the stamp of the Holy See, shall be presented to any telegraphic office in the kingdom. Telegrams directed to the Sovereign Pontiff shall be exempt from charges upon those who send them.

Art. xiii. In the city of Rome and in the six suburban sees the seminaries, academies, colleges, and other Catholic institutions founded for the education and culture of ecclesiastics, shall continue to depend only on the Holy See, without any interference of the scholastic authorities of the kingdom.

Art. xiv. Every special restriction of the exercise of the right of meeting on the part of the members of the Catholic clergy is abolished.

Art. xv. The Government renounces its right of apostolic legateship (*legazia apostolica*) in Sicily, and also its right, throughout the kingdom, of nomination or presentation in the collation of the greater benefices. The bishops shall not be required to make oath of allegiance to the king. The greater and lesser benefices cannot be conferred except on citizens of the kingdom, save in the case of the city of Rome, and of the suburban sees. No innovation is made touching the presentation to benefices under royal patronage.

Art. xvi. The royal "exequatur" and "placet," and every other form of Government assent for the publication and execution of acts of ecclesiastical authority, are abolished. However, until such time as may be otherwise provided in the special law of which Art. XVIII. speaks, the acts of these (ecclesiastical) authorities which concern the destination of ecclesiastical property and the provisions of the major and minor benefices, excepting those of the city of Rome and the suburban sees, remain subject to the royal "exequatur" and "placet." The enactments of the civil law with regard to the creation and to the modes of existence of ecclesiastical institutions and of their property remain unaltered.

Art. xvii. In matters spiritual and of spiritual discipline, no appeal is admitted against acts of the ecclesiastical authorities, nor is any aid on the part of the civil authority recognised as due to such acts, nor is it accorded to them. The recognising of the judicial effects, in these as in every other act of these (ecclesiastical) authorities, rests with the civil jurisdiction. However, such acts are without effect if contrary to the laws of the State, or to public order, or if damaging to private rights, and are subjected to the penal laws if they constitute a crime.

Art. xviii. An ulterior law will provide for the reorganisation, the preservation, and the administration of the ecclesiastical property of the kingdom.

Art. xix. As regards all matters which form part of the present law, everything now existing, in so far as it may be contrary to this law, ceases to have effect.

"The object of this law was to carry out still further than had yet been done the principle of a 'free Church in a free State,' by giving the Church unfettered power in all spiritual matters,

while placing all temporal power in the hands of the State. . . . The Pope and his advisers simply protested against all that was done. Pius IX. shut himself up in the Vatican and declared himself a prisoner. In the meanwhile the practical transfer of the capital from Florence was effected."—J. W. Probyn, *Italy, 1815 to 1878*, ch. 11.—The attitude towards the Italian Government assumed by the Papal Court in 1870, and since maintained, is indicated by the following, quoted from a work written in sympathy with it: "Pius IX. had refused to treat with or in any way recognize the new masters of Rome. The Law of Guarantees adopted by the Italian Parliament granted him a revenue in compensation for the broad territories of which he had been despoiled. He refused to touch a single lira of it, and preferred to rely upon the generosity of his children in every land, rather than to become the pensioner of those who had stripped him of his civil sovereignty. His last years were spent within the boundaries of the Vatican palace. He could not have ventured to appear publicly in the city without exposing himself to the insults of the mob on the one hand, or on the other calling forth demonstrations of loyalty, which would have been made the pretext for stern military repression. Nor could he have accepted in the streets of Rome the protection of the agents of that very power against whose presence in the city he had never ceased to protest. Thus it was that Pius IX. became, practically, a prisoner in his own palace of the Vatican. He had not long to wait for evidence of the utter hollowness of the so-called Law of Guarantees. The extension to Rome of the law suppressing the religious orders, the seizure of the Roman College, the project for the expropriation of the property of the Propaganda itself, were so many proofs of the spirit in which the new rulers of Rome interpreted their pledges, that the change of government should not in any way prejudice the Church or the Holy See in its administration of the Church. . . . The very misfortunes and difficulties of the Holy See drew closer the bonds that united the Catholic world to its centre. The Vatican became a centre of pilgrimage to an extent that it had never been before in all its long history, and this movement begun under Pius IX. has continued and gathered strength under Leo XIII., until at length it has provoked the actively hostile opposition of the intruded government. Twice during his last years Pius IX. found himself the centre of a world-wide demonstration of loyalty and affection, first on June 16th, 1871, when he celebrated the twenty-fifth anniversary of his coronation, the first of all the Popes who had ever reigned beyond the 'years of Peter'; and again on June 3rd, 1877, when, surrounded by the bishops and pilgrims of all nations, he kept the jubilee of his episcopal consecration. . . . Pius IX. was destined to outlive Victor Emmanuel, as he had outlived Napoleon III. . . . Victor Emmanuel died on January 9th, Pius IX. on February 6th [1878]. . . . It had been the hope of the Revolution that, however stubbornly Pius IX. might refuse truce or compromise with the new order of things, his successor would prove to be a man of more yielding disposition. The death of the Pope had occurred somewhat unexpectedly. Though he had been ill in the autumn of 1877, at the New Year he seemed to have recovered, and there was every expectation that his life would be prolonged for at least some months. The news of his death came at a moment when the Italian Government was fully occupied with the changes that followed the accession of a new king, and when the

diplomats of Europe were more interested in the settlement of the conditions of peace between France and Germany than in schemes for influencing the conclave. Before the enemies of the Church had time to concert any hostile plans of action, the cardinals had assembled at the Vatican and had chosen as Supreme Pontiff, Cardinal Pecci, the Archbishop of Perugia. He assumed the name of Leo XIII., a name now honoured not only within the Catholic Church, but throughout the whole civilized world. . . . The first public utterances of the new Pope shattered the hopes of the usurpers. He had taken up the standard of the Church's rights from the hands of his predecessor, and he showed himself as uncompromising as ever Pius IX. had been on the question of the independence of the Holy See, and its effective guarantee in the Civil Sovereignty of the Supreme Pontiff. The hope that the Roman Question would be solved by a surrender on the part of Leo XIII. of all that Pius IX. had contended for has been long since abandoned."—Chevalier O'Clery, *Making of Italy*, ch. 26.—See also ITALY: 1867-1870.

1870-1874.—First stages of the "Kulturkampf" in Germany.—May laws.—Speeches of Bismarck.—"For reasons relating to its own internal affairs the state, even though it took no special attitude to the dogma of infallibility in itself, could not avoid being drawn into the conflicts which that dogma was bound to call forth between its upholders and its opponents. . . . It was necessary for it to interfere and, by introducing civil marriages, to render marriage possible to those apostates who were not allowed to receive the sacraments; it was necessary for it to protect in the exercise of their office those of its public teachers who rejected the new dogma, even if their spiritual superiors should declare them unfit to hold such office. In cases, finally, where whole congregations, or majorities of them, remained true to the old teachings it was necessary for the state to protect them in the possession of their churches of which the bishops tried to deprive them. . . . The chancellor of the empire had now [1871] personally entered the lists. As his cool attitude already before the council had given reason to expect, the Vatican dogma did not much trouble him. All the more alarming seemed to him the agitation which the clergy were stirring up among the Polish nobles. . . . He [Bismarck] caused the announcement to be made in an article of the *Kreuzzeitung* that the government would not only continue on the defensive against the Centre, but in turn would proceed to attack it. The ultramontanes had better consider whether such a struggle could turn out to the advantage of the Roman Church. If, he concluded, three hundred years ago Teutonism in Germany was stronger than Romanism, how much stronger would it be now when Rome is no longer the capital of the world, but on the point of becoming the capital of Italy, and when the German imperial crown no longer rests on the head of a Spaniard but of a German prince. . . . In the Federal Council Lutz moved an amendment to the criminal code which should threaten any clergyman with imprisonment up to two years if he should misuse his office and discuss state affairs so as to disturb the peace. . . . This 'pulpit-paragraph' was accepted with 170 to 108 votes and became law December 14th, 1871. . . . The Prussian diet was opened on November 27, 1871, with the announcement of four new laws which should regulate marriages, the registration of civil personal matters, the withdrawal from existing churches, and the supervision

of schools. . . . The conservative party was in wild excitement over these measures and the *Kreuzzeitung* became the organ of decided opposition, especially against the school-supervision law which was chosen as the first object of attack. The conservatives collected petitions from all parts of the land to kill this law which they prophesied would make the schools a tool of atheism, a hot-bed of revolution, unnationality and immorality. They succeeded in getting together more than 300,000 signatures. . . . At the first reading in the House of Deputies the school-supervision law was passed, although by a majority of only 25 votes. . . . At the second reading the majority increased to 52. . . . The chief struggle was expected in the House of Lords. . . . The vote here was favorable beyond all hopes, resulting on March 8th in a majority in favor of the law almost as great as that in the House of Deputies. . . . By no means calm was the attitude of the pope towards the increasing complications, and when, a few weeks later, on June 24th, 1872, he received the German 'Leseverein' in Rome he complained bitterly of the prime minister of a powerful government who, after marvellous successes in war, should have placed himself at the head of a long-planned persecution of the church; a step which would undoubtedly tarnish the glory of his former triumphs. 'Who knows if the little stone shall not soon be loosened from above that shall destroy the foot of the Colossus!' The chief cause of this embitterment lay in the expulsion of the Jesuits which had meanwhile been decreed by the diet. . . . The more the national opposition to the Roman claims increased, the more passionate did the frame of mind of the ultramontanes become; and also, in no small degree, of the pope. An allocution addressed to the cardinals on December 22, 1872, surpassed in violence anything that had yet been heard. . . . Even Reichensperger found it advisable in excusing a vehemence that thus went beyond all bounds to call to mind that the Latinized style of the papal chancery was not to be taken too literally. The German government, after such a demonstration, had no other alternative than to recall the last representative of its embassy to the papal court. . . . Already in November Minister Falk had laid before the House a draft of a law concerning the limits of ecclesiastical punishments and disciplinary measures; on January 9, 1873, followed the drafts of three new laws. . . . Still more passionately than in the debate concerning the change in the Constitution did Bismarck come forward in the discussion of April 24-28. . . . Windhorst and Schorlemer-Alst answered him back in kind. . . . With violent attacks on Bismarck they prophesied that these Draconic laws would rebound against the passive opposition of the people; that dawn was glimmering in men's minds and that the victory of the Church was near. To the great majority of the German people, who had followed the political-ecclesiastical debates with the liveliest interest, such assurances seemed almost laughable. They felt sure of victory now that Bismarck himself had seized the standard with such decision. The 'May Laws' which the king signed on May 11, 1873, were considered a weapon sure to be effectual, and even the advanced-liberals, who had followed many of the steps of the Government with hesitation and doubt, declared in an appeal to their electors on March 23 that the conflict had assumed the proportions of a great struggle for enlightenment (Kulturkampf) in which all mankind were concerned, and that they themselves, in junction with the other liberal parties would accordingly support

the Government. . . . On August 7 (1873) Pius IX. sent a letter to the emperor under pretext of having heard that the latter did not sympathize with the latest measures of his government. He declared that such measures seemed to aim at the annihilation of catholicism and warned him that their final result would be to undermine the throne. He deduced his right to issue this warning from the fact that he was bound to tell the truth to all, even to non-catholics: for in one way or another—exactly how this was not the place to make clear—every one who had received baptism belonged to the pope. The emperor answered on September 3rd in a most dignified tone. . . . 'We can not pass over in silence the remark that every one who has been baptized belongs to the pope. The evangelical faith which I, as your Holiness must know, like my forefathers and together with the majority of my subjects, confess, does not allow us to accept any other Mediator in our relations with God save our Lord Jesus Christ.' . . . Among protestants this royal answer was greeted with jubilant acclamations and even in foreign lands it found a loud echo. The aged Earl Russell organized a great meeting in London on January 27, 1874. . . . Soon after the opening of the Prussian diet Falk could bring forward the draft of a law which handed over to state-officials [Standesbeamte] all matters referring to the celebration of marriages and the registration of civil personal matters. This draft was sure from the first of a good majority. . . . On March 9th, 1874, the law could be proclaimed. In the same month still the deputies Hinschius and Völk made a motion in the diet to introduce civil marriages throughout the whole empire. . . . It furthermore seemed necessary to take stronger measures against bishops and priests unlawfully appointed and whom the state had either deposed or refused to recognize. The mildest measure was to remove them from their dioceses or parishes, to banish them to certain fixed places and, in the worst cases, to expel them altogether from the lands of the empire. . . . The draft of the law (to this effect) was warmly supported and at last, April 25, 1874, was accepted by a vote of 214 to 208. . . . On July 13th, 1874, as Prince Bismarck, who had gone to take the cure in Kissingen, was driving to the Saline, the twenty-one year old cooper's-apprentice Kullmann, of Magdeburg, fired a pistol at him, and wounded him in his right hand which he had just raised for the purpose of saluting. At once arrested, Kullmann declared to the chancellor, who visited him an hour later in his prison, that he had wished to murder him on account of the laws against the church. . . . The reading of ultramontane papers and the violent discourses of the catholic clergy had driven him to the deed. He atoned for it with fourteen years in the House of Correction. Not alone did public opinion make ultramontaniam accountable for the deed, but Bismarck himself laid very strong emphasis on the fact that the criminal had spoken of the Centre as 'his party.' 'You may try as hard as you please to rid yourselves of this murderer,' he cried out in the diet of December 4th, 'he none the less holds fast to your coat-tails!'—C. Bulle, *Geschichte der neuesten Zeit* (tr. from the German), v. 4, pp. 20-41.—At the Session of the Lower House of the Prussian Diet, January 30, 1872, Deputy Windthorst spoke in opposition to the royal order for the abolition of the separate Roman Catholic section of the department of worship and public instruction, and Prince Bismarck, in reply, said: "The party to which the gentleman belongs has contributed its share to the difficulty

of obliterating the denominational standpoint in matters political. I have always considered it one of the most monstrous manifestations in politics, that a religious faction should convert itself into a political party. If all the other creeds were to adopt the same principle, it would bring theology into the parliamentary sessions and would make it a matter of public debate. . . . It has always been one of my fundamental principles that every creed ought to have full liberty of development, perfect liberty of conscience. But for all that I did not think it was a necessary corollary that a census of each denomination be taken merely for the purpose of giving each its proportional share in the Civil Service. . . . Where will you stop? You begin with a Cabinet; then you count the Chiefs of Division. I do not know what your ratio is—I think you claim four to seven—nor do I care to know. The subordinates in the Civil Service follow next. It is a fact, moreover, that the Evangelicals are by no means united in one denomination. The contrast is not merely between Protestants and Catholics, The United Prussian Established Church, the Lutheran Church, the Reformed Church, all have claims analogous to those of the Catholics. As soon as we cut up the state into denominational sections, giving each creed its proportional share, then the large Jewish population will come in for its part, a majority of which, distinguished by its special capacity, skill and intelligence, is peculiarly fitted for the business of the State. . . . We cannot admit the claim of the ecclesiastical authorities to a further share in the administration and in the interest of peace we are obliged to restrict the share they already have; so that we may have room beside each other and be obliged, as little as possible, to trouble ourselves about theology in this place."—*Die politischen Reden des Fürsten Bismarck* (tr. from the German), v. 5, pp. 231-240.—In the German Parliament, May 14, 1872, on the question of a grant of 19,350 thalers for the German embassy at the See of Rome, Prince Bismarck spoke as follows: "I can easily understand how in considering this item of the estimates, the opinion may be held that the expenditure for this embassy was superfluous, as it does no longer consider the protection of German citizens in foreign parts. Still I am glad that no motion for the striking out of this post was made, which would be unpleasant to the Government. The duties of an embassy consist not merely in affording protection to their countrymen, but also in keeping up the political relations of the Government which it represents with that to which it is accredited. Now there is no foreign sovereign, who, in the present state of our laws, might be called upon to exercise, in accordance with those laws, prerogatives in the German empire like those of His Holiness, approaching almost to sovereignty, limited by no constitutional responsibility. There is therefore great importance for the German empire in the character that is given to our diplomatic relations with the head of the Roman Church, wielding, as he does, an influence in this country unusually extensive for a foreign potentate. I scarcely believe, considering the spirit dominant at present in the leading circles of the Catholic Church, that any ambassador of the German empire could succeed, by the most skilful diplomacy, or by persuasion (comminatory attitudes conceivable between secular powers are out of the question here)—I say no one could succeed by persuasion in exerting an influence to bring about a modification of the position assumed by His Holiness the Pope towards things secular. The dogmas of the Catholic Church recently announced

and publicly promulgated make it impossible for any secular power to come to an understanding with the church without its own effacement, which the German empire, at least, cannot accept. Have no fear; we shall not go to Canossa, either in body or in spirit. Nevertheless it cannot be concealed that the state of the German empire (it is not my task here to investigate the motives and determine how much blame attaches to one party or the other; I am only defending an item in the Budget)—that the feeling within the German empire in regard to religious peace, is one of disquietude. The governments of the German empire are seeking, with all the solicitude they owe to their Catholic as well as Lutheran subjects for the best way, the most acceptable means, of changing the present unpleasant state of affairs in matters of religion to a more agreeable one, without disturbing to any degree the credal relations of the empire. This can only be done by way of legislation—of general imperial legislation—for which the governments have to rely upon the assistance of the Reichstag. That this legislation must not in the least infringe upon the liberty of conscience,—must proceed in the gentlest, most conciliatory manner; that the government must bend all its energies in order to prevent unnecessary retardation of its work, from incorrect recording or errors in form, you all will admit. That the governments must spare no efforts for the establishment of our internal peace, in a manner least offensive even to the religious sensitiveness of those whose creed we do not share, you will also admit. To this end, however, it is before all things needful that the Roman See be at all times well informed of the intentions of the German governments, much better than it has been hitherto. The reports made in the past to His Holiness, the Pope, on the state of affairs in Germany, and on the intentions of the German governments, I consider as one of the chief causes of the present disturbances of denominational relations; for those presentations were both incorrect and perverted, either by personal bias, or by baser motives. I had hoped that the choice of an ambassador, who had the full confidence of both parties, both on account of his love of truth and reliability, and on account of the nature of his views and his attitude—that the choice of such an ambassador as His Majesty had made in the person of a distinguished prince of the church [Cardinal Prince Hohenlohe] would be welcomed at Rome; that it would be taken as an earnest of our peaceable and conciliatory intentions; that it would be utilized as a means to our mutual understanding. I had hoped that it would afford the assurance that we would never ask anything of His Holiness, but what a prince of the church, sustaining the most intimate relations to the Pope, could present before him; that the forms with which one sacerdotal dignity confers with another would continue to prevail and that all unnecessary friction in a matter so difficult in itself would be avoided. . . . All this we had hoped to attain. But alas! for reasons which have not yet been submitted to us, a curt refusal on the part of the Papal See frustrated the intentions of His Majesty. I dare say such an incident does not often occur. It is customary, when a sovereign has made choice of an ambassador, out of courtesy to make inquiry at the court to which the chosen ambassador is to be accredited, whether he be persona grata or not. The case of a negative reply, however, is extremely rare, bringing about, as it must, a revocation of the appointment made not provisionally, but definitely, before the inquiry. Such a negative reply is equal

to a demand to annul what has been done, to a declaration: 'You have chosen unwisely.' I have now been Foreign Minister for ten years; have been busy in matters of higher diplomacy for twenty-one years; and I can positively assert that this is the first and only case in my experience of such an inquiry receiving a negative reply." Deputy Windthorst, in reply, criticised the procedure of the German Government in this affair, and justified the position taken by the papal court, saying: "I believe, gentlemen, for my part, that it was the duty of the Cardinal to ask the permission of his master, the Pope, before accepting the post. The Cardinal was the servant of the Pope, and as such, could not accept an office from another government without previous inquiry. . . . The case would be the same if His Holiness had appointed an adjutant general of His Majesty as papal nuncio, only more flagrant, for you will admit that a Cardinal is quite a different person from an adjutant general." Prince Bismarck replied: "I do not wish to discuss here the personal criticism which the gentleman made on His Eminence, the Cardinal, but I would say a word about the expression 'master' which was used. The gentleman is certainly well versed in history, especially ecclesiastical history, and I wish to ask him, who was the master of Cardinal Richelieu or Cardinal Mazarin. Both of these dignitaries were engaged in controversies and had to settle important differences with the See of Rome, in the service of their sovereign, the king of France; and yet they were Cardinals. . . . If it should please His Holiness to appoint an adjutant general of His Majesty as papal nuncio, I should unconditionally advise His Majesty to accept him. . . . I am an enemy to all conjectural politics and all prophecies. That will take care of itself. But I can assure the gentleman that we will maintain the full integral sovereignty of the law with all means at our disposal, against assumptions of individual subjects of His Majesty, the king of Prussia, be they priests or laymen, that there could be laws of the land not binding upon them; and we are sure of the entire support of a great majority of the members of all religious confessions. The sovereignty can and must be one and integral,—the sovereignty of the law; and he who declares the laws of his country as not binding upon himself, places himself outside the pale of the law."—*Die politischen Reden des Fürsten Bismarck* (tr. from the German), v. 5, pp. 337-344.—The following is from a speech of Prince Bismarck in the Upper House, March 10, 1873, during the discussion of the May Laws: "The gentleman who spoke before me has entered on the same path which the opponents of these bills followed in the other house by ascribing to them a confessional, I might say, an ecclesiastical character. The question we are considering is, according to my view, misconstrued, and the light in which we consider it, a false light if we look upon it as a confessional, a church question. It is essentially a political one; it is not, as our Catholic fellow citizens are made to believe, a contest of an evangelical dynasty against the Catholic Church; it is not a struggle between faith and unbelief; it is the perennial contest, as old as the human race, between royalty and priesthood, older than the appearance of our Savior on earth. This contest was carried on by Agamemnon at Aulis, which cost him his daughter and hindered the Grecian fleet from going to sea. This contest has filled the German history of the Middle Ages even to the disintegration of the German Empire. It is known as the struggles of the popes with the emperors, closing for the Middle Ages when the last

representative of the noble Suabian imperial dynasty died on the block beneath the axe of the French conqueror, that French conqueror being in league with the then ruling pope. We were very near an analogous solution of this question, translated into the manners of our own time. Had the French war of conquest been successful, the outbreak of which coincided with the publication of the Vatican Decrees, I know not what would have been narrated in Church circles of Germany of 'gestis Dei per Francos' ['Gesta Dei per Francos,' 'Deeds of God by the French' is the title of a collection by Bongars, containing the sources of the history of the crusades.—Footnote.] . . . It is in my opinion a falsification of history and politics, this attitude of considering His Holiness, the Pope, exclusively as the high priest of a religious denomination, or the Catholic Church as the representative of Churchdom merely. The papacy has at all times been a political power, interfering in the most resolute manner and with the greatest success in the secular affairs of this world, which interference it contended for and made its program. These programs are well known. The aim which was constantly present in its mind's eye, the program which in the Middle Ages was near its realization, was the subjection of the secular powers to the Church, an eminently political aim, a striving as old as mankind itself. For there have always been either some wise men, or some real priests who set up the claim, that the will of God was better known to them than to their fellow beings and in consequence of this claim they had the right to rule over their fellow men. And it cannot be denied that this proposition contains the basis of the papal claims for the exercise of sovereign rights. . . . The contention of priesthood against royalty, in our case, of the Pope against the German Emperor, . . . is to be judged like every other struggle; it has its alliances, its peace conventions, its pauses, its armistices. There have been peaceful popes, there have been popes militant, popes conquerors. There have been even peace-loving kings of France, though Louis XVI. was forced to carry on wars; so that even our French neighbors have had monarchs who preferred peace to war. Moreover, in the struggles of the papal power it has not always been the call that Catholic powers have been exclusively the allies of the pope; nor have the priests always sided with the pope. We have had cardinals as ministers of great powers at a time when those great powers followed an antipapal policy even to acts of violence. We have found bishops in the military retinue of the German emperors, when moving against the popes. This contest for power therefore is subject to the same condition as every other political contest, and it is a misrepresentation of the issue, calculated to impress people without judgment of their own, when it is characterized as aiming at the oppression of the church. Its object is the defense of the state, to determine the limits of priestly rule, of royal power, and this limit must secure the existence of the state. For in the kingdom of this world the rule and the precedence is the state's. . . . In the paragraphs of the constitution we have under consideration we found a 'modus vivendi,' an armistice, concluded at a time when the state was in need of help and thought to obtain this help or at least some support in the Catholic Church. This hope was based upon the fact that at the election for the national assembly of 1848 the districts in which the Catholic population predominated elected, if not royalists, yet friends of order,—which was not the case in evangelical districts. Under this impression the compromise be-

tween the ecclesiastical and secular arms was concluded, though, as subsequent events proved, in miscalculation as to its practical effects. For it was not the support of the electors who had thus voted but the Brandenburg ministry and the royal army that restored order. In the end the state was obliged to help itself; the aid that might have been given by the different churches did not pull it through. But at that time originated the 'modus vivendi' under which we lived in peace for a number of years. To be sure, this peace was bought only by an uninterrupted yielding of the state. . . . When we were yet in Versailles I was somewhat surprised to learn, that Catholic members of parliamentary bodies were asked to declare whether they were ready to join a religious party, such as we have now in the Party of the Centre, and whether they would agree to vote and agitate for the insertion of the paragraphs we are at present considering into the constitution of the Empire. I was not much alarmed then at that program. . . . When I returned here I saw how strong was the organization of this party of the church militant against the state. . . . Its object was the introduction of a state dualism in Prussia, the erection of a state within the state to bring it about that all Catholics should follow the guidance of this Party of the Centre in their private as well as their political conduct, a dualism of the worst kind. . . . If this program were carried out, we were to have instead of the one formerly integral state of Prussia, instead of the German Empire then at the point of realization—we were to have two state organizations, running side by side in parallel lines; one with the Party of the Centre as its general staff, the other with its general staff in the guiding secular principle, in the government and the person of His Majesty the Emperor. This situation was absolutely unacceptable for the government whose very duty it was to defend the state against such a danger. It would have misunderstood and neglected this duty if it had looked on calmly at the astounding progress which a closer examination of the affair brought to light. . . . The Government was obliged to terminate the armistice, based upon the constitution of 1848, and create a new 'modus vivendi' between the secular and sacerdotal power. The state cannot allow this situation to continue without being driven into internal struggles that may endanger its very existence. The question is simply this: Are those paragraphs of the constitution [of 1848] dangerous to the state?"—*Die politischen Reden des Fürsten Bismarck* (tr. from the German), v. 5, pp. 384-391.—See also GERMANY: 1873-1887.

1878.—Election of Leo XIII.

1878-1903.—Opposition to Italian monarchy.—Increase in bishoprics.—Foreign relations.—"The steady line of protest against the usurpation, taken repeatedly by Pius IX., was steadily maintained by Leo [XIII]. His accession was only announced to the King of Sardinia at Turin, not to the King of Italy at Rome, and Catholics were forbidden to take any part in the elections for the Parliament which sat in Rome. Repeated and dignified protests were made to the Catholic world against the continuance of the occupation, and as time went on, and this attitude on both sides seemed more and more fixed, the hopes of reconciliation seemed to become more and more distant. Still, the inconvenience was repeatedly felt

in the diplomatic world, above all when the non-Catholic sovereigns visited Rome, or when Catholic ones were precluded from doing so. Later on, rumour has it that King Humbert was on the eve of concluding an agreement which could be accepted by Pope and king, but there were many enemies of the Papacy who held that any treaty which recognised the Pontiff as more than a private individual was to be hindered by all means, fair or foul, and on the 29th July, 1900, King Humbert fell under the weapon of an assassin, and could do no more. . . . The Scottish hierarchy, re-established in 1878, had really been planned and drawn out before Pius IX. died; but to this reign belong still greater extensions of the hierarchy in almost every quarter of the world. India and Japan both received regular diocesan bishops instead of the former vicars apostolic, while in North Africa the ancient See of Carthage was revived in favour of Cardinal Lavignerie, founder of that society of Algerian missionaries known as the White Fathers. Moreover, a great increase in the number of bishoprics was made in America, both in North and South, and in Australia. It is computed that in all, the pontificate of Leo XIII. saw the creation of no fewer than two hundred and forty-eight episcopal or metropolitan sees, and of some forty-eight vicariates or prefectures apostolic. . . . Leo XIII. was by training and disposition a thorough diplomatist, and one of the cornerstones of his policy in church government was the extension of the functions of the Apostolic Delegate to represent the Holy See in the various countries of the world, especially when diplomatic relations could not be directly instituted with the civil rulers. The most notable case was the appointment of such a delegate to the United States of America, whither the Pope's favourite disciple, Satolli, was sent in 1893, to be succeeded in turn by Archbishops Martinelli and Falconio. But other very important delegations were also set up, for example in Canada and in India. Some attempts were made to do likewise in Great Britain, but in face of the opposition, if not of the English bishops at any rate of the Irish bishops and their flocks, the proposal seems to have been proved inopportune. However, on special occasions envoys were sent both to England and Ireland, notably when Ruffoscilla and Belmonte, both later on cardinals, were sent to represent the Pope at the Golden and Diamond Jubilees of the reign of Queen Victoria in 1887 and 1897. Mgr. Persico was on another occasion sent as Delegate to Ireland, when the mode in which the political action of the Nationalist party in that country, especially with regard to the Plan of Campaign, was found fault with."—G. 1894.—Conference with eastern patriarchs.—A conference of eastern patriarchs to consider the reunion of the eastern churches (Armenian, Maronite, Melchite, etc.) with the Church of Rome was opened at the Vatican, in October, under the presidency of the pope. The meeting had no result.

1894-1895.—Hungarian ecclesiastical laws. See HUNGARY: 1894-1895.

1896 (March).—Resumption of authority over Coptic church.—The authority of the Pope over the Coptic church was resumed on March 30, 1896, after a suspension of four centuries, by the re-establishment of the Catholic Patriarchate of Alexandria. Bishop Macarius was appointed

patriarch and two bishops were appointed for Upper and Lower Egypt.

1896 (September).—Decision on the validity of Anglican orders.—In September, 1896, the final decision of the Vatican, on a reopened question as to the validity of ordinations under the ritual of the Church of England, was announced by Pope Leo XIII in a bull which declares: "After long study, I must confirm the decree of my predecessors, that all ordinations made under the Anglican rite are absolutely invalid." Soon after this decision, the "Contemporary Review" gave an account of circumstances connected with it:

"The question of Anglican Orders was taken up in connection with the appeal for union made by Leo XIII. in the Encyclical 'Præclara' of 1894, and more particularly in his letter to the English

LEO XIII

(After painting by Laszlo)

people. The group of Anglicans of whom Lord Halifax is the spokesman took this appeal seriously, and ever since that time negotiations have been going on more or less continuously between them and the Vatican. . . . The idea of an incorporate union, so dear to Lord Halifax, and so much favoured in the first instance by the Pope, could only be carried out on the basis of a prior admission that the Anglican Church had an existence as a Church, and was therefore in a position to discuss a union with the Roman Church. Once recognise the validity of her Orders, and it would be possible to go into conference as to the points of difference between the two Churches, and the means of coming to an agreement. It is quite certain that the Pope entered heartily into these views. The Abbé Duchesne was accordingly deputed to inquire into the validity of the Anglican Orders, and was well aware that a favourable conclusion would be very well received. This was before the Abbé was put at the head of the French College at Rome. He made his investigation, arrived at the conclusion that the Orders were valid, sent his report to the

Vatican, and received from Cardinal Rampolla a letter of thanks and congratulations, together with a grand silver medal, which the Holy Father sent him as a sign of his satisfaction and particular good will. All this happened in the winter of 1894-95.

"In the autumn of 1895 the idea of union was in higher favour at the Vatican than ever. Cardinal Rampolla encouraged the foundation of the 'Revue Anglo-Romaine,' a journal devoted to the treatment of problems concerning the union of Churches, and particularly the re-union of the Anglican Church, and edited by the Abbé Portal, a French priest, and a personal friend of Lord Halifax. This movement in favour of union was, however, regarded by the Catholics in England with no little apprehension and mistrust, and their opposition alone would have been sufficient to wreck it for the time being. Cardinal Vaughan viewed the idea of incorporate union as a chimera, but treated the efforts to realise it as a real danger. . . . Leo, who would fain have maintained an attitude of judicial impartiality, soon found out that he must take a side; he must either definitely encourage the hopes of the Anglicans, or he must do something to calm the excited fears of the Catholics. Even at Rome, if we except the Pope and Cardinal Rampolla, who for a long time fondly hoped that they could make this policy of union a means of accomplishing very large results, theological opinion was adverse to the validity. Were there not, indeed, decisions of the Sacred Congregations which settled the dispute? There were, but in spite of them all the Pope was not disabused of his fancy. Compelled at last to take some action, he named a Commission of theologians, which sat at Rome in the spring of the present year [1896], under the presidency of Cardinal Mazzella. . . . The theologians set forth the arguments which favoured their respective views; papers were written, and, after a series of deliberations, a report was placed in the hands of the Pope. No conclusion was arrived at; none could be come to in this preliminary assembly. Only the materials for a judgment were worked out, in case his Holiness should think fit to pronounce a decision. . . . The Pope himself tells us, in the Bull *Apostolicæ Curæ*, that he left the final examination of the question to the congregation of cardinals called 'Suprema.' . . . The 'Suprema' met on July 16, under the presidency of the Pope. All the cardinals were of opinion that the matter had been long since decided, and that the debates in the preliminary commission had served to show how wise the decision had been. . . . The Bull declaring Anglican Orders null and void was published about the middle of September."—*Catholicus, Pope and the Anglicans: The policy of the bull (Contemporary Review, Dec., 1896)*.

1898 (January).—Encyclical letter of Pope Leo XIII on the Manitoba school question. See CANADA: 1898 (January).

1899 (January).—Encyclical letter of Pope Leo XIII condemning certain opinions "called by some 'Americanism.'"—The following passages are from the translation of an encyclical letter addressed, on January 22, 1899, by Pope Leo XIII to Cardinal Gibbons, for communication to the bishops and clergy of the Catholic Church in America:

"To Our Beloved Son, James, Cardinal Gibbons, Cardinal Priest of the Title Sancta Maria, Beyond the Tiber, Archbishop of Baltimore: . . . We have often considered and admired the noble gifts of your nation which enable the American

people to be alive to every good work which promotes the good of humanity and the splendor of civilization. Although this letter is not intended, as preceding ones, to repeat the words of praise so often spoken, but rather to call attention to some things to be avoided and corrected; still because it is conceived in that same spirit of apostolic charity which has inspired all our letters, we shall expect that you will take it as another proof of our love; the more so because it is intended to suppress certain contentions which have arisen lately among you to the detriment of the peace of many souls.

"It is known to you, beloved son, that the biography of Isaac Thomas Hecker, especially through the action of those who undertook to translate or interpret it in a foreign language, has excited not a little controversy, on account of certain opinions brought forward concerning the way of leading Christian life. We, therefore, on account of our apostolic office, having to guard the integrity of the faith and the security of the faithful, are desirous of writing to you more at length concerning this whole matter.

"The underlying principle of these new opinions is that, in order to more easily attract those who differ from her, the Church should shape her teachings more in accord with the spirit of the age and relax some of her ancient severity and make some concessions to new opinions. Many think that these concessions should be made not only in regard to ways of living, but even in regard to doctrines which belong to the deposit of the faith. They contend that it would be opportune, in order to gain those who differ from us, to omit certain points of her teaching which are of lesser importance, and to tone down the meaning which the Church has always attached to them. It does not need many words, beloved son, to prove the falsity of these ideas if the nature and origin of the doctrine which the Church proposes are recalled to mind. The Vatican Council says concerning this point: 'For the doctrine of faith which God has revealed has not been proposed, like a philosophical invention to be perfected by human ingenuity, but has been delivered as a divine deposit to the Spouse of Christ to be faithfully kept and infallibly declared. Hence that meaning of the sacred dogmas is perpetually to be retained which our Holy Mother, the Church, has once declared, nor is that meaning ever to be departed from under the pretense or pretext of a deeper comprehension of them.'—*Constitutio de Fide Catholica*, Chapter iv. . . .

"Let it be far from anyone's mind to suppress for any reason any doctrine that has been handed down. Such a policy would tend rather to separate Catholics from the Church than to bring in those who differ. There is nothing closer to our heart than to have those who are separated from the fold of Christ return to it, but in no other way than the way pointed out by Christ.

"The rule of life laid down for Catholics is not of such a nature that it cannot accommodate itself to the exigencies of various times and places. The Church has, guided by her Divine Master, a kind and merciful spirit, for which reason from the very beginning she has been what St. Paul said of himself: 'I became all things to all men that I might save all.'

"History proves clearly that the Apostolic See, to which has been intrusted the mission not only of teaching but of governing the whole Church, has continued 'in one and the same doctrine, one and the same sense, and one and the same judgment.'—*Const. de Fide*, Chapter iv.

"But in regard to ways of living she has been accustomed to so yield that, the divine principle of morals being kept intact, she has never neglected to accommodate herself to the character and genius of the nations which she embraces. Who can doubt that she will act in this same spirit again if the salvation of souls requires it? In this matter the Church must be the judge, not private men who are often deceived by the appearance of right. In this, all who wish to escape the blame of our predecessor, Pius the Sixth, must concur. He condemned as injurious to the Church and the spirit of God who guides her the doctrine contained in proposition lxxviii of the Synod of Pistoia, 'that the discipline made and approved by the Church should be submitted to examination, as if the Church could frame a code of laws useless or heavier than human liberty can bear.'

"But, beloved son, in this present matter of which we are speaking, there is even a greater danger and a more manifest opposition to Catholic doctrine and discipline in that opinion of the lovers of novelty, according to which they hold such liberty should be allowed in the Church, that her supervision and watchfulness being in some sense lessened, allowance be granted the faithful, each one to follow out more freely the leading of his own mind and the trend of his own proper activity. They are of opinion that such liberty has its counterpart in the newly given civil freedom which is now the right and the foundation of almost every secular state.

"In the apostolic letters concerning the constitution of states, addressed by us to the bishops of the whole Church, we discussed this point at length; and there set forth the difference existing between the Church, which is a divine society, and all other social human organizations which depend simply on free will and choice of men. It is well, then, to particularly direct attention to the opinion which serves as the argument in behalf of this greater liberty sought for and recommended to Catholics.

"It is alleged that now the Vatican decree concerning the infallible teaching authority of the Roman Pontiff having been proclaimed that nothing further on that score can give any solicitude, and accordingly, since that has been safeguarded and put beyond question a wider and freer field both for thought and action lies open to each one. But such reasoning is evidently faulty, since, if we are to come to any conclusion from the infallible teaching authority of the Church, it should rather be that no one should wish to depart from it and moreover that the minds of all being leavened and directed thereby, greater security from private error would be enjoyed by all. And further, those who avail themselves of such a way of reasoning seem to depart seriously from the over-ruling wisdom of the Most High—which wisdom, since it was pleased to set forth by most solemn decision the authority and supreme teaching rights of this Apostolic See—willed that decision precisely in order to safeguard the minds of the Church's children from the dangers of these present times.

"These dangers, viz., the confounding of license with liberty, the passion for discussing and pouring contempt upon any possible subject, the assumed right to hold whatever opinions one pleases upon any subject and to set them forth in print to the world, have so wrapped minds in darkness that there is now a greater need of the Church's teaching office than ever before, lest people become unmindful both of conscience and of duty.

"We, indeed, have no thought of rejecting everything that modern industry and study has pro-

duced; so far from it that we welcome to the patrimony of truth and to an ever-widening scope of public well-being whatsoever helps toward the progress of learning and virtue. Yet all this, to be of any solid benefit, nay, to have a real existence and growth, can only be on the condition of recognizing the wisdom and authority of the Church. . . .

"From the foregoing it is manifest, beloved son, that we are not able to give approval to those views which, in their collective sense, are called by some 'Americanism.' But if by this name are to be understood certain endowments of mind which belong to the American people, just as other characteristics belong to various other nations, and if, moreover, by it is designated your political condition and the laws and customs by which you are governed, there is no reason to take exception to the name. But if this is to be so understood that the doctrines which have been adverted to above are not only indicated, but exalted, there can be no manner of doubt that our venerable brethren, the bishops of America, would be the first to repudiate and condemn it as being most injurious to themselves and to their country. For it would give rise to the suspicion that there are among you some who conceive and would have the Church in America to be different from what it is in the rest of the world.

"But the true church is one, as by unity of doctrine, so by unity of government, and she is catholic also. Since God has placed the centre and foundation of unity in the chair of Blessed Peter, she is rightly called the Roman Church, for 'where Peter is, there is the church.' Wherefore, if anybody wishes to be considered a real Catholic, he ought to be able to say from his heart the self-same words which Jerome addressed to Pope Damasus; 'I, acknowledging no other leader than Christ, am bound in fellowship with Your Holiness: that is, with the chair of Peter. I know that the church was built upon him as its rock, and that whosoever gathereth not with you, scattereth.'"—*American Catholic Quarterly Review*, April, 1890.

1900-1901.—Church and state in Austria. See AUSTRIA-HUNGARY: 1900-1903.

1900-1901.—Proclamation of Universal Jubilee of the Holy Year Nineteen Hundred.—Extension for six months.—The following is the text of the papal proclamation of the Universal Jubilee, in its English translation, as published in the "American Catholic Quarterly Review":

"To all the Faithful of Christ who shall read these Letters, Health and Apostolic Benediction. The century, which, by the grace of God, we have ourselves seen almost from its commencement, draws rapidly to its close. Willingly have we followed the institutions of our predecessors in so ordering things that they may redound in the good of all Christian peoples, and which may be perhaps for them the last proof of our care to the government of the Sovereign Pontificate. We speak of the Great Jubilee introduced in ancient times among Christian customs and observed by our predecessors, who bestowed upon the years of general jubilee the title of the Holy Year, because it was usual for such a year to be blessed by a greater number of holy ceremonies, as these furnish the most copious means of help for the correction of morals and the leading of souls to sanctity. We have ourselves seen with our own eyes the fruitful result of the last solemn celebration of the Holy Year. It was in the Pontificate of Leo XII, and we were as yet in the years of our youth. It was truly a grand sight to see then the manifestations of religious fervor in Rome. We can remem-

ber as if the scene were still before our eyes, the immense concourse of pilgrims, the multitudes which flocked processionally to one or other of the great basilicas, the sacred orators who preached in the public streets, and the most frequented quarters of the city resounding with the Divine praises. The Sovereign Pontiff himself, with a numerous suite of Cardinals and in the sight of all the people, gave a noble example of piety and charity.

"From such thoughts as these we turn with renewed sorrow to the times in which we now live; for such practices of piety, when without hindrance they were fulfilled under the eyes of all the citizens, augmented admirably the fervor and piety of the whole people; but now, on account of the changed condition of Rome, it is impossible to renew them, for in order to do so in any measure we must depend upon the arbitration of others. But however that may be, God, who ever blesses salutary counsels, will concede—such is our hope—success to this our design, undertaken solely for Him and for His glory. At what do we aim or what do we wish? Nothing else truly than to render more easy the way of eternal salvation to the souls confided to us, and for this end to administer to the infirm of spirit those remedies which it has pleased our Lord Jesus Christ to place in our hands. This administration seems to us not alone a duty of our apostolic office, but a duty which is peculiarly necessary to our times. The present age, however, cannot be said to be sterile, either in regard to good works or to Christian virtues. Thanks be to God, we have examples of both in abundance, nor is there any virtue, however lofty and arduous its attainment and practice, in which many are not found to signalize themselves, because it is a power proper to the Christian religion, Divinely founded, inexhaustible and perpetual, to generate and nourish virtue. Yet, casting our eyes around, we see, on the other hand, with what blindness, with what persistent error, whole peoples are hurrying to eternal ruin. And this thought strikes bitterly to our heart—how many Christians, led away by the license of hearing and of thought, absorbing with avidity the intoxicating errors of false doctrine, go on day by day dissipating and destroying the grand gift of the faith. Hence arise repugnance to Christian living, that insatiable appetite for the things of this world, and hence cares and thoughts alienated from God and rooted in the world. It is almost impossible to express in words the damage which has already accrued from this iniquitous source to the very foundations of society. The minds of men ordinarily rebellious, the blind tendency of popular cupidity, hidden perils, tragical crimes, are nothing more to those who seek their source and cause than the unrestrained strife to possess and enjoy the goods of this world.

"It is of supreme importance, therefore, to public no less than private life, to admonish men as to the duties of their state, to arouse souls steeped in forgetfulness of duty, to recall to the thought of their own salvation those who run imminent risk of perishing and of losing through their negligence and pride those celestial and unchangeable rewards for the possession of which we are born. This is the aim of the Holy Year. The Church, mindful only of her intrinsic benignity and mercy as a most tender Mother, studies at this time, with love and by every means within her ample power, to reconduct souls to better counsels and to promote in each works of expiation by means of penance and emendation of life. To this end, multiplying prayers and augmenting the fervor of the faithful, she seeks to appease the outraged majesty of God

and to draw down His copious and celestial gifts. She opens wide the rich treasury of indulgences, of which she is the appointed dispenser, and exhorts the whole of Christianity to the firm hope of pardon. She is purely intent upon vanquishing with unconquerable love and sweetness the most rebellious wills. How, then, may we not hope to obtain, with God's help, rich fruits and profuse, and such as are most adapted to the present needs?

"Several extraordinary solemnities, the notices of which we believe to be already sufficiently diffused, and which will serve in some manner to consecrate the end of the nineteenth century and the beginning of the twentieth, greatly increase the advantage of the opportunity now given. We speak of the honors to be rendered at this time in every part of the world to Jesus Christ as our Redeemer. On this account we were profuse in our approbation and praise of a project which had its source in the piety of private individuals, and, in fact, what could be more holy and salutary? All that which man should hope for and desire is contained in the only-begotten Son of God, our Salvation, Life, and Resurrection. To desire to abandon Him is to desire eternal perdition. We could never silence adoration, praise, thanksgiving due to our Lord Jesus Christ, and without intermission they should be repeated everywhere, for in every place no thanksgiving, no honor, can be so great but that it may be increased. Our age produces perhaps many men who are forgetful and ungrateful, who ordinarily respond to the mercy of their Divine Saviour with disdain and to His gifts with offenses and injuries. Certainly the lives of many are so far removed from His laws and His precepts as to argue in themselves ungrateful and malicious souls. And what shall we say to see renewed again in these times and not once alone, the blasphemy of the Arian heresy regarding the Divinity of Jesus Christ. Courage, then, and to work, all you who with this new and most beautiful proposition seek to excite the piety of the people to new fervor. Do what you can in such manner that you impede not the course of the Jubilee and the appointed solemnities. Let it be added that in the forthcoming manifestations of faith and religion this special intention shall be kept in view—hatred of all that which within our memory has been impiously said or done, especially against the Divine Majesty of our Lord Jesus Christ, and to satisfy publicly for the injuries publicly inflicted upon Him. Now if we are really in earnest, we must know that to repent of evil done, and, having implored peace and pardon of God, to exercise ourselves with great diligence, in the duties necessary to virtue, and to assume those we have cast aside, is the means of satisfaction most desirable and assured, and which bears upon it the impress of truth. Since the Holy Year offers to all the opportunities which we have touched on in the beginning, it is a necessary provision that the Christian people enter upon it full of courage and of hope.

"For which reason, raising our eyes to heaven and praying from our heart that God, so rich in mercy, would vouchsafe to concede benignly His blessing and favor to our desires and works, and would illuminate with His Divine light the minds of all men, and move their souls to conform with His holy will and inestimable goodness, We, following in this the example of the Roman Pontiffs, of the Holy Roman College, our Venerable Brethren, in virtue of these letters, with the authority of Christ, of the blessed Peter and Paul, and with our own authority, order and promulgate from this hour the great and universal jubilee, which will commence in the holy city of Rome at the first

Vespers of the Nativity of our Lord Jesus Christ of the year 1899, and which will close at first Vespers of the Nativity of our Lord of the year 1900. May all redound to the glory of God, the salvation of souls, and the good of the Church. During this year of jubilee we concede and impart mercifully in our Lord full indulgence, remission and pardon of sin to all faithful Christians of either sex, who, being truly penitent shall confess and communicate, visiting devoutly the Roman basilicas of SS. Peter and Paul, St. John Lateran, and St. Mary Major, at least once a day for twenty days continuously or at intervals; that is, the obligation is to be fulfilled between the first Vespers of each day and the last Vespers of the day following, whether the Faithful be citizens of Rome or not, if they are residing permanently in Rome. If they come to Rome as pilgrims, then they must visit the said basilicas in the same manner for ten days, praying devoutly to God for the exaltation of Holy Church, for the extirpation of heresies, for peace and concord amongst Christian princes, and for the salvation of the whole Christian people.

"And since it may happen to many that with all their good-will they cannot or can only in part carry out the above, being either, while in Rome or on their journey; impeded by illness or other legitimate causes, we, taking into account their good-will, can, when they are truly repentant and have duly confessed and communicated, concede to them the participation in the same indulgences and remission of sins as if they had actually visited the basilicas on the days appointed. Rome, therefore, invites you lovingly to her bosom, beloved children, from all parts of the world, who have means of visiting her. Know also that to a good Catholic in this sacred time it is fitting that he come to Rome guided purely by Christian faith, and that he should renounce especially the satisfaction of sight-seeing merely idle or profane, turning his soul rather to those things which predispose him to religion and piety. And that which tends greatly so to predispose him, if he look within, is the natural character of the city, a certain character divinely impressed upon her, and not to be changed by human means, nor by any act of violence. For Jesus Christ, the Saviour of the world, chose amongst all its cities, that of Rome to be the centre of an action more than earthly, consecrating it to Himself. Here He placed, and not without long and careful preparation, the throne of His own empire; here He commanded that the see of His Vicar should be raised to the perpetuity of time; here He willed that the light of revealed truth should be jealously and inviolably guarded, and that from here light should be diffused throughout the whole earth in such a manner that those who are alienated from the faith of Rome are alienated from Christ. The religious monuments raised by our fathers, the singular majesty of her temples, the tomb of the Apostles, the Catacombs of the martyrs, all serve to increase the aspect of holiness and to impress those who visit her in the spirit of faith. Whosoever knows the voice of such monuments feels that he is no pilgrim in a foreign city, but a citizen in his own, and by God's grace he will realize this fact at his going, more forcibly than at his coming.

"We wish, in order that these present letters may be brought more easily under the notice of all, that printed copies, signed by a public notary and furnished with the seal of some ecclesiastical dignitary, shall be received with the same faith as would be given to the original by those who have heard or read it. To no one will it be lawful to alter any word of this our disposition, promulgation, conces-

sion, and will, or to rashly oppose it. If any should presume to make any such attempt, let them know that they incur thereby the indignation of God Almighty and of His Apostles Peter and Paul.

"Given at St. Peter's, Rome, on the 11th of May, in the year of the Incarnation of our Lord 1899, and the 22d of our Pontificate. C. Card. ALOISI-MASELLA, Pro-Datory. L. Card. MACCHI.

"Witnessed on behalf of the Curia: G. DELL' AQUILA VISCONTI. Registered in the Secretariate of Briefs, J. CUGNONI. In the year of the Nativity of our Lord 1899, on the 11th day of May, feast of the Ascension of our Lord Jesus Christ, in the 22d year of the Pontificate of our Holy Father and Lord in Christ, Leo XIII, by Divine Providence Pope, I have read and solemnly promulgated the present apostolical letters in the presence of the people, in the porch of the Holy Patriarchal Vatican Basilica. GIUSEPPE DELL' AQUILA VISCONTI, Official of the Curia"

On the termination of the "holy year," by a letter "given at Rome in the year of Our Lord 1901," the Pope announced: "We do, therefore, by the authority of Almighty God, of the Blessed Apostles Peter and Paul, and by our own, extend and pro-rogue, for a period of six months, the Great Jubilee which has just been celebrated in the Holy City. Wherefore, to all the faithful of both sexes, in all parts of the earth, including even those that have come to Rome during the past year and there or elsewhere gained the Jubilee under any conditions, we grant and accord mercifully in the Lord, for once, the fullest indulgence, remission and pardon of their sins, the annual Paschal confession and communion being, however, not valid as conditions for gaining the Jubilee, provided that within six months from the date of the publication in each diocese of this letter they visit the cathedral in the episcopal city or the principal church in other parts of the different dioceses, together with three other churches in the same place, as appointed by the Ordinary either directly or through his officials, the parish priests or Vicar Foran, at least once a day for fifteen continuous or uninterrupted days, natural or ecclesiastical (the ecclesiastical day being that which commences with the first vespers of one day and ends with the dusk of the day following), and pray devoutly to God for the exaltation of the Church, the extirpation of heresy, the concord of Catholic princes and the salvation of the Christian people. In places where there are not four churches, power is granted in the same way to the Ordinaries to fix a smaller number of churches; or even one church where there is only one, in which the faithful may make the full number of visits, separate and distinct, on the same natural or ecclesiastical day, in such a way that the sixty visits be distributed through fifteen continuous or interrupted days."

Provisions relating to the circumstances of persons at sea or traveling, or in religious community, or in prison, are prescribed in the papal letter, and special privileges and powers are granted to "Jubilee confessors."

1900-1904.—Power of church regulated by law in France.—Law of associations, restricting religious orders.—Protest of Pope Leo XIII. See FRANCE: 1000-1004.

1901.—Encyclical letter of Pope Leo XIII concerning social and Christian democracy.—In a letter dated January 1, 1901, addressed "to the Patriarchs, Archbishops, Bishops, and other Local Ordinaries in communion with the Apostolic See," the Pope has discussed the subjects of Democracy and Socialism, with reference to controverted views and opinions "defining what Catho-

lies ought to think," and giving them "some injunctions so as to make their own action larger in scope and more beneficial to the commonwealth." The letter opens with these words: "Venerable Brethren—Grave economical disputes in more than one country have long been raging; peace and concord are affected; the violence of the disputants grows every day, inasmuch that the thoughts of the wiser part are laden with doubt and apprehension. These disputes arise in the first instance from widespread philosophical and moral error. The scientific resources belonging to the age, increased facilities of communication and appliances of all kinds for economizing labor and making it more productive have resulted in a keener struggle for existence. Through the malefic influence of agitators the gulf between rich and poor has been widened, so that frequent disturbances arise and even greater calamities seem impending such as would bring ruin on a country."

The Pope then refers to his early encyclicals ("Quod Apostolici Muneris," issued in 1878, on the error in socialistic opinions, and "Rerum Novarum," issued in 1891, on "the rights and duties binding together the two classes of capitalists and laborers"), and to the good influence which he finds reason to believe they have had, and says further: "Thus, therefore, under the guidance of the Church, some sort of concerted action and institutional provision has been set up among Catholics for the protection of the lower classes, who are very often as much the victims of dangerous machinations and snares as they are suffering from hardship and poverty. The creed of the benefactor of the people had originally no name of its own; that of Christian Socialism and its derivatives, which some brought in, has not undeservedly grown obsolete. Afterward many wanted, very rightly, to name it Popular Christianity. In some places those who devote themselves to such work are called Christian Socialists; elsewhere it is called Christian Democracy, and its supporters Christian Democrats, as opposed to the Social Democracy, which Socialists uphold. Of these two appellations, certainly that of Christian Socialists, if not also of Christian Democracy, is offensive to many right-minded people, inasmuch as they think there is a perilous ambiguity attaching to it. They are afraid of the name for several reasons—popular government may be covertly promoted or preferred to other forms of political constitution; the influence of Christianity may seem to be confined to the benefit of the common people, all other ranks being as it were left out in the cold; beneath the specious designation may lurk some design or other of subverting all legitimate authority, being civil and religious.

"There is now commonly much dispute, and sometimes over-bitter dispute, on this topic, and we deem it our duty to put an end to the controversy by defining what Catholics ought to think; moreover we intend to give them some injunctions so as to make their own action larger in scope and more beneficial to the commonwealth.

"What Social Democracy means, and what Christian ought to mean, does not surely admit of doubt. The former, more or less extreme, as the case may be, is by many carried to such extravagance of wickedness as to reckon human satisfaction supreme and acknowledge nothing higher, to pursue bodily goods and those of the natural world, and to make the happiness of man consist in attaining and enjoying them. Hence they would have the supreme power in a state to be in the hands of the common people, in such sort that all distinctions of rank being abolished

and every citizen made equal to every other, all might have equal access also to the good things of life; the law of lordship is to be abolished, private fortunes confiscated and even socialization of the appliances of labor carried out. But Christian Democracy, as Christian, ought to have as its foundation the principles laid down by divine faith, having regard, indeed, to the temporal advantage of the lower orders, but designing therewith to fit their minds for the enjoyment of things eternal. Accordingly, to Christian Democracy, let there be nothing more sacred than law and right; let it bid the right of having and holding be kept inviolate; let it maintain the diversity of ranks which properly belong to a well-ordered state; in fine, let it prefer for human association that form and character which its divine author has imposed upon it. Clearly, therefore, Social and Christian Democracy can have nothing in common; the difference between them is no less than that between the sectarianism of socialism and the profession of the Christian law.

"Far be it from any one to pervert the name of Christian Democracy to political ends. For although democracy by its very name and by philosophical usage denotes popular rule, yet in this application it must be employed altogether without political significance, so as to denote nothing whatever besides this beneficent Christian action upon the people. For natural morality and the precepts of the Gospel, for the very reason that they transcend the chances of human existence, must necessarily be independent of any particular form of civil government and adapt themselves to all, so long as there is nothing to conflict with virtue and right. They are, therefore, and remain in themselves, absolutely external to all conflict of parties and vicissitudes of occurrence, so that, under whatever kind of government, people may and ought to abide by these precepts, which bid them love God above all and their neighbors as themselves. This has ever been the morality of the Church; by it Roman Pontiffs have constantly dealt with states whatever might be their executive government. And this being so, the mind and action of Catholics, when devoted to promoting the good of the lower orders, cannot by any possibility aim at embracing and introducing any one form of government in preference to another.

"Just in the same way must Christian Democracy repudiate the other ground of offense, which arises from paying so much regard to the interests of the lower classes as to seem to pass over the higher, who are nevertheless of equal importance to the preservation and development of the State. The Christian law of charity, which we have just mentioned, forbids this. It is large enough to embrace all ranks as the aim and the task of those who would have the common people in a Christian spirit on the one hand suitably relieved, and, on the other, preserved against the contagion of socialism. . . .

"We have recalled these various topics on which we have before this found occasion to dilate according to our ability, and we trust that all dispute over the name of Christian Democracy may now be laid aside, as well as any suspicion of dangerous signification attaching to it. This trust we rightly cherish. For making exception of the ideas of certain persons regarding the force and virtue of this kind of Christian Democracy, ideas which are not free from extravagance or error, surely there will be no single person to find fault with an endeavor, conformably to the law of nature and of God, to do merely this, to make the

lives of laborers and artisans more tolerable, and gradually to give them the opportunity of self-culture, so that at home and in the world they may freely fulfill the obligations of virtue and religion, may feel themselves to be men, and not mere animals, Christian men, not pagans, and so strive with more felicity and earnestness to attain that 'one thing needful,' that final good, for which we came into the world. This is belonging to one and the same family, the offspring of the same all-beneficent Father, redeemed by one Saviour and called to the same eternal inheritance. . . .

"God forbid that under the name of Christian democracy should lie the surreptitious aim of throwing off all obedience and turning away from those in lawful authority. The law of nature, no less than that of Christ, enjoins respect for all such as in their several degree hold office in the State, and further enjoins obedience to their lawful commands. This is the only attitude worthy of a man and a Christian, and ought to be taken up heartily and as a matter of duty, 'for conscience's sake,' as the Apostle himself has admonished, when he ordained: 'Let every soul be subject to the highest powers.' . . .

"We spoke just now advisedly of virtue and religion. For it is the opinion of some, which is caught up by the masses, that the social question as they call it, is 'economical' merely. The precise opposite is the truth—that it is first of all moral and religious, and for that reason its solution is to be expected mainly from the moral law and the pronouncements of religion. . . . Without the instincts which Christian wisdom implants and keeps alive, without providence, self-control, thrift, endurance and other natural qualities, you may try your hardest, but prosperity you cannot provide. That is the reason why we have never encouraged Catholics to form associations for the assistance of the poor, or introduce other schemes of the kind, without at the same time warning them that such things must not be attempted without the sanction of religion, without its inclusion and aid. . . . It is a laudable charity not merely to relieve the temporary needs of the poor, but to have an organized system of relief; this will be a more real and reliable assistance. It must be considered still more laudable to desire to instill into the minds of the mechanic and of the laborer notions of thrift and prudence, so that they may at least in part make provision for their declining years. It is an aim which not only relieves the cost of the wealthy, but it is a moral step for the poor themselves; it encourages them to approve their position, while it keeps them away from temptations, checks self-indulgence and leads them on to virtuous behavior. . . .

"Finally, we again enjoin with greater insistence that whatever schemes people take up in the popular cause, whether individually or in association, they should remember that they must be entirely submissive to episcopal authority. Do not let them be beguiled by an excessive ardor for charitable enterprise, which, if it induces any relaxation of due obedience, is itself false, unproductive of solid benefit and displeasing to God. Those who please God are those who are ready to give up their own ideas and listen to the bidding of the rulers of the Church, absolutely as His own."—*Catholic Union and Times*, Feb. 21, 1901.

1903 (July-August).—Death of Pope Leo XIII.—Election of Pius X.—The Papal seat became vacant by the death of Pope Leo XIII. on July 20, 1903. The conclave of cardinals for the

election of his successor assembled on the 31st of the month, and its choice of Cardinal Sarto, Patriarch of Venice, was made known on August 3. The new pope assumed the name of Pius X. "The conclave was not a lengthy or very difficult one. It must have been a dramatic moment when Cardinal Puzyna rose, and in the name of the Austrian Emperor vetoed the candidature of Cardinal Rampolla. Though a protest was made by Rampolla himself, and was supported by others, his candidature was from prudential motives withdrawn, and before long the needful majority was secured for Cardinal Joseph Sarto, Patriarch of Venice."—G. Stebbing, *Story of the Catholic church*, p. 647.—"Two ballots were cast each day in the Conclave, one in the forenoon and another in the afternoon.

TRIPLE-CROWNED PAPAL TIARA WITH
INFULE

The crowns are essentially uniform in shape, though the ornament varies.

The votes for Cardinal Sarto steadily increased from the first to the seventh ballot, on which he was elected. When the Cardinal observed that the suffrages for him were augmenting, he was visibly disturbed, and in a fervent speech he implored his colleagues not to regard him as a candidate. Contrary to his wishes, the votes for him increased. He then became alarmed and in a second speech in most pathetic language, he again besought the Cardinals to forget his name—"Obtestor vos," were his words, 'ut nominis mei omnino obliviscamini,' as he could not accept a burden too heavy for him to bear. All were moved by the modesty and transparent sincerity of the man. When he resumed his seat, his cheeks were suffused with blushes, tears were gushing from his eyes, and his body trembled with emotion. It was only after some of the leading Cardinals entreated him to

withdraw his opposition, that he finally and reluctantly consented to abide by the will of God and accept the sacrifice. Never did a prisoner make greater efforts to escape from his confinement than did Cardinal Sarto to escape from the yoke of the Papacy. With his divine Master he exclaimed: 'Father, if it be possible let this chalice pass from me. Nevertheless, not my will, but Thine be done.' When his election was officially announced, his florid countenance assumed a deathly pallor, and restoratives were applied to save him from fainting. So little did Cardinal Sarto expect to be the choice of his colleagues, that on setting out for Rome, he is said to have purchased a return ticket to his home in Venice."—Cardinal Gibbons, *Retrospect of fifty years*, v. 2, pp. 95-97.

1903 (December).—Pius X issues "motu proprio," on Catholic social action.—"In fifteen short and comprehensive articles Pope Pius . . . collected, and confirmed anew by his own sacred authority, all the social teachings of his illustrious predecessor which are to be found in the great Encyclicals: On Socialism, Communism and Nihilism, On the Condition of the Working Classes, and on Christian Democracy. To these articles four others are added, taken from an Instruction of the Sacred Congregation of Extraordinary Ecclesiastical Affairs, and dealing with the duties of Catholic writers. Thus compiled the nineteen articles constitute a clear and obligatory code of laws; they contain in abstract all that has been said and written upon the social question by the great 'Pope of the Workingmen,' and what has been digested and sanctioned as a program of popular action by the 'People's Pope.' In themselves they are neither more nor less than a compendium of Catholic social doctrine, found in the Gospels and in the Fathers of the Church, and now authoritatively expressed by two Pontiffs whom Divine Providence has especially chosen to guide the bark of St. Peter through the stormy days of modern social unrest."—A. C. Breig, *Papal program of social reform*, pp. 4-5.

1903-1910.—Temporal policy of Pius X.—Attitude toward modernism.—"In Italy the strained relations between the Papacy and the 'de facto' government at Rome can hardly be said to have improved [under Pius X]. In Spain also there was trouble, for the Conservative administration having given place to a Liberal one, the latter soon proved that its liberalism was of the type known as anticlerical. In France the growing antagonism between the radical leaders and the Holy See reached a climax with the Law of Separation of Church and State of the 11th of December, 1905. . . . Meanwhile, the exterior development of the Church's organization was not neglected. The policy pursued by Leo XIII. of sending Apostolic Delegates to reside in those countries where there could be no nuncio to the national Government, was persevered in. Many new dioceses were created, above all in the United States of America, in Canada, in Brazil, and in Australia. At the same time the number of Vicars Apostolic . . . was likewise increased. . . . Pius X. . . . had the consolation of proclaiming the beatification of the French heroine, Joan of Arc . . . and of others."—G. Stebbing, *Story of the Catholic church*, pp. 648, 650-651.—Within the church, the question of "modernism" was the most important problem with which Pius had to deal in the early period of his reign. "The movement which has come to be known as Modernism, and which, considered from the outside, may be roughly described as a certain impatience of the mental and religious beliefs, methods and customs sanctioned by tradition, is . . . the legitimate off-

spring of philosophical tendencies of long standing. Liberal Protestantism . . . [has] hardly done more than supply—formularies and a coherent framework for conceptions and hypotheses which had long been exercising men's minds. . . . Without any doubt, the philosophical systems of the last half of the eighteenth and the first half of the nineteenth century . . . are the dominating ideas which, variously amalgamated and variously reconciled, have given birth to the fundamental agnosticism of the Modernists. . . . It is quite probable that, in the beginning at least, several of the more active workers in the movement honestly believed that they were serving the Church; isolated individuals may have continued in such a belief right up to the publication of the Encyclical. . . . The men who in fact led the campaign drew to themselves a marked increase of force from the widespread constructive movement which was at that time powerfully stimulating the various branches of religious science in the bosom of the Church. . . . It was the wisdom of the Modernists . . . to make it appear that, agreeing, as they did, with these Catholics on a number of conclusions, . . . [they agreed with them also as regards] the fundamental philosophy in which their activity had its roots. On the other side . . . there was not always drawn a sufficiently clear distinction between Catholic opponents, some of whose conclusions appeared disquieting, and other opponents who had already gone clean beyond the bounds of Catholicity. . . . In the midst of this ferment, this welter of misunderstandings, a series of extraordinary books [appeared], religious in tone, and laying claim to an apologetic character—M. Loisy's *Gospel and Church*, Fogazzaro's *The Saint*, Tyrrell's *Lex Orandi*, M. Le Roy's *Dogma and Criticism*. . . . Exegetical, historical or philosophical research [lent indirect, but effectual support to the theory]. . . . Finally, . . . there always exists a certain need for progress, a progress which consists in the application of old truths to new circumstances, a progress which is in a real sense the concern of every Christian, and *a fortiori* of every priest. . . . [All these added together give] some idea of the danger which threatened the Catholic Church in France. . . . The time called for speech clear and strong, for speech which should be, as Holy Writ puts it, the doing of a thing 'at which both the ears of every one that heareth it shall tingle.' And that was the actual effect of the Papal measures and declarations as to doctrine, which culminated in the Encyclical *Pascendi* (Sept. 8, 1907). . . . From the date of these first movements it may be safely said that Modernism, driven into its last ditch by various Pontifical enactments—the most urgent of them being the *Motu proprio* of September 1, 1910, . . . lost almost all its credit in the eyes of Catholics, and in particular of French priests. . . . [Houtin's statement that there were] fifteen thousand Modernist priests in France (a third of the French Clergy!), . . . has been corrected by M. A. Loisy, who, dividing the figure by ten, arrives at a total of about one thousand five hundred. It would be nearer the truth, we believe, if it be the persistent Modernists that are in question, to divide again by ten, and to estimate the Modernist priests at about one hundred and fifty [written in 1910]. . . . A point which deserves to be brought into relief, . . . is the impulse given to ecclesiastical science in France, since the Encyclical *Pascendi*, by essentially Catholic scholars, who combine the following tradition with a wise measure of progress."—L. de Grandmaison, *Pius X and the Catholics of France* (R. J. Walker, ed., *Oxford and Cambridge Review*, July, 1911).—In March, 1908, "on the ground of

his obstinate persistence in 'modernist' opinions . . . [Alfred Loisy, professor of religion in the Collège de France], was visited with excommunication in its extreme form by the authorities of the Roman Church, in whose unstinted service he had thus far spent his life. . . . The inner conflict of his Catholic career . . . consisted, on the one hand, in his heroic effort to win a standing-ground in Roman Catholic teaching for this principle of the complete relativity of ecclesiastical doctrine to the time and conditions of its origin, with the necessary corollaries of a development of doctrine through all the past, and its further progress through all the future, and, on the other hand, in the repeated and at length definite refusal by the Pope and his advisers to abandon one jot or tittle of the rigid absolutism of the mediaeval structure of dogma. To this the Roman Catholic Church, since the opening of the new century, seems to have irretrievably committed itself, largely by way of explicit repudiation of Loisy's conclusions as a critic and a historian of Christianity. The encyclical *Pascendi* of Pius X, and the anti-Modernist oath by which it was followed to ensure its more complete effectiveness, have fastened this scholastic system on the Catholic Church with paralyzing results so far as concerns the normal progress of thought. This is the key to the apparently easy repulse of the Modernist movement."—R. W. Boynton, *Catholic career of Alfred Loisy* (*Harvard Theological Review*, Jan., 1918).

1904.—Papal prohibition of civil interference with the election of the Roman pontiff.—Civil veto, in all forms, denounced.—In the first year of his pontificate, on January 20, 1904, Pope Pius X pronounced the following denunciation and prohibition of every kind of intrusion of civil authority or influence in the election of a Roman pontiff: "When first, all unworthy as we are, we ascended this chair of Peter, we deemed it a most urgent duty of our apostolic office to provide that the life of the Church should manifest itself with absolute freedom, by the removal of all extraneous interference, as her divine Founder willed that it should manifest itself, and as her lofty mission imperatively requires.

"Now if there is one function above all others in the life of the Church which demands this liberty it is certainly that which is concerned with the election of the Roman pontiff; for when the head is in question, the health not of one member alone but of the whole body is involved (Greg. XV. Constit. *Aeterni Patris* in proem).

"To this full liberty in the election of the Supreme Pastor is opposed first of all that civil *Veto* which has been more than once brought forward by the rulers of some states, and by which it is sought to exclude somebody from the supreme pontificate. If this has happened sometimes, it has never been approved by the apostolic see. On the contrary the Roman pontiffs, in their enactments on the conclave, have been in nothing perhaps more emphatic or more earnest than in their efforts to exclude the interference of all extraneous powers from the sacred senate of the Cardinals summoned to elect the pontiff. . . .

"But, and experience has shown it, the measures hitherto taken for preventing the civil *Veto*, or *Exclusive*, have not served their purpose, and on account of the changed circumstances of the times the intrusion of the civil power in our day is more clearly than ever before destitute of all foundation in reason or equity, therefore we, by virtue of the apostolic charge entrusted to us, and following in the footsteps of our predecessors, after having maturely deliberated, with certain knowledge and by

our own motion, do absolutely condemn the civil *Veto*, or *Exclusive* as it is also called, even when expressed under the form of a mere desire, and all interventions and intercessions whatsoever, decreeing that it is not lawful for anybody, not even the supreme rulers of states, under any pretext, to interpose or interfere in the grave matter of the election of the Roman pontiff.

"Wherefore, in virtue of holy obedience, under threat of divine judgment and pain of excommunication *latae sententiae* reserved in a special manner to the future pontiff, we prohibit all and single the Cardinals of holy Roman Church, and likewise the secretary of the Sacred College of Cardinals and all others who take part in the conclave to receive, even under the form of a simple desire, the office of proposing the *Veto* or *Exclusive*, or to make known this *Veto* in whatever manner it may have come to their knowledge, to the Sacred College of Cardinals either taken as a whole or to the individual fathers Cardinals, either by writing, by word of mouth, whether directly and proximately, or indirectly and through others. And it is our will that this prohibition be extended to all the interventions above mentioned, and to all other intercessions whatsoever, by which the lay powers, of whatever grade and order, endeavor to intrude themselves in the election of the pontiff.

"Finally we vehemently exhort, in the same words as those used by our predecessors, that in the election of the pontiff, they pay no attention whatever to the appeals of secular princes or other worldly considerations . . . but solely with the glory of God and the good of the Church before their eyes, give their votes to him whom they judge in the Lord better fitted than the others to rule the Universal Church fruitfully and usefully. It is our will also that these our letters, together with the other constitutions of the same kind, be read in the presence of all in the first of the congregations wont to be held after the death of the pontiff; again after entrance into the conclave; also when anybody is raised to the dignity of the purple, with the addition of an oath binding to the religious observance of what is decreed in the present constitution."

1906 (February).—Encyclical "Vehementer Nos," to the prelates, clergy, and people of France, concerning the separation law.—The following are passages from the encyclical known, from its opening words in the Latin text as "Vehementer Nos," which Pope Pius X addressed to the French nation on February 10, 1906, after the adoption of the law separating the church from the state:

"To the Archbishops, Bishops, Clergy and People

of France. . . . Venerable Brethren, Well-Beloved Sons, Health and Apostolic Benediction.

"Our soul is full of sorrowful solicitude and our heart overflows with grief when our thoughts dwell upon you. How, indeed, could it be otherwise, immediately after the promulgation of that law which, by sundering violently the old ties that linked your nation with the Apostolic See, creates for the Catholic Church in France a situation unworthy of her and ever to be lamented? That is, beyond question, an event of the gravest import, and one that must be deplored by all right-minded men, for it is as disastrous to society as it is to religion; but it is an event which can have surprised nobody who has paid any attention to the religious policy followed in France of late years. For you, Venerable Brethren, it will certainly have been nothing new or strange, witnesses as you have been of the many dreadful blows aimed from time to time at religion by the public authority. You have seen the sanctity and inviolability of Christian marriage outraged by legislative acts in formal contradiction with them; the schools and hospitals laicised; clerics torn from their studies and from ecclesiastical discipline to be subjected to military service; the religious congregations dispersed and despoiled, and their members for the most part reduced to the last stage of destitution. Other legal measures which you all know have followed—the law ordaining public prayers at the beginning of each Parliamentary session and of the assizes has been abolished; the signs of mourning traditionally observed on board the ships on Good Friday suppressed; the religious character effaced from the judicial oath; all actions and emblems serving in any way to recall the idea of religion banished from the courts, the schools, the army, the navy, and, in a word, from all public establishments. These measures and others still which, one after another, really separated the Church from the State, were but so many steps designedly made to arrive at complete and official separation, as the authors of them have publicly and frequently admitted.

"On the other hand, the Holy See has spared absolutely no means to avert this great calamity. While it was untiring in warning those who were at the head of affairs in France, and in conjuring them over and over again to weigh well the immensity of the evils that would infallibly result from their separatist policy, it at the same time lavished upon France the most striking proofs of indulgent affection. It had then reason to hope that gratitude would have stayed those politicians on their downward path, and brought them at last to relinquish their designs. But all has been in vain—the attentions, good offices and efforts of our predecessor and ourself. The enemies of religion have succeeded at last in effecting by violence what they have long desired, in defiance of your rights as a Catholic nation and of the wishes of all who think rightly. . . .

"That the State must be separated from the Church is a thesis absolutely false, a most pernicious error. Based, as it is, on the principle that the State must not recognize any religious cult, it is in the first place guilty of a great injustice to God; for the Creator of man is also the founder of human societies, and preserves their existence as He preserves our own. We owe Him, therefore, not only a private cult, but a public and social worship to honor Him. Besides, it is an obvious negation of the supernatural order. It limits the action of the State to the pursuit of public prosperity during this life only, which is but the proximate object of political societies; and it occupies itself in no fashion (on the plea that this is foreign

to it) with their ultimate object, which is man's eternal happiness after this short life shall have run its course. . . .

"When the State broke the bonds of the Concordat and separated itself from the Church it ought, as a natural consequence, to have left her her independence and allowed her to enjoy peacefully that liberty granted by the common law which it pretended to assign to her. Nothing of the kind has been done. We recognize in the law many exceptional and odiously restrictive provisions, the effect of which is to place the Church under the domination of the civil power. . . .

"With the existence of the association of worship, the Law of Separation hinders the pastors from exercising the plenitude of their authority and of their office over the faithful, when it attributes to the Council of State supreme jurisdiction over these associations and submits them to a whole series of prescriptions not contained in common law rendering their formation difficult and their continued existence more difficult still; when, after proclaiming the liberty of public worship, it proceeds to restrict its exercise by numerous exceptions; when it despoils the Church of the internal regulation of the churches in order to invest the State with this function; when it thwarts the preaching of Catholic faith and morals and sets up a severe and exceptional penal code for clerics—when it sanctions all these provisions and many others of the same kind in which wide scope is left to arbitrary ruling, does it not place the Church in a position of humiliating subjection and, under the pretext of protecting public order, deprive peaceable citizens, who still constitute the vast majority in France, of the sacred right of practising their religion? . . .

"In addition to the wrongs and injuries to which we have so far referred, the Law of Separation also violates and tramples under foot the rights of property of the Church. In defiance of all justice, it despoils the Church of a great portion of a patrimony which belongs to her by titles as numerous as they are sacred; it suppresses and annuls all the pious foundations consecrated, with perfect legality, to divine worship and to suffrages for the dead. The resources furnished by Catholic liberality for the maintenance of Catholic schools, and the working of various charitable associations connected with religion, have been transferred to lay associations in which it would be idle to seek for a vestige of religion. In this it violates not only the rights of the Church, but the formal and explicit purpose of the donors and testators. It is also a subject of keen grief to us that the law, in contempt of all right, proclaims as property of the State, departments or communes, the ecclesiastical edifices dating from before the Concordat. True, the law concedes the gratuitous use of them for an indefinite period, to the associations of worship, but it surrounds the concession with so many and so serious reserves that in reality it leaves to the public powers the full disposition of them. Moreover, we entertain the gravest fears for the sanctity of those temples, the august refuges of the Divine Majesty and endeared by a thousand memories to the piety of the French people. . . .

"Hence, mindful of our Apostolic charge and conscious of the imperious duty incumbent upon us of defending and preserving against all assaults the full and absolute integrity of the sacred and inviolate rights of the Church, we do, by virtue of the supreme authority which God has confided to us, and on the grounds above set forth, reprove and condemn the law voted in France for the separation of Church and State as deeply unjust to God, whom

it denies, and as laying down the principle that the Republic recognizes no cult. We reprove and condemn it as violating the natural law, the law of nations, and fidelity to treaties; as contrary to the Divine constitution of the Church, to her essential rights and to her liberty; as destroying justice and trampling under foot the rights of property which the Church has acquired by many titles and, in addition, by virtue of the Concordat. We reprove and condemn it as gravely offensive to the dignity of this Apostolic See, to our own person, to the Episcopacy and to the clergy and all the Catholics of France. Therefore, we protest solemnly and with all our strength against the introduction, the voting and the promulgation of this law, declaring that it can never be alleged against the imprescriptible rights of the Church."—Pope Pius X, *Encyclical letter (American Catholic Quarterly Review, Apr., 1906)*.

1907 (September).—Mandates of the encyclical on modernism.—The following passages contain the essential mandates of the Encyclical (Pascendi) on modernism, issued on September 8th, 1907: "The office divinely committed to us of feeding the Lord's flock has especially this duty assigned to it by Christ, namely, to guard with the greatest vigilance the deposit of the faith delivered to the saints, rejecting the profane novelties of words and oppositions of knowledge falsely so called. There has never been a time when this watchfulness of the supreme pastor was not necessary to the Catholic body; for, owing to the efforts of the enemy of the human race, there have never been lacking 'men speaking perverse things' (Acts xx., 30), 'vain talkers and seducers' (Tit. i., 10), 'erring and driving into error' (II. Tim. iii., 13). Still, it must be confessed that the number of the enemies of the cross of Christ has in these last days increased exceedingly, who are striving, by arts entirely new and full of subtlety, to destroy the vital energy of the Church, and, if they can, to overthrow utterly Christ's kingdom itself. Wherefore we may no longer be silent, lest we should seem to fail in our most sacred duty, and lest the kindness that, in the hope of wiser counsels, we have hitherto shown them should be attributed to forgetfulness of our office.

"That we may make no delay in this matter is rendered necessary especially by the fact that the partisans of error are to be sought not only among the Church's open enemies; they lie hid, a thing to be deeply deplored and feared, in her very bosom and heart, and are the more mischievous the less conspicuously they appear. We allude, venerable brethren, to many who belong to the Catholic laity, nay, and this is far more lamentable, to the ranks of the priesthood itself, who, feigning a love for the Church, lacking the firm protection of philosophy and theology, nay, more, thoroughly imbued with the poisonous doctrines taught by the enemies of the Church, and lost to all sense of modesty vaunt themselves as reformers, . . . not sparing even the person of the Divine Redeemer, whom, with sacrilegious daring, they reduce to a simple, mere man. Though they express astonishment themselves, no one can justly be surprised that we number such men among the enemies

of the Church, if, leaving out of consideration the internal disposition of soul, of which God alone is the judge, he is acquainted with their tenets, their manner of speech, their conduct. Nor, indeed, will He err in accounting them the most pernicious of all the adversaries of the Church. For, as we have said, they put their designs for her ruin into operation not from without, but from within; hence the danger is present almost in the very veins and heart of the Church, whose injury is the more certain, the more intimate is their knowledge of her. Moreover, they lay the axe not to the branches and shoots, but to the very root; that is, to the faith and its deepest fibres. And having struck at this root of immortality, they proceed to disseminate poison through the whole tree, so that there is no part of Catholic truth from which they hold their hand, none that they do not strive to corrupt. Further, none is more skilful, none more astute than they in the employment of a thousand noxious arts; for they double the parts of rationalist and Catholic, and this so craftily that they easily lead the unwary into error; and since audacity is their chief characteristic, there is no conclusion of any kind from which they shrink or which they do not thrust forward with pertinacity and assurance. To this must be added the fact, which indeed is well calculated to deceive souls, that they lead a life of the greatest activity of assiduous and ardent application to every branch of learning, and that they possess, as a rule a reputation for the strictest morality. Finally, and this almost destroys all hope of cure, their very doctrines have given such a bent to their minds that they disdain all authority and brook no restraint; and, relying upon a false conscience, they attempt to ascribe to a love of truth that which is in reality the result of pride and obstinacy.

"Once, indeed, we had hopes of recalling them to a better sense, and to this end we first of all showed them kindness as our children, then we treated them with severity, and at last we have had recourse, though with great reluctance, to public reproof. But, you know, venerable brethren, how fruitless has been our action. They bowed their head for a moment, but it was soon uplifted more arrogantly than ever. If it were a matter which concerned them alone, we might perhaps have overlooked it; but the security of the Catholic name is at stake. Wherefore, as to maintain it longer would be a crime, we must now break silence, in order to expose before the whole Church in their true colors those men who have assumed this bad disguise.

"But since the modernists (as they are commonly and rightly called) employ a very clever artifice, namely, to present their doctrines without order and systematic arrangement into one whole, scattered and disjointed one from another, so as to appear to be in doubt and uncertainty, while they are in reality firm and steadfast, it will be of advantage, venerable brethren, to bring their teachings together here into one group, and to point out the connection between them, and thus to pass to an examination of the sources of the errors and to prescribe remedies for averting evil. . . . Against this host of grave errors, and its secret and open advance, our predecessor, Leo XIII., of happy memory, worked strenuously, especially as regards the Bible, both in his words and his acts. But, as we have seen, the modernists are not easily deterred by such weapons; with an affectation of submission and respect they proceeded to twist the words of the Pontiff to their own sense, and his acts they described as directed against

others than themselves. And the evil has gone on increasing from day to day. We therefore, venerable brethren, have determined to adopt at once the most efficacious measure in our power, and we beg and conjure you to see to it that in this most grave matter nobody will ever be able to say that you have been in the slightest degree wanting in vigilance, zeal or firmness. And what we ask of you and expect of you we ask and expect also of all other pastors of souls, of all educators and professors of clerics, and in a very special way of the superiors of religious institutions.

"I. In the first place, with regard to studies, we will and ordain that scholastic philosophy be made the basis of the sacred sciences. It goes without saying that if anything is met with among the scholastic doctors which may be regarded as an excess of subtlety, or which is altogether destitute of probability, we have no desire whatever to propose it for the imitation of present generations (Leo XIII. Enc., "Aeterni Patris"). And let it be clearly understood above all things that the scholastic philosophy we prescribe is that which the Angelic Doctor has bequeathed to us, and we, therefore, declare that all the ordinances of our predecessor on this subject continue fully in force, and, as far as may be necessary, we do decree anew and confirm and ordain that they be by all strictly observed. In seminaries where they may have been neglected let the Bishops impose them and require their observance, and let this apply also to the superiors of religious institutions. Further, let professors remember that they cannot set St. Thomas aside, especially in metaphysical questions, without grave detriment. On this philosophical foundation the theological edifice is to be solidly raised. Promote the study of theology, venerable brethren, by all means in your power, so that your clerics on leaving the seminaries may admire and love it, and always find their delight in it. For in the vast and varied abundance of studies opening before the mind desirous of truth everybody knows how the old maxim describes theology as so far in front of all others that every science and art should serve it and be to it as handmaidens. . . . With regard to profane studies, suffice it to recall here that our predecessor has admirably said: 'Apply yourselves energetically to the study of natural sciences: the brilliant discoveries and the bold and useful applications of them made in our times, which have won such applause by our contemporaries, will be an object of perpetual praise for those that come after us' (Leo XIII. Alloc., March 7, 1880). But this do without interference with sacred studies, as our predecessor in these most grave words prescribed: 'If you carefully search for the cause of these errors, you will find that it lies in the fact that in these days, when the natural sciences absorb so much study, the more severe and lofty studies have been proportionately neglected; some of them have almost passed into oblivion, some of them are pursued in a half-hearted or superficial way, and, sad to say, now that they are fallen from their old estate, they have been disfigured by perverse doctrines and monstrous errors (*loco cit.*) We ordain, therefore, that the study of natural science in the seminaries be carried on under this law.'

"II. All these prescriptions and those of our predecessor are to be borne in mind whenever there is question of choosing directors and professors for seminaries and Catholic Universities. Anybody who in any way is found to be imbued with modernism is to be excluded without compunction from these offices, and those who already occupy

them are to be withdrawn. The same policy is to be adopted towards those who favor modernism, either by extolling the modernists, or excusing their culpable conduct, by criticizing scholasticism, the Holy Father, or by refusing obedience to ecclesiastical authority in any of its depositories; and towards those who show a love of novelty in history, archæology, Biblical exegesis, and finally towards those who neglect the sacred sciences or appear to prefer them to the profane. In all this question of studies, venerable brethren, you cannot be too watchful or too constant, but most of all in the choice of professors, for as a rule the students are modeled after the pattern of their masters. Strong in the consciousness of your duty, act always prudently, but vigorously. Equal diligence and severity are to be used in examining and selecting candidates for holy orders. Far, far from the clergy be the love of novelty. God hates the proud and the obstinate. For the future the doctorate of theology and canon law must never be conferred on anybody who has not made the regular course of scholastic philosophy, if conferred, it shall be held as null and void. The rules laid down in 1806 by the Sacred Congregation of Bishops and Regulars for the clerics, both secular and regular, of Italy, concerning the frequenting of the universities, we now decree to be extended to all nations. Clerics and priests inscribed in a Catholic institute or university must not in the future follow in civil universities those courses for which there are chairs in the Catholic institutes to which they belong. If this has been permitted anywhere in the past, we ordain that it be not allowed for the future. Let the Bishops who form the governing board of such Catholic institutes or universities watch with all care that these our commands be constantly observed.

"III. It is also the duty of the Bishops to prevent writings infected with modernism or favorable to it from being read when they have been published, and to hinder their publication when they have not. No book or paper or periodical of this kind must ever be permitted to seminarists or university students. The injury to them would be equal to that caused by immoral reading—nay, it would be greater, for such writings poison Christian life at its very fount. The same decision is to be taken concerning the writings of some Catholics, who, though not badly disposed themselves, but ill instructed in theological studies and imbued with modern philosophy, strive to make this harmonize with the faith, and, as they say, to turn it to the account of the faith. The name and reputation of these authors cause them to be read without suspicion, and they are, therefore, all the more dangerous in preparing the way for modernism. To give you some more general directions, venerable brethren, in a matter of such moment, we bid you do everything in your power to drive out of your dioceses, even by solemn interdict, any pernicious books that may be in circulation there. . . .

"IV. But it is not enough to hinder the reading and the sale of bad books; it is also necessary to prevent them from being printed. Hence, let the Bishops use the utmost severity in granting permission to print. Under the rules of the Constitution 'Officiorum,' many publications require the authorization of the ordinary, and in some dioceses it has been made the custom to have a suitable number of official censors for the examination of writings. We have the highest praise for this institution, and we not only exhort, but we order that it be extended to all dioceses."—Pope Pius X., *Doctrines of the modernists* (*American Cath-*

olic Quarterly Review, Oct., 1907).—See also TYR-REL, FATHER GEORGE.

1907-1909.—Revision of Saint Jerome's Latin translation of the Bible, known as the "Vulgate."—"In May, 1907, an announcement was made of the Pope's intention to revise the Latin Bible, and the work has already made such progress that the time has come to record not only the main lines upon which the revision is being carried out but also the actual completion of its preliminary preparations. . . . Pius X. . . . offered the honourable though costly and arduous task to the learned Order of the Benedictines, by whom it was accepted. A commission of revision was appointed, with Abbot Gasquet, the President of the English Benedictines, as its head, and the International College of the Order at San Anselmo in Rome was chosen as the headquarters of their work. It is here that Abbot Gasquet and his fellow-workers have already made a good start upon the vast labour which their Order has undertaken [1909]. The object of the Commission, according to the Pope's definite instructions, is to determine and restore as far as possible the original text of St. Jerome's Latin translation made in the fourth century. [See BIBLE, ENGLISH: 7th-8th centuries.] How far St. Jerome's translation represents the Hebrew or Greek is another question which may be the subject some day for future criticism and another commission. . . . Pius X. has made it clear to the Commission that he desires their work of revision to be conducted on the most modern and scientific lines, and that neither money nor labour should be spared to make it as thorough as possible. An exhaustive search will be made through all the libraries of Europe in the hope of finding hitherto unrecognized manuscripts of the Vulgate. Already there are 15 collaborators at work in different centres, collating the best-known and most important manuscripts with the Clementine text, while another commission, with its assistants, is making a thorough examination of the libraries and cathedral archives of Spain in search of fresh material. . . . The method of work is as follows. For the purpose of collation copies of the Clementine text have been printed; each page being left blank for two-thirds of its surface, the text being printed on the remaining third with no capital letters, no stops, no word divided, so as to resemble manuscript as far as possible. When a reviser wishes to collate any manuscript he has only to correct this print like an ordinary proof-sheet and so reproduce every difference of the manuscript before him. The printing of these copies of the Vulgate, which are to form the basis of the collations, with the preparation of the texts and correction of proofs—no light matter—has been the work of the first year. Three hundred and sixty copies have been printed in all, one hundred upon the best hand-made paper, two hundred upon ordinary book paper, and sixty upon thin paper for the purpose of postage abroad. The Pope himself has defrayed the rather heavy cost of this production. Besides the printing of this Bible considerable progress has been made during the past year with the preparation of a hand-list of all the Latin Biblical MSS. in the libraries of Europe, which, when completed, will be of great use to the revisers. As the collators finish their work in the various libraries or archives where Biblical manuscripts are found, they send their annotated copies to San Anselmo, where they are bound up and added to a collection which, when complete, will form a vast library of all the different versions of the Bible."—*Rome correspondence of the London Times*, July 21, 1909.

1908.—New Apostolic constitution of the Curia.—A change of far-reaching and great importance in the ecclesiastical constitution of the Roman church was decreed by Pope Pius X in 1908, by the promulgation of a new Apostolic constitution of the Curia. It reorganized the numerous congregations or departments of the Vatican government which had exercised the judicial functions of the Curia for some generations past. The pope now restored these functions to an ancient ecclesiastical court, the Rota, which had fallen out of use. The Rota is constituted as an international court, before which questions between priest and bishop, bishop and diocese, and the like, have their bearing, and from which there is appeal to a tribunal of last resort, the *Segnatura*, composed of Cardinals alone. The reorganization of the Congregation of the Propaganda by this new Constitution removed from that body the ecclesiastical jurisdiction it had exercised heretofore over the Church in Great Britain, Holland, the United States, Canada, and some other countries, thus taking them out of the Roman category of missionary lands.

1908.—Situation of the church in France after separation. See FRANCE: 1904-1908.

1909 (April).—Beatification of Joan of Arc.—The ceremony of the beatification of Joan of Arc was performed at St. Peter's, in Rome, on April 18, 1909. Proceedings which began about ten years before were brought by this ceremony to the end of their first stage, beyond which they must still be continued for possibly many years, before the canonization of "the Maid" as a Saint should be complete. The question of the beatification had been under consideration in the Congregation of Rites for several years. The grounds on which that question is decided, in every case, were explained by *The Catholic Union and Times*, in connection with its account of the ceremony now referred to, as follows: The Congregation of Rites "may decide that the life of the person was a very worthy and very holy one, but they require much more than that. It must be proved to their satisfaction that 'miracles' have been performed. The Congregation of Rites requires evidence of not fewer than three miracles. In the case of 'miraculous cures' it must be shown that doctors have pronounced the cases hopeless, or that diseases have been cured which doctors call incurable. Usually the report contains particulars of a number of 'miracles,' from which the Congregation of Rites may make a selection. The three chosen among those attributed to Joan of Arc relate to the curing of nuns belonging to different communities, who are said to have obtained relief from their diseases by her intercession. One of these nuns had suffered for years from cancer and was on the point of death when, it was claimed, she was instantly cured by a prayer of Joan of Arc. When the Congregation of Rites has been satisfied as to the authenticity of three miracles they prepare their report, which is submitted to the Pope, who considers it. There is then a gathering at the Vatican, to which the public is admitted. Cardinals and bishops are present, and a lawyer of the papal court reads out the decision. After this, the ceremony of beatification generally takes place within a few months." In January, 1910, it was announced in Paris that the ecclesiastical process for the canonization would begin on February 9.—See also below: 1910; 1920 (May).

1909 (May).—Vote in British House of Commons for removal of remaining Catholic disabilities. See ENGLAND: 1909 (May).

1909-1912.—Separation of church and state in Portugal. See PORTUGAL: 1000-1012.

1910.—Political confusion and anti-clerical demonstrations in Rome and Germany.—Renewed anti-modernist policy of the pope.—“Under the confused state of the government during the year anti-clerical feeling in Rome resulted in insults to the Holy See which the Catholics finally met by a formal complaint to the Government. Although the Government showed a conciliatory spirit and harmony seemed about to be restored, the breach between the Holy See and the people was widened when somewhat the same policy that had been adopted by the Vatican with France was attempted with Germany. On the tercentenary of the canonisation of San Carlo Borromeo the Pope issued an encyclical charging the German reformers with having weakened morality in their country. This pronouncement was bitterly protested against on all sides and the Prussian government instructed its representative at the Vatican, von Mühlberg, so pointedly that the Holy See relaxed in its aggressive attitude for a time. But the *motu proprio* of the Pope, entitled *Sacrorum Antistitum* (September 8) imposing a vigorous anti-Modernist oath on all the clergy was the occasion of another war-like demonstration among democratic Catholics and encountered serious resistance in Germany later on. The fortieth anniversary of the entry of the Italian troops into Rome (September 20) brought with its celebration an aggressive demonstration against the Papacy.”—*Annual Register*, 1910, pp. 300-302.

1911-1914.—Movement toward Catholic political union.—Struggle between syndicalism and integralism.—Pius X's decree condemning syndicalism.—Death of Cardinal Rampolla.—“The clericals in Rome were, more and more, trying their strength in political or semi-political action. In 1910 moderate clericals gained success in the elections at Florence; in 1911 a strong Catholic agitation was initiated against the radical government's new rules suppressing religious teaching in the schools; on Easter Monday, April 8, 1912, a manifesto was officially published, signed by five notable Catholic societies, expressing approval of the government's plan of suffrage reform. Thus the work already undertaken and under way for some years in Italy, France and Belgium for the purpose of uniting the Catholics into one body for political action, was actively resumed with the tacit approval of the Vatican. On January 26, 1913, the General Assembly of the Popular Union of Italian Catholics met at Venice and drew up a detailed program of political and social demands to be submitted to candidates who wished the support of the Catholic electorate. The purpose was adequate clerical representation not only in the Chamber but in the Supreme Council of Labour. The demands drawn up included the liberty and independence of the pope, improvement in the condition of the working classes, maintenance of religious instruction in the schools and rejection of the bills relating to divorce. The last year of the pontificate of Pius X witnessed the most striking episode of . . . [the] struggle between the harassing Curia and the institutions of the church which resisted it. . . . In Germany first, and afterward in France and in Italy, the Catholic organizations of workmen, after various experiences, came to the decision to accept the Christian syndicates which had been started by the workmen themselves with a strictly economic purpose, and which were independent both of the Catholic political organization and of the control of the Catholic clergy. But the conservative party among the Catholics,

deemed these free syndicates to be dangerous for the church and to oppose the very spirit of Catholic doctrine and practice. . . . Holding this principle, the conservatives took for themselves the title of Integralists, in opposition to the Syndicalists. . . . The Syndicalists were numerous and well organized. . . . The Integralists were in the minority, but they had with them the Vatican and the pope himself. . . . The antagonism between Integralism and Syndicalism . . . assumed wider proportions, as a consequence of an . . . incident that happened in Austria. . . . The local quarrel spread to other countries. . . . But at this point something happened that was almost unprecedented in the history of the Roman church. . . . It was evident that the Society of Jesus did not share the views of the pope and had taken its place of combat with the opposition. . . . Evidently in their judgment Pius X had reached the summit of his reactionary policy and now a decline was to come. The constructive period of his pontificate was past; now it was necessary to prevent him from destroying through his own excesses what he had previously done for the church. . . . In the consistory of May 24, addressing the new cardinals, Pius X complained . . . of the conduct of Syndicalists, who had failed to understand his wishes and to follow his directions. . . . As for the Syndicalist unions, the pope said that they were to be permitted only in exceptional circumstances. . . . The intervention of the pope did not bring peace; there was still room for difference of interpretation of his words, and the quarrels grew more bitter. The pope realized then that he was not obeyed. . . . Overcoming the last hesitation, with a decree published July 15, 1914, he formally condemned the Syndicalist unions. It was his last condemnation; a month later the great European war began and the heart of the old pope was broken.”—G. F. La Piana, *From Leo XIII to Benedict XV* (*American Journal of Theology*, Apr., 1917).—The death of Cardinal Rampolla in December of the previous year deprived the Holy See of a powerful influence and reduced the likelihood of a resumption of official relations between France and the Vatican.

1914.—Death of Pius X (August 20).—Election of Benedict XV (September 3).—Conservative war policy.—Internal reforms.—“The death of Pope Pius X., on August 20, gave the Ministry the opportunity of exhibiting an entirely correct attitude toward the Holy See. [See also ITALY: 1914: Death of pope.] The Conclave opened on August 31. There were three parties in it: the Right, Conservative, directed by Cardinals Merry del Val and Billot, and inclined to vote for Cardinal de Laï; the Centre, led by Cardinals Pompili, Serafini, and Gatti, and putting forward Cardinal Ferrata; the Left, headed by Cardinals Agliardi, Della Chiesa, and Amette, hesitated between Cardinals Gaspari and Maffi. . . . After sixteen ballots, Cardinal Agliardi pronounced the name of Cardinal Della Chiesa, who was elected on September 3 and took the name of Benedict XV. He was a professed diplomatist, and had been a collaborator of the late Cardinal Rampolla. He had only been a Cardinal for three months, and was Archbishop of Bologna. He had to define his course of conduct in the European struggle almost at once. The Belgian Cardinal Mercier, Archbishop of Malines, was destined upon returning from the Conclave, to come into contact with the Germans who had destroyed Louvain and Malines, and who prevented him from communicating with his suffragans and his flock. Contrary to general expectations, the new Pope did

not take up with sufficient energy these encroachments on ecclesiastical prerogatives. . . . When at the end of the year the Holy See enjoined all the Episcopal authorities to cause prayers to be offered for the restoration of peace, it met in France with an almost universal resistance. The Bishops refused to allow the Pope's words to be read without qualification; they were communicated subject to the reserve that there could be no question of any peace which did not safeguard the rights of the French nation."—*Annual Register*, 1914, pp. 302-303.—In his first encyclical, Benedict XV not only presented his policy of neutrality in regard to the World War but he outlined his ecclesiastical policy within the church, virtually repudiating the antagonizing methods of his predecessor, though his aims of strengthening and unifying the church body were similar to those of Pius X. He condemned the reactionary Integralists and encouraged the publications of the Syndicalists, obedience to the bishops, whose power had been curtailed under the late pontificate was recommended, and the Society of St. Jerome for the Diffusion of the Gospel which had been practically dissolved was reorganized. The anti-modernist declarations of Pius, however, were confirmed by his successor.

1915.—British envoy sent to the Vatican.—“The absence of a French representative at Rome was felt keenly throughout the course of the past war. It may or may not have been true that the Vatican was possessed of German sympathies. So strongly was this belief held in France that in many instances it led to a revival of the old spirit of Gallicanism within the ranks of the clergy itself. When Pope Benedict XV in the fall of 1914 asked that prayers be offered for immediate peace, the French bishops refused to allow them to be said without the qualification that the peace to be prayed for should adequately guarantee French interests. . . . At the outbreak of the war Great Britain was quick to realize that the Pope's influence over millions of British subjects, as well as over the enemy countries, was not to be despised. Realizing the necessity of keeping the Vatican informed as to the principles for which the Allies were fighting, and also of counteracting German influence, the British government in the early months of the war [1915] dispatched Sir Henry Howard upon a special mission to Rome. According to some writers, the effect of this movement was almost immediately perceptible. For Sir Henry Howard (and later, Count de Salis) was able to secure a fairer hearing for the Allies, one result of which was the effort of the Vatican to repress the opposition of the Irish priesthood to conscription. . . . The diplomatic relations between Bavaria and Rome were not even broken off during the war. The Papal Nuncio continued to live in Munich, while the Bavarian minister retired to Switzerland. Here diplomatic correspondence was carried on with the Vatican; and the Italian government always respected the use of the Vatican's mail pouch for this purpose.”—R. L. Buel, *France and the Vatican* (*Political Science Quarterly*, Mar., 1921.)

1915-1917.—Vatican's attitude of neutrality continued.—Appeal to heads of belligerent nations (August, 1917).—Reply to Jewish letter.—Italy's entrance into the World War did not prevent Benedict XV from preserving his neutral attitude. Late in June, 1915, the result of an interview with the pope by a correspondent of the *Liberté* made this fact plain. In a letter to the Belgian Minister to the Holy See, dated July 6, 1915, Cardinal Gasparri explained the pope's

position: “The Chancellor of the German Empire, M. Bethmann-Hollweg, declared on August 4, 1914, in open Parliament, that by invading Belgian territory Germany was violating the neutrality of Belgium in opposition to International Law. Generally in the case of an actual conflict, one of the parties accuses and the other denies; and the Holy See, being unable to throw any light on the dispute by means of an Enquiry, finds itself unable to make any pronouncement. In the present case, on the contrary, the German Chancellor admitted that the invasion of Belgium was a violation of neutrality and contrary to International Law, although he declared it to be rendered legitimate by military necessity. The invasion of Belgium is, consequently, comprehended in the words of the Consistorial Allocation of January 22 last, wherein the Holy Father emphatically re-proves every injustice, by whatever side, and for whatever motive, it may have been committed. In the meantime, it is true, Germany has published some documents of the Belgian Staff by which she seeks to prove that Belgium, before the war, had failed in her duty as a neutral Power, and that therefore such neutrality was non-existent at the period of the invasion. But, even if the German point of view be admitted, it would always remain true to say that Germany, according to the Chancellor's own confession, penetrated into Belgian territory with the consciousness that she was committing a breach of neutrality and, as a consequence, an injustice. This is sufficient to prove that this act must be considered as directly included in the terms of the pontifical allocation.”—*Letter of Cardinal Gasparri, Secretary of State of His Holiness, dated July 6, 1915* (*Osservatore Romano*, July 18, 1915).—When in his allocation of December, 1915, the pope said that every effort should be made to bring the war to a conclusion and that that result could only be achieved by concessions on both sides, his pacific pronouncement was very unfavorably received in Italy except in ultra-clerical circles. In his allocation of December, 1916, special emphasis was laid on the passages concerning the war, the deportation of the Belgians, and the bombardment of undefended towns. Ten new cardinals were created, all of them belonging to the Entente countries. But that there was no change in his fundamental policy of neutrality became obvious in his peace proposals of 1917 (See also WORLD WAR: 1917; XI Efforts toward peace: g; h; i; j; m.) “In a note dated August 1, 1917, but published about the middle of the month, the Vatican invited the belligerent states to consider peace on the basis of certain definite proposals: the diminution of armaments; the arbitration of international disputes; the freedom of the seas; the reciprocal condonation of military damages; the general restitution of occupied territory, particularly the complete evacuation of Belgium and France and the restitution of the German colonies; and the examination in a conciliatory spirit of the other territorial question such as those between Italy and Austria and Germany and France, and others relating to Armenia, the Balkan states and Poland.”—G. H. Allen, W. S. Sims, S. W. McAndrew and E. Wiley, *Great War*, v. 5, pp. 101-102.—Bearing on the disputed territorial questions Pope Benedict's own words were: “As regards territorial questions as, for instance, those that are disputed by Italy and Austria, by Germany and France, there is reason to hope that in consideration of the immense advantages of durable peace with disarmament, the contending parties will examine in a conciliatory spirit, taking into account

as far as is just and possible, as we have said formerly, the aspirations of the population, and if occasion arises adjusting private interests to the general good of the great human society. The same spirit of equity and justice must guide the examination of the other territorial and political questions, notably those relative to Armenia, the Balkan States, and the territories forming part of the Old Kingdom of Poland, for which in particular, its noble historical traditions and the suffering particularly undergone during the present war, must win, with justice, the sympathies of the nations."—Benedictus P. M. XV, *Appeal to heads of Belligerent nations, Aug. 1, 1917 (American Journal of International Law, 1917, Supplement)*.—The attitude of the pope now officially expressed in his peace proposal was subject to criticism in the Allied camps. Such charges as the following were typical: "In quarters hostile both to Germany and the Vatican it has again and again been said that, in refraining from all protest against the violation of Belgium, the invasion of Serbia and the numberless breaches of international law committed by the Teutons, Pope Benedict was obviously partial to Germany; and it was sometimes added that the Kaiser had promised to restore the temporal power of the Popes as a reward for this partisanship."—*New York Times Current History, Oct., 1917, p. 6*.—On the other hand champions of the papal policy contended that the pope's obligation was international and that his neutrality was synonymous with neither indifference nor a veiled political preference. "Even if the Pope had been inclined to cast neutrality to the winds and take the part of one of the belligerent parties, he would be constrained not to do so by his unique title to sovereignty. Being the infallible law giver in matters of faith and morals, the supreme regulator of ecclesiastical discipline, the Head of the Church militant, the Pope, by the very force of circumstances, is frequently involved in the domestic concerns of certain States. These States, whether their population is wholly or only partially Catholic, cannot admit the possibility of the Pope becoming subject to any State. They cannot view with indifference the eventuality which would place the Pope under the authority of any State, as the abandoning of neutrality would suggest, for this Power would soon become mixed up in the domestic affairs of other States. This is perhaps the reason for the Italian Law of Guarantees. . . . As a temporal power, his [the Pope's] fighting force is entirely negligible. . . . As a spiritual power, however, his influence is incalculable, and it is precisely as the greatest moral force in the world that it is claimed he should have broken his neutrality by taking up the cause of the Allies. This argument, however, is its own reply. For as the greatest moral force in the world, the Pope must denounce 'all injustice, on whatever side it has been committed.' He must not approve one side exclusively, because he has spiritual subjects on both sides and because there is bound to be some injustice and wrong committed on both sides, however unintentional it may be on the part of the people themselves or of their ruler."—H. F. Wright, *Pope and the war (American Catholic Quarterly Review, Apr., 1919)*.—The pope's reply to the letter of the American Jewish Committee, of December 30, 1915, pleading for intercession in alleviating the persecution to which the Jews in various lands had been subjected, was an unmistakable plea against religious prejudice and persecution and was highly commended by liberal Christian as well as Hebrew publications.

1916.—Peace note of Central Powers addressed to Vatican. See WORLD WAR: 1916: XI. Peace proposals: a, 2.

1917 (May).—Promulgation of new canon law.—In December, 1916, the pope announced the immediate publication of a new code of canonical law, giving credit to his predecessor Pius X for its initiation, and praising Cardinal Gasparri who, he said, 'had borne most of the burden. "When on May the twenty-seventh, 1917, a new *Codex Juris Canonici* was promulgated by Papal Bull, this memorable event marked the happy conclusion of a revision of the Code of Law for the Catholic Church which had taken thirteen years of the most painstaking work on the part of a large number of erudite scholars and specialists in Canon Law. The new Code is truly a monumental work. . . . During the Middle Ages various Popes caused official collections made of laws that had been enacted within a limited period of years, but never before was the entire legislation of the Church unified and codified as it has now been done in the new *Codex*. The Papal Bull decreed that the new book of law was to go into effect on Whitsunday May the nineteenth, 1918. . . . The purpose of the new *Codex* is, to supersede all existing collections of papal laws, whether contained in the various official compilations published with the special approval of former Popes, or in the volume of decrees and declarations published by the various Roman Congregations, or, finally, in the many existing private collections of papal laws. Only in those instances in which the new Code expressly declares that a former law on a specified subject is to be retained, are former laws to continue in force. . . . The present Code . . . cannot be the final law in all and everything. . . . With the gradual progress of civilization, new amendments, decisions, declarations, . . . exceptions and particular regulations, . . . must naturally be expected. The Holy Father has, however, provided . . . that any and all new laws, as well as the possible repeal of some Canons of the new Code, also any interpretative declarations, etc., issued either by the Supreme Pontiff himself or by one of the Sacred Congregations, shall be turned over to a committee whose duty it will be to formulate the new laws, etc., into Canons, and to insert them in the Code in their proper places, so that the Code may for all times remain the one authoritative and complete lawbook of the Church."—S. Woywod, *New canon law, introduction, pp. v-vii*.—See also ECCLESIASTICAL LAW: 1917.

1917-1918.—Pope's letter on divorce in the United States.—Beatification and canonization proceedings.—While the papal peace note and the publication of the new code of canon law were the most conspicuous events of the Papacy during the year 1917, these were not the only matters which engaged the attention of the Vatican. On January 15, Pope Benedict XV sent a brief to the hierarchy of the United States lamenting the divorce evil, and in August, a series of special rules was published by the Consistorial Congregations, instructing the bishops all over the world in the regulation of preachers and preaching. On March 17, 1918, the Vatican formally pronounced the decree of beatification of Oliver Plunkett, Archbishop of Armagh, Ireland, executed at Tyburn in 1861, and in August, preliminary steps were approved for the beatification of Father Felix de Andreis, first superior of the Lazarist Fathers in the United States.

1919.—Formation of Catholic party in Italy.—Benedict declines Protestant overtures for unity.

—Decrees read confirming miracles of Joan of Arc.—On January 10, 1919, the announcement was made "of the formation of the 'Italian Popular Party' in Parliament. This is in fact if not in name the Catholic Party. [See ITALY: 1919: Internal affairs.] . . . Officially the Holy See is not involved; it accepts no responsibility for the programme and actions of the new party, which is autonomous, purely political, and in a quite different category from the 'Popular Union' and other officially authorized Catholic organizations. Nevertheless it is quite impossible that Italian Catholics should have initiated this movement without the knowledge and tacit consent of the Holy See. . . . Catholics are now at liberty to take part openly and without subterfuge in the life of the State."

—L. J. S. Wood, *Temporal power* (*Atlantic Monthly*, June, 1919).—Early in 1919 "the representatives of the Protestant commission on Faith and Order were received . . . in audience by the Holy Father. In answer to their request that the Catholic Church should participate in a world-wide conference on Christian Unity, the Holy Father kindly but very firmly declined, stating that the Catholic Church was the one visible Church of Christ upon earth, and adding his prayer that all outside the true Church might by God's grace see the light and reunite themselves with the visible head of the Church by whom they would be received with open arms."—*Catholic World*, July, 1919, p. 571.—Decrees were read at the Vatican on April 7, 1919, confirming the miracles proposed for the canonization of Joan of Arc and on March 10, confirming those for the beatification of Louise de Marillac de Gras, founder of the Sisters of Charity.

1919 (April).—First annual meeting of American hierarchy.—Formation of National Catholic Welfare Council.—In April, 1919, the pope in a letter to Cardinal Gibbons proposed that the hierarchy of the United States should hold annual meetings in the interests of church welfare. The first of these conventions accordingly met in Washington in September. Cardinal Mercier of Belgium [was] among the visitors. "The important outcome of the meeting [is] the establishment of the National Catholic Welfare Council for the religious, educational, and social well-being of the Catholic Church in the United States. To this end Catholic publicity will be promoted, recognized agencies engaged in foreign and home missions will be assisted, and the public interests of the Church in this country [the United States] systematically supervised. The permanent Boards established indicate the scope of the activities to be coordinated: Education, Social Work, Press and Literature, Lay Societies, Home and Foreign Missions. . . . So the entire Hierarchy, which forms the personnel of the Council, can only meet annually; an Administrative Committee, composed of three Archbishops and four Bishops will be its executive organ. The chairmen of Boards will be drawn from this Committee, thus keeping every activity under the immediate guidance and protection of the episcopate."—*Catholic World*, Nov., 1919, p. 286.

1920.—Benedict XV's policy of reconciliation.—Relations with France and Italy.—"When, in July, 1918, the Vatican and the Chinese government had agreed to exchange ministers, and, in fact, when the Pope had appointed the Most Reverend Joseph Petrelli as papal nuncio to China, the French government entered a vigorous protest. . . . The Pope's success in establishing diplomatic relations with Portugal in 1918 was another move to arouse French fears. But there is not

the slightest possibility of the establishing of a state religion in any of the countries (with the possible exception of Poland) to which the Vatican . . . sent papal nuncios. Frequently, Protestants, Orthodox Christians, Confucianists and Moslems comprise majorities. . . . The very fact that the Pope has been willing to receive delegates from these completely lay and neutral states, so far as religion is concerned, should be proof that the Vatican has finally reconciled itself to the new order of international society. No longer can it hope to be bound up inextricably with governments. Henceforth its rule cannot claim to be corporeal or even sovereign. The Vatican must restrict itself to the spiritual control of millions of Catholic communicants. It wishes, in return, that European powers recognize that it is an anomalous force in world politics. For it represents an international organization which has concentrated tremendous power in Rome over property and individuals situated the world over. The papal encyclical 'On Christian Reconciliation,' issued the last of May, 1920, is of extraordinary significance in the light of these facts. For it abrogates the rule which has caused so much friction in the courts of Europe, preventing Catholic sovereigns from visiting the king of Italy, whose existence the pope refused to recognize because he had been dispossessed of his lands to furnish a capital for the new nation. . . . In the light of the break of 1904, the repeal of his inhibition may be regarded as a direct concession to France (and more particularly to Italy). Benedict XV justified it in these words: 'It seems to be called for by the gravity of the moment and the established custom of exchanging visits for consultation between the heads of States and Governments.' Benedict was forced to make this move by the pressure of Catholic sovereigns, unable longer to resist the pressure of socialist and anti-clerical elements in their governments. In another respect the Vatican . . . [was] compelled to recede from its former position. Originally it forbade Catholics to vote or become candidates in Italian elections; but the formation of the Italian Catholic party, which in May and June, 1920, was strong enough, in cooperation with the Socialists, to drive the Nitti cabinet out of power, . . . has also brought about papal acquiescence. These admissions virtually constitute the recognition of the Italian government."—R. L. Buel, *France and the Vatican* (*Political Science Quarterly*, Mar., 1921). —"M. Colrat made an important statement before the French Foreign Affairs' Committee at Paris on June 28. It dealt with the re-establishment of diplomatic relations between the French Republic and the Holy See, and was to this effect: An agreement having been reached on the question of a foreign policy, steps may now be taken to re-establish the French Embassy at the Vatican. The internal laws of France will not be altered, and the Holy See will not intervene with regard to such matters as the prohibition of monastic societies. The *Corriere d'Italia*, semi-official organ of the Vatican, published in Rome, stated on July 8 that a *rapprochement* between the Vatican and Quirinal might be looked for in the selection of a protector of the holy places in Palestine. As England, on account of the appointment of Sir Herbert Samuel as High Commissioner, and also because she was officially a Protestant nation, could not be considered, nor France, because she already had her hands full in Syria, it was natural that Italy should receive the mandate, provided the way were paved by a recognition by the Italian Government of the inalienable rights

of the Holy See in Italy."—*New York Times Current History*, Aug., 1920, pp. 784-785.—"The [French] Chamber of Deputies supporting the government's bill for a resumption of diplomatic relations with the Vatican, voted confidence in the Government . . . [on November 30, 1920]. The bill was adopted. Premier Leygues stated in the Chamber that the government's decision to ask authority from Parliament to send a French Ambassador to the Vatican was simply a question of foreign policy and that it was in the interest of France. 'The Vatican is a moral force,' he declared, 'which France cannot afford to neglect.' . . . Premier Leygues reminded the Chamber that Great Britain was maintaining its envoy at the Vatican and that the Swiss government was resuming diplomatic relations with the Vatican, broken in 1873."—*New York Times*, Dec. 1, 1920, p. 19.—"In voting to resume diplomatic relations with the Vatican, the French Chamber of Deputies was mainly moved by two considerations, each important. The loyalty, the gallantry, the unself-

POPE PIUS XI

ish patriotism of the French Catholics, the spirit that inspired the French clerics, were beyond praise. It was the part of sound statesmanship apart from any sentimental reasons, to try to put away the old religious quarrels, to continue something of the 'Sacred Union.' The past is past. The republic retains the old laws against the congregations. The separation of Church and State remains a fact. . . . Rome is really a world capital. Representation at the Vatican is not a matter of religion alone. Great Britain is there. Switzerland is there. France must still regret that in a great crisis she was absent and Germany very much present. Bulgaria, Greece, Rumania are negotiating concordats. France can't afford not to be represented there."—*France and the Vatican* (*New York Times*, Dec. 4, 1920, p. 12).—"Approval having been given by the Dutch Chamber to the bill providing for the establishment of a permanent minister at the Vatican, the Holy See will soon appoint a nuncio at the Hague. No Papal representative has been at the Dutch capital since diplomatic relations with the Vatican were interrupted in 1907 with the recall of Monsignor

Rodolfo Giovannini when the Dutch Foreign Minister omitted to invite the Pope to the second peace conference at The Hague. Lately diplomatic relations were resumed, but the Vatican did not send a representative to The Hague, entrusting the nuncio in Belgium with the position of internuncio in Holland."—*New York Times*, Dec. 27, 1920.

1920.—Pope and the League of Nations.—"The Vatican demes that any steps have yet been taken to obtain admission into the League, and one must accept that denial. Nevertheless . . . it remains true that the subject has been considered, and that . . . semi-official conversations are going on which it is hoped will result in the representation of the Vatican on the council of the League of Nations."—S. Huddleston, *Vatican's new place in world politics* (*New York Times Current History*, Nov., 1920).

1920.—Schism in Czecho-Slovakia.—Benedict refuses their demands.—"Czecho-Slovakia seems to be entering a struggle similar to that which rent France with dissension prior to the war—a struggle between church and state. . . . On one side are the Slovak Catholics; on the other, the Czech anti-clericals. . . . When the empire of the Hapsburgs was dissolved, there were priests in the Bohemian country who thought of a schism. Some of these took the preliminary step of appealing to Pope Benedict for certain reforms. They asked, among other things, for the privilege of electing bishops by a vote of the laity, for the abolition of celibacy and for the privilege of using a liturgy in the Czech tongue instead of the Latin. There were other pleas, some of which were discussed for a long time at the Vatican. In the end, Benedict XV denied all pleas for a relaxation of the discipline and the suggested change in the mode of choosing bishops was not even considered. Some of the priests were aggrieved. . . . The schismatic priests organized a new church which they called Czecho-Slovakian. . . . Some of the Roman Catholic churches have been occupied by force in spite of an edict from Rome. . . . The whole of Czecho-Slovakia seems destined to be agitated and perhaps shaken to its foundations before the conflict ends. In the hope of averting the worst, Benedict XV contemplates the dispatch of a personal envoy to Prague."—*Vatican faces a new schism* (*Current Opinion*, Jan., 1921, pp. 6-7).—In September, 1920, the separation of church and state in Czecho-Slovakia was agreed to by the Vatican. In the following December, Benedict, at a secret consistory, upheld celibacy and said that the democratic forms asked by the Czecho-Slovak priests would never be granted.

1920 (May).—Ceremony of canonization of Joan of Arc.—Diplomatic corps present.—"Always a saint in the popular mind, the canonization of Joan of Arc on May 16 in the historic basilica at Rome five hundred years after her martyrdom 'was hardly more than an official ratification of a sainthood revered by free peoples everywhere.' All Christendom joined in paying tribute to the memory of the French heroine. The canonization ceremony, conducted by Pope Benedict, was described in the press dispatches as the most impressive function in several centuries. Thirty thousand persons, including 140 descendants of the shepherd girl's family and Church dignitaries from all parts of the world witnessed the rites in St. Peter's. . . . The first petition for canonization was made in 1860, by the Bishop of Orleans and twelve colleagues. The decree of heroicity was published in 1904; the proof of the three required miracles—three modern cures following invocation

to Joan was admitted in 1908; beatification took place in 1909, and in March, 1919, the Pope's decision was given for canonization."—*Saint Joan of Arc (Literary Digest, June 5, 1920, p. 47)*.—"At the ceremony in St. Peter's, Diego von Bergen, the new German Ambassador to the Vatican, made his first official reappearance in the Eternal City. Hitherto he had been the Prussian Minister to the Holy See, a post suppressed in April. The Bavarian Legation, however, was maintained at the Vatican, as was also the Nunciature at Munich. At no time since the Papacy was deprived of its temporal power and secular sovereignty in 1870 had the Vatican been able to boast of such a large *Corps Diplomatique*. . . . Aside from the German Ambassador and the Bavarian Minister, there were representatives from Argentina, Austria, Belgium, Bolivia, Chile, Columbia, Costa Rica, the Dominican Republic, Great Britain, Holland, Jugoslavia, Nicaragua, Peru, Poland, Portugal, Russia, the Ukraine, Venezuela, China and

Crete against any participants in the ambushing of the crown forces. In April, 1921, the appointment of Lord Edmund Talbot as first viceroy of Ireland was officially announced. "The appointment of Lord Edmund Talbot is a historical event of the first importance as he is the leading lay Roman Catholic in the kingdom and first Roman Catholic to be Lord Lieutenant of Ireland."—*New York Times, Apr. 2, 1921, p. 1*.

1921 (March).—Appointment of new American cardinal.—Death of Cardinal Gibbons.—Early in March, at a secret consistory at which Pope Benedict announced and created six new cardinals, Denis J. Dougherty, archbishop of Philadelphia, was made cardinal to succeed the late Cardinal Farley of New York. American Catholics and Protestants alike mourned the death, March 24, of Cardinal Gibbons, Archbishop of Baltimore and Dean of the American hierarchy.

1922.—Death of Benedict XV.—Election of Pius XI.—"Pope Benedict XV. died of pneumonia

CORONATION OF POPE PIUS XI, FEB. 12, 1922

International

Japan."—*Vatican (New York Times Current History, June, 1920, p. 430)*.

1920-1921.—Vatican and the Irish struggle.—During the summer of 1920 numerous remonstrances by Australian Catholics against the position taken by the Irish-Australian prelate, Archbishop Mannix of Melbourne, on the Irish question were answered by Benedict XV on August 6, in a statement through Cardinal Gasparri. The Vatican disclaimed all intention of interfering with the Archbishop's independence of action in the struggle of Ireland. Various delegations protesting against the treatment of Irish Catholics by the police and crown troops were received and listened to by the pope, who manifested deep regret when informed of the death of Lord Mayor MacSwiney of Cork in October. Benedict gave as his own opinion that death through hunger striking in such a cause was not suicide. In December, Bishop Cahalan of Cork demonstrated the policy of the church against lawless and violent methods of rebellion when he notified the churches of the promulgation of an excommunication de-

at the Vatican on Jan. 22, 1922, and his successor, Cardinal Achille Ratti, elected in solemn conclave of the high Cardinals of the Church on Feb. 6, was crowned in St. Peter's amid scenes of medieval grandeur on Feb. 12. . . . Profound grief was manifested throughout Italy over the death of Pope Benedict. Flags were flown at half mast on the public buildings, and the Italian Cabinet which subsequently fell . . . sent Catholic representatives to bring condolences to the Vatican. . . . The new Pope, Cardinal Ratti [who adopted the name of Pius XI] was elected by the Sacred College, consisting of fifty-three Cardinals, which deliberated in secret council in the Sistine Chapel. . . . The Cardinals were completely cut off from the outside world on Feb. 2, when workmen walled up the doors, according to ancient custom. In the first two votes taken (Feb. 3), the Sacred College reached no agreement. . . . The same result attended the voting of the next two days. It was not until Feb. 6 that Cardinal Ratti was elected. A thin stream of white smoke announced that a decision had been reached, and Cardinal

Bisleti . . . appeared on the balcony and announced the result to the excited crowd of 10,000 people, waiting outside St. Peter's in the rain. . . . His blessing of the people from this balcony was an innovation, contrary to precedent since the feud between the Papacy and the Italian Government began. . . . Cardinal O'Connell of Boston reached Rome one hour too late to take part in the election."—*Death of Pope Benedict XV and election of Pius XI. (New York Times Current History, Mar., 1922).*

PARABOLANI OF ALEXANDRIA.—"The 'parabolani' of Alexandria were a charitable corporation, instituted during the plague of Gallienus, to visit the sick and to bury the dead. They gradually enlarged, abused, and sold the privileges of their order. Their outrageous conduct under the reign of Cyril [as patriarch of Alexandria] provoked the emperor to deprive the patriarch of their nomination and to restrain their number to five or six hundred. But these restraints were transient and ineffectual."—E. Gibbon, *History of the decline and fall of the Roman empire, ch. 47, footnote.*

PARAGUA, island in the Malay archipelago, lying between Borneo and the main group of the Philippine islands. See PHILIPPINE ISLANDS: Map.

PARAGUAY: Name.—Geographic description.—Area.—Population.—Resources.—Immigration.—"De Azara tells us that the river Paraguay derives its name from the Payaguas tribe of Indians, who were the earliest navigators on its waters. Some writers deduce the origin of its title from an Indian cacique, called Paraguaio, but Azara says, this latter word has no signification in any known idiom of the Indians, and moreover there is no record of a cacique ever having borne that name."—T. J. Hutchinson, *Parana, p. 44.*—Paraguay "is remarkable for enchanting scenery, fertile soil and healthy climate. It has an area of 90,000 square miles, that is, about equal to the island of Great Britain, and is situated between 22 and 27½ degrees S. lat., and 54½ and 58½ W. long. It is bounded on the north by Rio Apa, which separates it from Brazil, on the west by the river Paraguay, and on the east and south by the Upper Paraná. [See LATIN AMERICA: Map of South America.] It has also territorial rights over a vast and undefined portion of the Gran Chaco [see GRAN CHACO], which is also claimed by Bolivia. . . . Being situated nearly 1,000 miles from the seaboard, it is in a manner secluded from the outer world."—M. G. and E. T. Mulhall, *Handbook of the River Plate comprising the Argentine Republic, Uruguay and Paraguay, pp. 637.*

ALSO IN: *Paraguay: General, commercial and financial information relating to the Republic of Paraguay, p. 589.*—H. Stephens, *South American travels, p. 349.*

"The resources of the republic are at present confined mostly to the production of raw material, the industries being few in number. The principal crop is maté, of which about 17,600,000 pounds are treated annually. About one half of this amount is exported. . . . The climate and soil of the republic are suited for all tropical growths; and rubber is grown to some extent, exports of this article in 1907 amounting to 4,400 pounds, sent principally to France. Cotton grows abundantly, and tobacco with little effort, while indigo and sugar cane yield easily to cultivation, and the forests contain many different grades of cabinet and dye woods, resins and balsams, while a native fibre plant known as *mapajo* is used by the Indians in the manufacture of a coarse textile for garments. . . . The live stock industry is constantly increasing, many cattlemen from the Argentine Republic and Brazil having located in the country in recent years."—International Bureau of American Republics, *Paraguay (pamphlet)*, pp. 8, 9, 10.—The population of Paraguay is less than one million, including the people of the Chaco district, which is estimated at 50,000. Every encouragement has been given to immigrants entering Paraguay. Transportation is allowed from Buenos Aires or Montevideo. This was suspended during the war but is now resumed. "As a field for immigration Paraguay is at a serious disadvantage because of its position, for Brazil and Argentina drain off the current of immigration from Europe before it can reach the interior Republic. . . . The natural advantages which Paraguay offers to counterbalance the superiority of Argentina in these respects are an exuberantly fertile soil in nearly all parts of a climate whose winters present few problems. . . . Besides good farms and cattle lands can be bought at a much lower price in Paraguay than in Argentine where land values are much inflated. According to statistics of the Foreign Office during the period 1881-1907, 12,241 immigrants entered Paraguay. This number includes only immigrants whose passage from the River Plate was paid by the Paraguayan Government. . . . It does not include immigrants who came to the country of their own accord."—W. L. Schurz, *Paraguay*, p. 133.

Aboriginal inhabitants. See PAMPAS TRIBES; TUPI.

1515-1557.—Discovery and exploration of La Plata.—Settlement and early years of colony.—The Rio de la Plata, or River of Silver, was discovered in 1515 by the Spanish explorer, Juan de Solís, who landed incautiously and was killed by the natives. In 1519 this "Sweet Sea," as Solís called it, was visited again by Magellan, in the course of the voyage which made known the great strait which bears his name. The first, however, to ascend the important river for any distance, and to attempt the establishing of Spanish settlements upon it, was Sebastian Cabot, in 1526, after he had become chief pilot to the king of Spain. He sailed up the majestic stream to the junction of the Paraguay and the Parana, and then explored both channels, in turn, for long distances beyond. "Cabot passed the following two years in friendly relations with the Guarani, in whose silver ornaments originated the name of La Plata, and thence of the Argentine Republic, the name having been applied by Cabot to the stream now called the Paraguay. That able and sagacious man now sent to Spain two of his most trusted followers with an account of Paraguay and its resources, and to seek the authority and reinforcements requisite for their acquisition. Their request was favourably received, but so tardily acted

on that in despair the distinguished navigator quitted the region of his discoveries after a delay of five years." In 1534, the enterprise abandoned by Cabot was taken up by a wealthy Spanish courtier, Don Pedro de Mendoza, who received large powers, and who fitted out an expedition of 2,000 men, with 100 horses, taking with him eight priests. Proceeding but a hundred miles up the Plata, Mendoza founded a town on its southwestern shore, which, in compliment to the fine climate of the region, he named Buenos Aires. As long as they kept at peace with the natives, these adventurers fared well; but when war broke out, as it did ere long, they were reduced to great straits for food. Mendoza, broken down with disappointments and hardships, resigned his powers to his lieutenant, Ayolas, and sailed for home, but died on the way. Ayolas, with part of his followers, ascended to a point on the Paraguay some distance above its junction with the Parana, where he founded a new city, calling it Asuncion. This was in 1537. Ayolas perished that same year in an attempt to make his way overland to Peru. The survivors of the colony were left in command of an officer named Irala, who proved to be a most capable man. The settlement at Buenos Aires was abandoned and all concentrated at Asuncion, where they numbered 600 souls. In 1542 they were joined by a new party of 400 adventurers from Spain, who came out with Cabeza de Vaca—a hero of strange adventures in Florida—now appointed Adelantado of La Plata. Cabeza de Vaca had landed with part of his forces on the Brazilian coast, at a point eastward from Asuncion, and boldly marched across country, making an important exploration and establishing friendly relations with the Guarani. But he was not successful in his government, and the discontented colonists summarily deposed him, shipping him off to Spain, with charges against him, and restoring Irala to the command of their affairs. This irregularity seems to have been winked at by the home authorities, and Irala was scarcely interfered with for a number of years. "The favourable reports which had reached Spain of the climate and capabilities of Paraguay were such as to divert thither many emigrants who would otherwise have turned their faces toward Mexico or Peru. It was the constant endeavour of Irala to level the distinctions which separated the Spaniards from the natives and to encourage intermarriages between them. This policy, in the course of time, led to a marked result,—namely, to that singular combination of outward civilization and of primitive simplicity which was to be found in the modern Paraguayan race until it was annihilated under the younger Lopez. . . . Irala, in fact, created a nation. The colony under his administration became numerous and wealthy. . . . He was the life and soul of the colony, and his death, which occurred in 1557 at the village of Ita, near Asuncion, when he had attained the age of 70 years, was lamented alike by Spaniards and Guarani. . . . The Spaniards brought with them few if any women, and if a certain proportion of Spanish ladies arrived later they were not in sufficient numbers to affect the general rule, which was that the Spanish settlers were allied to Guarani wives. Thus was formed the modern mixed Paraguayan race. In a very short time, therefore, by means of the ties of relationship, a strong sympathy grew up between the Spaniards and the Guarani, or those of Guarani blood, and a recognition of this fact formed the basis of the plan of government founded by the great Irala. The lot of the natives of Paraguay, as compared with

the natives of the other Spanish dominions in the New World, was far from being a hard one. There were no mines to work. The Spaniards came there to settle, rather than to amass fortunes with which to return to Europe. The country was abundantly fertile, and such wealth as the Spaniards might amass consisted in the produce of their fields or the increase of their herds, which were amply sufficient to support them. Consequently, all they required of the natives, for the most part, was a moderate amount of service as labourers or as herdsmen."—R. G. Watson, *Spanish and Portuguese South America*, v. 1, ch. 5, 16.

1608-1873.—Rule of Jesuits.—Dictatorship of Dr. Francia and of Lopez I and Lopez II.—Disastrous war with Brazil.—"Under Spanish rule, from the early part of the 16th century as a remote dependency of Peru, and subsequently of Buenos Ayres, Paraguay had been almost entirely abandoned to the Jesuits [see JESUITS: 1542-1649] as a virgin ground on which to try the experiment of their idea of a theocratic government. The Loyola Brethren, first brought in in 1608, baptized the Indian tribes, built towns, founded missions [and communities of converts called Reductions, meaning that they had been reduced into the Christian faith], gave the tamed savages pacific, industrious, and passively obedient habits, married them by wholesale, bidding the youth of the two sexes stand up in opposite rows, and saving them the trouble of a choice by pointing out to every Jack his Jenny; drilled and marshalled them to their daily tasks in processions and at the sound of the church bells, headed by holy images; and in their leisure hours amused them with Church ceremonies and any amount of music and dancing and merry-making. They allowed each family a patch of ground and a grove of banana and other fruit trees for their sustenance, while they claimed the whole bulk of the land for themselves as 'God's patrimony,' bidding those well-disciplined devotees save their souls by slaving with their bodies in behalf of their ghostly masters and instructors. With the whole labouring population under control, these holy men soon waxed so strong as to awe into subjection the few white settlers whose estates dated from the conquest; and by degrees, extending their sway from the country into the towns, and even into the capital, Asuncion, they set themselves above all civil and ecclesiastical authority, snubbing the intendente of the province and worrying the bishop of the diocese. Driven away by a fresh outburst of popular passions in 1731, and brought back four years later by the strong hand of the Spanish Government, they made common cause with it, truckled to the lay powers whom they had set at naught, and shared with them the good things which they had at first enjoyed undivided. All this till the time of the general crusade of the European powers against their order, when they had to depart from Paraguay as well as from all other Spanish dominions in 1767. In the early part of the present century, when the domestic calamities of Spain determined a general collapse of her power in the American colonies, Paraguay raised its cry for independence, and constituted itself into a separate Republic in 1811. But, although the party of emancipation was the strongest and seized the reins of government, there was still many among the citizens who clung to their connection with the mother country, and these were known as Penl-

ulares; and there were many more who favoured the scheme of a federal union of Paraguay with the Republics of the Plate, and these went by the name of Porteños, owing to the importance they attached to the dependence of their country on Buenos Ayres (the puerto or harbour), the only outlet as well as the natural head of the projected confederation [see ARGENTINA: 1580-1777]. All these dissenters were soon disposed of by the ruthless energy of one man, Juan Gaspar Rodriguez, known under the name of Dr. Francia. This man, the son of a Mamaluco, or Brazilian half-caste, with Indian blood in his veins, a man of stern, gloomy and truculent character, with a mixture of scepticism and stoicism, was one of those grim, yet grotesque, heroes according to Mr. Carlyle's heart whom it is now the fashion to call 'Saviours of society.' A Doctor of Divinity, issuing from the Jesuit seminary at Cordova, but practising law at Asuncion, he made his way from the Municipal Council to the Consular dignity of the New Republic, and assumed a Dictatorship, which laid the country at his discretion . . . (1814-1840), wielding the most unbounded power till his death, at the advanced age of 83. With a view, or under pretext of stifling discontent and baffling conspiracy within and warding off intrigue or aggression from without, he rid himself of his colleagues, rivals, and opponents, by wholesale executions, imprisonments, proscriptions, and confiscations, and raised a kind of Chinese wall all round the Paraguayan territory, depriving it of all trade or intercourse, and allowing no man to enter or quit his dominions without an express permission from himself. Francia's absolutism was a monomania, though there was something like method in his madness. There were faction and civil strife and military rule in Paraguay for about a twelvemonth after his death. In the end, a new Constitution, new Consuls—one of whom, Carlos Antonio Lopez, a lawyer, took upon himself to modify the Charter in a strictly despotic sense, had himself elected President, first for ten years, then for three, and again for ten more, managing thus to reign alone and supreme for 21 years (1841-1862). On his demise he bequeathed the Vice-Presidency to his son, Francisco Solano Lopez, whom he had already trusted with the command of all the forces, and who had no difficulty in having himself appointed President for life in an Assembly where there was only one negative vote. The rule of Francia in his later years, and that of the first Lopez throughout his reign, though tyrannical and economically improvident, had not been altogether unfavourable to the development of public prosperity. The population, which was only 97,480 in 1796 and 400,000 in 1825, had risen to 1,337,431 at the census of 1857. Paraguay had then a revenue of 12,441,323*l.*, no debt, no paper money, and the treasury was so full as to enable Lopez II to muster an army of 62,000 men, with 200 pieces of artillery, in the field and in his fortresses. Armed with this two-edged weapon, the new despot, whose perverse and violent temper bordered on insanity, corrupted by several years' dissipation in Paris, and swayed by the influence of a strong and evil-minded woman, flattered also by the skill he fancied he had shown when he played at soldiers as his father's general in early youth, had come to look upon himself as a second Napoleon, and allowed himself no rest till he had picked a quarrel with all his neighbours and engaged in a war with Brazil and with the Republics of the Plate, which lasted five years (1865-1870) [see BRAZIL: 1825-1865]. At the end of it nearly the whole of the male population had been led like

sheep to the slaughter; and the tyrant himself died 'in the last ditch,' not indeed fighting like a man, but killed like a dog when his flight was cut off, and not before he had sacrificed 100,000 of his combatants, doomed to starvation, sickness, and unutterable hardship a great many of the scattered and houseless population (400,000, as it is calculated), and so ruined the country that the census of 1873 only gave 221,079 souls, of whom the females far more than doubled the males."—A. Gallenga, *South America*, ch. 16.

Darras, *General history of the Catholic church, v. 4, period 7, ch. 7*.

1870.—New constitution.—After the death of Lopez, Paraguay set itself the task of trying to recover from the effect of his campaigns, and to prevent another ruler precipitating the country into similar disasters. In 1870 a new constitution was proclaimed. "The constitution of Paraguay provides for a republican form of government, with the usual division of legislative, executive, and judicial authority. The National Congress is composed of the Senate and the Chamber of Deputies, both elected by direct, popular vote, all citizens over 18 years of age being entitled to vote. Senators are elected for a term of six years, in the proportion of 1 for every 12,000 inhabitants or fraction exceeding 8,000. The Senate is renewed by thirds every two years. Deputies are elected for a term of four years, 1 for every 6,000 inhabitants or fraction exceeding 3,000. The Chamber of Deputies is renewed by halves every two years. The President and Vice-President of the Republic are elected by electors chosen for that purpose, for a term of four years. [See ELECTIONS, PRESIDENTIAL: South American republics.] The President is assisted by a cabinet of five Ministers or Secretaries. Congress is represented during recess by a Standing Committee composed of two Senators and four Deputies, which assists the President and is consulted by him on all matters pertaining to Congress. The Judiciary includes a Superior Court, two Courts of Appeals, and a number of minor tribunals. The Superior Court is composed of three Justices, appointed by the President, with the consent of the Senate, for a term of four years."—International Bureau of American Republics, *Paraguay (pamphlet)*, p. 5.

1872-1894.—Boundary settlement.—Gonzalez president.—In 1872 Paraguay settled her boundary dispute with Brazil, and in 1876 the Brazilian army of occupation was withdrawn. In the same year a quarrel with Argentina concerning boundaries was submitted to the United States for settlement. President Hayes decided in 1878 that Paraguay was entitled to the land between the Pilcomayo and the Verde rivers. In 1879 a dispute arose with Bolivia about the Chaco territory, but this was not settled. In 1890 Don Juan Gonzalez entered upon a presidential term which expired in 1894.

1890.—Represented at First International American Conference. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

1890.—William Lane's Utopia.—One of the most interesting of all colonising efforts of modern times was begun in Paraguay. This was the attempt of William Lane, editor of the *Work* in

Australia to found a socialistic colony. During the time of the great strike of 1890, he set sail with 250 men and women, their only band of union being that each should work for the good of all. From the start the scheme failed, for men and women who had worked well in Australia under the stimulus of personal gain, found it impossible to work as strenuously when their gain was for the common good.

1901-1910.—Participated in Second, Third and Fourth International American Conferences. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902; 1906; 1910.

1902-1915.—Revolutions the characteristic feature of recent history.—Details of revolutions of 1902, 1903, 1911-1912, 1915.—From 1920 to the time of the World War, the history of Paraguay is chiefly the history of its revolutions. Few changes of government were accomplished without bloodshed. Though these revolutions seemed but very little flurries, when viewed in the perspective of world-affairs, they decimated the population and made it almost impossible for the state to claim any other achievement more worthy of historical record. The first of these recent series of revolutions occurred in 1902. "In 1902 a struggle took place between factions of the *Colorado* party. As President Aceval [elected 1898] opposed the candidacy of his secretary of the interior for the presidency, certain military leaders thrust Aceval into a dungeon and even fired upon the national Congress which was deliberating about his enforced resignation. Eventually the vice-president was made acting president; in October the secretary of war Juan Escurra was elected president. Escurra was inaugurated in November, 1902. In August, 1904, an insurrection led by a group called the *Azules* or *Cívicos* took place. Martial law was proclaimed, the insurrectionists gained control of the Paraguay River, and the government forces were defeated. An agreement was patched up between the contending groups which stipulated that a new president should be elected, that the *Cívicos* should be accorded a majority of the members of the next cabinet, that a new army should be organized, and that an amnesty should be conceded to all political offenders. The leader of this revolution was Benigno Ferreira, who soon became president. Tranquillity was soon upset by a revolt led by Colonel Albino Jara, who posed as chief of the Liberal-Radical party. Revolutionists bombarded the 'palace of government' [1908]. With a small following, the President took refuge in the basement of that palace, while some members of his cabinet fled to the railroad station. Many citizens were killed in the streets of the capital city [Asuncion]. Through the mediation of the diplomatic corps—as the revolutionists promised to save his life—President Ferreira was induced to resign; and Vice-President Emiliano Naveiro then became chief magistrate. In 1910 his secretary of foreign relations, Manuel Gondra, a cultured member of the Liberal Radicals, was elected president. Manuel Gondra was inaugurated in December, 1910. The four years that followed were among the stormiest in Paraguay's history. By a sudden coup in January, 1911, Colonel Jara, acting secretary of war, induced President Gondra to resign in order to avoid bloodshed. A rump Congress promptly elected Jara president. In July insurrections broke out in various districts distant from the capital. At last Jara's position became untenable and he resigned; Congress elected Liberto Rojas as his successor. Because of the strife which continued between Jara's partisans and leaders of the Liberal-Radical

party, political conditions remained chaotic and there were rapid changes in the presidency. In April, 1912, Jara emerged at the head of a fresh revolt in southern Paraguay. He was mortally wounded, however, in a bloody engagement at Paraguari, and on July 19, Eduardo Schaerer, a Liberal-Radical of Teutonic descent, was elected president. With the inauguration of Schaerer, who became president on August 15, 1912, . . . [political] revolutions became less frequent. A revolt led by the secretary of war soon collapsed. A survey of public lands was undertaken by the national government. At the instance of the President, a homestead law was enacted which promised a strip of land to each applicant who would agree to till the soil and build a home."—W. S. Robertson, *History of the Latin-American nations*, pp. 283-284.—In 1915 owing to the protest of Colonel Escobar against a reduction of army expenditure, there was a mutinous attack of soldiers against President Schaerer, but this was not successful. "Between 1871 and 1915 there were 26 of what one Paraguayan writer calls 'alterations of the legal order.'"—W. L. Schurz, *Paraguay*, p. 21.

1913.—Appointment of minister to the United States.—Ratification of extradition treaty with the United States.—For the first time in eight years Paraguay appointed a minister to the United States. Dr. Hector Vélasquez was chosen. In the same year an extradition treaty between the United States and Paraguay was ratified.

1913-1915.—Establishment of steam ferry route across the Alto Paraná river.—Economic significance.—"It was in 1913 that occurred one of the most important events in the history of Paraguay. It is true that this was in no way connected with politics, presidents, or constitutions. All that actually occurred, in fact, was the establishment of the steam ferry across the Alto Paraná River, by means of which communication was opened up between the Paraguayan Central Railway and the Argentine North Eastern Railway. But the link was actually of the most momentous order; for it was the last in the lengthy chain by which the inland State of Paraguay for the first time in its history was given a direct road to the sea independent of the watery highway offered by its great river. By means of this steam ferry, which bodily transports the trains between Posadas on the Argentine shore and Encarnación on the opposite Paraguayan bank, Asunción is now in direct railway communication not only with Buenos Aires, but with the Uruguayan capital of Montevideo in addition. The true importance of this achievement has been considerably obscured by the shadow of contemporary events. From the point of worldwide acknowledgment it was certainly unfortunate that the fruit of all the years of work and preparation should have come to maturity just at a period when the countries of the Rio de la Plata—suffering from the European complications hatched in the Balkans—were undergoing a financial crisis. This in itself was sufficient to depress the spirits of the most resolute shareholders; but when in the following year the great European War broke out, scarcely a ray of light seemed to be left on the horizon. It was inevitable, of course, that this gigantic catastrophe should lead to an unprecedented situation in Paraguay. Thus, instead of the "bumper" freights and financial profit which in ordinary circumstances could scarcely have failed to attend the enterprise, a far less satisfactory situation had to be faced. This has been admirably explained in the Paraguay Central Railway's report for the

year ending on the 30th of June, 1915:—"The situation of Paraguay has been entirely abnormal: the economic life of the country passed through a period of rapid changes. Much of the business effected during the past year has been incidental to this abnormal condition; that is to say, is perhaps due less to a healthy increase in the output of produce, where increase has occurred, than to efforts to adjust changing values to the new conditions. For example produce has in some cases been exported in satisfaction of debts abroad, whereas in normal times money payments would have been made. In some cases the depreciation of the currency enabled exporters to purchase native products at unusually favourable prices, but the rise in freights, etc., and the congestion of ocean traffic soon tended to make these profits illusory. The depreciation of the currency enabled the timber companies to save on wages and to sell in Argentina, where a stock of Paraguayan timber has accumulated. On the other hand, the same cause affected the internal cattle trade adversely, and the depreciation of the paper money has, perhaps more than anything else, contributed to the impoverishment of the people.' It is clear enough that a situation such as this could not fail to result in a fall in traffic receipts. But, although the vastly increased commerce that had been anticipated with so much reason has not yet materialized, there is no question whatever but that its advent is merely postponed, and that when once the normal situation has been re-established in South America and throughout the world, the benefits of this most important railway communication have been experienced to the full."—W. H. Koebel, *Paraguay*, pp. 231-232.

1913-1920.—Railways and telegraphs.—The most important railway in Paraguay is the Central Paraguay, which was begun in 1850. "In 1913 the gauge was changed to permit of direct communication with the Argentine North Eastern Railway and through service was opened between Asunción and Buenos Aires. [The proposed Trans-Paraguay Railway has not yet been started.] A railway across the centre of the Republic would undoubtedly open large areas to settlement and promote the advancement of the interior which is now virtually without communications. . . . As is general throughout South America the Paraguayan telegraphs are government owned. There are [1920] about 2,050 miles of wire."—S. L. Schurz, *Paraguay*, pp. 116, 126.

1914.—Bryan-Wilson Treaty. See ARBITRATION, INTERNATIONAL: Modern: 1913.

1915.—Treaty signed with Bolivia concerning Chaco.—The question as to the ownership of the Chaco had been disputed with Bolivia for many years. Bolivia as early as 1879 had promised to produce evidence from the Spanish archives that she had a right to it. There was another attempt in 1913 to settle the question. In 1915 a treaty was signed but this has never been ratified. It is usually conceded that Paraguay has the real right to this land. It is still under Paraguayan rule.

1918.—Progress in education.—"In 1916 the Director General of Schools declared that 300 additional schools would scarcely fill the most urgent needs of the country, and that over 80,000 children of school age were receiving no education because of lack of schools. During 1916 thirty five rural schools were closed because teachers were not available. Some of the large corporations operating in the Alto Parana region have established schools for educating the children of their employees."—W. L. Schurz, *Paraguay*, p. 23.—"Notable prog-

ress has been made in the educational problems of the Republic. The simplest forms of education are apt to present some difficulties in a country whose population is as sparse and scattered as that of Paraguay. In 1908 it was estimated that the number of the inhabitants of Paraguay over the age of six years was 411,131, out of which total 254,171 were illiterate. In Asuncion itself is a university, as well as a number of secondary schools. It is in the remoter rural districts that the most difficult educational problems present themselves; but in the natural course of events these must automatically disappear when the districts in question are more fully opened up. . . . In 1918 there were 1,086 primary schools with 65,612 pupils of both sexes and an average monthly attendance of 47,377."—W. H. Koebel, *Paraguay*, p. 281.

1919.—Death of President Manuel Franco.—Vice President José Montero assumes office.—"Dr. Manuel Franco, elected president for the term expiring August, 1920, died in June, 1919. Dr. José Montero, who was vice-president, took office immediately and acted as President until the end of the term."—*Latin-American Year Book*, 1920, p. 555.—In November the Senate voted to join the League of Nations.

1919 (November).—Obligatory general arbitration treaty between Paraguay and Uruguay.—"In November, 1919, an ad referendum obligatory general arbitration treaty was concluded in Montevideo between representatives of the Republics of Paraguay and Uruguay. Under this pact all controversies arising between the high contracting parties, and which can not be settled through diplomatic channels, are to be submitted to arbitration. The arbitrator is to be the president or ruler of a State, and if no agreement can be arrived at as to his selection, the parties in interest shall submit their dispute to the Permanent Tribunal of The Hague established under the conventions of 1899 and 1907. The treaty is operative for a period of five years, and if not denounced by one of the parties shall be considered extended for a period of another five years, and so on successively."—*Latin-American Year Book*, 1920, p. 555.

1920 (June).—Presidential election.—On July 28 it was announced that Manuel Gondra, Paraguayan minister to the United States, had been elected president of Paraguay; and Felix Paiva, former minister of the interior, vice president. Señor Gondra at the time was on the ocean on his way from Buenos Aires to New York, arriving on July 2 to resume his post at Washington, where he had represented Paraguay for nearly three years. He later returned to Paraguay and was inaugurated president on August 15. "Soon afterward the Bank of Spain in Paraguay failed, precipitating a sudden monetary crisis, and the President, in a message to Congress on September 10, recommended the issue of 30,000,000 pesos currency with which to make loans to banks for six months to tide over the crisis. [On November 16, a moratorium of two months was declared. Later the general moratorium in Paraguay was extended to April 11, and that of the Banco Mercantil to May 16.]"—*New York Times Current History*, Jan., 1921, p. 118.

1921.—Argentine steamers under Paraguayan flag.—First ship flying Paraguayan flag in New York harbor.—"A decree of Jan. 13 gave temporary permission to vessels under foreign flags to engage in trade on the Upper Parana River, and the Argentine Navigation Company, in consequence of a strike, placed their steamers under the Paraguayan

flag, the Asuncion Government agreeing to operate them with 'officialized' crews. In March the company reached a settlement with the river boatmen's union, promising to restore union crews to the vessels. The 'officialized' crews protested, as this meant loss of their jobs. The nonunion men running the steamer Huttaita, on April 6, stole off with the vessel and headed north toward the Brazilian frontier. A Paraguayan gunboat was sent in pursuit and the Huttaita was sunk near Concepcion. This, it is believed, forestalled a plot of the crews to resist the Paraguayan Government's intention to restore the steamboats to the Argentine Company."—*New York Times Current History*, May, 1921, pp. 338.—The *Itororo*, the first ship to appear in New York harbor flying the Paraguayan flag, inaugurated direct trade between the United States and Argentina, Uruguay, and Paraguay, early in 1921. This, together with the work of the new steam ferry across the Alto Parana river (see above: 1913-1915), was regarded as an important factor in the development of trade.

1922.—Need of railways. See RAILROADS: 1912-1922.

1922.—Ayala appointed president.—On the death of President Gondra, President Ayala was appointed to serve out the unexpired term of office. Late in the year a revolt against him headed by Colonel Chirife was crushed.

PARALLAX METHOD: In astronomy. See ASTRONOMY: Measuring star distances.

PARALUS, the official vessel of the ancient Athenian government, for the conveyance of despatches and other official service.

PARASANG.—The parasang was an ancient Persian measure of distance, about which there is no certain knowledge. Xenophon and Herodotus represented it as equivalent to thirty Greek stadia; but Strabo regarded it as being of variable length. Modern opinion seems to incline toward agreement with Strabo, and to conclude that the parasang was a merely rough estimate of distance, averaging, according to computations by Colonel Chesney and others, something less than three geographical miles. The modern farsang or farsakh of Persia is likewise an estimated distance, which generally, however, overruns three geographical miles.—Based on E. H. Bunbury, *History of ancient geography*, v. 1, ch. 10, note B.—See also SCHOENE.

PARAWIANAS, South American Indian tribe. See CARIBS.

PARCEL POST.—As far back as the time of the ancient Egyptians, Assyrians and Persians, we know that couriers were employed by the king and state officials to carry packages and documents. "Dr R. P. Grenfell in a paper on the excavations by himself, and Dr. Hunt in the winter of 1007-1008 at Oxyrhynchus . . . discovered a document, written 270 B. C., which consisted of the register of an intermediate post office on the Nile Valley, which afforded a highly interesting glimpse of the postal arrangements of the ancients. Careful note was made of the day and the hour of the messenger's arrival, the number of packages he brought, the name and addresses on the exterior, and the names of the messengers to whom they were entrusted. The registered letter department of the present day Post Office, he commented, could hardly be more methodical and precise . . . [In 31 B. C., the Romans officially instituted couriers. Charlemagne in

807 instituted a service throughout the empire. Marco Polo in his *Travels* speaks of a system in China. But most of these services were for the king and court officials. The Hansa towns in the 12th century were the first to begin a service for commercial use.] The French Post Office can claim the first introduction of a parcel post. Mazarin's edict of 1643 shows that there was a parcel as well as a letter post, and both were in operation at a later date according to the regulations framed in Fleury's edicts of 1728. In the United Kingdom when Robert Murray started in 1683 his penny post in London, the service was not confined to letters, the only condition being that neither parcel nor letter should exceed one pound in weight. The Post Office when it organised a supplementary parcel service, undertook the service of common carriers. . . . Vienna possessed a local letter and a parcel post in 1772, at which date no city in Germany possessed the like; and in 1785 this was taken over by the imperial post."—I. G. J. Hamilton, *Outline of postal history*, pp. 3, 20, 13.—In 1883 parcel post was established in England. Parcel post from the United States to the United Kingdom began in 1902. In 1913 the United States government decided that it would accept parcels as well as letters in the mail service. "The two impelling causes of the parcel post were the popular dissatisfaction with the express service of the private companies and the potentiality of the rural mail service in this field. Representative David J. Lewis, an earnest advocate in Congress of parcel post, urged that the million miles of rural routes be connected with the steam transportation lines so that express service might be carried to the farms. The universal extent of the mail lines and the common control of the postal service stood out in contrast to the conditions which made the private expresses unsatisfactory to the people. Also there were several of the private express companies, the monopolistic nature of the business prevented competition and as a consequence the rates were high. The companies, moreover, quite naturally did not enter unprofitable territory, and also assiduous in carrying service to such points as would yield a net profit, they were unable to reach thousands of out-of-the-way places. Millions of people who were receiving daily delivery and collection of mail were thus deprived of express service. The parcel-post law went into effect January 1, 1913. In the organic act, postage was to be paid according to a zone system of rates and individual shipments were limited to 11 pounds in weight. The service provided was express service but differed essentially from that provided by the private express companies. The parcel post was the adaptation of mail-service principles and methods to the small freight business. Unlike express rates, the parcel-post rates provided no classification of articles according to their value or urgency. The principle of fixing rates according to what the traffic will bear has no place in parcel-post rates. The vast extent of the country and the great distance which parcels would have to be carried in some instances, together with the prevailing method of compensating transportation lines, made it impossible to provide uniform flat rates for parcel post, but within large zones of distances rates to all destinations were the same."—D. C. Roper, *United States post office*, pp. 188-190.—See also **POSTAL SYSTEM**: 1600-1800; 1803-1914.

PARIS.—Paris, the capital of France, is situated on both banks of the River Seine, about 200 miles from its source. Together with the suburban arrondissements, it forms the Department of Seine. Its population according to the census of 1921 was 2,906,472.

Beginning.—A small island in the Seine, which now forms an almost insignificant part of the great French capital, was the site of a rude town called Lutetia, or Luketia, or Lucotecia, when Cæsar extended the dominion of Rome over that part of Gaul. It was the chief town or stronghold of the Parisii, one of the minor tribes of the Gallic people, who were under the protection of the more powerful Senones and who occupied but a small territory. They were engaged in river traffic on the Seine and seem to have been prosperous, then and afterwards. "Strabo calls this place Lucototia; Ptolemy, Lucotecia; Julian, Luketia; Ammianus calls it at first Lutetia, and afterward Parisii, from the name of the people. It is not known when nor why the designation was changed, but it is supposed to have been changed during the reign of Julian. Three laws in the Theodosian Code, referred to Valentinian and Valens, for the year 365, bear date at Parisii, and since then this name has been preserved in all the histories and public records."—P. Godwin, *History of France: Ancient Gaul*, bk. 2, ch. 7, note.—See also **GAUL**: B. C. 58-51.

Julian's residence.—Before Julian ("the Apostle") became emperor, while, as Cæsar (355-361), he governed Gaul, his favorite residence, when not in camp or in the field, was at the city of the Parisii, which he called his "dear Luketia." The change of name to Parisii (whence resulted the modern name of Paris) is supposed to have taken place during his subsequent reign. "Commanding the fruitful valleys of the Seine, the Marne, and the Oise, the earliest occupants were merchants and boatmen, who conducted the trade of the rivers, and as early as the reign of Tiberius had formed a powerful corporation. During the revolts of the Bagauds in the third century, it acquired an unhappy celebrity as the stronghold from which they harassed the peace of the surrounding region. Subsequently, when the advances of the Germans drove the government from Trèves, the emperors selected the town of the Parisii as a more secure position. They built a palace there, and an entrenched camp for the soldiers; and very soon afterward several of those aqueducts and amphitheatres which were inseparable accompaniments of Roman life. It was in that palace, which the traveller still regards with curiosity in those mouldering remains of it known as the 'Palais des Thermes,' that Julian found his favorite residence."—P. Godwin, *History of France: Ancient Gaul*, bk. 2, ch. 7.

Capital of Clovis.—Clovis, the Frank conqueror—founder of the kingdom of the united Frank tribes in Gaul—fixed his residence first at Soissons [486], after he had overthrown Syagrius. "He afterwards chose Paris for his abode, where he built a church dedicated to the apostles St. Peter and St. Paul. But the epoch at which that town passed into his power is uncertain."—J. C. L. de Sismondi, *French under the Merovingians*, ch. 5.

511-752.—Under Merovingians. See FRANKS: 511-752.

845.—Sacked by Normans.—"France was heavily afflicted: a fearfully cold year was followed by another still colder and more inclement. The North wind blew incessantly all through the Winter, all through the pale and leafless Spring. The roots of the vines were perished by the frost—the wolves starved out of their forests, even in Aquitaine. . . . Meanwhile the Danish hosts were in bright activity. Regner Lodbrok and his fellows fitted out their fleet, ten times twelve dragons of the sea. Early in the bleak Spring they sailed, and the stout-built vessels ploughed cheerily through the crashing ice on the heaving Seine. . . . Rouen dared not offer any opposition. The Northmen quietly occupied the City: we apprehend that some knots or bands of the Northmen began even now to domicile themselves there, it being scarcely possible to account for the condition of Normandy under Rollo otherwise than by the supposition, that the country had long previously received a considerable Danish population. Paris, the point to which the Northmen were advancing by land and water, was the key of France, properly so called. Paris taken, the Seine would become a Danish river: Paris defended, the Danes might be restrained, perhaps expelled. The Capetian 'Duchy of France,' not yet created by any act of State, was beginning to be formed through the increasing influence of the future Capital. . . . Fierce as the Northmen generally were, they exceeded their usual ferocity. . . . With such panic were the Franks stricken, that they gave themselves up for lost. Paris island, Paris river, Paris bridges, Paris towers, were singularly defensible: the Palais-des-Thermes, the monasteries, were as so many castles. Had the inhabitants, for their own sakes, co-operated with Charles-le-Chauve [who had stationed himself with a small army at Saint-Denis],

the retreat of the Danes would have been entirely cut off; but they were palsied in mind and body; neither thought of resistance nor attempted resistance, and abandoned themselves to despair. On Easter Eve [March 28, 845] the Danes entered Paris. . . . The priests and clerks deserted their churches: the monks fled, bearing with them their shrines: soldiers, citizens and sailors abandoned their fortresses, dwellings and vessels: the great gate was left open, Paris emptied of her inhabitants, the city a solitude. The Danes hied at once to the untenanted monasteries: all valuable objects had been removed or concealed, but the Northmen employed themselves after their fashion. In the church of Saint-Germain-des-près, they swarmed up the pillars and galleries, and pulled the roof to pieces: the larchen beams being sought as excellent ship-timber. In the city, generally, they did not commit much devastation. They lodged themselves in the empty houses, and plundered all the moveables. . . . The Franks did not make any attempt to attack or dislodge the enemy, but a more efficient power compelled the Danes to retire from the city; disease raged among them, dysentery—a complaint frequently noticed, probably occasioned by their inordinate potations of the country-wine." Under these circumstances, Regner Lodbrok consented to quit Paris on receiving 7,000 pounds of silver,—a sum reckoned to be equivalent to 520,000 livres. "This was the first Danegeld paid by France, an unhappy precedent, and yet unavoidable: the pusillanimity of his subjects compelled Charles to adopt this disgraceful compromise."—F. Palgrave, *History of Normandy and England*, v. 1, bk. 1, ch. 3.

ALSO IN: C. F. Keary, *Vikings in western Christendom*, ch. 9.

857-861.—Twice ravaged by Northmen.—"The Seine as well as the future Duchy of France being laid open to the Northmen [857], Paris, partially recovered from Regner Lodbrok's invasion, was assailed with more fell intent. The surrounding districts were ravaged, and the great monasteries, heretofore sacked, were now destroyed. Only three churches were found standing—Saint-Denis, Saint-Germain-des-près, and Saint-Etienne or Notre-Dame—these having redeemed themselves by contributions to the enemy; but Saint-Denis made a bad bargain. The Northmen did not hold to their contract, or another company of pirates did not consider it as binding: the monastery was burnt to a shell, and a most heavy ransom paid for the liberation of Abbot Louis, Charlemagne's grandson by his daughter Rothaida. Sainte-Généviève suffered most severely amongst all; and the pristine beauty of the structure rendered the calamity more conspicuous and the distress more poignant. During three centuries the desolated grandeur of the shattered ruins continued to excite sorrow and dread. . . . Amongst the calamities of the times, the destruction of the Parisian monasteries seems to have worked peculiarly on the imagination." After this destructive visitation, the city had rest for only three years. In 861 a fresh horde of Danish pirates, first harrying the English coast and burning Winchester, swept then across the channel and swarmed over the country from Scheldt to Seine. Amiens, Nimeguen, Bayeux and Terouenne were all taken, on the way, and once more on Easter Day (April 6, 861) the ruthless savages of the North entered Paris. Saint-Germain-des-près, spared formerly, was now set on fire, and the city was stripped of its movable goods. King Charles the Bald met the enemy on this occasion, as before, with bribes, gave a fief to Jarl Welland, the Danish leader, and presently got him settled in the country as a baptized Christian

and a vassal.—F. Palgrave, *History of Normandy and England*, v. 1, bk. 1, ch. 3.

885-886.—Great siege by Northmen.—“In November, 885, under the reign of Charles the Fat, after having, for more than forty years, irregularly ravaged France, they [the Northmen] resolved to unite their forces in order at length to obtain possession of Paris, whose outskirts they had so often pillaged without having been able to enter the heart of the place, in the Ile de la Cité, which had originally been and still was the real Paris. Two bodies of troops were set in motion; one, under the command of Rollo, who was already famous amongst his comrades, marched on Rouen; the other went right up the course of the Seine, under the orders of Siegfried, whom the Northmen called their king. Rollo took Rouen, and pushed on at once for Paris. . . . On the 25th of November, 885, all the forces of the Northmen formed a junction before Paris; 700 huge barks covered two leagues of the Seine, bringing, it is said, more than 30,000 men. The chieftains were astonished at sight of the new fortifications of the city, a double wall of circumvallation, the bridges crowned with towers, and in the environs the ramparts of the abbays of St. Denis and St. Germain solidly rebuilt. . . . Paris had for defenders two heroes, one of the Church and the other of the Empire [Bishop Gozlin, and Eudes, lately made Count of Paris]. . . . The siege lasted thirteen months, while pushed vigorously forward, with eight several assaults; while maintained by close investment. . . . The bishop, Gozlin, died during the siege. Count Eudes quitted Paris for a time to go and beg aid of the emperor; but the Parisians soon saw him reappear on the heights of Montmartre with three battalions of troops, and he re-entered the town, spurring on his horse and striking right and left with his battle-axe through the ranks of the dumfounded besiegers. The struggle was prolonged throughout the summer, and when, in November, 886, Charles the Fat at last appeared before Paris, ‘with a large army of all nations,’ it was to purchase the retreat of the Northmen at the cost of a heavy ransom, and by allowing them to go and winter in Burgundy, ‘whereof the inhabitants obeyed not the emperor.’” —F. P. Guizot, *Popular history of France*, v. 1, ch. 12.

987.—First becomes capital of France.—“Nothing is more certain than that Paris never became the capital of France until after the accession of the third dynasty. Paris made the Capets, the Capets made Paris.”—F. Palgrave, *History of Normandy and England*, v. 1, p. 280.

1180-1199.—Improvement of city by Philip Augustus.—“During the few short intervals of peace which had occurred in the hitherto troubled reign of Philip [1180-1199], he had not been unmindful of the civil improvement of his people; and the inhabitants of his capital are indebted to his activity for the first attempts to rescue its foul, narrow, and mud-embedded streets from the reproach which its Latin name ‘Lutetia’ very justly implied. Philip expended much of the treasure, hitherto devoted solely to the revels of the court, in works of public utility, in the construction of paved causeways and aqueducts, in founding colleges and hospitals, in commencing a new city wall, and in the erection of the Cathedral of Notre-Dame.”—E. Smedley, *History of France*, pt. 1, ch. 4.

1252-1257.—Sorbonne founded.—In 1252 a deed authorizing a new college was granted to

Robert de Sorbon, and the site was acquired in 1257.

1258.—Drawing up of Commercial Code by Étienne Boileau.—Étienne Boileau, the provost of Paris, was commissioned by St. Louis to write out for future reference all the ancient regulations of the trades of the city. This book is sometimes called the “Book of Trades.”

1367.—Louvre included within walls of city. See LOUVRE: 600-1548.

1381.—Insurrection of Maillotins.—At the beginning of the reign of Charles VI a tumult broke out in Paris, caused by the imposition of a general tax on merchandise of all kinds. “The Parisians ran to the arsenal, where they found mallets of lead intended for the defence of the town, and under the blows from which the greater part of the collectors of the new tax perished. From the weapons used the insurgents took the name of Maillotins. Reims, Châlons, Orleans, Blois, and Rouen rose at the example of the capital. The States-General of the Langue d’Oil were then convoked at Compiègne, and separated without having granted anything. The Parisians were always in arms, and the dukes [regents during the minority of the young king], powerless to make them submit, treated with them, and contented themselves with the offer of 100,000 livres. The chastisement was put off for a time. [The chastisement of Paris and of the other rebellious towns was inflicted in 1382 after the king and his uncles had subdued the Flemings at Rosebecque.]”—E. de Bonnechose, *History of France*, epoch 2, bk. 2, ch. 5.—See also FLANDERS: 1382.

1626.—Port Royal and the Jansenists. See PORT ROYAL AND THE JANSENISTS: 1602-1700.

1643-1715.—Growing importance as a literary and artistic center.—Improvements in the city.—During the reign of Louis XIV Paris became the great center of literary influence. Her arts and crafts became the models of Europe, and though Louis disliked Paris, he realized that it was the capital and made many improvements. “Louis XIV was the first to appoint lieutenants of police for Paris. Then began the system of public lighting: from the first of November to the first of

March, a lantern in which was a burning candle was placed at the ends and in the middle of each street. The watch was increased or rather instituted. Bodies of firemen replaced the capuchins in the fire service (1699). The narrow streets were cleaned, widened, and paved, public carriages and cabs were established."—V. Duruy, *History of France*, p. 464.

1833-1848.—Municipal improvements.—Era of prosperity.—"It was principally to the improvement of Paris that the Government devoted the funds at their disposal. When Thiers, on April 19, 1833, submitted to the Chambers a proposal for a loan of 100,000,000 francs for public works, he assigned one-quarter of that sum to the monuments of the capital. He foresaw the union of the Louvre and the Tuileries, the enlargement of the Royal Library, the completion of the Arc de Triomphe, the Madeleine, the Pantheon, the Museum of Natural History, the School of Fine Arts, the Palais Bourbon, and the Collège de France, the decoration of the Place de la Concorde, where the obelisk was erected, the opening of many streets and numerous bridges across the Seine. Having become the masters of France, the bourgeois of Paris spent their money in thus changing the face of their city, which attracted within its circuit the whole foreign and provincial world for pleasure and for business. Paris was attacked by a perfect fever of speculation and work, which bore witness alike to the pride and the wealth of the citizens. Their efforts were seconded by active and intelligent prefects, M. de Bondy and M. de Rambuteau. The King himself spent five hours on May 1, 1834, with the whole royal family, in inaugurating the Exhibition of Industry, and on July 14 came to congratulate the exhibitors in person, and distribute amongst them Crosses of the Legion of Honour. The great names of French industry—Erard the pianoforte maker, Fouquet-Lemaître, cotton-spinner, Hartmann and Koechlin, makers of oiled-cloth, Sallandrouze and Thomire, makers of carpets and of bronze, Guimet and Grange, whose trade-marks were world-known—had the honours of that day, on which the wealth and the labour of the middle class received its official recognition. 'You, Sir, have earned our thanks,' said Baron Thénard to the King on their behalf; 'in preserving peace with honour, you have done more for France than by winning battles, or conquering provinces. Our factories have multiplied; our machines have been brought nearer perfection; our manufactures have improved, and their cost has diminished. Our connexions have been enlarged, new arts have actually been created.' In thus thanking the King, the bourgeois were really honouring the success of the Government of order, peace, and commerce, assured by Casimir Perier and followed up by his successors—a success in whose final establishment they rejoiced, as the outcome of the Charter which they were proud to have bestowed on France."—E. Bourgeois, *History of modern France*, v. 1, pp. 160-161.

1848 (February).—Revolution.—Abdication

and flight of Louis Philippe. See FRANCE: 1841-1848; 1842-1848.

1848 (March-June).—Creation of Ateliers Nationaux.—Insurrection consequent on closing them. See FRANCE: 1848 (February-May); (April-December).

1851.—Coup d'état. See FRANCE: 1851; 1851-1852.

1852-1870.—Second empire.—Building activity.—Changes and improvements.—"The intention, which was frankly borrowed from the first Napoleon, was evident: 'to make Paris the unique city of the world, the metropolis of Europe.' This involved nothing less than the destruction of hundreds of houses, and the construction of vast avenues in the place of narrow and unhealthy streets and lanes. 'Hygiene prescribes it; progress demands it,' said the socialist Louis Blanc. The Government scored twice in this process; first, in doing away with an entangled labyrinth of lanes very useful to conspirators and for barricades, and substituting wide spaces to serve the operations of the army of order in case of a riot; and secondly, in providing work for the labourer, air and luxury for commercial men and bourgeois, a satisfaction to the national pride, and noble vistas for the people generally. A prefect of the name of Haussmann, a man of initiative and action, was summoned from Bordeaux to superintend these alterations, the first of which was the construction of the Rue de Rivoli in 1852 and the clearance of the precincts of the Louvre and the Tuileries. He did not shrink from the expense of rebuilding the whole of Paris; he enlarged its borders so as to double its size; he appealed to the public credit to find the means of meeting the burden of so vast an enterprise; he built Central Markets, laid down parks, and created the Bois de Boulogne. Nobody had ever before been so audacious in his use of the spade in an old capital, or in removing so much building material. 'The extraordinary expenditure,' said Haussmann, 'will produce a general growth of revenue and of comfort; it will thus be repaid by the foreigners.' Thus was set on foot a policy which for the next fifteen years was worked in a way to strengthen and give permanence to the forces which had already under preceding reigns begun to attract cosmopolitan admirers of taste and aesthetic temper to enjoy the hospitality of the great city, so fascinating, so rich in all the graces of sense and intellect."—E. Bourgeois, *History of modern France*, v. 2, pp. 21-22.

1867.—Universal exhibition.—In 1867 a magnificent exhibition was held in Paris. All the sovereigns of Europe were invited, and among the guests of honor were Bismarck and Moltke.

1870-1871.—Siege by Germans.—Capitulation. See FRANCE: 1870 (September); (September-October), to 1871 (January-May).

1871 (March-May).—Insurgent Commune.—Reign of Terror.—Second siege of the city. See FRANCE: 1871 (March-May).

1873-1889.—Fortifications extended.—Three universal exhibitions held.—In 1873 in order to make invasion more difficult, Paris decided to spend vast sums on fortifications. The exhibition of 1878 was France's declaration to the world that she had recovered from the German invasion of 1870. In 1880, an exhibition was held to celebrate the centenary of the taking of the Bastille, and in 1880, another was held to celebrate the centenary of the French Revolution.

1897.—Burning of charity bazaar.—A terrible destruction of life was caused on the 4th of May by fire breaking out in a charity bazaar, held in the Rue Jean Goujon, at Paris. Temporary struc-

tures had been erected, of wood and other combustible materials, to represent a street of Old Paris shops, and the flames ran through them like wildfire. The place was thronged with people, mostly of the aristocratic class and more than 200 are said to have perished.

1913.—Syrian-Arab congress. See SYRIA: 1908-1921.

1914.—World War.—Government temporarily removed to Bordeaux.—City prepared for defense. See FRANCE: 1914 (August-September).

1914-1918.—Air raids.—Long range gun.—The bombardment of Paris began on August 30, 1914, with the visit of a German aeroplane. . . . The Zeppelins were a failure. They dropped seven bombs in Paris one night in 1915 [see WORLD WAR: 1915: X. War in the air], and seventeen one night in 1916 and then we heard no more of them. . . . From January 1916 till January 1918 we lived in peace, on the defensive but tranquil. . . . The bombardments of the first nine months of 1918 were the history of Paris in that period. [See WORLD WAR: 1918: VIII. Aviation.] . . . The public shelters were very popular at first, but when they proved admirable breeding places for scarlet fever and measles and influenza, people became a little shy of them. . . . The bombardments by the big guns [see BIG BERTHA] were at first easy to deal with, because they fell in regular lines across Paris. Afterwards they were more erratic."—H. P. Adam, *Paris sees it through*, pp. 210, 212, 216, 220.—See also WORLD WAR: 1918: II. Western front: g, 1; g, 5.

1916.—First general war council held in the city.—On March 27 and 28, the first general war council of the Entente Powers was held in Paris.

1916.—Conference of Allies on trade and tariff policy. See TARIFF: 1916.

1918.—International scientific conference. See INTERNATIONAL ORGANIZATION OF SCIENTIFIC RESEARCH.

PARIS, Conference of: Outline of work.—Constitution.—Question of publicity.—Delegations to conference.—Council of Ten and Council of Four.—"Great peace conferences are proverbially slow bodies. The negotiators of Münster and Osnabrück spent five years in elaborating the treaty of Westphalia [1648]; the conferences of Paris and Vienna labored a year and a half at undoing the work of Napoleon. Judged by these standards the Peace Conference of 1919 was an expeditious body. It began its sessions January 18 and adjourned December 9. . . . The heaviest part of the work was done in less than six months, before the departure of President Wilson on June 28."—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, p. 3.—"When President Wilson

came to France he found that just as he had made up his mind that the League of Nations must be formed, so each of the other nations had certain pet objects which they wanted the Peace Conference to adopt, and in several cases the prime ministers had made definite promises to their people to this end. Prime Minister Lloyd George, for instance, was firm against conscript armies. M. Clemenceau had made definite promises of reparation, and rather than raise more money by taxes, the French cabinet looked forward to having its bills paid by Germany. Signor Orlando and Baron Sonnino were pledged to get everything called for by the treaty of London, the treaty of St. Jean de Maurienne, and the most extreme claims to territory of the Italian nationalists. The Japanese were determined to get a confirmation of their Shan-tung arrangement with China, and a statement guaranteeing racial equality in international relations."—H. Hansen, *Adventures of the fourteen points*, p. 368.—"No one can understand the peace treaty who does not know and cannot measure the human conditions under which it was brought forth. It is singular but true that peace seemed very beautiful during the war, but almost hateful when the war ended. From a superficial survey of the conditions that prevailed at the Peace Conference, one would have been quite justified in assuming that many of the participants preferred war with all its horrors to any peace short of that which they demanded. Their demands had their genesis in deep-rooted and almost ineradicable hatreds and in the insistent desire for self-protection against future danger. Not a few among the Allies were so intent upon momentary gains as to imperil the entire structure of world-peace, which after all was the real purpose of the Conference. Though the peace delegates individually were able and high-minded, they were bound to the wheel of their national aspirations. Therefore they were unable or unwilling to yield on questions that concerned their own national advantages or safeguards against future German aggressions."—B. M. Baruch, *Making of the reparation and economic sections of the treaty*, pp. 5-6.—"The Allies were caught unprepared for war in 1914. They were hardly less unprepared for peace. The Entente powers had stated their war aims on January 12, 1917, when Germany was trying to draw them into peace negotiations. These aims might have been embodied in a treaty, drawn after the recognized European pattern, if the Entente, as it was constituted in January, 1917, had won the war. But Russia presently dropped away. The United States replaced Russia, functioning however, not as an 'Allied' but as an 'Associated' power. On January 8, 1918, President Wilson promulgated his 'Fourteen Points.' [These Fourteen Points were based on the statement issued by the 'Inquiry,' a body of American experts under the guidance of Colonel House.] He supplemented these on February 11th with four 'principles'; on July 4th with four more 'principles,' and on September 27th, with five additional 'principles.' In the Lansing-Solf armistice correspondence, Germany agreed to accept a peace based on the 'Fourteen Points' and on the later 'principles,' particularly those enunciated on September 27th. The principles were vague and abstract and contemplated a peace of conciliation as a first step toward a new world concert which would end wars. The 'Fourteen Points' were also full of ambiguities. By the end of 1918, some of them had ceased to be applicable. Others had nothing to do with the German settlement. Austro-Hungary, Turkey and Bulgaria had invited negotiations without any reference to Mr. Wilson's peace aims. Moreover, the

United States was not at war with either Bulgaria or Turkey. The major Entente powers made a reservation as to Point Two, relating to the freedom of the seas—a principle on which Mr. Wilson had laid special stress in all his prior discussions of peace readjustments. They also insisted that Germany must acknowledge an obligation to make compensation 'for all damage done to the civilian population of the Allied states or their property by the aggression of Germany by land, by sea, and from the air.'—J. H. Rose, *Development of the European nations, 1870-1921*, pp. 413-414.—"One of the earliest problems had been to decide what nations were entitled to a seat at the peace table. The old Russian Empire had collapsed and no stable government existed which the Allies would recognize as having the right to speak in the name of the Russian people as a whole. On the other hand, it was agreed that Poland, Czecho-Slovakia, and the Arab Kingdom of the Hedjaz were entitled to be present as separate states. The newly proclaimed Kingdom of the Serbs, Croats, and Slovenes had not as yet been recognized by the principal Allies, who continued to regard Serbia and Montenegro as separate states, and the remainder of the South Slav areas as Austro-Hungarian territories, the status of which was to be finally settled by the Peace Conference. On the other hand, the British Dominions and India were represented separately, instead of being included in a panel of delegates for the empire as a whole."—A. P. Scott, *Introduction to the peace treaties*, p. 64.—"Not less than a thousand delegates feregathered in the French capital; the British Delegation alone occupied five hotels. The vastness of the machinery was not perhaps incommensurate with the range of the war or the scope of the treaties, but it did not make for the expeditious settlement which was on every ground much to be desired. The Conference itself when in plenary session consisted of seventy delegates; of these, fourteen represented the British Empire [including Australia, Canada, India, New Zealand, Newfoundland and South Africa (see ENGLAND: 1919: British representation at the Peace Conference)]; France, Italy, United States, and Japan claimed five each; Belgium, Jugo-Slavia [Serbia], and Brazil, three apiece; China, Czecho-Slovakia, Greece, Portugal, Roumania, Poland, Siam, and the Hedjaz, two each; Bolivia, Cuba, Ecuador, Guatemala, Hayti, Honduras, Liberia, Nicaragua, Panama, Peru, Uruguay, one each. [Delegations in Paris having no representatives at the conference were from Aland Islands, Albania, Armenia, Austria, Dalmatia, Denmark, Kurdistan, Montenegro, Persia, Syria and Russia. There was also a delegation of Zionists.] The treaty itself was signed by sixty-eight of these, China alone abstaining. . . . The settlement falls naturally into three parts: (1) the remaking of the political map of Europe; (2) the territorial readjustments in Africa, Asia, and the Pacific; and (3) the regulation of future international relations by means of the Covenant of the League of Nations. The territorial resettlement in Europe depended upon five pivots; the readjustment of the eastern frontiers of France; the liberation of the peoples formerly annexed by Prussia, mainly Poles and Danes; the disintegration of the composite Empire of the Habsburgs; the redemption of unredeemed Italy; and the final liquidation of the Turkish estate in Europe. . . . The whole of the cement for the vast edifice erected with so much labour by the diplomatists at Paris is provided by the Covenant of the League of Nations. [See LEAGUE OF NATIONS: Making of the league at the Paris conference.] The text of that Covenant is prefixed to all the principal Treaties

concluded between the Allied and Associated Powers and their late enemies. The drafting and elaboration of its provisions occupied much of the time and thought of some of the leading statesmen of the world at the Peace Conference. Whether the procedure adopted was the best; whether it was wise to incorporate the Covenant in the text of the Treaties of Peace; whether it would not have been better first to formulate the terms to be imposed upon Germany and her allies, and then to have proceeded to elaborate the Covenant, are questions on which there is room for legitimate difference of opinion. But, as things are, the whole structure rests to a large extent upon the observance of the Covenant."—J. A. R. Marriott, *Europe and beyond*, pp. 301-302, 319.—"It was generally agreed that the enemy powers were not to be summoned until the treaty was ready for them to sign. From the outset France, England, the United States, Italy, and Japan assumed the direction of affairs. As Clemenceau frankly pointed out, they had borne the greatest burdens of the war, their armies and navies had largely won the victories, their stakes in the world-settlement were greatest, and on them would fall the principal responsibility for seeing that the terms of the treaty were carried out. Clemenceau was chosen permanent chairman. It was only after a formal protest that the representatives of the press had been admitted, even to the formal sessions, and throughout the Conference there was much criticism of the secrecy maintained 'Open covenants of peace, openly arrived at' had been one of the Fourteen Points. By this . . . President [Wilson] had intended to denounce secret treaties and understandings between statesmen, which might commit governments to undertakings of which the public was ignorant. By no reasonable interpretation could it be taken as a pledge never to thrash out difficult and delicate points in private. Many, however, felt that secrecy was being greatly overdone, and that negotiations were not being conducted 'in the public view.'"—A. P. Scott, *Introduction to the peace treaties*, p. 65.—"It was early apparent that the Conference could not profitably meet and do business as a whole. . . . Some guiding or steering executive committee was obviously required, and it was early found in the delegates of the five chief powers. . . . [But even these five] had thirty-four delegates and it was plain that this also was too large a body for doing ordinary business. So there was early organized a Committee or Council of Ten, each state having two members, ordinarily the chief delegate and the foreign secretary; and this became the active agency of the Conference. It had a secretariat; and expert advisers, civil or military, attended as they were needed. . . . Each special interest, each minor nationality, had a chance to come forward and state its case, usually at considerable length. . . . More and more people were called in. . . . For its last two sessions the Council moved into the large room reserved for the plenary sessions of the Conference. One of these meetings was reported at length in the Paris papers, and it was alleged that undue publicity as well as undue prolixity, was responsible for the sudden change on March 24. After that date the Council of Ten ceased to meet. . . . At times thereafter the foreign ministers met as a Council of Five. But the real power rested with a new body, the Council of the four principal delegates of England, France, Italy and the United States—Messrs. Lloyd George, Clemenceau, Orlando, and Wilson. [See COUNCIL OF FOUR.] . . . Outsiders were called in as needed, but ordinarily the Four met by themselves, with a confidential interpreter, Captain Mantoux, very able and very

trustworthy. There was no stenographer, not even a secretary, though secretaries were usually outside the door to execute orders."—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, p. 24-27.—"The Conference was dominated by personalities whom the events of the war had made the directing minds of organizations far greater than any that had ever previously existed. They were none of them men who could be fettered by a system; they used and 'scrapped' their materials ruthlessly, and thus continually changed the Conference machine to suit the needs of the moment and of the situation. It is impossible to describe the Conference as a static body. It should rather be regarded as a living organism whose cells were constantly changing, and at times it assumed confessedly strange and distorted forms at the imperious will of masters, who in their turn were in the grip of the great forces of public opinion."—H. W. V. Temperley, ed., *History of the peace conference of Paris*, v. 1, pp. 236-237.

Sources of information.—Commission system.—"Information the Conference had in huge quantities, literally by the ton. It came in every day in scores of foreign newspapers, in masses of pamphlets, in piles of diplomatic reports and despatches. Every special interest was on hand, eager to present its case orally to the Conference or its commissions, to enlighten personally the commissioners or their subordinates, to hand in endless volumes of more or less trustworthy ethnographical maps and statistics, of pictures and description, of propagandist matter of every conceivable sort. The collecting and sifting of such information for the Conference had begun years before. The French, systematic as always, had appointed governmental commissions, economic, military, geographic, and had also a special university committee with Professor Lavisse as chairman, which prepared two admirable volumes with detailed maps, on the European problems of the Conference. The British had printed two considerable series of Handbooks. . . . The United States had put little into print, but more than a year before the armistice, by direction of the President, Colonel Edward M. House had organized a comprehensive investigation, known as the 'Inquiry.' . . . Carloads of maps, statistics, manuscript reports, and fundamental books of reference accompanied the American Commission to Paris. The specialists who went along or were later brought together were organized into a group of economic advisers—Messrs. Baruch, Davis, Lamont, McCormick, Taussig, Young, and their staffs; two technical advisers in international law—Messrs. David Hunter Miller and James Brown Scott—with their assistants; and a section of territorial and political intelligence. . . . By March the expert work of the Conference had been largely organized into commissions, not systematically and at the outset, as the French had proposed in January, but haltingly and irregularly, as necessity compelled. . . . Ordinarily a commission consisted of two members from each of the five great powers, with a secretary from each and special advisers as required. . . . Some of the best work of the Conference was done in these commissions, and it is to be regretted that the system was not organized earlier and used more widely. Some matters were never referred to commissions, delicate matters like Fiume and Dalmatia and the Rhine frontier being reserved for the exclusive consideration of the Four. Problems of an intermediate sort were sent to special committees, extemporized and set to work at double speed. Such were the Saar valley and Alsace-Lorraine, referred to a committee of three, Messrs. Tardieu, Headlam-Morley, and Haskins.

. . . As time went on, the commissions tended to throw their reports into the form of specific articles or sections of a treaty. . . . Unanimous reports were likely to go through rapidly. A session of the Council of Four might take an important report clause by clause, with explanations from the committee and suggestions from members of the Council, but without fundamental modifications. On the other hand important changes in one chapter of the treaty were made at the last moment by the Four without any consultation of the commission concerned."—C. H. Haskins and R. H. Lord, *Some problems of the peace conference*, pp. 22-30.—The members of the various commissions were either experts in the subject to be considered, or diplomats of high rank. President Wilson was chairman of that on the League of Nations. The following commissions were appointed by the conference:
