#### LARGE WORLD COFFEE CROP

### EXPECTED IN 1965-66

The Foreign Agricultural Service's second estimate (September) of the 1965-66 world coffee crop put total production at 76.8 million bags 1/, and exportable production 2/ at 62.0 million bags. This estimate is up slightly from the June estimate and considerably larger than the small 1964-65 crop, for which total and exportable production are estimated at 51.8 and 37.2 million bags, respectively.

U. S. gross imports were down to 9.2 million bags in the first 6 months of 1965, as compared with 11.8 million bags during the same period in 1964. Total imports of 22.8 million bags for calendar 1964 were nearly a million bags below the 1963 figure.

The International Coffee Organization (ICO) met in London in August to review the International Coffee Agreement (ICA) to date. Export quotas for individual countries were set following a decision that the total global quota should initially be put at a level of 43.7 million bags for the 1965-66 coffee year (October 1, 1965 - September 30, 1966). In light of the expected large crop in 1965-66 and continually increasing world production, the ICO also moved to implement Articles 48 and 49 of the ICA, which call for the setting of individual and world production goals, and for production control programs in member countries.

## Production

North America: The total 1965-66 North American production is estimated at ll.1 million bags, with exportable production at 8.2 million bags. The respective figures in 1964-65 were 10.3 and 7.4 million bags.

1/ All bags in text and tables equal 132.276 pounds each. 2/ Exportable production: Total production minus domestic donsumption.

GREEN COFFEE: World total production for the marketing year 1965-66, with comparisons 1/

<sup>1/</sup> The coffee marketing season begins during the second half of the calendar year starting in some countries like Brazil as early as July 1 and in other countries about October 1. Exportable production represents total production minus consumption, except for Brazil prior to 1959-60 which was based on "registrations" of current crop minus port consumption and coastwise shipments. 2/ 132.276 pounds each. 3/ 2-year average. 4/ Includes Guadeloupe, Hawail, Jamaica, and Puerto Rico. 5/ Includes Bolivia, British Guiana, Paraguay and Surinam. 6/ Prior to 1962-63, was shown as Ruanda-Urundi. 7/ Shown in Congo (Leopoldville) prior to 1959-60. Combined exports for Rwanda and Burundi in 1959-60 totaled 160,000 bags. 8/ Beginning with 1961-62 includes West Cameroon. Prior to 1961-62 this area was identified as Southern Cameroon and its production was included with Nigeria. 9/ 3-year average. 10/ Prior to 1964-65 year was shown as Tanganyika. Now includes Zanzibar as well. 11/ Includes Cape Verde, Comoro Islands, Dahomey, Gabon, Ghana, Liberia, Nigeria, Congo (Brazzaville), Sao Tome and Principe, Sierra Leone, and Spanish Guinea. 12/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor and Vietnam.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

In Costa Rica, the 1965-66 crop is expected to be up, as that country continues to recover from the natural disasters which affected the 1964-65 crop. The latter crop also came in larger than was expected earlier. In Guatemala, one of the largest crops ever harvested is expected as a result of good growing conditions as well as the progress that has been made against a serious insect pest, the coffee leaf miner. Improved cultural practices are credited for at least part of the larger crops in El Salvador, Mexico, and Honduras. In the first two countries, 1965-66 will also be an "up" year in the production cycle. The 1965-66 crop in Nicaragua is estimated down from the big crop of 1964-65.

South America: Total 1965-66 production in South America is expected to reach 43.7 million bags, with exportable at 34.4 million bags. This is more than double the total output of 20.7 million bags, and almost triple the exportable production, in 1964-65.

The principal reason for the increase in South America in 1965-66 is, of course, the recovery in Brazilian production. A slight August frost in Sao Paulo and Minas Gerais has not damaged 1965-66 production but will probably mean a slight reduction in their 1966-67 output. Total registration figures for the 1964-65 Brazilian coffee year (July-June) were considerably higher than previously estimated, meaning that production in 1964-65 was larger than earlier thought and that more coffee had been held over from 1963-64 than previously estimated. In light of this, the Foreign Agricultural Service has revised both its 1963-64 and 1964-65 estimates for Brazil.

Elsewhere in South America, Ecuador, Peru, and Venezuela are all expected to produce more coffee in 1965-66 than in a year earlier, while Colombia's output is expected to be down slightly.

Africa: Total African production in 1965-66 should reach a total of 17.8 million bags, of which 17.0 is exportable production. This compares with 16.4 and 15.6 million bags, respectively, in 1964-65. During the 5-year period 1955-56 to 1959-60, the average total output was 10.2, of which 9.6 million was exportable production.

Present indications are that the 1965-66 crop in the Ivory Coast, the world's third-largest producer, will reach a record level in this "up" year in its production cycle. In Uganda, production is still expected to be up from 1964-65, although estimates of output for both years are now down, because of prolonged dry weather which has reportedly reduced yields considerably. Production in Angola is expected to be down slightly from the peak reached in 1964-65.

The crop in the Congo (Leopoldville) is expected to be up in 1965-66 as some coffee growers return to farms that they left earlier because of political instability. Kenya's output has been reduced slightly by continuing inroads of Coffee Berry Disease, plus untimely rains.

Asia and Oceania: The total output for Asia and Oceania in 1965-66 is now estimated at 4.3 million bags, as compared with 4.4 million in 1964-65. Exportable production is 2.4 million bags as compared with 2.5 million a year earlier.

Production in the <u>Philippines</u> is expected to be down slightly in 1965-66 because of insect damage. (Production in earlier years has been revised in the accompanying table to correct a clerical error in the first estimate of the 1965-66 crop.) The Philippines is generally a net importer of coffee.

Exportable Production in Smaller Producing Countries: Based on such information as is available, exportable production in smaller producing countries is estimated to be as follows (with comparable 1964-65 estimates in parentheses) in bags: Jamaica 20,000 (15,000); Puerto Rico 25,000 (25,000); Bolivia 20,000 (20,000); Paraguay 40,000 (40,000); Surinam 8,000 (8,000); Dahomey 28,000 (28,000); Gabon 18,000 (19,000); Ghana 48,000 (48,000); Liberia 58,000 (58,000); Nigeria 33,000 (33,000); Congo (Brazzaville) 14,000 (14,000); Sao Tome and Principe 5,000 (5,000); Sierra Leone 90,000 (90,000); Spanish Guinea 110,000 (110,000); New Caledonia 30,000 (30,000); Papua and New Guinea 80,000 (80,000); and Portuguese Timor 33,000 (33,000).

## World Trade and Developments

World trade in coffee in the 1964-65 coffee marketing year (ending September 30, 1965) was considerably below that of a year earlier. This lower level was the result largely of a drawdown in stocks during the year in principal importing countries. Assuming that consumer-country stocks will not go much below the present level, world trade should increase slightly in 1965-66.

Coffee developments in the United States in 1964-65 were probably also a good indication of what happened in other importing countries. Stocks, which totaled about 4.1 million bags on October 1, 1964, climbed to 4.5 by the end of the year and fell off to 2.6 million on June 30, 1965. Stocks were decreased because the trade anticipated that lower prices would follow the large crop. A weakening of prices has thus far been averted, however, by the International Coffee Agreement and its "Indicator Price" scheme, a plan which was inaugurated in the spring of 1965. Hence, with prices remaining fairly firm, there was no rebuilding of stocks to the higher levels of a year earlier. First estimates of U. S. imports of green coffee during the 1964-65 marketing year indicate that the level was almost 2.5 million bags below that of 1963-64, 23.3 million bags.

On a fiscal year basis, U. S. gross imports of green coffee for the year ended June 30, 1965 totaled 20.2 million bags, valued at \$1,072 million. This was a decrease of 4.4 million bags from corresponding imports in the same period a year earlier, with the dollar value down by \$46 million. Reexports of green coffee from the United States during July-June 1964-65 totaled 534,598 bags, as compared with 567,824 bags in the previous year.

During January-June 1965, Brazil supplied only 23 percent of U. S. green coffee imports, as compared with 33 percent during the first 6 months of 1964, and 31 percent during calendar 1964. The African and Asian share (mostly Robusta-type coffee) of the U. S. market was 31 percent during the first 6 months of 1965, as compared with 29 percent in the same period in 1964 and the same percentage in the entire calendar year of 1964. Mild Arabicas showed the biggest increase in the January-June 1965 period, jumping to 46 percent of the total, as compared with 38 percent in the first 6 months of 1964. The biggest increase was in imports from Central America and Mexico, which were running at 23 percent during the first half of 1965, as compared with 18 percent a year earlier and 16 percent in calendar 1964.

Inventories of green coffee held by roasters, importers, and dealers in the United States on June 30, 1965, were 2,591,000 bags, down 1,625,000 bags, or 26 percent, from a year earlier.

Total U. S. roastings for the first 6 months of 1965 were 10,731,000 bags, as compared with 11,661,000 bags in the same period in 1964, and 22,374,000 bags in all 1964. Roastings for soluble use (included in the above data) reached 1,842,000 bags in January-June 1964, as compared with 1,970,000 bags in the first half of 1963. Thus, it appears that roastings for soluble use are continuing their downward trend from the peak reached in 1962.

Spot prices for Brazilian coffees, New York market, averaged slightly lower in September than in the previous 8 months of 1965. Colombians were up slightly over the August level. Robusta prices (Ambriz AA's) continued to strengthen and averaged almost 36 cents a pound in September, as compared with 33 cents in July and less than 23 cents in May of this year.

Retail prices for roasted coffee in one-pound cans averaged 83.5 cents in August, as compared with 83.2 cents in June, according to the U. S. Bureau of Labor Statistics.

The International Coffee Council met in London in August to review the operation of the International Coffee Agreement to date. There was general satisfaction with the Agreement thus far, although it was realized that there are still many problems to be faced. One of the most important of these is a

world production total which continues to increase faster than consumption. To study this problem, the Council resolved to set up a working group to examine all available data relative to basic quotas and production goals and to present its conclusions and recommendations to the Executive Board by November 1, 1965. The Executive Board, in turn, is to review the working group's findings and prepare appropriate draft resolutions for the consideration by the Council before December 31, 1965. The group is also to recommend a policy relative to coffee stocks.

Also discussed at the August meeting was the potential threat to the Agreement of increasing exports from nonmember countries. The Council resolved that all importing members should immediately prepare and report on their respective plans for limiting imports from nonmembers should their share of the world market rise above 5 percent. Such plans will be put into effect if, and when, the executive director of the Agreement determines that such exports have exceeded 5 percent of the global total.
