DR. ROMOLO COSTA¹ has been making observations upon the placenta in the case of over-heavy fetuses, and has made some interesting discoveries. It of course frequently happens that a big fetus has a big placenta, and naturally enough one thinks of the large placenta as the means by which the larger amount of nourishment passes from the maternal system to the fetal one in order to make the greater degree of growth possible. But the afterbirth is not always large in proportion to the largeness of the fetus, and the question then arises as to the mechanism by which the latter obtains a sufficient food supply to account for its unusual bulk. In order, if possible, to solve this problem, Dr. Romolo Costa, working in Professor Mangiagalli's institute in Milan, has examined microscopically the placentas from 28 cases of large (macrosomatous) fetuses. He regarded as macrosomatous all fetuses weighing 4,000 grams and over. The placentas were found to be of two types. One of these types exhibited a very remarkable increase in vascularity. Not only were the villi more numerous and smaller in size, but they also contained more blood vessels, the blood vessels had thinner walls, the connective tissue of the villi was scanty, and the intervillous spaces were more markedly engorged with blood. In a word, there were all the signs of more active circulation in the placenta. It is easy to see that in such a vascular sort of afterbirth more maternal blood is brought into contact with a larger area of fetal vessels; the fetomaternal interchanges will, therefore, be more considerable. As Dr. Costa puts it, a gram of such a placenta has a greater nutritional capacity than a gram of another sort of placenta. In this way it is possible to

explain the greater weight of some large, over-weight fetuses whose placentas have showed no increase in size and weight. In the other type of placenta, however, Dr. Costa found no increased villous and intervillous vascularity; in it there was no territorial augmentation, so to say. Another cause had to be looked for here, and it was found in increased activity of the fetomaternal interchanges by reason of a sort of innately greater functioning power of the placental tissue. Dr. Costa, by preparing the placentas in a special way (Flemming's solution, formic aldehyde, etc.), discovered that the fat was so disposed in the villi as to suggest that it was passing with greater rapidity or in greater amount than usual from mother to fetus. There can be no doubt that these are very interesting observations, although it may be doubted whether the second type of placenta is so conclusively established as the first. Another question arises in connexion both with the vascular type and with that in which there is simply increased activity of function; what is the ulterior cause of the changes? Dr. Costa thinks that the increase in the vascular territory may possibly be a hereditary phenomenon handed down from parent to child, the placenta, we presume, being regarded as part of the child. This is not so likely to be the case in the other type, where one is inclined to think rather of some special circumstance in the pregnancy itself permitting or predisposing to a greater flow of nutriment from the mother to her unborn infant. It is clear that there is much investigation still needed before the physiology of the transplacental interchanges is thoroughly understood; but such work as this here referred to helps to fill up gaps in our knowledge, and, what is no less important, indicates the lines along which further research must travel.

LOUIS PHILIPPE AS SURGEON.

IN an article entitled "A Princely Practitioner," which appeared in the *JOURNAL* of May 31st (p. 1180), certain royal personages were mentioned as having a fondness for practising surgery on the bodies of their lieges. Among them should have been included Louis Philippe. Madame de Genlis, who was governess to the children of the Duke of Orleans (Philippe Egalité), gave them a very practical education, and, among other things, made her young pupils familiar with the principles and practice of what is now called first aid. Louis Philippe could dress and bandage a wound with the dexterity of a professional surgeon. In his youth he had followed courses of surgery at the Hôtel-Dieu and always carried a surgical case. His skill is commemorated by a picture painted by Alfred Johannot, which is now in the French Army Museum. The incident is related by Dr. Cabanès in the May number of *L'Hygiène*. On October 27th, 1833, the French King was going with his family to Le Bourget to await there the arrival of the King and Queen of the Belgians, who were coming to him on a visit. A postboy who followed the royal carriage was knocked down by a cart. He was carried to the side of the road, and the King after examining him declared that he must be bled. There was no surgeon at hand, and the question arose who should do what was needed. No one coming forward in answer to the appeal, the King took out of his pocket a lancet with which he opened a vein, whilst the princesses under his direction tore up their handkerchiefs to make bandages. The operation was successful, and the wounded man recovered perfectly and was a postboy ten years later. The incident was celebrated by a gold medal presented to Louis Philippe by the Société Monthyon et Franklin, in recognition of this manifestation of humanity. According to Victor Hugo this is "the first example of a king shedding the blood of a subject not to kill but to cure." Here, as usual, the omniscience of the great poet is at fault. Peter the Great, as we have already said, was fond of surgery, and other monarchs drew the teeth of their subjects. This they apparently

¹ Costa, R., *Annali di ostet. e ginec.*, xxv, 1 p. 253-265, 1913.

did from their love of the gentle art of dentistry, not by way of indirect taxation like Edward I, and others of lesser degree, in the good days of which Calverley sings:

And, by way of mild reminders
That he needed coin, the Knight
Day by day extracted grinders
From the howling Israelite.

CHLOROMA AND LEUKAEMIC AFFECTIONS OF THE EYE.

CHLOROMA is a very rare disease, and only about 50 cases have been published, although probably many more have died without a *post-mortem* examination or diagnosis. Although the symptom complex is fairly typical, few of the cases published have been recognized before death. The essential features are a lymphocytosis, which rapidly becomes acute and is in most cases the actual cause of death, and a sarcomatosis in which most of the bones and internal organs are infiltrated with granular cells, and massive deposits of new growth in the cavities of the skull, the thorax, and the abdomen occur. These growths and all infiltrated tissues are bright pea green, and it is from this characteristic that the disease, which has also been called cancer vert, has been named chloroma. The orbits are usually occupied by the growth, and in some cases the cavernous sinus is filled with a green mass. The exophthalmos, which is such a distinctive feature of the disease, is to be attributed to the great congestion of the orbital veins produced by these growths. Harrison Butler noted that the exophthalmos disappeared after a violent, almost fatal haemorrhage from the orbit, and that it was not present after death. In his case, which was published in this JOURNAL (1907, vol. i), the proptosis was not caused by the actual presence of the tumour masses in the orbit, but to the obliteration of the cavernous sinuses. The photograph of his case shows the characteristic bossing of the temples caused by the development of green tumour masses under the temporal muscles. Another very typical case was published by Dunlop in this JOURNAL, and in 1909 a case was very thoroughly investigated by Hall,¹ who gives a complete bibliography. Hudson² describes a case which died in the Royal London Ophthalmic Hospital in 1908. Unfortunately, its true nature was not recognized during life, and the blood was not examined. The patient had some atypical symptoms, and an acute mastoid abscess, from which green pus escaped, developed. The histology of the case is minutely described. It is unfortunate that the green colour rapidly fades, and specimens do not show the characteristic and striking coloration seen at the necropsy. In the same number of the reports there is another paper by Hudson upon leukaemic affections of the eyes. A case of myelogenous leukaemia with tumour formation in the conjunctiva and elsewhere, was treated by x rays. The disease became acute, an excess of large mononuclear cells appeared in the blood, and the patient died. *Post mortem* it was found that the spleen, the lymphatic glands, the liver, the kidneys, the tonsils, and the bone marrow of the femur were densely infiltrated with the same type of lymphocyte. The same applied to the tumours which formed in the skin and elsewhere. The paper gives an excellent historical review of the whole subject and the practical warning that x rays may be the cause of the acute exacerbation of a myelogenous leukaemia into the pernicious form. This fact was first noted by Rist and Beclère.

THE FRENCH HOSPITAL IN LONDON.

THE first public institution visited by the President of the French Republic after his arrival in London was appropriately the French Hospital in Shaftesbury Avenue. This admirable institution, which was founded through

the exertions of the late Dr. Achille Vintras, is managed by a committee of French residents in London, and is officered by English physicians and surgeons, of whom the seniors are respectively Dr. George Ogilvie and Mr. Edmund Owen. The hospital is open to all poor French persons and all poor foreigners speaking French, irrespective of creed or nationality. In 1912 the number of in-patients was 1,122, and of out-patients 5,064. In 1898 the hospital was enabled, partly by a bequest from M. Auchois, and partly by a gift of £4,000 by the French Government, with the assistance of the French Ambassador, to establish a convalescent home in Brighton. By the subsequent addition of the Paul Cambon Wing in 1904, and of the Ruffer Wing, built by the honorary president of the hospital as a memorial to his parents, the number of beds available at Brighton has been increased to 60, those in the Paul Cambon Wing being allotted to permanent pensioners. During 1912 the number of convalescent patients sent to the home was 380. The President of the Republic on arriving at the hospital on Wednesday morning was conducted to the board room where were assembled a number of supporters of the hospital, the medical and surgical staff, and representatives of the nursing sisters, and of the Red Cross nurses who work in the hospital. The president of the committee of management presented an address, in which he referred to the generous contribution of the French Government for the building of the hospital and to Dr. Achille Vintras, the best part of whose life had been devoted to advancing the interests of the institution. The address also made reference to the bequests of M. Auchois and to the interest the French Ambassador had shown in the development of the hospital. M. Poincaré, in replying, said that he was glad that his visit to London afforded him the opportunity of rendering his homage of admiration and expressing the gratitude of the French people to the medical staff of the hospital, to the devoted women who seconded their efforts, and to the whole *personnel* of the institution. M. Poincaré then conferred the distinction of Chevalier of the Legion of Honour on Mr. Clayton-Greene, one of the surgeons of the hospital, and decorated Mr. Hewitt Fletcher, the honorary auditor, with rosette of Officier de l'Instruction Publique. The President then visited the wards of the hospital, and conversed with some of the patients. M. Gaston Pondepeyre, the secretary of the hospital, had received on the previous day the distinction of the Legion of Honour.

THE CENTENARY OF GAS.

It is just over a hundred years since our native fogs were first lightened by illuminating gas, and the present year sees also the jubilee of the Institution of Gas Engineers. The double event is to be celebrated in October by a National Gas Congress and Exhibition in London. At the jubilee meeting last week of the Institution of Gas Engineers, the President, Sir Corbet Woodall, delivered an address which had a wider range than the technical interests of the audience to which it was immediately addressed. He combated the idea that it was the incandescent mantle, arriving at the opportune moment, which propped up a declining industry. It was not Welsbach but Sir George Livesey who preserved the gas undertakings, and it was done by remodelling gas finance, so that, with pecuniary interest yoked to public duty, the reborn industry could enter the good fields of domestic cooking, house-warming, and industrial fuel-supply. Sir Corbet Woodall claimed that, so far as science could test the question, it was only by means of ordinary town gas, made straight from the most suitable coal of the district, that the huge domesticsquandering of coal could be checked, and the smoke nuisance in towns abated. With regard to lighting, once the only function of gas, he pointed out that within the history of gas engineering the light obtainable from a cubic foot of gas had been increased from 2 to 60 candles, and suggested that even this limit might be

¹ *Proc. Roy. Soc. Med.*, vol. ii, No. 5, 1909.

² *Royal Lond. Ophth. Hosp. Reports*, vol. xviii, Pt. ii.

greatly improved, because no means existed of determining what were the final possibilities in the development of light from potential energy, whether in the form of the electric current or the combustion of coal gas. Sir Corbet did not think that gas would be superseded. With cheap gas as a result of more economical working, and an increasingly efficient public supply service, all the consequential benefits talked about by the prophets of town hygiene would follow as a natural course. A greater amount of smokeless, labourless fuel would be provided for urban Britain every year, and more coal fires would be put out. He contrasted the working man employed in gas concerns thirty years ago with his successor of the present generation, and the result of his experience is worthy of study by the sociologist. There was a time when those in charge of gasworks anticipated each week-end with anxiety, not to say disgust. Otherwise excellent and dependable workmen would be absent or would present themselves in a disgraceful condition, even to such an extent as to render the plant idle, and to endanger the adequate supply of a district. Wages were lower than at the present time, but the amount spent on drink was far higher. The drink trouble had now absolutely vanished, owing, doubtless, to education, domestic refinement, increased means of healthy recreation, and aids to thrift. The problems with which the modern captain of industry was faced were of a different character, but, with regard to these, Sir Corbet saw in co-partnership the good leaven which might yet work through the entire labour lump. Of the subjects set down for discussion and popular demonstration at the Congress more than half are connected with the hygienic aspects of the gas question, and the exhibition is to be on co-operative lines, the exhibiting firms having suppressed their rivalries and agreed to show only those pieces or sections of apparatus which, in the opinion of the executive committee representing the various gas associations, dovetail in with the general educational scheme. The idea of the movement, which is under royal patronage and has the support of many municipalities, is to link up the use of gas with the domestic and industrial arts, and even to give it a sociological significance.

THE POSITION IN SOUTH WALES.

WE are informed that, arising out of the visit paid by Dr. Addison, M.P., to South Wales, a meeting of the colliery surgeons has been held, and that representatives have been appointed with full powers to arrive at a settlement on behalf of their colleagues, and to attend a conference with the authorities and with other interested parties. No date has yet been fixed for the holding of the proposed conference, but negotiations are proceeding with a view to its being arranged as soon as possible.

THE ANNUAL MEETING: BRIGHTON.

MEMBERS proposing to attend the annual meeting of the Association at Brighton next month will find at pp. 7-10 of the advertisements a list of hotels and lodgings, and also the form to be filled in notifying their intention to be present. Members are requested to post this form without delay in order to facilitate the arrangements in Brighton. On the receipt of the form the necessary railway vouchers enabling members of the Association and their friends to travel to Brighton and back at the reduced rate of a single fare and a third will be forwarded. The tickets will be available from July 17th to July 28th inclusive.

AS announced in our advertisement columns, an examination for commissions in the Royal Army Medical Corps will be held on July 23rd. The presence of candidates will be required in London from July 21st. Applications to compete should be made to the Secretary, War Office, by July 14th.

Medical Notes in Parliament.

[FROM OUR LOBBY CORRESPONDENT.]

Insurance Act Amendment Bill.

ON Tuesday, June 24th, under the ten minutes rule, the Chancellor of the Exchequer introduced the bill to amend the National Insurance Act.

The points in which he indicated that amendments of the bill were being proposed were:

1. The bill would legalize the additional grant to the medical profession.
2. It would fulfil the promise of the Government in regard to those voluntary contributors who under the existing Act might continue as insured persons, although their income was above the limit fixed in the bill, if they had been members of a society for more than five years. The bill would secure that these persons would not be able to receive medical benefit under the ordinary conditions of the Act.
3. Other provisions affecting the medical profession are an increased grant in respect of insured persons of more than 65 years of age, so as to bring the contribution for them in respect of the cost of medical attendance and treatment up to the same amount as for other insured persons, so as to secure, under the understanding arrived at between the medical men and the societies, that they should be treated on the same terms as other insured persons.

4. A further provision affecting medical benefit was a Government grant of 2s. 6d. a head to old and disabled members of friendly societies who formerly were receiving medical benefit, but who, in consequence of their age or disablement, had not been received into approved societies and had been deprived of medical benefit.

5. Another provision affecting medical men is that persons exempted from insurance, to the number of nearly 80,000, but on whose behalf the employer pays a contribution, are to receive medical and sanatorium benefit in virtue of the employer's contribution.

6. Other provisions of the bill will provide full sickness benefit to insured persons over 50 years of age, and the present distinctions operating at 60 and 65 will cease, so that the benefits of the Act will be uniform for all classes up to the age of 70.

7. It was also announced that the arrears arising from unemployment which are at present required to be paid by insured persons should not include the employers' section of the arrears provided, but the insured person should be responsible for his own section of the arrears only, the employers' section of the arrears being made good by a State contribution.

The Chancellor outlined the portion of the bill relating to casual labour, stating that the general purpose of the provision would be to make the contribution levied vary with the number of days' work within certain limits, instead of charging the full weekly contribution of fourpence on half a day's or on a full day's work, as may happen at present.

We believe that the proposal which is likely to be adopted will embody some modification of the principle of a daily stamp with limits within each week, and that the standard of 7d. as the unit weekly contribution will be maintained.

He stated also that increased powers should be taken to penalize employers who failed to pay their contributions or made improper deductions from wages.

A detailed study of the bill and the effect of the provisions it contains must be postponed until it has been printed.

Mental Deficiency Bill.

The Committee Stage of the Mental Deficiency Bill was continued in Standing Committee B on June 19th and 24th. On June 19th very considerable progress was made with the bill.

Clause 3, which relates to the placing of mental defectives in an institution or under guardianship at the instance of a parent or guardian, was amended in two important particulars with a view to guarding against possible abuse. The amendments provided that a second

medical certificate should be furnished in these cases, and that one of the certificates should be given by a medical man whose name was on a list of medical men selected for that purpose by the local authority, and it was further provided that the petition should be accompanied by a certificate from a judicial authority. Considerable discussion took place on the question of the second medical certificate. Suggestions were made that one of them should be furnished by a special medical officer or by the medical officer of the institution to which the defective was to be sent. It was finally agreed that convenient and suitable provision could be made by the local authorities constituting a panel of medical men who were judged to be specially suitable for the purpose of granting these certificates.

A further important amendment was made to Subclause (3) of Clause 5 with a view to safeguarding the rights of the parent in cases in which a local authority shall present a petition in respect to a feeble-minded person. At the suggestion of Mr. Ellis Davis and Dr. Addison, an amendment was unanimously inserted to the effect that such a petition from a local authority must be accompanied by the consent of the parent or guardian, unless, in the opinion of the judicial authority, there are grounds for believing that such consent is being unreasonably withheld. The objection that, as the bill stood, a child might be taken from its parents or guardians against their will at the instance of a local educational authority, has been responsible for much of the opposition to the bill, and the amendments inserted will probably do much to allay it. The qualification with regard to the consent of the parent was introduced to meet that class of case in which parents are alleged to allow mentally defective girls to be used for immoral purposes.

Clauses 6 to 10 inclusive were rapidly passed through Committee with little or no amendment, and the Committee adjourned on the motion that Clause 11 stand part of the bill.

This important clause deals with the duration of detention under orders and the conditions under which a revision of the cases is undertaken. Dr. Addison pointed out that under Subclause (2) it appeared as if the case of a mentally defective child or young person might not be reconsidered by the visitors in the same annual or five-yearly periods as in the case of the other defectives, but that it might be open for such a case not to be reconsidered by the visitors until within three months after attaining the age of 21 years. This was plainly not the intention of the clause, and Mr. McKenna undertook to introduce words at a later stage which would remove any ambiguity on this subject.

At the meeting of the Committee on Tuesday, June 24th, Clauses 11 to 17 were added to the bill with several minor and not important amendments. On the motion of Mr. Rupert Guinness, Clause 12 was amended so that the authorities of a certified institution or home may discharge a defective on giving seven days' notice to the Board of Control. On Clause 14, in response to suggestions by Dr. Addison, the Home Secretary undertook that the mental condition of a person taken to a place of safety on being found neglected, abandoned, or cruelly treated, and thought to be a defective, should be reported on without delay. With respect to transfers from one institution to another, an amendment, proposed by Mr. Martin, was inserted in the bill in Clause 15 to the effect that the parent or guardian of the defective proposed to be transferred should be notified of the proposed removal, and informed of his right to withdraw the defective in accordance with the provisions of Section 12 of the bill. No material amendments were made in Clauses 16 and 17.

The first part of the bill concludes with Clause 18, and considerable discussion is likely to arise in the next sittings of the Committee over the clauses from Nos. 20 to 30, which set up the Board of Control, and relate to the position and duties of the local authorities.

In reply to Mr. Edward Wood on June 23rd, the Prime Minister said that the Government intended to proceed with the bill.

Mental Deficiency Bill (Scotland).—Mr. Frederick Whyte asked the Secretary for Scotland whether he was aware that many persons in Scotland apprehend that Clause 2, Subsection (1), of the Mental Deficiency and Lunacy

(Scotland) Bill was to be interpreted as meaning that defective children might be removed from their homes without the consent of their parents; and whether, in order to allay such fears, he would make an early and authoritative statement on the point.—Mr. McKinnon Wood replied that the bill contemplated that a defective child, like any other child, should remain at home under the guardianship of his parents, and be educated or trained with the assistance of the School Board when required. No child could be removed to other guardianship or to a special institution without the consent of the parents, except under a judicial order, which would ensure full consideration of every reasonable objection on the part of the parent. Resort to this procedure should in practice be very exceptional, but there were special circumstances in which such a procedure might be necessary in the interests of the child.

Dogs Bill.—The adjourned meeting of the Standing Committee A on the Dogs Bill was held on Wednesday, June 25th. Considerable debate arose, in which Sir Philip Magnus, Dr. Chapple, Sir Henry Craik, and others took part in opposing the bill. Up to the adjournment for lunch little more than the first line of the first clause had been added to the bill. After lunch a quorum was not again obtained, and the meeting of the Committee was accordingly adjourned until Wednesday, July 2nd.

Duties, Emoluments, and Expenses of Medical Officers of Health.—Sir Philip Magnus asked the Prime Minister whether, having regard to the functions which were discharged by medical officers of health, particularly in the inspection of and reporting on the insanitary dwellings of the poor, in giving effect to the recent tuberculosis orders and in other matters affecting the health of the people, and having regard also to the disabilities under which they suffered in respect of fixity of tenure of office, absence of any superannuation allowance, and the payment out of their salaries of the increased and increasing expenses connected with the discharge of their responsible duties, he would appoint a committee to inquire generally into their conditions of service, and to report to the House.—Mr. Burns replied that he was considering the question of the extension of the principle of fixity of tenure of whole-time officials and other aspects of the matter in the light of changes introduced by recent legislation, and would give careful consideration to the suggestion.

Colour Vision Tests.—Mr. Cathcart Wason asked what percentage of men had failed with the colour vision tests introduced on April 1st, and how this percentage compared with that of former years; and how many men had passed with the wool test and failed with the lantern test, and vice versa.—The Parliamentary Secretary to the Board of Trade said that the total number of men examined in colour vision from April 1st to May 31st was 1,689, and of these 105, or 6.22 per cent., failed. Of the 105 failures, fifty-five failed in both the wool test and lantern test, and fifty in the lantern test only. None failed in the wool test only. It was not possible to give corresponding figures for previous years, since the statistics available related to examinations, and not to individuals. In 1912, out of 7,326 examinations in colour vision, 163, or 2.22 per cent., resulted in failure. The figures for the two periods were not comparable, both because of the difference of basis and because the Board of Trade had reason to believe that the number of candidates examined in the last two months included an abnormal proportion of persons who had never been examined before, among whom, naturally, the percentage of rejections was disproportionately high.

Post Office Cycles.—Mr. John Walsh asked the Postmaster-General if the postal telegraph messenger boys of 13 years of age were compelled to use bicycles weighing 37 lb., with a pedal, in many cases, 1 in. longer than the reach of their legs when the saddle was at its lowest point; if the danger to the health of those boys by such practice had been continuously brought under the notice of the authorities in London by one of the medical officers for some months past; if such representation had resulted in a point-blank refusal to supply a more suitable machine; and if this decision had been come to with the approval of the senior and second medical officers to the General Post Office.—

The Postmaster-General said that the question of the weight and build of the cycles used by telegraph boy messengers in the Post Office had received very full consideration; and he was advised that the present type of machine was suitable in all respects and was as light as was compatible with safety and durability. He was not aware that injury to the health of boy messengers had resulted from the use of this type of cycle. There were standing instructions that the saddles were to be carefully adjusted before the cycles were used. It was true that representations were made by one Post Office medical officer concerning the weight and build of a cycle used by boy messengers in his district; but the chief and second medical officers to the Post Office, who had seen the medical officer's representations and the reports on the local inquiry which was held in the matter, were satisfied that the cycles were of a suitable build and weight.

Veterinary Inspector (Scotland).—Mr. Charles Bathurst asked the Secretary for Scotland as to the duties and qualifications of the new Veterinary Inspector to the Local Government Board appointed in Scotland, and was informed by Mr. McKinnon Wood that his duties are to supervise throughout Scotland the inspection of meat, of cattle, and of dairies in relation to milk supply. In further reply to Mr. Bathurst, Mr. McKinnon Wood said that Professor G. R. Leighton, who had been appointed Veterinary Inspector, held the following degrees and distinctions: M.D., C.M., L.R.C.P. and S.E., L.F.P.S.G., and F.R.S.E. He had been connected with Royal Dick Veterinary College since 1902, first as lecturer on comparative pathology and bacteriology, and latterly as professor of pathology, bacteriology, and meat inspection. In that capacity he had given lectures on diseases of animals, bacteriology of animal diseases, practical pathology, practical bacteriology, and meat inspection, and also demonstrations on healthy and diseased carcasses, the lectures on meat inspection and the demonstrations being conducted at the Edinburgh Corporation slaughterhouses. Professor Leighton had also a knowledge of Continental abattoirs, meat inspection, and methods of dealing with milk supply.

Medical Treatment and Nursing in the Highlands and Islands.—Major Hope asked the Secretary to the Treasury if he could state the amount of the sum which was to be granted for providing improved medical and nursing services for uninsured persons in the Highlands and Islands as recommended by the Medical Service Committee; and if he had come to an agreement as to whether the Insurance Commissioners or the Scottish Local Government Board should administer this grant. — Mr. Masterman replied that, under the arrangements proposed, the expenditure in respect of insured persons and non-insured persons would be met from a common fund made up of the moneys available under the National Insurance Act for medical benefit—the extra Parliamentary grant-in-aid of that benefit, and the proposed special Highlands and Islands Medical Service Grant of £42,000 per annum. It would not be possible to estimate beforehand what proportions of the total fund would be required for insured persons and non-insured persons respectively, but, when some experience had been gained, the approximate expenditure in respect of each class could no doubt be ascertained. It was proposed that the new grant should be administered by a Joint Committee of the several Government Departments concerned, in accordance with the Report of the Departmental Committee.

Docking of Horses.—In reply to Mr. George Greenwood, Colonel Seely said that representations had recently been made to the horse trade on this subject, and an order was now being issued to all concerned that after three years from this date no docked horse would be purchased for the army.

Foot and Mouth Disease (India).—In response to Sir John Spear, Mr. Runciman said that the report of the Committee sent out to India by the Board of Agriculture to investigate the cause and treatment of foot and mouth disease in cattle had been completed, but the drafting of a detailed report had been postponed owing to the illness of Sir Stewart Stockman, who was not yet able to attend to business.

Scotland.

(FROM OUR SPECIAL CORRESPONDENTS.)

TUBERCULOSIS TREATMENT IN EDINBURGH.

DURING last week a good deal of interest was aroused among medical practitioners in Edinburgh by the circulation for signature of a memorial to the Lord Provost, magistrates, and Town Council, giving the views of the signatories on the proposed appointment of an assistant medical officer of health who should concern himself with cases of tuberculosis in insured and uninsured persons. The memorial was evidently widely approved, for over 200 names were appended. Attention was drawn to this proposed new appointment in these columns some time ago (April 12th, page 791).

The report recommended that the Corporation should appoint an assistant medical officer of health, with special qualifications for dealing with tuberculosis, who should give his whole time to the duties of the office and receive a salary of not less than £500 per annum. His services were to be placed at the command of the Local Insurance Committee, for purposes connected with sanatorium or other treatment of tuberculosis. The report also recommended that the arrangements at present subsisting between the Corporation and the Royal Victoria Dispensary, under which the Corporation contributes £450 per annum, should be amended, so that the dispensary would undertake to give dispensary treatment to all persons, whether insured or uninsured, sent by the medical officer of health or the assistant medical officer of health. It was recommended that the Corporation should also secure the services of a thoroughly qualified consultant to act as consulting officer to the Corporation and the Insurance Committee in connexion with the prevention or treatment of tuberculosis in all its forms, whether in insured or uninsured persons. It should be noted that the Corporation already receives insured persons sent by the Insurance Committee for sanatorium treatment to the City Hospital at Colinton Mains, established for the treatment of infectious diseases under the Public Health Act, Dr. Alexander James, the physician to the hospital, undertaking the treatment of tuberculous patients at a remuneration of £300 per annum.

The full meaning of the scheme, however, only began to be apparent lately. The memorialists represent that this new arrangement would have the effect of giving to an officer in the Public Health Department the power to revise the judgement passed by practitioners of medicine in respect of the actual clinical condition of the patient and the form of treatment that shall be adopted; and they protest against the intrusion of the medical officer of health or of his assistant into the clinical sphere. The memorial proceeds: "In relation to the clinical aspects of tuberculosis—that is to say, the diagnosis of the form and stage of the disease in a given individual and the treatment which the determination of these facts would entail—we dissent entirely from the suggestion that the opinion of the medical practitioner should be subject to consideration or reversal by any one save a clinical consultant such as the profession is in the habit of meeting in relation to other medical practice. If, for the purpose of sanatorium benefit, it is necessary that the applications be submitted to one person, who shall act as adviser to the Committee, we claim that such official should be a clinician of high standing, in whom the profession and the public could place entire confidence. We believe that the appointment of an assistant medical officer of health to undertake such duties would not be in the interests of patients suffering from tuberculosis, and is calculated in the highest degree to create dissatisfaction and distrust in the public mind, as it certainly would in that of the medical profession."

On June 20th the joint subcommittee of the Public Health Committee and the Burgh of Edinburgh Insurance Committee submitted its report dealing with the tuberculosis arrangements at a joint meeting of the Public Health and Treasurer's Committees of the Edinburgh Town Council; the report was unanimously approved by these Committees, and was submitted for the consideration of the Town Council. In this report, to which reference was made in these pages some weeks ago (April 19th, page 850), one of the recommendations is the appointment of a qualified assistant to the medical officer of health, who would give his whole time to the duties of the office in dealing with tuberculosis patients, and advise the

Insurance Committee as to the appropriate form of benefit in each case, whether hospital, dispensary, or domiciliary, the salary proposed being £500. The appointment is to be made after advertisement, the terms of which are to be submitted to the Insurance Committee. Most of the other suggestions outlined already (*vide* page 791) were accepted in principle in the report. The estimate made by the Insurance Committee of the expenditure for the year on sanatorium treatment was submitted at the meeting, and this showed that the income which the Insurance Committee received was not sufficient to enable it to carry out all the work on sanatorium treatment. The question came therefore to be, Would the Corporation agree to pay one-half of the deficiency whilst the Treasury paid the other? The deficiency amounted to £10,700, which meant that the Corporation would have to pay £5,350. It was agreed to recommend the Corporation to meet half of the deficiency under two conditions—namely, first, that the Treasury pay the other half; and, secondly, that the Burgh Insurance Committee approve of the scheme for the treatment of tuberculosis patients submitted by the Public Health Committee to the Town Council, after consultation with a special committee of the Burgh Insurance Committee.

The Insurance Committee met on June 23rd to consider the recommendations of the Sanatorium Benefits Subcommittee, which had been in conference with the subcommittee of the Public Health Committee of the Town Council.

The substance of the report was that the Committee should approve of the appointment by the Town Council of a qualified assistant to the medical officer of health to act as tuberculosis officer at a salary of £500 per annum; that the Insurance Committee agree to an arrangement being made by the council with the directors of the Royal Victoria Hospital for utilizing the dispensary in connexion with the scheme for dealing with tuberculosis, under which the magistrates and council would pay to the directors a sum of £1,000 per annum; that a consultant or expert adviser be appointed at a salary of £500 per annum; that the Insurance Committee receive the services of the tuberculosis officer, consultant, and dispensary, on the payment of one-half of the salaries of the tuberculosis officer and the consultant, and one-half of the contribution of £1,000 to the dispensary; and that the appointment of consultant be offered to Sir Robert Philip.

Councillor Robertson presided, and stated in detail the various steps of the negotiations up to the present time. Some discussion then took place as to whether the committee was now dealing with a report or with a "cut-and-dried" scheme. A motion was then made that the standing orders be suspended in order that the whole position be discussed *de novo*; on a division, 22 voted for suspension and 19 against, and as a two-thirds majority was necessary for suspension, the motion was lost. Mr. William Guthrie then moved approval of the recommendations, and stated that he could not see any objection to the appointment of an assistant medical officer of health; he would be so only in name, for his whole time would be taken up in dealing with tuberculosis, and he would be at the beck of this Committee. Councillor Young seconded, and maintained that they were following the lines of the Astor Report in appointing a tuberculosis officer through the public authority, and in making him a whole-time officer under the medical officer of health; he was also to be an expert clinician, whatever else he might be. Mr. Simpson moved to disapprove, as he regarded the scheme as disastrous to the patients; and Mr. Warden, who seconded this motion, said he based his action on the ground that such an authority as Sir Robert Philip was against the proposed scheme. A somewhat heated discussion followed, and, finally, on a division being taken, 21 voted for the approval of the report and 19 against. The report, therefore, was adopted.

At a special meeting of the Town Council, held on June 24th, the reports of the Public Health and the Treasurer's Committee were presented by Mr. Macpherson (the convener). There were in all seven recommendations:

1. That a qualified assistant to the medical officer of health be appointed to act as tuberculosis officer at a salary of £500 per annum.
2. That an inquiry officer be added to the staff of the medical officer of health, at a salary of £100 per annum.
3. That an arrangement be made with the directors of the

Royal Victoria Hospital for utilizing the Royal Victoria Dispensary in connexion with the scheme for dealing with tuberculosis, under which the magistrates and council will pay to the directors a sum of £1,000 per annum, and the existing agreement with the directors will be superseded.

4. That a consultant or expert adviser be appointed at a salary of £500 per annum.

5. That an agreement be made with the Insurance Committee under which the services of the tuberculosis officer, consultant, and dispensary will be available to them on the footing that the Insurance Committee pay one-half of the salaries of the tuberculosis officer and the consultant and one-half of the contribution of £1,000 to the dispensary.

6. That the appointment of consultant be offered to Sir Robert Philip.

7. That Dr. James be appointed consulting physician at the City Hospital for cases of tuberculosis at a salary of £300 per annum.

Mr. Macpherson moved the adoption of the report, and pointed out that time was now pressing; the only important variation in the proposal was, he said, that the sum of £600 for the dispensary had been increased, at the request of the directors of the dispensary, to £1,000. The scheme substantially followed the lines of what was known as the Astor Report. After explaining the duties proposed to be assigned to an assistant medical officer of health, he stated that the consultant would be in effect the senior tuberculosis officer. The Committee suggested the name of Sir Robert Philip for this post, but it was open to the Council to propose another name, and so in the meantime he would leave the name of the consultant out of the motion. Mr. J. A. Young seconded, and expressed his opinion that the criticisms of the medical men were largely, or almost entirely, due to misapprehensions. If there was any interference between doctor and patient, it was an interference laid down by Parliament as necessary, and which the Town Council, as administrators, could not alter. In most cases in the past the part which the medical officer would play had been played without the slightest complaint from the medical profession or from the patients. Mr. Bruce Lindsay moved that the matter be remitted for further consideration, and Baillie Lyon seconded. On a division, the report, with the exception of that part dealing with the appointment of a consultant, was adopted by 37 votes to 3. The proposal to appoint a consultant was next considered, and in reply to a question whether any city or town had made a similar appointment, Mr. Macpherson replied that the circumstances in Edinburgh were unique. It had been done with a view of recognizing the great work which Sir Robert Philip had done in the burgh and in Scotland, and to acknowledge the usefulness of the Victoria Hospital and its work. Mr. Bruce Lindsay objected to the proposal, which was tantamount to saying to the medical men of the city: "A consultant has been appointed to whom you must go, and to no other person." He moved that the proposal to appoint a consultant be remitted back to the Committee. Mr. Deas seconded. Mr. Harrison said he agreed to the proposal if it were made a personal appointment, so leaving it to their successors in office to decide whether Sir Robert Philip should have a successor or not. Mr. Macpherson accepted this modification. The Council then voted on the question, and 35 members supported the proposal that the appointment be made a personal one, and 5 voted for delay. The financial arrangements as recommended by the Treasurer's Committee were then described by Treasurer Lorne Macleod, and were adopted.

The new buildings rendered necessary by the increased number of phthisis cases sent for treatment to the City Hospital at Colinton Mains under the Insurance Act are now in process of erection. The shelters are in the form of long sheds, open in front except for low screens between the supporting pillars; dressing-rooms and bathrooms are being erected also. Provision is being made at present for 63 beds. Mr. McHattie, the City Gardener, has a scheme in preparation for the planting of shelter belts of trees, which will require some 40,000 trees, about half of them being Austrian pines, and the others being elms, willows, and Canadian poplars. If the scheme be carried out as proposed, quite a pine forest may be expected to be in existence in a few years. The new shelters were inspected on June 17th by the Public Health Committee of the Edinburgh Town Council, and Mr. McHattie's tree-planting plan was discussed.

TREATMENT OF TUBERCULOSIS AT LEITH.

Dr. William Robertson, M.O.H., Leith, has issued a report on the administrative control of pulmonary tuberculosis, in which he states that the work connected with this disease demands far more personal and continual application than all the infectious maladies grouped together, excepting, perhaps, plague, small-pox, and typhus. Dealing next with the question of sanatorium accommodation, the report maintained that, if twenty beds sufficed for insured persons, thirty-four more would be enough for the dependants. The burgh architect believed that he could erect a sanatorium to contain that number at a cost of not more than £7,000. To meet the cost a grant of £50 a bed from the Local Government Board would provide £2,700, leaving £4,300 chargeable to the rates; for furnishing £800 would be required, making a total so chargeable of £5,100. Dr. Robertson thought that unless sanatorium benefit was restricted to phthisis serious expense would be incurred.

A COMBINED TUBERCULOSIS SANATORIUM.

At a meeting, on June 18th, of the Selkirk County Council for the purposes of the National Insurance Act, it was decided by a majority to combine with the counties of Berwick, Linlithgow, Peebles, Haddington, Midlothian, and Roxburgh in forming a central institution as a sanatorium for patients suffering from tuberculosis, and to maintain five beds therein as the share of the county of Selkirk. The amendment, which was lost (by 4 votes to 12), was that the council should have an institution of its own for the treatment of all cases. The question of the provision of local hospitals and dispensaries was delayed for further consideration.

EDINBURGH PROVIDENT DISPENSARY.

At the annual meeting of the Edinburgh Provident Dispensary, Marshall Street, on June 10th, when Mr. James MacIntosh presided, it was reported that during the past twelve months 4,831 patients had been treated, a decrease of 499 as compared with the previous year. The effect of the Insurance Act had been to diminish very considerably the number of adult males treated; but it had in no way impaired the usefulness of the dispensary, a large field of work being found among the numerous dependants on insured persons who were not themselves entitled to the benefits of the Act, as well as amongst the unemployed and uninsured class.

ECHO OF THE TURCO-BULGARIAN WAR.

Dr. Alice Hutchison, who was principal medical officer of the hospital of the Wounded Sick and Wounded Convoy Corps at Kirk Kilisse during the late war, was entertained to dinner at the Edinburgh Café on June 20th by some forty ladies. Dr. Hutchison had been absent in Bulgaria from November till recently, and since the end of January, when the Women's Convoy Corps returned to London, she had been working under the Bulgarian Red Cross Society, and had had charge of a field hospital to the south of Adrianople after the fall of that city. Dr. Elsie Inglis was in the chair, and proposed the health of the guest of the evening, who gave an interesting account of her experiences in Bulgaria. It was stated that this was the first occasion in which a medical woman had taken full charge of a military hospital in time of war.

FINLAYSON MEMORIAL LECTURE.

A large number of members of the medical profession, on the invitation of the Royal Faculty of Physicians and Surgeons in Glasgow, attended the Finlayson memorial lecture in Glasgow on May 6th. Dr. James A. Adams presided, and introduced the lecturer, Sir Thomas Clifford Allbutt, K.C.B., Regius Professor of Physic, Cambridge. Among others present were Dr. John Barlow, visitor, and Dr. W. G. Dan, treasurer of the Faculty; Principal Sir Donald MacAlister, and Sir Hector Cameron. The subject of the lecture was "Byzantine Medicine, from Galen to Salerno."

Ireland.

[FROM OUR SPECIAL CORRESPONDENTS.]

ULSTER MEDICAL SOCIETY.

THE annual meeting of the society was held in the Medical Institute, Belfast, on June 5th, when the president, Dr. R. W. Leslie, occupied the chair. The reports of the council, the honorary treasurer, and the honorary librarian were read, discussed, and passed. The treasurer drew attention to the fact that the balance in favour of the society had been falling for the last two or three years. Mr. R. J. Johnstone moved that in By-law V the words "such membership shall terminate at the end of the tenth year after the date of registration" be deleted. After considerable discussion it was agreed to postpone the matter for future discussion.

The following officers were elected for the session 1913-14:

President.—Mr. A. B. Mitchell, F.R.C.S.I.

Vice-Presidents.—Dr. Thomas Houston and Dr. Nolan (Downpatrick).

Honorary Treasurer.—Dr. John Rusk.

Honorary Secretary.—Mr. Samuel T. Irwin, F.R.C.S.I.

Honorary Editorial Secretary.—Dr. C. G. Lowry.

Council.—Mr. R. J. Johnstone, F.R.C.S., Howard Stevenson, F.R.C.S.I., Dr. J. C. Rankin, Mr. Crymble, F.R.C.S., Dr. Rentoul (Lisburn), Dr. W. McLorinan.

THE QUESTION OF PEAMOUNT SANATORIUM.

The Women's National Health Association has published a long memorandum to explain the action it recently took in connexion with the appointment of Dr. M'Grath as resident medical superintendent to the Peamount Sanatorium. The property of Peamount was bought for the purpose of a sanatorium for patients recommended for sanatorium benefit under the Insurance Act for £2,500. This money was provided out of the special sanatorium grant under the Insurance Act and the Finance Act of 1911. The property is vested in five trustees nominated by the Women's National Health Association, with the approval of the Irish Government. The management is in the hands of the same association. It was intended at first to provide provisional accommodation for patients recommended for sanatorium benefit by County Insurance Committees. Very soon application was made by a number of county councils for permanent accommodation, and an arrangement was made whereby county councils could contract for the establishment expenses of beds at £70 each. The council of the Women's National Health Association appointed a Provisional Committee in April, 1912, to take charge of all work carried out by the association under the Insurance Act, and empowered the President to take all such steps as she deemed expedient in the interests of the work.

At a conference held in December the county councillors present decided that only those councils which took permanent beds should be represented on the committee of management, and that each of these should appoint one representative, and that for every two such representatives the Women's National Health Association should appoint one representative. The Local Government Board pointed out that such a committee would not be an official committee, but simply a committee appointed by the Women's National Health Association. A special council meeting of the Women's National Health Association adopted the principle recommended for the constitution of the committee of management, and nominated six of its members to act along with the twelve representatives of county councils who had taken permanent beds at Peamount. It was, however, agreed that the president, assisted by the other officers of the association, should be empowered to act on behalf of the association in connexion with the sanatoriums, and the provisional committee, before dissolving, directed that advertisements for a resident medical superintendent should be issued in the medical journals. The duties of that office were in the meantime carried on by Dr. Joseph Daniel, who had for four years been in

charge of the home treatment of tuberculosis patients cared for by the Women's National Health Association in Dublin, and who, for the last year, was assistant superintendent of the Collier Memorial Dispensary for Tuberculosis. Associated with him was Dr. Prudence Gaffikin, medical secretary for the Women's National Health Association (who had held a variety of medical appointments, including the assistant medical officership of Huddersfield and Warrington and acting medical officership of the latter town, including the supervision of a small tuberculosis hospital). Dr. Gaffikin resided at Peamount, and when Dr. Daniel took over the charge of the Collier Dispensary, became sole medical superintendent pending a permanent appointment. When the committee met in March the county councillors declined to transact business till the remaining county councils had had a further opportunity to elect representatives. It was decided to call another meeting four weeks later to make the appointment, and directions were given that only candidates having suitable qualifications should be placed on the list to be considered. One of the candidates then in charge of a sanatorium in Birmingham was eminently suitable, and would probably have been unanimously appointed, but unhappily he died the day before the appointment was to be made. The committee ordered fresh advertisements and appointed a subcommittee to examine the applications and to recommend candidates. There were fourteen applicants, and the subcommittee unanimously decided to recommend that Dr. Kilpatrick (of co. Armagh), who had seven years' sanatorium experience, should be appointed chief medical superintendent, and Dr. J. J. M'Grath assistant medical officer. The committee met on May 7th, and appointed Dr. M'Grath resident medical superintendent, adding a rider that this appointment be subject to the sanction of the Local Government Board being continued to the institution under the superintendence of Dr. M'Grath. The officers of the Women's National Health Association, who were present, protested against this appointment on the alleged ground that Dr. M'Grath had no experience in the administration of a sanatorium. The matter was referred to the Local Government Board, which replied expressing surprise at the appointment of Dr. M'Grath, and indicating that the sanction which had been extended to Peamount temporarily was likely to be withdrawn unless a gentleman with the necessary experience were appointed. Meanwhile, Dr. Prudence Gaffikin had remained in charge at Peamount, with the temporary assistance of her brother, Dr. Philip Gaffikin, who had made special laboratory study of tuberculosis, and had been in attendance for six months at the White Abbey Sanatorium, Belfast. The Committee of Management met again on May 15th, and having heard the letter of the Local Government Board, passed a resolution regretting its action, but accepting the position, and deciding to go forward with the appointment of medical superintendents. The President of the Women's National Health Association intimated that she understood that Dr. Kilpatrick did not wish to renew his application, and that she was informed it would not be for the credit of the institution in medical circles that a new advertisement should be issued immediately. A resolution proposing Dr. M'Grath's temporary appointment for three months, in order to test his suitability for the post, was not accepted, as it was pointed out that this plan would be neither in the interests of Dr. M'Grath nor in that of the institution. Finally, it was decided unanimously to ask Dr. Prudence Gaffikin to continue to act as superintendent, assisted by Dr. Philip Gaffikin, and this request was acceded to on the understanding that a permanent appointment should be made as soon as feasible.

England and Wales.

LIVERPOOL.

MEDICAL TREATMENT OF SCHOOL CHILDREN.

A MOVEMENT is on foot to establish care-committees to include school managers, members of the Education Committee, and voluntary workers. The duty of these com-

mittees will be to follow up cases of children who require special attention owing to defects of health discovered on medical inspection, or lack of nourishment, or other reason. It is thought that these committees might, mainly through their voluntary helpers, also advise and help as regards juvenile employment on leaving school. Each voluntary helper would interest himself or herself in one or more families, and would become the guide, philosopher, and friend in all matters pertaining to the children. It would be an obvious advantage if a single visitor could take the place of the numerous representatives of the different organizations which interest themselves in child-life, and if the parents of the poorer classes could be spared the many visits—official and philanthropic—which are not infrequently a cause of annoyance. It is doubtful, however, whether voluntary workers could ever attain a standing of friendship in the homes of the classes aimed at, if part of their duty were to investigate the means of the parents and the eligibility of the children for free meals, free medical treatment, etc. There are, moreover, many other difficult points to be settled before the present organizations, which have a record of excellent work to show, can safely be dispensed with.

POLICE APPOINTMENTS.

As in the case of the tramway men, the Liverpool police are exempt from contributing to the Insurance Act. The members of the force receive medical treatment from doctors who are appointed by the Watch Committee at a fixed salary. This salary works out at a rate which is less than that payable for insured persons under the Act. A vacancy caused by the retirement of Dr. Thomas Dawson has drawn attention to this anomaly, and, following the advice of the local Division of the British Medical Association, members of the profession have agreed not to apply for the vacant post until the terms of service shall have been revised so as to make the remuneration at least equal to the standard set by the Insurance Act. Following on this action by the Division and by the local profession, the other police surgeons are approaching the Watch Committee with the view of obtaining an increase in the rate of remuneration of all police surgeons in the municipal area.

HOSPITAL CHANGES.

Dr. Murray Bligh has been appointed Physician to the Stanley Hospital to fill the vacancy caused by the transfer of Dr. Pantland Hick to the post of Assistant Physician at the Royal Infirmary.

MANCHESTER AND DISTRICT.

THE MANCHESTER CONSUMPTION HOSPITAL.

THE annual report of the Manchester Hospital for Consumption and Diseases of the Throat and Chest, which was presented to a meeting of subscribers held last week, states that during the year the three departments of the hospital—the out-patient department, the hospital at Bowden, and the Crossley Sanatorium at Delamere—have been inspected and approved by the Local Government Board, and arrangements are being made with various Insurance Committees for the use of beds at Bowden and Delamere, and with the Manchester Insurance Committee for the use of the Hardman Street Dispensary as a tuberculosis dispensary. The board of management points out that the Insurance Act does not apply to a large proportion of the patients receiving advice and sanatorium treatment at the institution, and as in the last year the expenditure exceeded the income by £2,188 there is still need for the continued support of friends and subscribers. The chairman of the meeting, Mr. Alderman Fildes, said the board welcomed the fact that the nation and the municipalities were now taking up the work, and would be glad to work shoulder to shoulder with those who were working the Insurance Act. Sir Kenneth Crossley said that subscribers seemed now to be feeling that they might reduce their subscriptions to the hospital, but all subscriptions would still be needed, as it was desired that the hospital should be additional and not subservient to anything which the Government might do. Sir Charles Behrens, the Treasurer, said the Insurance Act did not provide for the treatment of school boys or girls who were not

insured, nor for housewives, and it was from these classes that the hospital had the greatest number of its patients. He hoped the public would appreciate this fact, as otherwise the hospital would not be able to do that work efficiently.

BIRMINGHAM.

DEATH-RATE OF BIRMINGHAM IN 1912.

NOTWITHSTANDING the heavy mortality from measles, the death-rate in 1912 was only 14.1 per 1,000, which is lower than any previous year except 1910 when the rate was 13.2. During the last quarter of the year there was a severe outbreak of measles, and nearly 4,000 cases were reported from the elementary schools. There were 453 deaths from measles during this quarter. There was also an exceptional prevalence of scarlet fever during the same quarter, no fewer than 2,268 cases being notified, which is double the average number. The chief causes of death in 1912 were as follows: Measles 571, scarlet fever 153, diphtheria 100, whooping-cough 331, typhoid fever 30, diarrhoea and enteritis 346, phthisis 1,088, other tuberculous diseases 204, and respiratory diseases 2,272. Pulmonary tuberculosis was for the first time compulsorily notifiable in 1912, and 4,553 cases were reported.

Correspondence.

THE PROPOSED REFORM OF THE CONSTITUTION.

SIR,—It fell to me to occupy the chair of the Council during a very momentous period in the history of the Association. As a member of the committee which drafted the present constitution, I have necessarily some knowledge of the history of the movement, and have taken a great interest in its subsequent development, though, from circumstances, I have taken no very active part of late years in the work of the Association.

It was unfortunate for the Association, and for the authors of the scheme which was ultimately evolved, that so comparatively early in its history such a heavy strain should have been thrown upon it, and that the Association should have been called upon to pass through so severe a crisis, thus testing machinery and administrative arrangements for which it may correctly be claimed by the authors that they never had a fair trial.

It is no matter for surprise, therefore, that in more than one direction there was a breakdown, and that a movement is now on foot to try to amend the existing constitution.

It seems to me very important that full advantage should be taken of past experience, and that if the constitution is to be thrown anew into the melting pot the result should be as perfect as existing conditions and knowledge will permit.

Very few of those who guided the Association during the somewhat troubled waters of that time—now twelve years ago—form part of the administrative body to-day, and it may not, therefore, be inopportune for one who took a pretty active part then to make some suggestions which may perhaps help in the discussion of what is at once a vastly important and a vastly difficult problem. On its proper solution the future welfare of the Association largely depends, so no apology is needed for discussion from all points of view.

I may here state that my attitude then was a conservative one, and I did not view with much confidence the possibilities of the machine which was brought into existence. I recognize, however, that it is little use looking back, and that evolution must proceed from the point at which we at present find ourselves.

There are some points of very great importance, and having a profound influence, which I think have been very much overlooked, but on which I should like to insist at the threshold of this discussion.

I.

The history of the administrative arrangements of the Association, and the interests—more or less vested—which had grown up in consequence, may first be noticed.

Under the conditions existing up to the year 1902 the Council was the supreme body, and the general members of the Association exercised little control over its government. Each Branch sent a member or members to the Council, and a seat once gained was seldom disturbed. Thus a vested interest arose, and when it was sought to be disturbed it did not make for domestic peace in the Branch.

This tradition still exists, and its influence is to be traced in the last report of the Council.

Now that Branches are more or less grouped the result is not very satisfactory, and the weaker Branches cannot always feel that their claims receive due consideration.

II.

Generally speaking, the members of the Association took little interest in the government or management of the Association, and it is more difficult than many members suppose to create this feeling. Men who are very busy in their professional lives have little time to attend meetings or to make themselves acquainted with the details of organization. The result has been that the meetings of Divisions are not as a rule well attended, and the voice of the profession has not been got at through this means.

III.

The voicing of the Association by delegation has not proved a success. However small or unrepresentative a Divisional meeting may have been at which any particular decision has been reached, the Representative has to vote, either individually or by card, in accordance with such decision. It may well be that such vote is in direct opposition to the real views of the Division had it been possible to obtain a full meeting.

IV.

The passing of the supreme power from the Council to the Representative Body has been hindered, not helped, by the compromise which exists.

If it is the wish of the Association, as seems now quite clear, that the supreme power should be vested in the Representative Body, then the formation of the Council, its mode of election, and its duties, will have to be entirely changed.

In my opinion, to make the constitution a logical, practical, and workable one, the following changes are needed:

1. The Representative Body to cease to be an assembly of delegates.
2. The Council to be elected by the Representative Body and from its own members, care being taken to provide by group voting, or otherwise, that each area in the kingdom is proportionately represented on the Council.
3. The Council to be the executive of the Representative Body, which shall delegate to the Council such powers as it shall think fit.
4. The Representative Body should meet at least every half-year, provision being made for special meetings being secured without technical difficulties.
5. Election to the Representative Body to be annual, and the voting at such elections to be by a postal vote only. It is essential that the mode of election be uniform throughout the Association.
6. The opinion of the Divisions on all important question should be ascertained by a postal vote—the Representative Meeting deciding in each instance when this is to be done.

By requiring presence at a Divisional Meeting to record one's vote brings about this very serious result—namely, that a large preponderance of members are practically disfranchised, and hence they will cease to take any active interest in the affairs or policy of the Association, and will repudiate the decisions arrived at in which they have had no voice. A postal vote removes this difficulty, because the opportunity is given to every one to record his vote either at an election or on a matter of policy. It is very easy to make too much of the necessity for hearing or taking part in discussions at Divisional meetings.

As a result of these propositions in my opinion the answers to the six points submitted by the Council are very simple. The whole of the points would be in the hands of the Representative Body.

I believe that in these ideas we have the germ of a

constitution which will, more effectually than that now in existence, obtain the views of the Association in a concrete form on any important question, and that it will provide an administration which will command the confidence and support of the general body of members.

The old order must, as far as possible, disappear so that the altered constitution in its start should have little or nothing of compromise or unakeshift.—I am, etc.,

Bournemouth, June 23rd.

J. ROBERTS THOMSON.

THE POSITION OF VOLUNTARY HOMES UNDER THE MENTAL DEFICIENCY BILL.

SIR,—In considering the position of voluntary homes under the Mental Deficiency Bill, attention may first be called to Clause 47 (1). This is the provision which makes it necessary for a voluntary home receiving defectives to come under the Act. It reads as follows:

47.—(1) It shall not be lawful for a person without the consent of the Board to undertake the care and control of more than one person who is defective, or who is placed under his care as being a defective, elsewhere than in an institution, a certified house, or an approved home, and if any person contravenes this provision he shall be guilty of a misdemeanour.

I assume that a voluntary home is one which receives or proposes to receive more than one defective, and also that the Board would not grant consent, apart from certification or approval, to such reception, except temporarily in case of emergency. It should be noted that the question of profit does not arise here as it did in the Lunacy Act. Voluntary homes must therefore apply for recognition under the Act if they wish to continue their work.

Presuming, further, that we are not considering homes run for private profit, they can apply for recognition either (a) as a certified institution, or (b) as an approved home.

It is not specifically stated, but it would seem from reference to Clause 60 to be intended that one part of a home may become a "certified institution" and another part "an approved home."

The conditions attaching to approved homes are dealt with in Clause 46. Incidentally it may be pointed out that the use of the word "institution," which is given a technical definition in the bill, is here apparently used in a loose, non-technical sense, and this introduces a certain confusion which should be cleared up.

Approved homes will apparently be subject to special and less stringent regulations, etc., than certified institutions. The essential difference between them is that "approved homes" cannot receive and detain persons ordered to be sent under an order of judicial authority, a court, or a Secretary of State. There seems to be a lack of clearness as to what class of defectives may be received in approved homes, and under what conditions. It will be remembered that Clause 1 defines four classes of mentally defective persons deemed to be defective within the meaning of the bill—idiots, imbeciles, feeble-minded persons, and moral imbeciles.

Clause 2 describes how defectives may be "dealt with" under the bill, and in doing so states that they may be "sent to" or "placed in" an institution for defectives or placed under guardianship. Guardianship does not concern us for the moment.

Apparently, then, this clause does not provide for either those defectives who are subject to be dealt with at the instance of a parent or guardian as being idiots or imbeciles or under the age of 21, or those who in addition to being defective in some way come in contact with the law in one of the categories set out in Clause 2 (b), being placed in an approved home, but only in an institution or under guardianship, and yet in Clause 46, which deals with approved homes, it is only group (b) which is forbidden to be received, namely, defectives subject to be dealt with under this Act, otherwise than at the instance of his parent or guardian, by the process explained in Clause 4, under order of a court, etc.

The "approved home" idea, as it figures in the bill, has every appearance of being an afterthought, and has not been thoroughly amalgamated with the other provisions of the bill. Approved homes are allowed to receive but not to detain defectives other than those subject to be dealt with under Clause 2. The cases so received will be in the nature of voluntary boarders if over 21, and will not be certified. Presumably "feeble-minded persons"

under the age of 21 are suitable cases for being admitted to approved homes, and yet Clause 2 would, as has been explained, seem to exclude them.

Apparently local authorities would not be empowered to contribute towards the expenses of persons received in approved homes, though this is not absolutely certain (see Clause 45), but the local authority is responsible for the maintenance of a person ordered to be sent to a certified institution.

"Certified institutions," on the other hand, may receive defectives subject to be dealt with, whether at the instance of parents or guardians, or on the order of a court, etc., when, subject to the safeguards provided in Clauses 3 and 4, etc., there will be power of detention, but if not subject to be dealt with under the bill, a defective will presumably not be admissible to an "institution."

Voluntary homes wishing to become "certified institutions" will have to apply to the Board for a certificate, which will be granted by the Board to suitable managers if the premises seem to be fit. It is not at all certain what conditions as to fitness may be laid down—for example, as to numbers received, etc. The Secretary of State will make regulations (Clause 38) in regard to all such institutions and their management, etc.

If the views here taken are correct, it would appear to follow that all voluntary non-profit homes will find it desirable to become certified institutions, otherwise they lose the power of control which it is the main object of the bill to give them. "Approved homes" are introduced to provide for the voluntary boarder—that is, slight cases which parents will not certify and which are not subject to be dealt with by the Act.

What is to happen to feeble-minded cases over 21, not subject to be dealt with, who will not voluntarily enter an approved home, the bill does not say.

There remains the question whether local authorities will be willing to send their cases to voluntary institutions or whether they will prefer to provide their own. The main inducement for the recognition of the voluntary home, both by the Board of Control and the local authority, will be the financial one. The non-recognition or the disuse of voluntary homes would, in the first instance, be very costly, and it seems likely they will be encouraged to continue to fulfil their very useful functions as certified institutions.—I am, etc.,

London, W., June 23rd.

R. LANGDON-DOWN.

THE NORMAL EMPTY STOMACH.

SIR,—In his note on the shape of the normal empty stomach, in the BRITISH MEDICAL JOURNAL of June 7th, Dr. Stopford remarks that it is rare to see in the dead body a stomach that conforms in shape to what radiographers tell us is the normal. My experience leads me to believe that it is a frequent occurrence to find contracted stomachs at autopsy.

I have a collection of human stomachs, obtained in the *post-mortem* room, which illustrate the various phases in contraction of the emptying stomach. Several of my specimens are identical in shape with that figured by Dr. Stopford. In order to obtain such specimens it is only necessary that there should be little delay in performing the section, otherwise the changes that set in so rapidly after death through relaxation of the muscular walls of the stomach soon produce the flabby sac that was formerly always seen in the dissecting room.

Perhaps one may also suggest that such stomachs, illustrating the division of the organ into cardiac sac and gastric tube, will be more often seen if the performer of the section be interested in the anatomy of the stomach. So long ago as 1851 Broca described a stomach removed shortly after death; it possessed a globular cardiac portion and a tubular pyloric portion not unlike intestine in appearance; in fact, precisely similar to those now described as empty contracted stomachs.

The introduction and use of formalin as an additional agent for preserving bodies for dissection was the means of bringing prominently before anatomists stomachs, caught as it were, in various stages of contraction. It is interesting to note that when these tubular forms of stomach were first brought forward as being a stage in the normal organ, it was actually suggested by some that they were artefacts produced by the formalin. But the

numerous similar specimens seen *post mortem*, such as the typical one Dr. Stopford figures, are clear proof against this view.

Radiographers have done much to bring home to clinicians Cunningham's views on the stomach, and have confirmed its anatomy so lucidly described by him in 1905 in his paper, "The Varying Form of the Stomach in Man and the Anthropoid Ape."—I am, etc.,

London, W., June 17th.

CHAD WOODWARD.

ACUTE MENTAL HOSPITALS AND PSYCHIATRIC CLINICS.

SIR,—In reply to Sir Thomas Clouston's letter in your issue of June 14th, I would like to say that it was not the desire to claim a precedence in regard to the separate hospital idea in asylums which led me to indite the letter published in your edition of June 7th, but purely to correct the erroneous impression which might be left in the mind of any one not versed in these matters who read the leading article of May 17th. I referred to the large rate-supported asylums of England, only a small portion of which even at the present day have acute mental hospitals in connexion with them, but all of which undoubtedly have portions of the institution which might be termed "separate blocks or wards for new and acute and sick patients."—I am, etc.,

Bexley, June 18th.

T. E. KNOWLES STANSFIELD.

SYPHILIS AND CANCER OF THE TONGUE.

SIR,—In connexion with the correspondence on "syphilis and cancer of the tongue," the following quotation from a paper on The State and Syphilis, published in the twenty-fifth volume of the *Transactions* of the Royal Academy of Medicine, Ireland, may be interesting:

Professor Poirier has said: "Everybody cannot have cancer of the tongue. Two conditions are almost indispensable. You must be a smoker or syphilitic, especially the latter, and those who combine these two conditions have a much greater risk than others." Cancer of the tongue, he says, may be called the cancer of syphilitic smokers. Of 32 such cases he found that 27 were syphilitic, 3 of the remainder probably so, and the other 2 cases I think he said were women. Again, Fournier found that of 184 cases of cancer of the mouth 155 had syphilis, and in the remaining 29 the antecedents were unknown.

I am, etc.,

SEYMOUR STRITCH,
Member Board of Governors (formerly
R.M.O.) the Westmoreland Lock
Hospital, Dublin.

Dublin, June 21st.

TUBERCULOSIS OFFICERS.

SIR,—Dr. Wilson, in his letter in the issue of May 31st, p. 1189, seeks to plough a lonely furrow. The tuberculosis officer is appointed by the Public Health Committee, is under the administrative control of the medical officer of health, receives and carries out the orders of the Local Government Board. Therefore, the only service to which he can be attached is the public health service.

He can hardly be called superior to the medical officer of health. The medical officer of health is commonly the adviser to the local committee, and has a seat on that committee, whereas the tuberculosis officer has not. In view of the words "under the administrative control of the medical officer of health," he can hardly be called the equal of the medical officer of health; hence the only word left to define him is "junior." The fundamental idea in the Insurance Act is to attempt to create one large service of preventive medicine within which there are branches with offshoots of a specific nature. Thus, the phrase to which exception is taken, "a junior branch of the public health service," places the tuberculosis officer at the present time in the correct category. Dr. Cox's "look forward to entering the main branch of the public health service" is a natural sequence to the above position.

Dr. Wilson stated in his letter what he thinks the position of the tuberculosis officer will be in the future. Before the advent of tuberculosis officers their duties were

performed by the medical officer of health. The curve of death-rate from tuberculosis is descending at such a rate that it is computed that in 1958 the curve will be level, which is as much as stating that tuberculosis will be sufficiently under control to be called an uncommon disease. Professor Karl Pearson thinks that this decline is as much due to acquired immunity as to sanitation. The presence of tuberculosis officers may bring the date down to 1950, and then there might be a flood of "chest specialists" (Dr. Wilson) looking for work. Small-pox hospitals are being adapted as sanatoriums for tuberculous patients, and by 1950 these may be again adapted for venereal disease. In any case, superannuation would be a boon, and Dr. Wilson should give his support to the efforts being made to obtain it.—I am, etc.,

Forest Gate, E., June 20th.

ALEX. GRAHAM.

LECTURES TO VOLUNTARY AID DETACHMENTS.

SIR,—With reference to Dr. Benson's letter appearing in your issue of May 17th, p. 1087, which concerns lectures to voluntary aid detachments, I fail to see why the profession should give their services for nothing. We are exploited quite enough as it is.

Personally I give four or five courses on first-aid and nursing each year, and find it, although interesting, quite hard work. Each lecture takes an hour and a half to give. One gives six lectures instead of five, in order to cover the ground.

Sometimes the doctor has to motor ten or fifteen miles. One is only paid travelling expenses for the examinations and not for the lectures. In addition to this, it is quite usual to lose patients in one's absence.

It is absurd to say that "there are no funds to meet these fees, and this good and useful work will be absolutely crippled, and will consequently fall to pieces, and the profession blamed for it." In Cambridge the education authority pays a considerable part of these very moderate fees. Recently a charge of half a crown was made to each person attending a course here. The public do not expect to be lectured and examined for nothing. The Red Cross fees should be the same as the St. John Ambulance.

Personally I wish every Division would pass the York resolution. I feel sure that fair payment to the doctor for his services will not in any way hamper this patriotic movement.—I am, etc.,

Cambridge, May 21st.

CHARLES SEARLE.

Medico-Legal.

IMMUNITY OF TRADE UNION FUNDS.

THE JOURNAL of last week contained a note, page 1352, on a case heard in the Court of Sessions, Edinburgh, in which the judge said that while the plaintiff was barred from right of action against a trade union by the Trades Disputes Act, 1906, he had his remedy in an action for damages against the individual officials of the union. In a case heard before Mr. Justice Darling in the Court of King's Bench last week, a similar point was raised. The verdict, carrying damages, was found for the plaintiff, on the ground, if we understand the jury's finding correctly, that there was no trade dispute at the time when the men were induced to break their contracts. The judge incidentally expressed an opinion as to the liability of the individual members of the trade union in respect of breach of contract.

In this case, *Dallimore v. Williams* and another, the plaintiff was a bandmaster who gave concerts, and the defendants were the secretary and branch secretary of a trade union called the Amalgamated Musicians' Union.

The plaintiff stated that he had arranged to give a concert for the National Sunday League, and alleged that the defendant placed pickets outside the building, and induced the bandmen to refuse to play for the remuneration agreed, and, in order to give the concert, the plaintiff had to agree to pay extra remuneration. The defendants alleged that the plaintiff offered less than the union minimum wage, but this was denied. There had been friction between the plaintiff and defendants over other matters, and the plaintiff alleged that the defendants had taken the opportunity of this concert to embarrass him, and in so doing acted from malice. The defendants denied malice, and pleaded that in any event they were immune owing to the provisions of the Trades Disputes Act, 1906. Before counsel addressed the jury the judge said, as reported in the *Times*, that the effect of Section 3 of the Act

appeared to him to be that though a person who in the course of a trade dispute incited another to break his contract was not liable to an action, yet the person who actually broke his contract as a result of that incitement was liable to his employer in damages.

Mr. Langdon, K.C., for the defendants, said it might be that the person who actually broke his contract was liable, but there was judicial authority for the view that an employer could not recover damages against his servant, his only remedy being dismissal. Whether that authority would or would not be supported he was not at the moment prepared to argue; it was not an issue in this action. In addressing the jury, Mr. Langdon said the real question here was, What was a trade dispute? It was defined in Section 5 (3) of the Act as "any dispute between employers and workmen, or between workmen and workmen, which is connected with the employment or non-employment or the terms of employment, or with the conditions of labour, of any person"; and he submitted that on the facts here there was a trade dispute within that definition.

Sir P. Low, K.C., for the plaintiff, contended that, but for the Trades Disputes Act, there would have been no defence. A trade dispute within the Act must be a bona fide existing dispute, not one manufactured by the defendants for the occasion. There was, he submitted, no trade dispute here at all; but even if there was such a dispute, if the defendants availed themselves of it not for the purpose of furthering the dispute, but simply to annoy the plaintiff out of malice, the Act would be no protection.

Mr. Justice Darling, in summing up, said that the law was, as it had been, that if a person induced another to break his contract with a third person, the third person had a right of action. In 1906 the exception had been introduced that if the inducement took place in the course of a trade dispute the person injured could not recover. If the jury were satisfied that a trade dispute had been made out, and the defendants had induced the breach of contract in contemplation or furtherance of the dispute, they must find for the defendants. Section 3 of the Trades Disputes Act contained the provision that an act done in furtherance of a trade dispute should not be actionable, on the ground that it interfered with the right of a person to dispose of his capital or his labour as he willed. In words, therefore, it admitted that the right existed to dispose of one's capital or labour as one pleased. The statute admitted in terms the present right, but because it was found inconvenient to certain people this statute (not denying the right) took away the remedy. Whether there was a trade dispute or not was of the essence of this action. It must have been a bona fide existing dispute; the Act did not say, "in contemplation of a dispute which I am about to create" (Conway v. Wade [1909] A.C. 506). The defendant in the box had said the only way to enforce a strike was to get men to break their contracts, but it was possible to say to men that they had agreed to work for an improper rate, and that when they had worked out that contract they must not take another at that rate.

The questions left to the jury and their findings were as follows: (1) Did the defendants or either of them induce the handsmen to break their contracts with the plaintiff?—*Ans.*: Yes. (2) Did the defendants conspire to that effect?—*Ans.*: Yes. (3) Did the defendants so act in furtherance or contemplation of a trade dispute?—*Ans.*: They did not so act in contemplation or furtherance of a dispute; there was no trade dispute at the time when the men were induced to break their contracts, nor when the defendants conspired. (4) If they found for the plaintiffs what were the damages?—*Ans.*: The men broke their contracts in consequence of the inducement by the defendants. Damages, £350.

Judgement was entered accordingly.

THE LEGAL POSITION OF THE MEDICAL STAFF OF A VOLUNTARY HOSPITAL.

LAST week the case of Eddowes and others v. The St. John's Hospital for Diseases of the Skin (Incorporated) was heard by Mr. Justice Pickford. Although the trial was commenced before a jury, the jury was dispensed with by agreement between the parties.

Mr. Duke, K.C., Mr. Gore Browne, K.C., and Mr. Neilson (instructed by Messrs. Le Brasseur and Oakley, solicitors to the London and Counties Medical Protection Society) were for the plaintiffs; Mr. F. E. Smith, K.C., Mr. Sims, and Mr. Harold Smith (instructed by Messrs. Steadman, Van Praagh, and Gaylor) for the defendants.

The action was brought by Drs. Alfred Eddowes, G. W. Dawson, and L. F. Knuthsen, who were members of the medical staff at the defendant hospital to recover damages for wrongful dismissal. The case for the plaintiffs was that, being members of the staff, they were entitled to hold their offices until removed for good cause; that they had been dismissed without notice or justification. Their principal complaint was that no proper inquiry was made into the facts which led up to their being suspended by the board of the hospital. In effect they alleged that their dismissal arose through differences of opinion with the senior physician, Dr. Dockrell. They claimed damages for wrongful dismissal, and also a declaration that they were entitled to be reinstated at the hospital.

It is not proposed to set out all the facts (which were somewhat complicated), as the chief points of interest in the case seem to be the views of the learned judge on the position of the voluntary staff. These were expressed in his judgement.

Mr. Justice Pickford, in the course of his judgement, said the question he had to decide was not whether the defendants acted bona fide, nor whether they had purported to act in the best interests of the corporation. Neither proposition had been questioned. The question for him was whether they had acted within their legal powers, and the answer to that depended partly on the rules and the articles of association of the defendant company and partly on general principles. The plaintiffs had been what were called permanent members of the staff of this hospital. They had been appointed in the first instance on probation; and the appointments were confirmed, so that they became members of the staff. Their case was that they were there for life, subject, no doubt, to a power of dismissal for either incompetence or misconduct. On the other hand, the defendants contended that the plaintiffs could be required to resign at the will of the board of management. He had heard some evidence as to what was the opinion held in the medical profession on this matter in a case where there were no rules, but as a general thing hospitals now had rules dealing with the point. In the case suggested, however, the opinion of the medical profession was that the appointment was for life, subject to the power of dismissal in the two cases he had mentioned. It had been contended that the obligation was on one side only, and that the person appointed was entitled to resign at any time he liked. It was unnecessary to decide whether that view was correct, and he gave no decision on the point; but he thought that such an appointment to the medical staff of a hospital, whether of officers or of persons employed, must at least be one terminable only on a proper notice. There could not be a right to terminate the appointment at any moment. In this case there had been no notice—nothing that could be called notice, for he could not consider the seven days that had been mentioned. Unless he could discover something in the rules or "articles" as to the nature of these particular appointments which differentiated them from the case he had put, where there were no rules, he must hold that the dismissal of the plaintiffs was not within the powers of the defendants. He was unable to accept the proposition made by counsel for the defendants that there could be implied from these rules a power to dismiss members of the staff if there were continued friction between them and other members of the staff. To justify on such a ground the defendants would have to prove misconduct, and as it seemed to him the defence had been very carefully drawn so as not to raise any question of misconduct. No doubt the plaintiffs had made certain charges against Dr. Dockrell, the senior physician at the hospital, some or all of which they might be unable to substantiate. But it was not suggested that they were not made bona fide, and in the supposed interest of the hospital and of themselves. He did not think that this making of complaints could be described as misconduct, nor did he think there was any misconduct which would justify the defendants' dismissal of the plaintiffs. It had been contended in effect on the part of the defendant that the plaintiffs held no position. His lordship then continued: "With this contention I cannot agree. It may well be that they were officers, but I think that they were in a contract of employment, and I think that they had property in the corporation, and that they cannot be dismissed from membership of the corporation without their cases being heard." Having considered the several rules and articles of association which had been put forward as justifying the action of the defendants, his lordship said he would make a declaration that the plaintiffs were entitled to remain members of the corporation. He should not grant an injunction as asked, but he thought the plaintiffs were entitled to damages, inasmuch as they had each lost an indirect pecuniary advantage. He could not assess the damages on any very strict principle as no figures had been given him, but he thought that £50 would be enough in each case. The plaintiffs would have costs.

A stay of execution in view of a possible appeal was granted.

Universities and Colleges.

UNIVERSITY OF OXFORD.

THE following candidates have been approved at the examinations indicated:

FIRST B.M. (*Organic Chemistry*)—F. L. Apperly, C. W. W. Armstrong, J. L. Dunstan, W. E. Hayes, M. H. Mackeith, J. L. Maddox, P. T. Maurice, B. G. von Brandis Mellé, R. A. C. Prevett, S. K. Wright. (*Human Anatomy and Physiology*)—F. L. Apperly, J. N. C. Blamey, J. H. M. Campbell, L. M. Davies, W. L. Dawson, H. K. Denham, A. G. East, G. I. Evans, J. M. Guilloyle, F. G. Hobson, H. M. Oddy, G. H. Perkins, A. H. Plummer, J. Le Roy Shipley, A. Traill, N. L. Watt.

SECOND B.M. (*Materia Medica and Pharmacology*)—C. H. Carlton, E. W. Carrington, W. T. Collier, C. Dean, L. Gamsen, M. H. Lawrence, C. W. B. Littlejohn, G. S. Robinson, M. O. Raven, J. A. C. Sparrow, B. E. Wall, W. W. Waller, J. E. West. (*Pathology*)—L. R. Broster, J. J. Conybeare, G. T. Herbert, R. J. Inman, G. A. Mahing, F. E. Mather, C. P. Symonds, T. A. Tusseid, J. F. West. (*Forensic Medicine and Public Health*)—J. C. Davies, P. G. Doyno, F. A. Hampton, E. W. N. Hobbhouse, W. H. Ogilvie, A. L. Pearce-Gould, A. H. Southam, J. A. G. Sparrow, T. O. Thompson, C. W. Wheeler-Bennett. (*Medicine, Surgery, and Midwifery*)—P. G. Doyno, D. B. J. Hallett, N. F. Hallows, F. A. Hampton, W. H. Ogilvie, A. L. Pearce-Gould, T. O. Thompson, J. F. Venables, R. O. Ward.

M.CH.—E. L. Pearce-Gould.

D.P.H. (*Part I only*)—W. Brander, R. A. Deans, C. C. Morrell, H. K. Ward. (*Part II only*)—A. J. MacFarland. (*Both Parts*)—W. J. J. Arnold, F. B. Bana, J. N. Kilner.

UNIVERSITY OF CAMBRIDGE.

THE following degrees have been conferred:

- M.D.—G. P. D. Hawker, E. H. Mayhew.
 M.B.—A. J. McNair, E. E. Paget-Tomlinson, T. H. E. Watts-Silvester,
 A. M. Zamora.
 B.C.—A. J. McNair, A. M. Zamora.

Examinations.

The following candidates have been approved at the examination indicated:

PRELIMINARY SCIENCE (*Part III, Elementary Biology*).—R. O. Bagnall, E. V. Beale, C. L. P. Biggar, G. E. Birkett, E. N. Bock, W. E. L. Brown, C. T. Cobbold, J. L. Cope, R. S. Corbett, H. T. Cnbbon, F. N. V. Dyer, H. W. Eddison, C. W. S. Fernando, J. B. Foster, R. French, A. G. D. Gavin, G. H. Gidlow Jackson, C. I. C. Gill, H. H. Ginsburg, W. N. Goldschmidt, E. F. S. Gordon, W. B. Hathorn, G. G. Havers, L. G. Higgins, J. M. Higginton, J. S. La Fontaine, H. C. Langdale, F. G. Laurie, J. B. S. Lewis, W. B. A. Lewis, R. Lumsden, A. G. F. McArthur, H. H. Marten, J. H. Massey, O. G. Misquith, J. R. Mitchell, J. Normau, S. W. Page, A. V. Pegge, C. E. V. Porter, E. H. Powell, W. E. Rhodes, A. S. Richardson, J. A. W. Robertson, G. M. Shackel, G. H. Shakespeare, E. D. Spackman, A. T. Spoor, H. F. Squire, H. J. R. Surrage, G. D. Thomson, F. Whitaker, G. G. White, W. G. Woolrich.

SECOND M.B. (*Part I, Human Anatomy and Physiology*).—K. Atkin, G. A. Back, J. J. O. Beven, J. T. Blesdell, A. L. Bodley, C. E. Bond, W. S. Brown, H. C. H. Bull, E. W. Carlton Williams, A. E. Clark-Kennedy, D. Crawford, L. Cunningham, I. de B. Daly, E. H. Denny, D. D. Evans, H. W. Featherstone, E. A. Fiddian, L. S. Gathergood, A. A. Gemmell, F. H. S. Greenish, H. W. Hales, J. R. Harris, W. F. T. Haultain, N. S. Hewitt, F. E. Higgins, L. S. Holmwood, A. G. Irving, W. N. Loak, T. D. Morgan, M. K. Robertson, J. C. Russell, W. G. Schüddekopf, C. G. Schurr, G. B. Sellwood, E. W. L. Sharp, F. N. Sidebotham, B. H. Swift, W. T. Warwick, B. Whitehead, A. G. Williams, A. T. Woolward, R. T. Yolland.

THIRD M.B. (*Part I, Surgery and Midwifery*). (*New Regulations*).—H. A. Bell, E. J. Bradley, E. J. Y. Brash, G. M. Chapman, H. P. Dawson, E. L. Dobson, A. N. Hooper, A. R. MacMullen, F. D. Marsh, C. F. Mayne, D. S. Page, N. S. Soden, A. V. Stocks, P. Stocks, E. S. Taylor, A. G. G. Thompson, H. F. W. Warden, E. Wordley.

M.C.—H. L. Attwater, L. Bromley.

UNIVERSITY OF LONDON.

LONDON SCHOOL OF MEDICINE FOR WOMEN.

THE annual distribution of prizes at the London (Royal Free Hospital) School of Medicine for Women was held on June 20th, when Queen Amélie of Portugal presented the prizes to the successful students. The chair was taken by Mrs. Garrett Anderson, M.D., president of the school, and, in the absence of the Dean, a short speech was made by the Vice-Dean (Miss Aldrich-Blake), who spoke of the work of the past year, and said that, although the number of students in the school had increased during the last twelve months, the opportunities for useful work afforded to qualified medical women were also increasing.

The Chairman then introduced Queen Amélie, whose interest in the school, she said, had been shown on more than one occasion. Queen Amélie, after thanking those present for the cordiality of the reception they had given her, said that she had visited the school a month previously, and had noted with the utmost pleasure the completeness of the arrangements and the devotion of the students to their work. She wished prosperity to the school and success to the students in the useful and beautiful career in life they had chosen.

The prizes, which numbered about thirty, and took the form of cheques ranging from one to five guineas, were then distributed, and the following scholarships and studentships were awarded: Awarded by the University of London, Gilchrist studentship, £100, Miss M. Forrester-Brown; research studentship in physiology, £50, Miss C. Leatham. Awarded by the Fishmongers' Company, Girls' University exhibition, £60 a year for three years, Miss H. M. Halliday. Awarded by the school, St. Dunstan's exhibition, £60 a year for three or five years, Miss A. M. Kerr; school scholarship, £30, Miss E. M. Scarborough; Mabel Webb research scholarship, £30 a year for one year, extending to two or three years, Miss C. Leatham; Agnes Guthrie dental bursary, £60, Miss I. V. Vincent; Helen Pridaux prize, £40, Miss F. Edmonds.

UNIVERSITY OF LEEDS.

At a meeting of the Council, on June 18th, Dr. H. S. Raper, D.Sc., M.B., Ch.B., was appointed Lecturer in Chemical Physiology. Dr. Raper, who graduated at Leeds in 1903, is at present Lecturer in Pathological Chemistry at the University of Toronto.

Mr. Littlewood's resignation of his position as Clinical Lecturer was received with regret.

UNIVERSITY OF EDINBURGH.

UNIVERSITY COURT.

The Edinburgh University Court met on Monday, June 16th, and again on Friday, June 20th, Principal Sir William Turner in the chair.

Recognition of Teachers.

On the recommendation of the Senatus, recognition for purposes of graduation in medicine was granted to the following teachers in the Bradford Technical College: William West (Botany), J. A. Tonkins (Physics), B. North (Chemistry—*inorganic courses of the college along with Part I of organic course, or equivalent courses*).

D. T. M. and H.

The Court approved of a recommendation of the Senatus that the Diploma in Tropical Medicine and Hygiene, which, in accordance with the existing regulations, can only be awarded to graduates of this university, should in future be open also to registered practitioners in medicine who have resided abroad and acquired practical experience in tropical diseases, and who, on the recommendation of the Faculty of Medicine, receive the permission of the Senatus Academicus to become candidates for the diploma, and afterwards fulfil the regulations pertaining thereto.

Usher Institute.

A statement of the bacteriological work of the city performed in the Usher Institute of Public Health, and of the expenses incurred in connexion therewith during the year ended May 15th, was submitted.

Cunningham Prize and Medal.

It was intimated that the Executive Committee of the fund for a memorial to the late Professor D. J. Cunningham had transferred the balance of the fund to the University Court for the endowment of a prize and medal to be awarded annually to a medical student for distinction in anatomy.

GIFT TO THE UNIVERSITY.

The late Mr. Wm. McEwan's house, situated in Palmerston Place, Edinburgh, and looking out on the close round St. Mary's Cathedral Church, has been given by the Hon. Mrs. Greville (Mr. McEwan's daughter) to the University of Edinburgh.

ST. ANDREWS UNIVERSITY AND UNIVERSITY COLLEGE, DUNDEE.

THE following announcement was made officially at St. Andrews University on Saturday, June 21st:

The University Court of St. Andrews and the Council of University College, Dundee, have now arranged the questions which were in dispute betwixt them.

The arrangement come to practically leaves in the hands of the Council the entire transaction of financial business connected with University College, but subject to the sanction of the University Court in so far as concerns the regular expenditure upon the qualifying classes.

A standing joint committee, consisting of four representatives from each body, has been appointed to advise and consult as to points of common interest.

The significance of this is that an end is now made to a dispute which became public in January, 1912. The fees of students attending University College, Dundee, had hitherto been collected in Dundee, but St. Andrews University put forward a claim which amounted not only to the collection of fees, but practically the financial administration of the college. Negotiations followed, but the Council of the Dundee College refused to give up its claim to collect the fees. Despite this the authorities of St. Andrews sent officials to Dundee at the opening of the session in October, and called upon the students to pay their fees to them rather than to the Dundee secretary and treasurer, intimation being made that unless the students agreed to do so, their attendance at classes, though their fees had been paid to the Dundee official, would not be recognized for graduation purposes. To save the students from any risk in that regard, the Council agreed temporarily to the students handing their fees to the St. Andrews officials, and there were cases of students having been obliged to ask their money back from the Dundee secretary in order that they might hand it to the St. Andrews secretary.

Legal advice was taken, and St. Andrews was advised to proceed by ordinance to make good its claim. Dundee College was equally strongly advised, and intimation was made that the proposed ordinance would be resisted. At one time Dundee suggested a friendly reference to the Court of Sessions, but this course was not taken. It is generally understood that the present decision has been brought about through the good offices of Lord Balfour of Burleigh, the Chancellor of the University.

QUEEN'S UNIVERSITY, BELFAST.

Lectureship on Ophthalmology and Otolary.

At the meeting of the Senate on June 20th Mr. James A. Craig, M.B., F.R.C.S. Eng., Senior Ophthalmic Surgeon to the Royal Victoria Hospital, was appointed Lecturer on Ophthalmology and Otolary, in the room of the late Dr. Cecil Shaw.

Mr. Craig is an old student of the Queen's College, where he had a distinguished undergraduate course, and a graduate of the old Royal University. He obtained first place with first-class honours in the examination. The appointment will be most popular among the profession, who will join Mr. Craig's many friends in hearty congratulations.

SOCIETY OF APOTHECARIES OF LONDON.

THE following candidates have been approved in the subjects indicated:

- SURGERY.—*W. Alcock, *R. B. F. Frazer, †A. Y. Massey, †J. E. S. Sheppard Jones.
 MEDICINE.—J. E. S. Sheppard Jones.
 FORENSIC MEDICINE.—H. V. Capon, T. H. Crosswell, T. B. Paul.
 MIDWIFERY.—H. V. Capon, H. N. Eccles, W. S. Hughes.
 * Section I. † Section II.

The diploma of the Society has been granted to Messrs. A. Y. Massey and J. E. S. Sheppard Jones.

Obituary.

SIR JONATHAN HUTCHINSON, F.R.C.S., F.R.S.,

CONSULTING SURGEON TO THE LONDON HOSPITAL, AND EMERITUS
PROFESSOR OF SURGERY IN THE MEDICAL COLLEGE.

WE announce with deep regret, which will be shared by all members of his profession, the death of Sir Jonathan Hutchinson, F.R.S., F.R.C.S., which took place at his house, The Library, Inval, Haslemere, on the evening of June 23rd.

Jonathan Hutchinson, the son of Jonathan Hutchinson, a member of the Society of Friends, who married Elizabeth Massey, was born at Selby, Yorkshire, on July 23rd, 1828. He received his early education at Selby, and was then apprenticed to a surgeon at York, studying medicine at the same time at the York County Hospital and the York School of Medicine and Surgery. This was a small school, and Hutchinson tells us that he was the only member of some of the classes, so that he received the undivided attention of some of the lecturers. Dr. Thomas Laycock, afterwards professor of medicine at Edinburgh, was then lecturing in medicine at York, and he made a great impression on young Hutchinson, instilling into his mind the important part that heredity plays in the incidence of disease, and of the value of the general appearance of physiognomy of the patient as an indication of his physical condition.

In 1849 Hutchinson went to London and studied at St. Bartholomew's Hospital. He took the diplomas of M.R.C.S. and L.S.A. in the following year. Afterwards he was for a time physician's assistant at the City of London Hospital for Diseases of the Chest. In the early Fifties he was appointed surgeon to the Metropolitan Free Hospital, and soon afterwards became a member of the staff of the Royal London Ophthalmic Hospital, and of the Blackfriars Hospital for Diseases of the Skin, with both of which hospitals he maintained an official connexion for a long series of years. About 1859 he was appointed assistant surgeon to the London Hospital, and from 1862 was lecturer in the Medical College on the principles and practice of surgery, taking the additional subject of medical ophthalmology in 1863 when he became full surgeon. In 1873 he had become senior surgeon, and retired from the active staff of the hospital as long ago as 1883.

Another hospital to which he was attached was the Royal Lock Hospital, to which he was appointed assistant surgeon in 1862. After retiring from the active staff of the Royal Ophthalmic, the Blackfriars Skin, and the London Hospitals, he was appointed honorary consulting surgeon to them. He was also appointed Emeritus Professor of Surgery at the London Hospital Medical School, and delivered each year, for a time, a course of lectures. When he retired from active service at the London Hospital his friends founded the Hutchinson Triennial Prize Essay, in value £36, to commemorate his services, especially as a teacher there. It is open to the competition of members of the hospital school of not more than ten years' standing.

In 1865 he gained the Astley Cooper Triennial Clinical Prize of Guy's Hospital, the subject of his essay being "Injuries of the Head." He filled many offices at the Royal College of Surgeons. From 1879 to 1883 he was Hunterian Professor of Surgery and Pathology. He was elected to the Council in 1879, he was appointed to the Court of Examiners in 1880, and to the Board of Examiners in Dental Surgery in 1885. In 1888 he was Bradshaw Lecturer, in 1889 President, in 1891 Hunterian Orator, and in 1897 he was appointed one of the trustees of the Hunterian Collection. He served on the Royal Commission appointed in 1881 to inquire into the condition of the London hospitals for small-pox and fever cases, and into the means of preventing the spread of infection, and also on the Royal Commission on Vaccination (1890-96). In 1882 he was elected Fellow of the Royal Society, and in 1908 received the honour of knighthood for his distinguished services to medicine. He was honoured also by many learned bodies. He received honorary degrees from the universities of Glasgow (1887), Cambridge (1890), Edinburgh, Oxford, Dublin, and Leeds, and was a corresponding member of the Surgical Society of Paris.

He took an active interest in the work of most of the

London medical societies, and held the office of President of the Royal Medical and Chirurgical, Pathological (1879-80), Hunterian (1869-70), Ophthalmological (1883), Medical, and Neurological Societies. He also acted as secretary of the New Sydenham Society during the whole of its existence, 1859-1907. At a meeting called to wind up the original, or "Old" Sydenham Society as it was called, Hutchinson proposed that the society should be continued for the purpose of publishing translations of the best modern Continental works. It was, however, decided by the meeting to wind up the original society, the chairman suggesting that if some of the young men thought the society's work was not finished they had better form a new one for themselves. This they did, and Hutchinson was appointed secretary. The good work done by the society need not be referred to here.

Hutchinson was an example of the naturalist who takes to medicine and pathology. He was curious about all natural phenomena, from the retention of their leaves through the winter by young beech trees—a fact noted by White of Selborne but observed independently by Hutchinson—to the exact significance of a doubtful eruption on the human skin. He evidently possessed a highly developed visual memory, and was easily able to recall the characters of cases which he had seen perhaps a quarter of a century before; usually the drawings he would presently find among his papers confirmed the accuracy of his recollection. During the many years in which he was a very regular attendant at the meetings of medical societies in London he became rather a terror to the young man with a "unique case"; in fact, he almost caused the word to disappear from papers read in London. It was felt to be a challenge to him to get up and relate how a score of years before he had seen a case very like it indeed; in fact, he thought quite the same. Before sitting down he would promise to produce a picture at a subsequent meeting, and usually did so, with, it is true, varying results, for sometimes he saw resemblances not obvious to others. Not a little good-natured fun was made some years ago of his plan of, so to say, pigeon-holing in his memory certain very rare cases under the patient's initial as "Mrs. T.'s legs" or "Mr. J.'s nose." Hutchinson quite saw the humorous side of the matter, but was not on that account in the least deterred from continuing it. He was a great believer in recording rare cases, and had drawers full of pictures and notes of such cases. He began to accumulate this material, perhaps, partly from his innate love of anything curious or out of the way and because the collecting interest was strong in him, but he believed also, and would often express the opinion, that rare cases would eventually fall into their places and frequently help to give the clue to the pathology of the class to which they belonged.

He was also a great believer in the value of specimens and drawings in education, and, after retiring from the London Hospital, he organized in a studio attached to a house he took in Park Crescent, Portland Place, a clinical museum in which he stored his extensive collection of coloured drawings, charts, pathological and other specimens, and in which he held clinical lectures and gave demonstrations.

It is interesting to note, and affords a further example of Mr. Hutchinson's belief in the value of objective teaching, that the museum held in connexion with the Annual Meetings of the British Medical Association originated from a suggestion made by him in 1868. He proposed that an exhibition of objects invented or collected during the year—a museum which should, in fact, show "the cream of the year's progress" in medicine and surgery—could hardly fail to be of great practical value to visitors attending the meeting. The local officers of the Association at Oxford immediately took up the suggestion, and their efforts, aided by the prompt and active co-operation of Mr. Hutchinson himself, resulted in a fairly successful realization of his scheme. The exhibition was held in one of the lecture rooms of the University Museum. Every specimen was labelled with a clear, concise description. The objects contributed from various quarters on this occasion came under four heads: (1) Pathological drawings, preparations, wax models, etc.; (2) new instruments and appliances in medicine and surgery; (3) drugs and articles of medical diet; (4) new English and foreign medical works.

[Walter Benington.]

SIR JONATHAN HUTCHINSON
(1828-1913).

The foundation of the Medical Graduates' College and Polyclinic in 1899 was warmly supported by Hutchinson, and he consistently befriended it in moments of difficulty. For the preceding six years attempts had been made to organize post-graduate instruction in London, but the organization had no local abiding place, and it was felt that success and permanence could only be achieved by providing a central home with lecture-rooms, museum, reading-room, laboratory, and, above all, a clinical department for the practical study of disease. Suitable premises were acquired at 22, Chenies Street, W.C., and added to. One great feature of the Polyclinic was to be the daily consultations to which patients unable to pay a specialist's fees could be taken for consultation by their usual medical attendants, and where the medical members of the Polyclinic would have the advantage of studying them and observing the effects of treatment. Post-graduate lectures and practical courses were to be given regularly, and the library and museum were to be special attractions. Hutchinson presented a large number of books and periodicals to the library, and edited the *Polyclinic*, the journal of the Medical Graduates' College and Polyclinic, for some years from 1900. It was, however, in the museum that he took the keenest interest. He arranged in it a very large number of his own drawings, photographs, and specimens. After giving up his house in Cavendish Square, when he practically retired from practice, he took a small house in Gower Street, near the Polyclinic so that he might the more easily continue to superintend, and indeed to a very large extent carry out with his own hands, the work of classification, description, and arrangement. Nothing pleased him better than to spend an hour with a sympathetic listener, explaining his methods, and displaying some of his treasures and curiosities. He was always on such occasions informing and stimulating—stimulating sometimes to opposition, a result which he seemed rather to desire, appearing anxious to note how a fact or a picture with which he had grown familiar might strike a fresh mind and eye. The collection, especially of drawings, grew out of all possibility of displaying the whole on walls or screens, and he adopted the system of holding special exhibitions during which for several weeks all the drawings and photographs illustrating some one subject were displayed. During these periods he would readily devote many hours, day after day, to demonstrating the objects in the exhibition and discussing their significance and interpretation with any visitor who appeared interested.

Hutchinson was a voluminous writer throughout his whole career. Thus when only 24 he wrote his first paper, on infantile Iritis, and in 1853 he began to contribute weekly hospital reports to the *Medical Times and Gazette*, a custom which he kept up for several years. In 1869, when the late Mr. Ernest Hart withdrew from the Editorship of this JOURNAL, Hutchinson took his place, but relinquished the office to its previous occupant about eighteen months later. His most important and most enduring work was on syphilis. The subject of inherited venereal "taint" engaged his attention from his student days, when he saw his first case at York. After he went to London some further cases came under his observation from 1850-54 at the City of London Hospital for Diseases of the Chest, which opened his eyes to the fact that in young persons, in association with other symptoms, and with a peculiar physiognomy, it is not unusual to meet with evidence of past iritis. In 1852, in the paper referred to above, he suggested that infantile iritis was a more common disease than was usually supposed, because he frequently discovered synechiae in those too young to have suffered from acquired syphilis. In 1859 he read a paper at the Edinburgh meeting of the British Medical Association on "The Means of Recognizing, amongst Young Persons, the Subjects of Inherited Syphilis." For some years previously he had noticed in suspected cases the frequent occurrence of malformed teeth, of which he had several times taken models, and he had accumulated evidence which led him to consider the state of the upper incisor teeth by far the most reliable amongst the indications of inherited syphilis. His conclusions on these matters were communicated to the Pathological Society during the sessions 1857-8-9.

About the same time the fact that the disease hitherto

known as "strumous corneitis" was in practice never met with except in conjunction with peculiarities of physiognomy and malformed teeth, came prominently before him. In 1858 he commenced a series of papers in the *Ophthalmic Hospital Reports* on the general subject of inherited syphilis in its relation to diseases of the eye, and in 1863 he reprinted and extended these papers in his book, *A Clinical Memoir on Certain Diseases of the Eye and Ear, consequent on Inherited Syphilis*, "with an appended chapter of commentaries on the transmission of syphilis from parent to offspring and its more remote consequences." In the preface of this book he points out that the disease then known as "strumous corneitis" was syphilitic keratitis. The principal assertions in the book are that "chronic interstitial keratitis" is essentially an heredito-syphilitic disease, and that dental peculiarities of a certain kind are, when cautiously examined, a reliable indication of inherited syphilis. The description which he gave of the characteristic teeth, now known as "Hutchinson's teeth," in the book (p. 117) is interesting:

As diagnostic of hereditary syphilis, various peculiarities are often presented by the other teeth, especially the canines, but the upper central incisors are the test teeth. When first cut these teeth are usually short and narrow from side to side at their edges. In the edge is a crescentic portion, thinner than the rest, which after a time breaks away, leaving a broad, shallow, vertical notch, which is permanent for some years, but between 20 and 30 usually becomes obliterated, by the premature wearing down of the tooth. The two teeth often converge, but sometimes they stand widely apart. In certain instances in which the notch is either wholly absent or but slightly marked, there is still a peculiar colour, and a narrow squareness of form, which are easily recognized by the practised eye.

Since he learnt to look for the peculiarities of dentition he had not, he said, met with a single example of well characterized interstitial keratitis, occurring in both eyes, in which the teeth were of normal size and shape.

He began the publication of his *Archives of Surgery* in 1889. It was issued quarterly and was continued until, in 1899, ten volumes had been published; part of a volume appeared in 1890, and the publication was then discontinued. It was written by himself and will always be an enduring monument to his industry, persistency, and his capacity for observing. The journal appealed to the general practitioner, the surgeon, the physician, and the specialist, in spite of the limitations suggested by its title. Syphilis occupied its pages to a great extent and many interesting cases were recorded in it. One feature of it was its good illustrations.

He was one of the most distinguished syphilologists of his time, and he wrote innumerable articles on the subject, recording interesting cases, giving his own views on it, and the result of his experience of the various forms of treatment recommended for it. His well-known book on the subject was published in 1887 and reissued in a new and enlarged form in 1909. He wrote articles on syphilis in various systems of medicine. He also wrote articles on numerous other medical topics.

For many years he enjoyed a large and varied practice, residing first in Great Russell Street, then in Finsbury Circus, E.C., and afterwards in Cavendish Square. He was at once a general operating surgeon, an ophthalmologist, a dermatologist, a syphilologist, and a neurologist. He had made important contributions to all these departments of medicine, and his opinion was sought in consultation in respect of all of them.

One striking feature of his life was the work which centred round his home "Inval," Hasleclere, where he collected together objects of all sorts of interest in a large museum. A very good description of this was written by Sir William Osler. The educational museum contained objects of interest to illustrate a very great variety of subjects: Rocks and fossils, with suitable charts and figures; animals, skeletons, plants and flowers, birds' nests and eggs, and innumerable miscellaneous specimens. The library there contained several thousand volumes, chiefly of general literature and science, and many charts, drawings, and pictures of historical events. One exhibit illustrated the history of the centuries, from the beginning of Egyptian to Victorian times. Sir Jonathan published this skeleton schedule, and also a more elaborate chronological synopsis of universal history called "The Centuries."

Besides the museum specimens there were live stock at Haslemere in an aviary and vivarium in which the chief birds and animals of the district were kept, including snakes and the common viper, and at the entrance of the museum were placed in little vases fresh wild flowers with information about them attached.

Sir Jonathan Hutchinson continued a member of the Society of Friends throughout his life, and always retained something of the staid demeanour and a trace of the peculiarities in dress usually associated with that remarkable community which has had an influence on the intellectual history of England and North America altogether out of proportion to the number of its members. Near the entrance to his house at Haslemere was a hall which was used for religious as well as for secular purposes, between which perhaps Jonathan Hutchinson did not draw any such sharp distinction as commonly exists in the popular mind. On Sunday afternoons, when residing there, he would lecture on some subject of popular interest. The variety of his teaching may be appreciated by mention of a few of the subjects taken at different Sunday afternoons. At one lecture the flower of the potato was described, and the reason why it did not produce seed explained; the formation of galls was discussed, and these subjects were followed by a discourse on whales, dealing with their habits, structure, and affinities. Other Sunday lectures were on "The Inner Light and the New Birth," "The Influence of Wordsworth's Poetry," "Tuberculosis and Leprosy as Social Problems." Occasionally well known specialists were invited to give popular lectures in the museum, where the audience was chiefly composed of residents and their children. In connexion with the museum and as a means of widening its influence, Hutchinson, with the help of members of his family, founded a "Home University," and published a monthly journal similarly named. The object of the university, so the preface of the first number of the journal said, was to offer to the home student the best substitute for university residence which the editors of the journal could devise. In that endeavour neither trouble nor expense was to be spared. The *Home University* was neither to be a school book, an encyclopaedia, nor a journal of science and literature, but it was to partake of the character of all three. It would deal with all subjects and be designed for all readers. Hutchinson contributed to it himself and wrote on or supervised the writing on a variety of topics—for example, Keats, a medical student-poet, Etruscan remains, a museum lecture on shells, a classification of insects, a conversation on the elephant, mammoth, and mastodon, the ascent of sap, Origen, Fénelon, spelling reform, Lady Mary Wortley Montagu, Hamilcar, the unity of Italy, etc., to quote from the contents of the earliest numbers only. He also founded a museum in the village of Haslemere and one in his native place, Selby.

His views on leprosy and fish eating caused a good deal of public interest at the time his book on the subject was published (*On Leprosy and Fish Eating, A Statement of Facts and Explanations*, 1906) as the book was written for the general reader as well as for the medical man. His special interest in the subject began in 1855, when he observed some cases of leprosy in London hospitals. He wrote a paper for the *London Hospital Reports* in 1863 in which he foreshadowed the conclusions announced in his book. A study which he made at that time of the geographical distribution of the disease convinced him that neither climate nor race could have anything to do with its cause, and the observation that it prevailed almost exclusively on islands, on the shores of continents, and along the courses of rivers led him to form a strong conviction that it must be in some way connected with the eating of fish. From that date onwards he became a firm believer in the "fish hypothesis," and he collected facts bearing on the subject over many years. In 1890 there appeared in a Government report on the occurrence of leprosy in Natal the definite statement that it was met with amongst Kaffirs who never tasted fish, either fresh or cured. He tried during the succeeding years to gain information on the matter by correspondence, but without much result; and in 1901, when his own health rendered it desirable that he should take a long holiday, he set out for South Africa to investigate on the spot. He found that cases had occurred in Kaffirs who had not eaten fish, but they were exceedingly

few in number, and had all been associated with original cases which had been in Cape Colony and had there presumably eaten bad fish. He explained the non-fish-eating cases on the hypothesis that the leprosy bacillus had been introduced into the digestive system by food contaminated by a leper's hands, or by milk taken from the breast of a leprosy mother. In this way he explained the occurrence of the disease in those people who had not eaten fish, and also the fact that the disease is apt to cling to certain families and to show itself in successive generations.

During the following winter he made a tour of parts of India where leprosy occurs, giving lectures at Colombo, Madras, Calcutta, Lahore, and Bombay. Discussions took place after each lecture, but nothing was brought forward then which in his opinion controverted the fish hypothesis, or supported that of direct contagion. He was unable to publish his observations in book form until 1906, but he discussed the subject in the periodicals, lay and medical, writing especially to the *Times*, but no serious answer to his contentions, he maintained, was attempted. As his opinions were widely published in the public press, he took great care to avert an anti-fish-eating scare by emphasizing the fact that true leprosy only arose, in his opinion, from eating decomposing fish, and that there could be no question of there being any risk of contracting the disease by the consumption of the fish supplied to the English market, whether fresh or salted.

Whilst the importance of the evidence supporting the fish-eating theory of the cause of leprosy thus collected and published by Hutchinson was fully recognized by leprologists and others, it was held that he had not proved his case. The present opinion on the subject may be gathered from the conclusion to the consideration of the etiology of leprosy in Allbutt's *System of Medicine*:

We know by definite experimental proof and by clinical observations that tuberculosis—the first cousin of the disease under consideration—may be introduced into the body by more than one channel, through the respiratory and alimentary passages as well as through the skin, and we may reasonably suppose that leprosy likewise may be acquired in as many ways, although the paths of entry have not as yet been fully traced. (Article on leprosy by Dr. Abraham, Allbutt's *System of Medicine*, second edition, 1907, vol. ii, part ii, page 660.)

Further researches may show that an intermediary host is required before the bacillus will flourish in man, and then the fish-eating theory may be supported by further evidence. Excluding that on *Leprosy and Fish-eating*, his published books were for the most part of purely medical interest. That on *The Pedigree of Disease* (1884) reflected largely the influence of his first teacher of medicine, Professor Laycock.

In April (29th), 1911, he published a paper in this *JOURNAL* (p. 976) on salvarsan and arsenic cancer. He reiterated his frequently made statement that he was a zealous, not to say enthusiastic, advocate of arsenic and mercury as remedial agents; but he had to confess that, in his later years of practice, he had reason to fear that arsenic might be a dangerous drug to use. About 1880 he pointed out that it was a cause of herpes zoster, and not long after this (1887) he also published his belief that it could originate, or intensify if already present, a proclivity to cancer—not always to the same form of cancer, but most frequently to epithelioma, and not only after prolonged use of the drug, but after a comparatively short course. He stated that he had used arsenic only in exceptional cases since he became aware of its dangers, and uttered a warning against the too general use of salvarsan, which depended for its action in syphilis on its arsenical content. He added that but little had been alleged respecting the curative effects of this new remedy which was not equally true of mercury and the iodides when properly and boldly used. The well-known Hutchinson's pill of grey powder need hardly be mentioned here. He had so strong an opinion of the curative effects of mercury when properly used that in a discussion on the eligibility of syphilitics for life assurance he said: "If a man came to me with a primary chancre and nothing more, and he were in good health, and if I knew he was a man likely to submit to judicious treatment, I should say to any insurance office I was concerned with, 'Take this man by all means, there are no extraordinary risks; there are some little risks associated

with him, but it is very probable he has a good sound constitution in other respects."

He was always very accessible, and was hospitable in a quiet way. After he had settled himself at Haslemere, where even before he gave up practice he was accustomed to spend much time, he was always glad to welcome his friends, young and old, and sometimes organized large parties, where Hutchinson the countryman, who would stroll along a hedgerow with a gun, ostensibly in quest of rabbits, but with his attention easily called away by some bit of natural history, was a contrast to Hutchinson the rather keen controversialist of the London societies. Haslemere, with its twin mounds of Hindhead and Blackdown, is the centre of one of the most beautiful districts within easy reach of London, and Hutchinson was one of the first to appreciate its beauties and to realize its possibilities. He, at one time at any rate, owned a good deal of land there, and if we remember right built himself more than one country home before he finally pitched upon Inval, which was his home in the later years of his life.

Sir Jonathan Hutchinson had a large family. One of his sons bears the same name and, like his father, is surgeon to the London hospital; another, Mr. Procter Hutchinson, the laryngologist, died in early manhood; and a third is in practice at Haslemere.

The funeral took place at Haslemere on Thursday afternoon.

Sir JOHN BYERS (Belfast) writes:

Towards the close of the year 1878, immediately after graduating in medicine, I went to the London Hospital, where I had the rare good fortune to come under the magic spell and personal inspiration of Jonathan Hutchinson, and while no medical school in the United Kingdom had, at that time, an array of more brilliant teachers (Andrew Clark, Hughlings Jackson, Samuel Fenwick, Sutton, James Adams, Morell and Stephen Mackenzie, Couper, G. E. Herman, Thomas Barlow, and Frederick Troves (as surgical registrar), it is no disparagement to these most able men to say that Hutchinson was the *genius loci* who specially attracted outsiders.

First, he was an authority on so many diverse subjects: skin and eye diseases, syphilis, leprosy, diseases of women, nervous affections, all claimed his attention quite as much as general surgery.

Secondly, he was the most extraordinary observer I have ever come across, and, as a suggestive teacher, he was unrivalled. The simplest case was made to present affinities with other types of disease, and his pupils were inspired and encouraged to find out, if possible, its relationship with other forms of illness. In other words, Mr. Hutchinson constantly suggested to us that there were lines of observation and of thought about every disease still unknown that we might all try to work up.

Thirdly, Mr. Hutchinson, at the time I mention, occupied the curious position of medical and surgical referee (if I may use the word in such a sense) in obscure cases; hence, to his clinic were sent by the ablest men in the profession (Sir James Paget often sent examples of most out-of-the-way diseases) patients with rare complaints, for his opinion. These were brought into his little theatre, they were examined in turn by the students and doctors of all nationalities present, and then Mr. Hutchinson dictated his opinion, giving the reasons for his diagnosis. No method of clinical instruction could be more valuable. I have seen in one afternoon an example of Charcot's joint disease, a case of leprosy, a sarcoma of the sphenoid, ophthalmoplegia externa and interna, a congenital naevus of the tongue, pityriasis rubra, melanotic sarcoma, a congenital tumour of the sacrum, with a number of most obscure specific cases.

Fourthly, Mr. Hutchinson was an indefatigable worker. Not merely the London Hospital, but Moorfields Eye Hospital and the Skin Hospital at Blackfriars, all at times claimed his attention, and at each his work was done thoroughly. Not only did he keep a most careful record of his cases, but he employed artists (Mr. Burgess and others) to make coloured drawings of them, hence the value afterwards to the profession of his *Illustrations of Clinical Surgery*. Further, he found time, in the midst of all his pressing duties, to have a class once a week at his house in Cavendish Square, where those of us who attended had

the rare advantage of seeing his wonderful wealth of plates and specimens, and of hearing his views on almost every form of disease. I shall never forget those most pleasant and instructive evenings.

Fifthly, personally Mr. Hutchinson was the most charming of chiefs for any one to work under, and the truest of friends. I am sure there are many who, like myself, feel how much they owe to his splendid example, his brilliant teaching, and his direct personal help on many an occasion. Others will speak of his wonderful work as an authority on museums, as an educationalist, and as one who has written on the most diverse subjects, but, personally, I shall always remember Jonathan Hutchinson as the very highest type of clinical teachers, and as one of the most interesting, inspiring, and honourable of men it has ever been my rare good fortune to have met.

FREDERICK WALLACE, M.R.C.S., L.R.C.P. LOND.,
FORMERLY OF UPPER CLAPTON, LONDON.

ON June 14th passed away, at the Manor House, Uppingham, Mr. Frederick Wallace, late of Upper Clapton, London. He received his early education at Merchant Taylors' School. He afterwards entered at Guy's Hospital, and all his life took the keenest interest in the welfare of that institution.

One of a medical family, he first continued with his brother, Dr. R. U. Wallace, his father's practice in Haggerston; but at a later date he removed to Upper Clapton, where the greater part of his professional life was spent. He was an able and popular practitioner, and the news of his death has been received with regret by many of his old patients.

During the whole of his professional life he was a loyal and active member of the British Medical Association. He was the second Secretary of the old East London and South Essex District of the Metropolitan Counties Branch of the Association. He acted in that capacity for several years, and it was largely to his untiring energy that the prosperity of that district was due. He did excellent work on the central committees of the Association, and was from 1885 to 1895 a representative of the Metropolitan Counties Branch on the Central Council. In 1897 he attained the great distinction of being elected President of that Branch. He took much interest in the reorganization of the Association, and was the first Chairman of the new City Division. He was also active in other work for promoting the welfare of the profession, and served on the executive committee of the Medical Sickness Assurance Society, of which he was a Vice-President, from 1884 to 1911.

Mr. F. Wallace's energies were not restricted to his own profession. For many years he took part in the public affairs of the borough of Hackney, and served his fellow citizens both on the board of guardians and borough council.

His death from heart disease, which was quite sudden, occurred in the 68th year of his age, while on a visit to his son at Uppingham.

The funeral took place at Highgate on June 19th. Dr. Major Greenwood attended on behalf of the Central Council of the British Medical Association, and Dr. C. F. Hadfield represented the City Division. Dr. J. W. Hunt was present, representing the Medical Sickness Assurance Society, and Dr. King Warry the Hackney Borough Council.

Mr. Frederick Wallace was twice married. By his first wife he leaves a son and a daughter. The former follows his father's profession, and the latter is married to a medical practitioner. His second wife survives him.

LIEUTENANT-COLONEL JAMES CROFTS, late of the Bengal Medical Service, died at Cork on May 7th. He was born on May 13th, 1854, educated at Queen's College, Cork, took the M.B., M.Ch., and L.M. in the Queen's University of Ireland in 1874, and entered the I.M.S. as surgeon on March 31st, 1877, passing in two places below his younger brother, now Surgeon-General A. M. Crofts, C.I.E., K.H.S. He became Surgeon-Major on March 31st, 1889, Surgeon-Lieutenant-Colonel on March 31st, 1897, and retired on July 15th, 1905. He served in the Afghan war of 1878-80, and was present in the affair at Ali Khel, receiving the

medal. Most of his service was spent in medical appointments under the Foreign Office.

BRIGADE SURGEON JOHN ALFRED ILLINGWORTH, late of the Army Medical Department, died at Reading on June 6th, 1913. After taking the M.R.C.S. and L.S.A. in 1859, he entered the army as Assistant Surgeon on June 13th, 1859. He became Surgeon-Major in 1873, and retired with a step of honorary rank on December 1st, 1880. He served in the New Zealand war of 1860-61, and on the North-West Frontier of India, with the 7th Foot, in the Yusufzai expedition of 1863-64, receiving the medals for these two campaigns.

Public Health

AND

POOR LAW MEDICAL SERVICES.

SMALL-POX.

Isolation and Maintenance of Contacts.

THE appearance of a single case of small-pox in the Metropolitan Borough of Poplar early in May has been followed by a special report from the Public Health and Housing Committee on the case in question, together with a report from the medical officer of health upon the isolation and maintenance of contacts. There are indications throughout the country of considerable anxiety on the part of Public Health authorities caused by the increasing neglect of infantile vaccination. The case of small-pox notified at Poplar occurred in a woman, aged 34, who had not been vaccinated. Prompt measures of vaccination and revaccination of the inmates in the infected house and the isolation of the case were taken, and there has been no spread of the disease. It is pointed out that there is no enactment which empowers a local authority to isolate and maintain contacts. Whenever maintenance is carried out by such authority upon the recommendation of the medical officer of health the circumstances must at once be reported to the Local Government Board and the reasons stated why such recommendation has been made. The medical officer for Poplar expresses the opinion universally accepted that a person who has been in contact with a small-pox case, and who is immediately vaccinated or revaccinated, and has had his or her clothing disinfected, is not dangerous to the public. Details are given of the cost of the isolation and maintenance of contacts in the borough of Poplar during the small-pox epidemic of 1901-2. The cost, exclusive of certain items, such as wages and the fitting up and furnishing of shelters, was over £1,500. Prompt vaccination measures would obviate the necessity for such expenditure. Without vaccination isolation and the costly maintenance of contacts may completely break down. Although the maintenance of contacts in Poplar was so extensively adopted in 1901-2 the report says: "The isolation of the inmates was not satisfactorily effected, as in some instances friends visited the houses and numbers of the residents of the houses did not remain isolated, for at night time many of them went out, and in some cases went to places of amusement." After very careful consideration of the question as to what means other than vaccination can be relied on in the place of vaccination the Royal Commission reported: "We can see nothing to warrant the conclusion that in this country vaccination might safely be abandoned and replaced by a system of isolation. If such a change were made in our method of dealing with small-pox, and that which had been substituted for vaccination proved ineffectual to prevent the spread of the disease (it is not suggested that it would diminish the severity in those attacked), it is impossible to contemplate the consequences without dismay" (503). The relaxation of authority by the Government and the invitation to exemption now so extensively accepted by parents have been brought about without any fresh inquiry into or impeachment of the conclusion quoted above. An example on a small scale of the possibilities which may result in an unvaccinated child community was afforded at Newhaven in January last, when three "exempted" children in one family died on successive days from haemorrhagic small-pox.

POOR LAW MEDICAL OFFICERS' ASSOCIATION.

THE annual general meeting of the Poor Law Officers' Association of England and Wales will take place at the rooms of the Medical Society of London, Chandos Street, W., on Thursday, July 3rd, at 3 p.m. After the completion of the usual business papers will be read on the Present and Future of the Poor Law Infirmary, by Dr. C. Thackray Parsons, Medical Superintendent to the Fulham Infirmary; and on the Poor Law Medical Service and the Insurance Act, by Mr. E. J. Mott, Clerk to the Fulham Guardians. Tea will be provided after the meeting, but the usual annual dinner will not be held.

THE Vienna Association of Medical Practitioners recently organized courses of lectures on medical ethics. The success of the experiment has been such that the lectures are to be continued.

Medical News.

DR. E. M. BROCKBANK, Honorary Physician to the Manchester Royal Infirmary, has been appointed Dean of its School for Clinical Instruction.

THE French Minister of War has decided that to each section of hospital orderlies shall be assigned dogs trained for military purposes, especially for finding wounded men in the field.

THE Medical Society of Giessen has voted a contribution of 100 marks to the Lister Memorial Fund. Subscriptions may be addressed to the Honorary Treasurers of the Fund, Royal Society, Burlington House, Piccadilly, London, W.

THE Insurance Commissioners having issued regulations whereby the membership of the London Insurance Committee is increased to eighty, the London County Council becomes entitled to appoint two additional members and one additional medical practitioner. On June 24th the Council appointed Dr. R. M. Beaton as a medical member.

A VERY successful reception and conversazione was given by the Royal Society of Arts at the Natural History Museum, South Kensington, on Tuesday, June 17th. Lord Sanderson and Sir Henry Trueman Wood received the guests in the Central Hall, where selections of music were played by the band of the Royal Artillery, whilst the band of the University of London Officers' Training Corps performed in the Reptile Gallery, and an excellent vocal and instrumental concert was given during the course of the evening in the Shell Gallery.

AT the annual meeting of the Medico-Psychological Association of Great Britain and Ireland, which, as already announced, will take place on July 16th and 17th at the rooms of the Medical Society of London, the morning of the first day, Wednesday, will be occupied by general business. At the afternoon session on that day a presentation will be made to Dr. H. Hayes Newington, a member for forty years, President in 1889, and Treasurer since 1894. Dr. James Chambers will then deliver his presidential address, which will be followed by papers on traumatic neurasthenia by Dr. H. Campbell Thomson, and on the clinical significance of katatonic symptoms by Dr. Henry Devine. The annual dinner will take place in the evening. On Thursday morning papers will be read on the interpretation of dreams by Dr. C. A. Mercier, on dysentery by Dr. Salter Gettings, and on the bacteriological examination of the urine in some cases of general paralysis by Dr. E. Barton White. The report of a special committee on the status of assistant medical officers and the position of psychiatry will also be discussed. In the afternoon the President and Mrs. Chambers will give a garden party at the Priory, Roehampton.

THE last meeting of the Royal Meteorological Society for the session was held on June 18th, Mr. C. J. P. Cave, President, in the chair. A paper by Mr. J. S. Dines was read on "Pilot Balloon Observations in Barbados, 1911-12." These balloon ascents were carried out by Professor J. P. d'Albuquerque and other gentlemen, on behalf of the joint Upper Air Committee of the Royal Meteorological Society and the British Association. Mr. H. W. Braby, a graduate assistant in the Meteorological Office, read a paper on "The Harmattan Wind of the Guinea Coast." This is a north-east wind which blows during the winter months along the coast of Upper Guinea from French Guinea to the Cameroons. It is exceedingly dry, and brings with it fine sand which enters the crevices of doors and windows, covering everything with a film of dust. The sun is partially obscured, and distant objects become invisible. This wind, which blows intermittently from November to March, is locally known as "The Doctor." Its medical virtues seem problematical; at any rate this remarkable "doctor" would seem to have no faith in the therapeutic properties of light or ventilation. Dr. E. C. Snow read a paper prepared by himself and Mr. J. Peck on "The Correlation of Rainfall."

THE annual dinner of the Medico-Legal Society was held at the Holborn Restaurant on June 23rd. In the absence of Earl Russell, the president of the society, the chair was occupied by Sir William Collins. The toast of the society was proposed by Sir Frances Champneys, President of the Royal Society of Medicine, and Sir William Collins, in responding, gave an interesting survey of the history of the society, and paid a graceful tribute to the yeoman services rendered by Sir John Tweedy and Judge Walton. In the course of his remarks the chairman alluded to the valuable part played by the society in what might be termed the cross-fertilization of sciences, due to the fact that it embraced medical, legal, and lay members.

He expressed his earnest hope that the distinctive character of the society would be maintained, and that it would escape absorption by the Royal Society of Medicine, a body composed of and existing for the members of one profession only. The society might well be the means of directing the practical attention of the House of Commons to medico-legal questions, and become, in fact, the laboratory in which the raw material would be prepared for the legislator. Commenting upon the scanty recognition accorded to the science of medical jurisprudence in the report of the Royal Commission on University Education in London, Sir William expressed the opinion that the society could do a great deal to promote the organization of a really representative school of medical jurisprudence, which would place in a position worthy of it a great science that has been sorely neglected in the past. Sir John Tweedy proposed the health of the guests, and coupled with the toast the name of Mr. Ivor Eccles, who briefly responded.

THE Convalescent Homes Association has since last year changed its address to 14, Victoria Street, Westminster. It has also published a second edition of its list of convalescent homes and sanatoriums receiving London patients, copies of which (price 1s.) can be obtained on application. Containing as it does full particulars as to the terms of admission and special features of over a hundred institutions, it is a useful book. The main objects of the association are to co-ordinate the work of public convalescent homes receiving London patients, to disseminate information in regard to the needs of London in respect of convalescent relief, and to advise the authorities of homes on all points concerned in their management. Last year the association, out of an income of some £360, made grants aggregating over £140 to nine homes standing in need of assistance. The chairman of its executive committee is Sir William Church, and the honorary secretaries Mr. M. O. Fitzgerald and Dr. S. H. Habershon.

AT the annual meeting of the Royal National Sanatorium, Bournemouth, held on June 11th, Mr. D. H. W. Robson-Burrows, the Chairman, said that the institution was gradually undergoing a very considerable change. Down to June 5th a total of 97 people had been admitted to the institution during the year, or, roughly, an increase of 10 compared with the usual number. Out of the 97 no fewer than 71 came under the Insurance Act; 52 were insured persons and the remaining 19 were the dependants of insured people. Instead of 80 to 85 nominated patients, there were only 26 of that class. The annual donations and subscriptions had decreased, and, he had no doubt, would go on decreasing, as there was no reason why people should contribute towards what was now being done by the State. So far arrangements with local authorities had been limited to the counties of Hampshire and Dorset and the county borough of Bournemouth, although communications had been received from various parts of the country. The amount received from annual subscriptions showed a decrease of £78, and from donations of £375, while the amounts received from the Metropolitan Hospital Sunday Fund and from the Bournemouth Hospital Saturday and Sunday Funds showed a continuous falling off.

IT has already been announced in the JOURNAL that the third International Conference on Cancer Research is to be held at Brussels this year in August (1st to 5th). Fuller particulars of the programme have been published. The following subjects are proposed for discussion: (1) The use of physico-chemical measures in the treatment of cancer, and the use of chemical remedies after radical operations. The reporters are Professor Neuberg of Berlin, Professor Caspari of Berlin, Professor Freund of Vienna, Exzellenz Professor Czerny of Heidelberg, and Professor Bayet of Brussels. (2) Vaccine and serum treatment of tumours. The reporters are Dr. Odier of Geneva, Professor Daels and Dr. De Somer of Ghent, and Dr. William Koley of New York. (3) Statistics of cancer; its regional distribution. The reporters are Dr. Rosenfeld of Vienna and Professor Firket and Dr. Kramer of Liège. (4) Etiology of cancer. The reporters are Professor Joh. Fibiger of Copenhagen and Professor A. Marie. (5) Establishments for the care of cancer patients. The reporters are Professor Blumenthal of Berlin and Dr. Solé of Brussels. (6) The nursing of cancer patients and training in this special department of nursing. The reporter is Professor George Meyer of Berlin. (7) A report on the position of cancer research and anticancer campaigns in different countries, by means of pamphlets and monographs intended for doctors and leaflets for the instruction of the laity. The reporters are Professor Willem's of Ghent and Dr. Odier of Geneva.

Letters, Notes, and Answers.

CORRESPONDENTS who wish notice to be taken of their communications should authenticate them with their names—of course not necessarily for publication.

ORIGINAL ARTICLES and LETTERS forwarded for publication are understood to be offered to the BRITISH MEDICAL JOURNAL alone unless the contrary be stated.

MANUSCRIPTS FORWARDED TO THE OFFICE OF THIS JOURNAL CANNOT UNDER ANY CIRCUMSTANCES BE RETURNED.

CORRESPONDENTS not answered are requested to look at the Notices to Correspondents of the following week.

AUTHORS desiring reprints of their articles published in the BRITISH MEDICAL JOURNAL are requested to communicate with the Office, 429, Strand, W.C., on receipt of proof.

TELEGRAPHIC ADDRESS.—The telegraphic address of the EDITOR of the BRITISH MEDICAL JOURNAL is *Aitiology, Westrand, London*. The telegraphic address of the BRITISH MEDICAL JOURNAL is *Articulate, Westrand, London*.

TELEPHONE (National).—

2631, Gerrard, EDITOR, BRITISH MEDICAL JOURNAL.

2630, Gerrard, BRITISH MEDICAL ASSOCIATION.

2634, Gerrard, MEDICAL SECRETARY.

Queries, answers, and communications relating to subjects to which special departments of the BRITISH MEDICAL JOURNAL are devoted will be found under their respective headings.

QUERIES.

H. J. C. asks whether any effect on the nervous system or will power is likely to be produced by a habit of taking a drachm of paraldehyde every night for months or years.

MOTOR TYRE PAINT.

BETA wishes to know of a white paint for motor tyres that will not readily wash off nor injure the rubber. He asks whether ordinary whitening and water would be satisfactory and if so what should be added to make it adhere properly.

"EL KOSSAM."

DR. G. A. WILLIAMSON (Aberdeen) writes: On page 84 of that very interesting book, *Boyd Alexander's Last Journey*, the following occurs: "Induced José to take El Kossam. This medicine again had wonderful results. The next morning he was comparatively fit. I am very glad I brought some with me." The author is speaking of his treatment of an attack of dysentery acquired in San Thomé. Our correspondent asks whether Kossam is a common remedy on the West Coast of Africa.

. According to the *United States Dispensatory*, nineteenth edition, the seed of *Brucea sumatrana*, a plant indigenous in China and Southern Asia, are known as Kossam seeds, and are asserted to be useful in menorrhagia, dysentery, and diarrhoea. A reference is given to the *Pharmaceutical Journal*, lxiv, p. 463. From *Brucea sumatrana* Roxburgh has obtained an alkaloid, brucamarine. There is another species, *B. antidyenterica*, which was at one time supposed to be one of those which yielded false angostura bark.

INCOME TAX.

J. A. B. held an appointment as an assistant during the three years ended April, 1913, and in May purchased a partnership from which he expects to receive £350 per annum. He inquires what sum should be returned for income-tax purposes.

. The fourth rule, applying to Cases I and II, Schedule D, provides that the duty payable in respect of a partnership shall be computed according to the profits of the practice during the previous three years notwithstanding any change therein or succession to the practice, unless the partners prove that the profits have fallen short from some specific cause since the change took place or by reason thereof. Accordingly, in the case mentioned by "J. A. B." the firm's return for assessment should be made—by the precedent acting partner—on the basis of the full average profits of the practice during the past three years, and in any claim for abatement, etc., which he may make "J. A. B." should insert his share of the full return—for example, one-third of £1,050=£350. If, at the end of the year, it is found that the profits have fallen short from some specific cause, a claim for repayment should be preferred within six months.

ANSWERS.

GASTRIC ULCER.

IN answer to our correspondent's question as to the best book "on the treatment and after-treatment of gastric ulcer," we may refer him to the excellent article by Dr. Charles F. Martin on Gastric and Duodenal Ulcer in vol. v, p. 175, of Osler and Macrae's *System of Medicine*, published in 1909. A more specialized account may be found in Dr. George Herschell's *Non-Surgical Treatment of Duodenal Ulcer* (London: Henry J. Glazier, 1910), or in the section under

this head in Professor Saundby's *Treatment of Diseases of the Digestive System* (London: Griffin and Co., 1906). If our correspondent reads German, we may refer him to Professor Matthes's *Die Behandlungsmethoden des chronischen Magengeschwüres* in Professor Albu's *Encyclopaedia* (Karl Marhold, 1910), to Dr. M. Bamberger's *Alverenga Prize Essay, Die innere und die chirurgische Behandlung des chronischen Magengeschwüres und ihre Erfolge*, and to Dr. Friedrich Craemer's *Vorlesungen über Magen- und Darmkrankheiten*, 5th part.

LETTERS, NOTES, ETC.

LIPODYSTROPHIA PROGRESSIVA.

DR. F. PARKES WEBER (London, W.) writes: In my article on the above subject, which appeared in the *JOURNAL* for May 31st, I referred at length to a case described by Dr. E. Holländer, of Berlin, in 1910, but I did not know that this, from the neurological point of view, was Dr. A. Simons's case, and was fully described by Dr. Simons, under the heading "Eine seltene Trophoneurose ("Lipodystrophia progressiva")," in the *Zeitschrift f. d. ges. Neurologie*, etc., Berlin, 1911, vol. v (originalien), p. 29. Hoping you will allow me thus to call attention to Dr. Simons's publication.

DOGS AND DOG OWNERS.

MISS SYLVIA S. LINTON (Cambridge) writes: In the *BRITISH MEDICAL JOURNAL* of June 21st (p. 1356) you speak of the appeal of Miss Bailey to dog owners not to chain their dogs, and you say "while condemning this inhumanity we think that her unreserved demand fails to take into account possible danger to human beings." I may, of course, be mistaken, but I imagine that it is the chaining of dogs to which Miss Bailey objects. I have kept and shown dogs for the last six or seven years and I know that chaining is one of the worst things for them. At the same time, however, I believe in discipline for dogs, and would suggest that they are shut up in a run for a certain portion of the day. Surely it is possible for every one to make a small run for his dog, and while thus disciplining him do away with the injurious chaining. A dog will be quite as good a watchdog in a run as on a chain; of this I have had practical experience. The vast majority of people who keep one or two dogs, but yet have little technical knowledge of them, do not seem to realize the advantages of a run in place of a chain.

SCARCITY OF SHIP SURGEONS.

BLUE PETER writes with reference to the letter under this heading published last week to state that a well-known shipping firm habitually defers handing instructions to their ship surgeons until after appointment. He adds: A friend recently was offered three different ships in quick succession by a prominent company, showing that just now, at least, doctors for sea service are not readily obtainable. Intending ship surgeons will be well advised to use discretion in their selection of the company for whom they sail.

INTRAVENOUS INJECTIONS OF IODOFORM IN PULMONARY TUBERCULOSIS.

DR. A. STEVENSON (Sunderland) writes: I hold no brief for Dr. Dewar, yet having followed his line of treatment in phthisis for some years I can fully endorse all that he says in its favour. Dr. J. B. Coleman, at the Royal Academy of Medicine, Ireland, has not made out his case against "intravenous injections of iodoform." Dr. Coleman states that iodoform is toxic to human beings. When 3 grains can be given by the mouth, how can half a grain injected do any harm? I have not yet had any bad effects following the intravenous use of iodoform. Can Dr. Coleman give any cases where haemoptysis or pneumothorax resulted from its use. If not, then the intravenous method of administering iodoform should not be condemned because certain risks might happen which really do not take place. The proof of the iodoform is in the injection of it.

THE DECLINING BIRTH-RATE.

DR. BINNIE DUNLOP (London, S.W.) writes: In your note on Dr. Rohleder's pamphlet, *Der Geburtenrückgang eine Kulturfrage*, you say (May 31st, p. 1179) that, "Given a fixed income anywhere near the poverty line, it is obvious that a parent can provide better housing, nourishment, and education for two children than for five." Then you ask two questions which you consider cannot be answered offhand or with much agreement by medical men, and which I hope you will allow me to comment upon. "Do the environmental advantages which thus accrue to the diminished numbers of the offspring outweigh the disadvantages of a slackening of the intensity of natural selection operating upon a larger number of children (in a family), some of whom must be 'weeded out'?" Surely it is a most inhumane suggestion—and a totally indefensible one from a medical man whose mission is the saving of life—that a couple who can only afford to maintain two children should be encouraged or compelled to have more than two, in order that there may be some weeding out; in other words, in order to submit the children to a semi-starvation test as to which pair will prove the fittest. Besides, children are not born in litters, and the human tendency is to feed the delicate ones at the expense of the stronger ones. If a couple can—like the majority of our urban wage-earners—only do justice to two children, it seems to me the duty, as I heard Dr.

Rohleder most ably contending at the great Dresden Hygiene Exhibition, of the family doctor to teach the parents the best means of family limitation. This brings me to your second question: "Again, are the effects upon the health and morals of a nation of the employment of artificial methods of restricting fertility so prejudicial as to counterbalance the individual advantages?" What evidence is there that "the effects" are "prejudicial" at all? The fact that death-rates fall with falling birth-rates, and not otherwise, seems to prove that "the employment of artificial methods" is not injurious to health. That it is also not injurious to morals is evidenced by the admitted and constantly-remarked-upon improvement in them that has been going on steadily in recent years, and by the progressive diminution of crime as seen in the statistics.

DR. H. B. HANSON (Hampstead, N.W.) writes: It is with great satisfaction that one sees Sir Thomas Oliver and others drawing attention to the harm a frequently ignorant public does itself by the use of leal as an abortifacient. There is, however, one point where the evidence is a little conflicting; it needs elucidation before the matter can be dealt with radically. Sir Thomas Oliver says: "It is the light-hearted manner in which unmarried and young married women, in their eagerness to avoid responsibilities and the assumption of tasks which interfere with their pleasure, resort to the use of diachylon, that calls for condemnation." Dr. Hall states that it is a period of trade depression that sends the number of cases up by leaps and bounds. If there are society women who take diachylon as a means to devote more time to bridge or to enable them to lead a life of immorality without unpleasant consequences, then, as Sir Thomas Oliver says, they deserve condemnation; but the fact that the numbers increase during trade depression points much more to its being employed not to leave the woman free to amuse herself, but in order to prevent her adding another hungry mouth to her already starving family. As has been well pointed out in a recent weekly, all the desirable reforms—of keeping the children longer at school, forbidding their half-time work or trading in the streets—have an adverse side, which falls almost invariably on the mother. There is no automatic increase of wages to compensate for these increases of expenditure, and it means that the mother has frequently to see her children underfed, herself starved and worked beyond her strength, in order to make both ends meet. The deplorably low state of health of married working women the Insurance Act is already revealing to those of us who did not know it before.

While, therefore, attempting to prevent by legislation this harmful means by which they sometimes seek in desperation to lessen their family cares, are we to fail to go to the root of the matter and to say either children are a valuable asset to the nation, their birth must be encouraged, and we will therefore give national support to the woman who, against her will, bears them beyond her means, or children are not a valuable asset, and should she so desire, the woman is entirely within her prerogative (not, indeed, in committing self-injury and destroying the child before birth), but, if her means are insufficient, in refusing to take the preliminary steps necessary for its birth at all.

It is (to quote Sir Thomas's words again) "the light-hearted manner in which unmarried and young married men, in their eagerness to avoid interference with their pleasure," continually increase their families regardless of consequences to all concerned, and by no means with a desire to serve their country, which "calls for condemnation."

Was it perhaps this complete lack of responsibility which led Miss Cobbe, regrettably I think, to speak of married men as being possibly one with the lower animals? This brings me to another point. Whether the above-quoted remark of hers was just or wise is certainly open to doubt, but I join with your correspondent last week in thinking your comments on her other remark that she loved her own kind only by grace somewhat uncalled for. When one reads antivivisection literature one thinks how poor their case must be to need the support of the various "terminological inexactitudes" they bring to it; but sometimes when one reads the *BRITISH MEDICAL JOURNAL* one would be tempted, were it not for first hand knowledge, to say how poor our case must be to need the support of the rather sarcastic personal abuse we sometimes indulge in. I have all the more pleasure in making this protest in that not even grace itself has enabled me to take the slightest interest in the animal creation.

SCALE OF CHARGES FOR ADVERTISEMENTS IN THE BRITISH MEDICAL JOURNAL.

| | £ | s. | d. |
|-----------------------|-----|-----|--------|
| Eight lines and under | ... | ... | 0 4 0 |
| Each additional line | ... | ... | 0 0 6 |
| A whole column | ... | ... | 2 13 4 |
| A page | ... | ... | 8 0 0 |

An average line contains six words.

All remittances by Post Office Orders must be made payable to the British Medical Association at the General Post Office, London. No responsibility will be accepted for any such remittance not so safeguarded.

Advertisements should be delivered, addressed to the Manager, 423, Strand, London, not later than the first post on Wednesday morning preceding publication, and, if not paid for at the time, should be accompanied by a reference.

NOTE.—It is against the rules of the Post Office to receive *poste restante* letters addressed either in initials or numbers.

BRITISH MEDICAL ASSOCIATION.

NATIONAL INSURANCE ACT.

STATEMENT AS TO THE PRESENT POSITION AND POLICY WITH REGARD TO MEDICAL BENEFIT.

[In accordance with the instructions of the Representative Meeting on December 23rd, 1912, to the effect that steps should be taken to correct the many misstatements and misrepresentations which have been made in the press and from the platform as to the attitude of the medical profession towards the National Insurance Act, the following statement to the public has been issued to the press:]

The decision of the Representative Body of the British Medical Association that service under the National Insurance Act was impossible to self-respecting practitioners, and therefore must be declined, was the result of no hurried action, but the logical outcome of eighteen months' deliberation and negotiation. Some of the reasons which determined this resolution are here briefly set forth.

Under the final Regulations and conditions of service as published by the Commissioners the entire control and management of medical benefits are entrusted to the Local Insurance Committees, on which the representatives of insured persons are in a permanent majority, the directly elected representatives of the medical profession being two only, others being nominated by outside bodies so as to bring the total number up to one-tenth. By this body, practically a working class committee, all arrangements as to medical service are to be made and controlled and to it all complaints are to be referred, subject to final submission to the Commissioners. Any complaint by an insured person against a panel doctor is in the first place considered by a

committee composed of three medical men, three representatives of insured persons, and a lay chairman nominated by the Insurance Committee from those of its members who do not directly represent the insured. The finding of this body is then submitted to the full Insurance Committee for their decision. This decision is subject to review by the Commissioners, another body with a minimum of medical representation. It is thus evident that professional questions, involving in many cases difficult technical and even scientific issues, which in many cases may affect the reputation of a practitioner, must be considered and decided by a number of persons who are neither by education nor training fitted for that office. It has been well said that "No intellectual industry can escape injury when placed under the control of inferior intelligences," and for this reason, if for no other, the Regulations under the Act are distasteful and impossible to the members of a scientific profession. On the other hand, should a doctor object to frivolous and unnecessary calls or any other sort of misbehaviour by an insured person, he has to put the same machinery in motion, and appear to prosecute his

complaint before the tribunal constituted as described above. No busy practitioner can afford the time or risk the unpopularity necessary to obtain redress in this fashion, and, so far as he is concerned, this provision will be a dead letter.

The whole risk of the insurance has to be undertaken by the medical profession. The State safeguards itself by excluding from sickness benefit sufferers from certain classes of illness caused by the patient's own misconduct, which entail a very long and exhaustive treatment, as well as aged persons over 70. The doctor, however, has to give attendance on such cases until they recover or die—and this for an insurance premium which is quite inadequate. A statement was submitted to the Chancellor of the Exchequer proving this, to which no answer, or attempt at an answer, has been made. The report of Sir W. Plender on the earnings of medical men showed that they received 4s. 2d. per annum for each of the population for 1.8 attendances. This gives 2s. 4d. per attendance. The latest offer of the Government would provide about 8½d. for each attendance on an insured person under average conditions of health.

This is indeed a small fee for a skilled opinion carrying the responsibility of life and death. For this sum a practitioner on the panel (should the 7s. per annum be paid as a pure capitation fee) undertakes services far beyond those required in ordinary club contract practice. Should he require the services of an anaesthetist for some painful operation he must pay him out of his own pocket. He gets no allowance for "extra" work or for mileage, unless in exceptionally sparsely populated districts, and (contrary to the promise of the Chancellor of the Exchequer given at the meeting at the Examination Hall in 1911) must agree to treat without further remuneration persons whose lives in an insurance sense are bad, and who have passed no previous medical examination. He also has to keep "records," and his work is to be subject to inspection.

The Government has definitely refused to enact that persons whose income exceeds a certain sum shall make their own arrangements for medical treatment, receiving from the Insurance Committees the sums due to them for medical benefit. This refusal is based, not on any contention that it is just and right, but that, according to the Chancellor of the Exchequer, it would lead to loss of votes at parliamentary elections. A large number of doctors make the greater part of their income from the moderate fees paid to them by persons somewhat better off than the ordinary club patient. Such persons being swept into the insurance net, those doctors would be on the verge of ruin. Under the Act an income limit can be fixed by the Local Insurance Committees, but the Chancellor frankly stated that there was no chance whatever that the committees, with their statutory majority of working-class representatives, would be content to fix one in the case of highly paid artisans, though one might perhaps be arranged for farmers and small tradesmen. From his statements it is clear that the amendment to the Act moved by Dr. Addison on this subject is more for show than use.

From the point of view of the insured person the outlook is not reassuring. As matters now stand he is called on to trust his health—in most cases his sole capital—to a medical service which can hardly be efficient. In certain areas, no doubt, some sort of a panel will be set up; in a large number of districts it will be impossible to do so. The number of prac-

tioners willing to break their pledged word and accept service will be limited, and consequently the supply will fall short. To make the Act a success at least 10,000 doctors will be needed, taking country with industrial areas. To work it in some way about 8,000 might suffice, and any less number would spell disastrous failure. The service will therefore be deficient in numbers, and any attempt to work medical benefits under present conditions will be directly prejudicial to the health and best interests of the public.

The alternative scheme put forward by the British Medical Association is free from these objections. Under it the number of doctors willing to work will be limited only by the numbers who now practise among the industrial classes. All the best men will be available, and each of the insured will have absolutely free choice and can choose the practitioner by whom he wishes to be attended, the service being given freely and whole-heartedly and not "grudgingly or of necessity." Under these circumstances also, the doctors on the British Medical Association list will be able to work in full accord with specialists and consultants. The consultant and specialist, both in hospital and at his own consulting-rooms, exercises a boundless charity to those in need. He will not act in defiance of the interests of the bulk of his brethren, but will observe both the letter and spirit of the pledge which has been signed by the very great majority of those in consulting practice, and only treat insured persons, and co-operate with those doctors attending them in cases of urgent necessity, until the terms of service under the Act are accepted by the British Medical Association and the profession generally.

As soon, however, as this plan was sanctioned by the Representative Body of the British Medical Association and published a Government announcement was made that under no circumstances could assent be given to it. The Commissioners, for the Government, prefer to rely on the chance of establishing sufficient panels, obtaining enough "whole-time men" to give some sort of a service, and on the extension of branches of "Medical Institutes." The work of these Institutes has justly been stigmatized as "the very worst form of low-class contract practice." From this it is plain that quantity, not quality, is all the Government requires in its medical service, and that the health of the insured persons is but a "pawn in the game." There is no reason at all why assent should not be given to this alternative plan. The Act allows it, as definite provision is made in it for insured persons "to make their own arrangements" for medical treatment. The whole medical profession is ready and willing to work under such conditions, as they secure that freedom and independence which is demanded by the members of a scientific body. It will be to the best interests of the insured persons, as they will obtain the best possible attendance and treatment from the best possible men, each person freely choosing the doctor he wishes to look after him. It will be to the best interests of the State, as the medical service will be given heartily, and the individual practitioners will work as "doctors," and not as underpaid, overworked, unpensioned units in an uncovenanted branch of the Civil Service. The Government objections are incomprehensible, but the last word is neither with the Government nor with the doctors. It is the insured persons themselves who have to choose between an efficient and a non-efficient service, and, having made their choice, they must see that their decision is accepted.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

A MEETING of the State Sickness Insurance Committee appointed by the Special Representative Meeting on November 20th was held at the house of the Association, 429, Strand, on Monday, December 30th, 1912, Dr. J. A. MacDONALD in the chair. The members present were: *England and Wales*: Dr. R. M. Beaton (London), Dr. T. M. Carter (Bristol), Miss Frances Ivens M.S. (Liverpool), Mr. E. B. Turner (London), Mr. E. H. Willock (Croydon). *Ireland*: Dr. J. S. Darling (Lurgan). *Ex officio*: Mr. T. Jenner Verrall (Chairman of Representative Meetings), Bath.

APOLOGIES FOR ABSENCE.

Letters of apology for non-attendance were read from: Dr. J. Adams (Glasgow), Dr. Helme (Manchester), Dr. R. McKenzie Johnston (Edinburgh), Dr. Constance E. Long (London), Dr. E. O. Price (Bangor), Dr. D. G. Thomson (Norwich), Mr. D. F. Todd (Sunderland), the Treasurer (Dr. Edwin Rayner), and the President (Sir James Barr).

Dr. Price in his letter stated that he felt compelled to resign his membership of the Committee.

SPECIAL REPRESENTATIVE MEETING SUMMONED.

The Committee considered for some time the position which had arisen since the Representative Meeting on December 21st and 23rd, and the Chairman of Representative Meetings announced that he had received requisitions from constituencies in accordance with By-law 36 (1) for a Special Representative Meeting, and that he intended accordingly to call such a meeting at the earliest convenient date. After some discussion it was determined that the earliest possible date would be Friday, January 17th. The Committee thereupon adopted the following resolution:

That a Special Representative Meeting be called to consider the desirability of releasing practitioners from the pledge and undertaking they have given in connexion with the National Insurance Act, and to consider the situation created by the attitude of the Government towards the decisions of the Representative Body.

THE ALTERNATIVE SCHEME AND FREEDOM FROM FRIENDLY SOCIETY CONTROL.

The Committee considered the following question (Minute 79) asked at the recent Special Representative Meeting by Dr. Durant (Consett, Gateshead):

Inasmuch as the cardinal point, "Freedom from friendly society control," is by Minutes of the British Medical Association its declared policy, will medical practitioners entering into arrangements whereby any of such control exists, be breaking their pledges?

and the statement by the Chairman—

That in his opinion, the cardinal points were originally adopted with a view to work under the Act, and that the alternative scheme is for working outside the Act, and that the remainder of the question was a matter for consideration by the State Sickness Insurance Committee.

The Committee endorsed the reply of the Chairman of Representative Meetings that the suggestion of dealing with friendly societies was for service outside, and not under, the Act, and considered that in any such dealings with friendly societies it was not suggested that the old control by the societies should be repeated, but that, on the contrary, the lines laid down in the alternative scheme of the Association precluded any such control being obtained.

LEGAL OPINION.

The Medical Secretary reported that in accordance with instructions he had submitted certain questions to the Solicitor and had received a reply. The correspondence was read as follows:

British Medical Association,
Medical Department,
429, Strand, London, W.C.,
December 18th, 1912.

Dear Mr. Hempson,

The following legal points arose in the Committee yesterday in connexion with the National Insurance Act and its Regulations, and I was instructed to place them before you and ask you to give them your early attention. If you think it necessary to take Counsel's opinion you

will of course do so, but the Committee leaves discretion as to this in your hands.

I would direct your attention to the New Regulations issued by the Commissioners which I brought to your notice yesterday as published in the SUPPLEMENT to the JOURNAL of December 7th, first Schedule, part I, "Conditions of service for practitioners," and also to the Model Agreement on page 643 of that SUPPLEMENT.

The Committee would like to know, in the case of a practitioner who has signed this agreement, by which of the various people and bodies concerned an action for malpraxis or neglect, or failure to fulfil contract, could be brought. The contract is between the doctor and the Insurance Committee, but the doctor is only bound to attend those persons on his list. Could the Insurance Committee sue him for breach of contract or for alleged malpraxis, or would such action lie with the patient? Would an Approved Society, of which the patient was a member, have any *locus standi* in bringing an action? In your opinion, would the penalty for neglect of patient or malpraxis, if such were proved, be likely to be greater or less under a formal agreement signed as is contemplated than it is now under the informal contract which exists in private practice?

It is desired also that you should consider this matter in connexion with the proposed Medical Trust or any similar scheme where the contract was made between the Trust or the Local Medical Committee and the Insurance Committee. In the case above outlined of an action for breach of contract or malpraxis would the action here lie against the Committee of the Trust or the Local Medical Committee or against the individual doctor, and if against the former would that Committee have in its turn any claim against the medical practitioner concerned?

If an Approved Society were able to bring an action on the part of one of its members, and if the action were lost, could costs given against such a Society be recovered from the Society? You will note, in this connexion, that the Society may either be a Friendly Society, or a Trade Union, or one of the collecting Insurance Companies.

The Committee would be glad if you would carefully examine the Model Agreement of the Commissioners to which I have already referred, and give your opinion as to whether the interests of the practitioner signing it are thoroughly protected, and, if not, state the points in which you think it needs strengthening.

You will note that the Model Agreement on page 643 of the SUPPLEMENT of December 7th is for the period until April 14th, 1913. In the ordinary way it is probably intended that an Agreement shall be made for the period of one year. Supposing the doctors were dissatisfied with the conditions of service, would it be a breach of contract if they refused to continue during the period for which they had signed, what would be the method of procedure against the individual practitioner who refused to carry it out, and what, in your opinion, would be the probable penalty if the case were proved—that is, the breach of contract?

I am,

Yours faithfully,
ALFRED COX,
Medical Secretary.

W. F. Hempson, Esq.,
33, Henrietta Street, W.C.

Bedford House,
33, Henrietta Street, Strand,
London, W.C., 24th December, 1912.

State Sickness Insurance Committee.

Dear Dr. Cox,

I have now given careful consideration to your letter of the 18th inst., asking for my opinion on various points arising out of the National Insurance Act and its Regulations.

The model Agreement referred to by you appears to be a document which is required to be signed by the practitioner who is willing to serve upon the panel, addressed to the Insurance Committee for the district. Apparently there is to be no corresponding written assent by the Committee. Whether or not the Committee's assent to the document could be subsequently proved in any other way, as by their action with regard to it, cannot be definitely ascertained until work has been begun under the Act and it is seen what, if any, measures are to be taken by the Committee which may be regarded as an adoption on their part of the agreement.

If the Committee is not bound by the contract to the practitioner, I fail to see how the practitioner can be held to be bound to the Committee, as there can be no contract without mutuality.

It is a recognized principle of law that there can be no binding contract to give services without a corresponding obligation to employ.

As to malpraxis, I think it is clear that the Committee could have no cause of action against the practitioner on this ground. The only person who would have such cause of action would be the patient who had suffered. Also, there is no duty on the part of the doctor to the Approved Society, so the Society could bring no action for malpraxis against the practitioner.

I am of opinion, therefore, the liability of a doctor for neglect of a patient, or malpraxis, would be no greater if the proposed agreement were signed than if there were no such document.

With respect to the case which you put of a contract being entered into between a Local Medical Committee or Trust, as representing the individual practitioners, and the Insurance Committee, I am of opinion that it would be impossible for the Local Medical Committee or Trustees to be made liable for the malpraxis or neglect of the individual practitioner whom they represent.

As to an action for breach of contract, I am of opinion that, prima facie, no action would lie against the Local Medical Committee for a breach of contract by a medical practitioner unless by some document forming a contract they formally committed themselves to it. It is presumed they would not undertake such a liability.

The question whether a medical practitioner would be liable would depend upon his contract, if any, with the Local Medical Committee, but I have no information as to what form such a contract, if there were one, would take.

It is therefore impossible for me to express an opinion beyond saying that it *might* be possible for the Local Medical Committee to make an agreement with the practitioner that the latter should be liable to such Committee for breach of contract.

Your next point is as to an action by an Approved Society on behalf of one of its members. The Society, as I have previously stated, in my opinion could not bring an action on behalf of a member, therefore no costs could be given against it; the member suffering must bring the action in his own name, and the fact of his being supported by funds of the Society for that purpose (which seems an unlikely event) would not create a liability on the part of the Society for costs.

I have examined the two model agreements, one of which provides for "payment by attendance" and the other for "payment by capitation."

I observe their effect is to provide generally as to the mode of treatment by the doctor, the persons to be treated, the places where and times when the treatment is to take place, also the particulars to be furnished to the Commissioners (see Sections 1, 2, and 3).

No question of law arises on any of these and no opinion of mine upon them is called for. It will be for you to consider whether the requirements are too onerous.

Clause 8 refers to some account which may be required at the end of the term of engagement, but there is nothing to show what such account is intended to contain, in addition to what is contained in the particulars required by the schedules. Whether the word "account" is used in the ordinary acceptation of the word, and is intended to refer to figures for statistics, or whether it is used as synonymous with the word "report," I am unable to say.

Clause 10 refers to the remuneration, which would, of course, be agreed, for taking an appointment.

Clause 12 requires the practitioner "shall" supply such drugs as are mentioned therein, and the latter portion of it deals with the mode of paying for such drugs.

It is a matter for your consideration whether these terms are acceptable.

The first appointment is to be until 14th April, 1913.

Supposing the Committee shall be of opinion that the continuance of a doctor on the panel is prejudicial I think under Section 15 (2) (B) the Commissioners may remove him before the time, and that he would have no right of action unless he could prove malice.

On the other hand, in the event of the doctor declining to continue his service until the time named, I cannot see what (if any) action could successfully be brought against him; he could not be compelled to act by a mandatory injunction of a court, neither do I see that any person would suffer any damage by such discontinuance which would be recoverable by an action at law.

If any action lay against a practitioner for neglect or malpraxis, the insured person would recover as damages all the consequent expenses he had been put to, together with any loss sustained in his business, or otherwise, by reason of his illness, and, further, a solatium for the pain and trouble he has suffered.

There can be no penalty for any offence where not so provided by the Act, except by mutual agreement between the parties.

As the form of agreement stands at present it is a list of duties which the practitioner undertakes to perform rather than a mutual agreement, and in the event of his negligence or refusing to carry out these duties he can be struck off the panel.

There is no penalty provided, so none could be sued for.

I am, yours faithfully,
W. E. HEMPSON.

Dr. Cox.

THE VOLUNTARY HOSPITALS.

THE Council of the British Hospitals Association met at St. Bartholomew's Hospital, London, on December 28th, 1912, to consider what steps should be taken by the managers of voluntary hospitals with regard to the treatment of insured persons after January 15th. Dr. D. J. Mackintosh, M.V.O., medical superintendent of the Western Infirmary, Glasgow, was in the chair, and the meeting was attended by representatives of voluntary hospitals both in London and in the country.

The honorary secretary, Mr. Conrad Thies, presented a memorandum founded on the returns received from a large number of voluntary hospitals throughout the United Kingdom. The returns were summarized in the following table showing the number of insured persons at the present time receiving treatment in voluntary institutions:

| | Per Cent. | Average Per Cent. |
|---------------------|---------------|-------------------|
| In-patients | From 24 to 80 | 49 |
| Out-patients | From 18 to 72 | 47 |

The chairman said that the Chancellor of the Exchequer had made it quite plain that the provision made by the Act was for domiciliary treatment alone, and did not touch the important work which the voluntary hospitals had been carrying on in the past and which, it was hoped, they would be able to continue to carry on in the future. A great deal must depend upon the action which medical practitioners would take with regard to the working of the Act, but, whether they went on the panel or came to some other arrangement, the work of the voluntary hospitals, so far as in-patients were concerned, would not be lessened either in amount or importance. About 50 per cent. of the patients in all the voluntary hospitals were not insured persons. If the Act were properly worked, hospitals should be relieved of patients who were suffering from affections which could be equally well attended to by their own doctors at home. In that direction, therefore, the Act would be a distinct boon to the hospitals, for the time and attention of the medical staffs would be devoted entirely to the principal classes of work for which these hospitals existed—namely, the treatment of serious accidents, acute diseases, major surgical operations, etc., which could not be attended to in the patient's home, and which required skilled nursing. If it were made perfectly plain to the public that no provision whatever had been made for institutional treatment under the Act, it would be premature for the managers of voluntary hospitals to interfere at the present stage in any way with the treatment as in-patients of insured persons suffering from ailments which could not be efficiently treated in their own home.

The discussion was conducted in private, but it was announced that the Council had resolved to make the following recommendations to voluntary hospitals:

1. The British Hospitals Association is strongly of opinion that upon the medical benefit under the Insurance Act coming into force, insured persons should be examined by a medical officer, but, except for accidents, emergencies, or such special treatment as can only be given in a hospital, they should no longer be received in the out-patient or casualty department unless accompanied by a certificate or introduced personally by the medical practitioner who is in attendance. In such cases, after consultation, they should be referred back to their medical practitioner, with

an expression of the opinion of the hospital's physician or surgeon on the case, and a list of all such insured persons and the practitioners by whom they are sent should be forwarded to the Insurance Committee of the district periodically.

2. With reference to in-patients, insured persons whose cases are urgent and in need of hospital treatment should be admitted as heretofore, and hospitals should keep accurate records of all such persons admitted, and, if possible, the approved society to which they belong.

CAMPAIGN

SUGGESTED BY

LONDON MEMBERS OF THE CENTRAL COUNCIL.

An emergency meeting of all the London members of the Central Council of the Association was held at 429, Strand, on Wednesday, January 1st, 1913.

This meeting discussed the present position of the profession under the Insurance Act, and was of opinion that the vast majority of the profession is still unwilling to serve on the Government panels, that such men as have gone on these panels have done so under pressure, and that the recognition by the Government of the principle of the insured "making their own arrangements" would result in the formation of free panels of willing practitioners. The meeting decided therefore to petition for an immediate meeting of the State Sickness Insurance Committee with a view to the inauguration of a campaign against the attempt to force an unwilling profession on to the Government panels.

The campaign involves a complete system of publicity, intelligence, press, and parliamentary departments, for all of which the materials are at hand. The present position of the panels in London is so unsatisfactory that no doubt was felt that the scheme of free and willing service will be accepted with enthusiasm throughout the metropolis. All the evidence goes to show that in the greater part of the country the same success will attend this campaign.

The Chairman has consented to call the urgency meeting of the State Sickness Insurance Committee for Thursday, January 2nd, and it is hoped that the campaign will be started forthwith.

MEETINGS OF THE PROFESSION.

COUNTY OF LONDON.

A MEETING was held on December 30th, 1912, at the offices of the British Medical Association, of the Medical Committee appointed for the county of London. This committee is composed of medical practitioners directly elected in open meetings of the medical profession held in each metropolitan borough, to which each practitioner residing or practising in that borough was summoned, whether or not he or she was a member of the British Medical Association. The following resolutions were passed:

1. That this meeting agrees that it is preferable that the medical profession shall be free to work outside the existing Act and supply medical benefit to insured persons.

2. That this meeting is of opinion that the form of medical service outlined by the British Medical Association is the best method of promoting the good of the community and of maintaining the freedom and best interests of the medical profession.
3. That this meeting is of opinion that the form of medical service outlined by the British Medical Association is suitable in the present crisis and can be adopted provided that the insured community exercises its right to apply to make its own arrangements.
4. That this committee at once communicate with the Commissioners, the Insurance Committee for London, and all approved societies, stating the terms upon which it is prepared to treat the insured persons.

The following form of notice to the Clerk of the London Insurance Committee by insured persons desiring to make "their own arrangements" has been drawn up for use in Kensington, and has, we understand, been largely employed at the suggestion of medical men by insured persons in that metropolitan borough:

National Insurance Act.

The Clerk,
London Insurance Committee,
3, Pall Mall East, S.W.

Sir,
In pursuance of Section 15, Par. 3, of the above Act, I hereby apply to be allowed to make my own arrangements for Medical Benefits.

Name.....

Address.....

Society.....

....., 1913.

CAMBERWELL.

A meeting of all medical men resident and practising in the borough of Camberwell was held at the Surrey Masonic Hall on December 27th, 1912. Forty-eight members of the profession were present. Dr. BATES was elected Chairman. The attitude which the local profession should adopt in consequence of the decision of the Representative Body of the British Medical Association was then discussed.

The Attitude of the Local Profession.—Dr. CAPES proposed, and Dr. LOWE seconded, the following proposition, namely:

That this meeting of medical practitioners resident in the borough of Camberwell considers it dishonourable to break the pledges given, and calls upon all the local practitioners to refrain from forming a panel under the National Insurance Act until the conditions are pronounced satisfactory by the British Medical Association.

Dr. CLITHEROW proposed, and Dr. WARD seconded, the following amendment:

That all the members of the profession resident and practising in the borough of Camberwell agree to sign the provisional agreement to accept service under the National Insurance Act.

This was carried by 28 votes to 15. On being put as a substantive proposition, Dr. CAPES proposed, and Dr. CLARK seconded, an amendment—namely, to add the words:

If we are released by the British Medical Association.

This was lost by 18 votes to 28. The original amendment was carried as a substantive motion by 31 votes to 17. Whereupon it was unanimously resolved to send up the following resolution to the State Sickness Insurance Committee:

That this meeting of Camberwell practitioners, having been compelled by force of circumstances to go on the panel, respectfully desire that the Association should release them from their pledges.

NEWPORT, ISLE OF WIGHT.

At a meeting of the medical profession held in Newport, Isle of Wight, on December 30th, 1912, when there were forty-eight present, the following resolution was carried:

That the members of the medical profession in the Isle of Wight are of opinion that it would be prejudicial to the best interests of the profession and of the insured for any practitioners to apply for service on the panel, and they hereby agree to abide by their undertaking and pledge, given not only to the British Medical Association but to each other.

A vote was taken by roll-call, with the following result: In favour of the resolution, 39; neutral, 5; against, 4. Those who were against and those who did not vote agreed to abide by the decision of the majority, and declined to apply for service on the panel.

LLANDUDNO.

The following resolution was passed at a meeting (which was fully attended) of the medical practitioners of this town, held on December 28th, 1912:

That all the medical practitioners in Llandudno do stand by their pledges not to work the Insurance Act unless by instruction from the British Medical Association.

This was proposed by Dr. E. R. WOODHOUSE, seconded by Dr. R. RICHARDS, and carried unanimously.

PROVISIONAL MEDICAL COMMITTEES.

COUNTY OF CHESHIRE.

This Committee was formed by the Lancashire and Cheshire Branch Council on December 18th, 1912, and held its first meeting at the Onward Buildings, Deansgate, Manchester, on December 27th. Dr. Garstang, of Altrincham, was elected chairman, and Dr. Pieton, of Holmes Chapel, secretary. To the Altrincham Division eight representatives were apportioned, to the Birkenhead Division (excluding the county borough of Birkenhead) three, to the Chester and Crewe Division (excluding the county borough of Chester) six, to the Stockport, Macclesfield, and East Cheshire (excluding the county borough of Stockport) seven, to the Ashton Division (so far as in Cheshire) four, to the Warrington Division (so far as in Cheshire) one, and to the South Manchester Division (so far as in Cheshire)—comprising the Wilmslow area) one, making a total of thirty in all.

The second meeting was held on Monday, December 30th, 1912, at the Crewe Arms Hotel, Crewe.

Uninsured Persons.—It was resolved:

That, in accordance with the resolution of the Representative Meeting in November, uninsured persons, in areas of the county where no other arrangements have been made, may be accepted on contract terms obtaining hitherto until March 25th, 1913, or on any other terms that may be arranged by this committee; but that this shall not apply to uninsured persons provided for by the Act, namely, club members over 65, or ineligible for insurance through sickness at the commencement of the Act.

Cheshire Insurance Committee and the Question of Drugs.—The Committee subsequently attended in deputation at a meeting of the Cheshire Insurance Committee, and were invited by the CHAIRMAN of the latter to submit a supplementary list of drugs in addition to that submitted by the chemists. The deputation (Medical Committee) then withdrew, and after consideration resolved:

That it would be premature to intervene in the question of drugs whilst the larger question of service remains open.

The CHAIRMAN OF THE MEDICAL COMMITTEE (Dr. Garstang) returned this reply to the Insurance Committee.

Practitioners and the Panel.—Subsequently the deputation was invited again to attend at the meeting of the Insurance Committee to discuss the larger question. The CHAIRMAN OF THE INSURANCE COMMITTEE announced that the clerk had sent out 410 invitations to join the panel, and only 12 replies had been received. He invited Dr. Garstang to state the position of the medical men in the matter. Dr. GARSTANG stated that he knew of a few others besides the 12 who were contemplating going on the panel, but that they would make no difference to the main issue—an effective panel would not be formed. The Cheshire doctors would not go on the panel. On the other hand, they were prepared to offer the Insurance Committee a good—indeed, a far better—service on practically identical terms to those offered, but not on the panel system, and not with the restrictions it imposed. Asked to state the terms on which the doctors would serve, he enumerated the following:

1. Any agreement before it becomes operative shall receive the confirmation of the State Sickness Insurance Committee of the British Medical Association.
2. Any proposals made by the Insurance Committee to be subsequently considered by the profession of the area.
3. The essential features of any arrangement must include:
 - (a) Free choice of doctor from the *Medical Register*.

(b) 8s. 6d. capitation fee, including medicine, as a minimum; or 2s. 6d. per visit as a minimum.

(c) Income limit to be arranged.

(d) No individual agreement between doctors and the Insurance Committee; but the Medical Committee to agree in the name of the local profession to give service.

The Insurance Committee welcomed these terms subject to the approval of them by the Commissioners, which it would endeavour to obtain. The question whether, assuming the general acceptance of the above principles, the profession would provisionally attend insured persons on the 2s. 6d. tariff from January 15th was answered in the affirmative.

The Question of Remuneration.—The Crewe area doctors desire payment by capitation. The rest of Cheshire, on the whole, is in favour of payment for "work done." Both systems would run concurrently. The scheme for payment for "work done" drafted by the Stockport, Macclesfield, and East Cheshire area (National Medical Union scheme) which has been approved by the State Sickness Insurance Committee, had, before the interview, been brought to the notice of members of the Insurance Committee and favourably received.

COVENTRY.

The following resolution was carried at a meeting held on December 18th, 1912:

That the Secretary circularize the medical men in the area to the effect that after January 15th, and as a temporary arrangement, insured persons may be admitted into private clubs, the public medical service, or new dispensary at a rate of 2d. per week, and uninsured persons at 1d. per week. It is hoped that this may be a guide to you in dealing with your patients individually or collectively as members of societies.

IRELAND.

DUBLIN.

As the result of the conference between representatives from the Irish National Foresters Friendly Society and certain other societies and the Dublin County Borough Local Medical Committee the following resolution was adopted by the Committee:

As several important societies have expressed a wish to enter into negotiations with this Committee, the Committee will sanction a provisional arrangement on present terms to January 31st, 1913, in the case of such societies, by agreement between each society and its medical officer.

The same extension which has been granted to the friendly societies represented at the conference will be given to other medical officers, should their respective societies be desirous of participating in future negotiations, on making application to the Committee.

SCOTLAND.

ABERDEEN.

The Aberdeen, Banff, and Kincardine Division met on December 28th, 1912. There was a very large and representative attendance, about 100 members being present. We have not yet received any official report, but an account of the meeting, which appeared in the *Aberdeen Daily Journal* of December 28th, 1912, states that resolutions were passed to the effect that it was advisable that panels should be formed in the districts of the Division; that the Council be instructed to summon another Special Representative Meeting to reconsider the policy of the Association; and that the Provisional Medical Committees be recognized as Local Medical Committees.

ABERDEEN LIBERAL ASSOCIATION.

Dr. ALBERT WESTLAND, President of the Aberdeen Liberal Association, has resigned that position. The following is the text of the letter conveying the intimation of this decision to Mr. Scorgie, Secretary of the Association:

22, Albyn Place,
28th December, 1912.

Dear Mr. Scorgie,—I regret very much that I feel it necessary to tender my resignation of the office of president of the Aberdeen Liberal Association. An entirely new departure has been made by the present

Government. Upon a large and useful profession duties have been attempted to be imposed without any previous consultation with its recognized representatives, and conditions of work determined which are disliked and disapproved as inimical to its liberty and progress. And in regard to those duties under the conditions referred to, the remuneration offered has been fixed, not by mutual consent, but by arbitrary dictation by a member of the Government.

Both as a Liberal and as a member of the medical profession, I protest strongly against legislation of this character. I cannot believe that measures of social reform, when linked with, and to some extent dependent on, acts of despotic injustice to sections of the community, can be of real permanent value; and accordingly I must dissociate myself from any official tie with the party initiating such legislation.

In resigning, I would like to acknowledge with gratitude the kindness I have invariably received from yourself and the other officials, and the courtesy with which I have been treated by all members of the Association.

Believe me,

Yours very sincerely,

ALBERT WESTLAND.

Dr. Westland was in the chair at Mr. Lloyd George's recent meeting in Aberdeen.

SCHEME FOR MEDICAL SERVICE.

City Division.

A scheme for attendance on clubs or societies for insured or uninsured persons has been approved by the City Division Provisional Medical Committee, acting on instructions received from the meeting of the whole profession in the Division held on December 13th, 1912. The essential points in the scheme were published in the SUPPLEMENT of November 16th, 1912, p. 534. Full details and all necessary forms will be sent to any doctor residing in the neighbouring Divisions on application to the Honorary Secretary, Dr. W. Francis Roe, 12, Northampton Square, E.C. We are informed that the names of eighty practitioners in the City Division who are willing to act are already on the list.

POST OFFICE EMPLOYEES.

At an extraordinary general meeting of the Postal Medical Officers' Association, the President announced that at an interview with the Secretary of the Post Office it was intimated that unestablished postal employees who are under the Insurance Act will be free to choose their medical attendant, and that the postal medical officer will be under no obligation to attend such by the department.

BRITISH MEDICAL ASSOCIATION LIBRARY.

BOOKS NEEDED TO COMPLETE SERIES.

The Librarian will be glad to receive any of the following volumes, which are needed to complete series in the Library:

- American Association of Genito-Urinary Surgeons. Transactions. 1906.
- American Climatological Transactions. Vols. 1, 4, 5, 6.
- American Dermatological Association Transactions. Vols. 5, 7, 8, 11, and 29.
- American Journal of the Medical Sciences. New series, vols. 4, 5, 1842-3; vols. 14, 15, 1847-8; vols. 18-30, 1850; vol. 33, 1857; vol. 46, 1864-5; vol. 59; or any parts of these vols.
- American Journal of Ophthalmology. Vols. 1-9.
- American Laryngological Association. Transactions. Vols. 1-6, 8-9.
- American Medical Association. Transactions, 2, 4, 6, 7, 11, 12, 14, 15, 16, 19, 20, 22, 31, after vol. 33, and the *Journal*, up to 1903 inclusive.
- American Medico-Psychological Association. Transactions. Vol. 13, 1906.
- American Otological Society. Transactions. Vol. 3, part 2, 1883.
- American Public Health Association. Transactions. Any vols.
- Analyst. Vols. 1-24.
- Annals of Surgery. Vols. 13, 14, 26.
- Archiv für Dermatologie und Syphilis. Bd. 24 and 25 (1892 and 1893).

CORRESPONDENCE.

[It is particularly requested that communications intended for publication should be written on one side of the paper only, and should be addressed to the Editor, BRITISH MEDICAL JOURNAL, 429, Strand, London, W.C.]

THE ASSOCIATION AND THE PROFESSION.

DR. J. CROMIE (Blyth, Northumberland) writes: Come! let us reason together in a calm judicial spirit; let us put aside our inflammatory speeches, our political biases, our chagrin, and our irritating "I told you so's," and let us face the situation fairly and squarely; above all, do not let us make the mess more messy and confusion worse confounded by mutual recriminations, but let us rather try to believe that those who have taken a different line of action to our own were actuated by motives as honourable as ours, and no one is infallible.

It is quite true that "someone has blundered." But one blunder does not lose or win any campaign, and the struggle is by no means over; there is still a lot of work to be done, in order that our interests may be safeguarded and that the points gained may be retained.

That work cannot be done by bluster and bounce, nor can it be done by despair and dissension; it can only be done by loyalty to ourselves, loyalty to each other, and loyalty to the British Medical Association, which has done good work for us in the past.

I have not in the past seen eye to eye with all that was done by the British Medical Association, nor am I likely to do so in the future, but that does not blind me to the fact that whatever the faults of its head its heart is all right, and in no other way and by no other organization can the profession be led in the paths of pleasantness and peace.

Let us, therefore, close up our ranks, stand shoulder to shoulder, learn the lesson all too plain before us, turn our backs on these who propose fresh combinations by whatever name they may be called, be tolerant, view all questions from other standpoints than our own, and all will yet be well.

DR. R. C. BUIST (Dundee) writes: As one who believes that the British Medical Association is the only organization at present existing or conceived that can be permanently serviceable to the profession, I crave permission to make an appeal to the individual members of the Association to stand by her at the present critical juncture. No matter how strongly individuals may feel, there is nothing to be gained by the movement of protest extending beyond those members of the Council who had imposed upon them a duty which they could not conscientiously discharge. It is not yet the time, nor have I the desire to write either a descriptive or a critical history of the past twelve months. It is, however, the duty of each member to consider how far he has himself contributed to the change from January to December. In January the Association had a declared policy, solidly based on the assent of 27,000 practitioners. In December the policy had so changed that the basis of consent has collapsed like a house of cards. How has it come about that those who were at the helm realized so little the real position that the profession has only won to safety at the cost of a shattering of the executive and a stunning shock to the Association? Till we have learnt the lesson of the new position I appeal to each man for confidence in the capacity of the new executive. Given time and avoidance of precipitation, they are able to bring the ship once more into a fair course.

Any personal regret over the step I felt called upon to take is lessened by the knowledge that the Association has at command men earnest and able, and that, even in a moment of stress, it has been able to select so wisely as it has done in appointing Dr. Evan Jones and Dr. Willeck to fill the vacant posts. Again I appeal to the members not to act rashly and unwisely, but to stand by the ship.

DR. W. J. DURANT (Gateshead-on-Tyne) writes: The principle underlying the recommendation of the last Representative Meeting to medical practitioners to come to some arrangement with the representatives of insured

persons for attendance is undoubtedly, in my opinion, the giving up of the cardinal principle, "freedom from friendly society control." Because of this opinion I asked the Chairman of the recent Representative Meeting (Mr. Verrall) to give his ruling on a question which ran as follows: "Inasmuch as the cardinal point, 'freedom from friendly society control,' is by the minutes of the British Medical Association its declared policy, will medical practitioners entering into arrangements whereby any such control exists be breaking their pledges?"

Mr. Verrall referred the question to the State Sickness Insurance Committee. Has a chairman of Representative Meeting the power to refer such a question to that or any Committee? In my opinion by the laws of the Association he has not. He must either answer it or leave it to be answered by the Representative Meeting itself.

I take it that any such arrangement as recommended, if there is the vestige of control—such as any form of contract or even if the representatives of the insured persons hold the money—will undoubtedly abrogate the cardinal principle of "freedom from friendly society control" and so break the pledge which was given on the understanding that that principle was one of its chief bases.

Passing to another matter, namely, the desirability or otherwise of medical practitioners forming panels in certain special districts. I mean in:

1. Purely agricultural areas.
2. Combined town and agricultural areas where the latter largely predominate.
3. Certain seaside and other health resorts.

The moorland, mountainous, and fen districts are made workable by the special mileage fund. In my opinion, the medical men of the above three areas can force the Government or Commissioners to extend the special mileage fund to those areas. The medical men of those areas will be enormously strengthened in their resistance by the acceptance of the panel system by the doctors practising in industrial districts. There will be very few doctors left to "blackleg" their brethren practising in those special areas.

The three big points to be considered by the Representative Meeting on January 17th are:

1. To free men who believe they have given a personal and not a constitutional pledge.
2. To call upon all medical practitioners to remain or become members of the British Medical Association.
3. To ask for quarterly contributions to the defence fund for the purpose of providing the sinews of war for many fights which are sure to come, as we are only just beginning our campaign.

We may differ over the present situation, but we can have only one opinion as to the absolute necessity of consolidating and strengthening the only body—the British Medical Association—which, if properly led, can protect us.

We have received the following letter, dated December 30th, 1912, signed by the officers of the Provisional Medical Committee, Hastings Division of South-Eastern Branch:

At the request and on behalf of the Provisional Medical Committee of the Hastings Division, we desire to lodge an emphatic protest against the action of the Meeting of Representatives in discussing and recommending any scheme of medical service.

The Meeting of Representatives was called for a specific purpose, and might have performed its duty in twenty minutes. By means which we do not care to describe the discussion was prolonged preposterously, and when at last a decision was arrived at many Representatives seemed to have been so surprised and frightened at their own temerity that, without mandate, rhyme, or reason, they put forward and made public a suggestion for terms of medical service which at a blow upsets the work of many months in the Central and many of the Local Committees.

It has had a most disastrous effect on the most deserving of the Divisions—namely, those in which the men have laboured to secure the unity and solidarity of the members by providing a scheme of public medical service.

Just at the time that we were on the point of closing, on British Medical Association terms, with that portion of the public interested, we were thrown into confusion by the most unfortunate suggestion of 8s. 6d. introduced by Divisions which had simply "sat on the fence" waiting for something to turn up. It is maddening to learn that Divisions exist which have not held a single meeting during the year of struggle. It is galling to be paralysed on account of their laziness when we and the whole profession should have been rewarded on account of our industry. The suggestion has already met the fate such compromises deserve, for Mr. Lloyd George issued the next day, through the Commission, his refusal to accept it. It is therefore already dead.

The British Medical Association really deserves part of the obloquy which appears to be falling upon its head. Its policy has been weak and vacillating throughout, doubtless due to those members of the Council who have now shown their hand openly and gone over to the enemies of the medical profession. Let us hope that they may never return to the Council, and that there are no more of the same class left in it.

We know that we still have many traitors in our rank and file, but they also are becoming known, and it is to be hoped that their disingenuous counsel may be disregarded by those men who have their own welfare and that of the profession at heart.

J. P. WILLS,
Chairman.
GEORGE LOCKE,
Divisional Representative.
H. G. L. ALLFORD,
Honorary Secretary.

Dr. F. BROADBENT (North Collingham, Newark) writes: I have been many years a member of the British Medical Association, and have been on the Branch Council. When the Chancellor made his final offer I used every effort to get the profession to accept it, and I feel that I have done nothing wrong. I think it would be most abominable and ungrateful conduct for any of us to leave the Association. The Association has done wonders: it has organized the profession, it has got us good terms, and the machinery is now in order for protecting the profession from under-selling and other evils which at any time may arise. Why should we try to ruin our union because we have disagreed with it? I hope that by the time this letter is printed every man who wishes to go on the panel will be on it, and I hope he will remember that if it had not been for the Association he would be doing the work for half the money he is now getting.

COMBINED ACTION OF PRACTITIONERS IN DEPTFORD.

We have received for publication the following statement issued by practitioners resident in the Metropolitan Borough of Deptford:

Sir,—We, the undersigned medical men practising in the Borough of Deptford, refuse to accept service under the National Insurance Act as at present constituted, or to enrol our names on the Government panel for the treatment of insured persons.

We consider the conditions of service to be detrimental to the public health, and to tend to destroy the confidential relations at present existing between patient and doctor.

The Act permits Insurance Committees to allow insured persons to choose their own doctor, even although he may not be on the Government panel. Now we, the undersigned, who are a majority of the medical men practising in the Borough of Deptford, are not going on the panel, and suggest that the insured should demand their right to free choice of doctor.

Further information can be obtained from any of the signatories.

A CAMPAIGN OF LIES.

Dr. W. GORDON (Exeter) writes: A more infamous campaign of lying than is now added to the tactics of our enemy has been rarely witnessed. On Saturday a full-page poster of the *Daily Chronicle* bore the legend, "Exeter doctors form a panel." Not a doctor in Exeter has joined a panel or means to, and to-day a great increase in the local guarantee fund, for mutual defence is the reply.

Men must not be misled or frightened into surrender. Where are all these doctors coming from with whom we are threatened? Read the *Times* précis from different centres. London has not half its quota for the panel; neither has Glasgow. Half the reports in the Liberal press are absolutely false. Moreover, if whole-time men are imported, what sort of men will they be, willing to take for such small pay (£500 a year will not go far) the position of professional pariahs for the rest of their days? Will respectable citizens care to employ the dregs of the medical profession for their wives and families? And will they be any more anxious to do so when no consultants will meet them, no one assist them, give anaesthetics for them, operate for them? The consultant's position is clear and easy. He need refuse no patient, but insist on meeting some other doctor. If he does not, of course, he becomes a "blackleg" himself—and very properly.

The panels are not filling up by any means, and it seems to me the local leaders are enormously to blame wherever they do.

As to a whole-time medical service, it will need 10,000 men! These, at £500 a year apiece, work out at 5 millions a year! Five millions of good taxpayers' money to force inferior men—if so many existed; they do not!—on the insured classes, and destroy for ever the most distinguished branch of the noblest profession in the world! The thing is absurd—unthinkable.

Let the profession pull itself together, organize itself more fully, so that each day every big centre knows the exact truth about all others, keep every centre constantly in communication with every other. Let its leaders rally their friends. Let all do as we have done here—build up a big fighting fund; it is a very cheap investment. Above all have a policy. It should be this:

That it is a public duty to refuse to place our profession under the control of insufficiently educated men.

That will be found to go home at once, right through the "joints of the harness," for it is truth itself, the solid insuperable objection to this Act.

As to the students being used, where are there enough of them? Their falling off has been "alarming." Sensible fathers will not risk the panel with its sordid, self-contemptuous degradation for boys who would be infinitely better off as the artisans, who will be "top dog" of the doctors!

We must win in the end. Let all self-respecting, honourable men stand fast.

LOCAL MEDICAL COMMITTEES.

Dr. CHARLES J. COOKE (Plymouth) writes: Being one of the loyal majority in this town who have stuck to their pledges, I feel free to ask whether it is not a mistake for Local Medical Committees to refrain from obtaining statutory recognition.

We are pledged not to treat insured persons under the Act, and we are not going to do so until conditions are altered; but the fact remains that we are working under the Act so far as sanatorium benefit is concerned, and it seems to me that there could be no harm in becoming statutory committees—rather the reverse, because we shall be out of touch with the working of the Act, and that will be a very great mistake.

We ought to know what the pledge-breakers who have formed panels are doing and how the sanatorium benefit is being carried out.

THE PLEDGE: AN APPEAL.

Dr. CHARLES F. HARFORD (Livingstone College, Leyton, E.) writes: I have not previously addressed you with reference to the Insurance Act, but as an ex-Chairman of what is now the South-West Essex Division of the Metropolitan Counties Branch of the British Medical Association, and as one who has consistently desired to support the Association during a membership of more than twenty years, I would like to make an appeal through your columns to my fellow members in the Association with reference to the present crisis. I can claim no special right to make this appeal, but in a democratic body like the British Medical Association even the rank and file may venture to express their opinion.

It is true that I am not likely to be affected in any way personally by the Insurance Act, but perhaps I may speak with a greater measure of impartiality than some others, whilst at the same time I am living in close touch with men in this Division who are likely to be keenly affected by the Act.

My purpose in writing is to support the view which is widely held that the pledge given under what very many of us consider to be totally different conditions to those which prevail to-day should not be regarded as binding, and that no charge of dishonourable conduct should be brought against those who, having thoroughly weighed the alternatives, have decided that it is their duty to go on the panels.

The vital clauses of the pledge are obviously the following: "Excepting such as shall be satisfactory to the medical profession, and in accordance with the declared policy of the British Medical Association." These clearly must be taken together. Certainly none of us would have been so foolish as to commit ourselves to a policy which had never been defined, and the declared policy was, of course, that contained in the six cardinal points. The Representative Meeting on December 21st abandoned the demand for an income limit which was contained in the first cardinal point, and have advocated direct treatment with the friendly societies in contravention of the third cardinal point. From this it appears that it is the Representative Body which has departed from that which was "the declared policy" of the Association at the time when the pledge was taken. I am not arguing at the moment against this action, but I do most emphatically say that the policy being changed, it is impossible to hold men to the support of a different policy to that which was referred to in their undertaking.

On the other hand, I note that in the appeal addressed to the profession it is suggested that "those who have signed a provisional agreement are at liberty to withdraw therefrom." Seeing that this agreement is a contract entered into in accordance with an Act of Parliament, and signed by the practitioner over a 6d. stamp, it is surely a more binding undertaking than a pledge signed in many cases at the close of a meeting, and with the idea that it was intended to obtain concessions from the Government such as those which have been already secured. Under any circumstances, the situation is a most unpleasant one; but it will shortly be disastrous, not only to the British Medical Association but to the profession, that charges and counter charges of dishonourable conduct should be bandied about. I earnestly hope, then, that the Representative Meeting on January 17th will, under the altered circumstances, release the members from their pledge. If not, there is only one result which can happen, and that is the utter disruption of the Association. A large number of those who would agree with me are those who have been the most consistent supporters of the British Medical Association, and who have joined no rival organization to coerce the British Medical Association to take one side or another. If it is intended to drive us from the Association we may be compelled to retire, but I trust that the present majority who control the policy of the Association may not find it necessary to take so extreme a course.

I should, perhaps, add that the men in this Division who think with me are in the minority, though that minority includes most of those who have done active

work for the Association during the years that have passed.

THE OBLIGATION OF THE PLEDGE.

Dr. J. H. KEAY (Greenwich) writes: As there are a number of members who still persist in affirming that the undertaking which was signed refers to the general and not to the declared policy of the Association, perhaps you will allow me to refer to a letter dated December 11th, 1911, which I think should set the matter at rest. This circular letter, which was sent out in the name of the Association and signed by the Chairman of Representative Meetings and the Chairman of Council, begins by enumerating the six cardinal points, and stating that they are the adopted policy of the Association. The second paragraph I shall give in full:

"On June 15th the members of the profession were asked to pledge themselves, in the event of the bill becoming law, not to enter into any arrangements for the treatment of insured persons on terms inconsistent with the above declared policy of the Association."

That this was the meaning of the undertaking I never doubted, nor, so far as I know, has it ever been questioned by any who were then taking an active part in the work of the Association.

This being the case, several questions naturally arise. If, as some say, since that time the policy of the Association is changed, is the undertaking still binding? If, on the other hand, as some of the most prominent leaders of the Association now say, the policy has not changed, in what light are we to regard those who, at the Representative Meeting, discarded one point and definitely opposed another? As it has never been the custom of those who wish to work the Act to use any of the terms now in vogue, I do not answer this question, but leave it to each Representative who voted in the majority for his own conscience to decide.

A further question arises: What in the future is to be regarded as the duty of a Representative? For some time past the greater number of Divisions have given definite instructions to their Representatives, and seldom, if ever, has a Representative voted contrary to his instructions. This has necessitated not a few, like myself, who are Representatives, declining to attend meetings, and made us, perhaps, too willing to give place to deputies. When appointed Representatives our opinions were well known, and we could not alter them to suit the sudden changes in the Association and Divisions. A complete *volte-face* has now been performed. Representatives and Deputies, with no mandate from their Divisions and without consulting the profession, have supported a resolution which advises the inauguration of a new policy. If the resolution referred to is to be regarded as the policy of the Association, it seems quite evident that Representatives in future may take what course they choose without regard to instructions received from their Divisions.

Such is the state of anarchy at which we have now arrived. Notwithstanding all that has happened, I intend for my own part to cling to the Association so long as it is possible for me to do so, and urge all with whom I come in contact to take the same course. It is only at a very recent date that the present majority came into power, and the trend of events leads one to believe that its reign will be short-lived. Men who join panels can scarce be expected to show much enthusiasm for those who have urged them not to go upon panels, and judging from the fact that the term "blackleg" was hurled forth from the platform at the Representative Meeting, it would appear that among those who oppose the working of the Act there are still a few who have not yet abandoned their methods of intimidation and abuse. There are surely quite a sufficient number in the Association who, whatever their opinions, will not be content to see the medical profession still farther degraded.

Dr. E. ROWLAND FOTHERGILL (Brighton) writes: As a member of the original State Sickness Committee of the Association which drafted the form of undertaking signed by 27,000 doctors, might I state concisely certain facts? Possibly they may prove of assistance to some of my profession in their present state of uncertainty.

When this sentence in the undertaking was being drafted—"I will not enter into any agreement for giving medical attendance and treatment to persons insured

under the Bill excepting such as shall be satisfactory to the medical profession and in accordance with the declared policy of the British Medical Association"—the question was raised whether the policy therein referred to was the policy arrived at at the Special Representative Meeting on June 1st, 1911, or whether it could be interpreted as having a binding effect as regards any modification or addition to that policy in the future. We were informed that the solicitor stated that the sentence in view of the words "shall be" would make the undertaking binding on the signee with regard to any future policy, providing it were arrived at in a constitutional manner.

The policy of the Association was arrived at on June 1st, 1911, and was reaffirmed in July, 1912, at Liverpool with the addition of a seventh principle having reference to professional control. One of the six original principles was "that the administration of medical benefits should be by Local Health (Insurance) Committees and not by approved societies."

Now the policy of the Association is defined in the articles and by-laws as being a decision of the Representative Meeting on any subject that has previously been before the Divisions for their consideration; which decision must be carried by a two-thirds majority; and must receive either the approval of the Council subsequently or be adopted by a majority of the votes of doctors called together specially to consider the decision in Division Meetings.

Also at a Special Representative Meeting (such as the December 21st one) no business can be dealt with "other than that for which it has been specifically convened."

At the special meeting in December a motion was proposed "that arrangements be made between doctors and insured persons or their representatives." This resolution was opposed to one of the principles of the policy (see quotation above), had never been before the Divisions for consideration, since it had been negatived in April, 1911, and was not specifically entered on the agenda, and therefore should have been ruled out of order on each of these three objections respectively.

The constitutional policy as reaffirmed in July, 1912, still stands. The undertakings signed apply to that policy. Attempts are now being made to make them apply to a bastard policy.

If any doctors require to be absolved from their undertakings in order to have a free hand it is those doctors who now propose to enter into arrangements with approved societies, and not those who propose to enter into arrangements with Insurance Committees, always providing that such arrangements are in accordance with the policy of the Association as confirmed at the Liverpool meeting.

HOSPITALS AND THE TREATMENT OF INSURED PERSONS.

Mr. H. A. BALLANCE (Norwich) writes: To remove any misapprehension which might arise with regard to the statement in your leading article on page 1764 of your issue of December 28th, 1912, to the effect that I am "in hearty agreement with the decision of the meeting to approve the regulations instituted by St. Bartholomew's Hospital," I should like to say in this connexion that I am nevertheless in agreement with a resolution moved by Dr. Buttar towards the end of the proceedings of the recent Representative Meeting, and recorded on page 728 of the SUPPLEMENT, "that the approval of the scheme adopted by St. Bartholomew's Hospital with regard to the treatment of insured persons should not be taken to override the terms of the pledge which made 'urgent necessity' the sole condition under which an insured person could obtain through a voluntary medical charity the professional services of practitioners who had signed the pledge." Dr. Buttar's resolution has special reference to St. Bartholomew's Hospital regulation No. 3, from which may be inferred that a case requiring special treatment—that is, one which conceivably cannot "be treated by a general practitioner of ordinary competence"—would, in virtue of it being a special case, be given treatment at the hospital. The conclusion of the matter is that if a case is needing special treatment it must also be one of "urgent necessity," otherwise treatment would be refused.

THE LAST REPRESENTATIVE MEETING.

Dr. D. G. MACLEOD MUNRO (Honorary Secretary, Maidenhead Division) writes: It is to be hoped the Manchester "school of thought" in the counsels of the Association are now beginning to have a glimmering of the havoc their short-sighted and intemperate policy has brought about in the ranks of the Association. I should imagine that Mr. E. B. Turner, Dr. Helme, and the numerous lesser lights of the extreme school must have had considerable food for thought during these past few days. It was anticipated by those who favoured counsels of moderation and prudence that the pursuance of a policy of unreasoning hostility to the Insurance Act would only result in straining the loyalty of members of the Association to the breaking point, and so, unfortunately, it has turned out. The pathetic plea of Dr. Mark Taylor at the last Representative Meeting may not affect the gentlemen above-mentioned, but it has been echoed by many men all over the country. For myself, I confess I left that meeting with a sense of disgust, not only at the curious and fatal ineptitude of those who are supposed to be our leaders in not frankly recognizing the situation and facing it, but at the unseemly way in which the word "honour" was bandied about. Sir, it is not those who talk most loudly of "honour" who of necessity possess a monopoly of that lofty virtue, nor are they in this particular instance necessarily the most loyal members of the Association. If the Representative Meeting could not agree, while protesting against the inadequacy of the medical provisions of the Act, to give it a fair trial before final condemnation, in order to prove their case if necessary, then in my opinion—and I believe in the opinion of many loyal members of the Association—the autonomy of the Divisions ought to have been allowed free scope in view of the widely divergent conditions prevailing in different parts of the country. The refusal of local option was in my view a capital error on the part of the last Representative Meeting, and has rendered the task of those of us who wish to preserve the integrity of the Association doubly hard.

The necessity for another Representative Meeting surely proves, in spite of all assertion to the contrary, the unsatisfactoriness of the recent voting, and that there is an increasing body of opinion that the recent concessions of the Government are worthy at least of a provisional trial. It is to be hoped that at this forthcoming meeting saner counsels will prevail.

Dr. J. E. O'SULLIVAN (Liverpool) writes: In the report of the proceedings at the Representative Meeting it is stated: "Dr. O'Sullivan said that while it 'might be true' that consistency was the virtue of fools." I submit that such report is an error, and lays me open to grave misconception, as implying that I was of opinion that such statement might be true. I am not of that opinion.

What I said was that "some expedient philosopher was reported to have alleged that consistency was the virtue of fools." I went on to say that nevertheless, in spite of such dictum, I was willing to wear the fool's cap if my doing so was necessary to indicate that I was consistent in my action and true to my colours, having nailed them to the mast.

Those reports in the JOURNAL are, I presume, somewhat necessarily curtailed, but one cannot but feel that at such an important meeting, when men are sensible of the manner in which their remarks may be interpreted, accuracy of report is imperative, and it would not have been amiss if, under the circumstances, a more exhaustive statement of the proceedings had been given.

THE ELECTION OF REPRESENTATIVES.

Dr. W. B. PARSONS (Finchley, N.) writes: We shall soon be made aware of the success or failure of the considered policy of the Association. If the Representative Body really represents the views of the members at large, there ought to be an overwhelming majority who refuse to go on the panels of Insurance Committees. But I doubt very much the reality of the representation, and will, therefore, not be surprised to see full panels formed in most districts by January 1st, in spite of the fact that there must be many men who will respect their pledge and sacrifice their own interest. The Association policy may prove to

be a colossal failure: it shows signs of being at least a considerable failure. Some will attribute this to the want of a sensible alternative scheme, some to the present reasonableness of the Government scheme, but the weakness will be found to lie deeper—namely, in our defective method of electing Representatives. When a man is elected by a vote of, say, 10 *nemine contradicente* in a Divisional meeting of 15, and, going up as a Representative, speaks with the voice of 180, is it a wonder that he finds himself once in a way out of his calculations? Lately many have taken an interest in Association doings who a few years ago would not have been bothered, but numbers will remember that there was at one time, not so long ago, an amount of very emotional controversy about the terms of our proposed charter, and that a great deal of it centred round the postal vote for Representatives. There were those who, thinking themselves the flower of the tree of medico-political knowledge, referred to us as leaves. They would not believe that any "leaf" could vote intelligently until he had heard their arguments. By this preposterous assertion they carried the point, and they have since had their way. I am aware that it is now permissible to take a postal vote, but this was a useless concession, for our contention was that it should be compulsory, as it was fundamental. If the British Medical Association can survive the present disaster, it will be necessary to look into this question of representation again.

THE GUARANTEE FUND.

Dr. ROBERT CAPES (Denmark Hill) writes: As a "looker-on" at the Representative Meeting (on December 21st) the following three points were constantly being reiterated, and are still reproduced in my mind when I look back upon the meeting: (1) Lack of confidence in the Council. (2) Direct promise of monetary support made by the Representatives at Liverpool and apparently not kept. (3) Entire absence of funds to help those who will undoubtedly suffer financially if they do not break their pledge. As regards the first, the Chairman of Council made it quite plain that the Council were to be trusted absolutely, and then he emptied the vials of his wrath upon the members of the Association who never raise a finger to help on the work of the Association; there may be some on the Council who talk of the beloved Association, and who, to show their love, preside at meetings where expressions of opinion are such that it is impossible to believe that the members present are for the Association, and therefore on scriptural authority they must be against the Association. As regards No. 2 it is a matter of deep regret that some effort has not been made to keep this promise, as the failure to do so must have affected very greatly the instructions given by various Divisions to their Representatives. My third point, I think, is still a living one, and ought not to require flogging. What it does require is that every one should do his utmost to help those who state that they have to choose between starvation and dishonour. I make the humble offer of £1 a week to go to a fund to help those who may require it until this crisis is over. I enclose my cheque for £4, and will send the same amount on the 23rd of each month so long as required, provided this scheme meets with approval and support. One pound a week is comparatively a very small sacrifice compared with sharing our last loaf or pawning our clothes and many other actions of which there have been innumerable examples amongst the working classes when they have seen their neighbours starving during what they considered an honourable struggle.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list.

The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

Association Notices.

SPECIAL REPRESENTATIVE MEETING.

Notice is hereby given that a Special Representative Meeting of the Association will be held in the Connaught Rooms, Great Queen Street, London, W.C., on Friday, January 17th, 1913, at 9.30 in the forenoon, and the following day, if necessary, on the requisition of the Chesterfield, Cleveland, Derby, Glasgow North-Western, Newcastle-on-Tyne, Northamptonshire, West Cornwall, and Worcester Divisions, to consider the question of the desirability of releasing members of the profession from their undertakings and pledges in connexion with the National Insurance Act, and, further, to consider the situation created by the attitude of the Government towards the decisions of the Representative Body; also to elect a Member of Council in the place of Dr. E. J. Maclean, resigned.

BY ORDER OF THE CHAIRMAN OF REPRESENTATIVE MEETINGS,

GUY ELLISTON,
*Financial Secretary and
Business Manager.*

ALFRED COX,
Medical Secretary.

January 1st, 1913.

SPECIAL MEETING OF COUNCIL.

A SPECIAL MEETING of the Representative Body has been summoned to meet in London on Friday, January 17th, next.

Under the Regulations the Council must meet to consider the decisions arrived at by that Meeting, and notice is hereby given that a Meeting of Council will be held immediately upon the conclusion of the business of the Special Representative Meeting.

By Order,

GUY ELLISTON,

January 1st, 1913. *Financial Secretary and Business Manager.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.

LANCASHIRE AND CHESHIRE BRANCH: LIVERPOOL DIVISION.—The annual meeting of the Division will be held in the month of January. (Date will be announced later.) Business: (a) To receive annual report of the Executive Committee. (b) To elect officers. (c) To elect the Representatives of the Division on the Branch Council to take office after the next annual meeting of the Branch. (d) To elect the ordinary members of the Executive Committee. (e) To make new rules, or alter or repeal existing rules. (f) To transact any business that may be transacted at an ordinary meeting.—FRANCIS W. BAILEY, Honorary Secretary, 51A, Rodney Street, Liverpool.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held conjointly with the Aesculapian Society at the Metropolitan Hospital, Kingsland Road, on Friday, January 17th, at 4 p.m., when a clinical demonstration will be given by the visiting staff.—A. G. SOUTHCORBE, Honorary Secretary.

SOUTH-EASTERN BRANCH: ISLE OF THANET DIVISION.—It has been decided that the Division shall meet every week for the present, in order that the developments of the National Insurance Act may be watched. The Division will next meet at the Victoria Hotel, Hardres Street, Ramsgate, on Saturday, January 4th, 1913, at 8.30 p.m.—HUGH M. RAVEN, Honorary Secretary.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BIRMINGHAM BRANCH: CENTRAL DIVISION.

A SPECIAL meeting of the Central and Walsall Divisions was held on Friday, December 27th, 1912, at 3.30 p.m., at the Medical Institute, Edmund Street. Mr. LUCAS was in the chair, and 195 members were present.

Special Representative Meeting.—The report was presented by Dr. H. HOYLE WHAITE. Dr. FEATHERSTONE proposed and Dr. KIRBY seconded:

That the report of the Representatives be received, approved, and adopted, and that the best thanks of the constituency be accorded the Representatives for the able manner in which they have represented the constituency.

This motion was supported by Drs. SPROAT, LINE, WOLVERSON, and others, and carried with acclamation.

Policy of the Association.—Dr. FEATHERSTONE proposed and Dr. SPROAT seconded:

That the British Medical Association ought to grant local option in dealing with insured persons to Birmingham and similar industrial districts.

This was lost—47 for, 65 against. Dr. WOLVERSON proposed and Dr. GARBUTT seconded:

That in the opinion of this meeting the action of the Representative Meeting in throwing over the cardinal points which were not granted releases every man from his pledge, and that the question of going on the panel be left to each individual practitioner.

This motion was discussed by Drs. ORMOND, HOLLINSHEAD, JORDAN, HALLWRIGHT, STEAD, MARSH, WHAITE, ALLEN, ABBOTT, and GIBBS. It was lost by a large majority. Dr. HALLWRIGHT proposed and Dr. BERNAYS seconded:

That this meeting is of opinion that the finding of the Representative Meeting on December 21st does not represent the opinion of the majority of the profession, and desires to be relieved from the pledge—not to treat persons insured under the Act—and in case the British Medical Association after a further meeting of the Representatives decides that it cannot absolve from the pledge, the opinion of the profession should be ascertained by a postal vote (referendum).

This motion upon being put was lost—35 for, 55 against. Dr. NEVIN proposed and Dr. ORMOND seconded:

That the members of this Division agree loyally to adhere to their pledges and to abide by the latest declared policy of the British Medical Association.

Drs. LYDALL, OAKES, ALDREN, KIRBY, and DONOVAN discussed this proposition. The resolution was carried by an overwhelming majority, there being only two or three dissentients.

Conference with Secretaries of Clubs and Friendly Societies.—The Executive Committee had a conference with some of the secretaries of the clubs, friendly societies, and approved societies earlier in the afternoon, to discuss with them the British Medical Association's alternative method of dealing with insured persons to be adopted if possible in the event of the Government failing to come to terms with the Association. No decision, however, was arrived at. A further conference will probably take place.

CAMBRIDGE AND HUNTINGDON BRANCH.

A SPECIAL meeting of the Branch, to which all medical practitioners in the area were invited, was held at the University Arms Hotel, Cambridge, on December 13th, 1912. Dr. TYLER, President, was in the chair, and there were 113 members and others present. Several letters were read from members unable to be present, all of them indicating that they were opposed to accepting service under the National Insurance Act.

The Proposals of the Government.—After some discussion, the question submitted to the Divisions by the Council was put to the meeting, and the voting resulted as follows:

Cambridge and Huntingdon Division:

| | |
|----------------|-------------------|
| Ayes: | Noes: |
| Members ... 67 | Members ... 11 |
| Non-members 12 | Non-members ... 2 |

Isle of Ely Division:

| | |
|----------------|-------------------|
| Ayes: | Noes: |
| Members ... 16 | Members ... 0 |
| Non-members 2 | Non-members ... 0 |

DUNDEE BRANCH:
DUNDEE DIVISION.

A MEETING of the Division was held in University College on December 26th, 1912, Dr. C. S. YOUNG in the chair. There were forty-eight present.

Special Representative Meeting.—Dr. C. S. YOUNG reported as Representative at the Special Representative Meeting, and was accorded the thanks of the meeting.

The Insurance Act.

The CHAIRMAN made a statement regarding the present position of the profession.

It was proposed by Dr. G. W. MILLER and seconded by Dr. Low:

That this Division regrets that it is unable to accept the decision of the Representative Meeting to refuse service under the Insurance Act; that, in the opinion of this Division, the alternative scheme promulgated by the Representative Meeting renders absolutely invalid the pledges signed to support the former policy of the Association; and, further, that the said alternative scheme is unworkable, and that by its return to the negotiations with the approved societies it is derogatory to the medical profession.

A vote of the profession resulted: For, 43; against, 1; not voting, 4.

A vote of the Division resulted: For, 35; against, 2; not voting, 4.

It was proposed by Dr. KINNEAR and seconded by Dr. KERR:

That the Division recommends the medical profession in Dundee to place their names on the panel before December 31st.

The vote resulted:

| | | |
|------------|---------------|------------------|
| For ... 46 | Against ... 1 | Not voting ... 1 |
|------------|---------------|------------------|

It was proposed by Dr. R. C. BUIST, and resolved:

That the Provisional Local Medical Committee be empowered to apply for recognition.

It was proposed by Dr. MACKIE WHYTE, and resolved:

That the Division recommends that practitioners accept service on the Insurance Committee and the Advisory Committee.

It was proposed by Dr. Low, and resolved:

That the Local Medical Committee be empowered to nominate members for the Insurance Committee, and make suggestions regarding the working of the Act.

Local Medical Committee.—Dr. GEORGE WHYTE read a report of the last meeting of the Local Medical Committee. The Committee advised no consultation on Sunday, consultation hours in the evening only, all messages to be sent in before 10 a.m. except in urgent cases, when proof would require to be submitted of urgency. The capitation system was recommended for adoption by the Division. The treatment of uninsured persons in friendly societies was receiving the consideration of the Committee. Dr. Whyte received the thanks of the meeting for his report.

FORFARSHIRE DIVISION.

A MEETING of the Division was held in Arbroath on December 26th, 1912. Dr. J. D. DEWAR presided, and twenty-seven practitioners were present.

Special Representative Meeting.—Dr. YULE gave a report of the Special Representative Meeting of the British Medical Association held in London on December 21st and 23rd, 1912. The report was accepted.

The Policy of the Association.—Thereupon Dr. MACALISTER (Forfar) proposed and Dr. BROOM (Kirkcubbin) seconded:

That the Division adheres to the "pledge" given while the Act was in the bill stage, and refuses to work under the Act and present Regulations.

Whereupon an amendment was proposed by Dr. W. J. DEWAR (Arbroath) and seconded by Dr. CAMERON (Brechin):

That this Division disapproves of the "Future Policy" outlined by the Special Representative Meeting of the British Medical Association on December 21st and 23rd, 1912; that it considers arrangement of contract work directly with friendly societies to be a violation of the declared policy of the British Medical Association, and a step derogatory to the medical profession; and that in its opinion the scheme is unworkable in the Forfarshire Divisional area. It therefore calls upon its members to enter into provisional arrangements for giving service under the Act and present Regulations, up to April 14th, 1913.

The amendment was carried by 15 votes to 4. Thereafter Dr. CAMPBELL (Brechin) submitted a motion, which was seconded by Dr. GILRUTH (Arbroath):

That, inasmuch as the Division had decided to act contrary to the recommendation of the Special Representative Meeting, it is incumbent upon every member of the Division to resign his membership of the British Medical Association before December 31st, 1912.

Whereupon the direct negative was moved by Dr. YULE (Arbroath) and seconded by Dr. COLMAN (Broughty Ferry). The motion was lost, 3 voting for and 13 against it.

EAST ANGLIAN BRANCH:
NORTH SUFFOLK DIVISION.

A MEETING was held at the Lowestoft Hospital on December 10th, thirty-two practitioners being present, including three non-members of the Association.

The Proposals of the Government.—The vote on the question submitted to the Divisions resulted as follows:

| | |
|--|----|
| Members refusing to accept service ... | 25 |
| Members agreeing to accept service ... | 4 |
| Non-members refusing to accept service ... | 3 |
| Non-members agreeing to accept service ... | 0 |

Thus by 28 votes to 4 the Division decided not to accept service under the latest conditions.

The Pledge.—The following resolution was carried unanimously:

That this meeting reaffirms the pledge already given by members to refuse to give professional assistance to insured persons at the various hospitals in the area of the North Suffolk Division after January 15th, 1913, except in cases of extreme urgency, unless satisfactory arrangements are made by the Insurance Commissioners with the medical profession by that date.

It was also agreed that a copy of this resolution should be forwarded to the committee of each hospital in the Division.

Expenses of Representative.—It was agreed that an annual subscription of 5s. should be paid by each member to defray the expenses of the Representative at Representative Meetings, and that for this year an extra 5s. should be paid.

GLASGOW AND WEST OF SCOTLAND BRANCH:
DUMBARTONSHIRE AND ARGYLLSHIRE DIVISION.

A MEETING was held at Clydebank, on December 12th, 1912. Dr. JAMES WILSON, Dumbarton, presided. Twenty-five members and two non-members were present. Nine apologies for absence were received.

The Proposals of the Government.—A prolonged discussion took place, in which many joined. While some members were entirely opposed to giving service, others who thought the Act should now be given a trial were at the same time dissatisfied with it in various respects. The result of voting was:

| | |
|-------------------|-----------------------|
| Against refusal— | In favour of refusal— |
| Members 16 | Members 9 |
| Non-members ... 1 | Non-members ... 1 |
| 17 | 10 |

Thereafter, on the motion of Dr. W. S. YOUNG, it was unanimously agreed to re-affirm the determination of the Division to stand by the decision of the Association.

Instructions to Representative.—On the motion of Dr. W. S. YOUNG, seconded by Dr. McDUGALL, of Kinlochleven, it was unanimously decided that the Representative should (on the question of refusal of service) vote in accordance with the vote of the majority of members of the Association. He was also instructed that the Division considered the proposed arrangements for mileage most unsatisfactory; that the right to decide the method of payment ought to be given to practitioners and not to

Insurance Committees; that practitioners should not have patients allocated to them against their wish; and that the method of checking unreasonable demands by patients was not satisfactory. Further, on the motion of Dr. McDougall, seconded by Dr. Grant (Ballachulish), it was agreed that the Representative should endeavour to have consideration given to the possibility of adopting some method of voting which would allow of every member taking part in important decisions such as those at present being made, as it was felt by all present to be an injustice that many members, owing to distance, professional duties, or illness, had no say in matters vitally affecting them.

LANCASHIRE AND CHESHIRE BRANCH:

BOLTON DIVISION.

A GENERAL meeting was held at the infirmary on December 10th, 1912, Dr. FLITCROFT in the chair. Dr. T. W. H. Garstang of Altrincham was present by invitation. There was an attendance of eighty.

Special Communications.—A letter from the Mitre Sick and Burial Society, asking if it were possible to re-engage their doctor, who had resigned, if the medical profession refused to work the Act. The meeting ruled that it was not possible. A letter from the Gillingham Division was read, stating their decision not to work the Act under present terms, and their reasons for refusing.

Defence Fund.—A letter from Mr. James Neal, the Deputy Medical Secretary, pointing out that several practitioners in this area had not paid the first call on their guarantee—namely, £1, or had only paid 5s. on same. The Honorary Secretary was instructed to write to these gentlemen, asking them to forward the balance.

Report of the Deputy Representative.—Dr. THORNLEY gave his report of the proceedings of the Representative Meeting at which he attended. A vote of thanks to Dr. Thornley was passed unanimously. Dr. FLITCROFT proposed, Dr. MALLETT seconded.

Address by Dr. Garstang.—Dr. GARSTANG, member of Council elected by the Lancashire and Cheshire Branch, addressed the meeting. He gave an account of the work of the Council, their negotiations and meeting with the Chancellor of the Exchequer, the reasons for the neutral attitude which the Council had always adopted in the report to the Divisions, and the factors which determined it to alter that policy in giving a lead to the profession at the present time. He thanked the Division for the honour it had done him by electing him to the Council. He advocated allowing the Representative some latitude in his voting at the next Representative Meeting. Dr. MACFIE proposed a vote of thanks to Dr. Garstang. This was seconded and passed unanimously. The CHAIRMAN then put the question of the Council to the meeting. A discussion followed. The CHAIRMAN impressed upon all present the great importance of the vote to be taken, and although the result could not be deemed to be binding upon the Association in the same sense as a "decision of the Association" was binding, such a "decision" could only be arrived at in a Representative Meeting by a majority of two-thirds of those present and voting. The vote was then taken by a show of hands, with the following result:

| | | | |
|-----------------|----|-----------------|---|
| For: | | Against: | |
| Members ... | 57 | Members ... | 2 |
| Non-members ... | 13 | Non-members ... | 2 |

Dr. MALLETT moved:

That it be an instruction to our Representative that the extras enumerated on page 618 of the BRITISH MEDICAL JOURNAL SUPPLEMENT of December 7th, 1912, be paid for out of a fund quite apart from the 6s. 6d., and that dispensing be at the option of the practitioner.

Dr. THORNLEY seconded, and it was passed.

Provisional Medical Committee.—The Provisional Medical Committee which was elected on April 25th, 1912, was then formally re-elected.

LIVERPOOL DIVISION.

A MEETING was held at the Medical Institution on December 13th, 1912, to which all medical practitioners residing in the Liverpool Divisional area had been invited to consider

the revised and final offer of the Government in connexion with the medical service under the National Act.

The Proposals of the Government.—The meeting was well attended, and after the pledge had been read to the meeting by Dr. N. P. MARSH, Chairman of the Division, who occupied the chair, he proceeded to review the present situation, and gave a short summary of the results of the conference with the Chancellor of the Exchequer. The following specific question was then put from the Chair:

Are you in favour of the Association calling upon the profession to refuse to enter into any agreement with the Local Insurance Committees to give service under the Act upon the terms and conditions now finally offered by the Government?

The meeting decided to take the vote by means of voting papers. Drs. Llewelyn Morgan, Parkinson, Warke, and Williams acted as scrutineers. The final result was declared as follows:

| | | | |
|-----------------|-----|------------------|----|
| For refusal— | | Against refusal— | |
| Members ... | 243 | Members ... | 10 |
| Non-members ... | 64 | Non-members ... | 8 |
| | 307 | | 18 |

Majority for refusal, 289.

Vote of Thanks to Dr. Helme.—Sir JAMES BARR proposed:

That this Division thanks Dr. Helme for his letter of December 7th, 1912, addressed to the members of the Lancashire and Cheshire Branch of the British Medical Association, and for his summary of the results of the conference with the Chancellor of the Exchequer, accompanying the letter, and further places on record the appreciation of the work he had done, and the time he had given on behalf of the profession in reference to the National Insurance Act.

That was seconded by Dr. UTTING and supported by Dr. J. E. O'SULLIVAN, and carried unanimously.

Instructions to Representatives.—Mr. F. CHARLES LARKIN submitted the following resolution from the South Wales Branch:

That in the event of a decision of the Association being come to refusing to undertake work under the National Insurance Act, the Representative Body shall, as the next item of its business, proceed to take the necessary steps for the immediate issue of a statement to the public of the reasons for the afore-mentioned decision.

It was agreed that the Representatives should support this resolution, and also vote for refusal to give service under the Act at the forthcoming Representative Meeting.

Letters of apology had been sent to the Secretary, Dr. Francis W. Bailey, for non-attendance from Dr. Moyles on account of illness; Drs. Waddy, Henderson, Clemmy, Orton, Street, W. A. Marsh, Mawson, Stevenson, and C. Davies owing to engagements, all expressing refusal to work the Act, and from Dr. John Hay who was out of town.

MANCHESTER (CENTRAL) DIVISION.

A MEETING was held at the Onward Buildings, Deansgate, on December 16th, Dr. BURY in the chair. There were present fifty-one members and ten non-members.

The Proposals of the Government.—The HONORARY SECRETARY (Dr. Tylecote) read a letter of apology for absence from Mr. Telford, who expressed his conviction in favour of refusal of the terms now offered by the Government. A vote was taken on the question contained in the Report of Council concerning the final proposals of the Government *re* the Insurance Act, the question being:

Are you in favour of the Association calling upon the profession to refuse to enter into any agreement with Local Insurance Committees to give service under the Act upon the terms and conditions now finally offered by the Government?

The voting was as follows:

| | | | |
|-----------------------|----|------------------|---|
| In favour of refusal— | | Against refusal— | |
| Members ... | 50 | Members ... | 0 |
| Non-members ... | 10 | Non-members ... | 0 |
| | 60 | | 0 |

On the proposition of Dr. HELME, seconded by Dr. TYLECOTE, it was unanimously resolved:

That our Representative to the Special Representative Meeting be instructed to vote for the refusal of service under the Act on the terms now proposed by the Government.

On the proposition of Dr. BOOTH, seconded by Dr. SCOTSON, who regretted that he was not in a fit state of health to be able to act, Dr. Helme, the Deputy Representative,

was unanimously appointed to be the Representative at the Special Representative Meeting.

Vote of Thanks to Dr. Helme.—On the proposition of Dr. BOOTH, seconded by Dr. REYNOLDS, it was unanimously resolved:

That the best thanks of the Central Division be accorded to Dr. T. A. Helme for the valuable work he has done in the service of the profession, and for his special effort in sending out 10,000 copies of his letter to the Divisions where he considered it useful, and, further, that Dr. Helme's expenses be subscribed to by the Lancashire and Cheshire Branch of the Association.

Future Action.—On the proposition of Dr. HELME, seconded by Dr. REYNOLDS, it was unanimously resolved:

That any resolution as to future action arrived at by the Representative Meeting be referred to the Divisions. And further, that this resolution be entered as a notice of motion on the agenda of the Special Representative Meeting, and be moved by our Representative.

SOUTHPORT DIVISION.

A SPECIAL meeting, to which all members of the profession resident in the area were invited, was held at the Masonic Room, Victoria Hotel, Southport, on December 27th, 1912. There was an attendance of forty-nine, and the chair was taken by Dr. MEWBURN BROWN.

Special Representative Meeting.—Dr. BAILDON reported his impressions of the Representative Meeting. The CHAIRMAN read the appeal to the profession published in the SUPPLEMENT of December 28th. A discussion on the situation followed, in which Drs. FENN, WEAVER, PRIDIE, SPEIRS, GILL, HENDERSON, LIMONT, MARTIN, REID, EDMISTON, DALL, SCHOFIELD, BENTALL, LEWIS, and HARRIS took part.

The Pledge.—Dr. PRIDIE moved and Dr. SCHOFIELD seconded:

That this meeting is of opinion that the Association's pledge is binding under present conditions.

All present stood up in support of this resolution, with the exception of one, whose objection was that the members of the local infirmary staff had not satisfied him by the terms of their declaration as to their intentions of attendances on patients at the infirmary.

Schemes of Medical Service.—Dr. PENROSE, the Secretary of the Local Medical Committee, reported the result of the Committee's deliberation on schemes of medical service. Two schemes had been before the Committee: one a capitation scheme drawn up by Dr. Henderson, the other the scheme of the National Medical Union. The latter had been generally preferred, but Dr. Penrose pointed out that it was not likely to be adopted by the insured without much consideration, for which time would not be available before January 15th. He suggested, therefore, that the capitation scheme for insured persons only should be offered as a temporary measure. This view was adopted, and the following resolution:

That the general terms of Dr. Henderson's modified scheme be approved as a temporary measure, and further detail and action be left to the Local Medical Committee,

was carried unanimously. A resolution

That this scheme has the cordial co-operation and approval of all present

was carried unanimously, after amendment,

That every man in active practice in the county borough be expected to put his name on the public service list,

had been rejected. It was then decided that it was desirable that the Local Medical Committee should meet again to rediscuss the scheme and submit it for approval to the Council of the Association, the next day being fixed for the purpose.

Proposed Meeting with Southport Insurance Committee.—An invitation from the Southport Insurance Committee to a meeting with the Local Medical Committee was reported. Its acceptance was approved. It was also decided that at the earliest suitable opportunity the scheme should be made known to the insured and through the press.

Election of Additional Local Medical Committeeman.—Dr. Baildon was unanimously elected an additional member of the Local Medical Committee.

METROPOLITAN COUNTIES BRANCH:

OLD LAMBETH DIVISION.

A MEETING was held at the Camberwell Town Hall on December 19th. Dr. CAPES was in the chair, and ninety-five members and six visitors were present.

Special Representative Meeting.—Dr. J. G. PORTER PHILLIPS then read his report of the action of the two Lambeth Representatives at the Representative Meeting held on November 19th and 20th. It was resolved that the report should be adopted, and at the same time a hearty vote of thanks was passed to Dr. Phillips and Dr. Peers, the two Representatives.

Instructions to Representatives.—Dr. HAMAND FRASER proposed and Dr. SHAPTER ROBINSON seconded:

That it be an instruction to our Representatives to vote at the Representative Meeting in accordance with the total result of the votes given by members of the Association taken at the recent special meetings of members of the profession resident in the areas of the Camberwell and Lambeth Divisions.

Dr. VICTOR PARTRIDGE proposed as an amendment:

That we instruct our Representatives to vote for the profession accepting service under the Act.

The amendment was defeated by 44 votes to 40. The original resolution, being put to the meeting, was declared carried by 47 votes to 33.

National Insurance Practitioners' Association.—Dr. CRIEFS proposed and Dr. HICKLEY seconded the following motion:

That the Lambeth Division views with regret and grave disapprobation the attitude taken up by Dr. Lauriston Shaw in presiding at the meeting of the National Insurance Practitioners' Association, and calls upon him to resign his seat on the Council.

The motion was declared carried by 42 votes to 23.

Vote of Thanks.—The meeting concluded with a vote of thanks to the Chairman and the borough council.

SOUTH-WEST ESSEX DIVISION.

A SPECIAL meeting of the Division, to which all practitioners residing within its area were invited, was held on Friday, December 13th, at 4 p.m., in the Wesleyan Church School-room, High Street, Leyton, for the purpose of considering and voting upon the result of the negotiations between the deputation of the State Sickness Insurance Committee and the Chancellor of the Exchequer. Dr. PANTING presided, and 101 practitioners were present.

The Proposals of the Government.—The following spoke in the discussion upon the fresh proposals of the Government: Drs. TOMKINS, BONNEFIN, ELDRID, SHADWELL, C. WRIGHT, OWEN, IRVINE, SCOTT, BUTLER HARRIS, ORME, P. COLLINS, ARGLES, HARFORD, BERRILL, TODD-WHITE, GEO. COLLINS, HANCOCK, and WISE. The roll-call vote, taken at 5 p.m., was as follows:

Question: Are you in favour of the Association calling upon the profession to refuse to enter into any agreement with Local Insurance Committees to give service under the Act upon the lines and conditions now finally offered by the Government?

| Ayes: | | Nocs: | |
|-----------------|----|-----------------|----|
| Members ... | 57 | Members ... | 20 |

Borough County Medical Committee.—The following were elected Representatives of this Divisional area to the County Medical Committee: Drs. Butler Harris, H. Tomkins, Bonnefin, Chas. Scott, A. Berrill, C. R. Dykes, Clarence Wright, and Margaret Rorke.

Papers Sent out by Insurance Committee.—It was proposed by Dr. W. G. NOBLE and seconded by Dr. SHADWELL:

That no practitioner signs one or other of the papers sent by the Insurance Committee until after the decision of the Representative Meeting.

This was carried.

The Proposals of the Government.—It was proposed by Dr. TOMKINS and seconded by Dr. NOBLE:

That this meeting, having repeatedly recorded its decision to refuse service, sees no reason for reversing that decision in the latest propositions of the Government, and therefore instructs its Representative to vote for refusal of service until our just requests are granted.

This was carried by a large majority, and the meeting

broke up without discussing the draft form of Public Medical Service.

STRATFORD DIVISION.

A MASS meeting of medical men within the area of this Division was held on December 27th, 1912, at West Ham Town Hall, Dr. SANDERS presiding.

Special Representative Meeting.—Dr. OXLEY (Representative) and Mr. COUZENS (Deputy Representative) addressed the meeting, giving a short summary of what had been done at the Representative Meeting on December 21st and 23rd, 1912.

Insurance Act.—The following motion, which was ruled by the CHAIRMAN to be in order, was then proposed by Dr. FAIRFAX and seconded by Dr. BOYD ROBSON:

That we disapprove of the scheme suggested by the British Medical Association as it cannot be made compulsory, and that the panel system is the only one practicable for this neighbourhood, and this meeting therefore feels compelled to advise the profession in this district to accept provisional service under the Act.

A long discussion ensued, and in the end the resolution was rejected by 93 votes to 11. Thereafter it was proposed by Dr. OXLEY and seconded by Dr. ROSE:

That this meeting refuses service under the National Insurance Act.

On being put to the meeting, 96 voted in favour and 1 against the resolution.

Remuneration of a Tuberculosis Officer.—Dr. GRAHAM then brought forward a matter in regard to the remuneration of a tuberculosis officer for West Ham, and the CHAIRMAN stated that it would be dealt with on a suitable occasion.

WILLESDEN DIVISION.

A SPECIAL meeting of the Division was held at the Huddleston Hall, Willesden Green, on December 17th, 1912, Dr. CORAM JAMES in the chair, and fifty-six members and sixteen non-members were present.

Local Medical Committee for Middlesex.—A letter from the National Insurance Committee of the Metropolitan Counties Branch was read, requesting the Division to call a meeting of the profession to elect four members for the Local Medical Committee for Middlesex in accordance with Section 62 of the National Insurance Act. It was agreed that one of the four should be a non-member of the Association. The following were nominated: Drs. MACEVOY, SKENE, BINDLEY, MACAULEY, JOY, ARMITAGE, WILSON, SODEN, and FELCE. Dr. Felce being the only non-member nominated was declared elected, a ballot resulting in the election also of Drs. MACEVOY, SKENE, and SODEN.

The Proposals of the Government.—The CHAIRMAN then put the question submitted by the Council to the meeting, namely:

Are you in favour of the Association calling upon the profession to refuse to enter into any agreement with Local Insurance Committees to give service under the Act upon the terms and conditions now finally offered by the Government?

The following took part in the discussion, Drs. MACEVOY SMURTHWAITE, TURNER, TRAYLEN, SNOWMAN, ARMITAGE SODEN, SKENE, CARSON SMYTH, RAWES, and BINDLEY for the affirmative, Drs. MARSTON and CRONE for the negative. The result of the voting was as follows:

| | | | | |
|-------------------------------------|----|-----|--------|---|
| Members of the Association, Yes ... | 51 | ... | No ... | 4 |
| Non-members " " Yes ... | 13 | ... | No ... | 2 |

the result being received with applause.

Letter from Middlesex Insurance Committee.—The SECRETARY read a letter from the Chairman of the Middlesex Insurance Committee, requesting that the meeting should decide which method of remuneration would be preferred in the event of the district entering into provisional agreement to give service. It was agreed that the letter be referred to the Local Medical Committee for Middlesex.

Instruction to Representative.—Dr. CARSON SMYTH proposed and Dr. RAWES seconded:

That the Representative be instructed to vote at the Representative Meeting on December 21st according to the voting to-day on the main question.

This was carried unanimously.

Treatment of Insured.—Dr. ARMITAGE proposed and Dr. CLAYTON seconded:

That any scheme for the treatment of the insured should be based on the "minimum demands."

This was carried unanimously.

The discussion of further matters was postponed to a further meeting.

NORTH OF ENGLAND BRANCH:

NEWCASTLE-ON-TYNE AND HEXHAM DIVISIONS.

A JOINT meeting of these Division areas was held at the Royal Victoria Infirmary, Newcastle-on-Tyne, on December 27th, 1912, at 4.30 p.m. All registered practitioners in these areas, whether members or non-members of the Association, were invited to attend. Dr. ANDREW SMITH presided over an attendance of 120.

Special Representative Meeting.—Drs. J. W. SMITH and R. A. BOLAM, the Representatives of the constituency, gave their report on the recent Representative Meeting in London.

Contracting Out.—Dr. HUDSON proposed and Dr. FARQUHARSON seconded:

That the scheme of contracting out as proposed by the British Medical Association is not practicable.

This was agreed to, with only two dissentients.

The Association and the Pledge.—Dr. BUNTING proposed and Dr. DAGGER seconded:

That by its new policy the British Medical Association has violated the understanding on which the pledges were given, and that therefore the pledges are now void and members are free to join the panel immediately.

This was carried by 46 votes to 10.

Service under the Act.—Dr. RUTTER proposed and Dr. DAGGER seconded:

That this meeting of the medical profession in Newcastle and district desires to express its strong disapproval of the way in which the just claims of the profession have been disregarded by the Government; but in view of the scheme of the British Medical Association having been vetoed by the Government, we reluctantly have come to the conclusion that it is our duty to the general public to accept provisional service under the Act as the less evil both to them and to ourselves.

This was carried by a very large majority.

The Question of Remuneration.—Dr. CAMPBELL proposed and Dr. SPURGIN seconded:

That we recommend the medical men in Newcastle-on-Tyne to agree to the capitation system.

This was carried without a dissentient.

Requisition for a Representative Meeting.—Dr. BUNTING proposed and Dr. RUTTER seconded:

That this constituency, consisting of the Newcastle-on-Tyne and Hexham Divisions, calls upon the Council of the British Medical Association to convene a Special Representative Meeting to consider the desirability of releasing members of the profession from their undertaking and pledge.

This was agreed to.

Local Medical Committee.—Dr. BUNTING proposed and Dr. RUTTER seconded:

That the County Borough of Newcastle-on-Tyne Provisional Local Medical Committee now becomes the statutory Local Medical Committee, with power to co-opt, and that it apply for recognition from the Local Insurance Committee.

This was agreed to without a dissentient.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH:

FURNESS DIVISION.

A MEETING of the Division was held in the Masonic Hall, Barrow, on December 27th, 1912. Dr. SANSON was in the chair, and twenty-seven members and three non-members were present.

Special Representative Meeting.

The SECRETARY, who was in London as Deputy Representative, gave a report of the Special Representative Meeting.

The CHAIRMAN introduced the discussion by saying they must come to a definite decision. They in Barrow had to

consider themselves. He thought the country districts could sit tight; but Barrow was in a different position. Three men were ready to go on the panel. The local affairs were run by a united body of Socialists; the Act was compact, contained a large number of insured persons, and could pay whole-timers. They must hang together and discuss what course to pursue. He thought country members should not vote on a purely Barrow question.

The SECRETARY (Mr. J. Livingston) pointed out that this was a Divisional meeting.

Dr. POOLEY said that unless the minority went with the rest there was no use in discussing anything.

Dr. CALLAGHAN proposed and Dr. COOK seconded a resolution calling on the Council to return the pledges. This was withdrawn when the SECRETARY said the pledges could only be returned by a Representative Meeting. In speaking to the motion, Dr. Callaghan said the British Medical Association handed them over to the friendly societies, and he preferred to be under Government. Dr. Cook thought the Association was not deserving of censure; it had done its best.

Dr. CARMICHAEL thought they should support the British Medical Association, as the fight was by no means over.

Dr. BOWMAN thought the position was more tense than ever. They should all agree to abide by the vote. He was not at all in favour of the Act, which perpetuated what had been their undoing—contract practice. They had the sympathy of the public, and he would prefer dealing with the friendly societies than with the Chancellor. They must all hold together to get better terms. He considered that if they agreed to work the Act they were dealing a deadly blow to the whole future of medicine.

Dr. J. A. REED said they had come to a crisis, and the Association was beaten; 14,000 did not vote, and what was far more serious a large number did not think it worth while to put their hands in their pockets to support the Guarantee Fund. He had voted out of loyalty. A good many of those who voted against the Act were specialists and whole-timers. 2,420 voted for working the Act. The British Medical Association had broken a cardinal point by handing them over to the friendly societies. The Act was bound to run for three years whatever Government was in power. He alluded to the predominating socialistic nature of the local committees; and he believed if they refused service whole-time men would be appointed. If they did not do something desperate they were beaten, as the position in Barrow was peculiar. The British Medical Association should have had an alternative scheme long ago. He then proposed:

That Barrow practitioners be allowed to go on the panel.

Dr. RUTHERFORD seconded the resolution and alluded to friendly society control.

Mr. LIVINGSTON said he considered he, personally, stood to lose as much as any one there. If Dr. Reed's resolution passed the British Medical Association was at an end in the Furness area, and with it went the unity of the profession. In time the Insurance Committees would dictate their own terms. It was essential that the meeting should know if the minority would agree to the ruling of the meeting. If they went on the panel they were going on through fear, and not because they thought the terms were good. No body of men ever gained anything unless they were prepared for sacrifices. He admitted that the guarantee fund was unsatisfactory, and this probably was due to distrust of some of those on the Council who had now resigned. The three men who were known to be going on the panel were not strong enough to count, but if others joined them it was a different story. He was prepared to go with the majority. He then proposed:

That this Division abides by the decision of the last Representative Meeting.

Dr. JOHNSTON seconded. He thought Dr. Reed looked at the question from a purely local point of view. He wished to know whether the pledge was or was not binding. He thought it was. He alluded to Mr. Ballance's letter in which he said he thought hospital men should resign as a protest and refuse to treat insured persons in hospitals. He suspected treachery in the Council for a long time. As usual, the traitors approached with the kiss of peace. Under the Act they would lose their independence. There were various reasons why men did

not vote. He disagreed with Dr. Reed in saying they were being handed over to friendly societies.

Dr. PRATT supported the amendment. He joined the British Medical Association owing to the good fight they had put up, and he was shocked to hear old members proposing and supporting such a resolution as Dr. Reed proposed, carrying with it, as it did, the repudiation of pledges. He considered that he, a humble practitioner, knew more about honour than the late Chairman of the Ethical Committee.

Dr. DANIEL thought they had reached the limit of effective resistance. Where an area was safe it would be worth while resisting. The points between Mr. Lloyd George and them could be easily met.

Dr. E. REED considered they were beaten; 9s. was quite adequate, and they were only making a display of heroics.

Dr. THOMPSON objected to a remark made by Dr. Callaghan to the effect that club doctors did not give proper medicines. He hoped no one would use the argument that the latest proposal of the British Medical Association broke cardinal point No. 3 and therefore justified the repudiation of pledges. Those who proposed serving on the panel were prepared to break all the cardinal points. The severest blow the Association ever received was the resignation of the former Medical Secretary. Several consultants had sown dissension by their public speeches. He appealed to all to support the British Medical Association's policy and "play the game."

The amendment was carried. The voting was as follows: Drs. Reed, Coffey, Reed, Callaghan, and Sansom, against (that is, in favour of going on the panel). Dr. McGill did not vote. The remainder voted for the amendment. An earnest appeal was made by all present to those who were in the minority that they should withdraw from this position, and Dr. DANIEL proposed, and Dr. WILSON seconded, a resolution accordingly. Drs. REED and COFFEY voted against. Dr. CARMICHAEL then appealed to Drs. Reed and Coffey to postpone their decision to go on the panel until January 4th, 1913, pending the result of the conference of the Chancellor and the Insurance Committees to be held on January 2nd. This they agreed to do.

It was decided to hold a meeting of the Barrow practitioners on Friday, January 3rd, 1913, at 8.30 p.m.

OXFORD AND READING BRANCH:

OXFORD DIVISION.

A SPECIAL general meeting of this Division was held on December 28th, 1912, at the Radcliffe Infirmary, Oxford. Sir WILLIAM OSLER presided as chairman, and eighty members and non-members were present.

Mr. COUNSELL and Dr. EARLE made an offer to withdraw from the meeting, if the members present thought that they should do so, seeing that they had joined the local panel. The meeting conveyed that it was their pleasure that they should remain.

The Insurance Act.

The SECRETARY made a statement concerning press reports, and warned members against being misled by statements in certain organs of the lay press. He finally appealed for united action in the City and County of Oxford. At the request of the meeting he recited the words of both the "Undertaking" and "Pledge."

Dr. TURRELL (Member of Council) reviewed the whole course of the recent negotiation, explained the resolution of the Representative Body, and the terms of the pledge. He referred in detail to a small meeting recently held of medical men concerned in contract practice in Oxford, two of whom he understood had since joined the panel. He finally proposed the following resolution:

That this meeting reiterates its decision not to accept service under the Act except in accordance with the declared policy of the Association; and it further declares that those who have signed the "Undertaking" upon the strength of which the whole policy of the Association has been based, can only be released therefrom by a resolution of the Representative Body.

Dr. COLLIER, in seconding the resolution, read a portion of a letter he had written to Mr. Counsell, in answer to a request to take the chair at the meeting of medical men before referred to. He also referred to Mr. Counsell's

letter published in the *Times* of December 20th. He declared himself unable to understand Mr. Counsell's attitude, or his reasons for going on the panel. He made a strong plea for unanimous action, and called attention to the support which had been readily given by the Radcliff Infirmary staff.

Dr. HIGGS made a personal explanation of his attendance at Mr. Counsell's meeting, and emphatically denied that the meeting was one of men willing to go on the panel.

Dr. WYLIE made a similar explanation.

Mr. COUNSELL explained how and why the meeting was called, and also how mention of it had been made in the press. He considered that he was justified in going on the panel, seeing that it was the duty of all to obey an "Act of the King." He deprecated the growing inclination towards "passive resistance" to an Act of Parliament, merely because it was unpopular.

Further discussion took place, in which the following gentlemen took part: Dr. HODGES, Dr. BROOKS, Dr. JONES, Dr. HITCHINGS, Dr. SUMMERHAYES, Dr. BOISSIER, Dr. ALDEN, Dr. TURRELL, Mr. STYLE, Dr. MORETON, Mr. DREW, and Mr. COUNSELL.

The resolution was then put: For, 74; against, 2; Non-voting, 3.

Negotiation with Insured.—The meeting then discussed schemes for approaching the insured and their representatives.

Dr. HIGGS proposed the following scheme:

That the Oxford Medical Committee enter into negotiations with the Oxford Insurance Committee (as representatives of the insured members) for the treatment of insured persons.

That the Medical Committee form a panel of medical men who are willing to carry out the work.

That all arrangements and conditions shall be embodied in one agreement between the Medical Committee and the Insurance Committee.

That the Medical Committee shall have the right to make the arrangements with the individual medical men willing to carry out the above contract.

That no individual medical man shall make any separate agreement with the Insurance Committee, nor shall any medical man, except with the consent of his Committee, serve on the Insurance Committee.

Thus all arrangements for medical service would be carried out by the local Medical Committee as a body, and the Insurance Committee would be bound to deal with them in all medical matters.

Dr. TURRELL explained that he had no reply from the Central Office on this scheme.

It was eventually decided to summon a meeting of the City and County Medical Committees on December 31st, at which this scheme and others should be discussed; and if necessary, that the services of a solicitor should be requisitioned.

SOUTH-EASTERN BRANCH:

BRIGHTON DIVISION.

A LARGELY attended meeting of medical practitioners resident in the areas of the County Borough of Brighton and the administrative county of East Sussex was held at the Oddfellows Hall, Queen's Road, Brighton, on Monday, December 30th, 1912, at 4 p.m. Dr. RYLE was in the chair.

The Profession and the Insurance Act.—Dr. RYLE gave a short account of the present position of the medical profession with regard to the National Insurance Act, and stated that the meeting was being held to consider schemes proposed by the Brighton Medical Committee and by the East Sussex Medical Committee for attendance upon insured persons and others, otherwise than under the regulations of the National Health Insurance Commissioners.

Scheme for Attendance on Insured Persons.—Dr. TURTON then gave a brief outline of the Brighton scheme. The chief provisions of the scheme are that the administration should be in the hands of (a) the Local Medical Committee, who will provide medical attendance by means of lists of doctors and to whom all complaints against medical men are to be referred, and who will distribute the payments due to the various doctors; (b) the approved societies, who will prepare all lists of subscribers, undertake to collect all subscriptions and the necessary book-keeping and supply the Medical Committee with all necessary information; (c) Joint Committee, consisting of equal numbers of representatives of the Medical Committee and of the approved societies, with an independent chairman, to whom any matters may be referred by the approved society or the Local Medical Committee, and who

shall decide in any matters of dispute between the approved society and the Local Medical Committee arising under the rules provided for the service. A tariff of payments is suggested, giving each medical practitioner the choice of capitation scheme or of payment by attendance, together with list of extras substantially the same as those in the scheme proposed by the British Medical Association in September last. The East Sussex Medical Committee proposed to adopt the Hastings scheme with certain additions, amongst others provision for giving the medical men the option of receiving payments by attendance, this branch of the scheme to be kept separate financially. This scheme is practically identical with the above-mentioned scheme of the British Medical Association. The meeting resolved:

That while approving administrative clauses of the Brighton scheme, refers the remainder of the two reports to the two committees for elaboration into one scheme.

This was carried with nine dissentients. A proposal by Dr. BENHAM as follows—

That the meeting of the medical practitioners resident in the areas of Brighton and East Sussex declines to approve service taken on the panels opened by the Insurance Committee under the terms and conditions of service offered until such time as the medical services to be submitted on our behalf to the insured persons or their representatives have been proved impossible of adoption; and that the Medical Committees are instructed, immediately upon the termination of negotiations, to call a general meeting of medical practitioners to receive their report and determine on their future action—

was met with an amendment by Dr. CHARLES FRASER as follows:

That inasmuch as in supporting a policy of opposing the working of the Act under the conditions now offered by the Government, the profession is in duty bound to see that members of the profession do not suffer financially for their professional loyalty, and that means to secure this are not forthcoming, this meeting is of opinion that no further obstacles should be placed in the way of practitioners who may be desirous of placing their names on the panel.

This amendment was lost by 53 votes to 15.

Proposed Negotiations with Local Committees.—Dr. BENHAM's proposal was then carried with four dissentients. On Dr. TURTON's proposal the following resolution was approved:

That each approved society in the two areas be invited to appoint two representatives to meet the Brighton and East Sussex Local Committees respectively to negotiate with a view to adoption of the scheme approved by this meeting after elaboration as to details by these committees.

Note of Thanks.—The meeting closed with a vote of thanks to Dr. Ryle for presiding.

SOUTH MIDLAND BRANCH:

BUCKINGHAMSHIRE DIVISION.

A MEETING of the medical men practising in Bucks was held at the Royal Bucks Hospital, Aylesbury, on December 24th, 1912. Sixty-four were present, and Dr. BENSON, Chairman of the Buckinghamshire Division, presided.

The Insurance Act.—Dr. CHURCHILL appealed to members to exercise a spirit of toleration and broad-mindedness in the matter of the Insurance Act, and to discuss the matter in a friendly spirit. Dr. BRADBROOK gave an account of the Representative Meeting. Dr. DURRAN then proposed the following resolution:

That the decision of the Representative Meeting be accepted and adhered to by the medical practitioners of this county, and that all medical men in the county be called upon to keep their pledge and not to go on the panels.

A long discussion took place, in which Dr. SHAW, who seconded the resolution, Drs. W. H. BULL, REYNOLDS, WHEELER, CHARLESLEY, CHURCHILL, FLECK, DICKSON, ROSE, LONG, and LARKING took part. It was proposed "That the question be now put," and carried; 41 voted for the resolution and 15 against.

Local Medical Committee.—The Local Medical Committee was then elected as follows:—No. 1 District: Drs. Bradbrook, Buxton, and Deyns. No. 2 District: Drs. Churchill, Henderson, E. O. Turner, and Woolerton. No. 3 District: Drs. Baker, Perrin, F. A. Cooke, Shaw, and Rose. No. 4 District: Drs. Bonson, Kennish, and Larking. No. 5 District: Drs. Reynolds, Wheeler, and Watson.

No. 6 District: Drs. A. H. Turner, Llewelyn Jones, and Clarke Cohen. North Bucks: Drs. Bull, Wickham, and Harvey. South Bucks: Drs. Charsley, Dickson, and Bailey.

Instruction to Committee.—Dr. WHEELER proposed a resolution that the policy of the Association should be carried out; and it was agreed that it be an instruction to the Committee to proceed on these lines.

STAFFORDSHIRE BRANCH.

The first general meeting of the session was held at Stoke-on-Trent on November 21st, 1912. The chair was taken by Dr. J. A. COBB, Vice-President, and forty-four members were present.

Model Ethical Rules.—These rules, as recommended by the Central Council and by the Branch Council, were adopted as printed in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of September 21st, 1912, p. 325, and in substitution for all similar rules in vogue in the Branch.

Dinner.—The meeting was followed by a dinner at which twenty-six members were present.

Epsom College.—A collection in aid of Epsom College realized £1 5s.

STIRLING BRANCH.

A MEETING of this Branch was held in the Station Hotel, Larbert, on December 26th, 1912. Dr. Joss presided over an attendance of sixty-six members.

The Representative Meeting and the Profession.—The following resolutions were passed by a majority of 39 to 24:

1. This meeting is of opinion that the scheme of medical attendance proposed by the Representative Meeting contravenes the cardinal principle regarding freedom from friendly society control, and is unworkable in this area.
2. This meeting is of opinion that the objects of the undertaking and pledge have been substantially obtained in the National Insurance Act and Regulations; that under the altered conditions the pledge is no longer binding; and that the effect of the pledge would be completely reversed if utilized for making arrangements for medical treatment with friendly societies.
3. This meeting approves of practitioners entering into agreements with Local Insurance Committees through the Local Medical Committees and forming panels under the Act.
4. This meeting urges upon Local Medical Committees the duty of laying before Insurance Committees and the Commissioners the necessity of further provision for mileage and extras.

YORKSHIRE BRANCH:

HALIFAX DIVISION.

A MEETING of this Division was held at the Imperial Café, George's Square, Halifax, on December 27th, 1912. Dr. CROSSLEY WRIGHT was in the chair, and fifty-six other practitioners were present. On the motion of Dr. MARSHALL, seconded by Dr. HODGSON, Drs. Macaulay, J. Oakley, and Drury were elected as representatives of the British Medical Association on the Council of the Halifax and District Nursing Association for the coming year.

Insurance Act.—The CHAIRMAN announced that this meeting had been summoned in order finally to decide as to their course of action with regard to service under the Act. Dr. DRURY then read a statement as to the position of the British Medical Association and the proceedings at the Special Representative Meeting on December 21st and 23rd. Dr. PRIESTLEY LEECH explained that the choice now lay between service on the panels or a fight, with the prospect of salaried whole-time men being imported into the district. Dr. SHAW proposed, and Dr. BOND seconded, the following resolution:

That this meeting desires to record its disapproval of the scheme suggested by the Representative Meeting as the only alternative to the panel system of the National Insurance Act. As it cannot be made compulsory for insured persons to contract out, the scheme cannot in any sense be a national scheme; and, further, that it subverts an essential cardinal principle in placing the profession under the direct control of approved societies. This meeting therefore feels compelled to advise the profession in this district to accept provisional service under the Act.

Dr. ROBINSON, seconded by Dr. STRICKLAND, proposed as an amendment:

That no panel be formed;

but the CHAIRMAN ruled that this was a direct negative to the motion. Dr. J. OAKLEY reminded the meeting that in order to join the panel they must break the pledge given to the Association, and that this would be an unpleasant action the memory of which would remain with them as long as they lived. Several members spoke in favour of the motion, urging that the pledge was no longer binding, seeing that the Association could not help financially any member who suffered loss through his loyalty. On the motion being put, the voting was as follows: For the motion, 25; against, 16; 16 of those present did not vote.

Formation of a Local Medical Committee.—On the motion of Dr. PRIESTLEY LEECH, seconded by Dr. HUNT, the following were elected a Local Medical Committee for the Halifax Insurance area—namely: Drs. A. Drury, W. Shaw, D. J. Macaulay, J. Marshall, P. K. Steele, A. Robinson, A. H. Muir, E. W. S. Hughes, and W. M. Branson. On the motion of Dr. MACAULAY, seconded by Dr. PRIESTLEY LEECH, Dr. P. K. Steele was elected honorary secretary to the Local Medical Committee.

BOMBAY BRANCH.

A SPECIAL meeting of this Branch was held at the University Library on November 14th. Lieutenant-Colonel L. F. CHILDE, I.M.S., occupied the chair, and there were present about twenty-five members and three visitors.

Rules for the Reading of Papers.—The following rules for the reading of papers, etc., and discussions had been circulated amongst the members and accepted by a large majority:

1. Not more than twenty minutes be given to the reader of a paper or notes, unless a subject is chosen for general discussion and the Branch Council has decided to give more time, and then thirty minutes should be given.

2. No member should be given more than five minutes to discuss a paper or notes.

3. A member may speak for fifteen minutes while discussing a paper or notes, provided that the chairman of the particular meeting decides from personal knowledge or wish of the members present that such a discussion is likely to be supplementary to the paper or notes read at the meeting.

On the motion of Lieutenant-Colonel ASHTON STREET, I.M.S., seconded by Dr. SORAB NARIMAN, these rules were adopted with one dissentient.

Literature Received.—The receipt of Nos. 51, 52, and 53 of the Scientific Memoirs by the officers of the Medical and Sanitary Department under the Government of India, was announced, so also of the annual reports of the Government chemical analyst, the lunatic asylums, the Bombay Bacteriological Laboratory, and the Forty-eighth Annual Report of the Sanitary Commissioner of Bombay, as well as the Notes on Vaccination in the Presidency (1911-12).

RHODESIAN BRANCH.

PROPOSED MATABELELAND AND MASHONALAND DIVISIONS. ON May 21st a meeting of local practitioners interested in the proposed formation of a Rhodesian Branch of the British Medical Association was held in the Library Buildings, Bulawayo. Dr. SMYTH was in the chair, and Drs. Acland, Copeland, Head, Major Martin, and Drs. Jameson, Strong, and Townsend were present. It was decided that steps should be taken forthwith for the formation of a Rhodesian Branch, to include both Northern and Southern Rhodesia.

Dinner.—In the evening a dinner was held at the Grand Hotel, Bulawayo, in connexion with the meeting.

Proposed Matabeleland Division.—A meeting of local practitioners interested in the formation of a Matabeleland Division, to form part of the Rhodesian Branch, was also held at Bulawayo on May 21st, 1912, when the same practitioners were present, with the addition of Dr. Macdonald of Inyati. Dr. SMYTH took the chair. Various preliminary matters received consideration, including questions in connexion with the rules for the proposed Division. A further meeting of promoters of the proposed Matabeleland Division was held in the Memorial Hall, Bulawayo, on July 29th, 1912, when there were present: Dr. EATON (in the chair), Drs. Forrester, Head, Jameson, Le Feuvre, Major Martin, and Drs. Strong, Townsend, and Vigne. Further questions in connexion with the rules for the Division were considered. Provisional nominations

were made of Representatives of the Division on the Rhodesian Branch Council. The meeting considered also questions in connexion with a proposed scale of minimum fees, and appointed two committees for their consideration—one in respect of town and one in respect of country areas.

Proposed Mashonaland Division.—A meeting of practitioners interested in the formation of a Mashonaland Division of the Association, to form part of the new Rhodesian Branch, was held at the Club, Salisbury, on July 15th, when there were present: Drs. APPEYARD (in the chair), Mackenzie, Percy Peall, Guy Peall, Cheadle, Ellis, Harger, Huggins, Lillie, and Macnaughton. It was unanimously agreed to take steps for the formation of a Mashonaland Division of the new Rhodesian Branch, and that, if possible, meetings of the Division should be held quarterly in Salisbury on the first day of the High Court Sessions. Provisional nominations were made for the officerhips of the new Division, and decisions were arrived at as regards draft rules.

Formation of Rhodesian Branch.—As a result of the action initiated at these meetings, a Rhodesian Branch of the Association has been formed. A notice on the subject was published in the SUPPLEMENT to the JOURNAL of December 14th, 1912.

British Medical Association.

PUBLIC HEALTH COMMITTEE.

APPOINTMENT OF DISTRICT MEDICAL OFFICER FOR THE MICHELDEVER DISTRICT OF THE WINCHESTER UNION.

THE action of the Winchester Guardians in connexion with one of their district medical officers was brought to the notice of the Public Health Committee in April last. Under certain well-known Poor Law Orders a district medical officer when appointed to any district, if he lives in the same is entitled to be appointed to his office permanently, and not for a term of years. Nevertheless the Winchester Guardians appointed Dr. Todd, of Micheldever, Hants, for a term of three years only, although that gentleman was resident within his district and clearly entitled to the protection of the Poor Law Orders. This action, when challenged by the Poor Law Medical Officers' Association, was justified by the Local Government Board on the ground that Article 6 of the General Order of May 25th, 1857, provides that nothing contained in the Order "shall prevent the Guardians in any case of emergency, or in any special circumstances, from appointing one or more medical officers to act temporarily for such time and upon such terms as the Local Government Board shall approve."

The Public Health Committee from time to time gave instructions for communications to be addressed to the Local Government Board, but was unable to obtain a satisfactory answer. On the instructions of the Committee the correspondence is now published as follows:

British Medical Association,
429, Strand, London, W.C.,
April 30th, 1912.

Sir,

*Appointment of District Medical Officer,
Micheldever District of Winchester Guardians.*

The attention of the British Medical Association has been drawn to the recent appointment of Dr. P. E. Todd as Medical Officer for the Micheldever District of the Winchester Union for a period of three years only.

The Association has always understood that a District Medical Officer residing in the area for which he acts must, in accordance with the following Section of the Medical Appointments Order, May 25th, 1857, be appointed permanently:

Art. 2.—Every district medical officer duly qualified as aforesaid at the time of his appointment, and then being, or within two months after his appointment becoming, resident within the district for which he shall be appointed to act, shall hold his office until he shall die, or resign, or be proved to be insane in the same manner as in the previous Article, or become legally disqualified to hold such office, or be removed by the said Board, or cease to reside within such district.

It is observed by the Association that the reply of the Board, dated March 15th, 1912, to the Honorary Secretary of the Poor Law Medical Officers' Association, states that the Board would not regard the action of the Winchester Guardians in making the appointment in question for a period of three years only as a contravention of the above mentioned Order, having regard to the provision contained in the following Article 6 of the Order.

Art. 6.—Provided that nothing herein contained shall prevent the Guardians in any case of emergency, or under any special circumstances, from appointing one or more medical officers to act temporarily for such time and upon such terms as the Poor Law Board shall approve.

I am instructed to say that my Association is quite at a loss to understand this answer of the Board, or to perceive in what way the appointment in question can be said to be a case of "emergency." The press reports of the meetings of the Board of Guardians also fail to show any "special circumstances" which would seem to justify the Guardians in making an appointment for a limited time, or your Board in sanctioning such an appointment.

The British Medical Association looks upon this case as creating a grave precedent, and as undermining the confidence which the medical profession has always felt in the Medical Appointments Order and in your Board as a protection against capricious action on the part of Boards of Guardians. I am instructed, therefore, to ask if the Board will favour the Association with the nature of the "reasons brought forward by the Guardians" alluded to in the letter addressed by the Board to Dr. Major Greenwood on February 6th, 1912, and also to inquire whether the profession is to understand that in future Article 2 of the Medical Appointments Order, 1857, is to be regarded as having no binding force on guardians or upon your Board.

My Association would also inquire whether the importance of the hearing of such a precedent on the Poor Law Officers' Superannuation Act has been appreciated. If appointments are to be sanctioned for short periods, there is a distinct temptation offered to Boards of Guardians to make such limited appointments in order to escape responsibilities imposed upon them by this Act.

I am, Sir,

Your obedient Servant,
(Signed) ALFRED COX,
Acting Medical Secretary.

The Right Hon. John Burns, M.P.,
President of the Local Government Board,
Whitehall, S.W.

Local Government Board,
Whitehall, S.W.,
May 1st, 1912.

Sir,

I am directed by the Local Government Board to acknowledge the receipt of your letter of the 30th ultimo, relative to the appointment of Poor Law Medical Officer.

I am, Sir,
Your obedient Servant,
(Signed) H. C. MOWES,
Secretary.

A. Cox, Esq.,
Acting Medical Secretary,
British Medical Association.

Local Government Board,
Whitehall, S.W.,
May 13th, 1912.

Sir,

I am directed by the Local Government Board to advert to your letter of the 30th ultimo, relative to the terms of appointment of Dr. P. E. Todd as Medical Officer of the Micheldever District of the Winchester Union.

In reply, the Board direct me to state that they do not at present contemplate any general relaxation of the regulation in Article 2 of their General Order of the 25th May, 1857, as to the permanency of tenure of medical officers who are duly qualified and resident within the districts for which they are appointed.

I am, Sir,
Your obedient Servant,
(Signed) WALTER T. GERRARD,
Assistant Secretary.

The Acting Medical Secretary,
British Medical Association.

British Medical Association,
429, Strand,
London, W.C.,
May 15th, 1912.

(59,263B. 1912.)

Sir,
I beg to acknowledge receipt of your letter of the 13th inst. relative to the terms of appointments of Dr. P. E. Todd as Medical Officer of the Micheldever District of the Winchester Union.

I am, Sir,
Your obedient Servant,
(Signed) ALFRED COX,
Medical Secretary.

The Secretary,
Local Government Board,
Whitehall, S.W.

British Medical Association,
429, Strand,
London, W.C.,
June 1st, 1912.

Sir,
In reply to your letter of the 13th ult. (59,263B, 1912), relative to the terms of appointment of Dr. P. E. Todd as Medical Officer of the Micheldever District of the Winchester Union, I am instructed to say that the Association notes with satisfaction that the Board does not contemplate any general relaxation of the Regulation in Article 2 of their General Order of the 25th May, 1857. I am, however, instructed to point out that the Association has not yet been favoured with an answer to the question contained in the 4th paragraph of my letter of 30th April, namely, as to the circumstances which led your Board to regard the appointment in question as a case of urgency. You will no doubt appreciate the fact that the Association is looked to for advice in matters of this kind, and it would be a considerable advantage to the profession if we could have some statement from the Board which would enable us to allay the great apprehensions which have been aroused by the attitude of the Board as regards this appointment, which has seemed to many to be quite inconsistent with the terms of Article VI of the Medical Appointments Order, May 25th, 1857. I should feel obliged, therefore, if you will favour the Association with the nature of the "reasons brought forward by the Guardians" alluded to in the letter addressed by the Board to Dr. Major Greenwood on February 6th, 1912.

I am, Sir,
Your obedient Servant,
(Signed) ALFRED COX,
Medical Secretary.

The Secretary,
Local Government Board,
Whitehall, S.W.

Local Government Board,
Whitehall, S.W.,
June 3rd, 1912.

Sir,
I am directed by the Local Government Board to acknowledge the receipt of your letter of the 1st instant relative to the appointment of Medical Officer for the Micheldever District of the Winchester Union.

I am, Sir,
Your obedient servant,
(Signed) H. C. MOWES,
Secretary.

A. Cox, Esq.,
Secretary to the British Medical Association.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held on December 19th, 1912, at Caxton House, Westminster, with Sir FRANCIS H. CHAMPNEYS in the chair.

False Certificate of Birth of Candidate.

THE SECRETARY reported that a false and fraudulent certificate of birth had been tendered to him by a woman desirous of becoming a candidate for the examination of December 16th. The Board decided that the matter be referred to the Public Prosecutor.

Information against a Midwife.

A letter was considered from the Chief Constable of Windsor, suggesting that either the Board or the Matron of the Monmouthshire Training Centre should lay an information against a certified midwife under the Servants'

Character Act of 1792, 32 Geo. III, c. 56, s. 4. The Board directed that the midwife in question be cited to appear before the Penal Cases Committee.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments have been notified by the Admiralty: Fleet Surgeon HUGH S. BURNISTON, to the *Antrim*, vice Macleod, January 1st, 1913. Fleet Surgeon RICHARD W. Lieutenant T. E. Osmond, appointed on probation July 28th, 1911, has been stationed in London.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-five of the largest English towns 8,149 births and 5,458 deaths were registered during the week ending Saturday, December 14th, 1912. The annual rate of mortality in these towns, which had been 15.0, 14.5, and 16.4 per 1,000 in the three preceding weeks, fell to 16.1 per 1,000 in the week under notice. In London the death-rate was equal to 16.3 per 1,000, against 15.6, 14.5, and 17.2 in the three preceding weeks. Among the ninety-four other large towns the death-rates in the week under notice ranged from 3.0 in Dudley, 7.8 in Eastbourne, 8.0 in Lincoln, 8.1 in Aberdare, 8.2 in Iford, and 8.9 in Walthamstow to 22.2 in Preston, 22.8 in St. Helens and in South Shields, 23.3 in Swindon, 24.0 in Great Yarmouth, 27.9 in Stockton-on-Tees, and 31.7 in West Hartlepool. Measles caused a death-rate of 3.0 in East Ham, 3.1 in Birmingham, 3.3 in Coventry, 3.4 in Middlesbrough, 3.6 in Enfield, 3.9 in Newcastle-on-Tyne, 4.0 in Stockton-on-Tees, 4.1 in Grimsby, 4.8 in St. Helens, 4.9 in Preston, 5.7 in South Shields, 6.9 in Northampton, and 13.8 in West Hartlepool. The mortality from the remaining infectious diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 40, or 0.7 per cent. of the total deaths, were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 9 were registered in Liverpool, 8 in Birmingham, 4 in Warrington, and 2 each in Stoke-on-Trent, St. Helens, Rochdale, Sunderland, and Newcastle-on-Tyne. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,336, 2,279, and 2,266 at the end of the three preceding weeks, had further fallen to 2,232 on Saturday, December 14th, 1912; 248 new cases were admitted during the week, against 296, 271, and 285 in the three preceding weeks.

In ninety-five of the largest English towns 8,488 births and 5,222 deaths were registered during the week ending Saturday, December 21st, 1912. The annual rate of mortality in these towns, which had been 14.5, 16.4, and 16.1 per 1,000 in the three preceding weeks, declined to 15.4 per 1,000 in the week under notice. In London the death-rate was equal to 14.4 per 1,000, against 14.5, 17.2, and 16.3 in the three preceding weeks. Among the ninety-four other large towns the death-rates ranged from 7.2 in Enfield, 7.5 in Iford, 7.8 in Gillingham and in Eastbourne, 8.4 in Bournemouth, and 1.7 in Croydon to 21.0 in Stockton-on-Tees, 21.8 in Barrow-in-Furness, 23.1 in Newcastle-on-Tyne, 24.7 in South Shields, 26.8 in Sunderland, and 27.9 in Tynemouth. Measles caused an annual death-rate of 3.4 in West Ham, 4.0 in Northampton, 4.1 in West Hartlepool, 4.8 in St. Helens, 6.0 in Stockton-on-Tees, 6.2 in Preston, and 6.5 in Barrow-in-Furness; in whooping-cough of 1.3 in Stoke-on-Trent; and diphtheria of 2.4 in Barrow-in-Furness. The mortality from enteric fever and scarlet fever showed no excess in any of the large towns and no fatal case of small-pox was registered during the week. The causes of 39, or 0.7 per cent. of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 6 were recorded in Birmingham, 5 in Liverpool, 3 in Stoke-on-Trent, and 3 in Sunderland. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,279, 2,265, and 2,232 at the end of the three preceding weeks, had further fallen to 2,108 on Saturday, December 21st; 193 new cases were admitted during the week, against 271, 285, and 248 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In eighteen of the largest Scottish towns 1,082 births and 867 deaths were registered during the week ending Saturday, December 14th. The annual rate of mortality in these towns, which had been 19.0, 17.1, and 22.0 per 1,000 in the three preceding weeks, declined to 20.7 in the week under notice, but was 4.6 per 1,000 above the rate in the ninety-five large English towns. Among the several Scottish towns the death-rates in the week under notice ranged from 13.5 in Kilmarnock, 14.0 in Ayr, and 14.2 in Coatbridge and in Kirkcaldy, to 23.5 in Glasgow and in Paisley, 24.0 in Greenock, and 24.5 in Falkirk. The mortality from the principal infectious diseases averaged 1.1 per 1,000, and was highest in Clydebank and Motherwell. The 351 deaths from all causes registered in Glasgow included 16 from whooping-cough, 6 from diarrhoeal diseases, and 1 from diphtheria. Two deaths from scarlet fever were recorded in Dundee; 3 from whooping-cough in Kirkcaldy, 2 in Motherwell, and 2 in Clydebank; and 1 from small-pox in Kirkcaldy.

In eighteen of the largest Scottish towns 1,115 births and 801 deaths were registered during the week ending Saturday, December 21st, 1912. The annual rate of mortality in these towns, which had been 17.1, 22.0, and 20.7 per 1,000 in the three preceding weeks, fell to 19.2 in the week under notice, but was 3.8 per 1,000 above the rate in the ninety-five large English towns. Among the several Scottish towns the death-rates ranged from 3.9 in Kirkcaldy, 9.0 in Kilmarnock, and 13.8 in Falkirk to 23.8 in Leith, 24.6 in Perth, and 26.4 in Ayr. The mortality from the principal infectious diseases averaged 1.5 per 1,000, and was highest in Clydebank and Motherwell. The 312 deaths from all causes registered in Glasgow included 15 from whooping-cough, 7 from diphtheria, 2 from infantile diarrhoeal diseases, and 1 from scarlet fever. Two deaths from infantile diarrhoeal diseases, and 1 from diphtheria in Dundee; 3 from whooping-cough in Partick, 2 in Leith, 2 in Motherwell, and 2 in Clydebank; and 3 from infantile diarrhoea and enteritis in Dundee.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, December 14th, 1912, 509 births and 408 deaths were registered in the twenty-two principal urban districts of Ireland, as against 551 births and 486 deaths in the preceding week. The annual death-rate in these districts, which had been 18.5, 19.7, and 22.0 per 1,000 in the three preceding weeks, fell to 18.4 per 1,000 in the week under notice, this figure being 2.3 per 1,000 higher than the mean average death-rate in the ninety-five English towns for the corresponding period. The figures in Dublin and Belfast were 17.2 and 20.0 respectively, those in other districts ranging from 4.2 in Lisburn and 4.4 in Portadown to 35.7 in Dundalk and 36.2 in Wexford, while Cork stood at 17.0, Londonderry at 20.4, Limerick at 20.3, and Waterford at 20.9. The zymotic death-rate in the twenty-two districts averaged 2.2 per 1,000 as against 2.3 in the preceding week.

During the week ending Saturday, December 21st, 1912, 518 births and 457 deaths were registered in the twenty-two principal urban districts of Ireland, as against 509 births and 408 deaths in the preceding week. The annual death-rate in these districts, which had been 19.7, 22.0, and 18.4 per 1,000 in the three preceding weeks, rose to 20.6 per 1,000 in the week under notice, this figure being 5.2 per 1,000 higher than the mean average death-rate in the ninety-five English towns for the corresponding period. The figures in Dublin and Belfast were 20.8 and 23.5 respectively, those in other districts ranging from 4.2 in Drogheda and 6.4 in Queenstown, to 32.6 in Newtownards and 33.7 in Lisburn, while Cork stood at 17.0, Londonderry at 17.9, Limerick at 19.0, and Waterford at 20.9. The zymotic death-rate in the twenty-two districts averaged 2.7 per 1,000 as against 2.2 in the preceding period.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

- ACTON EDUCATION COMMITTEE.—Lady Assistant School Medical Officer and Assistant Medical Officer of Health. Salary, £250 per annum.
- BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Third House-Surgeon. Salary, £75 per annum.
- BLACKBURN AND EAST LANCASHIRE INFIRMARY.—Junior House-Surgeon. Salary, £80 per annum.
- BRADFORD EDUCATION COMMITTEE.—Woman Assistant to the School Medical Officer. Salary, £350 per annum.
- BRISTOL ROYAL INFIRMARY.—(1) Resident Casualty Officer. Salary at the rate of £50 per annum. (2) Dental House-Surgeon. Salary, £100 per annum.
- BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary, £100 per annum.
- CARDIFF: KING EDWARD VII WELSH NATIONAL MEMORIAL.—Tuberculosis Physician. Salary, £450 per annum, increasing to £500.
- CAPE TOWN: SOUTH AFRICAN COLLEGE.—Lecturer in Anatomy. Salary, £300 per annum.
- GARTLOCH MENTAL HOSPITAL.—Junior Assistant Medical Officer. Salary, £150 per annum.
- GUY'S HOSPITAL DENTAL SCHOOL.—Executive Officer. Salary, £200 per annum.
- HAMPSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL.—Physician to Out-patients.
- HELLINGLY: EAST SUSSEX COUNTY ASYLUM.—Third Assistant Medical Officer (Male). Salary, £175 per annum, increasing to £200.
- HULL: ROYAL INFIRMARY.—Casualty House-Surgeon. Salary at the rate of £60 per annum for six months, or £80 for twelve months.
- LANCASHIRE EDUCATION COMMITTEE, Preston.—School Medical Inspector. Salary, £250 per annum, rising to £400.
- LISCARD: VICTORIA CENTRAL HOSPITAL AND WALLASEY DISPENSARY.—House Surgeon. Salary, £100 per annum.
- LIVERPOOL MEDICAL MISSION.—Assistant Medical Officer.

- LIVERPOOL: SOUTHERN HOSPITAL.—(1) Honorary Assistant Surgeon. (2) Honorary Consulting Gynaecologist.
- LIVERPOOL UNIVERSITY.—Lectureship in Mental Diseases.
- LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—(1) Assistant House Surgeon. (2) Pathologist and Bacteriologist. Honorarium at the rate of 100 and 50 guineas per annum respectively.
- NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Senior House-Physician. Salary, £50 per annum.
- NOTTINGHAM GENERAL DISPENSARY.—Assistant Resident Surgeon (Male). Salary, £170 per annum.
- OXFORD COUNTY ASYLUM.—Junior Assistant Medical Officer (Male). Salary, £150 per annum, increasing to £175.
- PLYMOUTH: SOUTH DEVON AND EAST CORNWALL HOSPITAL.—(1) House Physician. Salary, £75 per annum. (2) Honorary Assistant Physician.
- ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—Junior Obstetric Assistant.
- ROYAL NATIONAL ORTHOPAEDIC HOSPITAL.—Junior Resident House-Surgeon. Salary at the rate of £80 per annum.
- ST. MARY'S HOSPITAL, Paddington, W.—Resident Assistant Anaesthetist. Salary at the rate of £100 per annum.
- ST. PAUL'S HOSPITAL, Red Lion Square, W.C.—Honorary Surgeon to Out-patients.
- STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY.—Pathologist (non-resident). Salary, £200 per annum.
- TOXTETH PARK TOWNSHIP.—Assistant Resident Female Medical Officer of the Workhouse and Infirmary. Salary, £125 per annum.
- UNIVERSITY COLLEGE HOSPITAL, Gower Street, W.C.—Physician in Charge of Out-patient Department for Mental Diseases.
- VICTORIA HOSPITAL FOR CHILDREN, Chelsea, S.W.—House Physician and House Surgeon. Salary, £40 per annum.
- WADSLEY: WEST RIDING ASYLUM.—Fourth Assistant Medical Officer (Male). Salary, £140 per annum, increasing to £160.
- WAKEFIELD.—Assistant Medical Officer of Health. Salary, £250 per annum.
- WEST BROMWICH UNION INFIRMARY.—Resident Assistant Medical Officer. Salary, £200 per annum.
- WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—House-Surgeon. Salary at the rate of £80 per annum.
- CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointment: Welshpool (Montgomery).

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Wednesday morning.

APPOINTMENTS.

- BUTT, A., M.B., B.S.Durb., Medical Officer of Health to the Launceston and Bradwoodwidge Rural District Council.
- BURTON, Hugh L., M.B., B.S.Lond., Deputy Medical Officer to the Strangeways Gaol, Manchester.
- CRAWLEY, Frank C., M.D.Dubl., F.R.C.S.I., Ophthalmic Surgeon to the Royal City of Dublin Hospital, vice A. H. Benson, deceased.
- DUNCAN, David G., M.B., Ch.M.Sydney, Government Medical Officer and Vaccinator at Mullumbimby, vice Dr. Reich, resigned.
- GARDEN, D. S., M.B., B.S.Aberd., District Medical Officer of the Halifax Union.
- KENNEDY, W. D., M.B., District Medical Officer of the Wantage Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

- SUGARS.—On December 20th, 1912, at Kulim, Kedah, Malay Peninsula, the wife of H. S. Sugars, M.B., B.Ch., T.C.D., of a daughter. (By cable.)
- HUTCHENS.—On December 30th, 1912, at Corbridge, Northumberland, the wife of H. J. Hutchens, D.S.O., of a son.

DEATHS.

- CHAMBERS.—Dr. John Louis Chambers, on December 21st, 1912, after a short illness, at 249, Hackney Road, passed peacefully away. Deeply mourned by his sorrowing wife and sister Mary. Friends please accept this (the only) intimation.
- COLBY.—On December 22nd, 1912, at The Mount, Malton, Yorkshire, William Taylor Colby, M.D., J.P., aged 85 years.
- PHILPOTS.—On December 31st, 1912, suddenly at Silverdale, Harris Philpots, M.B., C.M., of Birkenhead. Interment at Silverdale. No flowers.
- REDFERN.—On December 22nd, 1912, at Templepatrick House, Donaghadee, Peter Redfern, M.D.Lond., F.R.C.S.Eng., D.Sc., formerly Regius Professor of Anatomy and Physiology, Queen's College, Belfast, aged 91 years.

IN MEMORIAM.

In ever loving memory of our dearly beloved and only son Phiroze (Ball), who departed this life in the 19th year of his life, whilst yet full of bright hopes and noble aspirations, on December 26th, 1910.

All tears are vain, we cannot now recall thee,
Gone is thy loving voice, thy sweetest face;
Gone from the home, where we so dearly loved thee,
Where none can ever fill thy place.

Inserted by his sorrowing parents, Dr. B. Horanavatty, F.R.C.S., and Mrs. B. Horanavatty, of Ahmedabad.

DIARY FOR THE WEEK.

TUESDAY.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—First Milroy Lecture, by Major R. McCarrison, M.D., I.M.S.; The Etiology of Endemic Goitre.

WEDNESDAY.

HUNTERIAN SOCIETY, St. Bartholomew's Hospital, 9 p.m.—Professor Arthur Keith:—The Second Hunterian Lecture: The History and Nature of the Napoleonic Specimens in the Museum of the Royal College of Surgeons, England.

UNITED SERVICES MEDICAL SOCIETY, Royal Army Medical College, Grosvenor Road, S.W., 5 p.m.—Paper:—Lieutenant-Colonel G. D. Hunter, R.A.M.C.: The Tactical Employment of Field Medical Units.

THURSDAY.

HARVEIAN SOCIETY OF LONDON, Stafford Rooms, Titchborne Street, Edgware Road, W., 8.15 p.m.—(1) Annual Meeting and Election of Officers; (2) President's Address; (3) Smoking Concert.

NORTH-EAST LONDON CLINICAL SOCIETY, Prince of Wales's Hospital, Tottenham, 4.15 p.m.—Paper:—Mr. James Sherren: Gall Stones.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—Second Milroy Lecture, by Major R. McCarrison, M.D., I.M.S.: The Etiology of Endemic Goitre.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
CLINICAL SECTION, 8.30 p.m.—Demonstration of Cases and Specimens.

SECTION OF LARYNGOLOGY, 4.30 p.m.—Demonstration of Cases and Specimens.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—Daily arrangements: Out-patient Demonstration, 10 a.m.; Medical and Surgical Clinics, Monday: 12 noon, Throat, Nose, and Ear; 2.15 p.m., Surgery; 3 p.m., Operations; 3.15 p.m., Medicine; 4.15 p.m., Ear and Throat. Tuesday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Surgery; 3.15 p.m., Medicine. Wednesday: 11 a.m., Eye; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Eye Clinic; 4.30 p.m., Surgery. Thursday: 12 noon, Throat, Nose, and Ear; 2 p.m., Operations, Pathological Demonstration; 3.15 p.m., Medicine. Friday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Surgery. Saturday: 10 a.m., Radiography; 11 a.m., Eye. Special Lectures on Tuesday, 3.15 p.m.; and Wednesday and Thursday at 4.30 p.m.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following Clinical Demonstrations have been arranged for next week, at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Surgical; Friday, Eye. Lectures, at 5.15 p.m. each day, will be given as follows:—Monday:

The Work of a Tuberculosis Dispensary. Tuesday: Some Recent Advances in the Diagnosis, Prognosis, and Treatment of Heart Disease (illustrated by the polygraph). Wednesday, ditto. Thursday, ditto. Friday: Granuloma.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C., Tuesday and Friday, 3.30 p.m.: Trauma in Relation to Nervous Disease.

SALFORD ROYAL HOSPITAL, Tuesday, 4.30 p.m.—Incontinence of Urine.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics, X Rays, and Operations, 2 p.m. daily. Monday: Gynaecology, 10 a.m.; Eye, 2 p.m. Tuesday: Gynaecological Operations, 10 a.m.; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Wednesday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Eye, 2 p.m.; Gynaecology, 2 p.m. Thursday: Eye, 2 p.m.; Orthopaedics, 2 p.m. Friday: Gynaecological Operations, 10 a.m.; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Saturday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Eye, 10 a.m.

RECENT PUBLICATIONS.

Chemische Methodik für Aerzte. By Professor Carl Oppenheimer. Second edition. Revised by Dr. W. Glöckner. Leipzig; G. Thieme. 1912. (Cr. 8vo, pp. 100. M.2.40.)

Sets forth a number of chemical tests for clinical use and describes them in such fashion that general practitioners not specially trained in chemical analysis may perform them with ease. No methods requiring complicated or costly apparatus are included, and all quantitative work is performed by measurement instead of gravimetrically.

How to Become a Certified Midwife. By E. L. C. Appel, M.B., B.S., B.Sc. Revised and brought up to date by Victoria E. M. Bennett, M.B., B.S., D.P.H. London: The Scientific Press, Ltd. 1912. (Fep. 8vo, pp. 64. Price 6d. net.)

Consists for the most part of summaries of the requirements of the Midwives Act and the Central Midwives Board, together with a copy of the regulations issued by the Board, a list of some of the institutions in which training can be obtained, and a short glossary.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. J. AND A. CHURCHILL will shortly issue *Practice and Problem in Abdominal Surgery*, by Mr. Alfred E. Maylard, Surgeon to the Victoria Infirmary, Glasgow. The book (it is stated in the preface) is the outcome of the practical experience of one who knew abdominal surgery at its inception, who has passed through its varied phases of development, and who at present is enjoying that apparent apotheosis which it seems almost to have reached.

Messrs. W. B. Saunders Company have in the press for immediate publication a work on *Psychoanalysis* by Dr. A. A. Brill, Clinical Assistant in Psychiatry and Neurology, Columbia University Medical School.

National Insurance.

MEETING OF THE ADVISORY COMMITTEES.

The following is the official report of the meeting of the Advisory Committees held on Thursday, January 2nd.

The cross headings have been introduced by us for the convenience of readers.

GENERAL STATEMENT BY THE CHANCELLOR OF THE EXCHEQUER.

The Right Hon. D. LLOYD GEORGE, Chancellor of the Exchequer, who was in the chair, said: Ladies and gentlemen, about ten weeks ago we met in this room to discuss the revised terms which the Government proposed to submit to the medical profession for working the medical benefits of the National Insurance Act. I think you will agree with me when I say that the public generally, without distinction of party, regarded these terms as being not merely fair, but liberal and generous. I think I could go beyond that, and say that the attitude of the medical profession since then is a tacit admission that, as far as at any rate the cash terms are concerned, they, on the whole, fairly meet the situation. It is true that the ground of controversy shifted largely, and almost entirely, from the question of remuneration on to something which was called lay control. Now I have only one or two words to say about that. No profession to my knowledge has ever objected to the administrative control of any lay body that was responsible for paying it. Take the learned profession of which my right hon. friend the Attorney-General is such a distinguished ornament, and the still more learned branch of the profession, or at any rate the still more serviceable branch, which I will call the working branch, of the pro-

fession to which I have the honour to belong. Whenever adequate remuneration has been offered to us, we have never objected to the administration of that cash by the people who found it. We regarded it as a business proposition. As there was cash at the end of it, lawyers naturally did not object to it. As town clerks, as clerks of the peace, as clerks to magistrates, the legal profession has always accepted lay control and almost purely lay control in the administration of the funds in which they were participating. Then take the teaching profession. The teaching profession has never objected to lay control. It has always pleaded for an appeal to a central authority, but that we have given to the medical profession. The teaching profession has never said, We will recognize the control of the parent and no one else. They have never said, We will not stand interference by county councils, town councils, school boards, and boards of education; these are boards of laymen and we cannot tolerate it; it is not consistent with our dignity. It has never entered their heads to put forward such a claim. The same thing applies to the medical profession. As medical officers of health, as officers in hospitals under general municipal or other control, they have always recognized the control of the town councils, the county councils, the Local Government Board, and the committees who dispense the patronage. Therefore this demand that the only business of the layman is to find the money is an absolutely new demand which has never been put forward before under any conditions, and I am very glad to find that, as a matter of fact, it is not seriously presented by the vast majority of the medical profession themselves. I shall have cleared the ground of one or two of these things before I come to the actual practical proposition which I have to submit to you.

The question which we shall have to discuss here to-day is, first of all, what is to be done in areas where the panels are adequate; in the second place, what our proposals are in reference to areas where the panels are incomplete, or where we have practically no panels at all. I need hardly tell you that we are fully prepared to meet every one of these contingencies. We have carefully thought them out, and we have thought them out not merely for weeks but for months. We have been very reluctant and slow to put into operation some of our plans, because we know they may inflict hardship, and severe hardship, upon individuals; and, believe me, in spite of everything that has been said to the contrary, we have been sincerely desirous to avoid doing that. As a matter of fact, we have waited so long that we were really almost endangering the immediate success of our medical benefit clauses; and I tell you in all sincerity that we did it because we wanted to exhaust every effort to arrive at a peaceable friendly settlement, that would make everybody feel that on the whole we had come to a satisfactory arrangement, and which above all would avoid inflicting hardship upon any hard-working, honest, professional man who could not quite see his way at once to accept our terms. No one can accuse us of impatience. For twenty months we have negotiated. I have attended innumerable interviews, conferences, no end of deputations, with a view to trying to effect a friendly arrangement for ever twenty months. I think it is necessary that I should make that statement in order to make clear that we have ample justification now for any steps which we may think it necessary to take in areas where arrangements cannot be effected, where panels cannot be set up; and we have ample justification in the interests of the public, which must be paramount, in resorting to any fair plan, although it may inflict damage upon certain individuals.

Now it has been suggested to me from certain quarters that we ought to have made a bargain with the profession before ever introducing our bill. The events of the last few months show how utterly impossible that is as a business proposition. I have never met during the whole of these twenty months any body of medical men who claimed to have the power to enter into even a provisional bargain with the Government. They have had endless meetings. They have appointed negotiators time after time. I have never heard any of these negotiators who could tell me that they have had a right to enter into a provisional compromise with the Government. How could you under these circumstances bargain with the profession? What would have happened if I had taken that line before the bill was introduced? It would have been this: I should have met representatives of the British Medical Association; they would have expressed to me their individual views; I would have said to them, "Now, then, if I accept those proposals, can you guarantee that the profession will be behind you, that they will accept the Act?" They would have said, "No, certainly not, we cannot do anything of the kind." What would have happened? They would have reported it to the Council; the Council would have then reported it to the districts, the districts throughout the country would have been summoned, and every doctor would have come there and there would have been a debate in hundreds of districts; you would have had a full debate upon these proposals, and you would not have had any agreement amongst them; they would all have had conflicting suggestions; they would have met after that in a Representative Meeting; the Representative Meeting would have proposed something; they would have come to me again; they would have had to go back again; and the same process would have gone on. Meanwhile, I should have had to put the scheme before the gentlemen who represent the friendly societies and the trade unions, who at that time were the only organized bodies representing the insured class. What would have happened? I should have had a great debate going on in every town and village of the country about proposals that I have never submitted to the House of Commons at all. No Minister could inflict that indignity upon the House of Commons. The House of Commons would not have stood it. I should not have thought much of the House of Commons if it had. So that really to suggest that we could have come to an arrangement with

the medical profession before submitting the bill in any shape to the House of Commons, is a perfectly grotesque proposition.

I therefore come to what happened. I did see representatives of the medical profession. I forget how many times before the bill was introduced. I glanced from them, and from a very careful perusal of the reports of the *British Medical Journal*, which, I understand, is the official organ of the general practitioner, a general view of what the position of the profession was at that time. I saw representatives of the friendly societies and trade unions, and I tried to strike a sort of middle course which I thought on the whole fairly represented the justice of the case. I do not mind saying that the negotiations which have happened since, and discussions I have had, the facts that were brought before me have led me to modify my views in many respects, and when I was convinced on a subject I had no hesitation in saying so. I placed the matter before the Advisory Committee, and at the last meeting I got your general consent to the new proposal which the Government have submitted to the country.

Let me say another word. The greatest difficulties I have had with the negotiations has been due to the conflict of interests in the profession itself. It is a great mistake to imagine that what suits one general practitioner necessarily suits another. Even free choice of doctors does not suit them all. It suits some, but it is perfect poison to others, and I have even had my suspicion that some who have been opposing our terms for apparently other reasons were really moved to a very large extent by the fact that when free choice of doctor became part of the regulations under the Act, it would necessarily to a certain extent interfere with rather lucrative monopolies which they are enjoying at the present moment.

Then take another point, the separation of drugs and doctoring. This was pressed upon me by some of the ablest and most intelligent leaders amongst the doctors themselves. I was urged to do it in the interests of the insured class, and even in the interests of the profession it was pressed upon me, and I call your attention to this, that it has never been challenged by any representative body of medical men since then. Objection to it did not constitute one of the six cardinal points which are the basis of the pledge. I have received deputations. They have never demanded the restoration of the old position, and yet during the whole of the time I have not the faintest doubt from evidence which was brought to me that there were thousands of medical men who were moved much more by that than by anything which appeared in the six cardinal points of their pledge. That shows how very difficult it is to negotiate with those conditions, and it is only at the last moment—in fact, on December 21st—that for the first time the British Medical Association put forward a demand (and only then by implication) that the whole 8s. 6d. should be paid over to the medical profession. It is only by implication then, and of course the chemists were thrown over in a body. But mind you, this is after twenty months of negotiation—after I have met them innumerable times. They never put forward the demand until December 21st, within about three weeks of the time that medical benefit is coming into operation. How can you negotiate with them?

Let me say one other word about lay control. We have set up a special tribunal for the purpose of considering any questions affecting the fitness of a practitioner to remain on the panel. It is a tribunal consisting of two medical men with one lawyer. What better tribunal could you have than that—two medical men and one lawyer to keep them straight? That is the first time a tribunal of that kind has ever been set up for the consideration of complaints, either levelled against the medical profession, or by them where they are acting for a lay body. Town councils have no tribunals of that kind. I do not know that the Local Government Board have tribunals of that kind. But here we have set up a tribunal that they cannot possibly challenge as far as the profession is concerned, and that is the court of appeal which finally considers the matter and reports to the Insurance Commissioners.

I will now pass on to another point, and that is the very remarkable, the very startling, and the very inex-

pliable change which took place in the attitude of the profession at the very last moment towards the control of the approved societies. The first alternative constructive scheme ever set up by the British Medical Association was on December 21st last. Up to then we had general principles. We had criticisms, but no definite practical scheme showing how the profession thought they would like medical benefit administered. The very first was issued on December 21st. It has already been repudiated by large numbers of the medical profession throughout the country. It shows how much more easy it is to criticize than to set up a scheme of your own. It is very easy to pick holes, very easy to say this is wrong here and it is wrong there; it is very easy to lay down general principles, but every man who has ever had anything to do with framing an Act of Parliament and regulations, and putting any scheme through, knows how very difficult it is to set up any scheme which is free from some sort of criticism—some of them good, some of them thoroughly bad, and most of them indifferent. The medical profession have discovered that for the first time. Their first constructive attempt was on December 21st, 1912, within three weeks of medical benefits coming into operation, and it was so bad that the moment it appeared in the press most of their own people ran away from it. And, of course, all their safer leaders repudiated it on the spot, and I am very glad to find some of them here amongst us to-day.

Now let us see what their position was. As I introduced the bill into the House of Commons in May, 1911, the plan for the administration of medical benefit, as you recollect, was to allow the medical profession in every area to arrange their own terms within the cash limits and conditions of the bill with the approved societies. That was the plan. What happened? There was a wild vote against it in the medical profession. The tyranny of the friendly societies was depicted in language which has never even been applied to me, and that shows what a thoroughly bad opinion the medical profession had at that time. They met in their conferences, they passed resolutions, and as they said, this question of friendly society control was the key of the situation. Here is a special report of the meeting of the British Medical Association on May 31st, 1911: "The principle that medical practitioners should decline in any way to work for or under the friendly societies or some other bodies was emphatically affirmed, and the motions embodying and applying this principle were carried by acclamation, amidst scenes of great enthusiasm."

That was the opinion of May 31st, 1911. They came to me about it. The *Times* said: "Hardly less difficult is the demand that the administration of medical and maternity benefit should be removed from the friendly societies; but this is vital to the doctors, and public opinion will undoubtedly support them in it." That was their view then. I remember attending a Representative Meeting of the profession. That was in May, 1911, and the question was put to me in a very stern tone by the Chairman of that meeting on behalf of the delegates: "What I want to know here is this from the Chancellor of the Exchequer, if there is a proposal in the House of Commons for removing the control of medical benefit from the friendly societies to the Local Health Committees would he support it?" And he looked me straight in the eyes, and I said certainly I would. It was received with the most gratifying cheers. Then we had a discussion in the House of Commons. On behalf of the medical profession it was proposed that the profession should be liberated for ever from those shackles imposed upon them, and that they should be free men from that moment, and the House of Commons believed they were in earnest. They were sorry for them, trampled under foot as they were. Yes, and by an overwhelming majority of 390 to 17, struck off these chains from their legs. You could hear the clank of the falling irons. It resounded through the land. In order to show you how free from party bias this division was, I will just give you the numbers of those who voted for transferring the control of medical benefit from the approved societies to the Local Health Committees, now called Insurance Committees. There were 156 Liberals, 30 Labour, 33 Nationalists, but 171 Unionists. Of the 17 who supported the bill as it stood, the friends of tyranny and despotism, there were 8 Liberals, 5 Labour, 1 Nationalist, and 3 Unionists.

Very well. That showed that the vote was completely free from any sort of party bias at all. There was no Government pressure, there were no Whips at all—none. There were 156 Liberals and 171 Unionists who voted for it. It was a vote of the House of Commons as a whole, a vote of the representatives of the people who acceded to the demand of the medical profession, and as you know it was accepted by the House of Lords as well.

There was one very remarkable speech delivered in the course of the Commons debate by a gentleman who represents a constituency which I think is very largely composed of doctors, and therefore I think he is entitled to say that he was speaking in a very special sense on behalf of the medical profession. He is a distinguished member of Parliament and a very able member of Parliament. I am referring to Sir Henry Craik, the member for the Glasgow and Aberdeen Universities. He put the case so well for the transfer, and the things which he said are such an answer to the present position adopted by certain representatives of the medical profession, that I make no apology for quoting that speech. This is what he said: "You must place them"—that means the administration of these benefits—"under some public body. The very fact that it is a public body secures permanency and a just tribunal in case of dispute, and I should also say secures a high standard of professional honour"—this is important—"and ousts from this important field of public beneficence any man who would lower the standard of that professional honour. It is only by a public body"—listen to this—"that you can maintain proper discipline, that you can impose a proper standard, and that you can insist upon publicity being given to every transaction in which the public is concerned," and then he goes on, and mark these words, because they are remarkable and interesting. "I am speaking in no narrow interests of the profession," he said, and I believe him. "I am speaking in the interests of the public health." There I believe him. "The doctors desire, and surely it is a fair, just and reasonable claim that they put forward, to be brought into immediate contact with the State, whose servants they are. They desire that there should be no intermediary in the shape of any private body, however trustworthy its efforts and its work may be, and however beneficial its actions may be. They desire, and rightly desire, as public servants, to be brought into immediate contact with a public and statutory body to which they can look for maintaining the standard that they think is necessary for the public health." Is not that a fair and complete exposition of the position which we have taken up? Is it not a complete refutation of the position which has been taken up, not by the profession, but by a certain number of leaders amongst them who have been repudiated during the last three weeks by their constituents throughout the country? I would, therefore, just point out what happened. After all their pressure to transfer the administration from the approved societies to the Local Health Committees, after persuading the House of Commons to do it, and the House of Commons acceding to their demand by an overwhelming majority, after negotiating for twenty months upon that basis, at the fag-end of a Saturday afternoon sitting, without consulting their constituents, in defiance of their own constitution, they trampled upon their cardinal points, and, with hardly any debate, reversed the whole of their policy. Without asking the Government in a single interview I ever had with them to do so, they abolished an Act of Parliament by a resolution of the British Medical Association; set aside King, Lords, and Commons, and voted six millions to themselves without control by anybody. I think I had better not tell you what I think about that. I do not want to use any language either to exasperate or irritate anybody. It stands by itself as a transaction. There has been nothing like it that I know in history. What has happened since? You must remember that only one-third of the profession voted for the rejection of our terms. I cannot discover that one-tenth of them ever voted for the alternative scheme; I cannot discover that it was submitted by them to their districts or that they ever discussed it; and one thing I know, that since then it has been rejected by large numbers of the profession of the country, even many of those who are standing out are not supporting the alternative scheme. Some of the

wisest, some of the ablest and most experienced men amongst their leaders, whose work and wisdom built up the British Medical Association until it had become one of the most powerful trades unions in Great Britain, had neither hand nor part in it. Many of them incidentally resigned their positions. This scheme is the work of men who, in the main, never added a brick to the edifice which has been shattered for the moment by their folly; and I am very glad to say that the profession, as a whole, have repudiated such an idea. It is making a fool of Parliament, first of all going to them in May, 1911, and saying, "We demand this; we entreat you to give this to us; we beg you to do it." Parliament listens, and in another eighteen months they turn round and say, "We will have nothing to do with it." You cannot treat the institutions of the country in that way.

You will forgive me if, even at this length, I have cleared the ground of these preliminary controversies, because it was quite necessary that it should be done, and now I will come to the actual present position. I can only tell you what the position was last night, because it is changing from day to day and from hour to hour, and the changes are all in one direction. I am glad to tell you. This morning there were adequate and sufficient panels set up for three-fourths of the insured population of this country. The whole of Scotland, except, I believe, Orkney and Shetland (and there there are special difficulties). The whole of Wales, with the possible exception of Radnor, which is the smallest county, and which also represents very substantial difficulties, because there are only 6,000 insured persons in that rather extensive area. As a matter of fact, the greater number of areas throughout England have already been covered by these panels, and we are expecting news in to-day in respect of the less satisfactory areas. Well now, what about the remaining one-fourth? This morning we have reckoned the number of doctors whose names have been returned to us as having been already on the panels. I think it was computed by the British Medical Association that you require 8,000 or 10,000 doctors to administer the Act for the whole country for England, Scotland and Wales. The last figures we have received, and they are by no means complete, show that they are now approaching 10,000. They were very well over 8,000, and since then we have had some other returns, and they are now nearly 10,000. That is the number of doctors whose names have already appeared on the panels of this country. Now I come to the one-fourth of England, Scotland, and Wales—Great Britain, where you cannot at the present moment declare that the panels are adequate. I divide this proportion into two separate areas.

You have got areas with panels that are incomplete, where you require a few more doctors in order to be able to declare a sufficient and a satisfactory panel, where you are just short of having a satisfactory panel. About one-eighth of the insured persons in Great Britain are included in such areas. Then you come to the remaining one-eighth, where we have no panels, or where the panels are not adequate at present. Now that is the position. The problem which I shall invite your attention to in the main to-day is the problem which is presented by Classes 2 and 3. As far as the first category is concerned, the category where you have got adequate and complete panels—and that refers to three-fourths of the insured population—there are no special difficulties to which I need call your attention to-day. With regard to the second, the incomplete panels, the difficulties have not been very great there. So you may say that at the present moment we are assured of seven-eighths of the insured population receiving adequate medical treatment on January 15th on the panel system. I must say a word about the places where you have got adequate panels, because this afternoon I have invited the chairmen and the clerks of the Insurance Committees throughout Great Britain to come here to discuss these problems with me. I must submit, first of all, to the Advisory Committee the line which I propose taking with them, so that if you have any criticisms to offer with regard to them, this is the opportunity. At the same time, if you will allow me to say so, I hope, as the time is limited and I have got this meeting this afternoon, if you have got to choose between two speeches, you will deliver the speeches which have reference to Classes 2 and 3 rather than the areas where

you have got a panel at the present moment. That will assist me a good deal. However, I must submit to you the kind of line which I propose to take this afternoon. With regard to that, all I have got to say is this: The fact that the medical profession have, as regards three-fourths of the insured persons, come on to panels, does not, in my mind, conclude the questions which present difficulty to their minds. Their coming on may be in many districts an experiment; they are going to see how it works; they will have their difficulties in their minds now; I believe, in actual practice, they will find those difficulties will vanish. There is always an assumption, when you are dealing with people at first, that they are going to take an undue advantage in a contract of every regulation and condition which favours them. In actual practice that never takes place. People once they come together are much more anxious to work together and to co-operate than they are to secure their rights according to the letter of a contract. The best partnership is always the one where the partners never insist on the articles of association. Where one partner after another is always referring to Article 5 and Article 15, it is a partnership which it is far better should be dissolved. I believe you will find the same thing with the partnership between the Insurance Committees and the medical profession. Once they come together it is to the interest of both to work without friction. The medical profession have not the time to waste upon quarrels with committees. They are not interested in that. When they are roused I agree there is no profession in the world that could raise as many difficulties, and they do it well. But I think after all they are much more interested, like every other professional man, in their own professional work, and in getting on with that without interference, than they are in merely quarrelling with clerks and chairmen and committees or approved societies. Now, on the other hand, the interest of the Insurance Committees is also to get on without friction. Their success depends upon the way in which medical benefit works, and, after all, it would work better if it were worked with the cordial co-operation of the profession. Therefore, the Insurance Committee that is always insisting on irritating conditions, and that is rigorously applying every little regulation is not the best Insurance Committee in the interests of the insured class.

The next thing is this: If the medical profession find as a result of their experiments that there is a nail that somehow has got through the shoe which is beginning to chafe and irritate, and that they cannot walk very well until it is attended to, let them send it up here for repairs at once. They may depend upon it that if they have any grievance, any complaint, if they find something which is chafing and makes it difficult for them to work freely and clearly in the interests of their patients, they will get a fair and considered hearing, and an examination of every point which they bring to our notice. I will guarantee that on my honour, and on the honour of the Commissioners and the Government. We will not take advantage of the fact that they have come in on the panel, and that they therefore must adhere to the rigid terms of their contract. It is our interest that the medical profession shall work with a whole heart, and they cannot do that unless they feel they are fairly treated. Well, now, the same thing applies to the regulations. I cannot promise more cash; I think the Government have been very generous. But when you come to the regulations—after all, this is a new experiment: this is a great experiment, but it is a new one, and I recognize the provisional character of regulations which deal with a new experiment. We shall gather experience in the course of the next twelve months. I shall be surprised if that experience does not teach us something in the way of improving, of broadening, of strengthening, and modifying the regulations. We shall be looking out for anything that is causing friction, and it will be our watchful interest and care to see that it is removed at the first possible moment. This applies to the regulations as well as to all the other terms of the contract except cash. I do not want to mislead the profession there. I cannot see my way, speaking as Chancellor of the Exchequer, to increase the burden on the taxpayer with regard to cash.

Now I come to the districts where the panels are incomplete. We have carefully considered our plans, and

we must appeal for the support and the co-operation of the approved societies especially. May I take this opportunity of specially thanking the friendly societies for the very loyal way they have behaved in spite of the very special temptations that were presented to them by the resolution a few weeks ago. They have made it perfectly clear from the start that they would have preferred to have the administration of the medical benefit in the hands of the friendly societies. They fought for it. It is no fault of theirs that it was altered. It was altered at the wish of the medical profession, but having been incorporated in the Act of Parliament they have accepted it. They fought valiantly against it, but they accepted it with equal valour. I must thank them for the way in which they have stood by the Act as a whole, realizing that if a certain number of societies were to break away in response to this rather insidious appeal it might have the effect of breaking down the machinery of the Act altogether. They have realized that with an intelligence which I should have expected from my previous experience of the way in which they have helped us in this matter, and I thank them on behalf of the Government for doing so.

We must in these areas where the panels are incomplete or where there are no panels, fall back on what is known as "other arrangements." I think I ought to explain here—and if my explanation is not complete my friend the Attorney-General will correct me on the spot, because here I have got to expound the law and I apologize for having to do so in his presence. It has been assumed by a certain number of medical men—not by the whole—that the insured person has got an absolute indefeasible right to make arrangements apart from the Local Insurance Committees or the Insurance Commissioners with any doctor he likes, whether he is on or off the panel. We had to issue a notice the other day to say that this was a completely erroneous idea. That right depends entirely upon the Insurance Committees, and they are subject to the regulations of the Commissioners. No insured person is allowed to make any bargain outside the panel unless it is allowed by the Local Insurance Committee. Let that be perfectly clear. What was the idea of these special arrangements? The idea of these special arrangements was to enable the Insurance Committee in a district where, for instance, you had an old works club, to make an arrangement in a case of that kind. It was also intended to cover a case of this sort: Supposing you had a medical man in a district who did not care to go on the panel, either because his practice did not quite lie in that direction or because he had a rooted prejudice to contract practice, but at the same time there was a workman who had great confidence in him, the doctor had been attending him and his family with great care and skill for years, and had pulled him through many troubles, and the workman said, "Well, I would rather stick to my own doctor, and I would rather stick to him even if I had got to pay myself."

It was felt that there ought to be a power given to allow the insured person to make special arrangements wherever you had a case which came within that description. But, mind you, these were intended for special cases. They were intended to be exceptional cases, and it never entered anybody's head that you should allow the provision which was made to cover a special case to be used as a weapon to break down the whole machinery of the Act, and we will not allow it.

It is not fair. When it was put to us by the British Medical Association, it was specifically put to us as merely an expedient to cover exceptional cases; and it is almost a breach of faith to attempt to use it for the purpose of destroying the whole machinery of the Act. Is that quite clear? If not you can cross-examine the Attorney-General.

DISCUSSION.

PERSONS MAKING THEIR OWN ARRANGEMENTS.

Dr. MACLEAN: May I make this further point clear, Sir? I understand you to say that this power of contracting out on the part of the insured person is subject to the approval of the Insurance Committee. Is that approval of the Insurance Committee subject further to the approval of the Commissioners?

Mr. DUNCAN: May I also ask a question? I remember very well in the earlier conversations we had on the bill, that it was not only the two cases you mentioned just

now, but there were others where a person might be entitled or allowed to make his own arrangements; this is to say a person should not be compelled to take a practitioner from a particular school of medicine. I understand your point now is that for the purpose of bringing the Act into force there should not be a wholesale contracting out, but I hope the individual will be considered later on.

The CHANCELLOR: Mr. Duncan raised this point before, and he is perfectly right. There are men who prefer a certain special class of medical practitioner, and I remember Mr. Duncan putting the case to us whether contracting out would be allowed in cases of that kind; but, as he remembers, we made it clear as well that we could not allow wholesale contracting out, but that in order to meet exceptional cases of the kind he mentions it was intended to insert these provisions. Now to answer the very important point put to me by Dr. Maclean. You cannot contract out at all unless you are allowed to do so by the Insurance Committee; and the Insurance Committee is only allowed to do so subject to the regulations of the Insurance Commissioners as to payment; and as payment is entirely in the hands of the Insurance Commissioners, that is a very vital matter. Moreover, you may depend upon it that although we should raise no objection as to the 8s. 6d. to meet exceptional cases such as those mentioned by Mr. Duncan, we shall certainly not ask the House of Commons to vote £1,600,000 to enable any section to break down completely the machinery of an Act which we ourselves carried through the House of Commons.

POWER TO CLOSE THE PANEL.

Now, there are three alternative methods of dealing with these cases, and I want your special attention to them. The first case I will deal with is the case where you have a panel which is all but complete—that is to say, where you have a certain number of doctors but not enough to enable you to declare that there is an adequate panel. The Insurance Commissioners can close the panel. The Insurance Committee could then go to the doctors on the panel and say to them, Will you undertake to engage a sufficient number of assistants or take a sufficient number of partners so that the incomplete panel may become a complete one? The panel will then be closed in that area for a limited period so as to enable them to establish their practice amongst the insured class, because you could not expect medical men to go to the expense of engaging assistants, nor could you expect men to go as assistants or as partners into an area unless there were some special opportunities offered to them. Therefore we should say to them, "We will close the panel in that area for a period, during which no other doctor could come in."

We have already thought of this, and in certain specific areas we are in a position to put it into operation at once. The doctors are quite willing to engage assistants if they can get the monopoly of the practice amongst the insured class for a period sufficient to enable them to establish themselves there and to make the insured class acquainted with the new men who come there to assist these doctors. We shall insist, not merely upon qualified men, but thoroughly qualified men. A good deal has been said about our depending upon indifferent practitioners in certain areas. It is absolutely untrue, and it is a very scandalous thing that this attack upon the men who have put their names upon the panels in certain areas should come from the quarters it does come from. We have made special inquiries in certain areas—I am not referring to areas where practically all the doctors have come in, but I am referring to areas where the panel is incomplete—and the men who have come on are very fair examples of the general practitioners in the neighbourhood. I do not want to say they are better, because that, on the other hand, would be an imputation upon the men who are outside, and I do not wish to cast that imputation, but they are quite equal to the names of those who are not on the panel. While I am on that subject I should like to say this. When the Bradford Committee advertised the other day for a whole-time service, or rather for a salaried service, they received three or four times as many applications as there were posts. Not only have they examined the qualifications of the men whose names were sent in; we have examined them; and I venture to say that we

could set up in Bradford one of the very best services that any country in the world has got. They were exceptionally well-qualified men. And we have a surplus for elsewhere. That is the first method. Is that clear to everybody?

A REPRESENTATIVE: Did I understand you to say that the Local Insurance Committee has power to close the panel, or is it subject to the approval of the Commissioners?

THE CHANCELLOR: The Commissioners close the panels in consultation, of course, with the Insurance Committee; and that consultation is going to take place to-morrow.

MR. SEYMOUR WILLIAMS: May I ask another question? Do assistants go on the panel, or only the principal?

THE CHANCELLOR: For the time being the panel in the case we are considering is abolished; we have closed it; and this is a special arrangement; it is a special contract entered into with the doctors whose names are given in; it is not a panel system any longer; it has ceased to be a panel; and therefore the Insurance Committee will enter into a special contract with these doctors; that is what will happen in that case. Now I come to the second method. There are a certain number of doctors who have written to us to express their willingness to start practice in an area where we have not a sufficient number of doctors on the panel. I will tell you now the second alternative which I am going to suggest to the Insurance Committees this afternoon—this also involves closing the panel—that you should send a sufficient number of men to that district to make up the necessary complement for attending the insured population out of those men who are prepared to start practice in any area where their services are required. They will start practice on their own. There will not necessarily be assistants, there will not necessarily be partners. Supposing, for instance, you wanted twenty doctors in an area and you had only ten—I am taking any figure at random—we should then say to ten other doctors: "If you ten gentlemen will go there and start practice there, we will close the panel at twenty," and they will have the whole of the practice of the insured population for the period during which the panel will be closed.

A REPRESENTATIVE: Will the Commissioners send these men?

THE CHANCELLOR: We must arrange that with the Local Insurance Committees: we are proposing to act through these Committees; we do not propose to override the Local Insurance Committees. These are proposals that we shall put before them; we shall be in constant consultation with them; we shall be working through them.

A REPRESENTATIVE: Might the panel be closed indefinitely?

THE CHANCELLOR: We have power to close it; but we have power to unlock it later on if necessary, and if expedient.

DR. NORMAN WALKER: You have said that you will close the panel, but you have omitted to say for how long a period.

THE CHANCELLOR: I think you must allow that to depend on the bargain we make with the men who place their services at our disposal. That is a matter for arrangement between us and the gentlemen we get. We must get the best class of men. That is what we have made up our minds about. Whether it is one year, two years, or three years, depends upon the conditions which are likely to bring the best men to that area.

MR. WARREN: You have just given us an illustration of what you propose to do in an area where you require twenty doctors and have only ten—you would bring ten from other parts of the country into that particular area. What about the local prejudice that exists in many parts of the country on the part of insured persons; if they refuse to accept that, what is to happen?

THE CHANCELLOR: That is a question of debate later on. We shall certainly not do it without the consent of the Local Insurance Committees. My own opinion is that the only prejudice the workman has got is the prejudice he shares with every class of the community, and that is that he should get a good doctor. If he gets a good doctor, I do not think he cares whether it is Dr. Smith or Dr. Brown.

SALARIED SERVICE.

Then I come to the third and last alternative—that is, a salaried service. This was the recommendation which the Advisory Committee made at a very remarkable discussion we had about three or four months ago at the Caxton Hall meeting. There is a little misconception about this. It is not a State service. It will be a service under the Local Insurance Committee. It is not a whole-time service. You must allow private practice amongst the insured class. For instance, if the salaried officer is attending the head of the family, and giving satisfaction, I think, on the whole, the head of the family would like to have the same man attending his family. There might be difficulties. I do not say that any other doctor would refuse to attend the rest of the family; still it would be awkward to have the salaried man attending one member of the family, and the others being attended by somebody else. Therefore we propose that you should simply pay the salary for the attendance which is given to the insured persons, and that the doctor who is engaged should be free to attend any other member of the family, but not outside, and I think this is rather important—except other members of the same society. For instance, there will be members of friendly and other societies, who are not insured persons, and I think it would be absolutely essential that you should allow the salaried person upon terms which he can arrange to attend those persons. It is so important that we should get the attendance of these gentlemen for the insured persons and their relatives, and although I do not say they would neglect them, because they would get their salaries anyway—I am sure they would not—still I do not want them to be tempted by half-guineas and guineas from the work on which they are engaged. Therefore we propose as a condition of the salary that they should take no private practice outside what I call the insured class, and I am including there the members of approved societies.

I will show you what this means. We thought that we should have had an opportunity of setting up a service of this kind at Bradford. Bradford was very anxious for it. There was a real demand from the working classes for it. The doctors were very obdurate, and we worked up our plan. Now the doctors came in in time; so that there is no salaried service at Bradford. But I will just show you how it would have worked out within the money available. It is worth working this out. You have 100,000 insured persons in Bradford. That is our estimate. You have 7s. or 7s. 6d., as the case may be. That depends upon the debatable 6d. for drugs. That is 7s. or 7s. 6d. for each insured person. If you make it 7s., that is £35,000. If you make it 7s. 6d., that is £37,500. We proposed to engage fifty doctors at £500 a year. They were to attend to the insured persons for that salary; they were to be allowed to charge any member of the insured person's family whom they had attended in the course of their private practice on a scale to be agreed upon between the Committee and these doctors. They were not to be allowed to charge anything they liked. They were to be allowed to charge on a scale which was an agreed scale, and they were not to be allowed to attend anybody outside the insured class. Then we thought it would be necessary to have a certain number of consultants and specialist surgeons, so that it was proposed the service should include three specialist surgeons, one of them being an oculist, and that at the head of the service there should be a consulting physician, a superintendent at a salary of £1,200 a year. The specialist surgeons were to receive £1,000 a year. How much of the money have I spent now?

A REPRESENTATIVE: £29,200.

NURSING SERVICE.

THE CHANCELLOR: I will tell you what it was proposed to do with the remaining £8,000. We proposed to get other assistance for the doctors. We proposed that the service should include a staff of skilled nurses. All of us who have been patients know what valuable help a nurse can give a doctor, and there is no doubt that the nursing staff would enormously increase the value of the service. I do not suggest, of course, that a nurse should be a substitute for the doctor, but to assist; and every one who

knows anything about this matter knows what invaluable assistance they can render. A nurse has a definite sphere of work, which is well recognized by both the medical and nursing professions, and within that sphere lies a field of useful service which is of inestimable value to the community. We proposed that there should be fifty nurses.

You would find that still there would be something to spare, especially on the 7s. 6d. basis, for the provision of aids to exact diagnosis which pathology and bacteriology have placed at the disposal of modern medical science. If you could not supply fifty, you would have to supply fewer and give them better salaries; but, at any rate, you have not a single nurse now in the panel service, and you would be able to supply, at any rate, thirty or forty nurses. That is what we could have done; fifty salaried doctors at £500 a year without any deduction for drugs, with an additional income to be derived from private practice amongst the insured class.

A REPRESENTATIVE: Without any bad debts.

The CHANCELLOR: No bad debts; no payment or collections as you have in Lancashire; no quarrels with your patients, and county court actions and judgement summonses; no worries about keeping accounts, and from what I know of both doctors and solicitors, they loathe that.

Mr. WARREN: Not dispensing.

The CHANCELLOR: The dispensing will be entirely in the hands of the chemists. They will have no worries about that. They will be assisted by thirty or forty nurses, even if we could not afford fifty. You would have a staff which would include specialist surgeons, consultants, and bacteriological examination, and of special diagnosis in certain cases.

A REPRESENTATIVE: A couple of dentists.

The CHANCELLOR: That is an additional medical benefit. You could not do that until at the end of three years when you have your report upon the financial position. That is what we could have done at Bradford, and what we can do for other towns, and I do not mind saying I should like to see the experiment tried somewhere. Had it not been that we had promised the doctors that we would try the panel system, and give them every opportunity of working on that system, I should have tried it already. But however anxious I was to see this experiment tried, I thought it was imperative that we should keep absolute faith with those members of the medical profession who had kept faith with us. The 31st has passed, and our hands are now free. That salaried service, I think, in many cases would be better for a patient; I do not say in every case. For the approved societies it would be infinitely better from a financial point of view, because you would have a perfect check on malingering in those cases, for after all there is one weakness in the panel system, that if you allow a man to change his doctor it is very difficult for a doctor to be exceedingly stern in the matter of certificates. I think every doctor will admit that it is very difficult when a patient comes and practically pleads for a certificate in order to get an extra week or fortnight—well, the doctor takes an indulgent view of the matter. I do not say he will do anything unfair or dishonest—I am perfectly certain they are incapable of it—but they will err on the side of not quarrelling with their own patients, and that is very natural after all. But when you have a salaried service, the man is absolutely independent of the patient in that case. He is bound to do his best for him, because he has the Local Insurance Committee to look after him. Therefore, undoubtedly from the point of view of the finance of the societies, it would be an enormous advantage to them. Then there is no doubt, from the general point of view of public health, something can be said for it. You would get these doctors co-operating with other public medical services, and eventually we would be able to develop new methods and strengthen old methods for the purpose of not merely curing disease, but, what is still more important, preventing it.

IMMEDIATE CLOSURE OF PANELS.

I now come to what I shall have to put finally before the gentlemen who are good enough to be coming here this afternoon. We shall consult with the Insurance Committees, chairmen, and clerks in a body this afternoon. We shall consult with them individually and personally

to-morrow, area by area, and where we are convinced on their report—and we mean to carry them along with us—that the doctors are obdurate in their areas, and have no intention of coming in on the terms which have been offered to them, and coming in in time, and especially where they are engaged in a conspiracy to break down the Act, we shall close the panels forthwith.

Mr. WARREN: You are speaking of 3, where there are no panels at all.

The CHANCELLOR: No. 2 and 3, where the panels are incomplete, and where there are no panels. That refers to what, last night at any rate, was one-fourth. It is probably considerably less now. The Government will do so with the deepest regret. We shall only do it when driven by the action of the doctors in that area. The responsibility must be entirely theirs, as no doubt the loss will be theirs; but they must not lay that loss at our doors. We are pledged to find medical benefit for 12 to 13 millions of the insured population of this country. We shall exhaust every resource at the disposal of the Government to redeem that pledge. We shall be genuinely sorry for the loss, it may be the ruinous loss, inflicted on individuals; but they must place that loss at the doors of the people who are responsible for it.

They must put the blame on the right shoulders, the shoulders of those who, from whatever motives, have misled hundreds and thousands of hard-working, industrious professional men. I have done my best to avert it, and if I fail the fault is not mine, nor that of the Insurance Commissioners. The Government have received a mandate from the House of Commons. As far as medical benefit was concerned, it was passed through the House of Commons as a whole, without distinction of party, that medical benefit should be given, and that it should be administered by the Insurance Committees. That mandate we are bound here, as officials, to carry out, and we mean to carry it out in the letter and the spirit.

A REPRESENTATIVE: You did not make it quite clear, Sir, when you said where there was no panel, that when you closed it you would supply the necessary staff to carry on the work. I think that is what you meant, but I did not take it as definite that you would supply a sufficient staff in that area where there was no panel.

The CHANCELLOR: In consultation with the Local Committees. It depends, of course, upon the Committees and the representatives of the approved societies on those Committees. It depends on them. The moment they tell us that they cannot prepare a panel and that they wish us to make the arrangements we shall certainly then close the panel and assist them to make the necessary arrangements. But it depends on them and the reports they give us to-day and to-morrow.

Mr. DAVIES: I understand that the panels have not been made up, and the Commissioners have agreed to act on the proposal of the Chancellor to-day. That is what I understand by what the Chancellor has said.

The CHANCELLOR: That is so.

VIEWS OF THE FRIENDLY SOCIETIES.

Mr. WARREN: Might I say that we, as representing the friendly society portion of the approved societies, have listened with the very greatest possible attention to what you have had to say to us this morning, and we are delighted beyond measure that you have abandoned the idea, if ever you had it, of setting up a State medical service, because, whether rightly or wrongly, we who have had to do with the friendly society movement have never regarded that with any degree of favour whatever. We have always been opposed to what we should have regarded as a glorified system of parish doctor. But you have abandoned that to the extent that you only intend to find a substitute where panels do not exist in the form of a salaried service, and that removes any objection we could have had. We are delighted to find that that is in your mind, because we think it will go a long way towards settling the question, and it will afford us an opportunity we have been desiring and have been unable to accomplish, namely, to make adequate arrangements in respect of the very large number of our members who will not come under the Act, and therefore, whatever criticism we might have had to offer with regard to a State service has been removed, and I think that I may say, speaking for the friendly societies' representatives, that we shall accept

the idea of a salaried service with the greatest possible pleasure, throwing ourselves, as we have always done, upon a merciful medical profession to help us to make the necessary arrangements for the very large number of men who will not be under the Act because of infirmity and age limit. That you can perceive is a responsibility resting upon us, and it is up to the friendly societies to see that by the 15th of January we are in a position to give all those of our members the benefit we have contracted to give them, and which we thought we could not accomplish because we have received endless resignations all over the country. But in the service you have outlined we were glad that you mentioned that the salaried medical man would not only attend the insured person, but it would be up to him to make arrangements with us in respect of this large body of men, and women too, for whom we have the deepest consideration, and with whom we are desirous as honourable men to keep our contract by the time the medical benefit is due. Therefore I have no other word to say. Sir, than that of the highest possible approval of the system you have outlined to us.

A REPRESENTATIVE: I hope you are not going to take it for granted from the remarks of the last speaker that the representatives of the working classes as a whole are opposed to a State medical service. I want to disabuse your mind of that entirely. I can tell you it is in the opposite direction, and some of us are looking for the time when we are going to have a State medical service as it ought to be.

SALARIES OF NURSES.

MISS HUGHES: May I say one word, as the question of nurses has been introduced? and that is, it is most encouraging to know that this is the first Act of Parliament in which district nursing has been alluded to, and we have heard to-day that they are to be included amongst the benefits for insured persons and the members of their families.

THE CHANCELLOR: I do not want any misconception—that applies only where a salaried service is set up.

MISS HUGHES: Yes, I quite gathered that, and it was a mistake in my words. What I want to plead for is that these nurses should have adequate remuneration. It is not fully realized that they are required to have three or four years' training, and this takes up a great part of a woman's life. Then she does not begin her career till 27 or 28 as a rule, and we are supposed to be too old at 40. May I therefore beg, owing to the increased rate of living, that any salaried service should not be less than £120 for the services of a fully qualified nurse. She has often to support her relations and lay by for old age. I therefore venture to plead this for the nurses who are ready and willing to assist in this great work.

PUBLIC SALARIED SERVICE.

MR. TURNER (General Union of Weavers and Textile Workers): I want to express my regret that the Bradford doctors have come in. That was a proper place for the experiment to be tried of a public service. A public service is what is required. The chief feature about everything should be the benefit to the insured person—to try and get a person who is ill well again as sharply as possible, and to try and prevent a person who is well from being ill at any time, and therefore it would be a sound business proposition had there been a chance for Bradford to try this on at the present time. You have shown it fully from the financial point of view, but it would pay ten thousand times more from a health point of view. You would have the doctor at the disposal of the family, and you would save the infantile death-rate being so high, and of course it would make the figures of the birth-rate look better. It would mean this—proper immediate attention to every person in an insured person's family. That is the feature, to get people well and keep them well. I am therefore sorry to see that Bradford have had the wisdom of coming into the system. The public service must come some time, and I hope you are firm, Mr. Chancellor, at this juncture, that where the doctors are still holding out for politics or something else, for one reason or another, you will put down a public service as sharp as you can. You have been patient too long. You have offered too much money. You have been kind to generosity, and even more than that.

I want to say you have the full support of the working classes both in friendly societies and trade unions when you start a service of that sort for the poor people.

MR. TWOMEY (Swansea): Dealing with the three suggestions of yourself, Mr. Chairman, as to the method of providing medical attendance where panels are not complete, the first method you suggest is to make an offer or suggestion to the doctors who are on the panel that they may take in partners or sufficient assistants when the panel will be closed. On that my mind is made up; it would create a monopoly that would not be good for the insured person. The second method, suggested by yourself again, is to send men into the area to complete a panel. I hope you will try and avoid having to do that, Mr. Chancellor. The last suggestion is by far the best, and that is a salaried service, where we hope there will be sufficient doctors procured to work the Act in those districts where doctors cannot be now obtained. In that respect may I back up the appeal of our lady friend here, that the nurses, who worked very hard at a very small salary, should receive at least £120 a year. There is not a nurse a member of my family, but I have acted on the committee of a nursing institution, and I have found that the work put in by these ladies is such that they deserve recognition. I fancy I voice the opinion of the large majority of the members present when I say that the third method suggested by yourself is the one that should be carried into effect if possible.

A REPRESENTATIVE: I should like to ask a question with regard to the salaried service and the separation of drugs. You make it perfectly clear, Sir, that the drugs were absolutely distinct from the doctors?

THE CHANCELLOR: Yes.

THE REPRESENTATIVE: May I ask if in areas where you introduce a salaried medical officer—in rural areas where I think you have introduced the mile limit—whether the mile limit will hold good?

THE CHANCELLOR: You mean in a salaried service?

THE REPRESENTATIVE: Yes. I take it that the mile limit no longer holds good because the salaried medical officer is a whole-time officer apart from that.

INDUSTRIAL AND COLLECTING SOCIETIES.

MR. SMITH (for the industrial and collecting friendly approved societies): On behalf of the section of approved societies not represented by my friend, I desire to say that the proposals you have made this morning receive our very hearty support. We all recognize your exceeding patience in dealing with this matter, and I am sure that your explanation this morning will clear away a great deal of misunderstanding. I think you may take it that we heartily endorse the position taken up by yourself at this critical juncture. You have asked us to express our opinion on the three alternatives for dealing with the two-eighths. It appears to me there can be no valid objection to the first suggestion. I hear one or two of my friends argue that one of the three should be adopted, but I think we should agree that the Commissioners should bear in mind the whole of the three. I am extremely anxious that each of these experiments should have an opportunity of being tried. I am delighted to know that the friendly societies are in complete unison with the Commissioners and ourselves on the subject. We are all thrown together with a great deal of enthusiasm to make the Act work well. After all what we want is efficiency and the public health. I hope the Commissioners will try a salaried service somewhere. Being on the London County Council, and looking at the public service, and also taking a great interest in municipal work in London, I am perfectly sure there will be startling results if one or two experiments are tried in suitable places from the point of view of a salaried service. I confess that of the three alternatives I should give priority to the first, the incomplete panel. Then the third, the public salaried service, I should place second. Then lastly comes the starting of practices. I think that is the order in which the great bulk of those who are present put your suggestions. The information you have given to us is for the assistance of the Committee and we heartily and enthusiastically endorse the proposals you have made.

MR. APPLETON: Sir, may I join with the others in saying how pleased we are to have heard such a statement as you

have made this morning? As far as I myself and my friends are concerned, we want to emulate the conciliatory and kindly spirit that has animated you this morning, and that has really been at the back of all your dealings both with the medical profession and with ourselves. We have not agreed with you all the time, but that has not made any difference to your courtesy. We are disappointed at the fact that the doctors have changed their minds. We did hope for a public service. What we are pleased to know is that your patience is pretty well exhausted, and you have made up your mind there shall be no further delay. After all you have considered the doctors for six months, and we are glad to know you are going to consider these people who are going to administer the Act. Any further delay means serious expense. Within the next seven days we have got to get a mass of detail concerning administration, and we have got to assimilate it and understand it, and any further delay means very serious consequences to us. Most of these men are doing this without any payment at all. We do hope there will be no further delay in this direction. It means also increased cost. We shall clearly support everywhere any attempt to introduce a salaried service. Last time I spoke here my authority was challenged, but since then I have consulted the trade unions. I have secured the formal vote of my own committee, representing 900,000 trades unionists and 130,000 to 140,000 members of approved societies. That committee has taken the opinion of a conference at Manchester, and that opinion was practically unanimous that the salaried service would be the cheapest, the most efficient, and the best so far as the national health of this country was concerned.

A REPRESENTATIVE: Just a word, Sir, in the way of a question. At the present time I understand that where panels have been formed the Insurance Committees of various areas would have no right to introduce a salaried system. Am I right or am I wrong about that? What I wanted to suggest was this, Sir, that power be given to Insurance Committees to introduce a system of salaried service wherever they deemed it necessary. The reason I suggest that is this: in the friendly societies at the present moment there are thousands upon thousands of members who will not be insured members. Besides, if the doctors on the panels are allowed to go on, the families of the insured persons will not be attended to. Neither can we introduce a scale of payment for attending to the members themselves. Therefore I would suggest that whenever the Insurance Committees can introduce such a system they should be empowered to do so although the panels have not been formed at the present moment.

A REPRESENTATIVE: In the instance you gave of a district where there were twenty doctors required and there were only ten on the panel you said the panel would be closed and a conference would be held between the Insurance Committee and the doctors, but the point I would like to have made clear is this, Would it be possible for the Insurance Committee to have partly a panel and partly a salaried service? If the Commissioners could see their way to allow a thing like that it would be a very great service to insured persons.

EXTENSION OF TIME.

Mr. GORDON: I represent the National Federation of Merchant Tailors and also the Salford Insurance Committee. I should like to ask a question. You are meeting the chairmen and clerks of the Insurance Committees to-day and to-morrow. Will their decision be final with regard to the filling-up of the panel? To-day's meeting has been looked forward to with anxiety by a considerable body of medical men throughout the country, and in the present *impasse* I hope there will be an extension of time, so that an opportunity may be afforded these men even at the eleventh hour to come in.

The CHANCELLOR: What do you suggest by way of an extension of time?

Mr. GORDON: Ere you decide to close the panel you should consult the Local Insurance Committees, and allow them the opportunity of sending up either a complete or incomplete panel.

The CHANCELLOR: Will the Insurance Committee take the responsibility as from January 15th if there are no doctors? There is no medical service until January 15th. Supposing on the 15th, after they have asked us to extend

the time, there are no doctors, will they accept the responsibility for the insured class?

Mr. GORDON: It could be done this week. We could meet to-morrow night. My reason for asking is this: We had a meeting with the Local Medical Committee representing the medical gentlemen in the town on the eve of December 31st, and they are awaiting our decision. I want us to carry public feeling with us, and if possible to get the whole-hearted consent of the medical profession.

Mr. WHITLEY THOMSON: I personally am not only an employer, but I represent a great many employers connected with chambers of commerce. I should like to say how much we welcome the proposals you have made to-day so as to provide on the 15th of the month the medical benefits which have been so long promised. Many of us have in connexion with our works private benefit societies, and it has been a source of some anxiety to know whether, where the panels were not complete, or where there were no panels at all, medical benefits would be provided. You have now shown a way whereby this *impasse* will be got over. Speaking for myself, my own personal opinion would be that of the different methods you have shown a salaried medical service would commend itself most to those who are employers. Living as I do in Bradford, I had something to do with the proposals which emanated from Bradford, and perhaps in that case I am somewhat wedded to that scheme. I should very much urge upon you to lean, if possible, to a salaried medical service where it is necessary. On behalf of the employers I represent, I must thank you for the scheme you have so considerately and so well put before us.

Dr. MACLEAN: Sir, I want to make one or two remarks as to the time and spirit in which these alternative arrangements may be carried out. We, every one of us here to-day, must have been deeply impressed by the extent and character of the report which you have been able to put before us. The impression will not be confined to this meeting; it will create a very deep impression upon the country as a whole, and especially upon the doctors of the country. But, Sir, may I put it to this meeting through you that I venture to think that the report which you have made to us to-day, and I say it on behalf of the medical profession, proves that, notwithstanding rash and contrary advice, the heart of my profession is true to the country? Therefore I will especially advise those who are concerned not to be precipitate, not to be unduly harsh, in respect of setting up the alternative arrangements. My one further word is this, that the Government, the Commissioners, the Insurance Committees are strong enough not only to be just but to be generous.

Dr. BUIST: Sir, I should like to emphasize what Dr. Maclean has said. One has to remember that it is only ten days ago since 27,000 doctors throughout the country deemed themselves morally, and perhaps some thought legally, bound to the policy of the British Medical Association, and it has certainly required a flash of light from your alternative policy to show them where they were drifting. If that had not come I fear your report would not have been so favourable as it is to-day; and I am perfectly certain that the change which has taken place during the last week will continue if a certain amount of time is given for it; and the smooth working of things does to a certain extent depend upon the work being undertaken by the medical profession. I had the pleasure at a conference with the Local Insurance Committee of being able to say with the absolute unanimous support of the medical profession that we undertake as a debt of honour those duties to which Mr. Warren has referred; and I am sure if we can go along peacefully that will be recognized as a debt of honour by the whole profession.

Mr. BAGLEY: We as employers would be much more satisfied if this matter could be settled without so much friction. We want the medical profession to come into this insurance work with a free heart to work well so that we can get the best of their knowledge and service. We think every effort should be made in order to bring them in, and I believe if you use all your ingenuity—and that, I think, is limitless—it could be done. I do not know what will be your next move, but I say that in the best interests of public health we want the best of the

doctors' services, and as employers, those of us who are paying and contributing for the sinews of war, we want the thing settled so that the best of the Act can be administered to the people at large. I represent the glass bottle industry throughout Great Britain and Ireland, and also the workmen in connexion therewith, so that I am speaking in a form which I think will go a long way.

Mr. SEYMOUR WILLIAMS: Is there any possible hope yet that, notwithstanding the lateness of the hour, an arrangement may officially be come to with the British Medical Association. I am not suggesting in the way of any serious concession on either side, but it certainly would be an advantage if the thing could be started in peace instead of war.

REPLY BY THE CHANCELLOR OF THE EXCHEQUER.

The CHANCELLOR: Ladies and gentlemen, if you will allow me I will now conclude the debate because we have to meet the Insurance chairmen and clerks later on in the course of the day.

I think I had better deal first of all with the observations made by the last three or four speakers. I think every one feels that the debate would have been very incomplete without the impressive speeches delivered on behalf of the medical profession by Drs. Maclean and Buist. We are very glad to have their assistance once more in fashioning our policy for this great Act. They have made an appeal on behalf of their profession and I should be very glad to be able to respond to it as far as it is practicable. Dr. Maclean has said that the very remarkable figures which I was in a position to give to the Committee in the course of my observations showing the number of medical men who have responded to the appeal shows that the heart of the profession is true to the country. I agree there. In spite of all appearances to the contrary, in spite of even certain menacing indications, when the time approaches for the profession to decide between taking its share in carrying out the law of the land, taking its part in carrying out what after all is a great experiment affecting the health of millions of people, the profession has been true to its better and nobler instincts. I gladly recognize that. The fact that we are in a position to announce to-day that very nearly 10,000 of the general practitioners of this country have volunteered, in spite of every difficulty that has presented itself to their minds, to take their share in this great work is in itself a remarkable tribute to the real patriotism of the profession of which Dr. Maclean and Dr. Buist are such distinguished ornaments. I gladly recognize that. But when an appeal for more indulgence, which means more delay, is made, I have seriously to consider after all the insured class. I have not been impatient. Dr. Maclean, I think, will be the first to recognize that. In spite of a good many temptations to throw up the negotiations, I think I may say I have kept my temper, too, under a good deal of provocation. That does not affect the question. Therefore, if we come to the conclusion that it is impossible for us to consent to any further delay, I can assure you that the decision of the Government is not prompted by any feeling against any section of the medical profession, but it is rather due to the obligation of honour we are under to provide a service on January 15th for twelve millions of people of this country. At the same time, if the doctors in a given area are coming in, and Local Insurance Committees feel confident about that, and if they are coming in in time (it is no use waiting for January 14th—it is a question of the next two or three days)—if any Insurance Committees report to us that within the next two or three days they think the doctors in a given area are coming in, that they have just some little difficulties which they want to adjust, I must say that I do not think it would be proper for us there to overrule the Insurance Committee and declare the panel closed and set up a salaried service. In fact, I think it would be too sharp. Therefore, I willingly respond to that suggestion. But if the Insurance Committee were to say: Well, we really cannot guarantee to you that the doctors are coming in, we think they might—we think probably it is likely, but we have no sort of guarantee that they will—I do not think we should be

doing our duty if we allowed any further delay. That is my answer to the last suggestion.

Now, as far as I am able to sum up the debate, I think the Advisory Committee on the three alternatives that I have presented to them on the whole prefer the salaried service. I seem to have interpreted the feelings of the Committee in that respect. I am not at all surprised at their coming to that conclusion.

I shall come now to another point which was put to me of a totally different character—the question raised by Miss Hughes on behalf of the nurses. I agree that the functions of the nurses are very important. Their training costs them a good deal and their work is very hard, very onerous, and very honourable. I think their remuneration ought to be equally honourable. The figure is a matter which will have to be discussed with the Local Insurance Committees. I agree with you that the first consideration is, they must be well qualified, and they must be the very best that can be provided, and you certainly cannot do that without giving adequate remuneration. We should certainly confer with the body which represents the nurses before we came to any conclusion about the salaries which were to be paid.

With regard to the other point raised, as to whether you could run your panel and your salaried systems together, if it is a real panel you cannot. You will find it is impossible; you can only do it through institutes. The friendly society institutes do run a salaried service at the present moment. We propose to recognize those in the future. There you have a salaried service. Apart from that, you cannot. It depends entirely on there being a sufficient number of insured persons whose 6s. 6d. or 7s. will suffice to pay that particular doctor. You cannot run your salaried system and the panel system together, except where there are friendly society institutes. Then comes, perhaps, a rather different point from a speaker, who said: "Supposing you close a panel, could you then have a system, which I indicated, of assistants and partners and a salaried service running side by side?" The moment you have closed the panel, you can make any arrangements that the Insurance Commissioners approve, and when you are dealing with twenty or thirty men in a given area, it is a matter of the bargain you make and the plans you propose and the plans which are accepted by them. It might not be impossible to run a whole-time salaried service side by side with a closed panel. But it would be very difficult, and you could only do it by agreement with the doctors on the panel, because, after all, you have to stand by the men who have come on. You must not run a service that would deprive them of the practice, when they are facing a good deal of obloquy—I will not use the word persecution, but a good deal of worry from their professional brethren in that area. We must stand by them, and we propose to stand by the men who had stood by this Act.

I think that is everything. I thank you very much for your kindness in coming here.

The meeting then terminated.

INSURANCE ACT IN PARLIAMENT.

INSURED PERSONS MAKING THEIR OWN ARRANGEMENTS.

On the evening of Wednesday, January 1st, on the motion for the adjournment, Sir Philip Magnus, after thanking Mr. Sherwell (Huddersfield) for removing his blocking motion, and expressing his regret that the Chancellor of the Exchequer was prevented by indisposition from being present, said: We were very desirous of securing a statement from the Chancellor of the Exchequer on a very important point, but I understand that the Secretary to the Treasury is authorized to speak on his behalf and to give a definite reply to a question which at the close of my observations I shall put to him. What I am desirous of knowing is the exact meaning which the Chancellor of the Exchequer attaches to Subsection (3) of Section 15 of the Insurance Act, and what action he proposes to take with regard to it. In order that the

House may see exactly what that Section is I will read part of it:

The regulations made by the Insurance Commissioners shall authorize the Insurance Committee by which medical benefit is administered to require any persons whose income exceeds a limit to be fixed by the Committee—

This is the important part—

and to allow any other persons, in lieu of receiving medical benefit under such arrangements as aforesaid, to make their own arrangements for receiving medical attendance and treatment (including medicines and appliances).

This matter is one of very great importance to the millions of persons who, I understand, are now insured, and to the thousands of doctors, affecting as it does their position in relation to the Insurance Act. I must remind the House that on December 19th, I put this question to the Chancellor of the Exchequer. I asked:

Whether in the event of the doctors refusing to accept service under the National Insurance Act on the terms recently offered to them the Government intend as the only alternative open to them to propose a great extension of the system by which the societies employ their own doctors on a whole-time service.

The answer which the Chancellor of the Exchequer gave me in writing, because my question was not reached, and I was therefore unable to put any supplemental question, was:

As practitioners who desire to have their names placed on the first panel lists may make application up to December 31st, it will be premature to make any statement of the sort suggested.

I think the House will realize that that was no answer whatever to the question I put, and to the question on which the insured people and the doctors required information. That was so much the case that on the following day, the last day before the short recess, I sent in another question to the Chancellor of the Exchequer, and I received a letter from the Secretary to the Treasury begging me to postpone the question. The difficulty was that the answer to that question was urgently needed before the great meeting of the representative doctors which was to take place on the next day. The answer the Financial Secretary gave in the letter, speaking for the Chancellor of the Exchequer, was—

He is sorry, but it would be impossible for him to make any further statement on this subject during the winter.

The Chancellor of the Exchequer happened to be present on December 20th, and I put to him the question to which I have referred, and the answer which the Chancellor then gave me was—

I understand that several members wish to raise this question and discuss it in the afternoon. It is obviously impossible to give an answer to the question in the course of the minute or two at my disposal now.

I believe the Chancellor of the Exchequer was genuinely desirous of giving a full answer to the question, but he was prevented from doing so by the blocking motion. So far, therefore, we had no answer whatever to that important question. Now it so happened that only on December 30th Mr. Worthington-Evans asked the following supplemental question dealing with the same matter:

May I ask whether any objection will be made by the Insurance Commissioners to allowing Insurance Committees to permit private practitioners in counties to continue for individual patients under Section 15, Subsection (3), of the Act?

and the answer was—

I think that would depend entirely upon circumstances.

So far, therefore, it will be seen that no attempt has yet been made to give any answer to the important question which I have put down. Indirectly all these questions have reference to a matter on which I have every reason to believe the Chancellor of the Exchequer has always felt very keenly, and that is that there should be a choice of doctors given to every patient. I might quote numerous passages from the many eloquent speeches delivered by the Chancellor of the Exchequer showing how desirous he was at that time that every insured person should have a free choice of doctors, and I need scarcely say that the whole success of this bill depends upon the insured persons being able to choose their own medical attendants. I do not wish to trouble the House with numerous quotations which I might make from the Chancellor of the Exchequer's speeches, but I cannot refrain from making

this one. He said, after having spoken of medical benefit:

Free choice of doctors also will, to some extent, increase the charge. I, personally, have always been in favour of that. After all, confidence in your doctor is essential. No man who can afford to do otherwise would have a doctor prescribed for him by any club or society. He wants his own doctor to doctor him, a doctor in whom he has confidence.

According to the answer which the Financial Secretary will be able to give to the question I am about to put to him depends entirely the question whether insured persons will have any opportunity whatever of selecting their own doctors, or whether the doctors who have rushed into the panel as we have been told will be forced upon them. I might ask the Financial Secretary in his reply to state whether in the case of these doctors who have been admitted to the panel any inquiry has been made as to their qualifications, age, experience, or even their character. Owing to the extremely unsatisfactory character of the replies to which I have referred I wrote to the Chancellor of the Exchequer on December 31st telling him that I proposed on the following day to put to him a question a copy of which I enclosed. I stated in my letter that I thought it only right and proper to give him full notice of the question in order that he might, if necessary, seek the advice of the Law Officers of the Crown with the view to the answer he was proposing to give. From his replies it will be seen that he considered it was very difficult indeed to give a reply in a few words, although I personally should have thought that in one or two minutes a definite answer might have been given. At any rate, I will now ask the Financial Secretary to the Treasury, on behalf of the Chancellor of the Exchequer, to give me a clear and definite reply to the question which I am going to address to him. The question is, Whether under Section 15, Subsection (3), of the National Insurance Act a Local Insurance Committee is not required to allow any insured person to have the option of making his own arrangements for receiving medical attendance, including medicines and appliances, from the medical practitioner of his own choice? Surely there can be no difficulty in dealing with that question in the course of a verbal reply. As I desire to give the opportunity of speaking to other persons who wish to take part in this discussion, I hope the reply given to me by the Secretary to the Treasury will be as brief and concise as possible.

The Attorney-General (Sir Rufus Isaacs): I propose to answer the question put to the Secretary to the Treasury, the Chancellor of the Exchequer being unfortunately indisposed this evening. The answer to the question is very simple. Subsection (3) of Section 15 of the Act does not require the Insurance Committee to allow such arrangements to be made. What the subsection does is to require the Insurance Commissioners to make regulations authorizing the Insurance Committee to allow such arrangements. In other words, what the Insurance Commissioners have to do under these regulations is to vest discretion in the Insurance Committee, and the Insurance Committee can then exercise that discretion subject to regulations which will be made by the Insurance Commissioners. The Insurance Committee can then contribute out of the funds which are there for the purpose in order to provide the money necessary for medical benefit. That, I think, is a plain and direct answer to the question. The query, as I followed it, was whether they were not required. My answer is, No. The Insurance Commissioners are required to issue regulations to vest this discretion in the committee, but the committee are certainly not required to allow these arrangements to be made, but simply exercise their discretion in the matter.

Mr. Worthington-Evans: I confess I have nothing to complain of in the Attorney-General's interpretation of the Act. He said the Insurance Commissioners were required to make regulations. They have in fact made them, and under them the County Committee have got it in their discretion to give effect to Section 15, Subsection (3) of the Act. I will only note in passing that the question of my hon. friend was not merely on the construction of the Act; it was also directed to the administration of the Act by the Government. While the Attorney-General has, in my humble opinion, correctly described the actual legal position under the Act, I shall submit to the House

that for purposes which are fairly obvious the name of the Insurance Commissioners has been taken to issue press notices which are quite contrary not only to the Act itself but to the statement of the Attorney-General has made to-night. I am extremely sorry the Chancellor of the Exchequer is indisposed, but I would wish that the Financial Secretary to the Treasury had answered this question, because it is not merely a legal question—indeed, it is not primarily a legal question; on the other hand, it is a question of administration.

The Financial Secretary to the Treasury (Mr. Masterman): I am quite prepared to give a reply if I have time.

Mr. Worthington-Evans: I will do my best to give the right hon. gentleman time. It is, in my view, quite desirable the public should understand the matter, because it is not, in my opinion, a doctor's question at all. (Hon. Members: "Hear, hear.") I am very glad there is assent to that observation. It is, in fact, this one simple point: Are the insured people to have the free choice of doctor which has been promised them for their money, or are they to have that choice limited by the action of the Government?

Mr. Booth: Limited by the doctors.

Mr. Worthington-Evans: Then I start with the assumption that the Government admits that under the Act the Insurance Commissioners are bound to make regulations which do give the Insurance Committees the right to allow the private individual, the insured person, to choose his own doctor, whether that doctor is on the panel or not. (Hon. Members: "No.") I do not think that the Attorney-General is going to dissent from that. He will admit, I fancy, that Subsection (3) applies to doctors whether they are on the panel or not. That is important. I do not want to speak to the House under a misapprehension. Is that admitted or not—whether doctors are on the panel or not the Insurance Committees may, if they choose, in their discretion permit of private arrangements?

Sir Rufus Isaacs: I have already stated, subject to regulations which the Insurance Commissioners make.

Mr. Worthington-Evans: We have got to this stage that private arrangements may be made either with doctors on the panel or doctors not on the panel, subject only to the Insurance Commissioners' regulations. (Hon. Members: "No.") These arrangements may not be made compulsorily, but it is in the discretion of the Insurance Committees to allow this arrangement, subject to the regulations of the Insurance Commissioners. That simplifies the question very much indeed: for the Insurance Commissioners have made a provision which is contained in Regulation 14, the words of which are these:

The Committee may allow any insured person in lieu of receiving medical benefits under the arrangements made by the Committee, to make his own arrangements for receiving treatment, including medicine and appliances.

And in the next regulation it is provided that in such a case a cash payment would be made on account of that form of treatment equivalent to what would have been made had the man been treated by a panel doctor. If there had been the slightest dispute about that I could have referred to the memorandum 136 C and E—which I believe means "Customs" and "Excise," to which is added an explanatory memorandum which clearly sets out, for the purpose of insured persons, that the insured persons may receive medical benefit in one of several ways; first, on the panel system; secondly, through approved institutions; and, thirdly, by private arrangement. I will read the paragraph relating to private arrangements—

The third method by which insured persons may obtain medical benefit is under their own private arrangements. Any insured person can make application to the Insurance Committee on the appropriate form to be obtained from the Committee; to be allowed to make his own arrangements for receiving treatment, and, if allowed, will receive a contribution from the Committee towards the cost of that treatment.

It seems to be quite clear, then, that whether the doctor is on the panel or not, a private arrangement can be made with him, or with the Insurance Committee—that is, the Local County Committee. That seems to me to be a matter of extreme importance. There is a large number of doctors who are willing and desirous of treating their old friends and patients. They may be elderly men, who are not prepared to run the risk of going on the panel, because if they go on the panel they may have apportioned to them the residue of patients. (Hon. Members: "No,

no.") I would like to refer hon. members who say "No" to the Act. Let them read the Act. It is so under the Act. I have not had time to refer to it in detail, but I assert with confidence that under the Act this will happen, that the residue of patients in any county or insurance district who are not allotted to a doctor, who have not chosen a doctor, or who have not, also, been chosen by a doctor, will be apportioned either amongst the doctors on the panel or will otherwise be provided for by whole-time service or in some other way by the Insurance Committee. In one of those ways those patients have got to be dealt with, and the doctor who is willing to treat his own patients is not willing to run the risk—and it is a risk, no one can deny it—of having patients apportioned to him who have been rejected by the whole of the doctors on the panel. That is only one case. There is another case, that of the domestic servants, who in the past have been accustomed to receive treatment from the family doctor. (Hon. Members: "No, no.") They have had exactly the same treatment, but, if hon. members like, let them say that is only so in one case in ten that they will be deprived of that class of treatment in future, but that is the risk, because the family doctor may be quite likely not to go on the panel; and, unless the doctors not on the panel are also able to be chosen by the insured person, then those domestic servants, however few or however numerous, cannot get the same treatment that they have got in the past. That is a matter of some importance. Hon. members have some doubt about that. If they were really questioning it I would refer them to the report which appears in the *Times* to-day of exactly the same fear as I am now voicing that was expressed by some doctors who were present at a meeting of doctors yesterday who had agreed to serve on the London panel. It will be found in that report that some doctors immediately said that they would withdraw from the panel if they were to run the risk of having persons not chosen by themselves apportioned to them. The real point I want to get at in the short time at my disposal is, first, as to the action which has been taken by the Commissioners, or in their name, for at present I am not satisfied that they themselves have taken it. I believe the Attorney-General has stated the effect of the regulation correctly, and, if that is the case, how can the right hon. gentleman the Secretary to the Treasury justify the statement which has been issued to the press, on December 26th, which states this—and this is from the *Times* report of the Insurance Commissioners' circular?—

The point is that in places where a panel of doctors is formed, in accordance with the Act and regulations, it is open to the Insurance Committee of that area, if it chooses, to permit individuals to make their own arrangements for receiving medical attendance and treatment, including medicines and appliances.

The Insurance Commissioners have issued to the press a statement which is absolutely misleading. It is not in places where a panel has been formed, it is in all places, whether a panel has been formed or has not been formed; and the deliberate intention of that statement is to stamper the doctors to make them go on panels from fear of losing their practice, or fear of having to desert their old patients, whom they are perfectly willing to consider and whom they wish to serve in the future. They have been told by the Insurance Commissioners, quite contrary to the view of the Attorney-General, that if the private patient is to be allowed to continue any private arrangement with his doctor, the doctor has got to be on the panel. I say that is false, and it has been stated in the press for the very purpose—

Mr. Masterman: If you will give me a moment I will reply.

Mr. Worthington-Evans: I have not the slightest doubt the right hon. gentleman would be to the point when he replied, but he has already had his opportunity, and he will have a further opportunity to-morrow night if he can persuade his hon. friend the member for Huddersfield to withdraw his blocking motion. The next press notice issued by the Insurance Commissioners on December 30th contained an equally inaccurate statement—that individual arrangements can only be made where they are allowed by the Insurance Committee, subject to the approval of the Insurance Commissioners. That statement is absolutely incorrect. There is no question of the approval of

the Insurance Commissioners. As the Attorney-General correctly said, the only thing the Insurance Commissioners have to do is to make regulations.

Sir Rufus Isaacs: I said that the statement is not incorrect, as the hon. member says, because the Insurance Commissioners must make regulations which provide for the contributions.

Mr. Worthington-Evans: The Attorney-General is quite right.

It being half an hour after the conclusion of Government business, the House adjourned.

Contribution Cards.

On January 1st, in reply to Mr. Holmes, Mr. Masterman said that persons who had been in insurance for twenty-six weeks, but through temporary unemployment or sickness had not had twenty-six weekly contributions paid in respect of them, might qualify for sickness benefit by paying up the omitted contributions. They could do this by putting stamps in the vacant spaces of their ordinary cards if the omissions had occurred in the current quarter; if they occurred in the previous quarter they should put the necessary stamps on "arrears" cards to be obtained from their societies. An employed person who had been in insurance for the necessary time might similarly qualify for maternity benefit by paying any omitted contributions so long as these were paid before the birth of the child. Medical benefit would be provided as from January 15th for insured persons independently of the time a person had been insured or the number of contributions paid. If the omissions in payment were due not to unemployment but to the fault of the employer, the insured person might, under Section 70 of the Act, recover by civil proceedings the value of any benefit lost. If prosecuted, the employer might, under Section 69 of the Act, in addition to any fine inflicted, be required to pay to the Insurance Commissioners a sum equal to the amount of the contribution he had failed to pay, which sum would be taken as a payment in satisfaction of such contributions.

Mr. Fell asked, on January 1st, what number of cards had now been received from the approved societies and from the deposit contributors under the National Insurance Act; if the approved societies had entered the names of the contributors in their books with the necessary particulars to enable the benefits to be given after January 15th; and if any delay in the matter was anticipated. Mr. Masterman said that about 480,000 cards had been received from deposit contributors. Approved societies were still sending in their cards, and the numbers could not therefore be given at present. The registers of members and contributions were filled in before the cards were returned, and the reports in the hands of the Commissioners showed that societies were completing this work satisfactorily, so that delay in the payment of benefits was not anticipated.

Mr. John Ward asked if it might be taken that 400,000 represented the total number of deposit contributors so far known both in the United Kingdom and Ireland. Mr. Masterman said that the total of 480,000 represented the number existing in October last, but he thought the number had very much decreased owing to deposit contributors joining approved societies.

Mr. Masterman, in reply to a question by Mr. Forster asking for the number of insured persons, said a large number of societies had sent their cards in, but others had not completed the arrangements necessary to be completed before they sent in their cards. As soon as they were received he would be very glad to give the information desired.

Mr. Worthington-Evans asked whether the societies did not make actual returns apart from the cards and receive payment on account in respect of their numbers. Mr. Masterman said he had no returns. He would endeavour to obtain the information required, but the Commissioners had no returns as to the actual numbers.

Contribution Cards of Approved Societies.

Mr. Masterman, in replying to Mr. H. W. Forster on January 6th, said that the number of cards received from approved societies (in addition to those received from deposit contributors) by the end of 1912 was 8,087,036. Several millions of further cards were expected from a few large societies, who would deliver in large quantities.

In reply to a supplementary question he added that he would endeavour to ascertain how many of the insured were men and how many were women if a question was put down.

Collecting and Approved Societies.

Dr. Chapple asked the Prime Minister, on January 1st, whether he had any official information showing that the competition of collecting societies had forced all approved societies to bid for members by abolishing medical examination and by admitting to membership many who were afflicted with drinking habits, involving the certainty of sickness, accidents, and unemployment resulting therefrom; and, if so, would he endeavour to protect the National Insurance funds from this danger by bringing in a temperance bill without unnecessary delay, and thus correct as far as it was now possible the dislocation in the natural sequence of reforms? The Prime Minister said he had no official information upon the matters referred to in the first part of the question. He understood that immediately the Act was passed certain of the largest friendly societies decided to dispense with actual medical examination except in special cases, being satisfied with personal inquiry as to character and health of the applicants for membership. With regard to the last part of the question, he could add nothing to the reply which he gave on December 11th last to the deputation which presented a memorial from the National Temperance Convention.

Contracting Out.

Mr. Cassel, K.C., asked the Secretary to the Treasury, on January 6th, whether, under Section 15 of the National Insurance Act, 1911, and paragraphs 14 and 15 of the National Health Insurance (Administration of Medical Benefit Regulations, 1912), Insurance Committees had power to allow insured persons to make their own arrangements with any doctors they please without reference to the Insurance Commissioners; and whether, when such arrangements had been made, the Insurance Committees were bound to make to the persons who had made such arrangements the payments referred to in paragraph 15 of the said regulations without reference to the Insurance Commissioners.

Mr. Masterman, in reply, said that insured persons could not make their own arrangements for medical attendance and treatment unless they were allowed to do so by the Insurance Committees, and the contributions contemplated by the regulations would be paid subject to the possibility of deductions under regulation 14 (8). Those Committees, in exercising their discretion, would take into consideration the general interests of all the insured persons in their area, or any particular part of it. The Government and the Commissioners would take such measures as would prevent any attempt to break down the system contemplated by the Act as approved by Parliament either by the substitution of a general system of private arrangements outside the control of the Insurance Committees for that system or by the selection of a special class of picked lives affecting the ordinary average which a panel doctor had a right to anticipate in return for his remuneration; and when no panel had been declared adequate the Commissioners would make such other arrangements as they thought fit, or allow the Committee to make such arrangements as they approved for the medical attendance of insured persons.

Mr. Cassel asked if it was not the case that under the Act and Regulations as they stood at present the answer to both parts of his question was in the affirmative. Might not the Insurance Committee allow a person to make his own arrangements, and were they not bound to make payment without any further reference to the Insurance Commissioners? Mr. Masterman replied: Not until they had declared that the general medical service was adequate.

Mr. Cassel asked whether the London Insurance Committee could not now authorize persons to make arrangements with their own medical men. Mr. Masterman said that depended on how far they had made satisfactory arrangements for those who did not wish to contract out of the Act.

"Special Consideration."

Mr. Bigland asked the Chancellor of the Exchequer, on January 1st, whether Mr. H. G. Cowie and Mr. H. P. Orchard, Honorary Secretary of the National Insurance

Practitioners' Association, in a circular letter addressed to every member of the medical profession, dated December 27th, were authorized by him to make the promise contained in the circular that if a panel was not formed by December 31st, 1912, the Insurance Committee or Commissioners would be able to adopt a whole-time service or such other arrangements as they might think fit, regardless of the practitioners of the area, and that he had promised that in such case special consideration should be given to those who had applied by December 31st, 1912; and, if so, whether he would lay upon the table copies of what had passed between him and the authorities referred to in this paragraph. Mr. Masterman, who replied, stated that the paragraph in the circular letter referred to appeared to state the actual fact that, if panels were not formed in any areas, the panel system would be suspended, and a whole-time service or such other arrangements would be adopted as the Insurance Committees and the Commissioners decide. In response to questions received from the National Practitioners' Association during the holidays, the Chancellor of the Exchequer replied that priority of consideration would be given in the case of whole-time appointments to doctors who went on the panels, and he would lay on the table a copy of the letter which he wrote to the association, and which had already appeared in the public press.

Inclusive Terms.

On January 6th Sir J. D. Rees asked whether the doctors of Nottingham and Nottinghamshire had made a protest against the inclusion of attendance in cases of diseases due to misconduct, miscarriages, and abortion, the administration of anaesthetics, and the performance of operations in the conditions of service under the National Insurance Act; and, if so, what action the Government proposed to take. Mr. Masterman said he had received certain representations on the subject. There was, however, no power under the National Insurance Act to exclude such cases from medical benefit in so far as they were within the ordinary competence and skill of practitioners on the panel, and could, consistently with the best interests of the patients, be properly undertaken by such practitioners.

Medical Benefit.

On January 1st Mr. Cassel asked whether it was intended to obtain the sanction of the House of Commons before any arrangements were made by the Insurance Committees for the provision of medical benefit which involved the payment out of public funds of amounts in excess of those hitherto sanctioned by Parliament. Mr. Masterman said that the National Insurance Act did not impose any limit upon the amount which might be expended out of contributions in the provision of medical benefit. The effect of spending more than the amount allowed in the actuarial calculations upon which the scheme was based would, in the absence of a special grant, be to reduce the amount available for other benefits. It was proposed to ask Parliament for a special grant to defray the expenditure which might be incurred by Insurance Committees after the moneys actuarially available for the present calendar year had become exhausted. The agreements now being entered into with the doctors in no case ran for more than three months, and no public money would be expended without the previous sanction of Parliament.

Mr. Cassel asked if it was not the case that binding agreements would be entered into before Parliament was consulted, and what became of the control of that House over finance if binding agreements were entered into before the sanction of the House was obtained, when that sanction could be perfectly well asked for and obtained beforehand. Mr. Masterman replied that no binding agreement with the doctors, involving the expenditure of public money outside that provided by the National Insurance Act, would be entered into until Parliament had voted the money, if it did vote the money.

Mr. Cassel inquired, further, whether it was not the case that unless the additional money was found out of public money there would not be enough to provide for medical benefit. Mr. Masterman said that, as he had already stated, the agreements with the doctors were only for three months. Those agreements could be fully

honoured out of the money already provided by Parliament.

Mr. Cassel asked if there was any special reason why the House should not be given an opportunity of considering the matter. Mr. Masterman replied that he hoped on the earliest appropriate occasion the House would be given an opportunity, but that rested with the Prime Minister. Mr. Cassel said that the question was addressed to the Prime Minister.

Sir J. D. Rees asked, on January 6th, whether the Chancellor of the Exchequer gave a pledge to the secretary of the Medical Association Alliance that the friendly societies should not be deprived of the right to administer their medical benefit. Mr. Masterman replied that Section 15 (4) provided for the administration of medical benefit through existing systems and institutions under conditions there defined. Promises had been made that such institutions as the Friendly Societies' Medical Alliance should be entitled to apply for approval subject to such conditions as might be required, and this right was secured by the subsection referred to.

Mr. Cassel asked whether it was proposed to close the panels of doctors in any areas at a fixed time; and, if so, how in such cases the right of every duly qualified practitioner to have his name placed on the panel would be secured. Mr. Masterman said that the right of a duly qualified practitioner to have his name on a panel was conditional upon an adequate medical service having been arranged in his area on the normal panel system. Where a panel could not be formed the Insurance Commissioners might, under the provision in Section 15 (2) authorize the Insurance Committee to make such other arrangements as the Commissioners might approve, or might themselves make such arrangements as they thought fit.

Mr. Cassel asked Mr. Masterman if he was aware that Clause 15, subsection (2), specially provided for the right of every duly qualified practitioner to go on the panel, and that in the case where no panel was formed Parliament had expressly secured that right. Mr. Masterman replied, Certainly; but he had said that when the Commissioners after examination found there was no adequate panel. In that case it was evident there was no panel formed.

Mr. Cassel asked if the question had been considered whether, in the case where there was no panel at all, the Commissioners were not bound under the Act to admit every duly qualified practitioner. Mr. Masterman answered that where they had not declared the panel to be inadequate there was a right for every practitioner to go on.

Mr. Forster inquired under what section was there power to close a panel. Mr. Masterman replied under Clause 15, subsection (2), the Commissioners had power where there was no adequate panel to make any other arrangements they thought fit; declaring that the panel was inadequate, they could make what arrangements were suitable to the locality.

Mr. Forster inquired under what section of the Act. Mr. Masterman said they could suspend the normal panel system, and devise a system which might be known as the "close panel."

Mr. Forster: Under what section? Mr. Masterman: Clause 15, subsection (2).

Mr. Cassel: Did not that apply only where there was no panel at all? Mr. Masterman: No, it applied where the panel was declared to be inadequate.

Mr. Cassel asked what was the reason why arrangements for providing medical benefit which, according to statements made by the Chancellor of the Exchequer, would involve an additional charge upon public funds of more than one and a half millions a year, were not to be submitted to the House for its consideration before binding contracts had been entered into. The Prime Minister replied that no agreement with the doctors involving the expenditure of public money outside that provided by the National Insurance Act would be entered into without the sanction of Parliament.

Mr. Cassel asked if the right hon. gentleman was aware that the arrangement now proposed to be entered into contemplated the payment of 8s. 6d. per head for attendance and drugs; that when the bill was before Parliament it was contemplated that the payment would be only 6s. 6d. per head; that this increase would involve additional expenditure of moneys by Parliament, and that if the arrangement was once entered into Parliament would not

be absolutely free in giving its decision. The Prime Minister replied that the hon. and learned gentleman was quite wrong. Parliament would be absolutely free. The agreement was only entered into for three months, and the sum already provided was quite adequate for that purpose.

Mr. Cassel inquired if the right hon. gentleman was aware that if the arrangement was made for three months it practically carried with it an agreement for a longer time; he asked further why that House was prevented from discussing this matter. The Prime Minister replied that there would be free discussion. No arrangement had been or would be entered into except within the limits the House had already decided.

Mr. Worthington-Evans asked if it was not the case that if the 8s. 6d. was paid during the first three months there would be a deficiency during the other periods of three months, unless Parliament did grant an extra sum. The Prime Minister said that Parliament would have a full opportunity for determining that question when it arose.

Mr. Newman asked whether it was intended that whole-time sanitary and medical appointments in the gift of the Government were in the future to be reserved for candidates who had signified their intention of accepting service under the terms of the National Insurance Act as on December 31st, 1912. Mr. Fred Hall asked the Chancellor of the Exchequer if, with a view to securing the adhesion of members of the medical profession, he had undertaken that those doctors who agreed to work under the National Insurance Act should receive priority in filling medical appointments under the Act; how many such appointments would have to be created in order to attract a sufficient number of doctors; and whether he was in a position to give an undertaking which removed staff appointments from the control of the Insurance Commissioners or Insurance Committees under whom any such appointments would be held. The Chancellor of the Exchequer replied that the questions apparently referred to a letter which he issued with the concurrence of the Insurance Commissioners, and which had been laid on the table of the House, promising priority of consideration in connexion with whole-time appointments to doctors who had gone on the panels. Duly qualified practitioners had a statutory right to be included in the panels in their areas if such panels were formed. Those who were deprived of this right through the refusal of other doctors to come on panels must of necessity receive priority of consideration in connexion with any substituted system, as any not appointed would be excluded by a choice which was not their own; any opportunity of working under the National Insurance Act. The number of salaried appointments made would depend upon the number of doctors required to provide medical attendance and treatment in those areas, if any, in which sufficient doctors had not accepted service under the ordinary panel system, but there were very few areas where the possibility of such arrangements existed.

Sir Philip Magnus asked whether priority of consideration would be given quite independently of the qualifications of the doctors. Mr. Lloyd George replied, No. Certainly the qualifications would be taken into account.

Mr. Fred Hall asked for a reply to the last part of his question. Mr. Lloyd George said he could not give an undertaking of that kind. Mr. Fred Hall inquired when the Chancellor of the Exchequer would be in a position to reply to that part of the question. Mr. Lloyd George said he was in a position now, but he could not give a guarantee that the Insurance Commissioners would not exercise some control in the matter.

Mr. Newman asked the Chancellor of the Exchequer whether his attention had been called to an advertisement of the Bradford Insurance Committee asking for medical men to work the National Insurance Act at salaries of from £500 to £700; and whether, under the terms of service at present specified by the National Insurance Act, he could state how many insured persons it would be necessary for a medical practitioner to have on his list to assure for himself an income of £500. Mr. Masterman replied that he had seen the advertisement referred to in the first part of the question. A doctor not doing his own dispensing would earn £500 a year in respect of 1,429

insured persons, or, if the cost of drugs did not exceed 1s. 6d. a head, in respect of 1,333 persons. A doctor in a country district who did his own dispensing would earn the same sum in respect of 1,111 persons.

Mr. Newman asked if it was not a fact that the Chancellor of the Exchequer adumbrated a scheme for Bradford giving for its 100,000 insured persons fifty doctors. Mr. Masterman said, Certainly. In that case each one would look after the general health of 2,000 insured persons, and he was quite capable of doing so.

Mr. Newman asked the Chancellor of the Exchequer whether he had asked for and received assurance from adequate professional sources that 2,000 employed contributors could be adequately attended by a medical practitioner on a panel who would, in addition, be allowed to take private practice among the families of such insured contributors. Mr. Masterman said that, as already stated, it would be impracticable to fix 2,000 or any other figure as the maximum number of insured persons to be attended by a practitioner on the panel, as the number must necessarily vary according to the circumstances of each particular case. He was assured by adequate professional advice that, certainly in urban areas, a doctor would be able to be properly responsible for 2,000 persons (the majority of whom were, of course, not ill in any given year) without being debarred from any private practice he might obtain among the families of the insured, and that advice was confirmed by the experience of insurance schemes both here and abroad. It would be the duty of the Insurance Committee in each district to see that the arrangements were such as to secure that the insured persons in their district received adequate medical attendance and treatment.

Sir Henry Craik asked if the average number of 2,000 had been reached as the result of experience, and whether, as a matter of fact, it was not something like 800 or 900. Mr. Masterman replied that he would give the figures if a question was put on the paper.

Mr. Lawson asked if it was to be understood that any maximum number of insured persons would be fixed by the Insurance Committees. Mr. Masterman said that he thought the Insurance Committees would deal with the circumstances of each particular case as it arose. Mr. Newman asked whether, in the case of a salaried service being established by a Local Insurance Committee and consisting of ordinary medical practitioners, nurses, specialists, and superintendent, such Insurance Committee would be empowered out of public or other funds to establish and equip a hospital to receive for treatment insured persons who might be refused admission by any hospital supported by voluntary contributions. Mr. Masterman said he had no reason to believe that voluntary hospitals would refuse to treat cases of a kind which were outside medical benefit. The exact scope of a special medical service which might be arranged as an alternative to the ordinary panel system would be decided with reference to the requirements of the area affected.

Mr. Newman asked what would happen supposing the local hospitals refused to treat these insured people. Mr. Masterman said that it would be necessary to deal with each case as it arose.

Dr. Chapple asked the Chancellor of the Exchequer whether, in view of the statement made at a meeting of doctors in Stirlingshire, where the conditions imposed by the Insurance Commissioners had been accepted, that doctors attending insured persons requiring an anaesthetic would have to pay the fee for the anaesthetist, and of the very prevalent idea that this was the case, he would make a statement on the subject. Mr. Masterman said that the conditions under which payment was made in such cases were explained in detail in the memorandum of December 3rd, 1912, which is reprinted in Cd. 6530 (p. 26).

Dr. Chapple asked the Chancellor of the Exchequer whether, in view of the statement made by the chairman at Wednesday's conference with the London doctors to the effect that no patient would be forced on any doctor, and in view of Section 15, subsection (2) (d) of the National Insurance Act, he was prepared to state what arrangement had been made in this respect. Mr. Masterman said that any doctor on the panel had a preliminary right of refusing any particular insured person who applied to be placed on his list. It would be the duty of the Insurance Committee to make such

arrangements as were suitable for medical benefit for any patients who were thus refused by the doctor of their first choice; and these arrangements must be as far as practicable in agreement with the doctors themselves. Insurance Committees might ask the doctors in any district to agree each to accept a proportion of insured persons who might be refused attendance by the doctors of their first choice, or the insured person might be invited to make another choice of a doctor willing to accept him, or some other arrangement might be made by the Committee for his medical attendance and treatment.

Dr. Chapple asked if it was not the case that a number of insured persons might be rejected by all the doctors on the panel? What would be done with those who had been rejected? Did the subsection not contemplate that they should be distributed among the doctors? Mr. Masterman said that the Insurance Committee had made the arrangements suggested, and if a panel system was still in that district and kept in operation then it would be necessary to provide a doctor on the panel who would undertake the treatment of those patients.

Mr. Worthington-Evans asked whether a statement contained in the official explanatory statement as to medical benefit issued by the Insurance Commissioners to the doctors about December 16th last, to the effect that it would at any time be possible for a doctor to indicate his willingness to act on a panel, but unless indicated by December 31st the name would not be included in the first list, represented the policy of the Government; whether any warning had been given to doctors that the panel might be closed against new names for one, or two, or three years; and whether such closing was authorized by any, and which, of the existing regulations under the National Insurance Act. Mr. Masterman replied that the answer to all three parts of the question was in the affirmative, with the reservation that the right of a practitioner to be included upon a panel was conditional upon a panel being formed in his area. The Chancellor of the Exchequer announced so long ago as October 23rd that if no adequate panel could be formed in any area arrangements would be made for suspending the normal panel system, and that it would then be the duty of the Insurance Commissioners under the proviso to Section 15 of the Act to provide medical benefit by authorizing the Insurance Committees to make other arrangements, or by themselves making such other arrangements as they thought fit, as an alternative to the suspension of medical benefit. The regulations issued by the Commissioners were subject to the exercise by them of the powers reserved in the proviso to Section 15 (2).

Mr. Worthington-Evans inquired if the Insurance Commissioners could close the panel for one, two, or three years against the doctors who did not first go on the panel? Mr. Masterman said if a panel was declared by the Insurance Commissioners to be adequate, and so long as it was adequate other doctors might have their names added to the panel. If the Insurance Commissioners declared the panel inadequate, then they could make any arrangements they thought fit for the medical treatment of insured persons.

Mr. Rupert Gwynne asked if the Chancellor of the Exchequer was asked by the Insurance Commissioners to make arrangements that doctors should be kept off the panel for one, two, or three years? Mr. Masterman said he could not add anything to the answer he had already given. Every action taken in the matter had been taken by the Insurance Commissioners in conjunction with the Government. Mr. Gwynne inquired if the Chancellor of the Exchequer had their sanction when he made that statement. Mr. Lloyd George: Certainly. Mr. Gwynne asked if it was definitely sanctioned by the Insurance Commissioners. Mr. Lloyd George: Certainly.

Mr. Newman asked whether, in the case where a panel of medical practitioners was closed though incomplete by the Insurance Commissioners, and leave given to practitioners on such panel to engage assistants to complete the panel, on whom would devolve the duty of examining into the professional capabilities of such assistants; and whether any provision would be made for securing to them a minimum salary. Mr. Masterman said that the Insurance Committees would be responsible for securing that the service in their areas was adequate if the normal panel system was in operation, or if the panel system

was suspended, and they were authorized to make such arrangements as they thought fit, subject to the approval of the Commissioners. If in the latter case the service were partly provided through partners and assistants of the original practitioners, it would therefore be the duty of the Insurance Committees to take any necessary steps to secure that the service provided by such persons was satisfactory. Mr. Newman inquired who would actually examine the doctor's qualifications—the Insurance Committee? Mr. Masterman said that if the work was entrusted to the Insurance Committee it would be done by them with the approval of the Insurance Commissioners, or the Commissioners might, if they liked, themselves make the arrangements. Mr. Harry Lawson asked who was to determine the standard of capacity. Mr. Masterman said he thought he had already answered that—if it was entrusted to the Committee, the Committee, and if the Commissioners did it themselves then the Commissioners.

Mr. Fred Hall asked if any qualifications with regard to age, medical reputation, and proficiency were imposed in regard to doctors whose names were placed on the panels under the National Insurance Act. Mr. Masterman replied that under Section 15 (1) (b) of the National Insurance Act every qualified practitioner had a right to be included in a panel list if a panel was formed in his area. The power of removal, which was provided for in the same section, was conditional upon subsequent inquiry showing that the continuance of a particular practitioner would be prejudicial to the efficiency of the medical service of the insured. In accordance with the request of the medical profession, the regulations with regard to such an inquiry required careful investigation by a specially constituted central body, including members of the profession.

Mr. F. Hall asked if any professional gentlemen who had sent in their names to be included on the panels had been refused? Mr. Masterman replied in the negative, and said that the committees had no right to refuse the names that were sent in to be on the panel if a panel was formed. Mr. F. Hall asked if the public were to understand that doctors would be placed on the panels, for whom they were paying, irrespective of whether or not they were competent to carry out the work. Mr. Masterman said that, as he had said, every duly qualified practitioner had a right to be included in the panel list when the panel was formed. That was not a resolution of the Commissioners, but a resolution of the House of Commons.

Mr. F. Hall asked if the Secretary to the Treasury was aware that there were plenty of duly qualified medical practitioners whom the insured persons would not be prepared to accept. Mr. Masterman replied that there was no reason why they should accept them if they did not want them. The hon. gentleman was really criticizing an action which was the almost unanimous action of the House of Commons.

Mr. Cassel asked if the right hon. gentleman was aware that that unanimous resolution was not being carried out? Mr. Masterman replied that it was being carried out, and in no case were the Commissioners doing anything but carrying it out.

Mr. Fred Hall asked the Secretary to the Treasury what was the number of insured persons which it was originally intended to allocate to each doctor under the National Insurance Act; and what sum would have been earned yearly on the basis of the latest terms offered to the doctors. Mr. Masterman said that the National Insurance Act did not contemplate any fixed number of insured persons being allocated to a practitioner. On the contrary, the system of free choice by the insured person, subject to the consent of the practitioners, involved considerable variation in the numbers and a corresponding variation in the total remuneration. The second part of the question did not, therefore, arise.

Sick and Maternity Benefit.

Mr. Beck asked the Financial Secretary to the Treasury on January 7th what was the earliest date on which an insured person could become entitled to maternity benefit under the Insurance Act; and could notice of the illness of an insured person be given before January 13th, and, if so, what could be the earliest date on which such insured person, if still ill, could become entitled to sickness benefit.

Mr. Masterman said that notice of illness of an insured person could be given before January 13th. If he was ill on Thursday, January 9th, or was taken ill before doing any effective work on Friday, January 10th, he would be entitled to sickness benefit (if he continued to be incapable of work) as from Monday, January 13th, provided that he had at the latter date been in insurance for twenty-six weeks, and twenty-six full contributions had been paid in respect of him. An employed contributor was entitled to maternity benefit in respect of a child born after midnight on Sunday, January 12th, if he had been in insurance twenty-six weeks, and if twenty-six full contributions had been paid.

Additional Benefits.

In reply to Sir J. D. Rees, Mr. Masterman said that the amount of friendly societies' reserves which were set free in consequence of the National Insurance Act depended upon the course taken by societies themselves, and in many cases on the choice made by individual members. In some cases the benefits of the Act were being substituted by those formerly provided by the society; in others members were choosing to continue their full contributions to and full benefits from the private side of the society in addition to the contributions and benefits of the Act. In the former case only were reserves released, and a considerable time must elapse before the individual decisions of some four million persons and the precise extent to which they would have the effect of releasing reserves could be ascertained. It must, however, be remembered that where an individual decision had the result of preventing any reserves from being released it was because the member had himself chosen to continue to enjoy the benefit in respect of which those reserves would have been released in addition to the similar benefits now provided for him under the Act. Sir J. D. Rees asked whether the Chancellor of the Exchequer was not at present in a position to make an estimate, and that his views had completely altered since he originally made one. Mr. Masterman said he was afraid that until there was more information as to the choice made by insured persons he could not give any reliable estimate.

Sanatorium Benefit.

Mr. Harry Lawson asked the Chancellor of the Exchequer on December 31st on what basis and on what actuarial calculation he arrived at the amount of £200, stated by him in his speech at Aberdeen, which he said the blacksmith, then under treatment at the London Hospital, would receive in return for his contribution of 4s. 8d. under the National Insurance Act. The Chancellor of the Exchequer replied that the amount referred to was calculated according to the average cost of sanatorium treatment paid up to that date by the Middlesex Insurance Committee and to the period of treatment estimated to be necessary in this particular case.

Mr. Harry Lawson asked if the Chancellor of the Exchequer was aware that the Middlesex Insurance Committee had not paid a single penny up to the present date, and that the only rate was 10s. a week? If that was so, what time would be required to work out the £200? Mr. Lloyd George said that the information, which he got from the Committee itself, was that they were contracting to pay 35s. a week.

Mr. Harry Lawson: Will the right hon. gentleman inquire of the London Hospital? Mr. Lloyd George replied that he never said it was paid to the London Hospital. What he said was that the patient could not be kept in the London Hospital much longer, and that other arrangements would have to be made. He reckoned that those arrangements would cost the same in that case as in other cases, and the cost in other cases was 35s. a week. As a matter of fact they had secured accommodation at less.

Mr. Worthington-Evans: Does the right hon. gentleman remember how long he expected this man to be under treatment? Mr. Lloyd George: Speaking without notice, I think it was two years.

State of the Panels.

Mr. F. Hall asked the Chancellor of the Exchequer on January 8th how many whole-time doctors would be required to complete the panels under the National Insurance Act; the total cost of the same; whether a special branch of the Commission would be required to direct and supervise their work, and, if so, what arrange-

ments were proposed to be made in the matter. Mr. Masterman, who replied, said that the accession of doctors to the panels during the past few days had been so rapid as to make it impossible to state where, if at all, opportunities for the establishment of a salaried service would occur. It was possible that such a service would be instituted in three or four districts, but he could make no statement on the matter at present.

Mr. F. Hall asked, if the number of doctors who had rushed to the panels had been so rapid, how was the large deficiency in the London area to be accounted for? Mr. Masterman replied that he was not aware of any deficiency in the London area.

Mr. F. Hall inquired if the number of doctors on the panel in the London area was sufficient to carry out the duties under the Insurance Act. Mr. Masterman said he had not examined the numbers, but he should think, from what he had seen, that they were more than sufficient.

Post Office Medical Officers.

Mr. Fred Hall asked on January 7th if the circular dated December 31st, 1912, issued to Post Office medical officers was intended to imply that their services would be discontinued in the event of their not joining a panel under the National Insurance Act. The Postmaster-General said that the great majority of Post Office employees were not liable to compulsory insurance, and those persons would in any case remain under the charge of the Post Office medical officers. In Ireland also no question arose on that head. With respect to those Post Office employees who were insurable for medical benefit under the Act, he understood that the Insurance Commissioners were prepared to approve the present Post Office medical system as applicable and its officers as eligible to attend those insured persons. That, of course, did not prejudice the right of the insured persons to the attendance of some other doctor who was on the panel if they so preferred.

Mr. Hall asked if he was to understand clearly that in the event of the doctors not being on the panel the employees would still be allowed to have the services of the same medical gentlemen. Mr. Herbert Samuel said that if the question referred to Post Office medical officers who were not on the panel, they would.

Inspection of Drugs.

Mr. Wheeler asked the Chancellor of the Exchequer, on January 7th, whether any arrangements had yet been made for the inspection of drugs under the National Insurance Act; if so, how many inspectors had been appointed, and at what salaries, and whether those appointed were fully qualified chemists? Mr. Masterman replied that no arrangements had been made, and that no inspectors had been appointed for the purpose.

Medical Relief in Ireland.

On January 7th Mr. William O'Brien asked the Chancellor of the Exchequer whether he had considered the right of Ireland, under the equivalent grant arrangement of 1888, to 9 per cent. of the amount of the additional charges for medical relief now proposed to be contributed under the National Insurance Act from the Imperial Exchequer; and whether he would consider the advisability, from the point of view of health and comfort of the poorest part of the Irish population, of applying the funds to which Ireland was thus entitled to contributing, in the same proportion as under the Irish Agricultural Labourers Acts, towards providing housing accommodation at 1s. a week for the labourers in the cities and towns of Ireland. The Chancellor of the Exchequer said that the question of making an Exchequer grant in connexion with the work to be performed by doctors in Ireland under the National Insurance Act was now under consideration. Pending a decision in the matter, it would be impossible to express any opinion upon the suggestion contained in the second part of the question.

Mr. W. O'Brien inquired if it might be taken for granted that the representatives of Ireland would have some opportunity of discussing the matter before the £1,600,000 was voted. Mr. Lloyd George replied that there would be representatives of every part of the United Kingdom. Mr. T. M. Healy: When may we hope for a statement in the present session? Mr. Lloyd George: So far as I have the leave of the House.

CORRESPONDENCE.

[It is particularly requested that communications intended for publication should be written on one side of the paper only, and should be addressed to the Editor, BRITISH MEDICAL JOURNAL, 429, Strand, London, W.C.]

THE ASSOCIATION AND THE PROFESSION.

DR. A. S. HEDLEY (Rothbury) writes: The solicitude of Dr. Durant, of Gateshead, for the rural practitioner, though somewhat belated, is very touching. He is of opinion that men practising in moorland, mountainous, and fen districts, can force payment for mileage. Many of us would be glad to know in what way a few isolated doctors can now apply this compulsion to the Government or Commissioners. Of course we have the statement of Mr. Lloyd George about the small fund for mileage in these districts, but many of us have not the same implicit faith in the statements of the Chancellor as Dr. Durant has. I think Dr. Durant must agree that men practising in such areas would have been still more strengthened in their resistance had the doctors in industrial districts stood firm. Unfortunately the town doctors regardless of the terms of service—could not resist the temptation of hard cash and gave way; their neighbours on the outskirts had to do likewise in self-defence, and so the contagion spread. In other words, the country men have been swamped by their brothers in populous centres, and heroic appeals, such as we have this week from Dr. Cromie, are, at this time of day, simply ludicrous.

In this connexion I am glad to learn that a meeting has been called to try and unite the rural doctors of Northumberland, and I hope other counties will follow suit.

The last two paragraphs of the letter from the officials of the Hastings Division will be applauded by most of your readers. The Association has nothing to regret in those members it has lost.

DR. EMYR OWEN PRICE (Bangor) writes: The Representatives at their last meeting adopted a policy which, in my opinion, will so certainly lead to disaster that I cannot allow my pledge and undertaking to be used to help them, and, so far as allegiance to that pledge goes, I am proud to proclaim myself outlaw and rebel.

The Representatives chose to decide the important questions of taking service or not quite blindly, reckless of what might be the real strength of the chain supporting them. They refused the facts offered by the Medical Secretary. These would have exposed at once the "weak links."

The truth is, the concessions gained really provided tolerable conditions of service and terms fairly remunerative. Attempts to prove the contrary had been so unconvincing that the bulk of the opposition to taking service under the Act had become a hollow sham. Events have now proved this.

Many voted for prolonging the conflict, in the hope of securing further concessions and of working an independent medical service meanwhile at the expense of the State. Everybody knows now that the hope cannot be realized.

The Gilbertian absurdity of the proposals contained in the alternative or "constructive" policy of the Association has tickled the sense of humour of the whole kingdom. The profession to work a medical service "outside the Act," regardless of the Regulations, in defiance of them, and to get State pay! To get a Government reward for knocking the "bottom out of the Regulations"! When, during the debate, the possible financial difficulties were pointed out, the "dignity of the profession" was satisfied with the assurance that the Friendly Societies would intervene—would intercede with the Government and put the finance right. The Friendly Societies, forsooth, would do this—the bodies whom the Association has so flouted and scorned; these were to come to help make an impossible scheme possible.

No wonder the general practitioners, from John o' Groat to Land's End, are with contempt rejecting such a policy and preferring the county panels! No wonder men are

repudiating pledges put to such uses and are breaking out in rebellion against the policy of the Association.

They realize, too, the inadequacy of the preparations for war—that there is no war fund worthy the name; that those who make the sacrifice will have to suffer. They know that the Association has been lured on in meeting after meeting, almost to its doom, by declamatory prophets declaring untruly that truculent resolutions would fill the Treasury. They know that though these prophets "cut themselves with knives" the altars are yet cold. They know all these things, and they therefore are in active rebellion.

The wise and moderate men, our guides in the past, many of them still with us, have given warnings enough that solid voting and solidarity are often two different things when the proposals voted on are put into operation. Time has now given proof of this. For the sake of the Association I hope our remaining tried leaders will take up the reins of government leadership more firmly, and re-establish its power and prestige.

THE SITUATION AND ITS SEQUEL.

DR. HARRY GREY (Bristol) writes: Recriminations and blame are, as Dr. Cromie says, useless and harmful, but nevertheless it is absolutely necessary now to review and appreciate the situation and the mistakes that have led to it. We are beaten, and it would be a great deal more dignified to admit the defeat and set to work to prepare for the next struggle which, if our contention is correct that the Insurance Act as it applies to us is unjust and degrading, must begin before another year has passed. We are beaten by our own misdeeds. Bristol may be taken as an example of the whole country. On Monday, December 23rd, we accepted with one or two dissentients the verdict of the Representative Meeting. On Tuesday, the 24th, several men went back on that decision; by the 30th the decision had been practically reversed, and Bristol plumped for the panel. One asks, why? Two or three men were satisfied with the Act, ten or twelve were determined against any self-sacrifice in the interests of the whole and got scared by the lies in the newspapers; 80 to 100 were afraid that any sacrifice they made would benefit no one except the defaulters; the remaining 100 or so had no personal interest in the matter, and allowed those who had to be the arbiters of their own destiny. The "Doctors' splendid rally to Insurance Act" (*Daily Chronicle*) would more truly be described as "doctors' pitiful stampede," having been brought about by internal weakness in the profession, and intimidation, bribery, and superior force from without.

But the internal weakness did not supervene at the last hour; the fight was really lost eighteen months ago when the Association, throwing over the anticontract party (actually a majority of the Association), formulated a policy which I showed at the time, and which events have since proved to be illogical, contradictory, and founded on no principle whatever. The six-point policy was also incomprehensible and antipathetic to the public; I have not yet met any layman who could understand or sympathize with it. The campaign since June, 1911, when we declared the fetters of the contract system acceptable, has been directed towards lightening, padding, and concealing our chains. As such lightening and padding interfered, from the Government's point of view, with the efficiency of the fetters, our efforts met, in the absence of public comprehension and sympathy, with resistance, and the struggle came to be one not of reason but of force. In the absence on our side of ample power to protect sufferers (the Guarantee Fund is a negligible quantity, and the Association lacks the power of a trade-union to call a levy), the Government has shown itself the stronger, and the only thing left us to do is to submit under protest to an interference with the liberty of labour such as one could not have believed possible under a Liberal Government.

The situation is not, however, to my mind, without hope. The weakness due to lack of a compensation fund may be made good by acquiring trade-union powers, and the other weakness due to the existence of a few (or many) who really believe that the conditions of service under the Act are tolerable, is fairly certain to be remedied by the experience of a year or two's working of the Act. Mr. Lloyd

George himself has indicated this source of present weakness and future strength in alluding to the divergence of opinion in our ranks. Some practitioners' club practice is good and some bad; in some districts private practice pays well, in some it does not; the old club system tied up a large body of patients to one man, who would hold it against his neighbours at any price and by any means. The Insurance Act will be a great leveller, and tend to make our individual interests equal; we must help it to do so by insisting on universal free choice of doctor; with equal interests our fight will be more united when we do take the field to improve our condition.

Meanwhile it behoves us to draw together for safety, perfect our organization, remedy the defects of constitution that could permit such a false move as the late ballot, depose those of the executive who have shown themselves unequal to the position they occupy (some of them have happily already abdicated), and try to forget the shame and bitterness that must be felt, I should think, by 95 per cent. of the 10,000 men on the panels. One glaring defect of our constitution I should like to press on your notice—the cumbrousness of the Representative system and the absence of a legal postal vote. Not less important is the question of paid secretaries of Divisions. A third urgent matter is the formation of central committees; these are largely composed of the *haut ton* of the profession; in this disastrous fight it is the general practitioner who alone was competent to understand and deal with the matter, and, unfortunately, the general practitioner is too overworked and underpaid to have been adequately represented. Payment for committee services is absolutely essential if such men are to take part in them, and unless they do take part it is difficult to see how their case can ever be properly understood.

Dr. F. G. HAWORTH (Darwen) writes: In the last issue of the JOURNAL you discuss the question of the pledge, and you state that on December 30th, 1912, the State Sicknes Insurance Committee "would have been glad to find some way out of the difficulty"; also that "they (the men) can only be released by the deliberate decision of the Representative Body." This shows the vacillating policy of the governing body of the Association. If the pledge is binding stick to it, or throw it overboard. One point has so far not been mentioned. When the pledge was taken it was under peculiar psychic conditions; the measure was a bill not an Act; it glistened with irregularities and hardships, the terms were considered impossible, and the control was entirely lay, a wave of enthusiasm passed over the medical world, and we signed the bond under its influence—at least, I did. From that time until the date when the Divisions gave their last vote many alterations had been made, the bill had become an Act, the Chancellor had improved the terms of remuneration and the control taken directly from the approved societies and given to local committees, on which we have as much representation as is consistent with policy of "the man who pays the money must call the tune." You say "the fact that only half the number of men voted at the Divisional meetings was because they thought the result was a foregone conclusion." This we do not know; at that time dissensions were creeping in; remember, it was late in December, and many were going on the panels. No, sir! I submit you were wrong; you were not in the thick of the conflict, and could not see what was going on in the country—as, for instance, at our last meeting in Blackburn, only four voted for the Act, yet a day or two afterwards thirteen had joined the panel. When I signed the pledge I did not understand the Insurance Bill, did not read it. I left my fate in the hands of the British Medical Association—a fatal policy: "the majority does not always stand for wisdom." When the bill became law I went through it very carefully and believed in it. There were faults, certainly; how could such a gigantic measure be constructed without such faults? If a doctor had conceived and built it up it would have been fuller of hardships, because he would have had in his mind's eye his competitor in the next street rather than the insured. Let that pass; I was in a dilemma; I was pledged against the working of the Act, and yet I fully believed in it. On the last Saturday in 1912 I was told "if we did not go on the panel men would be sent

to take our places," and incidentally our bread and butter with them. In the face of this, the same evening the majority of the Darwen Medical Society decided by vote not to go on the panel, and we in the minority had to abide by this decision, or at least we did so. As to my pledge to the Association, I do not care twopenny for it. The conditions were altered, I was pledged against "club practice." The Act employs us under the Government, and our final court of appeal is the Government; but I do care for the good opinion of my fellow practitioners, and we in the minority, against our better judgement, succumbed. Now what is the result? We have stood out to the bitter end, until 10,000 men have gone on the panels, and we have to ask as a favour to be allowed to send in our names. Our loyalty has very nearly cost us dear. The Chancellor has made mistakes from our point of view. We ought to remember that he drew up the bill from two stand-points—ours and the insured. We should give him credit for having long patience with us. Have we made no mistakes? First, when we sent a deputation to him, we should have given it plenary powers, and instructions that only the Chairman should speak; Mr. Lloyd George did not permit any member of the Commission to speak except through himself (the Chancellor). Secondly, the votes of the Divisions should have been taken by post. If a pledge can be taken by post, surely a subsequent vote may be. Many men put up their hands for Yes from fear of ostracism.

Dr. GILES F. GOLDSBROUGH (Herne Hill) writes under date January 4th: I enclose a copy of a letter I have to-day sent to the Clerk of the Insurance Committee of the County of London.

I should like to add that my desire not to enter into agreement with the Insurance Commissioners is not animated by any political bias. I have been a Liberal in politics all my life, but I disagree with the panel system, partly on the ground stated in the letter which follows, and partly that unless adopted universally for all general practitioners it cannot become a fair or just system of remuneration for the medical profession. I should like also to say I have not entered into any pledge not to work the Insurance Act or otherwise, because as a medical man in private practice before the final arrangements of the Act were settled, I disagreed with that mode of expressing opinion on such a subject. I shall be glad now, however, to support the British Medical Association in its endeavors to guard the interests of the profession, and in all efforts to maintain individual freedom consistently with the development of medical science and art.

(COPY.)

Churchside, Herne Hill, S.E.,
January 4th, 1913.

To the Clerk of the Insurance Committee
of the County of London.

Sir,

I duly received the circular of the Insurance Committee of the County of London, dated January 2nd, 1913, and addressed to "All Medical Practitioners," notifying that the Committee have adopted the capitation system of remuneration for medical men who undertake to treat insured persons, I judge, to the exclusion of other forms of remuneration. I notice that such arrangement is provisional until April 14th, 1913.

I beg to say that as a medical man who desires not to enter into any agreement with the Insurance Commissioners, the publication, in any form, by a Government Department, of lists of medical men willing to treat obligatorily insured persons at a capitation rate appears to me to be an infringement of the spirit at least if not the letter, of the Medical Act of 1858, which disallows such form of advertisement to medical men generally.

If, therefore, I find the names of persons who have hitherto been treated by me as patients allotted as possible patients to medical men whose names appear on any such list, I shall immediately take steps to test the legality of such procedure on the ground that undue influence has been used to such persons by the publication of the lists.

I beg that you will submit this letter to the consideration of the Committee.

I am, Sir,

Yours truly,

(Signed)

GILES FORWARD GOLDSBROUGH.

Registered Qualification, M.D. Aberdeen, 1831.

FEE FOR GENERAL ANAESTHETIC.

The following correspondence has passed between the President of the General Medical Council and Sir Robert Morant, Chairman of Insurance Commissioners, with regard to the payment for the administration of a general anaesthetic under the regulations for medical benefit:

General Medical Council Office,
299, Oxford Street, W.,
December 13th, 1912.

[32116.]

*Sir Robert Morant, K.C.B., Chairman of the National Health Insurance Commission (England),
Buckingham Gate, S.W.*

Dear Sir,

My attention has been called, by members of the National Health Insurance Act Committee of the General Medical Council, to an important point arising out of the National Health Insurance (Administration of Medical Benefits) Regulations 1912, and on behalf of the Committee I desire to submit the point to the Commissioners, in case they should desire to offer any official observation upon it.

Under the alternative forms of agreement, as between a Local Medical Committee and a practitioner on the panel, contained in Part II of the First Schedule to the Regulations, it is provided in forms B, C, D, and E that in respect of a given patient the practitioner is entitled to claim special payments for the following services: (a) "Surgical operation requiring local or general anaesthetic," and (b) "Administration of general anaesthetic for the purposes of any operation included under medical benefit."

These provisions taken together are by some of my colleagues understood to imply that both the payments in question can be claimed only in cases where the practitioner himself operates, and also administers the general anaesthetic; and that no payment can be claimed under (b) when the operating practitioner obtains the services of a qualified person to administer the anaesthetic to the patient.

On November 27th, 1909, the General Medical Council adopted the following resolution:

That it is expedient in the public interest to provide that the person who administers the anaesthetic for the purpose of inducing unconsciousness during any medical, surgical, or dental operation or procedure, should not be the person who performs the said operation or procedure, due provision being made for cases of emergency.

The specific question I desire to put to the Commissioners is this: May an operating practitioner under any of the forms of agreement marked B, C, D, and E, who acts in accordance with the foregoing resolution of the Council, claim a separate payment in respect of the fee paid by him to another practitioner for administering the general anaesthetic?

I am,

Yours very faithfully,

DONALD MACALISTER,

President.

National Health Insurance Commission (England),
Buckingham Gate,
London, S.W.

16th December, 1912.

Dear Sir,

In reply to your letter of the 13th I have the honour to say that the answer to the question in its concluding paragraph is in the affirmative; that is to say, under any of the systems B, C, D, or E referred to in your question, the practitioner who performed an operation (itself within the scope of medical benefit) and employed another practitioner to administer an anaesthetic would be entitled to receive out of the medical benefit fund the stated fee for the anaesthetic, subject of course to such possible scaling down or up as under systems B, C, or E would apply to all such fees.

Under system A, the provision of the anaesthetist would be one of the services which the practitioner had contracted to render in consideration of the inclusive capitation fee, and he would, in those circumstances, have to pay the anaesthetist himself.

I am,

Yours truly,

ROBERT L. MGRANT,

The President.

General Council of Medical Education
and Registration of the
United Kingdom.

THREATS TO CLOSE A PANEL AND UTILIZE ASSISTANTS.

A LETTER has been received from medical practitioners in Wisbech signed by Dr. H. C. Meacock (for Drs. Meacock and Lucas), by Dr. M. Tylor (for Drs. Tylor, Ballmore, and Butterworth), by Dr. C. H. Gunson, and Dr. P. Bateman, stating that they received the following communication on January 8th, to which they have replied adhering to their decision not to accept service under the present conditions of the Act:

THE NATIONAL INSURANCE ACT, 1911.

Isle of Ely Insurance Committee.

Post Office Lane, Wisbech,
8th January, 1913.

Dear Sir,

Borough of Wisbech Medical Benefit.

I am directed by my Committee to inform you that at the meeting held yesterday it was resolved:

That, inasmuch as the panel of medical practitioners for the borough of Wisbech and the immediate vicinity is still incomplete, the Committee invite Dr. William Groom and Dr. Harry Groom, the only practitioners on the panel, to engage a sufficient number of qualified assistants to complete the panel, but that before such invitation be forwarded, forty-eight hours notice of the intention of the Committee be given to each medical practitioner who is not on the panel and who practises in Wisbech and within a radius of four miles of Wisbech.

The forty hours will expire at noon on Friday, the 10th instant.

Yours faithfully,

(Signed) J. H. DENNIS.

Dr. H. C. Meacock.

It is possibly an error in transcription for forty-eight.

The incident seems to be an example of attempt by a Local Insurance Committee to carry out one of the threats Mr. Lloyd George made in his speech to the Advisory Committee on January 2nd (see p. 29 *et seq.* above). He said that where there was a panel which was "all but complete," that is to say, where there were a certain number of doctors on it, but not enough to enable it to be declared an adequate panel, then the Insurance Commissioners could close the panel, and invite the doctors on the panel to engage a sufficient number of assistants or take a sufficient number of partners, so that the incomplete panel might become a complete one. As there are only two practitioners on the panel at Wisbech, it would be interesting to know how many assistants each of them is to take in order to make the panel adequate.

The close questioning to which the Secretary of the Treasury was subjected by Mr. Cassel, K.C., in the House of Commons on Monday last (p. 37), and the evasive answers returned, show that the Insurance Committee cannot be prevented by the Government from exercising their right to allow insured persons to make their own arrangements, although Mr. Masterman contended that this could not be done until the general medical service in the district was declared to be inadequate, and accompanied this statement with the threat that the Government and the Commissioners would take measures to prevent what he described as any attempt to break down the system contemplated by the Act.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of medical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list.

The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

NATIONAL INSURANCE.

REPORTS OF LOCAL ACTION.

LONDON.

LONDON MEDICAL COMMITTEE.

As the result of an interview with the State Sickness Insurance Committee on Wednesday, January 1st, reported elsewhere, the members of the London Medical Committee met at 429, Strand, on Friday, January 3rd, and resolved almost unanimously to start a vigorous campaign for the purpose of keeping the medical practitioners of London true to the pledge and of preventing the formation of panels under the Insurance Act.

The Committee resolved itself into subcommittees to deal with various departments of its work, appointing, for example, an Intelligence Subcommittee to keep in touch with and coordinate all work done, a Press Subcommittee, a Parliamentary Subcommittee, a Public Medical Service Subcommittee, and a Publication Subcommittee. The London members of Council were appointed a Special Committee with plenary powers to deal with questions of emergency. The work of the Subcommittees began at once and extremely good results have followed the efforts of the Public Meetings Subcommittee and of the Publication Subcommittee. Great enthusiasm prevails at meetings attended by speakers from the London Medical Committee, and many men resign from the panels after hearing the case properly explained to them.

PROTEST MEETING AT THE QUEEN'S HALL.

A mass meeting of medical practitioners, called by the Committee, was held on January 7th at the Queen's Hall, Langham Place, W., to consider the following resolution:

That this meeting protests emphatically against the unfair methods of intimidation employed by the Chancellor of the Exchequer for the purpose of coercing medical practitioners to serve on the panels under the Insurance Act, and is convinced that these methods cannot result in a service satisfactory to the insured person.

Sir Thos. B. Crosby, M.D., ex-Lord Mayor of London, presided and supporting him on the platform were Sir Bertrand Dawson, Sir Anthony Bowlby, Sir John Tweedy, Professor Howard Marsh, Mr. McAdam Eccles, Dr. G. Newton Pitt, Dr. Sidney Phillips, Dr. F. J. Smith, Mr. G. R. Turner, Dr. Ford Anderson, Dr. R. M. Beaton, Dr. M. G. Biggs, Dr. Buttar, Dr. A. E. Cope, Dr. D. H. Fraser, Dr. Major Greenwood, Dr. G. E. Haslip, Dr. T. A. J. Howell, Dr. Evan Jones, and Mr. C. B. Lockwood.

The body of the hall and the first gallery were used for the meeting and both were quite full. Before the speeches began patriotic tunes were played on the organ by Mr. Bess, and the proceedings throughout were very enthusiastic, the addresses being constantly punctuated with applause.

The Chairman, in opening the proceedings, expressed regret that the resolution before the meeting should be necessary. He would much rather put a resolution conveying the thanks of an honourable profession to the administrator of an important Act of Parliament, and he hoped that even yet this might come. It meant a great deal to the people of this country if the service rendered by the doctors was willing instead of reluctant.

Dr. P. C. Raiment, the Secretary of the Committee calling the meeting, stated that messages expressing sympathy with the objects of the gathering had been received from, amongst others, Sir Douglas Powell, the Chairman of Council of the British Medical Association (Dr. J. A. Macdonald), and Mr. T. J. Verrall, the Chairman of Representative Meetings. Mr. Verrall wrote to express his strong sympathy with the object of the meeting. This was to protest very firmly against the interference proposed under the National Insurance Act with the relations that had so long existed between many of the insured persons and their medical attendants. Whatever were in general the merits of a system of National Insurance, it was certainly incumbent in achieving a justifiable object to cause as little hardship and raise as little bitterness as possible. He could see no reason why the utmost facilities should not be given for the continuance of the present arrangements between

patient and doctor when these were shown to be efficient and desired by both parties.

A telegram was also read from the non-panel doctors of Cambridge heartily supporting the resolution, and from Barnstaple, stating that the report in the daily papers that North Devon men had joined the panel was incorrect.

Mr. E. B. Turner, in moving the resolution, said that although he was honoured in having the motion entrusted to him he was nevertheless filled with a sense of deep shame and humiliation that a gathering of a scientific and learned profession should be necessary to impugn the action of a State department and the conduct of a Minister of the Crown. In its final form the Insurance Act was obnoxious to a great majority of the profession, and disastrous and ruinous to many. Some of the most reasonable demands of the profession had been refused, not because that refusal was just or right, but simply as a matter of political expediency. The profession having expressed by large majorities its determination not to accept service, it became necessary for the Government to deal with the question of getting panels formed. In doing this it had relied upon a policy of intimidation, misrepresentation, and falsehood. Amongst the methods employed was the formation of the National Insurance Practitioners' Association, which met at a time when the verdict of the profession as to working the Act or not was still in the balance. Aided and countenanced by some of those whom members of the Association hoped were working with them, it was decided, without waiting for the authoritative verdict of the profession, to accept service freely and willingly under the Act. These gentlemen entered upon an energetic propaganda, and in the last few weeks politicians also had served out a great many untruths and half-truths to the press. The statement went out wholesale that the panels were filled at places where not a single man intended to go on, and all kinds of means were adopted to create feelings of apprehension. Bribery and corruption had been used; in one division the Insurance Committee had offered to distribute among the men on the panel any surplus available at the end of the first quarter. There had been downright intimidation in the way in which Insurance Committees had received deputations of medical men. Passing over all, like a malign comet, was the Chancellor of the Exchequer himself, with a daily lengthening tail of inconsistent statements, repudiated utterances, and promises unfulfilled, both to the insured and to the medical profession. The Chancellor's methods were those of the bludgeon and the pressgang, and, if it were not such a serious thing, it would be amusing to see this protagonist of modern democracy reverting to the methods of two centuries ago to compel a reluctant service. Mr. Turner alluded to the Chancellor's earlier condemnation of medical institutes, and contrasted it with his present threat to use them as a weapon against the profession, restricting them if the profession proved amenable, and permitting their unlimited extension by means of branches if opposition were continued. To the Advisory Committee the Chancellor insisted that assistants to doctors must be strictly limited in number, and that attendance must be mainly personal. He now stated, however, that where the panels were not complete the doctors who had gone on the list would be directed to engage any number of assistants, and the panel would then be closed. Looking at this matter from the point of view of the insured person, was it possible to obtain satisfactory service from men pressed into the work by the methods he had outlined? He said it was not. The Chancellor was perfectly right when he said that, in order to make the Act a success, there must be the whole-hearted and cordial co-operation of the medical profession. To discover whether that had been obtained it was only necessary to read the resolutions passed all over the country by the men who had been forced by dire necessity and against their wills on to the panels. Mr. Turner mentioned some of the examples that had come to his knowledge of attempts to secure medical benefit to the insured by inviting retired army medical officers and recently qualified men to put down their names for whole time services. As matters stood there would be good men on the panels, but there would also be the remainder. One of the results of the system would be to fix a great gulf between the private practitioner and

the insured person. The level of service in the insurance ranks would be the standard of the most poorly qualified men.

At the conclusion of Mr. Turner's speech there was great cheering, and the whole audience rose to its feet and sang "For he's a jolly good fellow." Mr. Turner briefly acknowledged the compliment before the next speaker was called upon.

Dr. Maenamara of Lewisham, in seconding the resolution, referred to his long struggles to make headway in the profession. He objected to the continual insults to his profession and to being made a State slave. Why should not the example of Southwark be followed in London generally? In that district the money for medical benefit had been paid into a pool, and the doctors were to be allowed to apportion it in their own way. As to the number of men on the panels, names had been duplicated and triplicated. If there were any present who had given in their names he urged them to recant.

Mr. W. McAdam Eccles, who spoke in support of the resolution, said the fight was for free choice of doctor for the insured person and for the honour of the medical profession. Mr. Lloyd George now denied what everybody thought was definitely settled—namely, that there was to be free choice of doctor by every insured person. The insured had been promised this in the plainest terms. In the official explanatory statement as to medical benefit issued on December 12th, 1912, it was stated that any insured person who desired might on application be allowed by the Insurance Committee to make his own arrangements, receiving a contribution towards the cost of treatment from the Insurance Committee. If that right was disallowed a test case must be brought before the courts for the sake of the insured. In spite of the alleged right of the doctor to refuse a patient not of his own choice, those who had gone on the panels had agreed to a clause in the agreements that they would accept "such other persons as were assigned to them."

Dr. W. H. Burnhill (Shepherd's Bush), who also spoke in support of the resolution, denied that the medical man's agitation was actuated by political motives, and proceeded to state that Mr. Lloyd George's methods were a disgrace to a Cabinet Minister. He said that one reason why the profession had lost the present fight was that some of its leaders had sacrificed their followers.

Dr. E. C. Montgomery-Smith (St. John's Wood) urged members of the profession not to resign from the British Medical Association, which was their own organization and would be urgently needed in the near future.

On the resolution being put to the meeting the whole audience rose to its feet and sang "Rule, Britannia," laying special emphasis on the last line: "Britons never shall be slaves." There was great cheering, renewed when, after having invited votes to the contrary, the Chairman announced the resolution to have been carried unanimously.

Dr. F. J. Smith proposed a vote of thanks to the Chairman, and expressed the hope that as a result of the meeting there would be a good many resignations from the panels. If they were sufficiently numerous in London they would render it impossible to work the Act.

Sir Thomas Crosby, in responding to the vote of thanks, which was carried with acclamation, mentioned that he had been a practitioner of medicine for over sixty years, and he accepted the invitation to preside because he believed he was one of the oldest general practitioners in the county of London.

The proceedings then terminated.

INSURED PERSONS AND FREE CHOICE OF DOCTOR.

A part of the campaign carried on by the London Medical Committee is the holding of public meetings of insured persons in various districts. On January 7th a huge and enthusiastic meeting was held at the public baths, Caledonian Road. In some introductory remarks, Dr. Wilson, who was in the chair, said that as doctors they did not want to say a word against the Act as an Act, but came to explain the medical sections of the Act, especially as they had reference to the insured person. The meeting was, he said, entirely non-political, as was proved by the fact that doctors of all shades of political opinion were on the platform. He then called upon Dr. Beaton, who explained the force of Clause 15, subsection (3), of the Act, the proviso under Clause 15 (2), and the Regula-

tions, combined with the answers of Ministers in the House of Commons. These, he said, showed that insured persons had a right to claim to be allowed to make their own arrangements and choose any doctor, whether he was on the panel or not. Dr. Sherry, Dr. Morison, Dr. Latham, Dr. Hands, and others emphasized the question of the free choice of doctor, and the following resolution was passed by an overwhelming majority of insured persons present:

That we, insured persons under the National Insurance Act, demand our right to choose our own doctors to attend and treat us, whether they be on the Government panel of doctors or not.

Legal Opinion.

The London Medical Committee has, we are informed, taken the opinion of eminent counsel upon the question of the validity of the agreements entered into by the medical practitioners who have gone on the panels, and counsel have advised that, although such agreements are legally speaking in order, no actions or other proceedings to compel performance of the agreements would succeed, and that actions for damages for breach of such agreements—that is, for failing or refusing to carry them out—would be ineffective because no damage flowing from such failure or refusal could be proved.

ALTERNATIVE SERVICE.

The London Medical Committee has formulated the following alternative scheme of conditions and terms upon which the medical profession in London who refuse to join the panel will agree to attend insured persons:

1. Free choice of doctor by the insured patient and of patient by doctor.

2. An income limit of £104 per annum and a radius of two miles, but permission may be given by Local Medical Committee to raise the income limit to £160 per annum if, in their opinion, this course should be adopted in their area.

3. All arrangements to be made through the Local Provisional or Public Service Medical Committees that are working this scheme.

4. A list of doctors willing to act will be drawn up for each borough council area, its publication to be left to the Public Medical Service Committee or the Local Provisional Medical Committee, as the case may be.

5. The arrangements made between Committee and insured persons or their agents shall be terminable by not less than three months' notice on either side.

6. Any complaints to be made in writing to the Secretary of the Public Medical Service Committee, which undertakes to deal with them in a fair spirit.

7. The remuneration shall be:

(a) A capitation payment of 6s. 6d. for ordinary attendance, and 8s. 6d. to include medicines and dressings. Such capitation fee shall not include the following:

Confinement. Miscarriage or illness resulting therefrom within one month.

Vaccinations.

Anaesthetics.

Operations requiring local or general anaesthesia.

Dentistry.

Special examinations—for example, Refractions, or ray, etc.

Tuberculous disease while in receipt of sanatorium benefit.

Extra certificates and reports.

Examinations and court attendance under workmen's compensation, employer's liability, and other statutes.

Should any Local Medical Service decide to admit insured persons as tariff fee members, under no circumstances should the fee charged per visit, whether with or without medicine, be less than 2s. 6d.

8. Each society shall supply at the commencement of each quarter a list in duplicate of the members it wishes each doctor to attend, and this list can be corrected on the first day of each of the succeeding two months; and at the end of each quarter the amounts due to the doctors shall be paid to the Treasurer of the Local Public Medical Service Committee or Local Provisional Medical Committee.

THE BOROUGH PANELS.

The London Insurance Committee has issued a table showing the number of the practitioners in the several metropolitan boroughs who have consented to act upon the panels. In an accompanying memorandum it is stated that the list of names was completed on the evening of January 6th, but that it will not be available for distribution until January 13th. It is admitted that

the total number of practitioners within one or two areas points to a considerable number of insured persons to be treated by each medical practitioner, but it is calculated that the average number of insured persons who will have the choice of selecting a doctor on the panel is, on the whole, just over 1,500 per doctor; so that, while in some cases the number of persons will exceed this figure, in other cases it is just possible the number may be less. It is difficult to see how this average has been arrived at since on the figures given in the table the number of insured persons to each doctor on the panel is 1,973. The Insurance Committee goes on to state that in addition to the doctors who reside in the County of London a large number living in the adjoining counties have accepted service under the Act, and have agreed to treat insured persons living near the boundary. It is stated that the number of doctors may, therefore, be increased by an additional 100. This gives a total of 859 doctors, which affords an average of 1,743 insured persons to each.

Such an average for an area so large and populous as London is not very informing, and it will be observed that there is a great difference between the proportions in the various boroughs.

It is stated that since the compilation of the list was completed on Monday many additional agreement forms have been received, and also that several practitioners residing in London have not yet determined the boroughs in which they wish their names to be entered. It is further stated that a comparison of the names with the map of London shows that medical practitioners are very evenly distributed throughout the county, particularly in the thickly populated districts.

An inspection of the figures does not in all cases bear this out. The assertion would appear to be correct for some of the poorer districts, in Greenwich, Woolwich,

Bermondsey, and Deptford, for example. It is certainly not correct in Lambeth, where the proportion is one doctor to over 2,000 insured persons; in St. Pancras, where it is 1 to over 2,400; in Islington, where it is 1 to 3,633; and in Hackney and Shoreditch, where it is 1 to over 5,000.

In the accompanying table the numbers in the columns headed "insured persons (approximate)," and "practitioners on panel," are those in the official list. We have added a third column giving the approximate number of registered medical practitioners in each borough.

COMMITTEE OF PANEL PRACTITIONERS.

A Medical Committee has been elected from the doctors on the panels in London. Its first meeting was held on January 7th, when officials were elected as follows:

Chairman, Dr. J. H. Keay (Greenwich); Deputy Chairman, Dr. Claude Taylor (Hampstead); Secretaries, Dr. B. A. Richmond (Rotherhithe) and Dr. Welby (Finsbury Park).

The following members were chosen to form, with these officers, the executive committee:

Dr. McBarney (Representing Chelsea, Fulham, and Hammersmith); Dr. Atteridge (Kensington and Westminster); Dr. Angus (Hampstead, Paddington, and Marylebone); Dr. Brenner (Finsbury, Holborn, and St. Pancras); Dr. Patel (Islington); Dr. Strong (City of London, Bethnal Green, and Shoreditch); Dr. Page (Hackney and Stoke Newington); Dr. Williams (Poplar and Stepney); Dr. Hogarth (Greenwich, Woolwich, and Deptford); Dr. Donnellan (Camberwell and Lewisham); Dr. Pring (Bermondsey and Southwark); Dr. Orchard (Lambeth); Dr. McMurtry (Battersea and Wandsworth); Dr. Ethel Bentham, and Dr. Elizabeth Adelaide Baker.

GREENWICH.

We have received for publication the following report from Dr. C. H. Hart, member of the London Medical Committee:

A meeting of medical practitioners in Greenwich was held at the Greenwich Borough Hall on Monday in last week to consider the position, but out of sixty-eight in the borough there was only an attendance of about twenty-five. On the motion to support the policy of the British Medical Association, as expressed in its resolution dealing with the proposed arrangements with friendly societies, the voting was 10 in favour of standing by the British Medical Association and 7 for joining the panel. A few practitioners not present had, however, intimated their intention of going on the panel, and although it was suggested that the minority might fall in with the majority they declined to do so, it being pointed out that many men inclined to join the panel would naturally be absent from the meeting, and therefore that the result of the vote was not a true indication of the general feeling. In the result it was decided to take no action. The meeting was presided over by Dr. E. G. Annis, Medical Officer of Health for the Borough of Greenwich, who did not vote.

As the result of a further meeting of doctors in actual practice resident in the district of Greenwich, Charlton, and Blackheath, held at the Cottage Hospital, Shooter's Hill Road, on Wednesday, and attended by nineteen medical men, the following statement has been issued:

"In view of the difference of opinion that now exists amongst the members of the medical profession (in actual practice) in the district, it is thought desirable to inform 'insured persons' and the public generally that all those doctors present at the meeting cannot consent to their names being placed on the panel by virtue of their having signed a solemn pledge with the British Medical Association not to act as medical officers under the Act until such time as the Government alter or mitigate the Regulations, and so render them acceptable, and not derogatory, to their profession as medical men. They regard (and are reminded by the British Medical Association) the solemn pledge that was taken in the early part of the year, and was signed by 27,400 practitioners, as still binding on them. They therefore feel that they cannot break their word of honour, for by so doing they would consider themselves unfaithful to the majority of their professional brethren who have worked and thought with them. They are standing by an 'Association' that has in the past been entrusted with their needs and requirements, and they feel sure that the public and 'insured persons' will understand their reason for not joining those of their profession who at the last moment have consented to work the Act. They believe that the public (for whose benefit the Act is to be administered) is with them, and will not consider their action

wrong in still remaining true to their word of honour and loyal to those who have fought so successfully from the beginning of the contest, in gaining certain concessions for them."

DEPTFORD.

A meeting of medical men practising within the metropolitan borough of Deptford, and determined to keep the pledges and generally to support the policy of the British Medical Association, was held at the residence of Dr. Walter Groome on December 28th, 1912. The situation was considered. As a result it was determined by every possible means to spread among insured persons a knowledge of the provisions contained in Section 15, Subsections 3 and 4, of the National Insurance Act. The statement, or "manifesto," which appeared in the BRITISH MEDICAL JOURNAL SUPPLEMENT of January 4th, 1913, was drafted and signed by twenty-four medical men practising in the borough.

At a second meeting held on December 31st, 1912, it was resolved that the twenty-five medical men present should form an association. Dr. C. J. Parke was elected chairman, Dr. Walter Groome treasurer, and Dr. C. P. Handson secretary. The manifesto issued at the previous meeting had already been published in the *Pall Mall Gazette*, the *Times*, and several other daily papers. It has now appeared in all the local papers with sympathetic editorial comments. It was resolved that reprints of this manifesto, with leaflets explaining in popular terms the attitude of the association, the notice to the Clerk of the London Insurance Committee by insured persons desirous of "making their own arrangements," as printed in the BRITISH MEDICAL JOURNAL SUPPLEMENT of January 4th, 1913, together with detailed directions for filling in and posting the form, should be distributed to every house in Deptford. It was hoped that this would have been accomplished before Tuesday, January 7th. Posters, similar to those used by the practitioners of Kensington, calling upon insured persons to make their own arrangements and demand free choice of doctor, adorn the hoardings in the borough. In addition to the house-to-house distribution, large numbers of the form of application for "contracting out" have been supplied by individual practitioners to their patients. For the preliminary expenses a levy was made on the members who signed the manifesto, and when the total expenses are known a further levy will be made.

The main idea underlying the policy is that the Insurance Committee should be simply inundated with requests for "contracting out," so that, if it has any regard for the popularity of the Act, it must feel compelled to concede the applications.

Secretaries of approval societies will be approached, and it is hoped to call a meeting of insured persons and to explain to them the advantages of the scheme supported by the British Medical Association.

HAMPSTEAD.

A meeting was held on December 30th, 1912, at 41, Belsize Park. Dr. Ford Anderson was in the chair, and sixteen members were present.

Treatment of Insured Persons.—A letter from the medical staff of the Kilburn Provident Medical Institute was read, asking the approval of the Committee to their scheme for treatment of its members who are insured persons. It was moved by Dr. Jessop and seconded by Dr. OPPENHEIMER:

That the Committee approve of the scheme.

This was carried unanimously. It was then moved by Dr. MacFadden and seconded by Dr. OPPENHEIMER:

That the Committee approve similar schemes by the Hampstead Provident Dispensary and the Court Abbey Foresters.

This was also carried unanimously.

London Medical Committee. Dr. PRITCHARD and Dr. ARCHER reported that action had been taken at the London Medical Committee held that afternoon. Details of the arrangements to circularize the practitioners concerned, with the aid of pamphlets and posters drawing the attention of insured persons to their ability to apply to the Insurance Committee to make their own arrangements, were discussed, and a subcommittee was appointed to draft a letter and make the necessary arrangements. The members of the subcommittee were Dr. Ford Anderson, Dr. MacFadden, Mr. Dorrell, and Mr. Archer. The

members present contributed 5s. each towards the expense.

Another meeting was held at an hour's notice on January 3rd at Frogna Park. Mr. ADAM OAKLEY was in the chair, and fourteen members were present.

Question about a Pamphlet.—Dr. PICARD asked the Honorary Secretary the reason why a pamphlet that had been objected to by the Committee had been issued. The Honorary Secretary explained that the printers had sent it without instructions, and it had been issued with the others by the typist in his absence.

Kilburn Provident Medical Institute.—A letter from Dr. Winslow Hall asking the Honorary Secretary to confirm his request that the Kilburn Provident Medical Institute should apply to become an approved institution, by writing to the Clerks to the Insurance Committees of London and Middlesex to that effect, was read. Whereupon Dr. MacFadden made the following statement: That at a meeting of the Committee of the Hampstead Provident Dispensary it was proposed that the institute become approved under the Act for the administration of medical benefit; that he pointed out that if this were carried it would involve the resignation of members of the medical staff, and that in such an eventuality the institute would not only lose the services of the staff as far as insured persons were concerned, but also as far as uninsured, and that it might be difficult for them to obtain the services of a staff at all. It was ultimately resolved to postpone the application for the present. Whereupon Dr. PRITCHARD moved and Dr. PICARD seconded, and it was carried *nemine contradicente*:

That the Hampstead Provisional Medical Committee inform the London Insurance Committee and the Middlesex Insurance Committee that the Kilburn Medical Provident Institute is prepared to accept insured patients who are allowed to contract out of their medical benefits under the following terms: 8s. 6d. per annum inclusive of medicine; income limit of £2 per week; and treatment as indicated by the enclosed rules.

Whereupon Dr. OPPENHEIMER moved and Dr. ARCHER seconded, and it was carried *nemine contradicente*:

That the Honorary Secretary be instructed to send Dr. Winslow Hall a copy of his letter to the Clerks of the Insurance Committees, and to inform him that this Committee does not approve of the Kilburn Provident Medical Institute applying to become an approved institution.

London Medical Committee.—The Committee then proceeded to discuss the means of carrying on the campaign of the London Medical Committee in Hampstead. A campaign fund was started, and £33 10s. was collected from members of the Committee, and it was agreed that the Honorary Secretary should send out a circular letter for subscriptions. It was moved by Dr. PRITCHARD, and seconded by Mr. ARCHER, that public meetings should be held as early as possible, and, on this being carried, it was arranged that two meetings should be held—one for the district of Hampstead and Fleet Road and the other for West Hampstead and Kilburn. Two subcommittees were appointed to carry out the details, one for each district. The subcommittee for Hampstead to consist of Dr. Ford Anderson, Dr. Jessop, and Dr. MacFadden; that for West Hampstead of Dr. Pritchard, Dr. Picard, and Mr. Archer; the Honorary Secretary being *ex officio* on both. A meeting of the profession was also arranged to be held on Thursday, January 9th, at 5 o'clock, immediately after the Divisional meeting.

Vote of Thanks.—A vote of thanks to Mr. Ware for entertaining the Committee was passed unanimously.

PROTEST OF A LIBERAL DOCTOR.

We have received the following letter for publication:

134, Mortimer Road, Kensal Rise, N.W.,
Jan. 5th, 1913.

Dear Mr. Hawkins,

I deeply regret that I am compelled to withdraw from the position of Vice-President of the Kensal Rise and Brondesbury Park Liberal Association, and to sever my connexion with the Liberal Party. I am driven into this position by the present Government forcing through Parliament a crude and unjust Act to the medical profession, and still further an Act that will prove highly detrimental to the public and will be a positive danger to the national health. From my experience in this neighbourhood during the past twenty years with private practice and club work, I am in a position to state that club work is most unsatisfactory both to the public and

medical profession, being literally nothing else but charity or sweated work.

The Insurance Act was rushed through Parliament without due consideration or arrangement with the parties most concerned, with the natural result that a complete deadlock has occurred. The cause of our dissatisfaction is that we have relied upon our private patients for our income, and have added a little club practice by way of charity. Now, under this Act, most of our paying patients are changed into club patients, for whom we may get a possible 1*l.*d. per week, though not guaranteed, with the consequent extra work. Under these new conditions our income will be so lessened that to earn the same amount we shall have to work from twice to three times as hard, and cannot possibly give due consideration or properly diagnose the ailments of the State patients, and at the same time be harassed by numerous officials who will be receiving the money that ought to be paid to the doctors.

As a Liberal medical man I protest against this despotic legislation, and shall stand aloof from the party that promoted it. Thanking you for the great courtesy I have received from yourself and the whole of the party in the past,

I am, dear sir,

Yours truly,

THOS. E. SMURTHWAITE.

MIDDLESEX.

THE PANEL IN THE HARROW DISTRICT.

Dr. A. H. WILLIAMS (Harrow) writes under date January 7th:

I think it due to my colleagues in this district to explain our present position.

Yesterday (Monday) afternoon, some hours after the official closing of the panel "for the last time," we, the practitioners in Harrow, Wealdstone, Wembley, Stanmore, and Pinner, found ourselves in the position of being the only district in Middlesex in which no panels had been formed. Not one single man had given in his name from these areas. We had been left in glorious isolation by all our neighbours.

We were threatened by the Insurance Committee with the planting in our midst of a number of whole-time officers, who, in addition to attending the insured, would be able to undersell us in the attendance on uninsured persons, and who would be maintained by the Committee for a period of years. We recognized that this could easily be done with the whole force of the County Committee directed against one isolated district, which contained only some thirty-three practitioners.

Left for the time being without any sort of support from outside, we felt that we must, for the time at any rate, retreat from a position which had become untenable. If we persisted in our isolated resistance, it meant disaster, and even ruin, to some of those doctors who had stood loyally by us at grave risk to themselves. We therefore held further meetings, and decided that it would be advisable, as a tactical measure, to form panels temporarily in this district. Such an intimation was sent to the Insurance Committee, who accepted the position, even though the panels had been officially closed for some hours.

Recognizing the magnificent loyalty of those practitioners who had stood out valiantly till the last, but in the end found that they must go on the panels or starve, we felt that it would be a poor return for their splendid loyalty to leave them to form panels alone, and thus to allow any one to point the finger of scorn at them as being the doctors who were too hard up to stand out. The offer was therefore made by some of the senior practitioners, who would not otherwise have gone on the panels in any case, to take part with them in their detested sacrifice.

To-day we hear that men are dropping off the panels at Willesden, Hendon, and other districts round us. Why had this not been done before? Had we received any support from other parts of the county we could have felt justified in continuing an unbroken resistance. We must now have something more definite than reports that others are going off the panels they have so lightly joined, before we can feel any confidence in sufficient support from our neighbours to enable us to go back to the position of yesterday. Without that confidence we feel that the retreat we have made is the only thing that could give us a reasonable chance of success in the fight which we intend to continue at the earliest opportunity.

We feel that we have been grievously deserted by the rest of the county. If we could stand out till after the "final" closing of the panels, why could not others? We had felt bound by our pledges, but when we were deserted

on all sides and stood alone, who could consider the undertaking any longer binding?

SALFORD.

SCHEME OF MEDICAL BENEFIT.

Special attention has been drawn to the scheme for the administration of medical benefit which has been adopted in Salford, because it is held to approach more nearly to the requirements of the profession than other schemes adopted in the rest of the country.

The original demands of the Salford Provisional Medical Committee, though they were received sympathetically by the Insurance Committee, were not accepted by the Commissioners, because they involved a suspension of some of the Regulations. Salford was, however, fortunate in having on the Insurance Committee several members, notably the chairman (Alderman Huddart), the clerk (Mr. Jackson), and the medical officer of health Dr. Tattersall, who evidently realized the difficulties that would arise if it were found necessary to introduce a salaried service. Accordingly, they set themselves to devise a scheme which would embody as much as possible of what the profession desired, while keeping within the provisions of the Act and the Regulations. It is estimated that there will be about 70,000 insured persons in Salford, and that about 35 doctors would be required. Down to Saturday, January 4th, only about 18 practitioners had replied to the invitation of the Insurance Committee, expressing their desire to negotiate with a view to joining the panel, and 4 of these had afterwards withdrawn. As soon as possible after the interview between the Commissioners and the chairman and clerk of the Insurance Committee, the practitioners who still wished to join the panel were summoned to meet the Medical Subcommittee of the Insurance Committee. The meeting took place on the evening of January 4th, and the scheme given in detail below was then submitted. After some explanations it was at once accepted, the feeling being expressed that it was probably the best possible under the circumstances. It was also stated that the Insurance Committee would feel compelled, though with great reluctance, to advertise for salaried medical officers if a sufficient number of practitioners did not accept the scheme before the evening of Monday, January 6th. The practitioners present expressed their anxiety to avoid this.

A further conference was held on Sunday morning, January 5th, between the Insurance Committee and the Provisional Medical Committee, and again the scheme received unanimous approval. A general meeting of the whole profession was then summoned by telephone and messenger for Sunday afternoon. The meeting was very largely attended, and, after the whole position had been explained, it was resolved *unanimously* to adopt the scheme and to advise all general practitioners to enter their names on the list as a provisional agreement until the end of April, details as to the scale of fees being left for subsequent arrangement. The following is the official text of the scheme, and up to Tuesday night over 100 practitioners had accepted, which is considerably more than the whole of those resident in the borough itself.

Salford Scheme.

The Salford Insurance Committee are prepared to adopt, until April 30th, the following arrangement for the provision of medical benefit, in accordance with the Act and the Regulations:

The Committee undertakes that the total sums available for medical attendance and treatment, namely, the quarter's portion of the annual 6*s.* 6*d.* per head for each insured person, and of the 6*d.* per head for domiciliary treatment of insured persons suffering from tuberculosis, shall be distributed among the doctors giving medical treatment and attendance to insured persons in accordance with the scale of fees to be settled by a representative Committee of those doctors—or shall be handed to the Committee of those doctors to be by them distributed amongst the doctors in that way.

The amounts available shall be the total amount for which the Committee shall be responsible to the doctors, and each doctor must give an undertaking that he will not make any claim against either the Committee or an insured person for higher remuneration, or bring any action in respect of it.

If the total amount is insufficient to meet all the charges

of the doctors in accordance with the scale, there will be a *pro rata* reduction made in the charges.

The doctors must make an arrangement among themselves by which every insured person in the area shall receive adequate medical treatment and attendance.

The sum of 2s. per head for each insured person available for drugs and medical appliances shall in like manner be ascertained for each area, and so much of it as is assignable to the doctors for supplying drugs and medical appliances shall be distributed among them according to a scheme to be settled by the before-mentioned representative Committee, and the remainder of the fund shall be distributed in accordance with Regulations 43 and 45.

Each doctor shall undertake to give to the persons attended by him such certificates as are necessary to enable them to establish their claim for sickness and disablement benefit, and to keep a day-book in the form already settled by the Commissioners to be provided by the Committee.

Disputes to be referred to the Medical Service Subcommittee described in the Regulations. The doctors' names to be published in the first list, and their consent to this publication is to indicate their acquiescence in the arrangement above described.

MANCHESTER.

SCHEME FOR MEDICAL BENEFIT.

With regard to the provision of medical benefit under the Insurance Act, matters had arrived at a very critical stage in Manchester on Sunday last. The Insurance Committee had advertised for salaried officers, but it was at the same time announced that it was open to any practitioners to join the panel up to 10 a.m. on Monday, when the list was to be closed. At the general meeting of the profession on Sunday evening it appeared that the position was that if the panel proved to be sufficient, those doctors who refused to join it were in danger of losing any share in the treatment of the insured, while if the panel were insufficient, the whole of the resident practitioners would suffer through the introduction of strangers. It was reported to the meeting that an agreement had been reached in Salford, and the Salford scheme was explained by Dr. Pinder, the Chairman of the Salford Medical Committee. He said that under the Salford scheme (1) there was no signed contract, (2) there was no panel, but for the convenience of patients a list of doctors willing to give attendance under the scheme; (3) there was absolute free choice of doctor with payment for work done, so that, although all disputes were to be referred to the Medical Service Committee described in the Regulations, all risk of disputes would be done away, and the attendance on the insured would be conducted on the basis of private practice, (4) It would be possible for any doctor to arrange beforehand with any insured person for the payment of any higher fees that might be agreed between them (see par. 2 below). The Chairman of the Manchester Insurance Committee was communicated with and asked whether an arrangement similar to that of Salford could be made in Manchester. The Chairman of the Insurance Committee was not in a position to give a definite reply without consulting his committee, but he arranged for a meeting of that committee for 9 a.m. on Monday. The Commissioners were then communicated with, and a conference was arranged for Monday evening. It was stated that the Insurance Committee had received more than sufficient applications to form a salaried service, and that it was considered that in point of numbers the number of practitioners who had expressed their willingness to form a panel would have sufficed to attend to the 240,000 insured persons in the area. At the conference held on Monday evening there were present Mr. Claude Schuster, secretary of the English Commissioners, who came specially from London, Mr. W. Davies (Chairman), and Sir Charles Behrens, representing the Insurance Committee, and Dr. Helme and Dr. McGowan representing the doctors. The Chairman and Clerk of the Salford Insurance Committee and Dr. Hodgson (Secretary of the Salford Medical Committee) were also present to explain the Salford scheme. The Insurance Committee and the Commissioners seemed to realize that if an amicable arrangement could be arrived at, whereby a whole-hearted service of the profession, instead of a limited service from those willing to serve on the panel, its acceptance would be in the interests of the insured no less than of the doctors.

The following is the scheme arranged provisionally for three months:

Manchester Scheme.

The Manchester Insurance Committee are prepared to make the following arrangements with the doctors for the provision, in accordance with the Act and Regulations of the Commissioners, for medical benefit to insured persons in their area, and domiciliary treatment of such persons suffering from tuberculosis.

1. The committee will undertake that the total sums available for medical attendance and treatment—namely, 6s. 6d. per head for twelve months for each insured person, and the 6d. per head for twelve months for the domiciliary treatment of insured persons suffering from tuberculosis, shall be ascertained, and the total sum shall be pooled and distributed among the doctors giving medical treatment and attendance to insured persons in that area in accordance with a scale of fees or remuneration to be settled by the Manchester Insurance Committee and a committee of doctors selected by the doctors practising in this area who undertake to give the service.

2. The total sum available shall be the limit of the liability of the Insurance Committee (except for drugs and medical appliances), and each doctor accepting service must give an undertaking that he will not make any claim or bring any action against an insured person or this Insurance Committee for additional payment.

3. If the total pooled is insufficient to meet all the proper charges of the doctors in accordance with the scale, there will be a *pro rata* reduction for each doctor, and if it should be in excess of the amount required the balance will be distributed equitably at the discretion of the doctors in the list.

4. The account of each doctor for fees or remuneration shall be submitted to the committee of doctors, who must examine it and certify the amount of the account as passed by them, and then send the account to the Insurance Committee for payment out of the fund in accordance with the last preceding clause. The committee of doctors shall have power to reduce or disallow any item of an account submitted to them.

5. The doctors must undertake to afford such medical attendance and treatment as is required by the Regulations of the Commissioners to every insured person within the area to the satisfaction of the Insurance Committee, and, also subject to the conditions of Regulation No. 51, to old and disabled members of friendly societies. Every insured person shall have the free right to arrange with any doctor among those accepting service in the area to attend him during the continuance of this scheme. The committee of doctors shall arrange to the satisfaction of the Insurance Committee for medical attendance and treatment to be given to any insured person who has not made an effective selection of a doctor.

6. The sum of 2s. per head for each insured person available for drugs and medical appliances shall in like manner be ascertained, and so much of it as is assignable to the doctors for supplying drugs and medical appliances shall be distributed among them according to a scheme to be settled by the Insurance Committee and the before-mentioned committee of doctors, and the remainder of the fund shall be distributed in accordance with Sections 43 and 45 of the Regulations made by the Insurance Commissioners.

6a. The figures before given are for twelve months, but as this scheme is intended to be provisional for the quarter commencing January 15th, 1913, the sums available for distribution must be divided by 4.

7. Each doctor shall undertake to give to the persons attended by him such certificates as are necessary to enable them to establish their claim for sickness and disablement benefits or to stop such benefits, and to keep a day-book in the form already settled by the Commissioners, and to be provided by the Committee.

8. All necessary forms of certificates will be supplied by the Insurance Committee.

9. Any dispute arising under this scheme shall be determined in manner provided by the regulations 52, 53, 54, 55, and 56.

10. This scheme is a tentative one for the quarter commencing January 15th, 1913, and the Insurance Committee will be prepared after that date to discuss with the committee of the doctors who accept service any suggested amendments (not involving an infringement of the Act or the regulations of the Insurance Commissioners or increased payments) which circumstances may be considered to make desirable.

11. Each doctor desiring to accept service under this scheme must send a notice to that effect to the clerk to the

Manchester Insurance Committee not later than noon on January 10th, 1913.

The acceptance of service will be treated as provisional for the period ending April 14th, 1913, and any doctor selling his practice or removing from the area shall be released from this arrangement on the expiration of one month from the date of notice to that effect given to the Insurance Committee.

There was further an understanding that the Insurance Committee would provide the necessary clerical staff.

The form of notice to be given to the Insurance Committee by a doctor joining the scheme is as follows:

National Insurance Act, 1911.

I, the undersigned, being a registered medical practitioner, am prepared to treat insured persons in the area of the Manchester Insurance Committee until April 14th, 1913, on the terms set out in the Scheme accompanying the circular letter of the Clerk to the said Committee, dated 7th day of January, 1913.

Particulars of my address and days and hours of attendance are given below:

Private address

.....

Days and hours of attendance (.....
thereat (.....
.....

Address of surgery, dispensary, or other place at which I shall be prepared to attend for the purpose of treating insured persons

.....

Days and hours of attendance (.....
thereat (.....
.....

(Signed).....

The Chairman of the Manchester Insurance Committee (Mr. Davies) said that the arrangement had been entered into by Mr. Schuster as representing the National Insurance Commissioners, by Dr. Helme and Dr. McGowan as representing the doctors, and by himself and Sir Charles Behrens as representing the Manchester Insurance Committee. The panel as a panel would not exist because now the door was thrown open to every doctor in Manchester.

The scheme is understood as being identical with that accepted in Salford.

ADMINISTRATIVE COUNTY OF LANCASHIRE.

A scheme for medical benefit which more nearly resembles the Manchester than the Salford scheme, though differing from both in some respects, has been adopted by the Insurance Committee for the administrative county of Lancashire, and was submitted to a meeting at Preston on January 6th, attended by about 120 medical practitioners from various parts of the county. The following resolution was, it is stated, adopted at this meeting:

That the scheme submitted is, in the opinion of the medical men present, one that is likely to be accepted by the medical profession in Lancashire.

The administrative county is divided provisionally into twenty-three districts and the total moneys available for each district are to be pooled for the district, the committees of doctors themselves in each district settling the scales of fees. As in Manchester, the accounts of each doctor must be examined and certified by the committee of doctors and the distribution made by the Insurance Committee. The doctors undertake to give such treatment "as is required by the Regulations" without the definite stipulation of the Manchester scheme that it must be "to the satisfaction of the Insurance Committee." The provision as to free choice of doctor is exactly as in the Manchester scheme, and the distribution of patients who make no choice or are refused is left entirely to the committee of doctors. The question of mileage in some of the sparsely populated rural districts is mentioned, but left for future arrangement between the Commissioners, the Insurance Committee, and the committees of doctors. There is the same provision as in Manchester that at the end of the three months the Insurance Committee will discuss amendments suggested

by the doctors, provided that they do not involve any infringement of the Act or the Regulations, or any increased payment. An important addition is made which is not in the Manchester or Salford schemes, that any doctor may withdraw his acceptance if he gives one month's notice before the end of January, and in such case his remuneration shall be of such amount as the committee of doctors may determine.

LIVERPOOL.

THE PLEDGE AND THE PANEL.

Medical opinion in Liverpool seems to have been greatly influenced by a threat attributed to Mr. Lloyd George of making a special case of Liverpool, and introducing from outside some 200 medical men. At a meeting of the Provisional Medical Committee held on Saturday, January 4th, the following resolution was adopted by fifteen votes to twelve:

We, the Liverpool Provisional Medical Committee, can no longer justly condemn those of our fellow practitioners who have hitherto loyally supported the British Medical Association, and are now compelled by force of circumstances to join the panel in order to save themselves from ruin.

When this became known, a meeting of general practitioners was summoned for Monday. The chair was taken by Dr. James C. Baxter of Everton, and Dr. McFall acted as secretary. The chairman said that it had not been intended to call such a meeting until after the Representative Meeting of the British Medical Association summoned for January 17th, but he had information from an official source that the Government intended at all cost to establish its scheme in Liverpool, and was, in fact, prepared to place 200 men there. He had no doubt at all about the correctness of the information. Further, it was known that a number of medical men in the city had decided to go on the panel. A meeting had taken place between the Emergency Committee, of which he was a member, and the local committee of the British Medical Association on Saturday, when it was thought better that the Emergency Committee should summon a meeting. The crisis had been brought about by the Chancellor of the Exchequer, who had given instructions to close the panel on January 15th. He concluded by pointing out that any arrangements which might be come to were provisional for three months. In reply to a question whether the action of the Liverpool Provisional Medical Committee had exonerated the members from their pledge, he stated that that was a matter for each individual to determine for himself.

Dr. J. E. O'Sullivan protested that nobody could absolve from the pledge save the Association, and that the resolution of the Provisional Committee was merely an expression of opinion, and could not be interpreted as a suggestion that men were absolved from their pledge. He contended that the meeting of the Provisional Medical Committee on Saturday was irregular, as the business taken was not stated on the summons. He believed that the statement with regard to 200 doctors ready to be brought into Liverpool was bluff.

Dr. Hughes stated that though the threat was coercive he believed that it had been made, and the Chairman said the person who made it was a representative of the Commissioners.

Dr. Dubourg said that though he felt that the profession owed a great debt of gratitude to the British Medical Association, he had in the circumstances placed his name on the panel.

In the course of further discussion Dr. Sugden, as the seconder of the resolution at the meeting of the Provisional Medical Committee, said that the resolution was passed not as binding on members of the profession or as freeing them from their pledges, but merely as an expression of the opinion of the meeting that men who went on the panel through stress of circumstances could no longer be blamed.

The following resolution was put to the meeting and carried by 60 votes to 27:

To confirm and adopt the action of the Liverpool Provisional Medical Committee so as to make it possible for men to take up a position on the panel in Liverpool without being held to have infringed upon their honourable undertaking to the British Medical Association.

CHESHIRE.

An emergency meeting of the Provisional Local Medical Committee for the County of Cheshire was held at the Altrincham Hospital on January 5th. Dr. GARSTANG in the chair.

It was resolved that the action of the Secretary in summoning the meeting in emergency be approved. Information was laid before the meeting that the terms submitted by the Committee to the County Insurance Committee on the previous Monday had been rejected by the Commissioners who had instructed the Insurance Committee to fill the panels, and failing that, to advertise for whole time officers. The Insurance Committee had been further promised by the Commissioners an ample supply of doctors if their advertisement failed to secure enough. This information was thoroughly authentic. After a keen discussion it was resolved:

That under strong protest and absolute compulsion the practitioners of Cheshire should agree to accept service on the panel.

Further it was resolved:

That the Chairman and Secretary be empowered to act for the Committee until the next meeting.

These resolutions and this concession were communicated to each doctor in the administrative county.

On January 7th Dr. Garstang and the Secretary attended at the meeting of the Cheshire Insurance Committee. They were asked to explain the Stockport, Macclesfield, and East Cheshire scheme (National Medical Union scheme) to the Medical Benefit Subcommittee.

At the general committee Dr. GARSTANG suggested the capitation method of payment for the first three months, and also put in a plea for the consideration of the above scheme. The Insurance Committee resolved accordingly that for three months payment should be by capitation and that the National Medical Union scheme should be considered as an optional alternative method by which an insured person could receive his medical benefit and at the same time provide it for his dependants.

In response to an urgent request which had been telegraphed to the Commissioners on January 4th, a reply was received on January 6th, agreeing that provided the doctors collectively indicated that when released from the obligation of the pledge they would be willing to serve, the actual signing of agreements might be postponed to the day after the Representative Meeting.

Dr. C. ADOLPHE K. RENSHAW (Sale) writes under date January 7th: Yesterday the Provisional Local Medical Committee for the County of Cheshire passed the following resolution:

That under strong protest and absolute compulsion the practitioners of Cheshire should agree to accept service on the panel.

These last shots in a rearguard action—fought in order to take up a stronger strategic position after faulty leadership had led to one quite untenable—were, I am convinced, unnecessary.

The profession combined and organized will be far more formidable manœuvring within the confines of the Act than by remaining outside. The German doctors obtained all their great victories after the Insurance Act came into action.

Every statesman will readily recognize that the simple concessions now needed are for the benefit of the nation, and that a profession harried by night work, vexations, demands, and mileage could not accomplish the result professedly aimed at by the author of the Act—the improvement of the health of the working classes.

But the methods needed to obtain such concessions must be diplomatic, there is no need to descend to the level of a trades union strike.

I repeat now what I wrote over a year ago on my return from Germany: "The Invalidity Insurance Bill now before this country, with all its faults, contains a germ from which may develop lasting good both to the community and to the medical profession."

BERKSHIRE.

A meeting of the medical practitioners living in the county of Berkshire was held in the Hospital Library, Reading, on January 3rd. Dr. HOLDEN was in the chair, and some thirty-five others were present. The meeting

proceeded to elect a Local Medical Committee for the county with regard to the National Insurance Act. Six names of men resident in the county but outside the Reading Division had been received from the Oxford and Maidenhead Divisions for North-west and East Berkshire respectively.

It was then proposed by Mr. NAPIER JONES and carried that the committee should consist of thirteen men, including a chairman and secretary, with power to co-opt two others, making a possible total of fifteen. The committee was elected as follows:

| | |
|---|---------------------------------|
| Dr. Gordon Paterson, Ascot (Chairman) | Dr. W. J. Susmann, Henley |
| Mr. J. H. Joy, Bradfield (Secretary) | Dr. C. S. Patterson, Hungerford |
| Mr. P. Napier Jones, Sandhurst and Crowthorne | Dr. G. M. Munro, Maidenhead |
| Mr. T. B. Bokenham, Wokingham | Dr. Elgood, Windsor |
| | Mr. A. C. Birt, Abingdon |
| | Dr. C. R. Scott, Wantage |
| | Mr. D. G. Kennard, Faringdon |
| | Mr. W. B. Nelson, Wallingford |

At 4 o'clock, the Reading practitioners having joined, the meeting became an ordinary Division meeting. The minutes of the last Division meeting having been read and confirmed, the CHAIRMAN (Dr. Holden) stated that the profession in Reading was in a serious position. He pointed out that the Reading Insurance Committee were about to seek whole-time medical officers to treat insured persons and be allowed to practise privately in addition. There were 25,000 insured persons in the borough for whom the Insurance Committee would attempt to provide seven or eight doctors.

Mr. WALTERS thought the profession had been beaten and must do its best under the circumstances. He much regretted the Representative Body could not meet immediately to release men from their pledges. Dr. G. C. TAYLOR, who had been adviser to the County Insurance Committee, made the statement that there were 60,000 insured persons in the county, and that 25 medical men had joined the county panel. It was gratifying to observe that only three of these on the panel belonged to the Reading Division, two being at Pangbourne and one at Newbury. He pointed out that the moneys set aside for providing domiciliary treatment of tuberculosis would be transferred on January 15th. to the fund for providing medical benefit. Mr. N. H. JOY could only advise one thing—that men should put their names on the panel. He spoke with deep feeling, voicing the sentiments of the majority present. He thought the profession, and especially the Reading Division, had fought honourably and well—that they should admit defeat and take it like men. They had not been beaten by fair methods. He spoke well of the fair-mindedness of Mr. Bate, chairman of the County Insurance Committee.

Mr. P. N. JONES (Representative at Representative Meeting) stated that the Representative Body had practically granted power to each Division to choose for or against going on the panel, but that the pledges were not formally absolved. He thought they should look after the insured persons to the best of their ability, and keep strange doctors out if possible. He thought that with care they might get the Act amended.

Dr. ABRAM then fully explained the state of affairs in Reading. He read the letter sent to the Secretary, and the advertisement prepared for whole-time officers by the Insurance Committee. He agreed with previous speakers that as the majority of the Divisions of the Association had given way to the economic pressure brought to bear upon the profession, further resistance would be unwise in the interests of the junior members of the profession. On these grounds he proposed the following resolution:

That the Local Medical Committees be empowered to make provisional arrangements with Insurance Committees to treat insured persons (declining to go on the panel if such course be found possible), but in any case only agreeing to work the Act for three months.

This was seconded and amended by the addition of the words:

"These arrangements to be subject to the subsequent release from our pledges by the British Medical Association."

This motion, after being spoken to by Drs. GULDBING, S. GILFORD, and C. S. PATTERSON, was put to the meeting, and the vote taken by closed ballot resulted in 54 in favour, 2 against, 2 not voting.

Acting upon this motion the County Medical Committee left the meeting to confer forthwith with a County Insur-

ance Subcommittee in the Hospital board-room. They returned after an absence of some three-quarters of an hour to report the Insurance Committee could not agree to any arrangements being subject to release from the pledge. It was then proposed by Mr. WALTERS, seconded by Mr. N. H. JOY, and carried by 27 votes to 4:

That in view of the urgency of the situation the members of this Division collectively release individual practitioners from their pledges.

Further, it was proposed by Mr. P. NAPIER JONES, seconded by Mr. A. THOMPSON, and carried unanimously:

That the Local Medical Committees for the county of Berkshire be authorized to guarantee an adequate list of medical practitioners to attend insured persons for three months under the Act.

BRIGHTON AND HOVE.

We have received the following report for publication from Dr. Rowland Fothergill, who is, we understand, honorary secretary of a committee formed at the meeting here reported:

A meeting, convened at very short notice, was held at the Oddfellows' Hall, Queen's Road, Brighton, on January 6th, of those medical practitioners who had not sent in their names as willing to serve on the East Sussex and Brighton panels, and who resided and practised in Brighton and Hove. Over forty-eight were present. Dr. H. Gervis was elected Chairman, Dr. E. HOBHOUSE consenting to act during his absence.

Mr. J. TUNROX proposed the following resolution and rider, which were carried unanimously:

That this meeting of medical practitioners resident in the county borough of Brighton and the administrative area of East Sussex, who have not accepted service under the National Insurance Act, protests in the strongest possible manner against the coercive methods applied by the Government to those of their professional brethren who have been driven by their necessities to accept such service under regulations to which they object. Such coercive methods are unworthy of the Government of a free country, are not calculated to promote the formation of an efficient medical service, and are, therefore, inimical to the best interests of persons insured under the National Insurance Act.

That a copy of the above resolution be forwarded to the Prime Minister, the Chancellor of the Exchequer, the Leader of the Opposition, and members of Parliament for Brighton and East Sussex.

Dr. HOBHOUSE proposed the following resolution, which was carried unanimously:

That this meeting of registered medical practitioners is unable to consider the question of placing their names on the panel until such time as they are relieved of their pledged word, or until the policy of the British Medical Association has been adopted by the Insurance Committees for the county and county borough areas.

It was the very strong opinion of the meeting that, having pledged their word to the Association, it was quite impossible to consider any conduct that would mean breaking a pledge on which the Association had depended throughout the campaign of the last eighteen months for any success at this moment. The meeting decided to send a copy of this resolution to the Insurance Committees for the county and county borough.

To Improve the Act.

Dr. HELEN BOYLE proposed the following resolution, which was carried by forty-seven to one.

That the registered practitioners present pledge themselves individually to use every possible means to strengthen the organization of the medical profession through the British Medical Association with a view to obtaining later, through an amending Act, such improvements of the National Insurance Act as will tend to make that Act a real benefit to the community, and one that will secure the corbal co-operation of the medical profession.

In order to carry this resolution into effect it was determined to elect a committee from those present, who were also given power to act generally on behalf of the meeting. The committee elected consisted of Drs. Helen Boyle, A. H. BUCK, Gordon DILL, E. Rowland FOTHERGILL, V. T. GREENYER, H. GERVIS, E. HOBHOUSE, Rivaz HUNT, G. HOWE, T. JOHNSTON, Louisa MARTINDALE, J. MARTINEAU, A. J. OWEN, R. J. RYLE, and R. WHITTINGTON. The committee met subsequently and adopted two resolutions, which it was decided to have placed on the agenda of the Representative Meeting of the British Medical Associa-

tion to be held on January 17th, which has been called to consider the question of the desirability of releasing members of the profession from their undertakings and pledges in connexion with the National Insurance Act, and, further, to consider the situation created by the attitude of the Government towards the decisions of the Representative Body.

HASTINGS.

We have received the following letter from the Provisional Medical Committee of the Hastings Division:

29, Cornwallis Gardens, Hastings,
January 7th, 1913.

Sir,

In the interest of the general public, we hope you will publish the following correspondence, as showing how very anxious the National Insurance Commissioners are to establish a representative list of doctors and to secure free choice for both doctor and patient in the various insurance areas as set forth in the Act.

We were not invited by the Committee either to modify or discuss the scheme. The fact that they decided to keep the panel open till 3 p.m. the following day speaks for itself.

We understand that the Insurance Committee overruled a suggestion that we be invited to discuss any details that did not conform to the Regulations.

The scheme suggested had the whole-hearted co-operation of practically every doctor in the borough. In this way every insured person could have had the doctor of his choice.

Yours faithfully,

H. G. L. ALLFORD, Honorary Secretary.

OTHO TRAVERS.

WILLIAM DAUNT.

HARRY GABB.

Percy Idle, Esq., Secretary Hastings National Insurance Committee.

Dear Sir,

We submit the following for the consideration of your Committee:

The arrangement to be provisional for three months only from and including January 15th, 1913.

All available money to be pooled, and bills for medical attendance to be sent in to the Insurance Committee. Should the funds be inadequate to meet the bills they shall be paid *pro rata*.

Charges to be 2s. 6d. per consultation or visit within two miles of the doctor's house, including medicine. We waive the question of £2 a week limit.

Confinements, operations, etc., to be paid for as per the enclosed schedule taken from the Public Medical Service scheme.

Limitation of Benefits.—Subscribers shall not be entitled in consideration of their ordinary subscriptions:—

1. To medical service in respect of any of the following matters, except upon payment by the patient of the fees specified in the following minimum table:—

| | £ | s. | d. |
|---|---|----|----|
| (a) Confinements "within two miles" ... | 1 | 0 | 0 |
| (b) Miscarriages | 0 | 10 | 6 |
| (c) Vaccinations | 0 | 3 | 6 |
| (d) Fractures | 0 | 10 | 6 |

(and upwards)

(e) Dislocations (at discretion of attendant)

(f) Consultations: Ordinary attendant ... 0 5 0

Consultant (at discretion of consultant)

(g) (1) Administration of gas ... 0 5 0

(2) Administration of general anaesthetic ... 0 10 6

(and upwards)

(h) Night visits—that is, visits made between 8 p.m. and 9 a.m., in response to calls received between these hours ... 0 2 6

(i) Special visits—that is, visits made in response to, and on the same day as, calls received after 10 a.m., at the desire of the subscriber ... 0 1 0

(j) Certificates, other than lunacy, except those which may be necessary for placing an insured person on, or removing him from, sickness or disablement benefit ... 0 1 0

(k) Reports 0 2 6

2. To medical service in respect of illness the consequence of personal misconduct, meaning thereby venereal diseases and acute alcoholic conditions.

3. To medical attendance in respect of—

(a) Illness arising from confinement or miscarriage within one month unless attended by their selected member in the confinement or miscarriage.

(b) Operations requiring local or general anaesthetics.

(c) Operative dentistry; the fees for which shall be specially arranged.

4. To cod liver oil, linseed meal, leeches, serum, vaccines, oxygen.

5. To bottles, jars, dressings or bandages (except for first dressings).

6. To special examinations, for example, refractions, x ray, bacteriological, etc.

7. To examinations, court attendances, etc., under common law, and Workmen's Compensation, Employers' Liability, and other statutes.

8. To medical attendance in respect of tuberculous disease when actually in receipt of sanatorium benefit under the National Insurance Act.

If your Committee will agree to this, we will guarantee an efficient medical service to insured persons.

The following gentlemen have signified their willingness to serve, and have signed their names to a document we hold to that effect:

Drs. Field, Frazer, Morgan, Manlove, Peck, Garard, Balingall, Howe, G. A. Ticehurst, Vickerman Hewland, Headley Huckle, Farrant Fry, Richardson, Locke, Baker, Gabb, Daunt, Brodribb, Johnstone, Travers, Allford, Barber, Stallard, Weston.

This list is not complete, as, owing to the hurried nature of the meeting (called at 4 p.m. for 4.30 p.m.), many men who would gladly have signed were unable to be present. The above, however, is a fairly representative list.

Town Hall, Hastings,
January 7th, 1913.

Dear Sir,

I am instructed to inform you that at a meeting of my Committee held last night a scheme was submitted by Drs. Allford, Travers, and Daunt, and the following resolution was passed thereon, namely:

That, having regard to the facts that the Committee has ascertained from the Commissioners that the Salford arrangement was made subject to the Regulations of the Commissioners, that the scheme put forward by Drs. Allford, Travers, and Daunt is not subject to these Regulations, and includes medicine contrary to the rule established in the case of towns by the Commissioners, the Committee cannot recommend the scheme to the Commissioners for acceptance.

The following resolution was also passed:

That a salaried service be instituted by this Committee unless a sufficient number of local doctors have signified their intention of joining the panel by 3 o'clock to-morrow, Tuesday, January 7th.

The Committee estimates that the amount available for medical benefit in this borough is £5,000.

Yours faithfully,
PERCY IDEL,
Clerk *pro tem*.

PORTSMOUTH.

At a meeting of the profession of Portsmouth, held on January 1st, the following resolution was passed:

That this meeting of the medical profession in Portsmouth resolve that those members who wish may go on the panel for three months on the understanding that they are released from their pledge by the British Medical Association before the completion of that period.

Total number of members present, 75. Voting: For, 44; against, 6; not voting, 25.

SIDMOUTH.

We have received the following report, dated January 6th, from the Secretary (Dr. Colclough): A meeting of the medical practitioners of Sidmouth has just been held, at which it was unanimously resolved that they should not take service under the Insurance Act. As an alternative scheme the medical men in practice offer to treat all insured and uninsured persons (male and female) whose wages do not exceed £2 per week, and who live within a radius of three miles from the post-office, on the following terms:

8s. 6d. a year (to be paid quarterly), including medicine.

Juveniles up to the age of 16, the children of the above, 4s. 6d. per head, including medicine.

Conditions: Free choice both for doctor and patient.

These fees do not include attendance for major operations, maternity cases, anaesthetics, miscarriages, or misconduct cases.

IRELAND.

DUBLIN DOCTORS AND THE FRIENDLY SOCIETIES.

THE difficulty between the Dublin doctors and the friendly societies in connexion with the working of the Insurance Act has been got over. The Irish Medical Association put forward a scale of fees for attendance on members of approved societies and their families demanding a capitation grant of 12s. 6d. for members and their families, and 8s. 6d. for unmarried persons, exclusive of the supply of drugs. At the same time the doctors who were acting as medical advisers to the benefit societies gave notice to

terminate their engagements on December 31st. The societies hitherto had been paying their doctors capitation fees ranging from 4s. to 7s., and in exceptional instances 7s. 6d.; but the average rate was between 4s. and 5s., which was the amount paid by bodies like the Irish National Foresters and the Ancient Order of Hibernians.

The fees demanded by the doctors were refused and steps were taken to appoint medical officers. Some appointments were made, but the doctors immediately resigned, and a union was formed by the friendly societies.

As a result of a meeting of this union held at the end of December it was announced that "arrangements were completed for a new and improved medical service, commencing after December 31st. Doctors and chemists were appointed and suitable arrangements made for the convenience of all members of affiliated societies." The Dublin doctors then agreed to hold a conference with the Friendly Societies' Union. This offer had been made some months earlier, but was then refused by the union. As a result of this conference the following official announcement has been made:

After considerable discussion, an agreement was arrived at pending the application of medical benefits to Ireland, on the following terms:

Societies approved for State insurance, a capitation grant of 7s. 6d., inclusive of drugs for a member, his wife, and family, the doctors supplying State and other medical certificates.

Benefit societies which are not State approved a capitation fee of 6s., to include drugs and certificates for the payment of sick benefits, but certificates required for State insurance purposes to be paid for extra.

Special arrangements were made regarding females and juveniles who are not the wives or dependants of insured members. It was further agreed that the doctors were not to accept any societies except those approved by the union, and an understanding was arrived at that the doctors would work the Act in Ireland on Mr. Lloyd George's terms, and would unite with the societies, if required, to improve and extend the measure as regards medical benefits. This was signed on behalf of the conference by Mr. Caleb J. Powell, Chairman of the conference; Mr. John D. Nugent, President, Benefit Societies' Union; Dr. Maurice R. Haynes, Honorary Secretary, Dublin County Borough Local Medical Committee; and Mr. Albert Chilton, Secretary, Benefit Societies' Union. In the case of juveniles, the rate has been laid down at 3s. per head.

In making these arrangements, the members of the Local Medical Committee have acted independently of the British Medical Association, owing to the defection which took place in England in connexion with that body.

Hospitals and Asylums.

THE "WAKEFIELD" TREATMENT OF ASYLUM DYSENTERY.

ON one or two previous occasions attention has been called to the apparently valuable results obtained at Wakefield Asylum in the treatment of asylum dysentery by the exhibition of saline aperients to the patients in general. Dr. Bevan Lewis showed in his successive annual reports the steady diminution, to practical extinction, of this disease, which so obstinately clings to most asylums. It is with disappointment, therefore, that we quote the following from Dr. Bolton's report: "Almost at the commencement of my duties here, I noticed that dysentery was endemic at the institution, 6 cases (of which 5 died) out of a total of 11 for the year 1910, occurring during November and December. During the year 1911, 35 cases have been detected and isolated, and of these 18 have died. As, in consequence of the systematic weekly exhibition of white mixture to all the patients in the asylum, dysentery has been regarded as a disease of the greatest rarity, the above facts are interesting. Though this 'Wakefield' treatment has been continued as usual on the male side of the institution, 15 of the 35 cases during the past year occurred in this section. On the female side last June I substituted the intelligent use of black draught, under the supervision of the medical officer, as a test of the efficacy of the white mixture, but without any conclusive result either way. This was to be expected, as it is hardly likely that an infectious disease can succumb to any treatment apart from general hygienic measures, systematic isolation, and, above all, expert bacteriological investigation. I am driven to the conclusion that the detection of endemic dysentery in this institution is due to my previous experience of this disease in other asylums, and to the introduction here of my constant practice of removing, *elicting up*, and systematically examining the intestines at all *post-mortem* examinations."

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

An emergency meeting of the State Sickness Insurance Committee appointed by the Special Representative Meeting on November 20th was held at the house of the Association, 429, Strand, on Thursday, January 2nd, 1913, Mr. T. JENNER VERRALL, Chairman of Representative Meetings, in the chair. The members present were: *England and Wales*: Dr. R. M. Beaton (London), Dr. T. M. Carter (Bristol), Dr. T. A. Helme (Manchester), Miss Frances Ivens, M.S. (Liverpool), Dr. Constance E. Long (London), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London), Mr. E. H. Willock (Croydon). *Ex officio*: Dr. Edwin Rayner (Treasurer).

APOLOGIES FOR ABSENCE.

Apologies for absence were read from the Chairman, the President, Dr. J. S. Darling (Lurgan), Dr. T. B. Costello (Tnam), Dr. J. Adams (Glasgow), and Dr. D. G. Thomson (Norwich).

THE CAMPAIGN IN LONDON.

The MEDICAL SECRETARY reported that the London members of the Central Council, after discussing the present situation with regard to the Insurance Act on the previous day, had requested him to ask the Chairman of the Committee to convene an emergency meeting for the purpose of resuming the discussion of the proposals previously placed before the Committee by the Provisional Medical Committee for London.

Mr. TURNER, at the invitation of the CHAIRMAN, explained what had been done in London since the last meeting of the State Sickness Insurance Committee on Monday, December 30th, to carry into effect the resolutions passed by the London Committee, which desired that the State Sickness Insurance Committee should approve of similar steps being taken throughout the country. After reporting generally upon the position in London, Mr. Turner said that he thought that if a sufficient number of insured persons could be induced to request their Insurance Committees to allow them to make their own arrangements, both the Insurance Commissioners and the Insurance Committees would be compelled to agree, and that the alternative policy of the Association in connexion with the Act could be carried out; he proposed:

That every practitioner in the country be informed that as many copies as he desires will be supplied him (for issue to his patients) of a request by insured persons to the Insurance Committees that they be allowed to make their own arrangements for medical attendance, and that he be urged to use his influence to this effect as widely as possible.

This was carried after discussion with one dissentient. In accordance with this resolution the following circular letter has been issued:

429, Strand, W.C.
January 3rd, 1913.

Sir or Madam,

National Insurance Act.

The State Sickness Insurance Committee of the British Medical Association has decided that the best way of giving effect to the recent decision of the Special Representative Meeting not to accept service under the present conditions of the National Insurance Act is to try to secure the interest and assistance of the insured persons themselves. In districts where there are no panels, or where the panels are not representative of the profession, it should be easy to convince insured persons that unless they are allowed to make their own arrangements outside the Act they will not be able to secure medical attendance from the doctors of their choice. Under Section 15 (3) of the National Insurance Act insured persons have the right to claim to be allowed to make their own arrangements for securing medical attendance, and in spite of the declaration of the Government that contracting out cannot be allowed on a large scale it is certain that if the insured persons themselves in large numbers demanded this right the Insurance Committees would be compelled to give it. I enclose a copy of a form which it is proposed you should hand to all insured persons who are your patients, urging them to send it at once to the clerk of the local Insurance Committee. If this is done at once, and the Insurance Committees are flooded with these requests there is no

doubt a great impression will be made upon the Committee^s and upon the public. I shall be glad to supply you with as many copies of the form as you desire, upon receipt of the enclosed post-card, duly filled in.

In addition to your own personal action it is necessary that the local profession should be prepared to offer the alternate scheme of the Association for the provision of medical attendance, and a letter is being sent to all Division Secretaries bringing this matter before their notice, and asking them at once to take action. If success is to be attained, however, you must do your share in this campaign.

I am,
Yours faithfully,
ALFRED COX,
Medical Secretary.

National Insurance Act.

The Clerk,
Insurance Committee.

Sir,
In pursuance of Section 15, Par. 3, of the above Act, I hereby apply to be allowed to make my own arrangements for Medical Benefits.

Name.....
Address.....
.....
Society.....
....., 1913.

Thereupon the following resolution was adopted unanimously:

That the Committee also urge on the Divisions that the most effective way of dealing with the present crisis is:

- (a) By organizing public meetings of insured persons for the purpose of informing them of their right to apply to make their own arrangements for medical attendance under the Act.
- (b) By interviewing the members of Parliament upon the subject.

A Press Committee, consisting of the Chairman, Mr. Turner, Dr. Beaton, and Mr. Willock, was appointed for the purpose of disseminating intelligence with regard to the medical crisis in connexion with the National Insurance Act, and it was authorized also to consult with any persons it might consider necessary for the purpose of giving effect to its reference.

At a later stage of the meeting the following members of the London Committee attended: Dr. C. Buttar, Dr. R. E. Crosse, Dr. Fraser, Dr. Major Greenwood, Dr. Howell, Dr. Herbert Jones, Dr. Mackeith, and Dr. Montgomery Smith. The deputation suggested that the State Sickness Insurance Committee (1) obtain a number of signed requests (say six) by insured persons resident in the area of two or three Insurance Committees that they be allowed to make their own arrangements for medical attendance; and (2) instruct the solicitor to the Association to (a) forward such requests to the respective Insurance Committees with a request for a definite answer within three days as to whether such permission will be granted, and asking in the event of the reply being in the negative for the reason for refusal; and (b) to advise as to the necessary steps to be taken to test the validity of such refusal.

The appointment of a series of subcommittees, including parliamentary, publicity, intelligence and publicity subcommittees, was also suggested.

The State Sickness Insurance Committee approved of the first suggestion, and resolved to provide a room in the offices of the Association for the use of the London Medical Committee on the understanding that that committee was alone responsible for any documents issued by it.

The Press Committee of the State Sickness Insurance Committee was authorized to undertake any of the following duties:

- (a) Attending at the Houses of Parliament, instructing members of Parliament as to the wishes of the Association, arranging for questions to be asked in the House, and generally taking any parliamentary action that might be deemed necessary.
- (b) Assisting Divisions in bringing to the notice of insured persons the decisions of the Association, either by public meetings or otherwise, arranging for Divisions to have the services of persons competent to speak on the subject, reasonable expenses of such lecturers being provided for by the Association, so far as London was concerned.

OXFORD SCHEME FOR MEDICAL ATTENDANCE UPON INSURED PERSONS.

A deputation, consisting of Dr. Turrell (Chairman of the Oxford Medical Committee), Dr. Duigan (Honorary Secretary of the Oxford Division of the British Medical Association), Dr. Higgs, and Dr. Boissier, waited upon the Committee, and submitted a scheme of provisional arrangements agreed to on the previous day at a conference between the Oxford Medical Committee and the Oxford Insurance Committee. The scheme was as follows:

Scheme suggested by the Oxford Medical Committee to the City Insurance Committee as a Temporary Arrangement.

All matters of medical benefit concerning the doctors shall stand referred to the "Conjoint" (or "Medical Service Subcommittee"). This Committee to consist of five members on each side—that is, five from the Insurance Committee and five medical men elected by the Medical Committee, and an independent chairman. All complaints shall be settled by this Committee. Further, this Committee shall draw up all rules and regulations as applied to medical benefit; and that any alterations in the conditions of medical service shall be referred to them by the Insurance Committee. Complaints as regards medical men are first to be considered by the Local Medical Committee, and if not satisfactorily settled by that body shall be referred to the "Conjoint Committee."

The Medical Committee shall supply the Insurance Committee with a list of medical men willing to attend insured persons. No insured person shall be assigned to any individual medical man during the continuance of this temporary arrangement. During the continuance of this scheme no official panels shall be formed, nor agreements signed. When a satisfactory agreement shall be arrived at between the Association and the Government, the medical men on this list shall at once form a panel, and sign the required agreement. The method of payment shall be on the capitation system; provided that the temporary list is merged into a permanent panel, payment shall be made to the doctors in proportion to the number of patients on their lists at the end of the quarter.

In the event of no permanent arrangement being arrived at, the sum payable for medical benefit during such time as the temporary arrangement has been in existence, shall be paid to the Medical Committee, who shall assign it to the medical men on the list in such manner as they shall determine.

Special attention is drawn to the point that this scheme is entirely provisional; that it has for its object the provision of medical attendance upon the insured until such time as the British Medical Association and the Government have come to some permanent agreement.

After hearing the views of the deputation and discussing the scheme with them and making suggestions for its amendment, the CHAIRMAN informed the deputation that the Committee was unable to give official sanction to it, and that the responsibility for action in regard to it must rest with the Oxford Committee.

EDINBURGH AND LEITH SCHEME FOR MEDICAL BENEFIT.

A provisional agreement submitted by the Edinburgh and Leith Medical Committee for the administration of medical benefit in those places was considered, but the Committee was unable to give its official sanction to the scheme.

Association Intelligence.

PROCEEDINGS OF COUNCIL.

A SPECIAL meeting of the Council was held at the conclusion of the Special Representative Meeting on December 23rd, 1912, in accordance with the regulations, which require that a meeting of the Council should be held to consider the decisions of the Representative Meeting.

Present.

Dr. J. A. MACDONALD, LL.D., Taunton, Chairman of Council, in the Chair.

Mr. T. JENNER VERRALL, Bath, Chairman of Representative Meetings.

Dr. J. GRANT ANDREW, Glasgow
Dr. R. M. BEATON, London
Dr. M. G. BIGGS, London
Dr. CHARLES BUTER, London
Professor HENRY CORBY, M.D.,
Cork
Mr. E. J. DOMVILLE, Exeter
Mr. T. W. H. GARSTANG,
Altrincham
Dr. T. D. GREENLEES, Lon-
don (Cape of Good Hope
Branches)
Dr. MAJOR GREENWOOD, Lon-
don

Mr. C. COURTENAY LORD, Gil-
ingham
Dr. J. LIVINGSTONE LOUDON,
Hamilton
Dr. EWEN J. MACLEAN, Cardiff
Dr. H. C. MACPHER, Wolver-
hampton
Dr. JAMES METCALFE, Brad-
ford
Dr. GEORGE PARKER, Bristol
Dr. E. S. REYNOLDS, Man-
chester
Mr. E. B. TURNER, London
Professor A. H. WHITE, Dublin

Mr. D. J. WILLIAMS, Llanelli

APOLOGIES.

Letters of apology for absence were read from the President, the President-elect, the Treasurer, Dr. David Ewart, Dr. T. Arthur Helme, Mr. F. C. Larkin, and Dr. C. G. D. Morier.

MINUTES OF SPECIAL REPRESENTATIVE MEETING.

The CHAIRMAN presented the minutes of the Special Representative Meeting on December 21st and 23rd, and explained that it was necessary for the Council to consider the decisions in case it might desire to exercise its power of referendum. No exception being taken, the Council approved the minutes of the Special Representative Meeting, and those calling for action by the Council were referred to the appropriate committees.

RESIGNATIONS.

The CHAIRMAN reported that the following had resigned their seats on the Council: Dr. J. Grant Andrew, Dr. Michael Dewar, Dr. A. C. Farquharson, and Mr. C. E. S. Flemming, being four of the twelve members of the Council elected by the Representatives in twelve groups of Branches and Divisions formed for this purpose, and Dr. R. C. Buist, Dr. Ewen J. Maclean, and Dr. Lauriston Shaw, three of the four Representatives elected by the Representative Meeting as a whole.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

GLASGOW AND WEST OF SCOTLAND BRANCH:

GLASGOW NORTH-WESTERN DIVISION.

A MEETING of registered practitioners residing in the area of this Division was held in the Burgh Hall, Hillhead, on December 26th, 1912. Dr. A. T. CAMPBELL occupied the chair. There were also forty-three members and eleven non-members present.

Special Representative Meeting.—The REPRESENTATIVE (Dr. A. T. Campbell) submitted his report of the Special Representative Meeting, and was accorded a vote of thanks.

The Insurance Act.—Thereafter Dr. J. LINDSAY moved and Dr. ADAMSON seconded the following motion:

This Division expresses its regret that the resolution passed at the meeting of the Branch (held the previous day) does not express the finding of the Representative Meeting of the British Medical Association.

The previous question was moved by Dr. ANGUS MACPHEE, and seconded by Dr. MACLEOD. The result of the vote was: For the motion, 17; for the previous question, 13; majority for latter, 4.

The Pledge.—As no report had been received from the Council, the CHAIRMAN invited an expression of opinion regarding the action to be taken in the circumstances. The SECRETARY read the terms of the undertaking and pledge, whereupon Dr. JAS. TODD moved the following resolution:

That the Government terms are not satisfactory, but in view of all the circumstances we do not consider there is any satisfactory alternative but to accept them in this area.

Dr. A. MACPHEE seconded the resolution, which was also supported by Dr. IVY MACKENZIE. Dr. J. LINDSAY moved an amendment in the negative, which was seconded by Dr. J. GRACIE. Thereafter Dr. W. S. PATERSON proposed the following resolution, which was seconded by Dr. J. H. CAMPBELL:

This meeting is of opinion that, as the British Medical Association has adopted no satisfactory alternative to the working of the Act, we call on the Association forthwith to release the signatories from their pledges.

Another amendment was moved by Dr. J. TAYLOR as follows, which was not seconded:

That in the opinion of this meeting the outstanding points of difference between the Government and the British Medical Association be submitted to arbitration.

Thereupon Dr. TODD withdrew his motion and Dr.

LINDSAY his amendment in favour of Dr. Paterson's proposal, which was adopted *nomine contradicente*.

Deputation to Local Insurance Committee.—It was resolved to appoint a deputation to interview Mr. Jones, the Secretary of the Local Insurance Committee, and, on the motion of Dr. INCLIS, the following were appointed: The Chairman, Secretary, and Drs. Todd, Erskine, and Paterson.

Further Special Representative Meeting.—The meeting approved the action of the Chairman and Secretary in assenting to the proposal of the Secretary of the Newcastle Division to co-operate with their Division in a requisition to the British Medical Association to convene a Special Representative Meeting.

To consider the position created by the action of the Government in preventing the alternative framed at the recent Representative Meeting from being worked, and also the desirability of releasing members of the profession from the undertaking and pledge.

METROPOLITAN COUNTIES BRANCH:

HARROW DIVISION.

A MEETING of this Division, to which every medical man practising within the area of the Division was invited, was held in the Gayton Rooms, Harrow, on December 30th, 1912. Dr. A. H. WILLIAMS was in the chair, and thirty members and five visitors were present.

Special Representative Meeting.—Dr. WILLIAMS gave a short account of the Representative Meeting, and read the Appeal to the Profession issued in accordance with instructions of that body dated December 23rd, 1912.

Service under Insurance Act.—Arising from this, a discussion took place as to the policy of the Division with regard to medical men applying for service on the Government panels under the Act. In answer to a question, the HONORARY SECRETARY stated that to the best of his knowledge six doctors had either applied or were prepared to apply to serve on the panels. Of these, four were practising in Northwood, one at Harefield, and one at Ruislip. After several speeches, Dr. DAVIDSON proposed and Dr. PENNEFATHER seconded:

That we refuse to serve on the panels set up by the Government until released from our pledge.

On a roll-call vote, thirty-three of those present voted in favour of the resolution, and two against.

Scheme for Public Medical Service.—The outline scheme for a public medical service drawn up by the Provisional Medical Committee was then considered, and adopted with some slight alterations. A subcommittee was then elected, composed of Drs. A. H. Williams, Muspratt, and Pennefather, to embody the salient points of this scheme in a condensed form, and to draft an explanatory letter, to be forwarded with the outline scheme to the secretaries of all clubs and friendly societies already resigned by practitioners in the Division (177 in number). Details of the scheme have been submitted to the State Sickness Insurance Committee.

Panels and the Pledge.

On January 4th meetings of medical men practising in the different sections of the Division were held to reconsider the attitude adopted by the Divisional meeting, in view of the number of doctors who had in the meantime joined the panels.

At the meetings held in Harrow, Wealdstone, Wembley, and Pinner, every doctor engaged in general practice attended, and the decision was unanimously passed at all three centres:

That it was impossible that the doctors should break their pledge given to the Association and to 2,700 of their colleagues until released therefrom by the Association, and that in consequence we will not apply for service on the Government panels.

WILLESDEN DIVISION.

A MEETING of the local profession was held at the St. Andrew's Schools, Willesden Green, on December 30th, 1912, Dr. CORAM JAMES in the chair. Sixty were present.

Letters. Communications regretting inability to be present were received from Drs. Felce, Pratt, and Bersford expressing loyalty to the British Medical Association policy. The SECRETARY read letters from four men, intimating that they were going on the Government

panel; from Dr. Snowman, suggesting that the British Medical Association should absolve men from their pledge.

Kilburn Provident Medical Institute.—A communication was read from Dr. Macevoy requesting permission for the Kilburn Provident Medical Institute to contract out under the "Harmsworth" clause of the Act. In reference to the last, Dr. CARSON SMITH proposed, and Dr. MACLELLAN seconded, that permission should be given. This was carried *nomine contradicente*.

Local Medical Committee.—It was agreed that the Provisional Medical Committee as constituted should be empowered to act as the Local Medical Committee, and claim statutory recognition if necessary.

Special Representative Meeting.—The CHAIRMAN called on Dr. Macevoy to give his report of the last Representative Meeting. Dr. Macevoy then gave a short account of the decisions come to at the meeting, his reference to the fact that the Representative Meeting considered the pledge to be binding being received with loud applause. The CHAIRMAN then moved a vote of thanks to Dr. Macevoy for his services and for his lucid statement. This was carried *nomine contradicente*.

Public Medical Service Scheme.—The HONORARY SECRETARY explained the chief points of the scheme as recommended by the Committee, which was based on that of the City Division, and, quoting the Act, Regulations, and Explanatory Statement, pointed out that the success of such a scheme was dependent upon the insured being able to "make their own arrangements," and that any scheme must receive the sanction of the Insurance Committee before any contribution could be made from the insurance funds, and that the Middlesex Insurance Committee and the Insurance Commissioners were opposed to "contracting out." After discussion, the Honorary Secretary was requested to write to the Middlesex Insurance Committee and to the Insurance Commissioners as to insured persons making their own arrangements, and to take steps to bring to the notice of the insured their rights under the Act by means of letters to the secretaries of the clubs which had been resigned. Failing a satisfactory reply the Honorary Secretary was instructed to request the member for the Harrow Division of Middlesex to ask a question in Parliament. Dr. X. made a personal statement as to the necessity of his joining the panel; his position was considered sympathetically, and Dr. CRONE proposed and Dr. PARR seconded that Dr. X.'s case be referred to the trustees of the guarantee fund for early and special consideration. This was carried by a large majority. Dr. Y. made a personal statement, stating that he had received an offer for a whole-time appointment under the Act, and desired to accept it in view of his application for a public appointment. His request was received by the meeting with marked disfavour. Dr. ARMITAGE proposed and it was seconded:

That the Public Medical Service scheme be accepted.

Dr. MACEVOY proposed, and Dr. STOCKER seconded, an amendment:

That this meeting records its continued loyalty to the British Medical Association, approves of the scheme suggested by the Local Medical Committee for the treatment of insured persons contracting out, and empowers the Local Medical Committee to write to the Local Insurance Committee to inform them of the conditions under which they will treat the insured.

This was carried unanimously, and also as a substantive motion.

Suspension of Standing Orders.—The HONORARY SECRETARY proposed that the Standing Orders for the session should be suspended and meetings arranged by the Committee as necessity arises. This was agreed to.

Withdrawal from Panel.—The Honorary Secretary was informed later in the day that one of those who had expressed his intention of joining the panel had reconsidered his position.

WIMBLEDON DIVISION.

A MEETING of this Division and of all practitioners in the area was held at the Town Hall, Wimbledon, on January 4th, Dr. POWELL EVANS in the chair. There was a large attendance.

Insurance Act.—The question of what should now be the attitude adopted *re* Insurance Act panels was the

business before the meeting. A long and animated discussion took place. A motion,

That we adhere to our former decision not to join the panels,

was put and lost. The following resolution became the unanimous finding of the meeting—namely:

That this meeting of the medical men of Wimbledon and district enter a strong protest against the methods adopted by the Chancellor of the Exchequer in forcing the profession to go on the panels against its best cherished traditions and against the best interests of the insured; but in the face of ruin which now threatens many of their members, they feel bound, although unwilling, to join the panels and to submit to conditions which they feel are derogatory and unjust.

MIDLAND BRANCH: CHESTERFIELD DIVISION.

A MEETING was held at Chesterfield Hospital Board Room, on December 23rd, 1912, at which Dr. GREEN was in the chair, and forty-seven members and one non-member were present.

Sheepbridge Works Club.—A statement by Dr. TAYLOR as to temporary terms for Sheepbridge Works Club was deemed satisfactory.

Special Representative Meeting.—Dr. DUNCAN presented his report detailing the line of action he had taken, and the decisions come to by the meeting. Dr. GREEN stated that it had been his privilege to attend the meeting, and gave his personal impressions thereon. It was resolved unanimously:

That the Representative be thanked for his attendance and report; and that this Division adheres to the declared policy of the Association.

Those present then handed in their panel invitations to the Honorary Secretary as requested.

Service on Insurance Committees.—It was resolved that the State Sickness Insurance Committee be asked to approve the medical representatives of the County Council taking their seats on the County Insurance Committee.

Treatment of Insured and Non-Insured.—The following matters were discussed:

Rate for insured persons to be the recognized adult rate in the Chesterfield Medical Service, namely, 8s. 8d. per annum.

New arrangements to be intimated by circular letter to clubs previously resigned.

Non-insured over 65: Local areas to arrange terms for those subject to approval of Service Subcommittees.

Colliery and Works Clubs: Rate to be maintained at 19s. 6d., and a telegram to that effect sent to Nottingham Division then sitting.

Juvenile lodges whose members are provided with medical attendance elsewhere: Rates referred to Central Committee of Public Medical Service.

Negotiation with Clubs: Previous holder may negotiate, but to demonstrate "open door" and adhesion to Public Medical Service, a member of local Public Medical Service Subcommittee should accompany any member so negotiating.

Guarantee Fund: Best means of establishing a satisfactory local fund referred to next meeting.

A meeting was held at Chesterfield Hospital Board Room on December 30th, 1912. Dr. GREEN was in the chair, and twenty-eight members and one non-member were present.

The CHAIRMAN addressed the meeting, detailing the circumstances under which it had been hurriedly called—namely: (1) Their own meeting on the 23rd, when all their papers were handed in to the Honorary Secretary's keeping. (2) The joint meeting with Derby Division on the 27th, where by a majority the Derby Division agreed to stand with the Chesterfield Division and wait the Representative Meeting then asked for. (3) The decision of the Nottingham Division on the 28th to go on the panel *en bloc*. (4) The decision, on the 29th, of various local areas in the Derby Division, and of two areas in their own, that they were compelled to go on the panel. (5) The information received on the 30th that the County Medical Committee had decided no longer to ask the men to remain off the panels. He recalled the fact that the Division had been consistently in favour of working the Act, and thanked the members for standing by the Associa-

tion as they had done, but in view of the above circumstances he felt it his duty to call this meeting hurriedly and place the facts before them, so that they might decide whether: (a) Surrounding circumstances would compel their going on the panel; or (b) they would be able to adhere to their previous decision and wait.

The previous decision was rescinded by 17 votes to 8.

It was resolved by 17 to 4:

That in view of the fact that the surrounding areas have gone on the panels, this Division of the Association feels compelled to accept service under the Insurance Act provisionally for three months, under protest against any conditions requiring service other than personal service—for example, the giving of certificates by another, also those requiring the treatment of abortious and miscarriages.

Payment by capitation was selected by the meeting.

NORTHERN COUNTIES OF SCOTLAND BRANCH: INVERNESS-SHIRE DIVISION.

A MEETING of this Division was held at the Northern Infirmary, Inverness, on December 28th, 1912. Dr. MACFADYEN, Senior Chairman, presided, and twelve members attended.

Apologies for Non-attendance.—Apologies were read from Drs. de Sylva (Arisaig), Miller (Fort William), Mackenzie (Scolpaig), De Watteville (Kingussie), who each indicated the desirability of accepting service on the panel of the County Insurance Committee; also letters from Drs. Kerr, Grant, and Helen S. MacDonald definitely intimating their intention to accept service on the panel.

Scottish Insurance Provisional Medical Committee.—Dr. J. MUNRO MOIR gave a lucid account of the business at the meeting of the Scottish Insurance Provisional Medical Committee in Edinburgh on December 27th, 1912, and read a telegram received from Commissioner Leishman stating that a definite adequate Treasury grant was to be given for mileage in country districts, and that he expected the recommendations of the Dewar Committee would result in a further grant for the Highlands and Islands.

The Insurance Act and the Profession.—The business of the day was then gone into—namely, to consider the situation now existing as the result of the voting at the Representative Meeting in London on December 21st, 1912, and in consideration of the fact that the Scottish Insurance Commissioners had guaranteed a definite sum for mileage for country districts and that a further sum would be allocated for the Highlands and Islands; and, further, that the recommendation of the Representative Meeting of December 21st, asking practitioners in their respective areas to treat with insured persons direct, or their representatives, or with friendly societies, was a complete contradiction of their previous policy regarding friendly society control. Accordingly Dr. JAMES MURRAY moved the following resolution:

That the most important of the demands of the British Medical Association having been met by the Commissioners of the National Health Insurance Act, the Inverness-shire Division of the British Medical Association agrees that members may give service under the Act provisionally. They do so, relying upon the assurance of the Scottish Commissioners that adequate provision has been made for mileage, as such provision is absolutely necessary in most areas of the northern Highlands, and they urgently request that detailed information upon this point should be provided by the Commissioners without delay.

Dr. GILLES seconded this resolution, which was carried unanimously.

The Pledge.—Mr. LUKE moved:

That as the British Medical Association, by the recent recommendation of the Representative Meeting of December 21st, 1912, has completely contradicted its previous policy regarding freedom from friendly society control and thereby altering the original conditions of the pledge, the members of the Inverness-shire Division of the British Medical Association hereby ask to be released from their pledge.

This was carried unanimously.

Extension of Time for going on Panels.—It was further agreed to ask the Commissioners, through the Local Insurance Committee, to get an extension of time for the country practitioners till January 6th for placing their names on the panel; also to take steps to get the Provisional Local Medical Committee recognized as a statutory body, and to meet the Burgh Insurance Committee to arrange the adoption of form of agreement for the burgh area, and that "capitation" should be adopted.

OXFORD AND READING BRANCH:
OXFORD DIVISION.

A SPECIAL general meeting was held on January 6th at the Radcliffe Infirmary, Oxford; Dr. TURRELL (member of Council) acted as Chairman (vice Sir William Osler, unavoidably absent), and sixty-five members and non-members were present.

Medical Service.—The CHAIRMAN reported the result of the informal negotiations between the Local Medical Committees and the County and City Insurance Committees. He read the terms of the provisional scheme drawn up by the Local Medical Committees, published in the SUPPLEMENT of this week, p. 56. He explained that its object was to enable a provisional service to be given without violation of the pledge. No official panels would be formed and no contracts signed until after January 17th, the date of the Representative Meeting. It had received the practically unanimous acceptance of both county and city Insurance Committees, and to a deputation waiting on it in London the State Sickness Insurance Committee had admitted its practicability, though unable to give it its official sanction. The "Medical Service List" for the county would remain open till Thursday, January 9th. Questions of detail would be supplied by the "Medical Service Committee" after official panels had been formed. Dr. NELSON (of Wallingford, Berks) gave an account of the meeting and decision of the Berkshire Medical Committee, which had unanimously voted:

That medical men in their district be collectively released from their pledges, and shall collectively go on the panel.

Dr. COLLIER expressed the opinion that the Oxford Division was greatly indebted to the Chairman (Dr. Turrell), the Secretary, and others, for their labours in preparing this scheme and getting it accepted. He drew attention to the protest that the Cambridge Division had made in being forced on to the panel, and noted that other Divisions had made similar protests. Dr. DUGAN hoped that Dr. Collier, as a Fellow of the Royal College of Physicians, would propose that similar expressions of protest be made by the Royal Colleges of Medicine and Surgery throughout the country at the mean and contemptible treatment of the profession by the Chancellor. He also expressed the hope that there would be no talk of resignations of membership of the Association during the present crisis. After some remarks by Dr. SUMMERHAYES, Dr. CRICKERHANK, and Dr. BOISSIER on the position of affairs in contiguous counties, Dr. HIGGS proposed:

That the scheme be accepted by this meeting.

This was seconded by Dr. BOISSIER and carried *nemine contradicente*. The CHAIRMAN then proposed:

1. That the scheme be adopted as far as the county of Oxon is concerned.

This was carried *nemine contradicente*.

2. That the scheme be adopted as far as the city of Oxford is concerned.

This was carried *nemine contradicente*.

Medical Service.—The meeting then proceeded to elect five members on to the Medical Service Committees of the county and city respectively. The following were elected for the county: Dr. Boissier, Dr. O'Kelly, Dr. Susmann, Dr. Jones, Dr. Caudwell. And for the city: Dr. Higgs, Dr. Woods, Dr. Rivers-Willson, Dr. Dickson, Dr. Seymour.

Instructions to Representative.—The following instructions were given to the Representative:

- (1) That he shall support a motion for absolving members from their pledge.
- (2) That if the question of means for a final settlement arise, he shall support a resolution in favour of appointing a deputation, with full plenipotentiary powers, to endeavour to come to a final settlement of the differences existing between the Government and the British Medical Association.

Votes of Thanks.—Dr. COLLIER proposed that a sincere vote of thanks be accorded to the Chairman of Representative Body, the Chairman of Council, and the Chairman and members of the State Sickness Insurance Committee. This was seconded by Dr. DUGAN and carried *nemine contradicente*. It was proposed by Dr. SUMMERHAYES that a vote of thanks be accorded to the Chairman, the Secretary, Dr. Higgs, and others con-

cerned in the recent negotiations. This was seconded by Dr. WYLIE and carried *nemine contradicente*.

Non-insured Members of Clubs.—Proposals for dealing with non-insured members of clubs and friendly societies, by Dr. JONES, and for dealing with the question of a tuberculosis officer, by Dr. GILLET, were ruled out of order by the CHAIRMAN, these proposals not being on the agenda paper.

SOUTH EASTERN BRANCH:

ISLE OF THANET DIVISION.

The sixty-second meeting of the Division was held at the Victoria Hotel, Ramsgate, on December 28th, 1912. There were present thirty-one members and five non-members, all medical practitioners in the district having been invited.

Dartford Division.—A telegram was received as follows:

Dartford Division unanimously refuse panel.

Special Representative Meeting.—Dr. HALSTEAD gave a report of the recent Representative Meeting, and indicated various decisions arrived at by that meeting, and specially laid stress upon the importance of the undertaking and the pledge.

The Pledge.—Dr. BRUNTON proposed, and Dr. SMYTHE seconded, the resolution:

That the validity of the pledge already signed be reaffirmed.

The following members also spoke: Drs. BENNETT POWELL, PINNIGER, RAVEN, WOODS, ARCHIBALD, BRUNTON, STYAN, and HUNT. Dr. STREET, in winding up the debate, made a strong appeal to members to stand by their pledges, and to maintain the unity of the profession in Thanet. He then put the resolution, which was carried *nemine contradicente*, two not voting.

Adjournment to Watch Developments.—It was decided that the meeting should be adjourned for a week, in order that developments in relation to the National Insurance Act should be watched, and that a meeting of the medical officers of the Public Medical Service should decide if any alterations in the service were advisable.

Votes of Thanks.—A very hearty vote of thanks, proposed by Dr. NICHOL, seconded by Dr. BIDDLE, was unanimously passed to Dr. Halstead for his strenuous services to the Division; and a vote of thanks was also passed to the Chairman for presiding.

SOUTH MIDLAND BRANCH:

NORTHAMPTONSHIRE DIVISION.

A MEETING of this Division was held in the Board Room of the Northampton General Hospital on December 28th, 1912. Dr. BAXTER was in the chair, and sixty-seven members and non-members were present.

Special Representative Meeting. Dr. BAXTER made a short speech on the business of the meeting, and Dr. DRYLAND then gave a report of the Representative Meeting. Dr. BAXTER proposed a hearty vote of thanks to Dr. Dryland, which was carried unanimously.

Service under Insurance Act.

Dr. GREENFIELD then spoke, and said that he hoped that, whatever was decided, there would be no bitterness of feeling between those who went on the panel and those who did not. He considered that for various reasons the British Medical Association scheme was nebulous and unworkable, and proposed:

That this meeting, while not satisfied with the terms and conditions of the National Insurance Act, cannot advise the practitioners of the county to abstain from going on the panel.

This was seconded by Dr. CHURCHOUSE.

Dr. COOKE said that he considered his pledge binding, and that the town was solid against working the Insurance Act, but in the rural districts there was a *débacle*. He thought, however, there should be no bitterness, and that members should stick to the Association even if they violently differed.

Dr. OLDACRES asked under what conditions they were justified in breaking their pledges, and said he felt he could not break his unless he were absolved from head quarters.

Dr. HARRISON spoke to the same effect.

Dr. TOLPOTT said he was prepared to go on the panel. The Association was defeated, and there was a point when defeat should be accepted. It was only a question of breaking their pledge now or a little later.

Dr. ROBINSON spoke to the same effect.

Dr. ROSS announced that he intended to go on the panel.

Dr. JACOBS said that he considered the pledge absolutely binding.

Dr. BAXTER said that those who lived in a position where every one was solid for not going on the panel should have some consideration for those who lived in a different area. The guarantee fee was totally inadequate. The pledge ought not to be broken except for good and solid reasons. The policy of the British Medical Association was hopeless and had already been countered by the Government, who would not permit it. He thought an honourable man was therefore free to vote as he liked, and he should therefore vote for Dr. Greenfield's proposition.

On a division 35 voted for Dr. Greenfield's proposition and 35 against it, and the Chairman refused to give a casting vote.

Dr. HICHENS then read a communication from the Newcastle-on-Tyne Division asking the Northamptonshire Division to join with them in calling a Special Representative Meeting, and proposed the following resolution:

That a Special Representative Meeting be called at once to release the members from their pledges.

He pointed out that unless this were done he was afraid that the Association would be rent in twain, and that all the good work of the last two years in bringing men into accord would be lost.

Dr. LINNELL seconded the motion for the same reason, and it was supported by Dr. OLDACRES.

The motion was carried with one dissident.

Proposal to keep Panels Open.—Dr. LINNELL proposed and Dr. HARRISON seconded:

That the County and Rural Insurance Committees be approached not to close the panels for one month.

This was carried.

County and Rural Insurance Committee.—The following were elected as representatives on the County and Town Insurance Committee:—*County, South:* Drs. Terry, Linnell, and Hope; *Kettering:* Dr. Dryland and Roughton; *Mid:* Drs. Churchill and Darley; *East:* Drs. Baxter, Greenfield, Robb, and Arthur; *Northampton:* Drs. Copley, Cooke, Cogan, Beatty, and Hichens. Dr. Dryland was elected Secretary. Dr. HICHENS read a letter from the County Insurance Committee inviting a deputation to meet it. Dr. GREENFIELD proposed and Dr. TERRY seconded:

That the question of meeting the Insurance Committee be left to the County Medical Committee.

This was carried.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH:

HEREFORD DIVISION.

A MEETING of this Division, with the non-members in the Division, was held at Hereford on December 30th, 1912. Dr. GERARD STEEL, the Vice Chairman, occupied the chair in the absence of the Chairman (Dr. Herbert Jones). Forty-four practitioners were present.

National Insurance Act. It was resolved by 43 to 1:

That this meeting reaffirms its previous unanimous decision not to accept service under the National Insurance Act.

Subsequently the following proposition was carried by 41 to 3:

That the meeting agree to accept the policy of the British Medical Association and to appoint a Local Medical Committee to carry it out.

Association Notices.

SPECIAL REPRESENTATIVE MEETING.

Notice is hereby given that a Special Representative Meeting of the Association will be held in the Connaught Rooms, Great Queen Street, London, W.C., on Friday, January 17th, 1913, at 9.30 in the forenoon, and the following day, if necessary, on the requisition of the Chesterfield, Cleveland, Derby, Glasgow North-Western, Newcastle-on-Tyne, Northamptonshire, West Cornwall, and Worcester Divisions, to consider the question of the desirability of releasing members of the profession from their undertakings and pledges in connexion with the National Insurance Act, and, further, to consider the situation created by the attitude of the Government towards the decisions of the Representative Body; also to elect a Member of Council in the place of Dr. E. J. Maclean, resigned.

BY ORDER OF THE CHAIRMAN OF REPRESENTATIVE MEETINGS,

GUY ELLISTON,
*Financial Secretary and
Business Manager.*

ALFRED COX,
Medical Secretary.

January 1st, 1913.

SPECIAL MEETING OF COUNCIL.

A SPECIAL MEETING of the Representative Body has been summoned to meet in London on Friday, January 17th next.

Under the Regulations the Council must meet to consider the decisions arrived at by that Meeting, and notice is hereby given that a Meeting of Council will be held immediately upon the conclusion of the business of the Special Representative Meeting.

By Order,

GUY ELLISTON,

January 1st, 1913. *Financial Secretary and Business Manager.*

ELECTION OF COUNCIL, 1912-13.

NOTICE is hereby given that nominations for a candidate for the election as a Member of Council by the Glasgow and West of Scotland (4 County Divisions), Border Counties, and Stirling Branches for the year 1912-13, must be forwarded to reach the Financial Secretary and Business Manager, at the Office of the Association, not later than Saturday, January 25th. Each nomination must be on the prescribed form, copies of which will be furnished by the Financial Secretary and Business Manager upon application.

Separate forms have been prepared:

- (A) For a nomination by a Division, and
- (B) For a nomination by any three Members of a Branch respectively.

Those applying are requested to state for which purpose the form is desired.

An announcement of the Nominations received will be made in the JOURNAL of February 1st, 1913.

Election will be by voting papers. These papers will contain the names of all duly nominated candidates, and will be issued from the Central Office on Monday, February 3rd, and will be returnable not later than Saturday, February 8th.

The result of the election will be published in the JOURNAL of February 15th, 1913.

By Order of the Council,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 11th, 1913.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, January 29th, in the Council Room at 429, Strand, London, W.C.

By Order,
GUY ELLISTON,

January 9th, 1913. *Financial Secretary and Business Manager.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.

BIRMINGHAM BRANCH: CENTRAL AND WALSALL DIVISIONS.—A constituency meeting of the Central and Walsall Divisions will be held at the Medical Institute, Edmund Street, on Wednesday, January 15th, at 3.30 p.m.: (1) To consider statement to be placed before the Divisions, as a result of reports from Divisional Secretaries, as to local position in regard to the pledge and formation of panels. (2) To instruct Representatives for Special Representative Meeting on January 17th.—**ERNEST C. HADLEY, H. HOYLE WHATE, Honorary Secretaries.**

BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH AND COVENTRY DIVISIONS.—A meeting of the Nuneaton and Tamworth and Coventry Divisions will be held at 4.15 p.m. on Tuesday, January 14th, at the Coventry Hospital. The object of the meeting is to instruct the Representative.—**D. DAVIDSON, A. WOOD, Honorary Secretaries.**

LANCASHIRE AND CHESHIRE BRANCH: LIVERPOOL DIVISION.—A special meeting of this Division will be held on Tuesday, January 14th, at 3.30 p.m., to instruct Representatives at the forthcoming Representative Meeting on January 17th. The annual meeting of the Division will be held on January 21st. Business: (a) To receive annual report of the Executive Committee. (b) To elect officers. (c) To elect the Representatives of the Division on the Branch Council to take office after the next annual meeting of the Branch. (d) To elect the ordinary members of the Executive Committee. (e) To make new rules, or alter or repeal existing rules. (f) To elect Representatives at the Representative Meeting. (g) To transact any business that may be transacted at an ordinary meeting.—**FRANCIS W. BAILEY, Honorary Secretary, 51A, Rodney Street, Liverpool.**

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A general meeting of the Division will be held on Monday, January 13th, at 10 p.m. prompt, at Balfour Hall, Kingsland Road (entrance in Danston Street, near Canal Bridge), to consider the annual report to the Branch, the instruction to Representatives for Special Representative Meeting, and other business.—A meeting of this Division will be held conjointly with the Aesculapian Society at the Metropolitan Hospital, Kingsland Road, on Friday, January 17th, at 4 p.m., when a clinical demonstration will be given by the visiting staff.—**A. G. SOUTHCOMBE, Honorary Secretary.**

METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.—A meeting of the Hampshire Division will be held on Tuesday, January 14th, at 4 p.m., at the Central Library, Finchley Road. Agenda: Annual report for 1912; instructions to Representative for Special Representative Meeting, January 17th. Notice: The date of this meeting has been altered from January 17th to January 14th, on account of the Special Representative Meeting being called for the 17th.—**E. ARTHUR DORRELL, Honorary Secretary, 7, Cannon Hill, N.W.**

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—A special meeting of the Division, requisitioned by ten members in accordance with Rule 12, will be held in the Wesleyan Church Schoolroom, Leyton High Road, on Thursday, January 16th, at 4 p.m. Agenda: (1) Elect Chairman and Vice-Chairman. (2) Minutes. (3) Correspondence. (4) To consider the question of the desirability of releasing members of the profession from their undertaking and pledges in connexion with the National Insurance Act, and further to consider the situation created by the attitude of the Government towards the decisions of the Representative Body. (5) To instruct Representative for Representative Meeting on January 17th. (6) Notice of motion, proposed by Dr B. C. Scott, seconded by Dr. Alfred Orme: "That we instruct our Representative to vote for and use his utmost endeavour to maintain the integrity of the pledge and undertaking." (7) Any other business.—**A. POTTINGER ELDRED, Honorary Secretary.**

MIDLAND BRANCH: LINCOLN DIVISION.—A special meeting, to which all medical men residing within the area of the Division are invited, will be held in the Lindum Restaurant, Lincoln, at 3 p.m., on Thursday, January 16th. Agenda: (1) To consider the forthcoming statement of the State Sickness Insurance Committee as to the position of the profession with regard to the National Insurance Act. (2) To instruct the

Representative as to the line he should take at the Special Representative Meeting on January 17th.—**J. S. CHATER, Honorary Secretary, 10, Steep Hill, Lincoln.**

SOUTH-EASTERN BRANCH: ISLE OF THANET DIVISION.—It has been decided that the Division shall meet every week for the present, in order that the developments of the National Insurance Act may be watched.—**HUGH M. RAVEN, Honorary Secretary.**

WEST SOMERSET BRANCH.—A special general meeting will be held at the Taunton and Somerset Hospital on Tuesday, January 14th, at 3.30 p.m. The chair will be taken by the President, Dr. Balfour Stewart. Agenda: To express an opinion on the future policy of the Association. To advise Dr. Macdonald as to the wishes of the Branch (in view of the meeting of Representatives to be held on January 17th) on the advisability or not of returning the pledges. Other business. In answer to inquiries as to future arrangements for the medical attendance on the non-insured persons in friendly societies, the Honorary Secretary calls attention to the following resolution passed at a meeting of the medical men in the Taunton district, which is very similar to others passed in many of the county districts: "That the secretaries of the friendly societies be informed that the medical men are prepared to attend the uninsured members of their societies at the present terms until March 25th, 1913, as a temporary arrangement only. In case the societies assist in bringing strange doctors into the district, or a panel is formed under the Act, this arrangement will immediately cease."—**CHARLES FARRANT, Honorary Secretary.**

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-five of the largest English towns, 5,959 births and 5,121 deaths were registered during the week ending Saturday, December 28th, 1912. The annual rate of mortality in these towns, which had been 16.4, 16.1, and 15.4 per 1,000 in the three preceding weeks, fell to 15.1 per 1,000 in the week under notice. In London the death-rate was equal to 14.4, against 17.2, 16.3, and 14.4 per 1,000 in the three preceding weeks. Among the ninety-four other large towns, the death-rates in the week under notice ranged from 5.6 in Ealing, 5.8 in Eastbourne, 7.0 in Southend-on-Sea, 7.2 in Enfield, and 7.4 in Wimbledon and in Southport to 21.0 in Middlesbrough, 21.1 in Newcastle-on-Tyne, 22.6 in Barrow-in-Furness, 24.4 in St. Helens and in Sunderland, and 26.6 in Preston. Measles caused a death-rate of 3.1 in Edmonton, 3.5 in West Hartlepool, 4.1 in Grimsby, 4.8 in St. Helens and in Barrow-in-Furness, 5.0 in Stockton-on-Tees, 5.2 in South Shields, and 8.9 in Preston; and whooping-cough of 2.1 in Warrington and 2.7 in Lincoln. The mortality from the remaining infectious diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 55, or 1.1 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 13 were registered in Birmingham, 12 in Liverpool, and 3 in St. Helens. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,265, 2,232, and 2,108 at the end of the three preceding weeks, were 2,112 on Saturday, December 28th; 191 new cases were admitted during the week, against 285, 248, and 193 in the three preceding weeks.

The area of the City of Carlisle as recently extended having contained a population exceeding 50,000 persons at the date of the last census, this city will in future be included in the great towns of the Registrar-General's weekly returns. In these towns, which now number ninety-six, 9,774 births and 5,387 deaths were registered during the week ending Saturday, January 4th. The annual rate of mortality, which had been 16.1, 15.4, and 15.1 per 1,000 in the ninety-five towns in the preceding three weeks, was equal to 15.7 per 1,000 in the ninety-six towns in the week under notice. In London last week, the death-rate was equal to 16.2, against 16.3, 14.4, and 14.4 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 5.7 in Eastbourne, 5.9 in Southport, 6.1 in Enfield, 8.7 in Hastings, and 8.8 in Leyton and in Reading to 21.9 in West Hartlepool, 22.0 in St. Helens, 23.6 in Newcastle-on-Tyne, 24.2 in Dudley, 25.9 in Stockton-on-Tees, and 26.0 in Bootle. Measles caused a death-rate of 4.0 in Swindon, 4.1 in West Hartlepool, 4.2 in South Shields, 4.4 in Preston, 4.6 in Northampton and in Wigan, 5.2 in Bath, 6.4 in Barrow-in-Furness, and 6.8 in St. Helens; scarlet fever of 1.0 in Middlesbrough and in Rhondda; whooping-cough of 1.3 in Willesden, and 2.7 in Cambridge and in Wolverhampton; and diphtheria of 1.0 in Rhondda. The mortality from enteric fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 57, or 1.1 per cent. of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 8 in Liverpool, 7 in Birmingham, 5 in Stoke-on-Trent, and 3 each in Burnley, Sheffield, South Shields, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,232, 2,108, and 2,112 at the end of the three preceding weeks, had fallen to 1,954 on Saturday last; 170 new cases were admitted during the week, against 248, 193, and 191 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In eighteen of the largest Scottish towns 1,022 births and 714 deaths were registered during the week ending Saturday, December 28th. The annual rate of mortality in these towns, which had been 22.0, 20.7, and 19.2 per 1,000 in the three preceding weeks, fell to 17.1 in the week under notice, but was 2.0 per 1,000 above the rate in the ninety-five large English towns. Among the several Scottish towns the death-rates ranged from 4.7 in Ayr, 10.3 in Kirkcaldy, and 11.9 in Hamilton to 18.9 in Glasgow, 19.9 in Falkirk, and 20.8 in Dundee. The mortality from the principal infectious diseases averaged 1.0 per 1,000, and was highest in Motherwell and Clydebank. The 285 deaths from all causes registered in Glasgow included 7 from whooping-cough, 4 from scarlet fever, 3 from measles, 3 from diphtheria, 2 from infantile diarrhoeal

cases, and 1 from enteric fever. Three deaths from whooping-cough were recorded in Edinburgh, 2 in Motherwell, and 2 in Clydebank; 4 deaths from diphtheria in Dundee; and 1 from small-pox in Kilmacduy.

James Barclay Montgomery, M.D. (Glasg.), F.R.C.P. (Lond.), J.P.,
eldest surviving son of the late James Montgomery, Edinburgh,
of The Bradley, Ayrshire, in his 84th year.

RECENT PUBLICATIONS.

The Year Book of Pharmacology. By J. O. Braithwaite and Horace
Finnemore, B.Sc., F.I.C. London: J. and A. Churchill. 1912.
(Crown 8vo, pp. 614.)

A composite, well-indexed volume containing a multi-
plicity of information on the subject of pharmacy. This
includes abstracts of all papers relating to materia medica,
specialized chemistry, and pharmacy which appeared in
British and foreign journals during the year ending June,
1912, and a detailed account of the British Pharmaceutical
Conference at its forty-ninth annual meeting.

Surgical Instruments and Appliances. By Harold Burrows, M.B.,
B.S. (Lond.), F.R.C.S. Fourth edition. London: The Scientific
Press, Limited. 1912. (Cr. 8vo, pp. 103. Price 1s. 6d. net.)

A fourth and enlarged edition of a book to which we drew
attention on its first publication. It supplies illustrated
and classified lists, which cover most of the operations
commonly practised, and may prove useful to house-surgeons
as well as operation-room attendants.

Our Children's Health at Home and at School. Edited by Charles
E. Hecht, M.A. London: National Food Reform Association.
1912. (Demy 8vo, pp. 467. Price 5s. net.)

A report of the conference on diet and hygiene in public,
secondary, and private schools, held at the Guildhall in
May last. Included are copies of press comments which
appeared thereon and of correspondence in the papers on
the same subject. It contains full information as to the
dietaries of a great many public schools, their cost, and the
results they are considered to give.

Daily Register. London: Parke, Davis, and Company. 1912. (Demy
8vo. Price 6d. net.)

The title covers a series of charts, on which it is intended
that patients attending tuberculosis dispensaries or under-
going tuberculin treatment by private practitioners shall
keep a full record of their history from day to day for the
information of their medical attendant. It has been brought
out, we are informed, at the suggestion of Dr. H. de Carle
Woodcock, of Leeds, and might, no doubt, often prove
useful.

The Chromatograph and Natural Science. By Leonard Donaldson. London: Ganes, Limited, 1912. (Denny 8vo, pp. 88; with 23 Illustrations. Price 2s. 6d.)

A volume setting forth some of the achievements of the producers of motion pictures and describing what appear to its author to be the possibilities of this modern art in connexion with the study and teaching of natural science. There is nothing in the pictures to differentiate them from ordinary photomicrographs of small objects, and the amount of actual information supplied on the subject of cinematography itself is somewhat meagre.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, Cavendish Square, W., 8.30 p.m.—Papers:—(1) Mr. T. North: The Rise and Possibilities of the General Practitioner-Surgeon. (2) Dr. J. B. Monro: The Treatment of Recent Injuries by Massage.

TUESDAY.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

A MEETING of the State Sickness Insurance Committee appointed by the Special Representative Meeting on November 20th, 1912, was held at the house of the Association, 429, Strand, on Thursday, January 9th, Dr. J. A. MACDONALD in the chair. The members present were: *England and Wales:* Dr. R. M. Beaton (London), Dr. T. A. Helme (Manchester), Miss Frances Ivens, M.S. (Liverpool), Mr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. D. G. Thomson (Norwich), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London), and Mr. E. H. Willock (Croydon). *Scotland:* Dr. J. Adams (Glasgow). *Ex officio:* The President (Sir James Barr), Mr. T. Jenner Verrall (Chairman of Representative Meetings), and Dr. Edwin Rayner (Treasurer).

APOLOGIES FOR ABSENCE.

Apologies for absence were read from Dr. J. S. Darling (Lurgan) and Dr. T. M. Carter (Bristol).

PRESS COMMITTEE.

The Press Committee appointed at the previous meeting reported the information it had issued to the press, and the Committee was instructed to draft a letter, based upon the statements, to members of the House of Commons, and to forward copies to the honorary secretaries of Divisions requesting them to send copies to each member of the Local Medical Insurance Committee, and to urge members of Divisions to interview personally members of the Local Insurance Committees thereon.

CAMPAIGN OF THE LONDON MEDICAL COMMITTEE.

A deputation from the London Medical Committee, consisting of Dr. BUTTAR and Mr. EVAN JONES, attended and gave a brief account of the campaign of the Committee, and explained the scheme of conditions and terms

of service upon which the medical men in London would attend insured persons. The deputation pointed out that the two objects which the London Medical Committee had in mind in its campaign were the welfare of the community and the maintenance of a free profession; it desired all the assistance the Association could give it in carrying out its objects.

PRESSURE UPON PRACTITIONERS TO JOIN THE PANEL.

The correspondence from Wisbech published in the SUPPLEMENT of last week, p. 44, was read, and the Committee approved of the insertion in the JOURNAL of a warning notice stating that further information with regard to the matter should be obtained from the Secretary of the Isle of Ely Division (Dr. A. C. S. Waters, High Street, March, Cambridgeshire).

POSITION AS REGARDS FORMATION OF PANELS.

It was reported that the information received from the Secretaries of Divisions with regard to the formation of panels was at present incomplete, and the Chairman was authorized to receive further information, and base upon it a report for the Representative Meeting.

THE MANCHESTER SCHEME.

A communication was received from a correspondent in Manchester inquiring whether the Manchester scheme (published in the SUPPLEMENT of last week, January 11th, p. 50) was within the policy of the Association. A resolution was proposed to the effect that the inquirer should be informed that, while the Committee recognized that the Manchester scheme was a distinct improvement on the Regulations issued by the Commissioners, it was not convinced that the arrangements were within the policy of the Association; an amendment by Dr. HELME, inviting the Committee to express the opinion that the acceptance of service under the Manchester scheme did not violate the pledge and undertaking, was lost, and the original motion was carried.

COMPENSATION.

The Committee had before it several applications for compensation, but in one instance only found the information sufficiently complete to authorize it in making an offer of temporary assistance without prejudice.

NATIONAL INSURANCE PRACTITIONERS' ASSOCIATION.

A communication was read from the National Insurance Practitioners' Association (1) drawing attention to an article appearing in the *Daily Chronicle* on January 9th, 1913, referring to certain action taken by practitioners to persuade a practitioner to withdraw from the panel formed for Willesden; (2) drawing attention to a certain leaflet issued by the "London Insurance Committee" from 429, Strand; (3) stating that many members of the Practitioners' Association who were also members of the British Medical Association resented the degradation of the latter body by its supposed responsibility for action of the kind referred to; (4) asking for an immediate disclaimer of any responsibility of the British Medical Association for such proceedings and a repudiation in the name of such body; and (5) stating that in the absence of such disclaimer it was proposed through the press to call the attention of members of the British Medical Association to the action being taken in London directed from the office of the Association.

The Committee resolved to reply, pointing out that the London Medical Committee acted entirely on its own authority and responsibility, and that, so far as the Willesden incident was concerned, that particular area was outside the jurisdiction of the London Medical Committee, and that there was no evidence that the action was taken under the aegis of the British Medical Association.

ATTENDANCE UPON AGED AND DISABLED CLUB MEMBERS.

A communication was read from the honorary secretary of a Division stating that it was proposed locally to attend aged and disabled members of clubs at the old rates, and asking for advice. The Committee resolved to call the attention of the Division to the fact that an understanding was come to in October, 1911, between representatives of the Association and the friendly societies that the rates for insured persons should be paid also for attendance upon members of societies who at the time of the passing of the Act were over 65 years of age, or permanently disabled and thus debarred from medical benefit under the Act. It was resolved further to point out that such an understanding was in fact contained in Section 15 (2) (e), of the Act and in Regulation 51, which governed the question of the attendance upon such members.

SEAMEN'S NATIONAL INSURANCE SOCIETY.

The consideration of the question of the conditions of service of practitioners under the Seamen's National Insurance Society, arising out of communications from the Honorary Secretary (Dr. Morgan) of the Liverpool Provisional Local Medical Committee, and the President (Sir James Barr), was postponed.

NATIONAL MEDICAL UNION.

The Committee resolved to communicate to the Council of the Association the following resolution passed by the General and Executive Committees of the National Medical Union:

That the Executive and General Committees offer the hearty support of the National Medical Union to the Council of the British Medical Association in its attitude of opposition to the formation of panels under the National Insurance Act, and suggest co-operation between the two bodies.

PUBLIC MEDICAL SERVICE SCHEMES.

The CHAIRMAN reported that he had since the last meeting approved on behalf of the Committee the following public medical service schemes with certain reservations in some places, and the Chairman's action was approved: Folkestone and District, West Sussex (Chichester, Worthing, Horsham, etc.), Southport, Llanely, North Bedfordshire, New Malden and Coombe, Tunbridge Wells.

The CHAIRMAN also reported that he had approved on behalf of the Committee of the scale of fees for domiciliary treatment and attendance of tuberculous persons submitted by the Burnley Division, and his action was approved.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

EAST ANGLIAN BRANCH:

SOUTH-EAST ESSEX DIVISION.

A MEETING of the medical practitioners of the district was held at Southend on January 6th, Dr. HARMON MORGAN in the chair.

The Panels and the Pledge.—The following resolution was carried with five dissentients:

That in the opinion of this meeting the action of nearly every Division in going on the panels, forced thereto by the intimidation and threats of the Government, has rendered further refusal to follow the same course inadvisable, looking to the fact that the alternative of a whole-time Government medical service would mean ruin to many loyal men in the Division. This meeting therefore advises all practitioners to temporarily join the panels subject to the removal of the pledge by the British Medical Association on January 17th next, and to consider themselves bound to resign from the panels by giving notice before January 31st next, should the pledge be not removed by the Association.

A further resolution, that all the committee should join the panel, was carried unanimously.

Local Medical Committee.—The Provisional Local Medical Committee was elected *en bloc* to form the Local Medical Committee, and a vote of thanks to the Executive Committee for their work concluded the meeting.

GLASGOW AND WEST OF SCOTLAND BRANCH:

DUMBARTONSHIRE AND ARGYLLSHIRE DIVISION.

THIS Division met in Clydebank on January 3rd. Dr. JAS. WILSON presided, and thirteen members were present.

Previous Finding Rescinded.—It was unanimously agreed to rescind the motion passed at last meeting "to stand by the Association's decision on the question of refusing service under the Insurance Act."

Withdrawal of Undertaking and Pledge.—On the motion of Dr. W. S. YOUNG, seconded by Dr. CRAMB, it was decided to sign a formal notice of withdrawal—eleven of those present did so—and further to advise the Division as a whole to withdraw from the undertaking and pledge.

Representative's Report.—Dr. CRAMB made a short statement and answered questions. Thereafter discussion took place.

Insurance Act.—The SECRETARY reported that panels were completed in every part of Dumbartonshire, and that Local Medical Committees were formed in Clydebank, Dumbarton, and the western district of the county. He had endeavoured to get information as to Argyllshire, but without success.

Instructions to Representative.—It was unanimously resolved that Dr. Cramb vote in favour of releasing the profession from the undertaking and pledge. It was also resolved unanimously that he express the Division's disapproval of the British Medical Association's alternative to service under the Act as decided upon at the last Special Representative Meeting. It was decided (one dissentient):

That Dr. Cramb be instructed to support the position taken up by the great majority of members of the British Medical Association in accepting service, and not to support any proposal which would weaken that position.

Central Defence Fund.—It was unanimously agreed:

That the profession in this Division adhere to the guarantees already given.

Contract Practice among the Uninsured.—It was decided unanimously that the Secretary be instructed to notify every member of the profession practising in the Division area that the Division have resolved:

That no contract practice be undertaken at rates lower than those accepted under the Insurance Act in each area (on a capitation basis without deductions, equivalent to 7s. 6d. without, 9s. with medicines); and further, that in all cases

patients should have free choice of doctor, doctors the right to refuse patients, and the income limit be the same as under the Act in each area.

Attendance upon Juvenile Members of Societies.—Dr. STRANG reported that the Clydebank Medical Association had formed a scheme as follows: Visits, 2s. 6d. with, 2s. without, medicines; consultations, 1s. 6d. with, 1s. without, medicines—the societies to be responsible for payment. This provisional scheme was approved.

METROPOLITAN COUNTIES BRANCH:
GREENWICH DIVISION.

At a meeting of the old Greenwich Division, held on January 13th, the following resolution was carried by 64 votes to 6:

That we desire to instruct the Representative of the old Greenwich Division, comprising Greenwich, Deptford, and Lewisham, to express our opinion at the forthcoming meeting of the Representative Meeting of the British Medical Association on January 17th that until agreement to treat insured persons under the National Insurance Act are satisfactory to the medical profession as voiced by the British Medical Association, the undertaking of the pledge must be considered binding on those who have subscribed to them.

KENSINGTON DIVISION.

A MEETING of the Division was held at Kensington Town Hall on Monday, January 13th, at 4 p.m. Mr. E. B. TURNER was in the chair, and eighty members were present.

Minutes.—The minutes of the last meeting were read. Arising out of the minutes, Dr. MATTHEWS asked if the cardinal points were dead, and said he had gone on the panel because the Association had abandoned them. The CHAIRMAN replied that the cardinal points were still alive, and contested Dr. MATTHEWS's arguments. Dr. BECKETT-OVERY questioned the Chairman's statement in the minutes that panel doctors were obliged to take residue patients on their lists, whether they wanted to or not. The CHAIRMAN maintained that his statement was correct. The minutes were then confirmed.

Resignation of Representative.—Dr. Beckett-Overy's resignation as Representative was received with regret, and a vote of thanks for his past great services to the Division was put from the Chair and carried by acclamation.

Instruction of Representatives.—The following resolution, recommended by the Executive Committee for adoption by the Division as an instruction to Representatives, was read by the CHAIRMAN:

That while expressing the deepest sympathy with, and declining in any way to blame, those members of the profession who, although they had expressed to their professional neighbours their reluctance to break a promise, felt themselves compelled by economic pressure and the defection of their fellows to go on the panels, the Representative Meeting expresses the opinion that, until agreements to treat insured persons under the Act are satisfactory to the medical profession and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding on those who have subscribed to them.

Dr. BECKETT-OVERY moved a direct negative, seconded by Dr. BUTLER. Dr. WALSH OWEN proposed as an amendment that the first part of the resolution be deleted as far as the word "panels." A discussion took place, in which Drs. CULVER JAMES, MATTHEWS, HEAD, GREENE, MURRAY, WRIGHT, RAIMENT, BURNHILL, and ALEX. DAVIDSON took part, and the amendment, seconded by Dr. KINGDON, was put to the meeting and carried with one dissident. The amendment then became the substantive motion, and, being put to the meeting, was carried with one dissident and became an instruction to Representatives, as follows:

Motion by Kensington.

That this Representative Meeting expresses the opinion that, until agreements to treat insured persons under the Act are satisfactory to the medical profession and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding on those who have subscribed to them.

The CHAIRMAN then put the following resolution by the Executive Committee for submission to the Representative Meeting:

Motion by Kensington.

That it being evident that a very large number of the doctors who have gone on to the panels have been compelled to do so by fear of injury to their practices, which in some cases might even amount to actual financial ruin, the Representative Meeting directs that a letter be sent to every member of the medical profession, asking (1) if he is on the panel; (2) if so, whether he has taken service willingly or against his inclination owing to coercion; (3) whether, if he be not satisfied with the conditions both as to service and remuneration, he is prepared to decline to renew his contract for panel service at the termination of the provisional three months, provided that the other practitioners who have been induced to take service by similar methods do the same; (4) if he be not on the panel, whether he wishes to go on; and (5) whether he would be willing to undertake any whole or part-time appointment to treat insured persons under the Act.

Dr. CRAWFORD THOMSON seconded. The resolution was put and carried, and became an instruction to Representatives.

Appointment of Deputy Representatives.—Dr. Herbert Tanner was appointed Deputy Representative in the place of Dr. Beckett-Overy, and Dr. Crawford Thomson as Deputy Representative if required.

London Medical Committee.—The London Medical Committee's scheme of service was provisionally adopted.

NORTH OF ENGLAND BRANCH:

SUNDERLAND DIVISION.

A MEETING of this Division was held on January 11th. In the absence of the Chairman, Dr. MORGAN took the chair.

The Undertaking and Pledge.—Dr. TODD moved and Dr. BOYD CUNNINGHAM seconded:

That, owing to circumstances over which the medical profession has no control, the majority of those who had signed the undertaking and pledge have been forced to take provisional service for three months under the National Insurance Act, and, taking into consideration the different constructions which have been placed upon the resolutions of the last Representative Meeting, this Division considers that all those who have signed the undertaking and pledge are absolved.

Dr. DIX moved and Dr. RUSSELL seconded the following amendment:

That all members who have signed the pledge and undertaking be forthwith released from such pledge.

The amendment was carried; on its being put as the substantive motion, Dr. MODLIN moved and Dr. NEILAN seconded an amendment:

That, inasmuch as the last Representative Meeting abandoned one of the six cardinal points in advising the profession to approach the friendly societies, this Division considers the pledge was no longer binding.

This amendment was lost. Dr. ROWSTON moved and Dr. MODLIN seconded an amendment:

That, owing to the altered circumstances, the pledge is no longer binding.

This amendment was lost, and Dr. DIX's amendment was carried as the substantive motion.

Policy for the Future.—Dr. TODD moved and Dr. DIX seconded, and it was unanimously carried:

That all steps be taken by the Association to safeguard the interests of the profession in the future and to ascertain what are the necessary amendments to the National Insurance Act and alterations in the Regulations to make the Act acceptable, in the truest sense of the word, to the profession and in the welfare of insured persons.

Special Representative Meeting.—Dr. MODLIN moved, Dr. DILLON seconded, and it was carried:

That in any other matters which may come up before the Representative Meeting, the Representative be allowed a free hand to vote as he may consider most advisable.

Dr. DILLON moved, Dr. SMITH seconded, and it was carried:

That, should Dr. Todd be unable to attend the Representative Meeting, Dr. Modlin be appointed as his deputy.

OXFORD AND READING BRANCH:
READING DIVISION.

A MEETING of the Division was held in the hospital library on Tuesday, January 14th, at 3.30 p.m. Dr. GORDON PATERSON was in the chair, and thirty-nine other members were present. Notice was given of the absence of the Chairman and Vice-Chairman of the Division.

Compensation.—After the minutes of the last meeting had been read and confirmed the SECRETARY stated that a late medical officer to the Amalgamated Friendly Societies Institute had applied for compensation from the Guarantee Fund—that he had recommended an immediate grant of £100 down and, if circumstances indicated, a further grant in the latter half of the year. Of this action the meeting approved.

Voluntary Hospitals.—The meeting then considered the resolutions of St. Bartholomew's Hospital with regard to the treatment of insured persons and others. It was stated that the Board of Management of the Royal Berkshire Hospital had already adopted these resolutions. After some discussion, it was proposed by the SECRETARY, seconded by Mr. BOKENHAM, and resolved:

That Clause 4 is not compatible with the previous ruling of the Division to the effect that the old out-patient system should be remodelled.

The meeting agreed that this resolution should be sent at once to the chairman of the medical staff of the hospital.

Arrangements Made for Attendance on Insured Persons.

Mr. N. H. JOY then reported, as Secretary of the County Medical Committee, how far arrangements had been made in the county of Berks for the treatment of insured persons. No income limit had yet been settled, but it was hoped that it would be fixed at £2. The matter, he said, would be settled on February 1st. In the meantime, steps would be taken to keep on good terms with the friendly societies and the insured persons and also for the appointment of medical representatives to the Insurance Committees. No details had been arranged as to supplying insured persons with drugs, although medical benefit was due on the following day.

Following this report numerous members asked questions as to how they should deal with insured persons, none of the county members having yet received the required forms for registering, prescribing, or making reports.

The meeting then invited the Clerk to the County Insurance Committee to answer the questions raised.

Mr. P. NAPLER JONES reported that members in the Crowthorne district had declined to go on the panel. They had been invited to meet the Chairman of the County Committee in Reading, but had declined. The Chairman had gone to Crowthorne, and after much argument arrangements were made for insured persons to be treated for three months in the way most convenient to the practitioners concerned.

Mr. ROWLAND then reported that in Reading an income limit of 50s. weekly had been agreed upon by the Insurance Subcommittee and the Local Medical Committee, and that those persons unalotted to any doctor should be distributed by a committee consisting of five practitioners and five others.

Dr. JOYCE then reported a conference between the drug committee of the Medical Society and the Chemists' Association of Reading. A pharmacopoeia drawn up for the society had been submitted to the chemists.

Tea was then served, and soon after the CLERK TO THE INSURANCE COMMITTEE arrived. He was bombarded with questions, most of which he was quite unable to answer. He was expecting the various forms required every hour from head quarters; he could not on his own authority promise anything. He was, however, heartily thanked by the meeting for the very trying ordeal to which he had been subjected.

The Representative was then instructed as to how he should proceed at the forthcoming Representative Meeting. Only one instruction was given, in the limited time remaining, and that to the effect that the Representative Body should release unconditionally and absolutely those who had signed pledges.

It was agreed by several speakers that the Association had adopted too rigid a policy from the beginning, and that the signing of pledges based on such a policy had been a mistake.

SOUTH-EASTERN BRANCH:
BRIGHTON DIVISION.

At a special meeting of the Brighton Division, held on January 9th, Dr. RYDING MARSH in the chair, at which forty members and fourteen visitors were present, the following resolutions were passed for submission to the Special Representative Meeting on January 17th:

Instructions to Representatives.

That the Representative Meeting declares that every medical practitioner is absolved from his undertakings and pledge. That, in view of the facts that (a) the St. Bartholomew's Hospital regulations re insured persons can be made to cover that part of the pledge having reference to staffs of hospitals; (b) that those Divisions who adopt the Bradford rules can for themselves decide as to professional recognition; and (c) that the remainder of the pledge is now obsolete, the pledges as a whole be considered to be cancelled.

Future Policy of the Association.

That it be an instruction to the Council to use every possible means to strengthen the organization of the medical profession through the British Medical Association with a view to obtaining later through an amending Act such improvements in the National Insurance Act as will tend to make that Act a real benefit to the community, and one that will secure the cordial co-operation of the medical profession.

1. That in the opinion of this Representative Meeting there is no reason for departure from an attitude of uncompromising hostility to the existing conditions of service under the Insurance Act.
2. That the Representative Body now proceed to formulate the conditions for future action which would be likely to secure the adherence of all medical practitioners dissatisfied with the Act.

That it be an instruction to the Council, by means of a campaign amongst the staffs of voluntary hospitals, similar institutions, and otherwise, to take such action as will induce the Government to provide an efficient medical and surgical service for those insured for medical benefits under the National Insurance Act.

WEST SOMERSET BRANCH.

A SPECIAL general meeting was held at the Taunton and Somerset Hospital on Tuesday, January 14th, at which thirty-five members were present. The HONORARY SECRETARY read a telegram from the President that he was prevented from attending owing to illness. Mr. W. B. WINCKWORTH, Past-President, was elected to the chair.

Special Representative Meeting.—It was the general feeling of the meeting that the meeting of Representatives should return the pledges, and, after some discussion, the following resolution, proposed by Dr. A. E. JOSCELYNE and seconded by Mr. WATKINS, was unanimously passed:

That this meeting of the West Somerset Branch recommends the meeting of Representatives to adopt this resolution:

"That this meeting recognizes that, by whatever means the Insurance Commissioners have obtained a sufficient number of men to supply medical benefits to the insured, and also that in the present circumstances the men who would be penalized are those who hold that their undertaking and pledge are still binding, now absolve the members of the profession from their pledge."

A motion, proposed by Dr. MEREDITH and seconded by Dr. PENBERTHY, that a circular signed by Dr. Lauriston Shaw and others be allowed to lie on the table, was passed unanimously.

LIBRARY OF THE BRITISH MEDICAL
ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list.

The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

MEMBERS ELECTED TO THE BRITISH MEDICAL ASSOCIATION

(AUGUST 16TH TO DECEMBER 31ST, 1912).

BY THE COUNCIL.

Barnardo, Frederick Adolphus Fleming, Captain I.M.S., M.A., M.B., Ch.B.
 Garstin, Edward James Hamilton, Surgeon R.N., M.B., B.Ch., B.A.O. Dub. Univ.
 Hancock, Eric Lawrence, M.B., B.S., O.S. "Norseman," Western Telegraph Co., Pernambuco, Brazil.
 Holden, Frank Naldrett, L.R.C.S.I., L.R.C.P.I., Selimpopon, British North Borneo.
 MacSweeney, Edmund George, L.R.C.P. and S. Edin., L.F.P. and S.G., 481, Main Street, Brockton, Mass., U.S.A.
 Markham-Carter, Robert, Captain I.M.S., F.R.C.S., F.R.G.S., L.R.C.P., D.T.M.
 Marshall, William Ernest, Fleet Surgeon R.N., M.R.C.S., L.R.C.P.
 Parnell, Roderick Joseph Graham, Surgeon R.N., M.R.C.S. Eng., L.R.C.P. Lond.
 Pratt, James John, Lieutenant-Colonel I.M.S., F.R.C.S. Eng.
 Purvis, Murray, Lieutenant I.M.S., M.B., Ch.B.
 Stiven, Harold Edward Sutherland, M.A., M.B., B.O. Cantab., M.R.C.S., L.R.C.P., Kasr-el-Ainy Hospital, Cairo, Egypt.

Border Counties Branch.

Anderson, T. M., M.B., Crichton Royal Institution, Dumfries

Association Notices.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, January 29th, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 9th, 1913.

ELECTION OF COUNCIL, 1912-13.

NOTICE is hereby given that nominations for a candidate for the election as a Member of Council by the Cambridge and Huntingdon, East Anglian, and South Midland Grouped Branches for the year 1912-13, must be forwarded to reach the Financial Secretary and Business Manager, at the Office of the Association, not later than Saturday, January 25th. Each nomination must be on the prescribed form, copies of which will be furnished by the Financial Secretary and Business Manager upon application.

Separate forms have been prepared:

- (A) For a nomination by a Division, and
 (B) For a nomination by any three Members of a Branch respectively.

Those applying are requested to state for which purpose the form is desired.

An announcement of the Nominations received will be made in the JOURNAL of February 1st, 1913.

Election will be by voting papers. These papers will contain the names of all duly nominated candidates, and will be issued from the Central Office on Monday, February 3rd, and will be returnable not later than Saturday, February 8th.

The result of the election will be published in the JOURNAL on or before February 15th, 1913.

By Order of the Council,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 18th, 1913.

NOTICE OF FORMATION OF A NEW DIVISION OF THE ASSOCIATION.

New Kesteven Division: Adjustment of Areas of Boston and Spalding and Lincoln Divisions.

THE following changes have been made in accordance with the Regulations of the Association, and take effect from the date of publication of this notice:

That a new Division of the Association be formed, to be known as the Kesteven Division, of area coterminous with the area of the County of Kesteven, Lincolnshire, and that the areas of the existing Boston and Spalding and Lincoln Divisions be modified accordingly. The new Division shall form part of the Midland Branch.

Representation in Representative Body: The question of the mode of representation of the new Division in the Representative Body has been left to the Council. It is intended to apply to the Council for independent representation.

BRANCH AND DIVISION MEETINGS TO BE HELD

To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.

LANCASHIRE AND CHESHIRE BRANCH: LIVERPOOL DIVISION.—The annual meeting of the Division will be held on January 31st. Business: (a) To receive annual report of the Executive Committee. (b) To elect officers. (c) To elect the Representatives of the Division on the Branch Council to take office after the next annual meeting of the Branch. (d) To elect the ordinary members of the Executive Committee. (e) To make new rules, or alter or repeal existing rules. (f) To elect Representatives at the Representative Meeting. (g) To transact any business that may be transacted at an ordinary meeting. —FRANCIS W. BAILEY, Honorary Secretary, 51A, Rodney Street, Liverpool.

METROPOLITAN COUNTIES BRANCH: GREENWICH AND DEPTFORD DIVISION.—A meeting of the Division will be held on Monday, January 20th, to Report Progress.—W. H. PAYNE, Honorary Secretary.

Hospitals and Asylums.

MIDDLESBROUGH COUNTY BOROUGH ASYLUM.

THE annual report of Dr. John W. Geddes, the Medical Superintendent of this asylum, shows that on January 1st, 1911, there were 417 patients in residence, of whom 253 were chargeable to Middlesbrough, and on the last day of the year also 417, of whom 251 were Middlesbrough cases. The proportion of insane to the population of Middlesbrough, Dr. Geddes says, was 1 to 417.5, or 24 per 10,000, as compared with 1 to 269, or 37.12 per 10,000, for the whole of England and Wales. The total cases under care during the year numbered 495, and the average number daily resident was 418. During the year 78 were admitted, those belonging to the borough (54) showing an increase of 3 on those of last year. Of the total number 70 were direct admissions, and of these the attacks were first attacks within three months in 37, and of less than twelve months' duration in 13 more; not-first attacks within twelve months in 8, and in the remainder, including 2 congenital cases, the attacks were of more than twelve months' duration on admission.

The direct admissions were classified according to form of mental disorder into:—Mania of all forms, 27; recent melancholia, 7; senile dementia, 3; delusional insanity, 4; general paralysis of the insane, 12; insanity with epilepsy, 9; less common forms, 6; and congenital mental defect, 2. As to causation, alcohol was assigned in 12, acquired syphilis in 3, and other toxins in 8; diseases of the nervous system in 13 (epilepsy, 11); critical periods in 8; physiological defects and errors in 4; bodily trauma in 2, and mental stress in 17. An insane heredity was ascertained in only 8, and of alcoholism in 1. During the year 27 were discharged as recovered, giving a recovery-rate on the direct admissions, and also in and on the direct admissions of 38.57 per cent.; also 2 were discharged as not improved, and 49 died. The deaths, which gave a death-rate on the average daily number resident of 11.72 per cent., were due in 17 cases to nervous diseases, including 12 deaths from general paralysis; in 14 to diseases of the heart and blood vessels; in 2 to respiratory diseases; in 2 to gastro-intestinal diseases; in 4 to genito-urinary diseases, and in the remainder to general diseases, including 6 from pulmonary tuberculosis. No inquest was held during the year, the general health was good, and no infectious disease occurred.

BARNWOOD HOUSE HOSPITAL FOR THE INSANE.

THE annual report for the year 1911 of Dr. J. G. Soutar, the Medical Superintendent of this large hospital for private patients, shows that on January 1st, 1911, there were 153 certified patients in residence, and on the last day of the year 149. The total cases under treatment during the year numbered 187, and the average number daily resident 150. These numbers show a slight falling-off on those of the previous year and a more marked decrease on those of the Nineties. Probably Barnwood House shares with other institutions of its kind the marked effect of increased provision for private patients in county and borough asylums—a matter commented upon by the Lunacy Commissioners in their recently issued annual report. We note also that only 34 patients were admitted during 1911, as compared with 39 for the previous year. Of the 34 admissions, 25 were direct admissions and 9 indirect. Were it not for these indirect admissions, transferred from other asylums, Dr. Soutar says there would have been many empty beds in the hospital.

Of the direct admissions 17 were first attack and 8 not-first attack cases. In 10 the attacks were first attacks within three and in 6 more within twelve months of admission; in 8 not-first attacks within twelve months, in the remaining case the attack being of between five and ten years' duration. The direct admissions were classified according to the forms of mental disorder into: Recent mania, 5; recent melancholia, 18, and chronic melancholia, 1; and delusional insanity, 1. As to causation, alcohol was assigned in none, syphilis in 1, tuberculosis in 2 and other toxins in 2; nervous diseases in 2; various bodily affections in 5; and puberty, child-bearing, and bodily trauma in 1 each. Mental stress was assigned in 11, whilst an insane heredity was ascertained in 8 and a neurotic heredity in 3 more.

During the year 11 were discharged as recovered, giving a recovery-rate on the direct admissions of 44 per cent., or of recoveries in and on the direct admissions of 36 per cent.; also 4 were discharged as relieved and 14 as not improved. During the year also 9 died, giving a death-rate on the average numbers resident of 6 per cent., as compared with the average death-rate for this institution of 5.4 per cent. All deaths, with one exception, were due to natural causes, the exception being an old lady who was moribund on admission from injuries sustained by a fall, and who died within twenty-four hours after reception. No accident of any kind occurred during the year, and the general health appears to have been satisfactory. It should be added that during the year 4 patients were maintained gratuitously and 74 at less than the average rate, at a cost to the hospital of £2,961 12s. 4d.

WORCESTERSHIRE ASYLUM, BARNSELEY HALL, BROMSGROVE.

THE annual report for 1911 of Dr. Percy T. Hughes, the Medical Superintendent of this asylum, shows that on January 1st, 1911, there were 528 patients in residence, and on the last day of the year 590. The total cases under care during the year numbered 711, and the average number daily resident 537. During the year 183 were admitted, of whom 104 were direct and 79 indirect admissions, including 5 statutory readmissions. Of the direct admissions, in only 31 were the attacks first attacks within three months and in only 20 more within twelve months of admission; in 19 not-first attacks within twelve months, and in 34 the attacks, whether first or not, were of more than twelve months' duration on admission. So far as duration of disorder, therefore, was concerned, the admissions were of unfavourable character.

As to the forms of mental disorder, the direct admissions were classified into: Recent mania 8, and recurrent 2; recent melancholia 22, and chronic 2; senile and secondary dementia, 28; primary dementia, 15; systematized delusional insanity, 8; insanity with epilepsy, 6; general paralysis and insanity with grosser brain lesions, 2 each; confusional insanity, 3; stupor, 1; and congenital defect, 5. Turning to causation, alcohol was assigned in 12, drug habits in 2, syphilis in 6, and other toxins in 14; diseases of the nervous system (including epilepsy, 7) in 33; various bodily affections, of which cardio-vascular degeneration (35) was the most important, in 78; critical periods in 39; physiological defects and errors in 10; bodily trauma in 2; and mental stress in 32. An insane heredity was ascertained in 23, an alcoholic heredity in 15, and of other neuropathies in 18 more. Also congenital mental defect not amounting to imbecility was recorded in 26. During the year only 11, or 10.5 per cent. of the direct admissions, were discharged as recovered, the recoveries in the direct admissions giving a recovery-rate calculated on the direct admissions of 9.6 per cent. Also 52 were discharged as relieved and 7 as not improved. The large number discharged as relieved was occasioned by the Greater Birmingham Act, in accordance with which all cases belonging to Greater Birmingham likely to be discharged as recovered or relieved were transferred to the Birmingham City Asylum at Winson Green. During the year 51 died, giving a death-rate on the average number resident of 9.4 per cent. The deaths were due in 12 to nervous diseases, including 6 from general paralysis; in 14 to diseases of the heart and blood vessels; in 6 to diseases of the respiratory organs; in 3 to diseases of the gastro-intestinal organs; and in the remainder to general diseases, with only 5 from tuberculous diseases. All deaths were from natural causes with the exception of one case, in which the patient died from perforation of the bowel by a small piece of wood which had been swallowed.

The general health was good throughout the year.

National Insurance.

REPORTS OF LOCAL ACTION.

LONDON AND MIDDLESEX.

LONDON MEDICAL COMMITTEE.

THE London Medical Committee has during the past week continued with increased vigour the campaign which it began on January 3rd against the conditions of service offered by the National Insurance Act. Its operations were at once directed to bringing to the notice of insured persons their right under Section 15 (3) of the Act to be allowed to apply to the Committee to make their own arrangements for medical benefit. To further this end the Committee has issued several thousand posters, over one million leaflets, and hundreds of thousands of forms to be filled in by insured persons and sent to the Insurance Committee. Public meetings of the insured have already been held all over London, and over 5,000 of the London insured have subscribed to resolutions calling upon the Government to allow them to contract out. Similar meetings are to be held nightly all this and next week. These meetings have been well attended, the speakers have been listened to with attention, and the resolutions have been carried by overwhelming majorities.

The Committee has also taken care to correct misstatements in the press, and feels confident that it has had a decided effect on the London panels; it draws attention to the fact that the list published on Monday last contained fewer individual names than the Insurance Committee stated it had on January 4th. If no more be added in the next few days the Committee is satisfied with its work, and will go forward with renewed courage.

The London Insurance Committee published on January 14th a list of the medical practitioners who have accepted service under the Act. The lists contained 1,897 entries.

The London Medical Committee has prepared the following analysis of the lists, which, so far as it can discover at present, indicates the true state of the official lists:

Number of men actually on panel (excluding six unclassified) but including many who appear in the Middlesex list 738
This total is inflated in the official list in the following manner:

| | 2 names appear 10 times | ... | Making an Official Total of |
|-----|-------------------------|-----|-----------------------------|
| 1 | 8 | ... | 20 |
| 13 | 7 | ... | 8 |
| 30 | 6 | ... | 91 |
| 46 | 5 | ... | 130 |
| 101 | 4 | ... | 250 |
| 135 | 3 | ... | 404 |
| 149 | 2 | ... | 495 |
| 261 | 1 | ... | 293 |
| 738 | | | 261 |
| | | | 1,897 |

Mr. Masterman, in reply to Mr. Touche in the House of Commons on January 15th, stated that the total number of different doctors who had signed agreements to attend insured persons with the London Insurance Committee, and whose names had been issued on the borough lists, was 780. Some more names had been received since the lists were printed, and the number was nearly 800.

HAMPSTEAD.

MEETING OF THE INSURED.

A public meeting, one of a number being held in London for the purpose of explaining to insured persons the policy of the British Medical Association, took place at the Town Hall, Hampstead, on January 11th, under the auspices of the Provisional Medical Committee for the locality. Mr. HENRY CLARKE, a well-known resident, took the chair, and there was a considerable attendance of the public.

The CHAIRMAN spoke of the importance of free choice of doctor to the insured person, and quoted a speech by the Chancellor in the House of Commons last August in favour of the principle.

Dr. FORD ANDERSON moved the following resolution:

That this meeting is of opinion that those insured persons

who apply for permission to make their own arrangements for medical benefit should be allowed to do so by the Insurance Committee, and thereby have secured to them free choice of doctor; and that a copy of this resolution be sent to the Chancellor of the Exchequer.

Dr. Ford Anderson stated the objections of the medical profession to the arrangements contemplated by the National Insurance Act to be that they involved loss of freedom, interference with conditions of service, and the absence of free choice of doctor. Medical men desired to see continued the system of medical attendance that had prevailed hitherto in this country by which the arrangement was a private one between doctor and patient. The British Medical Association had promulgated an alternative policy in regard to medical benefit. This having come to the ears of the authorities, many threats had been held out to cause the doctors to retire from the position they had taken up. As to the panels, there were 28,000 insured persons in Hampstead, and 26 doctors had gone on the panel; some of these did not reside in Hampstead, and, in his view, it was geographically impossible for them to attend to all the insured persons requiring treatment. Each man would have 1,077 patients allotted to him, but that was not so many as in Marylebone, where each doctor on the panel would be allotted 5,000 patients. He could imagine nothing more likely to benefit the community than that treatment under the Act should be given, not by doctors treating one class only, but by doctors attending all classes. The only way by which this could be accomplished was by adopting throughout the country the policy advocated by the British Medical Association. The best doctors in London would not go on the panel, but they had no objection to treating the insured under the scheme suggested by the Association.

The resolution was seconded by Mr. HEARD, who was introduced by the CHAIRMAN as an insured person.

Mr. E. B. TURNER, in supporting the resolution, spoke of the importance of a sick man of having a doctor he knew rather than one allotted to him; for that reason insured persons should do their utmost to see that the British Medical Association proposals were approved by the Commissioners and generally adopted. In order to obtain this consummation it was necessary for the insured to apply for permission to make their own arrangements. Mr. Turner emphasized the importance of sympathetic, individual treatment of patients, and urged that if medical men were on terms of freedom with the insured the attendance they gave would have far better results. He criticized some of the financial arrangements under the Act, and finally assured those present that there was no doubt that the money for medical benefit would be forthcoming even if they contracted out of the Act in the manner suggested by the British Medical Association.

Dr. BUTTAR declared that in London the panel was so limited it would not be possible to obtain free choice of doctor. If an insured person did choose a doctor on the panel, he would find that that medical man was so busy that he would not be able to give the attendance that the patient had the right to expect. On the other hand, the Insurance Committee said that if the insured person went to a non-panel doctor, that doctor would have to record the ailments of the patient, to keep accounts of all work done, and to submit to inspection of his methods to ensure that the treatment was not inferior to that which would be obtained from a panel doctor. As the medical profession would not tolerate that, the insured would be thrown back on panel doctors of whom they knew nothing. Dr. Buttar pointed out the difficult state of affairs that would arise if the insured desired the panel doctors to attend their dependants. In London there were 750 doctors on the panel and 1½ million insured persons. Dependants would probably bring the total to 3½ millions, and for the panel doctors to attend that number would mean 5,000 patients per man.

Questions being invited, a gentleman suggested that as all these on the list of any doctor would not require treatment, Dr. Buttar's figures should be modified to some extent. He also thought that the doctors should be allowed to engage assistants from college. He added

that if the medical profession as a whole would go on the panels the insured would have free choice of doctor. For his part, if he were an insured person and he found that his own medical man had not gone on the panel, he would say, "I am sorry, but if you will not do your duty by the State I must choose another doctor."

Mr. E. B. TURNER, replying to the points raised by the speaker, quoted from Mr. Lleyd George's speeches to show that he had expressed strong disapproval of the general employment of assistants. He also alluded to the Chancellor's initial error in not consulting the medical profession until the bill was just about to be introduced in Parliament.

After some further discussion the resolution was put to the meeting, and carried with only three or four dissentients.

MEETING OF THE PROFESSION.

A meeting of the profession was held at the Central Library, Finchley Road, on January 9th, at 4.30 p.m. Dr. FORD ANDERSON was in the chair, and thirty-one members were present. The minutes of the last meeting were read and confirmed.

Dr. FORD ANDERSON, in a speech from the chair, introduced the subject of the London campaign carried on by the Medical Committee for London, and he was followed by Dr. GORDON LANE, who informed the meeting of what had been done up to the present time. He described the organization of the Committee and the methods by which the Local Committee could keep in touch and carry on the work in Hampstead. He also answered various questions, and made clear the position of men who had gone on the panel and who were desirous of coming off, and gave the ruling of counsel on the questions of the agreements with the Insurance Committee and of the right of the insured to apply to contract out. It was moved from the chair:

That we, the members of the medical profession in meeting assembled on January 9th at Hampstead, are of opinion that we should act in the best interests of the insured and also of the profession by adhering firmly to the attitude suggested to us by the Medical Committee for London.

This was carried unanimously, and also that it should be sent to the press.

Upon the information that Dr. Claude Taylor had been appointed Vice-Chairman of the London County Medical Committee, Dr. ARCHER moved and Dr. MACNAUGHTON-JONES seconded:

That, whereas Dr. Claude Taylor has been appointed Vice-Chairman of the London County Medical Committee, a committee elected from doctors on the panels in London, and whereas his action is directly opposed to the interests of the profession in Hampstead, this meeting of medical practitioners in Hampstead calls upon him to resign his membership of the Hampstead Provisional Medical Committee.

This was carried, there being one dissentient.

A vote of thanks to Dr. Gordon Lane was carried by acclamation.

MEETING OF PROVISIONAL MEDICAL COMMITTEE.

A meeting of the Hampstead Provisional Medical Committee was held at 41, Belsize Park, on Thursday, January 9th, at 8.30 p.m. Dr. FORD ANDERSON was in the chair, and fourteen members were present. The confirmation of the minutes was deferred, as they were in the press.

A letter from Dr. Whitby was read referring to his position with regard to his relation with men on the panel in Coventry, and the Honorary Secretary was instructed to reply to the effect that he should wait until the Special Representative Meeting on January 17th.

On receiving the resignation of Dr. Claude Taylor, the Committee elected Dr. H. Sharman to fill the vacancy.

Upon information received that the Hampstead Provident Dispensary had applied to become an approved institution under Section 15, paragraph 4, of the Insurance Act, the medical staff were invited to attend and discuss the situation.

It was moved by Dr. OAKLEY, seconded by Dr. ARCHER, and carried unanimously:

That this Provisional Medical Committee considers that any provident dispensary becoming an approved institution under Section 15, paragraph 4, thereby comes under the National Insurance Act, and the medical officers of such a dispensary cannot, compatibly with the policy of the Association, attend to insured persons.

It was moved by Dr. OPPENHEIMER, and seconded by Dr. ARCHER, that a copy of the resolution be sent to the Hampstead Provident Dispensary. This was carried unanimously.

The Public Medical Service Scheme approved by the London Medical Committee was considered, and paragraphs 1 to 7 were approved.

Dr. BARNETT moved, Dr. ARCHER seconded, and it was carried *nemine contradicente*, that paragraph 7 be amended as follows:

That the list of exceptions be decided upon locally.

Paragraph 8 was then approved, whereupon it was resolved to proceed to the next business.

Dr. PURDIE, having been invited to attend, explained his reasons for going on the panel. The question of resignation from the panels was also discussed with Dr. PIPECOCK and Dr. TEBB, the two members of the medical staff of the Hampstead Dispensary who had gone on the panel in Hampstead.

WILLESDEN.

A special emergency meeting of the profession, arranged by the Willesden Division of the Metropolitan Counties Branch, was held at St. Andrew's Schools, Willesden Green, on Saturday, January 4th, at 9 p.m. Although less than twelve hours' notice of the meeting was given, sixty-one attended. Dr. CORAM JAMES was in the chair, and the minutes of the last meeting were taken as read.

Representative Meeting.

The notice that a Special Representative Meeting had been requisitioned for January 17th, to consider the question of releasing men from their pledge, was read, and it was decided to call a special meeting on Monday, January 13th, to instruct the Representative and to decide what motions, if any, should be sent to that meeting for decision or consideration.

Central Insurance Fund.

An appeal was made on behalf of the Central Insurance Defence Fund, and a very gratifying response was received.

Contracting Out.

The alternative policy of insisting on contracting out being allowed by the Commissioners, and by inducing the insured to demand their rights, was explained.

Interview with Chairman of Middlesex Insurance Committee.

Drs. MACEVOY, ARMITAGE, SKENE, and SODEN then gave an account of the interview they had had the previous evening with Mr. Glyn Jones, M.P., Chairman of the Middlesex Insurance Committee, and explained what had been decided by that Committee in the event of there being an inefficient panel in the district.

Dr. SNEWMAN moved and Dr. SKENE seconded *pro forma*:

That the Local Medical Committee be empowered to arrange forthwith with a sufficient number of members reluctantly willing to work under the Act, so as to ensure the formation of an adequate panel for Willesden.

The following amendment was moved by Dr. STOCKER and seconded by Dr. MACDONALD:

That to save from absolute ruin many of our fellow practitioners, and to retain for them their just and legitimate rights which are threatened by the tyrannical abuse of political power, we can no longer justly condemn those who are forced in self-preservation to go on the panel; but we accept this attitude with feelings of bitter animosity against the Government's method in violating the liberty of action of our profession, and we pledge ourselves to take every opportunity to improve the position of our fellow practitioners unwillingly coerced to serve under the Act.

The original motion was by consent withdrawn, and the amendment put as a substantive motion. Sixteen of those present joined in the discussion, and on being put to the vote the motion was carried by 37 votes to 4.

TOWER HAMLETS.

Protest Meeting.

A meeting of the medical practitioners in the Tower Hamlets area was held in the Limehouse Vestry Hall, on January 10th, for the purpose of protesting against the methods of the Chancellor of the Exchequer re the Insurance Act. Dr. THOMAS occupied the chair, and nineteen

members and ten non-members were present. This small attendance was no doubt due to the fact that a meeting of the practitioners who had gone on the panel was summoned by telegram late on the previous night, to take place at the same time in Shoreditch Town Hall.

Dr. PAXTON, who has gone on the panel, moved the following resolution:

That this meeting of medical practitioners in Poplar and Stepney protests against the unfair statements made by the Chancellor of the Exchequer for the purpose of coercing medical practitioners to serve on the panels, which have resulted in many men in this district signing the agreement to take service under the Act against their better judgement and through fear of grave financial loss.

Dr. TOOKER, who has also gone on the panel, seconded the resolution.

Mr. E. B. TURNER, Drs. EVAN JONES, MAJOR GREENWOOD, F. J. SMITH, and BEATON, who had been invited to address the meeting, spoke strongly in support of the motion. Drs. MICHAEL, CHRISNELL, and TOLAND also addressed the meeting.

On the motion being put to the vote it was declared to be carried unanimously.

PANELS AND CONTRACTING OUT.

The following official statement has been issued by the London Insurance Committee:

In the whole of London south of the Thames the Committee are satisfied that the names which they have received of practitioners to be placed upon the panel are sufficient to provide a medical service adequate in every respect for the needs of the insured persons in that area. Over the greater part of the area north of the Thames adequate panels have been secured. But in certain areas there is some doubt whether the number of practitioners willing to place their names on the panel will be sufficient to secure a service adequate in all respects. In such areas the Committee propose to confer with those doctors who have already placed their names upon the panel, and, if necessary, after this consultation, will apply to the Commission for sanction to take any measures which may be necessary to ensure that every insured person in those areas will receive adequate medical attendance and treatment.

The Committee have received a certain number of printed forms purporting to express a wish on behalf of insured persons to be allowed to make their own arrangements with doctors outside the list of those doctors who are advertised as accepting service under the Act on the normal panel system. The intention of the Act is only to allow arrangements of this nature as exceptions to the general course, where the special circumstances of the insured person justify it. The Insurance Committee will, in due course, consider every application by an insured person to make his own arrangements upon its merits, and for that purpose it will be necessary for every such person to furnish the Committee, in order that they may be able to deal with the matter, with such information as to the special circumstances of his case as is necessary to satisfy them that the application should be granted. If in any case an insured person is allowed to make his own arrangements it will be necessary, as a condition of the making of any contribution by the Committee towards the cost of his treatment, that the doctor with whom the arrangement is made should furnish reports and give certificates similar to those given by the panel doctors, and that the Insurance Committee should have facilities for ascertaining that the conditions of service and medical treatment are not inferior to those given on the normal panel system. In order that insured persons should not be led into making arrangements which the Insurance Committee will be unable to regard as justifying a contribution from them, it will further be necessary that such doctor should furnish the Committee with evidence that he is prepared to, and can, comply with these conditions. In considering the matter generally, the Insurance Committee will take into consideration the general effect upon the administration of medical benefit in the area.

MANIFESTO BY APPROVED SOCIETIES.

The following warning to members of approved societies has been issued. It is signed by representatives of the Prudential Approved Societies, General Federation of Trade Unions, National Conference of Friendly Societies, National Amalgamated Approved Society, Trade Union Congress, and the Liverpool Victoria Approved Society:

The undersigned representatives of approved societies, whose members comprise almost the whole body of insu-

red persons, have had their attention called to the movement being organized by a London committee of medical men to obtain the control of medical benefit for doctors who decline to go on the panels, and who desire to have the work on their own terms.

The medical committee referred to endeavours to induce acceptance of its proposals by promising free choice of doctor, but this is guaranteed already by the Act, and it must be borne in mind that where there are exceptional cases requiring special treatment the approved societies would advise their members, and, when requested, make representation to the Insurance Committees. The special circumstances of the insured persons would thus be properly considered, and their interests amply safeguarded.

According to their own view of income limit these doctors would admit or exclude members from medical benefit, they would themselves decide all complaints, and the insured would be required to pay out of their own pockets any additional charges imposed upon them by the doctors, the members having no voice whatever in the matter. We warn our members against this attempt, which we consider injurious to their best interests and to those of the societies to which they belong.

MIDDLESEX INSURANCE COMMITTEE.

The Middlesex Insurance Committee is not finding the establishment of panels in its districts altogether plain sailing. A meeting of medical men who had up to that time consented to serve was held on December 24th, 1912, when a temporary medical committee was appointed. Another meeting was held on the afternoon of Friday, January 10th. It was a non-statutory meeting, and the invitation to attend was accompanied by a circular stating that the lists of medical practitioners on the County of Middlesex panel would be published in book form, containing a list of practitioners for the whole county arranged in alphabetical order, and a separate list for each of the districts. The recipient was informed that his name would appear on as many districts as he desired. At the meeting, which was private, a discussion took place, and we understand that the information elicited included the following statements made by the chairman of the Committee:

1. No list of insured persons available for the inspection of doctors whom they have chosen will be issued before March 31st.
2. The choice of doctor is subject to the consent of the doctor to accept the insured person. This consent can be given or withheld in every individual case.
3. The doctor's consent cannot be given until he has scrutinized the list of insured persons who have chosen him.
4. The doctor can withhold his consent from taking on every individual applicant if in his opinion he is undesirable.
5. An insured person cannot claim attendance from a doctor unless that doctor has endorsed his pink card.
6. The pink card promises to the insured person medical attendance (if required) to April 30th. The so-called agreement with the Middlesex Insurance Committee lapses on April 14th. Therefore for the sixteen succeeding days no medical attendance is provided for.
7. The Middlesex Insurance Committee believes that the so-called agreement is binding, but that such a contract would be more strictly in legal order and valid if (a) the signature were duly attested and countersigned by a witness; (b) the names and descriptions of the Middlesex Insurance Committee were given and attached as the other contracting party; (c) that two agreements were prepared, one for each of the contracting parties; (d) that the amount of the "consideration" money should be distinctly stated, and not left blank.

LIVERPOOL.

NORTHERN ASSOCIATION OF MEDICAL WOMEN.

At a meeting of the Northern Association of Medical Women at Liverpool on January 11th the following resolutions were passed unanimately:

1. That this meeting, while not condemning those practitioners who for economic reasons have gone on the panel, expresses its sympathy with those who would not break their pledge, and considers they should be released. This meeting further urges all its members to loyally support, both financially and otherwise, the British Medical

Association in the united action necessary for ultimate success.

2. That inasmuch as the patients of medical women are frequently scattered over a wide area, special facilities should be given by the Insurance Committees to such insured persons to make their own arrangements.

Dr. CATHERINE CRISHOLM, of Manchester, was in the chair, and representatives from Leeds, Manchester, Preston, Wrexham, Liverpool, and Birkenhead were present. Reports were also received from members in Bolton, Chester, Oldham, Hull, Sheffield, Buxton, Colwyn Bay, Kendal, Halifax, and Wakefield.

WEST BROMWICH.

At a meeting of the West Bromwich Insurance Committee on January 8th, under the chairmanship of the Mayor, it was announced that Drs. H. B. W. Plummer, Langley Browne, and Alexander had been elected to represent the medical men practising in the borough, and Dr. A. S. Underhill as the representative of the town council; their names were added to the Medical Benefit Subcommittee. A report from this subcommittee stated that agreements had been entered into for the period ending April 14th, 1913, with thirty-three medical practitioners, fourteen of whom were resident within the area and the remainder in areas adjacent thereto; three practitioners within the area and one residing outside had declined to accept service. The agreement had been entered into on a capitation basis, the scale of remuneration, including domiciliary treatment of insured persons suffering from tuberculosis, being fixed at 1s. 9d. for the quarter ending April 14th. Thirteen agreements had been entered into with chemists to supply drugs and appliances and three with contractors to supply drugs (other than scheduled poisons and medicines which require to be dispensed) and appliances. The committee accepted the sum of 6s. per insured person in respect of deposit contributors for the cost of medical benefit. A Medical Service Subcommittee for dealing with any disputes which may arise between insured persons and the practitioners attending was elected by the representatives of the insured persons.

IRELAND.

DUBLIN HOSPITALS AND MATERNITY BENEFIT.

It will be remembered that when the clauses of the Insurance Bill were first published considerable apprehension was felt by the maternity hospitals in Dublin lest their work would be interfered with by the provisions as to maternity benefits. Action was immediately taken, and a deputation from the three maternity hospitals explained the peculiar position of Dublin in this respect to the insurance authorities. These hospitals, by making use of the services of medical students and pupil midwives, are able to place at the service of every poor woman in or near the city the best possible advice, and nearly half the births in the Dublin metropolitan area are attended by one or other of these hospitals. These hospitals were recently informed that the Regulations about to be issued would safeguard their interests and prevent any interference with the education of medical students and midwives. Women will not lose any of the benefit by entering hospital, unless some arrangement has been made by the friendly society or Insurance Committee to pay a proportion of the benefit to the hospital. In such cases the balance will be paid to the husband or the woman herself. In the case of patients attended by the extern department the Regulations will not prohibit the payment of the full benefit.

HOSPITALS.

LONDON.

At a meeting last week of the Central Hospital Council for London, attended by representatives of twelve of the principal London hospitals, it was decided to approve generally the system suggested by St. Bartholomew's Hospital for dealing with insured patients (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, December 28th, 1912, p. 725), leaving it to each hospital to make any minor modifications that experience might show to be necessary.

The Committee of the London Hospital has issued the following rules:

On and after January 15th, 1913, no insured person suffering from ailments of such a nature as can be treated by "a general

practitioner of average ability" will be treated at this hospital.

Should an "insurance doctor" desire consultative advice in the case of an insured person the House Committee agree to such advice being given, provided that the "insurance doctor" makes his request in writing. The patient subsequently will be referred back to the "insurance doctor" for treatment.

Should an "insurance doctor" consider that an insured person requires treatment which it is not in the power of a "general practitioner of average ability" to give (such as surgical operation, skilled nursing, x-ray treatment, etc.), and should the "insurance doctor" make a request in writing, the House Committee agree that such treatment shall be given, in the event of the medical officer of the hospital considering it necessary.

All urgent emergency cases and accidents of a serious nature will be treated at once, whether the person is insured or not.

BRISTOL.

The committees of two of the medical charities have within the last few days had under consideration the treatment of insured persons in both the in-patient and out-patient departments, and the decision of the third may be expected soon; it may even be made before this notice appears in print.

The Bristol Royal Infirmary Committee has postponed its final decision on the matter for a month. As a matter of fact, little is to be gained by this delay, while some of the honorary staffs who have decided views on the question of doing work for which others are paid are not well satisfied.

The Committee of the Women and Children's Hospital has, on the other hand, taken a very decided view and decisive step. Possibly their action will give the lead which other institutions are waiting for. It has decided that each woman presenting herself in the out-patient department shall be asked if she is insured, and the fact or otherwise noted on the treatment sheet sent in to the physician or surgeon, who shall decide in the case of insured only, whether the patient shall be allowed to continue attending. There is no doubt that the out-patient staff will do this, but it gives them the opportunity of allowing attendance for special cases where outside treatment cannot be given. The only thing the committee would not do was to place a notice in the out-patient room that insured persons were not admitted, but the staff are quite willing to undertake the burden of responsibility in refusing. About thirty to forty insured women attend the out-patient rooms weekly, so that the attendances may be diminished by two or more thousand a year. This decisive action of the committee has caused considerable satisfaction to the members of the staff.

SALFORD.

Salford Royal Hospital.

The Board of Management of the Salford Royal Hospital, after consultation with the Medical Board, held a special meeting last week to consider the relation of the hospital to the Insurance Act. With regard to in-patients it was resolved that any patient whose condition was urgent and who was in need of indoor treatment should be admitted as heretofore, whether insured or not. In the out-patient department, accidents, emergencies, and cases requiring such special treatment as can only be given in a hospital, will be treated so long as their condition requires it. All insured persons applying to the out-patient department will be examined by a medical officer of the hospital and will receive immediate advice, and if a case is urgent and needs treatment which is not provided under the Insurance Act treatment will be given. All cases of really necessitous poor persons who, after inquiry into their circumstances, are found to be unable to pay for treatment and medicine, will be treated as heretofore. All patients, whether insured or not, who bring a doctor's certificate or are introduced personally by a medical practitioner, will be entitled to obtain the opinion of the hospital physicians and surgeons. The honorary staff will be entitled, if they think fit, to refuse to meet any practitioner in consultation, always provided that no patient shall be denied immediate advice and treatment, if that be requisite on medical grounds. Accurate records are to be kept by the hospital of all insured persons receiving treatment, whether as in-patients or out-patients. The Board of Management reserved for future consideration the question whether some payment towards the cost of maintenance within the hospital shall be required from insured persons in receipt

of maintenance payments from the National Insurance fund. The conditions for the treatment of tuberculous cases in the hospital were also reserved for consideration in conference with the Insurance Committee.

MANCHESTER.
Royal Infirmary.

Resolutions substantially the same as those adopted in Salford with regard to the treatment of insured persons have also been adopted by the Board of Management of the Manchester Royal Infirmary in consultation with the Medical Board, the practical effect being that all persons will be treated as heretofore, either as in-patients or out-patients, but insured persons after receiving first aid will be referred to their own medical attendant unless they require specialist treatment or treatment that can only be given at a hospital.

GLOUCESTER.

The committee of the Gloucester Royal Infirmary and Eye Institution reported to the last quarterly meeting of the governors that it was estimated that of every five patients attending the institution two were insured persons. The committee was determined that the resources of the institution should not be diverted from their legitimate objects, namely, the treatment of those who are poor and real objects of charity, and had arranged that the general practice of the infirmary for the present should go on as heretofore, with the following proviso:

That insured persons whose ailments can be treated at home, and who, in the ordinary course, would be treated by their own doctor, will not be treated at the infirmary. It may be urged that it is impossible to say beforehand whether a case is suitable for home treatment or not—the decision must be left to the physician or surgeon on duty. In the surgery casualties will receive first aid, but if further treatment is necessary which, in the opinion of the attending surgeon, can be equally well done by the patient's own medical practitioner, the case will not be further treated in the surgery.

THREATS TO CLOSE A PANEL AND UTILIZE ASSISTANTS.

UNDER this title last week a letter received by medical practitioners in Wisbech was published. The letter, which was from Mr. Dennis, Clerk to the Isle of Ely Insurance Committee, stated that the Committee had resolved to invite Dr. William Groom and Dr. Harry Groom, the only practitioners on the panel, to engage a sufficient number of qualified assistants to complete it, but that the invitation would not be forwarded for forty-eight hours, a period which expired on January 10th. The following letter has since been received from Dr. Harry Groom:

12, North Brink, Wisbech,
January 13th, 1913.

To the Secretary of the British Medical Association.

Sir,

As you have thought well to publish in your issue of January 11th in the BRITISH MEDICAL JOURNAL correspondence sent to you, with your attached comments, by Mr. C. H. Meacock, and in my opinion obviously with the intention of casting odium upon Dr. William Groom and myself, I must ask you to publish this letter, and my letter sent to the Clerk of the Isle of Ely Insurance Committee, just as conspicuously as you did the other correspondence; and I hope this letter may satisfy your interesting curiosity as to the number of assistants we have engaged to make the Wisbech panel complete: and I may add that we only joined the Isle of Ely panel, when some twenty others in North Cambridgeshire also did so.

The letter is as follows:

Wisbech, January 10th.

Dear Mr. Dennis,

My brother and I cannot accept the invitation of the Isle of Ely Insurance Committee to provide an adequate panel for Wisbech, by employing assistants.

All we desire to do is to give entirely satisfactory attendance to those of the insured who elect to have our services. As we do not wish to absorb the patients of any other doctor, these must be provided for by the Insurance Commissioners.

Very faithfully yours,
HARRY GROOM.

NOTICES BY THE INSURANCE COMMISSIONERS.

MEDICAL BENEFIT FOR MEMBERS OF APPROVED SOCIETIES.
ON January 15th the Insurance Commissioners issued the following notice:

The Insurance Commissioners have received a number of inquiries as to the conditions under which insured persons who are members of approved societies become entitled to medical benefit under the National Insurance Act. They accordingly desire to make it known that all insured persons who are members of approved societies (with the exception of certain special classes such as soldiers and sailors now serving) are now entitled to medical benefit under the Act, no matter when they entered insurance or whether they have since been out of employment.

The provision of medical attendance and treatment for those members who were over 65 years of age on 15 July, 1912, and who are not entitled to medical benefit at the expense of the State Insurance funds, can be arranged privately, as before, by their societies.

MATERNITY BENEFIT.

The Insurance Commissioners have issued provisional regulations governing cases in which a confinement is attended in the first instance by a midwife and a doctor is subsequently summoned in an emergency in pursuance of the rules of the Central Midwives Board. The fees prescribed are as follows:

Rates of Prescribed Fee.

| | £ | s. | d. |
|--|----|----|----|
| A. For attending the mother on a summons in an emergency at any time before, or within twelve hours after, the end of labour | 15 | 0 | 0 |
| B. For attending the mother on a summons in an emergency at any time subsequently | 5 | 0 | 0 |
| C. For attending the child on a summons in an emergency. If the practitioner attends between the hours of 8 p.m. and 8 a.m. in response to a summons received between those hours | 5 | 0 | 0 |
| In any other case | 2 | 6 | 0 |

An accompanying memorandum indicates that the society is liable to pay these fees to the doctor for attending the summons, but is not liable to pay more than 15s. in any case. The doctor must give notice and claim his fee within twenty-four hours of the attendance.

INSURANCE ACT IN PARLIAMENT.

Administration of Medical Benefit.

ON Tuesday (January 14th) a debate in miniature arose out of a question put to the Chancellor of the Exchequer by Sir J. D. Rees, member for East Notts, who asked whether the Insurance Committee had been instructed not to allow people to make their own arrangements for medical treatment because the Government would not allow it; and, if so, by what authority the Insurance Committee had been urged to contravene the provisions of the Act to which they owed their existence. The Chancellor of the Exchequer said he did not know to which of the 235 Insurance Committees the hon. member referred, but in any case the answer to the first part of the question was in the negative; but with regard to the suggestion contained in the second part of the question, he pointed out that an Insurance Committee was not required by the Act to allow insured persons to make their own arrangements for medical treatment. Sir J. D. Rees asked the Chancellor of the Exchequer if he did not say they were so entitled. Mr. Lloyd George said he certainly did not. If he did the Act provided that they were not to be allowed.

Sir J. D. Rees further asked whether the Chancellor of the Exchequer had informed the secretaries of the National Insurance Medical Practitioners' Association that priority would be given to the doctors on the panels if whole-time appointments were necessary; and, if so, by what authority he offered this preference to doctors who accepted his views in preference to those who stood by the British Medical Association. Mr. Lloyd George replied by referring to the answer given by the Financial Secretary to the Treasury on January 1st (SUPPLEMENT, BRITISH MEDICAL JOURNAL, January 11th, p. 38) and to his own letter, dated December 18th, 1912, which had

been laid on the table of the House. Sir J. D. Rees asked if this would form a precedent for using public funds for breaking great industrial and other non-professional strikes. Mr. Lloyd George said it had nothing whatever to do with that. He simply proposed that course because doctors refused to place their services at the disposal of the State.

Sir J. D. Rees asked whether the Insurance Commissioners had approved of the action of the Middlesex Insurance Committee in agreeing that the sum payable in respect of insured persons who had not before March 31st selected a practitioner on the panels would be divided amongst the practitioners on the panels; and if the Government had sanctioned offering those practitioners who accepted its terms additions and emoluments at the expense of those who, maintaining their pledge, declined to accept such conditions. Mr. Lloyd George replied that Section 15 (2) (d) of the National Insurance Act and the regulations made by the Commissioners expressly provided for the distribution amongst the practitioners on the panel of insured persons who, after due notice, had failed to select a doctor, and the distribution was to be carried out, so far as practicable, under arrangements made by the practitioners on the panel themselves. Those practitioners were responsible for the medical treatment, if required, of such insured persons, and all money available to the committee for the medical treatment of insured persons obtaining treatment from the panel would be distributed among those practitioners in accordance with the Regulations.

Mr. Worthington-Evans asked whether a doctor who had gone on the panel could refuse to take his quota of the distributed insured persons. Mr. Lloyd George replied that there were special provisions in the Act dealing with cases of that kind. Mr. Worthington-Evans then inquired if a doctor, once he had gone on the panel, could refuse to take persons distributed by the Committee amongst the doctors on the panel, and Mr. Lloyd George said he could refuse in the first instance, but there were provisions dealing with those who had not been already distributed among the doctors. Mr. Worthington-Evans asked if the Chancellor of the Exchequer had not, in replying to a question, stated that those persons were to be distributed according to arrangements made with the doctors. He asked whether a doctor could refuse to treat those patients who were distributed. Mr. Gwynne asked if it was to be understood that although a doctor on a panel might refuse to attend a patient that same patient might be allotted to him by the committee. Mr. Lloyd George said he did not say that. He had said that there were special provisions in the Act for distributing those who had been refused by all the doctors, but it was a very improbable contingency that every doctor on the panel would refuse the patient.

Sir J. D. Rees asked the Chancellor of the Exchequer whether he organized or expressed his intention of organizing a service of State-paid doctors ready to proceed to any area in order to break down the opposition of the medical profession to working on the panel system. Mr. Lloyd George said that in any area where the panel might be found to be inadequate the duty was laid upon the Commissioners of making alternative arrangements, in conjunction with the Insurance Committee, for the medical treatment of insured persons, and of such alternative arrangements that of a salaried service appeared to be the one most acceptable to the insured persons themselves. Sir J. D. Rees then asked whether that formed a precedent for breaking down industrial and non-professional strikes, and Mr. Lloyd George replied that his answer was a specific answer to the question, which was whether a State service was to be organized in those cases. It was the duty of the Commissioners to see that adequate medical provision was made. There were two or three alternatives, and the one which was popular with insured persons was salaried service.

Mr. Worthington-Evans asked whether insured persons would have free choice of doctor in a district where a State service was organized and put into force. Mr. Lloyd George said that inasmuch as the insured person was fully represented upon the Insurance Committee which would be making the arrangements, he took it he would look after his own interest.

Mr. Worthington-Evans asked the Chancellor of the

Exchequer whether he had altered his mind since October last, when he stated that in such a case a person would be entitled to free choice of his own medical man. Mr. Lloyd George said that he failed to see in what respect his answer differed from the answer he gave before.

A further question by Mr. Hodge, who wished to know how could there be free choice of doctor if the doctors refused to work under the Act, was not answered.

Disposal of Rejected Insured Persons.

Mr. Chancellor asked the Secretary to the Treasury, on January 13th, whether any doctor on the panel would be perfectly free to refuse any patient whom the Insurance Committee desired to allot to him, and whether such refusal could in any way operate to the detriment of such doctor. Mr. Masterman said that any doctor on the panel had a preliminary right of refusing any particular insured person who applied to be placed on his list. It would be the duty of the Insurance Committee to make such arrangements as were suitable for medical benefit for any patients who were thus refused by the doctor of their first choice, and these arrangements must be as far as practicable in agreement with the doctors themselves. Insurance Committees might ask the doctors in any district to agree each to accept a proportion of insured persons who might be refused attendance by the doctors of their first choice; or the insured person might be invited to make another choice of a doctor willing to accept him, or some other arrangement might be made by the Committee for his medical attendance and treatment. In ordinary circumstances, the results of a doctor refusing a particular insured person would be merely that he would not be responsible for and would not receive remuneration in respect of that insured person.

Employment of Assistants.

In reply to Mr. Newman, who asked a question on January 13th with regard to the action of the Wisbech Insurance Committee, referred to in the SUPPLEMENT of January 11th, p. 44, and this week (p. 80), Mr. Masterman said that the Isle of Ely Insurance Committee had reported that the panel was adequate to provide medical attendance for insured persons throughout their area except in the districts of Wisbech and Chatteris. In order that medical attendance might be provided for insured persons in these two districts they further invited all the practitioners in the neighbourhood to accept service under the Act, with an intimation that if they declined, other alternative arrangements would have to be made with the doctors who had accepted service. The Commissioners were awaiting a further report from the committee as to the exact position, and until that report had been received he was unable to state the number of practitioners required to complete the panel. It would be necessary that any assistants utilized by doctors on the panel should be duly qualified medical practitioners.

Mr. John Ward inquired if there was any way by which the Insurance Committees could decide upon the recompense that the assistants would receive from the medical men who employed them. Mr. Masterman said he was not sure what the arrangements were. If the assistants were on the panel in the ordinary way they would be selected in the ordinary way by the insured persons for treatment.

Mr. Worthington-Evans asked if it was necessary for the doctors' assistants who were to treat insured persons to be on the panel. Mr. Masterman replied that that depended upon the arrangement. If the panel were abolished there would be no panel for them to be put on. If the panel were maintained, then, he thought, they had to be on the panel. Mr. Worthington-Evans asked whether, in a case where the panel was considered adequate, would it be necessary for any assistant who treated an insured person to be on the panel. Mr. Masterman asked for notice of the question.

Allocation of Insured Persons.

Mr. Rupert Gwynno asked how many doctors per thousand of insured persons had the Insurance Commissioners decided to be necessary to secure an adequate medical service in rural and urban areas respectively in order to set up a panel in such areas; and on what day was the decision of the Insurance Commissioners on this

point taken. Mr. Masterman replied that the number of insured persons for whom a doctor on the panel could properly be responsible must necessarily vary according to the circumstances of each particular case, and it was therefore impracticable to fix any maximum number either for all areas or for urban and rural areas respectively. In deciding in each case whether adequate medical service had been secured the Commissioners had regard to all the circumstances, and they were, of course, guided to a great extent by the advice and recommendation of the Local Insurance Committee. According to the experience of contract practice of a similar character in the past, every 1,000 persons on a list would involve, on the average, thirteen attendances a day, of which eight or nine would be surgery calls and four or five visits at the patient's home for 300 days' work in the year.

Mr. Worthington-Evans asked if a panel would be adequate with one doctor for 5,000 people, or would some general idea of what would be considered adequate be given. Mr. Masterman said he could not give any general statement; but certainly he did not anticipate one doctor would have to have 5,000 patients in any case.

Sir Philip Magnus asked the Secretary to the Treasury whether his attention had been called to the case of a doctor who had only consented to join a panel on the understanding that he would be required to treat a small and strictly limited number of insured persons; and whether the Commissioners proposed to allow such a bargain to be made with a Local Insurance Committee. Mr. Masterman said that the answer to the first part of the question was in the negative. Every practitioner on the panel, however, had a right to select the insured persons whom he undertook to treat, subject, of course, to the distribution amongst, and so far as practicable, under arrangements made by, the several practitioners on the panel, of the insured persons who had failed to make any selection, or who had been refused by the practitioner whom they had selected.

Mr. Masterman, in reply to Colonel Yate on January 15th, said that in cases in which payment by attendance was adopted an insured person need not choose his doctor until he was ill. In cases in which the capitation system of payment was adopted, all insured persons in the area who had not already made the choice would be allocated to doctors on the panel after a given date, to be announced by the Insurance Committee. Each Committee would exercise its own discretion as to the date which it would fix. It was quite competent for an Insurance Committee, with the consent of the practitioners on the panel, to make at once a provisional allocation of all insured persons amongst the doctors on the panel, with the condition that any insured person so allocated might, if he pleased, within the period announced select one of the other doctors on the panel.

Sir Philip Magnus asked if a doctor on the panel might make a bargain to attend a certain number of insured persons and no more. Mr. Masterman said that depended entirely on the arrangements that he made with the Local Insurance Committee. He thought most Insurance Committees would allow doctors to do that.

The Panels.

In reply to questions, on January 15th, by Mr. Worthington-Evans and Sir Philip Magnus, asking whether the Commissioners would prevent approved societies from recognizing and acting on certificates of illness given by doctors not on the panel for the purpose of claims for maternity, sickness, or invalidity benefits, Mr. Masterman said that the sickness benefit of members of approved societies was administered by those societies, and not by the Insurance Committees; and in deciding the nature of the evidence they would demand the societies would take such steps as were necessary for the protection of their funds and the rights of their members. The evidence of sickness which a society would accept as sufficient for the purpose of giving sickness benefit depended on the rules of the society, and within those rules upon their discretion in the actual administration of the benefit.

Mr. Gwynne asked what was the position at present of an insured person who had been attended as a maternity patient by a doctor who was not on the panel. Would such persons be entitled to the maternity benefit? Mr. Masterman replied that the administration of the maternity

benefit was entirely in the hands of the approved societies. The approved society having evidence that the benefit had been rightly earned would no doubt pay it.

Right to Form a Panel.

Sir A. Griffith-Boscawen asked the Secretary to the Treasury, on January 13th, whether a doctor who joined a panel under the National Insurance Act after the official list of the panel had been published could begin to undertake work immediately he joined, or whether he would have to wait till the next publication of the names on the panel; and whether a County Insurance Committee could refuse to pay him for services rendered under such circumstances. The Financial Secretary to the Treasury replied that in any district where the normal panel system was in force a doctor could join the panel at any time. His name would not be included in the published list until such time as the Insurance Committee issued a revised list of practitioners on the panel. He would be entitled to receive payment in respect of insured persons who elected to be treated by him, and whose treatment he undertook, as from the date on which he joined the panel. Those insured persons who did not express a wish to be attended by any particular doctor would be assigned by the Insurance Committee to doctors on the panel, and as far as possible, under arrangements made by the practitioners on the panel at that time.

Mr. Worthington-Evans asked if he understood the right hon. gentleman correctly, that the doctors who joined the panels late would also get their share of the insured persons who did not choose their own doctors? Mr. Masterman replied, Not necessarily for the first three months; but added in reply to a further question that they would receive payment in respect of insured persons whose treatment they undertook as from the date of joining the panel.

Mr. Cassel asked if the Act did not provide that every doctor should have the right to join the panel at any time. Mr. Masterman repeated that in any district where the normal panel system was in force a doctor could join the panel at any time.

Lists of Panel Doctors at Police Stations.

Mr. Glyn-Jones asked the Home Secretary whether, in view of the fact that insured persons might desire in an emergency to obtain at night time the services of a medical practitioner on the panels under the National Insurance Act, he would make arrangements whereby such lists of doctors, if supplied by the Insurance Committees, might be inspected at police stations within the metropolitan area. Mr. McKenna said he was glad to state that the Commissioner of Police was able to make tentative arrangements to carry out the suggestion.

Aged Members of Approved Societies.

Mr. Worthington-Evans asked whether approved societies or the Insurance Committees would be allowed to provide medical benefit for insured persons over 65 at the commencement of the Act; and, if so, whether the extra grant of 2s. 6d. would be payable in respect of them. Mr. Masterman said that by Section 49 (3) persons over 65 at the commencement of the Act who came under the special provisions of that section and were members of approved societies were entitled to such benefits as the society determined, and could provide out of their employers' and their own contributions and the State 2d. As far as he was aware, however, all the approved societies had chosen that this money should be devoted to the provision of sick pay rather than of medical treatment. Insurance Committees had the same powers and duties in the case of persons of this class who were deposit contributors as the societies had in the case of members of approved societies.

Mr. Worthington-Evans asked if two forms of alternative benefits had not been issued to societies, neither of which included medical benefits, directing the societies to choose one or the other. Mr. Masterman replied in the negative. They were purely optional for the guidance of societies, giving actuarial figures of what could be provided if they chose either of them.

Mr. Worthington-Evans asked whether the proposed extra grant of 2s. 6d. would be allowed to provide medical benefit for existing members of friendly societies who did not become insured persons because they were over 65

at the commencement of the Act. Mr. Masterman said that the answer was in the negative. Societies which had decided to devote the 9d. a week (or 8d. in the case of women), under Section 49 of the Act, to sick pay rather than to medical benefit would make their own arrangements for medical treatment of their members outside the Act.

Mr. Worthington-Evans asked whether the 2s. 6d.—the £1,650,000—would also be available for such benefits. Mr. Masterman replied: Not outside the Act.

Mr. Worthington-Evans asked why the Statutory Rules, Nos. 17 and 19, relating to the administration of medical benefit, dated December 5th, 1912, and the Forms 21 and 22, relating to persons desiring to make their own arrangements for medical treatment, were not sent to members of Parliament until January 8th, 1913. Mr. Masterman said that the Medical Regulations (S.R.O. 1719) were laid on the table on December 5th as H.C. 386, and were available to all members through the Vote Office on December 7th. The stock of forms Medical 21 and 22 (apart from some advanced copies) was only received from the printers on January 6th and 7th, and copies were immediately sent to members.

Persons making "their own Arrangements."

Mr. Newman asked the Secretary to the Treasury on January 13th whether, on behalf of the Insurance Commissioners, he was now in a position to state that, except under certain defined and special circumstances, insured persons were not entitled, under the terms of the National Insurance Act, to make arrangements with any medical practitioners not serving on the panel in the district in which they resided. Mr. Masterman referred the hon. gentleman to the answer he gave to a similar question by Mr. Cassel on January 6th (see SUPPLEMENT to the BRITISH MEDICAL JOURNAL, January 11th, p. 38).

In reply to questions by Mr. Touche and Mr. Arthur Strauss, on January 15th, Mr. Masterman said that the responsibility for deciding upon applications from insured persons to be allowed to make their own arrangements under Section 15 (3) of the National Insurance Act rested in the first instance with the several Insurance Committees to whom such applications were made. The committees would require to be satisfied as to the special circumstances of each particular case, and as to the acceptance by the doctor of the conditions required by the Regulations as to reports, certificates, and evidence of satisfactory service; and would also, in dealing with all applications in their area, have regard to the general interests of the insured persons in that area. The number of applications received by the committees could not be obtained without a special return from all the committees, which would involve considerable labour at a time of great pressure, and would possess no practical value.

Voluntary Contributors.

Mr. Masterman, in replying to Sir A. Griffith-Boscawen on January 13th, said that the total number of insured persons who were voluntary contributors would not be available until all the cards had been received from the societies and scheduled by the Commission.

Treasury Grant.

Mr. Cassel asked the Prime Minister on January 9th whether it was proposed that any additional grant out of public moneys should be made towards medical benefit in respect of the first three months from January 15th, 1913; and, if so, when it was proposed to obtain the sanction of the House thereto. The Prime Minister said that the answer was in the negative. The whole cost of the provision of medical benefit for the period referred to would be met out of funds available under the National Insurance Act.

Insurance Fund.

Mr. Carr-Gomm asked, on January 9th, what amount had been received in contributions and was now available for the payment of insurance benefit under the National Insurance Act. Mr. Masterman said that the amounts received through the sale of insurance stamps, etc., now amounted to about £8,000,000. As the State proportion was added as payment of benefit was made, that would represent a sum available for payments as required under the health insurance provisions of the Act of

over £10,000,000, apart from any additional sum which Parliament may vote for medical remuneration.

General Medical Council and Disciplinary Powers.

In reply to Mr. Booth, on January 13th, Mr. Masterman said he did not believe that any doctors who had signed an agreement to treat insured persons for three months would break that agreement before the period of the contract was completed unless they were released from the obligation by the Committee with which such an agreement had been made. If they were to take any such action a serious situation would arise. The question of whether such conduct would be infamous in the professional respect would be for the General Medical Council to consider.

Sir Philip Magnus inquired if the Insurance Committees had entered into a binding agreement with the doctors. Mr. Masterman said: "Oh, certainly, and they would not break it without the doctors releasing them from that agreement."

Dispensers.

Mr. Newman asked on January 13th whether, under the terms of the National Insurance Act, a dispenser who might have been regularly employed by a general medical practitioner for a number of years, but who was unregistered and not actually in the employment of a doctor at the date of the passing of the Act, was debarred from going on the local panel for the supply of drugs, while a doctor's groom, occasionally employed as an assistant dispenser during the past three years, was entitled to be so placed; and, if so, whether it was intended to take steps to remedy this state of affairs. Mr. Masterman said that the hon. member was under a misapprehension. Neither of the classes of persons mentioned by him could be included on a panel for the purpose of supplying to insured persons medicines requiring to be dispensed. The question whether persons of the first class could dispense as assistants would depend in each case upon whether they had acted as dispensers to a medical practitioner or public institution for three years immediately prior to December 16th, 1911. Persons of the second class mentioned would in no case be qualified by such occasional services to themselves supply medicines requiring dispensing or to dispense as assistants.

In reply to a question by Mr. Touche, on January 14th, Mr. Wedgwood Benn said that Section 15 (5) (b) (iii) of the National Insurance Act clearly provided that in the case of insured persons medicines might be dispensed by a person who for three years immediately prior to the passing of the Act had acted as a dispenser to a doctor or a public institution.

Records.

Mr. King asked whether insured workers under the National Insurance Act must expect that records of their ailments, even of a delicate nature, would pass into the hands of local and State officials, as stated widely in certain quarters; and whether the Insurance Commissioners would take measures to prevent any infringements of the reticence and secrecy which the medical profession were supposed to observe concerning their patients' case. Mr. Masterman: The statements were absolutely incorrect. The only records which were to be kept were those which would be entered in the prescribed form of day-book. This day-book would be in the sole custody of the doctor. Nobody except the doctor could have access to it. Those leaves of the day-book which passed out of the doctor's hands were perforated, so that while the part containing the name and address of the patient and the attendances (but not the nature of the illness) was sent to the Insurance Committee, the other part, containing the nature of the illness and certain other particulars (but not anything by which the patient could be identified), would not go to the Committee, but would be used for statistical purposes only. In that way absolute secrecy would be secured, and any danger of breach of professional confidence entirely avoided.

Mr. Masterman, in reply to a further question by Mr. King suggesting that the facts stated should be circulated to approved societies and other steps taken to make them widely known, said that he thought the approved societies knew them, but he would see that was circulated.

Medical Benefit in Ireland.

Mr. John Redmond asked the Chancellor of the Exchequer, on January 9th, whether, in view of the additional grant which it was proposed to make in respect of medical benefit under the National Insurance Act in Great Britain, he would consider the question of devoting a sum of money towards making good the cost of certificates for sickness and invalidity benefits in Ireland; whether he was still of the view that the extension of medical benefits to Ireland was a matter to be decided by the wishes of the Irish people themselves; and whether he had considered the question of the appointment of a representative Committee to consider the latter question. Mr. Lloyd George said that the Government were certainly still of opinion that the question of extending medical benefit to Ireland was one to be decided according to the wishes of the Irish people; and he proposed at an early date to appoint a representative Committee to consider the matter. Meantime, the Government would submit proposals for the grant of a sum of £50,000 towards expenses incurred in Ireland in connexion with the National Insurance Act in consequence of the absence of medical benefit in that country, such sum to be expended in accordance with the scheme to be submitted to the Treasury by the Irish Insurance Commissioners.

German Scheme.

Mr. Worthington-Evans, on January 13th, asked when the paper dealing with the cost and scope of medical benefit in Germany and giving collections of agreements entered into by the German doctors and the association under the German insurance scheme, publication of which was promised in July last, would be issued; and what was the reason for the delay. Mr. Masterman said that, in accordance with the promise made on July 24th, 1912, an officer was sent to Germany in the autumn to conduct a detailed investigation with a view to the preparation of a report on medical benefit under the German state insurance legislation. The publication of the report had been postponed in consequence of the protracted illness of the officer in question. It would, however, be laid on the table of the House that day.

Highlands and Islands.

Mr. Cathcart Wason asked the Secretary to the Treasury, on January 13th, whether, in view of the medical and nursing necessities of the Highlands and Islands, disclosed in the Report of the Committee presided over by the hon. member for Inverness, he could make some temporary arrangement by which doctors would receive adequate remuneration for their attendance on insured persons. Mr. Masterman said that the extra grant for mileage in the case of sparsely populated districts was now receiving the attention of the Chancellor of the Exchequer, and an announcement as to the conditions of the grant would be made in due course.

Sanatorium Benefit.

In reply to Mr. Godfrey Locker-Lampson, the President of the Local Government Board, on January 9th, said that the number of beds in isolation hospitals approved by the Local Government Board under the National Insurance Act for the treatment of tuberculosis was 1,732. Mr. G. Locker-Lampson asked what steps it was proposed to take supposing an epidemic broke out and those beds were wanted? Mr. Burns replied that in that case there would be beds for both classes of disease.

Isolation Hospitals (Tuberculosis).

In reply to Mr. Godfrey Locker-Lampson, on January 13th, the President of the Local Government Board said that the arrangements for the supply of beds for cases of tuberculosis in the event of the beds in isolation hospitals approved by the Local Government Board under the National Insurance Act being required in an outbreak of infectious disease varied in different cases. They had generally been made with a view to diminishing the likelihood of its being necessary to vacate the beds on an outbreak of disease. A large proportion of cases of tuberculosis which were receiving residential treatment could, however, be given other treatment should it be necessary at any time to remove them.

CORRESPONDENCE.

PERSONS MAKING THEIR OWN ARRANGEMENTS.

DR. J. CUTHBERTSON WALKER (Acting Honorary Secretary, Rochdale Division, British Medical Association) writes: Mr. Worthington-Evans has already, in the House of Commons, insisted very strongly on the right granted by the National Insurance Act to Local Insurance Committees to allow insured persons to make their own arrangements for medical attendance.

I may perhaps be allowed to point to some official sources of information which support Mr. Evans's contention, in addition to Section 15 (3) of the Act, which forms the basis of the authority for such private arrangements.

1. A deputation from the British Medical Association waited upon the Chancellor of the Exchequer on November 25th and 26th, 1912, and asked his consideration of certain points in connexion with the administration of medical benefit. In reply, the Chancellor furnished the Association with a Memorandum, in which he stated (paragraph 22): "But it will still remain possible for any insured person, who so desires, to make his 'own arrangements' with an individual practitioner (whether on the panel or not) on terms under which he will be liable to pay to the doctor such amount, if any, as the doctor charges for attendance and treatment (apart from drugs), during the year, beyond the amount available from the medical benefit fund." Again, in paragraph 44 of the same memorandum it is stated: "The Act gives to the Insurance Committee power to decide whether they will allow insured persons to make their own arrangements. This power can be exercised by the Insurance Committee whether they have fixed an income limit or not, and has no reference to the question of whether an income limit prevails in the area." The full text of this memorandum will be found in the SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL of December 7th, 1912.

2. Paragraph 14 (7) of the Revised Regulations for the administration of medical benefit issued by the Commissioners states:

The Committee may allow any insured persons resident in the county, whether individually or collectively, in lieu of receiving medical benefit under the arrangements made by the Committee, to make their own arrangements for receiving treatment (including medicines and appliances).

Paragraph 14 (8) lays down that where an Insurance Committee considers these arrangements satisfactory it shall contribute towards their cost.

3. Paragraph 49 of the Regulations states:

All moneys available to the Committee for the purposes of insured persons who are required or allowed to make their own arrangements for obtaining treatment (including medicines and appliances) shall be carried to a fund to be called the Special Arrangements Fund.

Paragraph 49 proceeds to explain in great detail (the whole paragraph contains more than 500 words) the terms and conditions under which the Special Arrangements Fund is to be distributed.

4. Early in December, 1912, a circular of instructions respecting the administration of medical benefit was issued by the Commissioners to Insurance Committees. Paragraph 26 of this circular states:

Model forms of notice by and to persons required or allowed to make their own arrangements for medical attendance and treatment will also be furnished.

5. In an "explanatory statement as to medical benefit as affecting medical practitioners," drawn up and sent by the Commissioners to all practising doctors, the following passages occur:

43. Cases of those who "make their own arrangements" for obtaining medical attendance and treatment fall under two heads—namely, first, those who make a private arrangement direct with a doctor for treatment on private practice lines; and, secondly, those who enter into some kind of contract for the purpose.

44. As regards those who obtain their treatment privately, the amount available will be paid into the pool; they will furnish to the Committee in due course their doctors' bills, made out according to a scale of fees laid down by the Committee, and the bills will be paid by the Committee as far as possible. If the amount of the bills exceeds the amount in the pool the amount paid towards each bill will be in proportion to the bill. In such cases, of course, the patient, having entered into a private arrangement with the doctor, will be liable to the

doctor, to the extent to which that arrangement renders him liable, for the amount of the doctor's bill over and above what is payable from the Medical Benefit Fund. The doctor will be under no obligation under the Act or Regulations to charge on the scale of fees laid down by the Committee. He may charge higher fees if the patient so agrees. As regards the supply of drugs, such arrangements are subject to the same restriction as the arrangements made with doctors on the panel—that is to say, an insured person cannot enter into an arrangement with the doctor to supply him with drugs unless the patient resides in an area in which the Committee has arranged for those insured persons who obtain attendance and treatment from doctors on the panel to be supplied with drugs by those practitioners.

45. If an insured person makes his own arrangements by way of contract, it will be the duty of the Insurance Committee to see that the contract affords reasonable security that he will obtain proper attendance and treatment, and that the money paid from the Medical Benefit Fund shall be applied solely to that object.

This paragraph also states the proportion which the amount allowed for medical attendance and treatment must bear to the amount allowed for the provision of drugs.

6. The medical benefit card issued to every insured person instructs him how to proceed should he desire to make his own arrangements.

Seeing that the Act and Regulations contain detailed provisions under which insured persons may make their own arrangements, why does the Government now describe the attempt to put these provisions in force, as an attempt to break down the machinery of the Act?

Insured persons who desire to make their own arrangements with their own doctor should at once apply to their Local Insurance Committee for permission to do so.

PRESENT DIFFICULTIES.

Dr. GEO. PARKER (Rock Ferry, Cheshire) writes: At the outset I would like to say that I, in conjunction with many others, am one of those unfortunate members of the British Medical Association who has been faithful to his pledges, and as a consequence will be deprived of a certain income from erstwhile patients of my own, plus that which would have been apportioned to me by the Insurance Committee where no choice of doctor is made. This money will now accrue to one or more of the disloyalists in my area who are panelites. The Council of the Association has lately declared disloyal those men who have been faithless to their pledges. Can any vote or resolution negative this, or absolve men from their pledges? If so, what necessity was there for any pledge, or what virtue or honour is there in loyalty?

The problem which looms large at present is: What security is there against just such another *débâcle* in the future, and it may be a very near future? A pledge is obviously and absolutely as so much waste paper to the panelite. It is therefore of paramount importance that some instrument should be quickly devised which shall secure absolute adherence by every medical man to a fiat of the British Medical Association, where a definite principle or policy is declared, if some such spectacle as now presents itself is to be averted. What that instrument is to be must soon occupy the serious attention of the Council and Representative Body.

The potent factor actuating those on the panels has been mistrust in his neighbours. Now if this contingency were obviated, the solidarity of those on the panels and the remainder—the great majority—would be secured. Every one would hail with satisfaction any device which would secure united action. It surely ought not to be impossible for such a solution to be evolved in conference.

Another question arises as to what counter-stroke there may be to the publication of lists of panelites in the press and at the various post offices in one's district. Are loyalists to remain in obscurity, and is it to be regarded as unprofessional or something worse, for a band of loyalists to club together and proclaim to the public through the local press, that they being still loyal to their Association and pledges, are in consequence not on the panel?

There can be no doubt whatever that the disgraceful tactics of renegades, politicians, and their emissaries, account for much of the stampeding of the profession. Nearly every man in my own Division who to-day is on the panel, is averse to the Act and its regulations, and is serving from fear, and not love. The threats of the

Chancellor and other more occult devices, have proved too irresistible for most of them.

Between now and April 14th there ought to be ample time for a complete reorganization of forces, and for the inauguration of an adequate check to any futuro formidable secession from an approved policy of the Association.

Finally, it is now more imperative than ever that every medical practitioner should enrol himself a member of the British Medical Association. There will be much reorganization required in the near future. There will also doubtlessly be many an attempt at "wing clipping" of the profession. This can only be obviated by a properly and effectively organized body, properly represented, and properly led.

Dr. J. CHARLESLEY MACKWOOD (Newick, Sussex) writes: I am in practice in a district of some 18,000 acres, which is worked by one other man, Dr. Orton, and myself. The position we have taken up is as follows: We decline to break our pledges by signing the contract with the Local Insurance Committee. We have offered to attend insured persons free of charge till after the Representative Meeting on January 17th. If then the pledge should be released—but not unless—we are prepared to sign the contract. If the pledge is held to be binding, we are prepared to attend free of charge insured persons till the Local Insurance Committee shall have made their arrangements for the district. This offer has been declined by the Clerk to the East Sussex Insurance Committee, who states that we must be prepared to sign our contracts when requested. This we have declined to do.

This evening I received the following letter. As I have not the writer's permission to publish it, I merely give his initials:

My dear Sir,

No one realizes more fully than myself the very shameful way in which Lloyd George has attempted to coerce the medical profession in the matter of the Insurance Act. I possibly ought not to write you on the subject, as I am not resident in your parish, but I think I would like you to know what is said in the district on the subject of your not joining the panel. Will you therefore kindly excuse my writing to you? The universal feeling I hear expressed is regret that you have not joined. Am I right in the idea that by so doing the risk is run that some very second-rate man may be introduced into the district to the serious injury of the insured persons as well as, I should fear, to your own detriment? You have been here, I think, long enough to be much valued and esteemed, and as things now are would, I feel sure, be congratulated if you could see your way to join the panel. To myself, individually, it can make no difference, but to those insured under the Act I think it is a very important matter.

Kindly excuse my thus writing to you.

Yours faithfully,
M. S—.

Dr. Mackwood.

I think most readers will be inclined to agree that the importation of pariah medical men into an entirely new district may lead to serious results for insured persons. On January 6th the Foresters' Friendly Society passed a resolution *namine contradicente* requesting the Clerk to the East Sussex Insurance Committee to see his way to accepting the names of Dr. Orton and myself on the panel subject to the terms of our letter to him. Friendly societies in the past have always looked out for the cheapest article with regard to medical attendance. Now that they are being assisted by the Chancellor of the Exchequer in the same direction they are inclined to alter their tune.

Dr. R. J. LEFER (Bamber Bridge) writes: I do not know what protection the medical practitioner who has to work under the Insurance Act by brute force will have in the future unless the British Medical Association is reorganized on trades union lines. The present policy is out of date in these materialistic days.

Dr. ARTHUR E. GLADSTONE (Newton Ferrers, Plymouth) writes: Now that the panic and stampede have taken place the profession should learn wisdom by experience, so as to avoid a repetition of such events in the future. Every doctor who has been frightened on to his panel by a threatened invasion by "outsiders" must know that such applications could only exist on paper. Presumably the same list of names did the trick in dozens of towns, for we all know that the number of employable

unemployed is very limited. Would it not be a simple matter for the British Medical Association to institute inquiries in every place, so as to actually find out the names of the pretended invaders? And when the facts have been established these methods should be exposed by a question in the House.

Dr. J. C. BARKER (Watford) writes: The medical and surgical treatment of the contract classes has been most unsatisfactory to all of us who have taken part in it, because modern methods have been out of our reach. This state of things has not been touched by the Insurance Act; no improvement in treatment has been introduced, and the old stagnation is perpetuated.

Now when the Government took a hand in providing medical treatment for the contract classes, it was our first duty to ourselves and the patient to take a high view of our responsibilities and see that we were enabled to give proper and efficient modern treatment. This would have involved free provision by the Government of laboratories, vaccines, etc., and a short measure to ensure an adequate supply of hospital beds in each district.

In other words, the first duty was to see that it was possible to treat patients properly under the Act; afterwards, if necessary, it could have combined to obtain adequate pay. Instead of this, the British Medical Association, on behalf of the profession, took up an entirely injudicious and wrong position. They attempted to modify the conditions of service, entirely regardless of the fact that the service could not be made satisfactory as far as the treatment of the patient was concerned.

The best thing we as a profession can do is to close down the present agitation, and try to obtain those modern methods of diagnosis and treatment which would render contract practice efficient and deserving of better pay.

PROTEST MEETING AT QUEEN'S HALL.

Mr. E. B. TURNER (London) writes: While I was speaking at the Queen's Hall meeting last week the name of a gentleman was mentioned. As a matter of fact my allusion was to others, and the gentleman in question (who is a personal friend of mine) informs me that he has never taken such action as that which I was discussing at the time.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns, 9,664 births and 5,285 deaths were registered during the week ending Saturday, January 11th. The annual rate of mortality in the ninety-five or ninety-six large towns, which had been 15.4, 15.1, and 15.7 per 1,000 in the three preceding weeks, fell to 15.4 per 1,000 in the week under notice. In London last week the death-rate was also equal to 15.4, against 14.4, 14.4, and 16.2 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 6.1 in Ealing, 7.0 in Wakefield, 7.8 in Ilford, 8.1 in Dudley, 8.3 in Hornsey, and 8.6 in Gillingham to 20.7 in Liverpool, 21.2 in South Shields, 22.2 in Sunderland, 24.1 in Wigan, 27.3 in St. Helens, and 29.1 in Preston. Measles caused a death-rate of 3.2 in Willesden and in West Hartlepool, 3.7 in Bath, 4.0 in Swindon, 4.2 in Acton, 4.6 in Wigan and in Northampton, 6.2 in Preston, and 6.8 in St. Helens; scarlet fever of 1.3 in Preston; and diphtheria of 1.1 in Stoke-on-Trent, 1.3 in York and 1.8 in Coventry and in Darlington. The mortality from enteric fever and from whooping-cough showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 54, or 1.0 per cent. of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 12 in Birmingham, 3 in Liverpool, 4 in London, 4 in Bootle, and 2 each in Warrington, Burnley, Preston, Sheffield, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,108, 2,112, and 1,954 at the end of the three preceding weeks, had further fallen to 1,889 on Saturday last; 202 new cases were admitted during the week, against 193, 151, and 170 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

THE Registrar-General's weekly return will from the beginning of this year relate to sixteen towns instead of eighteen, the towns of Partick and Govan having been incorporated in the City of Glasgow. In these sixteen towns 1,132 births and 763 deaths were registered during the week ending Saturday, January 4th. The annual rate of mortality in these towns, which had been 20.7, 19.2, and 17.1 per 1,000 in the three preceding weeks, rose to 17.6 in the week under notice, and was 1.9 per 1,000 above the rate in the ninety-six large English towns. Among the several Scottish towns the death-rate ranged from 9.1 in Kirkcaldy, 10.8 in Hamilton, and 12.2 in Ayr to 22.8 in Greenock, 23.3 in Dundee, and 24.0 in Leth. The mortality from the principal infectious diseases averaged 1.5 per 1,000, and was the highest in Coatbridge and Motherwell. The 331 deaths from all causes registered in Glasgow included 13 from whooping-cough, 6 from infantile diarrhoeal diseases, 4 from diphtheria, 3 from scarlet fever, 1 from measles, and 1 from enteric fever. Three deaths from whooping-cough were recorded in Edinburgh, 3 in Motherwell, 2 in Dundee, and 2 in Leth; 3 deaths from diphtheria in Dundee and 2 from enteric fever in Aberdeen.

HEALTH OF IRISH TOWNS.

COMMENCING with the first week of this year, the Registrar-General for Ireland has adopted a form somewhat different to that employed by him hitherto in his weekly returns regarding births and deaths. He now includes twenty-seven town districts instead of twenty-two, but gives full details concerning only seven, counting the Dublin registration area and Dublin city as two. Details concerning the other districts will be supplied in the quarterly return. In these twenty-seven districts 756 births and 504 deaths were registered as having occurred in the week ending Saturday, January 4th. Hence the estimated population being 1,199,130, the death-rate was equal to 22 per 1,000, and the birth-rate to 32.9. This death-rate was 5.8 higher than that for the same period in the ninety-six large English towns. In regard to the larger areas, the death-rate in the city of Dublin was 25.5, in Belfast 23.8, in Cork 27.2, in Londonderry 14.0, in Limerick 17.6, and in Waterford 30.4. The zymotic death-rate in the twenty-seven towns averaged 2.2 per 1,000.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments have been notified at the Admiralty: Staff Surgeon HORACE B. HILL, M.B. to be lent to the *Victory*, additional, for Physical Training School for qualifying course, January 9th, 1913; Staff Surgeon GEORGE D. WALSH to the *Dominion*, vice Hayden, February 1st, 1913. Staff Surgeon CHARLES H. DAWE to the *Vivid*, additional for disposal, to be lent to the *Indus* temporarily, during absence of Surgeon Babington, undergoing course, February 1st, 1913. Staff Surgeon PERCY F. ALDERSON to the *Gloucester* on recommissioning. Staff Surgeon HAROLD J. CHATER to the *Dublin* on commissioning. Staff Surgeon ARTHUR O. W. NEWPORT to the *Terrible* and for group of ships of the Third Fleet, January 1st, 1913. Surgeon SHELDON F. DUDLEY to the *Pembroke*, additional for disposal, February 1st, 1913, and to the *Pembroke* for R. N. Barracks, vice Dawe, February 15th, 1913. Surgeon CECIL R. M. BAKER, M.B., to the *Victory*, additional for disposal, February 1st, 1913, and to the *St. George*, vice Drennan, February 15th, 1913. Surgeon HARRY M. LANGDALE to the *Victory*, additional for disposal, February 1st, 1913, and to the *Zealandia*, vice Bradbury, February 15th, 1913. Surgeon FRANCIS H. SPECIAL REPRESENTATIVE MEETING.

FRIDAY AND SATURDAY, JANUARY 17TH AND 18TH, 1913.

Friday, January 17th.

A SPECIAL Representative Meeting of the British Medical Association, held on the requisition of the Chesterfield, Cleveland, Derby, Glasgow North-Western, Newcastle-on-Tyne, Northamptonshire, West Cornwall and Worcester Divisions, took place at the Connaught Rooms, Great Queen Street, London, on Friday, January 17th. The business of which the meeting was summoned was to consider the question of the desirability of releasing members of the profession from their undertakings and pledges in connexion with the National Insurance Act, and, further, to consider the situation created by the attitude of the Government towards the decisions of the Representative Body; also to elect a member of Council in the place of Dr. E. J. Maclean, resigned. Mr. T. JENNER VERRALL, Chairman of Representative Meetings, took the chair at 9.30 a.m.

PRELIMINARY BUSINESS.

The notice convening the meeting was read, and the names of substitutes were announced.

The CHAIRMAN, with regard to the filling of four vacancies on the Council by Representatives of grouped Divisions, said that, whilst the actual selection lay with him, nomination papers had been circulated, and he would be guided by the views of the Representatives. The election of a member of Council to fill the vacancy created by the resignation of Dr. E. J. Maclean (Cardiff) lay entirely with the meeting. The Chairman also explained that a point had arisen with regard to Consett, which Division, in the unavoidable absence of Dr. Durant, desired to appoint as Representative a gentleman who was the actual Representative of another constituency, which, however, was represented by a substitute on account of the unwillingness of the Representative to act. The

position thus created under the By-laws had been submitted to the Solicitor, Mr. Hempson, whom the Chairman took the opportunity of welcoming again to the meetings. (Applause.) The Solicitor's opinion was that Consett had selected a gentleman not eligible to act.

In response to an inquiry by Dr. R. E. HOWELL (Cleveland) as to whether it would be possible to nominate a Deputy Representative as a member of Council to fill one of the four vacancies created, the Solicitor expressed the opinion that the course suggested could be taken.

APOLOGIES FOR ABSENCE.

Apologies for absence were received from the following: Dr. J. Macnigger (East York), Dr. E. A. Clarke (Ashton-under-Lyne), Inspector-General Bentham, R.N., Dr. John Gordon (Aberdeen), Surgeon-General J. P. Greany, I.M.S.,

Dr. E. S. Reynolds (Manchester), Dr. J. R. Hamilton (Hawick), Mr. D. J. Williams (Llanelli), and Dr. Walter Brown (Ayrshire).

REPORT OF THE AGENDA COMMITTEE.

On the reception of the report of the Agenda Committee as to the course of business.

Dr. W. Clow (Renfrewshire) interposed to say that his Division instructed him to move the following motion, which he submitted should take precedence of all others:

That this meeting, recognizing that the unity of the Association is at stake, declines to discuss the undertaking and pledge and proceeds forthwith to formulate a new policy.

The CHAIRMAN said that the motion should have been in the hands of the Agenda Committee for consideration, but, apart from that, he felt strongly that the meeting was called on a requisition in proper form from more than seven Divisions to consider the question of the desirability of releasing members of the profession from their undertakings and pledges. When the motion directly indicating that the pledge should be held binding and should be continued was moved, Dr. Clow's motion could be moved as an amendment.

After further discussion, the recommendations of the Agenda Committee were approved.

After consultation with the Solicitor, the CHAIRMAN announced that, in order to discuss the status of the undertaking and pledge, it would be necessary to suspend Standing Order 29, which precluded the rescission of a resolution of the Representative Meeting without two months' notice to the Divisions. On the motion of Dr. O'SULLIVAN, the Standing Order was suspended.

REPORT OF THE STATE SICKNESS INSURANCE COMMITTEE.

The CHAIRMAN moved the reception of the Report of the State Sickness Insurance Committee as follows:

The State Sickness Insurance Committee reports that on January 3rd the Secretaries of all Divisions in England, Scotland, and Wales were asked to forward information as regards the formation of panels in their own areas.

The following is a *precis* of the information received:

Out of a total of 194 Divisions in England, Wales, and Scotland, 123 have replied, while 71 have not replied.

In 11 Divisions the panels are reported as not being complete. These areas are chiefly in London, where, at the present moment, a vigorous, and in some districts a successful, campaign is being carried on to persuade practitioners not to go on panels, and to induce those who have agreed to go on the panels to resign. This campaign is being carried on by a representative committee responsible to the profession in the County of London area. In 11 Divisions the panels are reported as being complete except in certain small districts. In 101 Divisions the secretaries report that arrangements for varying periods have been made with the Insurance Committees for the treatment of insured persons. In 52 Divisions the representatives of the insured are reported as having been approached in accordance with the alternative policy of the Association as defined at the Special Representative Meeting, December 21st, 1912. It is reported that in 17 of these instances the overtures of the profession were definitely rejected. In the other cases no conclusion has yet been reached. Forty-one Divisions are reported as having formally resolved either that practitioners should be released from their pledges, or that in their opinion the undertaking and pledge are no longer binding. One Division obtained legal advice to the latter effect.

The State Sickness Insurance Committee regrets that the official information at its disposal is so incomplete, and would remind the Divisions that the present official policy of the Association is the result of a vote passed by a very large majority of the Representatives after a similar vote had been carried in almost every Division in the kingdom. The responsibility for the present situation rests entirely therefore with the body of the profession. Having regard to the situation which has arisen throughout the country the constituencies are now requested to instruct their Representatives as to the lines they are to follow at the Special Representative Meeting on January 17th.

Dr. KEAY (Greenwich) objected to the tenor of the last paragraph of the report. He thought that very few Divisions had given any instructions to abandon the £2 wage limit, and he did not know that the motion to

reopen negotiations with friendly societies had been before any Division.

The CHAIRMAN OF COUNCIL (Dr. Macdonald) pointed out that the report dealt with none of the points raised by Dr. Keay, but simply with the policy of the Association as a whole not to work the Act as at present constituted.

The report was approved.

VOTES AND SPEECHES OF REPRESENTATIVES.

Dr. BENNETT (East Leinster) moved:

That the Representative Meeting is of the opinion that when Representatives have received definite instructions from Divisions their speeches as well as their votes should be in support of these instructions.

Dr. Bennett referred to incidents at the last Special Representative Meeting, and said that certain Representatives who had made speeches in one sense had been compelled by the instructions of the Divisions they represented to vote in the opposite. He ventured to think that had there been a large proportion of the members of that meeting possessed of freedom to vote the result might have been influenced by the speeches, although they only expressed personal opinions.

The motion was carried without further discussion.

THE UNDERTAKING AND PLEDGE.

In reply to Dr. E. C. G. DANIEL (Croydon) the CHAIRMAN said that he considered it would be advisable to deal with the pledge and undertaking as one whole.

Discussion on the National Insurance Act then proceeded in accordance with the recommendations of the Agenda Committee.

Dr. C. BUTTAR (Council) moved:

That while expressing the deepest sympathy with, and declining in any way to blame, those members of the profession who, compelled by economic pressure and the defection of their fellows, have against their wills gone on to the panels, the Representative Meeting expresses the opinion that, until agreements to treat insured persons under the Act are satisfactory to the medical profession and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding on those who have subscribed to them.

Dr. Buttar expressed the opinion that the principal question before the meeting—that of the pledge—ought to be settled practically without debate, as the majority no doubt had received instructions to vote one way or the other. But serious as that question was, he wanted to call attention to a far more serious one—what the profession was going to do next. Therefore he desired the question of the pledge to be settled at once, and then for the meeting to proceed to consider what the Association should do in face of the conditions that now existed. He thought there were six classes of opinion among members of the profession in regard to the Act. First there were those who were largely responsible for the Act—a very small but energetic section—who were wholeheartedly anxious to see the profession under State control, and whose views might be described as socialistic. The second class were those who hoped to come in and take their neighbours' patients. They were again a small minority, and in his opinion a negligible quantity. The third class were those who were on the panels owing to economic pressure, the fear that their livelihood was being taken from them, and owing to the intimidation practised upon them by the Government and subsidiary bodies such as the Commissioners and the Chairmen of Insurance Committees. Those men had been coerced into going on the panels, and he had a great deal of sympathy with them. The fourth class were those who, in view of the possibility of losing their means of livelihood, and being perhaps faced with ruin, had stood loyally to the pledge and undertaking which they had given. Those were the men chiefly to be considered. (Applause.) The fifth class he might describe as the philosophic anti-collectivists—those who, thinking chiefly of the honour of their profession, were against the notion of State control, and who, regarding freedom as the natural heritage of every Englishman, desired that the profession should remain free and give its willing services to the community for the benefit of its health. The sixth and last class was a collection of men whom they might treat with contempt. They were those who were absolutely

indifferent to the whole matter. The motion was designed to deal primarily with classes three and four, and most especially with those in the fourth class who had remained loyal to the Association. He desired that every possible support should be given to them, and that they should know that the whole profession desired to support them in the fight they were making against the risk of losing their livelihood, and the iniquities to which it was attempted to subject them. His motion concerned also those who had been compelled to go on the panels against their will. To them the Association ought to extend its sympathy and do all it could to help them, recognizing that they were on the panels unwillingly, and formed, as he believed, the vast majority of those on the panels. It was lamentable to think the Association had not been able to hold these men in hand, because time and again throughout this business the game had been absolutely in the hands of the profession, and it could have obtained everything it wanted. A fortnight ago a campaign was started in London to deal with the conditions imposed by the Insurance Act, and in that time, so far as London and Middlesex were concerned, the whole situation had been changed. The Insurance Committees in those districts were now waiting in the expectation that the Representative Body would allow the pledge to be broken, and that then medical men generally would go on the panels. The panels both in Middlesex and London were absolutely inefficient and inadequate owing to the course that had been taken during the last fortnight. The statement of Mr. Lloyd George that, if men would not go on the panels, he would close them for one, two, or three years—the inference being that he would ruin them—had been the cause compelling the men to go on the panels. He believed that statement to be absolutely misleading. It had not been properly placed before the profession, and had had the unfortunate effect of driving them on to the panels absolutely unwillingly.

Dr. M. G. BIGGS (Council, London) seconded the motion. He thought the meeting was asked to do something which it had no competence to do. The pledges and undertakings were personal matters; the men who signed them pledged themselves not to take any position under the Act until the profession was satisfied that the conditions were right and were in accordance with the policy of the Association. No one could say that these conditions had been fulfilled; therefore it was perfectly clear that the pledge and undertaking still remained.

Dr. O'SULLIVAN (Liverpool) sympathized with the mover and seconder of the motion, but urged that the meeting had to view the facts as they were. It was perfectly obvious that the pledge and undertaking were given for the sake of unity. Did unity still exist? Why continue to live in a fool's paradise? If the Association did not release those loyal men who desired it, it would be holding over them the sword of Damocles. They felt at present that there was a moral obligation upon them, but the pledge had been torn asunder. It was not fair in those circumstances to ask the loyal men to continue in an impossible position. For these reasons he could not see his way to vote for the motion.

Mr. MONTGOMERY-SMITH (Marylebone) said that at one Representative Meeting the Association brought into being that very powerful weapon, the pledge, for the specific purpose of obtaining unity. If at a succeeding Representative Meeting the Association was to whitewash those men who had called the meeting, so that they might be released from their pledge, the Association would not be serving the profession to the best advantage.

Dr. C. H. BENHAM said that in Brighton he had conscientiously up to the present moment supported what had been known as the "die-hard" attitude, but he was asked the meeting to consider very carefully the position in which the British Medical Association was placed. A large number of contract practitioners had given a pledge and undertaking, and the Association had asked them to resign appointments which were part of their livelihood, offering in return to raise a Defence Fund in order to guarantee them against loss. These contract practitioners felt that the British Medical Association had not performed its side of the bargain. He complimented Dr. Buttar on the extremely conciliatory nature of his speech. If his motion had been couched in the same

terms as his speech he thought it would have received a great deal more support. If Dr. Buttar's motion were passed a very large number of resignations were bound to come in from men who considered the Association had broken its part of the bargain. They would refuse to be ostracized because they were on the panel.

Dr. MAJOR GREENWOOD (City, London) supported Dr. Buttar's motion. He said that for London men the matter was very serious indeed. Acting on the result of the last Representative Meeting, they went to great expense and started a campaign, in doing which they thought that they were acting on the strength of what had been done at the last Representative Meeting. At the present time not more than 10 per cent. of the London men were on the panels.

Dr. J. PEARSE (Trowbridge) thought the meeting should deprecate any attack on the honour of members of the profession. It could not be suggested that the 10,000 men (approximately) who had gone on the panels were destitute of honour. In his opinion they had been driven on the panels, not by any sense of fright or lack of honour, but by reason of the alternative policy enunciated at the last Special Representative Meeting. He was sent up by his Division to the last Representative Meeting to vote against service under the Act. At the meeting of his Division after the Representative Meeting the men were asked to decide whether they considered service on the panel or the alternative scheme of the British Medical Association the better, and they decided in favour of the former. What had weighed very largely with them was that the British Medical Association had not formulated a sufficiently definite and coherent policy under which men could serve. The alternative policy evolved at the last meeting had never been before the Divisions, and he was quite sure that if, after the last Representative Meeting, the Divisions had been asked whether they would pledge themselves to continued opposition to the Act or to the alternative policy of the Association, the alternative policy of the Association would not have been carried.

The CHAIRMAN, in reply to a question by Mr. E. A. DORRELL (Hampstead), said he could not state how many of the 10,000 men on the panels were members of the Association, but there appeared to be a considerable number.

Dr. T. C. ASKIN (South Suffolk) thought that Dr. Pearse was quite wrong in saying that the question of the co-operation of lay bodies was sprung upon the Association as a surprise at the last Representative Meeting (December), and called attention to Minute 125 of the meeting on November 20th last.

The CHAIRMAN, on consulting the minute referred to, said that the question was not raised for the first time at the meeting in December last. Minute 125 of the meeting, November 20th, was as follows:

That it be an instruction to the Council that in any public medical service scheme submitted for approval the inclusion of the principle of co-operation with contributing lay bodies in the administration shall not be ground for the withholding of such approval, providing that control of purely professional matters remain with the profession.

Dr. STRETTON (Worcester) said that the Worcester Division instructed its Representative at the last meeting to vote against accepting service under the Act, but at a meeting of the Division held immediately afterwards it appeared that a considerable number of men evidently intended to take service under the Act. He had explained that the question of the pledge was not a legal question but a question of honour. A resolution to stand by the pledge was carried by a majority of 25 to 15, yet within forty-eight hours a large number of men in the Division were on the panel, and within another forty-eight hours the panel was full. Was it right that a general who had been deserted by 90 per cent. of his army should lead the remnant to certain destruction? It was his duty to use every effort he possessed to save them from that destruction. In Worcester they were faced with the fact that about 10 per cent. of the members regarded the pledge as an honourable undertaking and were prepared to face financial ruin rather than break it. That was why the Worcester Division joined with the other Divisions in asking for this Special Representative Meeting, in order to absolve those men from their pledge and save them from ruin. They had been faced with another difficulty. They

were informed by the Chairman of the Insurance Committee for the county of Worcester that it had been decided to close the panels at once, and that when they were closed they would be kept closed for three or four years. It was added that another three days would be given before the panels were closed. The Division then met and it was felt that the men could not be sacrificed while they were waiting for the Representative Meeting. The Division therefore absolved them and allowed them to take service under the Act, and it now asked the Representative Meeting to confirm the action it had taken. The British Medical Association had suffered a reverse, but only a temporary reverse, and it was possible yet to win the battle; and when the history of this controversy came to be written he hoped there would be a clause in the final statement that the British Medical Association had secured terms which upheld the honour of the profession and secured adequate treatment to the insured.

Dr. C. G. MEADE (Scarborough) maintained that there was a great difference between expediency and necessity. It was necessity that drove them on the panels; they were coerced, although they desired to be loyal to the pledge. The Association ought to know when it was beaten. The position was that the panels were worked because the men were bound to do it. He asked for reasonableness, and that they be absolved from the pledge.

Dr. STANLEY HODGSON (Salford) asked the meeting to look at the matter from the national, and not from the parochial, point of view. He belonged to a Division where a method of working had been secured which it was maintained in no way violated the pledge. This Salford scheme (SUPPLEMENT, January 11th, p. 49) was capable of being made a national scheme; but before going further it was of vital necessity that the pledge which was instituted by the Representative Meeting as a weapon, and which had thoroughly failed, should be laid aside. If the Association were to be ultimately successful, the first necessity was that everybody should be allowed with a clear conscience to attend insured persons under the Act, and to receive the money contributed by them and the State. If the stubborn attitude advocated by some members were maintained, the Association would be fatally weakened. No lead had been given in the matter, not because there were no men capable of leading, but because of the men who would not be led. The only way Salford had obtained its settlement was by insisting upon plenipotentiary powers being given to a committee, and that committee had limited all its negotiations to its chairman and himself. By that means an honourable arrangement had been come to.

Dr. GORDON (Exeter) said that the Exeter Division had sent him to support London, being in the same position as the metropolis—that is, there were not enough men on the panel in Exeter. It was said that the profession was beaten. That was not so; there was an unalterable determination to go on and win, but for that purpose the Association must present one solid phalanx. If the pledge were not rescinded, no one would be a penny the worse off; but, if it were rescinded, the Government organs infallibly would be given an opportunity of saying that the Association was beaten. The policy of the Association should be to hold members to the pledge in order to make it quite clear that it held to its resolution; and, secondly, to emphasize the fact that men must not leave their own districts to practise in other districts under the Insurance Act. For that purpose there should be a supplementary pledge enabling the truth to be found out about the number of blacklegs.

Dr. J. SORLEY (Sheffield) thought that speeches devoted to allegations of intimidation, coercion, and so forth by the Government were futile and beside the question. The reason men had gone on the panel was not because the Government had forced them to do so, but because the pledge had been broken. If the pledge had been kept, no coercion or intimidation by the Government could possibly have obtained service under the Act. Sheffield asked for release from the pledge because the men who had broken the pledge were so sensitive that they wanted to be absolved from it and their action condoned. What was the objection to that? The objections to the Act would remain although the pledge were removed. Members of the Association should be absolved as far as

possible from the pledge, and their action condoned, and the Association should devote itself to future action.

Dr. HASLIP (Westminster) said that if the pledge were withdrawn it would be the signal of defeat, and the unfilled panels would receive great accessions. So far from its being defeated, however, the fight of the profession was only just beginning. Those who had gone on the panels would within six months wish to come off. To adhere rigidly to the pledge would be to act unfairly to loyal members, and nothing would be gained. In his judgement the only way to do deal with the matter was to formulate a new policy and appoint a committee with full power to prosecute that policy. He had no hesitation in saying that the constitution of the Association was wrong, because it did not give a full franchise to its members. He deprecated the idea of further pledges, because one had been too much already, and with the Chairman's permission he would presently move that the meeting proceed to the next business.

The CHAIRMAN indicated that if the meeting decided to proceed to the next business it would be expressing no opinion on the question of holding members to or releasing them from the pledge.

Dr. E. R. FOTHERGILL (Brighton) said he spoke for those whom Dr. Buttar had referred to as loyal to the Association, but who had been forced on to the panels. It was suggested that the meeting should consider the pledge and undertaking still binding. He suggested that it would be far better to formulate a policy of war, and to send messages instilling courage in those districts which were holding firm in order to induce those who had fallen out to come into line again. They had been led away by Will-o'-the-wisps, and if induced to return they might assist in continuing the fight against this unjust Act, the unjust details of which they were only just realizing. Although they as individuals would pass away, the Act would go on for all time; and therefore it was a duty to alter the policy of the Association from time to time as the situation altered.

Dr. BONTOR (West Herts) inquired if the pledge and undertaking entered into applied to the policy of the Association in force at the time it was sent out, or did it affect the present policy of the Association or the policy to be adopted in the future?

The CHAIRMAN said it was a very important question, and asked the Solicitor whether the undertaking and pledge, especially the undertaking, referred to the policy of the Association at the particular time the undertaking was given, or whether it referred automatically to the varying policy adopted by the Association from time to time.

The SOLICITOR (Mr. W. E. Hempson) said he was not responsible for the preparation of the pledge, and the question had been put to him by the State Sickness Insurance Committee whether the pledge needed to be strengthened to make it effective as pertaining to what was the declared policy of the Association—not at one time, but at all times. He had thought of introducing some such words into it as "from time to time," but had considered that this would probably create greater difficulty than by allowing it to stand in what he might call its naked simplicity. If it were read critically it would be found that the words "shall be" governed the two things which flowed from it: (a) "Except such as shall be satisfactory to the medical profession"; and (b) "in accordance with the declared policy of the British Medical Association." The pledge was intended to be, and it certainly was construed by him as being, a pledge that, whatever the declared policy of the Association was, the signatories were bound by it by the terms of this document.

Dr. BONTOR further inquired what was the declared policy of the Association at the present moment.

The SOLICITOR replied that by the regulations the policy of the Association was declared by the Representative Body, whose resolutions went subsequently to the Council; and unless a referendum was decreed by the Council upon them they became binding upon the Association.

Dr. O'SULLIVAN (Liverpool) desired to know whether the resolution arrived at on December 21st by the Representative Body did not remain the policy of the Association until the Representative Body had altered it. On December 21st the Representative Body refused to work the Insurance

Act, and until that resolution was rescinded was not that the policy of the Association?

The CHAIRMAN replied that any resolution passed on December 21st, since a referendum had not been taken when it was submitted to the Council, was obviously a part of the policy of the Association. The last resolution passed governed that which was passed before, if it was done after valid discussion. Therefore the decisions arrived at at the last Representative Meeting, having been properly passed and approved by the Council, were the latest pronouncement on the subject.

Dr. J. H. KEAY (Greenwich) asked whether Mr. Hempson meant that the pledge had no reference to the six cardinal points that had been formulated just before it was signed.

Mr. HEMPSON (Solicitor) said if at one particular period the six cardinal points were the declared policy of the Association the pledge pertained to that, and if there were any variation of that policy properly arrived at in a constitutional manner, and that became the policy of the Association, according to the reading he had given the pledge would apply to that.

Dr. KEAY, speaking to the motion, said he was very much in sympathy with it. He could not quite follow Mr. Hempson that the declared policy of the Association which he had pledged himself to had no reference to the six cardinal points. He did not wish to reproach any man, but his opinion was that the Representatives who at the last meeting eliminated two of the cardinal points were the men who had broken the pledge.

Dr. BEATON (St. Pancras and Islington) said that at the meeting in November a resolution was carried that the profession refuse service under the National Insurance Act. That had been repeated less than a month ago in London, when by a vote of 182 to 21 they said that they would refuse service under the Act.

Dr. HELME (Manchester Central) asked the Chairman if it was correct to say that it was the declared policy of the Association to refuse to work the Act. Had not the meeting declined to give service under the Act and Regulations as then offered by the Government?

Dr. BEATON said the minute of the resolution at the last Representative Meeting was: "That the Representative Body rejects the proposals of the Government and adheres to its previous decision to decline service under the Act."

The CHAIRMAN OF REPRESENTATIVE MEETINGS said he had been asked to state the exact bearing of the motions passed respectively at the meetings in November and December. After the resolution passed in November a deputation of five members was appointed to wait on the Chancellor; the result was, certainly, a modification of the position. After that alteration, for what it was worth, on December 21st the Representative Meeting passed the resolution which Dr. Beaton had quoted.

Dr. BEATON (continuing) said that soon after that resolution had been passed some of the men had broken away in spite of the pledges they had given. A great deal had been said about the necessity that was put upon them, but what about the men who remained loyal? What about the men who stood out because 27,000 men had signed the pledge and undertaking? Was there nothing to be said for them? No good was served by recriminations about the past. The question was, What should be done? There was one bright example before the whole of the country, and that was London. (Applause.) If the country would only follow suit the profession would win. They might not win now, but between now and April 14th, if they stuck together, they would still have their own way. The only way to do it was to give plenary powers to a set of men who would meet the changes that happened from day to day, and who would fight with a trustful Association behind them. In London the names of those on the panels who were members of the Association had been got out for 17 boroughs. These had been examined, and 1,180 names appeared. Of the 1,180 only 339 were members of the British Medical Association, and altogether out of the 5,000 or 6,000 doctors in London only some 700 or 800 were on the panel. If Manchester, Edinburgh, and Glasgow did the same, the Association would win. (Applause.)

Dr. T. B. HEGGS (Canterbury) agreed with Dr. Beaton that the important work of the meeting was the future

policy of the Association, and in order that it should be strong enough to formulate and carry through a proper policy he would ask that the men be released from their pledges. Many of the men on the panel in Kent had been compelled to go on through necessity, because they felt that it was not right to themselves and their families to take the risk of staying off. Those men who went on under threats were men of the highest standing, morally, socially, and professionally. It was very desirable to retain those men in the Association, but so long as they did not follow the official policy of the Association they considered that they ought not to take any hand in its work. Unless they were retained in the Association that body would not have strength in the future to obtain amendments. For the sake of the Association and the unity of the profession he asked the meeting to absolve those men from their pledges.

Mr. E. B. TURNER (Deputy Chairman of Representative Meetings) said that, to be logical, the meeting before passing any resolution absolving men from their pledges must pass a resolution altering the present declared policy of the Association and enunciating the principle that service under the Act and regulations as they at present stood was satisfactory to the medical profession. How many men would say that the position under the Act at present was satisfactory to the medical profession, or that it was in accordance with the declared policy of the Association? How could the meeting pass a resolution absolving from the pledge men who had already broken it? If a resolution were passed doing away with whatever vestige remained of the pledge they would be undoing all the good that had been done by the fight in London for the liberty of the people to make their own arrangements. This was the test fight, and if it was won in London it would be followed freely all over the country; but London could not win if all the backbone and steel were taken out of the fight. He had been sent from an absolutely consistent Division, and, whatever happened, he would vote against any abrogation of the pledge. But his Division had given him a free hand as to other matters, and he would therefore support Dr. Haslip's proposal. If men chose to go from their pledge out of compulsion, he would have the same pity for them as he had for hundreds of other men who had written to him.

Dr. HELME (Manchester Central) said he had the deepest sympathy with two classes of men in this matter—those members of the Association whose honour had been sufficiently strong to keep them loyal to the pledge, and who to-day were facing the possibility of ruin rather than go back upon it in any way, and those who by force of circumstances, by the treachery of those residing in their immediate neighbourhood—"Hear, hear"—and by the worse treachery of Dr. Lauriston Shaw—(Loud applause)—had been driven against their will, in the face of ruin to themselves, their wives and children, to give an unwilling service under the Act. He was sorry to say that the majority came under the second head. They must face the fact that the pledge as a fighting weapon had failed. The result was that if the pledge was adhered to the meeting would be deciding after deliberation to inflict ruin upon those very men who had the strongest sense of honour. That was the condition that had to be faced, and therefore he had been instructed by his Division to vote for a formal release of the signatories to the undertaking and pledge. The Association was not defeated; far from it. In Manchester they were of opinion that they had a way out, and it was in order to keep all those men within the folds of the Association he asked the meeting to give the release. They had succeeded in Manchester and in Salford through the fact that plenary powers were given to delegates to deal directly with the Insurance Committee. The Representative Meeting must invest its own Committee with greater powers than before, and must give it a national character.

The motion to proceed to the next business was then put and carried, whereupon the luncheon interval was taken.

AFTERNOON SESSION.

Dr. HEGGS (Canterbury and Faversham) moved:

That this Representative Meeting, recognizing the force of present circumstances and consulting the best interests of the Association and the unity of the profession, now releases from their pledge those practitioners whose loyalty has been so valuable.

He pleaded that the Association really needed those men who, with a revolver at their heads and under intimidation which every honourable man condemned most strongly, had felt that they must go on the panel, and had done so with the consent of the practitioners in their area. There were among them honourable men and men of the highest standing in their counties, and the Association must have them back to work with it in the future. For that reason he asked the meeting to release them from their pledges. The Association was the essence of democratic Government, and no policy which it formulated would carry weight unless it was supported by the majority of its members. Under these conditions he thought it would be fatal to bind a certain number to a policy that was not followed by the majority of the Association.

In reply to a question whether the words "those practitioners whose loyalty had been so valuable," in the motion included those men who had gone on the panels as well as those who had not, the CHAIRMAN expressed the view that there was obviously a certain amount of discrimination. An amendment by Brighton would answer the question, and possibly Dr. HEGGS would accept it. This was to omit all words after the word "releases" and substitute the words "practitioners from their undertaking and pledge."

Dr. HEGGS accepted the amendment, which was moved by Dr. BENHAM (Brighton).

Dr. MAJOR GREENWOOD (Council) desired to know if the motion as now amended released those men who had already, as it were, released themselves.

The CHAIRMAN replied that, on the contrary, they had been informed that, whatever they had done, they had not been released.

Dr. O'SULLIVAN (Liverpool) inquired what was to be done with those Divisions which had used the machinery of the Association and its funds, and which had taken upon themselves to absolve men and give them advice upon this matter.

The CHAIRMAN observed that it was evident that the Agenda Committee understood what was meant by the resolution.

Mr. ROBINSON (Burnley), who supported the motion, said that his Division had been most loyal to the Association and determined in its opposition to the Insurance Act. Only ten days prior to January 5th they unanimously decided not to work under the present conditions, yet such were the altered circumstances and conditions that on January 5th, by a majority of nearly 2 to 1, it was decided to join what they denominated "lists" instead of panels, although as far as he was concerned he saw no difference between "list" and "panel." They also thought that the Insurance Committee would allow them to adopt the principal items in the Salford and Manchester scheme, but the difference between that scheme and going on to the panel and working under the Act was very small. A number of men against their own convictions and consciences had been compelled by circumstances to go on to the panel, and whether they liked it or not it was for the profession to acknowledge that under the present circumstances and conditions they were really beaten. The altered conditions and circumstances forced upon them at the end of December were the cause of a good many men going on the panels. The last Representative Meeting had abolished some of the principles of the cardinal points. (No, no.) It abolished the £2 limit and the 8s. 6d. without medicine, and it also asked members to negotiate with the friendly societies. ("No, no.") At any rate, that was the view of his Division. Personally he thought it was utterly wrong for the Representative Meeting now or at any time to alter matters decided at Divisional meetings without first consulting the Divisions. The alterations made at the last Representative Meeting were made without consulting the Divisions, and he thought those decisions were largely responsible for the condition of affairs which now existed.

Dr. MANKNELL (Bradford) represented a Division which was behind very few in the opposition it had made to the Insurance Act. It was his privilege a month ago to propose that as an Association they should decline service under the Act. Since then events had led to a great change of opinion, not only throughout the country but in his own constituency. After the Representative Meeting in December a meeting of the Division was held

at which it was resolved by an overwhelming majority that the decision of the Representative Meeting should be supported. The next morning the Yorkshire papers contained advertisements from the Bradford Committee for whole-time men. In no other part of the country had that advertisement appeared before. The profession, by the terms of the Act and the Regulations, regarded the advertisements as *ultra vires*, but it was now known definitely that the Chairman of the Local Insurance Committee had been to London and had interviewed the Commissioners, and had received permission—if not orders—to put in this advertisement before the time for the panel had expired. This produced a feeling of unrest, and on the night before the panels could be formed a meeting was held in Bradford, not merely of the Division, but of the whole profession, when it was decided by 68 votes to 23 that members if they so desired could go upon the panel. They knew from the very first day after the advertisement for whole-timers appeared that sufficient applications were received to fill these posts three times over. What did that mean to the profession in Bradford? The population was 300,000, with an insured list of 100,000 people, which meant that every third person in the city was an insured person. The doctors were informed that these whole-time men were to have a salary of £500 per annum, and were to be allowed to practise throughout the whole area at a rate to be fixed by the Local Insurance Committee. That meant extinction for the local doctors. Further, they were told that the authorities were prepared to close the panels. If this was not intimidation, bludgeoning, holding a revolver to the heads of the men in Bradford, he would like to know what was.

Dr. DUNCAN (Derby) said he represented a Division which had been consistently in favour of working the Act, but was determined to uphold the integrity of the profession. The Derby Division found that at the Representative Meetings in November and December there was a great majority against working the Act. If there had not been a two-thirds majority for this course, Derby would have demanded local option. Although in the Derby Division the men by a large majority were pledged to stand by the policy of the Association, at the same time it condemned that policy. Nevertheless, because it was the policy of the Association, the members were ready to sacrifice their own convictions and attempt to work it. Then news came that Leicester, one of the best organized Divisions in the country, was turning round, that Bradford, the strongest town, had fallen, Bristol, which was stated by its chairman to be organized as was no other constituency in the country, had fallen, and then that Nottingham had also changed its position. In the face of all this the Derby Division had no option but to tell its members that they were at liberty to go on the panel. They were to receive 9s. a head for insured persons, and were at liberty to make private contracts with those who were outside, who consisted of the women and children. He contended that the policy formulated at the last meeting was illegal, and that the Chairman might have ruled it out of order.

Dr. F. J. SMITH (London) asked whether some *via media* might be found which would not have the effect of alienating the loyal men and giving a triumph to the disloyal men. The men who had been forced on to the panels were being used as pawns in the game of the primarily disloyal men to compel the Association to withdraw the pledge. He did not believe the statements which had been made to induce the Bradford men to go on the panel. Those were statements made by politicians, and had no basis of fact. He had very strong evidence that such was the case in the Isle of Wight, where the men had been told if they did not go on the panel whole-time appointments would be advertised. Within twenty-four hours of this being done orders came from London to withdraw the advertisements and open the panels. He did not believe any statesman would dare take into a town of the size of Bradford fifteen or twenty whole-time men, because he would lose too many votes. The campaign in London was entirely based on the support of the insured people, from whom within the last fortnight they had received much encouragement. He urged the meeting to adopt some *via media* which would allow the campaign in London to go on, for the profession in London would guarantee to carry on the fight and win.

The CHAIRMAN then announced that three amendments had been handed in, one by Dr. Todd, one by Dr. Haslip, and one by Dr. Stavley Dick. The first, by Dr. Todd, was as follows:

That this Representative Meeting, while strongly of opinion that the National Insurance Act and Regulations as they at present exist must be amended before they can be loyally accepted by the profession, so as to work them in the best interests of the insured persons for whose benefit the Act has been passed, and as the meeting is well aware that the majority of medical practitioners who have taken provisional service under the Act have done so through necessity and circumstances over which they had no control, this meeting releases the men in such areas from their pledge, but strongly urges men in areas where they are able to hold out to do so, and that the Association concentrates its efforts both financial and otherwise on such areas to prevent capitulation and to ensure ultimate success.

The second amendment, by Dr. Haslip, was as follows:

That the Representative Body, recognizing the economic and other forms of pressure under which many members of the Association considered themselves warranted in taking a certain action as regards the pledge and undertaking which they signed, and having regard to the strenuous fight which the profession in many respects is carrying on, does not consider the present an opportune time to express an opinion upon the action of those members; that therefore the Representative Body proceed to appoint a committee with plenary powers, such powers to include the releasing of members of the profession from the pledge and undertaking in such areas where it is so desired, and that such committee take all necessary action in connexion with the National Insurance Act.

The third amendment, by Dr. J. S. Dick (Manchester North) was as follows: To substitute for the words in the motion by Canterbury and Faversham "now releases from their pledge those practitioners whose loyalty has been so valuable" the following:

Refrains from expressing an opinion as to whether or not the provisional arrangements entered into in many areas by Local Medical Committees are or are not contrary to the pledge, but this meeting is of opinion that the terms of the pledge require that any permanent arrangement contemplated in any area shall be submitted to and receive the approval of the Council of the Association.

The meeting expressed its preference for Dr. Haslip's amendment.

Dr. Todd (Sunderland) asked whether the Representative Meeting could legally carry out Dr. Haslip's amendment.

The SOLICITOR said that, in his opinion, the present position fell within the actual contemplation and competence of the Association's regulations. In support of his conclusion he referred to Article 38: "Committees may be appointed in such manner and having such powers as may be prescribed by the By-laws, or as the Representative Body or the Council, subject to the provisions of the By-laws, may think proper"; and By-law 64: "The Representative Body and the Council shall respectively have power to appoint committees with such powers as may to them seem necessary or convenient, and to fix the quorum thereof and lay down rules for regulating the proceedings of such committees." If the Representative Meeting agreed to appoint a committee with the powers proposed, in his opinion the meeting would be acting under the authority of the By-laws. The matter would then have to come before the Council to determine whether a referendum should be taken upon it as a matter which fell within the wishes of the Association generally.

Dr. Todd (Sunderland), having heard the opinion of the Solicitor, desired to withdraw his amendment and to second Dr. Haslip's in its place.

In reply to the CHAIRMAN, Dr. HASLIP said his proposal was that the Representative Body should advise the Association to decide as far as it could that the Association should put off all further decision as to its policy, and leave to the committee the question of pressing or not pressing for any points of policy. The release, or partial release of the men from the pledge and undertaking in certain areas would depend on a definite expression of opinion from those areas that they so desired. The committee, if appointed, was to wait before releasing the men from the pledge and undertaking in any area until it had evidence from the particular area that they wished it. He would leave it to the meeting whether the committee

would have an option to act or not on that information, as they chose.

Dr. FOTHERGILL (Brighton) thought that if the Representative Meeting adopted Dr. Haslip's amendment it would be handing over its powers for all time to a committee to be appointed to deal on its behalf.

Dr. HASLIP replied that he only meant till the next Representative Meeting, and he would be prepared to add the words, "until the holding of the next Representative Meeting."

The SOLICITOR, in reply to a question raised by Dr. MAJOR GREENWOOD as to the position of the Council under this proposal, said the Representative Meeting would not be handing over its powers. If it appointed a committee in pursuance of the powers which the regulations contained, it gave power to that committee within the terms of the motion which was proposed to be passed. More than that it did not do. It would be necessary to define more closely what powers were intended to be given. If the words "plenary powers" were used, some form of words must be adopted showing in what directions those powers might be exercised.

Dr. DARLING (Portadown and West Down) inquired whether it would be possible to give to a committee powers the Representative Meeting did not possess. That body had not plenary powers, and everything it did had to go to the Council, and was liable to a referendum being called. If the Representatives had no such powers, how could they give greater powers than they possessed?

The SOLICITOR, dealing with the first point, said the answer was in the negative. If the Representatives had not power they could not give it to other people. He did not follow Dr. Darling's further reference to giving greater powers than were possessed. He did not think that was proposed. There were certain things which it was felt required investigation at the hands of the proposed committee which would exercise a certain discretion with regard to them. The committee would be appointed for that purpose, and would have those powers given to it. The resolution appointing the committee would come before the Council who would block it if it thought fit and decree a referendum. If it did not do that it would give the hall-mark of its approval and the resolution would go forward as one the Council approved.

Mr. LARKIN (Liverpool) thought the meeting was on very delicate ground, and he asked whether the Representative Body had plenary powers. He contended it had not, but that its powers were very distinctly limited by the regulations. The power of the Representative Body was subject to certain restrictions, as, for instance, the referendum. If a body were given plenary powers, was it to be understood that its decision would go to the Council and be subject to referendum? If that were so the powers were not plenary. The powers of the Representative Body were certainly restricted in one direction by the Divisions, and in the other by the Council.

Mr. H. H. WHAITE (Birmingham Central) considered that many Representatives present had definite instructions, and if they voted for or against the proposition they would not be carrying out their instructions. Was he to understand that the proposed committee was to be empowered to absolve men from the pledge? In other words, if Representatives voted for the motion were they in effect carrying out instructions to vote for absolution from the pledge?

The CHAIRMAN thought if the committee were given the specific powers with regard to the pledge which the motion proposed it would be given powers with regard to the pledge and undertaking to absolve men in certain areas if and when it was found those areas desired to be absolved.

Mr. WHAITE maintained that the committee was not compelled to do it.

Dr. HASLIP preferred local option. The men to be appointed to the committee would be men to be trusted and possessed of common sense. The Association was in a dilemma. There were two opposing opinions, and each must give way a little. Those who were anxious to be absolved from the pledge should trust the committee that whatever they wished should be given to them.

Mr. WHAITE said that in Birmingham so many men had gone on the panels that there was a very small minority left. The result was that at the meeting in that city to instruct the Representatives a large majority of the men

on the panels stayed away. There was a possibility, therefore, of consultants and interested parties and a small loyal majority giving a vote which did not represent local views. That opened up a possibility of danger, and he could not carry out his instructions properly if he voted upon the motion.

The CHAIRMAN OF COUNCIL did not see so much difficulty with regard to the plenary powers proposed to be conferred on the committee as seemed to be present in the minds of some of the Representatives. What it came to was that with regard to the Insurance Act the committee would take the place for the time being of the Council. The idea was that the committee, being a small body, would meet more frequently than the Council. The Council could only act on instructions from the Representative Meeting, and the proposed committee would be in the same position; that was the length to which the term "plenary powers" went.

Dr. BICKERTON EDWARDS (Swansea) inquired whether it would be possible to release districts who wanted to be released from their pledges before the present meeting dissolved. There was an objection to the cumbersome method of having to get reports from the different Divisions. If the Representatives could be assured that their Divisions would be released through those of the Representatives who were there to ask for absolution, he thought the difficulty could be got over.

Dr. W. GORDON (Exeter) considered it very advisable to know exactly what the position of the proposed new body would be.

The CHAIRMAN thought the time had arrived when the vote should be taken to decide whether the question of releasing from the pledges or not releasing should be postponed in order that the matter might be approached on the terms of Dr. Haslip's motion. If it were desired to take a definite straight vote on releasing from the pledge in preference to appointing a committee with plenary power to deal with the Insurance Act, the best method would be to resume the discussion of the Canterbury and Faversham motion.

Dr. O'SULLIVAN (Liverpool) said he had been sent with definite instructions to vote for the release of loyal men, and he wanted that subject to be put as a plain and straight issue. He urged that the hitherto loyal members should be released from their pledges.

The CHAIRMAN thought that such members as had been instructed by their Divisions to vote on the question of releasing or not releasing, and who conscientiously believed they must give a straight vote on that issue, would obviously satisfy their instructions by voting against any postponement of that issue in the direction suggested by Dr. Haslip's proposal. If that proposal were lost the Canterbury and Faversham motion would remain as a straight issue.

Dr. MACDONALD (Chairman of Council) recognized that there were a number of men who had received instructions to vote in a certain direction on this matter. But there was a danger which they would appreciate when he told them that to make that vote a binding decision a two-thirds majority of the meeting would be required. That was the position. If Dr. Haslip's suggestion were accepted and power given to a committee to give this release, it would be an easier way out of the difficulty.

Dr. HASLIP was quite willing to divide the resolution into two parts, and to incorporate the Chairman of Council's suggestion. If the meeting gave the committee plenary powers to act for it, it must act quickly if it was to do any good.

Dr. E. O. PRICE (Carmarvon) asked, if this was done, was it not giving to a committee power to reverse the policy of the Association—in fact, to do what it required a two-thirds majority of the meeting to do?

The CHAIRMAN replied that, having suspended Standing Order 29, the meeting had power to make any alteration it thought necessary.

Dr. PRICE asked if the suspension of Standing Order 29 gave the meeting power to change the policy of the Association, which, he thought, was what this amounted to.

The CHAIRMAN said the Solicitor was of opinion that they were in order in doing that which was proposed.

In reply to Dr. ROBERTSON, the CHAIRMAN said that if he were a Representative, and had received from his Division instructions to vote either for or against on a

straight vote for releasing or not releasing men from the pledge, he would not feel himself justified in accepting any other way out of the difficulty.

Dr. HELME (Manchester Central) said that he had received distinct and definite instructions from his Division to vote for a release from the pledge, and he was of opinion that the amendment proposed by Dr. Haslip was a means of providing for that formal release being given.

The meeting then decided to take Dr. HASLIP's amendment in two parts.

Dr. HASLIP (Westminster) then in a few words moved his amendment in the following terms:

That this meeting proceeds to appoint a committee which shall release from the pledge and undertaking practitioners in any Divisions which give to the committee satisfactory evidence that this action is there desired, such release only to be effective so far as regards service by practitioners in their own districts, parishes, and towns, and any acceptance of service outside involving a change of residence for the purpose of accepting such service will be regarded as conduct detrimental to the honour and interests of the profession.

He hoped to have a two-thirds majority in favour of it. When they heard that it would have the support of Derbyshire and Manchester, he trusted that those who came there with the same object as Dr. Robertson, of Glasgow, would see their way to support it also. They all wanted to leave that meeting united.

Dr. W. E. THOMAS (Glamorganshire), who seconded, said that he agreed that it was desirable to have unanimity. Although in his Division they had been compelled to surrender, that was no reason why others should be compelled to do so.

Dr. TODD (Sunderland), who spoke in support, said that the Association had had a reverse, but that reverse could be turned into a success by backing up the London Divisions and others which were still loyal, not only by their moral support, but also their financial support. If the Representative Meeting carried the motion by a majority of two-thirds it would do the best thing for the medical profession it had ever done.

On the motion of Mr. RUSSELL COOMBE (Exeter), seconded by Mr. DEARDEN (Manchester West), the following amendment of Dr. Haslip's motion was put and carried:

That the words "or insurance areas which give to the committee satisfactory evidence that this action is desired in and by such Divisions or insurance areas" be substituted for the words "which give to the committee satisfactory evidence that this action is there desired."

The CHAIRMAN said that verbal alterations in the wording of the motion could be put after it had been carried and when it came up as a substantive motion. He had been asked whether, if those Representatives who were sent there to vote for the maintenance of the pledge voted for the motion, they would be voting for a procedure which would, in fact, enable any body of members to be released from the pledge who might so desire. His reply was that those who did not want any one to be released from their pledge at all would, of course, vote against any procedure which enabled people to be released.

On the amendment being put as a substantive motion, the following amendment, moved by Mr. WHARTE (Birmingham Central and Walsall), was carried:

That the words "by a practitioner in an area where release has not been given" be substituted for the words "outside involving a change of residence for the purpose of accepting such service."

Mr. MONTGOMERY-SMITH (Marylebone) said he wished to define "satisfactory evidence," and he moved as an amendment to insert "satisfactory evidence being a two-thirds majority of the practitioners in the Division." If the motion were carried as it stood now it would be extremely unfair to the members in his Division, where they were fighting men all round them, as none of their members were on the panel. He thought they should have a two-thirds majority behind them in order to carry on that fight.

Dr. DAVID ROXBURGH (Marylebone) seconded.

The CHAIRMAN remarked that although he was bound to put the amendment, if he were a member of the committee he would be very loth to have his hands tied in the way suggested. In his opinion, it must be left to the committee to decide what "satisfactory evidence" was.

The amendment was put to the meeting and lost.

After further discussion as to the precise wording of Dr. Haslip's proposal, it was moved by Dr. HEWELL (Cleveland), seconded by Dr. JOHN BROWN (Bacup), and carried, that the word "shall" in the substantive motion be altered to "may."

Upon a show of hands the voting appeared to be equal, whereupon a division was taken, in which 86 voted for the word "may" and 78 for "shall," and the former was declared carried.

The motion as amended was then put in the following form:

That the Representative Body, recognizing the economic and other forms of pressure under which many members of the Association considered themselves warranted in taking a certain action as regards the pledge and undertaking which they signed, and having regard to the strenuous fight which the profession in many respects is carrying on, does not consider the present an opportune time to express an opinion upon the action of those members; that therefore this meeting proceeds to appoint a committee which may release from the undertaking and pledge the practitioners in any Divisions or insurance areas which give to the committee satisfactory evidence that this action is desired in and by such Divisions or insurance areas, such release only to be effective so far as regards service by practitioners in their own districts, parishes, and towns, and any acceptance of service by a practitioner in an area where release has not been given will be regarded as conduct detrimental to the honour and interest of the medical profession.

A roll call was demanded and taken with the following result:

| | | | | | |
|--------------|-----|-----|-----|-----|----|
| Ayes | ... | ... | ... | ... | 80 |
| Noes | ... | ... | ... | ... | 91 |
| Did not vote | ... | ... | ... | ... | 5 |

MEMBER OF COUNCIL.

The CHAIRMAN announced that Dr. G. E. Haslip had been elected a member of Council in place of Dr. Maclean. The meeting adjourned at 5.45 p.m. until the next day.

Saturday, January 18th, 1913.

The Representative Meeting resumed its proceedings at 9.30 a.m., when the minutes of the previous day's proceedings were read, amended, and confirmed.

MEMBERS OF COUNCIL FOR GROUPED BRANCHES.

The CHAIRMAN announced, with regard to the election of members of Council for Grouped Branches, that the voting had resulted as follows:

| | | |
|---|-----|---------------------------------|
| North of England Branch | ... | } Dr. F. OLDHAM (Morecambe) |
| North Lancashire and South Westmorland Branch | ... | |
| Yorkshire Branch | ... | |
| Bath and Bristol Branch | ... | |
| Gloucestershire Branch | ... | } Dr. D. E. FINLAY (Gloucester) |
| West Somerset Branch | ... | |
| Worcestershire and Herefordshire Branch | ... | |
| Dorset and West Hants Branch | ... | |
| South-Western Branch | ... | } Dr. W. CLOW (Paisley) |
| Aberdeen, Northern Counties, Dundee, and Perth Branches | ... | |
| Edinburgh and Fife Branches | ... | |
| Glasgow and West of Scotland Branch (four City Divisions) | ... | |
| Glasgow and West of Scotland Branch (four County Divisions) | ... | } Dr. MUNRO MOIR (Inverness) |
| Border Counties and Stirling Branches | ... | |

In the exercise of his constitutional power, he appointed those gentlemen.

THE POSITION OF THE MEETING.

The CHAIRMAN at the outset reminded the meeting that, having rejected the proposal that a committee should be appointed with power to release from the pledge, the definite resolution by Canterbury that members be released from their pledges was again before the meeting. It was obvious from the previous day's debate that not only was there very acute feeling on the subject, but it was feeling based in many cases on definite instructions, requests, and desires on the part of Divisions and areas. It would be a profound pity and a disappointment to the profession and the public if the meeting separated practically without coming to any useful decision at all. Having regard to the

very full debate on the previous day, he thought, as business men anxious to come to a conclusion at the earliest date consistent with safety and reasonableness, that the meeting ought not to spend much more time if it intended adopting a certain line. He did not see the need for much further debate. If a straight vote were taken on the Canterbury and Faversham motion, the meeting would be guided by the fact whether the necessary two-thirds majority were obtained or not. It had been suggested to him that the only workable alternative to a straight vote on release or non-release from the pledge was to take the following motion as an amendment to the Canterbury and Faversham motion. It was a motion by Mid-Norfolk with an addition at the end.

That the Council be instructed (a) to take all necessary steps to watch and protect the interests of the profession under the National Insurance Act; (b) to take any opportunity that may be afforded for placing the Representatives of the Association on the Advisory and Insurance Committees; (c) to obtain statutory recognition of Local Medical Committees in every insurance area; (d) to collect information as to defects in the Act and Regulations, and to take all possible opportunities of remedying them, and as for this purpose the undertakings and pledges are neither necessary or desirable, they be and are hereby cancelled.

That would be tantamount to saying that from the Association's side the pledges were a personal matter tendered to it and accepted as part of its working campaign. The adoption of the amendment would mean that no further use would be made of the pledge by the Association. The suggestion was more or less in the nature of a compromise.

RELEASE FROM THE PLEDGE.

After some further discussion it was agreed to take a direct vote on the motion by the Canterbury and Faversham Division, which was as follows:

That this Representative Meeting, recognizing the force of present circumstances and consulting the best interests of the Association and the unity of the profession, now releases all practitioners from their pledges and undertakings.

A roll call having been demanded, the voting resulted as follows:

| | | | | | | |
|------------|-----|-----|-----|-----|-----|-----|
| Ayes | ... | ... | ... | ... | ... | 115 |
| Noes | ... | ... | ... | ... | ... | 35 |
| Net voting | ... | ... | ... | ... | ... | 5 |

The CHAIRMAN OF REPRESENTATIVE MEETINGS declared the motion carried by the requisite two-thirds majority.

CHANGE OF RESIDENCE AND ACCEPTANCE OF SERVICE.

The CHAIRMAN then put the following amendment proposed by Dr. W. GORDON on behalf of the Exeter Division:

That any acceptance of service outside a practitioner's own district, parish, or town involving a change of residence for the express purpose of accepting service will be regarded as conduct detrimental to the honour and interests of the medical profession.

This was agreed to without debate.

CONDEMNATION OF THE METHODS OF THE GOVERNMENT.

It was agreed to first take a resolution expressing the views of the profession with regard to the action of the Government in bringing medical benefit into operation, Dr. HELME (Manchester Central) moved:

That this meeting records its emphatic protest against the discreditable methods adopted by the Government whereby a position of urgency was created under which many practitioners, finding themselves threatened with financial ruin, were compelled to give unwilling service under the National Insurance Act on terms which this meeting considers to be derogatory to the profession and against the public interest.

Dr. Helme said it had been desired to add the words "and others" to "the Government" in the motion. He was perfectly familiar with the facts, and thought it a reprehensible state of things when, as in one case, a wealthy mill-owner in a certain district, absolutely by threats, compelled all the doctors in a town to go on the panel, threatening them with ruin if they did not; but he thought the motion would be strengthened by limiting it to the Government. He preferred the expression "unwilling service"; it would be well understood in the

House of Commons, which had already passed a resolution that service must be given by a willing profession. If the profession were compelled to give unwilling service it would redound much more to its honour if medical men said they were going to give as good a service as they could, even though unwillingly. The latter part of the motion simply reiterated what had been so often repeated—namely, that, taken as a whole, the system devised by the Government was derogatory to the profession, and would eventually act harmfully to the profession, because it would lower its status and injure it in many other ways.

Mr. E. B. TURNER (Kensington) said that whilst it was impossible for him to speak with any great pleasure on any subject after what had happened, yet to a certain extent this feeling was modified by the fact that he was able to second the motion. He had been in the thick of the fight lately in London to maintain the position of the profession, and knew the discreditable nature of the methods that had been used. The Representative Meeting, which was practically the mouthpiece of the very great majority of the profession, should put on record some such motion as that proposed. From the beginning it had been said that the profession's fight against the Act was dictated by political motives. That was false to the core. In his own case he had been asked many times to speak on the Act at political meetings and by-elections, and he had always refused because he had said that the only weight his words would have over those of any other member of the profession would be due to the fact that he had been elected to official positions in the Association, and he had been elected to those positions by the votes of men who were of all shades of political opinion. The resistance of the Association and the medical profession had from the very beginning been non-political. But when it became apparent what the decision of the profession was going to be, the party machine was brought into action, and what had been before merely departmental became definitely political. The methods of the Government were discreditable, more especially the threat to plant subsidized interlopers in order to ruin local men. There had been a campaign of calumny and misrepresentation to coerce members of their profession unwillingly to go on to these panels.

Dr. FOTHERGILL thought that if the motion were adopted in its present form it would be taken as a condemnation of those members of the profession who had undertaken service. He moved to leave out the words after "on terms" and substitute the words:

which are not calculated to permit the formation of an efficient medical service, and are, therefore, inimical to the best interest of the persons insured under the National Insurance Act.

Dr. BENHAM seconded.

The amendment was lost, 53 voting for and 62 against.

Dr. J. CLARKE (Dartford and Woolwich) informed the meeting that on January 16th there appeared in the Arsenal at Woolwich, a Government workshop employing 13,000 workmen, notices inviting the men to sign for the Arsenal doctors, who were commissioned officers in His Majesty's army. If this was not a form of Government pressure he did not know what was. This was done although there was a full panel, and its object must have been to show that the Government did not intend to give free choice of doctor to these men at any rate.

Dr. Helme's motion was put to the meeting and carried with one dissident.

RESCISSION OF RESOLUTION.

It was then agreed to rescind the following minute passed at the Liverpool meeting:

That the British Medical Association calls on all practitioners to refrain from applying for or accepting any post or office of any kind in connexion with the National Insurance Act (except in regard to sanatorium benefit, provided this is carried on in accordance with the wishes of the Association) until such time as the Government has satisfied the Association that its demand will be met.

FUTURE ACTION OF THE COUNCIL.

Dr. THOMSON (Mid-Norfolk) moved:

That the Council be instructed (a) to take all necessary steps to watch and protect the interests of the profession under the National Insurance Act; (b) to take any opportunity that

may be afforded for placing the representatives of the Association on the Advisory and Insurance Committees; (c) to obtain statutory recognition of Local Medical Committees in every Insurance area; (d) to collect information as to defects in the Act and Regulations and to take all possible opportunities of remedying them.

The motion was carried unanimously without discussion.

The CHAIRMAN pointed out that by the motion just passed the Council was instructed to take all necessary steps to watch the interests of the profession, and therefore it would be impossible to appoint another committee, as was suggested by a motion by the St. Pancras and Islington Division. He suggested that the matter be left to the State Sickness Insurance Committee to deal with, and this was agreed to.

Mr. MONTGOMERY-SMITH (Marylebone) moved:

This meeting declares that it is of opinion that the Act is unsatisfactory, and that where men still hold out against the Act the Council will give them every assistance in its power.

Mr. Montgomery-Smith said that by passing the motion the meeting was expressing more than a pious opinion: it was giving a distinct indication to the Council that it would be its duty to give every assistance, financial and otherwise, to those areas that were not satisfied with the conditions existing, and that such areas would be justified in continuing the fight.

The motion was agreed to.

Mr. TURNER (Kensington) moved the following rider:

That, it being evident that a very large number of the doctors who have gone on to the panels have been compelled to do so by fear of injury to their practices which in some cases might even amount to actual financial ruin, the Representative Meeting suggests the following as a means of giving effect to Section (d) of the motion by Mid-Norfolk (with regard to future action): That a letter be sent to every member of the medical profession asking (1) if he is on the panel; (2) if so, whether he has taken service willingly or against his inclination owing to coercion; (3) whether, if he be not satisfied with the conditions both as to service and remuneration, he is prepared to decline to renew his contract for panel service at the termination of the provisional three months, provided that the other practitioners who have been induced to take service by similar methods do the same; (4) if he be not on the panel whether he has any wish to go on; and (5) whether he has any intention of undertaking any whole or part time appointment to treat insured persons under the Act.

The inquiry should be made after an interval, and in this way useful information would, he said, be obtained.

The rider was agreed to, with the following addendum, moved by the CHAIRMAN:

And also to draw the attention of the Council to a means of carrying out the motion by Mid-Norfolk by instructing Divisions to send up within three months a report of how the Act is working.

ORGANIZATION OF THE ASSOCIATION.

A series of suggestions designed to improve the organization of the Association, made on behalf of the Brighton Division, were referred to the Council for consideration, as was also the following resolution, moved by Dr. DOUGLAS on behalf of the Maidstone Division:

That the Council be requested to consider in what way, if any, it is possible to obtain more quickly than at present the decision of the Association in cases of urgency, and how far it would be necessary to alter the rules and by-laws in order to do so.

On the motion of Dr. DEARDEN, seconded by Dr. BICKERTON EDWARDS, it was resolved:

That the Council of the British Medical Association be requested to utilize the postal vote of the whole profession with a view to the adoption or otherwise of any line of policy suggested by the Representative Meeting.

INSURED PERSONS AND CONTRACTING OUT.

Dr. MUIR EVANS (East Norfolk, North Suffolk) moved, and it was agreed:

That it be referred specifically to the Council to consider the question of facilities for insured persons to make their own arrangements for medical benefits, and, if the Council think it advisable, to ask the British Medical Association to take legal action to test the question of contracting out.

TUBERCULOSIS TREATMENT.

Dr. BICKERTON EDWARDS (Swansea) moved, and it was carried:

That it be a specific reference to the Council to consider the question of the attitude of the profession towards tuberculosis treatment, in view of the conditions as altered by the meeting.

Other motions of which notice had been given were referred to the Council for consideration.

RESIGNATIONS.

The CHAIRMAN OF COUNCIL moved and Mr. LARKIN (Liverpool) seconded:

That though there has been only a slight increase of resignations of membership of the Association during the last three months, as compared with the corresponding period last year, this meeting desires that those members who have tendered their resignations on account of their attitude to the National Insurance Act be invited to withdraw their resignations.

This was agreed to.

RECORD OF WORK DONE ON THE PANELS.

It was proposed by the CHAIRMAN OF COUNCIL, seconded by Mr. LARKIN (Liverpool), and agreed:

That all men going on the panels be specially requested to keep very full records of attendances and amount of work done during the next three months, to enable the Association to make representations to the Commissioners with regard to alteration of remuneration.

CONFIRMATION OF MINUTES.

The minutes were read, emended, and confirmed.

VOTES OF THANKS.

A vote of thanks having been passed to the Chairman for the able manner in which he had conducted the proceedings,

Mr. VERRALL, in reply, said he was glad to have presided at that meeting for two reasons: first, because the feeling of having done one's duty was a luxury that could not be enjoyed every day, and secondly, because it enabled him to make a record, which he hoped would remain a record indefinitely, namely, that of acting as Chairman of three Representative Meetings in three successive months.

A vote of thanks to the London Medical Committee terminated the proceedings.

PROCEEDINGS OF COUNCIL.

IMMEDIATELY after the conclusion of the Special Representative Meeting, on January 18th, a meeting of the Council was held.

Present.

Dr. J. A. MACDONALD, LL.D., Taunton, Chairman of Council, in the Chair.

Dr. W. AINSLIE HOLLIS, Hove, President-elect.

Mr. T. JENNER VERRALL, Bath, Chairman of Representative Meetings.

| Dr. G. E. HASLIP, London | Mr. E. H. WILLOCK, Croydon |
| Mr. EVAN JONES, London | |

APOLOGIES.

Apologies for absence were read from the President, the Treasurer, Dr. John Adams, Inspector-General Bentham, R.N., Dr. John Gordon, Surgeon-General J. P. Greany, I.M.S., Dr. J. R. Hamilton, Dr. E. S. Reynolds, and Mr. D. J. Williams.

MINUTES OF SPECIAL REPRESENTATIVE MEETING.

The CHAIRMAN presented the minutes of the Special Representative Meeting of January 17th and 18th, and explained that it was necessary for the Council to consider the decisions in case it desired to exercise its powers of referendum. The minutes were then considered, and no objection being raised were, on the motion of the

CHAIRMAN, approved and referred to the State Sickness Insurance Committee.

The CHAIRMAN OF REPRESENTATIVE MEETINGS and the CHAIRMAN OF COUNCIL were authorized to refer any other minutes to the appropriate committees.

PLEDGES.

The question was raised whether the pledges should be returned to members who so desired. The Solicitor having expressed an opinion against adopting this course, the Council resolved that it was in the meantime inadvisable to return the pledges.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

LANCASTER AND CHESHIRE BRANCH:

MANCHESTER (CENTRAL) DIVISION.

A MEETING of the Division was held at the Onward Buildings, Deansgate, on January 16th, at 4.15 p.m. Dr. J. FERGUSON was in the chair, and the other members present were Drs. Boyd, Bride, Burgess, Chisholm, Coogan, Dahms, Rayner, Shaw, and Tylecote (Honorary Secretary).

Minutes.—The minutes of the last meeting were read, confirmed, and signed, as correct.

The HONORARY SECRETARY reported (a) apologies for absence from Drs. Bury and Helme, (b) the resignation of Dr. Arnold Jones, and (c) arising out of the minutes, that Dr. Taylor had resigned from his offices on the Joint Committee.

Instructions to Representative.—It was resolved to instruct the Acting Representative (Dr. Helme) as follows: To vote to give formal release to the signatories of the undertaking and pledge (unanimous). In the Appendix of Notices of Motion to Agenda of Special Representative Meeting to vote against motions 20, 42, 43; to vote for motions 6, 18, 19, 21, 23, 24, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, and to vote for 17, suggesting as a rider to this:

That each Division be called on to issue a report to the Central Offices as to their opinion of the working of the Act at the end of the first quarter.

MANCHESTER (SOUTH) DIVISION.

A GENERAL meeting of the Division was held at Holy Innocents' Schools, Fallowfield, on Tuesday, January 14th, at 3.30 p.m.; Dr. GOODFELLOW presided, and there were thirty-four members present. The minutes of the last two members (December 30th, 1912, and January 3rd) were read and confirmed.

Chairmanship.—A letter was read from Dr. Edlin resigning the position of Chairman of the Division. Dr. DAVIE proposed and Dr. HOPKINSON seconded that Dr. Goodfellow take the chair, and this was carried unanimously.

Central Insurance Defence Fund.—A communication from the head office urging men to guarantee to the Central Insurance Defence Fund, and to keep up an active campaign in relation to the Insurance Act, was read, whereupon Dr. STOCKS proposed and Dr. HEATHCOTE seconded:

That it be a recommendation from this Division to the Joint Committee to take immediate steps to draw up a scheme, for the Manchester insurance area, for the inauguration of a public propaganda, with a view to explaining the medical objections to the Act and Regulations, and to induce the insured to insist upon their rights under Section 15, subsection 3, of the National Insurance Act.

This motion, after several members had spoken on it, was carried with one dissentient. The following motion, proposed by Dr. SAWERS CONTRA and seconded by Dr. GODSON, was carried *nemine contradicente*:

That the Joint Committee be requested to take such steps as may be necessary to call into existence some body which may legally represent, and act for, all medical men whose names are on the list for the service in connexion with the National Insurance Act.

Instructions to the Representative.—The meeting then discussed the question of instructing the Representative how to vote at the Representative Meeting on January 17th, on the desirability of the Representative Body granting official release to members from the British Medical Association pledge and undertaking. On this subject, Dr. WILLIAMS proposed and Dr. BROOMHEAD seconded the following motion:

That the Representative be given a free hand to vote on the question according to his own discretion.

Whereupon Dr. EDLIN proposed and Dr. GREGORY seconded the following amendment:

That it is desirable to release members of the profession from their undertaking and pledge in connexion with the National Insurance Act, and that it be an instruction to the Representative to vote accordingly in the Representative Meeting.

This amendment was carried *nemine contradicente*, and also as the substantive motion. An amendment to this motion was proposed by Dr. SAWERS SCOTT, and seconded by Dr. SARJANT:

That, when in the Representative Meeting the question of releasing members from their pledge and undertaking is proposed, our Representative propose that the next business be proceeded with.

This was lost. On the motion by Dr. WILLIAMS, seconded by Dr. SALTER, it was resolved *nemine contradicente*:

That the Representative be given a free hand to vote at the Representative Meeting, according to his own discretion, on questions arising during consideration of the situation created by the attitude of the Government towards the decisions of the Representative Body.

Dr. GREGORY proposed, and Dr. GODSON seconded:

That it be an instruction to the Representative to propose at the Representative Meeting the following resolution, provided the Representative Body decides to release members from their pledge and undertaking, namely:

That the Council of the British Medical Association be asked to press upon the Commissioners the desirability of reopening the panels immediately, so that all practitioners, especially those who have hitherto held that they could not honourably break their pledge and undertaking, may have an opportunity of entering their names thereon.

This was carried *nemine contradicente*.

Resolution of Protest against Coercion.—On the motion of Dr. SALTER, seconded by Dr. HEATHCOTE, it was resolved:

That this meeting record its sense of the injury done to the medical profession and the injustice to its members through their being forced, by a threat of ruin, to undertake service under the Insurance Act—a service whose conditions and terms are incompatible with the honour and welfare of the profession.

Organization of the Association.—The Secretary was instructed to forward this to the press. Dr. RHODES, who could not attend the meeting, sent the following resolution, which was seconded by Dr. STEINTHAL:

That this meeting, recognizing that the general practitioner is alone competent and able to deal with all legislative regulations relative to general practice—and yet that the general practitioner is too overworked and underpaid to have been adequately represented in the whole late transactions of the British Medical Association in connexion with the Insurance Act and all committees having reference thereto—urges on the British Medical Association and the Representative Meeting the necessity of providing for paid secretaries of Divisions, and such pecuniary means that general practitioners in all future legislation and regulations having reference to themselves, shall have the greatest, and not the least, influence in the councils of the nation with the British Medical Association.

The meeting wishes also to record its belief that in this way alone can mistakes be avoided in the future and medical efficiency and the public health, which depends on general practitioners, be secured.

The resolution was not carried.

METROPOLITAN COUNTIES BRANCH:

GREENWICH AND DEPTFORD DIVISION.

A SPECIALLY requisitioned meeting of this Division took place on January 20th. Dr. J. P. PURVIS was in the chair. The agenda was as follows: To obtain a report of all proceedings connected with the Association since the last general meeting; to discuss the action of the Executive Committee during the present crisis; any other business, including correspondence. A report presented by the Executive Committee was read and adopted.

A vote of censure on Dr. W. H. Payne, the Honorary Secretary, for joining the panels before being released from his pledge and undertaking, was proposed and seconded, but an amendment postponing further consideration of the matter to the next meeting of the Division so that it might appear on the agenda was accepted by the proposer and seconder of the motion, and carried.

A proposal to circulate a list of those who had given guarantees to the Insurance Defence Fund, or increased their guarantees, was negatived.

HARROW DIVISION.

A MEETING, to which every practitioner within the area of the Division was invited, was held in the Gayton Rooms, Harrow, on January 16th. Dr. A. H. WILLIAMS took the chair, and there were thirty-two members and five non-members present.

Minutes.—The minutes of last meeting, held on December 30th, 1912, having been printed in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL of January 11th, were taken as read, and confirmed.

Accounts.—The HONORARY TREASURER stated that, as agreed at the last meeting of the Executive Committee, the accounts had been audited by Dr. Wansborough Jones, who found them correct. The accounts showed that a deficit of £2 16s. 5d., brought up on December 31st, 1911, had been wiped out, and after the expenses of the Division had been met there remained a credit balance of £2 9s. 11d. The expenses of the Provisional Medical Committee amounted to £5 5s. 10d. The report was received.

Conference with Secretaries of Friendly Societies.—The HONORARY SECRETARY reported that a conference had been summoned for Thursday, January 23rd, between secretaries of friendly societies and a subcommittee of the Division, in order to discuss a scheme for the treatment of uninsured persons and juveniles.

Letter from Chairman of Middlesex Insurance Committee.—The HONORARY SECRETARY reported that he had written to the chairman of the Middlesex Insurance Committee, protesting against the inclusion of the names on the local panel lists of certain doctors who had not signified their willingness to serve, and read a letter of explanation from the chairman.

Question of which Dr. Jones had given notice to ask Dr. Hildesheim.—Dr. JONES stated that he had given notice to ask this question in view of certain statements that had been made with regard to Dr. Hildesheim. Since these statements had been made, they had been entirely withdrawn, and the Honorary Secretary had received two letters saying that the statements were incorrect. Dr. JONES said, therefore, that he now had no question to ask.

Future Action.—The following motion was proposed from the chair in order to defuse future action by medical men:

That medical men be asked to continue attendance on aged members of friendly societies precluded from becoming insured persons on the old rates of payment.

The motion on being put to the meeting was lost by a unanimous vote.

The London Panels.—Dr. WILLIAMS introduced Dr. Gordon Lane (London Medical Committee), who made a spirited speech on the right of insured persons to make their own arrangements for medical treatment, and emphasized the inadequacy of the London panels. He urged the medical men present to support their London colleagues, either by resigning from the panels forthwith, or by refusing to reapply for service on the panels after the provisional three months. After discussion as to whether the members of the Division should resign or refuse to reapply for service on the panels, it was proposed by Dr. JONES, seconded by Dr. HARLEY, and carried unanimously:

That, contingent on adequate support, especially from the other Divisions in Middlesex, the members of the Harrow Division would refuse to apply or reapply for service on the panels after April, 1913.

Instruction to Representative.—Dr. MUSPRATT proposed, and Mr. BRADY seconded:

That the Representative be instructed to vote in favour of the Association absolving medical practitioners from the pledge they had given.

Whereupon the following amendment was proposed by Dr. BAXTON, and seconded by Dr. LOCK:

That, in view of the fact that the majority of practitioners in this Division had broken their pledge, the Representative be instructed not to vote on this question, which should be decided by the vote of Representatives representing practitioners who had adhered to their pledge.

The amendment was put to the meeting, when only the proposer and seconder voted in favour, and it was therefore lost. The original resolution was then put, and was carried, with two dissentients.

MARYLEBONE DIVISION.

A GENERAL MEETING was held in the rooms of the Medical Society of London, Chandos Street, W., on January 16th. Mr. ATWOOD THORNE, Chairman of the Division, was in the chair, and thirty-nine members were present.

Minutes.—The minutes of the preceding meeting were confirmed.

Letters.—(1) From the Medical Secretary, notifying that the Central Council had approved of the rules passed on April 25th, 1912, with the exception of Rule 7 (b). (2) Notification to hospitals of the St. Bartholomew's scheme, as passed by the Representative Meeting on December 21st: No action was taken, as the hospitals in the area had made arrangements on these lines. (3) Letter re pledge from Dr. Lanrison Shaw and others.

Instructions to Representatives at the Special Representative Meeting on January 17th, 1913.—Dr. DAVID ROXBURGH moved and Dr. HOWARD WISE seconded:

That, while expressing the deepest sympathy with and declining in any way to blame those members of the profession who, although they had expressed to their professional neighbours their reluctance to break a promise, felt themselves compelled by economic pressure and the defection of their fellows to go on the panels, the Representative Meeting expresses the opinion that until agreements to treat insured persons under the Act are satisfactory to the medical profession and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding on those who have subscribed to them.

Dr. KIRSCH moved and Dr. DYKE ACLAND seconded, "That all words up to the word 'the' in the sixth line be omitted." Drs. HAWTHORNE, POYNTON, MESSRS. BISHOP HARMAN, McADAM ECCLES, DES. NEWTON PITT, MONTGOMERY-SMITH, WIRGMANN, PERCY SPURGIN, GORDON LANE, PEACOCKE, and Mr. H. J. PATERSON took part in the discussion. The amendment was carried *nemine contradicente*. Thereupon Dr. HAWTHORNE moved and Mr. BISHOP HARMAN seconded:

That the Representatives of the Division in the forthcoming Representative Meeting be instructed as follows:

(a) In the event of any discussion bearing on the application of the pledge to existing conditions, to move: That the Representative Meeting decline to record any finding on this subject until the opinion of members of the Association have been obtained by means of a referendum or postal vote.

(b) To propose that the Council shall, at a date not later than March 1st, obtain, by means of voting papers, the opinions of members of the Association on (1) the claims of the pledge in existing circumstances; (2) the policy of the Association in reference to the Insurance Act as defined by the Representative Meeting of December, 1912; that the results of this vote be communicated to a specially convened Representative Meeting.

(c) To propose that the Council be instructed to invite from each member of the Association who has declined to take service under the Insurance Act a private and confidential statement of any losses which such member believes himself to have suffered as a result of his adherence to the declared policy of the Association.

Mr. DREW discussed the amendment. The amendment was lost. The amended motion was then carried *nemine contradicente* as follows:

That the Representatives be instructed to express the opinion that, until agreements to treat insured persons under the Act are satisfactory to the medical profession and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding on those who have subscribed to them.

The following motion by Mr. H. J. PATERSON, seconded by Dr. GORDON LANE, was then carried:

That the Representatives be instructed to urge that the future policy of the Association be concentrated on securing free choice of doctor and freedom from lay control.

Dr. DAVID ROXBURGH moved and Mr. BISHOP HARMAN seconded:

That the State Sickness Insurance Committee be discharged, and that a new Committee be elected by the Representative Meeting, and given the powers of plenipotentiaries to

deal with all matters arising in connexion with the National Insurance Act until the Annual Representative Meeting.

This motion was lost. Dr. NEWTON PITT moved and Mr. WARREN LOW seconded:

That the meeting approves of local arrangements being accepted when the Local Insurance Committee of the profession of the district can agree on terms, subject to approval by the Council of the Association.

Dr. MONTGOMERY-SMITH discussed the motion, which was carried.

Election of Deputy Representative.—Mr. WARREN LOW proposed and Dr. DAVID ROXBURGH seconded that Dr. Montgomery-Smith be elected as Deputy for Mr. Maynard Smith, which was carried. The appointment of any other deputies was left in the hands of the Chairman.

The meeting then adjourned.

OLD LAMBETH DIVISION.

A MEETING of the Old Lambeth Division was held at the Surrey Masonic Hall on January 14th at 4 p.m. Dr. CAPES was in the chair and forty members were present.

Minutes.—The minutes of the previous meeting were read and confirmed.

Report of State Sickness Insurance Committee.—The report of the State Sickness Insurance Committee was read.

Special Representative Meeting.—Dr. PEERS then presented his report of the Representative Meeting in December. It was adopted unanimously, and a hearty vote of thanks passed to the Representatives for their work.

The Undertaking and Pledge.—The following resolution was then carried by 31 votes to 7:

That, while expressing the deepest sympathy with and declining in any way to blame those members of the profession who, although they had expressed to their professional neighbours their reluctance to break a promise, felt themselves compelled by economic pressure and the defection of their fellows to go on the panels, the Representative Meeting expresses the opinion that until the agreements to treat insured persons under the Act are satisfactory to the medical profession and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding upon those who have subscribed to them.

Vote of Thanks.—The meeting concluded with a hearty vote of thanks to Mr. E. B. TURNER, who attended to address the meeting, and to the CHAIRMAN.

WANDSWORTH AND WIMBLEDON DIVISIONS.

A MEETING of the profession summoned by these Divisions was held at Battersea Town Hall on Thursday, January 16th.

Instructions to Representatives.

1. Dr. BIGGS proposed, and Dr. MARTIN seconded, the following:

That the Representative Meeting expresses the opinion that until agreements to treat insured persons under the Act are satisfactory to the medical profession, and in accordance with the declared policy of the Association, the undertaking and pledge must be considered as still binding.

The motion on this voting resulted as follows:

| | | |
|---------------------------------------|--------|-----------|
| Members of the B.M.A. | | For 56 |
| " " " | | Against 9 |
| All members of the profession present | | For 69 |
| " " " | | Against 9 |

2. Dr. STAMM proposed, and Dr. BARTON seconded, the following motion, which was carried unanimously:

That the Council be instructed to investigate the manner in which business has been carried on by the Central Office.

3. Dr. STAMM proposed, and Dr. ORR seconded:

That our Representatives be instructed to inform the Representative Meeting that in our opinion any resolution absolving members from their pledges will *ipso facto* also absolve members from fulfilling their guarantees.

This was carried with two dissentients.

WILLESDEN DIVISION.

A SPECIAL meeting of the Division, to which non-members were invited, was held at St. Andrew's Schools, Willesden Green, on January 13th, at 9 p.m., to instruct Representative, etc. Dr. CORAN JAMES took the chair, and forty-seven members were present.

Minutes.—The minutes of the last meeting were read and confirmed.

Letter from the Chairman of the Middlesex Insurance Committee.—The HONORARY SECRETARY read a letter from Mr. Glyn Jones, Chairman of the Middlesex Insurance Committee, stating that he was unable to give a definite reply to the question whether a practitioner on the panel could be allowed absolutely to limit his list of those patients whom he accepted, and would not be compelled to take also some of the "residue." Mr. Glyn Jones had already verbally stated that this was so.

Instruction to Representative.—Dr. JOY proposed, and Dr. ARMITAGE seconded:

That our Representative be instructed to vote in favour of any resolution to the effect that the pledge be solemnly confirmed.

This was carried by 32 votes to 2.

Dr. CRONE proposed, and Dr. SNOWMAN seconded, the following resolution, which was carried *nemine contradicente*:

That the special circumstances under which the members of the Willesden Division signed on to the panel be explained to the British Medical Association.

Rescission of Minute of Representative Meeting.—Dr. SODEN proposed and Dr. MACEVOY seconded:

That Minute 184 of the Annual Representative Meeting of 1912 be rescinded so as to allow practitioners to accept seats on Insurance Committees.

This was carried unanimously. It was agreed that these instructions should be sent for inclusion in the agenda of the Representative Meeting.

Withdrawal from Panel.—The position of those who had withdrawn their names from the panel was discussed, and Dr. SKENE proposed and Dr. STOCKER seconded, and it was resolved *nemine contradicente*:

That in the opinion of this meeting the men "starred" on the panel list are not on the panel.

SOUTH MIDLAND BRANCH:

NORTHAMPTONSHIRE DIVISION.

A MEETING was held in the Board Room of the Northampton General Hospital on January 16th. Dr. BAXTER was in the chair, and nineteen members were present.

Apology for Non-attendance.—An apology for non-attendance was received from Dr. Nourse.

Minutes.—The minutes of the preceding meeting were read and confirmed.

Special Representative Meeting.—A discussion then took place on the instructions to the Representative for the forthcoming Representative Meeting. Dr. LINNELL proposed and Dr. COOKE seconded that Dr. Dryland should support any resolution having the effect of releasing members from their pledges. This was carried unanimously. Dr. LINNELL proposed and Dr. OLDACRES seconded that, in the event of being defeated on the main question, a Division should have power to release members from their pledges. This was carried unanimously. Dr. LINNELL proposed, seconded by Dr. DARLEY, as an instruction to Representative:

That all subsequent communications with the Government or other body in connexion with the Insurance Act be entrusted to the Council or a committee with plenary powers.

This was carried unanimously. Dr. DRYLAND proposed and Dr. LINNELL seconded:

That if the Divisions are given autonomy to release members from their pledges, the Northamptonshire members shall be automatically immediately released.

This was carried unanimously.

Clerical Work under the Insurance Act.—A discussion then ensued on the manifold forms to be filled up under the Insurance Act, and the following resolution, proposed by Dr. GREENFIELD and seconded by Dr. CHURCHOUSE, was carried:

That in the opinion of those medical men who have gone on the panel the amount of secretarial work imposed on the profession is too much and the forms issued are altogether unsuitable.

The following rider, proposed by Dr. COOKE and seconded by Dr. ROSS, was lost:

That this resolution be not forwarded for one month.

Nomination to Insurance Committee and Committee of Complaints.—Dr. DRYLAND read a communication from the Clerk to the County Insurance Committee asking for representatives to be nominated to the Insurance Committee and the Committee of Complaints, and Drs. LINNELL, DARLEY, BAXTER, DRYLAND, and GREENFIELD were selected.

Club Fees.—Dr. CHURCHOUSE reported that terms had been arranged with the Long Buckby clubs for the present, and that they had promised later to pay the same fees as were given in other parts of the county.

SOUTH-WESTERN BRANCH:

EXETER DIVISION.

A MEETING of the Exeter Division was held at the Exeter Hospital on January 15th. Mr. E. J. DOMVILLE occupied the chair, and there were forty members present.

Minutes.—The minutes of the previous meeting were confirmed.

Appointment of Deputy Representative.—Dr. DAVY proposed, and Dr. SHIRLEY PERKINS seconded:

That Dr. Gordon be appointed Representative as substitute for Dr. A. W. F. SAYRES, who would be unable to act at the Representative Meeting.

This was carried unanimously.

Release from Pledge.—Mr. SHIRLEY PERKINS proposed, and Dr. O. CLAYTON JONES seconded, the following resolution, which was carried *nemine contradicente*:

That all members of the profession be released from the pledge to the extent of serving in their own districts, parishes, and towns, but that any acceptance of service outside be regarded as a breach of the pledge, and unprofessional.

Special Representative Meeting.—Dr. DAVY proposed, and Dr. AYSNFORD seconded:

That the Representatives of the Division be allowed a free hand to vote as they considered best in the interests of the profession after hearing the opinions expressed at the Representative Meeting.

This was carried by 27 to 3. Dr. HUDSON proposed, and Dr. DESPREZ seconded, the following rider, which was carried by 26 to 4:

But is of opinion that the pledge should be adhered to.

Insurance Guaranter Fund.—The following resolutions were put by the CHAIRMAN, and passed unanimously:

That the Honorary Secretary be authorized to make a call of 20 per cent. on all guarantors to the Local Divisional Defence Fund by instruction of and for purposes of the States Sickness Insurance Committee.

That the Honorary Secretary be authorized to pay the accounts of the Exeter Local Medical Provisional Committee from the Local Divisional Defence Fund.

YORKSHIRE BRANCH:

HALIFAX DIVISION.

A MEETING of this Division was held at the Mikado Café, Halifax, on Monday, January 13th, at 8.30 p.m. Dr. DRURY, the Vice-Chairman, took the chair in the unavoidable absence of the Chairman, Dr. Crossley Wright; twenty-seven other members were present.

Notice of Resignation of Membership.—The SECRETARY announced that four members had notified their intention of resigning the membership of the Association. Dr. PRIESTLEY LEECH proposed and Dr. HUGHES seconded the following resolution, which was carried unanimously:

That the four members who are resigning be approached with a view to asking them to reconsider their decisions.

The SECRETARY announced that he had written to all of the four members and it was arranged that they should be approached personally.

Communications from ex-Members of Council.—Communications were read from the six medical men who recently resigned their seats on the Council of the British Medical Association and from the London Medical Committee.

Proposed Pension, Sickness, and Disablement Fund.—The following resolution was then proposed by Dr. PRIESTLEY LEECH and seconded by Dr. GILL:

That the British Medical Association should proceed forthwith to consider the desirability of forming itself into a

trades union and of undertaking the establishment of a sickness disablement and pension fund.

The expression "trades union" being objected to by certain members, on the suggestion of Dr. BRANSON, it was agreed to drop this out of the resolution. The resolution so altered was then passed *nemine contradicente* as follows:

That the British Medical Association should proceed forthwith to consider the desirability of adding to its functions the establishment and administration of a pension, sickness, and disablement fund.

Note of Condolence.—It was agreed, on the motion of the CHAIRMAN, that a vote of condolence be sent to Mrs. West Symes on the death of Dr. West Symes, who had been a member of the Division.

National Insurance Act.—On the motion of Dr. FRY, seconded by Dr. WELLBURN, the following resolution was carried *nemine contradicente*:

This Division regrets that the majority of its members, along with a majority of the profession generally, were obliged to join the panels through economic pressure and thereby to break the pledge which they had previously signed. It considers that the undertaking and pledge cannot be considered any longer binding. At the same time it is of the opinion that the defeat of the profession is chiefly due to the traitorous action of those members of the Council who, while holding office on the Council, took part in the formation of a rival association. This Division urges all members of the British Medical Association to decline to associate themselves in any way with the National Insurance Practitioners' Association.

Notifications to Patients.—A discussion then took place as to the kind of information which can be sent to patients without infringing the regulations against canvassing.

Uninsured Persons.—The question of clubs for uninsured women and juveniles then arose. Dr. FRY proposed, and Dr. WOODYATT seconded:

That no medical practitioner take any club outside the Insurance Act.

Dr. FRY remarked that the Act created a huge club, and it was desirable to keep as much private practice as possible. It was finally decided to refer the whole question of making arrangements for the treatment of uninsured persons to the Local Medical Committee.

EAST ANGLIAN BRANCH:

NORTH-WEST ESSEX DIVISION.

At the meeting of this Division held at Bishop's Stortford on January 13th, Dr. BARTLETT in the chair, nine members and one visitor were present.

National Insurance Act.—It was unanimously resolved that the members of the North-West Essex Division of the British Medical Association wish to place it on record that they have been forced by irresistible pressure and against their will to go on the panel. They hereby reiterate their convictions that the conditions of service are dangerous to the national health and derogatory to the honour of the profession.

Division of Branch.—By a vote of 9 to 0 it was decided that it was desirable that the East Anglian Branch should be split into three county Branches.

County Medical Committee.—A letter was read from Dr. J. P. Atkinson, jun., resigning his post on the County Medical Committee, and it was unanimously decided to ask him to reconsider his decision, and thank him for his valued past services.

Association Notices.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, January 29th, in the Council Room at 429, Strand, London, W.C.

By Order,
GUY ELLISTON,

Financial Secretary and Business Manager.

January 9th, 1913.

ELECTION OF COUNCIL, 1913-14.

Hong Kong and China Branch, Malaya Branch.

NOTICE is hereby given that nominations for a candidate for election as a Member of Council by the Hong Kong and China and Malaya grouped Branches for a period not

exceeding three years as prescribed by By-law 49 (2) must be forwarded so as to reach me not later than Monday, March 10th, 1913.

Nominations must be made either by any Division included in the group, or by any three Members of a Branch included in the group, in the form prescribed below.

Election will be by voting papers, and these will contain the names of all duly nominated candidates, and will be issued by me.

By Order of the Council,

OSWALD MARRIOTT,

Honorary Secretary, Hong Kong and China Branch, and Returning Officer.

Alexander Buildings, Hong Kong.
January 22nd, 1913.

Baluchistan, Bombay, Punjab, Burma, South Indian and Madras, Colombo Ceylon, Assam grouped Branches.

Notice is hereby given that nominations for a candidate for the election as a Member of Council by the Baluchistan, Bombay, Punjab, Burma, South Indian and Madras, Colombo Ceylon, and Assam grouped Branches for a period not exceeding three years, as prescribed by By-law 49 (2), must be forwarded so as to reach me not later than Saturday, March 8th, 1913.

Nominations must be made either by any Division included in the group, or by any three Members of a Branch included in the group, in the form prescribed below.

Election will be by voting papers, and these will contain the names of all duly nominated candidates, and will be issued by me.

By Order of the Council,

D. R. BARDI, F.R.C.S.I.,

Honorary Secretary, Bombay Branch, and Returning Officer.

Albert Building, Fort Bombay,
January 23rd, 1913.

FORM OF NOMINATION.

BY NOT LESS THAN THREE MEMBERS OF A BRANCH.

Branches included in Group—

BRANCH AND DIVISION MEETINGS TO BE HELD.

LANCASHIRE AND CHESHIRE BRANCH: LIVERPOOL DIVISION.—The annual meeting of the Division will be held on January 31st. Business: (a) To receive annual report of the Executive Committee. (b) To elect officers. (c) To elect the Representatives of the Division on the Branch Council to take office after the next annual meeting of the Branch. (d) To elect the ordinary members of the Executive Committee. (e) To make new rules, or alter or repeal existing rules. (f) To elect Representatives at the Representative Meeting. (g) To transact any business that may be transacted at an ordinary meeting.—FRANCIS W. BAILEY, Honorary Secretary, 51A, Rodney Street, Liverpool.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held conjointly with the Finsbury Medical Society at the Manchester Hotel, Aldersgate Street, E.C., on Tuesday, February 11th, at 9.30 p.m., when Dr. Batty Shaw will give an address on Tuberculous.—A. G. SOUTHCOMBE, Honorary Secretary.

SOUTH-EASTERN BRANCH: ISLE OF THANET BRANCH.—The next meeting of the Division will be held at the Royal Seabathing Hospital, Margate, on January 28th, at 3.45 p.m., Dr. Nichol in the chair. Business: (1) Correspondence. (2) To consider the results of the recent Representative Meeting. (3) To consider certain alterations in the Rules of the Public Medical Service. (4) Any other business. All medical practitioners in Thanet are invited to this meeting.—HUGH M. RAVEN, Honorary Divisional Secretary, Bartfield House, Broadstairs.

National Insurance.

REPORTS OF LOCAL ACTION.

LONDON.

LONDON MEDICAL COMMITTEE.

At the close of the Representative Meeting the Committee decided to continue its campaign, notwithstanding the release from the pledge. Despite that release, only about 70 or 80 extra men have joined the panel. The Committee decided at once to take a referendum from the 5,800 London practitioners. Up to date 2,000 replies have, we are informed, been received, and these show an overwhelming majority against service under the Act, many of those who are on the panels declaring their willingness to take their names off at the end of their three months' contract. The great majority of replies are from general practitioners who, had the conditions been reasonable, would have been on the panels.

Panel Doctor Overburdened by Clerical Work.

The following is quoted from the *Times* of January 21st:

Evidence as to the great amount of clerical work thrown upon doctors on the insurance panels was given at the inquest held at Lambeth yesterday by Mr. Ingleby Oddie on the body of Frederick Richard Townsend, aged 53, a builder's labourer, of Hotspur Street, Kennington, who died on Friday.

The widow, Louisa Townsend, said that on Monday, January 13th, her husband complained of abdominal pains. On the following day he felt ill, and could not go to work. He was insured under the National Insurance Act, and went to the nearest medical man available under the Act, Dr. Hickson. The doctor did not examine him, but gave him a powder, which he took but could not retain. On Wednesday morning he again saw Dr. Hickson, who gave him a prescription to be made up by a chemist. She went with her husband to see his foreman in Tottenham Court Road. He vomited on the way, but he did not say he felt worse. The next day he was able to go and he shaved, and she took him for a walk. He never went out again, however, and on Thursday night he became very restless, so she sat up with him.

The Coroner asked the witness why she did not send for the doctor on Thursday night. She replied that she did not know where he lived, though she knew it was at Battersea, and she thought he might not be in. His surgery was in Lambeth Walk, but he was not there at night.

Supposing your husband was very ill, as he in fact was, and you had wanted Dr. Hicksen, you would not have known where to find him?—No, sir, because he lives at Battersea.

That is a long way off?—Yes.

The Coroner said he was not blaming the witness at all; he was thinking of the difficulty caused through the witness not knowing where the doctor could be found at night. "You had received no instruction from anybody," he added, "and the doctor did not say, 'If your husband is worse I live at so-and-so'?"—No, sir.

He is the doctor on the panel supplied under the Insurance Act?—Yes, Sir.

The witness added that her husband died very peacefully at 7 o'clock on Friday morning. They had been married thirty-two years. When they visited the doctor for the second time he said nothing about seeing her husband again; he merely gave him a prescription. She did not go into the surgery with her husband. She did not know that Dr. Hickson could be telephoned for.

EVIDENCE OF DR. HICKSON.

Dr. George B. Hickson stated that he was a physician and surgeon, and had a surgery in Lambeth Walk and a private practice at Battersea. He was one of the panel doctors under the National Insurance Act. Mrs. Townsend did not go into his surgery, or she would have been given his address at Battersea. She was a perfect stranger to him.

The Coroner: Are you given a district?—Anybody insured can call upon me. Some people come from Surbiton. There is no rule on the subject.

Are you having a busy time?—Perfectly dreadful. I have been signing cards until midnight; there has been a

regular rush, and my private patients have been driven away. I have no time to attend to them.

Dr. Hickson added that on Wednesday he was engaged for six hours at a stretch signing cards, without doing anything else, when he might have been attending to his patients—doing clerical work instead of attending to his practice, and it was the same all the week. He was at his Lambeth Walk surgery at certain hours in the morning and the evening. There was a great crowd of insured people waiting for their cards to be signed on Tuesday, and Townsend went in and asked him to put his name on his list. He asked the man about himself and signed his card. Townsend said he felt sick, and asked for some medicine. He replied that Townsend was a little premature, but gave him a powder, and thought nothing more of it. The next morning, when Townsend called, he said he was still in pain, but he put the witness off thinking that anything serious was the matter because he waited for an hour and a half. There was a crowd of something like 200 or 300 persons waiting.

The Coroner: Really! It must have been like going into a theatre?—Yes.

And you had no time to examine the patients?—No; it was as much as I could do to sign the papers.

A CERTIFICATE WITHDRAWN.

The witness added that the people were not asking for treatment—they were simply asking to be put on his list. Townsend complained of pain, but he did not for a moment suspect anything of serious nature. He told the man to go home and take his medicine, adding, "If you do not improve let me know."

You had so much to do that you had no time to examine him?—No.

You are overworked?—No doubt. I did not think it was of importance, and I let him go away.

The deceased did not know how to get hold of you at night time?—My caretaker would have had to have gone to the public telephone to call me up at Battersea, but I am going to have the telephone installed in my surgery at Lambeth Walk.

You must inform these people.—It is up all over my place, but unfortunately these people did not see it.

Is it on their cards?—No.

Then it ought to be.—I have nothing to do with the printing of the cards.

The witness further stated that during the time he saw Townsend he did not examine his abdomen. Had he had time he would have done so. He made a "half-examination" for appendicitis, but he had no idea the man had a strangulated hernia.

The Coroner: What did you think was the matter?—Dyspepsia, or something of that kind.

Did you give a certificate of death?—Yes; Mrs. Townsend came to me, and I was astonished to hear of her husband's death, but she was anxious that there should not be a *post-mortem* examination, and I said I would give a certificate for enteritis, and did so. Afterwards I came to the conclusion that I was not justified, and sent for the certificate, which Mrs. Townsend brought back.

I hope you won't do that again, Dr. Hickson. You know, enteritis might be due to poison?—Yes. I thought better of it.

Your explanation for not examining this man, who was suffering from a grave and fatal disease, is that you had not time to do it?—I had not time to do it.

A CASE FOR AN OPERATION.

Dr. Robert S. Trevor, pathologist at St. George's Hospital, who made an autopsy, stated that he found a femoral hernia, which had become strangulated and was beginning to be gangrenous. Death was due to exhaustion.

What is the treatment?—Such a condition demands an immediate operation.

If that is done, what are the prospects of recovery?—Very good.

What do you think of this case? First of all, if this man had been examined properly. Assuming that he had gone to a hospital, and complained of abdominal pain and vomiting, what would have been done?—He would have been stripped and examined at once, and an urgent operation would have been done.

They would have seen the condition at once?—Yes, any one would have diagnosed the case on examination.

Would his life have been saved?—I think so, without doubt.

So if this man had gone to the hospital he would have been alive now?—Probably.

As it is, he went to his National Insurance doctor, and he is now dead?—Yes.

Do you think doctors ought always to examine a patient when there is a history of abdominal pain and sickness?—Personally I think certainly, if it is possible. I think every case of abdominal pain should be most carefully examined, and in this case the mischief could have been seen. The deceased was a healthy man, except for a slight thickening of the aortic and mitral valves, and there would have been no hesitation in placing him under an anaesthetic and operating upon him. No doubt that would have been done successfully.

COMMENTS OF THE CORONER.

The Coroner, in summing up, said this was a very sad case of a man of 53, who was at work a week ago. He was suddenly taken with abdominal pains and sickness, and he went to a doctor, who was overwhelmed with work and who had to contend with a long queue of insured people waiting to get their papers signed. The doctor did not think there was anything seriously the matter with the man, and gave him a simple remedy and sent him away without examination. Next morning, apparently, the patient was in a most serious condition, and one which was bound to kill him unless he had an operation. He went to see the doctor, who was again overwhelmed with patients, and had not time to examine him as he should have done. Although the man told him that he had a pain in the abdomen and was suffering from sickness, the doctor thought it was a case of indigestion or colic, and gave him a prescription, which the patient had made up. He never saw the patient again. The man went home, and on the Thursday he got so much worse and his symptoms became so grave that he must have been dying that night. His wife said she did not know where to go for Dr. Hickson, whose lock-up surgery was closed at night, and she naturally thought it was no use going there. The result was that nobody saw her husband till after death, when she called in the nearest doctor. All this time the man had been suffering from a complaint which could have been relieved by an operation which was almost invariably successful, and here was a case of a man whose life ought to have been saved, but owing to the unfortunate circumstance that the doctor did not examine him he did not diagnose what he was suffering from. The doctor had told them that he did not have time or he would have made a thorough examination, and this poor man's life had unfortunately been lost. If Townsend had gone to the hospital with his grave symptoms the doctors, who were always on the alert, would have recognized his condition and would have operated upon him. At St. Thomas's no doubt he would have been brought back to practically normal health, and his life would have been saved. It had been lost, however, and it was a very regrettable state of things. He sincerely hoped it would not occur again that a doctor representing the Government would be placed in such a position that he had no time to examine a case which might be a grave and fatal one. He hoped he should not have any more of those cases. It was a very painful thing to hold an inquest on a man whose life ought to have been saved. He said that deliberately.

The jury, after deliberating in private, returned a verdict of "Death from natural causes," and added a rider that more care should be exercised in future in the matter of examining insured persons by doctors under the National Insurance Act. They excused Dr. Hickson in this case "owing to the scandalous amount of work that was imposed upon him under the Act."

PADDINGTON.

The public meeting held by the Local Provisional Medical Committee for Paddington was well attended in spite of very inclement weather. The chair was taken by the Ex-Mayor (Alderman Perring), who was supported by the Mayor and by several aldermen.

The CHAIRMAN stated that the meeting had been called to give insured persons an opportunity of expressing their opinion with regard to the action of the Government as to the free choice of doctor. It was of vital importance that patients should not be obliged to accept the services of a doctor merely because his name was on the panel.

Dr. HENRY STURGE, a councillor for the borough, explained the reasons why he and other medical men objected to take service under the Act; he disclaimed any political motive, and said that he was known to many of

those present as a Liberal worker. The medical profession had shown itself willing to meet Mr. Lloyd George on several important points, including the general rate of remuneration, but the Chancellor of the Exchequer had refused to adjust relatively small and reasonable requirements.

Mr. HERBERT TANNER, who followed, appealed for the support of those of the audience who might be trade unionists. According to the Chancellor of the Exchequer any doctor would do for the insured, and it was evident that under existing conditions insured persons would not get the willing service and sympathy to be obtained from their own family doctor.

Dr. HOLMES also spoke, and the following resolution was then moved by Mr. E. WRIGHT, an insured member of the audience:

That this meeting condemns the principle of depriving the insured people of the country of the advantage of retaining the service of their own doctor, and considers it a gross interference with the liberty of the subject.

The resolution was duly seconded and strongly supported by Alderman R. F. WHUR, Dr. GREEN, and Dr. WRIGHT. When put by the MAYOR to the meeting it was carried with six or seven dissentients.

HAMPSTEAD.

PROVISIONAL MEDICAL COMMITTEE.

A MEETING of the Hampstead Provisional Medical Committee was held on Saturday, January 18th, at 8.30 p.m., at 41, Belsize Park. Dr. FORD ANDERSON was in the chair, and fourteen members were present.

The minutes of the last meeting as published in the JOURNAL were confirmed.

Special Representative Meeting.

The HONORARY SECRETARY gave an account of the proceedings of the Representative Body and of the action taken by the London Medical Committee in consequence.

The committee decided to await the result of the inquiries to be made by the London Medical Committee before taking any action.

Income Limit.

It was moved by Dr. PRITCHARD and seconded by Mr. PEYTON BAYL:

That this committee approves the Public Medical Service scheme of the London Medical Committee as modified at the previous meeting, January 9th, and that the income limit shall be £104 per annum.

Thereupon Dr. OPPENHEIMER moved and Dr. MACFADDEN seconded an amendment:

That the words "£104 per annum" be left out, and that the words "fixed later" be substituted.

This was carried by 6 votes to 4.

Being put as a substantive motion, it was carried *unanimé contradictente*.

DEPTFORD.

THE INSURANCE ACT.

At a meeting of the Deptford Medical Committee the following resolution was unanimously passed:

That this meeting of the Deptford Medical Committee, after considering the resolutions passed by the Representative Body of the British Medical Association on January 18th, 1913, trusts those practitioners who have not accepted the National Insurance Act will reconsider their position, and place their names on the panels in order to restore the unity of the profession and to consolidate its position for future action.

QUESTIONS IN PARLIAMENT.

SIR J. D. REES asked the Chancellor of the Exchequer on January 21st whether it had been found that the 1,956 names printed and published as those of members of panels in London were reduced to 738 when names entered more than once were excluded, that names were entered without any regard to the place of residence of the doctors named, and that in some cases they were repeated as often as ten times; and, if so, whether such proceedings had his sanction. Mr. Masterman said that the list published by the London Insurance Committee on January 13th showed 759 doctors on the London panel. They were shown in lists for the different boroughs for the convenience of insured persons making their choice,

each doctor being named in the list of any borough in which he had stated that he desired to attend insured persons.

Sir J. D. Rees inquired if there was any difficulty in filling the panel when doctors' names were inserted without their permission, and repeated in various quarters. Mr. Masterman replied that no name was entered without the doctor's permission, and no doctor's name was put as serving on any panel except at his specific request.

Sir J. D. Rees offered to supply instances of that nature, not only in London, but in Middlesex, and Mr. Masterman said he would be glad to investigate any such allegations.

Mr. Touche asked the Secretary to the Treasury, on January 21st, how many of the practitioners whose names appeared on the doctors' panel for the county of London were resident outside the county of London. Mr. Masterman said he was informed by the London Insurance Committee that twenty-two of the doctors whose names appeared on the London panel resided outside the boundaries of the Administrative County of London.

Mr. Touche asked whether the London Insurance Committee supplied the information on which the statement, published by the press on January 15th, that 1,955 doctors had accepted service on the London panel, was based; and whether the actual number was 783; or, if not, what was the actual number. Mr. Masterman replied that the answer to the first part of the question was in the negative. The information supplied officially by the London Insurance Committee on January 8th showed 759 doctors. The list published by them on January 13th showed 780 doctors, and subsequent additions had brought the number to over 900.

Mr. Touche asked how many of the doctors whose names appeared on the London panel had resigned. Mr. Masterman said that four doctors on the London panel had withdrawn, one of them because he was leaving London.

Mr. Touche asked whether there were not, approximately, 200 medical practitioners resident in the borough of Islington, and how many of the seventy-three doctors on the London panel for the borough were resident within the borough. Mr. Masterman said he was informed by the London Insurance Committee that of the seventy-six doctors on the London panel who were prepared to attend insured persons in Islington, twenty-nine were actually resident in that borough, but some of the remainder had surgeries within the boundaries of the borough.

Sir C. Kinloch-Cooke asked the Chancellor of the Exchequer, on January 22nd, whether he was aware that in some districts in London the nearest doctor on the panel was resident several miles distant from the insured persons; and whether he was prepared to remove this disability by allowing insured persons to be attended by doctors not on the panels who were willing to comply with the provisions of Section 15 (3) of Part I of the National Insurance Act. Mr. Masterman, who replied, said that the answer to the first part of the question was in the negative. The second part did not therefore arise. Sir C. Kinloch-Cooke offered to produce evidence in the affirmative, and Mr. Masterman said he would be very pleased to receive it.

Sir C. Kinloch-Cooke asked the Chancellor of the Exchequer, on January 22nd, whether the Insurance Committees in London and elsewhere had any power to alter the policy stated by him when explaining the Government policy regarding the National Insurance Act at Whitefield's Tabernacle on October 14th, 1911, that under that measure any insured person could have the doctor of their own choice. Mr. Lloyd George said he adhered to the statement. Providing the doctor was prepared to serve under the conditions of the Insurance Act, an insured person was entitled to his services under that Act.

Replying to a supplementary question by the same hon. member, Mr. Lloyd George said any doctor had the right to go on the panel, and there was a free choice of doctors on the panel.

Mr. Fred Hall asked the Chancellor of the Exchequer to give his official confirmation in that House to the statement he made at Whitefield's Tabernacle that any insured person was allowed to have whatever doctor he or she required. Mr. Lloyd George said that was not the statement he made. He referred to doctors on the panels. If

doctors refused to serve under the Insurance Act, of course there was no free choice of doctors.

Other members rose to ask further questions, but the Speaker said it was a matter of debate, and not of question and answer.

Mr. Touche asked the Financial Secretary to the Treasury, on January 20th, if his attention had been called to a resolution passed by the London Medical Committee protesting against the recent formation of what was termed the London County Medical Committee (from among the members of which an executive committee had been formed) on the ground that in no sense consistent with reason, or in pursuance of Section 62 of the National Insurance Act, could the Insurance Commissioners be satisfied that such a committee could be regarded as representative of the 5,500 duly qualified medical practitioners resident in the county of London; and what steps were proposed to be taken by the Commissioners to secure that any body which was recognized under the Act satisfied the provisions of the Act. Mr. Masterman said that the Committee referred to had not yet been recognized by the Commissioners under Section 62 of the Act. The Commissioners, when considering applications made to them by a medical committee for recognition under that Section, required full information as to its composition and the procedure by which it was brought into existence.

HOSPITALS.

GLASGOW.

A CONSULTATIVE COMMITTEE appointed by the Royal Western and Victoria Infirmaries of Glasgow to consider the question of the treatment of insured persons under the Insurance Act has advised the adoption of the two recommendations of the British Hospitals Association, with the proviso that action should be postponed till the middle of February. These recommendations were:

1. With reference to out-patients the council is strongly of opinion that upon medical benefit under the National Insurance Act coming into force, insured persons should be examined by a medical officer, but except for accidents, emergencies, or such special treatment as can only be given in a hospital, they should no longer be received in the out-patient and casualty departments unless accompanied by a certificate or introduced personally by the medical practitioner who is in attendance. In such cases, after consultation, they should be referred back to their medical practitioner with an expression of the opinion of the hospital physician or surgeon on the case. And a list of all such insured persons and the practitioners by whom they are sent should be forwarded to the Insurance Committee of the district periodically.

2. With reference to in-patients, insured persons, whose cases are urgent and in need of hospital treatment, not provided for under the National Insurance Act, should be admitted as heretofore, and the hospitals should keep accurate records of all such persons admitted, and if possible the approved society to which they belong.

Meetings of the governors of each of the infirmaries have since been held. The boards of the Western and Victoria Infirmaries have unanimously adopted the recommendations, while the board of the Royal Infirmary, after discussion, adjourned its decision.

INSURANCE ACT IN PARLIAMENT.

ADMINISTRATION OF MEDICAL BENEFIT.

The Panels.

MR. FRED HALL asked, on January 15th, what steps had been taken to ensure that Insurance Committees, in forming panels of doctors or otherwise, had consulted Local Medical Committees duly constituted as provided by Section 62 of the National Insurance Act. The Financial Secretary to the Treasury said that every duly qualified medical practitioner who was desirous of being included on any panel had a statutory right under Section 15 (2) (b) of the National Insurance Act to be so included. The formation of Local Medical Committees rested with doctors themselves. Their statutory right under Section 62 to be consulted by the Insurance Committees depended upon their applying to and satisfying the Commissioners that they were representative of the practitioners resident in the area for which the Committee was formed, and also upon their receiving recognition by the Commissioners.

On January 20th Dr. Esmonde asked whether some benefit societies had issued circulars to their members urging them to select particular doctors on the panel, and

had also sent canvassers to their members to inform them that they were required by the society to select certain doctors who were named; whether in the majority of cases that was being done with reference to members of those societies who only became members of any friendly society for the first time under the provisions of the National Insurance Act, and who were not patients of the particular doctors named; and whether, in view of the effect of such pressure or canvassing carried on with the connivance of the doctors who were favoured by the officials of those societies upon the other doctors who had gone on the local panels, and whose patients were thus interfered with, the Insurance Commissioners would have immediate steps taken to prohibit societies interfering in this manner. Mr. Masterman said that every insured person had a right to select the practitioner on the panel by whom he wished to be attended, and the issue of any circular which concealed this fact would be unjustifiable. If he were informed of any actual case in which a circular had been issued stating that members were required by the society to select certain doctors who were named, he would see if action should be taken.

Mr. William Thorne inquired if the panels were filled throughout the country. Mr. Masterman said he thought that with a few tiny exceptions the panels were now in operation in all districts.

Mr. W. Thorne asked how the insured persons were going to get medical benefits where the panels were not set up. Mr. Masterman replied that in every case doctors were provided for insured persons.

Mr. Hogge asked what steps had been taken to acquaint insured persons with the names and addresses of doctors on the panel; and whether lists of their names and addresses had been circulated to each insured person, or, failing that, whether their names and addresses had been advertised in the local press. Mr. Masterman said that lists of doctors on the panel had been set up in all post-offices, and in offices of the Customs and Excise officers, at police-stations, labour exchanges, and hospitals, and had also been sent to the local branches of approved societies who asked for them. Lists had not been supplied to individual insured persons, but certain newspapers had, he believed, published local lists. In reply to Mr. Fell, Mr. Masterman said that the lists were communicated to all the approved societies.

Mr. Newman asked whether, before admitting the name of any practitioner who might apply to have his name placed on a panel in its area, the Insurance Committees had been directed by the Insurance Commissioners to investigate the validity and worth of any foreign or American degree that such applicant might adduce as proof of ability to fulfil the duties required of him. Mr. Masterman said that he was not aware that any medical practitioners had been included on any panel except duly qualified medical practitioners—that was, practitioners for the time being registered under the Medical Acts. No foreign or colonial practitioner was entitled to be registered unless he possessed the qualifications prescribed by the Medical Act, 1886.

In reply to Mr. Newman, Mr. Masterman said that the question of the manner in which lists of doctors on the different panels were published was entirely a matter for the Insurance Committees themselves, acting in conjunction with the medical men on the panels. He believed there had been local variations in the procedure adopted, but he did not believe that they had caused any difficulties to insured persons making their choice.

Mr. Touche asked, on January 20th, how many of the doctors on the panel for the county of London were also on the panels of neighbouring counties? Mr. Masterman said he believed that some doctors resident near the border of the administrative county of London had arranged to continue to treat insured persons the other side of that border under the Insurance Act as formerly in private practice. A complete answer to the question would involve the separate examination and comparison of the panels of Middlesex, Surrey, Kent, Essex, West Ham, and Croydon.

Major White asked whether any doctors were entered on more than one panel under the National Insurance Act; if so, how many; and how many of them had been registered in more than two districts. Mr. Masterman replied that where a doctor living near the boundary

between two contiguous areas had patients in both, he had, of course, placed his name on the panel of both. It would obviously have been detrimental to the interests not only of the doctors, but of insured persons, that any such artificial divisions as arose from Local Government boundaries should preclude insured persons from continuing to receive the services of their own doctors. The figure of 15,000, given as the number of doctors on panels in Great Britain, was arrived at after making a liberal discount for cases of that kind.

Major White asked how many duplicates were upon the panels, and Mr. Masterman said that to give an answer it would be necessary to examine all the boundaries of Great Britain. Major White then elicited the information that there was only one panel for the county of London; its division into lists for the separate boroughs was, Mr. Masterman said, for the assistance of the insured persons in their selection of a doctor within convenient distance of their homes. Doctors were asked what districts they wished to serve, and the lists were prepared accordingly. The number of doctors on the London panel in the first list was 780, and he had learnt that more than 100 new names had since been received.

Mr. W. Thorne asked if any steps had been taken to prevent a doctor from having more patients than he could attend. Mr. Masterman replied that he did not think any doctor had sent in any list of the number he had already received.

Mr. Bowerman asked the Chancellor of the Exchequer, on January 20th, whether, in view of the decision arrived at on January 18th at a Representative Meeting of members of the British Medical Association, it was intended to allow further time for the completion of the doctors' panels, and also when it was intended to set up the Local Medical Committees. The Chancellor of the Exchequer said that so far as he was aware the panels were still open throughout the greater part of the kingdom, and doctors might send in their names for addition to them to the Local Insurance Committee. The date of publication of those names rested with the local committees. Applications for recognition from Local Medical Committees could at any time be sent to the Insurance Commissioners for approval.

Certificates for Medical Benefit.

In reply to a question by Sir J. D. Rees, on January 21st, Mr. Masterman reiterated his statement with regard to medical certificates for the purpose of sickness benefit. It was, he said, for the societies to take such steps as were necessary for the protection of their funds and the rights of their members, and the question whether an insured person was really ill or not was one for the approved society.

Sir H. Craik: Is it understood that all benefits under the Insurance Act depended upon whether the insured person went to a doctor on the panel? Mr. Masterman said that he could not give an answer unless the hon. gentleman interpreted to him what he meant by the question, "Is it understood." Sir H. Craik: Is it a fact, then? To this no reply was given.

Assistants.

Mr. Worthington-Evans asked, on January 16th, whether, where a panel had been constituted, it was necessary for panel doctors' assistants to be also on the panel before they were permitted to treat insured persons; and whether the locumtenent of a panel doctor must be on the panel before he could look after the panel doctor's patients. Mr. Masterman, in reply, said that where a panel was constituted it was open to a qualified assistant or locumtenent (if his principal assented) to place his name on the panel. An assistant or locumtenent whose name was not thus on the panel might only treat insured persons on behalf of his principal when the latter was precluded by urgency of other professional duties, absence from home, or other reasonable cause, from giving personal attendance to an insured person under his care. Mr. Worthington-Evans inquired if the ordinary two or three weeks' holiday would be considered a reasonable cause. Mr. Masterman said, Yes, it would include a case of that sort.

Mr. John Ward asked the Secretary to the Treasury, on January 6th, whether doctors placed on the insured panels would be authorized to hand over their cases under the

National Insurance Act to qualified assistants, and, if so, what power would the representatives of the approved societies on the Insurance Committees possess to insist upon a proper salary being secured to such qualified medical assistants. Mr. Masterman said that it was the duty of the Insurance Committee to take any necessary steps to secure that the service provided by any assistants was satisfactory, but, subject to this, the salary of such assistants was a matter for their principals and themselves to determine.

Change of Residence of Sick Insured Person.

Colonel Rawson asked the Secretary to the Treasury if a member of an approved society was taken ill at such member's employer's house, and had medical attendance from a doctor at that place, in the event of the employer sending the member home, say to another county, and such member still requiring medical attendance, whether the member was entitled to have another doctor at the member's own home. Mr. Masterman replied: Yes, provided that the insured person notified the Insurance Committee in whose area his own home was situated.

Hours of Attendance.

Mr. Fred Hall on January 22nd asked if list doctors were entitled to prescribe and limit the hours during which they would attend insured persons, as in some cases doctors had intimated that their services were only available for insured persons between the hours of 9 and 10 a.m., and 5 and 6 p.m.; and what was the position of persons who could not attend during such restricted hours. Mr. Masterman replied that each doctor on the panel was required to see patients at his own residence or surgery, or other place appointed him at stated hours, such hours being agreed upon between the doctor and the Insurance Committee. Any patient whose condition so required must be visited by the doctor at the patient's own home.

Limiting Doctors' Lists.

Mr. Masterman, in reply to Mr. R. Gwynne on January 22nd, said no doctor ought to accept more insured persons upon his list than he considered he could properly be responsible for, and any insured person who had reason to believe that he was receiving inadequate attention from a doctor under the Act could bring his case before the Medical Service Subcommittee set up by the regulations. Mr. Fred Hall asked if an insured person could receive adequate treatment by doctors where each doctor on the panel had to attend 4,500 insured persons, as in Marylebone. Mr. Masterman began to reply, but the Speaker interrupted, and called on the member who had the next question on the paper.

Selection of Patients.

Mr. Worthington-Evans asked, on January 20th, whether a doctor might join the panel and by his agreement stipulate that he would give medical attendance and treatment only to patients who selected him, and not to patients who might be assigned to him without their wish and without his consent by the Insurance Committee. Mr. Masterman referred Mr. Worthington-Evans to the answers already given to similar questions (SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL, January 11th, p. 39, and January 18th, pp. 81 and 82), to which he had nothing to add. Mr. Worthington-Evans asked for a specific answer to the question, stating that it had never really been answered before. Mr. Masterman replied that it had been answered three or four times. Mr. Worthington-Evans asked if a doctor could stipulate by the agreement that he should only attend his own patients and not those assigned to him. Mr. Masterman said that if the Insurance Committee accepted that agreement, certainly.

Aged Members of Approved Societies.

In reply to Mr. Clynes on January 15th Mr. Masterman said that employed persons who were over the age of 65 on July 15th last were insured under the special provisions of Section 49, under which their benefits were such as their society might determine and could provide out of their own and their employers' contributions and the State 2d. Societies had, in fact, preferred to use the funds available under the Act for giving sick pay, continuing any arrangements they had made in the past for medical benefit from the private funds of the society. Insured persons who entered insur-

ance under the Act before the age of 65 were entitled to medical benefit till their death at whatever age; and he was not aware of any statement to the contrary issued by the Commissioners.

Compensation for Accidents.

The Marquis of Tullibardine asked, on January 21st, whether a doctor meeting with an accident or injury while attending to, or going to or from attending a case under the National Insurance Act received compensation for such injury. Mr. Masterman said that the answer was in the negative. He was advised that a doctor on the panel was not in the position of an employee of an Insurance Committee, and had no more title to compensation from that committee in case of accident than a doctor attending a private patient had from that patient.

The Marquis of Tullibardine inquired if a doctor under the Local Government Board could not get compensation. Mr. Masterman said he supposed in that case he was an employee of the Local Government Board. No doctor on a panel was an employee of the Insurance Committee.

Depreciation of Medical Practices.

Sir J. D. Rees asked, on January 16th, whether the Secretary to the Treasury was aware that a practice in Middlesex, worth £1,500 before the passing of the National Insurance Act, was now unsaleable; whether he was aware that doctors who, for reasons of health or otherwise, would only be able to perform consulting work in their own houses, and were unable to join the panels, would be ruined, since as many as 80 per cent. of their patients would become insured persons; and whether he would inquire into those effects of the National Insurance Act. Mr. Masterman referred Sir J. D. Rees to the reply he gave on January 1st, when he intimated that he was not aware that a practice for which £1,200 was offered before the National Insurance Act was in sight realized £900 soon after it was passed, and was now unsaleable, and that he was unaware that any scheme of compensation was required in connexion with an Act which he considered would greatly increase the remuneration of those who accepted service under it.

Sir J. D. Rees inquired if the Secretary to the Treasury noticed that the instance referred to was another case, and, as he doubted the generality of his statement, would he take into account the fact that there were many such cases, and make an inquiry. Mr. Masterman replied that it was far too early to make an inquiry. All he could say was that, as a result of the working of the National Insurance Act, the practices of many doctors would probably be doubled in value.

Sir J. D. Rees asked if the medical profession were no judges of their own business. Mr. Masterman replied that the members of the medical profession were coming in to work the Act in large numbers. The Speaker intervened by saying that the controversy could not be raised at question time.

PROPOSED GRANT TO IRELAND.

On January 21st the Chancellor of the Exchequer informed Mr. Fred Hall that the proposed grant of £50,000 to Ireland for the provision of insurance benefits was supplementary to the funds already provided by the United Kingdom for the working of the National Insurance Act in Ireland, but in the event of the extension of medical benefit to Ireland it would be merged in the grant for that purpose. The object of the special grant was to provide a contribution towards certain expenses arising in Ireland in connexion with national insurance owing to the absence of medical benefit in that country. There was therefore no corresponding grant in Great Britain where medical benefit existed.

Mr. W. O'Brien asked if the House would have an opportunity of discussing the matter this session, but Mr. Lloyd George declined to pledge himself.

Sanatorium Benefit.

Mr. Cassel asked the President of the Local Government Board, on January 15th, what sums had up to January 1st, 1913, been granted for the provision of sanatoriums and other institutions for the treatment of tuberculosis under the National Insurance Act, 1911, in England, Wales, Scotland, and Ireland, respectively. Mr. Burns said that the Local Government Board were only concerned with the distribution of the capital grant in England. No

capital grants had been actually distributed towards buildings, but the Board was negotiating with many local authorities in regard to schemes, and in some cases the arrangements had so far advanced as to enable the Board to promise grants subject to the concurrence of the Treasury.

Mr. C. Bathurst asked the Chancellor of the Exchequer, on January 16th, whether he realized that in Mr. Henry Hobhouse's letter written to him on behalf of the County Councils Association, in reference to sanatorium benefit, in July last it was stated that local authorities were prepared to bear 25 per cent. of the deficit arising from sanatorium maintenance schemes if the remainder were provided from other sources; that in his reply, published and circulated by the Local Government Board, the local authorities were by an error stated to be willing to contribute 25 per cent. of the whole annual cost of such schemes; that such authorities were, in fact, wholly unable to increase by this amount the already heavy burdens upon their ratepayers; and whether, under such circumstances he could see his way to increase the Exchequer grant so as to enable local authorities to provide sanatorium benefit to all persons within their areas seriously affected by tuberculosis. Mr. Lloyd George said he thought the hon. member was under a misapprehension. The exact terms of the memorandum forwarded by Mr. Henry Hobhouse were as follows:

As regards the maintenance of insured persons, the association would desire to know what sums will be actually available for the county councils under Section 16 of the Act. They desire to express a strong opinion that such a sum should amount at least to 75 per cent. of the annual cost of maintenance of the institutions to be provided, and that a similar percentage should be provided by the Exchequer in respect of the maintenance of non-insured persons.

That was exactly consistent with his letter of July 31st last, which stated:

I gathered that local authorities are prepared to bear 25 per cent. of the annual cost of schemes if the remainder were provided from other sources.

In both statements the percentage taken was explicitly a percentage of the annual cost of the schemes and not of the deficit arising if the remainder were provided from other sources.

Mr. Hugh Barric asked the Chancellor of the Exchequer, on January 16th, the amount of the intended grant-in-aid to be given to Irish county councils to assist in providing sanatorium treatment for uninsured persons, and to meet the cost of providing sanatorium treatment for insured persons, in so far as insurance contributions would be insufficient for the purpose. Mr. Masterman said the intention was that the amount of the annual grant should be one-half of the total net cost incurred, within reasonable limits, by or on behalf of a county or county borough council, or combinations of those bodies, in the treatment, according to a scheme approved by the Irish Local Government Board, of tuberculosis in the area, of all persons, whether insured persons, dependants of insured persons, or persons who were neither themselves insured persons, nor their dependants, after deducting the amounts received from Insurance Committees out of the moneys available under the National Insurance Act for sanatorium benefit, and any sums received in respect of the treatment of non-insured persons or otherwise. A circular explaining the conditions of the grant in detail was now in draft, and would shortly be issued by the Irish Local Government Board.

Mr. Barnes asked, on January 20th, whether, in the case of an insured person who had been certified for sanatorium treatment, and for whom accommodation could not be found, the National Insurance Commissioners had any power to render that person financial or other assistance pending his entry into a sanatorium; if not, whether it was anticipated that there would be any such cases in the normal working of the Act; and, if such cases would be possible or probable, steps could be taken to secure the power referred to. Mr. Masterman replied in the affirmative, adding that if there should be any such cases both financial and other assistance would be provided; for during any period between an insured person becoming incapable of work and his actual entry into a sanatorium he would receive domiciliary treatment, including both medical attendance and the provision of medicines, and also extra nourishment, etc., ancillary to

the treatment; and he would also be entitled, under the ordinary conditions, to sickness benefit, normally of 10s. a week.

CORRESPONDENCE.

[It is particularly requested that communications intended for publication should be written on one side of the paper only, and should be addressed to the Editor, BRITISH MEDICAL JOURNAL, 429, Strand, London, W.C.]

SPECIAL REPRESENTATIVE MEETING OF JANUARY 17TH.

DR. HÆRDING H. TOMKINS (Vice-Chairman South-West Essex Division) writes: As suspicion fell upon me of having divulged proceedings to the press on account of my taking notes in the gallery at the Special Representative Meeting on January 17th, I feel an explanation is due to the Representatives. Not having broken my pledge I am equally incapable of violating the trust implied by my presence at the meeting, and the reason for note-taking was that as Secretary of the Local Medical Committee, Essex, I had to attend a meeting before the issue of the BRITISH MEDICAL JOURNAL, at which, I may now add, I was able to make a statement that went some little way towards carrying out an expression of opinion of the Representatives.

"CONTRACTING OUT."

DR. H. BRYAN DENSHAM (Stockton-on-Tees) writes: It is advisable that those general practitioners who have not placed their names upon the panels should act on similar and defined lines in dealing with the question of "contracting out."

In dealing with this question I shall confine myself to the case of those who contract out as private patients, and shall not deal with those who may desire to contract out on a capitation basis as members of works' clubs, etc.

It is clear from Clause 15, sec. 3, of the Insurance Act, and paragraphs 6, 43, 44, and 45 of the "Explanatory Statement as to Medical Benefit" issued by the Insurance Commissioners that both those responsible for the framing of the Act and those who will be responsible for its administration have regarded "contracting out" as a process they were prepared to accept, subject to the consent of the Local Insurance Committees. Until the last two or three weeks it has been generally understood that the extent to which "contracting out" would be allowed would depend only on the number of the insured who might desire to take this course.

Those in authority have changed their attitude towards this question, and now maintain that "contracting out" can only be allowed under very special circumstances in individual cases. Further, that any attempt to obtain "contracting out" on an extensive scale would be regarded as an attempt to defeat the purposes of the Act, and that those advocating this course would be regarded as enemies of the Act.

It is as absurd to regard those of us who have not placed our names upon the panel as therefore necessarily opposed to the Act, as it would be to regard those medical men who have placed their names upon the panels as therefore necessarily in favour of the Act.

I am a lifelong and active Liberal and a sincere admirer of the general principles of the Insurance Act. But I cannot place my name upon a panel, because I regard the administration of medical benefit as unjust to the medical profession, and therefore likely to prove unsatisfactory to those insured.

The medical profession as an organized body has no longer the ear of those responsible for administering the Insurance Act. But those insured under the Act possess a power which, if they assert, no Government can withstand. Therefore, those medical men who are standing out must have sufficient confidence in themselves and in the justice of their cause to hold firm until the question of "contracting out" has been fully solved. That is to say, until the insured have obtained their right to utilize their full medical benefit in any way they may regard as most to their advantage, subject to reasonable safeguards as to the efficiency of the medical treatment they obtain.

This is bound to come when those insured better understand the Act and the conditions of medical service. My experience of the working classes is that the bulk of them

profoundly distrust club or contract service. They realize that under this system you attempt to standardize the price of an article of varying value. The result is that the method is most profitable to the man who supplies the article of the least value, and *vice versa*.

The more intelligent of the working classes have only to realize that under a system of "contracting out" they can obtain the services of the doctor of their choice under conditions of private practice, and have the greater part, if not the whole, of the cost of their medical service paid for them from their "pooled" medical benefits, and they will demand this right and will not be denied.

It must take time for the insured fully to appreciate the situation, but we can shorten this period if we fully utilize our opportunities of informing our patients of their rights under the Act.

In the meantime we must go on in faith, and I have every confidence that those who stand firm by what they believe to be right will find before long that they have chosen the course which is not only most consistent with the preservation of their self-respect, but also the one which is to the advantage of their practice. It is to be hoped that in towns where all the men have gone on the panels the stronger men will reconsider their position, and so aid in increasing the demand for "contracting out."

Our proper course of action seems to be clear. We must explain to those of our patients who are insured that it is their right to be allowed to "contract out" if they so desire. They should assert that right, whether or no they themselves desire to take advantage of it.

If they are denied that right the situation will be:

1. Unjust to those insured, in that they are deprived of a choice expressly provided for them in the Act.
2. Unfair to those medical men who have not placed their names on the panels, and who should not be penalized for standing firm for what they believe to be right.

3. Not in the public interest, in that money contributed from the public purse will only obtain for those insured a needlessly restricted medical service.

The following leaflet issued here was drawn up before we had heard of Form Med. 21.

NATIONAL INSURANCE ACT.

WHAT IS MEANT BY "CONTRACTING OUT" FOR MEDICAL BENEFIT.

All insured persons have a right under Clause 15, Sec. 3, to be allowed to "Contract out" for their Medical Benefits, and so retain the services of their present Doctor, whether he is on the Panel or not.

You may "Contract out" in Two Ways:

1. If you are a Member of a Work's Club, Friendly Society, or other Club providing Medical Benefit, you may continue to receive your Benefit in the same way as before.

Under this system the whole cost of your Medical attendance will be paid for you, and you will not be put to any additional cost.

2. If you are a Private Patient of your Doctor, this will probably be the system adopted:

All those who thus "Contract out" will have the amounts of their Medical Benefit placed together in a "Pool."

Their Doctor will attend them at the same Fees and under the same conditions as before.

All cost of Medical Attendance will be charged against this "Pool."

If the amount in the "Pool" is sufficient all Fees will be paid in full from it.

If the amount is not sufficient you will have to pay the balance.

It is not possible to say if the amount in the Pool will be sufficient to pay all Fees until the system has been tried.

If the estimates made prove correct, the amount in the Pool should be sufficient to pay in full.

How to Proceed if you decide to Contract Out.

Take your Red Card to your own Doctor who will sign it. It should then be sent to the Clerk of the Insurance Committee either direct or through the Secretary of your Approved Society.

THREAT TO CLOSE A PANEL AND UTILIZE ASSISTANTS.

Under this heading the action taken by the Isle of Ely Insurance Committee, contrary to the general consensus of opinion of the profession in and around Wisbech, was noticed in the SUPPLEMENT of January 11th and 18th, pp. 44 and 80.

The following letter has since been forwarded to us for publication:

Wisbech,
January 21st, 1913.

Sir,—

Although the British Medical Association has released its members from the pledge and undertaking, we, the undersigned medical practitioners in the Isle of Ely, still considering that the conditions of service under the Act are unsatisfactory to the profession and against the best interests of the public, have resolved to adhere to the former policy of the British Medical Association and decline to take service until the conditions are acceptable.

COLLECTIVE WITHDRAWAL FROM PANEL OWING TO IMPOSSIBILITY OF EFFICIENT WORKING.

SIR,—Having attempted to do the work under the Insurance Act as at present constituted after being stamped on to the panel on account of the Chancellor's threats, we find it a physical impossibility to carry out the work.

We have asked that our names be withdrawn from the list. Further, we are refusing all applications from insured persons.

Having already accepted several names for treatment, we have notified those persons that we are willing to treat them in case of illness gratuitously if they so wish until April 30th, 1913.—We are, etc.,

FREDERICK B. JEFFERISS.
HERBERT J. BRYAN.
H. A. BARNES.
W. R. S. JEFFERISS.

Chatham, January 21st.

FEE FOR GENERAL ANAESTHETIC.

The following correspondence has passed between Dr. E. Rowland Fothergill (Brighton) and the Insurance Commissioners:

January 11th, 1913.

Gentlemen,

Fee for General Anaesthetic.

In spite of replies sent by the Chairman of the English Commissioners and others which seem to convey the opinion that, in a case where a doctor has agreed to give himself, or to provide, medical attendance for an insured person for a period of time for a fixed payment, that doctor will be financially liable for the fee of any anaesthetist called in on his advice to assist him in a minor operation, there is still a great deal of confusion.

May I, therefore, by illustration place before you a typical case, ask for your opinion, and at the same time ask if that opinion can be taken as being based on the interpretation of the National Insurance Act and Regulations by the law officers of the Crown, or whether it is only the opinion of the Commissioners as a body?

Dr. A. agrees to attend for three months under the Act and Regulations Mr. B. for Is. 9d. under system A.

Mr. B. so injures his finger as, in the opinion of Dr. A., to necessitate its amputation.

Dr. A. advises Mr. B. that a general anaesthetic is necessary; states that he has agreed to give all treatment personally (Sec. 9 of Agreement); that it is not expedient to operate and give the chloroform, but that he will do it if the patient, Mr. B., agrees to it; that if he does not agree, then Mr. B. must pay the fee of the anaesthetist.

Mr. B. agrees to pay the fee, and does so. The operation is performed.

Questions.

- A. Can Mr. B. claim later, from or through the Insurance Committee, the return of the fee?
- B. Can the Insurance Committee refund this fee, deducting the amount from the credit account of Dr. A.?
- C. By what means can Mr. B. secure the advantage of a general anaesthetic, given by a second person, if Dr. A. declines to provide it unless Mr. B. pays the fee?
- D. Who is to decide that a general anaesthetic given by a second person is expedient when Dr. A., to save his pocket, says that it is not, and Mr. B., to save his feelings, and possibly his life, says that it is?

As this question is coming up at a meeting to be held on Tuesday (14th) might I ask for a prompt reply?

Yours faithfully,
E. ROWLAND FOTHERGILL.

To the Commissioners,
Buckingham Gate.

[Telegram.]

Fothergill, 38, Dyke Road, Brighton.

Your letter 11th. Panel doctor on capitation system must in cases of minor operations provide anaesthetist free to patient.—Insurance Commission.

[Reply.]

January 15th, 1913.

I duly received your telegram at 11 p.m. yesterday too late by many hours to be of any use to the Committee.

Might I draw your attention to the fact that my letter of 11th inst. enclosed certain specific questions framed to meet the uncertainty in the minds of certain doctors here. Your telegram in no way answers any one of them.

May I, therefore, again press for a reply, and if received by Sunday it will be in time for next meeting.

Yours faithfully,
E. ROWLAND FOTHERGILL.

National Health Insurance Commission (England),
Buckingham Gate,
London, S.W.

January 18th, 1913.

Sir,

In reply to your letters of the 11th and 15th instant, I am directed by the National Health Insurance Commission (England) to point out that under the terms of his agreement with the Insurance Committee a medical practitioner undertakes to give to his patients such treatment as is of a kind which can consistently with the best interests of the patient be properly undertaken by a general practitioner of ordinary professional competence and skill. Assuming therefore that the operation in question is one that is properly included in the range of services covered by medical benefit, it would not be open to a medical practitioner to require of his patient a fee in respect of services which by his agreement he had undertaken to render, or to suggest to him the adoption of a procedure which he considers inexpedient having regard to the best interests of the patient. Either course would constitute a breach of his agreement with the Committee. Your questions A and B do not therefore arise, while the answers to your questions C and D are to be found in Regulations 52 and 55 of the National Health Insurance (Administration of Medical Benefit) Regulations dated December 5th, 1912.

I am,

Sir,

Your obedient servant,

E. MACGOWAN.

Dr. E. Rowland Fothergill,
Ravenstonedale,
38, Dyke Road, Brighton.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

BATH: ROYAL UNITED HOSPITAL.—House-Surgeon. Salary, £80 per annum.

BIRMINGHAM EDUCATION COMMITTEE.—Dental Surgeon. Salary, £250 per annum.

BRADFORD ROYAL INFIRMARY.—Resident Surgical Officer. Salary, £150 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physician. (2) Dental House-Surgeon. (3) Obstetric and Ophthalmic House-Surgeon. (4) Resident Casualty Officer. Salary for (1) and (2), £100 per annum, for (3) £75 per annum, and (4) £50 per annum.

BURNLEY: VICTORIA HOSPITAL.—Resident Medical Officer. Salary, £100 per annum.

CAMBRIDGE: COUNTY ASYLUM.—Junior Assistant Medical Officer. Salary, £160 per annum, rising to £200.

CENTRAL LONDON OPHTHALMIC HOSPITAL, Gray's Inn Road, W.C.—Two Assistant Surgeons.

CHELSEA HOSPITAL FOR WOMEN, Fulham Road, S.W.—House-Surgeon. Salary, £30 per annum.

DAVOS PLATZ: QUEEN ALEXANDRA SANATORIUM.—Medical Superintendent. Salary, £200 per annum.

FRENCH HOSPITAL, Shaftesbury Avenue, W.C.—Third Physician in the Out-patient Department.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £75 per annum.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.—(1) House-Physician. (2) House-Surgeon. (3) Casualty Medical Officer. Salary for (1) and (2) £30 for six months and £2 10s. washing allowance, and for (3) £200 per annum.

LEICESTERSHIRE COUNTY COUNCIL.—Tuberculosis Medical Officer. Salary at the rate of £500 per annum.

LIVERPOOL DISPENSARIES.—Head Surgeon. Salary, £170 per annum.

LIVERPOOL INFECTIOUS DISEASES HOSPITAL.—Assistant Resident Medical Officer. Salary, £120 per annum.

LONDON HOSPITAL, Whitechapel, E.—Assistant Surgeon.

METROPOLITAN ASYLUMS BOARD.—Assistant Medical Officer at the Queen Mary's Hospital for Children, Carshalton. Salary, £150 per annum, rising to £180.

METROPOLITAN HOSPITAL, Kingsland Road, N.E.—(1) House-Surgeon. (2) Assistant House-Surgeon. Salary at the rate of £60 and £40 per annum respectively.

MILDMAY MISSION HOSPITAL, Bethnal Green, N.—House-Surgeon. Salary, £80 per annum.

NEWCASTLE-UPON-TYNE TUBERCULOSIS DISPENSARY.—Medical Officer (male). Salary, £500 per annum.

NOTTINGHAM CITY ASYLUM.—Second Assistant Medical Officer. Salary, £200 per annum.

OXFORD COUNTY ASYLUM, Littlemore.—Junior Assistant Medical Officer (male). Salary, £150 per annum, rising to £175.

READING: ROYAL BERKSHIRE HOSPITAL.—Honorary Assistant Physician.

REIDHILL: EARLSWOOD ASYLUM.—Junior Assistant Medical Officer. Salary, £150 per annum.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Curator and Librarian. Salary at the rate of £120 per annum.

ROYAL NAVY.—Six Dental Surgeons for the Naval Forces. Salary, £1 per diem for seven days a week.

ST. MARK'S HOSPITAL FOR CANCER, FISTULA, AND OTHER DISEASES OF THE RECTUM, City Road, E.C.—House-Surgeon. Salary, £80 per annum.

ST. PAUL'S HOSPITAL FOR SKIN AND GENITO-URINARY DISEASES, Red Lion Square, W.C.—(1) Honorary Surgeon to Out-patients. (2) Clinical Assistant.

SALFORD ROYAL HOSPITAL.—(1) Honorary Physician. (2) Honorary Assistant Physician.

SAMARITAN FREE HOSPITAL FOR WOMEN, Marylebone Road, N.W.—(1) Surgeon to the Department for Out-patients. (2) Assistant Medical Registrar.

SOUTHPORT INFIRMARY.—Resident Senior House-Surgeon. Salary at the rate of £100 per annum.

SOUTH YORKSHIRE ASYLUM, Wadsley.—Fourth Assistant Medical Officer (male). Salary, £150 per annum, rising to £180.

STAFFORD: STAFFORDSHIRE COUNTY ASYLUM.—Assistant Medical Officer. Salary, £210 per annum.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY.—House-Physician. Salary, £100 per annum.

WESTERN OPHTHALMIC HOSPITAL, Marylebone Road, W.—Second House-Surgeon (non-resident), rising to First after six months. Salary at the rate of £40 and £50 per annum respectively.

WEST RIDING ASYLUM, Menston, near Leeds.—Fourth Assistant Medical Officer. Salary, £150 per annum, rising to £180.

WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Assistant Honorary Surgeon in the Eye, Ear, and Throat Departments.

WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—Pathologist and Bacteriologist. Salary, £200 per annum.

WORCESTER GENERAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

YORK DISPENSARY.—Resident Medical Officer (male). Salary, £140 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Buckle (Banffshire), Moreton-in-Marsh (Gloucester).

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Wednesday morning.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

DEATH.

GARNER.—On January 20th, John Edward Garner, M.D., son of the late Captain John Garner, R.N., Aberdeen, aged 60 years. Was interred at the Preston Cemetery, January 25th.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. CASSELL AND CO., LTD., will publish at the end of January a new and enlarged edition of Dr. Herman's *Diseases of Women*, revised by the author and by Dr. Drummond Maxwell.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, Cavendish Square, W., 8 p.m.—Exhibition of Clinical Cases.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ODONTOLOGY, 1, Wimpole Street, W., 8 p.m.—Discussion on Mr. Badcock's Paper on Orthodontics in Modern Practice, reopened by Mr. J. F. Colyer.

TUESDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF MEDICINE, 1, Wimpole Street, W., 5.30 p.m.—Paper:—Dr. Noel D. Bardswell: Records of King Edward VII Sanatorium.

SECTION OF PSYCHIATRY, 1, Wimpole Street, W., 8.30 p.m.—Paper:—Dr. F. W. Mott, F.R.S.: The Neuropathic Inheritance.

WEDNESDAY.

HUNTERIAN SOCIETY, Library of St. Bartholomew's Hospital, 9 p.m.—Clinical and Pathological Evening. The President (Mr. A. H. Tubby) will show Cases of Fracture, illustrated by Skiagrams. Dr. E. Maynard: Fractured Femur, with Skiagrams. Mr. F. S. Kidd: (a) A Case of Osteogenesis Imperfecta, with Unusual Features; (b) Some Results from Pyelography. Dr. Haldin Davis: (a) Case of Paget's Disease of the Nipple cured by Radium; (b) Microscopical Slides of Favus, Molluscum Contagiosum, etc. Dr. W. H. Nelson: Tumour involving the Larynx in a Middle-aged Man.

ROYAL SOCIETY OF MEDICINE:

SECTION OF THE HISTORY OF MEDICINE, 1, Wimpole Street, W., 6 p.m.—Dr. Steeves: Medical Allusions in the Writings of Francis Bacon. Dr. Raymond Crawford will show some Plague Banquets by Lantern Slides and the Epidiascope. Mr. B. Glauville Corney, I.S.O.: Some Oddities in Nomenclature and Their Origin. Mr. Alban Doran will give a Demonstration of Some Eighteenth Century Obstetric Forceps with Means of the Epidiascope. Mr. D'Arcy Power will show, for Mr. Sidney Young, F.S.A., a Register of Sea Surgeons from 1707-1744.

THURSDAY.

HARVEIAN SOCIETY OF LONDON, St. Mary's Hospital, Paddington, W.—Clinical Evening. The Chair will be taken by Dr. Leonard Guthrie at 8.45 p.m. Cases to be shewn at 8 p.m.

ROYAL SOCIETY OF MEDICINE:

SECTION OF BALNEOLOGY AND CLIMATOLOGY, 1, Wimpole Street, W., 5.30 p.m.—Discussion on Fibrositis, opened by Dr. Llewellyn (Bath). Dr. Stockman (Glasgow) will deal with the Pathology of the condition. Mr. Kenneth W. Goadby will deal with the Bacteriology of the condition.

POST-GRADUATE COURSES AND LECTURES.

BROMPTON HOSPITAL FOR CONSUMPTION, S.W.—Wednesday, 4.30 p.m., The Cardio-Vascular System in Pulmonary Tuberculosis.

CANCER HOSPITAL, Fulham Road, S.W.—Wednesday, 5 p.m., Tumours of the Kidney.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—Daily arrangements: Out-patient Demonstration, 10 a.m.; Medical and Surgical Clinics. Monday: 12 noon, Throat, Nose, and Ear; 2.15 p.m., Surgery; 3 p.m., Operations; 3.15 p.m., Medicine; 4.15 p.m., Ear and Throat. Tuesday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Surgery; 3.15 p.m., Medicine; Skin, 4.15 p.m. Wednesday: 11 a.m., Eye; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Eye Clinic; 4.30 p.m., Surgery. Thursday: 12 noon, Throat, Nose, and Ear; 2 p.m., Operations, Pathological Demonstration; 3.15 p.m., Medicine. Friday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Surgery. Saturday: 10 a.m., Radiography; 11 a.m., Eye.

MANCHESTER: ANCOATS HOSPITAL, Thursday, 4.15 p.m.—Post-graduate Clinic: Relation of Appendicitis to Gastric Ulcer.

MANCHESTER ROYAL INFIRMARY.—Tuesday, 4.30 p.m., Rheumatoid Arthritis and Osteo-Arthritis. Friday, 4.30 p.m., Prostatectomy.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following Clinical Demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Medical; Friday, Eye. Lectures at 5.15 p.m. each day will be given as follows: Monday, Some Recent Advances in the Treatment of Scoliosis (Lateral Curvature of the Spine); Tuesday, The Value of Tuberculin in the Diagnosis and Treatment of Tuberculosis; Wednesday, Psycho-Analysis (continued); Thursday, Shock during Anaesthesia; Friday, Spirochaetes.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Tuesday, 3.30 p.m., Intracranial Tumours. Friday, 3.30 p.m., Trigeminal Neuralgia.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.—Monday, Clinics: 10 a.m., Surgical Out-patient; 2.30 p.m., Medical Out-patient, Nose, Throat, and Ear; 3 p.m., Demonstration on Clinical and General Pathology. Tuesday, 2.30 p.m., Operations; Clinics: Surgical, Gynaecological; 3.30 p.m., Medical In-patient; 4.30 p.m., Gynaecological Demonstration, illustrated by Clay Modelling. Wednesday, 2 p.m., Throat Operations; 2.30 p.m., Medical Out-patient; Skin and Eye Clinics: X Rays; 3 p.m., Pathological Demonstration; 5.30 p.m., Eye Operations. Thursday, 2.30 p.m., Gynaecological Operations; Clinics: Medical and Surgical Out-patient; 3 p.m., Medical In-patient; 4.30 p.m., Special Demonstration of Selected Skin Cases. Friday, 2.30 p.m., Operations; Clinics: Medical Out-patient, Surgical, Eye; 3 p.m., Medical In-patient; Pathological Demonstration.

SEAMEN'S HOSPITAL SOCIETY, London School of Tropical Medicine, Royal Albert Dock, E.—Lectures daily (Saturday excepted) at 12 and 4 p.m. Practical Laboratory Work daily (Saturday excepted), 10 to 12 a.m. Practical Protozoology, 2 to 3.30 daily. Advanced Protozoology, 10.30 a.m. to 1 p.m. daily. Medical Clinics, Tuesday and Thursday, at 3 p.m. Operations, Friday, at 3 p.m.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics 2 p.m., X Rays 2 p.m., Operations 2 p.m. daily. Monday: Gynaecology, 10 a.m.; Demonstration of Minor Operations, 11 a.m.; Pathological Demonstration, 12 noon; Eye, 2 p.m. Tuesday: Gynaecological Operations, 10 a.m.; Surgical Registrar, 10.30 a.m.; Demonstration of Fractures, etc., 12 noon; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Wednesday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Medical Registrar, 10.30 a.m.; Lecture: Abdominal Diagnosis, 12 noon; Eye, 2 p.m.; Gynaecology, 2 p.m. Thursday: Gynaecological Demonstration, 10.30 a.m.; Lecture: Neurological Cases, 12.15 p.m.; Eye, 2 p.m.; Orthopaedics, 2 p.m. Friday: Gynaecological Operations, 10 a.m.; Lecture: Practical Medicine, 10.30 a.m.; Lecture: Clinical Pathology, 12.15 p.m.; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Saturday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Eye, 10 a.m.; Surgical Registrar, 10.30 a.m.; Lecture: Surgical Anatomy of the Abdomen, 12 noon. Lectures at 5 p.m. each day will be given as follows: Monday, Diseases of the Pituitary Body; Tuesday, Yellow Fever; Wednesday, Practical Medicine; Thursday, Diseases of the Pituitary Body; Friday, Anaesthetics.

DIARY OF THE ASSOCIATION.

| Date. | Meetings to be Held. | Date. | Meetings to be Held. |

| 28 Fri. | Birmingham Branch, Pathological and Clinical Section, Medical Institute, 8 p.m. | 24 Thur. | South-West Essex Division, Walthamstow Hospital, 4 p.m. |
| | | 25 Fri. | Birmingham Branch, Pathological and Clinical Section, Medical Institute, 8 p.m. |

Minute 40.—Resolved: That this Representative Meeting, recognizing the force of present circumstances and consulting the best interests of the Association and the unity of the profession, now releases all practitioners from their undertaking and pledge.

Minute 41.—Resolved: That any acceptance of service outside practitioners' own districts, parishes, and towns, involving a change of residence for the express purpose of accepting service, will be regarded as conduct detrimental to the honour and interests of the medical profession.

The minutes of the Special Representative Meeting with regard to the Central Defence Fund were also considered, and it was resolved to take the opinion of the Solicitor on certain points and to report to the Council.

Minute 45 of the Special Representative Meeting was also noted as follows:

That this meeting records its emphatic protest against the discreditable methods adopted by the Government, whereby a position of urgency was created, under which many practitioners, finding themselves threatened with financial ruin, were compelled to give unwilling service under the National Insurance Act on terms which this meeting considers to be derogatory to the profession and against the public interest.

The Committee resolved to place on record its opinion that the decision of the Special Representative Meeting in January to rescind the resolution of the Annual Representative Meeting, 1912, allowed practitioners to apply for and accept appointments under the Act, due regard being had to the exceptions referred to in Minute 41 above.

FUTURE ACTION.

The minutes of the Representative Meeting with reference to the future action of the Association and the sending out of an inquiry to all practitioners asking their opinion as to the conditions of service under the present provisional arrangements, and whether they would be willing to continue such arrangements, were considered, and the latter subject was deferred until the next meeting. The Committee noted the instruction contained in Minute 49 of the Representative Meeting, (a) to take all necessary steps to watch and protect the interest of the profession under the National Insurance Act; (b) to take any opportunity that may be afforded for placing the representatives of the Association on the Advisory and Insurance Committees; (c) to obtain statutory recognition of Local Medical Committees in every insurance area; (d) to collect information as to defects in the Act and Regulations, and to take all possible opportunities of remedying them.

ADVISORY COMMITTEES.

Dr. MCKENZIE JOHNSTON stated that he had been invited to act upon the Scottish Advisory Committee, and the State Sickness Insurance Committee recommended him to accept the invitation, and expressed a general approval of practitioners accepting appointments upon Advisory Committees.

COUNTY INSURANCE COMMITTEES.

Dr. THOMSON stated that the Local Medical Committee for Norfolk had forwarded to the Insurance Commissioners the names of practitioners suitable for appointment upon the County Insurance Committee under the provisions of Section 59 (2) (c) of the Act, and had been informed by the Commissioners that the election of those practitioners was subject to regulations to be made by the Commissioners, which it was hoped to issue at the earliest possible moment. The State Sickness Insurance Committee resolved to write to the Insurance Commissioners with reference to the delay caused in the appointment of medical practitioners upon Insurance Committees owing to the failure of the Commissioners to issue regulations governing this question, and to ask when the regulations would be issued.

It was reported to the Committee that action is being taken locally with respect to obtaining recognition of Local Medical Committees, and the Committee resolved to ask each Division before the expiration of three months to submit a report as to the local working of the Act.

PROPOSED SICKNESS, ACCIDENT, AND PENSION FUND.

The minutes of the Special Representative Meeting with reference to financial questions was referred to a special

subcommittee, which was instructed to report after two weeks. The members of the subcommittee are the Chairman, Dr. Beaton, Dr. Carter, Mr. Todd, and Mr. Willock.

EXPENSES OF LOCAL MEDICAL COMMITTEES.

The minute of the Representative Meeting under this head was considered, and the Committee expressed the opinion that no action should be taken by the Association to seek payment of the expenses of a Local Medical Committee from State funds, and advised the Council to consider the desirability of steps being taken by the Association to meet the expenses of these committees.

METHODS OF OBTAINING THE OPINION OF THE ASSOCIATION.

The minutes of the Representative Meeting asking the Council to consider in what way it would be possible to obtain more quickly than at present the decision of the Association in cases of urgency, and requesting the Council to utilize the postal vote of the whole profession on such questions, were considered.

The MEDICAL SECRETARY reported that the question of the Association obtaining powers to take a postal vote of its members had been under the consideration of the Association for some years; that a report had been presented to the Annual Representative Meetings in 1911 and 1912; the subject had been referred back to the Council in 1912, and was under the consideration of the Organization Committee, which had, however, been unable to find time for the proper discussion of the subject.

The Committee resolved to make the following recommendations to the Council:

That the Council refer to the appropriate committee to take into consideration what alterations in the constitution of the Representative Body can be made to enable the views of the profession to be obtained in a more effective and rapid manner than at present, and to consider whether a postal vote can be provided for under the constitution and should be sanctioned, and that the matter be considered to be one of urgency.

FEEES FOR UNINSURED MEMBERS OF THE WAREHOUSEMEN AND CLERKS' PROVIDENT ASSOCIATION.

A letter was received from a medical officer of the Warehousemen and Clerks' Provident Association, informing the Committee that that association was endeavouring to secure medical attendance on its uninsured members at the old rate of 6s. a year, inclusive of medicines. It was pointed out that as a matter of fact the uninsured members were in many cases better off financially than the insured, for whom the sum of 7s. exclusive of medicines would now be received. The Committee gave instructions for a circular to be sent to all the medical officers of the Provident Association warning them against accepting such inadequate terms and promising any assistance the Association could give in the movement which had already been started to insist on not less than the insured rate for those members earning less than £160 per annum and 10s. 6d. for those earning more than that income.

PUBLIC MEDICAL SERVICE SCHEMES APPROVED.

The CHAIRMAN reported that he had since the last meeting approved, on behalf of the Committee, the following public medical service schemes, and the Chairman's action was approved: Fulham Sick Club, Lewisham Public Medical Service.

Meetings of Branches and Divisions.

METROPOLITAN COUNTIES BRANCH:

LEWISHAM DIVISION.

A MEETING of the medical practitioners of Lewisham was held at Sangley Hall, Catford, on January 19th. Dr. COMBER was in the chair, and forty practitioners attended. *The Pledge.*—Dr. BLUE proposed and Dr. MACNAMARA seconded the following resolution:

That we, the members of the medical profession in meeting assembled on January 19th, at Lewisham, while not condemning those who consider themselves forced in self-preservation to go on the panel, are of opinion that we should act in the best interests of the insured and also of the profession by adhering firmly to our determination to decline service under the National Insurance Act. We

pledge ourselves to take every opportunity to improve the position of our fellow practitioners unwillingly coerced to serve under the Act, after release from their pledge by the Association, and we urge all present to loyally support, both financially and otherwise, the British Medical Association in the united action necessary for ultimate success.

This was carried by 28 votes to 7. It was also decided to form a Lewisham Branch of the London Medical Committee, and a committee, consisting of Drs. Barnett, Bunday, Comber, Hudson Evans, Halliwell, Hemmans, Macnamara, and Wilson, was appointed to draw up a scheme to be considered at a subsequent meeting.

MARYLEBONE DIVISION.

A GENERAL MEETING of the Division was held in the rooms of the Medical Society of London, on January 27th. Mr. ARWOOD THORNE, Chairman of the Division, was in the chair, and forty-six members and two guests were present.

Minutes.—The minutes of the preceding meeting were confirmed.

Apologies for Non-attendance.—Letters of apology for non-attendance were received from Drs. Abercrombie, Hawthorne, Heywood, and Spon.

Special Representative Meeting.—The SECRETARY gave an account of the proceedings of the last meeting, and Mr. BISHOP HARMAN moved, and Mr. FLEMING BROWNE seconded, the adoption of the report, which was carried.

The Insurance Act.—Dr. DAVID ROXBURGH discussed the present position, with special reference to practitioners going on the panel, and moved:

That this meeting of the Marylebone Division is of opinion that the Central Council of the British Medical Association should be requested without delay to inform the Divisions what amount is available for distribution to those practitioners who have suffered pecuniary loss by their loyal adherence to their pledges, and in what manner application for assistance should be made.

Dr. ACLAND seconded. Mr. E. B. TURNER was accorded permission to address the meeting, and gave an account of the present position as regards the Guarantee Fund and the position in London. After some remarks from Mr. HALLIDAY SUTHERLAND, the resolution was carried *nemine contradicente*. A discussion then took place, in the course of which Mr. McADAM ECCLES congratulated the members of the Division on their loyal upholding of the decision of the Association. He stated that nearly 200 out-patients were being referred from St. Bartholomew's Hospital every day to the doctors on the panels, and discussed the loss which the members of hospital staffs would incur through the falling off of students. Mr. DREW raised the question of how nurses and servants in hospitals were to be treated, and Mr. WARREN LOW, Drs. ROXBURGH, GORDON LANE, FLEMING BROWNE, and DAVIS also spoke.

Vote of Thanks.—Dr. PERCY SPURGIN moved, and Dr. ACLAND seconded, a hearty vote of thanks to Mr. E. B. Turner for his speech. This was carried *nemine contradicente*, and the meeting then adjourned.

NORTH OF ENGLAND BRANCH:

SUNDERLAND DIVISION.

A MEETING of the Sunderland Division was held on January 21st. Dr. ADAMSON, Chairman of the Division, was in the chair, and twenty-four members were present. Dr. Middlemass wrote asking that his name be withdrawn from the Committee, and this was agreed to with regret.

Annual Report.—The annual report was read and adopted and ordered to be entered on the minutes. The financial report was postponed.

Payment of Personal Expenses of Representative.—It was resolved that a special Division fund be formed to pay the reasonable personal expenses of the Representative to Representative Meetings.

Clerical Assistance.—It was also agreed that clerical assistance be obtained for the Honorary Secretary of the Division and Honorary Secretary of the Medical Insurance Committee, and that only one Secretary be appointed for the Division.

Appointment of Chairman.—The CHAIRMAN moved and it was carried by acclamation that Mr. D. F. Todd be the Chairman for the ensuing year. Mr. Todd, in returning thanks, made reference to the Insurance Act. He also

mentioned that he was the first Secretary of that Division, that at the first meeting seven members were present out of a roll of thirty-one, and that at the present moment the membership was 119. He also touched on several matters which he intended to press during his year of office in order to improve the organization of the Division, and pointed out that it would be necessary to increase the subscription to the Association to £2 2s. This he considered was a small amount considering the work which the Association had already done and was still doing for the profession, and also the excellence of the JOURNAL. He referred to the fact that he was the third successive Irishman to occupy the chair, and paid a glowing tribute to his two immediate predecessors, Drs. G. B. Morgan, sen., and J. Adamson, for the work done by them during their respective years of office. He concluded by proposing a vote of thanks to Dr. Adamson for his conduct in the chair during the past year.

This was carried unanimously, and Dr. ADAMSON suitably replied.

Election of Officers.—The following officers were elected for the ensuing year:

Vice-Chairman, Dr. Adamson.

Representative to Representative Meetings, Mr. D. F. Todd.

Honorary Secretary, Dr. Modlin.

Representative on Contract Practice Committee, Dr. Thompson.

Representatives on the Branch Council, Drs. Adamson, Dillon, Dix, Hubbersty, Middlemass, and Boyd Cunningham, the latter taking the place of Dr. Modlin, who as Honorary Secretary of the Division is *ex officio* a member of the Branch Council.

Executive Committee, Drs. Chalmers, Boyd Cunningham, Dillon, Dix, Hay, Hubbersty, Morgan, sen., Morison, Robertson, Rowstou, Thompson, and Wallace.

Model Ethical Rules.—The Model Ethical Rules of the British Medical Association (as printed in the SUPPLEMENT to the JOURNAL of September 21st, 1912) were adopted for the Division.

Standing Orders.—The Standing Orders of the Division were confirmed.

Annual Dinner of Division.—The HONORARY SECRETARY announced that Sir James Barr, the President of the Association, had kindly promised to address the Division on Rheumatoid Arthritis and its Treatment, on Friday, March 14th, 1913, and that the annual dinner of the Division will be held the same evening, with Sir James Barr as guest of the Division.

Vote of Thanks.—A vote of thanks was passed to the Chairman.

Association Notices.

NOMINATIONS FOR COUNCIL, 1912-13.

Glasgow and West of Scotland Branch (4 County Divisions), Border Counties, and Stirling Branches:

GEORGE ROBERT LIVINGSTON, M.D.,
47, Castle Street, Dumfries.

JAMES LIVINGSTONE LOUDON, M.D., D.P.H.,
Linnwood, Hamilton, N.B.

Cambridge and Huntingdon, East Anglian, and South Midland Branches:

BOSTON ELPHINSTONE FORDYCE, M.B., C.M.,
61, Chesterton Road, Cambridge.

LEWIS WILLIAM REYNOLDS, M.R.C.S., J.P.,
The Priory, High Wycombe.

NOTICE OF CHANGE OF NAME OF A DIVISION.

Greenwich and Deptford Division.

The following change has been made in accordance with the regulations of the Association, and takes effect from the date of publication of this notice:

That the name of the Greenwich Division be altered to Greenwich and Deptford Division.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held conjointly with the Finsbury Medical Society at the Manchester Hotel, Aldersgate Street, E.C., on Tuesday, February 11th, at 9.30 p.m., when Dr. Batty Shaw will give an address on Tuberculosis.—A. G. SOUTHCOMBE, Honorary Secretary.

National Insurance.

LOCAL MEDICAL COMMITTEES: RECOGNITION, DUTIES, AND POWERS.

THE following analysis of the provisions of the Insurance Act and the Regulations for medical benefit, showing the manner in which recognition by the Insurance Commissioners is to be obtained and the duties and powers of such committees when recognized has been drawn up by the Medical Secretary for the convenience of members. The revised Regulations, to which frequent references are made below, were printed in the SUPPLEMENT for December 7th, 1912, p. 627 *et seq.* The National Insurance Act (with Index) was printed in the SUPPLEMENT for January 6th, 1912.

(A) RECOGNITION BY INSURANCE COMMISSIONERS.

Where a Local Medical Committee is formed for any County, County Borough, or District Insurance Committee area, and the Commissioners are satisfied that that Local Medical Committee is representative of the qualified practitioners in the area, they must recognize the Local Medical Committee (National Insurance Act, Section 62).

(B) DUTIES AND POWERS OF LOCAL MEDICAL COMMITTEE WHEN RECOGNIZED.

I. General.

It must, subject to regulations made by the Commissioners, be consulted by the Insurance Committee for the area on all general questions affecting the administration of medical benefit, including the arrangements made with practitioners for giving attendance and treatment to insured persons, and shall have such other duties and powers as may be determined by the Commissioners (Act, Section 62).

II. Specific.

(i) It must be consulted as to—

- (a) Conditions of service of practitioners (Reg. 7 (1)).
- (b) Method and rate of remuneration of practitioners (Reg. 7 (1)).
- (c) Rules with regard to the administration of medical benefit (Reg. 9). (Model Rules have been published by the Commissioners; vide SUPPLEMENT to BRITISH MEDICAL JOURNAL of October 5th, 1912, p. 372.)
- (d) Fixing, varying, or abolition of an income limit (Reg. 14 (2)).
- (e) Revision of prices of drugs and appliances (Reg. 35).

(ii) It has a right to make to the Commissioners, and to have considered by them, representations regarding any arrangements as to medical benefit submitted by the Insurance Committee to the Commissioners for approval (Regs. 8 to 11).

It is doubtful whether the Local Medical Committee could appeal to the Commissioners as regards the income limit. The statement as to income limit is to be furnished "for the information of the Commissioners," but apparently not for their approval. The Local Medical Committee must, however, be consulted by the Local Insurance Committee as above-mentioned, and the Commissioners must consider any representations made by the Local Medical Committee as to any arrangements "submitted" to them.

(iii) It has the power—

(a) To dispute the right of any insured person to receive medical benefit under the arrangements made by the Insurance Committee, on the ground of income limit (Reg. 14 (4)).

(b) (and, upon representation made to it by the Pharmaceutical Committee, the duty) of investigating into the question of whether the drugs or appliances ordered by any practitioner or practitioners on the panel are excessive in character or amount, and reporting thereon to the Insurance Committee (Reg. 46).

(c) To cause, by making representations to the Commissioners that the continuance of a practitioner on the panel will be prejudicial to the efficiency of the service, an inquiry to be made by the Commissioners on the subject (Reg. 54 (1)).

(d) To cause, by making representations to the Commissioners that the inclusion or continuance on the list of a chemist or other person will be prejudicial to the efficiency of the service, an inquiry to be made by the Commissioners on the subject (Reg. 56 (1)).

(e) To determine, in consultation with the Insurance Committee, what records, if any, additional to such simple records of disease and treatment as may be required as conditions of the payment of any Parliamentary grant, shall be kept by practitioners (1st Schedule, 8).

(iv) It appoints three of the seven members of the Medical Service Subcommittee, to which Subcommittee not only shall all complaints stand referred, but to which "any other question arising with reference to the administration by the Insurance Committee of medical benefit may be referred" (Reg. 52 (1) and (2)).

(v) It has a right to be represented at any inquiry before the Medical Service Subcommittee (Reg. 52 (4) (c)) or at any inquiry before the Enquiry Committee in which it is concerned (Reg. 54 (4)).

(vi) It has the duty—

(a) of considering any complaint by a practitioner on the panel against any other practitioner on the panel involving any question of the efficiency of the medical service of insured persons, and may apply to the Commissioners to remove the name of the practitioner against whom complaint is made from the panel, or may take such other action as it may deem proper in the circumstances (Reg. 53).

(b) of considering, on reference by a practitioner on the panel, any question as to whether an operation or other service is comprised in the treatment which he has by the agreement undertaken to give, and, if possible, coming to an agreement on the subject with the Insurance Committee, and failing such agreement, to be heard by the Referees, to whom the matter will be referred (Reg. 55 (1)).

RIGHT TO INSERTION OF NAME ON PANEL.

WE have received copies of a correspondence which has passed between Dr. T. Ridley Bailey of Bilston (Chairman of the County of Stafford Medical Committee) and the County Insurance Committee. It appears that Dr. Bailey forwarded on January 3rd a signed and stamped agreement to the Clerk of the Staffordshire Insurance Committee accepting service under the Insurance Act. On January 6th Dr. Bailey received a letter signed by Mr. George E. Brown, as Chairman of the "County Medical Benefit Committee," informing him that the panel had been closed on December 31st, but that a supplementary panel would be issued to include the names of all doctors who had applied between December 31st, 1912, and 10 a.m. on January 6th, 1913. The letter went on to inform Dr. Bailey that his name would be on that supplementary list "subject to all the doctors whose names are on the first panel agreeing." Holding that this claim of the Com-

mittee to impose any condition before accepting his name was illegal and *ultra vires*, Dr. Bailey at once referred the matter to the Insurance Commissioners, who in a reply dated January 10th stated:

Doctors applying to be placed on the panel at any time are entitled to have their names placed upon the lists republished by the committee after their application, and the inclusion of their names on any such republished list does not require any such consent as that indicated.

Further correspondence then ensued, from which it appears that the Staffordshire Insurance Committee published on January 13th in the local press a list of the first panel, from which Dr. Bailey's name was omitted, although the names of four or five other practitioners who had signed and forwarded agreements at the same time or later than Dr. Bailey appeared in this list. In concluding a letter addressed to the Clerk of the Staffordshire Insurance Committee on January 17th, Dr. Bailey wrote:

The matter is of such supreme importance to insured persons as affecting their right to "free choice of doctor," and concerns the community in regard to the impartial and independent administration of public business by public authorities that I am forwarding this correspondence to the press.

It appears, from a letter of January 16th from the clerk to the Committee, that Dr. Bailey's name was inserted, or was to be inserted, in a supplementary list issued on January 16th. With the observations quoted from Dr. Bailey's letter of January 17th we entirely agree. It is, as he says, most important in the public interest that no attempt should be countenanced to strain the provisions of the Act to the disadvantage of members of the profession who may have incurred the displeasure of any members of an Insurance Committee by their criticisms of the Act.

OFFICIAL PUBLICATIONS.

ADMINISTRATION OF SICKNESS AND MATERNITY BENEFITS.
The Insurance Commissioners have issued a *Handbook to the Administration of Sickness and Maternity Benefits by Approved Societies*, which is intended "to provide in a convenient form a summary of the information which must be in the possession of officials of approved societies to enable them to deal with the various matters which will arise in the course of their work." It begins with a summary of the routine duties of the secretary of a society and then deals at length with the proper entering up of the various classes of members in the membership register and the issue and verification of the appropriate contribution cards. The general conditions on which sickness benefit may be given are described for all the classes of members. Maternity benefit is next described in a similar way and full directions given for dealing with claims for either of these benefits. Special attention is given to the keeping of the society's accounts, investments and expenditure on administration, and various questions relating to the acceptance of members, transfers and withdrawals, rules and meetings of the societies, are dealt with. The complicated questions that may arise with regard to married women, and the special classes of insured persons are set forth with full explanations and a series of "Summary Tables" show the contributions, benefits and waiting periods for each class.

The book also contains a reprint of several circulars which have been issued separately by the Commissioners, and one of these (Circ. A.S. 73) dealing with maternity benefit, sets out some points of interest to medical men. It alludes, for instance, to the model rule of approved societies under which a society may require a woman in respect of whom maternity benefit is payable to be attended at her confinement by a medical practitioner or a certified midwife. Where a society has adopted this rule, fines may be inflicted on any member who breaks it, or, while allowing the mother to exercise her legal right to choose the doctor or midwife, the society may pay the fee of the doctor or midwife out of the 30s. benefit, and only hand the balance over to the insured person in cash or in kind. The proper application of the 30s. when the mother is in a hospital is described, but already the handbook is not quite up to date, as it does not contain the provisional regulations of the Commissioners prescribing the fee to be paid to doctors summoned to the assistance of midwives in accordance with the rules of the Central Midwives Board.¹ Circular A.S. 75 is also quoted dealing with questions that arise under medical benefit. Referring to Clause 15, 2 (c) of the Act, which deals with persons who were members of friendly societies on December 16th, 1911, but who were not eligible to become insured because on July 15th last they were either over the age of 65 or permanently disabled, it is pointed out that the Act gives the societies, if they so desire, the right to claim from the doctors on the panel medical attendance for these persons on the same terms as those arranged for insured persons. The circular then makes the following statement:

This is, however, an option granted to societies, and the Act does not make it obligatory on a society to avail itself of this provision, nor does it either expressly or by implication require any payment made by a society in respect of this treatment to be on the same scale as in the case of insured persons, if the society can obtain treatment at a lower rate.

This interpretation of the Act by the Commissioners is distinctly open to doubt, and at any rate the essence of

the understanding between the British Medical Association and the friendly societies, when this section of the Act was agreed on, was that the doctors on their side agreed to give medical attendance to these persons and the societies agreed to pay for it, on the same terms as were arranged for insured persons. The insured are not allowed to contract out so as to get medical attendance at a lower rate than the panel receives, and exactly the same ought to apply to the persons mentioned in Clause 15, 2 (c). It would, however, appear that the official view at present is that the doctors may be held to their side of the bargain but the societies may escape their side.

COLLIERY AND WORKS PRACTICE.

SEVERAL correspondents have asked whether any deductions could be made from the 7s. grant for the maintenance of hospitals and nurses. We have every reason to believe that such a deduction cannot be made.

With regard to the question as to whether the poundage systems which exist in several colliery districts could be converted under Section 15 (4), commonly known as the Harmsworth amendment, into a whole-time service whenever and wherever such a change might be found convenient by the Insurance Committees and Commissioners, we have been informed that such a change could not take place.

We have been asked also whether, under Section 15 (4), it would be possible to institute a committee, in cases where one does not already exist, for receiving the money from the colliery company and then handing it over to the doctors. We are advised that in all probability such a new committee would be illegal.

The exact meaning of the application of Section 15 (3) appears to be a matter in which there is a good deal of difference of opinion, and it is very probable that it will require the decision of a court of law to settle definitely the interpretation of this subsection.

REPORTS OF LOCAL ACTION.

FINSBURY.

At a general meeting of the Finsbury Medical Society on January 22nd, a resolution was unanimously adopted requesting those members of the society who had placed their names on the panel before the abrogation of the British Medical Association pledge, and so contributed to the temporary defeat of the profession, to resign their membership of the society.

MIDDLESEX.

The following resolutions were adopted at a meeting of the Middlesex County Medical Committee held on January 21st:

Local Medical and Insurance Committees.

Proposed by Dr. SODEN and seconded by Dr. BLUETT:

That this Committee claim from the Insurance Commissioners statutory recognition under the Act.

This was carried unanimously.

On the motion of Dr. WILLIAMS, seconded by Dr. BLUETT, the following was carried unanimously as a rider:

And ask for power to appoint two members on the Middlesex Insurance Committee.

Proposed by Dr. SODEN and seconded by Dr. BRACKENBURY:

That each Provisional Medical Committee shall elect one member as "correspondent," whose duty shall be to inform the other Divisions, through the Honorary Secretary of this Committee, of any resolution passed or action taken by his Division which in any way affects the interests of the other Divisions of Middlesex, and that the Honorary Secretary of this Committee be instructed to request the Local Medical Committees of all the adjoining insurance areas to cooperate in a similar manner.

This was carried by 13 to 0.

COUNTY OF CHESHIRE.

Provisional Medical Committee.

The fourth meeting of this Committee was held on January 21st at the Onward Buildings, Deansgate, Manchester. Dr. GARSTANG was in the chair, and twenty-three members out of a total committee of thirty were present. After a general discussion, it was unanimously resolved:

¹ SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL, JANUARY 18th, p. 80.

That the profession should be relieved from the enormous amount of clerical work involved by the National Insurance Act; that there should be no repetition of the signing of cards at the end of the three months' trial period.

Incidentally it was mentioned that before the receipt of the sheets for the return of names of patients accepted many patients' cards had been signed, but that no record had been kept of them.

Dr. P. R. Cooper (Altrincham) and Dr. J. B. Hughes (Macclesfield) were elected by a unanimous vote to represent the medical profession on the County Insurance Committee. The committee also unanimously nominated Dr. Thomas Watts (Hyde) and Dr. Gray (Crewe) as the names of medical men to be submitted to the Insurance Commissioners for their appointment to the Insurance Committee; and Dr. Pictou (Holmes Chapel) and Dr. McIntyre Brown (West Kirby) as the names of medical men to be submitted by the Chairman to the Cheshire County Council for appointment to the Insurance Committee.

As the medical members of the District Insurance Committees the following have been elected by the profession of the several areas:

Congleton.—Dr. Fern.
Crewe.—Dr. Gray.
Dukinfield.—Dr. Robertson.
Hyde Borough.—Dr. J. Bennett (Hyde).
Macclesfield.—Dr. Marsh.
Stalybridge.—Dr. Howie.
Altrincham and Bowdon District.—Dr. H. Cooper.
Bebington and Neston District.—Dr. Grant.
Congleton Rural Area.—Dr. Bennett (Sandbach).
Hoyle and West Kirby District.—Dr. McIntyre Brown.
Knutsford and Wilmslow District.—Dr. L. Fennell (Knutsford).
Lymm and District.—Dr. Burrowes.
Macclesfield and Hayfield Rural District.—Dr. Maine (Bollington).
Nantwich and Area.—Dr. Matthews.
Northwich and District.—Dr. Manwaring-White.
Sale and Ashton-on-Mersey District.—Dr. Adolphe Renshaw.
Tarrin District.—Dr. Moreton.
Malpas District.—Dr. Phillips.
Winsford and Middlewich District.—Dr. Hector Leak.

The names selected to represent the profession of the Wallasey Borough (of which the latter is entitled to two) and of the Ashton-under-Lyne and Stockport, the Chester Area (rural), the Runcorn Rural, and the Runcorn Urban Districts have not yet been received.

Drugs.

A subcommittee consisting of the following members was appointed to deal with the revision of and additions to the proposed drug list as issued by the Pharmaceutical Society: Drs. Hodgson, Marsh, Clarke, Matthews, and Pictou.

This subcommittee held its first meeting on January 26th, at Dr. Hodgson's house at Crewe, all the members being present. Five drugs were starred, implying that they were to be physiologically standardized. The qualities of the drugs were specified in a number of instances. A considerable addition was made to the list. A note was made that the dressings should be supplied in small sealed packages, and picric acid gauze should be added, amongst other things, to the list of "appliances," and also some leg splints.

On the motion of the SECRETARY, it was resolved:

That the Insurance Committee should be requested to lay down definitely the principle that in rural areas where the doctors dispensed the payment should be by the full 9s. capitation fee, as stated in Reg. 47.

Administration of Medical Benefit.

Dr. PERCY COOPER drew attention to an important series of points touching the rights, privileges, and duties of the medical profession in connexion with the insurance service. He advocated off-duty times, facilities for the appointment of a locum tenens, endowment of the means of locomotion—free trains and trams for doctors on duty and duty-free petrol.

On the motion of the CHAIRMAN it was agreed that these objectives should be borne in mind by the Committee in the negotiations of the future.

SCOTLAND.

THE VOLUNTARY HOSPITALS.

The Royal Infirmary, Edinburgh.

As was perhaps to be expected, January 15th did not pass at the Royal Infirmary without some friction developing

in connexion with medical benefit under the Insurance Act. A workman applied for treatment on account of a slight injury to a finger received in the course of his work; the injury was regarded as trivial, and the man was informed that he should go to the insurance doctor for attention. The man's fellow-workmen took umbrage, and decided to discontinue their contributions to the funds of the infirmary pending inquiry. Inquiry was made, and the doctor who saw the man gave his account of the matter, with the result that the superintendent of the hospital (Sir Joseph Fayrer, Bart.) was able to send a full explanation of the circumstances to the firm in question. We now learn that the workmen have again considered the matter, and have agreed to continue their contributions to the infirmary as in the past. This is satisfactory so far as it goes, but there is appended to it a rather curious rider:

The men consider that some method should be adopted to ensure that no workman who requires treatment at the infirmary will be rejected, and they agree that the following will be the best way to attain this end: In the case of a workman meeting with an accident he will receive first aid here as usual, and be furnished with a ticket giving his name and place of employment, and an indication that in the opinion of the ambulance staff the case is one for treatment by the infirmary.

It will be interesting to note how this system works—if, that is to say, the infirmary managers accept it. It is conceivable that the ambulance staff at the works and the surgeons at the out-patient department to the infirmary may not apportion the like amount of gravity to each injury which may occur. The questions of urgency and emergency are evidently going to play no small part in the working of the hospitals in relation to the Insurance Act.

Glasgow Royal Infirmary.

At a meeting of the governors of the Glasgow Royal Infirmary held on January 20th, resolutions were adopted in substantially the same terms as those previously adopted by the Western and Victoria Infirmaries, and reported in the SUPPLEMENT last week.

SCOTTISH MINERS AND MEDICAL ATTENDANCE.

At a meeting of the executive of the Scottish Miners' Federation held in Glasgow on January 24th, reports regarding medical attendance on the dependants of workmen at the collieries were considered. It was stated that in some districts doctors were not carrying out the recommendations from the joint meetings of coalowners, miners, and doctors. The executive agreed that, with the consent of the workmen at the collieries concerned, in the event of the doctors continuing their present attitude, they would arrange for doctors in order to secure adequate medical attendance.

The Stirlingshire Miners' County Union has completed arrangements with the employers in the county for insuring the wives and families of all miners who come under the Insurance Act. The scheme which has been adopted is for the purpose of providing medical attention and medicine to miners' families, the funds for this purpose being raised by a contribution of 2d. per week, which will be deducted from the wages of all insured workers. A lower scale of contributions has been fixed for those who desire medical attention only.

EDINBURGH.

Humours of the Working of the Act.

The early days of the application of medical benefit in Edinburgh have not been without some humours, albeit of a somewhat sad kind. One doctor told a *Scotsman* representative that he had not been called upon to pay many visits, but he had given numerous consultations; some insured persons had come to be put on his list, but, not wishing evidently to make two bites of a cherry, had seized the opportunity of getting a consultation at the same time. Many people who had had influenza at some period anterior to January 15th had called for a tonic; "they wanted their money's worth." The giving of prescriptions in triplicate was a nuisance, most doctors being unaccustomed to working with carbons. Another doctor, in Dundee, had been working out the rate of remuneration he was receiving, and had found it to be on an average 4½d. a visit or consultation. A curious case is reported from Bathgate in which an employed person under 21 years of age receiving a small wage of 1s. 6d. a week is found to be bound to pay 3d. a week and her employer the same;

when she is 21 years old her liability will cease, and her employer's become 5d. This seems "pretty strange," as Pepsys would have said.

IRELAND.

MEDICAL CERTIFICATES UNDER THE INSURANCE ACT.

At its last meeting the Dublin Clinical Hospitals Standing Committee considered the question of granting certificates to hospital patients for insurance purposes, and decided that a charge of 2s. 6d. should be made for each certificate, provided it was found that this fee was not deducted from the patient's sick benefit money. That the senior member of the staff in charge of the case should sign the certificate, and that the fees obtained for the certificates should be pooled for the benefit of the medical staff of the hospital. It was also decided that the doctors of friendly societies should not be allowed to enter the hospitals for the purpose of seeing and giving certificates for insured patients who are under treatment. In connexion with sanatorium patients it was decided that 5s. a week should be paid to the medical man in charge of each tuberculous patient admitted to a general hospital for sanatorium benefit. As stated recently, with one exception the Dublin hospitals have not yet been recognized as capable of providing this sanatorium benefit, but steps are to be taken to have the hospitals recognized for this purpose.

MEDICAL ATTENDANCE.

The following resolution was passed by the Conjoint Committee of the British Medical Association and the Irish Medical Association at a meeting held in Dublin last week:

This Committee regrets the decision of the Dublin Borough Medical Committee to give attendance to a man, his wife, and children for 7s. 6d. per annum, including medicines. The Conjoint Committee believe it is impossible to give an honest or efficient service at the terms suggested, and that, therefore, the public health will suffer.

DUBLIN INSURANCE COMMITTEE.

At the last weekly meeting of the County Borough of Dublin Insurance Committee it was decided that cases of dependants of insured persons should in future be considered for sanatorium treatment. A resolution was passed, calling for immediate steps to be taken to secure the extension to Ireland of the medical benefits under the National Insurance Act, and that copies of the resolution should be sent to the Prime Minister, to the Chancellor of the Exchequer, the Chief Secretary for Ireland, the Insurance Commission, the leaders of the Irish parliamentary parties, and the press.

LONDONDERRY COUNTY COUNCIL AND TUBERCULOSIS SCHEME.

For some time past the Londonderry County Council has been in communication with the Local Government Board regarding the formation of a tuberculosis scheme for the county. The Local Government Board in their last letter requested the council to appoint a medical superintendent for the proposed county tuberculosis dispensary, and advised them to levy a rate of 1d. in the £ for the coming year's expenditure under the Tuberculosis Act. The matter was discussed, and the opinion expressed that, though they were willing and prepared to undertake the financial burden of one half of the cost of providing treatment for the dependants of the insured, and also of non-insured persons, it was not equitable that they should be asked to bear any proportion of the cost of giving treatment to insured persons. A notice of motion to this effect was handed in, and the meeting adjourned.

INSURANCE ACT IN PARLIAMENT.

ADMINISTRATION OF MEDICAL BENEFIT.

Contracting Out.

MR. WATT asked the Secretary to the Treasury, on January 22nd, what steps he proposed to take to permit of insured persons making use of the services of their own doctor in the case where the doctor had conscientious objections to going on the panel.—Mr. Masterman replied that he did not understand to what kind of objection the question referred.

Mr. Watt also asked the Secretary to the Treasury whether his attention had been called to posters, leaflets, and pamphlets, issued and signed by medical practitioners in Scotland, dealing with the administration of the National Insurance Act, and advertising the terms on which they were willing to perform outside the panel similar duties to those undertaken by doctors on the panel in respect of insured persons; and, if so, whether it was proposed that payment be made from State funds to those doctors.—Mr. Masterman said that the answer to the first part of the question was in the affirmative. No contributions from insurance funds towards the cost of the medical treatment of persons who were attended by doctors not on the panel would be made except under the conditions stated in his answer to Mr. Cassel on January 6th (SUPPLEMENT, January 11th, p. 37).

Sir J. D. Rees asked, on January 22nd, whether it was laid down by Section 18 (1) of the National Insurance Act that a mother was to have free choice of doctor and midwife for her confinement; and, if so, whether he would explain why the Commissioners have issued Circular A.S., No. 73, paragraphs (1), (2), and (3), in which it was proposed that a limited list of doctors and midwives should be provided with whom the society administering the benefit had previously made arrangements, and that the mother should forfeit maternity benefit if she refused to employ one of such listed practitioners or midwives; and whether that circular had the approval of the Government, seeing that it did limit the choice of doctor and midwife.—Mr. Masterman said the provision in question was expressly recited in the second paragraph of the circular referred to. The circular did not contain, explicitly or by implication, any such statement as that which the hon. member attributed to it.

Mr. Touche asked, on January 27th, (1) what course an insured person ought to pursue when he had incurred expense by obtaining treatment from a doctor not on the list, and had failed to receive any reply to repeated applications to the Insurance Committee for permission to contract out, and was so placed that it was a matter of urgency to him to ascertain how far the expenses he had incurred and might incur would be met by the Insurance Committee; and whether the Government was aware that many insured persons in London were in this position; (2) whether an insured person under the National Insurance Act was acting in accordance with the instructions printed at the foot of the medical ticket issued by the Insurance Commissioners if he returned that ticket to the Insurance Committee with his application for permission to contract out, or whether he should only forward it when he had actually incurred the expense towards which he was claiming a contribution.—Mr. Masterman said that the National Insurance Act contemplated that permission to an insured person to make his own arrangements and receive a contribution towards the cost from the Insurance Committee would only be given in special circumstances. Insured persons were therefore not entitled to assume that their applications could be granted, and if in these circumstances they chose to incur expense by obtaining treatment from a doctor not on the panel they must be prepared to take the risk of receiving no contribution if their application were not acceded to. The medical ticket should be retained by the insured person until the Insurance Committee had directed him to forward it to them.

Sir C. Kinloch-Cooke inquired if the reply was not in direct conflict with what the Chancellor of the Exchequer said the other day.—Mr. Masterman replied in the negative, and added that it was a direct carrying out of the Act.

Choice of Doctor.

Mr. Orde-Powlett asked the Chancellor of the Exchequer, on January 27th, whether he was aware that an official of an assurance company was advising insured persons to select one particular doctor; that it was only after repeated inquiries that he admitted that they could choose for themselves; whether such a proceeding was in accordance with the regulations of the Insurance Commissioners; and whether he had sanctioned such a practice.—Mr. Masterman said that if a case were substantiated of an insured person being deliberately misled into thinking his choice of a doctor on the panel was in any way fettered the Commissioners would take a serious view of such

conduct, and would take the appropriate action with regard to all persons found to be responsible for it.

Mr. Newman asked the Secretary to the Treasury, on January 27th, whether he was aware that a majority of insured persons had failed to take steps to be placed on the list of any approved medical practitioner on the panel in their district, and that their failure to do so would be attended with discomfort and danger to themselves in the event of sudden illness or other emergency, and inconvenience to the medical practitioners on the panel; and whether the Insurance Commissioners would direct the Local Committees to notify insured persons of the obligation imposed on them to forthwith apply to be placed on the list of a medical practitioner on their local panel.—Mr. Masterman said he had no information to suggest that insured persons were not taking the necessary steps to select a doctor from the panel who would attend them in case of illness. All the evidence in his possession showed that not only the sick, but persons in good health had come with quite unexpected alacrity to have their names registered by panel doctors to be their patients in the event of possible future illness.

Panel Doctors' Agreements.

Mr. R. Gwynne asked the Chancellor of the Exchequer, on January 29th, if he would state which, if any, Insurance Committees had permitted doctors to join the panel and limit, by their agreements, the number of insured persons to be treated by them to those whom they agreed to treat without having others assigned to them.—Mr. Masterman said that the conditions under which insured persons in each area might be allotted to the doctors on the panel were laid down in Section 15 (2) (d) of the Act and the regulations of the Commissioners. It was within the discretion of the Insurance Committee, subject to those conditions, to make such arrangements as would limit the number of persons for whose treatment any particular doctor would be responsible. He was not aware which Insurance Committees had made arrangements with doctors on the panel granting such limitations.

Panel Doctors' Clerical Work.

In reply to Mr. Fell, who asked, on January 29th, whether the clerical work imposed upon panel doctors could not be carried out in some other manner, Mr. Masterman said that the Insurance Commissioners were anxious to receive suggestions from doctors on the panel for simplification or improvement of the methods of keeping records and returns. Inquiries were being carried out by officials of the Commission in various districts.

"Closing" Panels.

Mr. Bowerman asked the Chancellor of the Exchequer, on January 23rd, whether, where a panel of doctors was incomplete, it was the intention of the Insurance Commissioners to allow practitioners who had their names on the panel to undertake to engage a sufficient number of assistants so that the incomplete panel might become a complete one, and then to close the panel; or whether it was intended never to close panels, so that it might always be open to doctors to enter their names?—Mr. Masterman said that the course suggested in the first part of the question might be adopted in any area where the panel was inadequate, and where, therefore, other arrangements had to be made under the proviso to Section 15 (2) of the National Insurance Act. But, as a matter of fact, it had not yet been adopted in any case. Where the panel was inadequate it was always open to any duly qualified medical practitioner to join it.

The Panel in London.

In reply to Sir J. D. Rees, Mr. Masterman said that a revised list, which would include over 300 additional names of practitioners who had applied to be put on the London panel since the publication of the first, would be issued this week.

Appointments in the Isle of Ely.

In reply to Mr. Worthington-Evans, who asked where Dr. Morgan and Dr. Dimmock had practised prior to their appointment under the National Insurance Act in the Isle of Ely, Mr. Masterman said that Dr. Morgan had practised in London and Dr. Dimmock had held hospital appointments in London and the provinces. The Insurance Commissioners, upon the application of the Isle of Ely

Insurance Committee and after inquiry, had been satisfied that the number of doctors in two districts was not such as to secure an adequate medical service, and had authorized the Committee to make special arrangements under which one doctor in Chatteris and three in Wisbech had undertaken complete responsibility for all the insured persons in those districts. Mr. Worthington-Evans then asked whether the panel system had been superseded in the district, and, if so, whether the supersession had been made by the Insurance Commissioners or the Insurance Committee.—Mr. Masterman said that the panel system, the list system, under Clause 15 of the Act had been suspended. The scheme put forward by the Insurance Committee had been accepted by the Insurance Commissioners, but he was unable to say for how long a period the arrangement had been entered into.

Remuneration of Medical Practitioners.

Mr. Newman asked, on January 27th, if the yearly remuneration or allowance due to a medical practitioner under any regulation made by the Insurance Commission in respect of any insured person who might apply and be accepted by him to be entered on his list, was held to date from January 15th, or the date on which the medical practitioner agreed to accept such insured person, or from the date on which he first professionally was required to attend on such person?—Mr. Masterman replied that payment was due in respect of the period commencing January 15th or whatever later date the doctor joined the panel. In reply to a further question, he added that the doctor was paid from the time he took responsibility. He was not paid before that time.

Women Doctors on Panels.

Mr. Snowden asked the Chancellor of the Exchequer, on January 22nd, how many women doctors had joined the insurance panels; and if insured women, who desired to be attended by a woman doctor where there was a resident woman doctor, but where no woman doctor was on the panel, could make their own arrangements with the woman doctor and receive the equivalent grant from the approved society.—Mr. Masterman said he could not answer the first part of the question until an examination had been made of the panel lists of 196 different committees, and he did not feel that the labour would be justified at the present time seeing that additional doctors were joining the panels every day. With regard to the second part of the question, it would be the duty, in the first instance, of the Insurance Committees upon application to consider the circumstances of each particular case.

Change of Residence of Insured Person.

Mr. John Ward asked, on January 27th, how the Insurance Commissioners proposed to allocate to the rural districts where he temporarily resided the medical contribution of an insured workman who changed his place of abode on an average of four or five times in a quarter. would the approved society have to notify the change of residence each time to the Local Insurance Committees or would it be sufficient to notify only that Local Insurance Committee where the approved member resided at the beginning of each quarter?—Mr. Masterman said that arrangements for the necessary notifications and adjustments of contributions in the special class of cases referred to were now being completed.

Week Ends and Holidays.

Mr. Masterman, as Financial Secretary to the Treasury and Chairman to the Joint Committee of Insurance Commissioners, has been peppered with questions about the administration of medical benefit under the Insurance Act, which he has answered with much skill and for the most part with good temper, although he has not always given the information asked for. On Tuesday he was presented with two conundrums: one was the case of a young man whose business was at Gravesend, but who spent his week ends at Chatham. Mr. Masterman was asked from which place the insured person should procure medical aid if taken ill, or whether he could claim medical attendance in both places. The reply was that he could not choose a doctor on the panel in both but only in one or other neighbourhood; if, having made his choice in one area, he fell ill in the other, he would have to notify the Committee, and the Committee would then have to make arrangements for his attendance by another doctor. This answer

seems tantamount to an admission that this special condition had not been foreseen. The other case put was that of a domestic servant whose employer lived part of the year in one place and part in another, and the answer was that the servant would have to notify the Insurance Committee in either area on the occasion of each change of address.

Aged Members of Approved Societies.

Mr. Worthington-Evans asked, on January 22nd, whether, in view of the fact that under Section 15 (2) (c) of the National Insurance Act there was an obligation on the Insurance Committees to provide medical benefit for old members of friendly societies who did not become insured persons on the same terms of remuneration as those arranged for insured persons, he would say whether arrangements were being made by the Insurance Committees to provide medical benefit for old members of friendly societies who did not become insured persons; whether those members would be charged not more than 6s. for their medical benefit; and whether the additional 2s. 6d. would be granted in respect of them.—Mr. Masterman replied that the answer to the first part of the question was in the affirmative, and to the second and third parts in the negative. The arrangements made gave an option to societies, and were not obligatory upon them. He had no evidence to show that the fact that doctors on the panels were receiving a larger remuneration than hitherto in respect of insured persons was necessitating an expenditure upon uninsured persons of a much higher fee than that for which they had been treated in the past.

Death of an Insured Person.

Major Gastrell asked the Secretary to the Treasury, on January 27th, whether his attention had been called to the circumstances of the death of Frederick Richard Townsend, an insured person under the National Insurance Act, and to the verdict of the jury who inquired into the cause of death, when the jury referred to the scandalous amount of clerical work required of a panel doctor; and the coroner, in summing up, said that the man's life ought to have been saved if the doctor, owing to his work, had not been prevented from examining the case, and what steps would be taken for limiting the number of insured persons any one doctor might agree to treat?—Mr. Masterman said that he was informed that the London Insurance Committee were conducting an inquiry into the allegations made at the inquest in the case referred to, that the amount of work imposed upon the doctor in attendance upon the patient by the Insurance Act, the regulations made thereunder, and the arrangements of the Insurance Committee were such as to preclude the doctor from a proper examination of or attendance upon his patients. Until that inquiry was completed, it would be improper for him to make any statement on the subject.

Major Gastrell asked if compensation would be paid to the relatives of the deceased, but Mr. Masterman said that the inquiry was more or less of a judicial nature, and he could not make any statement before receiving the report.

Postal Medical Officers.

Mr. Glazebrook asked the Postmaster-General, on January 22nd, whether his attention had been called to a circular issued by the Post Office authorities on December 31st, 1912, to medical officers of post offices to the effect that the conditions of their service hitherto in force would be superseded by the arrangements for medical benefit under the National Insurance Act; whether he was aware that a further circular was addressed to the same medical officers by the same authorities on January 13th, 1913, stating that the Insurance Commissioners were prepared to recognize the Post Office medical system as an institution in the sense defined by Section 15 (4) of the National Insurance Act, and indicating that the effect of this would be that, contrary to the statement of December 31st, the conditions of service of Post Office medical officers would continue as before, the only difference being that Post Office officials would, if they applied to exercise their right of free choice of doctor, be able to receive their medical benefit from another doctor, provided he was on the panel; would he say what was the object of sending

these contradictory circulars; and whether the intention of applying for the recognition of the Post Office medical system as an institution was only conceived between the dates of the two circulars; and was the object of the first circular to force the Post Office medical officers to join the panels under the impression that the Post Office medical system, and with it the appointments thereto, was at an end?—Mr. Herbert Samuel said that in the circular of December 31st, 1912, Post Office medical officers were informed that the approval of the Insurance Commissioners was being sought for the Post Office medical system; and they were told that, if such approval were not forthcoming, insured Post Office servants would be limited in their choice of medical attendants to doctors on the panels. In the circular of January 13th medical officers were informed that the Insurance Commissioners were prepared to approve the Post Office medical system. He saw no contradiction between the two circulars. The answer to the last two parts of the question was in the negative.

Dispensers.

Several questions have been addressed to the Secretary of the Treasury raising the question of the position of persons who had been acting as dispensers to doctors, or having so acted are now employed as dispensers in shops, stores, etc., but were, it was alleged, precluded from going on the panels of persons authorized to supply drugs and appliances.—Mr. Masterman said that the Act gave effect to the pledge given on August 2nd, 1911, that no person should become disqualified for dispensing medicines through the passing of the Act. The conditions under which persons were allowed to arrange with Insurance Committees to supply medicines requiring dispensing, to dispense medicines for other persons or firms who were supplying them, and to supply drugs not requiring dispensing and appliances respectively, were laid down in explicit terms in Section 15 of the National Insurance Act, and in the other Acts determining the conditions under which medicines were supplied, and the Commissioners had no power to alter them by regulations. In reply to further questions, Mr. Masterman denied that any qualified dispenser was deprived of his living under the Act. On the contrary, he said a large number of persons not qualified got special qualifications under particular clauses of the Act.

Purveyors of Drugs and Medical Appliances.

On January 28th Mr. Newman raised the question as to a case in which on the list of firms from whom drugs and medical appliances could be obtained for insured persons was the name of a woman whose sole qualification was that of being a registered midwife.—Mr. Masterman said that the fact that the person was a registered midwife would not disqualify her from supplying drugs; she could not dispense drugs unless qualified under the Pharmacy Act.

Provision of Medical Attendance.

In reply to Mr. Grant, Mr. Masterman said on January 27th that he was not aware of any cases in which approved societies had failed to issue medical tickets to their members who were entitled to them, or that hospitals were refusing to give treatment to persons who were not in a position to apply for it under the Act, on the ground that they were insured.

MEDICAL MEMBERS OF INSURANCE COMMITTEES.

Sir J. D. Rees asked the Secretary to the Treasury on January 27th whether he was aware that, though the Rochdale Insurance Committee had been in existence for several weeks and medical benefit had actually been in operation for upwards of one week, the Commissioners had not yet issued the regulations necessary for the due election of the medical members of the Insurance Committee; and, if so, what explanation he could give of an omission so unsatisfactory to the medical profession.—Mr. Masterman said that when the Rochdale Insurance Committee was constituted, like the other Insurance Committees, in May last, the British Medical Association was invited to obtain from the medical profession throughout the country the names of medical practitioners suitable for appointment as representing the profession in each area, in the same way as central organizations representing approved societies obtained names of their representatives throughout the country. The Association

declined this offer, and in the ordinary course no new appointments would be made until new committees were appointed. The Commissioners had, however, decided to allow representation on the present committees, and were arranging for the election at the earliest possible date of direct representatives of the profession on the various committees, and also for the appointment of medical members of the committees by the county and county borough councils and the Insurance Commissioners.

MATERNITY BENEFIT.

Sir John Spear asked the President of the Local Government Board on January 23rd if persons entitled to maternity benefit under the National Insurance Act, and who would claim it in full, were entitled to midwifery orders at the hands of boards of guardians.—Mr. Burns replied that a person who was destitute was entitled to Poor Law relief. The question of destitution was one which must be determined by reference to the circumstances of each individual case.

SANATORIUM BENEFIT.

The Exchequer Grant.

Mr. Lloyd George has been asked several questions with regard to the Exchequer grant for the treatment of tuberculous persons, but has declined to give any answer until after he has seen a deputation of the County Councils Association. One of the questions by Mr. Charles Bathurst implied that in the county of Gloucester the amount available for the institutional treatment of insured persons from central funds was estimated to be £3,433 per annum, leaving a deficit of £3,933 to be found from other sources for insured persons alone, or including dependants £6,679, or including the whole community £8,738.

Cost of Erection of Sanatorium.

Mr. Birrell, in replying to a question by Mr. Swift MacNeill on January 23rd regarding the erection of a sanatorium by the Tyrone County Council for twenty-five to thirty patients at the total estimated cost of £1,200, stated that the Local Government Board in Ireland recognized that a sanatorium complete in all its details could not be erected at such a low figure as £40 a bed.

COST OF INSURANCE CIRCULARS AND LEAFLETS.

In reply to an inquiry by Mr. C. Bathurst on January 23rd, Mr. Masterman said that the total expenditure of the Stationery Office to date upon leaflets, cards, printed regulations, etc., in connexion with both parts of the National Insurance Act was £127,000. Sir J. D. Rees on the same day asked the Chancellor of the Exchequer from what source the funds were provided for circularizing the medical profession throughout the country in favour of working under the panel system and breaking the doctors' strike.—Mr. Masterman said that the only document issued to the medical profession by the Commissioners was the explanatory statement sent out on December 7th to all registered medical practitioners in Great Britain describing the medical arrangements under the Act and Regulations, which has been laid on the table of the House. In a written answer to another question on January 22nd by Sir J. D. Rees, asking how many circulars were issued to medical practitioners containing the letter of December 18th from the Chancellor of the Exchequer to the National Insurance Act Practitioners' Association, Mr. Masterman said that he had no information as to any circulation which the recipients of the letter in question might have given to it.

AMENDMENT OF THE ACT.

In reply to Mr. Fred. Hall, who asked on January 28th when it was proposed to introduce legislation to amend the anomalies of the Insurance Act as promised at the time of the Edinburgh election, Mr. Lloyd George said that, as the main benefits of the Act had only been in operation for barely a fortnight, it would be premature to make any statement of the nature mentioned. The Chancellor of the Exchequer having quoted the exact words he used in Edinburgh, Mr. Hall inquired if it had not already been proved beyond doubt that the Act required much alteration with regard to many questions, and particularly that of freedom of choice of doctor.—The Speaker here intervened, stating that a series of contentious matters should not be raised at question time.

CORRESPONDENCE.

[It is particularly requested that communications intended for publication should be written on one side of the paper only, and should be addressed to the Editor, BRITISH MEDICAL JOURNAL, 429, Strand, London, W.C.]

THE PRESENT SITUATION AND FUTURE POLICY.

DR. P. R. COOPER (Bowdon) writes: A majority of the medical practitioners throughout the country having agreed—albeit, in most instances, under stress of *force majeure*—to work the Act, at any rate during the provisional three months' period, the Representative Meeting has reluctantly released those of us who remained loyal to our pledges. For good or ill the medical profession is now launched upon contract practice on a far larger scale than ever existed before, and private practice—at all events amongst the working and lower middle classes—apparently is doomed. For this consummation we have to thank no one but ourselves. We have contracted with contract terms too long. There are too many amongst us, even of our leaders, who are evidently wedded to contract work, at least their support of the principle of a fair wage for work actually done, which one would have thought incontestable, has been so feeble-hearted that an honest and earnest opposition would have been far better for the cause.

In my opinion, apart from the numerical strength of the capitationists in the profession, the chief cause of our recent *débâcle* is the absence of reliable data for testing the true worth of the Government's offer. The Government, of course, many of its supporters, most labourists and socialists, and apparently also some doctors consider it "most generous," and speak of the "endowment of the medical profession"! They allow themselves to be misled by its face value. They forget that what is given with one hand is, to a large extent, taken away with the other. The only data at present available are from the reports of friendly societies, dispensaries, and the Plender report—none of which are in my opinion fair criteria of the conditions as they will be under the Insurance Act in its present form. The whole question hinges upon what fee we are really going to receive per unit of work done, and my chief object in writing is earnestly to ask every medical man who is working under the Act to take the trouble to ascertain this amount for himself. The calculation will not involve a great deal of extra trouble. He will have to keep a record of each item of attendance for the Insurance Committee, therefore he has only, for his own information, to price these (theoretically, of course) according to the scale of fees agreed to in the British Medical Association scheme—namely, 2s. 6d. for an "ordinary visit," 3s. 6d. for a "special visit," 5s. to 7s. 6d. for a "night visit," 1s. per mile over one mile for "mileage," 1 guinea each for anaesthetics, fractures and dislocations, poisoning cases, 1 to 3 guineas for operations, etc.

To ascertain the amount actually received per ordinary visit one deducts the total amount of all the above "extras" from the total capitation fees received, and divides the remainder by the number of ordinary visits paid. If this be done, at the end of the three months' period we shall be in a position to say *positively* whether or not we are being adequately paid for our work. Should the amount work out at anything near 2s. 6d. per visit, we may safely continue for another three months, as the spring months are usually somewhat lighter in morbidity than the winter months. But should we find, as I fear will be the case, that the remuneration works out at less than 1s. per ordinary visit—that is, after deducting legitimate "extras," then I say we must demand from the Government a higher capitation fee, or insist on payment for work done at a proper tariff of fees.

To those who think that the campaign is over, and that the doctors are hopelessly routed, I would say that the campaign has only just begun, and the loss of the first battle should only rouse us to renewed effort. We are fighting for the future of medicine in this country, and justice is bound to triumph in the end. The methods of the Chancellor are autocratic and mediæval in the extreme. Liberty is too sturdy a flower in the English garden to be trampled out of existence by the heavy heels of the doughiest of politicians.

Dr. GEORGE MCGREGOR (Southsea) writes: I think it can now be safely said that this contest is over, and that the medical profession can accept its most humiliating defeat with as good grace as possible. All the promised safeguards, all the ridiculous statements as to our cardinal points being obtainable by local bargaining, all the much talked of concessions are as so much chaff before the wind. The Local Insurance Committees, strongly backed up by the Commissioners, who, in turn, are the paid agents of the Chancellor of the Exchequer, have the medical men in their powerful grip, and evidently intend to hold them as close to the grindstone as possible without completely wearing them away. The Act is so framed that the laws are being made by the above-mentioned Commissioners, etc., as they go along, and no one can dispute them. The promise of free choice of doctor so magnificently dangled before the eyes of the public and the profession is, perhaps, the most empty of all the specious promises made. The statutory right of every medical man to go upon a panel is absolutely groundless. The concession (?) of 10 per cent. representation on Insurance Committees is so obviously absurd that one wonders that even any members of our profession could be dazzled by it. The Insurance Committees are practically made up of friendly society representatives, and we know enough of them in the past to be able to say how much bargaining will be allowed. In this town, at any rate, they have allowed the doctors on the panel to settle at what time of the day they will be in their surgeries to see insured persons and whether they will see them on Christmas Day and Good Friday, but beyond that bargaining will not be listened to. It is as plain as anything can possibly be that this Act is but the thin end of the wedge to bring into this great national medical club not only the workers over 16 years of age, but also their dependants of all ages, at the expense of the medical profession. When the present Chancellor of the Exchequer gets his next lease of power the national medical club will be completed, and the greater bulk of private practice will be a thing of the past.

This being so, is it not well for us to look for the cause of our defeat and then so perfect our organization that we shall be in a position to make a real defence against the attack on our liberty? The cause of the defeat is not far to seek. Our Association is undermined by those who were apparently with us in our just demands, but were all the time working for the enemy. And this undermining extends from the Divisions right to the very Council of the Association. The great act of treachery was started at the beginning of the fight by the action of some members of the Council, and they have worked against us in a subtle manner ever since. A large number of the rank and file, not to be depended upon at the best of times, were only too glad to seize upon some feeble promise of increased remuneration to panic and stampede many others. And worst of all are those who have used their professional brethren as a means to further their own political schemes and their hopes of some very doubtful form of reward.

We must have a Council formed of the men who will suffer most from these attacks, and not of men who know absolutely nothing of the real general practitioner's position, and who are the so-called influential members of the profession. Their influence is with the wrong people, and we have been their dupes, instead of being strongly and clearly led by them.

Let every member of the Association do his utmost to secure a Council which will be clean and straightforward, and also do his best to secure that the officials of his own Branch and Division shall be those men he most can trust. His votes must not be given in an offhand, casual manner, or perhaps neglected altogether; he must interest himself in the business of the Association, and so be able to watch and find out for himself who are the men who are for us and who are those against us, and thus secure by his votes the men most able to uphold our cause. We must devise some means of penalizing those rebellious members of the ranks which are to be found in every army—the malcontents and defaulters.

The next battle is not far distant, and already the enemy have started their organizations; let us see to it at once, or we shall sustain another and a much greater defeat.

Dr. W. D. GIMSON (Chelmsford) writes: I see in the BRITISH MEDICAL JOURNAL for January 18th Dr. Leper advocates reorganizing the British Medical Association on trades union lines.

I believe it would be far better to organize a medical trades union, apart from the British Medical Association. I do not believe the bulk of the profession have any confidence left in the British Medical Association as a fighting machine.

If it is possible for us to run a proper trades union with the rights or privileges of a trades union, there are many good men and true in Harley Street and that district who would be trustees for the funds, and I feel sure the profession would support the scheme. With regard to men who have given up club appointments at the call of the British Medical Association, surely these appointments would have ceased automatically with "free choice of doctor."

Dr. E. H. WORTH (Streatham) writes: Eighteen months ago the profession was thought to be the soul of honour. We demanded our cardinal points and signed a pledge, and at our meetings again and again stated that we would stand firm. The result of the last four weeks has been to drag the honour of the profession to the dust (we lied when we said we would stand by our pledge), and has left a great stain on our character which must be wiped out, or the profession can never again hold up its head. In April next we must demand over again the cardinal point of £2 a wage limit, and the right to contract out if desired. From my very soul I ask the profession to play the man, and not leave us where we are now, among the people whose word is not to be trusted.

Dr. G. TOTTENHAM POSNETT (London, W.) writes: Like many others, I have been driven, by economic circumstances over which I have no control, on to the insurance panel. Why? The answer is easy. It is because the British Medical Association has never had a "grip" of the profession, and consequently when the day of tribulation dawned the medical profession was faced with a campaign which could only end, as it has, in our Waterloo. I am not a member of the British Medical Association, but have always looked on it as the guardian of the interests of the medical profession at large, both members and non-members, until the present time, when I see it is incapable of adopting that rôle—incapable through lack of "grip" of its members and the profession. I quite concede that traitors within the council of any body are capable, as we have had only too much proof, of disintegrating the policy of that body. Look to it in the future that the Council contains no Trojan horse!

In the past the British Medical Association has erred in that it has done nothing for the medical profession; it has been purely concerned with science and the publication of an excellent journal, but, as I have said, it has done nothing. To be the power it should be, and must be in the future, it must be all in all to the medical profession—it must be capable of earning money to a considerable extent for the benefit of its members, and it must make itself so essential to the medical practitioner that no medical man will be able, in his own interests, to remain outside its membership. What can it do to consummate this idea? It must first of all alter its whole management, its present machinery must be "scrapped," and in its place a much more businesslike Board of Control established. Let the present Association be wound up voluntarily, and let a union on trade union principles take its place, or, if that be not possible under law, then let another association be formed with a much more elastic constitution. This matter should have immediate consideration and some very definite action taken within the next few months, as there will be more than enough for it to do, as the last word has not yet been said about the Insurance Act.

When the new association or union is formed, the following business bureaux should be established for the benefit of the members and the welfare of the profession.

No. 1. *Medical Agency.*—To supply reliable locum-tenents and assistants, and negotiate the sale and purchase of practices. The present medical agent business is carried on for the sole benefit of the proprietor of the

agency, and is most unsatisfactory to the medical profession in every way.

No. 2. *Medical Defence*.—This should be within the Association not without, as at present.

No. 3. *Life, Sickness, Accident*, and all other insurances through the Association. These could be arranged for through a good office which might be induced to take up present policies.

No. 4. *Debt collecting*, with interchange of information regarding patients between practitioners.

No. 5. *Clinical Research*.—Why should this be, as at present, in the hands of those making a business of it when it could legitimately be made to earn money for the Association—vide *Viroi*, etc.?

The above are plain business propositions, each one capable of earning a considerable annual sum of money which should be utilized to form a reserve fund for the protection of the members, to annually reduce premiums on life insurance, and possibly to provide superannuation allowances, and annuities for widows and orphans.

Members on whom the gods have smiled might also be induced to remember, when making their wills, that gifts to the Association would be for the material benefit of some of their less fortunate brethren.

CONTRACTING OUT.

Dr. W. COODE ADAMS (Hampstead) writes: Those who are now advocating the application of the contracting-out clause of the Insurance Act scarcely appear to have realized the almost cataclysmal effects which would result from such a policy, and therefore the utter impossibility for the Insurance Commissioners to even contemplate such a proceeding except in rare instances.

The principle underlying the Act is that of the British Constitution, that is, "No taxation without representation and control." To expect the public to pay insurance tax and then to remove the money thus collected out of the control of the representatives of the payers would be a distinct infraction of this principle and would not be tolerated for a moment.

The second point is that this contracting-out clause would be utilized by the friendly societies in order to regain the appointment and control of their old club doctor, who then indeed would be subject to "lay control" in its grossest form. The old bargaining would begin again with the old abuses which this Act has put a stop to, and, besides, would be a reversal of the policy the profession fought so hard for at the commencement of the campaign—namely, "freedom from friendly society control." This attempted reversal by the Representative Meeting in December did more to hurry men on to the panel than anything else. We who did so felt then that all which the profession had gained was about to be thrown away, and that it behoved us to quickly grasp what had been won before it was too late.

Lastly, contracting out would break down "the panel," since it would be worth no one's while to belong to it, and thus rob the Government of that official connexion with the medical profession which it was one of the chief objects of the Act to initiate. No Government is likely to stultify itself thus, or to permit itself to be manoeuvred out of a position it had deliberately taken up.

It is, therefore, somewhat sad to see so much money, time, energy, and temper expended in thus "crying for the moon."

CENTRAL DEFENCE FUND.

Dr. FREDERIC H. HAYNES (Leamington) writes: I think a vigorous effort should be made to raise a fund for the future, that the Association may be in a position at the end of three years to carry out any programme resolved upon to help such members substantially who may resign appointments, etc., in order to obtain better terms. The want of such a fund was, in my opinion, the cause of the collapse in the struggle between the Association and the Chancellor of the Exchequer. I think it would involve a personal canvass, or that each member should give a cheque or money to the canvasser for the year, with a promise of a similar amount for two years more—three years in all. Personally, if generally responded to, I would give £10 10s. a year for three years. In this way, a large sum (with interest accrued) would be raised. I think each member should be asked to give £10 10s. a year if possible.

MEDICAL CERTIFICATES FOR SICKNESS BENEFITS.

Dr. W. B. CROSKERY (Eckington) writes: I wish to place before you and your readers the worries of a non-panel doctor, and the public who wish for his services, under the Derbyshire Insurance Committee. I am and was before January 15th attending as a private patient a case of scarlet fever in a lad belonging to the "Sons of Temperance" approved society, and he and his people—whom I have attended over twenty years—wish me to see him through his illness, and he is one of the insured. Meanwhile, after January 15th he required a medical certificate for benefit. When he became entitled to this I had a call from the panel doctor on whose list he had placed his name, who told me the approved society in which the patient was would not accept the certificate of a non-panel doctor, and that he could not give one from me, giving as his reason that the certificate begins, "I have examined so-and-so," etc. He had therefore been obliged, he said, to call on my patient and give it, and he would have to call weekly to give subsequent certificates. The patient partly confirms the point that the secretary of the approved society told him he must have a panel doctor's certificate. Well, this is rather hard on patient, non-panel doctor, and the public. There seems to be a needless exposure to infection, and a needless worry to the patient and his friends at an anxious time, not to speak of the slight to a registered medical practitioner. I should like to know if it is even legal.

Secondly, my housekeeper, who has been with me thirty years, applied to the Committee "to make her own arrangements." Asked by the Secretary of the Derbyshire Insurance Committee for her reasons, she said "she had had the same doctor for thirty years, that he had not gone on the panel, and that free choice of doctor was permitted by the Act and stated by Mr. George to be allowed." She received a final reply that permission would not be granted by the Committee.

A patient of mine insured under the Act wrote to the secretary of her approved society (the Domestic Servants' Insurance Society) asking if the certificate of her medical attendant, who was not on the panel, would be accepted by the society. The secretary has replied since the above was written. He wrote:

In reply to your inquiry, we beg to inform you that the signature of any registered practitioner, whether on the panel or not, is sufficient in the case of an insured person who wishes to claim sickness benefit.

THE SO-CALLED FREE CHOICE OF DOCTOR AND THE RED CARD.

A Warning.

Dr. R. J. RYLE (Brighton) writes: Those who attempt to follow the advice of Dr. Bryan Densham (given on p. 110 of SUPPLEMENT to the BRITISH MEDICAL JOURNAL for January 25th) are liable to a rude awakening. In at any rate one insurance area a doctor not on the panel who had signed the red card was promptly reprimanded by the secretary of the Insurance Committee, and was roundly told that only doctors on the panel had a right to sign the red card. In common fairness to the insured, who are given to understand that they have a free choice of doctor, it would have been kinder to tell them on the card that they have not a free choice of doctor, but that they are allowed to make selection from among the names on the panel. Such a proceeding, however, would have been not quite in keeping with the methods by which it is sought to introduce the Act to the country.

TWO POINTS OF DETAIL.

Dr. ROBERT R. RENTOUL (Liverpool) writes: There are two conditions which should forthwith be collectively agreed to:

(a) The supplying and paying for a sixpenny stamp by the doctor who agrees to go on the panel. I wish to know if this action on the part of the Local Insurance Commissioners is lawful. It is a Government contract with an individual, and, if so, then the former should supply the stamp free to the panel doctor. It is surely a fact that if the Local Government Board make an agreement with a doctor to act as a Poor Law doctor, the former will pay for the stamp. If the panel doctor has to pay, then it reduces his 6s. 6d. to 6s. Another point is, if the panel doctor signs should not also the State agree to (that is, the Local Insurance Committee) also sign; and, further, should

not both signatures he witnessed? Suppose a doctor wishes to take an action he has no definite right to sue when the agreement is not signed by both parties to the contract.

(b) Has the panel doctor the right to first examine the insured person medically, and to refuse to so examine until he pays the examiner the fee of 2s. 6d. or 3s. 6d.? Our Local Insurance Committee Secretary, in reply to me, simply states that there "is no provision for a fee being paid by the patient." This means that the doctor can refuse to examine, and, therefore, refuse to accept the insured person unless he submits to a thorough medical examination.

Until the above points are decided I suggest that no doctor supplies the 6d. stamp nor examine any insured person until the latter pays the examination fee. By so doing we shall all the sooner find out how the Act is going to treat us.

DOMICILIARY TREATMENT OF TUBERCULOUS INSURED PERSONS.

Dr. J. P. WALKER, County Medical Officer, Isle of Wight, writes: Recently I wrote to the Insurance Commissioners to ascertain whether doctors on the panel now undertaking the domiciliary treatment of insured persons suffering from tuberculosis were still required to comply with the conditions laid down more especially in Sections 3, 4, 5, 6, and 7 of Article II of the Local Government Board's General Order, No. 59,221, of July 26th last, in addition to filling up their day books, giving a brief mention of the nature of the cases, together with the visits and attendances made.

I enclose a copy of their reply, which seems worthy of insertion in the JOURNAL, being a matter of general interest.

National Health Insurance Commission (England),
Buckingham Gate,
London, S.W.,

22nd January, 1913.

Sir,

In reply to your letter of the 16th instant, I am directed by the National Health Insurance Commission (England) to state that practitioners attending persons recommended for sanatorium benefit in the form of domiciliary treatment will be required to observe all the provisions of the Order of the Local Government Board dated the 26th July last, including paragraphs 3-7 of Article II of that Order.

I am to add that a record of visits, etc., made in connexion with the domiciliary treatment of a person recommended for sanatorium benefit should not be noted in the day book (Form 24), which is only required for the purpose of medical benefit.

I am, Sir,

Your obedient servant,

E. MACGOWAN.

J. P. Walker, Esq., M.D., D.P.H.,
Burghfield,

Dover Street, Ryde, Isle of Wight.

THE REPRESENTATIVE MEETING OF JANUARY.

Dr. A. MANKNELL (Bradford) writes: In your report of my remarks at the Special Representative Meeting, January 17th, I am reported to have said that a meeting was held in Bradford "on the night before the panels could be formed." Perhaps in the hurry of the three minutes' time limit I expressed myself badly. I meant on the night before the last day for forming a panel. The panel was to be closed next day—namely, December 31st. We had already interviewed the Insurance Committee, and had received a point-blank refusal upon the question of contracting out, by which means the Association scheme could be put into action. The scheme was explained to the Insurance Committee, and a guarantee was given, in the name of the local profession, that under it a full and efficient medical service would be assured for the insured of the city. This was unanimously rejected by them, and the decision to allow no contracting out whatever was also unanimously passed. Also we were definitely assured by the chairman of their committee that they had a number of applications for whole-time service sufficient to fill the necessary vacancies two or three times over, and that the applications were satisfactory in character. The meeting of the Bradford profession therefore decided that the policy of the Association had been followed to the last moment, and that the only course open was to fill the panels with as many as possible of local men, and so avoid the disaster of so large an importation.

THE DEPTFORD MEDICAL COMMITTEE.

Dr. C. P. HANDSON (New Cross) writes: In your issue of January 25th, SUPPLEMENT, p. 105, appears a resolution unanimously passed by the Deptford Medical Committee. I am requested by the Deptford Non-Panel Practitioners' Association to draw your attention to the fact that the members present at the committee meeting were all on the panel, and in no way represent the practitioners of Deptford, and that they were elected at a time when it was not known that they were likely to accept service under the Act. I hope you will be able to publish this disclaimer in your next issue.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments have been notified at the Admiralty: Fleet Surgeon CHRISTOPHER L. W. BENTON, M.B., to the *Ganges*, January 10th, 1913, and *Ganges* for Shotley Training Establishment, vice Brown, January 28th, 1913; Fleet Surgeon ROBLEY H. G. BROWNE, to the *King George V*, vice Gordon Green, January 28th, 1913; Fleet Surgeon HENRY W. GORDON-GREEN, to the *Pembroke* Dockyard, vice Colbourne, January 28th, 1913; Fleet Surgeon WILLIAM J. COLBOURNE, to the *Neptune*, and for general staff duties on recommissioning, January 28th, 1913; Fleet Surgeon J. McELWEE, M.D., to the *Carnarvon*, on transfer of flag, January 28th, 1913; Fleet Surgeon ROBERT H. J. BROWNE to the *Hyacinth* on completing, and for general staff duties on transfer of flag; Fleet Surgeon JOSEPH A. MOON to the *President*, additional, for senior medical officers' course at Royal Naval College, Greenwich, April 1st, 1913; Fleet Surgeon CHARLES STRICKLAND to the R.M. Division, Portsmouth, vice Moon, April 1st, 1913; Fleet Surgeon MORRIS C. LANGFORD to the *Thunderer*, vice Strickland, April 1st, 1913; Fleet Surgeon ROBERT S. BERNARD to the *Royal Arthur* on recommissioning (for medical charge of voyage out) February 4th, 1913, and the *Tamar*, vice O'Leary, on arrival; Fleet Surgeon ELYSTAN G. E. O'LEARY, F.R.C.S. Edin., to the *Royal Arthur* for medical charge of voyage home; Fleet Surgeon EDWARD H. HODNET DE COURTMAHFARY, M.B., to the *Indefatigable*, vice Bernard, February 4th, 1913; Staff Surgeon WILLIAM P. WALKER, M.B., to the *Queen*, additional, for Second and Third Fleets, January 13th, 1913; Staff Surgeon T. H. VICKERS, to the *Blanche*, on recommissioning, January 23rd, 1913; Staff Surgeon N. B. V. JACOB, to the *Fivid*, additional, on transfer of flag, January 28th, 1913; Staff Surgeon F. BOLSTER, M.B., to the *King Alfred*, on transfer of flag, January 28th, 1913, and to the *Hecla*, vice Fdarb, February 11th, 1913; Staff Surgeon DAVID W. HEWITT, M.B., F.R.C.S., to the *President*, additional, for Medical Department, Admiralty, and Medical Department, vice Langford; Staff Surgeon NOEL H. HARRIS to the *Egmont*, additional, for *Prosperine*, for medical charge of ratings on voyage to Malta, February 1st, 1913, and the *Prosperine*, on commissioning, undated; Surgeon JAMES L. BARFORD to the *Hyacinth*, on recommissioning, February 11th, 1913; Surgeon JOHN H. BURDETT to the *Neptune*, recommissioning, January 28th, 1913; Surgeon WALTER G. MOORE-ANDERSON, M.B., to the *President*, additional, for five months' course of instruction at Naval Medical School, to join Royal Naval College, February 1st, 1913; Surgeon GORDON V. HOBBS to be lent to Portsmouth Dockyard temporarily, vice Moore-Anderson, February 1st, 1913; Surgeon W. L. COWARDIN to the *Carnarvon*, on transfer of flag, January 28th, 1913; Surgeon CHARLES F. WILLES to the *Nightingale*, vice Garstin (to take passage in *Royal Arthur*), February 4th, 1913; Surgeon HENRY E. SCARGILL to the *Royal Arthur* on recommissioning for voyage out, February 4th, 1913, and the *Kinsha*, vice Stephens, on arrival; Surgeon WALTER F. LLOYD to the *Tamar*, vice Smith (to take passage in the *Royal Arthur*), February 4th, 1913.

INDIAN MEDICAL SERVICE.

CAPTAIN W. L. FORSYTH has been posted to the Jail Department in the Madras Presidency.
CAPTAIN H. STOTT has been nominated as Surgeon to his Excellency the Governor of Madras.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL J. FALLON has been appointed Director of Medical Service, Third (Lahore) Divisional Area.

Lieutenant-Colonel EDWIN ECKERSLEY, M.B., from supernumerary, is restored to the Establishment vice G. Wilson, M.B., retired, January 20th, 1913.

Major R. J. BLACKHAM has been placed on special duty till further orders as an addition to the medical staff in attendance upon His Excellency the Viceroy in India.

Major GEORGE B. STANISTREET, M.B., to be Deputy Assistant General at the War Office, vice Lieutenant-Colonel E. Eckersley, M.B., January 20th, 1913.

Captain A. S. WILLIAMS has been posted to the Dublin District for duty.

Captain J. C. HART has been posted to Woolwich.

Captain J. DE LA COUR has been posted to the Dublin District for duty.

Lieutenant H. W. L. ALLOTT has been posted to the Dublin District.

Lieutenant E. C. LANG has been posted to the Dublin District.

Lieutenant E. V. WHITBY has been posted to the Cork District.

Lieutenant R. E. PORTER has been posted to the Cork District.

Lieutenant R. B. PHILLIPPS has been posted to the Cork District.

Lieutenant J. HARE has been posted to the Belfast District.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

No. 78 *Field Ambulance*.—Lieutenant WILSON H. P. HEY to be Captain, December 12th, 1912.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

First Highland Field Ambulance.—Lieutenant JOHN D. FIDDES, M.B., to be Captain, December 10th, 1912.

First London Field Ambulance.—ARTHUR D. DOWNES, M.B., to be Lieutenant, December 12th, 1912.

Second North Midland Field Ambulance.—Lieutenant RICHARD M. WEST, M.D., to be Captain, December 9th, 1912.

First London (City of London) General Hospital.—Captain HENRY N. BURROUGHS, M.B., resigns his commission, January 8th, 1913.

First Home Counties Field Ambulance.—DUNCAN MATHESON JOHNSTON, M.B., to be Lieutenant, January 18th, 1913.

Third Scottish General Hospital.—GERALD CHARLES FREDERICK ROBINSON, F.R.C.S., to be Captain, whose services will be available on mobilization, December 3rd, 1912. Major THOMAS K. DALZIEL, M.B., to be Lieutenant-Colonel, December 16th, 1912. Captain WILLIAM MACLENNAN, M.B., to be Major, December 16th, 1912.

Third Wessex Field Ambulance.—Lieutenant EDMUND ALDERSON, M.D., to be Captain, December 15th, 1912.

Second Western General Hospital.—Major EDMUND T. MILNER, M.B., Major JUDSON S. BURY, M.D., and Captain JAMES L. SMITH, M.D., have resigned their commissions, January 22nd, 1913. Captain ARTHUR H. BUNCESS, M.B., F.R.C.S., Captain JOHN H. RAY, M.B., F.R.C.S., and Captain GEORGE R. MURRAY, M.D., have been promoted to Majors, January 22nd, 1913.

Highland Mounted Brigade Field Ambulance.—Lieutenant ARCHIBALD C. BALFOUR resigns his commission, January 25th, 1913.

Sixth London Field Ambulance.—Lieutenant HENRY K. DAWSON, M.D., to be Captain, January 6th, 1913.

Edin., CHARLES KERR, M.B., ALEXANDER PETRIE LOW, M.B., ARTHUR WELLESLEY FALCONER, M.D., GEORGE HERBERT COLT, M.B., F.R.C.S., ANGUS MCGILLIVRAY, M.B., GEORGE MELLIS DUNCAN, M.B., WILLIAM CLARK SOUTHER, M.B., JOHN JOHNSTON, M.B., WILLIAM BROWN, M.B., and JAMES MILROY McQUEEN, M.B.

Attached to Units other than Medical Units.—Lieutenant HENRY L. WADD resigns his commission, January 8th, 1913. Lieutenant JOHN TAIT to be Captain, December 30th, 1912. Lieutenant WILLIAM H. NEWTON resigns his commission, January 18th, 1913. Lieutenant THOMAS N. THOMAS to be Captain, December 17th, 1912. Lieutenant JOSEPH B. DAWSON resigns his commission, January 22nd, 1913.

For Attachment to Units other than Medical Units.—FRANK CLAYTON, M.D., to be Lieutenant, November 18th, 1913.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN ninety-six of the largest English towns 8,305 births and 5,657 deaths were registered during the week ending Saturday, January 18th. The annual rate of mortality in the ninety-five or ninety-six towns, which had been 15.1, 15.7, and 15.4 per 1,000 in the three preceding weeks, rose to 16.5 per 1,000 in the week under notice. In London last week the death-rate was also equal to 16.5, against 14.4, 16.2, and 15.3 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 7.5 in Tottenham, 8.6 in Gillingham, 8.9 in Darlington, 9.0 in Wimbledon, 9.1 in Great Yarmouth, and 9.5 in Esher, and in Walsall to 23.6 in St. Helens, 23.8 in Carlisle and in Aberdare, 24.1 in Ipswich and in Wigan, 27.3 in Dudley, 27.5 in Rotherham, and 27.6 in West Hartlepool. Measles caused a death-rate of 3.8 in Sheffield, 4.0 in Swindon, in Barrow-in-Furness, and in Stockton-on-Tees, 4.2 in St. Helens, 4.4 in Preston, 4.6 in Wigan, 5.3 in Edmonton, and 6.1 in South Shields; whooping-cough of 1.6 in Blackburn, 1.8 in Cambridge, 2.0 in Swindon, and 2.4 in Rotherham; and diphtheria of 1.3 in Portsmouth. The mortality from scarlet fever or enteric fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 63, or 1.1 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 11 in Liverpool, 6 in Birmingham, 4 in St. Helens, and 4 in Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,112, 1,954, and 1,889 at the end of the three preceding weeks, had further fallen to 1,828 on Saturday last; 204 new cases were admitted during the week, against 191, 170, and 202 in the three preceding weeks.

In ninety-six of the largest English towns 8,850 births and 5,819 deaths were registered during the week ending Saturday, January 25th. The annual rate of mortality in these towns, which had been 15.7, 15.4, and 16.5 per 1,000 in the three preceding weeks, rose to 17.0 per 1,000 in the week under review. In London last week the death-rate was equal to 17.8, against 16.2, 15.3, and 16.5 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 7.6 in Gillingham, 9.1 in Edmonton, 9.5 in Hornsey, 10.3 in Croydon and in Gloucester, 10.5 in Enfield, and 10.6 in East Ham to 24.0 in Oldham, 24.3 in Sunderland, 24.5 in South Shields, 25.2 in Dewsbury, 26.0 in Bootle, and 26.7 in St. Helens. Measles caused a death-rate of 3.0 in Edmonton and in West Bromwich, 3.6 in Bootle, 4.0 in Swindon, in Wigan, in Preston, and in Sheffield, and 4.2 in St. Helens and diphtheria of 1.3 in Swansea. The mortality from the remaining infectious diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 59, or 0.9 per cent., of the total deaths, were not certified either by a registered medical practitioner or by a coroner after inquest, and included 10 in Birmingham, 7 in Liverpool, and 3 each in Stoke-on-Trent, Coventry, St. Helens, and Blackburn. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,954, 1,889, and 1,828, at the end of the three preceding weeks, had further fallen to 1,784 on Saturday last; 215 new cases were admitted during the week, against 170, 202, and 204 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

IN sixteen of the largest Scottish towns 1,237 births and 748 deaths were registered during the week ending Saturday, January 11th. The annual rate of mortality in these towns, which had been 19.2, 17.1, and 17.6 per 1,000 in the three preceding weeks, fell to 17.3 in the week under notice, but was 1.9 per 1,000 above the rate in the ninety-six large English towns. Among the several Scottish towns the death-

rates ranged from 7.6 in Ayr, 8.8 in Falkirk, and 12.2 in Paisley to 21.1 in Dundee, 22.3 in Perth, and 22.8 in Greenock. The mortality from the principal infectious diseases averaged 1.3 per 1,000, and was highest in Perth and Motherwell. The 341 deaths from all causes registered in Glasgow included 15 from whooping-cough, 4 from diphtheria, 3 from scarlet fever, 3 from infantile diarrhoeal diseases, and 2 from measles. Four deaths from whooping-cough were recorded in Edinburgh, 4 in Motherwell, 2 in Greenock, and 2 in Perth, and 3 deaths from diphtheria in Aberdeen and 2 in Hamilton.

In the sixteen largest Scottish towns 1,211 births and 802 deaths were registered during the week ending Saturday, January 18th. The annual rate of mortality in these towns, which had been 17.6 and 17.3 per 1,000 in the two preceding weeks, rose to 18.5 in the week under notice, and was 2.0 per 1,000 higher than the rate in the ninety-six large English towns. Among the several Scottish towns the death-rates ranged from 13.5 in Hamilton and in Kilmarnock, 15.3 in Motherwell, and 16.1 in Falkirk to 20.7 in Paisley, 25.5 in Greenock, and 27.5 in Ayr. The mortality from the principal infectious diseases averaged 1.5 per 1,000, and was highest in Clydebank and Motherwell. The 363 deaths from all causes registered in Glasgow included 26 from whooping-cough, 7 from diphtheria, 4 from scarlet fever, and 4 from infantile diarrhoeal diseases. Three deaths from whooping-cough were registered in Leith, and 5 from infantile diarrhoeal diseases in Dundee.

In the sixteen largest Scottish towns, 1,222 births and 875 deaths were registered during the week ending Saturday, January 25th. The annual rate of mortality in these towns, which had been 17.6, 17.3, and 18.5 per 1,000 in the three preceding weeks, rose to 20.2 in the week under notice, and was 3.2 per 1,000 above the rate recorded in the ninety-six large English towns. Among the several Scottish towns the death-rate ranged from 10.5 in Kilmarnock, 12.7 in Motherwell, and 13.2 in Falkirk to 24.6 in Leith, 25.5 in Greenock, and 26.5 in Coatbridge. The mortality from the principal infectious diseases averaged 1.8 per 1,000, and was highest in Glasgow and Leith. The 437 deaths from all causes registered in Glasgow included 30 from whooping-cough, 11 from infantile diarrhoeal diseases, 7 from diphtheria, 3 from scarlet fever, 1 from enteric fever, and 1 from measles. Three deaths from whooping-cough were recorded in Edinburgh, 2 in Paisley, and 2 in Leith; 2 deaths from scarlet fever in Leith; and 3 deaths from diphtheria in Aberdeen and 2 in Dundee.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, January 11th, 583 births and 484 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 756 births and 544 deaths in the preceding period. These deaths represent a mortality of 21 per 1,000 of the aggregate population of the districts in question, as against 22 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 5.6 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate on the other hand was equal to 25.4 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 22.8, as against an average of 20.2 for the previous four weeks, in Dublin city also 22.8 (as against 21.7), in Belfast 21.1 (as against 21.9), in Cork 19.7 (as against 20.1), in Londonderry 20.3 (as against 15.3), Limerick 12.2 (as against 13.6), and in Waterford 28.5 (as against 21.9). The zymotic death-rate was 2.3, as against 2.2 in the previous week.

During the week ending Saturday, January 18th, 631 births and 510 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 583 births and 484 deaths in the preceding period. These deaths represent a mortality of 22 per 1,000 of the aggregate population of the districts in question, as against 21 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 5.7 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 27.4 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 22.3, as against an average of 20.5 for the previous four weeks, in Dublin city 23.2 (as against 21.7), in Belfast 20.3 (as against 21.1), in Cork 25.2 (as against 22.1), in Londonderry 16.5 (as against 14.9), in Limerick 13.5 (as against 12.2), and in Waterford 32.3 (as against 21.7). The zymotic death-rate was 2.1, as against 2.3 in the previous week.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

ABERDEEN SCHOOL BOARD.—Assistant School Medical Officer. Salary, £250 per annum.

AGRA: DUFFERIN HOSPITALS.—Lally Doctor on the Staff. Salary, Rs. 300 a month.

PROCEEDINGS OF COUNCIL.

A MEETING of the Council was held at 429, Strand, London, W.C., on Wednesday, January 29th, at 2 p.m.

Present.

- Sir JAMES BARR, M.D., LL.D., Liverpool, President, in the Chair, afterwards Dr. J. A. MACDONALD, LL.D., Taunton, Chairman of Council.
- Mr. T. JENNER VERRALL, Bath, Chairman of Representative Meetings.
- Dr. EDWIN RAYNER, Stockport, Treasurer.

|---|---|

The PRESIDENT (Sir James Barr) took the chair pending the arrival of the Chairman of Council,

MINUTES.

The minutes of the ordinary meeting held on October 31st, 1912, the adjourned meeting, November 13th, 1912, and special meetings, November 21st, December 4th and 23rd, 1912, and January 18th, 1913, having been printed and circulated and no objection having been received, were signed as correct.

Apologies for absence were read from the President-elect, Dr. John Adams, Inspector-General R. Bentham, R.N., Dr. John Gordon, Surgeon-General J. P. Greany, I.M.S., Dr. T. Arthur Helme, Mr. Albert Lucas, Dr. J. Metcalfe, Dr. J. Munro Moir, Dr. C. G. D. Morier, Dr. E. S. Reynolds, and Mr. E. H. Willock.

RESIGNATIONS.

It was reported that at or since the Special Representative meeting, December, 1912, the following had resigned from the Council:

- Andrew, Dr. J. Grant (grouped Divisions: Glasgow and West of Scotland).
- Buist, Dr. R. C. (elected by Representative Body).
- Davie Harris, Lieut.-Col. F. W. H., R.A.M.C. (Representative of the Army Medical Service).
- Dewar, Dr. Michael (grouped Divisions: East of Scotland).
- Durran, Dr. John G. (Cambridge and Huntingdon, East Anglian, and South Midland Branches).
- Farquharson, Dr. A. C. (grouped Divisions: North of England).
- Flemming, Mr. C. E. S. (grouped Divisions: West of England).
- London, Dr. J. Livingstone (Glasgow and West of Scotland, Border Counties and Stirling Branches).
- Maclean, Dr. Ewen J. (elected by Representative Body).
- Shaw, Dr. Lauriston E. (elected by Representative Body).

Certain of the vacancies thus created had been filled as follows:

- Clow, Dr. W., vice Dr. J. Grant Andrew.
- Finlay, Dr. D. E., vice Mr. C. E. S. Flemming.
- Haslip, Dr. G. E., vice Dr. Ewen J. Maclean.
- Jones, Mr. Evan, vice Dr. Lauriston Shaw.
- Moir, Dr. J. Munro, vice Dr. Michael Dewar.
- Oldham, Dr. H. F., vice Dr. A. C. Farquharson.
- Willock, Mr. E. H., vice Dr. R. C. Buist.

ELECTION TO CENTRAL COUNCIL.

The following return to the Central Council, vice Dr. Pope, deceased, was announced:

| <i>Branch.</i> | <i>Name of Representative.</i> |
|-----------------------------|--------------------------------|
| East York and North Lincoln | R. Wallace Henry, M.D., |
| and Midland Branches | 6, Market Street, Leicester. |
| grouped. | |

DEATHS.

The Chairman was authorized to address a letter of condolence to the family of the late Dr. C. W. Marriott, of Reading, a former member of the Council. Letters received in reply to condolences addressed by the Council to members of the families of the late Dr. Pope, of Leicester, and Dr. T. B. Moriarty, of Cork, were entered on the minutes.

BACTERIA AND SHELLFISH.

The Council referred to the Science Committee an application from the Fishmongers' Company, asking the Council to nominate three medical men from whom a special committee of the Company could nominate one to confer with them in regard to shellfish, particularly as to bacteria, and what other standards besides freedom from bacteria should be adopted to render shellfish suitable for human consumption.

A RESOLUTION OF THANKS.

The following resolution, adopted at a meeting of the profession held at Coventry, was received and entered on the minutes:

That this meeting of the profession in Coventry records its hearty appreciation of the efforts the Council has made on our behalf in very difficult circumstances, and especially of its indefatigable labour, and also to express our abhorrence of those members who deserted us when we most needed help.

(Dr. J. A. Macdonald, Chairman of Council,
in the Chair.)

FINANCE COMMITTEE.

The TREASURER, in presenting the statement of the accounts for the last quarter of 1912, said that it was important to bear in mind that the figures were merely a statement of cash disbursements and cash receipts, and was not a balance-sheet. At the same time, the figures it contained were significant, and foreshadowed the result that would be proved when the actual balance-sheet for the year 1912 was submitted to the Council in April next. Taking the figures for the twelve months, the facts were that in 1912 the Association had disbursed £11,300 more than in 1911. In 1911 it had spent £10,000 more than in 1910; and in 1910 it had spent £5,000 more than in 1909. It thus appeared that since 1909, the period antecedent to the introduction of the National Insurance Bill, the Association has spent approximately £36,000 of additional money. Of this sum, £5,000 to £6,000 must be discounted for litigation in which the Council was involved in 1912, but at a modest estimate the Association had had to find something like £30,000 to carry on the campaign, towards which it had received about £13,500 from the Insurance Defence Fund. With regard to the revenue it would be seen that, after discounting the grants made from the Insurance Defence Fund, the revenue for 1912 was insufficient by about £16,000 to meet the current expenses for the year. Going back to 1909, it would be seen that the increase in revenue did not exceed on an average £2,000 per annum. As to the sources of the revenue, practically every department showed progress. The Treasurer then commented on some of the details of expenditure; the increase shown in the cost of machining the JOURNAL and SUPPLEMENT, compositors' wages, paper, and postage was influenced by the increased circulation of the JOURNAL. He called attention to the fact that the sum paid in compositors' wages showed an increase, notwithstanding the fact that the average number of pages was lower; this was due to the circumstance that during the quarter the JOURNAL was often produced under abnormal conditions, involving the working of overtime, which meant extra expense. Reporting for the JOURNAL also showed an increase, as there had been two Special Representative Meetings in the three months. The amount paid in railway fares to members of Council had increased considerably. In the

quarter there were two Special Representative Meetings, and in round figures it was estimated that the railway fares alone for a Representative Meeting amounted to about £500. The cost of railway fares for Committees would have been lower had not the weekly meetings of the State Sickness Insurance Committee involved the Association in a heavy expenditure. The expenditure on miscellaneous printing was still high, but the Medico-Political Committee had spent £136 less; the State Sickness Insurance Committee, in spite of its frequent sittings, £411 less; and the Hospitals Committee £44 less.

Some conversation took place with regard to the relation of the Central Defence Fund to the general funds of the Association, and the CHAIRMAN OF COUNCIL and CHAIRMAN OF REPRESENTATIVE MEETINGS pointed out that the Central Defence Fund had been drawn upon to defray part of the cost incurred by the Association in reference to the National Insurance Act, but that it was never intended that the Defence Fund should defray the whole of that cost, since the action taken had been part of the medico-political work of the Association, and it was therefore proper that a proportion of the cost should fall upon the general funds of the Association. The Central Defence Fund was intended to be applied also for the purpose of compensation. It was pointed out that if the Association was to continue to concern itself with political questions it must raise annually sufficient funds to deal with such questions adequately. Eventually a resolution approving the accounts for the quarter ending December 31st, 1912, and authorizing the Treasurer to pay those remaining unpaid, was agreed to.

STATE SICKNESS INSURANCE COMMITTEE.

A report from the State Sickness Insurance Committee arising out of its meeting of January 23rd was received.

Constitution and Duties of the Committee.

THE REPORT quoted the two following resolutions of the Special Representative Meetings of November, 1912, and January 18th, 1913:

November, 1912 (Minute 54).—That a State Sickness Insurance Committee be appointed by the Representative Body to watch the interests of the profession in relation to the National Insurance Act and to report on the situation to the Council, and that the Committee consist of (a) twelve members elected by grouped Representatives in the same manner as members of Council under By-law 43 (c); (b) the *ex officio* members; and (c) two women medical practitioners, to be nominated, one by the Northern Association of Medical Women, and one by the Association of Registered Medical Women.

January, 1913 (Minute 50).—Resolved: That the meeting do not appoint a new Committee, and that the State Sickness Insurance Committee appointed in November, 1912, continue to act under instructions of the Council.

Some preliminary discussion took place with regard to the position of the Committee to the Council, and it was pointed out that the words of the minute of the Special Representative Meeting of January 18th were "continue to act under instructions of the Council." The Council finally decided to instruct the State Sickness Insurance Committee to exercise the same powers as heretofore.

The Council then proceeded to consider the report section by section, and in what follows the note on each section of the report and the recommendation made by the Committee are followed by an account of the decision of the Council with regard to it.

The Central Insurance Defence Fund.

THE REPORT recalled that at the special meeting in December the following resolution was passed:

Minute 66.—Resolved: That the Representative Meeting instructs the Council to place the raising, management, and distribution of the Central Defence Fund under the control of the State Sickness Insurance Committee, granting also to that Committee such assistance from the business staff of the Association as it may require.

From this resolution the Committee had assumed that the Council had delegated to it the duties specified in that Minute, but it had been informed that questions had been raised as to the right of the Representative Body to instruct the Council on this matter, and as to the validity of the delegation to a Committee of the responsibilities of the Council in view of the fact that the Central Defence Fund was vested in the Council as

trustees. At the meeting of the Council on May 1st, 1912, the Finance Committee had been instructed to administer on behalf of the Council the Insurance Defence Fund. In view of the wishes of the Representative Meeting as expressed in Minute 66 quoted above, and of the obvious convenience of the management of the fund being in the hands of a committee, which met frequently, and had the most intimate knowledge of the circumstances likely to lead to claims upon the fund, the Committee recommended (a) that the Council should rescind the resolution passed on May 1st, 1912; (b) that the Council place in the hands of the State Sickness Insurance Committee the administration of the Insurance Defence Fund, and delegate to that Committee the power to raise, manage, and distribute the fund. The Committee also recommended the Council to take into consideration the policy to be pursued in making grants from the fund and how far steps should be taken to enforce the payment of guarantees.

THE COUNCIL heard a statement from the Solicitor on this subject, and after discussion finally resolved as follows:

That the Council entrust the administration of the Central Insurance Defence Fund to the State Sickness Insurance Committee, subject to the approval of the Council, with power to make any such grants as may be urgently required if approved by the Chairman of Council acting on behalf of the Council.

Some general discussion then ensued with regard to the recommendation of the State Sickness Insurance Committee to take into consideration the question of the policy to be pursued in making grants from the fund, but the matter was postponed until the Council had discussed the future policy of the Association with regard to the Act.

Expenses of Statutory Local Medical Committees.

THE REPORT recalled that the Special Representative Meeting of January, 1913, had asked the Council to consider how far it was advisable in the interests of the committees and of the British Medical Association to seek payment from State funds of the expenses of Local Medical Committees. The State Sickness Insurance Committee pointed out that the Local Medical Committees had been set up at the request of the medical profession and were a purely optional part of the machinery of the Act, and that if these committees did receive State assistance there would be a danger of some of them developing into independent bodies. The Committee accordingly recommended the Council that steps should be taken by the Association to finance the Local Medical Committees.

THE COUNCIL debated this recommendation at some length, and eventually disapproved of it.

Contract Attendance upon Uninsured Persons.

THE REPORT recommended the Council that, having regard to the fact that in many localities schemes were already working or were upon the point of being put into operation for the treatment of uninsured persons upon contract terms, the question of fees and other conditions concerning attendance upon uninsured persons was a matter which should be settled in each locality, and not by a general scheme throughout the Association.

THE COUNCIL, after considering the recommendation, adopted the following resolution:

That having regard to the fact that in many localities schemes are already working or upon the point of being put into operation for the treatment of uninsured persons upon contract terms, the question of fees and other conditions concerning attendance upon uninsured persons should be settled in each locality subject to the approval of the State Sickness Insurance Committee.

Canvassing.

THE REPORT recommended the Council to consider whether any further action, and if so what action, should be taken with regard to advertising by members of panels in order to secure insured persons on their lists.

THE COUNCIL referred this recommendation to the Central Ethical Committee.

London Medical Committee.

The Committee reported that in response to a circular sent out by the State Sickness Insurance Committee on

November 19th, 1912, the practitioners resident in the County of London appointed a committee, representative of the whole area, which it was anticipated might become the statutory Local Medical Committee for London, if the profession decided to work the Act, and would protect the interests of the profession in that area if the profession continued to decline service. This Committee had been pursuing an active campaign on behalf of the majority of the profession in London who had declined to accept service under the Act, and had approached the State Sickness Insurance Committee in order to obtain its active support. The latter Committee was not able to entertain some of the suggestions put forward by the London Medical Committee involving an expensive campaign all over the country in favour of insured persons "contracting out" of the Act. The State Sickness Insurance Committee, however, had granted, free of charge, to the London Medical Committee office room in the house of the Association for the purposes of its campaign, upon the understanding that the London Medical Committee was alone responsible for any documents issued by it. One of the suggestions made by the London Committee was adopted, and a letter was circulated to every practitioner in the kingdom informing him that as many copies as he desired would be supplied, for issue to his patients, of a request by insured persons to the Local Insurance Committee that they be allowed to make their own arrangements for medical attendance. Practitioners were urged to use their influence to this effect as widely as possible, and the Division secretaries were also informed of the campaign of the London Committee, and were told that the help of the Association would be given to them in organizing public meetings of insured persons in their own areas and in interviewing members of Parliament upon the subject. About 700,000 of the "contracting out" forms had been supplied, mainly to practitioners outside London, as the London Medical Committee had been issuing a special form in London.

Appointment of Practitioners upon Insurance Committees.

The Committee reported that it had addressed a communication to the Insurance Commissioners protesting against the delay caused in the setting up of properly constituted committees by the failure of the Insurance Commissioners to publish the regulations governing such election, and asking when the regulations might be expected.

Treatment of Uninsured Members of a Society.

The Committee had been informed that a capitation fee of 6s. had been offered by the Warehousemen, Travellers, and Clerks Provident Association to their medical officers for attendance upon its uninsured members. It had been pointed out to the Committee that this fee was not only below the capitation fee paid for attendance upon insured persons, but was also objectionable because many of the uninsured members of the association were in receipt of higher wages than insured persons. The Committee were also informed that the great majority of the medical officers of this association had asked for the same rate as was given under the Insurance Act for those uninsured members below an income limit of £160, and 10s. 6d. per annum for those above that income limit. The Committee had communicated with all the medical officers to this association, stating the opinion of the Committee that the fees which it was understood had been demanded by the majority of the officers were perfectly reasonable, and promising every assistance at the disposal of the Association in securing these terms.

Facilities for Obtaining the Opinion of the Association, Postal Vote, etc.

THE REPORT stated that the Committee had considered the Minutes 57 and 58 of the Special Representative Meeting (January, 1913).

Minute 57.—That the Council be requested to consider in what way, if any, it is possible to obtain more quickly than at present the decision of the Association in cases of urgency, and how far it would be necessary to alter the regulations and by-laws in order to do so.

Minute 58.—That the Council be requested to utilize the postal vote of the whole profession on questions of urgency, or on the adoption or otherwise of any suggested future line of policy.

The Committee had also taken into consideration the following motion, of which the Brighton Division had given notice at the same meeting:

That it be an instruction to the Council to consider as soon as possible, and report to the Divisions, if there is any procedure which they can recommend which will allow of a very urgent and important matter being decided immediately instead of as at present having to wait two or three weeks.

With reference to this matter the Committee reported that the questions involved had been under the consideration of the Association for some years, and that a report was presented to the Annual Representative Meeting of 1912 giving counsel's opinion as to certain legal difficulties. The Committee, however, recognizing that recent events had shown the urgent necessity of proceeding with this matter without further delay, recommended the Council to refer it to the appropriate committee to consider (1) what alterations in the constitution of the Association could be made to enable the views of the profession to be obtained in a more effective and rapid manner than at present; and (2) whether the postal vote could and should be provided for under the constitution, and that the matter be dealt with as one of urgency.

THE COUNCIL, after discussion, referred this matter to the Organization Committee, with an instruction to consider the matter as one of urgency.

Future Action.

THE REPORT of the State Sickness Insurance Committee stated that it had under consideration the suggestion of the Special Representative Meeting of January for action on the lines indicated in the following extract from the minutes of that meeting:

Minute 52.—That a letter be sent to every member of the Medical Profession asking (1) if he is on the panel; (2) if so, whether he has taken service willingly or against his inclination owing to coercion; (3) whether, if he be not satisfied with the conditions both as to service and remuneration, he is prepared to decline to renew his contract for panel service at the termination of the provisional three months, provided that the other practitioners who have been induced to take service by similar methods do the same; (4) if he be not on the panel, whether he has any wish to go on, and (5) whether he has any intention of undertaking any whole or part time appointment to treat insured persons under the Act.

The Committee reported that it approved the course suggested, and proposed to take the action contemplated in about a fortnight.

THE COUNCIL debated this section of the report at considerable length. After many aspects of the matter had been put forward,

Dr. BUTTAR submitted a motion which, after slight verbal alteration, was put to the meeting in the following form:

That the Council proceed to define the attitude of the Association in relation to the present administration of the National Insurance Act. That, inasmuch as the Representative Body considers the Act unworkable and derogatory, the action of the Council and the State Sickness Insurance Committee shall continue to be in opposition to the Act and Regulations as at present constituted. That the interests of those not on the panels through loyalty to the Association shall continue to be paramount, and that steps be taken to assist those practitioners who wish to resign from the panels in April if the Association call on them to do so.

The London Medical Committee, he said, had sent out a circular with a form of questions to ascertain how far medical practitioners in London were in favour of the Act and regulations. It was anticipated that these questions would be answered only by a percentage of the members, and that therefore a great work of organization, which would take a considerable time, would be necessary. He believed that there was an increasing body of medical men who were growing dissatisfied with the terms of the Act, and he thought that a definite policy should be stated. He desired first to help those who had been loyal to the Association, and secondly, those who had gone on the panels unwillingly. He hoped it would be possible to establish the unity of the profession and restore the courage of men which had leaked away in the last few months.

The motion was seconded by Mr. EVAN JONES, who thought the Council should give a strong lead and carry out the idea of the Representative Meeting, which still was that the Act was unworkable and derogatory.

After a discussion, during which it was made plain that the motion did not imply any reflection on those who had been compelled to go on the panels owing to economic pressure, it was carried *nemine contradicente*.

Dr. BUTTAR then moved:

That the State Sickness Insurance Committee shall at once press for an amending Act, and define the conditions relating to the medical profession which should be embodied in such an Act.

This was seconded by Mr. TODD, and carried unanimously.

Dr. BUTTAR then moved:

That the Council give all possible support to any strong trade union that may be formed.

He pointed out that the idea was not a new one in the Association and had actually been mooted at the annual meeting at Liverpool. Many members had been long dissatisfied with the constitution of the Association, which, owing to the fact that many members lived at a distance from the centres made it difficult to carry out a strong policy.

Mr. TODD objected that the motion did not appear on the agenda, and that as it raised a new line of policy notice should have been given.

Dr. BUTTAR said that as the proposal had been made outside the Association it ought to be considered by the Council.

Mr. TURNER also urged that the feeling in London was very strong, and unless the Council adopted some definite line of action the Association would be injured.

Dr. HASLIP stated that there was a strong feeling also in the other direction, and the CHAIRMAN OF COUNCIL said that he must rule out of order the proposal for the Council to approve the formation of trade unions.

In reply to the CHAIRMAN OF COUNCIL, Dr. BUTTAR said that out of some 5,800 practitioners to whom the London Medical Committee had sent the circular of questions about 2,000 had at that time replied.

The CHAIRMAN OF COUNCIL agreed that an adequate response could not be expected unless a campaign was carried out in every Division to induce men to express their opinion. He believed the Council were in favour of prompt action, and it was resolved to take action upon the Minute of the Special Representative Meeting (Minute 52) quoted above by instituting a systematic inquiry. It was intimated that the matter would be fully considered by the State Sickness Insurance Committee at its meeting on February 6th.

(To be continued.)

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

LANCASHIRE AND CHESHIRE BRANCH: LIVERPOOL DIVISION.

THE annual meeting of the Liverpool Division was held at the Liverpool Medical Institution on January 31st.

Election of Officers.—Dr. N. PERCY MARSH, who occupied the chair at the commencement of the proceedings, was thanked for his services as chairman during the year 1912, and his successor, Dr. R. I. Richardson, was unanimously elected. Dr. Damer Harrison was elected Vice-Chairman, and the Secretary, Dr. Francis W. Bailey, was unanimously re-elected.

Report of Executive Committee.—The following report was presented on the work done during the year:

Report.

It is gratifying to find that there has been an increasing interest in the affairs of the Division, due, no doubt, to the campaign in connexion with the National Insurance Act, but for obvious reasons it would still be more encouraging if each member of the Division could induce every non-member of the Association resident in the Division to join the British Medical Association, and so strengthen the hands of the Association.

During the year ten meetings of the Division were held—one annual, three ordinary, and six special; to two of the latter

non-members were invited, 17 of whom attended one meeting and 72 the other, and on each occasion 253 members. The average attendance of members at the ten meetings was 102.9.

The Executive Committee met fifteen times during the year, and the number of times the following subcommittees met was as follows: Insurance Act Subcommittee, nine; Ethical Subcommittee, three; Ward Secretaries Subcommittee, three; Hospital Subcommittee, two; Medical Treatment of School Children, two; Guarantee Fund Subcommittee, three; and the Local Campaign Pledge Subcommittee several times; so that upwards of fifty meetings of the Division and its committees were held during the year.

The number of members on the list, December 31st, 1911, was 364, and December 31st, 1912, 406. The committee regrets the loss the Division has sustained by the death of three of its members—Dr. A. T. H. Waters, Dr. Finegan, and Dr. O. T. Williams.

The expenses of the Division have been unusually heavy, and there has been a great strain on the financial resources.

Election of Representatives.—Dr. J. E. O'SULLIVAN intimated that he had decided not to offer himself for re-election as Representative on the Representative Body; and Mr. F. CHARLES LARKIN proposed, and Sir JAMES BARR seconded, a proposition that Dr. O'Sullivan be thanked for his services during the past year, which on being put to the meeting was unanimously carried. The following were elected Representatives on the Representative Body: Dr. R. I. Richardson, Dr. J. Walker, Mr. Damer Harrison, Dr. S. H. Shaw.

Representatives on Branch Council.—The Representatives on the Branch Council were elected as follows: Dr. T. R. Bradshaw, Dr. F. H. Barendt, Dr. Francis W. Bailey, Dr. E. T. Davies, Dr. A. Stookes, and Dr. Macleay.

Members of Executive Committee.—The result of the voting for ordinary members of the Executive was as follows:

- Bootle Ward: Dr. J. Dunn and Dr. Claxton.
- Central Ward: Dr. Heaney and Dr. Llewelyn Morgan.
- Northern Ward: Dr. Owen Bowen and Dr. J. J. Tisdall.
- Southern Ward: Dr. J. C. M. Given and Dr. W. B. Bennett.
- Western Ward: Dr. K. Grossmann and Dr. W. T. D. Allen.

Central Guarantee Fund.—Dr. J. WALKER, Chairman of the Central Guarantee Fund Subcommittee, submitted a report stating that:

| | £ | s. | d. |
|--|--------|----|----|
| 301 Practitioners in the Division had guaranteed | 2,911 | 7 | 0 |
| Up to January 11th, 1913, 40 of these had increased their guarantee by ... | 570 | 10 | 0 |
| 34 new guarantors had guaranteed ... | 319 | 8 | 0 |
| Thus the total amount now guaranteed by 335 guarantors was ... | | | |
| | £3,801 | 5 | 0 |
| The work of the Committee represented an increase of ... | £889 | 18 | 0 |

They were unanimously thanked for their services and reappointed.

Payment of Expenses of Representatives.—It was resolved to support a resolution of the Branch Council agreeing to defray the expenses of Representatives, and on the motion of Dr. R. T. BAILEY, seconded by Dr. O. E. B. LIMRICK, a discussion took place as to whether a voluntary levy of at least 3s. per member should be made to defray the expenses of the Representatives on the Representative Body by the Liverpool Division; this matter was referred to the Executive Committee for further consideration.

METROPOLITAN COUNTIES BRANCH:

HAMPSTEAD DIVISION.

A MEETING of the Hampstead Division was held on January 14th at the Central Library, Finchley Road. Dr. PEARCE was in the chair and nineteen members were present.

Minutes.—The minutes of the last meeting as printed in the JOURNAL were confirmed.

Apology for Non-attendance.—A letter regretting inability to attend was read from Dr. Jessop.

Resignations.—Letters resigning membership of the Association were read from Drs. Pidcock and Cohn.

National Insurance Act.—A communication was read from the Medical Secretary, dated January 3rd, regarding points arising under resolutions from the Representative Meeting and on matters which had arisen since the meeting.

The Local Panel.—The HONORARY SECRETARY gave an analysis of the local panel as follows: 43 names, of which 16 were Hampstead practitioners; of the remaining 27,

3 did not appear in the last-issued *Medical Register*; one gave addresses for seeing patients an address in the City and an alternative address at Ealing.

Annual Report.—The annual report was read, and upon the motion of Dr. OPPENHEIMER, seconded by Dr. PRITCHARD, it was adopted. A hearty vote of thanks to the Honorary Secretary and Treasurer was passed.

Instructions to Representative to Special Representative Meeting, January 17th.—On the motion of Dr. PRITCHARD, seconded by Dr. COLDSTREAM, it was resolved by 17 to 2:

That the Hampstead Representative be instructed to vote in favour of holding the profession to its pledge and undertaking.

Dr. HAWARD moved, and Dr. BARNETT seconded, the following resolution, which was carried by 10 to 1:

That it be an instruction to our Representative to move the following resolution at the Representative Meeting:

That permission be given by the British Medical Association for non-panel doctors to be represented on the Local Insurance Committees.

It was moved by Dr. OPPENHEIMER, seconded by Mr. DORRELL, and carried by 14 to 1:

That in the opinion of this meeting continued membership of the Association is not compatible with a violation of its policy declared in constitutional forms.

It was moved by Dr. PRITCHARD, seconded by Dr. PECK, and carried unanimously:

That on any other matters the Representative be allowed to use his own discretion.

Appointment of Deputy Representative.—It was also unanimously resolved to confirm the appointment of Mr. E. E. Ware as Deputy Representative.

SOUTH-EASTERN BRANCH:

BRIGHTON DIVISION.

A MEETING of the Brighton Division was held at the Lecture Hall, New Road, on January 23th, Dr. RYDING MARSH in the chair.

Secretary's Report and Financial Statement.—The Secretary's report and financial statement was received stating that the total expenditure for the year was £57 9s. 0½d., leaving a deficit of £4 16s. 8½d. Twenty-two Division meetings were held during the year, with an average attendance of forty-seven. Membership of the Division had increased from 209 to 217. The SECRETARY stated that in his opinion it would be impossible for the Brighton Division to continue to work at the present pressure and keep within the amount of the grant allotted by the Branch Council.

Special Representative Meeting.—The Representatives presented their report of the Special Representative Meeting, which was received and entered on the minutes.

Report of Brighton Medical Committee.—The report of the Brighton Medical Committee was presented by the CHAIRMAN (Dr. Turton), and contained the following scheme for attendance on women entitled to maternity benefit, proposed by the committee in conjunction with the committee of the West Street Hospital for Women:

Proposed Scheme for Attendance on Women entitled to Maternity Benefit in Conjunction with the West Street Hospital for Women.

1. The Hospital for Women is willing to undertake to attend in labour and to nurse during ten days only those insured women who bring evidence that they have engaged a doctor on the terms set out below.

2. The Hospital for Women to get £1 from the Local Insurance Committee in the case of deposit contributors, and £1 from the approved society in the case of other insured women.

3. This sum is to be allocated as follows:

10s. 6d. to be paid by the hospital to the doctor in every case.

8s. 6d. to be retained by the hospital for midwife and nurses.

1s. 6d. to form a fund for exceptional cases, for example, another doctor required to assist during labour, etc.

4. For this 10s. 6d. the doctor undertakes to attend before or during labour only when summoned by the midwife acting in compliance with the rules and regulations of the Central Midwives Board; but he undertakes to visit every case within twenty-four hours of delivery and to pay the necessary visits during the ten days of the puerperium.

5. The patient shall select any doctor she likes who agrees to these terms, whether he be on the panel or not.

6. The Hospital for Women have deputed Mr. Holmes, the Honorary Secretary, and Mr. Jacob-Hood with power to negotiate with the authorities concerned, subject to the scheme being approved by the medical profession.

7. The Hospital for Women are anxious to apply to the Commissioners and to the Local Insurance Committee at the earliest possible date for approval of the scheme.

This scheme was discussed at some length, and an amendment was proposed by Dr. RAWDON WOOD, and seconded by Dr. GREENYER:

That the Division does not approve the scheme proposed by the West Street Hospital and recommends that the hospital confine itself to its proper sphere, namely, the attendance and treatment of indigent poor.

This amendment was lost, whereupon Dr. TURTON proposed the following resolution, which was carried by a large majority:

That the Brighton Division approves the scheme brought forward by the West Street Hospital with the approval of the Brighton Medical Committee, and refers it to that committee with power to negotiate with the authorities concerned and report to the Brighton Division.

Dr. TURTON then moved on behalf of the Brighton Medical Committee the following resolution, which was carried *nomine contradicente*:

That the Brighton Division strongly disapproves of any medical practitioner consenting, either singly or by placing his name on a list, to arrange with any approved society to give his attendance to any parturient woman entitled either directly or indirectly to maternity benefit under Section 18 of the National Insurance Act.

Local Medical Committee.—It was proposed by Dr. FOTHERGILL, and the meeting resolved:

That it be an instruction to the Executive Committee to consider what steps should be taken in order to harmonize the aims and objects of the Division with reference to the National Insurance Act with those of the various Local Medical Committees within the area and to report with recommendations to a special general meeting to be held at an early date.

The report of the East Sussex Medical Committee was presented by the CHAIRMAN (Dr. Benham), and was approved.

Report of Executive Committee.—The report of the Executive Committee was received and entered on the minutes.

Vice-Presidency of Section of Medical Sociology.—Dr. BROADBENT moved, and Dr. GREENYER seconded, the following resolution, which was carried with three dissentients:

That Dr. Lauriston Shaw be asked to resign the Vice-Presidency of the Section of Medical Sociology.

Vacancy on State Sickness Insurance Committee.—The SECRETARY read a communication from the State Sickness Insurance Committee with reference to a vacancy caused by the resignation of Mr. E. H. Willock. Dr. GREENYER proposed, Dr. BENHAM seconded, and it was resolved, that Dr. Fothergill be nominated by the Brighton Division.

ISLE OF THANET DIVISION.

The sixty-third meeting of the Isle of Thanet Division was held at Ramsgate on January 4th. There were present twenty-two members and three non-members.

Minutes.—The minutes of the last meeting were read, confirmed, and signed.

Resignation of Membership.—Letters were received from Dr. Newell and Dr. Storar resigning membership of the Association.

Medical Attendance on Uninsured Members of Friendly Societies.—Dr. HALSTEAD read a letter which he had received from the Ramsgate and St. Lawrence friendly societies, asking for a conference between the Ramsgate doctors and themselves on the question of the treatment of uninsured members of friendly societies. On the motion of Dr. TAMPLIN, seconded by Dr. HALSTEAD, it was resolved to reply in the following terms:

That the medical men practising in Ramsgate are ready to meet the societies represented by Mr. Conconi on Tuesday, January 7th, at the Foresters' Hall, Ramsgate, at 8.30 p.m., but that the medical men prefer that all members of those societies should be invited to attend.

National Insurance Act.—Dr. ARCHIBALD, who had attended a meeting held at Maidstone that afternoon between the Kent Insurance Committee and the Kent Medical Committee, reported that the members of the Kent Medical Committee had agreed that further resistance to the Insurance Act was useless, and that in his

opinion all the Divisions in Kent would agree to their members going on the panels, and that the panels were to be left open till Tuesday, January 7th. A prolonged discussion took place on the situation, and Dr. HICKS proposed and Dr. SCRCLIFFE seconded the resolution:

That those members of the Division who wish to join the panels should be permitted to do so.

Dr. HEMMING proposed an amendment which was seconded by Dr. HALSTEAD:

That the decision on this resolution be deferred to an adjourned meeting to be held at the Victoria Hotel, Ramsgate, at 5 p.m., January 6th.

The amendment was carried *nomine contradicente*.

Public Medical Service.—Dr. BRUNTON reported the proposed alterations in the rules of the Public Medical Service which were recommended by the Committee of the Service. These were:

Clause XXI (i): That the fee should be reduced to 2d., or 8s. 6d. a year, if the cost of collection of subscriptions were undertaken by approved societies; and that it further be reduced to 7s. a year if the doctors were not responsible for the supply of medicines and appliances.

Clause XXI (ii) was struck out.

Clause XXXIII (c): Extra charge for fractures not to be claimed.

Clause XXXVI: The charges to be 2d. a week for non-insured men and women, or 8s. 6d. per year if paid quarterly.

On the motion of Dr. NICHOL, seconded by Dr. WOODS, these alterations were provisionally agreed to by the meeting *nomine contradicente*, it being realized that proper notice for the alteration of rules of the Public Medical Service was necessary.

The meeting adjourned.

The sixty-fourth meeting of the Division was held at Ramsgate on January 6th, being adjourned from the previous meeting. There were present thirty-four members and eleven non-members.

Minutes.—The minutes of the last meeting were read, confirmed, and signed.

National Insurance Act.—The HONORARY SECRETARY read letter D24 from the Medical Secretary, and also a circular letter, dated January 3rd, from the State Sickness Insurance Committee. He also read a telegram received from the Medical Secretary as follows:

Have received scheme offered by Kent Insurance Committee from Secretary of Kent County Medical Committee, together with urgent request that permission should be given for acceptance. Following is my reply to him: "Decisions of Representative Meeting prevent my giving official sanction to scheme, but you must take all circumstances into consideration, and take full responsibility for your action, doing what you think is best for the local profession."

Dr. HICKS proposed the following resolution, which was seconded by Dr. SCRCLIFFE:

That the action of those members of this Division who join the panel should be approved by the Division.

The following members also spoke: Drs. HALSTEAD, BRUNTON, ARCHIBALD, BENNETT-POWELL, TAMPLIN, and NICHOL. Dr. NICHOL proposed and Dr. TAMPLIN seconded an amendment:

That, in view of the serious injury which must result to the loyal members of our profession from continued resistance, this meeting no longer disapproves of the members of the Isle of Thanet Division of the British Medical Association accepting service on the panel, provided that the pledge be withdrawn by the Representative Meeting; and that, if the pledge be not withdrawn, they terminate their engagement at the end of three months.

After Drs. SAVERS, DUNDAS, RAVEN, and SMYTHE had spoken, Dr. STREET summed up the debate. The amendment was then put, and lost by 9 votes to 13. The original resolution was then put, and lost after a recount by 12 votes to 13. Dr. HALSTEAD proposed a resolution, which was seconded by Dr. HEMMING, to the effect:

That the meeting should take a show of hands, and ascertain those who were going on the panel (a) in spite of the decision of the Division, (b) in spite of the decision of the Representative Meeting.

This was carried by 14 votes to 6. It was, however, evident that some members did not realize the full meaning of the resolution, and a general conversation took place. Dr. NICHOL then proposed, and Dr. RICHARDS seconded, the following resolution, which was carried by 30 votes to 5, all practitioners present being asked to vote:

That in view of the serious injury which must result to the loyal members of our profession from continued resistance, this meeting no longer disapproves of their colleagues accepting service on the panel, provided that the pledge be withdrawn by the Representative Meeting.

The following resolution, proposed by Dr. NICHOL, and seconded by Dr. TAMPLIN, was carried *nemine contradicente*, 22 members voting:

That our Representative be instructed to vote in favour of the withdrawal of the pledge and undertaking at the forthcoming Representative Meeting.

Dr. HALSTEAD then stated that, as he was in entire disagreement with the majority of the members of the Division, he resigned his position as Representative. Dr. NICHOL proposed and Dr. WOODS seconded that this resignation be not accepted, and this was carried unanimously.

Mode of Payment under Insurance Act.—Dr. ARCHIBALD reported that the Kent Medical Committee were in favour of a scheme by which the whole county should work the Insurance Act on the basis of payment per attendance. He pointed out that this would be seriously deleterious to the Isle of Thanet, as did Dr. BRUNTON, and proposed that the Division should give its opinion that payment on the capitation basis should be the method adopted. This was seconded, and carried unanimously.

A letter was received from the Secretary of the Friendly Societies' Defence Association, stating that, owing to the circumstances which had arisen since the invitation of the Friendly Societies' Defence Association to the members of the Isle of Thanet Division of the British Medical Association to meet them on January 8th, the meeting was not immediately necessary.

Vote of Thanks.—A vote of thanks was passed to the Chairman for presiding.

SOUTHERN BRANCH:

JERSEY DIVISION.

The annual meeting of this Division was held on January 14th, Dr. SYMONS presiding.

Election of Officers.—The annual report of the Executive Committee having been approved, the following officers were elected for 1913: *Chairman*, Dr. E. O. B. VOISIN; *Vice-Chairman*, Dr. LEASK; *Honorary Secretary and Treasurer*, Dr. WYNN WALKER; *Members of the Executive Committee*, Dr. SYMONS and Dr. LE BROECC; *Representative of the Division at Branch Councils*, Dr. MAJOR.

National Insurance Act.—Dr. SYMONS proposed and Dr. MAJOR seconded:

That since this Division is unaffected by the Insurance Act the Chairman and Secretary have the power to decide whether, on any matter related to the Act and referred to the Division, a special meeting should be called.

Association Notices.

NOTICE OF ALTERATION OF BOUNDARIES OF BRANCHES AND DIVISIONS.

THE following change has been made in accordance with the Regulations of the Association, and takes effect from the date of publication of this notice:

That the parishes of Mitcham and Morden be transferred from the area of the Croydon Division of the South-Eastern Branch to the area of the Wimbledon Division of the Metropolitan Counties Branch, the area of the Wimbledon Division to be defined for the future as follows:

The Municipal Borough of Wimbledon, the Urban District of Merton, and so much of the Rural District of Croydon as is contained within the civil parishes of Mitcham and Merden,

and the definitions of the Croydon Division and Metropolitan Counties and South-Eastern Branches to be correspondingly modified.

Representation in Representative Body.—Unaffected.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

THE Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, 1913, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31) must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,

Medical Secretary.

February 4th, 1913.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held conjointly with the Finchbury Medical Society at the Manchester Hotel, Aldersgate Street, E.C., on Tuesday, February 11th, at 9.30 p.m., when Dr. BATTY SHAW will give an address on Tuberculosis.—A. G. SOUTHCOMBE, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—The next meeting will be held on Tuesday, February 11th, at 4 p.m., at Whipps Cross Infirmary. Agenda: (1) Minutes. (2) Correspondence. (3) Clinical Demonstration by Dr. J. C. MUIR. (4) Any other business.—A. POTTINGER ELDRED, Honorary Secretary.

NORTH OF ENGLAND BRANCH: NEWCASTLE-UPON-TYNE DIVISION.—The next scientific demonstration will be held at the Royal Victoria Infirmary on Friday, February 21st. Mr. F. C. PYBUS: The Treatment of Tuberculous Glands of the Neck. Professor T. BEATTIE: Treatment of Pulmonary Tuberculosis. Dr. W. E. HUME: Some Points in the Diagnosis of Early Phthisis. Dr. GEORGE HALL: Cervical Ribs and their Results. Mr. R. J. WILLAN: Diagnosis and Treatment of Malignant Tumours of the Prostate Gland. The demonstration arranged by the Newcastle-upon-Tyne Division of the British Medical Association for March 21st will take place on March 14th, when Professor R. A. BOLAM will lecture on Medico-legal Tests for Blood, in place of Dr. ARNISON's paper on Local Treatment of Rheumatic Arthritis, as Dr. ARNISON took Professor Bolam's place at the January meeting.—R. J. WILLAN, Honorary Secretary, Newcastle-on-Tyne.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following notices of appointment and promotion have been announced at the Admiralty: Fleet Surgeon ALBERT X. LAVERTINE to the *Good Hope*, and for group of ships of Third Fleet, February 1st, 1913. Fleet Surgeon JOHN E. COAN, M.B., to the *Donegal* on transfer of flag. Staff Surgeon EDWARD E. SAWDY to the *Edgar* on recommissioning, February 4th, 1913. Staff Surgeon FREDERICK F. MAHON to the *Theseus* on recommissioning, February 4th, 1913. Staff Surgeon WALTER H. O. GARDE, F.R.C.S. (Edin.), to the *Gibraltar* on recommissioning, February 4th, 1913. Staff Surgeon WILLIAM P. WALKER, M.B., to the *Carnarvon*, additional for Second and Third Fleets, January 28th, 1913. Surgeon EDWARD MORON-BROWNE to the *Good Hope*, and for group of ships of Third Fleet, February 1st, 1913. Surgeon WILLIAM H. KING to the *Victory*, additional for disposal. Surgeon HARRY M. LANGDALE to the *Victory*, additional for disposal, February 1st, 1913.

Staff Surgeon DAVID W. HEWITT, M.B., F.R.C.S., has been promoted to Fleet Surgeon for conspicuous professional merit, January 28th, 1913.

ARMY MEDICAL SERVICE.

COLONEL RICHARD W. FORD, D.S.O., on completion of four years' service in his rank, is placed on the half-pay list, January 26th, 1913.

Colonel ROBERT J. S. SIMPSON, C.M.G., M.B., retires on retired pay, February 5th, 1913.

Lieutenant-Colonel CHARLES E. FAUNCE to be Colonel, vice R. W. Ford, D.S.O., January 29th, 1913.

Lieutenant-Colonel ROBERT J. GEDDES, D.S.O., M.B., to be Colonel, vice R. J. S. Simpson, February 5th, 1913.

National Insurance.

OFFICIAL DOCUMENTS.

SPECIAL TREASURY GRANTS.

A WHITE PAPER (490), containing Supplementary Estimates for the year ending March 31st, 1913, was presented to the House of Commons on January 30th, and ordered to be printed.

Among the Estimates is the following :

Estimate of the Amount required in the Year ending 31st March, 1913, for Grants in Aid of National Health Insurance (United Kingdom) in addition to the sums payable under Section 3 of the National Insurance Act, 1911.

| | £ |
|---|------------|
| A.—NATIONAL HEALTH INSURANCE FUND (ENGLAND).. | 1,380,000 |
| B.—" " " " (WALES) ... | 101,000 |
| C.—" " " " (SCOTLAND). | 214,000 |
| <p>The grants in aid will be paid to special accounts in the National Health Insurance Funds for England, Wales, and Scotland respectively, and will be applied by the several Commissions in grants by way of additional payments at a rate not exceeding 2s. 6d. for each insured person for the cost of medical attendance and treatment, and not exceeding 1½d. for each insured person for the cost of administration of medical benefit. The grant in aid under Subhead C. includes £10,000 for mileage and other special charges in the Highlands and Islands of Scotland.</p> | |
| D.—NATIONAL HEALTH INSURANCE FUND (IRELAND) | 50,000 |
| <p>The grant in aid will be paid to a special account in the National Health Insurance Fund, Ireland, and will be applied by the Irish Insurance Commissioners in grants towards the cost of medical certificates of sickness, and other expenses of administration arising owing to the absence of medical benefit in Ireland.</p> | |
| E.—SPECIAL DRUG FUND (GREAT BRITAIN)... | 30,000 |
| F.—MILEAGE FUND (GREAT BRITAIN, EXCLUDING THE HIGHLANDS AND ISLANDS OF SCOTLAND) | 50,000 |
| <p>The grants in aid under Subheads E. and F. will be paid to special accounts administered by the National Health Insurance Joint Committee, and will be applied respectively by way of special grants towards the cost of drugs where epidemics or other abnormal conditions have caused an excessive demand upon the funds available for this purpose, and of special grants in respect of mileage in sparsely populated districts, exclusive of the Highlands and Islands of Scotland, for which provision is made under Subhead C.</p> | |
| Total ... | £1,825,000 |

Note.—The grants in aid provided on this Estimate will be paid to the respective funds and accounts, and no part of the sums issued out of the Vote will be surrendered to the Exchequer at the close of the year, but any balances standing to the credit of the respective accounts at the end of any financial year will be taken into account in determining the amount of the grants for subsequent years. Expenditure out of the special accounts will be audited by the Comptroller and Auditor General.

The grants will be subject to such conditions, and calculated in such manner, as may be determined by schemes made by the several bodies of Commissioners or the Joint Committee as the case may be, subject to the approval of the Treasury.

The grants for which provision is made in this estimate are additional to the proportion of the cost of benefits and the administration thereof, which by Section 3 of the National Insurance Act, 1911, is payable out of moneys provided by Parliament. [This is the section which lays it down that the funds for providing benefits and the cost of administration shall be derived from the contributions of employed and employers and the remainder "from moneys provided by Parliament."]]

ELECTION OF MEDICAL REPRESENTATIVES ON LOCAL INSURANCE COMMITTEES.

A CIRCULAR ⁸/_{1.C.} has been issued by the National Insurance Commissioners in England stating that they have made regulations, entitled "The National Health Insurance (Insurance Committees Election of Medical Representatives) Regulations (England), 1913," for the purpose of providing for the election of two representatives of the medical practitioners resident in the area of each Insurance Committee to be members of that Committee in pursuance of paragraph (c) of Subsection (2) of

Section 59 of the National Insurance Act. These Regulations, so far as we have been able to ascertain, have not yet been issued, but the circular states that the procedure for the election will be as follows :

Voters.

- (1) The persons entitled to vote at the election of the two representatives of the profession on the Insurance Committee for any county or county borough are the registered medical practitioners who appear in the Medical Register on the 30th January, 1913, as having their address within the area of that county or county borough.

Nominations.

- (2) Every practitioner entitled to vote in the election of a representative on an Insurance Committee is entitled under the Regulations to take part in nominating a candidate for election.
- (3) A candidate for election need not necessarily be resident in the area for which the election is held. He must be nominated on a nomination paper. A copy of the nomination paper prescribed by the Regulations is enclosed. In order to be effective for the purposes of the election it must be signed by five practitioners resident in the County who must also state upon the paper their respective registered addresses. It must also be signed by the candidate as evidence that he consents to be nominated. The paper must be despatched by post in an envelope addressed to the Returning Officer, National Health Insurance Commission (England), Buckingham Gate, London, S.W. Any nomination paper will be considered as in time for the election if it is placed in the post before the latest time for despatch on Monday, the 10th February. Great care must be exercised in filling up and despatching the nomination paper, as any misnomer, or misdescription, or late despatch may invalidate the nomination.

Withdrawal of Nominations.

- (4) Any person nominated as a candidate may withdraw his candidature by despatching by post to the Commissioners not later than the 12th day of February, 1913, a notice of his withdrawal signed by him.

Procedure for Election.

- (5) The nomination papers received in respect of each county or county borough will be examined immediately after the 12th day of February. If two candidates and not more are nominated in respect of any area those two candidates will be declared forthwith to be elected. If not more than one candidate is so nominated that candidate will be declared forthwith to be elected, and the vacancy will be filled up after the expiration of one month as if it were a casual vacancy.

Ballot Papers.

- (6) If the number of candidates nominated for any area exceeds two, the returning officer will, not later than the 18th day of February, despatch by post to the registered practitioners a ballot paper containing the names of all candidates duly nominated. The names of the nominators will not appear on the ballot paper. Every practitioner desiring to record his vote, must mark the ballot paper in accordance with the rules contained in Part I of the First Schedule to the Regulations, which are set out below, and return it by post to the Commissioners not later than the 21st day of February.

Counting of Votes.

- (7) The election will be conducted on the principle of the single transferable vote.

Announcement of Result.

- (8) The Commissioners will publish the result of the election for each county and county borough in such manner as they think necessary for the purpose of bringing the result to the knowledge of the practitioners resident therein.

FIRST SCHEDULE.

Part I.

METHOD OF VOTING.

- 1.—(a) Every practitioner shall record his vote by placing on his ballot paper the figure "1" in the place opposite to the name of the candidate who is his first choice.
(b) Every practitioner may also place upon his ballot paper the figure "2" opposite the name of the candidate who is his second choice, and the figure "3" opposite the candidate who is his third choice, and so on, numbering as many candidates as he pleases in the order of his choice.
2. Every practitioner—
(a) shall sign his name at the foot of the ballot paper in the place provided for the purpose;
(b) shall set not more than one figure opposite to the name of any one candidate, nor the same figure opposite the name of more than one candidate;
(c) shall so mark his paper that no uncertainty arises as to the candidate for whom he desires to record his vote.
3. Every ballot paper which does not comply with the provisions of these Rules shall be invalid.

VALIDITY OF CERTIFICATES OF NON-PANEL DOCTORS.

We understand that the question of the validity of medical certificates signed by non-panel doctors was recently brought before the National Health Insurance Commissioners by the Medical Defence Union, and that a communication has been received from the Commissioners stating that "there is nothing in the National Insurance Act, or any regulations thereunder, or in the rules of any approved society which would justify a society in declining to accept a medical certificate in connexion with a claim for sickness benefit on the ground that the certificate was not signed by a doctor on the local panel."

This statement should be read in the light of the reply by Mr. Masterman published under the Parliamentary Notes (p. 139).

REPORTS OF LOCAL ACTION.

SCOTLAND.

EDINBURGH.

The Edinburgh Local Medical Committee, which met for the first time on Saturday, February 1st, consists of the following:

C. W. Cathcart, Chairman.
Robert Thin, Vice-Chairman.
John Darling, Secretary, 116, Marchmont Road.
A. M. McIntosh, Treasurer.

Sir James Affleck, E. Armour, J. Balfour, J. W. Ballantyne, D. M. Barker, L. P. Bianchi, John M. Bowie, E. Scott Caruichael, T. B. Darling, M. Dewar, J. S. Fowler, J. B. Jamieson, R. McKenzie Johnstone, R. J. Johnston, D. Lorimer, Angus Macdonald, A. McKendrick, J. Maclaren, R. Maclaren, M. McLarty, W. L. Martin, A. A. Matheson, John Orr, Sir R. W. Philip, R. Robertson, T. R. Ronaldson, A. T. Sloan, J. W. L. Spence, A. Veitch, Chalmers Watson.

Two others (who have not yet accepted office) will be added; the list when thus completed will consist of 36 members, 18 on the panel, and 18 not on the panel.

Medical Guild.

The Medical Guild, which held a meeting on February 4th in the Gould Hall, Edinburgh, is a society of medical practitioners who have not joined the panel under the Insurance Act. It has been formed so that all insured persons may know:

1. That the certificate of any medical practitioner, whether he is on the panel or not, is sufficient to obtain sickness benefit.
2. That maternity benefit is paid to all women who are attended by medical practitioners, whether such practitioners are on the panel or not.
3. That the medical benefits for the insured who desire to make their own private arrangements are receiving the earnest attention of the guild.

It is reported that of the 372 members of the medical profession in the Edinburgh and Leith area, only 122 have joined the panel under the Insurance Act. It is believed that a certain number of the 122 will give up the work at the end of three months, as some of them have already had enough of it.

The Royal Infirmary, Edinburgh.

Reference was made in last week's issue to the difficulty which had arisen between the Royal Infirmary and the workmen of Messrs. Miller and Co., London Road Foundry, regarding the application made by one of the workmen for treatment at the out-patient department. It will be remembered (vide p. 118) that the accident was regarded as trivial, and the man was sent away to go to the insurance doctor; the workmen thereupon threatened cessation of their contributions to the infirmary. An investigation was made and an explanation offered by the superintendent of the infirmary; this was considered satisfactory by the men, but they suggested an arrangement which looked as if their ambulance staff were to have the right to decide what cases of injury were serious enough to be sent to the infirmary. It is satisfactory to learn that an arrangement has now been arrived at. At the meeting of the infirmary managers it was proposed to suspend for six months the resolution of the board as to the treatment of insured persons at the out-patient department, so as to allow time for the Act to get into working order, but finally the superintendent was instructed to write a reply to Messrs. Miller and Co.'s

men forthwith. In this letter assurance was given "that treatment will invariably be given to all cases of accident arriving at the infirmary, but that it must be left for the examining medical officer to decide whether the case is one for admission to the wards, or for further treatment as an out-patient, or one to be referred for treatment to the medical officer of the society to which the patient belongs." The result has been that Messrs. Miller and Co.'s men are now satisfied, and their secretary, in his letter to this effect, added that the suggestion they had previously made regarding their ambulance staff "had been with the view of bringing forth a definite understanding, and not with the intention of arrogating to themselves the right to say what cases should be subject to treatment in the infirmary."

Another matter of difficulty at the Royal Infirmary in connexion with the Insurance Act is the question whether certain classes of employment in that institution are employment within the meaning of the first part of the Act. Three classes of employment are involved. There are, first, the resident physicians and resident surgeons, who receive no salary, but get board and lodging free, and an allowance of £2 10s. in lieu of laundry for the period of their engagement; in their case the value of the board and lodging, taken along with the allowance, does not exceed £160 a year. There are, secondly, the non-resident house-physicians and non-resident house-surgeons and clinical assistants, who are occupied with their duties for two or three hours daily; they also receive no remuneration, but some of them are allowed lunch. There are, thirdly, the supervisors for the administration of anaesthetics, who are occupied on an average for one or two hours a day, and receive an honorarium of £20 per annum. The Scottish Insurance Commissioners have presented a petition to the Court of Session to have it settled in what relation these various kinds of employment stand in respect to the Act.

It may be remembered that at the instance of the Medical Defence Union the Insurance Commissioners held an inquiry on October 22nd, 1912, to consider whether under Section 66 of the National Insurance Act resident medical officers of hospitals and similar institutions were employed under a contract of service bringing them within the provisions of the Act as insured persons. The Commissioners decided that such officers were not so employed, and were accordingly not required to be insured even though their rate of remuneration did not exceed in value £160 per year.

HOSPITAL RULES.

The following regulations with reference to the treatment of insured persons were adopted at a recent meeting of the directors of the Northern Infirmary, Inverness:

NORTHERN INFIRMARY, INVERNESS.

Regulations Adopted with regard to Persons Presenting Themselves for Treatment after January 15th, 1913.

1. All persons desiring to be admitted to the hospital must be provided with an admission form, on which it shall be shown whether they are, or are not, insured persons. In the case of insured persons, the name of the approved society to which they belong must be furnished in each case.
2. Each insured person shall be referred to the member of the medical staff on duty, or, in his absence, to a member of the acting or consulting staff, to decide whether his or her ailment is urgent or requiring special hospital treatment.
3. Urgent cases may be admitted at any time and without letters of admission. By urgent cases are meant persons who have met with dangerous accidents and those who require instant treatment.
4. In the case of an insured person with an ailment or an accident which can be treated by a general practitioner of ordinary competence, such insured person shall be told by a member of the medical staff that he or she must obtain treatment by a medical practitioner outside the hospital.
5. The treatment of the really necessitous uninsured poor shall remain as at present.

Notices to be Posted in Prominent Positions in the Hospital.

1. On and after January 15th, 1913, all persons applying for treatment will be required to state whether they are insured persons or not.
2. Insured persons with small ailments will not be treated at the hospital.

COUNTY OF CHESHIRE.

Provisional Medical Committee.

The fifth meeting of this Committee was held at the Onward Buildings, Deansgate, Manchester, on February 3rd, nineteen members being present and Dr. GARSTANG in the chair,

The election by this Committee of Drs. P. Cooper and J. B. Hughes to represent the profession on the Insurance Committee was referred to. Subsequent to it the practitioners of the county had received direct from the Commission invitations to nominate representatives for the same posts. The SECRETARY reported that he had circularized the profession of the area, requesting them to support the nominees of this Committee. His action was approved.

Dr. McIntyre Brown, of West Kirby, raised (by letter) the question of the formation of District Medical Committees.

There are twenty-four insurance districts in the county (corresponding to the educational areas), as detailed in the BRITISH MEDICAL JOURNAL SUPPLEMENT of February 1st, p. 118. The Committee resolved, on the motion of Dr. P. Cooper:

That where District Medical Committees had not been already formed the Secretary should request the medical representative on the District Insurance Committee to convene a meeting of the local profession of his area for the purpose of electing a District Medical Committee, and in the case of those areas where no representative had yet been selected that the Secretary should communicate the same request to the Secretary of the British Medical Association Divisions in which those areas are situated.

The question of fuller representation on the District Committees, raised by letter by a practitioner in Macclesfield, was postponed until statutory recognition of this committee should have been obtained.

The following were elected as the medical members of the Medical Service Subcommittee for the county: Dr. Garstang (Altrincham), Dr. Picton (Holmes Chapel), Dr. Marsh (Macclesfield).

Dr. GARSTANG then reported an interview between a deputation of this committee and the Medical Benefit Subcommittee of the Insurance Committee, at which the amended drug list was submitted. As the chemists took exception to the inclusion of vaccines, serums, animal extracts, and all appliances for the treatment of fractures of the lower extremity, the subcommittee had proposed, and it was agreed to by all parties, that the amended drug list, including the above, should be submitted to the Commissioners.

The question of the action to be taken in view of the decision arrived at on February 1st by the Medical Benefit Subcommittee of the Cheshire Insurance Committee, that dispensing for patients more than one mile from a chemist, though permitted to doctors if the patients so desire, should be paid for per item, and *not* by capitation, was discussed. (A capitation system for payment of medical attendance is in force.)

The Medical Secretary (British Medical Association) had wired that a similar decision in the North Riding had, he understood, after strong representations to committee and Commissioners, been reversed.

The "Explanation of Medical Benefit" clearly contemplates payment for dispensing in rural areas by capitation, but the Regulation (47) is only permissive. Dr. LITTLE understood capitation payment for dispensing was part of the agreement in respect to rural patients. Dr. MARSH laid stress on Mr. Lloyd George's point that rural dispensing was to compensate for no payment for mileage. Drs. BENNETT and MATTHEWS also spoke. Dr. PERCY COOPER moved and Dr. MARSH seconded that strong representations on the subject should be sent to the Committee and the Commissioners.

The terms on which attendance should be given to old and disabled members of friendly societies were discussed, and the Committee resolved that the Act itself laid down the terms in Section 15 (2) (c)—namely, the same terms as those applicable to insured persons; and that this view of the matter should be communicated to the Insurance Committee accordingly.

The meeting was adjourned till Thursday.

LIVERPOOL.

The statutory Local Medical Committee has now been elected and awaits official recognition. It consists of twelve panel doctors, eight non-panel general practitioners, five consultants, and one medical woman.

The Municipal Council has selected its two medical representatives on the Insurance Committee, and the election (now in progress) of two representatives of the medical profession on the same body will bring the local

machinery of the Act near to completion. The sooner the Local Medical Committee gets to work and makes its weight felt on the vexed question of "contracting out" the better. At the present moment officialdom is trying hard to stampede insured persons on to the panel system, just as a little time ago they stamped the medical profession. Only the more daring among the insured are holding out in hopes of retaining their own doctor where that doctor does not happen to be on the panel.

NATIONAL MEDICAL UNION.

The Secretary of the National Medical Union, Mr. J. Webster Watts, 5, John Dalton Street, Manchester, informs us that at the annual general meeting of the union, held on January 28th, it was resolved to convert it into a permanent organization for medical men who decline service under the National Insurance Act as at present constituted.

Amongst the objects at which the union is aiming are the following:

1. The bringing together of all those whose convictions have led them to remain in opposition to the present Act.
2. Mutual assistance amongst members all over the country.
3. The guarding of the interests of the members in every possible way.
4. To endeavour to uphold the honour and interests of the profession, which have been—and still are—gravely imperilled by recent events.
5. To secure efficient medical attendance for the industrial classes at reasonable remuneration.

The annual subscription to the union is 10s. 6d.

INSURANCE ACT IN PARLIAMENT.

ADMINISTRATION OF MEDICAL BENEFIT.

Number of Insured Persons.

In reply to Mr. Fred Hall, on January 29th, Mr. Masterman said that the approximate number of members of approved societies was 13½ millions, and of deposit contributors 480,000. The numbers of men and women were about 10 millions and 3½ millions respectively. The numbers of single and married women were not available, as the distinction was not required for immediate administrative purposes, but he hoped to obtain them.

Medical Institutions.

Mr. Duncan Millar asked the Secretary to the Treasury in how many instances existing medical institutions or associations had been approved under Section 15 (4) of the National Insurance Act; and in how many cases medical treatment was provided by the rules of such associations for dependants as well as for insured persons.—Mr. Masterman said that 109 systems and institutions had been approved. With one exception the rules provided for the treatment of dependants.

The Panel Lists.

On January 29th Mr. Masterman stated, in reply to Lord Ninian Crichton-Stuart, that the names of additional doctors joining the panels were kept at the offices of the Insurance Committees. Revised lists were published by the Insurance Committees at convenient intervals.

Contracting Out and Time Limit.

Mr. Gwynne asked, on January 29th, whether Local Insurance Committees were entitled to fix a limit of five days in which persons desirous of making their own arrangements for medical benefit had to apply for the form, thus excluding a large number of persons who had not received the medical benefit ticket, which in certain cases it had been stated must be brought when application was made, from availing themselves of the provisions of Section 16 (3) of the Act.—Mr. Masterman said he was not aware of any case in which such a time limit had been fixed, and offered to make inquiries if particulars of any case were supplied to him.

Mr. Worthington-Evans, on February 3rd, asked whether insured persons were allowed to make their own arrangements, under Section 15 (3) of the National Insurance Act, by the Insurance Committee of the Isle of Ely; and what limits of time within which applications for permission to make private arrangements could be made had been fixed by such Committee.—Mr. Masterman replied that the Isle of Ely Insurance Committee

would exercise the powers conferred on them by Section 15 (3) of the National Insurance Act in the same way as other Insurance Committees, except in the areas in which the panel system had been suspended. In those areas all the sums available for the medical treatment of insured persons would be paid by the Committee to the doctors who had undertaken complete responsibility for their treatment. He was not aware that any limits of time had been fixed by the Committee.

Mr. Worthington-Evans inquired if the insured persons were going to have any free choice at all in the matter.—Mr. Masterman said he thought they would have free choice amongst the doctors who were willing to act under the Act.

On February 3rd Mr. O'Grady asked the Secretary to the Treasury whether an insured person preferring to pay his doctor's bill in the usual way could claim from the Local Committee the sum allowed under the National Insurance Act for medical services.—Mr. Masterman said that in cases where the Insurance Committee allowed an insured person to make his or her own arrangements for medical attendance and treatment, a contribution towards the cost of that treatment would be made by the Committee, in accordance with Section 15 (3) of the Act.

Suspension of Panel System.

Mr. Worthington-Evans asked on what terms Drs. Morgan and Dimock had been engaged as doctors for the Isle of Ely under the National Insurance Act; and whether any assurance had been given to them that the panel would be closed or not adopted for two years or any other period, and by whom such assurance was given.—Mr. Masterman said that Dr. Morgan only rendered service pending the completion of the Committee's arrangements for medical service in the Chatteris district. Dr. Dimock and the other doctors who had undertaken the attendance and treatment of insured persons in the Chatteris and Wisbech districts would be remunerated on the same terms as panel doctors elsewhere, and they had entered into agreement with the Local Insurance Committee to take complete responsibility for the insured persons in those districts for a period of two years, subject to three months' notice on either side.

Mr. Worthington-Evans asked whether any assurance had been given to the doctors that the panel would be closed or not within the two years.—Mr. Masterman said that he understood that the arrangement was that the panel system was suspended for two years, subject to three months' notice on either side.

Domestic Servants.

Sir J. D. Rees asked the Secretary to the Treasury if a domestic servant got ill and went to his or her home, how his or her transfer was arranged from one to another panel practitioner.—Mr. Masterman said that any insured person who changed his residence, on giving notice to the Insurance Committee of the area to which he was going, would be able to obtain treatment from a doctor on the panel in that area.

In reply to Mr. Gretton, Mr. Masterman said that he could not give an indication of the amount of time that would be occupied in those transfers.

In reply to a question by Mr. Mildmay as to whether the regulation applied to servants moving back and forward in the course of a year, Mr. Masterman said that, if they were a really long period of time away from one place to another, it would. If they were continually moving from one place to another, he thought they would find it more convenient to take advantage of the special arrangements.

In reply to Mr. Gwynne, Mr. Masterman said they would require a ticket, but he did not think a separate ticket was necessary in each case.

Certificates of Non-panel Doctors.

Sir H. Craik asked, on February 4th, whether a domestic servant, being an insured person, who received medical attendance from the family doctor at the cost of her employer, might be deprived of sickness benefit because that doctor was not on the panel, and therefore his certificate might not be accepted by the Local Insurance Committee.—Mr. Masterman replied that the Local Insurance Committees had nothing whatever to do with sickness benefit for members of approved societies. The question of requiring satisfactory evidence of sickness,

whether by certificates or otherwise, was entirely a matter for the committee of management of the approved society, subject to appeal to the Insurance Committee under Section 67 of the Act.

Aged Members of Approved Societies.

Mr. Glazebrook asked the Chancellor of the Exchequer, on January 23th, whether he would take steps that the old or infirm persons who were members of approved societies at the date of the passing of the National Insurance Act be put in possession of the vouchers entitling them to medical attendance and treatment on the same terms as to remuneration as those arranged with respect to insured persons, as required by Section 15 (2) (e) of the National Insurance Act.—Mr. Masterman, who replied, said that the Regulations issued by the Commissioners provided for the issue of the vouchers referred to.

Lord Ninian Crichton-Stuart asked, on February 3rd, if the Government were prepared to help, financially or otherwise, those members of friendly societies over 65 years of age who were insured persons, and therefore eligible for sickness benefit, to get medical benefit.—Mr. Masterman replied in the affirmative. He said the Supplementary Estimates included provision for a capitation grant of 2s. 6d. in respect of those insured persons whose societies elected to provide medical treatment as one of the benefits to be given under Section 49 of the Act.

Sir Ryland Adkins inquired whether any similar or analogous benefits would be given to those over 70, members of friendly societies, who under the Act got no benefit.—Mr. Masterman said that the provision was entirely limited to insured persons.

Payment to Doctors Who Dispense.

Mr. Wright asked, on February 4th, whether doctors in rural districts who undertook both medical attendance and the supply of drugs to insured persons on their lists were entitled to the whole of the 2s. allowed for such persons for drugs; if not, to what, if any, share of the floating 6d.; and whether any regulations, and, if so, what, had been drawn up in that respect.—Mr. Masterman said that a doctor in a rural district who did his own dispensing under the conditions laid down in Sections 45 and 47 of the Medical Benefit Regulations would receive on the capitation system the total capitation sum for medical treatment and drugs, namely 7s. (which includes the so-called floating 6d.) for general attendance, 6d. for attendance on tuberculosis patients, and 1s. 6d. for drugs, making a total of 9s. in all.

Mr. Wright asked whether in some counties the Local Insurance Committees were allowing only 1s. 6d., and not the 2s.—Mr. Masterman said that if any case was brought to his notice, he would see that it was immediately put right.

Income Limit.

Mr. Charles Duncan asked the Secretary to the Treasury, on February 3rd, whether the Perth Burgh Insurance Committee had fixed a £2 limit for medical benefit under the National Insurance Act on the ground that a panel of doctors could not otherwise have been set up; whether that action, which was causing dissatisfaction amongst insured persons in Perth, was in order, and what action he proposed to take in the matter.—Mr. Masterman said that under Section 15 (3) of the Act, the question of whether an income limit above which persons must make their own arrangements for receiving medical attendance and treatment and receive a contribution towards its cost, instead of receiving medical benefit under the ordinary arrangements, was one to be determined by the Insurance Committee. Paragraph 14 (2) of the Medical Benefit Regulations required that before such an income limit was fixed the Committee should give public notice of their intention, and should consider the representations of any societies with members resident in the area. He was informed that the Perth Insurance Committee had given public notice accordingly, and that a meeting would be held at which representatives of societies would have an opportunity of expressing their views before a final decision was arrived at.

Professional Secrecy.

Sir H. Craik asked, on February 4th, whether, considering that it was a breach of medical etiquette for

doctors to divulge the ailments of their patients, and that patients often objected to any specific statement in regard to that being made public, it was sufficient to enter on the sickness certificate that the insured person was disabled by illness or accident, as the case might be, leaving any specific statement which might be required for statistical purposes to be entered in the doctor's private day-book.—Mr. Masterman said that the arrangements for the keeping and furnishing of records by doctors secured that information which would connect the name of a patient with an entry as to a particular kind of disease could not be obtained by the Commissioners, committee, or society. The nature of the evidence which a society accepted in support of a claim to sickness benefit (which had no connexion with the form of record kept by the doctor for the purposes of the Medical Benefit Regulations) was primarily a matter for the society. If any question arose between such a claimant and his society as to the sufficiency of any certificate tendered by the claimant for this purpose, that question would have to be determined by the Commission under Section 67 of the Act. In reply to a further question by Sir Henry Craik, the Secretary to the Treasury stated that statistics which were taken for general statistical purposes were records which would be altogether independent of the names, and could not be attached to them.

District Nurses.

In reply to Sir Archibald Williamson, on January 30th, Mr. Masterman said that the Commissioners had no funds from which to make any grant for the support of district nurses. Under Section 21 of the Act an approved society or an Insurance Committee might subscribe for that purpose, and experience of the working of the Act was necessary to show what would be the effect of that provision.

Periods of Payment.

In reply to Mr. Cassel, on January 30th, Mr. Masterman said that the Regulations contemplated quarterly payments, but arrangements might be made by Insurance Committees whereby payments might be made on account during the quarter. The lists of patients sent in by the doctors would be checked by the Insurance Committees from the lists furnished by the societies, net from the medical tickets. The payments were due as from January 15th or whatever later date the doctor joined the panel.

Clerical Work.

In reply to Mr. Locker-Lampson, on February 5th, Mr. Masterman said that the principal pressure of clerical work on doctors on the panel had been due to the initial work in connexion with the selection of doctors and registration of patients at the starting of medical benefit, and would not recur. Proposals for simplifying the work were under the consideration of the Commissioners.

SANATORIUM BENEFIT.

Mr. Masterman, on January 30th, in reply to a question by Mr. Cassel, said that an Insurance Committee had no power to supply such articles as coal, but only such food and nourishment as were ancillary to the treatment of tuberculosis. The ordinary necessaries of life for the cost of which an insured person's sickness benefit was available did not fall within the definition.

Mr. Masterman, in replying to Mr. Leach on February 3rd, said he hoped that a return showing how many persons were under treatment for tuberculosis, and how many of them were receiving treatment in institutions, would be laid on the table of the House this week.

Mr. Wheeler asked, on February 4th, whether insured persons suffering from tuberculosis could claim sanatorium treatment as a right; and, if not, what arrangements had been made for the treatment of those insured persons for whom doctors had stated that sanatorium treatment was absolutely necessary.—Mr. Masterman said that an insured person was entitled to such sanatorium benefit as the Insurance Committee recommended. The nature of the treatment was determined by the Committee, acting on the advice of the tuberculosis officer or other consulting medical man.

Mr. Wheeler asked if there were not a large number of insured persons urgently in need of sanatorium treatment who had paid for it thinking they were going to get it.—Mr. Masterman said that if any case of people recommended for sanatorium benefit who had not received that

benefit was brought before him he would have immediate inquiry made.

In reply to Sir Henry Craik, Mr. Masterman said he was not aware of any insured man or woman who had been recommended for sanatorium benefit who was not receiving some sanatorium benefit.

MATERNITY BENEFIT IN IRELAND.

On January 30th Mr. O'Shee asked the Secretary to the Treasury whether, in Ireland, in the case of a woman whose husband was an insured person, and who in her confinement procured the attendance of the dispensary doctor or dispensary midwife under the provisions of the Medical Charities Acts, there was any liability, under Section 13 of the National Insurance Act, to deduction from the maternity benefit of any payment for such doctor or midwife; and, if not, whether the entire sum of 30s. would be payable without deduction.—Mr. Masterman said that under the Medical Charities Acts only "poor persons" were eligible to receive a dispensary ticket from a guardian or relieving officer requiring the attendance of a dispensary medical officer free of charge. The question of whether a particular applicant was a poor person was one that would require to be determined by reference to the circumstances of the particular case, and though the receipt of maternity benefit might be a relevant consideration, no general answer which would apply to all cases could be given beforehand. He referred Mr. O'Shee to the answer given by the President of the Local Government Board on January 23rd with regard to a somewhat similar question under the English Poor Law (see SUPPLEMENT, February 1st, p. 122).

AMENDMENT OF THE ACT.

Mr. Lloyd George, when announcing the appointment, on February 4th, of the Commission on the extension of medical benefit to Ireland (see p. 306), stated that such extension would involve an amendment of the Act, and seemed to recognize that the occasion might be taken to make other amendments. Mr. Masterman, on February 5th, stated that the Government was prepared to introduce an amending Act when experience showed that such amendment was desirable. The Commissioners would be glad to receive at any time and from any quarter any suggestion for possible improvement; criticisms so far, however, had been barren of constructive suggestions.

CORRESPONDENCE.

RESULTS OF THE ACTION OF THE BRITISH MEDICAL ASSOCIATION AND FUTURE PROSPECTS.

DR. JOHN GAY (Putney) writes: May I, as one who is neither a political supporter of the Chancellor of the Exchequer nor a pledge-breaker, endeavour, with much diffidence, to pour oil on very troubled waters? Should we not, at this present time, face the results of our *mistakes* (for defeat we can hardly call it) with some philosophy and calm? We hear of attempts made to break up one association and to set up a multitude of others in its place in a spirit which savours of panic that is surely fraught with the possibility of disaster. Whatever action has been taken by the British Medical Association represents only the desires of its members. Every step has been taken after discussion in, and by the decision of, the Divisions; and if, unfortunately, we have failed to get at the real views of the profession on this occasion, we must see to it that such a result will be for the future impossible. Would it not be better, therefore, that a period of calm should precede the formation of new organizations, so that the probability of further failure shall be reduced to a minimum?

It may or may not be reasonable for us to suspect the Government of sinister motives, and no one knows better than ourselves how often the proffered spoonful of jam disguises the presence of a less pleasant powder. Some of us are suspicious of the composition of the Chancellor's jam, while others declare that they can detect in it the nauseous flavour of the medicine. But if we examine Mr. George's actions dispassionately, can we be so sure that he has been actuated by want of consideration for, or opposition to, our views? As a matter of fact we have scored on many points, as the following summary proves:

In the original bill we objected to the voluntary centri-

butor, and that objection was sustained. We declined to submit to the friendly societies as employers, and asked for a separate committee on which we should have representation, which was granted. We asked for a tenth representation of medical men on the committee, and this also was given us. We asked also for representation on the Insurance Commission, on statutory medical committees, for free choice of doctor among those willing to take up the work of the panel, for the open panel in place of whole-time medical officers, and all these were granted.

Had we accepted the terms offered in November last, as seems to have been the desire of a very large proportion of the profession, we should now have had representatives on the Insurance Committees while regulations were being made. And it should be remembered that there are statutory committees with whom the Insurance Commissioners were bound to have arranged for the services of medical men, instead of which men were obliged to go on the panels in a fashion which can only be described as a *débâcle*. Had these committees been properly constituted they would certainly, as shown in the SUPPLEMENT just issued, have had considerable power. In any event we should have remained a united and independent body, and have had the whole thing in our own hands, even to the arrangement of income limits in different districts. All this we have lost, though perhaps not irretrievably.

There remain only in dispute the amount for capitation grant and the income limit. As regards the former, the Chancellor offered 4s. 6d. per head and some extras. We asked for 8s. 6d. and some extras. We were finally offered 7s. without extras, and 9s. in country districts, free of expense. Obviously many thought it a good offer. It meant £1,600,000 extra for our work. Even now it might be possible, if we work together through the organization in the Act, to get certain extras, such as anaesthetics and mileage, through the power of the county councils to raise a rate if needed for such purposes. Union is the only method to achieve this.

The income limit is a sore point, undoubtedly. But it is clear that during the passage of a bill a Minister is exposed to several lines of fire, and too much granted to one side is apt to wreck a bill by the action of the opposing party. Apparently a different arrangement from that in the Act would have had no support from either party.

If we have been defeated is it not by our own disunion? Is it not now to our best interest to stop the sort of guerrilla warfare now being carried on in London and to accept the position, which is evidently agreeable to a very large number of the profession; to elect on the Insurance Committee the best and most reasonable men we can—not politicians, but men whose opinions will carry weight with their lay colleagues; and to elect similarly the Medical Committees, and see how the Act works and how we can get such regulations framed as we may desire. There are many who believe that the Chancellor is really anxious for a satisfactory service and the good-will of the profession. I have endeavoured to point out the evidence of this desire. When the panels all over the country are practically complete is it wise for London to start the methods of warfare now threatened? It may lead to worse things than we have already experienced. There is time enough to arrange new organizations when we find out exactly what is wanted.

Dr. J. E. O'SULLIVAN (Liverpool) writes: The letter from Dr. G. McGregor in the SUPPLEMENT of February 1st merits careful study and reflection, due to cogent remarks as to the future of the Association contained therein. After adverting to the causes of the recent *débâcle*, he proceeds to remark:

Let every member of the Association do his utmost to secure a Council which will be clean and straightforward, and also do his best to secure that the officials of his own Branch and Division shall be those men he most can trust. We must devise some means of penalizing those rebellious members of the ranks—the malcontents and defaulters.

I am quite in agreement with these statements, but ask myself, Is there even a remote hope that they will be put into practice?

At the meeting of the Representative Body on January 17th I voiced the instructions of my Division—instructions given on my own and another's initiative—in order to defeat an attempt to give instructions to vote for a

general release, including those who had violated the pledge, as to the advisability of releasing the men who had remained loyal to the bond given. At the same time I had a resolution on the agenda paper, in my own name, moving that the meeting should express condemnation of and censure on those who violated the pledge. I hoped to speak on the terms of my resolution when the motion of the Faversham Division was reached. Unfortunately, not feeling well, I could not remain until Saturday, and though I handed in a rider to the Faversham motion, and left it in charge of another Representative, it was not discussed.

The grotesque and farcical decision arrived at by the majority of the Representative Body to release from the pledge those who had distinctly violated it and gone against the declared policy of the Association was only worthy of a Gilbertian comic opera, and it was done without the slightest expression of censure upon the disloyal, or any tribute paid to the loyal, members of the Association. The public has received this farcical performance with indifference or with the contempt it merited and deserved.

I with others would quite willingly have viewed the wholesale resignations from the Association of those men who had acted disloyally, at the hour of peril, with perfect equanimity, purged of their presence, for when can such men be ever again depended on? The loyal men would have felt revived, and would willingly have paid an increased subscription.

Had such line of action obtained the Association would now be in a far more creditable position than it at present occupies, alike in the opinion of its loyal members—many of whom at present are contemplating resigning—and in that of the public at large.

Apropos of Dr. McGregor's advice as to the men to elect on the Council, on the Branch Councils, and on the Executive of the Divisions—men, in future, to be relied on, let me explain the position here.

On January 31st the annual meeting of the Liverpool Division for the election of the Executive Committee of members to the Branch Council and of members to the Representative Body was held; out of over 400 members about 30 to 40 put in an appearance. Of the executive, the chairman elected and four other members went on the panel before released from the pledge, and the Chairman and Secretary of the late local Provisional Committee that issued the resolution which was promptly interpreted by many as signifying that they would be justified in going on the panel, and who themselves voted for sending out that resolution, were also elected. It would be interesting to know what Dr. McGregor thinks of these facts. What hope have we that we can rely and depend on men in the next battle, which he says is not far distant?

The Association is at present in a state of apathy and stupefaction as a result of our recent discreditable *volte face*. Honourable, well-meaning men hesitate, and thus affairs are suffered to drift.

After the decision of the Representative Body I am strongly of opinion that the only real hope for the Association (though I know that the words will stink in the nostrils of some: they cannot produce any possible worse effect than reference to the recent *débâcle*) is to turn itself into a trades union, and thus in some way fit itself for any future conflict.

CONTRACTING OUT.

Dr. H. BRYAN DENSHAM (Stockton-on-Tees) writes: In the SUPPLEMENT of February 1st Dr. Coode Adams puts forward his views on this question. Opinions set out in your columns, however apparent may be their fallacies, cannot be ignored lest some may give them credence. Dr. Adams states:

1. That under "contracting out" the money set apart would be removed from the control of the representatives of the insured.

That is not so. The Insurance Committee would still have full control of the pooled medical benefits of those contracting out.

2. That "contracting out" would be used by the friendly societies to regain the appointment and control of their club doctors, and so renew the abuses which existed under this system.

The medical men who formerly lent themselves to such

abuse of contract service are all on the panels, and would not leave them to accept a lower rate of remuneration.

3. That a "contracting out system" would break down the "panel" system.

There is no justification for this statement. Both systems are essential features of the Insurance Act, and they are in no way incompatible.

Dr. Adams concludes by saying: "It is, therefore, somewhat sad to see so much money, time, energy, and temper expended on thus crying for the moon." It is still more sad to find a medical man making inaccurate statements with a view of discouraging those of his brethren who are striving to preserve some portion of the independence of their profession.

Dr. B. G. M. BASKETT (Thundersley, Essex) writes: There is surely a fallacy underlying Dr. Coode Adams's argument. What possible reason can there be for calling insurance premiums public money? An insurer qualifies for his insurance by punctual payment of his premiums. *Qua* insurance, the Insurance Commissioners have as much right to refuse sick benefit if the policy-holder does not deal with a grocer who is a member, say, of the local Liberal Association, as medical benefit pay to a man who does not deal with a doctor on a specified list. Plainly, if this be an Insurance Act, the insuring person has an indefensible right to his benefit without conditions.

If it is not an Insurance Act, but a Poor Law, Mr. George's attitude is justified. Dr. Adams seems to recognize that it is a Poor Law, inasmuch as he speaks of "insurance tax." But Ministers did not venture to use that term while the Act was yet a bill; on the contrary, the beneficiaries were taught to look on their contributions, not as a tax, but as a highly remunerative investment. Every one knows what fatal mischief the misuse of words may work in political matters; for example, this very Act is commended to us as a "Radical" measure, a claim which is enough to make Cobden and Bright turn in their graves; and if it is merely to produce an exact appreciation of the meaning of the Act, the effort which Dr. Adams deprecates is worth making.

Secondly, even if the insurer's money is not a trust, but public money, and is as really a tax as the contribution which medical men must make towards their own remuneration, Dr. Adams's (and Mr. George's) objection *re* taxation and representation is not relevant. The amount to be paid for medical benefit is—between maximum and minimum limits—already fixed, as we hope, and fixed by what we conventionally regard as representative methods. The sole difference which contracting out makes is that the insurer, like a responsible being, receives into his own hands what otherwise would be paid over his head, as if he were a child.

Thirdly, in the face of the instructions issued on the insurance cards, it is idle to maintain that its composers did not so read their instructions from Parliament that they knew they were to expect large abstentions from the panel system. The card issued to fourteen million people is, in fact, proof that Mr. George's attitude differs now from what it was. The important thing now is Government control, rather than popular feeling; and the question before us is whether the Insurance Commissioners shall be the irresponsible rulers of one-third of the British people. The British Medical Association scheme proposes collective, not individual, bargaining with the benefit societies; but even the latter would be better ultimately than Mr. George's scheme, which involves the most grinding of all tyrannies.

The suggestion that we cannot do our duty to people who earn less than £160 a year without official supervision is derogatory not more to our integrity than to the manhood of that class. If the supervision is to be real it will necessarily be disastrous to the profession, and therefore to our patients; if, as seems probable, it is only nominal, why the insistence on the panel?

When trade enters on its next depression, and when the employers have been able to shift the burden of their taxation, so that real wages fall, we are certain (if my experience of the working class feeling is at all typical) to have the employed class with us in our objection to the Act, and under a Government which has the same regard for the liberty of the poorer as of the richer members of the community, it seems to me certain that we should be

able to introduce the voluntary principle into the Act. Dr. Adams, again following Lloyd George, thinks that would be fatal to the Act. That such an Act should collapse, or the grant of freedom to the people should be its most damaging indictment, one thinks, to any Englishman, it certainly is the most hopeful reason why we should continue the effort to bring home to "employed" people's minds the degradation of the inferior status which has been thrust upon them.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN ninety-six of the largest English towns 8,632 births and 5,906 deaths were registered during the week ending Saturday, February 1st. The annual rate of mortality in these towns, which had been 15.4, 16.5, and 17.0 per 1,000 in the three preceding weeks, further rose to 17.2 per 1,000 in the week under review. In London last week the death-rate rose to 18.6, against 15.3, 16.5, and 17.8 per 1,000 in the three previous weeks. Among the ninety-five other large towns the death-rates last week ranged from 4.9 in Devonport, 7.2 in Ilford and in Southampton, 10.0 in Ealing, 10.3 in Southport, 10.5 in Wallasey, and 10.8 in Wimbledon to 24.5 in South Shields, 25.0 in Darlington, 25.6 in Barnsley, 25.9 in Wakefield and in Rotherham, 26.8 in Aberdare, and 31.5 in St. Helens. Measles caused a death-rate of 2.9 in Bootle, 3.2 in Barrow-in-Furness, 3.4 in Acton, 6.8 in St. Helens, and 6.9 in Wigan; and diphtheria of 1.0 in St. Helens, in Sunderland, and in Rhondda, and 2.0 in Walthamstow. The mortality from the remaining infectious diseases showed no marked excess in any of the large towns, and no fatal case of small pox was registered during the week. The causes of 51, or 0.9 per cent. of the total deaths, were not certified either by a registered medical practitioner or by a coroner after inquest, and included 11 in Birmingham and in Liverpool, and 3 in Stoke-on-Trent and in St. Helens. The number of scarlet-fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,889, 1,828, and 1,784 at the end of the three preceding weeks, had further fallen to 1,738 on Saturday last; 209 new cases were admitted during the week, against 202, 204, and 215 in the three preceding weeks.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, January 25th, 714 births and 420 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 631 births and 510 deaths in the preceding period. These deaths represent a mortality of 21 per 1,000 of the aggregate population in the districts in question, as against 22 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 4.3 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 31.0 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 19.7 (as against an average of 21.9 for the previous four weeks), in Dublin city 21.7 (as against 23.3), in Belfast 24.5 (as against 22.4), in Cork 21.8 (as against 23.5), in Londonderry 30.5 (as against 20.3), in Limerick 16.2 (as against 14.9), and in Waterford 19.0 (as against 27.5). The zymotic death-rate was 1.7, as against 2.1 in the previous week.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

- AGRA: DUFFERIN HOSPITALS.**—Lady Doctor on the Staff. Salary, Rs. 300 a month.
- BARNSTAPLE UNION.**—District Medical Officer for the Parishes of Bittadon, Ilfracombe, and West Down. Salary, £80 per annum.
- BARROW-IN-FURNESS; NORTH LONSDALE HOSPITAL.**—Resident House-Surgeon. Salary, £100 per annum.
- BATH: EASTERN DISPENSARY.**—Resident Medical Officer. Salary, £130 per annum.
- BEDFORD COUNTY HOSPITAL.**—Male Assistant House-Surgeon. Salary, £80 per annum.
- BIRKENHEAD UNION.**—Senior Male Resident Assistant Medical Officer. Salary, £120 per annum.
- BIRMINGHAM AND MIDLAND EYE HOSPITAL.**—Third House-Surgeon. Salary, £75 per annum.
- BOOTLE BOROUGH HOSPITALS FOR INFECTIOUS DISEASES.**—Resident Medical Officer. Salary, £120 per annum.
- BRADFORD POOR LAW UNION:** Assistant Resident Medical Officer for the Hospital and Workhouse. Salary, £130 per annum.
- BRISLINGTON HOUSE PRIVATE ASYLUM,** near Bristol.—Junior Resident Medical Officer. Salary commencing at £160.
- BRISTOL ROYAL INFIRMARY.**—(1) House-Physician. (2) Dental House-Surgeon. (3) Obstetric and Ophthalmic House-Surgeon. (4) Resident Casualty Officer. (5) Honorary Surgeon. (6) Honorary Assistant Surgeon. Salary for (1) and (2), £100 per annum, for (3) £75 per annum, and (4) £50 per annum.
- BUCKS COUNTY LUNATIC ASYLUM,** Stone, near Aylesbury.—Assistant Medical Officer. Salary, £200 per annum.
- BURY INFIRMARY.**—(1) Senior House-Surgeon. Salary, £110 per annum. (2) Junior House-Surgeon. Salary, £80 per annum, increasing to £90.
- CAMBRIDGE: ADDENBROOKE'S HOSPITAL.**—Second House-Surgeon. Salary, £80 per annum.
- CARDIFF: KING EDWARD VII'S HOSPITAL.**—House-Surgeon (male) for the Ophthalmic and Ear and Throat Departments. Honorarium, £50 for six months.

CARLISLE NON-PROVIDENT DISPENSARY.—Resident Medical Officer. Salary, £150 per annum.

CHELSEA INFIRMARY, Cale Street, S.W.—Second Assistant Medical Officer. Salary, £120 per annum.

COLCHESTER: ESSEX COUNTY ASYLUM.—House-Physician. Salary, £80 per annum.

DAVOS PLATZ: QUEEN ALEXANDRA SANATORIUM. Resident Assistant Medical Officer. Salary, £100 per annum.

DENBIGH: NORTH WALES COUNTIES ASYLUM.—Junior Assistant Medical Officer (male). Salary, £160 per annum, rising to £200.

DEVON COUNTY ASYLUM, Exminster.—Fourth Assistant Medical Officer. Salary, £130 per annum, rising to £140, and £50 at the end of each year for pathological work.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.—Clinical Assistant.

EAST SUSSEX COUNTY ASYLUM, Hellingly.—Third Assistant Medical Officer (male). Salary, £175 per annum, increasing to £200.

EDINBURGH: ROYAL EDINBURGH HOSPITAL FOR SICK CHILDREN.—Four Resident Medical Officers.

ESSEX EDUCATION COMMITTEE, Chelmsford.—School Medical Inspector. Salary, £250 per annum, rising to £300.

GLOUCESTER: GLOUCESTERSHIRE ROYAL INFIRMARY AND EYE INSTITUTION.—Assistant House-Surgeon. Remuneration at the rate of £80 per annum.

GLOUCESTERSHIRE: Rural Districts of East Dean, Gloucester, West Dean and Lydney and the Urban Districts of Awre, Newnham, Westbury-on-Severn and Coleford.—Medical Officer of Health and Assistant Medical Inspector of School Children. Salary, £500 per annum.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £75 per annum.

HERTS COUNTY ASYLUM, Hill End, St. Albans.—Junior Assistant Medical Officer. Salary, £170 per annum, rising to £190.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton, S.W.—(1) Casualty House-Surgeon. (2) Assistant Physician.

KING EDWARD VII SANATORIUM, Midhurst.—Second Assistant Medical Officer. Salary, £150 per annum, rising to £200.

LANCASHIRE EDUCATION COMMITTEE, PRESTON.—School Medical Inspector. Salary, £250 per annum, rising to £400.

LEEDS CITY.—Assistant Medical Officer of Health and Chief Inspector of Nuisances. Salary, £360 per annum.

LEICESTERSHIRE AND RUTLAND ASYLUM, Narborough.—Male Junior Assistant Medical Officer. Salary, £150 per annum, rising to £180.

LIVERPOOL HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.—Honorary Assistant Physician.

LIVERPOOL INFIRMARY FOR CHILDREN.—Resident House-Surgeon. Salary at the rate of £60 per annum.

MACCLESFIELD GENERAL INFIRMARY.—Junior House-Surgeon. Salary, £80 per annum.

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASES OF THE THROAT AND CHEST.—Assistant Medical Officer for the Crossley Sanatorium. Salary, £100 per annum.

MANCHESTER: ST. JOHN'S HOSPITAL FOR EYE AND EAR.—Honorary Assistant Aural Surgeon.

MANCHESTER: ST. MARY'S HOSPITALS FOR WOMEN AND CHILDREN. House-Surgeon. Honorarium at the rate of £50 per annum.

MELROSE: ROXBURGH DISTRICT ASYLUM.—Assistant Medical Officer. Salary, £170 per annum.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Honorary Dental Surgeon.

NORTHAMPTON: ST. ANDREW'S HOSPITAL FOR MENTAL DISEASES.—Resident Medical Superintendent. Salary, £1,200 per annum.

NOTTINGHAM CITY ASYLUM.—Second Assistant Medical Officer. Salary, £200 per annum.

NOTTINGHAM GENERAL HOSPITAL.—(1) Assistant Resident Surgeon (male). (2) Assistant Resident Surgeon for the Branch. Salary, £170 per annum each.

OXFORD COUNTY ASYLUM, Littlemore.—Junior Assistant Medical Officer (male). Salary, £150 per annum, rising to £175.

OXFORD: RADCLIFFE INFIRMARY AND COUNTY HOSPITAL.—(1) House-Surgeon. (2) Casualty House-Surgeon. Salary at the rate of £80 £80 per annum each.

PECKHAM L.C.C. CENTRE FOR TREATMENT OF SCHOOL CHILDREN.—(1) Four Dental Appointments. Salary at the rate of £50 per annum. (2) Anaesthetist. Salary, £25 per annum.

READING: ROYAL BERKSHIRE HOSPITAL.—Medical Registrar.

ROCHDALE INFIRMARY.—(1) Senior House-Surgeon (male). Salary, £100 per annum. (2) Junior House-Surgeon. Salary, £80 per annum, rising to £90 after six months.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—Junior Obstetric Assistant.

ROYAL NATIONAL ORTHOPAEDIC HOSPITAL, Great Portland Street, W.—Second Resident House-Surgeon. Salary at the rate of £100 per annum.

ROYAL NAVY.—Six Dental Surgeons for the Naval Forces. Salary, £1 per diem for seven days a week.

ST. PAUL'S HOSPITAL FOR SKIN AND GENITO-URINARY DISEASES, Red Lion Square, W.C.—(1) Honorary Surgeon to Out-patients. (2) Clinical Assistant.

SHEFFIELD UNION HOSPITAL.—Resident Assistant Medical Officer. Salary, £120 per annum.

SOUTHPORT INFIRMARY.—Resident Senior House-Surgeon. Salary at the rate of £100 per annum.

WILLIAMS, Herbert, M.B., Ch.B., F.R.C.S. Edin., Honorary Assistant Surgeon to the Royal Southern Hospital, Liverpool.

WILLIAMSON, W. S., M.R.C.S., L.R.C.P., District Medical Officer of the Bradford Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

ROBERTS.—On January 26th, at 104, Midland Road, Bedford, to Dr. and Mrs. E. Cleaton Roberts, a son.

MARRIAGES.

BIRKS—MARSE.—On February 1st, at Holy Trinity, Bedford, Guy Thornton Birka, M.B., B.C., of Bedford, to Elsie Alice, daughter of Mrs. Marsh, of Bedford.

MORRISON DAVIES—COURTNEY.—On January 31st, H. Morrison Davies, M.D., M.C. Cantab., F.R.C.S., son of W. Morrison Davies, to Dorothy, daughter of W. L. Courtney, Esq.

SMITH-PORTER.—At the Presbyterian Church, Broad Street, Birmingham, on February 1st, by the Rev. D. Urquhart Crerar, William Maule Smith, M.D., Worcester County Asylum, Bromsgrove, to Mary Reid, youngest daughter of the late James Porter, Edinburgh.

DEATH.

LONGWORTH.—On February 3rd, at the Suffolk District Asylum, Melton, Stephen George, L.R.C.P. (Ireland), aged 36 years.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 8.30 p.m.—Mr. Edmund Owen will open a discussion on Early Operation in Appendicitis. The following gentlemen will take part in the discussion: Mr. W. H. Battle, Mr. C. P. Child, Sir George Beatson, Mr. A. M. Connell (Sheffield), Mr. G. Grey Turner, and Mr. Crawford Renton.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Professor J. E. Adams: Peritoneal Adhesions, dealing with their Clinical Aspect and their Pathology.

TUESDAY.

ROYAL SOCIETY OF MEDICINE: SECTION OF SURGERY, 5.30 p.m.—Dr. Arthur F. Hertz: The Cause and Treatment of Certain Unfavourable After-effects of Gastro-enterostomy. Mr. Edred M. Corner: Inferences on Modern Treatment drawn from Histories of Patients who have Recovered from Perforation of a Gastric or Duodenal Ulcer.

WEDNESDAY.

UNITED SERVICES MEDICAL SOCIETY, Royal Army Medical College, Grosvenor Road, S.W., 5 p.m.—Major Josiah Oldfield, R.A.M.C.(T.): Regimental and Field Ambulance Training.

FRIDAY.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Sir Rickman J. Godlee, Bart., F.R.C.S.: Hunterian Oration.

ROYAL SOCIETY OF MEDICINE:

CLINICAL SECTION, 8 p.m.—Discussion on Cervical Rib, particularly the Results of Operative Treatment. Dr. F. Wood Jones: Anatomical Demonstration. Mr. W. Thorburn: Surgical Treatment. Mr. Percy Sargent: Results of Operation. Dr. S. A. K. Wilson: Symptomatology. Cases will be arranged to illustrate: (1) Results of Removal of Rib; (2) Neuro-muscular Features; (3) Vascular Features. Sir St. Clair Thomson: (1) Intrinsic Cancer of the Larynx in a Woman; Laryngo-fissure case in which complete Extirpation of the Growth was apparently effected through the mouth; (2) Lateral Rhinostomy or Moure's Operation; Case to illustrate the great advantage of this operation in malignant disease of the nose and accessory sinuses. Dr. Hale White: Retinal Haemorrhages in Secondary Anaemia. Dr. P. Parkes Weber: (2) Thoracic Aneurysm in a Woman; (2) Nephritis in Secondary Syphilis (Result); (3) Intermittent Claudication (Arthritis Obliterans).

POST-GRADUATE COURSES AND LECTURES.

- BROMPTON HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, S.W.—Wednesday, 4.30 p.m.: Diagnosis of Diseases simulating Laryngeal Tuberculosis.
- CANCER HOSPITAL, Fulham Road, S.W.—Wednesday, 5 p.m.: Cancer of the Tongue.
- LONDON HOSPITAL MEDICAL COLLEGE, E.—Monday, 4.30 p.m.: Lesions of the Peripheral Nervous System and Spinal Cord. Tuesday, 4.30 p.m.: Pathology of the Central Nervous System. Wednesday, 4.30 p.m.: Clinical Anatomy and Regional Diagnosis. Friday: Common Diseases of the Nervous System.
- LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—Daily arrangements; Out-patient Demonstration, 10 a.m.; Medical and Surgical Clinics. Monday: 12 noon, Throat, Nose, and Ear; 2.15 p.m., Surgery; 3 p.m., Operations; 3.15 p.m., Medicine; 4.15 p.m., Ear and Throat. Tuesday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Surgery; 3.15 p.m., Medicine; 4.15 p.m., Skin. Wednesday: 11 a.m., Eye; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Eye Clinic; 4.30 p.m., Surgery. Thursday: 12 noon, Throat, Nose, and Ear; 2 p.m., Operations, Pathological Demonstration; 3.15 p.m., Medicine. Friday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Surgery. Saturday: 10 a.m., Radiography; 11 a.m., Eye.
- LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.—Lectures daily (Saturday excepted) at 12 and 4 p.m. Practical laboratory work daily (Saturday excepted), 10 to 12 a.m. Practical Entomology, 2 to 3.30 daily. Special Entomology, 10.30 to 1 p.m. daily. Medical Clinics, Tuesday and Thursday at 3 p.m. Operations, Friday, at 3 p.m.
- MANCHESTER ANCOATS HOSPITAL.—Thursday, 4.15 p.m.: Post-graduate Clinic: Diabetes.
- MANCHESTER ROYAL INFIRMARY.—Tuesday, 4.30 p.m.: Diet in Diseases of the Stomach. Friday, 4.30 p.m.: Some Examples of Calculus Disease.
- MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following clinical demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday,

Surgical; Thursday, Medical; Friday, Ear, Nose, and Throat. Lectures at 5.15 p.m. each day will be given as follows: Monday, Some Common Mistakes in the Treatment of the Diseases of Women; Tuesday, Automatism; Wednesday, Some Points in the Localization of Cerebral Tumours; Thursday, Heart Disorders and the Gastro-intestinal Tract; Friday, Discharges.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Tuesday, 3.30 p.m.: Sensory Conduction in the Spinal Cord. Friday, 3.30 p.m.: Sensory Types of Disseminated Sclerosis.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.—Monday, Clinics: 10 a.m., Surgical Out-patient; 2.30 p.m., Medical Out-patient, Nose, Throat, and Ear; 3 p.m., Demonstration on Clinical and General Pathology. Tuesday: 2.30 p.m., Operations; Clinics: Surgical, Gynaecological; 3.30 p.m., Medical In-patient; 4.30 p.m., Lecture: Recent Investigations in the Treatment of Heart Disease, illustrated by polygraphic tracings. Wednesday: 2 p.m., Throat Operations; 2.30 p.m., Medical Out-patient; Skin and Eye Clinics; X Rays; 3 p.m., Pathological Demonstration; 5.30 p.m., Eye Operations. Thursday: 2.30 p.m., Gynaecological Operations. Clinics: Medical and Surgical Out-patient; 3 p.m., Medical In-patient; 4.30 p.m., Lecture: Ethyl Chloride Anaesthesia. Friday: 2.30 p.m., Operations; Clinics: Medical Out-patient, Surgical, Eye; 3 p.m., Medical In-patient; Pathological Demonstration.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—Monday: 4.30 p.m., Tuberculin; 8 p.m., Tuberculin Demonstration. Tuesday, 4.30 p.m.: Immunity in Relation to Tuberculosis. Wednesday: 4.30 p.m., Indications for and Contraindications to Tuberculin Treatment. Thursday: 4.30 p.m., Practical Administration of Tuberculin for Diagnosis; 8 p.m., Tuberculin Demonstration. Friday, 4.30 p.m.: Practical Administration of Tuberculin for Treatment. Saturday, 10.30 a.m.: Demonstration of Tuberculous Cases.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics, X Rays, Operations, 2 p.m. daily. Monday: Gynaecology, 10 a.m.; Medical Registrar, 10.30 a.m.; Pathological Demonstration, 12 noon; Eye, 2 p.m. Tuesday: Gynaecological Operations, 10 a.m.; Surgical Registrar, 10.30 a.m.; Demonstration of Fractures, etc., 12 noon; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Wednesday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Demonstration of Minor Operations, 11 a.m.; Lecture, Abdominal Diagnosis, 12 noon; Eye, 2 p.m.; Gynaecology, 2 p.m. Thursday: Gynaecological Demonstration, 10.30 a.m.; Lecture, Neurological Cases, 12.15 p.m.; Eye, 2 p.m.; Orthopaedics, 2 p.m. Friday: Gynaecological Operations, 10 a.m.; Lecture, Practical Medicine, 10.30 a.m.; Lecture, Clinical Pathology, 12.15 p.m.; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Saturday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Eye, 10 a.m.; Surgical Registrar, 10.30 a.m.; Lecture, Surgical Anatomy of the Abdomen, 12 noon. Lectures at 5 p.m.: Monday, Whitlow, Surgical Anatomy and Treatment; Tuesday, Clinical Pathology; Wednesday, Practical Medicine; Thursday, Practical Surgery; Friday, Cases of Skin Disease.

PROCEEDINGS OF COUNCIL.

(Continued from p. 132.)

THE LATE CHAIRMAN OF THE CENTRAL ETHICAL COMMITTEE.

THE Council considered certain communications brought before it with reference to the action of the late Chairman of the Central Ethical Committee (Dr. Lauriston Shaw) in taking the chair at a meeting of medical practitioners at the Holborn Restaurant on December 13th, 1912.

After discussion the Council adopted the following resolution *nemine contradicente*:

That the Council of the British Medical Association places on record its deep condemnation of the action of the Chairman of the Central Ethical Committee of the British Medical Association in taking the chair at the meeting at the Holborn Restaurant on December 13th, 1912, and thus associating himself with a pamphlet which suggested that practitioners were at that time free to break their pledged word to the British Medical Association.

[The above resolution was transmitted to Dr. Lauriston Shaw, from whom the following letter has been received:

64, Harley Street, W.,
February 3rd, 1913.

Dear Sir,

I have to acknowledge the receipt of your letter of January 31st, quoting a resolution passed by the Council of the British Medical Association of January 29th concerning certain action taken by me on December 13th last.

I shall be obliged if you will convey to the Council my observations thereon as follows:

In as far as the resolution may be intended to criticize my action as a member of the Council, I would draw the attention of the Council to the fact that a Councillor in his official capacity is responsible to his constituents alone. On December 23rd my then constituents, the

Representatives of the Association in Representative Meeting assembled, asked for and received from me an explanation of the action which the Council now criticizes, and, having received my explanation, passed to the next business.

In as far as the resolution might be construed as criticizing my conduct as a member of the profession or the Association, it can hardly have escaped the Council that there is a form of procedure laid down by the Association for the orderly investigation of all cases in which such conduct is challenged, and that the Council has a definite duty and responsibility in connexion therewith, which the resolution it has now passed would preclude it from exercising in this matter.

In the absence of any authoritative ruling, properly arrived at, upon my action, I must remain the judge of my own conduct in this matter, and I have no doubt that I acted rightly and in the best interests of the profession and of the Association.

If the Council has any intention of publishing the resolution—an action for which it must take entire responsibility and be prepared to defend—I would ask that this my answer be published in close contiguity.

I am,

Yours faithfully,

LAURISTON E. SHAW.

Guy Elliston, Esq.,
Secretary to the Council,
British Medical Association,
429, Strand, W.C.]

Arising out of one of the communications referred to above regarding the officers of the Medical Sociology Section a resolution was also passed *nemine contradicente*.

SCOTTISH COMMITTEE.

The report of the Scottish Committee stated that, owing to the resignation of Dr. Michael Dewar, Dr. J. R. Hamilton, of Hawick, had been appointed Chairman, and the Committee had placed on record and expressed to Dr. Dewar its deep sense of indebtedness to him for the many services

rendered by him on behalf of the profession in his capacity as Chairman. It was also reported that Dr. J. Grant Andrew, having resigned his membership of the Council, had ceased to be a member of the Committee.

The Committee stated that it had received reports from its members regarding the number of practitioners in various parts of Scotland who would probably join the panels.

The report was received and adopted.

IRISH COMMITTEE.

The quarterly report, which was presented by Dr. R. J. JOHNSTONE, stated that he had been reappointed Chairman for the year, Professor A. H. White had been reappointed Honorary Secretary, and the Committee had co-opted Drs. J. Power, Denis Walshe, and H. T. A. Warnock to be members.

Dr. JOHNSTONE said that last year the Council had made a grant of £100 to the Committee on condition that the Irish Medical Association gave £50, and that in the preceding year the grant had been £200 on condition that the Irish Medical Association gave £100. In that year only £100 of the £200 voted had been claimed. The Joint Committee in Ireland had practically exercised the same functions in Ireland as the State Sickness Insurance Committee in Great Britain. The question of medical benefit for Ireland had been remitted by the Government to a special committee, and there was reason to fear that an attempt might be made to pay a lower rate of remuneration to the medical profession in Ireland than in Great Britain. The position was extremely grave, and the Joint Committee in Ireland must be in a position to deal with it. The understanding was that if the Association made a grant of £200 for the year the Irish Medical Association would grant £100.

Dr. DARLING, in supporting the proposal, said that the fight in Ireland was beginning, and the work must be done through the Joint Committee.

After some further discussion, during which the CHAIRMAN OF THE ORGANIZATION COMMITTEE said that a record of the manner in which the money was disbursed should be supplied, the Council accepted the recommendation of the Irish Committee that a grant of £200 should be made towards the expenses of the Joint Committee from the Central Insurance Defence Fund on condition that the Irish Medical Association granted not less than £100.

ORGANIZATION COMMITTEE.

The quarterly report of the Organization Committee, presented by the CHAIRMAN (Mr. F. C. Larkin), stated that the Committee had co-opted Mr. R. E. Crosse, Honorary Secretary of the Metropolitan Counties Branch, to assist in the consideration of matters affecting London.

Formation of Constituencies.

The Committee recommended that separate representation be accorded to the Birmingham Central, Kingston-on-Thames, Richmond, Scarborough, and York Divisions in Representative Meetings for the year 1913-14; and that the Walsall Division be grouped with the West Bromwich Division for representation in Representative Meetings for that year. This was agreed to.

Shorter Period for Calling Special Representative Meetings.

The next recommendation of the Committee referred to By-law 36, which prescribes, *inter alia*, that at least fourteen days' notice of a Special Representative Meeting shall be given in the JOURNAL. The Maidstone Division had proposed at the Annual Representative Meeting, 1912, to add the words, "in the case of urgency the period of notice may be shortened at the discretion of the Council." The Organization Committee had considered the matter, and recommended the Council to report as follows to the Representative Meeting:

That it might be possible to shorten the period of notice now required for the calling of a Special Representative Meeting by giving ten instead of fourteen days' notice in the JOURNAL; the meeting could then be held in the middle of the second week after the notice was issued. But as the shortening of the period of the notice would entail a special meeting of the Council, and having regard to the manifold arrangements that must be made, and all the other circumstances, the Council is extremely doubtful if it would be found

to be practicable, and therefore thinks it inadvisable to attempt the change.

At the suggestion of the CHAIRMAN OF COUNCIL, who recalled the fact that the question of increased rapidity of action had been referred to the Organization Committee, this recommendation was referred back to the Committee.

Officers of Divisions.

Mr. LARKIN reported that the Committee had considered certain amendments of rules submitted by the Isle of Thanet Division, and had reserved for the consideration of the Council a proposal that the Secretary of the Division should be elected annually at the annual meeting of the Division, but that the Chairman should be elected for one meeting only, and should be so elected at the previous meeting or by the Executive Committee. The Organization Committee had been informed by the Honorary Secretary that the Division had found it advantageous to be able to change its chairman for different meetings; in this way almost every member of the Division had been in the chair at one time or another, and interest was stimulated. Mr. Larkin said that he considered that the arrangements contained in the model rules under which the Chairman was elected annually, so that a Division had at least two standing officers, the Chairman and the Secretary, was more satisfactory. The Council resolved to inform the Isle of Thanet Division that it could not approve the rule proposed by the Division.

Resignations.

The Committee reported that from October 15th, 1912, to January 11th, 1913, resignations had been tendered by 638 members of the Association, as against 405 for the corresponding period of last year. In view of certain misleading statements in the lay press, the Committee had authorized the Financial Secretary and Business Manager to publish these figures in the newspapers.

Conference of Secretaries.

In accordance with the instructions of the Council of November 13th, 1912, nominations to a "Conference of Secretaries Subcommittee" to assist the Chairman had been invited from the committee appointed by the Conference of Secretaries at Liverpool. The Organization Committee had appointed a subcommittee to consist of the Chairman, Mr. Russell Coombe, Dr. A. H. Williams, members of the Organization Committee, with Mr. W. J. Greer, Dr. T. Barrett Higgs, and Mr. P. C. Raiment, nominated by the Conference of Secretaries.

Approval of Rules.

It was reported that rules submitted by the Dartford, Lambeth, and Lewisham Divisions, and alterations to existing rules by the Glasgow Southern and Newcastle-on-Tyne Divisions and the Isle of Thanet Division (with the exception mentioned above) had been approved by the Organization Committee during the quarter, and the action of the Committee was endorsed by the Council.

JOURNAL COMMITTEE.

Dr. BEATON, a member of the Journal Committee, presented the quarterly report and also a supplementary report.

The report contained a statement that Dr. Buist had reported to the meeting of the Committee on January 10th that he and Dr. Lauriston Shaw had resigned their seats on the Council, and that Dr. Biggs, having been elected Chairman of the Central Ethical Committee, was in attendance in the place of Dr. Shaw. The question of the appointment of Chairman was considered, and Dr. Buist pointed out that under the regulations the Chairman of a Standing Committee must be a member of the Council. The Committee decided to defer the question of appointing a chairman, and asked Dr. Buist to act as chairman of that meeting. The supplementary report stated that Dr. Buist had resigned his seat on the Journal Committee, but the further consideration of the position thus created was deferred, as there was a recommendation from the Central Ethical Committee on the general subject.

Editor's Report.

The Editor's quarterly report to the Committee stated that the publication of the full proceedings of the Sections

at the Annual Meeting at Liverpool, which occupied 542 pages of the JOURNAL, was completed in the issue of November 23rd, 1912.

The Editor's report contained the following table showing the number of pages in the JOURNAL and EPITOME and the SUPPLEMENT, excluding advertisements, for the past five years:

| Year. | Pages in JOURNAL and EPITOME. | | Pages in SUPPLEMENT. | | Total. | Weekly Average of Total. |
|-------|-------------------------------|-----------------|----------------------|-----------------|--------|--------------------------|
| | | Weekly Average. | | Weekly Average. | | |
| 1908 | 2724 | 71 | 823 | 16 | 4552 | 87.5 |
| 1909 | 3604 | 63 | 828 | 16 | 4432 | 85.5 |
| 1910 | 5836 | 72 | 928 | 18 | 4764 | 89.9 |
| 1911 | 3604 | 65 | 1232 | 24 | 4636 | 89.15 |
| 1912 | 3464 | 67 | 1552 | 30 | 5036 | 96.85 |

* Fifty-three weeks.

Weekly average for the five years: JOURNAL and EPITOME, 69 (68.8); SUPPLEMENT, 21 (20.3).

Proprietary Medicines.

The report contained a reference to a memorandum by the Medical Secretary on the questions which had been addressed to him when he gave evidence on behalf of the Association before the Select Committee at the House of Commons on Patent and Proprietary Medicines. Notes upon the subject by the Financial Secretary and Business Manager and by the Editor, the latter containing an abstract of the arrangements of the American Medical Association, had been considered by the Committee.

In reply to Dr. HASLIP, the MEDICAL SECRETARY stated that the Medico-Political Committee had appointed a special subcommittee, which interviewed the witnesses who were to appear for the Association before the Committee, and the evidence to be led was discussed. Various points, however, had arisen in examination which had not been discussed beforehand and had to be dealt with at the time. The report of the Committee, which was then approved, contained recommendations to the following effect:

1. That the general principles already in force regarding the control of advertisements be not modified at present.
2. That when any new advertisement is tendered the advertiser be asked to supply a sample of the preparation as supplied to the public.
3. That the acceptance of the renewal of the advertisement of certain preparations specified should in future be conditional upon the advertisement being withdrawn from the lay press.

CENTRAL ETHICAL COMMITTEE.

Dr. M. G. BIGGS, in presenting the report, stated that in consequence of the resignation of Dr. Lauriston Shaw the Committee had elected him as its chairman.

The Committee reported that it had been notified of the resignations from the Council of Drs. A. C. Farquharson, E. J. Maclean, and Lauriston E. Shaw, members of the Central Ethical Committee, but had received no formal notice from these gentlemen of their resignations as members of the Central Ethical Committee, and therefore desired the Council to consider whether a member of the Council, who was also a member of the Committee appointed by the Council or by the Representative Body, when resigning his membership of the Council *ipso facto* ceased to be a member of such Committee. The point did not appear to have arisen before, and was not provided for in the articles or by-laws. Dr. Biggs pointed out that the Council had occasionally appointed a member who was not on the Council to be a member of a committee, and that the Representative Meeting constantly did so.

Mr. Tonn raised the point of a member of the Committee elected by the Representative Body, and contended that if he resigned as member of that body he ceased to be a member of the Committee also, and proposed that the Council should make a pronouncement to this effect.

The CHAIRMAN OF COUNCIL said that this would be out of order, and the Council adopted the following resolution:

That the Council is of opinion that a member of Council who is also a member of a Committee appointed by the

Council, when resigning his membership of the Council *ipso facto* ceases to be a member of such Committee.

Warning Notices.

At the Annual Representative Meeting, 1912, it was decided that, with rare exceptions, warning notices should not be inserted for Divisions which had not adopted Rule Z; and, further, that where a case seemed to demand action in spite of this deficiency—as, for example, when some appointment was offered in opposition to the declared policy of the Association—a warning notice should only be issued on the instruction of the Chairman of the Ethical Committee after he had assured himself that the dispute would be conducted vigorously, and that the Division understood its responsibilities, and was prepared to take disciplinary measures against offenders. To this a rider was adopted to the effect that save in cases which only concerned a single Division no warning notice should be inserted except in accordance with the decision of the Association under Article 31, which is the article prescribing the manner in which a decision of the Association is to be reached after certain formalities.

The rider was referred to the Council for consideration, and by the Council to the Central Ethical Committee, which now reported that it would be inadvisable to adopt the suggestion in the rider, inasmuch as it was impossible at the commencement of a dispute to determine whether it would concern one particular Division only. The Council resolved to advise the Representative Body accordingly.

Model Ethical Rules.

When the model ethical rules, that is to say, the rules of procedure in ethical cases, submitted by the Council, were considered by the Annual Representative Meeting on July 23rd, 1912, a number of amendments were moved on behalf of the Brighton Division; some of these, not immediately dealt with, were referred to the Central Ethical Committee for consideration. The Committee now advised the Council that there would be no advantage in making the amendments suggested, and that until experience had shown that the rules now in operation were unsatisfactory, no change could be made. The Council accepted this recommendation.

ELECTION OF CANDIDATES.

The eight candidates whose names appeared on the notice convening the meeting were elected members of the British Medical Association.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

ON Thursday, February 6th, a meeting of the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand. Dr. J. A. MACDONALD was in the chair, and the other members present were: *England and Wales*: Dr. R. M. Beaton (London), Dr. E. Rowland Fothergill (Brighton), Miss Frances Ivens, M.S. (Liverpool), Dr. Constance E. Long (London), Mr. Herbert Jones (Hereford), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London). *Scotland*: Dr. J. Adams (Glasgow), Dr. R. McKenzie Johnston (Edinburgh). *En officio*: The President (Sir James Barr) and Mr. T. Jenner Verrall (Chairman of Representative Meetings).

APOLOGIES FOR ABSENCE.

Apologies for absence were read from the Treasurer (Dr. Rayner), Dr. T. H. Carter (Bristol), Dr. D. G. Thomson (Norwich), Dr. J. S. Darling (Lurgan), Mr. T. B. Costello (Tuam), and Dr. E. O. Price (Bangor).

NOMINATIONS TO THE COMMITTEE.

The CHAIRMAN OF REPRESENTATIVE MEETINGS reported that, after considering the recent voting by the Representatives of the groups concerned, he had appointed Dr. E. R. Fothergill a member of the Committee in the place of Mr. Willock, and that Dr. E. O. Price had been reappointed.

MEDICAL BENEFIT IN IRELAND.

Attention was drawn to the appointment of a Treasury Committee to consider the advisability of extending the provisions of the National Insurance Act, 1911, with respect to medical benefit to Ireland. The CHAIRMAN pointed out that in the past matters connected with the administration of medical benefit in Ireland had been left in the hands of the Joint Committee of the Irish Committee of the British Medical Association and the Irish Medical Association, and the State Sickness Insurance Committee resolved to ask the Joint Committee what action it proposed to take in the matter.

CONTRACT ATTENDANCE UPON UNINSURED PERSONS.

The Committee considered the resolution on this subject adopted by the Council on January 29th (SUPPLEMENT, February 8th, p. 131), and resolved to formulate points to be included in any scheme for the treatment of uninsured persons before such a scheme could be approved by the Committee, and adopted the following general principles:

1. That in general, in considering the necessity for obtaining the approval of the State Sickness Insurance Committee for schemes for the treatment of uninsured persons upon contract terms, the following principles and conditions must be adhered to:

- (a) Free choice of doctor by patient and of patient by doctor.
- (b) Remuneration to be not less than that paid in respect of insured persons—that is, 9s. per annum, including medicines.
- (c) Persons earning over £160 not to be treated under contract terms at all.
- (d) Juveniles (under 16) to be treated at special rates.

2. That the Committee realizes that the conditions in certain areas will not allow of the above terms being obtained; and that in these circumstances the approval of the State Sickness Insurance Committee of a scheme involving a less payment may be given provisionally when the local profession can show that the economic conditions in the area demand it.

3. That one of the conditions necessary for the approval of schemes containing lower rates of payment shall be the inclusion in a prominent position amongst the rules of a statement that approval by the Association has been given to the rates only because of special economic conditions.

COMPENSATION.

The MEDICAL SECRETARY presented a report on applications for compensation from the Central Insurance Defence Fund, and the Committee resolved to make grants in three cases, and authorized the Chairman in any other cases demanding immediate action to act on behalf of the Committee, the Solicitor to the Association to be consulted in the settlement of the agreement in each case.

FUTURE ACTION.

The Committee considered the terms of the letter to members of the profession asking for information with regard to their experience of the working of the medical benefit under the Insurance Act, drafted in accordance with Minutes 48 and 52 of the Special Representative Meeting (SUPPLEMENT, February 8th, p. 132), and resolved that it should be issued as soon as possible to every member of the profession in Great Britain. It was further resolved to issue a letter to honorary secretaries of Divisions pointing out that the future policy of the Association would depend largely upon the information obtained from the answers to the questions attached to the above-mentioned letter, and asking them to use the machinery of the Divisions to its fullest extent in order to secure answers from every practitioner in the area, especially from those on the panel.

PROPOSED SICKNESS, ACCIDENT, AND PENSION FUND.

Dr. CARTER having stated that he would be unable to accept appointment upon the special Subcommittee on a proposed Sickness, Accident, and Pension Fund, Dr. Fothergill was appointed in his place, and it was arranged that a meeting of the Subcommittee would be held this week. This Subcommittee was also instructed to consider and report generally upon the administration and present position of the Central Insurance Defence Fund.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

The Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, 1913, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,

February 4th, 1913.

Medical Secretary.

ELECTION TO COUNCIL, 1912-13.

A CONTEST was necessary in the two following grouped Branches: Cambridge and Huntingdon, East Anglian and South Midland Branches; and Glasgow and West of Scotland (four County Divisions), Border Counties, and Stirling Branches. As a result, Dr. Boston Elphinstone Fordyce, of Cambridge, is elected for the former, and Dr. James Livingstone Loudon, of Hamilton, N.B., is re-elected for the latter.

GUY ELLISTON,

Financial Secretary and Business Manager.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: EAST HERTFORDSHIRE DIVISION.—A meeting of this Division will be held at 3 p.m., on Wednesday, February 19th, 1913, at the Shire Hall, Hertford, when Dr. Hystop Thomson, the County Tuberculosis Officer, will give an address on "The Problem of Tuberculosis, and the proposed plan of campaign in the County of Hertford." After the address Dr. Thomson will be pleased to answer questions, and a short discussion will follow. All medical practitioners resident in the area of the Division are invited to be present.—H. D. LEDWARD, Honorary Secretary, 123, Norton Way, Letchworth.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—The next scientific demonstration will be held at the Royal Victoria Infirmary on Friday, February 21st, 1913. Mr. F. C. Pybus: The Treatment of Tuberculous Glands of the Neck. Professor T. Beattie: Treatment of Pulmonary Tuberculosis. Dr. W. E. Hume: Some Points in the Diagnosis of Early Phthisis. Dr. George Hall: Cervical Ribs and their Results. Mr. R. J. Willan: Diagnosis and Treatment of Malignant Tumours of the Prostate Gland. The demonstration arranged by the Newcastle-on-Tyne Division of the British Medical Association for March 21st will take place on March 14th, when Professor R. A. Bolam will lecture on Medico-legal Tests for Blood, in place of Dr. Arnison's paper on Local Treatment of Rheumatic Arthritis, as Dr. Arnison took Professor Bolam's place at the January meeting.—R. J. WILLAN, Honorary Secretary, Newcastle-on-Tyne.

SOUTH-EASTERN BRANCH: ISLE OF THANET DIVISION.—The next meeting of this Division will be held at the Royal Seabathing Hospital, Margate, on Friday, February 21st, 1913, at 3.45 p.m., Dr. Nichol in the chair. Tea will be served during the meeting. All medical practitioners in Thanet are invited to this meeting. Agenda: (1) Correspondence. (2) To arrange for the election of representative Medical Committees for the Ramsgate and Margate areas in relation to the National Insurance Act. (3) Any other business. The Public Medical Service

is meeting at the same time to make certain alterations in its rules.—HUGH M. RAVEN, Honorary Divisional Secretary, Broadstairs.

STAFFORDSHIRE BRANCH.—The Second General Meeting of the Session will be held at the Swan Hotel, Stafford, on Thursday, February 27th, 1913. The President, E. C. Stack, Esq., F.R.C.S.I., will take the chair at 5.15 p.m. Business: (1) Minutes of the last Ordinary General Meeting. (2) Correspondence. (3) Exhibition of Living Cases. (4) Papers: (i) "Mouth-breathing and Deafness," John Priestley; (ii) "Notes and Remarks on three Pathological Specimens removed by Abdominal Section," F. N. Cookson. (5) Exhibition of Pathological Specimens, etc. Dinner, 7 p.m.; charge, 5s.—HAROLD HARTLEY, Honorary General Secretary, Basford, Stoke-on-Trent.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

EAST ANGLIAN BRANCH:

WEST SUFFOLK DIVISION.

The West Suffolk Division met in the Angel Hotel, Bury St. Edmunds, on February 7th.

Local Medical Committee.—The Local Medical Committee was constituted as follows: The office-bearers of the Division, Drs. Wood, Hinnell and Caie, and Drs. Batt, Mavor, Boswell, Wilkin, Ritchie, Trotter, and Everett.

County Insurance Committee.—The Secretary (Dr. Caie) was nominated for election by the county council to serve on the County Insurance Committee. Drs. Wood and Batt were nominated to represent the medical profession in the area of the County Insurance Committee.

METROPOLITAN COUNTIES BRANCH:

CAMBERWELL DIVISION.

London Insurance Committee.—The Executive Committee of the Camberwell Division met on Thursday, February 6th, 1913, and decided to nominate Mr. E. B. Turner and Mr. Evan Jones for service on the Insurance Committee of the County of London.

BORDER BRANCH, SOUTH AFRICA.

The annual meeting of this Branch was held at East London, in the East London Club, on January 17th, at 8 p.m. Owing to the absence in England of the president for the year (Dr. K. B. Alexander), Dr. W. DUNCAN MILLER of Fort Beaufort was unanimously voted to act as chairman of the meeting. The members present were Drs. Miller, Cassidy, Grey, Gauteaume, Lownds, Roulston, Skinner, Wemble, and Anderson (Acting Secretary).

The "Transvaal Medical Journal."—Voting papers were received through the post to decide whether the Branch would contract for the *Transvaal Medical Journal* during 1913 were handed in, and after examination resulted in 14 for and 25 against the proposal. The large number of country members who failed to vote was commented on, and it was stated that most of the East London members were in favour of the proposal, but abstained from voting as they did not wish to force the hands of the country members in the matter. The following notice, proposed by Dr. LOWNDS and seconded by Dr. GANTEAUME, was, after discussion, carried unanimously:

That the matter of the *Transvaal Medical Journal* being adopted as an official organ of the Branch do stand over for six months.

Dr. BARCROFT ANDERSON proposed and Dr. ROULSTON seconded:

That this meeting of the Border Branch is in favour of the principle of having a medical journal subject to the absolute control of the members of the British Medical Association in South Africa (preferably by means of a weekly supplemental inset in the BRITISH MEDICAL JOURNAL), and that the other Branches be asked for their co-operation.

Dr. GANTEAUME objected to the part of the motion in-

serted here in brackets, and after discussion the motion with this part omitted was carried unanimously. The CHAIRMAN, as a country member, expressed the opinion that the country members who voted against the adoption of the *Transvaal Medical Journal* did so from lack of sufficient explanations having been given in its favour.

Election of Officers.—The following officers were elected: President, Dr. Miller of Fort Beaufort; Secretary and Treasurer, Dr. Tremble, R.M.O., Frere Hospital, East London; Members of Branch Council, Drs. Caiger, Knapp, Miller, Nicols, Paisley, Welsh, Anderson, Gauteaume, Grey, Lownds, Nangle, Skinner. Representative on Central Council, Dr. Greenlees.

Delegate to the Annual Meeting, Brighton.—The Branch Council was authorized to appoint a delegate to the Annual Meeting at Brighton.

Formation of Orange Free State Branch.—A letter from the Medical Secretary of the Association was read as to the formation of an Orange Free State Branch. After discussion it was agreed:

That the Border Branch is strongly in favour of the formation of an Orange Free State Branch, and recommends that no member of the Border Branch be transferred to the proposed new Branch without such member's consent.

South African Committee.—Drs. Gauteaume and Anderson were elected members of the South African Committee.

Grants to Divisions.—It was agreed that the Branch Council be authorized to deal on a *pro rata* basis with any sums available for distribution to the Divisions.

HONG KONG AND CHINA BRANCH.

The annual general meeting of the Hong Kong and China Branch of the British Medical Association was held at the Board Room of the Sanitary Department on November 14th, 1912; Dr. C. FORSYTH, President, was in the chair, and the other members present were: Dr. Sanders (Vice-President), Dr. Marriott (Honorary Secretary and Treasurer), Fleet Surgeon E. G. E. O'Leary, R.N., Major Fleury, R.A.M.C., Dr. F. Clark (members of Council); Lieutenant-Colonel A. C. Youman, I.M.S., Lieutenant E. C. Lambkin, R.A.M.C., Surgeon L. Hunt, R.N.; Dr. G. M. Harston, Lieutenant J. B. Tackaberry, I.M.S., Dr. Dalmahoy Allan, Dr. E. Martyn Lobb, Dr. F. Lindsay Woods, Deputy Surgeon-General D. T. Hoskyn, R.N., Lieutenant-Colonel J. M. Irwin, P.M.O. The minutes of the last meeting were read and confirmed.

Annual Report.—The annual report of the Branch Council, and the annual statement of accounts as agreed to by the Council, was read and adopted.

Election of President and Officers.—Colonel Irwin was elected President, and Dr. Marriott was re-elected Honorary Secretary and Treasurer, and the following members were elected to form the Council: Fleet Surgeon E. G. E. O'Leary, R.N., representing navy; Major Fleury, R.A.M.C., representing military members; Dr. W. B. A. Moore, representing Colonial Medical Service; Dr. G. M. Harston and Dr. F. Gröne, representing private practitioners.

Proposed Alteration of Rules.—The HONORARY SECRETARY read the proposed alterations to Rules 9 and 10 of the Branch, which had been printed and circulated to members, and stated the reasons for suggested alterations. The first section of No. 9 was, he said, now unnecessary, as the change in subscription was nearly ten years old. The alteration and addition to Rule 10 was required on account of applications for election to membership of Association from locally qualified practitioners, and was necessary to define their status, and also the privileges of such members, if elected, with regard to the library. The proposed alterations were moved by Dr. FORSYTH, seconded by Dr. MARRIOTT, and carried *nemine contradicente*.

Suggested Rules for Library.—The HONORARY SECRETARY read and explained the necessity for the suggested rules, which had been printed and circulated to members. A discussion took place on Rules 4 and 5. Drs. SANDERS and DALMAHOY ALLAN suggested that only one book be allowed out to each member at one time, and that the book should be returned within fourteen days. Dr. MARRIOTT said that experience showed that members had hitherto found it desirable to keep books out, on the

average, longer than one month. Dr. SANDERS suggested that as several books had been reported as taken out without due entry, the clerk present in the library should be made responsible for having correct entry made of books borrowed and in return should be paid a salary for such duty. Dr. CLARK suggested that it might be possible to move the library to more suitable quarters, where the books would be better looked after and where it would be possible to study them without taking the purely reference works out of the library. He suggested that the head of the Sanitary Department might be approached for permission to house the library in the board room. The other rules being agreed to, it was decided to hold the matter over for further consideration.

Vote of Thanks to Retiring President.—A vote of thanks to Dr. Forsyth for acting as President during the past twelve months was proposed by Dr. MARRIOTT, seconded by Dr. SANDERS, and agreed to unanimously. Dr. FORSYTH replied, and, vacating the chair, asked Colonel Irwin to take the chair as President.

President's Address.—Colonel IRWIN, after thanking the Branch for the honour conferred on him, remarked that he was probably the oldest member of the Association present, having been a member for thirty-one years, and gave a retrospect of his experiences. Starting with a description of the life and surroundings of medical students in the early Seventies as he knew them at Trinity College, Dublin, he compared them with the conditions prevailing at present. He referred to the great change that had taken place in the hospitals and their administration since his student days, and alluded to the condition of the nursing staff in earlier years, and to the rivalry between surgeons on the introduction of antiseptic treatment. He then compared the condition of the military medical service thirty-one years ago and at the present time, and dwelt on the necessity for military rank, title, and power for efficiency of service. Colonel Irwin also referred to the great advantage to the service from having adopted a properly qualified body of Nursing Sisters. On the motion of Dr. MARRIOTT, a vote of thanks to Colonel Irwin was adopted.

Surgical Shock.—Dr. E. L. MARTYN LOBB read a paper on surgical shock, setting himself first to define the condition of shock, how it arose, and what means could be taken to prevent and overcome it. Referring members to the recent Arris and Gale lectures by Tyrrell Gray and Leonard Parsons, he quoted their "law of inverse immunity," and discussed relative shock values of various tissues and the shock indices of various operations, and the conclusion that in every operation there must be a certain amount of shock present. Though shock was generally accompanied by low blood pressure, this was not, he said, always the case; he mentioned one case in which shock was at its highest when the blood pressure was also at its highest. Dr. Lobb also drew attention to the fact that in the first week of life the infant was practically free from effects of shock, and that this fact had been made use of in freely operating on such infants for malformations, such as cleft palate, during the first week, with great success. He also compared the male and female sex at various ages in their capacity for bearing shock, and discussed the effect of climate, altitude, and of difference in race of human beings. The various means available for avoiding or minimizing shock were next considered, such as careful anaesthesia, saline infusion, careful preparation of the patient preparatory to operation, methods available for raising blood pressure, and also the effect of morphine. The effect of brandy, adrenalin, pituitary extract, and ergot, also its preparations such as erunin, and lastly strychnine, were discussed, and the usefulness or even danger of such in cases of extreme shock were insisted on. Colonel IRWIN, in thanking Dr. Lobb for his valuable paper, mentioned his own experiences of shock from bullet wounds in South Africa. Lieutenant TACKABERRY referred to its effect on different races of natives, and to the effect of saline infusion of ether. Dr. DELMAHOY ALLAN referred to the condition of blood pressure in shock. Dr. HARSTON mentioned a case of death from shock after a gall stone had passed into the duodenum. Dr. LOBB replied. The PRESIDENT announced that the meetings would be held on the second Thursday of each month (December 12th, January 9th, February 13th, March 13th, and possibly April 10th).

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

The following books were added to the Library between July and September, 1912:

FIRST LIST.

Presented by the Authors.

Bond, C. J., and others: The Great State. 1912
Herringham, W. P.: Kidney Diseases. 1912
Porcher: Le lait desséché. 1912

Presented by Sir James Barr, LL.D., M.D.

Twenty-one volumes of the Liverpool Medico-Chirurgical Journal. 1888-1908

Presented by Lady Butlin.

Butlin, the late Sir Henry: Lectures on Unicellula Caucri. 1912

Presented by E. Hurry Fenwick, Esq., F.R.C.S.

Deuxième Congrès de l'Association Française d'Urologie, procès verbaux, rapports et discussions. 1912

Presented by the Rev. G. R. J. Fletcher, M.R.C.S.

Harvey, William: Anatomical Exercitations Concerning the Generation of Living Creatures, to which are added Particular Discourses of Births and of Conceptions (with portrait). 1653

Presented by Dr. H. Hearnsey, Nyasaland.

Nyasaland Sleeping Sickness Diaries, Nos. 1-16. 1910-1912

Presented by the Medical Officer of the Local Government Board.

Dr. Rees's Report on Malldwyd Urban District. 1912
Dr. Wheaton's Report on Enteric at Barnstaple. 1912

Presented by Dr. Norman Porritt, Hatch End.

The Phonographic Record. 1900 1911

Presented by Miss Charlewood Turner.

BRITISH MEDICAL JOURNAL. 1890-1899
Clinical Society of London, Transactions. 1882-1899
Guy's Hospital Gazette. 1894-1897
Guy's Hospital Reports. 1836-1896
Hunterian Society Reports. 1890-1897
International Medical Congress, Transactions. 1881
Journal of Pathology and Bacteriology. 1893-1898
Pathological Society Transactions. 1864-1899
Royal Medical and Chirurgical Society Transactions. 1874-1897

Presented by the Editor of the "British Medical Journal."

Abel, K.: Vorlesungen über Frauenkrankheiten. 1912
Anderson, S.: Hints to Dressers. 1910
Barié, E.: Traité pratique des maladies du coeur. 1912
Barnard, J. E.: Practical Photomicrography. 1911
Barnett, K. B.: Handbook on Military Sanitation. 1912
Battie, W. H.: Clinical Lectures on the Acute Abdomen. 1911
Baxter, C. P.: Hospital Service Book. No date
Bellevue Hospital Nomenclature of Diseases and Conditions. 1911
Bingham, S.: Words to Wives on Pregnancy and Parturition. 1912
Bloch: Sexual Life of our Time. 1908
Bosauquet, W. C.: Spirochaetes. 1911
Browning and Mackenzie: Recent Methods in the Diagnosis and Treatment of Syphilis. 1911
Chapin and Pisek: Diseases of Infants and Children. 1912
Chassevant, A.: Hydrologie élémentaire à l'usage des médecins. 1912
Clarke, Jackson: The Cause of Cancer. 1912
Coleman and Hilliard: Anaesthetics in Dental Surgery. 1912
Colyer and Colyer: Dental Disease and its Relation to General Medicine. 1911
Collins J.: The Way with the Nerves. 1911
Costain, A. J.: The Life of Dr. Arthur Jackson. 1911
Cowen and Ruston: Smoke, a Study of Town Air. 1911
Crispin, E. S.: Prevention and Treatment of Disease in the Tropics. 1912
Daniel, H. C.: Science and Empiricism. 1908

Jones, R. H.: Experimental Domestic Science. 1912
Kisch: The Sexual Life of Women. 1910

National Insurance.

DEBATE ON THE INSURANCE ACT.

THE House of Commons spent the whole of the sitting on Friday, February 7th, in discussing the working of the Insurance Act. The debate arose on the Supplementary Estimate for £1,825,000 for the grants in aid of national insurance, details of which were published in the SUPPLEMENT of last week (p. 136). At the outset the objection was raised that the proposal was irregular, as the vote was for money to be expended in the next financial year. A motion to reduce the vote by £500 was negatived on a division by 206 to 50, but the constitutional point has not been settled, and the Prime Minister has since acknowledged that special legislation will be necessary next session.

The general debate was opened by Mr. Booth (Pontefract), who estimated that 6,500 maternity and 36,000 sickness claims were being paid weekly, and showed the extent of his acquaintance with the facts of medical practice by saying that the medical attendance on persons not ill enough to claim sick pay "could not take a very large amount of time."

After this the debate, which lasted nearly six hours, was concerned chiefly with free choice of doctor.

Mr. Worthington-Evans said that there could be no dispute that the Insurance Act required the Insurance Commissioners to make regulations permitting Insurance Committees to allow any insured person to make private arrangements, and the Commissioners had in fact made such regulations. Administrative difficulties, however, had been put in the way of insured persons who tried to make their own arrangements, and a notice had appeared in the press of December 26th, 1912, stating that private arrangements were only possible where a panel had been formed; this had largely affected the procedure of Insurance Committees throughout the country. He contended that an Insurance Committee which closed the panel was acting *ultra vires*. The Commissioners could supersede the panel system, and appoint a full-time medical man, but if once a panel were formed in any area other doctors could not be prevented from going upon it.

Mr. Masterman said that this was only the case if the lists were adequate; if inadequate, the Commissioners could adopt any system they pleased, including what was called closing the panel.

Mr. Worthington-Evans retorted that to allow the addition of the names of medical men to a list could not make it more inadequate. To allow imported doctors to take private practice was not in accordance with statements made by the Chancellor of the Exchequer. If the administration of medical benefit were to be successful, insured persons should be allowed freely to make their own arrangements; the ideal arrangement would be that every doctor should be working in the service of the National Insurance, and the creation of two classes of doctors, which was contrary to the interests of the doctor, would be still more contrary to the interest of the insured. The suggestion that the Government ought to consider was whether it was not possible to allow doctors to place their names on the list for limited practice, permitting them to specify that they were willing to treat either a certain class of patients or certain patients. In the case of aged and infirm members of friendly societies the Act provided that the Insurance Committee must, if asked to do so, supply medical benefit at a cost not greater than to insured persons, but in many cases they were being asked to pay several shillings a year more than they formerly paid. The arrangements of aged and sick members of friendly societies who were not insured under the Act had been disturbed by the Act, and he appealed to the Chancellor of the Exchequer to include them in the parliamentary grant of 2s. 6d. to provide them with medical benefit.

Dr. Addison, after quoting from Section 15, to show the powers given by the Act to the Insurance Commissioners to ensure an adequate service in any area where the panel was inadequate, went on to say that the truth of the statement of the Chancellor of the Exchequer that persons who made their own arrangements would have something provided for them under the Act to help them

to pay their share was proved by the fact that, as was clearly stated in Regulation 49, a special fund was provided, out of which those who had made their own arrangements might draw to help them to pay the cost of the medical charges to which they had become subject. The whole intent and purpose of the agitation raised in London with regard to authorizing insured persons to make their own arrangements was to break down the Act. The draft scheme proposed to impose an income limit of £2, and it would be useless for a person who happened to have more than that weekly amount to make his own arrangements. Under the scheme persons making their own arrangements would have to pay a considerable amount for extras, which they got free under the Act. The main purpose of the agitation was, however, to obtain freedom from control. The hot-headed persons who had got the control of the agitation were acting to the detriment of their professional brethren, and, by ignoring the interests of the insured persons, had put every public authority in the country against them. The proposal really amounted to taking five million and a half, partly contributed by the Treasury and partly by the employers and the insured, and to hand it over, and say, "Make your own arrangements." This was contrary to anything that had ever been sanctioned by Parliament, and contrary to the whole intention and purpose of the Act. The Insurance Committees, therefore, were quite right in refusing to sanction these wholesale applications. The Insurance Committees, having this money in their control, were compelled, as self-respecting bodies, to see that the arrangements proposed were adequate before they consented to them. Further, to allow without careful scrutiny amalgamations of insured persons to make their own arrangements might not be in their best interests, or in the best interests of medical men. It had been stated that the Commissioners were going to send inspectors into surgeries to watch doctors examine their patients. This would not be tolerated by any self-respecting doctor or patient, and the Commissioners and their inspectors would not waste their time and energies in that way. No effort had been spared to discredit the whole medical service under the Insurance Act, and to keep medical men from going on the panel. Medical men were finding out that the amount of work they had to do was very much less than they anticipated. Some time ago he had ventured to prophesy that the basis of remuneration could be calculated on these lines—if there were 2,000 insured persons on his list, the medical man would receive an income of £750 for medical services without any deduction for drugs. From the facts at present brought to his knowledge, it appeared that eight visits and sixteen surgery attendances for six days a week were the services which the doctor would render for £750 if he had 2,000 insured persons on his list. It could not be said that that was inadequate payment. Some medical men he knew had from 2,000 to 3,000 insured persons on their lists, which was too large a number, but the fact that in certain crowded districts there was not one medical man to 5,000 of the inhabitants had brought this about. The people could not afford to maintain more, but as their means in this respect were now the same as those of the best workers there would soon be an improved service. Medical men were themselves finding that the service could be made attractive and good, and were making suggestions for the greater efficiency of the service by means of early accurate diagnosis and improved treatment. He firmly believed that the sincere efforts of the Government to make the service effective would very soon take away the bitterness of the recent strife and attract to the service the hearty co-operation of medical men from one end of the country to the other.

Sir Philip Magnus said that it was acknowledged that medical benefit under the Act could not be really successful unless the conditions were such that the doctors could throw themselves into their work with the same spirit and effect as if they were voluntarily employed. No one had been more emphatic with regard to the importance of allowing the patient free choice of his

medical man than the Chancellor of the Exchequer himself. It was the deliberate intention of the framers of the Act to allow this choice, and the card which had been issued to insured persons bore upon it the following statement:

If you are arranging with the Insurance Committee to obtain your treatment from a doctor not on the list, and wish to claim contributions towards the cost of treatment, you must send this ticket to the Insurance Committee.

The form known as Medical Form 21 had been drawn up by the Insurance Commissioners to give this free choice of doctor. It had been printed in thousands, but had not been circulated. Every difficulty had been placed in the way of allowing persons to make their own arrangements, notwithstanding the statement on the card. He then referred to the subject of malingering, and asked the Chancellor of the Exchequer to consider the statistics of malingering in Leipzig. It was there found that 8,500 patients were reported to the confidential medical advisers to ascertain whether they were really unable to work. Of those, 1,259 did not come up for examination, 1,300 notified recovery before examination, and of the 5,800 who were examined 47 per cent. were declared able to work forthwith, 12 per cent. at the end of a week, 10 per cent. to be re-examined, and 31 per cent. declared unable to work. The very fact that under any contract system it was only to be expected that insured persons would seek assistance from the doctor more frequently than if they paid per visit meant that the amount of work thrown on the medical men would be very much greater than in the past. In his concluding observations he referred to the fact that medical men had been required to sign a form of agreement which did not specify the rate of remuneration, and that they had not received in exchange any reciprocal contract.

Mr. William O'Brien contended that the amount due to Ireland from the grant under consideration need not be devoted to medical benefit, and suggested that it should be applied to providing better housing.

Mr. H. W. Forster complained that there had been undue delay in issuing the regulations for the election of medical representatives on the Insurance Committee, and contended that their presence on the Committee was most desirable at the present moment when the arrangements were being got into order. In some parts of the country the Insurance Committees had replied to applications to make their own arrangements by a general refusal. The matter was one which should be approached from the point of view of the insured persons who had a right to decide for themselves.

REPLY BY MR. LLOYD GEORGE.

Mr. Lloyd George, in opening his reply, contended that some of the difficulties which had arisen in bringing the Act into force were, in fact, due to the determination of the Government to safeguard the right of the free choice of doctor, and continued as follows:

The Act in Poor Town Districts.

One thing the Act has brought into prominence is that the poorer districts of this country are largely understaffed with doctors. Go to the well-to-do districts and suburbs, go to the districts where you have an industrial population earning good salaries, and you find a doctor for 500 or 1,000 of the population. I think you will find a doctor in Bradford for every 1,200 or 1,300. Go to the East End and you find there is one doctor for every 4,000 and 5,000, and barely that. What is happening? One result of the Insurance Act is that doctors are beginning to drift to those districts for the first time—well-qualified doctors. It is true that many of them are young men who see an opening; but why did not doctors start practising in those districts before? It was because unless you get thousands and thousands of patients you cannot make a living out of a threepenny attendance and a bottle thrown in. The medicine would cost something, and the water-rate would amount to something, and therefore that was the only way they could make a living. What happens now? The well-to-do artisan and the man who is only earning 10s. to 15s. a week are both getting the same payment from the insurance fund for their doctor. What is the result? The doctor in future, although he may dislike the neighbourhood, finds that from the point of view of

payment there is no distinction between the well-to-do district and the district which is not well-to-do. The doctors are beginning to find that out. Take Finsbury alone—about a dozen doctors have already gone there and started a practice. They are good men. I am not comparing them with the men who were there before, but they are well-qualified men. That is the sort of movement that is going to take place, with the result that the poorer districts which have been neglected and thrown upon the threepenny and sixpenny doctor will in future have excellent doctors to attend to them. The hon. gentleman complains that things are not in perfect order. He gave no proof of it.

The Refusal of the Doctors.

I am not attacking the Unionist press, but there are two or three papers that have made a business out of this. They bring in every point, and they use these vague phrases, giving no ease at all. But who is responsible? Up to the 21st of December the doctors did not come in. They had remained outside, and on the 21st of December, within about a fortnight or three weeks of the Act coming into operation for medical benefits, they started not an absolutely new scheme, but a scheme which they themselves rejected eighteen months before, and as to which they demanded unanimously that the House of Commons should make a statutory provision to prevent it ever coming into operation. Why should the Government be blamed for that? Is it because they projected this wild-cat scheme, at the instance of just one or two men who have led them very badly—and I think that all the doctors of the country admit that quite freely now.

That is the real reason why, if there is the slightest confusion, it exists. It is because they refused up to the last moment to accept the terms offered, and they put forward terms which they unanimously had rejected eighteen months before, and as to which they wished the Government to provide a statutory bar against their ever coming into operation. There was, he contended, no proof of overwork. The Chairman of the London Insurance Committee had stated that there were nearly 1,200 doctors already on the panels; the number of insured persons was 1,300,000; that meant about one doctor to 1,100 persons. In industrial districts a doctor attended about 5,000. One doctor attended between 3,000 and 4,000 persons—man, woman, and child—in districts like those in South Wales, in Durham, and in Northumberland. Eleven hundred persons, then, meant something like 2,500 at the outside—man, woman, and child—and that was far below the number attended by the colliery doctors in the mining districts of South Wales, Durham, and Northumberland. At any rate, it was infinitely better than the present system under which there was one doctor for every 4,000 or 5,000 poor people. He did not claim that it had been possible to establish a perfect system, but in three weeks a system had been established which must necessarily take years to perfect. Not merely a beginning, but an extremely successful beginning, had been made. As to the delay in the election of medical men on the Insurance Committees, that was the fault of the doctors. The British Medical Association had refused to supply a list of doctors in each district to represent the medical profession on the Advisory Committee and on the Insurance Committees of those districts.

Again, it was not, he said, accurate to assert that the regulations for the control of the medical profession had been prepared by laymen. Laymen were, of course, engaged in the drafting of the documents because the assistance of a lawyer was essential.

Whose fault is it, Mr. Lloyd George continued, that the medical profession did not have a share in framing these Regulations? We put representatives of the medical profession on our Advisory Committees for the purpose of settling these identical rules which are to control the medical benefits. What did they do? The representatives of the British Medical Association cleared out and withdrew every other man whom they possibly could.

Persons making their own Arrangements.

There have been a good many quotations giving many cases. I stand by them, and not only that: I have been better than my word on them. I am

not now giving the actual words, but I said that it would be possible in any district, if the insured persons did not care for the capitation system, to pool the whole of their money, and to draw upon that amount to the extent of as far as it went; and I went beyond that, and I said that the insured person would be liable for the balance. What happened in those cases? By this grant the balance has been wiped out, and we are now enabling the doctors and societies, where insured persons prefer the pooling arrangements, to enter into that arrangement on one condition: that this grant is to be paid, and not a penny piece is to be charged in respect of the balance against the insured persons. In Manchester the very arrangement I suggested in the Opera House has been carried out, and throughout the whole of the great county of Lancashire. What is the arrangement? The doctors there say, "We do not like the capitation system, and we do not care about treating people at 8s. 6d. per head, or whatever it may be, and we prefer that the 8s. 6d., or 6s. 6d., or 7s., should be put into a pool, and that each of us should attend, upon the old system, our patients, and at the end of a given period we should send in our bills, and that those bills should go as against that pool, and if it is insufficient we shall have a dividend." If it is more than sufficient in some districts they are going to make very good use of it. I am not quite sure if this is to be the case in Manchester, but I understand that in some districts where there is a balance, as they anticipate there will be, they propose to use it for the purpose of the setting up of laboratories and systems of that kind. That is the system I indicated at the Opera House, and not only have the Insurance Commissioners stood by the promise which I gave, but actually over the whole of Lancashire to-day, and I believe in several other parts of the country, that is the system which is in operation, and I say it is a very good system for those districts. I only want to point out that that system has been carried out.

The hon. gentleman asks, Why do you not allow people to make their own arrangements? Their own arrangements were never intended save in exceptional cases. The hon. member for St. Pancras speaks as though I were forcing the panel system upon insured persons. The panel system is the choice of the British Medical Association. My original idea, as hon. members will see if they read the first print of the bill, was to allow arrangements to be made between the approved societies and the doctors. That is how the bill was introduced. If that were the system at the present moment there would be no question of persons making their own arrangements. How was it altered? It was altered purely as the result of a great agitation by the British Medical Association. They said, "No, we will have nothing to do with the approved societies; we have had a wide experience of them; they are tyrannical." The hon. member for Glasgow University (Sir H. Craik), who represents, perhaps, more doctors than any other member, gave a reason of which I thoroughly approve. He said that it is only with a public authority you can get the necessary discipline and control. Those were words spoken on behalf of the medical profession. They insisted on the panel system, and now, when it does not suit them, they turn round and say, "This is an instrument of torture manufactured by the Chancellor of the Exchequer for tormenting an innocent profession." It is not my invention.

Mr. Worthington-Evans: But you are using it.

Mr. Lloyd George: Who put it into my hands? I am doing it for their own good, as they will realize by and by. They convinced me that the panel system is the best. It took weeks to do it. I had several interviews with them; I thought their reasons were sound, and I gave way. They convinced me so thoroughly that I cannot see my way to change again. What does the panel system mean? Any doctor on the *Medical Register* can go on the panel. No one can say him nay as long as he behaves. That means a free choice of doctors. There is no Act of Parliament that can compel a doctor to attend a man. I cannot compel a doctor to go on the panel. All I can do is what the medical profession asked me to do—leave an open door to the rest, without any qualification beyond those which they have won at their examinations and which they have retained. That is a free choice of

doctors—a free choice of every doctor who chooses to come inside and say, "I am willing to serve." It is obviously impossible, if we set up an alternative service that involves a guarantee to anybody that comes into the district to ask for free choice of doctor. That is the fault of the profession in the district. If we had been driven to set up a national service in some of the large towns, the panel would have been closed, because that would be the only way in which our finance could be assured. The medical profession were wise; they did not give us the opportunity.

The Guarantee for Medical Attendance.

Mr. Lloyd George went on to allege that the demand for contracting out was not medical but political, and was due to the approaching London County Council elections. The movement had not come from the insured persons. It had come entirely from a certain section of the medical profession who had organized it. Probably 95 per cent. of the insured persons in London were either trade unionists, or members of friendly societies, or belonged to industrial insurance companies. There had been no demand from these bodies that represent insured persons. Insured persons could not be permitted to make their own arrangements on the scale on which it was demanded, because it would break down the Act. One advantage of the panel system was that it guaranteed medical attendance for every insured person. As to the question whether medical men could be allowed to go on the panel merely to attend a certain class of persons—so long as the panel as a whole guaranteed an efficient service for everybody, there would be no difficulty about it, and that was the advantage of the panel. To allow persons to make their own arrangements on a large scale would mean that the doctor would pick and choose his patients—the question of picked lives all over again. One doctor would say, "I will have certain people." A doctor getting 8s. 6d. would pick lives and leave the worst lives and the broken lives to the panel doctors. That would be grossly unfair, and could not be allowed. There would be no guarantee for effective medical attendance for the bulk of the population. Such a system would allow those who are in bad health, who are broken and very poor, to be attended by a section of the medical profession which may not be of the very best. Under the panel system there was real effective control to see that the doctor who was on the panel did render the services he had contracted to give.

A good many doctors, Mr. Lloyd George continued, would like to get away from that, but are we to pay the same money to the doctor who is prepared to carry out the regulations of the State, who is prepared to subject himself to State supervision, who enters into a contract which the State can enforce, and a doctor who can do as he pleases and has only got his own patients to control him?

Sir P. Magnus: You cannot enforce it in a good many cases.

Mr. Lloyd George: We can do a little more than we have done in the past in that respect. You can see that his name is not retained on the panel, and that is a very powerful sanction to carrying out medical benefit in this country. With regard to the doctors that have come on, we were assured that there would be no medical attendance on January 14th, or that if we had medical attendance it would be purely a sort of refuge for the profession. The British Medical Association issued a statement of what they regarded as a successful panel system. They said you must get 8,000 doctors at the very least to join your panels in order to work the Act. We have got 15,000. With regard to the quality of the doctors, practically throughout Great Britain almost all the doctors who have been engaged in industrial work are on the panels to-day. London may be a possible exception, but I do not deal with that. If you take all the great cities of this country—Glasgow, Liverpool, Manchester, Bradford, Newcastle, Birmingham, and Sheffield—the vast majority of the doctors who have been engaged in industrial practice are now on the list; and it is very remarkable, that, although they have been working for three or four weeks under difficulties which would naturally come at the beginning, the number of complaints we have had up to the present are infinitesimal in the whole of those districts. We cannot guarantee the quality

of any doctor. There are good and bad doctors, and some in between; but that is the case in every profession, but you cannot guarantee them. Money does not always buy a good doctor. All we can say is that the medical profession such as it is—some of them first class, competent, and skilled men—we have got them on the list. We have got others, but, at any rate, they have been chosen by insured persons. If there are doctors on the list not competent the insured persons need not choose them; and if they choose them it is because they have faith in them, and I think faith very often makes up for works. So much for the number on the list. In London we have about 1,200 doctors, one in 1,100 of the insured population. There are many districts in the East End where the population is under-doctored, and I have no doubt that in the course of the next few months doctors will drift into those areas. They are beginning to do so. There is a great deal of hard work, but it is due very largely to the fact that in the past these poor people have not been attended at all. Half, if not two-thirds, of the population of these districts have never received medical attendance at all, except what they have got as out-patients of the hospitals. For the first time they can call in their own doctor. That undoubtedly increases the work of the doctors.

Clerical Work.

There is also another class of work which I have no doubt has increased the burden of the doctors at the beginning, and that is the filling up of the medical benefit cards. It does not take very long, it is true, but still if a doctor has 500 patients on his list it does take some time to fill in his name and address on each, and very often he has to fill in the name and address of his patient as well.

Mr. Worthington-Evans: And there is the book.

Mr. Lloyd George: I agree; and the trouble is three-fold to people who are not in the habit of doing this sort of thing. But that is a burden which is passing away. They have only to do it once, and there is an end of it. In future they will only have to fill these cards in respect of new patients.

Sir P. Magnus: No, every time.

Mr. Lloyd George: No, the hon. gentleman is perfectly wrong. They have only got to fill the cards and send them in the first time. They have to send the names of those who accept them as doctors once to the Insurance Committee. Therefore, all this trouble which has taken place during the first fortnight, and of which most unfair advantage has been taken by some of the Press and by one or two hon. gentlemen who have seen in it an opportunity of putting questions to try and create the impression that all the trouble in this world is due to the Insurance Act, is passing away, and in the course of the next week or two there will be very much less. I should like to say one word about the keeping of books and papers by the medical profession. I think it is possible to simplify some of the documents they have to fill up, and we are looking into the matter. It is one of the things where experience, of course, will teach us how to work the Act. I was interested to hear what the hon. member for Sevenoaks (Mr. Forster) said about this. He said: "You cannot tell in advance what amendments you want to the Insurance Act. It is only experience which will show you." He quoted a letter which I wrote, I think to a Liberal candidate, and in which I said it was impossible to tell what amendments would be necessary. I have always admitted amendments would undoubtedly be necessary, and said that experience, and experience alone, would teach us what amendments would be required. This is one of the amendments in the Regulations which I think will have to be made. I think there will have to be some simplification of some of these documents.

Tuberculosis and the Sanatorium Grant.

I should like to say something in regard to a question about which I have had representations made to me, particularly from Scotland. It concerns what is called the "tuberculosis sixpence." The doctors earn 6s. 6d. or 7s. according to whether they simply get the medical grant or whether sixpence is added out of the tuberculosis grant. Complaints have been made about that, notably from Scotland. They do not want to see their sixpences go. They complain that the money is not paid out of

this grant, but out of the sanatorium grant of 1s. 3d. I think it is rather important that I should say something about that. There are three claims upon the sanatorium grant of 1s. 3d. The first is the dispensary treatment, the second the domiciliary treatment, the third the sanatorium benefit or institutional treatment. The suggestion is that the whole of this domiciliary treatment should be provided out of this sum, and that we should not take it out of the 1s. 3d. It is true that up to the present most of the work that has been done in respect of the sanatorium benefit has been dispensary and not institutional, the dispensary being the clearing-house, and having also provided tuberculi and observation beds. It is part of the work of the dispensary to decide whether patients shall be passed on to an institution or shall receive treatment in their own homes. I am now concerned with that part dealt with in this vote, where the doctor is called upon to deal with a patient in his own home. We are criticized from both sides. The doctors say you are not paying enough, and the Scottish county councils say you are paying too much. I think I ought to explain to the House, first, why the proportion is so large. The number of insured persons who come up for treatment must of course at first be necessarily small. You are only dealing with persons who were employed in July last year, and who have developed consumption since then. They may have had the germs in them, but they only developed after they had paid their contributions, and filled up their cards, being employed persons. Well, the numbers have increased from week to week and month by month. In November there were about 5,000 cases which applied for sanatorium treatment. Of those, about half were dispensary cases and cases treated by doctors in their own homes, and about half went to sanatoriums. The figures received last week show that 5,000 have been sent to institutions. The number has increased to that extent. Remember that the doctor has not merely to examine the case before he sends it from the dispensary to the sanatorium, but it is his duty when on the panel to look after the patient when he returns from the sanatorium and to keep an eye upon him and see how he is getting on. Therefore I would point out to the Scottish county councils that this 6d., although a liberal grant, does cover a good deal of work which is not on the face of it apparent. I have no doubt that as time goes on there will be more and more of those poor people sent on to institutions. You cannot build sanatoriums in a day. The Act only came into operation in July. You cannot build sanatoriums all over the country in a few months, and I think it would be a great mistake to attempt to do so. You must proceed tentatively and experimentally, even with regard to the treatment of consumption. Some of the authorities still maintain that it is very much better to use tuberculin. The late leader of the Opposition (Mr. Balfour), in a speech on the subject, urged us not to put all our eggs into one basket, and not to go in wholly for institutional treatment. That was supported by the right hon. gentleman the member for East Worcestershire (Mr. Austen Chamberlain), who was very strong about tuberculin. I hope all these things will be tried. That is what we are doing. We are trying to send patients through the dispensaries from their own homes, and to treat them in increasing numbers in institutions. At the end of January we had 5,000 in these institutions. I only wanted to say that in order to make clear to the House why we are distributing the 1s. 3d. in that way.

Scotland.

After some observations from Mr. Landon, Mr. Cathcart Wason said that, as one who from the first had been a consistent supporter of the Insurance Act, he must point out that there were serious difficulties to contend with in the Highlands and Islands of Scotland. In the two counties of Orkney and Shetland, which he had the honour to represent, there were many islands with a considerable number of inhabitants which were totally unprovided with medical benefit. In Shetland there were the following islands: Burra Isles, 889; Fan Isle, 139; Whalsay, 1,040; Skerries, 144; Papa Stour, 212; Fona, 175. In Orkney they had Burra, 628; Eday, 529; Hoy Greensay, 393; North Ronaldshay, 436; Rousay Egelshay and Veira, 710. In all those places the position was that there was no medical service whatever. He under-

stood that the sum of £10,000 in the Supplementary Estimates under consideration was for medical service and mileage in those particular districts, and he expressed his gratitude for the action of the Government in the matter.

Major Hope said that under the conditions existing in many parts of Midlothian the Act was not working satisfactorily, and it had been impossible to obtain replies from the Scottish Insurance Commissioners and the County Insurance Committee to applications for information. Insured persons had failed to obtain medical benefit, and he contended that they would be within their rights under the proviso of Section 15 (2) if they made their own terms for individual visits, and then sought to recover the doctor's bill in full from the Insurance Commissioners.

MEDICAL BENEFIT: SPECIAL GRANTS.

The conditions of medical benefit in Middlesex was discussed by Mr. Mallaby-Deeley and Mr. Glyn-Jones. Mr. T. M. Healy raised an objection to the constitutional procedure with regard to the vote. To this Mr. Lloyd George replied, and went on to say that the special grant of £10,000 to the Highlands need not necessarily be expended within the present financial year.

After some remarks from Mr. Butecher, Sir J. D. Rees rose to speak, when Mr. Lloyd George moved the closure, which was carried, and the vote was then passed without a division.

ANOTHER DISCUSSION.

On Wednesday evening during the discussion of the Consolidated Fund Bill, upon which almost any subject may be brought forward, Mr. Cassel raised two points. The first was whether the records of diseases of insured persons required to be kept by doctors and sent to the Government departments were privileged; the second was the course taken by some Insurance Committees, which he said were at present merely the nominees of the Commissioners, in insisting on persons who wished to remain under their own doctor going to a doctor on the panel. This was part of a policy to force doctors on the panels, and he considered that the interests of the insured persons had been sacrificed with this object.

Mr. Masterman replied that it would be impossible by comparing the forms sent to the Insurance Committees with those sent to the Insurance Commissioners to trace the particular diseases of the particular individuals. Arrangements had been made under which the risk of medical attendance on insured persons who moved from place to place would be taken by the Insurance Committee in the district to which they removed. In London a difficulty had arisen with regard to those persons who lived outside London but worked in the City. It might, he said, be possible to divide the fee between the doctors in the two districts, in proportion to their risks, but nine out of ten cases of sudden illness in London were taken to hospitals. He hoped all the Insurance Committees would be fully appointed in a short time; the doctors were now electing their representatives. As to the point whether approved societies could accept certificates of doctors not on the panels, all that was necessary was that the societies should be satisfied, whether by a certificate or other means, that an insured person was suffering from a complaint entitling him to sickness benefit. He could not recommend approved societies all over the country promiscuously to accept certificates of non-panel doctors, as it might be worth while for a man to pay such doctors 1s., 2s. 6d., or 5s. a week for medical attendance if he could get from them certificates for 10s. a week sick pay, which the panel doctors would not give. The Government intended that Insurance Committees, if assured of adequate medical attendance on all persons within the area, should be able to allow under certain conditions arrangements with doctors not on the panel, and he believed the London Insurance Committee was granting a general exemption to nurses at hospitals. Permission to make their own arrangements, and arrangements allowing doctors to go on the panel to attend only a limited number of patients, must be qualified by the dominant consideration, which was that every insured person within the area must receive adequate medical attendance. In the case of a doctor who was willing to attend at the insurance rate servants in the houses he went to, the Chairman of the London Insurance Committee

agreed that there was no objection to allowing doctors to go on the panel for a limited number of cases so long as that was done in agreement with the doctors that were on the panel, and the arrangement could be woven into a system whereby adequate medical attendance could be given to every insured person. Insurance Committees were, however, justified in preventing the attempt to break down the Act which had been encouraged by some persons connected with the party opposite.

Mr. H. W. Forster denied this insinuation. The object was, he said, to secure to people the real right of choice which had been promised.

Mr. Hamersley urged that it should not be required that medical certificates given for sickness benefit should state the nature of the illness.

QUESTIONS IN THE HOUSE.

ADMINISTRATION OF MEDICAL BENEFIT.

Financial Provisions.

In reply to Mr. Cassel, Mr. Masterman said, on February 5th, that the Government had proposed to proceed by way of supplementary estimate in order to obtain the sanction of the House at the earliest possible date to the incurring of expenditure upon medical benefit in excess of the amounts available out of contributions under the National Insurance Act. It was very desirable, regard being had to the provisions of Section 61 of the National Insurance Act, and in order that Insurance Committees might be in a position to enter into contracts for the whole year, that the whole amount available for medical benefit should be credited to the committees as soon as possible after the commencement of the calendar year, as indeed was contemplated by the financial provisions of the Act; and that could not be done unless the money was issued from the Exchequer before March 31st. The Act contemplated that the Insurance Committees would be credited on January 1st with the whole of the money required for medical benefits during the whole year, and in the present uncertainty that prevailed among the medical profession it was essential that the committees should be able to make these contracts for the whole year and have the money as soon as possible to meet the contracts.

Cost of Benefits.

Mr. Masterman, in replying to Mr. Worthington-Evans, on February 5th, said that the liability of the State in respect of charges accruing during the months of January, February, and March, 1913, for benefits other than medical and sanatorium benefits, and including the cost of administration, was estimated at £601,000; the expenditure on insured persons for benefits and the cost of administration during the months of January, February, and March, 1913, estimated as nearly as the circumstances of the case permit, was £3,970,000. The proposed new grants were outside the Act altogether. The obligation under the Act to pay two-ninths (or one-fourth) of the cost of benefits out of moneys provided by Parliament was combined with that of paying seven-ninths (or three-fourths) out of contributions. Where nothing was paid out of contributions, nothing was payable out of moneys provided by Parliament under the Section (Section 3).

Medical Remuneration.

Sir J. D. Rees asked the Secretary to the Treasury, on February 5th, whether the Government was in a position to guarantee to medical men who had gone on the panels not only 1s. 9d. for the quarter, but 7s. for the year as capitation fee; and whether insured persons had been warned that such selection of doctors as they had made were not of any avail beyond April 14th, 1913.—Mr. Masterman said that one of the purposes for which the special grants-in-aid were required was to make provision for additional payments for the cost of medical attendance and treatment, so that the amount available for the remuneration of doctors on the panel would be equivalent to a sum of 7s. a head per annum, including the 6d. payable in respect of the domiciliary treatment of tuberculosis. When that money was voted the Insurance Committees would be in a position to make contracts with the doctors on a 7s. basis for the remainder of the year.

On February 5th Mr. Wright asked the Secretary to the Treasury whether the taking of responsibility for an

insured person by a doctor who had joined the panel dated from the time when the doctor signed the insured person's card; whether he was aware that in some districts insured persons not in immediate need of treatment were taking no steps to have their cards signed and were unaware of any necessity to have them signed, and doctors were thereby suffering loss; and whether he would take the necessary steps to induce such insured persons to have their cards signed.—Mr. Masterman, in reply, said that the doctors upon a panel which was adequate had collectively taken responsibility for all the insured persons in the district, and unless any doctor's list was closed an insured person might come on it by selection and acceptance at any time before allocation by the Insurance Committee. The total amount available for insured persons, well or ill, in the area would be divided amongst the doctors who had thus accepted responsibility for them; and the allocation of patients would carry payment in respect of them as from January 15th.

Mileage.

In reply to Sir Hildred Carlile, Mr. Masterman said that Paragraph 50 of the Medical Benefit Regulations gave Insurance Committees powers to make arrangements for a payment for mileage in those cases where insured persons resided more than five miles from the nearest doctor, by agreement with the practitioners, out of the total capitation sums available. In addition, a sum of £50,000 had been voted in Committee of Supply for mileage grants in sparsely populated districts in Great Britain other than the Highlands and Islands.

Certificates.

Mr. Jowett asked the Chancellor of the Exchequer, on February 6th, if he was taking any action on the information given to him concerning certain insurance companies who were refusing to pay sick benefit to insured persons who were eligible for it unless the doctor's certificate showed the nature of the illness in each case, the doctors in the Bradford district being unwilling to conform to that requirement in the interests of the patients concerned.—Mr. Masterman said that the nature of the evidence which a society accepted in support of a claim to sickness benefit was primarily a matter for the society. If any question arose between such a claimant and his society as to the sufficiency of any certificate tendered by the claimant for that purpose, that question would have to be determined by the Commission under Section 67 of the Act. The general question of the form of the certificates required in connexion with claims for sickness benefit was receiving consideration.

Hours of Consultation.

Mr. Frederick Hall asked, on February 6th, if a panel doctor was empowered to prescribe the hours during which he would receive applications from insured persons to call upon them at their own homes; and, if so, whether steps would be taken to remedy an arrangement likely, under the present congested conditions, to have serious results in cases of dangerous illness.—Mr. Masterman said that a doctor on a panel was under the same conditions as doctors in ordinary private practice. He might give notice of a time within which he would receive requests to call upon patients for ordinary attendance, and he was under obligation to attend them at any hour in cases of urgency.

Operations.

Mr. Masterman informed Mr. Fred. Hall, on February 11th, that no regulations had been made as to arrangements to be followed for the performance of operations on insured persons who could not be dealt with at hospitals. Whether an operation should be performed at the patient's home, or at the doctor's surgery, or at a hospital, must depend upon the circumstances of each particular case.

Refusals by Selected Doctors.

Mr. Masterman stated, in reply to a question by Major Hope, on February 11th, that if an insured person had been refused by the doctor whom he had selected, he was entitled to be allotted to some doctor on the panel. The allotment, however, was not a matter for the approved society or the Insurance Commissioners, but for the Insurance Committee of the area in which he resided.

Mr. Touche inquired if an insured person was not refused by a doctor, but the doctor was too busy to attend him,

and if after much delay a doctor not on the panel had to be called in, would the insured person be entitled to claim the fee necessary for the other doctor.—Mr. Masterman said that the insured person certainly was not entitled to claim the fee, but whether any fee could be allowed would depend on the circumstances of the particular case.

Emergency Medical Attendance.

In reply to questions by Mr. Godfrey Locker-Lampson and Mr. F. Hall, on February 6th, Mr. Masterman said that though it was open to an insured person to obtain the services of another doctor in an emergency, the Act did not contemplate any insured person having the services of more than one doctor at a time, and there was no power to recover any expenditure incurred, although reciprocal arrangements could probably be made between the panel doctors themselves for such cases.

Number of Patients and Employment of Assistants.

Mr. Edmund Harvey asked, on February 6th, whether it was permissible for a doctor to accept more insured persons on his list than he could possibly attend himself in illness, with a view to engaging assistants to attend them instead of himself.—Mr. Masterman, in reply, said that no doctor ought to accept more insured persons upon his list than he considered he could personally be responsible for. An assistant not on the panel might only treat insured persons on behalf of his principal when the latter was precluded by urgency of other professional duties, absence from home, or other reasonable cause from giving personal attendance to an insured person under his care. If the assistant was on the panel, the insured person might choose either the assistant or the principal, or might express his willingness to be attended by either.

Mr. F. Hall inquired if the Government intended to make any regulation as to the number of insured persons that any doctor on the panel might take.—Mr. Masterman said it was the duty of the Insurance Committee to see that no doctor took more patients than he could adequately attend.

Allotment of Insured Persons.

On February 11th, Mr. Masterman, in replying to Captain Craig, said that if an insured person failed to exercise his right of choosing a doctor, he thereby left to the Insurance Committee the duty of allotting him to one of the doctors on the panel. If the doctor who had undertaken the treatment of an insured person was precluded by urgency of other professional duties, absence from home, or other reasonable cause from personally attending, he was required to the best of his ability to provide that when he was so precluded from personal attendance some other doctor would give attendance as his deputy on his behalf.

Panels Closed.

In reply to Mr. Godfrey Locker-Lampson, Mr. Masterman, on February 6th, said that the Shropshire Insurance Committee had made special arrangements—which were generally similar in character to those adopted in the Wisbech and Charteris districts in the Isle of Ely—in one district, that of Bridgnorth, in which there was not a sufficient number of doctors available for the panel system, and another district was now under consideration by an insurance committee.

"Contracting Out."

On February 6th Mr. Godfrey Locker-Lampson asked whether any Insurance Committees under the National Insurance Act had refused to send Form Medical 21 to insured persons who had applied for it, and, if so, which? Sir William Bull also asked whether the Form Medical 21, issued by the Insurance Commissioners, had been withdrawn; if so, upon what ground they had withdrawn it; and, if not, where compulsorily insured persons could obtain copies of this form on applying for it.—Mr. Masterman said he was informed that some Insurance Committees had not issued Form Medical 21, pending the publication of an alternative form dealing more fully with the conditions under which applications for permission to make their own arrangements under the provisions of Section 15 (3) of the Act would be entertained.

Sir John Randles asked the Secretary to the Treasury, on February 11th, whether he could take any steps to make it quite clear, in accordance with Section 15 (3) of the National Insurance Act, that it was intended that

committees should allow the sum for medical services, so that any insured person might freely select his own doctor and use such sum as the committee would have expended in payment of medical services towards the payment of his own doctor in the usual way.—Mr. Masterman said that the Commissioners proposed to issue to Insurance Committees a memorandum dealing with the question of application under Section 15 (3) of the National Insurance Act.

Mr. G. Locker-Lampson asked, on February 11th, whether the Insurance Committees in the county of Middlesex, the Isle of Ely, and Sheffield had refused free choice of doctor outside the panels unless exceptional circumstances were proved; and whether any definition of exceptional circumstances had been laid down by them.—Mr. Masterman said he was not aware that the three Insurance Committees mentioned had acted differently from other committees. The Act only contemplated permission being given to an insured person to make his own arrangements in exceptional circumstances. It was for the committee to decide upon each application whether the circumstances of the case were or were not exceptional. It was left by the Act to the discretion of the committee to permit or not to permit any case of what was ordinarily called "making their own arrangements." Every insured person had the right to choose his own doctor among all the doctors willing to serve him and willing to serve under the Insurance Act.

Mr. Godfrey Locker-Lampson asked, on February 6th, whether any Insurance Committees under the National Insurance Act had refused to allow insured persons to make their own arrangements for receiving medical attendance and treatment?—Mr. Masterman said he was not aware of any general refusal of any Insurance Committee to grant permission to insured persons to make their own arrangements when the panel system was working, though he believed some Committees had suspended the granting of such permission until they were satisfied that a panel system sufficient to provide adequate attendance for all insured persons was assured.

Mr. Newman asked, on February 6th, the Secretary to the Treasury whether his attention had been drawn to a recommendation of the General Purposes Subcommittee of the Middlesex Insurance Committee, that under no circumstances should an insured person be allowed to make arrangements with a medical practitioner who had withdrawn from a local panel, and that only under exceptional circumstances should insured persons be allowed to make their own arrangements, each case to be dealt with on its merits; and whether he would explain why this Insurance Committee proposed thus to penalize a medical practitioner on the ground that he had reconsidered a decision to serve on a local panel.—Mr. Masterman said he understood that the Middlesex Insurance Committee recognized that it was impossible to allow doctors who had made contracts for a definite period and had not been released, to break these contracts and yet undertake the attendance of insured persons within the same period upon different terms.

The Selection of Doctors.

Mr. G. Locker-Lampson asked on February 5th whether the Prudential Assurance Approved Society was advising its members not to select a doctor on the panel until they actually fell sick; and to what fund the money would be put which was thus saved in medical capitation fees.—Mr. Masterman said that he was informed by the society referred to that there was no foundation for the suggestion in the first part of the question. On the contrary, in a circular letter the society had instructed all their agents to urge upon every member entitled to medical benefit the imperative need for promptly selecting the doctor they desired should attend them in case of illness.

Works Doctors.

Mr. Pointer asked the Secretary to the Treasury, on February 5th, if he was aware that many employers were approaching the Insurance Committees with a view to obtaining the right to themselves to provide the medical man for their employes, and in return were demanding from the Insurance Committees the money which had been allocated to the committees by the societies for the medical treatment of their members; and whether that

action would, in the best interests of the men, be sanctioned, seeing that the doctor would then be virtually in the employ of the employer.—Mr. Masterman said that it would be contrary to the spirit and intention of the National Insurance Act and the Regulations for an Insurance Committee to allow insured persons to make their own arrangements for medical attendance and treatment and to contribute towards the cost thereof in circumstances such as those referred to. He asked to be informed of any cases of the kind.

Isle of Ely Insurance Committee.

Mr. Masterman informed Major Hope on February 5th that the four doctors engaged by the Isle of Ely Insurance Committee to give medical treatment to insured persons in the district of Chatteris and Wisbech were also permitted to take private practice. He added, in reply to Mr. Worthington-Evans, that members of friendly societies who were not insured persons were entitled to receive medical attendance and treatment from the doctors who were working under the Act, and they had the option of selecting those doctors for treatment on the same terms as to remuneration as insured persons.

West Riding Insurance Committee.

Mr. Lane-Fox asked the Secretary to the Treasury, on February 11th, whether the regulations of the West Riding Insurance Committee, by which a doctor doing his own dispensing in a rural area had to make out in triplicate all prescriptions, and had to work out from the official tariff the exact cost of all items in them without any payment for the labour involved, had his sanction; whether the official tariff gave prices for drugs, dressings, etc., which were considerably below the prices at which doctors could obtain them, though they might be those at which they were supplied to large wholesale chemists; and why no answer to these simple questions, beyond a printed acknowledgement, had yet been received by the doctors in the Wetherby district, though the questions were addressed to the Chancellor of the Exchequer on January 15th.—Mr. Masterman said that the letters received from the doctors referred to raised questions of a somewhat complex character, depending not only upon the regulations, but also upon the policy of the West Riding Insurance Committee. The Commissioners were communicating with the Insurance Committee, and a full reply would be sent to the doctors as soon as possible.

Surgical Appliances.

In reply to the Marquess of Tullibardine, on February 5th, Mr. Masterman said that the splints prescribed in the list of appliances were not restricted to arm splints, and the bandages were not restricted as to length. He was advised that the surgical dressings included in the list were adequate for the treatment of the surgical cases which fell within the scope of medical benefit. All splints and apparatus could be got which would be required for surgical cases which fell within the scope of medical benefit.

In reply to a further question by the Marquess of Tullibardine, on February 10th, Mr. Masterman said that the second schedule to the medical benefit regulations issued by the Insurance Commission had provided that any kind of splints and of cotton and wood wools properly required as part of medical benefit could be claimed.

Mr. Masterman stated in reply to a subsequent question that he was not aware that a certain committee had ruled that if medicated wool was required the patient would have to pay for it, and offered to inquire into any such case brought to his knowledge.

In replying to Mr. Newdegate, on February 11th, Mr. Masterman said that the prescribed list of appliances was subject to such revision as might be found advisable when more experience had been gained after working of the Act. The suggestion that kidney belts or appliances for the relief of cases which were a source of trouble without that assistance should be included would receive due consideration.

Drugs and Dressings.

In reply to the Marquess of Tullibardine, on February 10th, who asked what steps would be taken to ensure that the quality of drugs and dressings supplied under the Insurance Act would be good, and whether an inferior quality was known as "insurance quality," Mr.

Masterman stated that the agreements with the chemists stipulated explicitly that all drugs and appliances should be of good quality.

Homoeopathy.

Mr. Masterman informed Mr. Keir Hardie on February 10th that if an insured person were unable to obtain from a chemist on the panel the drugs prescribed as part of medical benefit by a homoeopathic doctor on the panel, the Insurance Committee of the area had power under Section 30 of the Medical Benefit Regulations to make special arrangements for the doctor himself to supply the drugs to the patient.

Mr. Masterman, in replying to Sir J. D. Rees on February 11th, said that duly qualified medical practitioners alone had the right to be included in a panel list. It was, however, open to persons who belonged to an unorthodox school of medicine to apply to their Insurance Committee for permission to make their own arrangements for medical attendance and treatment, and if such permission was given the committee would make a contribution towards the cost of the treatment.

Change of Residence.

Mr. Masterman informed Mr. G. Loeker-Lampson on February 5th that if an insured person moved from the area of one Insurance Committee to that of another he could, by giving notice to the second Committee, obtain medical attendance and also such certificates as were required to be furnished in connexion with any claim for sickness benefit from a doctor on the panel in the second area. He promised to give publicity to that statement, but could not undertake to issue it to every insured person.

Domestic Servants.

Mr. Masterman, in reply to Mr. MacCallum Scott, on February 11th, said that in the case of a domestic servant who had selected a doctor on the panel for the district in which she was employed but who, in the event of serious illness, would have to return to her home in another district, notice should be given on the servant's return to her home to the Insurance Committee of the area in which it was situated, and it would then be the duty of the Insurance Committee to make arrangements as soon as practicable for her medical attendance and treatment there.

Local Medical Committees.

In reply to Mr. Hills, Mr. Masterman said, on February 6th, that seventy-one Local Medical Committees had been recognized by the Insurance Commissioners in accordance with Section 62 of the National Insurance Act. The Commissioners required to be satisfied that the Local Medical Committee before it was recognized was fully representative of the medical practitioners in the area.

Pathological and Bacteriological Investigations.

In reply to Mr. Godfrey Loeker-Lampson, who asked on February 6th whether medical benefit under the National Insurance Act included modern methods of exact diagnosis such as pathological and bacteriological investigations, Mr. Masterman said that pathological or bacteriological investigations of an expert character were not services demanded of a doctor working under the Act, who was only required to give such treatment as was of a kind which could consistently with the best interests of the patient be properly undertaken by a general practitioner of ordinary professional competence and skill; although, of course, such a practitioner would utilize any facilities placed at his disposal (without expense to himself) for obtaining expert assistance.

Admiralty Works at Crombie and Medical Benefit.

The Secretary to the Treasury on February 10th informed Mr. John Ward that no complaint had been received by the Scottish Insurance Commissioners as to the administration of the medical benefit of the men employed at the Admiralty works, Crombie, Fife, but added that inquiries would be made.

Highlands and Islands.

Mr. Masterman informed the Marquess of Tullibardine on February 10th that the population of the island of Harris was 5,449; the insured population was estimated to be between 100 and 150, for whom two panel doctors were available, one being resident at Obbe and the other on

Berneray Island. A population of 100 could not support a doctor, nor had they ever had a doctor resident in the island. What had happened was that the doctors who had been attending the people up till now had gone on the panel. As to the island of Canna, it contained 29 inhabitants, of whom probably less than 10 would be insured persons. It would, of course, be impossible to provide a special doctor resident in the island for that number of persons. The men on the island would have the same right to a doctor and the same possibility of a doctor as they had ever had, with the additional advantage that they would now have money to pay for a doctor, which some of them did not have before. The whole question of the special circumstances of the Highlands and Islands was under consideration.

SANATORIUM BENEFIT.

Provision of Sanatoriums.

Mr. Burns, in replying to Mr. Chiozza Money, said that plans had been approved for the erection of new buildings or the extension of existing buildings in England in twelve cases, and in about twenty other cases plans were under consideration.

Delay in Providing Benefit.

Mr. Harry Lawson asked, on February 6th, whether arrangements would be made to prevent consumption patients in the East End of London from being kept nearly eight weeks before any decision was given as to whether they could obtain sanatorium benefit, seeing that under the present circumstances more harm than good was in many cases done by preventing alternative treatment?—Mr. Masterman said he was not aware of any such delay before decision as was suggested, although some patients had been kept waiting a short period while the accommodation for them was being completed. Patients who remained at home until accommodation was ready in sanatoriums, so far from being prevented from receiving alternative treatment, were provided with it; medical attendance, medicines and articles ancillary to their treatment, such as extra food, all being supplied to them at the expense of the insurance funds. He was informed that the Downes School at Carshalton, which was being equipped as a sanatorium for over 300 cases, would commence receiving patients from the London Insurance Committee in a few days' time, and so relieve any waiting list at present existing.

Travelling Expenses for Examination.

Mr. Masterman informed Mr. Newton, on February 5th, that the payment of travelling expenses incurred by an insured person ordered to attend a town some miles distant for the purpose of being medically examined in connexion with a claim for medical benefit might properly be treated as expenses incurred for the purpose of administering sanatorium benefit, and might, if the circumstances of the applicant warranted it, be defrayed by the Insurance Committee. With regard to the question of the examination of insured persons claiming sanatorium benefit by a local doctor, it rested with the Insurance Committee to decide what arrangements should be made to ascertain whether applicants were in fact suffering from tuberculosis.

MATERNITY BENEFIT.

Mr. O'Shea asked the Secretary to the Treasury, on February 5th, whether, in Ireland, in the case of a woman whose husband was an insured person, and who, in her confinement, was legally entitled to the attendance of the dispensary doctor or dispensary midwife under the provisions of the Medical Charities Acts, there was any liability, under Section 18 of the National Insurance Act, to deduction from the maternity benefit of any payment for such doctor or midwife: and, if not, whether the entire sum of 30s. will be payable without deduction.—Mr. Masterman said that if the wife of an insured person had received attendance on confinement from a dispensary doctor or midwife free of charge under the provisions of the Medical Charities Acts, the maternity benefit in respect of her husband's insurance under the National Insurance Act would be payable, under the ordinary conditions, without deduction.

Mr. O'Grady asked the Secretary to the Treasury whether the widow of a man deceased, who had paid the first quarter's insurance premium fully, was entitled to maternity benefit for the birth of a posthumous child.—Mr. Masterman replied that maternity benefit in respect

of the husband's insurance was not payable unless and until the husband had been insured twenty-six weeks and twenty-six contributions had been paid by or in respect of him. In the case mentioned, if the widow were herself an employed contributor she would be entitled to sickness benefit on the usual conditions in respect of the incapacity caused by the confinement.

NURSES' INSURANCE SOCIETY.

In reply to Mr. Astor, Mr. Masterman said that the Nurses' Insurance Society had submitted a scheme to the Insurance Commission whereby nurses would be given the option of receiving, in lieu of the sickness benefit provided under the National Insurance Act, a largely increased sickness benefit commencing at the end of the first six weeks of illness. The Commissioners had been unable to accept the scheme in the form in which it was submitted, but forwarded a suggested alternative to the society, and were now in communication with it as to the form of substituted benefits which would best meet the needs of the particular class of insured persons in this society.

SICKNESS BENEFIT IN IRELAND.

Mr. Masterman, in reply to Mr. O'Donnell, on February 11th, said he was informed by the Irish Commission that a certain amount of difficulty had arisen in Ireland in connexion with sickness certificates. A sum of £50,000 was being taken in the Supplementary Estimate, which would be to a large extent available for defraying the reasonable cost of such certificates. Societies, however, could adopt alternative methods of obtaining evidence of illness if excessive fees were charged for medical certificates; and the Irish Commissioners had issued to all societies and branches transacting business under the National Insurance Act in Ireland a circular pointing out that societies might, if they thought fit, obtain evidence of illness by the adoption of a system of lay visitors, by the inspection of medical relief registers, or by the acceptance of a written statement from a clergyman, magistrate, or other responsible person who could testify to the claimant's incapacity for work.

REPORTS OF LOCAL ACTION.

LONDON.

FORMATION OF DISTRICT INSURANCE COMMITTEES IN LONDON.

In accordance with Section 59 (4) of the National Insurance Act, the Insurance Committee has prepared a scheme for the formation of District Insurance Committees for each of the metropolitan boroughs. The District Committees are to consist of not less than 25 nor more than 40 members, the representation of interested bodies to be in the proportions specified in a schedule, and increased proportionately in the case of Committees of over 25 members. Each Committee is to have not less than 3 women members. The schedule provides for the constitution of District Committees as follows: Borough Council, 5 representatives, of whom one shall be a medical practitioner, and one the medical officer of health if willing to serve, and subject to the consent of the local authority; friendly societies, 4 representatives; collecting societies, 4; trade unions, 3; dividing societies, 2; the Local Medical Committee recognized by the Insurance Commissioners, 1 representative; a committee representative of chemists in the area, 1 representative.

COUNTY OF CHESHIRE.

Provisional Local Medical Committee.

The sixth meeting of this Committee, being an adjourned meeting from February 3rd, was held, on February 6th, at the Onward Buildings, Deansgate, Manchester, Dr. GARSTANG being in the chair, and fifteen members present.

Letters sent by the Secretary to the Insurance Committee and the Commissioners protesting against the proposal by the Medical Benefit Subcommittee of the County Insurance Committee to pay for dispensing by doctors in rural areas per item, and not by capitation, were approved.

The former, which also dealt with the question of the remuneration for attendance on aged and infirm club members, was ordered to be printed and circulated to the profession of the county. The view expressed was that the Act itself, Sec. 15 (2) (e), lays down the terms.

Treatment of Uninsured.

Dr. HODGSON informed the meeting that the friendly societies in Crewe were dissatisfied with the offer of the local profession to accept patients at the same rates as paid in respect of the insured, and stated that they were advertising for doctors at lower rates. He added that a warning notice had been sent to the JOURNAL in this connexion. It was proposed by Dr. H. COOPER and seconded by Dr. MARSH that this warning notice should apply to the whole county.

The Committee ventilated the subject of attendance on the uninsured, but registered no new decision. Dr. THOMAS WATTS informed the meeting that the practitioners in Hyde had declined to attend uninsured persons on a contract basis, and had raised their visiting fees. A visit without medicine was still 2s. 6d., but the fee for a visit with medicine had been raised from 3s. 6d. to 4s. 6d. Consultations were to be 2s. 6d., with or without medicine; visits between 8 p.m. and 10 p.m., 3s. 6d., without medicine, and between 10 p.m. and 8 a.m., 5s. Operations and fractures as in Poor Law scale. Mileage was not a question with them, but he suggested the scale paid under the Factory Acts—6d. extra for each half-mile beyond one mile. Dr. HUGHES pointed out that, in accordance with a resolution of this Committee and of the Representative Meeting of the British Medical Association November meeting, which was quoted, the Macclesfield practitioners had decided to make no change until after March 25th. Dr. MARSH laid stress on the importance of having a tariff generally fixed and agreed. He thought the terms mentioned by Dr. Watts too high for Macclesfield, and suggested 3s. 6d. with medicine as an appropriate charge per visit. The general feeling of the meeting, which accorded with the views expressed by Dr. Marsh, was that the scale should be based on 2s. 6d. a visit, and that other items should be on a proportionate scale, on the general lines already laid down by the British Medical Association, but to be finally decided locally.

Model Rules.

The Committee resolved:

That the hours during which a patient should not summon a practitioner except in serious emergency should be between 8 p.m. and 8 a.m.

That they should press for the hour in the morning by which messages should be delivered at the surgery requesting a practitioner to visit patients during the course of the day should be fixed as the termination of the morning surgery hour, whatever that might be. This system would be much more elastic than an uniform hour of 10 a.m. as proposed by the Insurance Committee.

The seventh meeting of the Committee was held on February 10th at the Onward Buildings, Deansgate, Manchester, Dr. GARSTANG in the chair, and twelve members being present. A letter from Dr. Barclay, of Macclesfield, was read announcing that, in accordance with the policy of the British Medical Association, he had declined after March 25th next to attend the members of a club on contract terms, unless as part of a general service open to all the doctors who care to join. He asked if it would be possible for the County Medical Committee to suggest such a service to the committee of the club before it took any definite or irremediable steps. The Secretary was instructed to write to the club pointing out that a solution of the present difficulty would be reached by the formation of a Public Medical Service with free choice of doctor, and to send a copy of the letter with a suitable covering letter to the other societies in the town and to their medical officers.

Representations were received by the Committee that the practitioners of the Eddisbury district of the western portion of the Chester and Crewe Division had not had an opportunity of voting at a Divisional meeting for the appointment of the six representatives on this Committee to which that Division is entitled. These representations emanated from the Commission and from a leading practitioner in West Cheshire. The Secretary was instructed to communicate with the Secretary of the Chester and Crewe

Division, asking him to summon a meeting to carry out the election with all convenient speed.

An announcement was received from the practitioners of the Runcorn rural area that they had withdrawn their offer to continue to attend the aged and infirm members of friendly societies on the old terms, as that offer had been made without appreciation of the fact that the Act itself (Section 15 (2) (c)) provides for their treatment on the same terms as the insured.

Simplification of Records.

Dr. Picton was instructed to attend the interview with the Insurance Commissioners *re* simplification of records.

The Committee discussed many detailed suggestions for facilitating keeping the required records.

Local Panel Lists.

It was agreed that there should be complete freedom of individual choice as to what local lists the names of practitioners should appear upon.

Allocation of Patients who have made no Choice of Doctor.

The Secretary was instructed to remind the Clerk to the Insurance Committee that an understanding had been arrived at that this should be done "in agreement with the Local Medical Committee."

CONTRACT ATTENDANCE ON UNINSURED PERSONS.

In the report of the Representative Meeting of January it should have been stated that the following motion by the Stockport, Macclesfield, and East Cheshire Division with regard to contract attendance on uninsured persons was referred to the Council for consideration:

That where medical attendance on insured terms is desired for the families of insured persons it should be based on the following principles:

1. Free choice of doctor from the *Medical Register* subject to the doctor's consent.
2. Payment for work done on a standard tariff. No insurance risk to be borne by the profession.
3. It should be to the patient's financial interest not to receive over-attendance.
4. There should be provision for the higher and special forms of medical work, and general practitioners should assist therein for payment.
5. The dependants of the insured should be included in medical benefit for an extra payment in proportion to the income of the insured, and irrespective of the number of the dependants, but the payment to the doctors for their treatment should be on the same standard tariff as applies to the insured persons.

COUNTY OF STAFFORD.

The County of Stafford Local Medical Committee has been recognized by the Insurance Commissioners and the Joint Committee in accordance with Section 62 of the Insurance Act. The Committee consists of thirty-one members chosen by meetings held in each administrative insurance district of the county; such meetings also constituted Provisional District Medical Committees, which will apply for recognition when the scheme for constituting District Insurance Committees is promulgated. The committee is made up as follows:

| INSURANCE DISTRICT. | REPRESENTATIVES. |
|---------------------|-------------------------------------|
| Bilston... | T. Ridley Bailey (Chairman) |
| Brierley Hill ... | Dr. Taylor, Dr. Plant |
| Brownhills ... | Dr. Wolverson |
| Cannock ... | Dr. Batter, Dr. Nock |
| Cheadle ... | Dr. Mitchell Smith |
| Coseley ... | Dr. Johnson, Dr. Clendinnen |
| Leek ... | Dr. Somerville |
| Lichfield ... | Dr. T. D. S. Shaw, Dr. R. Freer |
| Newcastle ... | Dr. Sowry, Dr. Webster |
| Rowley Regis ... | Dr. Mitchell, Dr. McQueen |
| Seisdon ... | Dr. Burd |
| Smallthorne ... | Dr. Steele, Dr. Leys |
| Stafford ... | Dr. Cookson, Dr. Hodder (Hon. Sec.) |
| Stone ... | Dr. Dixon |
| Tamworth ... | Dr. Lawson |
| Tipton ... | Dr. Mason, Dr. Brown |
| Uttoxeter ... | Dr. Fletcher |
| Wednesbury ... | Dr. Magrane, Dr. Morris |
| Willenhall ... | Dr. Scott, Dr. Stockwell |
| Wolstanton ... | Dr. Daly |

The Committee is prepared to assist the County Insurance Committee in all matters relating to medical benefit as laid down by Section 62 of the Act.

BOLTON.

A meeting of the Local Medical Committee was held on February 4th at the Infirmary, Dr. FLITCROFT in the chair, and there was an attendance of eighteen.

Local Insurance Committee.

On the motion of Dr. ROLLAND the following eight members of the profession were selected from which two could be appointed by the local profession: Drs. Mothersole, Mallett, Thornley, Flitcroft, Johnstone, Swainson, Beesley, and Rolland.

Medical Service Subcommittee.

The following were selected to act on the Medical Service Subcommittee: Drs. Wright, Macfie, and Mallett.

Administrative Details.

The following resolutions were also adopted:

That in respect of insured persons and after the provisional period has elapsed the medical profession of the County Borough of Bolton hold no formal consultations on Wednesday night except by appointment.

That any mixture prescribed for a patient be not repeated except by rewriting in detail.

That the Committee urge upon the profession the importance of placing upon the day-book every item of work done.

A Subcommittee consisting of Drs. Robinson, Thornley, Roes, and O'Neill was appointed to suggest to the Commissioners an improved form of day-book.

Canvassing.

Dr. THORNLEY stated that he had reason to believe that canvassing for insurance medical tickets had been active in certain quarters of the town and that if direct evidence of such could be obtained prompt measures for its repression should be taken.

SCOTLAND.

EDINBURGH.

The Medical Guild.

THE Medical Guild, to the action of which in drawing the attention of insured persons to the fact, among others, that sickness and maternity benefit would be granted on the certificate of any medical practitioner, was formed at a meeting held in the house of the Royal College of Physicians of Edinburgh on January 7th. The constitution and rules adopted are as follows:

I. The aim of this guild is to bring together for conference and for mutual support and encouragement the members of the medical profession who approve of and accept the policy of the guild; and to take whatever further steps may be determined on to use them more closely into one body.

II. The policy of the guild is:

1. To maintain the freedom of the profession in its professional and personal relations with the public.
2. To encourage the public to maintain a corresponding freedom.
3. To oppose the method of administration of the medical benefits under the National Insurance Act in so far as it interferes with the complete freedom of relationship between patient and doctor.
4. To accept as members only those who are not engaged in "contract practice" on a capitation basis.

Any doubt regarding 4 to be referred to the committee. Any alteration in the constitution only to take place at a special meeting called for the purpose; one month's notice of such meeting to be given.

The Secretary, Dr. Frederick Porter (65, Morningside Road, Edinburgh), informs us that an explanatory note of the fundamental principles of the constitution will shortly be published. A levy of 2s. is at present being made for initial expenses.

Medical Benefit Subcommittee.

The Medical Benefit Subcommittee of the Edinburgh Borough Insurance Committee had a meeting, presided over by Councillor ROBERTSON, on February 6th, in the City Chambers. The subject under consideration was the position of insured persons who have made application to be allowed to make their own arrangements in regard to medical benefit. The Local Medical Committee, recently elected, was represented by Mr. C. W. Cathcart (its president) and others; they also had considered the matter and their views were stated; and thereafter the subcommittee met in private and came to some important conclusions.

Dr. Gay's proofs are merely surrenders in answer to the action of the British Medical Association and the union of the profession. Dr. Gay also overlooks the fact that there are other areas besides London still holding out—such as Gillingham, Isle of Ely, etc.

It is evidently a case of fancies *versus* facts, and Dr. Gay has allowed his feelings to run away with him, and so to neglect the important duty of collecting the facts on which to build his theory. In contradistinction to this, the London Medical Committee is carrying out a personal appeal to all London practitioners, including all on the panel, with a view to a most careful collection of all the evidence and its implications. If the evidence points to the fact that those on the panels like the work and mean to go on with it, the Committee will take no further steps on their behalf. On the contrary, however, some evidence of dissatisfaction and decision to give up in April has been obtained from those already on the panel, through the pressure of the causes mentioned in the minutes quoted above.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

Dr. H. CAMERON KIDD (Bromsgrove) writes: Your article on this subject (February 8th, p. 295) fails, I think, to make clear where the responsibility for the present difficulty lies. You very fairly excuse Mr. Lloyd George, but fix it upon the friendly society which, you say, "has received for many years the contributions of the unfortunate member and now . . . calmly informs him that he must shift for himself," but the fact of the matter is, as the letter which you quote from a club secretary clearly shows, that it is the doctor, and not the friendly society, who has for years been taking the annual contribution of the present old member, the doctor's fee having always been an extra, simply passed through the hands of the club secretary, for medical attendance, apart from all the other benefits offered by the society.

Most of these old members are men who originally founded their local branch of friendly society, and at a time—forty to fifty years ago—when thrift was not so common, set the best of examples to their fellows, and for from forty to forty-five years they have been paying, *separately from their ordinary lodge contribution*, 4s. or 5s. a year to the doctor with a view to having medical attendance in their old age when their healthy working years were passed. One of these members came in to me last night. He has been paying me for twenty-five years, and my predecessor in this practice for twenty years before that, 4s. per annum regularly, during all which time he has drawn two weeks' sick pay (in the second year of his membership) and he is one of the original members of his lodge. He is not an isolated example by any means, for there are many such as he.

Now, is it fair that these men, who have been paying me all these years a sum which I and my predecessor accepted, should now in their old age be asked to double their contribution because the Insurance Act has been introduced and has fixed 8s. 6d. as the annual premium payable by mixed lives of all sorts? In this town, at any rate, we all feel that it is not fair, and at a meeting with the local friendly societies we have agreed to take 5s. 6d. per annum from all these old members, which I think is a fair amount. The men themselves acknowledged that they did not think 4s. per annum was a sufficient premium for what they received in return; but whose fault can we say it is that this sum was cheerfully accepted by us medical men in the past?

We did accept it, and it has been paid for forty years to us—not to the friendly societies—with the definite object of providing for medical attendance in old age, and to ask for it to be doubled, and more than doubled, during the few years that remain to these old members, because of the introduction of the Insurance Act is, in my opinion, not a defensible proceeding.

CONTRACTING OUT.

Dr. W. COODE ADAMS (Hampstead) writes: May I crave a few lines in answer to those gentlemen who have done me the honour to take notice of my letter? Dr. Densham refers to my "opinions" "which cannot be ignored." But later on he calls these opinions "statements," and lastly, "inaccurate statements." Now, an opinion may be

erroneous, but I cannot see how an opinion, however erroneous, can be termed an "inaccurate statement."

He there says that after contracting out "the Insurance Committee would still have full control of the pooled medical benefits." Is this true? The committees are given no powers of arranging how much medical service is to be rendered in exchange for these pooled benefits. This is not full control. If a man is obliged to spend a sovereign, but has no right to see that he gets his money's worth in exchange, he cannot be said to have full control over the sovereign.

Again, he writes "medical men on the panel would not leave it to accept a lower rate" (from the friendly societies). Why not? If an increase on the aggregate sum were offered a lower rate might conceivably be preferable. Besides, other conditions might be added, such as examination on admission, etc.

His third objection is to my opinion that the panel system would break down. I still adhere to this opinion. If the number of the insured on the panel doctors' lists is seriously reduced by contracting out, the remuneration for the panel doctor will be proportionately diminished, and no one would care to be on it. The two systems are, in my opinion, incompatible. This is the hopeless part of the position. The Association fought hard to gain the panel system, and is now striving to abolish it.

Dr. Basket objects to the term "public money" as applied to the insurance premiums, and cavils at the word "tax." But facts are facts, nevertheless. He also expresses the opinion that "the insuring person has an indefensible right to his benefit without conditions." I do not know where he gets this from, and I do not think he can instance any practice among insurance companies in support of this view. Under contracting out the insured does not receive medical benefit, but only a sum of money, which may or may not be equivalent to medical benefit. This is the "sole difference."

I do not share his opinion that supervision will be disastrous to the medical profession. The General Medical Council already exercises supervision, and there is a more defined supervision in the services, but no disaster has been experienced.

As regards the voluntary principle, it is well known that the *raison d'être* for the Act was that the voluntary principle had been tried and had failed.

CENTRAL MIDWIVES BOARD.

A SPECIAL meeting of the Central Midwives Board was held on December 21st, 1912, at Caxton House, Westminster, with Sir FRANCIS H. CHAMPNEYS in the chair.

Midwives Struck Off the Roll.

The Board considered the following charges amongst others against the midwives whose names are given below, and ordered them to be struck off the roll:

Sarah Camps, that being in attendance as a midwife at a confinement, the patient suffering from rigors with raised temperature, she did not explain that the case was one in which the attendance of a registered medical practitioner was required, nor did she hand to the husband or the nearest relative or friend present the form of sending for medical help, properly filled up and signed by her, in order that this might be immediately forwarded to the medical practitioner, as required by Rule E 20 (4).

Hannah Hope, that she was not scrupulously clean in her person and house, as required by Rule E 1, that she did not possess the appliances and antiseptics required by Rule E 2, that she did not when in attendance at the confinements of her patients adopt the antiseptic precautions prescribed by Rules E 3 and 7, and that she was unable to make use of a clinical thermometer or to take the pulse of her patients, as required by Rule E 13.

Mary Ellen Jones, that being in attendance as a midwife at a confinement the patient being seriously ill, and having collapsed after the confinement, she did not explain that the case was one in which the attendance of a registered medical practitioner was required, nor did she hand to the husband or the nearest relative or friend present the form of sending for medical help, properly filled up and signed by her, in order that this might be immediately forwarded to the medical practitioner, as required by Rule E 19, and that she did not keep a register of cases as required by Rule E 23.

Mary Sutton, that she did not possess the whole of the appliances required by the rules and that she was ignorant of the use of antiseptics.

Sarah Ann Tunstall, that, being in attendance as a midwife at a confinement, the patient suffering from rigors with raised temperature, she did not explain that the case was one in which

the attendance of a registered medical practitioner was required, nor did she hand to the husband or the nearest relative or friend present the form of sending for medical help, properly filled up and signed by her, in order that this might be immediately forwarded to the medical practitioner, as required by Rule E 20 (4), and a registered medical practitioner having been sent for, she failed to notify the fact to the local supervising authority, as required by Rule E 21 (1).

Marion Eristow, that being in attendance as a midwife at a confinement, she did not on any occasion take the patient's pulse or temperature, contrary to Rule E 13.

Maria Cleverly, that she did not possess the antiseptics required by the rules, that she was unable to make use of a clinical thermometer, and consequently could not take the temperature of her patients, as required by Rule E 13, and that she did not keep a register of cases, as required by Rule E 23.

Eliza Mercer, that being in attendance as a midwife at a confinement, a registered medical practitioner having been sent for, she failed to notify the local supervising authority thereof, as required by Rule E 21 (1), and she made use of flannel for bathing the patient contrary to Rule E 7.

Annie Payne, that being in attendance as a midwife at a confinement she visited the patient on three days only during the lying-in period, she did not adopt the antiseptic precautions required by Rules E 3 and 7, she bathed the patient with water in which the baby had been washed, and she did not at any time take the patient's pulse or temperature, as required by Rule E 13.

Margaret Pemberton, that she did not possess the appliances and antiseptics required by Rule E 2, that she did not possess a register of cases as required by Rule E 23, and that she did not wear a clean washable dress and apron, as required by Rule E 1.

Elizabeth Soden, that being in attendance as a midwife at a confinement, the baby suffering from inflammation of the eyes, she did not explain that the case was one in which the attendance of a registered medical practitioner was required, nor did she hand to the husband or the nearest relative or friend present the form of sending for medical help, properly filled up and signed by her, in order that this might be immediately forwarded to the medical practitioner, as required by Rule E 20 (5).

Ellen Strickland, that being in attendance as a midwife at a confinement, she neglected to take the pulse and temperature of the patient as required by Rule E 13, she did not attend to the comfort and cleanliness of the patient, as required by Rule E 11, and she made false entries as to the temperature of the patient in her register of cases.

Alice Swain, that being in attendance as a midwife at a confinement, the child suffering from a malformation or deformity, she did not hand to the husband or the nearest relative or friend present the form of sending for medical help, properly filled up and signed by her, in order that this might be immediately forwarded to the medical practitioner, as required by Rule E 20 (5).

Midwives Censured.

The following midwives were censured after charges against them had been considered: *Emma Lange* and *Lily Jane Reynolds*.

Midwives Cautioned.

Jane Cox and *Sarah Ellen Gamble* were cautioned after charges against them had been considered.

A meeting of the Central Midwives Board was held at Caxton House, Westminster, on January 16th, with Sir FRANCIS H. CHAMPNEYS in the chair.

Lectures for Pupils Entering for Examination of Central Midwives Board.

A letter was considered from the matron of the Maternity Nursing Association, Myddelton Square, E.C., stating that the Executive Committee of the association was prepared to accommodate not more than eight outside pupils at the lectures held for candidates entering for the examination of the Central Midwives Board on certain conditions.

A letter was also considered from the secretary of the Royal Maternity Charity of London, suggesting that the Board might utilize the existing training school of the charity in connexion with the proposal that all lectures for pupils in London entering for the examination of the Central Midwives Board should be held at one of the training institutions.

The Board directed that the secretary of the Royal Maternity Charity be thanked for his letter, and that it be considered when the list of lecturers is revised.

Pulmonary Tuberculosis.

A letter was considered from Dr. W. J. Howarth, county medical officer for Kent, asking the Board's opinion as to whether pulmonary tuberculosis should not now be regarded as an infectious disease, and consequently within the prohibition contained in Rule E 17 (b) as to laying out the dead. The Board directed that Dr. Howarth

be informed that the answer to the question will be found in Rule E 17 (b), which is as follows:

No midwife shall (except under the circumstances hereinafter mentioned) undertake the duty of laying out the dead. In no case must a midwife lay out the body of any patient on whom she has not been in attendance at the time of death, or a body upon which a *post-mortem* examination has been made. A midwife will not transgress this rule if (a) she prepares for burial the body of a lying-in woman, a stillborn child, or an infant dying within ten days; or if (b) she lays out a dead body in a case of non-infectious illness, provided that she is not prohibited from doing so by any general rule of the local supervising authority, and is not attending a midwifery case at the time. After laying out a dead body for burial she must notify the local supervising authority, and undergo adequate cleansing and disinfection in accordance with Rule 5.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following notices of appointment and retirement have been announced at the Admiralty: Fleet Surgeon H. SPICER, M.B., to the *Cornwallis*, vice Bell, February 4th, 1913. Fleet Surgeon JOHN W. CRAIG, M.B., to the *Agamemnon* on recommissioning, February 19th, 1913. Fleet Surgeon A. G. S. BELL has been placed on the retired list at his own request, February 1st, 1913. Staff Surgeon S. ROACH to the *Devonshire* on completing, vice McKenna, February 12th, 1913. Staff Surgeon N. B. V. JACOB to the *Roxburgh* on completing, February 12th, 1913. Staff Surgeon ANCHIBALD D. SPALDING to the *Agamemnon* on recommissioning, February 19th, 1913. Staff Surgeon EDWARD C. SAWDY to the *Hawke* on recommissioning, February 4th, 1913. Surgeon LEONARD WARREN, M.B., to the *Halycon* additional for the *Teddy* on recommissioning, February 26th, 1913. Surgeon G. A. S. HAMILTON to the *Devonshire* on completing, February 12th, 1913. Surgeon HARRY M. LANGDALE to the *Devonshire* on completing, February 12th, 1913.

ARMY MEDICAL SERVICE.

COLONEL ROBERT J. S. SIMPSON, C.M.G., M.B., has retired on retired pay, February 5th, 1913.

Lieutenant-Colonel ROBERT J. GEDDES, D.S.O., M.B., to be Colonel, vice R. J. S. Simpson, February 5th, 1913.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL H. P. G. ELKINGTON has been ordered to Shorncliffe for duty.

Lieutenant-Colonel A. R. ALDRIDGE has been posted to the Eastern Command at Woolwich.

Major DANIEL D. SHANAHAN, to be Lieutenant-Colonel, vice R. J. Geddes, February 5th, 1913.

Major HENRY A. BERRYMAN, retires on retired pay, February 5th, 1913.

Major S. G. BULLEN has been appointed Specialist in Operative Surgery at Curragh.

Major E. McDONNELL has been posted to the Eastern Command.

Major Wm. POWER has been posted to the Eastern Command.

Vital Statistics.

VITAL STATISTICS OF LONDON DURING THE FOURTH QUARTER OF 1912.

IN the accompanying table (p. 164) will be found summarized the vital statistics of the metropolitan boroughs and of the City of London, based upon the Registrar-General's returns for the fourth quarter of 1912. The mortality figures in the table relate to the deaths of persons actually belonging to the several boroughs, and are obtained by distributing the deaths in institutions among the boroughs in which the deceased persons had previously resided. The 26,940 births registered in London were equal to an annual rate of 23.9 per 1,000 of the population, estimated at 4,519,754 persons in the middle of last year; in the corresponding quarters of the three preceding years the rates were 25.0, 24.7 and 24.0 per 1,000 respectively. The lowest birth-rates last quarter were 12.2 in the City of Westminster, 13.5 in Hampstead, 16.3 in Chelsea, 16.4 in Kensington, 18.5 in Paddington, and 18.8 in Stoke Newington; among the highest rates were 29.4 in Bermondsey, 30.3 in Shoreditch, 31.5 in Poplar, 32.3 in Stepney, and 37.7 in Finsbury.

During the last quarter the deaths of 16,900 London residents were registered, equal to an annual rate of 15.0 per 1,000, against 14.4, 15.8 and 14.3 per 1,000 in the corresponding periods of the three preceding years. The death-rates last quarter ranged from 10.5 in Wandsworth, 11.2 in Lewisham and in Woolwich, 11.5 in Hampstead and 12.6 in the City of Westminster, to 16.5 in Bermondsey, 17.5 in Southwark, 18.7 in Bethnal Green, 18.8 in Poplar, 18.9 in Stepney, 21.2 in Finsbury, and 23.4 in Shoreditch.

The 16,900 deaths from all causes included 30 from enteric fever, 788 from measles, 50 from scarlet fever, 152 from whooping-cough, 115 from diphtheria, and 318 from diarrhoea and enteritis among children under 2 years of age. Enteric fever was proportionately most fatal in Hammersmith, St. Marylebone, Islington, Hampstead, and Poplar; measles in Finsbury, Shoreditch, Bethnal Green, Stepney, Poplar, and Battersea; scarlet fever in St. Marylebone, Stepney, Southwark, Bermondsey, and Greenwich; whooping-cough in Kensington, Hammersmith, Finsbury, Bethnal Green, Battersea, Deptford, and Greenwich; diphtheria in Islington, Holborn, Stepney, Deptford, Greenwich, and Lewisham. The mortality from diarrhoea and enteritis among children under 2, measured in proportion to the registered births, was greatest in Kensington, the City of Westminster, Finsbury, Shoreditch, and Southwark.

The deaths from phthisis last quarter among London residents numbered 1,656, and were equal to an annual rate of 1.47 per 1,000; in the corresponding quarters of the three preceding years the rates were 1.44, 1.41, and 1.40 respectively. The death-rates from this disease last quarter ranged from 0.68 in Lewisham, 0.75 in Hampstead, 0.90 in Paddington, and 0.95 in Wandsworth to 1.85 in Bermondsey, 1.87 in Stepney, 1.91 in Finsbury, 2.11 in Southwark, 2.15 in the City of London, and 2.40 in Shoreditch.

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during the Fourth Quarter of 1912.

* No correction is made for births in lying-in institutions; the boroughs principally affected are marked thus (*).

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 103 per 1,000 last quarter, against 116, 128, and 113 in the fourth quarter of the three preceding years. The lowest rates recorded last quarter were 19 in the City of London, 63 in Stoke Newington, 64 in Woolwich, and 65 in Lewisham; the highest rates were 132 in Stepney, 135 in Kensington, 138 in Paddington, 141 in Shoreditch, and 150 in Bethnal Green.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 9,082 births and 5,896 deaths were registered during the week ending Saturday, February 8th. The annual rate of mortality in these towns, which had been 16.5, 17.0, and 17.3 per 1,000 in the three preceding weeks, fell to 17.2 per 1,000 in the week under notice. In London the death-rate was equal to 17.3, against 16.5, 17.8, and 18.5 per 1,000 in the three previous weeks. Among the ninety-five other large towns the death-rates ranged from 4.2 in Ilford, 8.6 in Gillingham, 9.8 in Wolverhampton, 10.0 in Ealing, 10.2 in East Ham, and 10.3 in Walthamstow to 23.0 in Preston, 24.0 in Barrow-in-Furness, 24.7 in Wigan, 24.9 in Wakefield, 26.0 in South Shields, 26.4 in Bury, 30.9 in St. Helens, and 41.9 in Stockton-on-Tees. Measles caused a death-rate of 2.3 in Edmonton and in Sheffield, 2.4 in West Hartlepool, 2.8 in South Shields, 3.4 in Wigan, 3.8 in West Bromwich, 4.0 in Stockton-on-Tees, 4.2 in Acton, 5.2 in St. Helens, and 5.7 in Eastbourne; enteric fever of 1.3 in Preston; diphtheria of 1.4 in Coventry, and scarlet fever of 1.0 in Rhondda. The mortality from whooping-cough showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 52, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 7 in Liverpool, 5 each in Stoke-on-Trent, in Birmingham and in Sheffield, and 3 in Barrow-in-Furness. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,828, 1,784, and 1,738 at the end of the three preceding weeks, had further declined to 1,735 on Saturday last; 209 new cases were admitted during the week, against 204, 215, and 229 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In sixteen of the largest Scottish towns, 1,199 births and 874 deaths were registered during the week ending Saturday, February 1st. The annual rate of mortality in these towns, which had been 17.3, 18.5, and 20.2 per 1,000 in the three preceding weeks, was again 20.2 in the week under review, and was 2.9 per 1,000 in excess of the rate in the ninety-six large English towns. Among the several Scottish towns the death-rates ranged from 9.0 in Kilmarnock, 14.6 in Falkirk, and 14.8 in Greenock to 26.5 in Coatbridge, 31.2 in Perth, and 31.7 in Clydebank. The mortality from the principal infectious diseases averaged 1.7 per 1,000, and was highest in Perth and Motherwell. The 444 deaths from all causes registered in Glasgow included 38 from whooping-cough, 3 from diphtheria, 2 from infantile diarrhoeal diseases, 1 from scarlet fever, and 1 from enteric fever. Three deaths from whooping-cough were recorded in Edinburgh, in Leith, in Coatbridge, and in Motherwell, and 2 in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, February 1st, 614 births and 470 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 714 births and 490 deaths in the preceding period.

These deaths represent a mortality of 20 per 1,000 of the aggregate population in the districts in question, as against 21 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 2.8 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 26.7 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 18.8, as against an average of 20.9 for the previous four weeks, in Dublin city 19.8 (as against 21.9), in Belfast 22.9 (as against 22.2), in Cork 32.6 (as against 24.8), in Londonderry 19.1 (as against 21.6), in Limerick 17.6 (as against 14.9), and in Waterford 7.6 (as against 21.8). The zymotic death-rate was 1.3, as against 1.7 in the previous week.

ENGLISH URBAN MORTALITY IN THE FOURTH QUARTER OF 1912.

In the accompanying table (p. 165) will be found summarized the vital statistics of ninety-five of the largest English towns, based upon the Registrar-General's weekly returns for the fourth quarter of the year. The 105,598 births registered in these towns during the quarter under notice corresponded to an annual rate of 24.0 per 1,000 of the population, estimated at 17,639,881 persons in the middle of last year. In London the birth-rate last quarter was 23.9 per 1,000, while among the other large towns it ranged from 12.1 in Bournemouth, 13.8 in Southampton, 14.1 in Eastbourne, 14.6 in Horsey, 15.0 in Hastings and 15.4 in Blackpool to 30.0 in Liverpool and St. Helens, 30.4 in Rotherham, 30.6 in Stoke-on-Trent, 31.1 in Stockton-on-Tees, and 35.0 in Rhondda.

The 63,973 deaths registered in these towns were equal to a rate of 14.5 per 1,000; in London the death-rate was 15.0 per 1,000, while among the other large towns the lowest rates were 7.7 in Ilford, 8.3 in Wimbledon, 8.6 in Enfield, 9.0 in Gillingham, 9.5 in Bournemouth, and 9.8 in Eastbourne; the highest rates were 18.0 in Stockton-on-Tees, 18.1 in Preston and in Sunderland, 18.5 in Beattie, 18.6 in Tynemouth, 19.2 in Middlesbrough, 19.3 in Liverpool, and 19.6 in South Shields.

The deaths from all causes included 206 from enteric fever, 1 from small-pox, 3,433 from measles, 353 from scarlet fever, 558 from whooping-cough, 613 from diphtheria, and 1,231 from children under 2 years of age from diarrhoea and enteritis. The fatal case of small-pox belonged to Wolverhampton. The 206 deaths from enteric fever were equal to an annual rate of 0.05 per 1,000; in London the death-rate from this disease was 0.03 per 1,000, while among the other towns the highest rates were 0.15 in Stoke-on-Trent, in Barnsley, and in Middlesbrough, 0.17 in Hull, 0.19 in Rotherham, and 0.31 in Wigan. The 3,433 fatal cases of measles corresponded to a rate of 0.78 per 1,000; in London the death rate from this cause was 0.70 per 1,000, while it ranged upwards in the other towns to 2.01 in South Shields, 2.12 in Birmingham, 2.21 in St. Helens, 2.24 in Barrow-in-Furness, 2.37 in Newcastle-on-Tyne, 2.38 in Stockport, 2.48 in Middlesbrough, 2.63 in West Hartlepool, 3.00 in Preston, and 3.05 in West Ham. The 333 deaths from scarlet fever were equal to 0.08 per 1,000; in London the scarlet fever death-rate was 0.04, while among the other large towns the highest rates were 0.20 in Preston, 0.22 in Eastbourne and in Dewsbury, 0.23 in Rhondda, 0.25 in West Hartlepool, 0.25 in Middlesbrough, 0.29 in Birmingham and in St. Helens, 0.33 in Huddersfield, and 0.54 in Aberdare. The 558 fatal cases of whooping-cough were equal to a rate of 0.13 per 1,000, which was also the death-rate from this disease in London; in the other large towns the highest rates were 0.31 in Nottingham, 0.32 in Rotherham, 0.33 in Warrington and in Burnley, 0.39 in Swindon, 0.40 in Wigan, 0.62 in Lincoln, 0.66 in Stoke-on-Trent, and 0.71 in Cambridge. The 613 deaths from diphtheria corresponded to a rate of 0.14 per 1,000; in London the rate was 0.10 per 1,000, while among the other large towns it ranged upwards to

| West Hartlepool - | 64,095 | 392 | 278 | 24.5 | 17.4 | — | — | 58 | 4 | — | 7 | 5 | 151 | 1.9 | | | |
| Sunderland - | 151,832 | 1,117 | 687 | 29.5 | 18.1 | 1 | — | 29 | 2 | — | 3 | 8 | 172 | 3.9 | | | |
| South Shields - | 109,678 | 802 | 642 | 29.3 | 19.8 | 1 | — | 55 | 1 | 5 | 3 | 8 | 124 | 7.3 | | | |
| Gateshead - | 117,848 | 772 | 455 | 26.3 | 15.5 | — | — | 28 | — | 1 | 6 | 15 | 142 | 0.6 | | | |

0.34 in York and in Swansea, 0.38 in West Hartlepool, 0.40 in Coventry, 0.41 in Stoke-on-Trent, 0.43 in Cambridge, 0.44 in Preston, 0.71 in Portsmouth, and 0.81 in Barrow-in-Furness. The fatal cases of diarrhoea and enteritis among children under 2 years of age numbered 1,231, and were in the proportion of 11.66 per 1,000 to the births registered during the quarter; the highest proportions recorded were 20.63 in Preston, 20.85 in Salford, 21.67 in Birkenhead, 21.74 in Swindon, 22.58 in Liverpool, 24.34 in Burnley, and 26.32 in Blackburn.

Infant mortality measured by the proportion of deaths among children under 1 year of age to registered births was equal to 111 per 1,000; in London the rate was 103 per 1,000, while among the other large towns it ranged from 48 in Hastings and in Southend, 49 in Gillingham, 54 in Southport, 55 in Brighton, 58 in Wimbledon and in Eastbourne, and 59 in Ilford, to 144 in Stoke-on-Trent, 146 in Rotherham and in Blackburn, 151 in Sunderland, 160 in Tynemouth, 172 in Middlesbrough and in South Shields, and 184 in Burnley.

The causes of 0.9 per cent. of the deaths registered in the ninety-five towns last quarter were not certified either by a registered medical practitioner or by a coroner. In thirty-nine of the towns the causes of all the deaths were certified; the highest proportions of uncertified deaths recorded were 4.2 per cent. in Gillingham, 4.5 in Barrow-in-Furness, 4.9 in Southend, 5.0 in Darlington, 5.1 in St. Helens, and 7.3 in Gatehead.

MCANOO, H. M., L.R.C.P.&S.Irel., District Medical Officer of the Wolstanton and Burslem Union.

MCDONALD, W. A., L.R.C.P.&S.Edin., District Medical Officer of the Newcastle-under-Lyme Union.

MCRAE, R., M.B., B.S.Aberd., Second Assistant Medical Officer to the Paddington Parish Workhouse and Infirmary.

MARKS, Herbert J., M.D., M.R.C.S., L.R.C.P., Honorary Surgeon for Diseases of the Ear, Nose, and Throat at the Royal Prince Alfred Hospital, Sydney, N.S.W.

MITCHELL, J. R., M.B., Honorary Junior Assistant-Physician to the Newcastle-on-Tyne Skin Hospital.

MORRISON, F. S., F.R.C.S.I. Certifying Factory Surgeon for the Medbourne District, co. Leicester.

MORRISON, W. H., M.B., District Medical Officer of the Escrick Out-Relief Union.

OTTON, D. C. Leyland, L.R.C.P.Lond., M.R.C.S., L.D.S.R.C.S.Eng., Honorary Anaesthetist and Dental Surgeon to the Eye and Ear Infirmary, Liverpool.

PATRICK, J. King, M.B., Ch.B., B.Sc.Glasg., D.P.H., Tuberculosis Medical Officer for the Metropolitan Borough of Hampstead.

PICKUP, J. C., M.B., B.S.Glas., District Medical Officer of the Barnsley Union.

POOLEY, G. H., F.R.C.S., Medical Referee under the Workmen's Compensation Act, 1906, for County Court Circuits Nos. 13 and 16, with a view to being employed in ophthalmic cases.

PRATT, Lieutenant-Colonel J. J., F.R.C.S., I.M.S.(ret.), Lecturer on Tropical Diseases at the Westminster Hospital Medical School, vice Lieutenant-Colonel A. Duncan, M.D., F.R.C.P., F.R.C.S., I.M.S.(ret.), deceased.

PRIESTLEY, R. F., M.B., B.C., D.P.H., Assistant School Medical Officer to the Reading Education Committee.

PRINGLE, G. L. Kerr, M.D.Edin., Honorary Physician to the Royal Bath Hospital, Harrogate.

RANKIN, Thomas T., M.D., Resident Medical Officer at the Constance Road Workhouse, Camberwell.

ROBERTS, J. F., M.B., Assistant Medical Officer of the West Derby Union Infirmary.

ROUGVIE, Miss M., M.B., B.S.Edin., Assistant Medical Officer to the Halifax Union Poor Law Hospital.

SCHLINK, H., M.B., Ch.M.Syd., Honorary Assistant Gynaecological Surgeon to the Royal Prince Alfred Hospital, Sydney, N.S.W.

SCROLEBERG, H. A., M.B., Medical Referee under the Workmen's Compensation Act, 1906, for County Court Circuits Nos. 24, 28, 30, 31, and 54, with a view to being employed in cases of industrial diseases (except ophthalmic cases and cases of beat-hand, beat-knee, and beat-elbow).

SELLERS, Arthur, M.D., Medical Referee under the Workmen's Compensation Act, 1906, for County Court Circuits Nos. 3, 4, 5, 6, 7, 8, 9, and 19, with a view to being employed in cases of industrial diseases (except ophthalmic cases and cases of beat-hand, beat-knee, and beat-elbow).

WESTMACOTT, Fredk. H., F.R.C.S., Assistant Surgical Officer to the Aural Department of the Manchester Royal Infirmary (reappointment).

WHEELER-O'BRYEN, J., M.D.Ver., L.R.C.P.&L.M.Ed., L.R.C.S.&L.M.Ed., L.A.H.Dub., District Medical Officer and Public Vaccinator for Sydenham.

WILLIAMSON, Oliver K., M.A., M.D.Cantab., F.R.C.P.Lond., Fourth Assistant Physician to the Westminster Hospital.

WOODALL, A. E., M.Sc., M.D.Vict., Medical Officer at the Central Branch of the Manchester Royal Infirmary (reappointment).

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—The following appointments have been made:
 Radiographer and Medical Electrician, E. U. Williams, M.R.C.S., L.R.C.P.
 Assistant Anaesthetist, Miss F. R. Bousfield, M.B., B.S.
 Clinical Assistant to Skin Department, Mrs. Addison, M.B., B.S.
 Clinical Assistant to Mr. Cuning, Miss Hunt, M.D., B.S.Lond., D.P.H.Camb., M.A., B.Sc.

UNIVERSITY COLLEGE HOSPITAL.—The following appointments have been made:
 Casualty Surgical Officer, A. A. Henderson, M.R.C.S., L.R.C.P.
 House-Surgeon, R. L. Horton, M.R.C.S., L.R.C.P.
 House-Physician, J. Taylor, M.B., B.S., M.R.C.S., L.R.C.P.
 Physician in Charge of the Out-patient Department for Mental Diseases, Bernard Hart, M.D.Lond.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

BOLTON.—February 5th, at the West Riding Asylum, Wakefield, the wife of Joseph Shaw Bolton, M.D., D.Sc., F.R.C.P., of a son.

DARKE.—On February 9th, at 3, Pownall Gardens, Hounslow, the wife of Sydney J. Darke, M.B., B.S., of a son.

HALL.—At 1, North Gill Crescent, Fence Houses, co. Durham, on 11th inst., the wife of J. Robertson Hall, M.B., Ch.B.Edin., of a daughter.

DEATHS.

McHARDY.—On February 8th, in Dumfries, Malcolm Macdonald McHardy, F.R.C.S., in his 61st year.

SUTCLIFFE.—On January 29th, at "Lea Loyd," Roscombe, Hants, Henry Sutcliffe, M.R.C.S., Consulting Surgeon to the West Bromwich District Hospital, aged 74.

IN MEMORIAM.

In ever loving memory of our dearly beloved and only son Phiroze (Ball), who departed this life in the 19th year of his life, whilst yet full of bright hopes and noble aspirations, on December 26th, 1910.

All tears are vain, we cannot now recall thee,
 Gone is thy loving voice, thy sweetest face;
 Gone from the home, where we so dearly loved thee,
 Where none can ever fill thy place.

Inserted by his sorrowing parents, Dr. B. H. Nanavatty, F.R.C.S., and Mrs. B. H. Nanavatty, of Ahmedabad.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, Cavendish Square, W., 9 p.m.—Second Lettsomian Lecture by Mr. James Berry: The Surgery of the Thyroid Gland, with Special Reference to Exophthalmic Goitre.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Professor Arthur Keith: The Upright Posture: Its Evolution and Diseases.

TUESDAY.

CHELSEA CLINICAL SOCIETY, Club Rooms of the Medical School, St. George's Hospital, 8.30 p.m.—Agenda: Papers: Dr. V. B. Orr: The Work of a Tuberculin Dispensary. Dr. Halls Daily: The Use of Tuberculin in Diagnosis and Treatment. A discussion will follow, in which Dr. Barcroft, Dr. L. A. Clutterbuck, Dr. F. N. Griffiths, Dr. Campbell McClure, and others will take part.

LONDON DERMATOLOGICAL SOCIETY, St. John's Hospital, 49, Leicester Square, W.C., 4.30 p.m.—(1) Demonstration of Pathological Specimens. (2) Cases sent for Consultation. (3) Exhibition of Clinical Cases as follow: (a) Dr. Sibley: (1) Leucoderma; (2) Scrofuloderma. (b) Dr. Bunch: A Case for Diagnosis. (c) Dr. Dockrell: (1) Acne Varioliformis; (2) Syphilide on a Tuberculous Base. (d) Dr. Griffith: (1) Persistent Erythrodermia; (2) Ichthyosis. 5.15 p.m.—Discussion on the Sociological Aspect of Syphilis will be opened by Dr. Prosser White (Wigan).

MEDICO-LEGAL SOCIETY, 11, Chandos Street, Cavendish Square, W., 8.30 p.m.—Medico-Legal Specimens: By F. W. Mott, M.D., F.R.S.: (1) Case of Needle embedded in the Septum Ventrliculorum for Twenty-nine Years. (2) Case of Acute Mania of General Paralysis with Ununited Fracture of the Femur. By F. J. Smith, M.A., M.D., F.R.C.P., F.R.C.S.: (1) Brain showing Track of a Bullet. Wound self-inflicted, query Accident? (2) Skull with Knife sticking in it. (3) Intestine with many Bullet Wounds. (4) Stomach—Acute Poisoning.

ROYAL SOCIETY OF MEDICINE:
 SECTION OF PATHOLOGY, 1, Wimpole Street, W., 8.30 p.m.—Dr. H. Warren Crowe: A New Method for the Differentiation of certain Streptococci. Dr. Alfred A. Lendon: Ovarian Cystoma with Splenic Metastasis. Dr. Arthur Hall: Obliterative Cholangitis with Dilatation of the Hepatic Ducts.

SECTION OF THERAPEUTICS AND PHARMACOLOGY, 1, Wimpole Street, W., 4.30 p.m.—Discussion (adjourned from January 21st). The Non-operative Treatment of Malignant Disease. The Discussion will be resumed by Dr. R. Knox, Mr. C. Rowntree, Dr. Finzi, Dr. Iredell, Dr. Haig, Dr. R. Bell, Dr. O. F. F. Grünbaum, Dr. Shaw Mackenzie.

WEDNESDAY.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Professor Arthur Keith: The Upright Posture: Its Evolution and Diseases.

THURSDAY.

HARVEIAN SOCIETY OF LONDON, Stafford Rooms, Titchborne Street, Edgware Road, W.—Discussion on the Diagnosis of Acute Abdominal Conditions in Children will be opened by Mr. Corber and Dr. Cautley, and continued by Sir James Goodhart, Mr. Warren Low, Dr. Still, and others.

ROYAL SOCIETY OF MEDICINE:
 SECTION OF DERMATOLOGY, 1, Wimpole Street, W., 5 p.m.—Demonstration of Cases.

SECTION OF NEUROLOGY, 1, Wimpole Street, W., 8.30 p.m.—In place of the February meeting, a combined meeting of the Sections of Ophthalmology and Neurology will be held on Wednesday, March 5th, at 8 p.m.

FRIDAY.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Professor Arthur Keith: The Upright Posture: Its Evolution and Diseases.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ELECTRO-THERAPEUTICS, 1, Wimpole St., W., 8.30 p.m.—Discussion to consider the Use of X Rays in the Diagnosis of Pulmonary Tuberculosis.

SECTION OF OTOLGY, 1, Wimpole Street, W., 5 p.m.—Casual Specimens and Communications: Mr. Arthur Cheate: Both Temporal Bones from 120 Individuals, with lantern slides. Mr. E. B. Waggett and Mr. E. D. Davis: Osteoma of Mastoid. Dr. Watson-Williams: A Periosteal Flap to Line the Bone Cavity in the Radical Mastoid Operation. Dr. Dan McKenzie: Otitic Abscess of Pterygoid Region: Drainage through External Auditory Meatus; Recovery. Mr. R. Lake: Cyst of Concha, Section and Report. Mr. G. N. Biggs: Specimen of Auricular Epithelioma. Mr. H. J. Davis: (1) Boy, aged 5; Progressive Bilateral Deafness following Attack of Epidemic Cerebro-spinal Meningitis Three Years ago; Boy now become mute. (2) Woman, aged 32; Sudden Deafness following Scald to Membrana Tympani by Steam; Recovery. (3) Man, aged 55; Epithelioma of Middle Ear involving Middle and Posterior Fossae of the Skull; with photographs.

POST-GRADUATE COURSES AND LECTURES.

- BROMPTON HOSPITAL FOR CONSUMPTION, Wednesday, 4.30 p.m.—Demonstration of Cases.
- CANCER HOSPITAL, Fulham Road, S.W., Wednesday, 5 p.m.—Diagnosis of Cancer of the Stomach.
- LONDON HOSPITAL MEDICAL COLLEGE, E.—Monday, 4.30 p.m.: Lesions of the Peripheral Nervous System and Spinal Cord. Tuesday, 4.30 p.m.: Pathology of the Central Nervous System. Wednesday, 4.30 p.m.: Clinical Anatomy and Regional Diagnosis. Friday, 4.30 p.m.: Common Diseases of the Nervous System.
- LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—Daily arrangements: Out-patient Demonstration, 10 a.m.; Medical and Surgical Clinics. Monday: 12 noon, Throat, Nose, and Ear; 2.15 p.m., Surgery; 3 p.m., Operations; 3.15 p.m., Medicine; 4.15 p.m., Ear and Throat. Tuesday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Surgery; 3.15 p.m., Medicine; 4.15 p.m., Skin. Wednesday: 11 a.m., Eye; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Eye Clinic; 4.30 p.m., Surgery. Thursday: 12 noon, Throat, Nose, and Ear; 2 p.m., Operations, Pathological Demonstration; 3.15 p.m., Medicine. Friday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Surgery. Saturday: 10 a.m., Radiography, 11 a.m., Eye.
- LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.—Lectures daily (Saturday excepted) at 12 and 4 p.m. Practical Laboratory Work daily (Saturday excepted), 10 to 12 a.m. Practical Entomology, 2 to 3.30 daily. Special Entomology, 10.30 to 1 p.m. daily. Medical Clinics Tuesday and Thursday at 3 p.m. Operations Friday at 3 p.m.
- MANCHESTER ROYAL INFIRMARY.—Tuesday, 4.30 p.m.: Some Varieties and Causes of Ataxia. Friday, 4.30 p.m.: Tuberculosis of Bone.
- MANCHESTER ANCOATS HOSPITAL POST-GRADUATE CLINIC.—Thursday, 4.15 p.m.: Enlargements of the Thyroid Gland, including Exophthalmic Goitre.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following Clinical Demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Medical; Friday, Eye. Lectures at 5.15 p.m. each day will be given as follows: Monday, An Efficient Ambulance Service for Accidents and other Casualties in London Streets and other Places; Tuesday, Asthma in Children; Wednesday, Gastro-Intestinal Medicine; Thursday, Gait in Nervous Disease.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C., Tuesday, 3.30 p.m., Friday, 3.30 p.m.—Syphilis of the Nervous System.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.—Monday, Clinics: 10 a.m., Surgical Out-patient; 2.30 p.m., Medical Out-patient, Nose, Throat, and Ear; 3 p.m., Demonstration of Clinical and General Pathology. Tuesday, 2.30 p.m. Operations; Clinics: Surgical, Gynaecological; 3.30 p.m., Medical In-patient. Wednesday, 2 p.m., Throat Operations; 2.30 p.m., Medical Out-patient; Skin and Eye Clinics; X Rays; 3 p.m., Pathological Demonstration; 5.30 p.m., Eye Operations; 4.30 p.m., Special Demonstration of Selected Cases of Children's Disease. Thursday, 2.30 p.m., Gynaecological Operations. Clinics: Medical and Surgical Out-patient; 3 p.m., Medical In-patient; 4.30 p.m., Lecture on the Diagnosis and Treatment of Scoliosis. Friday, 2.30 p.m., Operations; Clinics: Medical Out-patient, Surgical, Eye; 3 p.m., Medical In-patient; Pathological Demonstration.

ROYAL EYE HOSPITAL, St. George's Circus, S.E., Tuesday, 4.30 p.m.—Inflammation of the Uveal Tract.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—Monday, 4.30 p.m.: Some Points in the Surgery of the Thorax. Thursday, 4.30 p.m.: Myocarditis. Friday, 4.30 p.m.: Special Clinical Demonstration on Bronchiectasis, illustrated by the Epidiascope.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Daily arrangements: Medical and Surgical Clinics, 2 p.m.; X Rays 2 p.m.; Operations 2 p.m. Monday: Gynaecology, 10 a.m.; Medical Registrar, 10.30 a.m.; Pathological Demonstration, 12 noon; Eye, 2 p.m. Tuesday: Gynaecological Operations, 10 a.m.; Surgical Registrar, 10.30 a.m.; Demonstration of Fractures, etc., 12 noon; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Wednesday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Demonstration of Minor Operations, 11 a.m.; Lecture, Abdominal Diagnosis, 12 noon; Eye, 2 p.m.; Gynaecology, 2 p.m. Thursday: Gynaecological Demonstration, 10.30 a.m.; Lecture, Neurological Cases, 12.15 p.m.; Eye, 2 p.m.; Orthopaedics, 2 p.m. Friday: Gynaecological Operations, 10 a.m.; Lecture, Practical Medicine, 10.30 a.m.; Lecture, Clinical Pathology, 12.15 p.m.; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Saturday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Eye, 10 a.m.; Surgical Registrar, 10.30 a.m.; Lecture, Surgical Anatomy of the Abdomen, 12 noon. Lectures at 5 p.m.: Monday, Abdominal Injuries; Tuesday, Types of Insanity; Wednesday, Practical Medicine; Thursday, Practical Surgery; Friday, Administration of Anaesthetics.

REPORT OF COMMITTEE.

PART I.

DISCUSSION OF EVIDENCE: WITH RECOMMENDATIONS.

I. INTRODUCTION.

1.—In January, 1911, H.H. the Duke of Teck, Lord Iveagh and the Speaker of the House of Commons, Governors of King Edward's Hospital Fund for London, appointed us, together with the late Lord Northcote, as a Committee to undertake the inquiries indicated in the following terms of Reference:—

To consider and report generally as to the circumstances and conditions under which patients are admitted to the Casualty and Out-patient Departments of the London Voluntary Hospitals, and especially as to what precautions are taken to prevent the admission of persons who are unsuitable, and as to whether adequate provision is made for the admission of such persons as are suitable; and to make such recommendations as may seem to them desirable.

2.—We have the honour to submit the following Report of our proceedings and the result of our inquiries under the foregoing Reference.

3.—It is with deep regret that we record the lamented illness and death of our colleague the late Lord Northcote, which deprived us of his most valuable assistance during the receipt of about one-half of the evidence and during the whole of the consideration of our Report.

4.—We have held 27 meetings, and have received oral evidence from 48 witnesses. Of these 27 attended in response to invitations addressed to particular Hospitals, the number of separate Institutions thus represented being 21. Of these Hospital witnesses, six were medical men, and 21 laymen, while of the other witnesses 11 were medical and 10 lay. In addition to the oral evidence we received written statements from 44 other Hospitals as well as from four personal witnesses.

5.—We find that the word "admission" is often used at Hospitals in a technical sense, as meaning admission to the wards for In-patient treatment. In this sense it would mean, when applied to an Out-patient, admission from the Out-patient Department into the wards. In the terms of Reference set out above the word is used in the non-technical sense of admission to the Out-patient or Casualty Departments themselves, and throughout our Report we have followed the same practice.

II. THE OUT-PATIENT SERVICE OF LONDON: ITS NATURE, EXTENT, AND DISTRIBUTION.

6.—The following statement will show the nature and extent of the Out-patient service of London within a radius of nine miles from Charing Cross.

A. HOSPITALS.

7.—The number of Hospitals with Out-patient Departments from which detailed returns have been received amounts to 65, classified as follows¹:

| Class. | Number. |
|---|---------|
| General Hospitals with Medical Schools ... | 12 |
| General Hospitals without Medical Schools ... | 16 |
| Children's Hospitals ... | 7 |
| Hospitals for Special Diseases ... | 30 |

Besides these there are Out-patient Departments at 23 smaller General Hospitals and Special Hospitals from which no detailed returns have been obtained.²

8.—These Hospitals are all comprised within the radius of nine miles from Charing Cross, but they are by no means regularly distributed within that area.³ Of the 12 General Hospitals with Medical Schools no less than nine lie within one and a half miles of Charing Cross, and of these all but two are north of the river. Taking the 23 General Hospitals together, six lie within the E.C. and W.C. postal districts, 10 more lie round these districts but

still within three miles of Charing Cross, making 16 within that radius. Nine more lie between three and six miles distance, while only three (besides 10 Cottage Hospitals taking but few Out-patients) lie beyond the six-mile radius, an area which includes some of the most populous parts of Outer London.⁴

In the case of the Special Hospitals the concentration towards a centre is still more marked. Out of the 37 Children's and Special Hospitals only four lie outside the three-mile radius, and of the 33 which lie within, 21 are situated in the Central and Western postal districts.

9.—This distribution is due to historical causes. It arises partly from the fact that the growth of the outer parts of London is of comparatively recent date, and partly also, particularly in the case of the Special Hospitals, from the same forces which have made the Harley Street area the home of the medical consultant, upon whose services the Hospitals depend. Its effects, so far as the convenience of Out-patients is concerned, are to some extent modified by recent developments of travelling facilities⁵; and the striking lack of Hospital accommodation in South London will be greatly reduced when the removal of King's College Hospital to South London is complete.⁶

10.—But the disparity between the distribution of population and that of Hospital accommodation remains an important factor, and renders any organization of Out-patient Departments on a basis of locality extremely difficult.⁴

11.—The numbers of Out-patients, including Casualties, treated at these Hospitals in the year 1910 were as follows⁷:—

| Class (see paragraph 7). | Number of Hospitals. | Total Out-patients. |
|---|----------------------|----------------------------|
| General Hospitals with Schools ... | 12 | 884,634 |
| General Hospitals without Schools ... | 16 | 355,589 |
| Children's Hospitals ... | 7 | 156,352 |
| Hospitals for Special Diseases ... | 30 | 276,916 |
| Other smaller General and Special Hospitals ... | 23 (about) | 102,000 |
| | | <u>Total ... 1,775,491</u> |

12.—No conclusions,⁸ however, can be drawn from the total figure, unless the following considerations are taken into account.

13.—The Out-patients can be divided into various classes, some of which, at all events, would have to be Hospital patients under any system of Out-patient organization.

14.—One of these various classes is that known as "Casualties."⁹ The term has no fixed definition common to all Hospitals, but it usually includes cases which are either too urgent or too trivial to be referred to the Out-patient Department proper at the hours of attendance of the visiting staff, and it thus includes cases as to whose suitability there is least doubt, and cases to whose suitability there is most doubt. It is said that there is a tendency for the Casualty Department to grow until it becomes a duplicate Out-patient Department, differing from the Out-patient Department proper in being subject to less regulation as regards hours of attendance and inquiry into circumstances.⁹ True Casualties, however, if their numbers were recorded, would stand in a class by themselves for the purpose of this inquiry. They comprise injuries by accident and sudden attacks of illness which require immediate attention and treatment.⁹

15.—Another class of Out-patients is made up of those who have already been, or who subsequently become,

In-patients.¹ The available statistics indicate that in themselves these cases do not form more than about 4 per cent. of the Out-patients. But they illustrate one of the important uses of the Out-patient Department as a channel for the admission of serious cases to the wards.²

16. A third class which stands by itself is that of Out-patients attending special departments.³ These grow in number with the growth of special treatments.

They are represented partly by the patients of Special Hospitals and partly by the special Out-patients at General Hospitals. These appear to form about 30 per cent. of the whole number.

17.—Yet another class consists of patients who are recommended by medical men.⁴ No complete records are available, but at some of the Hospitals they form a not inconsiderable proportion of the whole.

18.—In estimating the proportion which these various classes taken together bear to the total number of Out-patients, allowance must be made for the fact that some of those recommended by doctors may also be counted among the special cases, or among those who have been or subsequently become In-patients, or sometimes among both classes successively.

19.—Other facts must also be noted before drawing conclusions from the total number of Out-patients, *e.g.*: (i) the fact that many patients attend more than one Hospital for the same ailment⁵; (ii) the fact that the same person attending the same Hospital at different times of the same year for different ailments, or for different attacks of the same ailment, is counted as so many different patients; and (iii) the fact that a large number come from the Home Counties, or even from distant parts of the country.⁶

20.—But after making allowance for all these factors, there is no doubt that the total number of Out-patients treated in a year by the Hospitals is very large,⁷ and that any system of charitable assistance offering benefits on such a scale requires careful organization if abuse is to be avoided.

21.—Various methods are in force for the control of the admission of these vast numbers to the Out-patient Departments. (i) Sometimes subscribers' letters have to be produced by patients.⁸ (ii) Sometimes payments are taken either of a fixed sum per head, with exemption in case of inability to pay, or on a scale varying with the means of the patient.⁹ (iii) At most Hospitals there is some system of inquiry into the suitability of those applying for assistance.¹⁰ The scope and efficiency of the systems vary. In many of the largest and best-managed Hospitals a special class of inquiry officers, called "Almoners" (usually ladies), have been introduced. These Almoners are trained in charitable as distinct from merely detective work, and they aim not only at preventing abuse but at bringing the Hospital into relation with other forms of medical and charitable assistance, wherever this is thought necessary either to render the treatment complete, or to prevent overlapping. At many Hospitals this side of their work is facilitated by the existence of a special fund for the non-medical assistance of patients, known as a Samaritan fund.¹¹ (iv) Some Hospitals limit the number of new patients selected in any one day for treatment by the visiting staff in proportion to the number of physicians and surgeons in attendance.¹²

These methods will be more fully discussed in later sections of this Report.

22.—Although the terms of reference appear to limit the inquiry to the circumstances and conditions of admission to the Out-patient Departments and not to extend it to the medical treatment of the patients when once admitted, it is obvious that the inquiry must involve some reference to the staffing and equipment of the Departments themselves. The suitability of a case for admission depends largely on the nature of the ailment; and thus the

medical staff has to assist in determining the question of admissibility.

23. The Out-patient staff usually consists of two grades: (i) the honorary visiting staff, who are physicians and surgeons in consulting practice and of established repute; and (ii) assistants¹ of various kinds, sometimes paid and sometimes unpaid—resident medical officers, casualty officers, house physicians, and house surgeons—for the most part picked men, but at the same time more or less newly qualified, whose experience has been limited to Hospital practice in the Out-patient Departments and the wards. At some Hospitals, particularly in Special Hospitals or in special departments of General Hospitals, there are also qualified "clinical assistants" sometimes in general practice—working for the sake of experience.² At the Hospitals with Schools the work of examining and treating the patients is combined with that of teaching medical students, and the students assist the doctors in various ways.³

24. There is no question as to the high efficiency of the Hospital staffing and equipment. But witnesses have differed as to the extent to which this efficiency is actually brought to bear upon the large crowds of patients—what proportion are actually seen by the visiting staff, and how far the assistant staff are able, in the circumstances under which the work has to be done, to give sufficient attention to the cases which remain under their care.⁴

B. DISPENSARIES.

25.—In addition to the Out-patient Departments of the Hospitals there are within the nine-mile radius some 52 Provident Dispensaries, about 54 Non-Provident Dispensaries, and 43 Poor Law Dispensaries.⁵

The Provident Dispensaries supply medical treatment for a given period in return for the payment of a fixed sum.⁶ The medical staff consists of general practitioners, who are paid. But unless the Dispensary is very large the contributions do not cover the cost, and the charitable element enters in.⁷

26.—The Non-Provident Dispensaries supply treatment either free or for a small payment per attendance. They are charitable institutions differing from Hospitals, so far as Out-patients are concerned, chiefly in the fact that they are usually staffed by general practitioners and equipped only for ordinary treatments.

27.—Both the Provident and the Non-Provident Dispensaries differ from the Hospitals in that they have no In-patient provision for serious cases. But, on the other hand, all the Provident Dispensaries and many of the Non-Provident (unlike the Hospitals) supply attendance in patients' own homes where necessary.

28.—The Poor-Law Dispensaries also supply medical treatment by general practitioners. But their sphere is at once narrower and wider than that of the other institutions mentioned. Access to them involves application to the relieving officer and contact with the Poor Law machinery, and though it does not bring with it disfranchisement it is said to be often a step towards pauperism.⁸ On the other hand, the Poor Law can supply food and other forms of non-medical assistance where these are needed, and can admit to the Infirmary cases requiring indoor treatment.

C. PRIVATE DOCTORS.

29.—Besides the Hospitals and Dispensaries the needs of the poor are supplied by a very large number of private doctors. Many of these have clubs whose members they contract to treat for a fixed payment not unlike that charged by Provident Dispensaries. Some of them are said to charge their private patients quite small fees, 6d. per visit to the surgery, or even 3d. And it is well known that whatever their normal charge may be the medical

profession of all grades supplies a very large amount of treatment in many cases without thought of fee or reward, and in many cases without reasonable anticipation of receiving payment.

III. CLASSES SUITABLE FOR ADMISSION TO HOSPITAL OUT-PATIENT DEPARTMENTS.

30.—Out-patient Departments may be abused or their work unduly restricted if proper precautions are not taken:

- (A) Patients may be admitted who are financially unsuitable for the particular form of charitable assistance offered.
- (B) The special resources of the Hospital may be wasted by a confusion of the functions of the Hospital with those of other medical agencies, leading to the admission of patients who are medically unsuitable.
- (C) Suitable patients may be unable to gain admission, or may fail on admission to obtain the assistance they need, or may be deterred from applying at all by fear of the inconveniences they may suffer. This may be the direct result of the admission of unsuitable cases.

To form an opinion on these points it is necessary to determine what classes are suitable as Out-patients, and to see what provision is made for their treatment.

ORIGINAL OBJECTS.

31.—In the charters, trust deeds and Acts of Incorporation creating the Hospitals, their object is usually defined in some such words as these: "to afford medical and surgical relief to sick and necessitous persons." In some cases the relief must be "gratuitous."¹

32.—The question, however, arises as to who are the "necessitous." Mr. Sydney Holland's definition is as good as any:—"A legitimate Hospital patient is a person who is a wage earner who is unable to pay for that medical or surgical advice which he requires in order to keep him in health, and of the greatest value to the community."²

This definition, however, needs to be extended so as to include pensioners, dependants and other persons who, though not wage earners, are, except for sickness, independent of outside help.

In applying the definition to any particular case, regard must be had to the kind of relief needed, and to the question whether the Hospital is the most suitable agency for supplying it.

LATER WIDENING TENDENCIES.

33.—The conception of the function of Hospitals has widened in recent years in some directions, while in other ways it has narrowed. Among the widening tendencies are the following:—

- (A) The development of costly special treatments and methods of diagnosis. This has raised the whole idea of the standard of medical treatment which a Hospital should afford. It has also raised the financial level below which a patient needing these costly treatments is "necessitous."
- (B) The recognition of the fact that medical treatment is often inadequate unless associated with other forms of assistance. This idea has widened the conception of the duty of a Hospital as a charitable institution, especially as the ideals of organized charitable administration tend to grow higher.
- (C) Hospitals have become centres of ever more and more elaborate medical education and the advancement of medical science. This side of their work will sometimes require that the rules restricting admission should be relaxed so as to permit patients who may not come within the definition of the necessitous poor to enter, and by their presence enable the Hospitals to fulfil these functions.

LATER NARROWING TENDENCIES.

34.—In other directions, however, the Hospitals, as their work expands, find themselves liable to compete with agencies whose operations tend to narrow Hospital work. Among such agencies are

- (A) The Provident organizations, which are designed to enable a whole section of the poorer population to raise themselves above the necessity of applying for charitable assistance, and which find their development hampered by the unlimited offer of free treatment at the Hospitals to those who can afford to make provision for their needs.
- (B) The Poor Law medical service, which offers a special means of treatment to those who may be said to come within the pauper class.
- (C) Other forms of public medical assistance, such as the Public Health Departments of the municipalities and the medical care of school children by the Education Authorities. And in this connexion regard must be had to the possible developments of National Insurance.
- (D) The private doctor, whose interests would not be affected by the establishment of a charity to deal with the very poor, but who finds occasion for anxiety when the great Hospital, with its Out-patient Department, attracts, as it does, patients of the class which contributes to his practice.

35.—It becomes more and more necessary, therefore, for the Hospitals to consider what position they should take up with regard to these agencies: whether they should compete with them, or co-operate with them, or attempt to confine their work to spheres not touched by them.

WAGE LIMITS.

36.—When all the factors are taken into consideration it is not surprising that there is a general agreement among witnesses that no very definite line can be drawn between the suitable and the unsuitable, so far as financial circumstances are concerned. Only in a few Hospitals is a wage limit laid down as a test of suitability, and in these only for the purpose of affording a guide to the inquiry officer—all cases above that limit being specially investigated, in order to see whether the number of dependants, the expenses of illness, or other circumstances, justify the admission of the patient. Provided, however, that this is borne in mind, the wage limit may be taken as "crystallizing" the definition of financial suitability, and it thus forms a convenient basis for its discussion.

37.—Examples of such wage limits for ordinary ailments are:

For single men: London Hospital—15s. to 19s. for the labour class, 20s. for a class above;¹ Great Northern Hospital—25s.;² Middlesex Hospital—30s.³

For married patients the limit varies with the number of children, beginning either at 25s., 30s., or 35s., and ending usually⁴ with 40s.

Special Hospitals naturally tend to have higher limits.⁵

It is interesting to compare these with the wage limits for Provident Dispensaries affiliated to the Metropolitan Provident Medical Association, viz., 30s. for single men, 40s. for married.⁶ This comparison shows that the general Hospitals, so far as wage limits are any evidence, recognize in the case of single men that the offer of free assistance should be confined to a class below those for whom the Provident Dispensaries cater. The only exception is the Middlesex Hospital, and there the wage limit of 30s. is admitted by witnesses to be too high.⁷ But in the case of married patients it seems that the Hospitals tend to recognize no such distinction, but to adopt as their limit for free medical advice the same figure as the Dispensaries adopt for treatment at Provident rates. It is worth noting that the Secretary of the Hospital Saturday Fund supports the Hospitals in the 40s. limit,⁸ while the medical representative of the Charity Organization Society would put it as low as 30s.⁹ The Provident

¹ Sandhurst, 1171.

² Holland, 15; quoted by Loch, 697, 794.

Dispensary attached to the Metropolitan Hospital and the Camberwell Provident Dispensary have 35s. as their limit.¹

It must be remembered, however, that, while the Provident Dispensary wage limit is fixed with reference to earnings during a period of health,² certified by a medical examination, the Hospital wage limit has reference to a time of illness, when perhaps the patient's earnings have been diminished and his expenses increased.³

PROVIDENT DISPENSARY CLASS.

38.—In spite of this overlapping in wage limits, it is held by a large number of witnesses, both within the Hospitals and outside them, that those able to make provision for ordinary ailments by means of Provident Dispensaries, clubs, and other forms of insurance, are not suitable for admission to Out-patient Departments for such ailments.⁴ Some apparently would do no more than urge such patients to make provision,⁵ but others go further, and (at all events in some cases) hold that even where it is necessary to treat them when they first present themselves, they should be given to understand that if they apply at some future time for another similar illness they will not be admitted.⁶

Many of the witnesses who accept this view in theory maintain, however, that in the absence of a sufficient supply of Provident Dispensaries it cannot be adopted in practice.⁷

POOR LAW CLASS.

39.—There is also a difference of opinion as to the point at which the lower limit of suitability should be drawn.

On the one hand it is held by a large number of witnesses that the Out-patient Departments should not be opened indiscriminately to all those who are poor, with out reference to the question whether they are in receipt of Poor Law relief, or are in such a state of destitution as to be unable to benefit by the treatment the Hospital can supply.⁸ It is contended that to do this is a waste of the special resources of the Hospitals.

On the other hand the practice of some of the large Hospitals indicates that this view is not held by them, and that they do not refuse assistance on this ground.⁹

INTERMEDIATE CLASS.

40.—But assuming that those able to make provision for themselves should be excluded, as also those too destitute to profit by Hospital treatment, the question remains whether there is not an intermediate class suitable for Out-patient treatment. The view held by the British Medical Association is that there is no such intermediate class,¹⁰ their argument being that all sick people are able to secure the attendance of general practitioners, either privately or through a Provident Dispensary or through the Poor Law, and that the Hospitals should be reserved for cases sent for consultation by such general practitioners. The ordinary subscriber to Hospitals, even where prepared to exclude the Provident Dispensary class, probably takes the other view, and considers that it is for just such an intermediate class that the Hospital exists.¹¹

Some witnesses who admit the existence of this class hold that a patient who is unable to pay the small fees of Provident Dispensaries when in health really needs in sickness the help of general charity rather than mere medical attendance,¹² and it is suggested that the help

given might, in suitable cases, include the payment of Provident Dispensary fees.¹ But, bearing in mind two facts: first, that no general organization of charitable and public assistance yet exists, and, second, that however carefully prospective patients are classified, there will always be many individual cases whose circumstances render classification difficult, we are not prepared to say that the Provident Dispensary class and the Poor Law class cover between them all those who cannot pay a private doctor's ordinary fees. The intermediate class is, however, being continually narrowed by the development of Poor Law medical assistance on the one hand and of charitable and public assistance on the other.²

IV. EVIDENCE AS TO EXISTENCE OF ABUSE.

41.—All the factors mentioned above affect the question whether the Out-patient Departments are abused or misused.

AS REGARDS THOSE ABLE TO PAY.

42.—The first question is whether patients are treated who can afford to pay private doctors. This charge is frequently brought by general practitioners, although for reasons which can easily be appreciated, there is great reluctance to touch specific instances.³ It does not appear that there is any appreciable abuse by really well-to-do people.⁴ The scrutiny of officials and doctors, to say nothing of expert inquiry officers, is sufficient to prevent this. But there is probably good ground for the feeling on the part of general practitioners that many patients who could without hardship afford the small charge made by them for ordinary ailments are treated at the Hospitals.⁵ It would often be impossible to detect such cases at sight. They can only be discovered by the investigations of trained inquiry officers. But there are large areas not covered by such investigation. At some Hospitals the inquiry is little more than nominal,⁶ and even where it is most thorough it is liable to be evaded by false statements.⁷ At most Hospitals the Inquiry Officer or Almoner only investigates a portion of the total numbers of Out-patients,⁸ and often the Casualty Department is not touched at all. There is thus ample room for minor abuse of this kind. Very few witnesses have gone so far as to deny its existence altogether.⁹ As to its amount, however, the evidence has varied. Some Hospitals deny its importance on the ground that their Inquiry Officers find so few cases¹⁰; but there would seem to be more reason for confidence in those whose Almoners do detect and exclude a good many.¹¹ One Hospital admits that though its present inquiry discovers but little abuse, a more efficient system would find a considerable amount.¹² The statistics seem to show that where the inquiry is thorough, a not inconsiderable number of cases are discovered, and probably at least as much escapes detection where the inquiry is not thorough.¹³ Doubtless the abuse differs in different neighbourhoods,¹⁴ but even in the poorest districts there are comparatively prosperous streets within reach, and abuse by the inhabitants of such streets, though small in proportion to the number of patients, may constitute a greater hardship to local doctors than an equal amount of abuse elsewhere.

AS REGARDS THOSE SUITABLE FOR PROVIDENT DISPENSARIES.

43.—There is much stronger evidence that the Out-patient Departments are used on a large scale by the class

of patients able to make provision for ordinary ailments by means of Provident Dispensaries or clubs. In the first place, there is the evidence already quoted from the wage limits,¹ which goes to show that many Hospitals draw the line between patients suitable for free treatment and patients unsuitable at the very point where the Provident Dispensaries draw the line between those suitable for treatment on the provident or contract system and those who should pay ordinary fees according to the number of attendances. In the second place, there is the evidence from the statistics of the Hospitals which endeavour to exclude the Provident Dispensary class, showing that a considerable number are so excluded.² There is no reason to believe that a similar percentage of cases would not be excluded from the other Hospitals if the same standard were universally applied. In the third place, a good many witnesses have expressed the opinion that the Hospitals are largely used by those who could have made provision, and that this form of misuse is far more common than abuse in the sense of the treatment of those actually able to pay at the time.³

44.—The argument that the admission of such cases is not an abuse because there are not enough Provident Dispensaries is met by other witnesses with the contention that the absence of Provident Dispensaries is due to the fact that the Out-patient Departments offer free treatment to cases suitable for a Dispensary.⁴

AS REGARDS CASES SUITABLE FOR THE POOR LAW.

45.—The allegation that the Out-patient Departments are used for ordinary ailments by persons who are either too poor to benefit by them, or who are actually in receipt of poor relief, is supported by evidence of the same general character. Some Hospitals do not consider this to be misuse at all.⁵ Others do; and the statistics of their partial inquiries made with a view to excluding this class make it certain that considerable numbers would be found if the inquiries at all Hospitals were complete.⁶ There is the direct evidence of witnesses that it would be wise to refer to the Poor Law many cases which are not now referred.⁷ And there is also on this point the detailed evidence published by the Poor Law Commission to the effect that 11 per cent. of the Out-patients at certain Hospitals were actually in receipt of Poor Law relief, while 38 per cent. might be described as destitute.⁸

46.—On the other hand there is much evidence to the effect that even where the desirability of referring such cases to the Poor Law is recognized, a difficulty often arises from the side of the Poor Law. Not only are the conditions attached to medical relief often deterrent,⁹ but the Poor Law authorities are said to resist the reference of cases to them by the Hospitals.¹⁰ These difficulties seem to indicate that, in dealing with the destitute and the very poor, the improved organization of the Out-patient Departments should be met by some change in the character and scope of Poor Law administration, and some co-ordination of Poor Law and charitable agencies.¹¹

AS REGARDS THE MEDICALLY UNSUITABLE—TRIVIAL CASES.

47.—In the case of all these classes we have used the phrase "for ordinary ailments." As already noted, the question of the nature of the ailment bears on the question of suitability, and therefore of abuse or misuse; and this for two reasons. First, the nature of the ailment and of the treatment required affects the question of the ability of the patient to pay for the necessary medical attendance. One ailment differs from another in its effect on the earn-

ing capacity of the patient, in the number of attendances which it would entail on the part of a private doctor, or in the necessity for costly drugs or appliances. Secondly, the nature of the ailment affects the question whether the necessary treatment can be supplied by the general practitioner, or whether it requires the special skill or special appliances available at the Hospital. There is, therefore, a further question to be taken into account in considering whether the Out-patient Departments are abused or misused the question of medical suitability.

48.—It is generally agreed that the Hospitals are specially adapted by personnel and equipment for the diagnosis and treatment of difficult cases and those needing costly drugs or appliances.¹² It follows, therefore, that the admission of such cases (often, though loosely, called "consultative cases") to the Out-patient Departments should be facilitated wherever the patient cannot obtain the special advice or treatment which he needs, even though he is, privately or through a Provident or Poor Law Dispensary, already able to obtain the services of a general practitioner for ordinary ailments. And many witnesses contend that the work of the Out-patient Department should be confined to such cases,² and that patients suffering from ordinary ailments should be either excluded or discouraged from attendance on the ground of medical unsuitability. More especially is this policy advocated in the case of what are termed "trivial" ailments.³ It is held that the admission of such cases is itself a waste of the elaborate resources of the Hospital, and that it hampers the efficient discharge of the true function of the Hospitals in three ways: First, that the crowd of trivial cases leaves insufficient time for the diagnosis and treatment of the serious cases;⁴ second, that many serious cases are deterred from coming to the Hospitals by the fear of crowding, waiting, and insufficient attention in the end;⁵ third, that proper inquiry into the financial suitability of patients is rendered impossible by the large numbers that present themselves when trivial cases are admitted.⁶

49.—There seems to be little doubt that a great many of the cases now treated, especially in the Casualty Departments, are trivial and should not be admitted. The difficulty arises when the possibility of an alternative is considered. Some witnesses argue that it is as easy to treat a trivial case as to inquire into its suitability.⁷ Others maintain that if the Hospitals were to state publicly that trivial cases would not be treated, such cases would soon cease to present themselves.⁸ Others lay stress upon the difficulty of defining a medically trivial case so as to insure that no danger of hidden complications is overlooked,⁹ upon the risk of turning away any case untreated,¹⁰ upon the fact that from the patient's point of view minor ailments are often serious,¹¹ or upon the value of trivial cases for teaching purposes.¹² The degree to which exclusion would be right depends very largely upon the extent to which the alternative of treatment by a general practitioner is practicable, and is thus intimately connected with the question of financial suitability already discussed.

IN DIFFERENT DEPARTMENTS.

50. It is obvious that the line between abuse and non-abuse will be different in Casualty Departments, Out-patient Departments proper, and Special Departments respectively.

51.—In the Casualty Departments are treated emergency cases of a serious character, which must be dealt with, once at all events, without reference to financial suitability, and without the delay involved in transfer to the Out-patient Department proper. But the Casualty

Departments are frequently called upon to deal with a large number of trivial cases, which individually require only a very small amount of attention. For these two reasons it is rare for the Casualty Department to be included in the inquiry system, even where an efficient system is in force in the Out-patient Department. If, as is frequently the case, the Casualty Department also deals with Patients who happen to come outside the ordinary Out-patient hours, or with such cases as the Casualty medical officers (many of whom are often newly-qualified men eager for experience) may choose to retain in their own hands,¹ the liability of the Department to abuse is increased. At certain Hospitals the rules are specially designed to prevent this particular danger.² Unless, however, great care is exercised, there is a general tendency for the Casualty Department to become a centre of abuse and disorganization, and the more so when the Out-patient Department proper is well organized and protected by inquiry.³

52.—In the Out-patient Department proper there will be found mingled the trivial, the ordinary, and the serious, except in Hospitals where this Department is first reached through a receiving room or Casualty Department. In these instances the trivial cases will have been already sifted out. As regards the other two classes, the Inquiry Officer or Almoner has to take into consideration the nature of the ailment and the circumstances of the patient, and as a general rule no case is excluded or referred elsewhere without the concurrence of a medical man.⁴

53.—In the Special Departments there will naturally be a large proportion of cases needing special diagnosis or treatment, and the average financial level below which abuse need not be guarded against is accordingly higher.⁵ In these Departments, as with the more serious of the cases in the general Out-patient Department, the question usually is not whether the patient can afford a general practitioner's fee, but whether he can pay a consultant's fee, which is normally £2 2s., and, even when reduced to meet inability to pay, rarely falls below £1 ls.⁶

54.—When once, however, the higher level is fixed, it is just as necessary as in ordinary cases to make sure by inquiry that all the patients treated come within the limit. With the majority of cases this will be easy, but in borderline cases it may be specially difficult, while abuse will often involve greater cost to the charity and loss to the medical profession than in the case of ordinary Out-patients.

AS AFFECTED BY PATIENTS' PAYMENTS.

55.—At some Hospitals the question of abuse or non-abuse is complicated by the existence of a system of patients' payments.⁷ These sometimes take the form of a fixed payment of a few pence to cover the cost of drugs and dressings required of all ordinary Out-patients who do not give proof of inability to pay it. Sometimes, at special Hospitals, payment is asked not of any fixed sum but of the amount which the patient is supposed to be able to pay, although he cannot afford a consultant's minimum fee. In either case the system amounts to this, that the offer of assistance is modified to meet variations in the financial circumstances of the patients. The elasticity thus introduced may reduce the risk of abuse from the point of view of cost to the charity, but witnesses have differed as to its effect on the risk of unfair competition with private practitioners.⁸

AS AFFECTED BY MEDICAL EDUCATION.

56.—Finally, in all discussions as to financial or medical suitability, the question of medical education and the advancement of medical science must be kept in mind, for, within reasonable limits, the medical staff must be entrusted with the power to retain, for these purposes, cases which might otherwise be deemed unsuitable.⁹

This necessity has been used as an argument against

any considerable restriction of admission.¹ But, on the other hand, it is by no means clear that unrestricted admission produces the conditions most favourable to medical education, and we have evidence from medical witnesses that a reduction in the number of trivial cases and a proportionate increase in consultative cases would be a gain from this point of view.²

V. EVIDENCE AS TO DEFECTS OTHER THAN ABUSE.

57.—Passing from the question of admission of persons who are unsuitable to that of the adequacy of the provision for those who are suitable, we find considerable evidence of defects.

DISTANCE FROM HOMES OF PATIENTS.

58.—The first defect is the want of proportion between the distribution of Out-patient accommodation and the distribution of population,³ and the long distances which have frequently to be travelled by patients.⁴ This is not only a physical hardship in cases of serious illnesses but also a source of expense, both in loss of work and in fares, and may go far to reduce the benefit of free treatment. South London is the worst off in this respect, and generally the outlying districts suffer while the centre is over-supplied.⁵

The development of Suburban Hospitals, often with a staff of West End Consultants, and such transfers as that of King's College Hospital to South London, are doing something to remedy this defect. But the defect is not likely to be completely removed.⁶

OVERCROWDING.

59.—Next to the question of distance comes that of overcrowding.⁷ As a rule this is complained of not so much as an evil in itself as because of the evils which it is said to produce⁸—long hours of waiting, inadequate inquiry, danger of infection, and overwork on the part of the medical staff, resulting in hurried diagnosis and treatment. For except in a few instances⁹ the evidence points not to overcrowding in relation to the cubic capacity of the waiting halls, but to overcrowding in relation to the means available for dealing efficiently with the crowd of patients. Since the days of the House of Lords Inquiry in 1890-2 a great many of the waiting halls have been enlarged;¹⁰ and such actual overcrowding as remains is attributed largely to the congregation of persons who, in the opinion of the witnesses, are unsuitable for admission,¹¹ and even of persons who attend the Out-patient Department mainly as a kind of social meeting place.¹² But generally speaking the question of overcrowding and its prevention is bound up with the questions of hours of waiting and overwork of staff, and is best discussed in connexion with them.¹³

WAITING.

60.—From the point of view of the patients, the question of long hours of waiting is, perhaps, that which gives rise to most general complaint.¹⁴ That it should do so is not surprising; whether the waiting is avoidable, and is, therefore, a legitimate ground for criticizing the management of the Hospitals, is another matter.

61.—On the question of the actual hours of waiting, as on the question of abuse, it has proved difficult to get from the complainants detailed evidence which could be

⁹ Thies, 432/12; Loch, 737-8.

verified.¹ From Hospital witnesses we have a few particulars, ranging from an average of two and a half hours to three and a half hours and even four or five hours.² Other Hospital witnesses (though not without exceptions)³ admit that waiting occurs as an undesirable result of present methods.⁴ It is said to cause the patients much loss of time, thus producing in some cases a loss of earnings, which (like expenditure of time and money on travelling) may often nullify the financial benefit of free treatment; in other cases either loss to employers or neglect of homes, besides, in many instances, considerable suffering and increased risk of infection.⁵ It also deters from applying for Hospital treatment those cases whose seriousness renders them physically unfit to endure the long hours.⁶

62.—At the same time it seems probable that this waiting cannot be avoided under the present system of Out-patient organization. It does not appear to be due, as a general rule, to any maladministration in detail. The process through which patients must necessarily pass is inevitably a lengthy one. They must be assembled, registered, sorted, and provided with cards before they are ready for the doctors,⁷ their prescriptions must be made up after the doctor has seen them,⁸ and the inquiries of the Almoner take time. At each of these stages, however, it is possible for unnecessary delay to take place, and undoubtedly it is the duty of the Hospital managers to take all practicable steps to shorten the waits.⁹

63.—But it seems to be generally admitted that the real cause of the waiting is to be found in the large numbers that attend, and is hardly avoidable under the present system.¹⁰ Any increase in the staff or accommodation designed to deal with the excessive waiting is said to have the effect of attracting still larger numbers.¹¹ Such improvements may increase the liability to abuse, for if waiting keeps away cases which are medically suitable it also deters many which are financially unsuitable.¹² If this is so, it can only be remedied by some plan which, while admitting the suitable, will reduce the numbers by excluding the unsuitable.¹³

DANGER OF INFECTION.

64.—As an incidental result of the crowds of patients and the hours of waiting, there is said to be considerable danger of infection,¹⁴ especially in the case of minor and non-notifiable diseases,¹⁵ and sometimes even of scarlet fever or diphtheria.¹⁶ The Central Hospital Council specifically mention danger from chicken-pox, mumps, whooping-cough and tuberculosis, and suggest that all these should be compulsorily notified.¹⁷ This is evidently a question, first, of the prompt and adequate inspection by doctor or nurse of all patients admitted to the waiting hall, and, second, of sufficient provision for the isolation of suspected cases or their reference to some agency specially designed for the treatment of infectious disease.¹⁸ Thus the danger, so far as it exists, is an additional proof of the importance of the reduction of numbers by the exclusion of unsuitable cases, and of co-ordination between the different agencies for the treatment of disease.

HURRIED DIAGNOSIS AND TREATMENT.

65.—It is also alleged that as a result of overcrowding the patients often fail to receive thorough medical examination and treatment.¹⁹ The criticism is usually made in

quite general terms, but it may mean (A) that some of the patients who need the special skill of a consultant fail to reach the visiting staff at all by reason of the junior assistants omitting to distinguish them, either from inexperience or from want of time; or (B) that the remaining patients, suffering only from ordinary ailments, fail to receive proper attention because their excessive numbers make it impossible; or (C) that the consultant staff themselves are overworked and cannot give sufficient time even to the serious cases.

66.—It is not possible for the visiting staff to see all the patients attending the Out-patient Department. The patients must be medically sorted by someone, and only those who need the special skill of the consultant, or whose cases are useful for teaching or research must be reserved for the visiting staff. This duty falls upon the assistant staff.¹

67.—With the positive qualification of the assistant² medical staff of the Out-patient Departments for this work our inquiry is not directly concerned, but we have no doubt that the Hospitals take every care to confine responsible appointments to the best available men. At the same time, we have evidence that the practice as regards the Casualty Departments differs materially at different Hospitals, the Casualty officers being sometimes newly qualified men working with or under house-physicians or house-surgeons;³ sometimes men who are themselves holding these appointments, working under the supervision of members of the visiting staff;⁴ and sometimes men who have already held such appointments and are directly responsible to the Hospital itself.⁵

68.—The question of the qualification of the Hospital staff for this work as compared with that of the general practitioner is, however, of importance having regard to the alternative proposal to entrust the sifting of patients to the outside medical man. On this question of comparison witnesses differ.⁶ It turns largely upon the value of the experience of the general practitioner, on the one hand, and on the other hand upon the advantages and knowledge which the recently qualified members of a medical school derive from their frequent contact with the leaders of the profession, their access to modern or costly appliances, and their acquaintance with the newest methods of examination and treatment.

69.—There is, however, a considerable amount of evidence to the effect that the work of the assistant staff is impaired by the pressure under which it has to be done.⁷

70.—Estimates of the average time given to each case have been furnished by some witnesses. The different estimates include one minute, less than two minutes,⁸ and three minutes,⁹ while one witness finds as the result of a special calculation that the average for minor cases is two minutes.¹⁰ In the Casualty Department, especially, the complaint is made by both medical and Hospital witnesses of hurried diagnosis,¹¹ and very serious consequences have been attributed to this cause.¹² But on the other hand it is claimed that experienced casualty medical officers as a rule possess great skill in rapid diagnosis¹³ and make very few mistakes, in spite of the pressure under which they work.¹⁴ So long, therefore, as this pressure remains, it is most important that Casualty Officers should be men with experience, for even where senior men are available for cases of difficulty, time frequently does not permit of consultation with them.¹⁵

71.—But the evidence points to the desirability of reducing the pressure if possible by lessening the overcrowding of the departments where patients are sorted,

and this can only be done by preventing the attendance of unsuitable cases.¹

72.—With regard to the work of the visiting physicians and surgeons there is little evidence of hurry in either diagnosis or in treatment. For one thing, the highly skilled consultant staff possess great powers of rapid diagnosis.² Again, at the teaching Hospitals, plenty of time is necessarily given, for the sake of the students, to the cases reserved for the visiting staff.³ In many Hospitals the number of new cases reserved for each physician or surgeon is strictly limited. That such limits have been found necessary is evidence that the staff are otherwise liable to be either hurried or overworked, or obliged to depute the actual treatment of some cases to their assistants.⁴ The numbers, however, are not the same at different Hospitals, varying, for example, from 12 medical or 15 surgical at the Royal Free,⁵ and 15 at St. George's⁶ to 19 (admitted to be a heavy number) at St. Thomas's.⁷ At Hospitals without schools there are wider variations, ranging from 10 to 20 and even 25.⁸

Different witnesses have given the maximum number that could be treated by one man, at a teaching Hospital, at 12, 12 to 15, and 20 respectively.⁹ At one general Hospital with a post-graduate college, on the other hand, the average number per medical officer (including clinical assistants) is said to amount to 30.¹⁰

73.—Generally speaking the evidence points to the conclusion that in the case of patients who actually reach the visiting staff the danger is not that of hurried diagnosis or treatment, but that of long hours and overwork for the doctors.¹¹ This difficulty is a serious obstacle to the development of consultative work in the true sense of the word, for such work involves the labour of reporting to the general practitioner who is in charge of the case and for whose guidance the opinion of the consultant is sought.¹²

DETACHMENT FROM HOME CONDITIONS AND PAST HISTORY.

74.—A further alleged defect of the Out-patient system lies in its detachment from the home conditions of the patient and his past history, both of which may affect not only the diagnosis of his disease, but also the method and prospects of cure.¹³ This is put forward as a strong argument in favour of the treatment of ordinary ailments, not at the Out-patient Departments, but by the general practitioner acting, privately or through Dispensaries, more or less as a family doctor.¹⁴

75.—Assuming that the general practitioner can be relied on to give full attention to the home conditions and past history of patients attending at his surgery or at the Dispensary, this argument is a strong one. We have evidence, for instance, of a case of a boy attending two hospitals for bronchitis without it being discovered that his bed at home was beneath a leaking roof.¹⁵ The fact that at some Hospitals an Out-patient is frequently seen by different doctors on successive visits¹⁶ makes the occurrence of such misfortunes not improbable.

76.—The practice of relying on Hospitals rather than on private doctors is also said to lead to a neglect of preventive precautions and early treatment.¹⁷ The dangers arising from this might be lessened if the hospitals were in closer touch with general practitioners, and thus able to recommend domiciliary treatment.¹⁸ At the same time it must be recognized that many of the Hospitals themselves, through their Almoners, are endeavouring to

secure a means of keeping in touch, at all events in selected cases, with home conditions or with agencies that know the homes.¹ In this connexion mention ought to be made of the excellent work begun by the Tuberculosis Dispensaries towards supplementing the Out-patient Departments in the specially important case of pulmonary consumption.² It seems highly desirable that the practice of co-operating with such Dispensaries, already adopted by some Hospitals, should be extended as far as practicable in the interests both of the patients and of those who are living within the range of their infection.³

77.—Another way in which this detachment from home conditions is said to reduce the value of Out-patient treatment lies in the absence of specific advice not only as to ordinary home hygiene or special care in diet or the like, but also as to the method of applying the prescribed remedies between the dates of successive visits to the Hospital.⁴ This is attributed to the pressure under which the medical work is carried on. It is due, therefore, partly to overcrowding, and partly to the absence of touch with home conditions. Akin to this is the difficulty of ensuring that the patient carries out at home such instructions as are given him at the Hospital.⁵

SEPARATION FROM OTHER CHARITABLE ASSISTANCE.

78.—The tendency to treat an application to the Out-patient Department as an isolated incident in the patient's life shows itself also in the separation of medical relief from other forms of charitable or public assistance. This has not always been, and is not always now, recognized as a defect.⁶ The first instinct of the charitable man is to treat the immediate symptom of distress, and in the case of Hospital charity, where the immediate symptom is illness, this tendency is strengthened by the view naturally taken by the medical man.⁷ But from a wider standpoint it has been argued that illness is often a symptom of general distress, sometimes involving a whole family, and therefore only curable if the whole problem of the patient's circumstances is attacked.⁸ This is akin to the modern view that the Hospital as a curative agency should no longer be looked upon as a separate unit, but as a link in the chain of charitable agencies.⁹ The growth of the almoner system shows the extent to which this view is spreading amongst the Hospitals themselves.

79.—There is plenty of evidence, however, that the co-operation is at present very incomplete, for while many Hospitals make considerable use of a large number of charitable agencies, in addition to their own Samaritan Funds, others make no effort at all in this direction, or certainly no systematic effort.

The question whether such co-operation should be organized by the Hospitals themselves, through Almoners or otherwise, or whether it should be attained by the establishment of some external organization, is one which will arise during the discussion of remedies.¹⁰

80.—In this connexion the Poor Law may be considered as a special kind of public assistance, co-operation with which involves problems of its own. But the idea of co-ordination between the Poor Law and charitable agencies is gaining ground, and finds its completed expression in the recommendations of the Majority Report of the Poor Law Commission.¹¹ So far as Hospitals are concerned, however, the fact that the Poor Law has its own medical branch makes it a question of the co-ordination of medical agencies rather than of other forms of assistance, and it will, therefore, be dealt with in the next section.¹²

SEPARATION FROM OTHER MEDICAL AGENCIES.

81.—The arguments against the isolation of medical relief from other forms of charitable assistance point also to the desirability of co-ordination between different agencies for the provision of medical assistance itself, the absence of which causes much overlapping, waste, and

confusion.¹ The principal medical agencies outside the Hospitals are the three kinds of Dispensaries (Provident, Non-Provident, and Poor Law) and the general practitioners. The relations of the Hospitals *inter se* must also be considered.

Non-Provident Dispensaries.

82.—With the Non-Provident Dispensaries we do not propose to deal in any detail. So far as their place amongst medical agencies is concerned, they appear to be analogous to the Out-patient Departments,² differing only in two ways. On the one hand, they are usually staffed by general practitioners instead of consultants, and their equipment is less elaborate.³ On the other hand, they sometimes provide domiciliary treatment as well as treatment at the Dispensary.⁴ Without a special inquiry we can express no opinion on their merits. We must therefore leave open the question how far they can be used to supplement the work either of the Hospitals or of the private practitioners.⁵ At present the relation of the Non-Provident Dispensaries to the Hospitals and to the Provident Dispensaries is said to be one of competition rather than co-operation.⁶

Provident Dispensaries.

83.—With regard to the relations between Provident Dispensaries and Out-patient Departments, the object to be aimed at by co-operation should be, on the one hand, for the Hospital to refer to the Provident Dispensary for future treatment cases of ordinary ailments in which the patient can afford to make provision by periodical payments, and, on the other hand, for the Provident Dispensary to refer to the Hospital cases requiring special diagnosis, advice, or treatment. The extent to which the former method of co-operation is carried out has already been considered.⁷ The latter appears to be rare.⁸ The desirability of some such system of co-operation was recognized by the Central Hospital Council, which in 1905-6 joined with the Metropolitan Provident Medical Association in drawing up a definite scheme for the purpose.⁹ The scheme has, however, not yet been brought into operation. The Hospitals were not unanimous on the subject, some suggesting difficulties in practice; while up to the present time it has proved impossible to prepare a list of a sufficient number of Dispensaries for a general scheme.¹⁰

84.—From the side of the Hospitals complaints are sometimes made that the Provident Dispensaries are not really competent to treat their members properly, or to pay enough for efficient medical attendance and drugs.¹¹ It is said that they consequently send on to the Hospitals cases that seem likely to be troublesome or expensive,¹² while failing to detect those which need specialist advice.¹³ It has been argued that for an efficient system of co-operation the Provident Dispensaries should be affiliated to the Hospitals, so as to benefit by close relations with their consultants.¹⁴ Under such a system it is suggested that the students of the Medical Schools might receive part of their training in Provident Dispensaries thus affiliated, and that this would compensate the teaching Hospitals for any loss of opportunities for medical education that might result from the exclusion of trivial cases from the Out-patient Departments.¹⁵

85.—There is strong evidence that the effect of the competition of the Out-patient Departments with the Provident Dispensaries has been disastrous. The Dispensaries are injured by the offer of free medical treat-

ment for ordinary ailments to the class from which their members come.¹ This is proved by the evidence that they flourish in districts remote from Hospitals but fail in their immediate neighbourhood.²

Cases are reported of Provident Dispensaries which have suffered a marked falling off of numbers after the opening of an Out-patient Department in the same district,³ but have begun to recover when a stricter system of inquiry, by the agency of local medical men, has been introduced by the Hospital.⁴

86.—It is essential to the success of Provident Dispensaries that they should have a large number of members not requiring very prolonged or expensive treatment. They cannot, therefore, prosper so long as the Hospital Out-patient Departments offer free treatment to trivial cases. On the other hand, the Hospitals cannot refuse to treat trivial cases on the ground that they ought to go to Provident Dispensaries, so long as Provident Dispensaries do not exist in the neighbourhood. The British Medical Association lays particular stress on this alleged "vicious circle."⁵

Poor Law Medical Service.

87.—The question of co-operation with the Poor Law medical service depends in like manner on the reference to the Poor Law of cases unsuitable for Hospital treatment, and the reference by the Poor Law authorities to the Hospitals of cases on which a specialist or consultative opinion is needed.⁶

88.—We have already dealt with the question of the unsuitability for Hospital treatment, in respect of ordinary ailments, of those actually in receipt of Poor Law relief and of those too poor to benefit.⁷ We have also noted the fact that many of these are actually treated at the Hospitals,⁸ because of the inadequacy of the inquiry system at the Hospital, or because of the omission to co-operate with the Poor Law authorities.⁹

89.—At present the friction already alluded to between the Hospitals and the Poor Law appears to hamper the reference to the Hospitals of Poor Law cases needing specialist treatment.¹⁰ A considerable number of such cases are no doubt treated by the Hospitals.¹¹ But there is no organized system for the reference of such patients to the Hospitals.¹²

90.—Besides preventing overlapping, co-operation between the Hospital and Poor Law authorities might, according to some witnesses, lead to the opening of the Poor Law infirmaries to the students of the medical schools.¹³ This would give opportunities for the study of chronic cases in the infirmaries, to the advantage, it is urged, both of the patients and of the students.¹⁴ It would also improve Out-patient organization by removing the inducement to keep the Out-patient Department open to destitute cases for the sake of medical education,¹⁵ and it would help to compensate the schools for the loss of teaching material which would result from the exclusion of trivial cases.

Other Voluntary Hospitals.

91.—There is also evidence of serious defects arising from the absence of co-operation between one Hospital Out-patient Department and another. Sometimes criticism is directed to the mere fact that patients attend more than one Hospital at the same time, or pass successively from one to another, or prefer a Hospital far from their homes to one near at hand.¹⁶ Some Hospitals endeavour to prevent this by the reference back of cases which either are or have been attending another Hospital.¹⁷ Some

Hospitals refer to a nearer Hospital (if efficient) those coming from a distance.¹ Many, however, regard these simple forms of overlapping as no great evil. They are attributed to the desire for a change of doctor, to the attraction of a new building, or to a preference for some feature in the management of a particular Hospital;² and strict localization is held to be very difficult, if not impossible, in London, owing to the unequal distribution of Hospitals in relation to population.³ But some restriction on this wandering is desirable as an aid to Out-patient organization.

92.—Far more serious evils result when migration from one Out-patient Department to another is due to want of uniformity in the rules for admission or in the efficiency of the inquiry systems.⁴ If cases refused at one Hospital can readily obtain relief at another, attempts at organization are largely frustrated. In the first place, the reference of unsuitable patients to a more appropriate agency is less likely to be acted upon; and, in the second place, individual Hospitals are reluctant to adopt stricter rules of admission than are generally in force, lest the consequent reduction of numbers, as compared with other Hospitals, should injuriously affect either their appeal to public sympathy or the interests of their medical schools.⁵

93.—As a preventive of either of these forms of migration, the Hospitals have been invited by the Charity Organization Society to co-operate in the Society's scheme for the mutual registration of cases assisted.⁶ This proposal is approved by many witnesses,⁷ and it has been adopted in varying degrees by several Hospitals.⁸ Most witnesses, however, recognize the difficulties arising from the vast numbers of Out-patients,⁹ and some consider these difficulties insuperable.¹⁰ The principle of mutual registration can, however, be applied to a limited extent with comparative ease and yet with considerable advantage. Thus, some Hospitals take part in local systems of registration, such as those in operation in Chelsea, Hampstead, and St. Pancras.¹¹ Others report the cases that receive supplementary assistance through the Almoner or the Samaritan Fund.¹² But a very useful modification, and one which could probably be applied without great difficulty, would be to report to the Registrar cases rejected or referred to other agencies.¹³ These are comparatively few in number, and a record of them in a central register would greatly facilitate the adoption of uniform standards of admission. Further extensions of the principle might well be practicable as the numbers of Out-patients became reduced by improved organization.¹⁴

General Practitioners.

94.—Great stress has been laid by many witnesses upon defects in the relations between the Out-patient Departments and general practitioners. It is said that at present the Hospitals compete with the private doctor in the treatment of ordinary cases, thus injuring him financially and professionally; whereas under a system of co-operation the Hospitals might to a greater extent than at present leave ordinary cases to the general practitioner and encourage him to send up to them difficult cases needing specialist advice or treatment. By thus developing the consultative side of their work, it is urged, the Hospitals would raise, instead of lowering, the standard of medical attendance on the poor in their neighbourhood.

95.—The question whether the Out-patient Departments actually compete with the general practitioners is, to a great extent, only another aspect of the question whether they are abused through the admission for

ordinary ailments of patients able to pay for their treatment. We have already stated that, in our opinion, competition with respect to well-to-do patients is rare;¹ but that in the case of patients able to pay small fees or to join Provident Dispensaries, the competition is not inconsiderable where no complete system of inquiry exists.² It is recognized by the British Medical Association that this is due to the "glamour" of the Hospitals rather than to any spirit of competition in the Hospital itself.³

96.—Very serious results are attributed by witnesses to this competition. In the first place, it is said to compel the private doctor to lower his fees in order to retain patients.⁴ Witnesses have spoken of fees being reduced from 2s. 6d. to 1s., to 6d., and even to 3d. a visit.⁵ In order to make a living out of such charges the doctor is obliged to see a very large number of patients and can give but little attention to each,⁶ quite apart from the question of giving time to study. Under these circumstances his professional status and efficiency degenerate, to the great disadvantage of the poor.⁷

97.—Other witnesses, however, deny that under the present inquiry system there is any serious competition between Hospitals and general practitioners.⁸ It is maintained that competent doctors find no difficulty in making a reasonable income, even in the neighbourhood of Hospitals;⁹ and that where low fees exist they are due to purely economic causes—to competition within the profession, to the demand for a cheap form of doctoring, and to the profits to be made out of it.¹⁰ But it seems impossible to doubt that the competition which we have already found to exist, as the result of the incompleteness of the inquiry systems, must have, to some extent, the effect attributed to it.

98.—Again, Hospital competition is said to affect injuriously the medical treatment of the poor by general practitioners, in that it makes the latter reluctant to send difficult cases to the Out-patient Departments for a second opinion. They are said to find that the Hospital often retains such cases, so that the private doctor loses not only the individual patient but also the connexion of his family and friends.¹¹ Such reluctance would be largely removed if active co-operation were substituted for competition.¹²

99.—As a matter of fact a good deal has been done in recent years to reduce competition and encourage co-operation. This is one of the results of the employment of Hospital Almoners.¹³ But, taking the Hospitals as a whole, there is as yet no organized system of co-operation either in regard to the reference to general practitioners of ordinary patients suspected of not being suitable for Hospital treatment, or in regard to the method of dealing with cases coming to the Out-patient Departments with recommendations from medical men.

100.—A good many Hospitals communicate with general practitioners in certain cases either as part of the inquiry into the patient's circumstances or as the result of such inquiry. At some this takes place in the case of all patients who are discovered to have been under the care of a private doctor.¹⁴ Sometimes the patient objects to this, preferring that his own doctor should not know he has sought a second opinion;¹⁵ but the system is found to have the great advantage of encouraging private doctors to send up difficult cases.¹⁶ It does not appear that where there is reasonable ground for the patient's wish to have

a second opinion, the doctor refuses to concur, except from fear of Hospital competition.¹

101.—At many Hospitals an inquiry of the patient's doctor (if any) is a regular part of the process of investigation into financial circumstances, the patient being referred back to the doctor if ultimately found to be able to pay.² Sometimes reference to a private doctor takes the place of inquiry—the rule being that all doubtful cases are told that they can only be treated if they bring a recommendation from some general practitioner.³

102.—One Hospital states that of the patients referred to their own doctor for an introduction the majority do not return though an appreciable number do;⁴ another finds that more than half return with an introduction from the doctor.⁵

103.—With reference to cases recommended by general practitioners there is no uniformity of procedure. At a good many hospitals such recommendations admit the patient without inquiry. At some they give him preference over other patients. At St. Thomas's, where the recommendations ensure access to the visiting staff, nearly one-fourth of the out-patients proper are sent by private doctors.⁶ The numbers thus recommended seem to vary considerably at different Hospitals,⁷ this form of co-operation being specially encouraged at Hospitals with almoners;⁸ while at teaching hospitals former students often send up interesting or difficult cases.⁹ It is probable that the records are not complete, and that, for instance, a good many patients recommended by firms or other subscribers are sent on the advice of a doctor;¹⁰ but after allowing for this it is evident that there is not as much co-operation in this way as there might be. The private doctors' reluctance has already been alluded to. From the Hospital point of view it is doubtful whether a doctor's recommendation should excuse inquiry. It is alleged that general practitioners sometimes send on any case which involves more than the simplest form of treatment;¹¹ or that, in their desire to oblige private patients, they do not pay sufficient attention to the question whether the patient they recommend can afford the reduced fee of a private consultant.¹² But there is no reason why such cases should not be inquired into.¹³

From the doctor's point of view, the reluctance to co-operate might be expected to diminish with every step towards the prevention of the existing competition.

104.—It has been suggested by medical witnesses that from the point of view of medical education closer co-operation with general practitioners would be an advantage in two ways: first, that it would increase the proportion of interesting cases sent to the Hospitals;¹⁴ and, second, that it would continue the education of the private doctor by keeping him in touch with the Hospital consultant.¹⁵

VI. GENERAL OBJECTS TO BE AIMED AT IN REFORM.

105.—The foregoing discussion of the various defects of the existing Out-patient system points to the conclusion that any scheme of reform should aim at the following general objects:—

- (i) The reduction of numbers, partly by the exclusion of those able to pay for medical treatment or to make provision for it by provident methods, and of those too poor to benefit by it; and partly by the discouragement of the attendance of trivial cases.

- (ii) The development of the consultative side of Hospital work, and the encouragement of co-operation with general practitioners and other agencies for medical assistance.
- (iii) The co-ordination of Hospital assistance with general charitable work and with the Poor Law and other forms of public assistance.
- (iv) The provision of adequate safeguards for the interests of medical education and the development of medical science.

The various remedies suggested by witnesses will be considered in relation to these objects.

VII. EVIDENCE AS TO SUGGESTED REMEDIES.

106.—Safeguards against abuse and remedies for the other defects mentioned may be sought in two directions: first, in the internal organization of each Hospital; and second, in the external organization of medical assistance. Under the first class of remedies free access to the Out-patient Departments would be permitted to all patients, the Hospital providing within its own walls, and having under its own control the machinery for sifting the patients, and for co-operating with other agencies. Under the second class the sifting would be done by some external agency, on whose recommendation alone patients would be admitted to the Out-patient Department.

107.—Of the various safeguards and remedies at present in operation in the Out-patient Departments of different Hospitals, the following are the most important:—

- (1) Admission by subscribers' letters;
- (2) Payment by patients who can afford it;
- (3) Inquiry into patients' circumstances;
- (4) The limitation of the numbers selected for the visiting staff in any one day; and
- (5) Admission only on the recommendation of an outside general practitioner.

SUBSCRIBERS' LETTERS.

108.—Subscribers' letters have been abandoned at most of the Out-patient Departments, and where they are retained it is usually on the plea that they are valued by subscribers, and so assist in raising funds.¹ Since, however, at some Hospitals they confer privileges, such as exemption from inquiry into patients' circumstances, a remission of patients' payments, or a guarantee of access to the visiting staff,² it is evident that they are still used as a test of medical or financial suitability.³

109.—But the general opinion is in favour of their abolition.⁴ The trouble of obtaining them frequently constitutes a hardship on the patient.⁵ They are often given without adequate knowledge of patients' circumstances, and thus lead to the admission of unsuitable cases.⁶ We therefore recommend the abolition of the use of such letters.

PATIENTS' PAYMENTS.

110.—Patients' payments may be regarded as a precaution against abuse in two ways. In the first place unsuitable persons who might be attracted by an offer of free treatment may not be attracted by any less favourable offer. Against this, however, must be set the risk that unsuitable persons who would not care to accept charity may have less hesitation when they are paying something towards the cost. In the second place, persons unsuitable for free treatment may yet be suitable for treatment at a rate of payment below that charged by private doctors. Theoretically the question may seem merely one of amount. So long as the payment at the Hospital does not approach that asked by private doctors, it may lessen the risk of pauperizing the patient, and yet not increase the risk of competition with the general practitioner. Thus it is claimed by some witnesses that

a payment of 3d. per attendance does not compete with the charges of a private doctor,¹ although others admit that a charge of 6d. in respect of ordinary ailments might do so.² The narrowness of the line thus drawn shows how dangerous the principle may be, even when it is fully understood that the payment is only for medicines and dressings,³ that all other expenses are borne by the Hospital,⁴ and that the medical attendance is for the most part honorary. But it is said that there is a tendency amongst patients to believe that the payment covers medical attendance and other expenses as well, and that they are in no sense recipients of charity⁵; and many witnesses hold that in these circumstances even a 3d. payment competes unfairly with the charges of local doctors,⁶ and discourages provident methods.⁷ On this subject the members of the Central Hospital Council were equally divided.⁸

111.—At special Hospitals, where the comparison is between the patients' payments and the minimum fee of the specialist, and a higher charge can be made without risk of competition, a system of payment according to the means of the patient is sometimes in force.⁹ But the same general arguments for or against patients' payments apply also to these, and the objections on the part of medical witnesses have been equally strong.¹⁰

112.—On the whole, we are of opinion that the system of payments might advantageously be abolished.

INQUIRY OFFICERS AND ALMONERS.

113.—Inquiry into patients' circumstances by officers of the Hospital is the principal method at present in force of controlling the admission of patients by means of internal organization.

114.—There are two principal methods of investigation, one by means of an Inquiry Officer whose energies are directed solely to the prevention of abuse; the other by an Almoner (usually a lady) whose inquiries have the additional object of ascertaining whether supplementary assistance is needed, and of putting the patient in the way of obtaining such assistance.¹¹

115.—Of these two types the Inquiry Officer pure and simple is the earlier, the Almoner representing a later development.¹² Of the 12 general Hospitals with schools, three have Inquiry Officers only (and of these, one leaves the ultimate decision to the secretary), six have Almoners only, another has "Lady Out-patient Visitors," and two have both Almoners and Inquiry Officers. Of the 16 other general Hospitals without schools, four have Almoners, two have Inquiry Officers, four entrust the investigations to their secretaries, one to a resident medical officer, one to a nurse, and one to a registration officer. Three report that they have no inquiry system, but of these one admits Out-patients solely on the recommendation of private doctors.¹³

116.—In the special Hospitals the inquiry systems are less well developed. Amongst 37 Hospitals only four have Almoners, of whom three are at Children's Hospitals, while no fewer than 21 entrust the decision in doubtful cases to the secretary, with or without the assistance of clerks or Inquiry Officers.¹⁴

117.—The extent to which an unorganized system of inquiry is necessary at any particular Hospital depends on the size of its Out-patient Department. It is undesirable that the duty of deciding as to the suitability of patients, whether for free or for part-pay treatment, should be in

the hands of any officer who is concerned with the raising of funds for the Hospital, or whose business it is to consider the effect of Out-patient statistics, or of patients' payments, on the financial prospects of the institution.¹

118.—The qualifications of the "Inquiry Officer" vary at different Hospitals. At some he is little more than a registering clerk,² at others he is a skilled investigator, sometimes with the general experience of an ex-police inspector³; sometimes with a special knowledge of the immediate neighbourhood of the Hospital, which is of the greatest value.

119.—The "Almoner" is usually a lady,⁴ trained by the "Hospital Almoners' Council" upon definite and uniform lines.⁵ This Council, like the Almoner system itself, was founded by the Charity Organization Society,⁶ but it has recently been reorganized on a representative basis.⁷ The training is partly theoretical, consisting of lectures on sociology, hygiene and physiology; and partly practical, consisting of general charitable work in a district office of the Charity Organization Society, and of Hospital work in the office of a Hospital Almoner.⁸ But when the training is completed, the Almoner becomes responsible solely to the Hospital which employs her.⁹

120.—The principles upon which Almoners are trained to work include: (1) the prevention of abuse by referring unsuitable cases to an appropriate agency, (2) the supplementing of Hospital treatment by securing the aid of other charities and the co-operation of the patient himself, (3) the encouragement of thrift in the form of provision against future sickness, (4) the development of the consultative side of Hospital work.¹⁰ In all her work the Almoner is expected to act in close touch with the medical staff of the Hospital, no case being refused or referred elsewhere without medical sanction.¹¹

121.—With regard to the relative merits of "Inquiry Officers" and "Almoners," it seems to be more and more recognized, so far at least as the larger Hospitals are concerned, that the merely negative investigations of the former are insufficient, and that the positive activities of the latter are necessary.¹² This is admitted even by such witnesses as dislike the methods of the present Almoners.¹³

It is evident that the Almoner system is well adapted to the prevention of many of the defects already discussed, bringing, as it does, the Hospital work into touch with home conditions, with the past history of the patients, with other charitable and medical agencies, and with general practitioners.¹⁴ Some witnesses, however, have expressed the fear that the side of the Almoner work which deals with the prevention of abuse is liable to be hampered by the more positive side,¹⁵ and to be less efficiently performed than it would be by ordinary Inquiry Officers. On the other hand, we have instances of an Almoner having discovered abuse which had been passed over by an Inquiry Officer;¹⁶ and we find that amongst the great Hospitals with schools, the numbers of cases excluded are comparatively small at those without Almoners.¹⁷ It should be remembered that the principle of the reference of unsuitable cases to more appropriate agencies, which is the special work of Almoners, prevents abuse by enabling a stricter standard of suitability to be applied without hardship to patients. Again, the exclusion of cases too poor to benefit by Out-patient treatment is better enforced after it has first been ascertained that it is impossible to supplement the Hospital treatment by other appropriate charitable assistance.

In both these directions therefore the twofold function of the Almoner actually assists in the exclusion of the unsuitable.

¹¹ The term "Almoner" does not appear to indicate the nature of the work of the official so named. It suggests rather the distribution of relief than the prevention of abuse or even the promotion of co-operation between charitable agencies. Nevertheless its meaning is well understood by those who use the word.

¹⁷ Statistical Appendix, Sec. B, cols. 7 and 10.

122.—On the whole the evidence seems to prove that the system of inquiry through Almoners (either alone or supplemented by ordinary Inquiry Officers) has been very useful both in preventing the abuse of the Out-patient Departments and in remedying some of their other defects, and the question arises whether all that is necessary is to extend the system till the whole field is covered.

123.—As to the possibility of a sufficient extension of the system, it is evident that a large increase in the number of Almoners would be required, and that the expense would be considerable.

124.—Thus the London Hospital, which has at present five Almoners, besides an Inquiry officer and an Out-patient Superintendent, estimates that 15 would be necessary, at a total cost of £3,000 a year, and that even then the Casualty Department would be untouched.¹ At St. Thomas's, where the Casualty Department is partly investigated and the number of Out-patients proper is limited, there is a staff of nine, besides voluntary workers.² Charing Cross has one, and states that it would require three if the Casualty Department as well as the Out-patient Department was to be covered.³ The Metropolitan would want four.⁴ St. Bartholomew's⁵ and the West London⁶ find the cost of Almoners the chief obstacle to reorganization—the salary being usually £100 or £120, rising to £200.⁷ St. Mary's, in order to investigate the Casualty Department, feels the need not only of more Almoners, but also of more accommodation,⁸ and the latter difficulty occurs at the Royal Free and to some extent at St. Thomas's.⁹ Some increase of expenditure would therefore be unavoidable in most cases, but it would appear that the Hospitals with Almoners consider them well worth their cost, partly because of what they save by the prevention of abuse, and partly because of the increased value of Hospital treatment when supplemented by the various other forms of assistance which the trained Almoner knows how to secure.¹⁰

125.—The chief difficulty in establishing a complete inquiry system lies in the large number of patients that present themselves. It is estimated that one Almoner cannot satisfactorily deal with more than about 25 cases a day.¹¹

But the mere presence of an Almoner tends to deter unsuitable cases from applying, and so diminishes the work to be done.¹²

126.—The preliminary investigations of an experienced Inquiry Officer would reduce the pressure on the Almoner's Department. Sufficient particulars to justify the exclusion of the more obviously unsuitable cases can often be obtained by an officer moving about amongst the patients in much less time than is required for the private interviews with the Almoner, and there is therefore a good deal to be said for this form of "double sieve."¹³

LIMITATION OF NUMBERS.

127.—We have already described the system,¹⁴ adopted at several hospitals, of limiting the numbers of new patients reserved for the visiting physicians and surgeons in attendance, on any one day. The cases selected for these purposes are, of course, the most serious of those presenting themselves. The cases not so selected are, according to their seriousness, either treated by the resident or junior staff, or given a preferential chance of selection for the visiting staff next day.¹⁵

128.—The advantage claimed for this system is that it draws a clear distinction between patients that need the consultant and patients that do not. Provided that the selection is in the hands of fully competent medical officers, it ensures that all serious cases come under the direct

care of the consultant himself,¹ relieves them of much of the liability to long hours of waiting, and enables the Almoner to give them special attention. As evidence that it does not cause any hardship, we are told that at St. Thomas's the maximum number (19) is seldom reached.² But it does not in itself relieve the crowding of the receiving room and the pressure on the staff responsible for selecting the more serious cases and treating the less serious,³ or facilitate the inquiries of the Almoner into ordinary cases, except in so far as the knowledge that only the more serious cases will be attended to by the consultant may deter the more trivial from applying unnecessarily.⁴

EXTERNAL SIFTING BY GENERAL PRACTITIONERS.

129.—There are many witnesses, however, who are doubtful whether the extension of the system of inquiries by "Almoners," accompanied or not accompanied by a limitation of numbers, would be adequate to secure the necessary reforms. The alternative plan is therefore put forward, of entrusting the sifting of patients to some external agency, and thus limiting the applicants to the Hospitals to those who are *prima facie* suitable either medically or financially or on both grounds.

130.—In support of this policy it is urged that the Almoners alone are not successful in preventing abuse,⁵ and that it is extremely difficult to turn away patients when once they passed the doors of the Hospital.⁶ It is also suggested that the Almoner tends to decide too much on financial grounds, and therefore to admit patients who are medically unsuitable, while excluding patients requiring Hospital treatment.⁷

131.—The proposal usually takes the form that admission to the Out-patient Departments should, except in cases of emergency, be confined to patients recommended by medical practitioners, including private doctors, dispensary doctors, and Poor Law medical officers.⁸ Under this system, as put before us by the British Medical Association, every one would have access to a general practitioner, either privately or through a provident or Poor Law Dispensary, who would treat all ordinary or trivial ailments;⁹ while in cases presenting difficulty in diagnosis or requiring special treatment the general practitioner would send the patient to the Hospital for consultative advice.¹⁰ The Hospital would report on the case to the private doctor, and would not retain it for treatment except where special skill or expensive apparatus was required.¹¹ In all other cases it would be left to the general practitioner to see to the carrying out of the treatment advised by the Hospital consultant.¹²

132.—The arguments in favour of the proposal for external sifting by general practitioners may be summed up as follows:

- (1) That abuse would be prevented, because no general practitioner would recommend any one, at all events in respect of an ordinary ailment, who was able to pay a private doctor or join a Provident Dispensary, or was already provided for by the Poor Law. It is admitted,¹³ however, that the Hospital would still have to protect itself by means of Almoners against the recommendation of patients able to pay consultant's fees.
- (2) That overcrowding would be prevented together with the other evils that result from the admission of ordinary or trivial cases. That the treatment of patients for ordinary ailments would be conducted by doctors familiar with their home conditions and past history, and that in special cases the same doctors

would be able to see that the treatment advised by the Hospital was duly carried out.

- (4) That co-operation with general practitioners would take the place of competition, and the reluctance of the private doctors to send difficult cases to the Hospitals would disappear.
- (5) That a great step would thus be taken towards the co-ordination of the whole medical service of the poor. The Hospital would fulfil its most valuable function as a consultative centre, to the great benefit of the patients, both directly, through the provision of the special advice or treatment they might need, and also indirectly through the increased efficiency of the general practitioners, who would be kept in touch with the leaders of their profession and the most recent advances of science.

133. It is obvious that the attainment of these ends by this means depends upon the soundness of certain assumptions.

134.—The first assumption is that all patients would be in a position without undue hardship¹ to obtain access to a general practitioner, either privately or through dispensaries, or through the Poor Law.

This assumption involves the existence, as part of the scheme, of a sufficient number of Provident Dispensaries to meet the needs of all who cannot afford ordinary fees.² It further presupposes either the non-existence of any class intermediate between those able to join Provident Dispensaries and those suitable for the Poor Law,³ or else the existence of charitable or public agencies by whose assistance the members of that class will be enabled to make provision.⁴

Should there be an absence of sufficient Provident Dispensaries, the advocates of the scheme would meet the difficulty by allowing free access to the Out-patient Departments for a time, though with preference to recommended cases, and subject to strict inquiry by Almoners. This would give time for the Provident Dispensaries to be developed on a scale adequate to their function under the scheme.⁵

135.—The second assumption is that the general practitioner could be relied upon to detect the cases which required a second opinion or special treatment, and send them to the Hospital.⁶

In so far, if at all, as the general practitioners accessible to the poor may be at present less reliable in this respect than the Casualty Officers at the Out-patient Departments,⁷ it is argued that their competence would improve under the system.⁸ Here again the suggested transitional period might assist in preventing hardship,⁹ but some witnesses would provide permanently for a means of appeal from the decision of the private doctor either to the Hospital¹⁰ or to some representative authority representing non-medical interests.¹¹

136.—The third assumption is that the general practitioners could be relied on to determine on uniform principles the best means of dealing with patients, whether from the medical, the financial or the sociological point of view. For it would be to the general practitioners that the control of the future policy would be entrusted, in many of the matters in respect of which reforms are at present urged upon the Hospitals. They would in effect be responsible for determining the kind of cases, medically speaking, which should be admitted to the Out-patient Departments; the financial level which should distinguish the classes suitable for provident, charitable or Poor Law

agencies respectively; and the extent to which the administration of medical assistance should keep in view collateral objects such as the encouragement of thrift, co-ordination with other forms of charitable work, or the interests of medical education and the advancement of medical science.

This statement must, of course, be modified to some extent in the case of those witnesses who would associate with the scheme some representative authority for the co-ordination of medical assistance.¹

137. Satisfactory assurances on all these points would seem to be necessary, from the point of view of the Hospitals, of the patients, and of the charitable public, before any proposal could be accepted to transfer from the Hospitals to an outside agency the sifting and selection of patients. We are not satisfied that the case for entrusting the selection to general practitioners has been made out.²

138.—Our doubts on these points have not been removed by a study of the evidence as to the Bolingbroke Hospital, which is referred to by advocates of the system as an example of its operation in practice.³ Here the Out-patient department is purely consultative: patients are seen only on the recommendation of a medical man, and even then they are not treated at all unless special skill or apparatus is required, but are referred back to the general practitioner with a report from the Hospital doctor.⁴ We have evidence that, as far as it goes, this system works well; that it satisfies the local doctors, the subscribers, and the patients who belong to friendly societies and clubs;⁵ that the system is favourable to the development of Provident organizations; and generally that this Hospital is free from many of the abuses and other defects to which open Out-patient Departments are liable. But it does not appear that the Bolingbroke system comprises any provision for securing to patients access to other charitable agencies. The attitude of the Hospital itself, so far as this aspect of the question is concerned, is purely passive. It makes no inquiry as to the financial suitability of the patients;⁶ the question whether a particular patient should join a Provident Dispensary is looked upon as a personal matter between patients and individual private doctors,⁷ who may or may not decide such questions on uniform principles. It is assumed that all patients who are ineligible as having no private or dispensary doctor are proper subjects for the Poor Law;⁸ but it is admitted that they may go to other Hospitals.⁹

The Hospital Out-patient Department acts (apart from casualties and operations) merely as a consultant centre for patients who are unable to pay for specialist advice, but are able to secure the services of a general practitioner to carry out that advice. We have no reason to suppose that it does not perform this function usefully and efficiently. But in the absence of any system of local co-ordination, and of any evidence as to the method by which those who are excluded from the Bolingbroke Out-patient Department obtain their treatment for ordinary ailments, there is nothing to show that it meets the whole of the legitimate Hospital requirements of all classes in its district, or that the introduction of similar methods into all Hospitals would not leave large classes unprovided for. The fact that St. Thomas's Hospital, with its comparatively well-developed Almoner system, treats as many cases from the Bolingbroke district as does the Bolingbroke itself,¹⁰ is alone sufficient to render this extremely doubtful.

CO-ORDINATING AGENCIES.

139.—Several witnesses have expressed the opinion that for any effective organization of the Out patient Departments the establishment of some agency for the co-ordination of medical assistance is required. Such an agency

¹⁰ Prior, 2145, but cf. 2052-2056; Roberts 4111 1 (a) and (b) and Statistical Appendix, Sec. A, col. 2.

would, it is said, supply a remedy for the want of uniformity now existing between one Hospital and another, for overlapping, and for the isolation of medical agencies from other forms of charitable or public assistance.¹

140.—At present no such co-ordinating agency exists. There are, however, various bodies which perform, either directly or incidentally, some of the functions of such an agency.

141.—From time to time there have been conferences between the various Hospitals,² and between Hospitals and other bodies such as the British Medical Association,³ and quite recently a British Hospitals Association has been formed, part of whose function it is to organize conferences on Hospital matters.

In 1892 the formation of a Central Body was recommended by the Select Committee of the House of Lords,⁴ and in 1897 a Central Hospital Council was formed representing 18 of the leading Hospitals.⁵ This Council has made recommendations on such subjects as the appointment of inquiry officers, and the definition of the term "Casualty patients"; and in conjunction with the Metropolitan Provident Medical Association it drew up in 1905-6 a scheme of co-operation between Hospitals and Provident Dispensaries.⁶

The three Hospital Funds—the King's Fund, the Hospital Sunday Fund, and the Hospital Saturday Fund—have used their influence in the past to secure uniform statistics of Out-patients,⁷ and, in the case of the two first mentioned, the appointment of inquiry officers.⁸

142.—In the sphere of general charity a co-ordinating agency already exists in the Charity Organization Society,⁹ whose services in the initiation of the Almoner system, the training of Almoners, and the organization of the mutual registration of assistance, have already been referred to. Agencies of a more generally representative character have been established in certain districts of London in the form of Councils of Social Welfare,¹⁰ and there is a Central Association of Councils of Social Welfare for the promotion of this movement.¹¹ The Majority Report of the Poor Law Commission contemplates the establishment of Central and Local Voluntary Aid Committees¹² to work in co-operation with the Public Assistance Authorities which under their scheme would take the place of the present Poor Law Authorities.¹³ In association with these authorities, the scheme also proposes Central and Local Medical Assistance Committees representing Hospitals, Poor Law infirmaries, Provident Dispensaries, General Practitioners, Public Health Authorities and the Public Assistance Authority.¹⁴ The Majority Report, therefore, contemplates the machinery for a complete co-ordination of medical and charitable assistance.¹⁵

143.—At present, however, the work of co-operation between one Hospital and another, and between Hospitals and other agencies, lies chiefly in the hands of the Almoners, acting in concert with the medical staffs; and the reconstitution of the Hospital Almoners' Council, on a representative basis, is a further step along this line of co-ordination.¹⁶ The Council is to consist of representatives of Hospitals, of the medical staffs of Hospitals, of the Charity Organization Society, and of the trained Almoners and other persons interested in the work of Hospitals and kindred charities.

VIII. CONCLUSIONS AS TO REMEDIES.

DEVELOPMENT OF ALMONER SYSTEM.

144.—The evidence leads us to the conclusion that the most practicable method of remedying the defects of the

Out-patient Departments lies in the development of the Almoner system. This development should have in view three main ends. First, the reference to appropriate agencies, of cases unsuitable for the Out-patient Departments; second, co-ordination with other forms of medical and charitable assistance; third, co-operation with general practitioners so as to encourage the use of the Hospitals for consultative purposes.

145.—A question arises as to whether the Almoners themselves should undertake all this work, or whether they should utilize existing agencies. It seems to us that there might be some danger of the Almoner travelling beyond the province of the Hospital as an institution for medical relief,¹ if he or she did all the work personally. It seems preferable that the Almoner should utilize existing agencies,² especially where there is any local machinery of co-ordination in existence.³ As the co-ordination of charitable or public assistance in any area develops, the Hospitals will thus be ready to take their place in the organization. The Almoners' aim should be to provide a link between the Hospital and general charity.

146.—Co-operation between Hospitals and general practitioners, with the consequent encouragement of the use of the Hospital as a consultant centre, can, we believe, be developed to a very considerable extent through the agency of the Almoners. We have been struck with the way in which the existing Almoner system has been utilized for the purpose at some Hospitals. It is part of the regular practice of the Almoner to communicate with the doctor if the patient has one, and the case is often referred back to him (subject to the consent of the Hospital doctor) if he is in a position to treat the ailment. At King's College Hospital the Almoner keeps a card index of patients recommended by medical men,⁴ and no future application from such a patient, or from his family, is knowingly entertained without reference to the medical man. This is stated to have led to an increase in the number of cases sent up by private doctors for special advice or treatment.⁵ It seems to us that good results might be expected from an extension of this practice.

147.—This co-operation should be effected by three methods, which between them would cover all the cases where the general practitioner could have any grievance:

- (i) In the case of a patient who has no doctor:—by referring the patient to a private doctor, Provident Dispensary or Poor Law dispensary, whenever the financial circumstances, combined with the nature of the ailment, rendered such a course appropriate.
- (ii) In the case of a patient who has a doctor, and comes without a recommendation from that doctor:—by communication with the doctor. Such communication would take the form of a reference back to the doctor if the case was one which could be adequately dealt with by him, and a report to the doctor if the case needed special diagnosis, advice, or treatment.
- (iii) In the case of a patient who comes with a doctor's recommendation:—by reporting to that doctor on the case; and keeping a record of the fact that the patient has a doctor, for use in the event of the patient subsequently attending without a recommendation.

The carrying out of these methods would be the work partly of the Almoner and partly of the Hospital doctor or his assistants, but (as at present) no action should be taken by the Almoner without the knowledge and consent of the Hospital doctor.

148.—The interest of the patients would be safeguarded, as well as those of the Hospital and of the general practitioners, if the actual arrangements took the following form:

- (1) In cases where the Hospital doctor advised treatment at the Out-patient Department, the Hospital to inform both the patient and the general practitioner of this fact. The patient

¹ Buckle, 283; Glenton-Kerr, 668-9; cf. Kemp, 1374.

² Kemp, 1375, 1383, 1386-92.

³ Holland, 49, 53; Loch, 745.

⁴ Tirard, 4173/11, 12, 14, 17.

⁵ Tirard, 4173, 17.

then to be at liberty to come again for treatment if he wished to do so, until such time as he was well enough to be referred back to the general practitioner.

- (2) In cases where the Hospital doctor considered that the patient could be adequately treated by the general practitioner, the Hospital also to inform both the patient and the general practitioner of the fact; but the patient would then not be admitted to the Out-patient Department.

149.—The development of the Almoner system, on a scale sufficient for the application of these principles throughout the Hospitals of London, is largely a question of finance. We consider that expenditure in this direction would be so beneficial that it would give the Hospitals an added claim on the charitable public.

150.—The work of the Almoners, however, if it is to be successful, requires to be supplemented by two other reforms—first a reduction of numbers through the exclusion, by the Hospital doctors, of those unsuitable on medical grounds for Hospital treatment; and, second, the provision of sufficient Provident Dispensaries or other means of securing medical attendance for ordinary ailments by provident methods. In addition to these, some further development of general co-ordination between Hospitals and other agencies is desirable; while finally it is essential that the interests of medical education and the advancement of medical science should be safeguarded.

LIMITATION OF NUMBERS.

151.—The reduction of numbers by the exclusion on medical grounds of cases unsuitable for Hospital treatment would, in our opinion, be both practicable and beneficial. It would require the adoption of a deliberate policy, both in the Out-patient Department proper and in the Casualty Department. In the Out-patient Department proper, we recommend the extension of the practice already described as being in operation at some Hospitals,¹ where fully qualified medical officers select each day a limited number of the more serious cases, in proportion to the number of members of the Visiting Staff in attendance. In selecting such cases regard would naturally be paid to recommendations from general practitioners,² which should of course be the subject of inquiry by the Almoner.

152.—The cases not so reserved will naturally be less serious, and therefore more likely to be within the capacity of the ordinary general practitioner. They may have to be treated by the medical officer of the Hospital, but the attitude of both Almoner and medical officer to them should be that unless there is good reason to the contrary they should for continuous treatment be referred to a general practitioner. This, it should be noted, amounts to a reversal of the usual attitude at present, which is to retain them at the Hospital unless there is clear evidence to the contrary. This change of attitude would itself greatly conduce to good relations with general practitioners.

153.—There will remain the cases which are now usually treated in the Casualty Department, namely, the emergency cases that cannot wait for the visiting staff, and the trivial cases which can be disposed of so quickly that they are, as a rule, neither reserved for the visiting staff nor inquired into by the Almoner. The former must, of course, be treated once at all events. The latter, however, should, in our opinion, be sent away untreated,³ except where there is any element of urgency or risk, in which case "first aid" must, of course, be given.⁴ This class of case, we consider, is unsuitable for Hospital treatment for two reasons: In the first place, the resources of a great Hospital should not be employed upon an utterly trivial ailment when they are already strained to the utmost to cope with more important work.⁵ In the second place, such an ailment can be treated by a private doctor at so small a cost that the patient who is unable to meet that cost must be practically destitute, and should be provided for by the Poor Law.⁶ The extra work involved in ascertaining whether the patients should be treated or be sent away would soon be saved by the reduction of

numbers that would follow when the practice became generally known.¹ Cases where there is any doubt, either as to the triviality of the ailment or as to the financial position of the patient, should be referred to the Out-patient Department proper, where they would come within the cognizance of the Almoner.

154.—It will be seen that this suggestion implies a rather more detailed, but, at the same time, a much clearer subdivision of patients, than the present haphazard classification into Casualties and Out-patients proper. Whatever the nomenclature adopted, or whatever the number of separate departments provided for in the Hospital building, four classes of patients should be recognized instead of two:—

- (1) The emergency cases, or true casualties.
- (2) The trivial cases.
- (3) The cases of ordinary ailments, not trivial, but not serious enough for the visiting staff.
- (4) The serious or otherwise special cases selected, up to a limited number per day, as needing a consultant's advice or treatment.

The first would be treated once as emergencies, and would subsequently fall into one of the other classes.

The second would, wherever possible, be sent away by the medical officer untreated.

The third would be treated once, if necessary, in the Out-patient Department, but would not be retained unless the Almoner, acting in concert with the medical officer, was convinced that access to a competent private or dispensary doctor was impossible.

The fourth would be reserved for the thorough examination both of the medical staff and of the Almoner.

DEVELOPMENT OF PROVIDENT AGENCIES.

155.—The provision of adequate Provident Dispensaries is undoubtedly a necessary condition of any effective reform of the Out-patient Departments. But there is little doubt that the comparative scarcity of such provision at present is largely due to the competition of the Out-patient Department as now organized, and this competition would be greatly reduced if the reforms we have recommended were put into operation. We feel confident that a general recognition of the advantages, both to the patients and to the Hospitals, of a transfer of a great deal of the present out-patient work to provident agencies would lead to the provision of the necessary facilities. Certainly such provision, whether it resulted from professional or charitable effort or from some scheme of National Insurance, would greatly assist in the reform of the Out-patient Departments.

DEVELOPMENT OF CO-ORDINATION.

156.—For successful out-patient reform there is also required some better general co-ordination than at present exists amongst the Hospitals themselves and between the Hospitals and other agencies of assistance, both medical and non-medical. Co-ordination between Hospitals is required in order to secure uniformity as regards the standard of suitability of patients. It is useless for some Hospitals to adopt a standard for admission which other Hospitals ignore. Co-ordination between Hospitals and other medical agencies is necessary in order that exclusion may not be a mere refusal of assistance, with the risk of injury to the patient, but may take the form of reference to a more appropriate agency; and also to secure that all classes of case are provided for. Finally, co-ordination between Hospitals and other charitable agencies is necessary for the purpose of supplementing the mere medical treatment wherever illness is caused or accompanied by other forms of distress, and in order to ensure that reference to the Poor Law is only resorted to in cases that are beyond the reach of voluntary assistance. We consider, therefore, that Hospitals should co-operate as far as possible with any well-considered movement in the direction of co-ordination either amongst themselves or amongst the agencies for charitable or public assistance generally.

SAFEGUARDS FOR MEDICAL EDUCATION.

157.—In any system of out-patient organization it is essential that the interests of medical education and the advancement of medical science should be safeguarded.

PART II. GENERAL CONCLUSIONS.

1.—Consideration of the original objects of the Out-patient Departments leads to the following conclusions as to their function, the classes suitable for admission, and their relation to other agencies:

- (A) The Out-patient Department is and has always been intended for the provision of effective medical attendance for persons unable to pay for the particular form of treatment required by the ailment from which they are suffering.
- (B) The modern Out-patient Department, while available for patients unable to provide for ordinary ailments, is specially fitted for three functions:
 - (i) To provide (in the Casualty Department) immediate treatment for sudden and serious accident or illness.
 - (ii) To provide (in the Out-patient Department proper) special diagnosis, advice or treatment where these are necessary.
 - (iii) To assist medical education and the advancement of medical science.

2. The chief alternative agencies for affording relief of the kind supplied by the Hospitals are the following:

- (i) Private Consultants.
- (ii) Private general Practitioners.
- (iii) Provident Dispensaries.
- (iv) Non-provident Dispensaries.
- (v) Poor Law Dispensaries.

The question what classes of persons should be discouraged from attending the Out-patient Department must be considered in relation to these various alternative agencies.

3.—Use of the Out-patient Departments by the well-to-do is not common. When it is attempted, the existence of inquiry officers and the vigilance of the medical staffs prevent it at the majority of the Hospitals.

4.—Use of the Out-patient Departments for ordinary ailments by persons able to pay small fees to doctors is in some degree prevented by the inquiry system, but it probably exists to quite an appreciable extent, owing to the fact that the inquiry systems reach only a small proportion of the total number of applicants, and that patients excluded from one Hospital on this ground can often obtain admission at another.

5.—The use of the Out-patient Departments for the treatment of ordinary ailments by a class able to make provision for such ailments by joining Provident Dispensaries is common. This is proved by the experience of the Hospitals which try to detect and exclude this class.

6.—The use of the "Casualty" Department by persons not well-to-do but able to pay or make provision for the one or two treatments required, is not uncommon. This is due to several causes:—

- (1) Many of the cases are emergencies and must be treated at once, without reference to financial circumstances.
- (2) The large numbers make inquiry difficult.
- (3) It is often easier to treat cases outright than first to ascertain medically that they are not urgent, and then to ascertain whether they are financially suitable.
- (4) There is a tendency to extend the Casualty Departments to cases obviously not emergencies, either by a loose definition of "casualty," or by a desire on the part of junior medical officers to retain cases for practice, or by a desire on the part of patients to avoid the inquiry systems in force in the Out-patient Department proper.

7. These three forms of misuse—the admission of patients able to pay small fees, the admission of the Provident Dispensary class, and the admission of the pseudo-casualties—may well be in themselves sufficient to account for the various defects which are attributed to the Out-patient system, viz.:—

- (A) Unfair competition by the Hospitals with doctors on the one hand, and with Provident Dispensaries on the other—with a consequent deterioration of general practice through loss

of patients. This competition has the effect of deterring medical practitioners from using the Hospitals for consultative purposes; it also discourages thrift, and tends to pauperization, and it substitutes Out-patient treatment for treatment by the family doctor who is acquainted with the past history and home conditions of the patient.

- (B) The overcrowding of the Casualty and Out-patient Departments with minor cases—with consequent waiting, and in some instances hurried diagnosis, and superficial treatment.
- (C) The departure of the Hospitals from their most appropriate function as specialists and consultative agencies, and the comparative waste of their resources in the way of personnel and appliances.

8.—Assuming that adequate provision, Provident or otherwise, is possible elsewhere for the pseudo-casualties, and for the Provident Dispensary class, the admission of these classes to the Casualty Out-patient Department for the treatment of ordinary ailments is detrimental to the Hospitals, to the general practitioners, and to the patients themselves.

9.—The admission of the class able to pay small doctors' fees could be greatly reduced, if not prevented, if the inquiry system now in force in the most highly organized Out-patient Departments were adopted throughout all Hospitals.

10.—The pseudo-casualty class might be largely excluded if a stricter definition of casualty were universally adopted, and if the medical officers in charge of the Casualty Departments were instructed to carry out a policy of refusing to treat (at all events more than once) cases which are not emergencies. Any additional labour which this might cause at first would be soon compensated for by the reduction of numbers that would result when the practice became generally known amongst the class from which the patients are drawn, and the time and trouble now wasted on trivial cases could be devoted to the more thorough treatment of the suitable.

11.—In cases which are neither urgent nor trivial, the refusal of treatment would not amount to an absolute rejection, but would consist of a reference to the Out-patient Department proper at the usual fixed hours, as is now the practice at Hospitals which use their Casualty Department as a receiving and sorting room for all applicants. The patients so referred would then come within the range of the inquiry system in force in the Out-patient Department proper.

12.—The Provident Dispensary class could presumably be largely excluded if the inquiry systems were developed, and brought up to the level of the best system now in force at some Hospitals. The exclusion of this class from the Out-patient Departments would require as a corollary the development of provident medical organizations outside the Hospitals, but at the same time it would remove the chief obstacle to that development.

13.—The use of the Out-patient Departments for ordinary ailments by a class unsuitable by reason of extreme poverty is also proved by the statistics of the Hospitals which exclude such cases. This class consists of two grades:

- (A) Those actually in receipt of Poor Law relief, estimated in Miss Roberts's report to the Poor Law Commission at 11 per cent. of all Out-patients.
- (B) Those who are beyond the reach of charitable assistance and can only be dealt with effectively by the Poor Law.

There is no reason to suppose that this class would not be found amongst the Out-patients who are not at present subjected to a system of inquiry. The exclusion of the Poor Law class, where it is practised, is not the outcome of any desire to limit the sphere of Hospital usefulness, but of the belief that it is a waste of the resources of a Hospital to provide medical treatment for persons unable to benefit by it for want of the ordinary necessities of life.

14.—Above the Poor Law class, however, there is a class which, though not destitute, cannot profit by medical treatment unless it is supplemented by other forms of charitable assistance, but can profit when it is so supplemented. In such cases the resources of the Out-patient Department are wasted if the further assistance cannot be secured. To secure this assistance involves some organized co-operation between the Hospital and other charitable agencies.

15.—It is desirable to secure a ready access to the Out-patient Department for patients who are under the charge of other medical agencies for ordinary ailments, but who require the specialist diagnosis, advice, or treatment which can only be obtained by attendance at the Hospital. This can best be effected by means of organized co-operation between the Hospital and other medical agencies.

16.—To organize an Out-patient Department on these lines—distinguishing between the different classes of applicant, and co-operating with other medical and charitable agencies, both in referring patients to them and in accepting patients from them—demands the employment of Inquiry Officers capable of something more than the mere prevention of abuse. Such officers already exist in the Hospital Almoners.

17. Further, such an organization of the Out-patient Department falls in with a just conception of the proper sphere of Hospital assistance in relation first to other agencies for medical assistance, and, secondly, to public charitable assistance generally, which is of comparatively recent growth. This conception is itself in fact part of the recent development of ideas on the proper function and methods of charitable and public assistance generally. This development, at first largely the work of the Charity Organization Society, has recently found more general expression in the formation of Councils of Social Welfare, and in the Majority Report of the Poor Law Commission. In connexion with Hospitals it has taken shape in the Almoner system, and in the growing support given to that system by Hospital Committees.

18.—The extension of the Almoner system to cover all the Out-patient Departments is the readiest method of improving the means of inquiry, and of securing the co-ordination of Hospital assistance with other forms of medical and charitable assistance. It helps to exclude from the Out-patient Departments the class able to pay for medical attendance, the Provident Dispensary class, and the Poor Law class. It supplements Hospital assistance, where necessary, by the aid of other charitable agencies; and it encourages the reference to the Hospital by other agencies (including private practitioners) of cases needing specialist diagnosis, advice, or treatment.

19.—A large number of witnesses have advocated an alternative plan by which access to the Out-patient Departments should, except in the case of the first attendance of true casualties, be permitted only on the recommendation of some sifting agency external to the Hospital. The agency suggested is usually the general practitioner, either in private practice, or acting as medical officer of a Provident or Poor Law Dispensary; but sometimes some more representative organization to form part of a general scheme of charitable and public assistance is mentioned. The chief arguments for this outside sifting are, first, the difficulty of turning away patients once allowed to come, and, secondly, the difficulty of inquiry with the large numbers who do come. But whatever may be the theoretical advantages of this alternative it would be preferable, at all events in the first instance, to try the development of the existing methods. For the alternative presents two initial difficulties. It would not be possible to close free access to the Hospitals or to entrust the sifting of patients to any outside agency until (i) some general conception of the functions of the Hospital in relation to other agencies had been sufficiently developed to be acceptable to the Hospital and to the public, (ii) some suitable agency had been devised or developed to which the sifting could be safely entrusted.

20.—None of the agencies mentioned by witnesses, and likely to be available in the near future, provides adequately for all the requirements of such a conception and such a sifting agency. The Almoner system is doubtless itself defective at present in some respects, but it clearly meets in many points the needs of the case.

21.—One of the main objects of Out-patient organization should be to promote co-operation between the Hospital and general practitioners, so as to encourage the general practitioners to use the hospitals as consultant centres in difficult cases, and to avail themselves of the educational advantages of contact with the Hospital staffs.

22.—The general adoption through the Almoners of co-operation with general practitioners would go far to remove the grievance which at present so often deters the private doctor from sending cases to Hospitals for a second opinion or for special treatment. It would also be to the advantage of the Hospitals, for they would be enabled to fulfil their proper function of consultative agencies, and it would benefit the poor generally through the improvement of medical practice that would result from the frequent contact of the private doctor with the Hospital consultant.

23.—The removal of the reluctance of the general practitioner to send cases to Hospitals would also very largely remove the injury to medical education that might result from a reduction in the number of Out-patients, especially if arrangements could be made for the admission of Hospital students to the practice of Provident and Poor Law Dispensaries in suitable cases.

24.—If Out-patient practice could be localized, *e.g.*, by the reference of patients to the Hospital nearest to their homes, or by mutual arrangements for the allocation of different districts to different Hospitals, or otherwise, the organization of the Out-patient Departments on these lines would be greatly assisted. The Hospital doctors would become better acquainted with the local general practitioners, and the Almoners with the local medical and charitable agencies.

25.—It is most important that a general uniformity in the principles and methods of Out-patient administration should be adopted in all the Hospitals of London. Without this there would either be injustice as between one Hospital and another and between one locality and another, or else the whole system would be likely to relapse into the former condition of disorganization.

26.—It is evident that a thorough system of Out-patient organization would involve a temporary increase in total expenditure and a permanent increase in the cost per patient—the first due to the cost of the Almoners' Department and the cost of reporting to general practitioners, the second to the reduction of numbers and the more specialized character of the cases. But the same arguments which justify expenditure upon improved methods of medical treatment may be used to justify expenditure upon improved methods of charitable administration.

27.—Out-patient organization on these lines would be greatly facilitated by the reduction of numbers to manageable proportions which might be expected to ensue; especially if the system were put into operation simultaneously with the establishment of fresh provident agencies on a large scale.

28. In making these recommendations we have not considered the possible effect of the National Insurance Act on the Out-patient Departments of the London Hospitals. It appeared to us that such an inquiry did not fall within the terms of the reference made to us; and further, that even if it did, an inquiry before the Act had come into operation would be of no real value.

29.—We desire (in conclusion) to place on record our high appreciation of the work done by Mr. H. R. Maynard, who throughout the Inquiry has acted as Secretary. He brought to bear on the subject an extensive and accurate knowledge of Hospitals and their methods. He has been indefatigable in providing and placing at our disposal the statistics required for our work. His suggestions have guided us to much of our most valuable evidence, and helped the course of our investigations. He has rendered invaluable assistance in collecting and shaping the material for our Report. It is hardly necessary to add that all this has been done with a willingness and a courtesy that have greatly facilitated the task entrusted to us.

Our thanks are also due to Mr. P. M. Fry for his constant attendance during the Inquiry, and for his valuable assistance in framing the Report.

MERSLEY,
J. L. STEENEY.

H. R. MAYNARD,
Secretary,
July 5th, 1912.

MEMORANDUM

OF

EVIDENCE ON OUT-PATIENT DEPARTMENTS TO BE PLACED BEFORE THE SPECIAL
ENQUIRY COMMITTEE OF KING EDWARD'S HOSPITAL FUND FOR LONDON.*Introductory.*

1. The British Medical Association gladly avails itself of the invitation to give evidence before the Out-patient Enquiry Committee of King Edward's Hospital Fund for London. From its study of the Questions to which witnesses are desired by the Committee specially to direct their attention, the Association recognizes that the scope of the enquiry must include matters to which it has from time to time been compelled, in view of representations made by many members of the profession, to give most anxious consideration.

2. The Association submits, as desired, preparatory to the attendance of its witnesses, a Memorandum of the substance of its evidence. This Memorandum comprises an indication of the position and authority of the Association, a general explanation of its views on the broader questions of public policy involved, and categorical answers to the Questions stated by the Committee of Enquiry.

Constitution and Status of the British Medical Association.

3. The British Medical Association is a voluntary Society, formed in the year 1832, membership of which is open, subject to election, to any medical practitioner registered in the United Kingdom. The Association has at present a membership of about 22,200, the total number of medical practitioners shown by the current Medical Register being 40,558.

4. The Association is essentially a Federation of local Medical Societies called Divisions, which are grouped for certain purposes into larger local bodies called Branches. The government of the Association is vested in a Representative Body which is composed of delegates elected annually by the Divisions, and meets once a year, and oftener if required. The Agenda of the Representative Body is discussed previously in Meetings of the Divisions, which instruct their Representatives thereon, and every member is thus enabled to take part in determining the policy of the Association.

5. This representative constitution and the large membership of the Association give it a status possessed by no other body for voicing the opinion of the medical profession in the United Kingdom on questions of public policy such as are dealt with in this enquiry.

Previous Action of the Association: Evidence before Poor Law Commission.

6. The question of the reforms necessary in the constitution and working of Out-patient Departments has been under the consideration of the Association for many years, and in connexion with former public inquiries the Association has given what assistance it could to enable those responsible for the investigation to form sound conclusions. In this connexion, the Association would specially mention the fact that this subject was included among those upon which the Association gave evidence before the Royal Commission on the Poor Laws and the Relief of Distress. As there is reason to believe that this evidence carried weight with the Commissioners it may be convenient at this point to quote from the (Majority) Report of the Royal Commission the passage in which this subject is especially dealt with.

(Excerpt from Report of Poor Law Royal Commission.)

7. The Royal Commissioners state (Majority Report, Part V, chap. 2):

REVIEW OF THE SYSTEM OF MEDICAL ASSISTANCE TO
THE POOR.*(f) Overlapping of Agencies Providing Non-Institutional
Medical Assistance.*

Par. 188. . . . We desire to draw attention to the question of what is the right sphere of the voluntary hospital in regard to out-patients. This problem, in our opinion, lies

at the very entrance to any radical reform of the system of medical assistance. . . .

In the first place, the out-patient departments are dealing with a large number of cases for whose treatment the Poor Law authorities are, or should be, responsible. . . .

In the second place, it is for consideration whether the Public Assistance Authorities should not also deal with the two following classes of cases which, at present, receive treatment from the out-patient departments:

- (a) Persons who are suffering from chronic ailments.
- (b) Persons whose home conditions will not allow them to reap any commensurate benefit from such treatment.

In the third place, the benefits of the out-patient departments are being extended to:

- (a) The well-to-do who can afford to pay private practitioners.
- (b) Persons sufficiently able to join a provident institution.

Par. 189. Until, therefore, the work of the out-patient department is delimited in such a way as to prevent overlapping between its sphere and that of the Public Assistance Authority, and to leave full scope for private practice and provident effort, any endeavour to reform the system of public medical assistance will be locally thwarted. Indeed, all attempts to create order out of the present chaos will be disappointing. Even in the interest of the out-patient departments themselves a reform appears to be expedient in order to secure the greatest benefits from the treatment which they so lavishly bestow, and to prevent those benefits from being abused by the well-to-do. Suggestions for remedying the abuses of the out-patient departments have been laid before us by many witnesses, but by none more fully than the representatives of the British Medical Association. We are convinced with them that a strenuous effort should be made to circumscribe the work of the out-patient departments. They should be used almost exclusively for:—

- 1. Casualties.
- 2. Consultations.
- 3. Cases requiring expensive equipment for the treatment of special diseases and defects.

To this end the "letter" system should be thoroughly reformed or abolished, and, except for casualties, the recommendation of a medical officer or private practitioner substituted.

*Steps taken to ascertain the opinion of the Hospital
Authorities generally.*

8. In addition to such public action as has been above stated, the British Medical Association has in recent years made efforts to obtain a consensus of opinion among all directly concerned in Hospital work. With this object it has taken the initiative in promoting Conferences of representatives of Boards of Management of Hospitals, throughout the country, with representatives of the medical profession. At such a Conference, held in March, 1905, certain definite conclusions, based upon suggestions of the Association, were adopted, and a Committee was appointed which circulated these conclusions to all Hospitals throughout the country, invited their criticisms, and requested them to appoint representatives to take part in a further Conference. At a second Conference, held in December, 1906, to which 156 hospitals, including most of the leading Metropolitan Hospitals and County Hospitals in England and Wales, appointed representatives, these conclusions were finally approved. With the assistance of the indications thus obtained of the views of Hospital Authorities throughout the country, the Association has drawn up a statement of principles upon which in its opinion Hospital administration should be based as regards those aspects with which the medical profession is specially concerned. A copy of these principles, so far as they relate to the administration of out-patient departments, is appended to this Memorandum. (See Appendix A.)

*Confidence of Representatives of Medical Staffs of
Metropolitan Hospitals.*

9. For the purpose of considering the application of these general principles to the special conditions of

Medical Charity in the Metropolis, the Association through its local organization in London, the Metropolitan Counties Branch, has within the last few months convened a Conference to which the medical staffs of all the Hospitals in London which receive grants from the King Edward's Hospital Fund, or have Medical Schools, were invited to send Delegates. The staffs of 38 of these Hospitals appointed representatives to take part in the Conference, the findings of which have received careful consideration in the preparation of this Memorandum.

10. The Association is therefore able to submit its evidence to the King Edward's Fund Committee with confidence that it is representing not only the opinion of members of the profession fully conversant with the local conditions prevailing in the Metropolis, but also the preponderating opinion of those directly concerned, whether from the administrative or medical standpoint, in hospital work throughout the country.

Action in Support of Reform.

11. The Association deems it proper to advert to another aspect in which the Committee of King Edward's Hospital Fund may regard the position and action of the Association as specially meriting consideration—namely, in relation to the prospect of such reforms as the Committee may recommend being carried into effect. It is a matter of common experience that reforms recommended by important Royal and other Commissions and Committees, the desirability of which on public grounds is generally recognized, fail nevertheless to be carried into execution, partly because of the resistance of bodies or individuals interested, and partly because the reforms receive no organized support. The resistance mentioned may be due to the want of recognition of the desirability of the proposed changes, but it is also due frequently to a fear, on the part of some who recognize the desirability, that if such changes are made by some only and not by others, those who carry them out will suffer in competition. The Association has reason for believing that the reforms advocated in this Memorandum are of the character described. They are generally in accordance with what has been recommended by successive Committees and Commissions who have investigated the subject from the standpoint of the public interest, including not least the Royal Commission on the Poor Law. But the Association has been definitely informed by at least one important London hospital that the Hospital authorities, while recognizing the intrinsic desirability of certain proposals of the Association, fear that it would be prejudicial to the interests of the Hospital to carry them into effect unless all other Hospitals of a like character could be induced to make the same changes simultaneously. If, as the result of the present inquiry, the King Edward's Hospital Fund should, on the recommendation of the Special Committee, throw its powerful influence on the side of such reforms, the Association believes that the Fund could rely upon receiving effective support from the medical profession, through the organized and steady co-operation of the large majority of the members of that profession, both in the Metropolis and throughout the United Kingdom.

General Review of Out-patient Reform.

12. In presenting, as must be done in this Memorandum, a general review of the existing conditions of Out-patient Departments at the Metropolitan Hospitals, of the causes which underlie the present unsatisfactory state of affairs, and of the methods of reform by which such causes can be overcome, the Association recognizes that the arrangements at the different Hospitals vary very greatly, and that individual institutions may not improbably contend that the general principles stated and reforms advocated are inapplicable to their respective cases. The Association would submit, however, that its recommendations are capable of being applied in detail to every Out-patient Department, provided that the will to apply them is present, and whether the existing defects are already firmly established or only in an early stage of development.

Preliminary Definition: the terms "Casualty" and "Out-patient."

13. A preliminary definition of terms is necessary. The separation at certain Hospitals of the cases which

are treated without being admitted to the wards into two groups of "Casualties" and "Out-patients," may, unless care is taken, lead to confusion and waste of time in the present enquiry. It would appear that originally the term "Casualty" was intended to designate an accident or sudden illness presenting such acute symptoms as to require immediate surgical or medical treatment. It might be supposed that a "Casualty Department" dealt with such cases only, but in many Hospitals this is by no means the fact. Unclassified cases; cases that come each morning before a certain hour, often in large numbers, and are not selected as technically "Out-patients" (twelve hundred is the number stated as attending on certain days in this way at one large Hospital); cases that come at altogether irregular hours; cases that are too trivial to be sent to the "Out-patient" Department, and cases, on the other hand, that are too seriously ill to be sent to that Department; cases which the Casualty Officer would himself like to see again; cases, generally, that are treated by the resident staff and not by the visiting staff; all these, in varying proportions, according to the particular arrangements of the individual hospital, make up the "Casualty" Department. The number attending in the "Casualty" Department generally varies inversely as the number attending the "Out-patient" Department proper, and it has invariably been found that the former Department becomes the more crowded, and the more resistant of order and control, in direct proportion to the firmness with which the regulations are enforced for the proper selection and restriction of the cases admitted to the Out-patient Department, officially so-called.

14. The importance in this investigation of the relation between the "Casualty" and "Out-patient" Departments of Hospitals will readily be recognized. It is mentioned at this point with the object of stating, at the outset of the evidence of the Association, that throughout that evidence the word "Out-patient" must, except when otherwise clearly indicated, be taken to mean any patient treated at a Hospital who is not occupying a bed in one of the wards, and the words "Out-patient Department" must be understood, in the evidence, as including any room or place where such patients are received, either for preliminary investigation or for diagnosis or treatment.

A Reformed Out-patient Department.

15. The views of the Association on the general subject of reform of Out-patient Departments can perhaps be indicated most clearly by a statement of the conception presenting itself to the Association of the organization of an Out-patient Department fulfilling its proper purposes for the benefit of the community in a great city like London. For the explanation of this conception it is necessary, first, to make some observations on the general question of the proper relation of Hospitals to other agencies for the relief of the poor.

Existing Confusion as to Scope of Medical Charities including Out-patient Departments.

16. The Royal Commission on the Poor Law has demonstrated the evils of overlapping of such agencies with consequent waste of money, waste of effort, and general inefficiency, which have flowed chiefly from the past want of clear thinking upon this subject, and of proper co-operation among those concerned. The Association states, therefore, propositions which may appear to the Committee to be obvious, in order, if possible, to secure that firm foundation of a common understanding as to the meaning of terms and fundamental principles without which progress in this matter seems unattainable. The Association assumes that the object of a Hospital or other Medical Charity is to provide special medical and surgical treatment for those who cannot meet the cost of such treatment out of their own resources. The provision for such treatment is made partly by subscribers and donors, who furnish the resources necessary for meeting the cost of buildings, material, equipment, and paid staff, and partly by the Honorary Medical Staff, who undertake gratuitously, or for a nominal honorarium, the actual treatment of the patients. In considering the question of overlapping it is to be observed, first, that many persons who cannot afford the cost of their own treatment and may, therefore, properly in many cases be treated at Hospitals, are also able, under certain conditions, to

obtain treatment at the public expense through the Poor Law Authorities, Sanitary Authorities, Education Authorities, and other public bodies; secondly, that many persons who cannot afford to obtain, at their own expense, treatment requiring special medical or surgical skill, can, nevertheless, afford to pay for their own treatment in ordinary illnesses; and, thirdly, that many persons who, under existing conditions, find themselves unable to pay for the cost of medical attendance at the time when need arises, could have made provision for the purpose through provident or insurance agencies had the necessary facilities been afforded, or had they availed themselves of such facilities as exist. Through a want of common understanding, and a consequent want of co-ordination of effort, among all concerned, all the various agencies have overlapped, and cases which had any such understanding existed, would certainly have been treated by one, have, in fact, been treated by another, and not uncommonly by two or more at the same time. The burden of treatment has been thrown to an excessive degree upon medical charities, which have experienced the greatest difficulty in obtaining the financial resources necessary to carry on their legitimate work. The development of provident or insurance agencies for the provision of medical treatment has been greatly retarded, especially in London, and particularly through the operations of the Out-patient Departments.

Suggested definition of general scope of Out-patient Department.

17. The Special Enquiry Committee may possibly consider that it is beyond its province, when dealing with the one subject of the reform of the Out-patient Departments of London Hospitals to attempt to lay down a precise definition of the proper sphere of medical charity in this country among all the agencies for the provision of medical attendance. The Association trusts, however, that the Committee will recognize that such action as may be taken by the King Edward's Hospital Fund on their recommendation, with respect to the work of Out-patient Departments, is not unlikely to have a profound influence in advancing or retarding a satisfactory solution of the general question. It may, therefore, be thought desirable to adopt, at all events for the purpose of the present enquiry, a provisional definition of the proper sphere of the Out-patient Department, both in its relation to other agencies for affording medical relief at the expense of others than the persons treated, and also in its relation to those agencies through which persons at present obtain treatment at their own expense. As a contribution towards such a definition the Association suggests (i) that the Out-patient Department should not afford treatment of a kind which the patients requiring it can obtain at their own expense by joining a provident medical organization if in no other way; (ii) that the treatment of cases which do not require special medical or surgical skill should be regarded as outside the province of Out-patient Departments, and should be left, according to the means of the patient, either to private medical practitioners, to provident medical organizations, or to the Poor Law, the Education or other public authorities.

Organization of Out-patient Departments.

18. Bearing this definition in mind the Association suggests the following scheme for a reformed Out-patient Department.

Staff and General Equipment.

19. Attached to a hospital where scientific medicine in all or some of its various branches is being practised, and where all kinds of investigations for the improvement of treatment are being carried out in the interests of the patients, the Out-patient Department should be able to attract to its staff men of high professional attainments willing to restrict their work to certain branches of practice. This staff should have put at their disposal the use of all necessary scientific apparatus and appliances, the help of qualified practitioners and medical students, the assistance of trained laboratory and clerical staffs, and the co-operation of the resident medical officers.

Selection of Cases.

20. A Department thus equipped should be placed in a position to deal in orderly sequence with a strictly

limited number of cases which have already been carefully selected by medical practitioners as needing, and as likely to be benefited by, such skilled investigation and treatment as the Department affords. Such selection will doubtless be carried out in part by special officers of the institution. If, however, the hospitals, through their Out-patient Departments, are to take their proper place in the general scheme of agencies affording medical care to the section of the community concerned, they must avail themselves systematically of the co-operation of medical practitioners outside their own walls—namely, of those private practitioners, officers of provident medical organizations, or medical officers of public authorities, under whose care the patient would be when not receiving treatment from the hospital itself.

Co-operation in Treatment.

21. Every case thus dealt with in an Out-patient Department should, at the same time, be under the professional care of some independent medical practitioner who is (i) cognizant of all that is being done for or learnt about his patient at the hospital, (ii) able to carry out any treatment that may not, in the opinion of the Out-patient Staff, necessitate attendance at the hospital, and (iii) prepared to give such treatment in the patient's own home if found advisable.

Criteria of Admission.

22. To such a Department the admission of a patient should be determined by the following criteria: first, that some medical practitioner who is not attached to the hospital but co-operating with the hospital authorities, and who is in medical charge of the case, vouches for the need of further professional advice or treatment; second, that the hospital authorities have ascertained by enquiry of their own that the patient is unable to provide such advice and treatment at his own expense; third, that the advice and treatment is of a kind which the Out-patient Department is in a position to supply.

Benefits to be Expected from the Proposed Reforms.

23. Such a system of organization of Out-patient Departments, co-operating with external agencies, both as regards selection of cases for admission and as regards the continuous treatment of the case in the hospital and outside, would, in the first place, secure the maximum benefit to the patients. Under the present system the condition in respect of which a patient receives treatment at a hospital is dealt with in the institution in many respects as though it were an isolated episode in his life, bearing no relation to his past or his future physical career. To such a degree is this carried that often there is no practical recognition of the fact that the condition treated in the Out-patient Department forms merely an incident in a continuous illness. As a necessity for the scientific treatment of disease, as well as for other reasons, those who treat the case at the Institution should be in the closest possible touch with those who are to carry on the treatment elsewhere. Not only, however, would the rearrangements recommended by the British Medical Association be thus advantageous to the patients, which, of course, is the matter of primary concern—they would also tend to fulfil the secondary, but important, object of affording more valuable experience and more sound instruction to all those who come in contact with the case at the hospital. Lastly, such arrangements would keep members of the medical profession outside the hospital in touch with the most modern scientific methods of diagnosis and treatment, and by thus increasing their professional efficiency and adding to the scientific interest of their daily work, would tend to the benefit of all their patients and of the community as a whole.

Explanations of Existing Defects.

24. That this ideal is very far from being realized will be made clear to the Committee by many witnesses. Existing conditions will doubtless, however, be defended by some who will put forward various explanations, such as have been urged in the past, concerning the necessity for maintaining that system of free access to the Out-patient Department by all patients demanding its services, which has led to the present condition of overcrowding with unsuitable cases and the associated evils.

Use of Department as an Advertisement for obtaining Subscriptions.

25. From the point of view of the Hospital Manager, endeavouring to attract subscriptions, it will perhaps be urged that the ability to advertise that "No sick person is ever turned from the doors," and to publish statistics of Out-patient attendances in tens or hundreds of thousands per annum, is necessary to gain financial support.

Use of Department as a Field for Selection of Instructive Cases.

26. From the point of view of the In-patient Staff it will not improbably be urged that the enormous Out-patient and Casualty attendance forms the best ground from which instructive cases for admission to the wards can be selected, whilst the Staff of the "Out-patient" Department proper will point to the crowded "Casualty" Department as the means of providing a selection of cases for affording clinical instruction for the students.

Use of Department for Necessitous Cases of Ordinary Illness.

27. Even medical practitioners outside the hospital, who are keenly alive to the evils of hospital abuse by patients able to pay fees, may, nevertheless, by implication if not avowedly, maintain the necessity of an Out-patient Department carrying on the continuous and independent treatment of all classes of poor patients, in order that to it may be drafted those patients who, after long illnesses, become unable to continue payment for private medical services, and those club patients whose prolonged treatment has become a difficulty to the club doctors.

Replies to Foregoing Arguments.

28. The argument of the Hospital Managers, stated in paragraph 25, rests entirely on the imperfect education of the public as to the actual working and needs of hospitals. There would be no permanent falling off of subscriptions, but rather the reverse, under the new system, after it became clear to the public, from the pronouncements of an independent authority (as, for example, from the result of the present inquiry) that although the aggregate number of attendances of patients recorded in the books of the Hospital was reduced, the actual work of the Hospital was in fact enhanced, both in amount and efficiency, by the change. Any temporary falling off in public subscriptions, such as might at first ensue, would be more than compensated for by the increased sympathy of private practitioners, who can, and do, often exercise considerable influence with well-to-do members of the community who desire their advice as to suitable medical objects to which to devote their subscriptions.

29. As to the argument from the point of view of the Medical Staff, the Association believes that the number of cases meriting the attention of the specially skilled staff of a hospital, and available for treatment by them, would be increased by the more satisfactory system of selection herein proposed. As regards the opportunity afforded in hospitals having medical schools for the instruction of students in cases of ordinary illness, such as they may be expected to have to deal with in general practice, such instruction could be given more satisfactorily in provident dispensaries if suitable arrangements were made with them. Instruction given there would have the collateral advantage of benefiting also the medical officers of the provident dispensaries.

30. Concerning the treatment of those who at present come to hospitals, not because their cases require special medical or surgical skill, but because, having come to the end of their resources, they can no longer afford to pay for ordinary treatment, the question is one of proper organization of the agencies outside the hospital which afford medical relief. The chief reasons why such organization has not been satisfactorily developed is because, as the Poor Law Commissioners have pointed out, it has been choked by the competition of the Out-patient Departments.

31. Thus, whilst recognizing that the considerations above stated have been chiefly responsible for bringing about the existing condition, the British Medical Association would maintain that the unchecked influence of such considerations defeats the objects which those actuated by

them have had in view. The resulting overcrowded departments make the best work impossible; they bring discredit upon the institution, which must ultimately lessen financial support; they introduce real dangers, physical and moral, to the patients attending; they alienate the sympathy of the general body of medical practitioners, from whom, if proper co-operation were encouraged, a constant supply of suitable cases would be forthcoming; and they entirely prevent or check the development of various forms of provident medical agencies, such as in other parts of the country are successfully organized by the medical profession, but have been found very difficult to promote in London.

32. The Association would lay special stress upon the influence of the Out-patient Department in checking the development of other agencies for providing ordinary medical treatment for patients of the class which might reasonably look to the Out-patient Department for providing further assistance on special occasions. A vicious circle has now been created in many parts of London, to escape from which the help of some such body as King Edward's Fund is required. On the one hand, the hospitals are unable to refuse direct access to unselected trivial cases because provident dispensaries or public medical services do not exist in sufficient numbers to deal with the large proportion of such patients who are unable to pay private practitioners. On the other hand, it is impossible to promote, with any prospect of success, agencies based on the provident system, in face of the competition of Out-patient Departments carried on as at present.

33. This consideration will make some interim arrangement necessary before it becomes possible to secure in full working the ideal Out-patient Department as indicated above.

34. The consultative and independent forms of Out-patient practice might for a time be carried on side by side, whilst, if a clear indication were afforded that after a certain date the independent system would be abandoned, opportunity would be afforded and encouragement given for the development of provident or insurance systems outside the hospital. In the interval it would probably be desirable, by putting obstacles in the way of independent access, to encourage patients to seek, of their own initiative, the advantages of a consultative system. All patients coming without professional recommendation should be submitted to complete methods of inquiry into economic fitness and into former efforts to obtain advice, whilst to the consultative cases priority of attention and facilities for making definite appointments should be afforded.

35. In drafting the answers to the questions submitted by the Committee of Enquiry the possibility of these two forms of Out-patient practice existing side by side during a limited period has been before the Association, and must be taken into account in order to avoid an occasional appearance of contradiction.

36. The Association would draw attention separately to three questions affecting the administration of Out-patient Departments to which reference has not been made in the general review of the subject contained in the foregoing paragraphs. These are (i) the employment of almoners; (ii) the use of subscribers' letters, and (iii) the system of making charges to Out-patients.

Employment of Almoners.

37. The Association has already indicated its opinion that, quite apart from the assistance given by outside medical practitioners in the selection of suitable patients, the hospital should make enquiries of its own into the economic fitness of applicants for Out-patient treatment. For this purpose the employment of suitably trained and competent almoners in sufficient numbers is essential. With a view to securing such competence, and securing also uniformity in the application of tests as to economic fitness at the various hospitals in the Metropolis, it appears to the Association that some uniform central system of training and testing the suitability of persons for the office should be adopted. It must at the same time be recognized that the work of Almoners will not entirely meet the difficulty. The abuse of Out-patient Departments has continued to increase at some hospitals at which Almoners have been appointed,

In New York the Board of Charities prosecutes persons who obtain medical or surgical treatment on false representations as to their means. If every applicant for treatment were compelled to sign a sufficiently definite statement as to his financial circumstances, and if prosecutions were undertaken in flagrant cases of false statements, abuse would be materially checked.

Subscribers' Letters.

38. The use of subscribers' letters has been abandoned by most of the principal hospitals in London, but is still maintained by many of the smaller institutions. The admission of patients on the sole recommendation of subscribers is entirely inconsistent with the principles advocated in this Memorandum. Conferences of representatives of hospitals, and the replies of hospitals to the inquiries addressed to them by the Committee of those Conferences in 1905 and 1906, show that the majority of those responsible for hospital administration recognize the great objections to the system, and hospitals have stated definitely that they retain it only because they see no way of recouping themselves for the serious loss of income which they anticipate would be the immediate result of the discontinuance of the system. Although the example of the Bolingbroke Hospital, in which no falling off of subscriptions has resulted from the abolition of subscribers' letters, may be taken as showing that such fears are illusory, nevertheless they still exercise powerful influence. With the help of the King Edward's Hospital Fund this difficulty could in London be entirely overcome, and the Association ventures to hope that the Special Enquiry Committee will include, among its recommendations to the Fund, one for the discontinuance of subscribers' letters for the admission of Out-patients, and for giving any necessary financial assistance to Hospitals which abandon the system until the first effects of such discontinuance have passed off.

Payments by Hospital Patients.

39. Attention must be drawn to a practice which is fortunately not universal, but tends to become more common, that, namely, of charging patients either for treatment or for materials supplied. In many of the special hospitals a small charge is made for actual treatment. Such payment is not unnatural, and perhaps in some cases not unreasonably, regarded by the patient as the pecuniary equivalent of the services rendered to him. Thus the so-called charity, subsidized by contributions of subscribers and central Hospital Funds, and enabled thereby to charge fees similar to, and even lower than, those charged by private practitioners, enters into direct competition with them for paying patients. Some such institutions actually advertise in a way which can only be regarded as intended to attract not charitable subscribers but paying patients. Even in some of those hospitals which do not avowedly charge for treatment a small charge is made for medicines, and for other materials supplied. Such a system is tantamount to making the charity one given solely by the honorary officers, the institution relieving itself as far as possible of any charge upon its funds. Yet the very numerous patients who are charged in this way, and constitute little if any burden upon the hospital funds, are included indiscriminately with all other patients in compiling the statistics of persons treated at the institution which are used as a basis of appeals for subscriptions. Such a system appears to the Association to be both unfair to the medical profession and unsound from the standpoint of public policy. The argument advanced in its favour is that it affords an inducement to thrift. Its operations, however, are in actual discouragement of the true thrift of the patient who endeavours to pay not only for his medicines but also for the professional services of which he obtains the benefit. In other words, these payments are diverted from the truly provident organizations to which they would otherwise be paid. The Association entirely agrees that all those who can afford to pay any part of the cost of their treatment should be encouraged to meet such cost, but such payments should be made to properly organized provident institutions working in co-operation with the charities. No charge should be made by a charity to a patient in consideration of treatment given.

ANSWERS TO THE SPECIFIC QUESTIONS STATED BY THE OUT-PATIENT ENQUIRY COMMITTEE.

(NOTE.—The Association has not attempted to compile statistics in support of the statements of fact contained in the following answers to questions. The fullest possible evidence as to the existence of overlapping and abuse is afforded by the Reports of the Royal Commission on the Poor Law, and to attempt to collect the same material again would be a waste of labour. The main facts are not seriously controverted except in so far as the authorities of any given hospital may contend that what they regard as abuse does not exist to an appreciable degree at their own institution. Evidence will doubtless be given before the Committee by many members of hospital staffs as to their own experience of the effects of the existing system on the work of the Out-patient Departments, and by private practitioners as to the effect, as observed by them, upon the public. The Association will nominate a number of individual witnesses, both members of hospital staffs and medical practitioners, who will be glad to give evidence of these kinds.)

QUESTION 1.—What classes of persons should be considered to be suitable for admission (whether as casualties, general out-patients, or special out-patients) to the Out-patient Departments of the London Voluntary Hospitals?

Casualties.

ANSWER:

1 (a). Under the head of "Casualties" should be admitted only cases of serious accident and of sudden severe illness, and such cases should receive in the Out-patient Department "first aid" only, *i.e.*, such immediate treatment as the emergency demands.

Other Cases.

1 (b). Apart from casualties, a patient should not be admitted who (i) is not accompanied by a medical practitioner, or does not bring a recommendation from one, stating that the case is, in his opinion, suitable medically and economically for investigation or treatment at the hospital, and that he would resume the care of the patient; or (ii) does not sign a form giving sufficient particulars of economic position to satisfy the Almoner that he is unable to pay for adequate treatment. The practicability of such a procedure is exemplified by the Regulations laid down by the New York Board of Charities which have been in operation for a number of years. (See Appendix B.)

QUESTION 2.—What should be the relation of the hospitals (in respect of the admission of out-patients) to other agencies for the treatment of disease, *e.g.*,

- (a) Medical practitioners,
- (b) Provident dispensaries,
- (c) Other voluntary hospitals,
- (d) Free dispensaries,
- (e) Other charitable or provident agencies,
- (f) The Poor Law,
- (g) Other public authorities.

ANSWER:

2 (a) To Private Medical Practitioners.

The relation of Hospitals (in respect of the admission of Out-patients) to private medical practitioners should be that of affording a means whereby patients under the care of such practitioners may obtain gratuitously the advice of specially skilled physicians or surgeons, or investigation or treatment of a special kind, for which they are unable to pay. The private practitioner should be regarded as still responsible for the care of the case, and the medical staff of the institution should act in co-operation with him. Continuous treatment, of a kind which the ordinary medical attendant can give, should not be given in the Out-patient Department.

2 (b) To Provident Dispensaries.

The same relations should exist between Hospitals and medical officers of Provident Dispensaries as between Hospitals and private practitioners, as stated in the answer to Question 2 (a).

2 (c) To other Voluntary Hospitals.

The relations of a Hospital to other Voluntary Hospitals should be regulated by the adoption of uniform rules of admission of patients and of a definite system of co-operation,

so that (i) a patient who has been refused treatment at one hospital on the ground that, economically or medically, he is unsuitable for hospital treatment shall not be admitted to another; (ii) that cases which a Hospital is unable to treat through the Department being already full, or which require treatment of a kind that can more suitably be given at some other Hospital, shall, with the least possible delay, be referred to, and enabled to obtain treatment at, the institution best adapted to their requirements.

2 (d) *To Free Dispensaries.*

Free Dispensaries should be regarded as analogous in their character to Out-patient Departments of Hospitals, and the relations of any Hospital Out-patient Department to a Free Dispensary should be the same as to the Out-patient Department of another Hospital.

2 (e) *To other Charitable and Provident Agencies.*

The questions of the relations of Hospitals to other "charitable," and to other "provident," organizations are most conveniently considered separately; and as regards charitable institutions, a distinction must be made between (i) those, such as Convalescent Homes, Sanatoriums, or Epileptic Colonies, which provide treatment, (ii) Societies which exist for the provision of mechanical appliances or other material requirements, and (iii) the Charity Organisation Society and similar bodies which exist for the co-ordination and provision of charitable relief of all kinds.

Charitable Organizations.

(i) *Sanatoriums, etc.*

The machinery of reference of patients to such institutions should be through the private practitioner, or medical officer of a provident organization, who has care of the patient. The Out-patient Department should be prepared to advise as to the kind of institution to which the patient should be sent.

(ii) *Societies for Supplying Material Requirements.*

To facilitate the work of such Societies, the Hospitals should co-operate with them in supplying what the patient requires, or should give the necessary advice and information to the medical attendant.

(iii) *Charity Organization Society and Similar Bodies.*

The hospital should obtain such co-operation as it needs from such organizations in securing that the objects of the charity are properly carried out and that its resources are not misapplied, and should also co-operate with such societies in order that proper provision may be made in suitable cases for affording relief supplementary to that of the hospital.

Provident Organizations.

The hospitals should co-operate with the medical officers of Friendly Societies, Works' Clubs, Medical Aid Societies, and other provident medical organizations, in the same manner as with the medical officers of Provident Dispensaries or with private medical practitioners.

2 (f) *To the Poor Law (as at present constituted).*

The Hospital should undertake, under existing conditions, the treatment of those Poor Law cases only which require the advice of specially skilled physicians or surgeons, or special investigation or treatment of a kind which the Authority cannot itself supply. All the arrangements should be made by or through the Poor Law Medical Officers, namely, the district Medical Officer of the district in which the patient resides, or the Medical Officer of the Institution in which he has been previously an inmate. The relation of the Out-patient Department to such Poor Law Medical Officers, as regards the admission of Out-patients, should be the same as to private medical practitioners or to medical officers of provident organizations.

2 (g) *To other Public Authorities.*

The relation of the Hospital to other public Authorities giving medical relief should be the same as to the Poor Law Authority as described in 2 (f).

QUESTION 3.—To what extent do the hospitals at the present admit suitable cases and exclude unsuitable cases?

ANSWER :

3. Proper methods of selection, with a view to the admission of suitable cases, and the exclusion of the unsuitable, are in operation only to a very small extent. The consequence is that in the large majority of the Hospitals the Out-patient and Casualty Departments are overcrowded with unsuitable cases, while suitable cases are deterred from seeking admission.

Not the least evil resulting from this defect is the spreading of infectious disease by the close aggregation in the Casualty and Out-patient rooms, often for hours at a time, of people awaiting attention who ought not to have been admitted.

It not infrequently occurs that cases of Ringworm, Scarletina, Measles, Diphtheria, and Small-pox are admitted to such rooms, and remain there for some time before they are seen by one of the Staff and the nature of the case detected.

At two Hospitals, the Bolingbroke and the New Dreadnought Hospital, Greenwich, the plan of consultations, in the case of Out-patients, with certificate of a private practitioner has been adopted, has prevented abuse, has created cordial co-operation between the staffs and general practitioners in the neighbourhood of these Hospitals, and thus ensures that the practitioners in charge of suitable cases experience no reluctance in introducing them to the Out-patient Departments.

QUESTION 4.—To what extent do the relations which should exist between the out-patient departments and other agencies for the treatment of disease exist at present?

ANSWER :

4. Speaking broadly, the relations which should exist between Out-patient Departments and other agencies for the treatment of disease ought to be based on the principle of co-operation; practically they are to-day in most instances based on the principle of competition. Relations based upon co-operation exist to a very small extent, and the degree to which they prevail seems to be in proportion to the degree to which the competitive element can in special instances be eliminated.

(a) As far as private medical practitioners are concerned, cases are sent for consultative purposes to the Out-patient Departments more freely by those resident some distance from the hospital than by those in its immediate neighbourhood. Some cases sent to hospital Out-patient Departments in London come from provincial towns where there are hospitals of excellent repute.

(b) Except in the case of hospitals having special provident dispensaries attached to them, only a small proportion of out-patient cases are received for second opinions from such dispensaries. The glamour of the hospital and the absolutely free treatment undermine the loyalty of the patients to their provident institution.

(c) Co-operation between the Out-patient Department of one voluntary hospital and another is conspicuous by its absence. Obviously, to send on cases from one hospital to another on the ground of excessive work would arouse at the second hospital a suspicion that the cases were uninteresting or in some other way unsuitable. Superfluous work is dealt with by trusting that the patients will be tired out by long waiting, or, alternatively, by putting on an additional medical officer or clinical assistant to deal with the excess. The other co-operative relation, of referring cases of special diseases to special hospitals, or cases of non-special diseases to other hospitals, is rarely if ever resorted to.

(d) The conditions of attendance at free dispensaries and Out-patient Departments are so similar that any recognition by the staff of the free dispensary that more skilled advice could be obtained at the Hospital would be fatal to successful competition. If cases are ever sent it is in hope of securing admission to the In-patient Department, or because the distance between the two institutions is so great that competition can be neglected.

(c) Other charitable agencies and other provident agencies are more conveniently treated separately.

Charitable Agencies.

With regard to other charitable or provident agencies in which the treatment of disease is only a subsidiary feature proper relations more frequently obtain. Charity Organization Committees not rarely send cases to the Out-patient Departments for expert opinions as to the ideal method of treatment or as to ultimate prognosis. Reciprocally, cases attending the Out-patient Department and needing charitable assistance other than medical are occasionally referred to the Charity Organization Society, or other charitable agencies. The press of work in the majority of Out-patient Departments makes it extremely difficult to carry out this work of reference effectively, and the Almoner who recognizes the value of such work is generally precluded from putting it in practice by the stress of special duty of endeavouring to check the attendance of patients economically unfit to receive the benefits of the charity.

Provident Agencies.

The relations which, in the opinion of the Association, should prevail between Hospitals and such organizations as Friendly Societies, Works' Clubs, and the like, do not, at present exist. The laxity of the rules of admission to Out-patient Departments affords a great inducement to medical officers of Friendly Societies, and similar bodies, to relieve themselves, at the expense of the Hospitals, of giving prolonged and perhaps irksome medical attendance, which strictly they are under contract to provide. A satisfactory adjustment of responsibilities between medical officers of provident organizations and medical charities is unattainable so long as the doors of the Out-patient Department are thrown so widely open as at present.

(f) and (g) Co-operative relations between the Poor Law and other Public Authorities and Out-patient Departments can hardly be said at present to exist at all.

QUESTION 5.—Do any, and if so, what, undesirable effects result from the methods at present prevailing in regard to the admission of out-patients?

ANSWER:

5. The undesirable effects resulting from methods of admission of Out-patients may be classified under the following heads:

- I. To the patients attending.
- II. To the patients who ought to attend and do not.
- III. To the Medical Profession.

I.—To the Patients Attending.

(a) Even the patient whom all would recognize as an ideal Out-patient has frequently suffered, before admission, through the methods at present prevailing. But for these methods his condition might never have become sufficiently severe to require treatment. The opportunity of an easy cure, which simple treatment by his private practitioner or club doctor might have effected at an earlier stage, is lost. The patient, trained by present hospital methods to rely upon hospital help, makes no provident provision for ordinary sickness, is unable or unwilling to pay medical fees, does not care to apply to the hospital while his ailment is simple, and waits until it is sufficiently severe.

Arrived at the hospital he still suffers from present methods, because he runs the risk of being exhausted by long waiting, or of being attacked by infectious disease from contact with patients unwittingly attending while suffering from contagious disorders. Finally, he may fail to receive the fullest attention his case deserves because of the overworked state of the officers in the department. Even as a new patient he may fail to receive adequate attention, but when he reaches the state of "an old case," the great number

of others in similar condition renders effective re-examination extremely difficult to carry out.

(b) Many cases attending Out-patient Departments receive more harm from their weekly journeys to and fro than can be compensated for by such advice, medicine, or surgical treatment as they obtain. The competition of the hospital prevents the development of provident institutions providing domiciliary treatment for such of their patients as need it, though the hospital itself gives nothing corresponding to it, except actual admission to its wards, and this it cannot possibly give to all those Out-patients who are too ill safely to travel to and fro. Any attempts to dissuade such patients from attending are met by assurances that they cannot possibly afford to pay for medical advice and urgent entreaties to be saved from the necessity of applying for Poor Law help.

(c) A very large number of cases with quite trivial ailments waste much time in attending Out-patient Departments, and develop a morbid taste for drugs and for the interesting rôle of invalidism, whilst they lose their sense of independence, and acquire idle and thriftless habits.

(d) Certain indirect consequences of the system need mention. The loss of time of patients, and of those who accompany patients, or attend for medicine and the like on their behalf, is a cause of serious economic loss to themselves and to the country generally. Not only workmen but their employers suffer from time wasted by such workmen in obtaining treatment at Out-patient Departments which, under a proper system, they would obtain elsewhere with less expenditure of time, and in other respects more satisfactorily. Similarly, homes are neglected and children suffer while women are waiting in Out-patient and Casualty Rooms, whose attendance there results in little if any benefit to themselves or to anyone else. The hygienic and economic consequences of such defective arrangements obviously spread from those immediately affected to the community in general, and constitute a public evil.

II. To the Patients who ought to Attend and do not.

There are many patients under the care of private practitioners in clubs or dispensaries, or paying small fees, who are quite unable to pay fees for consultative opinions and for whom the special resources of the hospital in skilled officers and appliances would be welcomed by their medical attendants on account of some special difficulty in diagnosis or treatment. Under existing conditions, however, they are kept from the hospital by the want of systematic arrangements for this purpose, and by the crowd of trivial cases attending. Even were extra accommodation provided for this specific purpose, general practitioners would be deterred by consideration of the effect upon their private practice of introducing patients to institutions which compete with them in treating all comers.

III.—To the Medical Profession.

The undesirable effects of present methods upon the profession are felt both by practitioners outside the hospital and by the medical staff.

(a) An outside practitioner loses not only remunerative practice, but also valuable experience, whenever an unsuitable patient attends a hospital, whether it would have become his duty or privilege to attend such patient as a private practitioner, or as the medical officer of a provident or other agency. An outside practitioner also suffers whenever a poor patient under his care is unable to secure the special services of an Out-patient Department for help in diagnosis or treatment. In such a case he loses, not pecuniarily, but in reputation and scientific experience. The injuries thus occasioned to private practitioners are a matter of public, and not merely of private or professional, concern. The public must rely upon the private practitioner as their first line of defence against disease, and must suffer from any impairment of his efficiency and status.

(b) The staff of the hospital suffer under existing conditions whenever they are called upon to deal with trivial cases which afford little opportunity of increasing their special experience, or to deal with an excessive number of cases, which on the one hand leads to a loss of health, and on the other hand deprives them of the opportunity of doing justice to their scientific work, and of maintaining and extending their reputation amongst their professional colleagues.

QUESTION 6.—Would any, and if so, what, changes in the methods at present prevailing at the hospitals be desirable?

ANSWER :

6. The aim of all changes in the Out-patient arrangements must be :

(a) That admission shall be on such terms as may lead to the most rapid and perfect development of all those agencies with which the Department should co-operate.

(b) That its own resources should be so developed as to make all such agencies desire to seek its co-operation and not to fear its competition.

With these objects in view, the following changes should be brought about :

1. The fullest written and signed particulars should be required of all applicants for admission, except (i) in the case of really severe and sudden urgent casualties, and (ii) in the case of those on whose behalf application is made by a medical practitioner actually in medical charge of the case. From the latter, hereinafter called "consultative" cases, a general statement as to economic fitness should be accepted provisionally from the medical attendant, but inquiries should also be made independently by the almoner, and a signed statement obtained from the patient whenever it appears desirable.

Consultative cases should receive priority of treatment, and as far as possible appointments should be made so as to avoid delay. Non-consultative cases should thus be encouraged to join the consultative class, should be refused treatment if their cases are trivial, and, if unable to pay private practitioner's fees, should be recommended to join a provident dispensary or similar institution. The declaration forms of the non-consultative cases should be kept and classified, so that cases coming a second time without making suitable provision for private non-hospital treatment could be at once refused.

2. The fullest development of Out-patient Departments should be carried out to fit them for the duty of reporting on cases that are returned to the practitioner as well as for treating cases that are retained. The habit of entrusting Out-patient Departments to resident medical officers and clinical assistants should be discouraged. The appointed member of the staff should have adequate assistance in investigating the cases, but he should in all cases be responsible for conferring with the general practitioner, if he attends, or of reporting to him if he is unable to do so. Short-hand clerks and typewriters should be provided to deal with the correspondence. The extra cost of salaries of such officers would be covered by economies otherwise effected.

QUESTION 7.—Is the accommodation at present existing, whether at the Out-patient Departments or elsewhere, adequate to the admission of the cases suitable for treatment by the respective agencies?

(Indicate the area upon a consideration of which this part of the evidence is based.)

ANSWER :

7. So far as the Association is competent to judge, the existing Out-patient Department accommodation in London would suffice for the proper work of these Departments if organized upon the lines recommended by the Association. The premises would, however, require reconstruction. The very large halls at present used for Out-patients waiting for attention would no longer be required for this purpose, and should be converted into suitable suites of smaller rooms, fitted up with all modern equipments for those

special methods of diagnosis and treatment for the application of which it will be one chief function of the Department to provide.

As regards agencies external to the Hospital, there does not at present exist in London an adequate system of provident medical organizations for the treatment of those persons who now frequent Out-patient Departments, but who could and would make provision for their treatment in ordinary illness by subscription to provident organizations if such existed, and if the Out-patient Departments were rendered less readily accessible. The medical profession in certain parts of London have undertaken, or have under consideration, the organization of "Public Medical Services" based on the principles of (i) small periodic payment by the patient; (ii) freedom of every reputable practitioner in the district for which the Service provides to act upon the staff; (iii) free choice of doctor by patient from among the Staff of the Service. The success of such attempts is at present greatly prejudiced by the operations of the Out-patient Departments of the Hospitals.

APPENDIX A.

HOSPITAL OUT-PATIENT DEPARTMENTS.

CLASSIFIED COLLECTION OF PRONOUNCEMENTS OF THE BRITISH MEDICAL ASSOCIATION (1905 TO 1909 INCLUSIVE) ON QUESTIONS OF INTEREST TO THE MEDICAL PROFESSION AFFECTING THE ORGANIZATION AND MANAGEMENT OF HOSPITAL OUT-PATIENT DEPARTMENTS AND THE EMPLOYMENT OF THE HOSPITAL STAFF.

A.—SUITABILITY OF PATIENTS FOR ADMISSION.

1. *General Principle of Discrimination.*—That inability to pay for adequate treatment shall be the consideration for the admission of all patients for hospital treatment. This shall not apply to Poor Law cases.

2. *Subscribers' Letters.*—That the production of subscribers' letters shall cease to be compulsory, and that, where possible, the system shall be abolished.

3. *Evidence of Suitability.*—That, except in emergencies, sufficient evidence shall be obtained on two points: (a) That the patient is not in a position to pay for adequate treatment; (b) that the case is, from a hospital point of view, suitable for treatment.

4. *Investigation as to Economic Suitability.*—That some means of investigation into the circumstances of the applicants for relief, by means of an almoner or other agent, shall be employed in all medical charities.

5. *Medical Certificates of Suitability.*—That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in a case of casualty at its first attendance.

6. *Contributions to Hospitals by Employers of Labour and by Employees.*—That contributions to Hospitals by employers of labour or by employees should not be considered as the payment of premiums of insurance against the cost of treatment of sickness or accident, nor as entitling the contributors to claim hospital treatment either for themselves or for persons nominated by them, but as charitable contributions to be expended at the discretion of those to whom the management of the hospital is entrusted.

B.—PROCEDURE AT HOSPITAL.

7. *Medical Inspection of all Cases.*—That, on the first visit, no patient be permitted to leave a hospital without having been seen by a registered medical practitioner.

8. *Urgent Cases.*—That all cases of serious accident and severe sudden illness shall be attended to on their first application, and, if deemed eligible for further treatment, shall be referred to the appropriate department of the hospital, but, if ineligible, shall then be referred for treatment elsewhere.

9. *Trivial Cases.*—That all cases of trivial accident or illness deemed ineligible for the casualty department shall, after having been seen, be referred for treatment elsewhere.

10. *Scope of Out-patient Departments.*—That the primary object of an out-patient department should be for consultation.

11. *Reference elsewhere of Unsuitable Cases.*—That all cases not suitable for hospital treatment shall be referred in general terms to a medical practitioner, to a public medical service, an approved provident dispensary, or to the relieving officer under the Poor Law.

12. *Limitation of Work of Medical Officers.*—That, where possible, the number of new cases to be seen on any one day by an honorary medical officer shall be limited.

C. CO-ORDINATION OF HOSPITALS WITH ONE ANOTHER AND WITH OTHER FORMS OF MEDICAL SERVICES.

13. *Co-operation of Hospitals with One Another.*—That hospitals operating in the same area should confer with the object of securing approximately uniform regulations for the prevention of abuse.

14. *Co-ordination of Hospitals with Public Medical Services and Provident Dispensaries.*—That there shall be a system of co-ordination between hospitals, on the one hand, and public medical services and provident dispensaries on the other, so that the hospitals shall refer to the public medical services and provident dispensaries cases unsuitable for hospital treatment (see paragraph 11 foregoing), and the public medical services and provident dispensaries shall refer to the hospitals cases for consultation, as well as those requiring hospital treatment and nursing, or specially suitable for purposes of clinical instruction.

15. *Notices to Facilitate Co-operation.*—That notices be posted in Out-patient and Casualty Departments of Hospitals calling attention to public medical services or approved provident dispensaries in the neighbourhood.

16. *Reference of Cases for Special Advice.*—That a member of a public medical service or provident dispensary, or other patient referred to a hospital for consultation, with a private note or personally by a general practitioner in attendance, should be referred back to such medical attendant with a statement of the opinion of the hospital physician or surgeon on the condition of the patient.

17. *Relation of Hospitals to the Poor Law Medical Service.*—That cases of obvious destitution or cases already in receipt of Poor Law Relief shall, after they have been once seen in the casualty or out-patient department, be referred to the Poor Law Relieving Officer, unless they should be retained for hospital treatment, and Poor Law patients should be referred to hospitals for consultation, as in the case of public medical service and provident dispensary patients. In these cases payment might be required from the Poor Law Guardians if deemed advisable.

18. *Reference of School Children to Charities.*—That the Association should oppose the reference of School Children, found upon medical inspection to be defective, to public medical charities for treatment, whether or not accompanied by payments or subsidies.

APPENDIX B.

RULES AND REGULATIONS OF DISPENSARIES UNDER THE NEW YORK STATE BOARD OF CHARITIES.

I.—Posting a Public Notice.

There shall be posted and permanently maintained in a conspicuous place in the reception room for applicants a notice as follows:

This dispensary has been licensed under the laws of the State of New York by the State Board of Charities, to furnish medical or surgical relief, advice, or treatment, medi-

* The term "public medical service" has been applied in certain districts to organizations for providing medical attendance and medicine for certain sections of the community, in which the service is under the direct control of the medical profession. In other districts services of exactly the same general type have been established under the title of "provident medical associations," but the general designation of "public medical service" is preferable, as avoiding confusion with organizations under non-medical control.

cine or apparatus to the sick poor who are unable to pay for the same. The law provides as follows:

(Section 25, Chapter 363, Laws of 1899.)

"Any person who obtains medical or surgical treatment on false representations from any dispensary licensed under the provisions of this Act, shall be guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than ten dollars and not more than two hundred and fifty dollars."

(Imprisonment until fine be paid may be imposed.—Code Crim. Pro., s. 718.)

II.—The Registrar.

(As amended October 10th, 1900.)

There shall be an Officer to be known as "the Registrar," whose duties shall be to supervise the work of the dispensary, and either personally, or by a competent deputy selected by him for that purpose, to make and preserve all records, receive all applicants, and to see that all rules and regulations are enforced.

III.—The Admission of Applicants.

(As amended October 10th, 1900.)

1. It shall be the duty of the Registrar to examine all applicants to determine the question of their admission, and the following rules shall guide his actions:—

(a) All emergency cases shall be admitted and receive prompt treatment and care.

(b) Every applicant who is, in the opinion of the Registrar, after examination and personal inquiry, poor and needy, shall be admitted.

(c) Every applicant, either personally or by the parent or guardian of such applicant, in regard to whose ability to pay for medical or surgical relief, advice or treatment, medicine or apparatus, or either, in whole or in part, the Registrar is in doubt, shall be admitted to a first treatment on signing a card containing the "representation" or statement of the applicant, but the Registrar shall forthwith cause an investigation of his or her ability to pay either personally or by parent or guardian; the results of such investigation shall be filed among the permanent records of the dispensary. Any such applicant who declines to sign the required "representation" or statement shall be refused admission.

2. Such "representation" or statement shall be in the following form:

(Card of Admission on "Representation" or Statement of Patient.)

Name..... Date.....
 Dr.....No. in Family.....
 Nationality..... Address.....
 Occupation, Man..... Woman.....
 Income..... Rent.....
 This is my..... application to this Dispensary in the year.....
 I have been an applicant to no other Dispensary in the year..... (or to the following Dispensaries.....)
 The foregoing statement is in all respects true.
 Signature of Applicant.....
 Admitted..... Refused.....

3. The Registrar shall issue to every applicant who is admitted for treatment a pass card on one side of which shall be printed the usual information in regard to attendance upon the class to which he or she is assigned, and on the other side the card shall be in the following form:

Penalty for False Representations.

(Section 25, Chapter 363, Laws of 1899.)

"Any person who obtains medical or surgical treatment on false representations from any dispensary licensed under the provisions of this Act shall be guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than ten dollars and not more than two hundred and fifty dollars."

(Imprisonment until fine be paid may be imposed.—Code Crim. Pro., s. 718.)

National Insurance.

LOCAL MEDICAL COMMITTEES: INSURANCE COMMITTEES.

THE State Sickness Insurance Committee, at its meeting on February 20th, adopted the following resolutions:

I.

That a communication be sent to Honorary Secretaries of Divisions,

- (a) referring to the work of Local Medical Committees,
- (b) asking for information as to

(i) The names of the Secretaries and Chairmen of Local Medical Committees;

(ii) The names and addresses of the directly-elected medical practitioners upon the Local Insurance Committees, and also of the medical practitioners elected thereto in any other capacity;

(iii) Information generally as to the action that is being taken by Local Medical Committees;

and

(c) intimating that the columns of the JOURNAL are open for the reports of meetings of the Local Medical Committees.

II.

That it be an instruction to the Special Subcommittee to consider and report as to what steps should be taken in order to co-ordinate the action of the Divisions with reference to the National Insurance Act with that taken by the various Local Medical Committees within their areas.

THE CLERICAL WORK IN CONNEXION WITH MEDICAL BENEFIT.

ENGLAND.

THE Secretary of the Insurance Commission (England) has supplied us with the following report of conferences with the Insurance Commissioners on the clerical work and other matters affecting medical practitioners who have undertaken to give medical attendance and treatment under the Insurance Act.

Memorandum by the Commissioners.

The Insurance Commissioners have given careful consideration to the subject of the clerical work required from medical practitioners in connexion with the administration of medical benefit, as to which they have received many suggestions from practitioners on the panels, based on their personal experience.

On February 4th the Commission received a deputation from the National Insurance Practitioners' Association, who submitted the results of inquiries which that Association had made among doctors engaged in the work. The deputation urged that the forms of records should be simplified, and stated that, so far as they could ascertain, a card system for the keeping of records would be generally preferred by the profession to the day-book at present in use, or indeed to any record in book form. Amendments in the prescription form were suggested, and the deputation pressed for the substitution of duplicate, or even single, forms for the triplicates at present in use. They urged that the doctor should not be required to furnish to the patient a copy of the prescription for retention by the chemist (in addition to the one which the chemist would send to the Insurance Committee as a voucher for payment), and that it should be left to the doctor's own discretion whether he should retain a copy for his own use.

The deputation raised the questions also as to the methods to be adopted for allocation of insured persons among practitioners on the panel, the possibility of Insurance Committees making payments on account before the end of the quarter to practitioners in respect of the insured persons already on their list, and the simplification of the forms of certificates required by some approved societies in connexion with the administration of sickness benefit.

These subjects were further considered at a conference held by the Insurance Commissioners at the Civil Service Commission, Burlington House, on February 11th, to which every Local Medical Committee recognized by the Commissioners under Section 62 of the Act, and also every Committee which had applied for recognition, had been invited to send a representative. About eighty were present.

The first subject discussed was the procedure and forms in connexion with the acceptance of an insured person by a doctor for inclusion in his list. It was stated on behalf of the Commissioners that there would not be another general issue of the red tickets, the use of which was a temporary measure required by the special circumstances incidental to the bringing into operation of medical benefit

on January 15th. The only clerical work required of a doctor in future, in connexion with the acceptance of an insured person on his list, would be the filling up of a form of acceptance, and this would not be required in respect of any insured person already accepted by him. In other words, after the completion of the first general assignment, the filling up of forms of acceptance will only be necessary in the case of insured persons changing from one doctor to another, those coming into a district, and those entering for the first time into insurance.

It was further stated that each Insurance Committee would send to each doctor on the panel, in respect of each insured person notified by him as accepted on his list, a card containing that person's name, address, and other particulars. These cards would constitute the doctor's list of the insured persons for the time being recognized by the Committee as under his care. After some discussion, in which some of those attending expressed preference for a single continuous list, it was clear that the proposed card system was preferred by the majority of the conference.

On the subject of records there were marked differences of opinion. A few favoured the continuance of the present day-book, simplified by the omission of the patient's society and number and reduced in size, while some urged that the record should be kept in a book retained by the patient which he should produce each time he was attended by the doctor. It was clear, however, that a large majority considered a card system the best. A form of card was placed before the conference and was generally approved, subject to modifications in detail. Some speakers urged that the records should be confined to those cases in which sick pay was received, but the preponderating feeling was in favour of such records as were required being obtained in respect of all cases treated.

Objections were raised to the triplicate prescription form, and also to the requirement that drugs not included in the list adopted by the Committee must be ordered on a special form. On the former subject the Commissioners stated that they had decided not to require the triplicate and to leave the keeping of a duplicate to the discretion of the doctor. Note was taken of the suggestion that when a special drug was ordered some distinctive mark might be made on the ordinary form, instead of using a special form. Suggestions were also made for detailed modifications of the prescription forms with a view to the convenience of the prescriber.

In addition to these questions of clerical work members of the conference were invited to raise any other points to which they desired to draw attention with a view to facilitating the work of doctors in connexion with medical benefit. Points were brought forward as to the method to be adopted for the distribution of those insured persons who made no choice or were rejected by the doctors of their choice, the method of distribution of the medical benefit fund where a capitation system was adopted, and the grant for mileage.

It was explained that the method of distribution of insured persons among the doctors on the panel was one primarily for consideration by those doctors themselves, who could draw up a scheme for the purpose. It would be

possible, under a scheme approved by them, to permit a doctor to take on his list only a small number of insured persons, or to confine his list to persons of a defined class. The Insurance Committee would require to be satisfied that the scheme was such as to secure that every insured person was provided with medical attendance, that an excessive number was not assigned to any one doctor, and that an insured person was not unreasonably assigned to a doctor living at a distance from him. It was also explained that the method of distribution of the capitation allowance in cases in which the allocation of insured persons was not completed before the end of the quarter, was also a matter for the consideration primarily of the doctors on the panel, who should make arrangements with the Insurance Committee. Where desired, Insurance Committees would be able to make payments to doctors on account (for example, at the end of the first month) in respect of the insured persons already accepted on their lists.

As to the mileage grant, it was stated that the Insurance Committees were collecting information as to the cases in their own areas in which special circumstances justifying a claim appeared to exist. The Committees would report to the Commissioners, who would distribute the grant after due consideration of all the claims.

SCOTLAND.

On February 14th a meeting took place in Edinburgh between the representatives of forty-four Local Medical Committees in Scotland and the Scottish Insurance Commissioners. Some representatives of the Pharmaceutical Standing Committee (Scotland) were also present. Among the questions discussed were the modifications of the medical day-book now in use, and the possible employment of a card system of medical records, the medical prescription book, and the carbon copies, the use of the medical ticket for identification purposes, and the utility of a uniform medical certificate. The conference lasted for more than four hours, and the Commissioners promised to give consideration to the various suggestions made.

DEBATE ON THE INSURANCE ACT.

On the last day of the session, February 14th, another discussion was raised on the National Insurance Act by Mr. Godfrey Locker-Lampson, who gave instances in which an Insurance Committee had told applicants that free choice of doctor could be allowed only in exceptional circumstances, and that each case would have to be judged on its merits and a proper reason given for the permission. The speeches of the Chancellor of the Exchequer, the Lord Advocate, and other members of the Government while the bill was in the House contained, he said, no references to exceptional circumstances, nor was there any such reference on the red ticket or on Form Medical 21. He complained that in some districts no inquiries were made as to the condition of applicants, or as to the existence of exceptional circumstances in their cases. He also complained that Insurance Committees were telling people that certificates for sick pay could not be received unless given by a doctor on the panel. When challenged by Mr. Masterman he quoted a case in which an applicant from a district in Leicestershire, where there was no doctor on the panel, had been told to apply to Dr. —, who "will now practise in your village from to-day."

Dr. Dawes, who is the Chairman of the London Insurance Committee, asked whether the reasonable request of a doctor to be put on the panel for a limited number of patients, when in view of his private practice he was unable to deal with an unlimited number or any very large number, would be granted. He also asked whether what might be called a clinical inspection would be made on behalf of the Insurance Commissioners.

Mr. Bridgeman inquired as to the exact position of persons over 65 in respect of medical benefit.

Sir John Jardina and Sir John Barran raised the question of mileage in certain southern counties of Scotland in which a number of insured persons resided at considerable distances from any doctor in no fewer than 200 cases in Roxburghshire the distance was as great as ten miles.

Sir Henry Craik said that whereas the Chancellor of the Exchequer had spoken eloquently upon the free choice of doctor, and how there ought to be the fullest confidence

between doctor and patient, the Act as it was being worked did not afford such free choice. Many Insurance Committees were refusing to consider even the assignment of the ordinary sickness benefit and other benefits to those who were not able to produce a certificate from a medical man on the panel.

Mr. Sherwell said there had been delay in some cases in extending medical benefit to insured persons in Huddersfield, owing to the failure of the Insurance Commissioners to issue Form Medical 21.

Mr. W. Thorne said that, in his experience, free choice was limited by the fact that some doctors had so many people on their list that they refused to sign any more forms. There was already overcrowding, and in such cases during surgery hours two or three hundred people could be seen waiting in file in the road, as if they were going into a music-hall; there ought to be some limit to the list of any particular doctor. He also mentioned a case in which an insured person who went to the doctor before 8 p.m. found the shop of the nearest chemist, which was three miles away, closed when he got there, and asked, Would it not be possible where the chemists lived so far away for the doctor to supply the medicine?

Sir George Younger complained that to one doctor who resided at the seaside some miles away a great many servants in the west-end of Edinburgh had been assigned.

MR. MASTERMAN'S REPLY.

Mr. Masterman, in general reply, said that, in spite of the strenuous opposition of the friendly societies, the bill was transformed when it was passing through the House. The old friendly societies system, in which all the members of a society went to one doctor, was swept away.

Free Choice.

The system of free choice was approved by the House by an overwhelming majority; it allowed every doctor who agreed to work under the Act to have his name put upon the list, and all members to have free choice from that list of any doctor they wished to attend them. Those responsible for the administration of the Act had been fighting for the application of that principle. Throughout the greater part of England and through almost the whole of Scotland practically every doctor engaged in industrial practice was on the panel. He believed that, taking the counties of England and Scotland, the resident registered practitioners on the panels were nearer 90 than 80 per cent. There was the freest possible choice of those doctors among the insured persons.

Persons Making their own Arrangements.

With regard to persons making their own arrangements, he said that no kind of obstacle would be put in the way of Insurance Committees exercising their discretion in any exceptional cases so long as this application of Section 15 (3) did not interfere with the general responsibility of the Insurance Committee to give medical benefit to all persons under the Act and so long as the committee acted in conjunction with the panel doctors. If certain doctors wished for a limited number of patients it was desirable, if compatible with the general interests of the insured persons, that they should be permitted to go on the panel for that limited number, but it would not be fair to allow such doctors to select lives; they ought to take a fair average sample of lives. An Insurance Committee could only give its consent to this limitation acting in conjunction with, and with the approval of, those doctors who had taken a general risk in that respect. With regard to Mr. Dawes's second question, there was no intention to bring any inspectors to examine either the method of diagnosis or the treatment of the patient by the doctor on the panel. The only reservation was that in cases of definite complaint by the insured of the treatment he had received, that complaint was referred to a committee established by the regulations, a committee on which both the medical profession and insured persons were represented. It was, he said, a libel to suggest that an inspector was suddenly to descend from the Insurance Committee upon a panel doctor to investigate his day-book, to ask why he gave medicine in one case and not in another, and why he treated one man one way and not in another way. Any such suggestion was utterly remote from the conception of the Insurance Act.

Persons over 65.

With regard to insured persons over 65, he said that there were two classes. There were the persons who, being over 65, were working and were employed when the Act came into force last July. They became insured persons, but were insured in a separate fund; they received nine pennyworth of insurance for the fourpence of their contribution; to that ninepence there was now being added 2s. 6d. a head for those who selected medical benefit, and they would therefore receive something over tenpence a head of insurance for the fourpence they paid down. Under a system calculated either by the friendly societies or according to tables prepared by Insurance Commissioners they could receive any benefit within the limit of tenpence which their approved society might select for them. At first the approved societies only asked for tables of sick pay, but there was now a strong demand for medical benefit on the part of persons over 65, who felt very much the fact that they would not receive medical benefit, and said that they would prefer that some portion of the 10d. should be allocated for medical benefit, and consequently less for sick pay. The Insurance Commission had now issued actuarial tables which would enable any society to give to these persons medical attendance and treatment and a certain amount of sick pay. In respect of such persons the extra 2s. 6d. now voted for medical benefit would be paid to the society in respect of that person, so that if medical benefit was given there would actually be paid in respect of that person somewhat more than if medical benefit was not given and only sick pay given. In reply to a question by Mr. Albert Smith, Mr. Masterman stated that a trade union could make up the sick pay of a person over 65 to 6s. a week, and then give the medical benefit out of the National Insurance Fund. They would then undoubtedly receive the extra 2s. 6d. out of this particular fund. The second class of persons were those who did not become insured persons under the Act but were insured in friendly societies, and it was urged that if those persons who expected medical benefit for their lives were now deprived of it, it would be a hard case. The answer was twofold. If they had been accumulating funds in accumulating societies up to that age (65), then, as the funds were released by the passing of the Act, the societies ought to make arrangements for the continuance of medical benefit, and should give special attention to the interests of old members: they should be a first charge on any funds liberated. The second answer had reference to a clause in the Act which stated that Insurance Committees must arrange for the medical attendance of those persons over 65 at a rate not less than a general rate for insured persons; that was intended for the protection of persons who might find doctors charging an extra amount. The difficulty had not arisen in connexion with that particular clause. There would, he thought, be no difficulty in securing attendance on persons over 65 who were not insured at the same rate for which insured persons were attended. But, owing to the extra grant, the price for the medical attendance on insured persons had increased. In country districts it had increased from an average of 4s. to an average of 9s., and Mr. Masterman thought it would be unfair if doctors receiving 9s. a week capitation for patients for whom they had only received 4s. a year before the Act was passed, also turned round on persons not insured and over 65 years of age, and asked from them 9s. for the same services which they used to give for 4s. In the town districts also there would be a very considerable increase. He hoped that as the Act came to be understood the doctors would see that the matter affected a small and rapidly diminishing number of persons. It would not be possible to give the extra 2s. 6d. except in respect of persons who came under the Insurance Act. He was making inquiries, and hoped that the result would show that the majority of doctors working under the Act were willing to accept the old figures for those persons.

Mileage in Scotland.

With regard to mileage in certain districts in Scotland the Government recognized that the point had to be met. The grant that the House was making contained a sum of £40,000 for special services in Great Britain outside the Highlands, and a separate grant of £10,000

for dealing with the special problems of the Highlands. The proposal was that the distribution of the £50,000 should be worked out in conjunction with the Insurance Committees. When the scheme was completed the mileage money would be paid as from the commencement of the Act. With regard to the question of certificates for sick pay Mr. Masterman said that it was entirely a question for the managing bodies of the approved societies subject to the provision that an insured person could appeal to the Insurance Commissioners. It had been explained during the debate in the previous week why it was believed that it would be unwise for the managing bodies of approved societies promiscuously to announce that they would receive certificates from any doctor, panel or non-panel.

QUESTIONS IN THE HOUSE.

AMENDING BILL.

Mr. Godfrey Locker-Lampson asked the Prime Minister, on February 13th, (1) whether he would give the House an adequate opportunity of discussing amendments to the National Insurance Act at an early date, and (2) whether he would give facilities for a bill to amend the National Insurance Act so that an insured person could recover from the Insurance Fund the expenses of emergency medical treatment which he might have incurred outside the district in which his panel doctor operated. The Prime Minister said that it would be premature at that time to make any further announcement with regard to the business of next session.

The Prime Minister, in reply to Mr. Harry Lawson, said he would certainly consider whether an opportunity might not be given to discuss the amendment of the Act.

ADMINISTRATION OF MEDICAL BENEFIT.

Income Limit.

Mr. Masterman stated, in reply to Sir J. D. Rees on February 12th, that in accordance with Section 62 of the Act, the regulations provided that an Insurance Committee should consult the Local Medical Committee, if one had been recognized in its area, before fixing, varying, or abolishing an income limit.

Contracting Out.

On February 14th the Secretary to the Treasury stated, in reply to Sir Philip Magnus, that a circular letter had been forwarded by the London Insurance Committee to all hospitals which had applied to that Committee for leave to make their own arrangements. A special form of notice of application applicable to these cases would be issued for use by such hospitals as soon as possible.

Closing of Panels.

On February 12th Mr. Hunt asked why the panel in the Bridgnorth area of Shropshire was closed from January 15th, and was still to be closed for a period of three years.—Mr. Masterman said that as the number of practitioners available for the panel system in the urban and rural areas of Bridgnorth was not adequate for treatment of insured persons, the Commissioners dispensed with the necessity for the adoption of the panel system for the period named, and authorized the Insurance Committee to make other arrangements under Section 15 (2) of the Act.

Aged Insured Persons entitled to Medical Benefit.

Mr. Cassel asked, on February 12th, whether the special grant-in-aid for medical benefit would be made in respect of insured persons who after the age of 70 still remained entitled to medical benefit; and, if not, from what source would the extra cost of medical benefit in such cases be defrayed.—Mr. Masterman replied that the special grant-in-aid would be paid in respect of all insured persons entitled to medical benefit irrespective of age.

Limitation of Lists and the Residue of Insured Persons.

Sir Philip Magnus asked the Secretary to the Treasury, on February 12th, whether, in the case of a doctor having joined a list or panel on the understanding that he contracted to attend only a limited number of insured persons,

he might be required later on, as a condition of his remaining on the list or panel, to attend such additional number of insured persons as might be allotted to him as his share of the residue of persons to whom no doctor had been previously assigned.—Mr. Masterman replied that the distribution of insured persons who had not been assigned to any doctor was to be carried out so far as practicable under arrangements made by the doctors on the panel. If such arrangements allowed of a doctor attending only a limited number of patients, there was no reason why it should be made a condition of his remaining on the panel that he should attend an additional number of insured persons, so long as the arrangements were in force.

Assistants.

In reply to Mr. F. Hall, on February 13th, Mr. Masterman said that a practitioner on the panel might depute an assistant to act on his behalf when he was precluded by urgency of other professional duties, absence from home, or other reasonable cause, from giving personal attendance to an insured person under his care. It was the duty of the Insurance Committee to take any necessary steps to secure that the service provided by any assistants was satisfactory, but, subject to this, the remuneration of such assistants was a matter for their principals and themselves to determine.

Drugs and Appliances.

Mr. Newdegate asked, on February 13th, whether, in view of the inconvenience suffered by patients, he could now state whether kidney belts would be included among appliances supplied under the National Insurance Act.—Mr. Masterman said that the suggestion was receiving consideration. The whole question of the schedule, including the suggestions, was under consideration. He had no doubt there would be some speedy result.

On February 14th Mr. Needham asked whether a doctor who was working under the National Insurance Act, in addition to giving a prescription and advice, could also sell medicine to the insured person to be paid for by the insured person.—Mr. Masterman said that, except in the special circumstances where a doctor was allowed to dispense under the Act in accordance with paragraph 50 of the Medical Benefit Regulations, no payment could be made to him out of the insurance funds for any drugs supplied by him to insured persons, who were entitled to obtain them free from any chemist on the panel. He did not think it would be proper for such an arrangement to be made as was described in the question.

Records: Repetition of Prescriptions.

Mr. Masterman, in reply to Captain Knight, said that both doctors on the panel and approved institutions were required to send to the Insurance Committee notices of acceptance of insured persons. The arrangement by which, at the commencement of medical benefit, insured persons desiring treatment from a doctor on the panel could obtain such treatment by presenting their medical tickets would not be appropriate to insured persons entitled to receive medical attendance and treatment through an approved institution, in respect of whom definite evidence was necessary that they were, or desired to become, members of the institution.

Captain Knight asked why a patient, being a member of an approved institution, could not obtain a second supply of medicine without having a further interview with the medical officer and obtaining a second prescription.—Mr. Masterman said that this requirement must have been imposed by the rules of the institution to which the insured person belonged. It had not been imposed by any regulation of the Commissioners. The institutions might, however, reasonably consider that it was in the best interests of the patient that the decision as to repeating a medicine should rest with the medical attendant of the patient rather than with the patient himself, and that a prescription should not be repeated without a written statement to that effect by the medical attendant.

Professional Secrecy: Records of Illness.

Mr. Cassel asked, on February 12th, whether it would be possible to ascertain the diseases from which any insured person had suffered or was suffering by comparing the records in the hands of the Insurance Commissioners

with those in the hands of the Insurance Committees; and, if so, how far would such records be kept secret, would privilege from production in any court of law be claimed; and had or would any information from such records be supplied to the Treasury or any other Government Department.—Mr. Masterman said that the answer to the first part of the question was in the negative. As he had stated in reply to previous questions, the arrangements for the keeping and furnishing of records secured that information which would connect the name of a patient with an entry as to a particular kind of disease could not be obtained by the Commissioners, the Insurance Committee, or the society. The particulars of illnesses and certain other particulars (but not anything by which the patient can be identified) would be used for statistical purposes.

Mr. Cassel asked if Mr. Masterman was aware that the half of the form filled up by the doctors containing the disease was sent to the Insurance Commissioners, and the other half, containing the name of the patient suffering from the disease, was sent to the Insurance Committees, and that they could be identified together by the numbers which were on them. If it were proved that this was the case, would he take steps to see that proper secrecy was preserved.—Mr. Masterman said he was informed that the forms were so arranged that it was quite impossible to identify them even if they were kept together.

Mr. Staveley-Hill asked the Secretary to the Treasury, on February 14th, if he would explain how, having regard to the wording of Form 240 A.G.D. and Form 240a, A.G.D., the nature of the illness of an insured person was alone known to the doctor when the forms mentioned state the nature of the illness and had to be signed by a secretary of an approved society in which the person is insured.—Mr. Masterman replied that the forms referred to were forms to be used by approved societies for the purpose of keeping a continuous record of the duration of every illness which incapacitated a member from work. Where the societies had knowledge, from whatever source, of the nature of the illness, they could, if they thought fit, fill up the space in the form which was left for that purpose. These forms had no connexion with the records kept by doctors.

Change of Residence.

A number of questions have been put to Mr. Masterman with regard to insured persons who change their residence temporarily during the year, as, for instance, to convalesce at the seaside after an illness, or in such cases as those of domestic servants, who either go with their employers to some other place, or change their situations during the year. Mr. Masterman's replies were generally to the effect that the insured persons must, on change of residence, notify the Insurance Committee of the new district, but he admitted that the committees must make arrangements with their permanent officials to meet cases occurring in the intervals between the meetings of the committee, and eventually said that he would be glad to receive any suggestions for making the regulations on this point more simple and convenient. Sir William Ball called attention to cases in which relieving officers had admitted domestic servants to the infirmary or work-houses when they had no homes to go to and could not provide board and lodgings and all the extras out of the sick pay. He asked that the ratepayers should, after contributing to the National Insurance Act, be protected from being compelled to support these young women. Mr. Masterman could only say that he was not aware of any cases of the kind, but was ready to receive particulars.

SANATORIUM BUILDINGS.

In a written reply the President of the Local Government Board stated on February 14th that so far as England was concerned new buildings to contain 214 beds were being erected at Birmingham, Bolton, Derby, Ford, Meathop, and Winstley, at an estimated cost of about £41,000, and existing buildings at Liverpool, Sutton, and Wakefield containing about 390 beds were being adapted for use as sanatoriums or extended at an estimated cost of £4,900; 172 sanatoriums and hospitals containing about 6,300 beds had already been approved under the National Insurance Act.

REPORTS OF LOCAL ACTION.

NORTHERN ASSOCIATION OF MEDICAL WOMEN.

A MEETING of the Northern Association of Medical Women was held on February 15th at the Women's Union, Manchester University. Dr. DRINKWATER (Wrexham) took the chair.

Dr. CLAYDON (Oldham) gave an account of the interview between the representatives of the medical practitioners on the panel and the Commissioners, held in London during the course of the week.

The following resolutions were passed unanimously:

1. That in those areas where the Local Insurance Committees refuse permission to make their own arrangements to the insured patients of women doctors, the Commissioners should be respectfully asked to intervene.
2. That in any insurance area where one or more women doctors are practising, it is advisable that they should be directly represented on the Local Medical Committee.

COUNTY OF CHESHIRE.

A SCHEME TO INCLUDE DEPENDANTS.

ON February 18th a meeting was held at the Town Hall, Macclesfield, under the chairmanship of Colonel BROCKLEHURST, M.P., between the representatives of all the friendly, burial, and other sick benefit societies and the medical profession of the town to consider the proposed East Cheshire medical system. This system was formulated some time ago by the Stockport, Macclesfield, and East Cheshire Division of the British Medical Association, and has received the endorsement of the central authority of that Association. The main principles of the scheme have been advocated also by the National Medical Union.

Its chief feature is that a working man entering under the system ensures medical attendance for his family as well as himself for a small payment, proportionate to his wages, in addition to his statutory payment under the National Insurance Act.

The basis of the scheme consists in pooling the sum of 9s. per annum allotted to medical benefit by the State, or, in case of non-State members, paid as a premium by individuals joining, and the establishment in respect of each family of a deposit payable in very small weekly or monthly instalments. The deposit would first bear the cost of illness up to a strictly limited liability, and any further claim would be borne by the pool. The balance of the deposit above the amount of the liability would form a kind of savings bank account, upon which the beneficiary could draw, and the balance of the pool would be payable to the deposits in the form of bonuses. The deposits would, of course, bear interest, and at death would form a death benefit. There would be free choice of doctor, and the doctor would be paid according to a standard tariff.

Mr. J. WEBSTER WATTS, F.C.A., who has been closely identified with the scheme, was present, and endorsed the actuarial side of the proposals, pointing out that a considerable balance would be available in normal years, a portion of which might be used to assist the formation of the requisite deposits of those members who were near the poverty line.

The approval of the Commissioners would be a necessary condition precedent to the final adoption of any such scheme.

On the motion of Mr. SOMERVILLE, the senior practitioner of the town, a Committee was appointed to thresh out the scheme to consist of nine representatives of the Sick Benefit Societies and four representatives of the medical profession nominated by the Local Medical Committee. Dr. MARSH agreed to act as honorary secretary *pro tem.* and to convene the first meeting.

IRELAND.

DEPUTATION TO MR. REDMOND.

A DEPUTATION from the County Waterford Medical Association had an interview with Mr. John Redmond, M.P., on February 10th. Dr. POWER, who acted as spokesman, put forward various points, and among others inquired if the special grant of £50,000 was the sole amount available for certification purposes in Ireland. Mr. REDMOND, in reply, said that the whole of that sum could not be applied for certification, and that its disposal rested with the Irish

Insurance Commissioners. Various other points were raised, to which Mr. Redmond made reserved answers. He concluded by advising the medical men in Ireland to give evidence before the Treasury Commission, adding that the system of medical benefit in England could only be applied to big centres in Ireland, such as Dublin and Belfast; some other method would have to be devised to deal with areas of smaller population.

THE TREASURY COMMITTEE ON MEDICAL BENEFIT.

It was originally intended that the Treasury Committee appointed to inquire into the advisability of applying to Ireland the provisions of the National Insurance Act of 1911 with reference to medical benefits should meet in Belfast on February 17th and 18th, but the sitting has been postponed to March.

A general meeting of all the profession summoned by the Belfast Division and the Belfast Medical Guild was held in the Medical Institute on the afternoon of February 13th. Sir JOHN BYERS was elected Chairman, and a very large number of medical men were present. Dr. George Elliott acted as Secretary. A report of the subcommittee lately appointed to consider the matter was submitted and discussed, and, after a spirited debate, Dr. R. J. Johnstone, Dr. Geo. Elliott, Dr. MacIntosh, Dr. Stanley B. Coats, and Dr. O'Doherty were appointed by ballot to appear before the Commission and give evidence. Much interest was shown in the proceedings, and the speaking was full of matter and to the point; the Chairman's tact, fairness, and firmness brought a difficult task to a successful issue, and the profession seemed to have every confidence that, despite the numerous minor clefts, the interests of all will be well looked after by the gentlemen selected, and a firm and united front shown.

THE INSURANCE ACT IN CASHEL.

The Cashel Board of Guardians have come to the conclusion that it would be much to the advantage of the various benefit societies under the Insurance Act if they agreed to pay for their members' maintenance in hospital. The guardians could refuse to admit the insured persons to hospital if the societies refused to pay. If the patients remained outside they might be drawing 10s. sick benefit for six months, whereas they might be only a week or so in the hospital, and this would be a considerable advantage to the societies. Accordingly it was unanimously resolved to pass the following:

That the relieving officers be directed to demand from persons of the tramp class seeking relief his or her insurance card, and to refuse admission to the workhouse unless the card is produced, and to inform the master in every instance whether the applicant is an insured person, and to name the society.

CORRESPONDENCE.

THE INQUIRY ADDRESSED TO THE REGISTERED MEDICAL PRACTITIONERS BY THE ASSOCIATION.

Dr. HENRY DICKMAN (Sheffield): I trust the Association's circular will be answered by every medical man. I believe if certain modifications are introduced we shall be more satisfied than we are at present, and those to my mind are:

1. That the dispensing should be given to us—at all events, it should be made optional. Every medical man should be given the 9s. per head. If he prefers the dispensing to be done by the chemist, the cost of his prescriptions should be deducted from his 9s. It seems out of the question that 2s. per head would cover the cost of the chemist. As 9s. a head is all that could be got for medical benefits, it is evident that this sum will be divided between chemist and doctor to the detriment of the latter. It is therefore necessary, for other reasons as well, that we keep the dispensing in our own hands.

2. The treatment of venereal diseases should be paid for by patient.

3. That all minor operations and anaesthetics be paid for by patients as before under the club system; patients too poor to do so have the hospitals.

We cannot very well object to some public control when we are paid out of public money, and it seems to me that

the regulations are fairly reasonable for the investigation of complaints. Of course the most ideal system is abolition of the panel system and payment for work done per scale, so that all are private patients.

THE PRESENT SITUATION AND FUTURE POLICY.

Dr. HARFORD EDWARDS (Markyate, near Dunstable) writes: I do not know whether my opinion and experience so far as it goes—and it seems to me too soon for a definite opinion—is of any value, but if it is you are welcome to it. I am not sure either whether it will apply to many or most country practitioners, but I should say it does. I have at present something over 900 insured persons on my list.

1. Of these a certain number formerly were private patients who paid, and included in this section are two or three employers of labour who, one would suppose, must be making a gross income of more than £160. To me this is immaterial, as there are so few.

2. There are, of course, a large number—the largest—of people who were formerly “club” patients, paying 4s. per annum.

3. In my practice there are included a considerable number who though not club members, and who did not get a “parish” order (I am a Poor Law doctor) have never (a) paid anything whatever, or (b) have only paid in dribbles, or by employing a collector, or by “county courting” them.

From the purely financial standpoint this seems to point to an improvement, and on the same side must, I think, be put a possible improvement in one's relations with patients—that is, the question of payment does not come in.

I mention these points as I cannot help thinking there must be many in like circumstances, who therefore would not be inclined to leave the panels without some very definite and positive alternative policy. A mere return—if it were possible—to the old conditions would not appeal.

I may say I have always voted against going on the panel, though I am an ex-panellist.

Dr. FITZ-JAMES MOLONY (Porlock, Somerset) writes: Some of the letters appearing in the BRITISH MEDICAL JOURNAL seem to show a spirit of needless panic. The profession has been outwitted in the first fight simply because it was not ready, but if the present panic leads to proper organization it will have done some good.

The proposals by Dr. P. R. Cooper and others that payment for work actually done should be adopted are absolutely futile. This is clear from the fact that a panel doctor living in a large town, with his thousand or more insured patients living near him, could run up accounts to an unlimited extent. The patients would not have to pay, and would be gratified by the frequent visits, but the payment would come from the pooled funds as far as they went, and out of the pockets of the other panel doctors. It would mean a scramble for the pooled money, and would lead to no end of trouble.

I do not suppose it is seriously suggested that the State should provide for fifteen millions of workers by payment per attendance in the ordinary sense, and pay their medical bills, whatever the amount. This being so, the capitation system is the only possible one, and if the fees were increased, and the mileage question settled, it would work fairly enough. Surely all this has been threshed out before.

The British Medical Association deserves well of the profession for the fight it made, but the machinery of a scientific body is not adapted to fight a Government. It has been suggested that every medical man should join the British Medical Association, but this does not meet the case of those who take the *Lancet* or some other medical paper. I would suggest that the JOURNAL be dissociated from the British Medical Association, that the SUPPLEMENT be called “The Proceedings of the British Medical Association,” and be issued with all the medical periodicals. Alternatively, a small fee might be charged each member for enrolment in the British Medical Association, entitling him to a copy of “The Proceedings,” and he could make his own arrangements about a medical paper.

The British Medical Association of the future will have strenuous fighting work in addition to its scientific work, and the machinery will have to be altered. For one thing,

it is idle to expect that competent men, such as we want on our Insurance Medical Committees, will work or attend meetings without being paid for it. Directors of companies are paid, and there is nothing derogatory in the idea. Reward sweetens labour, and it would all make for efficiency. The Medical Committees must be such as can be relied on to safeguard medical interests, and it will probably be necessary to provide permanent legal help to enable them to meet Insurance Committees on anything like even terms.

Dr. G. MCGREGOR (Southsea) writes: In Dr. O'Sullivan's letter in the SUPPLEMENT of February 8th he gives figures which show that only about 10 per cent. of the members of his Division took the trouble to be present at the annual meeting of the Division when important elections were to be decided, and he also shows how leading members of the Executive violated the pledge. Although I am not surprised to read that account of a Division, the facts are none the less deplorable, and it was because I knew that such a state of affairs existed that I felt it to be my duty to endeavour to urge men to take a more lively interest in the real business affairs of the Association, instead of leaving it to the few. I believe that the state of things shown by Dr. O'Sullivan exists in the large majority of the Divisions and except some very exciting business is on hand, such as the immediate loss of our liberty and all we hold dear, members are content to pay their subscriptions and scan the JOURNAL, and that is the extent of their interest in the Association. If these conditions are to go on it is useless for members to look to the Association to help them fight their battles, and although it does almost seem hopeless that we shall be able to rely on the men to hold closer together in the future, we must not give in without a further attempt to rouse our colleagues to a sense of their danger. The Association could have gained every single point in the late struggle and will be able to do so in the future if every single member will only show a reasonable interest in its affairs instead of putting them aside to be the very last matter to be attended to. Is the profession content to stand idly by and see itself plundered and broken? If not, then in the name of all that is reasonable, let us act like sensible men and use our Association—call it trade union if you will—to the best possible advantage, and *at once*.

Dr. ARTHUR KING (Bew, North Devon) writes: True there is promise of some amelioration, but at present the more one tries to work the Insurance Act the more it seems to resemble an insanity. Just as in madness there is probably an underlying perversion of idea on which the whole superstructure of conduct is built, so in the National Insurance Act a stupendous fallacy supports all its fearful and wonderful unworkable complexity and detail. The framers forgot that the people for whom they were legislating are by nature human—not nine-pins—and react to surroundings. It was a similar simple calculation and omitting the human factor that lost to us the United States.

In commerce it is recognized—though the principle is apparently unknown to the Government—that when strawberries are half the price the consumption is doubled, putting it roughly; and yet the Minister responsible fondly imagines, when medicine is given for the asking, the demand will remain the same.

Be that as it may, the doctor is asked, or rather compelled, to accept the remuneration calculated on conditions previously existent. At best, contract practice is the illegitimate offspring of charity degraded into a catchpenny trade, and has become the curse of the profession. It is a matter of regret, in the interests of the profession and the public, that the General Medical Council cannot take steps in regard to it similar to those towards advertising, which is, compared with contract practice, in its remote effects a minor sin. It lowers the status, lessens the weight of medical opinion on matters vital to the nation, and affects evilly the moral and physical character. It is the last straw of the medical wastrel and a drag and hindrance to the painstaking practitioner.

Anxious to get their own back, for every trivial ailment the insured seeks sick and medical benefit. This eventually grows into a habit and custom. There should be some restraining influence to protect the doctor against these

frivolous calls which absorb his time, and leave the less for the investigation of honest sickness.

The Government have plunged into a vast experiment without consulting those well qualified to inform them how good can best come out of it. The Act abolishes all those natural checks of individual responsibility which kept the clamour for assistance within reasonable bounds, and then the Government calmly plants the burden on the shoulders of the profession, and charges them with trying to wreck the Act because they find it unworkable. Every benefit is tainted with an injustice to the sweated doctor. Labourers it appears have rights, and are entitled to consideration—doctors not. One hundred hours a week and night work is not excessive for us, whereas half that for them is slavery and bondage.

There should be no longer any sentiment in the matter. The Government has undertaken the care of the sick and its duty is plain—to see to it and give proper remuneration.

The doctor when he has paid his poor rates has done his part like the ordinary citizen who is not again called on to supply, say, tea and sugar to pink cards at below cost price.

Is there a trade or profession, save ours, that would have been subjugated by threats of vengeance, to ruin our livings and practices by the importation of doctors? Is there a trade or profession that would accept a closely-calculated capitation to supply necessities *ad libitum*? Would railways or tailors supply free travelling or trousers for, say, 10s. a year because statisticians showed this was the average sum spent per head before?

If Mr. Lloyd George is sincere in his spoken word he might still make amends for the harm and the wrong he has done the doctors and the people. "Doctors differ." Many like myself object to the introduction of a gamble into professional work. I desire to receive fees for the patients I treat and not for the people I do not treat. Surely this is not peculiar, nor does it constitute a specialist.

When a Government tries to grapple with big questions it might well bear in mind that of the things we see the most important part is that which we do not see.

CONTRACTING OUT.

Dr. B. G. M. BASKETT (Thundersley, Essex) writes: I do not "cavil at the word 'tax'"; on the contrary, I think it is the proper term. But it should not be used in connexion with the word "insurance." If it is a tax, the employee's contribution is not an insurance premium; if it is a premium, it is not a tax, but a trust, and the addition of a Government bonus makes no difference to the sanctity of the trust. Therefore the insurer plainly has an *indefeasible* right (not "indefensible," as printed) without conditions to his benefit. For, *pace* Dr. Adams, it is not possible that any insurance company for the richer classes should make conditions as to the way their insurers spend their money when earned by their premiums. Any conditions are known and agreed to before the contract is made. The absence of contract makes this law a Poor Law and justifies the imposition of conditions after the "policy" is taken out. But it would have been fatal to the bill to have said so, and may yet be fatal to the Act when once the people most concerned realize that Ministers have despaired of their ever reaching a position in which they can pay for what they get without help from taxes. If the relief came from the rates, no incubation period would have been needed for the realization.

That real supervision by a lay committee must be fatal to any scientific body hardly needs arguing, especially if the Insurance Committees, like the guardians of the poor and other non-political bodies, come, as inevitably they will, to be elected on political platforms. This is notoriously the case in Germany. Dr. Adams's reference to the services is unfortunate, because the disastrous results of subordination of the profession in the army have been confessed and remedied by the recent changes.

I do not know whether he means himself to justify the Act or is merely quoting others when he says that its *raison d'être* is the failure of the voluntary principle. But that is what the authors of the Elizabethan Poor Law said; and, legislating for the moment, they multiplied the evil tenfold for the future. Dr. Adams must needs admit that the voluntary principle in England has been followed

by the lowest death rate of any industrial community in the world, with the doubtful exception of two where individualism has conspicuous sway, while in Germany, where State meddling has reached its triumphant apotheosis, the sickness-rate explain it how you will—has greatly increased, and the progress against tuberculosis is acknowledgedly far behind our own.

Rome was not built in a day; our progress, though necessarily seeming slow to us while watching, has been immense. There is no evil against which the Act is directed which would not have been ameliorated by raising wages and the standard of living. By relieving taxation Ministers could have raised the wages of every man and woman in the country and left them free; instead they have chosen to increase taxation and to impose what must ultimately come to be an appalling burden. Personally I have not yet come across a medical man of long experience who does not see in the Act a menace as well as an indignity to the class it hopes to benefit. We shall do our duty by that class, as we did before; but I hope that every man who sees clearly the real meaning of this measure will do his utmost to educate the people with whom he comes in contact with a sense of the invidiousness of imposing special laws on a man because he has less than £160 a year.

VOLUNTARY PAYMENTS TO PANEL DOCTORS BY INSURED PERSONS.

Dr. J. C. THURBERTSON WALKER (Roughdale) writes: As a considerable number of insured persons are desirous of ignoring the medical benefit provisions of the National Insurance Act, and have intimated to their doctor that they wish to be attended by him in the ordinary way, in spite of the fact that he has accepted them as panel patients, I have taken legal opinion on the following question, and have received the reply which is given below:

Question.—Is it open to a practitioner on the panel to receive payment voluntarily made for treatment (such treatment being within the competence of a general practitioner, rendered to an insured person under his care, such an insured person not being a person who has made his "own arrangements" in the manner provided by the Regulations?

Answer.—As the Regulations stand, I think it is open to a practitioner on the panel to receive voluntary payments for treatment within the competence of a general practitioner.

MILEAGE.

Dr. L. L. THOM (Ewyas Harold, Hereford) writes: Already we can see one great mistake we made. Mileage does not affect the town medical man at all, but it does the rural very seriously. We rural men must combine. It was the mass of the town votes which dragged us down. I propose that rural practitioners combine. We already know that the number of insured in each practice (rural) is but few. There are only 1,200 in Dore Union, with five resident and three just extra-resident. We could afford to do without it. We should combine and force mileage. It is quite certain that Mr. Lloyd George could not import medical men at £300 a year who would live a most uncomfortable life, and often not find a place for his motor or horses to earn only about £60. The rural areas could not be grouped, because sick people cannot walk very far.

A pledge from the others also to resign *en masse* if a man is imported to prevent just mileage, and the thing is done. We must get mileage guaranteed after two miles. It can easily be done; but we must not be overweighted with the votes of the pleased town doctor, for whom miles have no terror and where it would be possible for Mr. Lloyd George to import. The Act is a poor matter to the rural doctor.

FRIENDLY SOCIETIES AND THEIR AGED AND INIRM MEMBERS.

Dr. CHARLES E. MORRIS (Holywell, N. Wales) replies to Dr. Kidd's letter (SUPPLEMENT, February 15th, p. 162) as follows: His kindly feelings are to be commended and raise our admiration; but would do so still more if he offered to treat these old friends for, say, the same rate as before, or still greater height of altruism would he attain if he attended them for nothing, having taken their contributions for so many years.

Does not Dr. Kidd know that the State has by statute imposed on the Insurance Committee the duty of making arrangements with duly qualified medical practitioners, under regulations made by the Insurance Commissioners,

and being such as to secure the provision of medical attendance and treatment on the same terms as to remuneration for uninsurable aged members of friendly societies as for insured persons? The benevolent intention being, no doubt, that as some compensation for the segregation inflicted upon them by the State, these veterans of labour should, when ill, be not attended at any different rate to their fellows who are insured, and thus they escape invidious treatment.

Where the money is to come from is not clear, and, if the aged member cannot provide it, it becomes the duty of his lodge, or his Order, or of the Insurance Committee, or of Parliament, to find the money to carry out the very explicit terms of the statute.

LOCAL MEDICAL COMMITTEES.

Under this heading it is proposed to publish regularly reports of the meetings of Local Medical Committees. The honorary secretaries of committees are invited to send reports, which it is suggested should deal as far as possible with matters of general interest to the profession throughout the country to the exclusion of details mainly of local concern. Reports should be received not later than the first post on Tuesday in each week.

BOOTLE.

At a meeting of the members of the profession resident in the County Borough of Bootle held on January 20th, a Local Medical Committee was elected consisting of ten members. Application was made to the National Insurance Commissioners for recognition under the Act. This has now been granted, and the first meeting of the Committee was held on the evening of February 15th, when eight members were present. Dr. McCormack was elected Chairman, and Dr. Walker (29, Merton Road, Bootle) Secretary.

Meetings of Branches and Divisions.

**METROPOLITAN COUNTIES BRANCH:
WILLESDEN DIVISION.**

A special meeting of the Division, to which non-members were invited, was held on February 4th. Twenty-nine were present. In the absence of Dr. James, Dr. MACAULEY was elected to the chair.

Report of Representative.—Dr. MACEVOY gave his report as Representative and answered questions, and was unanimously accorded a vote of thanks.

Report of Provisional Medical Committee.—The HONORARY SECRETARY reported that the committee had applied for recognition, but had not yet received a reply. On the question of expenses, the Honorary Secretary was instructed to write for further information.

Report of Middlesex Medical Committee.—Dr. MACEVOY reported that the committee had (1) applied for recognition; (2) had decided that each Division should elect a "correspondent" for the purpose of informing the other Divisions of any resolution passed and action taken by his Division affecting the interests of other Divisions, etc.; (3) had recommended that steps be taken to canvass the medical practitioners in all Divisions of Middlesex with a view to ascertaining whether they will or will not apply or reapply for service on the panel after April 15th if more satisfactory terms are not offered. The meeting expressed sympathy with the action of the Middlesex Medical Committee, left to that committee the nomination of candidates for the Insurance Committee, and appointed Dr. Skene correspondent.

**MIDLAND BRANCH:
KESTEVEN DIVISION.**

The inaugural meeting of the Kesteven Division was held at Grantham on February 11th, when the officers were elected.

Chairman, Dr. G. W. Shipman (Grantham); *Vice-Chairman*, Dr. T. P. Greenwood (Stamford); *Honorary*

Secretary and Treasurer, Dr. C. H. D. Robbs (Grantham); *Executive Committee*, Dr. H. T. Benson (Market Deeping); Dr. J. C. Ellis (Metheringham, Lincoln); Dr. J. Galletly (Bourne); Dr. O. Giles (Sleaford); Dr. J. A. Macdonald (Woolsthorpe).

The rules of organization were adopted and the ethical rules in their entirety.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

The Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,

Medical Secretary.

February 4th, 1913.

ELECTION OF COUNCIL, 1913-14.

NOTICE is hereby given that nominations for a candidate for the election as a Member of Council by the New Zealand Branch for a period not exceeding three years as prescribed by By-law 49 (2) must be forwarded so as to reach me not later than Tuesday, April 15th, 1913.

Nominations must be made either by any Division, or by any three Members of the Branch, in the form prescribed below.

Election will be by voting papers, and these will contain the names of all duly nominated candidates, and will be issued by me.

By Order of the Council,

H. E. GIBBS,
Honorary Secretary, New Zealand
Branch, and Returning Officer.

123, Willis Street, Wellington, New Zealand.
February 22nd, 1913.

NEW ZEALAND.

NOMINATION FORM.

BY A DIVISION OR BY NOT LESS THAN THREE MEMBERS OF THE BRANCH.

We, the undersigned, hereby nominate

.....
of.....
.....

as a candidate for election by the New Zealand Branch above named as a member of the Council of the Association.

Names and addresses of nominators, and Branches to which they belong.

| <i>Name.</i> | <i>Branch.</i> |
|--------------|----------------|
| | |
| | |
| | |

This form should be returned to Dr. H. E. Gibbs, 123, Willis Street, Wellington, New Zealand, not later than Tuesday, April 15th, 1913.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH.—The fourth ordinary meeting of the session will be held at the Museum, Bath, on Wednesday, February 26th, Dr. Roxburgh, President, in the chair. A discussion will be opened at 8 p.m., by Dr. Mervyn Gordon, on "The Present Prospect and Limitations of Treatment by Specific Measures in the Commoner Bacterial Infections."—W. M. BEAUMONT and NEWMAN NEILD, Honorary Secretaries, Bath.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—A meeting of this Division will be held at the Coventry Hospital on Tuesday, March 4th, at 8.30 p.m. (1) To discuss the ethical procedure in regard to the Coventry Dispensary. (2) To discuss the new Ethical Rules as recommended by the Association. (3) To receive communications. (4) Dr. Wynne will read a paper on "The Role of Tuberculin in Treatment of Pulmonary Tuberculosis."—DUNCAN DAVIDSON, 15, Priory Row, Coventry.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held at the Manor Lodge, Upper Clapton (by invitation of Dr. C. F. Hadfield), on Tuesday, March 12th, at 9.30 p.m. Clinical evening: Cases and discussion. The Honorary Secretary will be glad to receive notice from members desiring to show cases or read short abstracts by February 28th.—A. G. SOUTHCOMBE, 83, Sidney Road, Homerton, N.E.

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION. A meeting of the Division will be held at the Royal Infirmary, Leicester, on Wednesday, February 26th, at 4 o'clock. Agenda: Minutes of the last meeting. Clinical cases. Other business.—R. WALLACE HENRY, Honorary Secretary, 6, Market Street, Leicester.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—It has been found necessary to again alter the date of the demonstration arranged by the Newcastle-on-Tyne Division to March 28th, when Professor R. A. Bolam will lecture on "Medico-legal Tests for Blood."—R. J. WILLAN, Honorary Secretary, 25, Ellison Place, Newcastle-on-Tyne.

STAFFORDSHIRE BRANCH.—The Second General Meeting of the Session will be held at the Swan Hotel, Stafford, on Thursday, February 27th, 1913. The President, E. C. Stack, Esq., F.R.C.S.I., will take the chair at 5.15 p.m. Business: (1) Minutes of the last Ordinary General Meeting. (2) Correspondence. (3) Exhibition of Living Cases. (4) Papers: (i) "Mouth-breathing and Deafness," John Priestley; (ii) "Notes and Remarks on three Pathological Specimens removed by Abdominal Section," F. N. Cookson. (5) Exhibition of Pathological Specimens, etc. Dinner, 7 p.m.; charge, 5s.—HAROLD HARTLEY, Honorary General Secretary, Basford, Stoke-on-Trent.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following notices of retirement and appointments have been announced at the Admiralty: Deputy Surgeon-General JOHN J. DENNIS, M.D., to the *President*, additional, for temporary service in the Medical Department, February 15th, 1913. Staff Surgeon WILLIAM C. B. SMITH to the *Royal Arthur* for medical charge of voyage home. Staff Surgeon ELIJAH R. L. THOMAS to the *Excellent* temporarily, February 15th, 1913. Surgeon A. FAIRLEY, M.B., to the *Victory* for Royal Naval Barracks.

Fleet Surgeon ARTHUR SYDNEY GORDON has been placed on the retired list at his own request, February 1st, 1913.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Major E. F. Q. L'ESTRANGE to command the Station Hospital, Cambronne.

Major FREDERICK W. HARDY, M.B., to be Lieutenant-Colonel, vice C. E. Faunce, January 26th, 1913.

The following Captains to be Majors: GEORGE F. SHEEHAN and EUGENE RYAN, JOHN H. BARBOUR, M.B., January 29th, 1913; Captain RICHARD C. WILSON, M.B., February 3rd, 1913.

Captain A. H. T. DAVIS to command the Station Hospital, Malapuram.

Captain J. H. GURLEY has been posted to Netley Hospital as Specialist in Ophthalmology.

Major E. B. STEEL has been appointed to the Medical Charge of Troop at Exeter, vice Lieutenant-Colonel H. P. Edington.

The undermentioned Lieutenants to be Captains, January 31st, 1913: ALBERT H. DIVE, LIONEL C. HAYES, M.B., ROBERT GALE, M.B., ALFRED G. JONES, M.B., KENNETH COMYN, FREDERICK B. LAING, M.B., ARTHUR S. CAINE, JOHN M. WEDDELL, CHARLES M. NIGOL, M.B., ARTHUR P. O'CONNOR, M.B., THOMAS H. DICKSON, M.B., HUGH G. ROBERTSON, M.B., HERBERT V. STANLEY, M.B., PHILIP C. FIELD, RONALD M. DAVIES, M.B., RICHARD C. G. KIRKHEAD, M.B., EDWARD C. STONEY, M.B., THEODORE W. STALLBRASS, M.B., VICTOR P. HUTCHINSON.

Lieutenant W. B. LAIRD has taken up duty in the London District.

Lieutenant R. C. CARLYLE has taken up duty in the London District.

Lieutenant J. H. S. SHIELDS has taken up duty in the London District.

The undermentioned Lieutenants from the Seconded List are restored to the establishment: WALKER W. PRATT, M.B., and EDWARD P. A. SMITH, January 26th, 1913. CUTHBERT J. H. LITTLE, M.B.; FRANK C. COWTAN, ARTHUR A. M. DAVIES, and LESLIE DUNBAR, M.B.

The undermentioned Lieutenants are confirmed in their rank: WILLIAM B. LAIRD, FRANCES R. B. SHIMSHIRE, EDWARD B. ALLSOTT, HARRY C. TOOD, M.B., MAURICE BURNETT, GILBERT A. BLAKE, M.B., ROBERT W. VINT, M.B., HAROLD W. L. ALLOTT, JOHN HARR, M.B., ROBERT A. FLOOD, M.B., ERIC C. LANG, M.B., LEOPOLD T. POOLE, M.B., THOMAS H. BALFOUR, M.B., RICHARD E. PORTER, M.B., HUGH J. S. SHIELDS, PIERCE M. J. POWEN, EDWARD V. WHITBY, M.B., EDMUND U. RUSSELL, N. RIAN W. STEVENS, M.B., RICHARD B. PHILLIPPS, JAMES C. SPROULE, GEORGE F. ALLISON, ROBERT C. CARLYLE, M.B., JOHN E. HEPPEY, HENRY F. PANTON, M.B.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

First Home Counties Field Ambulance.—Captain JAMES S. WARRICK, M.D., to be Major, January 29th, 1913. Captain ARTHUR T. PALWASSL resigns his commission, February 8th, 1913.

Third South Midland Field Ambulance.—Captain PERRY MOXEY from the list of officers attached to Units other than Medical Units to be Captain, February 1st, 1913.

Third Anglian Field Ambulance.—WILLIAM R. M. TUTTLE, M.D., to be Lieutenant (to be supernumerary), January 13th, 1913.

Third East Lancashire Field Ambulance.—Lieutenant WILSON H. G. HEY, M.B., F.R.C.S., to be Captain, December 12th, 1912.

Third Northumbrian Field Ambulance.—Captain WILSON RANSON, F.R.C.S., Special Reserve, to be Lieutenant-Colonel, February 8th, 1913.

First Northern Field Hospital.—Captain FREDERICK CHARLES PYBUS, M.B., F.R.C.S., from the list of officers whose services will be available on mobilization, to be Captain in the permanent personnel, February 8th, 1913. Captain FREDERICK C. PYBUS, M.B., F.R.C.S., to be Major, February 8th, 1913.

Attached to Units other than Medical Units.—Lieutenant PIERCY T. TOLPITT, to be Captain, December 18th, 1912. Captain DANIEL O. KERR, M.B., and Lieutenant ALFRED I. SHEPHEARD-WALWYN, M.D., have resigned their commissions, February 5th, 1913. THOMAS BROWN, M.B., October 3rd, 1912. ALBERT A. GUNN, M.B., December 16th, 1912. Lieutenant EDWARD C. RYALL, F.R.C.S.I., has resigned his commission, February 8th, 1913.

For Attachment to Units other than Medical Units.—GEORGE HENRY WATSON to be Lieutenant, January 6th, 1913. THOMAS WILLIAM S. HILLS to be Lieutenant, January 24th, 1913.

CHANGES OF STATION.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns, 8,672 births and 5,886 deaths were registered during the week ending Saturday, February 15th. The annual rate of mortality in these towns, which had been 17.0, 17.5, and 17.2 per 1,000 in the three preceding weeks, was again 17.2 per 1,000 in the week under notice. In London last week the death-rate was equal to 28.1, against 17.8, 18.6, and 17.3 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 7.0 in Enfield, 7.4 in Southend-on-Sea, 7.9 in Hootie, 8.0 in Wadsworth, 9.0 in Wimbledon, and 9.1 in Cambridge to 24.3 in Merthyr Tydfil, 24.9 in West Bromwich, 25.0 in Swindon, 28.2 in Wigan, 29.4 in St. Helens, and 29.9 in Stockton-on-Tees. Measles caused a death-rate of 4.0 in Swindon and in Barrow-in-Furness, 5.2 in St. Helens, 6.3 in Wigan, and 7.5 in West Bromwich; whooping-cough of 3.5 in Warrington; and diphtheria of 1.2 in Birkenhead and in Newport (Mon.). The mortality from enteric fever and scarlet fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 42, or 0.7 per cent. of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 13 in Birmingham, 5 in Liverpool, 3 in Coventry, and 2 each in Southport, Blackpool, Sheffield, Sunderland, and Tynemouth. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,784, 1,738, and 1,736 at the end of the three preceding weeks, had further fallen to 1,701 on Saturday last; 196 new cases were admitted during the week, against 215, 209, and 209 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,165 births and 900 deaths were registered during the week ending Saturday, February 8th. The annual rate of mortality in these towns, which had been 20.2 per 1,000 in each of the two preceding weeks, rose to 20.8 in the week under notice, and was 3.6 per 1,000 above the rate in the ninety-six large English towns. Among the several towns the death-rates last week ranged from 10.5 in Kilmarnock, 11.7 in Kirkcaldy, and 14.6 in Clydebank, to 24.9 in Falkirk, 25.3 in Perth, and 29.0 in Ayr. The mortality from the principal infectious diseases averaged 2.0 per 1,000, and was due to (1) Diphtheria and Croup, (2) 433 deaths from all causes registered in Glasgow included 34 from whooping-cough, 4 from infantile diarrhoeal diseases, 3 from measles, 3 from scarlet fever, 3 from diphtheria, and 2 from enteric fever. Seven deaths from whooping-cough were recorded in Edinburgh, 4 in Leith, 2 in Aberdeen, and 2 in Motherwell; 4 deaths from diphtheria in Aberdeen; and 4 deaths from scarlet fever in Coatbridge.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, February 8th, 654 births and 481 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 614 births and 473 deaths in the preceding period. These deaths represent a mortality of 20.9 per 1,000 of the aggregate population in the district in question, as against 29.4 per 1,000 in the preceding week. The mortality in the Irish towns was, therefore, 5.7 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending Saturday. The birth-rate, on the other hand, was at a 28.4 per 1,000 of population. The birth-rate of individual localities was in the Dublin region as follows:—17.7, as against 16.7, in 1914 for the previous four weeks; in Dublin city, 18.1 (as against 20.7); in Belfast, 23.2 (as against 22.7); in Cork, 22.4 (as against 23.5); in Londonderry, 20.3 (as against 21.6); in Limerick, 15.2 (as against 15.9); and in Waterford, 2.6 (as against 2.4). The zymotic death-rate was 1.3, as against 1.1 in the previous week.

MACCLESFIELD GENERAL INFIRMARY.—Junior House-Surgeon. Salary, £80 per annum.

MANCHESTER ROYAL INFIRMARY AND DISPENSARY.—Honorary Assistant Aural Surgeon.

MIDDLESEX HOSPITAL MEDICAL SCHOOL, W.—Senior Demonstrator of Anatomy. Salary at the rate of £100 per annum.

National Insurance.

LOCAL MEDICAL COMMITTEES.

Under this head it is proposed to publish regularly reports of meetings of Local Medical Committees. The State Sickness Insurance Committee, at its meeting on February 20th, directed a communication to be addressed to the honorary secretaries of Divisions intimating that the columns of the JOURNAL would be open for this purpose, and at the same time asking for information as to the names of the chairmen and secretaries of Local Medical Committees and of the medical practitioners elected upon the Local Insurance Committees of counties and other areas.

ABERDEENSHIRE.

A Local Medical Committee for the county of Aberdeenshire has been constituted as follows:

| | |
|-------------------------------------|----------------------------|
| Dr. Rorie (Cults), Chairman. | Dr. Trail (Strichen). |
| Dr. Rannie (Culter), Vice-Chairman. | Dr. Wilson (Huntly). |
| Dr. Bruce (Cults), Secretary. | Dr. Skinner (Skene). |
| Dr. Forbes (Inverurie). | Dr. Cockburn (Oldmeldrum). |
| Dr. Henry (Kemnay). | Dr. Crarer (Turriff). |
| Dr. Hendry (Ballater). | Dr. Middleton (Peterhead). |
| Dr. Nicol (Alford). | Dr. Smith (Peterhead). |
| Dr. Beddie (Fraserburgh). | Dr. Cran (Banchory). |
| Dr. Trail (Fraserburgh). | Dr. Christie (Woodside). |

A subcommittee appointed to consider various points reported to a meeting summoned by the Local Medical Committee of the doctors on the panel held on January 24th at the Medico-Chirurgical Society's Hall, Aberdeen.

This meeting arrived at a number of conclusions, and the Local Medical Committee subsequently had a conference with the County Insurance Committee, when an agreement was reached on many of the questions. The points raised included the supply of drugs and appliances,

which, in the unanimous opinion of the Medical Committee, should be governed by Paragraph 30 of the Regulations. That paragraph provides that in a rural area the committee may make arrangements for the supply to an insured person of drugs and appliances by the practitioner attending him at a distance of more than one mile from the place of business of a chemist who is on the list. It was agreed that Sunday surgery hours for insured persons should be discontinued, and that the Insurance Committee, when issuing its local regulations, should minimize all Sunday work. It was further arranged that all notices of visits requested should be left before 10 a.m., except in cases of genuine emergency. The Local Medical Committee has made further representations, including an offer that visits within one mile should be free from mileage, which was considered a more fair offer than the three miles free from mileage proposed by the Commissioners. The Local Medical Committee has also decided that as dentistry is not a legal obligation under the Act, the minimum fee for extracting should be 1s. 6d., exclusive of local anaesthetics. It also resolved that

the rate for attendance on uninsured club members should be 7s. a head, exclusive of medicine, within a radius of three miles, insured persons over 65 to be taken at the same rate. The Committee considered the probability that a demand would be made in time for the treatment of all dependants of insured persons at a capitation rate, and adopted the following tariff as the basis for subsequent arrangement and calculation:

Minimum Tariff for Attendance on Dependants of Insured Persons.

Ordinary visit, 2s. 6d., plus suitable mileage above one mile.
Consultation at home, 2s. 6d.
Tooth extraction, 2s. 6d., with local anaesthetic when required.
Visit between 8 p.m. and 8 a.m., double fee.
Sunday visit, fee and a half.
Certificate, 2s. 6d.
Midwifery, £1 ls.; with anaesthetic, £1 5s.
Abortion with operative interference, as confinement.
Abortion without operative interference, at ordinary visit rates.
Fractures and dislocations—setting or reducing without anaesthetic, 10s. 6d.; with anaesthetic, £1 ls.
Minor operations with local anaesthetic, 5s.
(In all cases with suitable mileage.)

Expenses of Committee.

It was unanimously resolved that a levy of 2s. 6d. be made on each medical man on the panel to cover current expenses for printing, postage, etc.

County Insurance Committee.

The Commissioners for Scotland have accepted the nominations of the Local Medical Committee of members of the County Insurance Committee as follows:

Representatives of Practitioners.—Dr. Roric (Cults), Dr. Beddie (Fraserburgh).

Representatives of Commissioners.—Dr. Bruce (Cults), Dr. Skinner (Skene).

Representatives of County Council.—Dr. Maver (Bucksburn), Dr. Trail (Fraserburgh).

PLYMOUTH.

The following is a list of members of the Plymouth Local Medical Committee:

| | |
|--------------------------------------|---|
| Robert Jaques, F.R.C.S., Chairman | T. B. P. Wilkinson, M.B., B.Ch. |
| Paul Swain, F.R.C.S. Eng. | W. L. Woolcombe, F.R.C.S. Ed. |
| E. L. Fox, M.D. Lond. | H. B. Palmer, L.R.C.S. |
| E. B. Thomson, M.D. | Rosa Bale, L.R.C.P. and S. |
| R. B. Burke, L.R.C.P. and S. | W. F. MacCarthy, M.D. |
| H. R. Corbett, M.B., B.Ch. | C. J. Cooke, M.D. (1, Sussex Terrace, Plymouth), Hono- rary Secretary |
| H. H. Parsloe, M.R.C.S. | B. J. Donbavand, M.R.C.S., <i>ex officio.</i> |
| Robert Simpson, L.R.C.P. and S. | |
| R. H. Wagner, M.D., M.Ch. | |
| Fielding Whitmore, M.R.C.S. | |

The medical representatives elected by the profession to serve on the Insurance Committee are Drs. Robert Simpson and R. H. Wagner. Those elected to the Medical Service Subcommittee are Drs. E. L. Fox and E. B. Thomson and Mr. W. L. Woolcombe.

BOSTON.

A meeting of the Local Medical Committee was held on February 7th, when there were present Dr. Smith (in the chair), Drs. White, Pileher, W. H. Smith, R. Tuxford, and the Secretary (Dr. Wilson).

Statutory Recognition.—It was resolved to apply for statutory recognition, and the Secretary was instructed to take the necessary steps.

Election to Local Medical Committee.—The Committee, having power to add to its number, unanimously elected Dr. S. H. Perry of Spalding.

Election of Representatives on Insurance Committee.—It was resolved to leave the matter of the election of representatives to the Holland Insurance Committee to the special meeting of the Division.

CONSTITUTION OF OTHER COMMITTEES.

Information as to the constitution of other local medical committees will be found in the report of the Reigate and Brighton Divisions of the South-Eastern Branch, and in that of the East Hertfordshire Division of the Metropolitan Counties Branch (pp. 223, 224, 225).

LOCAL INSURANCE COMMITTEES.

The Insurance Commissioners have declared the following medical practitioners to have been elected to serve on Insurance Committees in England by the medical practitioners resident in the several areas shown below in accordance with the Regulations made by the Commissioners under Section 59 (2) (c) of the National Insurance Act, 1911.

Dr. OLDHAM (Calton Cottage, Morecambe) telegraphs his thanks to the profession of Lancashire for the honour conferred upon him by his election to represent them on the County Insurance Committee. He will be glad to hear from any of his constituents in difficulties with the Insurance Act and its administration.

MEETINGS OF INSURANCE COMMITTEES.

LONDON INSURANCE COMMITTEE.
THE first public meeting of the London Insurance Committee was held on February 20th at the County Hall, Mr. J. A. DAWES, M.P., Chairman of the Committee, presiding. About forty of the eighty members of the Committee were present.

Inquiry as to the Death of an Insured Patient.

Almost the first business dealt with was a report by the Medical Service Subcommittee, which had been instructed to inquire into allegations made at an inquest on January 20th last that the amount of work imposed on the doctor in attendance, in consequence of the arrangements made under the Insurance Act, was such as to preclude the doctor from properly attending his patients. The subcommittee reported that it had considered the details of the case, and had been able to supplement the information before it by evidence furnished by Dr. G. Blake Hickson, the medical practitioner concerned, who had attended the meeting of the subcommittee.

The subcommittee had come to the conclusion that the circumstances attending the case were unprecedented and unlikely to recur; that the patient on the second day did not make any statement to Dr. Hickson which would lead him to believe that the man was seriously ill, and that Dr. Hickson, owing to the crowd of persons in his consulting-room, did not proceed as far in his investigation of the case as he might have done in ordinary circumstances. The subcommittee considered that arrangements made by the Insurance Committee for supplying the necessary forms to medical practitioners were the best that could be made in the circumstances. At the same time the subcommittee considered it a matter of regret that the inevitable pressure put on medical men during the inception

of the Act was aggravated by the necessity of putting into effect at a very late stage temporary arrangements involving great additional work on all concerned. The period of uncertainty due to the prolonged negotiations with the medical profession was probably responsible for this; the effect was that it was not possible for the medical profession to estimate the amount of work that would be necessary.

The amount of work imposed upon doctors by the Act and Regulations and the arrangements of the Committee was not such as to preclude them from giving proper attendance under ordinary conditions, and the pressure at the inception of the Act was due to the rush of persons desiring to have their medical tickets endorsed.

Increased Sanatorium Accommodation.

With reference to the arrangements entered into with the London County Council and the Metropolitan Asylums Board for the reception at the Downs Sanatorium, Sutton, of 300 male patients suffering from tuberculosis, the Insurance Committee decided, on consideration of a detailed report as to the number of cases of tuberculosis within its jurisdiction, to ask the County Council to provide accommodation for 200 further cases as soon as possible (100 women, 50 advanced cases and 50 observation cases) and to inform the Council that further accommodation might be required at a later date.

Inadequacy of Funds for Sanatorium Benefit.

The Sanatorium Benefit Subcommittee submitted a long report with regard to the cost of tuberculosis treatment and the provision made by the Act. It was pointed out that of the 1s. 3d. per insured person allotted to sanatorium benefit, 6d. was earmarked for paying medical practitioners on the panel in respect of domiciliary treatment. Out of the total amount remaining—9d. per insured person—the Committee was required to provide drugs and accessories for insured persons receiving domiciliary, dispensary and out-patient hospital treatment, and treatment in sanatoriums and other institutions, and, in addition, to meet the administrative expenses. The cost of 500 beds at 30s. a week would be £39,000 a year, and after deducting this amount and the sum due to medical practitioners in respect of domiciliary treatment, very little would remain to cover the cost of other forms of treatment. The subcommittee therefore advised the Committee not to incur further expenditure by providing dispensary and out-patient hospital treatment, pending the receipt of definite information from the County Council as to the general scheme proposed for dealing with tuberculosis throughout the county. The attention of the Treasury should be drawn at once to the fact that the funds now available for defraying the whole cost of sanatorium benefit were inadequate, and that the sums originally available for all forms of treatment should be placed at the disposal of the Committee.

The CHAIRMAN said the suggestion of the subcommittee was that as the Treasury had originally allocated a larger sum than 9d. per head for this purpose, it should give a larger grant before Section 17 (2) of the Act was enforced enabling the Committee to call upon the County Council to contribute.

Mr. CYRIL JACKSON thought it a very serious thing that such a position as this should have arisen so soon after the passing of the Act. He hoped very strong representations would be made to the Treasury.

It was agreed that representations be made to the Treasury, and that the attention of the Insurance Committees of the principal cities of the country be called to the matter.

Domestic Servants and Contracting Out.

Some discussion then took place on a motion by Lady ST. HELLIER that in view of the fact that domestic servants were being deprived of the services of the medical practitioners attending the family engaging them, it be referred to the Medical Benefit Subcommittee to consider arrangements for giving facilities to domestic servants to select their own doctors.

Mr. KINGSLEY WOOD thought that if this proposal were adopted, the co-operation of a thousand medical men in London not now concerned in working the Act would be secured.

Mr. F. COYSH, Chairman of the General Purposes Sub-

committee, regarded this as an insidious attempt to pledge the Committee to the policy of contracting out. He hoped the Committee would lay it down definitely and absolutely that it was opposed to contracting out, except in special cases which it would consider on their merits.

Mr. O. E. WARBURG, Chairman of the Medical Service Subcommittee, did not think it desirable to limit the co-operation of the medical profession to the 1,200 men on the panel. He agreed with a remark made by Mr. Lloyd George that it was undesirable to have any distinction between panel doctors and others. The tone of some members who had taken part in the debate suggested that a doctor was to be hounded out of service under the Act unless he was prepared to go on the panel. There were many medical men who were prepared to co-operate in working the Act but who were not willing to go on the panel, and to make that a *sine qua non* was the likeliest way of wrecking any possibility of a settlement with the profession. The panel system was not appropriate to the treatment of the domestic servant and some other classes of workers. In the case of a domestic servant who went to her own home when ill, the panel doctor of that place would come under the clause which allowed him 1½d. a week for attending the patient. He saw no objection to handing over to the approved society the 7s. a head to which servants were entitled and allowing the society to make special arrangements with the medical profession.

The CHAIRMAN remarked that the matter might be covered by the form just issued by the Insurance Commissioners, which seemed to permit almost every conceivable form of contracting out. He also remarked that this question was under the consideration of a subcommittee.

The motion was lost by 29 votes to 9.

OFFICIAL DOCUMENTS.

PERSONS MAKING THEIR OWN ARRANGEMENTS.

THE Insurance Commissioners have issued a memorandum (143/I.C.) with regard to the conditions which they will require to be fulfilled in respect of insured persons desiring, under Section 15 (3) of the Insurance Act, to make their own arrangements for medical attendance and treatment.

The document is as follows:

Applications under Section 15 (3) of the National Insurance Act, 1911, from Insured Persons Desirous of Making their own Arrangements for Medical Attendance and Treatment.

1. The Insurance Commissioners understand that Insurance Committees have experienced some difficulty with regard to applications from insured persons under Section 15 (3) of the National Insurance Act, and the following Memorandum is intended to assist Committees in dealing with such applications.

2. The Act does not contemplate arrangements under Section 15 (3) as an alternative to the normal panel system, but only as a provision to meet the exceptional cases of insured persons for whom, owing to their individual circumstances or to the circumstances of their occupation, special arrangements are more suitable than the arrangements made by the Committee.

3. Moreover, in considering applications from insured persons to be allowed to make their own arrangements for medical attendance and treatment, Insurance Committees will doubtless have regard not only to the special circumstances of each case, but also to the effect of their decision upon the general arrangements for the administration of medical benefit in their area.

4. Special circumstances in which an insured person may desire to obtain medical attendance and treatment otherwise than under the arrangements made by the Committee with practitioners on the panel include the following:

- (a) Special disabilities arising out of the nature of the occupation which prevent the insured person from getting full advantage from the panel system (e.g., commercial travellers, actors);
- (b) Special advantages arising out of the nature of the occupation which enable insured persons to obtain a more convenient or more extensive medical service than that provided by the panel system (e.g., nurses, hospital and asylum staffs);

(c) Circumstances in which the insured person desires a particular system of treatment not undertaken by doctors on the panel.

5. The majority of the applications with which Committees have to deal are received, it is understood, from insured persons desiring to obtain medical attendance and treatment from a particular practitioner who is not on the panel. Special discrimination must be exercised in dealing with such applications.

6. Some of the cases in which applications are made under Subsection (3) of Section 15 can be more suitably met by the Committee allowing the doctor whose services are desired to come on the panel for a limited number of insured persons or for particular insured persons only, as for instance in certain cases of domestic servants desiring to be attended by the doctor who attends the household. But this should only be done where the Committee have carefully satisfied themselves (1) that provision has already been made for all insured persons, (2) that the other doctors on the panel agree to the proposed arrangement, and (3) that the arrangement will not, at all events without the consent of the other doctors on the panel, result in the doctor who is admitted to the panel on these terms having on his list an undue proportion of selected lives.

7. With regard to the majority of applications received from persons desiring to obtain medical attendance from a practitioner not on the panel, it will be within the knowledge of the Committee that an attempt has been made by a section of the medical profession in certain districts to utilize the provisions of Subsection 3 of Section 15 of the Act for the purpose of setting up an alternative service in substitution for the normal system contemplated by Subsection 2. This would defeat the clear intention of the Act, which is that medical benefit should be administered by the Insurance Committee, and that the doctors who attend insured persons should as a rule do so under the arrangements made by the Committee, and not under private arrangements made with the insured persons directly. If a medical practitioner is prepared to attend any substantial number of insured persons, the proper course is for the practitioner to come on the panel.

8. On the other hand, there will doubtless be isolated cases in which the insured person desires to be attended by a practitioner who does not ordinarily undertake practice among the insured class and whose ordinary fees are possibly on a higher scale than the amount available from the Medical Benefit Fund would afford. Cases may also arise in which an insured woman desires to be attended by a practitioner of her own sex, and is willing, if necessary, to pay more than the ordinary rate of remuneration. Such cases as these would appear to fall within the class for which Subsection 3 was intended to provide. But before granting the application the Committee should ascertain that the insured person fully recognizes and accepts the liability for any excess of the doctor's charges beyond the amount which the Committee would be able to contribute.

Contribution.

9. The Act provides that the Insurance Committee shall, *subject to the Regulations*, make a contribution towards the cost of medical attendance and treatment in those cases in which they have allowed an applicant to make his own arrangements. The Regulations which have been made are concerned with four main points:

- (1) The separation of medical attendance from the supply of medicines.
- (2) The Committee's duty to the insured person, and indirectly to his approved society, as to the efficiency of the medical treatment arranged for;
- (3) The enforcement of the conditions of the Exchequer Grant;
- (4) The pooling arrangements necessary to carry out the provisions of the Subsection as to the Committee contributing "sums not exceeding in the aggregate the amounts which the Committee would otherwise have expended in providing medical benefit for them."

10. As these provisions are prescribed by the Regulations as conditions of contribution, it is desirable that the Committee should satisfy themselves that these conditions will be observed when considering an application, instead of allowing the insured person to incur expense under a misapprehension, only to find out later that through his non-observance of the conditions the Committee are unable to contribute.

11. Further, as already stated, it is desirable that the Committee should call the attention of applicants to the fact that they are liable to the doctor for any margin on his bills in excess of the Committee's contribution.

There is reason to believe that this fact is not generally appreciated.

12. Except in cases in which the insured person has contracted to obtain treatment at a fixed rate, it will be necessary for the Committee, in pursuance of Regulation 49 (2) (b), to fix a scale of fees in accordance with which the expenditure of the insured person will require to be calculated by them.

Forms of Application.

13. In order to bring to the notice of applicants, as well as of doctors with whom they desire to make special arrangements, the conditions which must be complied with, and to enable the Committee at the same time to satisfy themselves both as to the presence of special circumstances and as to the efficiency of the service arranged for, the Commissioners have prepared the enclosed model form (43/I.C.) for the convenience of the Committee. This form, as will be seen, provides for a statement by the applicant of the special circumstances which prompt him to make application, and for an undertaking by the doctor by whom he proposes to be attended that the necessary conditions will be observed.

14. In the case, however, of persons who by reason of their occupation change their residence at such frequent intervals that they are unable to make arrangements with any single doctor, this form will be inapplicable. Such persons will be unable to obtain an undertaking from the doctor in advance; and the Committee will require to satisfy themselves as to the observance of the conditions when application is made for a contribution. The enclosed form (43 A/I.C.) has been prepared for issue in these special cases by the Committee to the applicant when they notify him of their consent to his application, and is intended to enable the insured person both to account to the Committee for that expenditure to which a contribution is desired, and at the same time to satisfy them that the necessary conditions have been complied with.

15. In the case of nurses or other insured persons employed in a hospital or similar institution to whom treatment would normally be given by doctors on the staff a further form of application will be found convenient.

16. The enclosed form (43 B/I.C.) provides for a collective application over the individual signatures of all the applicants, and for a general undertaking by the institution itself to comply with the necessary conditions of contribution by the Committee.

17. Regulation 49 (2) of the Medical Benefit Regulations provides as follows:

"There shall be paid to every insured person required or allowed to make his own arrangements by way of contribution to the cost of his treatment (including medicines and appliances) an amount equal to that expended by him in obtaining treatment, medicine and appliances. Provided that

(a) in the case of a person who has contracted to obtain treatment (including medicines and appliances) for the year, the sum to be paid shall be a sum equal to the amount contracted to be paid by him or a sum equal to the aggregate amount standing to the credit of the fund divided by the number of persons making their own arrangements, whichever is the less."

18. At the same time Regulation 49 (2) (c) expressly lays down that "it shall be a condition of any payment that the medicines and appliances supplied to any person required or allowed to make his own arrangements shall be supplied otherwise than by or at the profit of the practitioner who is attending him," except in certain circumstances.

19. It will be clear, therefore, that no insured person can make an inclusive contract to the expense of which the Committee would contribute for medical attendance and medicines with a doctor; and that for this reason inclusive contracts such as those implied in the terms of Regulation 49 (2) (a) must necessarily be made with some intermediate person or body by whom both doctor and dispenser are employed. The position of a Hospital or Asylum, however, as employing doctors and dispensers, enables it to make inclusive contracts with insured persons upon its staff; and, if this course is followed, the Insurance Committee will be enabled by Regulation 49 (2) (a) to make a contribution to the expense incurred by the insured person under such contract within the limits set forth in that Regulation.

20. It would, of course, be possible to arrange for hospital employees to be treated by the doctors on the staff otherwise than under the provisions of Section 15 (3) of the Act, if the doctors on the panel consented to the hospital doctors being placed on the panel for the treat-

ment of insured members of the staff only. This alternative course might conveniently be considered, especially in circumstances in which, owing to the local situation of the institution, it would be permissible for the insured employees to receive their medicines from the doctor in attendance under the provisions of Regulation 30.

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.
February 18th, 1913.

Appended to the document is the following form (43 I.O.) for the use of insured persons desiring to make their own arrangements embodying an undertaking to be signed by the doctor, and instructions to insured persons :

(Page 1.)

NATIONAL INSURANCE ACT, 1911.

INSURANCE COMMITTEE FOR THE COUNTY OF
COUNTY BOROUGH OF
(Address)

If you desire to be allowed to make your own arrangements for medical attendance and treatment (including medicines and appliances) you must answer the following questions and obtain your doctor's signature to the accompanying undertaking (see page 2).

Before doing so you should carefully read the instructions set out on leaf (see page 3).

Question.

(1) What are the special circumstances which cause you to desire to make your own arrangements for medical attendance and treatment, instead of receiving medical benefit under the arrangements made by the Insurance Committee?

Answer.

(2) By what doctor do you desire to be attended?

(3) Has he attended you or your family previously?
If so, for how long?

(4) If you do not wish to arrange with a particular doctor, what arrangements do you desire to make?

Name of Approved Society (or Branch) :
Number.....
Usual Signature.....
Address.....
Date.....

If you are a Deposit Contributor, write here "Deposit Contributor."

NOTICE.—When you have filled up this form send it together with your Medical Ticket to the Clerk to the Insurance Committee at the above address.

(Page 2.)

UNDERTAKING TO BE SIGNED BY DOCTOR.

I, of undertake to give to an insured person living at medical attendance and treatment not inferior in nature quality or extent to that provided under the arrangements made by the Insurance Committee, and I undertake to comply in other respects with any conditions which, by reason of any scheme for the distribution of Parliamentary grant, must be complied with in the case of treatment provided otherwise, including—

(1) The keeping and furnishing of records, in the form prescribed by the Insurance Commissioners, of the diseases of the insured person attended by me, and of any treatment of him, and of such further records as may at any time hereafter be agreed between the Insurance Committee and the Local Medical Committee;

(2) The furnishing, at the request of the insured person, of such certificates as are required to be furnished by him for the purposes of the National Insurance Act in connection with any claim for sickness or disablement benefit made by him in pursuance of the rules of the Society of which he is a member, or of the Committee, as the case may be, and

(3) The giving of any domiciliary treatment which may be required in the event of the insured person being recommended for Sanatorium Benefit.

I agree to give such reasonable facilities as may be necessary to enable the Insurance Committee or the Insurance Commissioners to satisfy themselves that the above conditions are being duly carried out in order that the insured person may be entitled to receive from the Insurance Committee a contribution towards the cost of the attendance and treatment given by me.

My remuneration for treatment of the insured person under the arrangement which I have made with him (a) will be calculated at a rate of per quarter during the period ending

or
(b) will be calculated on the basis of fees per attendance in accordance with the following scale:

- a. d.
- (1) Attendance on the patient at the practitioner's residence, surgery or dispensary
- (2) Visit to the patient's residence
- (3) Special Visit, i.e., visit paid by the patient's desire on the same day as a call received after a.m., or on Sunday
- (4) Night Visit, i.e., visit made between the hours of 8 p.m. and 8 a.m. in response to a call received between those hours
- (5) Surgical operation requiring local or general anaesthetic, or case of abortion or miscarriage
- (6) Administration of general anaesthetic
- (7) Setting of fracture
- (8) Reduction of dislocation

and I agree to furnish quarterly a statement of attendances and treatment given during the preceding quarter under the foregoing heads.

I understand that it is a condition of any contribution by the Insurance Committee towards the cost of the insured person's treatment by me that I comply with the terms of this undertaking, and that any contribution will be limited in the manner described in the instructions below.

Signature.....

Date.....

To obviate any danger of a breach of professional confidence, the prescribed form (which will be supplied by the Committee) will be perforated. The portion containing the name and address of the insured person and the attendances is to be sent to the Committee, and the other portion containing the nature of the illness, etc., to the Commissioners.

Strike out either (a) or (b), whichever is inapplicable.
The scale of fees should be completed by the doctor by the insertion in the appropriate spaces of the fees which he proposes to charge the insured person. If these fees are in excess of the scale of fees fixed by the Committee the excess would have to be borne by the insured person.

(Page 3.)

INSTRUCTIONS.

1. The Insurance Committee in considering an application from an insured person to be allowed to make his own arrangements for medical attendance and treatment will require to be satisfied that there are special circumstances affecting the applicant which justify them in granting the application and in making a contribution from the Fund out of which medical benefit is payable towards the cost of attendance and treatment obtained under such arrangements. They will also require to be satisfied that the treatment obtained will be of a nature quality and extent not inferior to that obtained by insured persons who are attended under the arrangements made by the Committee, and that the conditions are complied with upon which a Parliamentary Grant is made to the Committee for the purpose of the provision of medical benefit to insured persons. It is accordingly necessary that an undertaking in the form annexed should be signed by the doctor who undertakes the treatment of any insured person allowed to make his own arrangements.

2. The Committee in considering applications from persons who desire to be allowed to make their own arrangements will also have regard to the effect of such arrangements upon the general scheme of provision of medical benefit for insured persons in their area.

3. Subject to the necessary conditions being fulfilled, a contribution will be made by the Committee to the cost of attendance and treatment obtained by the person who is allowed to make his own arrangements.

4. The amount which an insured person can thus obtain as a contribution from the Insurance Committee towards the cost of his attendance and treatment is strictly limited. Sums not exceeding in the aggregate what it would have cost the Committee to provide medical benefit for all the insured persons in their area required or allowed to make their own arrangements will be carried annually to a fund called the Special Arrangements Fund, and the amount which can be contributed towards the cost of medical attendance and treatment including medicines and appliances of all insured persons in the area making their own arrangements cannot exceed the amount of this Fund, plus a sum equivalent to 6d. per head of all such insured persons in respect of the domiciliary treatment of tuberculosis.

5. Contributions towards the cost of obtaining medicines and appliances must be considered separately from contributions towards the cost of obtaining medical attendance and treatment.

6. No contributions can be made by the Insurance Committee towards the cost of medicines and appliances supplied by or at the profit of the doctor undertaking the treatment of the insured person except in the following cases:

- (a) If the medicine is a medicine which is ordinarily administered by the doctor to the person or if the medicine or appliance is required immediately or before a supply can conveniently be obtained from the chemist.
- (b) If the insured person is living in the country at a distance of more than one mile from a chemist, or if, owing to

special difficulties of communication, the insured person has received permission from the Insurance Committee to obtain medicines and appliances from the doctor attending him.

7. The arrangement with the doctor for giving medical attendance and treatment (excluding medicines and appliances) may be made either by contract, under which he agrees for a fixed sum per annum to provide all necessary attendance and treatment, or on the basis of payment by fees for service actually rendered.

(Page 4.)

8. If the doctor enters into a contract to give medical attendance and treatment (excluding medicines and appliances) for a fixed sum, the Insurance Committee will contribute a sum not exceeding the amount agreed to be paid under the contract and not exceeding thirteen-seventenths or, if the Commissioners so allow, fourteen-seventenths of the aggregate amount of the Special Arrangements Fund divided by the total number of persons making their own arrangements, plus a proportion of the sum set aside in respect of the domiciliary treatment of tuberculosis.

9. If the arrangement made with the doctor is for payment by the insured person of fees per attendance in respect of services actually rendered, the insured person will be required to submit a detailed account of the services rendered and the charges incurred, and the amount expended by the insured person will then be calculated in accordance with the scale of fees fixed by the Committee* applying to all persons in its area who make their own arrangements in this way. The bills of the doctors calculated on this scale will be paid in full if the total amount of the bills does not exceed the total amount available in the pool. If the total amount of the bills exceeds the total amount in the pool the bills will be paid so far as the pool permits, the same proportion being paid on each bill, and the insured person in the absence of any special arrangements to the contrary will be liable to the doctor for the payment of the balance.

10. In the exceptional circumstances in which a contribution can be made towards the cost of drugs supplied by the doctor the arrangement will be made by the patient with him for including the supply of drugs in the contract, if the arrangement be on the contract basis, or for his charging in his account for medicines actually supplied, and payment will be made in accordance with the same principle as in cases where the doctor provides medical attendance and treatment only.

11. In the cases in which the doctor does not supply medicines or appliances the insured person will present to the Committee the chemist's account, and the Committee will contribute to the cost so far as the amount available in the appropriate pool permits, and if the aggregate accounts exceed the total amount in the pool the same proportion will be paid on each.

PERSONS IN THE EMPLOYMENT OF HOSPITALS.

Another form (43 (b) /I.C.) is for the use of insured persons employed at hospitals, asylms, and other institutions making application under Section 15 (3). It authorizes the governing body of the institution to receive on behalf of signatories the contributions payable by the Insurance Committee toward the cost of medical treatment, and contains a form of acceptance of these responsibilities of the governing body.

CHANGE OF ADDRESS.

Another form (43 (a) /I.C.) consists of instructions to insured persons making their own arrangements for medical attendance who, by reason of the nature of their occupation, changed their residence too frequently to make arrangements with a single doctor. It is as follows:

Instructions to Insured Persons making their Own Arrangements for obtaining Medical Attendance, who by Reason of the Nature of their Occupation change their Residence too frequently to make Arrangements with a Single Doctor.

1. It is the duty of the Insurance Committee to satisfy themselves before making a contribution towards the

* Scale of Fees Fixed by the Committee.

| | | |
|---|-----|-----|
| | s. | d. |
| (1) Attendance on the patient at the practitioner's residence, surgery, or dispensary ... | ... | ... |
| (2) Visit to the patient's residence ... | ... | ... |
| (3) Special Visit, i.e., visit paid by the patient's desire on the same day as a call received after a.m., or on Sunday ... | ... | ... |
| (4) Night Visit, i.e., visit made between the hours of 8 p.m. and 8 a.m. in response to a call received between those hours ... | ... | ... |
| (5) Surgical operation requiring local or general anaesthetic, or case of abortion or miscarriage ... | ... | ... |
| (6) Administration of general anaesthetic ... | ... | ... |
| (7) Setting of fracture ... | ... | ... |
| (8) Reduction of dislocation ... | ... | ... |

expense incurred by a person making his own arrangements that the treatment obtained under such arrangements is in nature quality and extent not inferior to that obtained by insured persons who are attended under the arrangements made by the Committee, and that the conditions upon which a Parliamentary Grant is made to the Committee for the purpose of the provision of medical benefit to insured persons are complied with, including—

(1) the keeping and furnishing of records, in the form prescribed by the Insurance Commissioners, of the diseases of the insured person attended, and of any treatment of him, and of such further records as may at any time hereafter be agreed between the Insurance Committee and the Local Medical Committee;

(2) the furnishing, at the request of the insured person, of such certificates as are required to be furnished by him for the purposes of the National Insurance Act in connection with any claim for sickness or disablement benefit made by him in pursuance of the rules of the Society of which he is a member, or of the Committee, as the case may be, and

(3) the giving of any domiciliary treatment which may be required in the event of the insured person being recommended for Sanatorium Benefit.

2. In normal circumstance, in order to protect the insured person from incurring expense under a misapprehension, only to discover subsequently that in consequence of non-compliance with the necessary conditions, the Committee are unable to contribute, the Committee have taken steps to satisfy themselves upon the matters referred to before allowing the insured person to make his own arrangements, by requiring an undertaking from the doctor by whom the applicant proposes to be attended that the requisite conditions will be observed. In the case, however, of those insured persons who, by reason of the nature of their occupation, change their residence so frequently as to be unable to make arrangements with any single doctor, it will presumably not be possible for them to satisfy the Committee in advance, and it will therefore rest with the insured person to afford evidence of compliance with the conditions at the time when he applies for a contribution from the Committee.

3. Subject to the necessary conditions being fulfilled, a contribution will be made by the Committee to the cost of attendance and treatment obtained by the person who is allowed to make his own arrangements.

4. The amount which an insured person can thus obtain as a contribution from the Insurance Committee towards the cost of his attendance and treatment is strictly limited. Sums not exceeding in the aggregate what it would have cost the Committee to provide medical benefit for all the insured persons in their area required or allowed to make their own arrangements will be carried annually to a fund called the Special Arrangements Fund, and the amount which can be contributed towards the cost of medical attendance and treatment, including medicines and appliances of all insured persons in the area making their own arrangements, cannot exceed the amount of this Fund.

5. Contributions towards the cost of obtaining medicines and appliances must be considered separately from contributions towards the cost of obtaining medical attendance and treatment.

6. No contributions can be made by the Insurance Committee towards the cost of medicines and appliances supplied by or at the profit of the doctor undertaking the treatment of the insured person except in the following cases:—

(a) If the medicine is a medicine which is ordinarily administered by the doctor to the person, or if the medicine or appliance is required immediately or before a supply can conveniently be obtained from the chemist; or

(b) If the insured person is living in the country at a distance of more than one mile from a chemist, or if, owing to special difficulties of communication, the insured person has received permission from the Insurance Committee to obtain medicines and appliances from the doctor attending him.

7. The arrangement with the doctor for giving medical attendance and treatment (excluding medicines and appliances) may be made on the basis of payment by fees for services actually rendered; and it is presumed that this method will be usually adopted by persons frequently changing their place of residence.

8. If the arrangement made with the doctor is for payment by the insured person of fees per attendance in respect of services actually rendered, the insured person will be required at the end of the year to submit a detailed

account of the services rendered and the charges incurred, and the amount expended by the insured person will then be calculated in accordance with the scale of fees fixed by the Committee applying to all persons in its area who make their own arrangements in this way. The bills of the doctors calculated on this scale will be paid in full if the total amount of the bills does not exceed the total amount available in the pool. If the total amount of the bills exceeds the total amount in the pool, the bills will be paid so far as the pool permits, the same proportion being paid on each bill, and the insured person, in the absence of any special arrangements to the contrary, will be liable to the doctor for the payment of the balance.

10. In the exceptional circumstances in which a contribution can be made towards the cost of the drugs supplied by the doctor arrangements will be made by the patient with him for his charging in a separate account for medicines actually supplied, and payment will be made in accordance with the same principles as in cases where the doctor provides medical attendance and treatment only.

11. In the cases in which the doctor does not supply medicines or appliances the insured person will present to the Committee the chemists' accounts, and the Committee will contribute to the cost so far as the amount available in the appropriate pool permits. If the aggregate accounts exceed the total amount in the pool the same proportion will be paid on each.

Appended are schedules. The first is a form of which the amounts in the scale of fees to be fixed by the Committee are to be entered, the second the form of application for a contribution towards the expense incurred by the insured person obtaining medical attendance and treatment, setting out in detail the number of each kind of service given and the charge made in respect of each item verified by the secretary or the doctor, and a form to be forwarded for statistical purposes to the National Health Insurance Commissioners in England.

UNINSURED PERSONS.

CANNOCK CHASE.

FROM a report in the *Midland Evening News* of February 18th we learn that a meeting of the local lodge of the Ancient Order of Oddfellows, Cannock, at which the attendance was unusually large, had been held on the previous evening. This report contained the following paragraph:

It was also decided to agree to the following terms with the doctors for uninsured persons:

- Adults, 3s. per head.
- Juveniles, 2s. per head.
- "Exempts," 6s. per head.

A considerable amount of discussion took place with reference to two matters as to whether it was not possible to bring all in under the 3s. and 2s. basis, but eventually the terms were agreed to unanimously, on the recommendation of the corresponding secretary.

Another newspaper—*The Advertiser*—in its issue of February 25th, contains a paragraph on the subject, from which we quote the following:

The competition between the local doctors for the treatment of the members of friendly societies who are not covered by the National Health Insurance Act, has been ended by their acceptance of the scale of charges offered by the Friendly Societies' Council. From the financial point of view, the medical men are now worse off than they would have been if they had adhered to the original scale agreed upon between themselves. The friendly societies and their members, on the other hand, have gained considerably, not the least of the gains being that all classes of club members in the district have now free choice of doctor. The club doctor, in the old sense of the term, no longer exists, and there is now no restriction on any members as to which doctor they shall call in in cases of sickness, provided the doctor in question has accepted them as prospective patients. Another matter of considerable importance, which was brought up and decided as an indirect result of the doctors' disagreement, concerns the method of payment of fees. It has now been agreed that secretaries and doctors shall have no individual financial dealings with each other, and that the money owed by clubs for medical treatment shall be forwarded to the executive body of the local association of doctors for distribution. This will mean less labour for secretaries, and it will not make any appreciable addition to the work of the doctors, so that the arrangement should give satisfaction to both sides.

In spite of this explanation we find some difficulty in understanding the position. We do not understand what is meant by "exempts," but if the facts with regard to

adults and juveniles are correctly stated by the *Midland Evening News*—and we have good reason to believe they are—the doctors in Cannock Chase appear not only to have failed in defending their own interests, but have set a very bad example to the rest of the country.

REPORTS OF LOCAL ACTION.

GILLINGHAM, KENT.

THE failure to form an adequate panel in Gillingham, a municipal borough of over 50,000 inhabitants on the south-east side of Chatham, has led the Kent Insurance Committee to appoint a special subcommittee to endeavour to make arrangements. This subcommittee, having failed to convince the medical practitioners in Gillingham of the advantages of joining the panel, resolved to ask the Kent Insurance Committee to authorize it to apply to the Insurance Commissioners to appoint three whole-time doctors. It would appear that the Kent Medical Committee has arranged a scheme for the county with the Kent Insurance Committee; but that it has not been accepted in Gillingham, as is shown by the following letter addressed to the Kent Insurance Committee by Dr. Courtenay Lord, writing on behalf of the Gillingham practitioners:

Gillingham, Kent,
February 9th, 1913.

Gentlemen,—We are in receipt of your resolutions through Dr. Potts of the Kent County Medical Committee.

Resolution No. 1 expresses regret that we have not fallen in with the Kent County scheme. Our chief reason for the attitude adopted is that the scheme is merely the Government scheme under a new name, and involves accepting a state of affairs which we still consider will end in the lasting degradation of our profession. A further reason is that the scheme is on your own showing financially unsound, as you state that you only propose to pay us a proportion of our earnings in any given year.

We have no wish to place the insured of this town under any disability, but we would remind you that our services were promised to them by Mr. Lloyd George without our consent, and we therefore decline to accept any blame for the present state of affairs. We are, as you know, fully prepared to undertake the attendance of insured persons on the lines laid down in my previous letter, but we absolutely decline to forfeit our independence by signing any contract, and we also decline to undertake the enormous amount of clerical work involved.

Resolution No. 2 implies the threat of a whole-time service. To this we reply that such a threat would be quite obviated by allowing the insured their legal right to contract out.

Our present position is that we have declined an offer which we cannot accept with self-respect, and this, as free men in a free country, we have a perfect right to do. We would point out to you that there is nothing in the Act or in the Regulations to compel any man to accept this service if he does not wish to do so. The only compulsion is the threat of financial ruin, which has been somewhat freely made use of, and which severely redounds to the credit either of the author of the Act, or those concerned with the administration of it.

As men who have striven in the past to do our duty to those of the public who have been our patients, we view with deep concern the application of the pernicious system of cheap contract practice to about one-third of the population of this country, and we decline to have any hand in furthering a movement which must lower the whole status of the medical profession and have a detrimental effect on the health of the insured classes.

Signed on behalf of the Gillingham practitioners,
C. COURTENAY LORD, M.R.C.S., L.R.C.P.

The Insurance Committee advertised for three medical men to set up in Gillingham subject, as it is understood, to a promise from the Committee to guarantee them a minimum emolument for the first year; it is stated that three medical men have been selected. We understand that there are altogether fifteen practitioners in Gillingham, and that of these two are salaried officers of an institute and three have gone on the panel; the remaining ten are those who have adhered to their decision not to join the panel. The position would therefore appear to be this: that the Insurance Committee considered the panel of three inadequate, in spite of the circumstance that, as we are led to understand, the number of insured persons on the lists of these three medical men is quite small, and very far from enough to occupy their time. Nevertheless, the Insurance Committee, rather than accept the conditions desired by the large majority of the profession in Gillingham, which we presume would merely require that the Insurance Committee should allow insured persons who so wished to

make their own arrangements, have determined to carry on a war in the bitterest way, without regard to the interests of the insured persons or of the medical profession, and therefore without regard to the public health. It proposes to introduce three practitioners who are willing to act in opposition to the wishes of the local members of the profession to which they belong. Matters seem, therefore, to have come at present to a deadlock, and the key, we judge, can only be found by the insured persons themselves insisting upon their rights.

SCOTLAND.

SCOTTISH MINERS AND MEDICAL ATTENDANCE.

BRIEF references to the position in the mining districts of Scotland have been published in earlier issues, but it may be interesting to members of the Association generally to have some further information.

At the request of the Mining Federation, the Colliery and Public Works Surgeons Committee for Scotland had an interview with representatives of the Federation in Edinburgh on January 10th, and, after discussion, it was agreed to recommend the following provisional arrangements for three months:—

1. That there be a minimum flat rate of
1d. per worker per week without medicine, or
2d. per worker per week inclusive of medicine.
2. Medicine or not to be given according to the custom that at present prevails in each district.
3. Money to be collected by owners by deduction from wages at the works offices and lodged in bank in the names of an equally constituted committee of doctors and workmen.

The entire money so lodged in bank to be distributed by cheque to the doctors, according to the number of patients on each doctor's list. Cheques to be signed conjointly by representatives of doctors and miners.

The terms expressed above have not met with the unanimous approval of colliery and works doctors. It was contended that no uniform flat rate could be absolutely fixed as applicable to all colliery districts in Scotland, and that in the less populous and more scattered districts a higher rate than 1d. a week a worker without medicine, or 2d. inclusive of medicine, must be arranged to make contract practice possible in such areas. This contention was not accepted by the Scottish Miners' Federation in spite of the fact that the majority of the workmen in various districts in Scotland have agreed to the rates of 2d. or 3d. a worker a week inclusive of medicine. A joint meeting of representatives of the Colliery and Public Works Surgeons Committee of Scotland, the Scottish Midland and Western Medical Association, the executive council of the Lanarkshire Division of the British Medical Association, the Midlothian General Practitioners' Association, and a committee of Lanarkshire colliery surgeons, was held in Glasgow on February 14th. It was largely attended, and the following recommendation was unanimously approved:

That immediate steps be taken to have county medical associations organized, with paid legal secretaries, to safeguard the interests of all members concerned in such contract practice.

We are informed that the method proposed for disbursing the medical fees to each doctor does not find favour either with the doctors or the employers, as both would prefer the old method by which payments were made direct from the works offices, and not through the medium of committees of doctors and workmen.

IRELAND.

MEDICAL BENEFIT.

A SPECIAL meeting of the conjoint committee of the Irish Committee of the British Medical Association and the Irish Medical Association was held at the Royal College of Surgeons, Dublin, on February 14th. Dr. ROBERT H. WOODS, President of the Irish Medical Association, and subsequently Dr. R. J. JOHNSTONE and Mr. F. W. KIDD, occupied the chair. Twenty-four members were present, together with Dr. M. R. J. Hayes (Medical Secretary) and Mr. C. H. GICK.

The Treasury Committee on the Extension of Medical Benefit to Ireland.

It was reported that in response to a request made to the Chancellor of the Exchequer that representatives of

the medical profession in Ireland should be appointed on the Committee which is about to inquire into the advisability of extending medical benefit to Ireland, a reply had been received to the effect that the Committee was composed entirely of members of the Houses of Parliament and of departmental officials, and that no interest affected had direct representation, but that all interests affected would have full opportunity in giving evidence to make any representations they might care to submit.

It was resolved to postpone the delegates' meeting already summoned for February 20th until the report of the Commission had been published. The Medical Benefit Subcommittee reported that it understood that at present evidence would only be taken with reference to the extension of medical benefit to the urban areas, and that if it was ascertained that a demand existed in those areas, it was possible that medical benefit would be extended to those areas forthwith, leaving the wider question of rural areas for further consideration.

A summary of evidence was prepared, and the committee having been notified that only a few witnesses would be required, representatives from the principal towns in the four provinces, with Dr. M. R. J. Hayes, Medical Secretary, were selected.

The following resolutions were adopted:

That the Conjoint Committee is of opinion that medical benefits or their equivalent should be now extended to rural areas on terms satisfactory to the medical profession.

That this meeting condemn the practice of appointing lay inspectors to visit and report on the condition of insured persons entitled to sickness benefit, and that inspection by such persons is not in the best interest of the patient, as it would be an unwarrantable intrusion on the privacy of the patient and dangerous to the public health in cases of infectious illness, and it is not within the power of lay persons to determine the presence or absence of disease.

CONFERENCE BETWEEN INSURANCE COMMISSIONERS AND SOCIETIES.

A conference took place last week between the Insurance Commissioners of Ireland and representatives of approved societies. It was decided that the Commissioners should communicate with the Local Government Board, requesting it to circularize Poor Law Boards and district councils, asking that the district maternity nurses should attend insured members or insured members' wives for maternity cases at a fee of 5s., or in cases where a doctor attends, a fee of 7s. 6d., but no cumulative fee to be paid. The question of certificates was discussed, and after a division it was agreed that the Commissioners should arrange for doctors of the County Committees to form a panel under the County Insurance Committees, and to be paid a capitation fee for supplying all certificates to approved societies.

DUBLIN INSURANCE COMMITTEE.

At the last meeting of the County Borough of Dublin Insurance Committee it was intimated that the Insurance Commission had sanctioned the proposed payment of £150 to the Public Health Committee to cover the cost of treatment of insured persons sent to the Collier Memorial Dispensary during the period ending April 12th, 1913. Correspondence was submitted from the Honorary Secretary of the Local Medical Committee transmitting a copy of a resolution passed by that committee agreeing to the scale of fees suggested for domiciliary attendance, and stating that it was hoped shortly to form a panel of medical practitioners in Dublin for that purpose. The resignation of Dr. J. T. Crowe, Medical Superintendent of the Collier Memorial Dispensary, and expert adviser to the Committee, on his appointment as chief tuberculosis officer for the counties of Leicestershire and Rutlandshire, was accepted with regret.

MATERNITY BENEFIT.

The Longford Board of Guardians have agreed, on the application of their medical officer, to consider the cancelling of red tickets in maternity cases where the husband is proved to have at least 30s. a week. He mentioned a case where recently he was called out at midnight on a red ticket to the home of a big farmer, and in another case he found that his patient had left £500 to her relations.

The Fermanagh Board of Guardians has decided that where a person is entitled to the 30s. maternity benefit, she is to be granted no relief at the expense of the rates.

CORRESPONDENCE.

THE PRESENT SITUATION AND FUTURE POLICY.

DRS. HENRY J. CARDALE (41, Glengall Road, Cubitt Town, E.), W. H. F. OXLEY, and JOHN PAXTON (Poplar, E.) write: Reading the correspondence in your columns week by week, it is evident that the profession recognizes: (1) The urgent need for a business organization devoted entirely to the defence of its interests; (2) the fact that the British Medical Association, from every point of view, is unsuitable for such a purpose. To quote from letters in your current issue:

The profession has been outwitted . . . because it was not ready, but, if the present panic leads to better organization, it will have done some good.

We must not give in without a further attempt to rouse our colleagues to a sense of their danger.

Re British Medical Association:

The machinery of a scientific body is not adapted to fight a Government.

Finally, to quote from Dr. Arthur Brock's letter:

It must be obvious to any one that the insurance doctors will now have no option but to form some big central combine to defend their economic interests. . . . This is not the object for which the British Medical Association exists.

Any one who has read Mr. Hempsou's statement at the Liverpool meeting must realize that, even if it were desirable, it is impossible to register the British Medical Association as a trade union. No; let us retain the British Medical Association in the capacity for which it was originally constituted—namely, the advancement of medical science, and form a union whose sole function shall be the conservation of the interests of the general practitioner. Such an institution is urgently needed not only by panel doctors, but equally by non-panel men. It is quite unnecessary to dwell on the dangers that face all of us in the immediate future; they are sufficiently obvious.

With a view to being prepared and not being again found unready, the Poplar Medical Union has under consideration the formation of such an organization as I have mentioned above, which should take advantage of the protection and other advantages afforded by the Trades Union Acts, and register as a trade union. We intend in the immediate future to communicate with other districts in London with a view to concerted action. In the meantime we should be glad to hear from any individual or organized body interested in the matter, for the sooner the general practitioner has such a body devoted entirely to his interests, the sooner shall we feel prepared to face the future with something approaching equanimity.

Dr. GARRATT (Chichester) writes: Dr. Arthur King raises the old controversy of contract *versus* private practice, and uses violent language, which calls for some reply. Contract practice under capitation involves two parties; let us consider first the beneficiary. To him it is an insurance, strictly comparable to that against death, accident, fire, or other mishap. It is, indeed, but an extension of one of the most beneficent inventions that civilization has evolved, and is, in respect to persons of very limited income, from their point of view, wholly desirable and to be commended. The doctor may regard the matter either commercially or ethically. Commercially all depends on the rate of pay, the ability of the beneficiary to afford visiting fees, the incidence of sickness among his class, and, last but not least, the personal influence of the doctor in controlling unnecessary calls. Some classes are more profitable under the one system, some under the other, agricultural labourers being suitable for contract rather than private practice. Ethically, payment under contract is payment by salary, the method on the whole characteristic of a profession; whilst payment by the piece, or for work done, is on the whole characteristic of a trade. Now I have nothing to say against honest trade, and consider it in no way derogatory; I have, indeed, some sympathy with Dr. King in his evident desire to get his money for all he undertakes, but, in confessing this weakness, I consider myself inferior and not superior to him who has it not, and to precisely this degree—the more of a trader and the less of a professional man than he. Comparisons are notoriously odious, but when

I frankly concede that, as a rural practitioner, I prefer on commercial, practical, and ethical grounds to treat agricultural labourers as contract rather than private patients, I do not on that account regard myself as "a wastrel," a "drag and a hindrance" to my fellows, one "evil in moral and physical character," or—with bated breath be it said—as in any respect inferior to, let us say for example, Dr. Arthur King of Bow.

Dr. A. C. FARQUHARSON (Spennymoor) writes: A few years' experience of the British Medical Association in Council, Representative Meeting, and in perusal of the columns of the BRITISH MEDICAL JOURNAL, go a long way towards rendering one insult-proof and immune to the stings of venomous verbiage, but occasionally one gets a reminder that the top-storeyed pachyderm which intimacy with the ways of the British Medical Association develops is not always impenetrable. In your issue of February 22nd a person writing in the SUPPLEMENT (p. 202, column 2) refers to contract practice as "the last straw of the medical wastrel."

Now, I am not very much concerned with this person's impressions of contract practice, but that a gross libel should be published in the BRITISH MEDICAL JOURNAL regarding a class of practitioners, the majority of whom are members of the Association, is a circumstance which ought not to pass unnoticed.

If this person's bravery of conviction will allow him to write and you will publish a statement to the effect that every person engaged in contract practice is a "medical wastrel," I will know how to deal with him and the publishers of the BRITISH MEDICAL JOURNAL.

The person who spits his venom at a class and thus in a measure obtains legal refuge from his libellous statements is not one from whom I, as a contract practitioner, would care to take my professional ethics, but I do think, Mr. Editor, that you, inspired by the recent display of exceptional courage on the part of the Council, might have viewed the line to which I take exception with "deep condemnation" and—blue-pencilled it.

AN EXPERIENCE OF THE PANEL AND SOME DEDUCTIONS.

Dr. ROSA FORD (New Cross Gate, S.E.) writes: It may be useful to doctors who are considering whether they will remain on the panels in April or join them then, to note the following figures, given me by and taken from the actual practice of a panel doctor during the period January 16th to February 15th inclusive. If the following calculations are correct—and any panel doctor can judge of this by a comparison with his own figures—he receives roughly 1s. per patient seen, whatever the attention he may have to give him:

In 31 days, including 4 Sundays, 332 attendances were made—that is, an average of 10.7 patients a day were seen. During the same period the average number of insured on the books was 413.6. The percentage of insured requiring treatment averaged, therefore, 2.6 a day.

With 1,000 patients this means that 26 would require treatment every day, including Sundays. Suppose that in summer only 13 required treatment per day, the average for the year would then be $\frac{26 + 13}{2} = 19.5$.

The remuneration for 1,000 patients is 230 pence a day. The fee per patient would, therefore, be $\frac{230}{19.5} = 11.8$ pence. Allow that in the above figures 1 patient a day came out of curiosity, the remuneration, excluding these, would then be $\frac{230}{18.5} = 12.4$ pence.

It is therefore clear that with panel work, unless a man has done a cheap practice before, he must be prepared for one of two things—either to work harder for the same money or to receive less money for the same work.

Previously one often gave one's best work for a low fee because of the known poverty of the patient; now a panel doctor is often called upon to give the same work to patients who, he knows, can afford, and indeed formerly paid, a reasonable fee.

The above figures correspond pretty accurately to an estimate which has been quoted that an average of eight days' treatment per insured person must be reckoned with in the year. That means 8,000 treatments in the year with 1,000 on the books, and this, divided by 365, gives 21.9 patients to be seen daily, very near the 19.5 obtained by the above calculations.

There is another point that should influence doctors in deciding their action in April. One of the fruits of the Act in its working so far has been the trampling by the Insurance Commissioners on one of the best traditions of the profession. Hitherto we have regarded our fellows as colleagues, and as such have refused to take one another's patients. Panel doctors are now forced to take other men's patients against all their best instincts. This crushing of a man's moral instincts cannot but tend to weaken his moral standard. That men have been found to take whole-time positions under such a condition is a proof that a blow has been struck at the high moral standard hitherto set before the profession. That the Insurance Commissioners have even unwittingly trampled on this condition merely shows the danger of any community meddling with what it does not understand. An Act, one of whose first fruits is the degradation of the profession it seeks to control, can hardly be better than its fruit. The Chancellor will tell us that not he but the non-panel doctors are responsible for this fruit. As well may the stomach be blamed for the indigestion following upon the hasty ingestion of ill-considered food, as the non-panel doctors be blamed for the insurrection following upon hasty legislation.

Let the Chancellor tell a learned profession what it is he wants done, and let him then courteously consider the method whereby its representatives propose to execute the measure. A firm of engineers called in to perform a certain task would not submit to conditions imposed upon it by an employer ignorant of engineering. The heads of the firm will submit a scheme, and, if this is accepted, they will then proceed to carry out the work in their own way. If the scheme is unsatisfactory to the employer he is at liberty to reject it, or, if the execution of the work displeases him, he is at liberty in future to dispense with their services. He is *not* at liberty to hold a pistol at their heads and thus endeavour to enforce his methods of work.

THE INQUIRY ADDRESSED TO THE REGISTERED MEDICAL PRACTITIONERS BY THE ASSOCIATION.

MR. CHARLES E. S. FLEMMING (Bradford-on-Avon) writes: In this week's JOURNAL there is an annotation urging medical men to answer the questions issued about ten days ago by the State Sickness Insurance Committee, but I doubt whether the answers to this inquiry will have the results for which you express a desire. When I read the questions—the report of the January Representative Meeting (SUPPLEMENT, p. 98), the report of the Council meeting (SUPPLEMENT, p. 132), and of the State Sickness Insurance Committee (SUPPLEMENT, p. 148), I cannot but feel regret at the waste of time, money, and opportunity, and an impression that the end aimed at is not the improvement of the conditions under which the Act is worked, but the prevention of its working; not a desire to make the Act satisfactory, but to rake up dissatisfaction. The questions as to whether men are working the Act willingly, whether they intend to continue to work it, and others in the same spirit, are not of any practical value, and show a surprising want of appreciation of the fact that the great majority of the men likely under any conditions to do insurance practice are already doing so, and will and must continue to do so. Of those directing our affairs, one is tempted to say, as was said of the Bourbons, "They have learnt nothing and forgotten nothing."

In the report of the State Sickness Insurance Committee (SUPPLEMENT, p. 148), it is stated that "the future policy of the Association would depend largely upon the information obtained from the answers," and in the report of the Council above referred to there is a resolution containing the following words: "The action of the Council and the State Sickness Insurance Committee shall continue to be in opposition to the Act and Regulations as at present constituted," and further on is another resolution: "That the State Sickness Insurance Committee shall at once press for an amending Act." Truly with a vengeance is the Council knocking the head of the Association against a stone wall. In neither report do I see any proposal to make careful and prompt inquiries as to the alterations required for the more convenient and advantageous working of the Act. In only one of the eight questions is this subject dealt with, but so subsidiary is it in position and so little emphasis is laid upon it that

many will not attach sufficient importance to it, especially as the tenor of the questions makes it appear that the object of the inquiry is to find out whether there is yet an off-chance of damaging the Act.

As to the questions themselves, how can men yet, after only five weeks' experience, say whether they are or are not satisfied with the working of the Act, a new Act, new and untried machinery, much of it admittedly tentative? Answers now given must have reference to the work as actually experienced and not as it will be when the new arrangements as to clerical work take effect. The signing of red tickets, which gave so much trouble, will probably influence many decisions. It is as if ten years ago motorists were asked to give a decision as to the satisfactory working of motor cars, and whether they intended to continue to use them. When the rider embodying these questions was introduced at the Representative Meeting, the mover said that the inquiry would be made "after an interval." If these words meant anything they meant such an interval as would enable well-founded and useful answers to be given. No doubt the sooner inquiry was made the more likely was dissatisfaction to be expressed; and yet on the answers given under these circumstances does the State Sickness Insurance Committee intend the future policy of the Association to be founded.

It may be said that the Committee was bound by the resolution of the Representative Meeting to ask these questions, but it was not bound to ask them at this particular time, or all at the same time. A resolution (SUPPLEMENT, p. 98) was passed instructing the Council "to collect information as to defects in the Act and Regulations and to take all possible opportunities of remedying them." This might have been done first, but the work appears to have been left to the National Insurance Practitioners' Association to carry out. It was not pleasant for members of the British Medical Association reading the Commissioners' report on alterations in the clerical work to see that the place that ought to have been occupied by their own Association was taken by the National Insurance Practitioners' Association. I have not a word to say against the latter society, which is doing most excellent work; but why didn't we do it ourselves?

We are looking to the Council not only to collect information as to faults and remedies, but through the Branches and Divisions to give advice and make suggestions to the Local Medical Committees.

I notice in this week's SUPPLEMENT (p. 197) that an instruction has been given to a subcommittee of the Insurance Committee "to consider and report as to what steps should be taken in order to co-ordinate the action of the Divisions with reference to the National Insurance Act with that taken by the various Local Medical Committees within their areas." I have referred so often to this subject that I would not again were it not that I consider it to be at the present time one of the most urgent and important matters for the Association to consider. I believe that the only practical procedure is to rearrange our Divisions and Branches so that they may be coterminous with the areas of the Insurance Committees. A very short experience has sufficed to show that for medico-political work the most useful division, the most efficient organization, is that of the Local Medical Committee and the corresponding Medical Union set up for the purpose of dealing with the Insurance Act. In many districts the work of the Divisions of the Association as such is at present almost negligible, especially as regards this Act, but there is a great amount of other and important work that Divisions or Branches with these areas could do—work that cannot be conveniently or well done by very many existing Divisions—the work of negotiating with county or borough councils, dealing with health authorities, the various pressing questions as to the inspection and treatment of school children, the work of district nurses and midwives, etc.

MILEAGE.

DR. W. W. NOCK (Penkridge) writes: I am in entire agreement with Dr. Thain on the question of mileage, and think that the rural practitioners should combine, though I believe that the Commissioners are genuinely anxious to be fair, and that if representations without threats were made to them something would be done. The rural doctor with a list one quarter the size of the man in industrial centres

has to spend as much time on visiting and more money for one quarter the payment. His surgery work is of course much less. The payment should take the form of an extra capitation grant per mile for every mile more than two from the nearest practitioner.

Dr. J. R. HAMILTON (Hawick, N.B.) writes: Dr. Thain, in the SUPPLEMENT of the 22nd, suggests rural practitioners combining to secure a mileage rate. The real combination would be their co-operating in every county in clearly showing the amount of mileage in that county. The British Medical Association has all the machinery necessary to have figures submitted to the proper quarter if reliable figures were obtained. We have every reason to believe that reasonable mileage will be granted when the Association can obtain reliable figures to place in the hands of the Treasury. Unfortunately, those of us interested in the mileage question have not hitherto been able to present a complete enough statement. We need have no fear of the town votes dragging us down; on the contrary, we may reasonably calculate on their full support.

There are already far too many ephemeral combinations, which all tend to weaken our just cause. Let that enthusiasm be directed towards enlisting every respectable member of our profession into the British Medical Association; then we might expect greater respect.

THE STOCKPORT INSURANCE SCHEME.

Dr. JAMES BRASSEY BRIERLEY (Old Trafford) writes: In your report of a meeting of some Divisions of Cheshire at Macclesfield a very grave error has crept in. The scheme as now evolved has not been approved by the National Medical Union.

Others as well as myself protested against it from the first, because it was designed to work under the Act and also that it was philanthropic. The only approval as far as I know was on the understanding that the principle of the National Deposit Friendly Society be adopted.

It is difficult to know how Mr. Walls, who is the secretary of the National Medical Union, could have given such "information." The "general principles" were not approved, and very obviously—the Union disapproves of the Act, and will have no share in club (or, what is practically identical with it, panel) practice. Please understand I do not write officially, but as a member of the executive I cannot allow such a grave error to pass unnoticed.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

Dr. HERBERT C. JONAS (Barnstaple) writes, in answer to Dr. H. Cameron Kidd (SUPPLEMENT, February 15th, p. 162):

Dr. Kidd brings forward an instance of one man who was paid 4s. per annum for forty-five years, and has had only two weeks' sickness benefit (not medical attendance, he it noted). Instead of pitying this man, one can only regard him as one of fortune's favourites; and the facts as stated have absolutely no bearing on the question under discussion. If Dr. Kidd will have another conversation with his old friend, I am quite sure he will discover that the man in question joined his friendly society with the proper views of mutual help to one another. He paid yearly his insurance of 4s., and yearly he got his money's worth; and, if he was not sick, I am quite sure that some one else used up his 4s. in every single year of the forty-five.

When some doctor can come forward and say that the whole sum derived from any one friendly society in the past has been more than sufficient to pay adequately for all the medical attendance required by the society as a whole, then, and only then, will a case be made out for taking the aged and infirm at less rates than the insured.

I entirely agree with Dr. Kidd that it is unfair to ask these men individually to pay this increased rate now. But we (the doctors) do not do so; we state that the Government says we are to be paid so much, and it is for the friendly societies to say where the money is to come from, and to my mind there is one source from which they have absolutely no right to ask it, and that is from the pockets of these old men. On the other hand, I must protest against the final paragraph of the letter. These

people did not cheerfully pay 4s. per annum for forty years simply to provide against sickness in old age—that is to say, piling up money against a certainty, as one does in life insurance. The payment was a yearly contract; 4s. was to cover the man's risk against a doctor's bill for twelve months; and Dr. Kidd gives away his own case when he admits that the insured themselves say that "they did not think 4s. per annum was a sufficient premium for what they received in return."

Hospitals and Asylums.

CROYDON MENTAL HOSPITAL, WARLINGHAM, SURREY.

IN his annual report for the year 1911 the Medical Superintendent (Dr. E. S. Pasmore) after alluding to the great loss of time in securing the treatment of the insane, the illness in the majority of his admissions having existed for over twelve months without expert treatment and advice, suggests that "a hospital mental clinic presided over by the medical officers of the local asylum—they being specialists in this branch—be instituted at every local hospital in the country, near which there is an asylum, but so as not to clash with the other out-patient department. The cost of such a clinic could be borne by an arrangement between the lunacy authorities of the borough and the local hospital committee. The medical officers in turn from the asylum could attend on one or two mornings a week. People might then be attracted to bring their friends to such a clinic, on the first sign of any mental aberration manifesting itself, to seek the special advice provided. By this means cases in the earliest stage might be detected, and there would be a chance of immediate cure, while those who became chronically insane could be at once drafted to the local asylum. Clinics of the kind I suggest are not uncommon on the Continent. They exist in Bavaria, at Munich, in Switzerland, at Berne, and elsewhere. At some of the large London hospitals such clinics have been commenced, mental specialists from asylums being in charge of them." Dr. Pasmore's proposal is one which would doubtless prove beneficial in certain places, but medical superintendents are as a rule already fully occupied with their multifarious duties as directors, and it might fall to the junior medical staff to work the clinics. Continental clinics are university clinics presided over by university professors who are not engaged in the direction of asylums, and it is obvious that these differ *toto coelo* from the departments of local hospitals proposed by Dr. Pasmore. There are, however, out-patient departments at certain asylums—for example, the West Riding Asylum at Wakefield—which work well and to whose institution elsewhere there is no insuperable obstacle. To what extent the West Riding Out-patient Department fulfils Dr. Pasmore's ideal of catching and treating early cases of insanity it would be interesting to know.

Turning to the Croydon statistics, Dr. Pasmore's report shows that on January 1st, 1911, there were 557 patients in the asylum and on the last day of the year 685. There was thus a considerable numerical increase at this asylum, and this increase was found to give also a considerable increase relatively to population, the general population since 1900 having increased by 69 per cent. and the insane population by 200 per cent. The total cases under care during the year numbered 801 and the average number daily resident 651. During the year 244 were admitted, of whom 207 were first admissions. As to duration of disorder, in 76 the attacks were first attacks within three and in 24 more within twelve months of admission; in 43 not-first attacks within twelve months; in 88, whether the attacks were first or not, the illness was of more than twelve months' duration, and 8 were congenital cases.

Considering the large proportion—unhappily paralleled in most other asylums—of cases in which the illness was already of long standing on admission, it is little wonder that Dr. Pasmore and others should seek all ways to secure earlier treatment. The admissions were classified according to the forms of mental disorder into: Recent mania, 27, chronic and recurrent, 17; recent melancholia, 57, chronic and recurrent, 13; senile and secondary dementia, 37; primary dementia, 6; general paralysis, 8; insanity with epilepsy, 2; delusional insanity, 48; confusional insanity, 10; and congenital defect, 19. Taken altogether, an unfavourable class of admissions.

Turning to probable causation, alcohol was assigned in 24, syphilis in 20, and other toxins in 12; diseases of the nervous system in 14; other bodily infections in 46; child-bearing in 10; critical periods in 63; bodily trauma in 6; and mental stress in 39. An insane heredity was ascertained in 58, and of other neuropathies in 9, whilst congenital defect not amounting to imbecility existed in 22.

During the year 50 were discharged as recovered, giving a recovery rate on the direct admissions of 33.78 per cent.; also 22 were discharged as relieved and 2 as not improved.

During the year also 42 died, giving a death-rate on the average number resident of 6.45 per cent. The deaths were due in 5 to general paralysis, and in 1 to hemiplegia; in 13 to diseases of the heart and blood vessels; in 2 to chronic Bright's disease; in 8 to lobar pneumonia, and 2 to bronchopneumonia; and in 11, or 26 per cent. of the total deaths, to pulmonary tuberculosis.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

On Thursday, February 20th, a meeting of the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand. Dr. J. A. MACDONALD was in the chair, and the other members present were: *England and Wales:* Dr. R. M. Beaton (London), Dr. T. M. Carter (Bristol), Dr. E. Rowland Fothergill (Brighton), Miss Frances Ivens, M.S. (Liverpool), Mr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. E. O. Price (Bangor), Dr. D. G. Thomson (Norwich), Mr. E. B. Turner (London). *Scotland:* Dr. J. Adams (Glasgow), Dr. R. McKenzie Johnston (Edinburgh). *Ex officio:* Sir James Barr (President), Mr. T. Jenner Verrall (Chairman of Representative Meetings), Dr. Edwin Rayner (Treasurer).

APOLOGIES FOR ABSENCE.

Apologetics for absence were read from Dr. T. B. Costello (Tuam), Dr. J. S. Darling (Lurgan), Dr. T. A. Helme (Manchester), and Mr. D. F. Todd (Sunderland).

LOCAL INSURANCE COMMITTEES.

The first subject considered by the Committee was the election of direct representatives of the local medical profession on Insurance Committees, and the provisional regulations issued by the Commissioners in relation to the mode of election. It was reported that the Chairman of the Committee had caused a letter to be addressed to the Honorary Secretaries of Divisions calling attention to the matter, and his action was approved.

LOCAL MEDICAL COMMITTEES.

It was resolved to send a communication to the honorary secretaries of Divisions in the terms of the resolutions reported in the SUPPLEMENT of February 22nd, p. 197.

The first resolution asked that honorary secretaries would supply to the Committee information as to the action that was being taken by Local Medical Committees, the names of the chairmen and secretaries of such Committees, the names of the medical practitioners upon the Local Insurance Committees, and invited reports for publication in the JOURNAL of the meetings of Local Medical Committees.

A further resolution, also published last week, instructed a special subcommittee to report on the steps that should be taken to co-ordinate the action of the Divisions with reference to the Insurance Act with that taken by the various Local Medical Committees within their areas.

The point whether Provisional Medical Committees should be continued was raised by an inquiry. The State Sickness Insurance Committee expressed the opinion that until the Local Medical Committee for an area had been recognized by the Commissioners the Provisional Medical Committee should continue.

INQUIRY ADDRESSED TO REGISTERED MEDICAL PRACTITIONERS.

The circular letter with questions to all registered medical practitioners in Great Britain and a circular letter to Honorary Secretaries of Divisions and Branches in Great Britain on the same subject issued on February 11th were approved.

LONDON MEDICAL COMMITTEE.

Dr. FOTHERGILL moved the suspension of Standing Orders to move to rescind the resolution of the Committee of January 2nd, 1913, approving of the London Medical Committee being granted office room in the house of the Association free of charge for the purpose of its Insurance Act campaign upon the understanding that the London Medical Committee was alone responsible for the documents issued by it. The motion to suspend the Standing Orders was seconded by Dr. CARTER, and in the discussion which followed the propriety of rescinding the resolution of January 2nd was discussed. On the motion to suspend the Standing Orders being put, 7 voted Aye and 4 No; and the CHAIRMAN ruled that the motion was lost, as it had

not been carried by the necessary two-thirds majority of those present and voting.

CENTRAL INSURANCE DEFENCE FUND.

Compensation.

Applications for compensation from the Central Insurance Defence Fund were considered; the suggested amount and method of grant was approved in three cases, and instructions were given that the details of the agreements should be settled by the Solicitor.

Subscription from Colonial Division.

The Committee adopted a resolution expressing cordial appreciation of the action of the Durban Division in forwarding a subscription of £50 from that Division to the Central Insurance Defence Fund.

Principles Guiding Distribution.

A communication was read from the Secretary of a Division asking for certain information concerning the Central Insurance Defence Fund. It was resolved to inform the inquirer (a) that no part of the Central Insurance Defence Fund had been used for financing the campaign of the London Medical Committee; (b) that part of the Fund had already been used for the purposes of compensating certain practitioners who had suffered loss through resigning whole-time appointments out of loyalty to the policy of the Association; (c) that it was the intention of the Committee to forward as soon as possible to the Divisions a statement as to the expenditure in connexion with the Fund.

PAYMENT FROM LOCAL FUND TO LOCAL MEDICAL COMMITTEE.

A communication was received from the Honorary Secretary of a Branch stating that it was desired to hand over an amount in hand for the local fund to the Local Medical Committee, as the money had been subscribed by the local profession for the purposes in connexion with the National Insurance Act. The Committee advised the Branch Treasurer to transfer the sum in question to the Local Medical Committee.

RIGHT OF INSURED PERSONS TO MAKE THEIR OWN ARRANGEMENTS.

Arising out of a communication from the Honorary Secretary of a Branch with regard to the action of the County Insurance Committee in refusing to allow insured persons to make their own arrangements, the Committee resolved to take the opinion of Mr. Danckwerts, K.C., upon the particular case, and at the same time to submit the following points with regard to the general question:

(a) Whether, granting the right of Insurance Committees under the Act to refuse to allow insured persons to make their own arrangements, Insurance Committees, as incidental to such right have power to formulate general conditions applicable to all cases, or whether they are bound to give each individual case consideration *per se*, or

(b) Whether the Insurance Commissioners have exceeded their powers under the Act in formulating general conditions for issue by Insurance Committees applicable to all cases.

TREATMENT OF UNINSURED PERSONS.

Information which the Committee viewed with grave concern was received with regard to the position in a certain area in respect to the fees for the treatment of uninsured persons. The Committee suggested that a meeting of the medical profession in the area should be held, and that the Medical Secretary or Deputy Medical Secretary should attend the meeting if so desired.

TEMPORARY RESIDENTS.

The question of the payment of medical practitioners in health resorts who were called upon to attend insured persons temporarily absent from their own homes was considered, and it was resolved to notify the Insurance Commissioners that the State Sickness Insurance Committee had evidence that the problem of how to deal with persons who were transferred temporarily from their own homes to health resorts, both inland and seaside, was becoming acute, and to ask the Commissioners to call, at an early date, a conference of Local Medical Committees in the towns and districts interested.

INSURED PERSONS OVER 65 YEARS OF AGE.

It was resolved to forward a strong protest to the Insurance Commissioners with regard to the misleading statements by Mr. Masterman in the House of Commons, and to draw attention to the terms of Section 15 (2) (c) of the Insurance Act and to the conditions in which it was inserted—that is to say, as a bargain between the friendly societies and the doctors, under which the profession would not charge more for the treatment of old and disabled members of friendly societies than for ordinary insured persons.

ACCEPTANCE OF SERVICE IN OTHER DISTRICTS.

Dr. BEATON raised the question of the interpretation of Minute 41 of the Special Representative Meeting of January, 1913, and asked for a definite interpretation.

Minute 41.—That any acceptance of service outside practitioners' own districts, parishes, and towns involving a change of residence for the express purpose of accepting service, will be regarded as conduct detrimental to the honour and interests of the medical profession.

After discussion the Committee adopted the following resolutions:

- (a) That the State Sickness Insurance Committee is of opinion that where practitioners merely go into a neighbourhood to join a panel which, in the opinion of the local Division, is effective, such intrusion is not an offence under Minute 41 of the Special Representative Meeting January, 1913.
