- (b) That where in the opinion of the local Division the local panel is not effective and it is believed that circumstances justify their standing out against working the Act, the intrusion of practitioners into that neighbourhood to defeat the object which the local Division has in view is an offence under Minute 41, and
- (c) That the word "intrusion" should be interpreted so as to cover not only cases in which practitioners remove their places of residence, but also cases in which they open branch surgeries.

FEES TO PRACTITIONERS CALLED IN ON THE ADVICE OF MIDWIVES.

The Committee resumed the consideration of the Provisional Regulations issued by the Insurance Commissioners as to fees to medical practitioners summoned by midwives in accordance with the rules of the Central Midwives Board, and to the circular letters A. S. 73 and 78 issued by the Insurance Commissioners to approved societies in relation to this matter. Dr. CARTER gave an account of a scheme now under consideration at Bristol, and the Committee also had information from the honorary secretary of the Newcastle-on-Tyne Local Medical Committee with reference to the position in towns where there were midwifery teaching schools. The Committee, after a short discussion, decided to consider the matter further at its next meeting on March 6th, when it was anticipated that further information on the general question would be available.

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

SECOND LIST.

The following books were added to the Library between July and September, 1912:

Presented by the Editor of the "British Medical Journal."

| | |
|--|------|
| Laurance, L.: General and Practical Optics. | 1908 |
| Leipoldt: Common Sense Diетetics. | 1911 |
| Leipoldt: The School Nurse, Her Duties and Responsibilities. | 1912 |
| Leslie and Shipley: The Grouse in Health and Disease, popular edition. | 1912 |
| Lowe, P.: A Naturalist on Desert Islands. | 1911 |
| Mann: Atlas of Killian's Tracheo-Bronchoscopy. | 1911 |
| Mendel and Tobias: Die Tabes der Frauen. | 1912 |
| Meyer and Pfeiffer: Das Klima von Schomberg. | 1912 |
| Middleweck, F. F.: Medical Gymnastics and Massage. | 1912 |
| Moore, B.: The Dawn of the Health Age. | 1911 |
| Morton, W. C.: Principles of Anatomy; the Abdomen. | 1911 |
| Mnnk, H.: Hirn und Rückenmark. | 1909 |
| Osler, Sir William: Man's Redemption of Man. | 1910 |
| Parsons, F. G.: Practical Anatomy, 2 volumes. | 1912 |
| Pearson, Karl: The Grammar of Science, third edition, part 1. | 1911 |
| Pickerill: Prevention of Dental Caries. | 1912 |
| Poppi, A.: L'ipofisi Cerebrale l'aringea e la Glandola l'inciale in Patologia. | 1911 |
| Rawling, L. B.: Muscles and Nerves. | 1906 |

| | |

| Archives of Ophthalmology. | Vols. 1-3, 6, 7, 14, 15, 16 and 20. |
| Archives of Otolology. | Vols. 1-7, and 20-22. |

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

METROPOLITAN COUNTIES BRANCH: EAST HERTFORDSHIRE DIVISION.

A MEETING of this Division was held at the Shire Hall, Hertford, on February 19th, to which all practitioners resident within the area were invited. Dr. GILBERTSON presided, and eleven members and one non-member were present.

County Medical Committee.

The HONORARY SECRETARY reported:

1. That the County Medical Committee had received statutory recognition.
2. That Dr. Boyd had been duly nominated as the Representative of the Division on the County Insurance Committee in accordance with the Provisional Regulations of the Insurance Commissioners (January 31st), and that Dr. Fisher (King's Langley) had been nominated by the West Herts Division.
3. That the names of Drs. Shelly and Gilbertson (East Herts) and Drs. Evill and Wells (West Herts) had been forwarded as the recommendations of the County Medical Committee for the four other medical seats on the Insurance Committee.
4. That Drs. Berry (Watford), Evill (Barnet), and Shelly (Hertford) had been elected at the first meeting of the County Medical Committee as the medical members of the Medical Service Subcommittee.
5. That the medical representatives on three District Insurance Committees had been elected as follows:

Bishop's Stortford.—Drs. Collins and Newman.
Cheshunt.—Drs. Clark and McClymont.
Buntingford.—Drs. Ewing and Fell.

Address by County Tuberculosis Officer.

Dr. HYSLOP THOMSON, the County Tuberculosis Officer, then gave a short address on "The Problem of Tuberculosis and the Proposed Plan of Campaign in the County of Hertford," which was followed by questions and a lengthy discussion. The members present cordially thanked Dr. Thomson for his most interesting paper and for his answers to the various questions raised.

GREENWICH AND DEPTFORD DIVISION.

A MEETING of the Greenwich and Deptford Division was held on February 12th. Dr. J. P. PERVIS was in the chair.

Dr. A. T. DRAKE proposed, and Dr. A. E. CRABEE seconded, a vote of censure on the Honorary Secretary for his conduct in joining the panel before being released from the undertaking and pledge. After some discussion, and after a statement had been made by Dr. W. H. PAYNE, Dr. ANNIS proposed and Dr. MUIR seconded the following amendment:

That this meeting of the Greenwich and Deptford Division, having heard the full explanation of the whole circumstances as outlined in the report of the Executive Committee presented at the last meeting, also a further statement made by the Honorary Secretary, showing that all that has been done by him was with the full concurrence of the Medical Secretary of the Association, realizes that no good purpose will be served by further discussing or jursing this matter, and therefore do now proceed to the next business.

This was carried by 19 to 12, and also as a substantive resolution.

Another motion of which notice had been given, expressing want of confidence in Dr. Keay (representative of the old Greenwich Division), was, in the absence through illness of the member who had given notice of the motion, not proposed.

HAMPSTEAD DIVISION.

A MEETING of the Hampstead Division was held on February 14th, when Mr. ERNEST WARE occupied the chair and fifteen members were present.

The CHAIRMAN reported that Mr. Dorrell had resigned the membership of the Association, and consequently ceased to be Secretary and Representative. It had not, he said, been possible to arrange for the appointment of a successor, and the Executive Committee had undertaken to carry on the work of the Division so far as it applied to making arrangements for those scientific meetings that had already been fixed. After some discussion, the Chairman expressed his willingness to undertake the secretarial duties with regard to the scientific work for the rest of the current year; this offer was unanimously accepted, and the action of the Executive Committee approved.

Mr. RICHARD LAKE then read a paper on chronic middle ear disease, which was full of interest and was followed by a discussion in which many members took part. A cordial vote of thanks to Mr. Lake terminated the meeting.

MIDLAND BRANCH.

BOSTON AND SPALDING DIVISION.

A SPECIAL meeting of this Division was held on February 7th. Dr. WHITE was in the chair, and eleven members were present.

Attendance on Uninsured Persons.—The question of medical attendance on uninsured members of friendly societies over 65 years of age and not disabled from working by injury or disease was considered and the following scale of fees was agreed to:

Uninsured Men.—Members of friendly societies over 65 years of age and not disabled from working by injury or disease. *Wage Limit.*—£2 a week or £104 a year for those attended under capitation system. Dr. MASON proposed, and Dr. R. TUXFORD seconded, that it be 8s. 6d. a head, with *extra fees* as follows:

| | s. | d. |
|---|----|------------|
| Certificates for other clubs ... | 0 | 6 each. |
| Certificates for the purposes of Workmen's Compensation Act ... | 2 | 6 minimum. |
| <i>Mileage.</i> —Three miles out. One shilling a mile out beyond this distance. | | |

Diseases due to misconduct.
Administration of anaesthetics outside hospitals, 10s. 6d.
Major operations outside hospitals.
Consultations, vaccines, serums, surgical instruments and appliances.

Free choice of doctor by patient and patient by doctor. Contract to last one year.

In the event of payment per attendance being chosen then the following tariff to be adopted, applying to those whose income do not exceed £160 a year:

| | s. | d. |
|---|----|----|
| Ordinary visit and medicine, distant one mile and a half from Town Bridge ... | 3 | 6 |
| Ordinary visit, distant one mile and a half from Town Bridge ... | 2 | 6 |
| Night visits (for calls received and paid from 8 p.m. to 8 a.m.) ... | 5 | 0 |
| Consultation with medicine at surgery ... | 2 | 6 |
| Consultation without medicine ... | 1 | 6 |

Mileage.—One shilling a mile out beyond one mile and a half from Town Bridge. Extra fees would be charged for general anaesthetics, major operations, consultations, fractures, dislocations, vaccines, serums, surgical instruments, and appliances.

It was decided to accept women and children under the same scheme, with extra fees beyond those above mentioned for confinements, miscarriages, and abortions.

Juvenile Clubs.—Boys, ages 5 to 16: 5s. a head, with extra fees as mentioned above for uninsured men, wage-limit of parent the same.

Women and Girls.—No capitation scheme, only payment per attendance.

Nominations to Insurance Committee.—It was resolved *nemine contradicente*, that Dr. Wilson represent the North of the Holland Division and Dr. S. H. Perry (Spalding) the South on the Holland Insurance Committee.

NORTHERN COUNTIES OF SCOTLAND BRANCH: INVERNESS-SHIRE DIVISION.

A MEETING of the Division was held at Inverness on February 14th for the purpose of constituting an Ethical Committee for the Division. The Ethical Rules recommended by the Representative Meeting in Liverpool were adopted as rules of the Division.

The following were elected members of the Ethical Committee: Dr. John MacDonald (M.O.H. Inverness), Mr. James Luke (Inverness), Dr. J. Munro Moir (Inverness), Dr. T. C. Mackenzie (District Asylum, Inverness),

Dr. Thos. Macdonald (Beaulieu), Dr. Miller (Fortwilliam), Dr. Balfour (Aviemore), Dr. Macdonald (Uig, Skye), Dr. Tolmie (Obbe, Harris), Dr. M. Mackenzie (Scotpaig), Dr. Reardon (South Uist), with the Chairman and Secretary of the Division as *ex officio* members.

OXFORD AND READING BRANCH: OXFORD DIVISION.

A SPECIAL general meeting of the Division was held on February 21st at the Radcliffe Infirmary, Oxford. Dr. TURRELL was in the chair, and about fifty members were present.

Central Defence Fund.—Dr. COLLIER, on behalf of the Local Guarantee Fund Committee, made an appeal to all who had not yet subscribed to the Central Fund, explaining that the liabilities of the Association were very large, and that the Oxford Guarantee Fund Committee had undertaken to assist in defraying them by opening a subscription list.

Attendance on Aged and Infirm Members of Friendly Societies.—The question of attendance on aged and infirm members of friendly societies was discussed, and after various propositions had been made, the CHAIRMAN, in order to make the position quite clear, read an extract from the BRITISH MEDICAL JOURNAL of February 1st, and moved the following resolution, which was carried *nemine contradicente*:

That aged and infirm members of approved societies be not attended at lower rates than 8s. 6d. per member. (This to include medicine.)

Contract Attendance on Uninsured Persons.

The subject of contract attendance on uninsured persons was then dealt with. Mr. DREW stated that the staff of the Cutler Boulter Dispensary, Oxford, had agreed only to attend members on Insurance Act terms.

Dr. HEEP, speaking for practitioners of the Islip and Bicester District, said that the rates agreed upon for members of friendly societies were: Men 10s., women 8s. 6d., juveniles (from 5 to 16) 6s., and payment for "extras."

Dr. JONES, speaking for Deddington, Steeple Aston, and Aynho, said that the terms there were the same as the above, but that a few would prefer fees at National Friendly Deposit Society rates.

Dr. SUMMERHAYES (Thame and South Oxon) said the terms there settled were: Adults, from 16 to 60, 8s. 6d.; children, from 1 to 16, 4s. for one, 6s. for two, and 8s. for three or more, with extras.

Dr. SUSSMAN, of Henley, gave a detailed account of the "Berkshire Scheme" now in force throughout the whole of Berks. This was based on a sliding scale, according to wages, and was under the control of a central committee, co-ordinating the work of local district committees.

Dr. BRUNYATE stated that the Woodstock club fees would in future be raised to 8s. 6d. a member.

Mr. STYLE outlined the Gloucestershire scheme: Adults 2d. a week, two children 1d. a week, juveniles 4s. 4d. (with extras).

Finally the CHAIRMAN proposed the following motion, which was carried by 19 to 5:

That no contract attendance on uninsured persons and juveniles be undertaken at lower rates than the following:

| | Per Annum. | |
|---|------------|----|
| | s. | d. |
| Males | 10 | 0 |
| Females | 8 | 6 |
| Juvenile members of friendly societies ... | 5 | 0 |
| Children (not more than two to be charged for) | 4 | 4 |
| "Nurse children" | 10 | 0 |

It was explained that these were minimum rates, and that "extras" should be charged for.

Subsequently, on the motion of Mr. DREW, it was agreed to appoint a subcommittee, consisting of the City and County Medical Committees, to consider a scheme for contract attendance on the uninsured on the lines of the Berkshire scheme.

Contract Midwifery.—It was unanimously decided to refuse all midwifery on contract terms.

Free Choice of Doctor.—Mr. STYLE raised the question of free choice of doctor for all uninsured members of benefit societies, and it was unanimously decided that there should be free choice.

RHODESIAN BRANCH: MATABELELAND DIVISION.

THE third meeting of the Matabeleland Division of the Rhodesian Branch was held at the Memorial Hospital on November 4th, 1912, when there were present Drs. Eaton, Sutherland, Townsend, Head, Acland, and Jameson. THE SECRETARY reported that the Transvaal, the Griqualand West, and the Cape of Good Hope Eastern Province and Western Province Branches had written expressing their approval and wishing the society success. The Transvaal Medical Society's tariff was discussed; the Chairman, Secretary, and Drs. Acland and Strong were requested to make certain additions, and the tariff so amended was directed to be incorporated in the minutes and circulated and brought up to the next meeting.

The following resolutions as to club practice, signed by all the practitioners in Bulawayo, were adopted:

1. That to tender, being unprofessional, we cannot do so.
2. That we will not engage in club practice.
3. That, while we are aware of the fact that certain civil servants cannot afford to pay full fees, and consequently have always been charged at a reduced rate, we do not see any reason to charge special fees for professional services to all members of the Matabeleland Civil Service Co-operative Society, Limited.

MASHONALAND DIVISION.

At the second meeting of the Mashonaland Division it was reported that the following cable had been sent to the British Medical Association in London:¹

All Mashonaland practitioners unite with those in Matabeleland desiring formation of Rhodesian Branch of the Association.

Resolutions with regard to club practice identical with those passed by the Matabeleland Division were adopted.

THE SECRETARY reported that a number of practitioners in Northern Rhodesia desired to join the Branch, but no Division had been started in the district, and on the motion of Dr. TOWNSEND, seconded by the SECRETARY, it was resolved that North Rhodesia should be part of the Matabeleland Division until such time as a separate Division was formed.

On the motion of Dr. EATON, seconded by Dr. TOWNSEND, it was resolved that the *Transvaal Medical Journal* should be the organ of the Division.

The following resolution, proposed by Dr. SUTHERLAND, seconded by Dr. JAMESON, was carried:

That the subscription be £2 2s., payable on or after December 1st, for the year 1913. This to include the BRITISH MEDICAL JOURNAL and the *Transvaal Medical Journal*.

It was resolved that the next meeting be held at the Memorial Hospital at 8.30 p.m. during the next High Court Session. It was left to the Chairman and Secretary to settle the actual day, and to arrange a clinical evening, to include ten minutes' papers on cases.

It was decided to send copies of the minutes to all practitioners in Matabeleland and N. Rhodesia, and that sufficient copies be sent to the Secretary of the Mashonaland Division for all members of that Division, as it was felt that if a common tariff scale could be arranged for Rhodesia it would be better than to have different scales in the three Divisions. It was hoped that reference by the Divisions to the Branch Council might achieve this.

SOUTH-EASTERN BRANCH: BRIGHTON DIVISION.

AN ordinary meeting of the Brighton Division was held on February 18th at the Lecture Hall, New Road, Dr. RYDING MANSIE in the chair. Thirty-one members were present.

Local Medical Committees.—The proceedings of the Brighton and East Sussex Medical Committees were reported by their respective CHAIRMEN. Both committees have now received statutory recognition under the Act.

Ethical Committee.—The Ethical Committee made a report. After some discussion the consideration of the report was adjourned until such time as the Executive Committee decided to put the matter on the agenda for a Division meeting.

¹ The notice recognizing the Rhodesian Branch was published in the SUPPLEMENT of December 14th, 1912, p. 677.

New Members Subcommittee.—Dr. FOTHERGILL reported the proceedings of the New Members Subcommittee, which has already obtained twelve new applications for membership. An active canvass is to be carried on amongst all non-members in the Division area, and adjoining Divisions are being invited to carry out a similar canvass.

Medical Certificates under the Insurance Act.—The following resolutions were carried without a dissentient:

- (1) That the certificate of any medical practitioner whose name appears on the *Medical Register* should be accepted by an Insurance Committee, approved society, or other body until it has been clearly proved, after due investigation, that such certificate is not to be relied upon.
- (2) That in all insurance areas where an adequate medical service has been provided under the Act for insured persons, the request of individual insured persons to be allowed to contract outside the Act with a registered medical practitioner should be granted subject to withdrawal of the permission later, should it be proved, after due investigation, that the medical attendance given has been unsatisfactory.

REIGATE DIVISION.

A MEETING of the Reigate Division was held at the White Hart Hotel on February 19th, at 4 p.m. Mr. A. R. WALTERS took the chair, and twenty-three members and one non-member were present.

Local Medical and Insurance Committees.

The CHAIRMAN described the working arrangements of the Insurance Act with regard to Local Medical and Insurance Committees.

Dr. SPENCER PALMER read the report of the Provisional Medical Committee, which had held 17 meetings, with an average attendance of 11 out of the 15 members. The report dealt with the work of the committee with regard to the various aspects of the Insurance Act and in relation to the question of the medical treatment of school children. Dr. PALMER pointed out that the work of the Provisional Committee came to an end with the election of a Local Medical Committee. The report was adopted.

Medical Treatment of School Children.

Dr. WALTERS gave an account of the negotiations with the Surrey County Council with regard to the medical treatment of school children found to be defective, and described the schemes proposed.

A memorandum from the Clerk to the Education Committee of the County Council was read. It was resolved to continue negotiations on the lines of the scheme suggested by the county authorities, with the addition of certain riders of the Provisional Committee.

Aged and Infirm Members of Friendly Societies.

A discussion followed upon the question of attendance upon aged and infirm members of approved societies, and contract attendance upon uninsured persons generally. Dr. PRINCE moved the following resolution, which was seconded by Dr. WEIR, and carried:

That no further contract work be accepted at terms below the full insurance rate of 9s. per annum.

Contract Attendance upon Uninsured Women.

The consideration of the question of contract attendance upon uninsured women was deferred.

Election of Representatives on Insurance Committee.

The CHAIRMAN referred to the candidature of Dr. Arnold Lyndon, of Haslemere, and Dr. George Cowie, of Wimbledon, as medical representatives on the Surrey Insurance Committee, and strongly urged those present to support these gentlemen.

Election to Executive Committee.

The name of Dr. Ogle was added to the Executive Committee of the Division.

MEETING OF MEDICAL MEN RESIDENT IN THE INSURANCE DISTRICT.

The Divisional meeting was followed by a meeting of medical men resident in the Reigate Insurance District. Dr. WALTERS presided.

The first business was the consideration of the offer made by the Surrey Insurance Committee to introduce the Salford scheme or some similar arrangement in districts in which there was a unanimous demand for such a method of attendance and remuneration. The CHAIRMAN outlined such a plan, and the following motion, proposed by Dr. WEIR and seconded by Dr. FRENCH, was carried unanimously:

That we in this district emphatically oppose any such plan as the Salford scheme.

Local Medical Committee.

On the motion of Dr. PALMER it was agreed that the constitution of the Local Committee be that of the Provisional Committee; representatives from Chipstead taking the place of those from Bletchingley, and that the committee should be elected for one year. The following gentlemen were then elected:

Borough of Reigate.—Messrs. Walters, Ogle, Palmer, Hewetson, Thornton, and Gayner.

Dorking.—Messrs. Mackenzie, G. A. A. Robertson, and Sebastian.

Horley.—Messrs. S. A. Clark, Pagden, and Williamson.

Kingswood, Chipstead, and Merstham.—Messrs. French, Binney, and Weir.

A vote of thanks was accorded to Dr. Palmer for his services as Chairman of the Provisional Committee.

Drugs.

The following were appointed as a subcommittee to act with the local Pharmacists' Society in the preparation of a list, with formulae, of stock mixtures: Drs. Spencer, Palmer, Mackenzie, and Watson.

Vote of Thanks.

The meeting closed with a vote of thanks to the Chairman.

SOUTH-WESTERN BRANCH:

EXETER DIVISION.

Special Meeting.

A SPECIAL meeting of the Exeter Division was held at the Royal Devon and Exeter Hospital on February 19th. Mr. E. J. DOMVILLE was in the chair, and thirty members were present. The meeting was summoned to consider certain resolutions, of which notice had been given. Mr. RUSSELL COOMBE moved, and Dr. T. J. STEELE PERKINS seconded, a resolution to the effect that no negotiation or agreement for contract practice (except with regard to persons insured under the National Insurance Act) should be entered into by any practitioner in Exeter otherwise than through the Secretary of the Exeter Medical Committee, or, outside Exeter, save through the Secretary of the District Medical Committee of his area, and that no medical practitioner should continue practice of such nature except with the sanction of such Committee.

After considerable discussion, in which Drs. DAVY, DUNCAN, PEREIRA and others took part, a resolution approving the principle of the resolution was carried by more than a two-thirds majority, and a committee was formed to settle the wording in consultation with the mover of the resolution.

Mr. RUSSELL COOMBE proposed the two following motions, which were carried unanimously:

That this Division, acting under the ethical rules, requests the Branch Council to obtain the adhesion of the other Divisions of the Branch to the following, or some similar, resolution:

That for all purposes under the National Insurance Act, members of the Branch practising in the County of Devon, the County of Cornwall, the County Borough of Exeter, the County Borough of Plymouth, and the County Borough of Devonport shall, as regards their practice within these respective areas, be bound by the decisions of the recognized Medical Committees for these areas.

That any members practising in the counties of Somerset and Dorset shall similarly be bound by the decisions of the recognized Medical Committees for those Counties.

That it be the duty of the Division Secretary to keep a separate book (provided with an index) wherein shall be inscribed all resolutions of the Division, together with a reference to the minutes of the meeting at which they were adopted.

ANNUAL MEETING.

The annual meeting of the Division was held after the conclusion of the special meeting.

Annual Report.

The HONORARY SECRETARY read the annual report, which contained the following statement as to membership :

| | | | |
|---------------------------------------|-----|-----|-----|
| Membership on December 31st, 1911 | ... | ... | 156 |
| <i>Increases :</i> | | | |
| (a) New members... | ... | ... | 6 |
| (b) Through change of address | ... | ... | 24 |
| Total additions | ... | ... | 30 |
| Aggregate | ... | ... | 186 |
| <i>Losses :</i> | | | |
| (a) Deaths | ... | ... | 3 |
| (b) Resignations | ... | ... | 6 |
| (c) Through change of address | ... | ... | 14 |
| Total deductions | ... | ... | 23 |
| Net membership on December 31st, 1912 | ... | ... | 163 |

Five meetings had been held during the year, with an average attendance of 54; the largest attendance at any one meeting was 87. The chief subject of interest during the year was the National Insurance Act, and it was due to the interest taken in this subject that the meetings had been so exceptionally well attended.

Election of Officers.—The following were elected officers for the ensuing year:

Chairman, Mr. A. C. Roper; *Vice-Chairman*, Mr. H. Andrew; *Honorary Secretary*, Mr. Robert Worthington; *Representatives*, Mr. Russell Coombe and Dr. W. Gordon; *Representatives on Branch Council*, Drs. R. V. Solly, W. H. Evans, G. G. Gidley, M. Cutcliffe, H. H. Serpell, J. Cook, A. M. Braund, and Mr. Robert Worthington; *Executive and Ethical Committees* (the same members were elected to serve on these committees as were elected Representatives on the Branch Council); *Representatives on District Nursing Association*, Messrs. Russell Coombe and J. T. Steele Perkins.

Local Defence Fund.—Dr. DUNCAN gave an account of the Local Defence Fund, and remarked that members were responding very satisfactorily to the recent 20 per cent. call. On the motion of Mr. RUSSELL COOMBE, seconded by Mr. ROPER, it was unanimously resolved to make a grant of £20 from the Local Defence Fund to assist in defraying the heavy expenses of the Division during the past year.

Vote of Thanks to Mr. E. J. Domville.—Mr. H. ANDREW proposed a vote of thanks to Mr. Domville for the able manner in which he, as Chairman, had conducted the business of the meetings of the Division during the past three years, and expressed regret that he was leaving. Mr. A. C. ROPER seconded, and the vote was carried with acclamation. Mr. DOMVILLE replied.

Vote of Thanks to Retiring Secretary.—Dr. J. T. STEELE PERKINS proposed a vote of thanks to Dr. A. W. F. Sayres on his retirement from the Honorary Secretaryship of the Division, and for his work on behalf of the Division during the three strenuous years just past. This was seconded by Dr. W. GORDON, supported by Mr. RUSSELL COOMBE, and carried unanimously. Dr. SAYRES expressed his thanks.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

THE Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913.

Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,

February 4th, 1913.

Medical Secretary.

ELECTION OF COUNCIL, 1913-14.

NOTICE is hereby given that nominations for a candidate for election as a Member of Council by the New South Wales and Queensland Grouped Branches for a period not exceeding three years as prescribed by By-law 49 (2) must be forwarded so as to reach me not later than Thursday, April 24th, 1913.

Nominations must be made by any three Members of the grouped Branches, in the form prescribed below.

Election will be by voting papers, and these will contain the names of all duly nominated candidates, and will be issued by me.

By Order of the Council,

R. H. TODD,

Honorary Secretary, New South Wales
Branch, and Returning Officer.

Northfield Chambers, Phillip Street, Sydney, N.S.W.,
March 1st, 1913.

NEW SOUTH WALES AND QUEENSLAND.

NOMINATION FORM.

BY NOT LESS THAN THREE MEMBERS OF THE GROUPED
BRANCHES.

We, the undersigned, hereby nominate

.....
of.....
.....

as a candidate for election by the New South Wales and Queensland grouped Branches above named as a member of the Council of the Association.

Names and addresses of nominators, and Branches to which they belong.

| Name. | Branch. |
|-------|---------|
| | |
| | |
| | |

This form should be returned to Dr. R. H. Todd, Northfield Chambers, Phillip Street, Sydney, N.S.W., not later than Thursday, April 24th, 1913.

BRANCH AND DIVISION MEETINGS TO BE HELD.

To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—A meeting of this Division will be held at the Coventry Hospital on Tuesday, March 4th, at 8.30 p.m. (1) To discuss the ethical procedure in regard to the Coventry Dispensary. (2) To discuss the new Ethical Rules as recommended by the Association. (3) To receive communications. (4) Dr. Wynne will read a paper on "The Role of Tuberculin in Treatment of Pulmonary Tuberculosis."—DUNCAN DAVIDSON, 15, Priory Row, Coventry.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held at the Manor Lodge, Upper Clapton (by invitation of Dr. C. F. Hadfield), on Tuesday, March 12th, at 9.30 p.m. Clinical evening: Cases and discussion. The Honorary Secretary will be glad to receive notice from members desiring to show cases or read short abstracts by February 28th.—A. G. SOUTHCOMBE, 83, Sidney Road, Homerton, N.E.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—It has been found necessary again to alter the date of the demonstration arranged by the Newcastle-on-Tyne Division to March 28th, when Professor R. A. Bolam will lecture on Medico-legal Tests for Blood.—R. J. WILLAN, Honorary Secretary, 25, Ellison Place, Newcastle-on-Tyne.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held at Carlton House, Westminster, on February 20th, with Sir FRANCIS H. CHAMPNEYS in the chair.

Certificates of Candidates.

A letter was considered from the mother of a candidate who had tendered a false and fraudulent certificate of birth when endeavouring to enter for examination. The falsification of the certificate was regarded as having been done without the candidate's knowledge, and in these circumstances the Board resolved that the candidate should be allowed to present herself at the next examination after her 21st birthday according to the birth certificate from Somerset House, and that the mother be informed that a person falsifying a certificate renders himself or herself liable to a penalty of twelve months' hard labour. It was resolved to advise training schools to satisfy themselves that the dates on the birth certificates of pupils had not been tampered with.

Payment of Midwives.

A letter was considered from the Medical Officer of Health for Leicester suggesting that a midwife's remuneration should be a first charge upon the maternity benefit payable to her patient. The Board directed that the Medical Officer of Health for Leicester should be informed that the Board has no power to deal with the payment of midwives.

Uncertified Midwives.

The Board considered a letter from the Secretary of the Wigam and District Guild of Midwives calling attention to the frequency of midwifery practice by uncertified women in the borough of Wigam, and decided to reply that an amendment of the Midwives Act by the omission of the words "habitually and for gain" was highly desirable, and that the Board had made repeated suggestions to this effect. A letter was also considered from the Clerk of the Cheshire County Council forwarding an extract from the minutes of a meeting of that council with reference to proceedings contemplated against an uncertified woman practising as a midwife. The Board resolved to send a similar reply in this instance, and to add that if its suggestion were carried out prosecutions under the Act would probably be undertaken within the time limit of the Summary Jurisdiction Act.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments have been announced at the Admiralty: Staff Surgeon GERALD M. EASTMENT to the *Atacuity* on recommissioning, February 27th, 1913. Surgeon G. J. Notts and Derby Mounted Brigade Field Ambulance.—Captain ALEXANDER T. MULHALL, F.R.C.S.L., and Captain FRANCIS B.

During the week ending Saturday, February 22nd, 620 births and 554 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 635 births and 490 deaths in the preceding period. These deaths represent a mortality of 24.1 per 1,000 of the aggregate population in the districts in question, as against 21.3 per 1,000 in the previous period. The mortality in these Irish areas was therefore 6.8 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 27.0 per 1,000 of the population. As for mortality of individual localities, that in the Dublin registration area was 24.1 (as against an average of 20.8 for the previous four weeks), in Dublin City 25.9 (as against 21.2), in Belfast 25.4 (as against 22.8), in Cork 23.8 (as against 27.0), in Londonderry 19.1 (as against 19.4), in Limerick 17.6 (as against 17.3), and in Waterford 20.9 (as against 20.4). The zymotic death-rate was 1.6, or the same as in the previous week.

EPIDEMIC MORTALITY IN LONDON.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

THE accompanying diagram shows the prevalence of the principal epidemic diseases during the fourth quarter of the year. The fluctuations of each disease and its relative fatality compared with the average in the corresponding periods of recent years can thus be readily seen, except for diarrhoea and enteritis among children under 2 years of age, for which the average mortality is not available.

Enteric Fever.—The fatal cases of enteric fever, which had been 31, 28, and 29 in the three preceding quarters, rose to 30 last quarter, but were 38 below the corrected average number in the corresponding period of the five preceding years; this disease showed the highest proportional mortality in Hammeramith, St. Marylebone, Ilampstead, Islington, and Poplar. The number of enteric fever patients under treatment in the Metropolitan Asylums Hospitals at the end of the quarter was 37, against 52, 32, and 49 at the end of the three preceding quarters; 85 new cases were admitted during the quarter, against 93 in each of the two preceding quarters.

Small-Pox.—No death from small-pox was recorded last quarter, and no case of this disease was under treatment during the quarter in the Metropolitan Asylums Hospitals.

Measles.—The deaths from measles, which had been 202, 433, and 376, rose last quarter to 788, and were 435 in excess of the average number in the fourth quarters of the five preceding years. This disease was proportionally most fatal in Finsbury, Shoreditch, Bethnal Green, Stepney, Poplar, and Battersea.

Scarlet Fever.—The fatal cases of scarlet fever, which had been 23, 42, and 44 in the three preceding quarters, further rose last quarter to 50, but were fewer than half the corrected average number. The greatest proportional mortality from this disease was recorded in St. Marylebone, Stepney, Southwark, Bermondsey, and Greenwich. There were 2,083 scarlet fever patients under treatment in the Metropolitan Asylums Hospitals at the end of last quarter, against 1,296, 1,380, and 1,845 at the end of the three preceding quarters; 3,542 new cases were admitted during the quarter, against 2,051, 2,039, and 2,856 in the three preceding quarters.

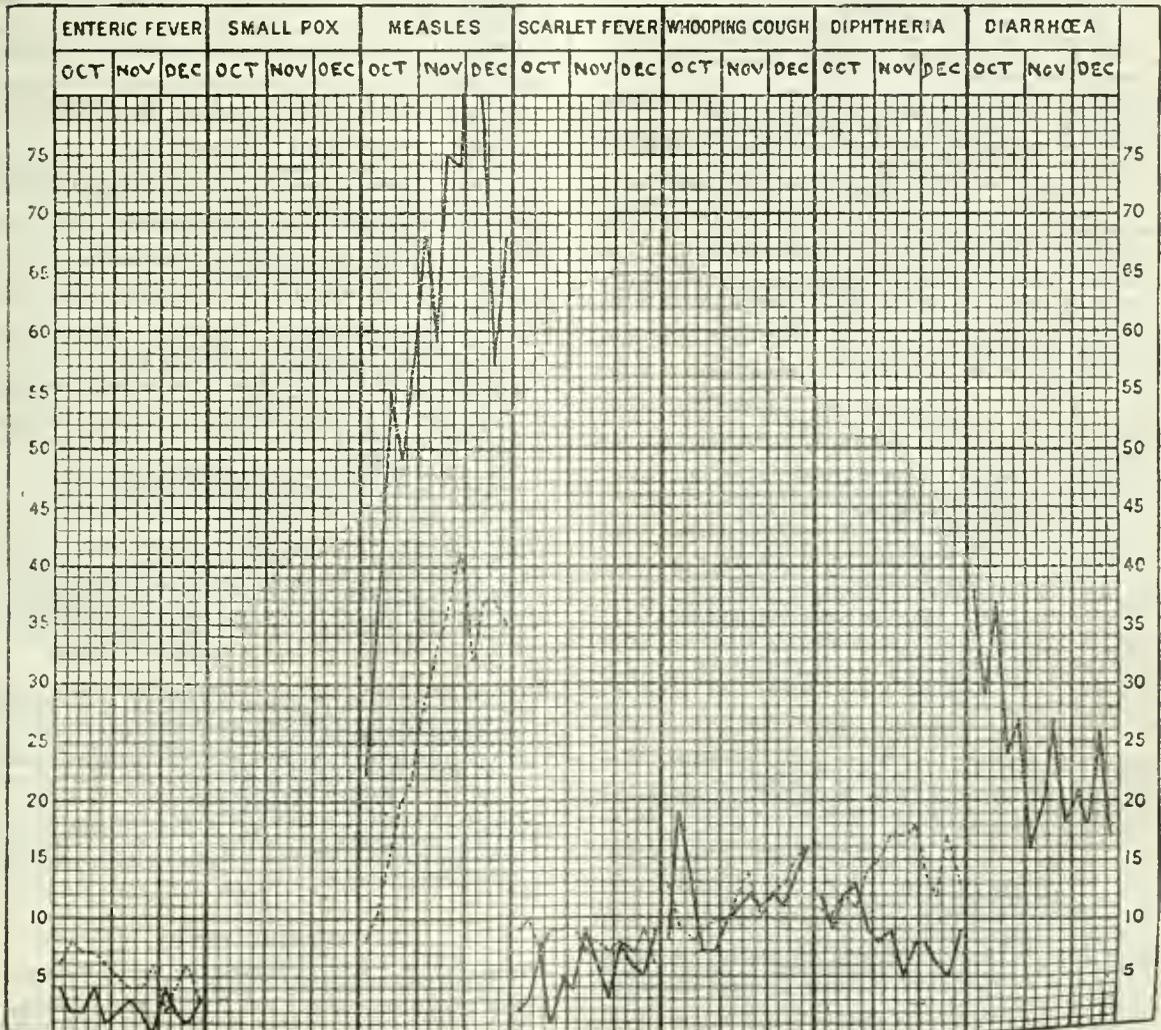

Whooping-Cough.—The deaths from whooping-cough, which had been 283, 354, and 182 in the three preceding quarters, further declined last quarter to 152, and were almost equal to the corrected average number. Among the several metropolitan boroughs this disease was proportionally most fatal in Kensington, Hammersmith, Finsbury, Bethnal Green, Battersea, Deptford, and Greenwich.

Diphtheria.—The fatal cases of this disease, which had been 133, 99, and 108 in the three preceding quarters, rose again to 113 last quarter, but were 63 below the corrected average in the corresponding period of the five preceding years. The highest death-rates from diphtheria last quarter were recorded in Islington, Holborn, Stepney, Deptford, and Greenwich. The Metropolitan Asylums Hospitals contained 99 diphtheria patients at the end of last quarter, against 1,045, 877, and 941 at the end of the three preceding quarters; 1,525 cases were admitted during the quarter, against 1,706, 1,440, and 1,513 in the three preceding quarters.

Diarrhoea.—The 318 deaths under this heading are those attributed to diarrhoea and enteritis among children under 2 years of age; measured in proportion to the births registered in the several boroughs during the quarter, the mortality from this cause was greatest in Kensington, the City of Westminster, Finsbury, Shoreditch, and Southwark.

In conclusion, it may be stated that the aggregate mortality last quarter from these epidemic diseases was 32 per cent. above the average.

DEATHS FROM EPIDEMIC DISEASES IN LONDON DURING THE FOURTH QUARTER OF 1912.

NOTE.—The black lines show the recorded number of deaths from each disease during each week of the quarter. The dotted lines show the average number of deaths in the corresponding weeks of the five preceding years, 1907-11. Under the heading "Diarrhoea" are given the deaths from diarrhoea and enteritis among children under 2 years of age; the corrected average number of these deaths is not available.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

WHITESIDE, J. H., M.B., C.M. Edin., District Medical Officer of the Driffield Union.

WYLDE, R. P., L.M.S.S.A. Lond., District Medical Officer of the Ashton-under-Lyne Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

HEDLEY.—On February 24th, 1913, at 11, John Street, Berkeley Square, W., the wife of John Prescott Hedley, M.C. Cantab., F.R.C.S. Eng., of a son.

ROBIE.—At 163, Princes Street, Dundee, on February 20th, to Dr. and Mrs. G. A. Robie, of a son.

YOUNG.—On February 25th, at 57, Harley Street, W., the wife of R. A. Young, M.D., B.Sc., F.R.C.P., of a son.

MARRIAGES.

BLACK—CHARLES.—At the Gardens, Presbyterian Church, Capetown, on February 25th, by the Rev. Dr. McClure, James Black, M.D. Edin., Springs, Transvaal, to Mary Gaff, younger daughter of Mr. and Mrs. Pringle Charles, 2, Cobden Crescent, Edinburgh. (By cable.)

WILDMAN—BROWN.—On February 20th, 1913, at Ruyton-Eleven-Towns, Salop, William Stanley Wildman, F.R.C.S. Eng., of 1, Highfields, Doncaster Road, Rotherham, to Margaret Elizabeth Mary Brown.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 9 p.m.—Third Lettsomian Lecture by Mr. James Berry: The Surgery of the Thyroid Gland.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Professor Wilfred Trotter: Operative Treatment of Malignant Disease of the Mouth and Pharynx.

TUESDAY.

MIDLAND OBSTETRICAL AND GYNAECOLOGICAL SOCIETY, Royal Infirmary, Leicester, 3.30 p.m.—Specimens and Instruments:—Mr. J. Farneaux Jordan: Myoma complicating Pregnancy. Dr. N. J. Spriggs: Ligaturing Forceps for Pelvic Surgery. Short Communications:—Dr. H. T. Hicks: Localizing Septic Peritonitis of Puerperal Origin. Dr. Cecil Marriott: Cases of Hysteropexy; Dr. T. Clare: A Case of Dysmenorrhoea and Sterility. Paper:—Dr. N. J. Spriggs: Congenital Intestinal Occlusion.

ROENTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Papers:—Dr. H. Lewis Jones: The Physiological Effects of the Magnetic Field. Dr. Howard Humphris: The Rationale of the Static Current.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—Third Gouldsonian Lecture by Dr. A. J. Jenkin Blake: Death by Lightning and Electric Currents.

ROYAL SOCIETY OF MEDICINE:

SECTION OF PATHOLOGY.—Laboratory Meeting at the Pathological Department, London Hospital, 8.30 p.m.

UNITED SERVICES MEDICAL SOCIETY (Portsmouth Branch), Alexandra Hospital, Cosham, 4.15 p.m.—Fleet Surgeon F. H. A. Clayton, R.N.: Notes on three unusual Cases. Major G. J. Stoney Archer, R.A.M.C.: The Treatment of General Peritonitis due to Appendicitis. Captain J. E. Grogan, R.A.M.C.: Three Cases of Malarial Fever contracted in England.

WEDNESDAY.

HUNTERIAN SOCIETY, London Hospital, 4 p.m.—Clinical Afternoon. Exhibition of Cases:—Sir Bertrand Dawson: Splenic Anaemia after Splenectomy. Dr. Robert Hutchison: (1) A Case of Acromegaly; (2) A Case of Acute Myeloid Leukaemia with Infiltration of the Parotids. Dr. Lewis Smith: Example of Congenital Morbus Cordis, and another interesting Case. Mr. James Sherren: Unusual Specimen of a Duodenal Ulcer, and patients to illustrate the Results of Operative Treatment in Duodenal Ulcer. Mr. Hugh Lett: Cervical Rib. Dr. J. H. Sequeira: Remarkable Case of Multiple Lupus. Dr. S. Gilbert Scott: Radiograms of Bone Diseases, Innocent and Malignant; Pituitary Tumour, etc. Dr. P. N. Pantou will demonstrate some Rare Forms of Leukaemia, with Cases and Microscopic Preparations.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Professor Wilfred Trotter: Operative Treatment of Malignant Disease of the Mouth and Pharynx.

ROYAL SOCIETY OF MEDICINE:

SECTION OF THE HISTORY OF MEDICINE, 1, Wimpole Street, W., 5 p.m.—Mr. Joseph Offord (Honorary Member of the Archaeological Association of Rome): (1) The Reissner Medical Papyrus; (2) Restrictions upon Circumcision under the Romans. Mr. H. Barlow-English: Herbs, 1525-1640 (examples will be shown). Dr. Leonard Guthrie: The Lady Sedley's Receipt Book, 1686. Mr. J. D. Marshall will show some examples of Old Drug Pots by means of the Epidiascope.

SECTIONS OF OPHTHALMOLOGY AND NEUROLOGY, 1, Wimpole Street, W., 8 p.m.—Discussion on Disease of the Pituitary Body, to be opened by Professor Schäfer, F.R.S., and Mr. J. Herbert Fisher. Illustrative Cases and Specimens will be shown by Dr. H. L. Eason, Dr. Grünbaum, Dr. Gordon Holmes, Dr. Grainger Stewart, Dr. W. H. Wilcox, and others.

THURSDAY.

NORTH-EAST LONDON CLINICAL SOCIETY, Prince of Wales's Hospital, Tottenham, 4.15 p.m.—Clinical Meeting.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—First Lumsden Lecture by Dr. F. de Havilland Hall: Intrathoracic Aneurysm.

ROYAL SOCIETY OF MEDICINE:

SECTION OF BALNEOLOGY AND CLIMATOLOGY, 1, Wimpole Street, W., 5.30 p.m.—Resumed Discussion on Fibrositis, introduced by Dr. Ackerley in a Paper entitled, Daily Habits in Civilized Life as Factors in the Causation of Fibrositis: with Suggestions for its Prevention and Cure. The following will take part in the Discussion: Dr. Luff, Dr. Bain, Dr. Leonard Williams, Dr. Fortescue Fox, Dr. Wainwright, Dr. Pagan Lowe, and others.

SECTION OF OBSTETRICS AND GYNAECOLOGY, 1, Wimpole Street, 8 p.m.—Discussion on Ventrifixation: (1) Indications for the Operation, to be opened by Dr. W. S. A. Griffith; (2) Technique of the Operation, to be opened by Dr. H. Briggs; (3) After-results of the Operation, to be opened by Dr. A. E. Giles.

FRIDAY.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Dr. C. G. Seligmann: The Hamitic Element in the Population of Anglo-Egyptian Sudan.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ANAESTHETICS, 1, Wimpole Street, W., 8.30 p.m.—Mr. H. Bellamy Gardner: Technique in General Anaesthesia for Nasal Operations. Mr. Buckston Browne: A brief eulogy of Mr. Clover. Mr. Norbury and Dr. Morcom: Hedonal Alone and in Conjunction with General Anaesthetics.

SECTION OF LARYNGOLOGY, 1, Wimpole Street, W., 4.30 p.m.—Cases, etc., will be shown by Mr. Herbert Tilley, Mr. George N. Biggs, Mr. W. G. Howarth, Mr. T. Jefferson Paulder, Mr. E. D. Davis, Dr. H. L. Whale, and others.

POST-GRADUATE COURSES AND LECTURES.

BROMPTON HOSPITAL FOR CONSUMPTION, S.W.—Wednesday, 4.30 p.m.—The Problem of Infection and Predisposition in Pulmonary Tuberculosis.

CANCER HOSPITAL, Fulham Road, S.W.—Wednesday, 5 p.m., Cancer of the Breast.

LONDON HOSPITAL MEDICAL COLLEGE, E.—Monday, 4.30 p.m., Lesions of the Peripheral Nervous System and Spinal Cord. Tuesday, 4.30 p.m., Pathology of the Central Nervous System. Wednesday, 4.30 p.m., Clinical Anatomy and Regional Diagnosis. Friday, 4.30 p.m., Common Diseases of the Nervous System.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—Daily arrangements; Out-patient Demonstration, 10 a.m., Medical and Surgical Clinics. Monday: 12 noon, Throat, Nose, and Ear; 2.15 p.m., Surgery; 3 p.m., Operations; 3.15 p.m., Medicine. Tuesday: 4.15 p.m., Ear and Throat. Tuesday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Surgery; 3.15 p.m., Medicine; 4.15 p.m., Skin. Wednesday: 11 a.m., Eye; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Eye Clinic; 4.30 p.m., Surgery. Thursday: 12 noon, Throat, Nose, and Ear; 2 p.m., Operations. Pathological Demonstration; 3.15 p.m., Medicine. Friday: 12 noon, Skin; 2 p.m., Operations; 2.15 p.m., Medicine; 3.15 p.m., Surgery. Saturday: 10 a.m., Radiography; 11 a.m., Eye.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.—Lectures daily (Saturday excepted) at 12 and 4 p.m. Practical laboratory work daily (Saturday excepted) 10 to 12 a.m. Practical Helminthology, 2 to 3.30 p.m. daily. Medical Clinics, Tuesday and Thursday at 3 p.m. Operations, Friday at 3 p.m.

MANCHESTER: ANCOATS HOSPITAL POST-GRADUATE CLINIC.—Thursday, 4.15 p.m., Cervical Adenitis.

MANCHESTER ROYAL INFIRMARY.—Tuesday, 4.30 p.m., A New Operation for Prolapse of the Uterus Complicated by Hypertrophy of the Cervix. Friday, 4.30 p.m., The Surgical Aspects of Infantile Paralysis.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chancery Street, W.C.—The following Clinical Demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Surgical; Friday, Ear, Nose, and Throat. Lectures at 5.15 p.m. each day will be given as follows: Monday, Clinical Enlargements of the Spleen in

Children; Tuesday, Some Points in the Treatment of Spasmodic Asthma. Wednesday, The Treatment of Neuralgia and Spasm by Nerve Injections. Thursday, Irregularities of the Pulse in Toxic Conditions: their Clinical Recognition and Significance. (Lantern Demonstration.)

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Tuesday, 3.30 p.m., Infantile. Friday, 3.30 p.m., Polyglandular Syndromes.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.—Monday, Clinics: 10 a.m., Surgical Out-patient; 2.30 p.m., Medical Out-patient, Nose, Throat, and Ear; 3 p.m., Demonstration on Clinical and General Pathology. Tuesday, 2.30 p.m., Operations; Clinics: Surgical, Gynaecological; 3.30 p.m., Medical In-patient; 4.30 p.m., Lecture: Pain and Lesions of and Around the Umbilicus. Wednesday, 2 p.m., Throat Operations; 2.30 p.m., Medical Out-patient; Skin and Eye Clinics; X rays; 3 p.m., Pathological Demonstration; 5.30 p.m., Eye Operations. Thursday, 2.30 p.m., Gynaecological Operations; Clinics: Medical and Surgical Out-patient; 5 p.m., Medical In-patient. Friday, 2.30 p.m., Operations; Clinics: Medical Out-patient, Surgical, Eye; 3 p.m., Medical In-patient; Pathological Demonstration; 4.30 p.m., Lecture: Bacterial Infections of the Blood.

ROYAL EYE HOSPITAL, Southwark, S.E.—Tuesday, 4.30 p.m., Senile Cataract with Especial Reference to Difficulties in Treatment.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—Monday, 4.30 p.m., The Diagnosis and Treatment of Pulmonary Tuberculosis in Childhood. Wednesday, 4.30 p.m., Pulmonary Tuberculosis in Relation to Life Insurance. Friday, 4.30 p.m., Special Clinical Demonstration on Osteo-Pulmonary Arthropathy, illustrated by the Epidiascope.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—The following are the arrangements for next week: Medical and Surgical Clinics, 2 p.m.; X Rays, 2 p.m.; Operations, 2 p.m. Monday: Gynaecology, 10 a.m.; Medical Registrar, 10.30 a.m.; Pathological Demonstration, 12 noon; Eye, 2 p.m. Tuesday: Gynaecological Operations, 10 a.m.; Surgical Registrar, 10.30 a.m.; Demonstration of Fractures, etc., 12 noon; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Wednesday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Demonstration of Minor Operations, 11 a.m. Lecture, Abdominal Diagnosis, 12 noon; Eye, 2 p.m.; Gynaecology, 2 p.m. Thursday: Gynaecological Demonstration, 10.30 a.m.; Lecture, Neurological Cases, 12.15 p.m.; Eye, 2 p.m.; Orthopaedics, 2 p.m. Friday: Gynaecological Operations, 10 a.m.; Lecture, Practical Medicine, 10.30 a.m.; Lecture, Clinical Pathology, 12.15 p.m.; Throat, Nose, and Ear, 2 p.m.; Skin, 2 p.m. Saturday: Diseases of Children, 10 a.m.; Throat, Nose, and Ear Operations, 10 a.m.; Eye, 10 a.m.; Surgical Registrar, 10.30 a.m.; Lecture, Surgical Anatomy of the Abdomen, 12 noon. Lectures at 5 p.m.: Monday, Radio-Therapeutics; Tuesday, The Medical Treatment of Early Insanity; Wednesday, Practical Medicine; Thursday, Practical Surgery; Friday, Clinical Lecture (Gynaecology).

LOCAL MEDICAL COMMITTEES.

ESSEX.

A Local Medical Committee for the county of Essex has been elected in the proportion of one representative for every twenty practitioners in Essex. The Committee is now constituted as follows:

| | |
|---|---|
| <p>Dr. Leigh Day, Colchester, Chairman</p> <p>Dr. J. D. Wells, Billericay, Vice-Chairman</p> <p>Dr. Harding H. Tomkins, 492, Lea Bridge Road, Leyton, Secretary</p> <p>Dr. R. V. Brews, North Wool- wich</p> <p>Dr. L. A. White, Manor Park</p> <p>Dr. James Dunlop, Upminster</p> <p>Dr. A. Mitchell, Ilford</p> <p>Dr. J. Ross Steen, Ilford</p> <p>Dr. J. P. Atkinson, jun., Saffron Walden</p> <p>Dr. J. A. White, Harlow</p> <p>Dr. Butler Harris, Loughton</p> <p>Dr. H. Bonnett, Stratford</p> <p>Dr. Bernard C. Scott, Leyton- stone</p> <p>Dr. A. R. Dykes, Buckhurst Hill</p> <p>Dr. Clarence Wright, Leyton- stone</p> | <p>Dr. A. Berrill, South Woodford</p> <p>Dr. Margaret Rorke, Leyton- stone</p> <p>Dr. W. F. A. Clowes, Col- chester</p> <p>Dr. C. G. Roberts, Halstead</p> <p>Dr. P. Coleman, Clacton-on- Sea</p> <p>Dr. S. Campbell, Dovercourt</p> <p>Dr. F. B. Candwell, Cogges- hall</p> <p>Dr. Reynolds Brown, Maldon</p> <p>Dr. Arthur Quennell, Brent- wood</p> <p>Dr. Simpson, Southchurch</p> <p>Dr. W. D. Watson, Leigh-on- Sea</p> <p>Dr. J. B. Maxwell, Southend- on-Sea</p> <p>Dr. J. Walker, Southend-on- Sea</p> <p>Dr. G. F. White, Stanford-le- Hope</p> |
|---|---|

The Committee has held three meetings and has appointed the following subcommittees: Conference, Drugs, Standing Orders, and Finance. Conferences have been held with the Local Insurance Committee and the Commissioners.

Application was made for the statutory recognition of the committee after its first meeting on January 6th, but the authorities at first desired to limit the members of the statutory committee to panel doctors only. It was pointed out to the authorities that as the Act requires the Committee to be representatives of all the profession, and as there were non-panel doctors in Essex the

committee must contain non-panel doctors. It has now been duly recognized.

The Committee nominated members of the profession upon the Local Insurance Committee, but the nominations were refused on the ground that the Committee was not a duly appointed association of practitioners for that purpose as referred to in the Regulations. The Commissioners issued circulars to all practitioners in the county requesting them to nominate representatives, and an election was held which resulted in the selection of the candidates nominated by the Local Medical Committee—namely, Dr. W. F. A. Clowes (Colchester) and Dr. J. H. Salter (Tolleshunt d'Arey). Dr. Butler Harris, one of the practitioners selected by the Committee for appointment by the Commissioners upon the Local Insurance Committee, has also been appointed.

Various matters to which the profession in the county takes exception have been brought under the notice of the Insurance Committee and the Commissioners by resolutions and by interviews; among these matters are the useless and irksome details of bookkeeping, prescription forms, etc. Strong representations have also been made concerning the refusal to allow persons to make their own arrangements.

The Local Medical Committee, while ready to assist in elucidating the difficulties of drug arrangements, expressed its inability to favour a flat rate for charges, or to meet representatives of the pharmacists to consider prices, as the Committee considered the difficulties of the former insurmountable, and the latter likely to raise objections on the part of chemists to doctors interfering with their arrangements.

The Commissioners having expressed their inability to assist in meeting the expenses of the Committee, these have been so far defrayed by members of the Committee, but the Secretary will welcome any suggestions on this head from other secretaries of statutory Local Medical Committees.

EAST SUSSEX.

At a meeting of medical practitioners resident in the parliamentary division of East Sussex held at Lewes, on December 5th, 1912, which was attended by about one hundred, an East Sussex Medical Committee was elected on a territorial basis. The Committee was instructed to obtain recognition from the Insurance Commissioners if and when the Council of the British Medical Association sanctioned this course, to report to the Council of the South-Eastern Branch on questions of policy, and to submit draft agreements for approval to the Council of the British Medical Association and Branch Council and Division, and to report quarterly to the Branch Council and Division. It was also authorized to fill casual vacancies.

The Committee was constituted as follows:

| | |
|---|---|
| C. H. Benham, M.D.Lond., Hove, Chairman | H. M. Langdale, M.R.C.S.Eng., Uckfield |
| C. E. Collins, M.R.C.S., East Grinstead, Vice-Chairman | E. Cornelius Garman, M.R.C.S. Eng., Hailsham |
| H. Vallance, M.R.C.S.Eng., Lewes, Honorary Secretary | Thos. S. Taylor, B.S.Camb., Hailsham |
| Alice H. A. Boyle, L.R.C.S. and P.Edin., Hove | Thos. Burfield, M.R.C.S.Eng., Hailsham |
| Walter Broadbent, M.D.Camb., Hove | T. E. Holman, L.S.A.Lond., Cross-in-Hand |
| Arthur M. Daldy, M.D.Lond., Hove | H. Cameron Taylor, Bexhill |
| Thomas Johnston, M.R.C.S. Eng., Hove | J. R. Skinner, M.B.Aberd., Winchelsea |
| John C. Mackwood, M.R.C.S. Eng., Newick | Ernest W. Skinner, M.B.Edin., Rye |
| J. R. Steinbaeuser, M.D.Lond., Lewes | H. H. H. Huckle, M.R.C.S., Ore |
| Fredk. Wm. Aphorp, M.R.C.S. Eng., Burgess Hill | Wm. Wallis, M.R.C.S., Groom- bridge |
| Bertram M. Young, M.R.C.S. Eng., Hassocks | Gardiner W. Trouton, M.D. Dub., Rotherfield |
| R. Dymoke Pennefather, L.R.C.S.I., Hayward's Heath | Chas. H. Fazan, M.R.C.S., Wadhurst |
| James McGlashan, M.B.Glasg., Newhaven | H. S. Basden, M.R.C.S., Crow- borough |
| W. Pringle Morgan, M.B.Dub., Seaford | Fritz S. Eschwege, M.R.C.S., Crawley Down |

A letter was received from the Insurance Commission on February 3rd stating that the Commissioners, with the concurrence of the Joint Committee, recognized the Committee until April 30th, and suggesting that before that date the Committee would consider the desirability of arranging for the election of a permanent committee on the basis of separate representation for each district in proportion to the number of practitioners resident therein. A reply had been sent to the Commissioners pointing out that the Committee has been elected in the manner suggested.

The Committee held its first meeting on December 23rd, 1912, when the following minute (44 of the Special Representative Meeting of December 21st, 1912) was considered:

That the Association advises the profession to express its willingness to treat insured persons on condition that each insured person shall have free choice of doctor subject to the consent of the doctor to act; that where a capitation system is adopted, the basis of remuneration shall be a minimum of 8s. 6d. per annum inclusive of drugs; that where a system of payment by attendance is adopted, such payment be on a scale of fees to be drawn up by a Local Medical Committee, subject to the approval of the Council of the Association, the minimum fee per visit being 2s. 6d.; that the general arrangements be made between the insured or their representatives and a committee of local doctors, and that all other details be left to the doctors of the local areas affected; that this arrangement be carried on until such time as the profession adopts some uniform scheme. The arrangement of a minimum basis of remuneration is not considered to include the treatment of tuberculosis.

A small committee was appointed to draw up and circulate a letter to all medical practitioners and to representatives of the insured with a view to carrying out the advice contained in the minute.

At the second meeting, held on December 28th, the Committee considered a scheme for a public medical service. At the third meeting on January 7th, 1913, the Honorary Secretary was instructed to send a circular letter to every practitioner in the area asking for a subscription of 5s. towards the necessary expenses. An Executive Committee was appointed and two members were nominated to the Local Insurance Committee. The method of remuneration adopted was by capitation.

At the fourth meeting, held on January 23rd, it was

reported that representations had been made to certain practitioners with regard to canvassing and circularizing, and that the practitioners had desisted.

At the fifth meeting, held on February 19th, the proceedings of the Executive Committee, which had met on January 29th and February 12th, were received and approved. They involved the adoption of the Hastings and district scheme for medical attendance on uninsured persons, and it was resolved to submit this scheme to the Council of the Association, and if approved to forward a copy to every practitioner in East Sussex.

The following resolutions passed by a meeting of practitioners of Brighton and Hove were adopted:

That the certificate of any medical practitioner whose name appears on the *Medical Register* should be accepted by an Insurance Committee, approved society, or other body until it has been clearly proved, after due investigation, that such certificate is not to be relied upon.

That in all insurance areas where an adequate medical service has been provided under the Act for insured persons, the request of individual insured persons to be allowed to contract outside the Act with a registered medical practitioner should be granted, subject to withdrawal of the permission later should it be proved, after due investigation, that the medical attendance given has been unsatisfactory.

DORSET.

A Local Medical Committee for the county of Dorset was formed on December 26th, 1912, as follows:

| | |
|--|--------------------------------------|
| Dr. P. W. Macdonald, Dor- chester, Chairman | Dr. Good, Dorchester |
| Dr. T. MacCarthy, Sherborne, Vice-Chairman | Dr. Le Fleming, Wimborne |
| Dr. James Miller, Weymouth, Secretary | Dr. Manning, Weymouth |
| Dr. Colmer, Yeovil | Dr. Milner, Parkstone |
| Dr. Cosens, Dorchester | Dr. Daniell, Blandford |
| Dr. Courtenay, Wareham | Dr. Tuthill, Parkstone |
| Dr. Edwards, Bridport | Dr. Sanderson - Wells, Wey- mouth |
| | Dr. Whittingdale, Sherborne |

Dr. Le Fleming (Wimborne) and Dr. James Miller (Weymouth) were appointed direct representatives on the Insurance Committee. Dr. Kitson was appointed by the County Council, and Dr. MacCarthy's name has been suggested by the Commissioners for appointment by them on the Committee.

Drs. Macdonald, Cosens, and Miller were elected to the Medical Service Subcommittee.

NORFOLK.

The Local Medical Committee for the county of Norfolk has been constituted as follows:

Chairman, Dr. B. D. Z. Wright, Coltishall
Vice-Chairmen, Dr. Back, Acle; Dr. Colvin-Smith, Cromer;
Dr. Steele, Stoke Ferry
Honorary Secretary, Dr. D. G. Thomson, Thorpe, Norwich

MEMBERS.

*Practitioners Resident in the Mid-Norfolk Division of the
British Medical Association.*

| | |
|---------------------------------------|---|
| Dr. W. E. Cooper, East Harling | Dr. G. Lowe, Wymondham |
| Dr. A. Davidson, Thorpe St. Andrew | Dr. J. D. McKelvie, Blofield |
| Dr. S. Harrison, North Wals- ham | Dr. C. A. O. Owens, Long Stratton |
| Dr. R. J. Horn, St. Faith's | Dr. A. R. Rackham, North Elmhurst |
| Dr. W. Howard, New Bucken- ham | Dr. B. B. Sapwell, Aylsham |
| Dr. J. K. Howlett, East Dere- ham | Dr. A. L. Vaughan, Diss |
| Dr. G. S. Keeling, Attleborough | Dr. H. F. Skrimshire, Melton Constable |

Practitioners Resident in the West Norfolk Division.

| | |
|---|-------------------------------------|
| Dr. A. Gardner, King's Lynn | Dr. J. L. Forrest, Terrington |
| Dr. S. M. Hamill, Burnham Market | St. John, Wisbech |
| Dr. W. H. Fisher, Fakenham | Dr. A. G. Minns, Thetford |
| Ar. A. W. Thomas, Swaffham | Dr. H. E. Rowell, East Rud- ham |
| Dr. J. R. Kingdon, Nelson Street, King's Lynn | Dr. E. G. Wales, Downham Market. |
| Dr. W. B. Wraywood, King's Street, King's Lynn | |

*Practitioners Resident in the East Norfolk Division (Rural
Subdivision).*

| | |
|----------------------------|-------------------------------|
| Dr. E. Poake, Ormesby | Dr. L. T. McClintock, Loddon. |
| Dr. E. B. Cutting, Stalham | |

At a meeting of the Committee held at the Medical Library, Norwich, on February 25th, when seventeen members were present, the Secretary announced that he had received notice of the statutory recognition of the Committee by the Commissioners. The matters raised

by Circular 10/I.C. issued by the Commissioners (see p. 239) were considered, but in view of their importance it was decided that copies of the circular must be in the hands of each member of the Committee before further discussion could take place thereon.

The election of the medical members of the Medical Service Subcommittee was then carried out. Dr. ROWELL proposed and Dr. HARRISON seconded and it was agreed that one member be chosen from each of the three Divisions of the British Medical Association in the county, whereupon Drs. Back, Rowell, and Sapwell were duly elected.

Medical representation on the District Insurance Committees was then discussed. Norfolk has been divided into nine districts, in areas corresponding to the Poor Law unions, grouped in couples; the total membership of these District Committees is twenty, and of these two in each Committee are medical practitioners. The following were elected to serve on these District Committees: Drs. Haunill, Rowell, Ferrest, Gardiner, Steele, Wales, Skrimshire, Sapwell, Thomas, Howlett, Minns, Keeling, Owens, McClintock, Hern, Back, Harrison, Beake.

The Special Mileage Fund was then considered, and the Secretary was instructed to arrange for a deputation from the practitioners practising in the Ten Districts of West Norfolk and the Marshlands of East Norfolk to have an interview with the Clerk to the Insurance Committee on the matter.

The circular letter of the British Medical Association which referred to the expenses of the Committee was read, and the Secretary was authorized in the meantime to incur necessary expenditure on printing and postage, etc., to be refunded to him later on by a levy on the practitioners on the panel. Other matters in this circular were considered, namely, as to attendance on aged and disabled members of friendly societies and due note was made of the 2s. 6d. per head subsidy by the Government, which it was considered totally removed any excuse for not charging such persons the same rates as insured persons.

A resolution passed at a previous meeting of the Committee, that with a view to economy of time and trouble a subcommittee be formed with the aid of the chemists to compile a "formulary of prescriptions in common use," was reviewed in the light of the report of the subcommittee presented by Drs. Harrison and Howlett, whereupon Dr. COLVIN-SMITH moved, Dr. DAVIDSON seconded, and it was carried that, in the meantime, at all events, no formulary be compiled.

The CHAIRMAN reported that he had attended a conference in London by the invitation of the Commissioners relative to the simplification of records, and that it had been decided to abolish the day book and substitute the card system, and also to abolish the writing of prescriptions in triplicate.

The Secretary was instructed to write to the Secretary to the Insurance Committee asking that insured persons be notified to select their doctor, as the friendly societies had not been very successful in this direction or in pointing out the right to "free choice of doctor."

OXFORD.

OXFORD MEDICAL COMMITTEE.

A MEETING of the Oxford Medical Committee was held on February 27th at the Radcliffe Infirmary, Oxford, at 2.45 p.m., when Dr. TURRELL (Chairman) and ten members attended.

The Ethical Committee's report concerning the conduct of one of the members of the Division on the panel was received and adopted.

Dr. HIGGS explained the position of the Medical Service Subcommittee, which had power only to deal with complaints, or matters referred to it by the Insurance Committee.

The SECRETARY read a notice received from the Secretary of the Insurance Committee, stating its intention to adopt an income limit of £160 per annum. He was instructed to inform the Secretary that a limit of £2 10s. a week had been accepted by the Berks Insurance Committee, and that this limit was desired by both the City and County of Oxford Medical Committees.

Dr. Rivers Willson's nomination paper being rendered

invalid by the fact that one of the signatory's registered address was not "Oxford," he was duly elected by the committee as one of its two representatives on the Insurance Committee. Meanwhile he could, by the consent of the Commissioners, act on the committee as their temporary representative.

A letter received from the Secretary of the Insurance Committee, dealing with the question of allocation of panel patients and method of quarterly payments, was read. On the motion of the CHAIRMAN, it was agreed that these matters be referred to the five medical members on the Medical Service Subcommittee.

CONJOINT MEETING OF CITY AND COUNTY MEDICAL COMMITTEES.

The County Medical Committee then sat with the City Committee and discussed the advisability of adopting the "Berkshire Scheme" for dealing with uninsured persons. After some discussion the following resolution was carried *nemine contradicente*:

That the Berkshire Scheme be reconsidered after the expiration of one year, as this would enable a comparison to be made between the working of this scheme and that of the local schemes under the "minimum scale" adopted at the last meeting of the Division.

The SECRETARY read a letter received from the Secretary of the Oxfordshire Juvenile Friendly Society, protesting against "the minimum scale of 6s. per head per annum for juveniles" adopted by the Oxford Division. The Secretary was instructed to point out that 5s. was the sum and not 6s.

The subject of midwifery fees was discussed and the following motion was carried *nemine contradicente*:

That no medical man accept less than one guinea when called in to a maternity case within ten days of confinement.

With regard to attendance on aged and infirm members of friendly societies, it was resolved *nemine contradicente*:

That the medical representatives on both Insurance Committees be asked to raise the question of the arrangements for attendance on aged and infirm members of friendly societies, under the agreement made between representatives of the profession and of approved societies at the meeting with the Chancellor in October, 1912; and that the fee be 9s. per head, the same as that paid for insured persons.

On the motion of the CHAIRMAN, the representatives on the Insurance Committees were requested to secure as large a measure of "contracting out" as possible.

Dr. BOISSIER (Secretary of County Medical Committee) stated that certain medical men in the bordering counties were accepting lower rates for the uninsured than those accepted by the Oxford Division. He was instructed to write protests to the doctors, if known, and also to the Secretaries of the neighbouring Divisions.

LIVERPOOL.

At a general meeting of the medical profession resident in the Liverpool insurance area, on January 28th, the following were elected to the Liverpool Local Medical Committee:

| | |
|--|----------------------|
| Mr. F. C. Larkin, Chairman | Dr. F. S. Heaney |
| Dr. T. Clarke, Vice-Chairman | Miss F. Ivens, M.S. |
| Dr. W. T. D. Allen, Honorary Secretary | Dr. W. Macdonald |
| Dr. F. W. Bailey | Dr. J. E. W. McFall |
| Dr. F. W. Barondt | Dr. Llewelyn Morgan |
| Dr. W. B. Bennett | Mr. G. P. Newbolt |
| Dr. F. R. Bradshaw | Dr. R. Paterson |
| Dr. T. Bnshby | Dr. A. H. Pinder |
| Dr. D. Donnelly | Dr. R. J. Richardson |
| Dr. J. H. Dubourg | Dr. S. H. Shaw |
| Dr. W. J. R. Dunn | Dr. R. G. Sheldon |
| Dr. F. M. Gardner-Medwin | Dr. M. T. Stack |
| | Dr. Tweedale Thomson |

BURY.

THE only county borough in the Bury Division of the British Medical Association is the county borough of Bury. The Local Medical Committee for the county borough was constituted for the year 1913 of all medical men living and practising within the borough. There are twenty-nine members, including those engaged in public and hospital practice. The Committee was recognized

by the Commissioners on January 22nd, and the officers for the year are as follows:

Chairman.—Dr. Baird.

Honorary Secretary.—Dr. Turnbull.

Executive Committee.—Chairman and Secretary (*ex officio*), Dr. Johnson, Dr. Cook, Dr. Greenhalgh, Dr. Nuttall, Dr. Vine, Dr. Cruickshank, Dr. Lucas.

The expenses of the Committee will be met by a subscription of 2s. 6d. per member, with an additional levy of 1s. per 100 insured persons on each member's list.

Drs. Johnson and Cook have been nominated as the representatives of the Committee on the Local Insurance Committee, but owing to a technical error in the nomination their election will be delayed for a month. Dr. Greenhalgh has been elected as the town council representative, and the Secretary as the Commissioners' representative.

Drs. Johnson, Cook, and Nuttall have been elected to the Medical Service Subcommittee.

WEST RIDING OF YORKSHIRE.

At a meeting attended by over 200 doctors from all parts of the West Riding, held in the County Hall, Wakefield, on January 6th, under the chairmanship of Dr. R. MAY, of Wakefield, a Local Medical Committee was elected to represent the medical profession throughout the area of the West Riding Insurance Committee. One member of the committee was elected to represent each of the various districts of the Insurance Committee area, and the committee was given power to add to its number. The officers of the committee, which has been recognized by the Insurance Commissioners as the Statutory Medical Committee for the West Riding, are:

Chairman.—Dr. R. May (Wakefield).

Vice-Chairman.—Dr. G. B. Hillman (Castleford).

Honorary Secretary.—Dr. W. Eardley, 50, Burlington Crescent, Goole.

Assistant Honorary Secretary.—Dr. Percy V. Fry, Ryburn House, Sowerby Bridge.

The committee elected Dr. Russell (Batley) and Dr. May (Wakefield) the medical members of the Insurance Committee, and, as may be seen by reference to the list published last week, the election of these gentlemen has been formally recognized. The Committee also resolved to recommend the names of certain practitioners to the Commissioners for appointment.

The second meeting of the Committee was held on January 9th, when an Emergency Subcommittee was appointed, consisting of the officers with Dr. Russell to interview the Medical Benefit Subcommittee as might be required.

At the third meeting on January 20th it was agreed that the full capitation fee of 9s. should be paid to doctors who did their own dispensing for insured persons residing more than a mile from a panel chemist, and that a fixed standard payment of 6d. should be made for all emergency dispensing and dressings to simplify book-keeping and prescribing. It was also agreed that attendance and medicine should be supplied at the same rate as for insured persons to those who were members of approved societies at the time of the passing of the Act, and were 65 years old and upwards on July 15th, 1912, and who are employed contributors under the Regulations.

It was reported that at a conference of the Medical Benefit Subcommittee it had been agreed that the medical representation on the district insurance committees should be not less than one-tenth of the total number of such committees, that the administration of tuberculin and various vaccines should be considered special treatment not within the medical benefits of the Act, that nothing should be done at present with regard to domiciliary treatment of tuberculosis in non-insured persons who are dependants on insured persons.

The Medical Benefit Subcommittee agreed to pay an inclusive capitation fee of 8s. 6d. plus the floating 6d. if this latter sum was available. The chairman of the Medical Benefit Subcommittee stated that medical men had the right to charge a patient possessing a signed medical ticket who insisted on remaining a private patient and "going on as before."

At the fourth meeting, held on January 30th, it was resolved that any operation requiring a general anaesthetic should be considered outside the scope of medical benefit under the Act; and with regard to certificates to

be furnished for sickness benefit, to ask the Medical Benefit Subcommittee of the Insurance Committee to inform the various societies that the official certificate issued by the Commissioners was all that was required. It was also resolved to inform the Insurance Committee that the term "vaccine" was held to include tuberculin, stock and autogenous vaccines, various serums, and vaccine lymph, and that the administration of these should be considered outside medical benefit. It was also arranged to give medical attendance to members of approved societies over 65 at the same rate as to insured persons—namely, 9s. per head, and it was arranged with the representative of the Insurance Committee that the giving of an anaesthetic for a dentist was not included under medical benefit, as dental work was entirely outside the Act.

A Medical Service Subcommittee—consisting of Dr. R. May (Wakefield), Dr. G. B. Hillman (Castleford), and Dr. James Russell (Batley)—has been appointed.

PLYMOUTH.

THE list of members of the Plymouth Local Medical Committee was published last week, and it was reported that Drs. Robert Simpson and R. H. Wagner had been elected by the profession to serve on the Local Insurance Committee. At the meeting of the Insurance Committee on February 28th these gentlemen were welcomed by the Chairman on the occasion of their first attendance. Certain resolutions of the Local Medical Committee were brought up. The first was a request to the Insurance Committee to fix an income limit for the purpose of the administration of medical benefit, such limit to be £2 a week; another resolution suggested that a radius of two miles from the recognized residence or surgery of a practitioner should be the limit of his sphere of work under the Insurance Act. The CHAIRMAN of the Medical Benefits Subcommittee brought up a report, in the course of which it was stated that a number of applications had been received from persons desirous of making their own arrangements, and that the Subcommittee would have shortly to deal with the matter of the allocation of those insured persons who had not yet chosen their doctors. Dr. R. SIMPSON moved an amendment to add to the report of the Subcommittee certain paragraphs contained in the Memorandum 143/I.C. of the Insurance Commissioners. The Memorandum of the Commissioners, he said, went a great deal further than the minute of the Medical Benefit Subcommittee. The minute only dealt with cases of sick persons who had been attended by a medical practitioner on or before January 15th. The memorandum included in addition commercial travellers and actors who, by reason of their occupation, were travelling about; also persons requiring special treatment, not carried out by doctors on the panel, and insured persons who desired to be attended by a practitioner who did not ordinarily undertake practice among the insured class. It was the aim and intention of the Commissioners to allow persons a more generous method of making their own arrangements than was contemplated in the Committee's minute. The amendment was seconded, and after some discussion, during which the CHAIRMAN said that the memorandum referred to by Dr. Simpson was not in the hands of the Subcommittee at the time it made the report, Dr. SIMPSON accepted the suggestion that the whole matter, including the allocation of patients, should be referred to the Medical Benefit Subcommittee.

FALKIRK.

At a meeting of the Local Medical Committee held on February 25th, a deputation from the Falkirk and District United Trades Council was received, and expressed the view that the time had come when the doctors should make a reduction in the rate charged for club patients. The rate in the district had hitherto been 3d. a week for each workman who joined a club, and this contribution carried with it medical attendance upon the worker himself, his wife, and family. In view of the fact that the breadwinner was now nationally insured, the deputation urged a reduction of the rate from 3d. to 2d. per week, and pointed out that in some cases two or three members of a family were insured under the Insurance Act.

The members of the Committee indicated the difference between the custom prevailing in the district and that obtaining in other districts, where it was compulsory for

every worker to be in a club. The result was that the members of local clubs did not represent more than 25 per cent. of the working population, whereas in compulsory areas the doctors drew contributions from both married and single men, and consequently were able at the present juncture to consider the reduction of the rates. It was pointed out also that in this district it was left to each man to determine what steps in the way of obtaining medical attendance were in his best interests, and that he need not join a club. The CHAIRMAN said that the deputation would see that the doctors were disinclined to make any change in their terms.

A deputation was also received from the Local Federation of Friendly Societies. It was submitted by the deputation that the rates asked by the doctors—namely, 7s. each—for the treatment of members permanently ill and those over 65 years of age, also of ordinary members whose living was precarious, and who had not enrolled as State members, were too high, and would ultimately bring about an increase in the premiums of these members. It was thought that these classes of members had a grievance if their rate of contribution to their friendly societies was increased by the operation of the Insurance Act. While recognizing that this was so, the doctors present did not see their way to indicate any prospect of reduced terms, as most of the doctors concerned were absent. They stated, however, that the matter might be discussed at a subsequent meeting.

In the course of the discussion the deputation urged the doctors to exercise more caution in granting or continuing certificates of ill health, in order to put down malingering as far as possible. It was stated that, unless this was done, the friendly societies could not hope to survive the present crisis in their history.

In response to a request from the Secretary of the County Insurance Committee regarding the provision of a consulting hour in the morning, it was decided to intimate that attendance would, as far as possible, be given in the consulting-rooms at 9 a.m.

MEETINGS OF INSURANCE COMMITTEES.

MIDDLESEX INSURANCE COMMITTEE.

The monthly meeting of the Middlesex Insurance Committee was held at Caxton Hall, Westminster, on March 3rd, Mr. GLYN JONES, M.P., presiding.

Capitation Payment.

The Committee agreed to accept the principle of Circular 10/L.C. as to calculating the remuneration of doctors on the panel on a capitation basis.

Discussion on "Contracting Out."

After consideration of Memorandum 43/L.C., dealing with the making of their own arrangements by the insured, the General Purposes Subcommittee recommended that the scheme proposed by the Insurance Commissioners be adopted, and that the special circumstances in which arrangements other than those contemplated by the Act be those stated by the Commissioners in Memorandum 43 with respect to commercial travellers, actors, nurses, and persons desiring a particular system of treatment not undertaken by doctors on the panel.

Dr. W. E. LOWRY (Brentford) moved the reference back of the recommendation in order to urge upon the Committee the desirability of permitting a wide interpretation of Clause 15 (3) of the Act as to insured persons making their own arrangements. He considered that a liberal measure of contracting out would be of immense advantage to all concerned, and this point had been entirely overlooked by the Committee. It would save them from the rock on which he was sorry to say the Insurance Act would split; he meant the difficulties that would arise when the assignment to the various doctors of the residue of insured persons who had not selected a medical man came to be dealt with. The residue would be found to consist of persons who keenly resented the injustice of being forced to take any form of contract practice; they were old members of clubs, and they felt how completely bad contract practice was. By allowing contracting out the Committee would do away with the

necessity of a Committee of Complaints, because if people had free choice and freedom to change their doctor as often as they liked, difficulties between doctor and patient would be avoided. An advantage to the insured person would be that he would be able to obtain a very much wider range of medical treatment than the Act could give. If a man's case were beyond the competence of a local practitioner he could go to a hospital or to one of the many doctors not on the panel who specialized in operative work. If the Committee succeeded in forcing all medical men on to the panel, one dead level would be established; he did not think it would be the lowest level, but was certain it would not be the highest level.

Mr. MORTON DAVIS, who seconded, thought it would be advisable to reconsider the matter in view of the fact that 130,000 people in Middlesex had not yet selected their doctor. The reason probably was that they could not make the arrangements they desired.

Mr. WARREN, as a representative of the approved societies, welcomed Dr. Lowry's remarks, which he took to indicate a recognition on the part of the medical profession that a mistake had been made in removing medical benefit from administration by the approved societies. He regretted that the medical profession did not decide many months ago to adopt its present position. There would be no satisfaction until the administration of medical benefit was restored to the approved societies.

Mr. WM. REGISTER remarked that as the Committee had permitted insured persons to contract out and be attended by herbalists and homeopaths, there could be no objection to their going to doctors not on the panel.

The CHAIRMAN deprecated any assumption that a doctor on the panel was any less competent to perform, for instance, an amputation, than a doctor who was not on the panel. It really was not fair to make any classification of medical men and to assume that some were not as fully qualified as others.

The amendment was lost by a large majority, only five voting in favour.

Dr. H. B. BRACKENBURY (Finsbury Park), continuing the discussion of the main question, thought Dr. Lowry had implied a distinction between one class of doctors and another. From his own knowledge he could say that doctors with large operative practices were on the panel for Middlesex, and in some districts all the doctors were on the panel.

Dr. LOWRY said he did not intend to imply any inferiority of panel doctors to others not on the panel.

The recommendations of the subcommittee with reference to the attitude of the Insurance Committee on the question of contracting out were then approved.

Scale of Medical Fees.

The General Purposes Subcommittee submitted a scale of fees to medical practitioners which, the CHAIRMAN explained, was based on a scheme for a public medical service promoted by the Ealing Division of the British Medical Association. The scale was as follows:

| | s. | d. |
|---|----|----|
| 1. Attendance on patients at practitioners' residence or surgery | 1 | 0 |
| 2. Visit to patient's residence | 2 | 0 |
| 3. Special visit | 2 | 6 |
| 4. Night visit | 2 | 6 |
| 5. Surgical operation | 10 | 6 |
| 6. Administration of general anaesthetic | 10 | 6 |
| 7. Setting of fracture | 10 | 6 |
| 8. Dislocation | 10 | 6 |

The CHAIRMAN said that these figures were only units on which the payments to the medical men would be computed. The bills would be paid from a pool, and if they amounted to too large a sum they would have to be cut down. In the course of some comments on the figures one member mentioned that the police paid 7s. 6d. for night calls, and another said that 3s. was usually paid by friendly societies for night visits. It was also suggested that 10s. 6d. was relatively too much to pay for administering an anaesthetic if that sum was allowed for surgical operations.

It was agreed that the General Purposes Subcommittee should confer with the Statutory Medical Committee with reference to the scale of charges.

British Medical Association.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

COPIES of the following letter, addressed to the National Insurance (Joint) Committee on the instructions of the State Sickness Insurance Committee of the British Medical Association, have been forwarded to Mr. Masterman, M.P., Chairman of that Committee, and to all the representatives of the Friendly Societies present at the conferences held October 9th and 16th, 1911:

Offices of the British Medical Association,
Medical Department,
429, Strand, London, W.C.
February 28th, 1913.

Sir,

The attention of the British Medical Association has been drawn to two statements which were made by Mr. Masterman, Secretary to the Treasury, in the House of Commons on February 14th last, relating to the question of the provision of medical attendance for members of friendly societies who are over 65 and who are not entitled to medical benefit under the National Insurance Act. The first statement, which appears on p. 954 of the Parliamentary Debates for February 14th, was a written reply to a question, and was to the following effect:

I know no reason why the fact that a doctor is receiving higher remuneration than hitherto in respect to insured persons should prevent him continuing to treat the small and diminishing number of his own aged and infirm patients who are not insured on the same, or approximately the same, terms as before.

The second statement was made by Mr. Masterman in the course of his speech on the same date, and appears on pages 1004-5-6-7 of the same number of the *Parliamentary Debates*. In this speech the Secretary to the Treasury virtually repeated the statement above quoted, and suggested that there is something unfair and mean in doctors expecting the same rate of remuneration for members of friendly societies who are over 65 and who are not insured so far as medical benefit is concerned, as is being obtained for attendance on insured persons.

The Association desires to protest in the strongest manner against these insinuations, which can only be based upon ignorance of the real facts of the case, and I am instructed to express the hope that the Commissioners will take some steps to prevent such misstatements being made, and such aspersions being cast upon the profession. I am instructed to draw your attention to the history of this matter. This will be found in the document, marked "Private and Confidential," which is a verbatim report of a conference on the National Insurance Bill on October 16th, 1911, between representatives of the British Medical Association and representatives of the friendly societies, at which it is noted that Mr. Masterman was present. A perusal of pages 24, 28, 29, 30, 31, 32, 33, 34, and 43 and 44 will convince the Commissioners of a fact which is clearly within the recollection of those of our representatives who were present at the conference, namely, that there was no thought at that time of dividing the aged and infirm members of approved societies into two classes—namely, those who would become insured but who would not be entitled to receive medical benefit under the Act, and those who would not become insured and would therefore receive none of the benefits of the Act. The friendly societies made an appeal to the representatives of the Association on behalf of their members who would not receive medical benefit under the Act, but for whose medical attendance the societies were responsible. They naturally feared that the profession would be unwilling to accept these persons at the same rate as they would accept the ordinary insured person, and they thankfully accepted the promise of the representatives of the Association to co-operate with them "in maintaining the medical attendance of those already members of friendly societies who may unfortunately be shut out under the bill by reason of ill health or of being over 65 years of age" (see speech by Mr. Moffrey, page 43 of report mentioned above). In return for this concession, the representatives of the friendly societies promised to do their best to prevent any reopening of the campaign for replacing the administration of medical benefit in the hands of the approved societies. The Chancellor of the Exchequer, who was in the chair, congratulated both

sides on having arrived at this understanding. It is true that at that time the representatives of the friendly societies were under the impression that the rate of payment for medical benefit was to be 6s. per annum, but it is quite certain that, irrespective of the cost, they realized that their societies would be called upon to provide medical attendance for their aged and infirm members, for whom, quite reasonably, a special rate could be demanded by the medical profession. The Association is unable to find, in the course of that debate, any suggestion of a division of the aged and infirm members into the two classes specified by Mr. Masterman, namely, those who became insured under the Act and those who did not. It seems obvious to the Association that the division of these persons into these two classes as regards the provision of medical attendance is an after-thought, suggested by the fact that the Government finds itself able to provide an extra grant for the insured who may be over 65; but has not, so far, been able to provide a grant for the others.

Judging from the evidence before the Association the profession throughout the country resents strongly the insinuations of meanness on its part in asking for a rate of payment which is in fact laid down in Section 15 (2) (c) of the Act. In this section the responsibility is laid upon the Insurance Committee of providing medical attendance, "on the same terms as to remuneration as those arranged with respect to insured persons," to members of friendly societies which become approved societies, who are not entitled to medical benefit, either because they were 65 or upwards at the date of the commencement of the Act, or that, being subject to permanent disablement at that date, they were not qualified to become insured persons. The method by which Mr. Masterman sought to discriminate between these persons is quite incomprehensible to the Association. He argued that it would be unfair for doctors who had been attending a club for many years to ask for the same rate of remuneration all round, and that these old persons who are excluded from the benefits of the Act, not by any action on the part of the profession, but by the deliberate action of Parliament, had a claim on the charity of the profession which it was mean in resisting. In answer to this the Association would point out that the medical profession is perfectly willing to fulfil the bargain it entered into with the friendly societies which is embodied in Clause 15 (2) (c) of the Act; but it submits that the responsibility for finding the extra money for the payment for this small and diminishing class of members of the friendly society falls, not on the medical profession which has for years been attending not only these members but the rest of the friendly society members on semi-charitable terms, but on the societies which undertook to insure them for medical attendance, have taken their contributions on this understanding for many years, and are, according to the repeated statements of members of the Government, owing to liberation of certain of their funds, now in a much better position to meet the claims made upon them than they were before.

I am instructed to send a copy of this letter to Mr. Masterman, as the Association thinks that he should have the earliest possible opportunity of removing the misconceptions to which his answer and speech have given rise. I am also instructed to send a copy to those representatives of the friendly societies who were present at the conference referred to early in this letter, in order that they may be reminded that any hardship to which their old and infirm members may be put is due not to any unfairness on the part of the medical profession, but to their own forgetfulness of a bargain freely made with representatives of the profession.

In conclusion, the Association would be glad if the Commissioners will do something to impress upon the

Insurance Committees their obligations under Clause 15 (2) (e) of the Act, and also to remedy the discrepancy which occurs between that clause and Regulation 51 (2). In this regulation, doubtless by inadvertence, it is stated that the agreement between the Committee and a practitioner on the panel shall include the condition that he shall attend the old and infirm members of friendly societies above alluded to at a rate of remuneration *not exceeding* the amount which would be available for the medical treatment of that member if he was an insured person. Clause 15 (2) (e) of the Act states that the provision of medical attendance for this class of persons shall be *on the same terms* as to remuneration as those arranged with respect to insured persons. It appears to the Association that the words of the Regulations tend to weaken the force of the relevant clause in the Act.

I am,
Your obedient servant,
(Signed) ALFRED COX,
Medical Secretary.

The Secretary,
National Health Insurance (Joint) Committee,
Buckingham Gate, S.W.

ARRANGEMENTS FOR DISPENSING.

APPOINTMENT OF DEPARTMENTAL COMMITTEE.

A COMMITTEE has been appointed consisting of Mr. James Smith Whitaker, M.R.C.S., L.R.C.P., of the National Health Insurance Commission (England), Chairman; Mr. Walter Davies, Mr. James Crawford Ledlie of the Privy Council Office, Mr. Claud Schuster of the National Health Insurance Commission (England), Dr. Lauriston E. Shaw, to inquire and report whether, having regard to the interests of insured persons in obtaining an efficient and rapid supply of drugs, medicines, and appliances, and to the conditions under which those articles were supplied before the passing of the National Insurance Act, 1911, any alteration is necessary in the conditions laid down by Section 15 (5) (iii) of the National Insurance Act in respect of the matter.

The paragraph is as follows:

(iii) Subject to the regulations made by the last foregoing proviso the regulations shall prohibit arrangements for the dispensing of medicines being made with persons other than persons, firms, or bodies corporate entitled to carry on the business of a chemist and druggist under the provisions of the Pharmacy Act, 1868, as amended by the Poisons and Pharmacy Act, 1908, who undertake that all medicines supplied by them to insured persons shall be dispensed either by or under the direct supervision of a registered pharmacist or by a person who, for three years immediately prior to the passing of this Act, has acted as a dispenser to a duly qualified medical practitioner or a public institution.

The note in *National Insurance* by Carr, Garnett, and Taylor is as follows:

"Acted as a dispenser."—This safeguards the large number of dispensers to medical men who have no legally recognized qualifications for dispensing.

All communications in regard to the Committee should be addressed to the Secretary, James Rae, Esq., at the National Health Insurance Commission (England), Buckingham Gate, S.W.

OFFICIAL DOCUMENTS.

ADMINISTRATION OF MEDICAL BENEFIT.

The Insurance Commissioners (England) have issued, under date of February 18th, 1913, the following circular (20/L.C.) with regard to the administration of medical benefits by Insurance Committees:

Method of Calculating the Remuneration on a Capitation Basis of Doctors coming on the Panel prior to and during the currency of the First Quarter.

1. Where the Committee have adopted for the remuneration of doctors on the panel a system of payment either in whole or in part by capitation, they may desire some assistance as to the most convenient method of calculating the remuneration due both to those practitioners who placed their names upon the panel at the commencement of the present quarter, and to those who joined the panel at a later date.

2. The Fourth Schedule to the Model Form of Agreement with doctors on a capitation basis (which form it is

assumed has been adopted by Committees with little or no modification as regards that Schedule) specifies a fixed rate of remuneration *per quarter* in respect of each person included in the practitioner's list at the end of the quarter. Doctors coming on the panel at any time after the beginning of the quarter will be remunerated for the period to the 14th April next in respect of each person on their lists in proportion to the period of their service. For the purpose of ascertaining the sum to be credited in respect of each person on the doctor's list, it is recommended that the period of the doctor's service during the quarter should be reckoned in weeks, any portion of a week being regarded as a complete week, and that the sum to be credited to him in respect of persons on his list should bear such proportion to the full quarterly amount as the period of his service bears to the full quarter.

3. Doctors coming on the panel during the quarter should be apprised of the method proposed to be adopted by the Committee for ascertaining the actual rate applicable to the period of their service.

4. The net result of the arrangements explained above will be that such portion of the amount available for the treatment of insured persons on the lists of doctors coming on the panel during the quarter as may be regarded as applicable to the period prior to those doctors' acceptance of service will be mainly distributed among the doctors who were already on the panel during that period, and upon whom the collective responsibility for the treatment of all the insured persons in the area devolved during that period.

5. The following Table illustrates the proportionate amounts to be credited to doctors coming on the panel before the commencement of and at different dates during the quarter in cases in which an inclusive rate of 1s. 9d. per quarter has been fixed:

| Date of Doctor's acceptance. | Amount to be Credited. |
|---|------------------------|
| Any date up to and including 21 January ... | 21.0d. |
| " " " 28 January ... | 19.38d. |
| " " " 4 February ... | 17.77d. |
| " " " 11 February ... | 16.15d. |
| " " " 18 February ... | 14.54d. |
| " " " 25 February ... | 12.92d. |
| " " " 4 March ... | 11.31d. |
| " " " 11 March ... | 9.69d. |
| " " " 18 March ... | 8.08d. |
| " " " 25 March ... | 6.46d. |
| " " " 1 April ... | 4.85d. |
| " " " 8 April ... | 3.23d. |

It will, of course, be understood that the amounts shown in the above Table do not represent the actual amounts payable, but are credit rates for the purpose of the distribution of the fund.

6. The necessity for an apportionment of remuneration in the manner described will not, of course, be restricted to the provisional or initial period, but will arise in normal circumstances whenever a doctor places his name upon the panel or ceases to practise in the area during the medical year. A similar method might suitably be adopted in such cases.

Allocation of Insured Persons who have not selected, or been accepted by a Doctor on the Panel.

7. In areas in which the capitation system has been adopted the question of the principle upon which those insured persons are to be assigned who have not selected or been accepted by doctors should receive careful consideration at an early date. It will not be possible for a Committee to proceed with the allocation of individual insured persons until the index register is complete; but they should determine the basis upon which each doctor's quota of such persons is to be ascertained, if this has not already been done, without delay.

8. Subject to what is stated in the following paragraphs, the unassigned residue might be distributed in any of the following ways:

(a) In equal shares.

(b) In proportion to the number of accepted persons already on each doctor's list.

(c) In proportion to the number of patients already treated by each doctor as ascertained from the day-book or in any other way.

9. With regard to the relative merits of these methods, it may be observed that basis (a) would to some extent operate to the disadvantage of those doctors who served the whole quarter and accepted insured persons who were ill when they applied to them, inasmuch as such doctors would only receive an equal share of the healthy residue with the doctors who, by reason of their joining the panel at a later date, have fewer sick persons on their lists.

10. Basis (b) would secure an approximately equitable distribution. But in areas in which it is believed that

any considerable number of healthy insured persons have exercised their choice of doctor by presenting their medical tickets for endorsement, basis (c) would perhaps secure a more equitable distribution of healthy and unhealthy persons.

11. The basis of allocation to be adopted should be the subject of discussion, both with the Local Medical Committee and with the practitioners on the panel, and should, of course, be determined with full regard to any understanding which may have been arrived at with the doctors on the panel prior to their accepting service.

12. Whatever arrangements may be arrived at must be subject to considerations as to the maximum number of insured persons for whose treatment an individual practitioner can reasonably accept responsibility. It appears to the Commissioners that no absolute limit can usefully be fixed, but that regard must be had to the circumstances of each case after consultation with the Local Medical Committee and the practitioners on the panel. The arrangements will also be subject to considerations as to the local distribution of the unassigned residue, and as to what number of individual insured persons can be allotted to any individual doctor, having regard to the distance of their residences from his house or surgery, without hardship to the insured persons so allotted.

13. There would be no objection to the adoption by the Committee, should they so desire, of one basis of allocation for the first quarter and a different basis for the subsequent period. Where this course is followed, the basis adopted for the first quarter would not presumably require to be given effect to by the individual assignment of insured persons, but would apply only to the method of distribution of the available moneys among doctors on the panel.

Advance Payments to Doctors on the Panel.

14. Arrangements have been made whereby Committees will be enabled, should they so desire, to make advance payments to doctors on the panel on account of the sums due to them at the end of the quarter. Where a capitation system is in force the Commissioners are of opinion that advances might safely be made to each doctor as soon as he has completed a month's service to the extent of a rate of 7d. (one-third of 1s. 9d.) in respect of the number of insured persons whose names are contained in the schedules of acceptances received from him during the month.

15. Committees who have adopted a capitation system should include the amount required to enable them to make advance payments to doctors on the above basis in their monthly application for issue of Funds (Form 273 Revised A.G.D.).

16. Committees who have adopted an attendance system, and who are desirous of making advance payments to doctors, should submit their proposals in that connexion to the Commissioners by letter.

Applications for Grants from the Special Mileage Fund.

17. Those Committees who are desirous of making application for a grant from the Special Mileage Fund should apply without delay, if they have not already done so, in order that the Commissioners may have before them all the facts necessary to enable them to determine the basis of distribution of the grant.

18. Grants from the fund in question will only be made in respect of those parts of the country which are exceptionally sparsely populated and in which there are special difficulties of access (such as mountainous districts, moorlands, and fens); and any application should be accompanied by particulars in support of the claim of the localities concerned to be included in that category.

19. Further, the Commissioners will require to have before them, in considering the method of distribution to be determined, an approximate estimate of the numbers of insured persons in the localities concerned for whose treatment doctors on the panel ought, in the opinion of the Committee, to receive additional remuneration out of any grant received. This estimate might conveniently take the form of a statement of the number of insured persons resident at a distance from the house or surgery of the nearest doctor of more than three miles, subdivided into the number of persons so resident at a distance of between three and four miles, four and five miles, and so on. It is essential that estimates should be submitted at an early date in order that the Commissioners may be in a position to review the whole situation so as to apportion the funds available in the most equitable manner.

Arrangements for dealing with Removals during the Provisional Period.

20. For the purpose of dealing with the question of removals during the provisional period, and pending the

establishment of the arrangements referred to in paragraph 37, insured persons entitled to medical benefit may be divided into three classes:

- (a) Those who have arranged to receive treatment from panel doctors.
- (b) Those who receive treatment through Institutions.
- (c) Those who have been allowed to make their own arrangements.

21. Insured persons falling under class (a) are required under the Medical Benefit Regulations to give notice on removing into a new area to the Committee for that area; and it then devolves upon that Committee to make arrangements for his medical benefit. This will necessitate the issue of a new medical ticket, inasmuch as the ticket already in the possession of the insured person will bear the signature of the doctor accepting, and will therefore not be available in a new area.

22. In the case of the removal of such a person from the area of Committee A to that of Committee B, the latter Committee, on receipt of a notification of removal, should require the surrender of the old medical ticket, and ascertain the date on which the removal took place. During the provisional period the production of the medical ticket may be accepted as proof that the insured person is entitled to medical benefit, and is not receiving the benefit otherwise than through a doctor on the panel. A fresh ticket may then be issued forthwith. Committee B should immediately notify Committee A, stating the date of removal; and Committee A should transmit to Committee B the appropriate index or suspense slip, and at the same time notify the doctor concerned (whose name should be on the back of the slip) that the insured person in question is no longer on his list for treatment, and has been removed therefrom as from the date of change of residence.

23. In some cases the notification of removal may not reach Committee B until an interval has elapsed. The actual or approximate date on which the removal took place must, however, always be regarded as the date when Committee A ceased to be responsible for the medical benefit of the insured person; and the necessary financial adjustments will be made on that basis.

24. Where the removal is within a Committee's area, the procedure will be similar except that reference to another Committee for the index or suspense slip will, of course, be unnecessary.

25. With regard to persons falling into classes (b) and (c) above, such persons by selecting an Institution or by making their own arrangements exercise their option for the whole of the currency of the medical year; and the responsibility of Committee B for their medical treatment will only commence from the beginning of the medical year following the date of removal. Where application is made for the index or suspense slip of a person falling under classes (b) or (c), Committee B should be informed that the person falls under class (b) or (c) and that the slip will be transferred at the end of the medical year.

26. An insured person on removal may only obtain treatment under the arrangements made with practitioners on the panel. The new medical ticket issued should therefore bear the name of the Committee, in order to avoid the risk of an insured person whose removal is temporary using it to obtain treatment on return to his former address; and it should be filled up by the Committee by whom it is issued with the name of the insured person and the address in their area. A supply of medical tickets will be furnished to Committees in due course.

Supply of Medicines, etc., by Doctors on the Panel.

27. Numerous inquiries have been received as to the effect of paragraph 30 of the Regulations; and the following statement is intended to assist Committees in dealing with various matters arising in connexion therewith.

The paragraph in question sets out the circumstances in which a doctor on the panel is entitled to enter into arrangements with the Committee to supply medicines himself to insured persons. The expression "rural area" has no technical construction, such as the expression "rural district"; and accordingly the question as to whether any given locality is "rural" is one of fact for the decision of the Committee, as well as the question whether insured persons will have difficulty in obtaining medicine from the nearest chemist on the list by reason of distance or inadequacy of means of communication.

28. The arrangements for the payment of doctors for the supply of medicines, etc., under Regulation 30 will vary according to the method of their remuneration for medical attendance.

(a) Where a capitation system is in force, it is open to the Committee to arrange for payment in respect of medicines in accordance with Regulation 47. This Regulation

provides for the doctor receiving in respect of the supply by him of drugs a capitation rate per annum of 1s. 6d. plus the average amount per head transferred from the Drug Suspense Fund to the Drug Fund; but it will be borne in mind that the average sum per head of the unexpended balance of the Drug Suspense Fund passes to him in respect of medical attendance. Thus, in effect, he will be credited with 7s., plus 1s. 6d., plus the whole of the 6d. credited to the Drug Suspense Fund, the total credit amounting to 9s. per annum in respect of each person on his list to whom he is entitled to supply medicines, etc.

(b) In areas in which an attendance system is in force, the necessity of requiring a detailed account in respect of the supply of medicines and appliances may be avoided if an arrangement can be made whereby the doctors will supply medicines, etc., as an additional service at a flat rate for each prescription, thus enabling the charge in respect of each prescription to be entered and accounted for in the same manner as services in connexion with medical attendance. The actual amount of the rate to be paid should, however, be arrived at in consultation with the chemists, who have, of course, a considerable interest in the amount determined upon.

29. It will be borne in mind that where payment to doctors for the entire supply of medicines, etc., to certain insured persons has been arranged under the provisions of Regulation 30 (1), no separate or additional payments will fall to be made to them for the supply of medicines or appliances in the circumstances contemplated in Regulation 30 (2), inasmuch as the payments under Regulation 30 (1) will cover the entire responsibility for the supply of any drugs or prescribed appliances which the condition of the patient may require.

Lost Medical Tickets.

30. During the provisional period it will devolve upon Committees to issue medical tickets, not only in the circumstances referred to in paragraphs 20 to 25, but also in certain other cases where it may be necessary, viz., where the original ticket has been lost, or where it has been mutilated or otherwise rendered unavailable.

31. In these cases it will be necessary for the Committee to satisfy itself that the applicant is entitled to a fresh ticket. The Commissioners have accordingly prepared a form for use where the insured person concerned is a member of a Society. A copy is enclosed and a supply will be sent in a few days, together with a supply of medical tickets. If a Deposit Contributor requires another ticket the Committee should forward the application to the Accountant and Comptroller-General, National Health Insurance Commission (England), Delaware Road, Maida Hill, London, W.

32. Where a ticket has been lost after being signed by a doctor on the panel the insured person must present the fresh ticket to the same doctor for signature.

33. All tickets issued by a Committee should be stamped with the name of the Committee, and should be marked "Duplicate."

Recommendations for Sanatorium Benefit.

34. In view of the arrangements as to Medical Benefit which have now come into operation, and of the general allocation in conjunction therewith of 6d. per insured person for the domiciliary treatment of tuberculous insured persons recommended for sanatorium benefit, the procedure hitherto adopted for securing special treatment for tuberculous among the insured appears to the Commissioners to admit of being simplified.

35. As indicated in their Circular 6 I.C. the Commissioners consider that an application for Sanatorium Benefit should continue to be made on Form Medical 1 or a similar form, but that evidence as to the applicant being an insured person will no longer be needed if he is at the time of his application eligible for medical benefit. This form will as before be accompanied by a brief statement signed by the medical practitioner that the person is in his opinion suffering from tuberculosis. On receipt of this application the Commissioners think that the Committee may at once recommend the applicant for Sanatorium Benefit in the form of domiciliary treatment pending further consideration of the case. The practitioner will then assume charge of the case, and will carry out treatment in consultation with the "consulting officer," that is, either the Tuberculosis Officer or the Medical Officer of Health, as the case may be, in accordance with the Order of the Local Government Board. If in the course of such treatment it is made apparent to the consulting officer, who is also Medical Adviser to the Committee, that the case is one in which treatment in a sanatorium or hospital or at a dispensary would be more suitable, it will be his duty to represent

the facts to the Committee, who may thereupon make a further recommendation for the necessary treatment to be provided.

36. On the above method a formal medical report for the information of the Committee as a preliminary to the grant of Sanatorium Benefit will become unnecessary.

Doctors' Lists of Insured Persons, Day Books, and Prescription Books.

37. In view of the objections which have been raised in various quarters to the amount of clerical work entailed upon doctors on the panel by the provisional arrangements now in force relating to the medical ticket and the schedules of acceptance, the Commissioners desire to point out that the necessity for those arrangements is initial and temporary only. There will be no reissue of the medical ticket; and no repetition will be necessary of the clerical work entailed upon doctors on the panel by the preparation of their schedules of acceptance. It will be the duty of each Committee adopting a capitation system to furnish each doctor with a list of the insured persons for whose treatment he is responsible; and such lists, once compiled from the schedules of acceptance and by the allocation of the residue, will be permanent, subject, of course, to the right of individual insured persons to change their doctor and of the doctor to discontinue the treatment of individual insured persons at the dates appointed for revision. These arrangements will enable a simple card system of records to be substituted for the Day book. A memorandum dealing with the whole subject will be issued shortly.

38. It is also proposed to discontinue the issue of Prescription Books in triplicate, and to make it optional for the doctor to retain a duplicate for his own use.

Future Arrangements for the Administration of Medical Benefit.

39. Committees should take into consideration as soon as they are in a position to do so the arrangements to be made for the provision of Medical Benefit after the expiration of the current quarter on April 14th next. They should, therefore, expedite their negotiations with doctors and chemists, with a view to the early settlement of any outstanding difficulties and the adoption of arrangements for the future. In considering these matters they must consult any Local Medical Committee recognized for the area, or, if no Local Medical Committee has been recognized, the doctors on the panel.

REPORTS OF LOCAL ACTION.

LONDON.

TUBERCULOUS PATIENTS MAKING THEIR OWN ARRANGEMENTS.

In the *Times* of March 1st, Mr. G. A. Touché, M.P. for North Islington, called attention to the case of Mr. F. W. Eeles in illustration of the difficulty encountered by insured persons in obtaining treatment for tuberculosis under the present administration of the Insurance Act in London. The facts of the case appear to be that the patient had been suffering from consumption for two years, and that on October 15th, 1912, Dr. G—, his club doctor, decided to treat him by tuberculin injections. The treatment was commenced on November 4th, and was given as part of the medical attendance arranged for by his club. Application for sanatorium benefit was made in the middle of October, and on November 25th the London Insurance Committee agreed to pay Dr. G— to continue the treatment until further notice. Mr. Dawes, M.P., chairman of the London Insurance Committee, states that on February 13th that committee was informed by the Insurance Commissioners that it must insist upon all such cases being treated by panel doctors, and a circular was accordingly sent to the patient and doctor stating that unless the patient obtained permission to make his own arrangements the best course for him to adopt would be to submit his medical ticket to a doctor whose name was on the London medical panel, with a view to obtaining domiciliary treatment from him. It appears that early in January the patient had applied for permission to make his own arrangements, and was asked either to reconsider his decision or to make his request on "Form Med. 21, which may be received upon application." This reply was received on January 27th, but recent inquiry at the office of the London Insurance Committee brought the reply that Form Med. 21 was not yet printed.

A special appeal was then made to the Clerk, who replied that the case would be considered on its merits and would be dealt with in due course, and that there was nothing to add to the circular. After the publication of Mr. Touche's letter on March 1st the Chairman of the London Insurance Committee stated (on that day) that on February 24th a communication had been received from the patient stating that he could not obtain treatment from a panel doctor, and that a letter had been prepared, but had not been posted, informing the patient that as he had been receiving injections of tuberculin from Dr. G—the Committee had decided to allow him to receive for the present domiciliary treatment from him as the patient of the Committee. Mr. Dawes, in defence of the Insurance Committee, stated that in no case brought to its notice in which a man had been treated by tuberculin by his own doctor had permission to allow him to go on with it been refused, although there was actually no fund out of which the Committee could pay a non-panel doctor. Permission had been given in about a dozen cases. Mr. Dawes gave the assurance that if new cases demanding tuberculin treatment arose the Committee would allow the patients to make their own arrangements if special circumstances justified it in doing so, but difficulties would not arise in the future. Copies of Form Mcd. 21 had, he said, only been received from the Insurance Commissioners during the previous week.

SCOTLAND.

EDINBURGH INSURANCE COMMITTEE.

At a meeting of the above Committee held on February 27th, Councillor ROBERTSON presiding, it was intimated that the Commissioners had appointed Dr. John Bowie, Dr. F. W. N. Haultain, and Dr. W. L. Martin members of the Committee. Further, in room of three members resigned, the Town Council had appointed Dr. Alexander Veitch, Baillie Richardson, and Councillor Barrie.

THE MEDICAL GUILD.

The following note in explanation of the Medical Guild's formation, adopted at a meeting of the Guild held in Edinburgh on February 24th, has been forwarded by the Secretary, Dr. Frederick Porter (65, Morningside Road, Edinburgh):—

THE MEDICAL GUILD.

The Reason for its Formation.

As about one half of the members of the medical profession in Britain are not on the medical panels constituted under the National Insurance Act, this Association has been formed to draw together those of them practising in Scotland with a view to mutual support, encouragement, and conference. The Guild is also intended to act as a centre to which medical men who decide to give up service under the National Insurance Act will be able to turn for sympathy and fellowship.

The motives which brought together those who initiated this movement are expressed in those two sentences; but when the question is asked—Why did they not join medical panels?—the answer is as follows:

1. They are uncompromisingly opposed to a State contract system of medical practice under the control and supervision of lay bodies with no special knowledge of medical matters.

2. They resent their private patients being taken from them by State compulsion and put under a contract system.

3. They hold that contract practice, save under special circumstances and safeguards, is prejudicial to the public health, and is unfavourable to the development of that care and skill in the individual practitioner of medicine upon which valuable service depends.

Moreover, they have in the past valued personal freedom and liberty in their professional dealings with the public, and have appreciated the excellent relations which subsisted between them and the persons who have selected them as their medical attendants. The selection was usually made on professional and personal grounds, with the result that there existed mutual confidence and personal interest between them and the members of the families they attended. Many of these families had little confidence in contract medical practice and selected a family medical attendant, although they were entitled to such attendance through a friendly society. This section of the community has a special claim at this time, and the members of the Guild are in a position to give them the

same care and attention they have hitherto required and received. The members of the Guild stand for the freedom of the individual to choose his own doctor, and for the maintenance of the spirit of confidence and trust between doctor and patient which is universally regarded as desirable.

If you approve of these objects, it is hoped that you will join the Guild and aid in the maintenance of the higher relations of the medical profession with the public.

IRELAND.

COMMITTEE ON EXTENSION OF MEDICAL BENEFIT.

Sittings in Belfast.

The Committee of Inquiry appointed by the Treasury, with Lord ASHBY ST. LEDGERS as Chairman, to consider the question of the proposed extension of medical benefit under the Insurance Act to Ireland, held its first sitting in Belfast on March 4th.

In opening the proceedings the CHAIRMAN said that the Belfast Linen Merchants' Association had expressed the opinion that in view of the elaborate system of medical relief already available the extension of medical benefit to Ireland was unnecessary, and that an increased charge would have a prejudicial effect on the cottage industries. The Belfast Chamber of Commerce had pointed out that more than one-half of the population was engaged in agriculture, an occupation in which there was a relatively low percentage of sickness, and urged that the extension of medical benefit would practically involve a duplication of medical relief agencies at an increased cost to the community and without compensating results. Similar opinions had, the Chairman said, been expressed unanimously at a conference of Irish Chambers of Commerce in Dublin on October 24th and November 9th, 1911.

Evidence given on behalf of the Orange and Protestant Friendly Societies, by Mr. R. H. NOBLE, was to the effect that the members had voted by about 3 to 1 in favour of the provision of medical benefit if administered by the societies, but against it by more than 2 to 1 if administered by Insurance Committees.

The Rev. P. KERLIN, of Magilligan, Derry, was in favour of the abolition of the present dispensary system and the institution of medical benefit administered by Insurance Committees for insured persons and their dependants, inasmuch as many would thus benefit who were now unwilling to avail themselves of the provisions made by the Poor Law.

Dr. R. J. JOHNSTONE, who gave evidence on behalf of the Conjoint Committee of the British and Irish Medical Associations, stated that, with the drawbacks existing in England obviated as far as possible, the extension of medical benefit to Ireland would prove acceptable to the medical profession, if for no other reason than that it would go a long way towards getting rid of the present abuses of the Poor Law and club practice. For insured persons the same capitation fee as in England (7s.) was asked, and, if dependants were included, one guinea. The assertion that Irish working men were healthier than the English could not, he said, be accepted: it was contrary to the experience of doctors who had practised in both countries, and the mortality statistics of English and Irish towns were totally opposed to such a view. In reply to Mr. LARDNER, Dr. Johnstone stated that the object of the doctors was to remove the pauper taint from insured persons attending the dispensaries, and to prevent the abuse of the Poor Law service.

Mr. DEVLIN asked why because the State had carried a great scheme for the health of the community the doctors asked 17s. a head more from these poor people when they had been willing to accept them previously at 4s. a head.

Dr. JOHNSTONE replied that the doctors were not asking 17s. from the poor people, but from a large organization which included not only those poor people but a great many working men who earned a large income. The doctors had withdrawn from contracts with friendly societies because they wished free choice of doctor introduced.

Mr. GLYNN, a member of the Committee, said that there were 122,000 insured persons in Belfast, and that of this number about 50,000 were married; at the terms mentioned by Dr. Johnstone this would involve the provision of 50,000 guineas and 75,000 sums of 7s. to provide medical benefit in Belfast.

Refusal of Medical Evidence.

On February 10th an application was made to the Secretary of the Irish Insurance Commissioners by Dr. George Elliott, Honorary Secretary of the Belfast Division of the British Medical Association, on behalf of that Division and the Belfast Medical Guild, two Associations which comprise all the members of the medical profession in the borough, stating that the medical practitioners in the Belfast district were desirous of facilitating the inquiry of the Committee in every way possible, and were prepared to tender evidence. No reply beyond a formal acknowledgement having been received to this communication, a further letter was written by Dr. George Elliott on February 20th, stating that Dr. S. B. Coates, Dr. George Elliott, Dr. R. J. Johnstone, Dr. John Macintosh, and Dr. John O'Doherty had been nominated to give evidence on behalf of the medical practitioners in Belfast and the surrounding parts of Antrim and Down. A very unpleasant impression has been produced not only by the refusal of the Committee to take evidence from these witnesses, but also by the manner in which the Secretary of the Committee had expressed this refusal. He transmitted a letter addressed by him to Dr. Hayes, the Secretary of the Conjoint Committee of the British Medical and Irish Medical Associations in Ireland, in which he stated that the sittings the Committee proposed to hold in Ireland during the week beginning March 4th were intended to be not more than a preliminary inquiry in order to ascertain generally the trend of Irish opinion in the matter so far as the two classes primarily affected, namely, insured persons and their employers, were concerned. While recognizing the importance of giving the medical profession in Ireland a full opportunity of making representations from their point of view with regard to the question of medical benefits the Committee considered that the opportune time for such representations would be rather when the question of extending medical benefits to Ireland was definitely settled. The Secretary added that the Chairman of the Committee had no objection to taking evidence from a representative of the Conjoint Committee in each of the three centres at which the preliminary inquiry would be held—namely, Dublin, Belfast, and Cork. The receipt of this letter led Dr. Elliott to write a letter of remonstrance, in which he pointed out that on a matter with regard to which, from the very nature of their life's work, no other section of the community was so well qualified to express an opinion as the medical profession, it would be wise for the Committee to have that advice and information from the beginning. This letter brought a mere acknowledgement, and at a special meeting of the profession, held in Belfast on February 27th, the following resolution was unanimously adopted:

This meeting of the medical profession of Belfast and district has heard with great regret and surprise that the Commission has refused to hear the members selected on the 13th inst. by the local practitioners to give evidence. The meeting would again tender the names of the medical witnesses, and would urge that it is essential that they be heard, as representing the various views of medical men in the largest industrial centre of Ireland. The meeting would also urge that the Commission should receive evidence from doctors in other urban and rural areas of the North of Ireland.

The Committee sat again in Belfast on the following day, and arranged to meet in Dublin on March 6th.

MATERNITY BENEFITS.

The question of maternity benefit is still in a state of great confusion in Ireland. At the conference held recently in Dublin between the approved societies (106 of which were represented from all parts of Ireland) and the Insurance Commission, the CHAIRMAN said that the Commissioners desired, first of all, to impress upon the societies the duty of seeing that the 30s. was properly administered for the benefit of the mother and the child. It need not be paid in one lump sum; the society might spread the payments over a few weeks to enable the mother to get proper attention during the four weeks that followed confinement. A society could arrange, with the consent of the mother, for the attendance of a qualified maternity nurse in all cases, and could provide a fee from the 30s. for that nurse. In addition, the societies had power to make grants from their funds towards nursing

associations which would look after the mother and child in the period following confinement. With regard to fees he mentioned five classes of patients, in two of which he said fees might be paid to doctor and nurse, (1) cases of women who were themselves insured and whose husbands were insured and in employment, and (2) cases of women who were not insured, but whose husbands were and had employment. The Commissioners proposed to communicate with the Local Government Board with the object of getting societies and boards of guardians to agree to a uniform system, whereby the class of case for which a fee ought to be paid would be defined. In all other cases the guardians would issue tickets as before. In rural districts it was proposed that the fee for the doctor should be 7s. 6d. or for the nurse 5s. The maternity hospitals in Dublin had arranged with the societies to recommend their insured women to go into the hospital, where they would get treatment for nine days for 5s., and also certificates. If the woman preferred to be attended in her own home, she would be attended for the same period for a fee of 5s., getting all the facilities from the hospital, together with the attendance of students under the proper supervision of a doctor. The following resolution was passed unanimously:

That the Commission be empowered to make arrangements with midwives and doctors in Ireland to attend members or insured members' wives in maternity cases for a maximum fee of 5s. for nurses, and 7s. 6d. for doctors, such fees not to be cumulative, and not to apply to cases where medical relief tickets are, or ought to be, granted. Societies to be at liberty to adopt these arrangements or not as they decide.

Both the Commissioners and the societies apparently entirely overlook the fact that the "maternity benefit" was introduced into the Insurance Act to enable poor women to have skilled attention during confinement, and that therefore the fees of both doctor and nurse are a first call on this 30s., and were not intended, as is now suggested, to be paid out of anything that may be left over in the case of fairly well-to-do patients. Mr. Lloyd George himself explained this in Parliament in the following words:

Women of the working classes in critical cases are neglected sadly, sometimes through carelessness, but oftener through poverty, and that is an injury, not only to the woman herself, but to the children born. We therefore propose that there should be a 30s. benefit in these cases, which would cover doctoring and the nursing, but only conditional upon those who are women workers not returning to their work for four weeks.

TREATMENT OF TUBERCULOUS PATIENTS.

At the last quarterly meeting of the Kildare County Council a deputation from the County Kildare Medical Committee attended to discuss the treatment of tuberculous patients. It was stated that there was no place provided for the treatment of hopeless cases, and domiciliary treatment of these cases was a failure. The doctors had decided to charge a fee of 5s. for a domiciliary visit, and 1s. a mile after the first mile. A charge of 2s. 6d. would be made if the patients came to the doctors. As matters were at present, no nourishment could be given to domiciliary cases, and they were not allowed into the workhouse. It was decided that a subcommittee should interview the Local Government Board and place the doctors' views before them.

At the last weekly meeting of the Dublin County Borough Insurance Committee a circular with regard to sanatorium benefit was submitted, intimating that it is competent for Insurance Committees, if satisfied, in consultation with the medical adviser, that the provision of special articles of clothing is a necessary part of the treatment, to make arrangements for the supply of such outfits by the persons or local authorities undertaking the treatment. A resolution was passed appointing Dr. J. T. Daniel, of the P. F. Collier Memorial Dispensary, temporary medical adviser to the Committee pending action by the Public Health Committee with regard to the appointment of a successor to Dr. J. T. Crowe.

At the quarterly meeting of the Sligo County Council Dr. P. J. Burke was appointed tuberculosis officer for the county at a salary of £450 a year and an allowance of £50 a year for travelling expenses. A subcommittee was appointed to select a suitable building or site in the town of Sligo for a central dispensary. Dr. Irwin, who attended on behalf of the Women's National Health Association,

urged the council to take advantage of the Peamount sanatorium scheme, and gave a guarantee that the capital cost would not exceed £70 a bed and that the maintenance charge would only be £1 a week while the beds were occupied. Sir Acheson MacCullagh, who attended on behalf of the Local Government Board, strongly urged the council to join with some other neighbouring counties in building a sanatorium. The council decided to arrange for a conference with the other counties of the province with a view to making some joint arrangement.

CORRESPONDENCE.

PERSONS MAKING THEIR OWN ARRANGEMENTS.

DR. H. D. LEDWARD (Letchworth, Hertfordshire) writes: In your leading article (March 1st, p. 458) the serious consideration of the restrictions which should be put on the right to "contract out" is urged; may I be allowed to present a point of view which appears to be entirely disregarded by the Commissioners in their recent Memorandum?

It is true that a majority of the profession prefer contract arrangements for dealing with insured persons, but there is an important minority who will always refuse to undertake any work on contract terms, although they have no objection to private practice among the insured class at ordinary working-class fees. The practitioners who form this minority are not the least intelligent of our profession, and their work compares not unfavourably with that of their fellows; whether they are right or wrong in their views as to contract practice need not be argued; that they hold these views with all sincerity will be readily acknowledged. It would appear to be the intention of the Commissioners either to force such men to take contract work or to deprive the insured of their services except in "special circumstances." Even if an insured person desires to "make his own arrangements" he is apparently expected to go and make a bargain with his doctor (unless he be a commercial traveller or an actor) and inform the Insurance Committee of the result, giving the name of his doctor, whether he has had past experience of him, and the fee per quarter or per attendance for which the doctor is prepared to treat him. As you, sir, remark, it is difficult to perceive any advantage from the practitioner's point of view over the ordinary panel arrangement.

Another fact that the Commissioners ignore is that a large number of the more intelligent members of the working classes strongly object to receive medical attendance under a contract arrangement. They may be wrong, but they imagine that they do not receive quite the same consideration if the doctor is paid whether he sees them or not, and they prefer the more independent relationship of private practice.

Surely one reason why Section 15 (3) of the Act was inserted was to enable such persons to continue to receive medical attendance under the conditions which they consider most satisfactory to themselves. Why should not an insurance committee be allowed to sanction "own arrangements" if an insured person states that he prefers the relationship of private practice between himself and his doctor? To adopt such a course in any area is not going to upset the panel system. Obviously the number of the insured who are willing to incur the possibility of extra payment out of their own pockets is limited; the vast majority will prefer to make sure of getting all the doctoring they require without any personal liability. Why should the acceptance of this personal liability be so discouraged, almost refused by the Commissioners? An insured person who prefers that his doctor should be paid, and paid in full, for what he does for him, and so asks the Committee to put his medical benefit contribution into the Special Arrangements Fund, is a wise man. He knows that this will ensure that he gets the best value for his money, because all who, like himself, accept some personal liability will be careful how they draw on this fund. Under the ordinary panel arrangement the man who takes care of his health knows that he is paying for attendance upon his less careful neighbours and upon those who rush to the doctor on every conceivable excuse; but the contributors to the Special Arrangements Fund have all a direct incentive to take care of their health and to brush aside minor ills, with great

advantage to themselves and to the quality of the attention they receive when they do require it.

One of the most serious criticisms of the "normal system" of providing medical benefit is that it is economically wasteful. Most panel doctors will agree, I think, that during the past few weeks they have been spending a considerable amount of time attending to trivialities which would have got quite well without their ministrations, time better spent in the more careful investigation of more serious illness. Apart from wasting the doctors' time, unlimited facilities for free doctoring may have a most undesirable effect upon those who enjoy such facilities; minor ailments, better forgotten, are apt to become exaggerated and dwelt upon. In Mr. Gibbon's able sociological study of the experience of Germany and Denmark in relation to medical benefit, published last October (*Medical Benefit in Germany and Denmark*, by I. G. Gibbon; P. S. King and Son), this aspect of medical insurance is discussed and the very remedy proposed—namely, some small personal financial interest, which our own authorities seem so determined to discourage.

In the political strife that has raged round this question of "own arrangements" the legitimate desires and true interests of the insured are being lost sight of; one would like to know why this need be.

DR. H. BRYAN DENSHAM (Stockton-on-Tees) writes: The medical benefits under the Insurance Act have now been in force for six weeks. This period is too brief to yield much information, but it is long enough to give us some idea how our interests will be affected, and also to some extent how far the benefits meet with the approval of those insured. It is therefore desirable that wherever a number of general practitioners in any district have declined service on the local panels, they should publish their experiences for the help of others.

This parliamentary borough includes Stockton, Thornaby, and Norton, with a population of 85,000 almost entirely industrial in character. Twenty-nine general practitioners reside in this district, of whom fifteen with three assistants are giving service on the local panels, and eleven have declined service.

Contract practice is the dominant type of practice in the county of Durham, and the overwhelming majority of the men in practice in the county are serving on their local panels. Therefore those of us in this district who have declined service are holding our position without much encouragement from our immediate surroundings, and our experience (brief as it is) has its value.

We meet frequently to consider our common interests, and I am glad to say that we are all still of opinion that in declining service on the panels we have not only done what is right in the interests of our patients, but also what is best in our own interests. We shall not be content until those insured are allowed to use their full medical benefit as they think best in their own interests, subject to certain reasonable conditions.

Our District Committee has not yet been formed. When it is constituted we shall ask for an opportunity of laying our views before it, and we hope to have its help in our efforts to obtain for those insured the right to "contract out" if they so desire.

Our County Insurance Committee has not yet come to a decision on this question, and so far has not acceded to our request for an opportunity of laying our views before it. If it declines to permit "contracting out" under reasonable conditions, we shall then consider the best steps to take in order to give expression to the views of the insured on this question.

I have every hope that organized labour will ultimately be found to be largely on our side.

Some weeks since nearly 800 applications from those desiring to "contract out" had been sent in from Stockton alone, and this number has since been largely increased. In addition to these, a large number—probably some thousands—have not yet taken any step to secure their medical benefit, and a great proportion of these desire to "contract out."

Most of these insured persons represent, either directly or indirectly, a parliamentary vote, and they will most strongly resent any attempt by regulations to deprive them of a right reserved to them in an Act of Parliament.

I hope our experience here will be an encouragement to men practising in other districts.

In country districts there is no scope for differentiation in type of practice; but wherever a number of medical men are practising in a centre of population, it is to be hoped that the stronger men will refuse service on the panels, and so increase the demand by the insured to be allowed to "contract out."

It is only by these means that the medical profession can be saved from the "levelling down" effects of contract practice and the insured be enabled to obtain the best the profession has to offer.

To get this result efficient local organization is necessary. The strength of our position here is due to the fact that as a Division we have always been united in our decisions on important questions. Both panel and non-panel men still meet frequently, and so remain in close touch. We all realize that our interests are still essentially the same.

AN EXPERIENCE ON THE PANEL AND SOME DEDUCTIONS.

Dr. G. A. WYON (Bow) writes: May I be allowed to give my own figures by way of contrast with Dr. Rosa Ford's figures, and then point out where there is an apparent fallacy in the latter?

In forty-five days—January 15th to February 28th—981 attendances were made—an average of 21.8 per day. The number of persons accepted up to February 28th was 1,375—it is now a few more. Therefore the percentage attendance was 1.58 a day. With 1,000 patients, this means that 15.8 would require treatment per day in winter, or $\frac{15.8 + 7.9}{2} = 11.9$ throughout the year, using the same method of estimation as Dr. Ford. The remuneration for 1,000 persons is 230 pence a day. The fee per patient would therefore be $\frac{230}{11.9} = 19.4$ pence, compared with Dr. Ford's 11.8 pence.

Now, it is possible that two practices should show such a marked difference, but I think it very unlikely.

A source of fallacy seems to be present in Dr. Ford's statement: "The average number of insured persons on the books was 413.6." The number at the end of the period is not stated, but it is this, or something larger than this, if acceptances are still being made, which ought to be used as the figure for the population being attended. This in her case would probably be 800 or 900, and, if so, our figures agree. In fact, I believe I am now treating an insured population of about 1,500, because I am still accepting four or five a day, and there is sure to be a surplus in April to be allotted by the Insurance Committee, and yet my work done for insured persons is not increasing from week to week, as it ought to be, if my reading of Dr. Ford's letter is right, and if her theory is more true than mine.

If my theory is correct, the fee for work done is about 10 per cent. more than my figures show.

Dr. A. C. E. PARE (Feltham) writes: In further elucidation of the interesting question discussed in the letter of Dr. Rosa Ford, may I be allowed to quote figures derived from my own experience during the period extending from January 15th to February 28th?

The number of patients on my list is 330. In the forty-five days comprised I have paid 56 visits and there have been 208 attendances at the surgery—a total of 264. The remuneration for 330 patients for forty-five days works out at 284.76 shillings. Taking the visits at 1s. 6d. each (that is, 84 shillings), there remain 200.76 shillings for 208 attendances at the surgery—that is, 11.58 pence per attendance. Thus, so far I am getting, roughly, 1s. 6d. per visit and 1s. per attendance at surgery. It is obvious, however, that the rate of attendance will be much less during the summer months—let us say, one-half. Then during a period of equal length the average number of visits, calculated on the yearly average, would be $\frac{56 + 28}{2} = 42$, and the attendances at surgery $\frac{208 + 104}{2} = 156$. The visits might be thus reckoned to produce 2s. (=84 shillings), and the attendances at surgery would then yield 1.28 shillings, or 1s. 3d. each.

When we take into consideration that we do not supply medicine (which may be reckoned at a minimum cost of

3d. per bottle, a modest enough estimate) we are getting the equivalent of at least 2s. 3d. per visit and 1s. 6d. per attendance at surgery.

In addition there is still to be taken into account our portion of the "floating" sixpence (if any) and our share of the money accruing from unallotted contributors.

Taking all these things into consideration my figures go to show that we shall not be far off the usual fees of 2s. 6d. per visit and 2s. per attendance at surgery for this class of practice.

One swallow does not make a summer, and I do not wish to dogmatize on the figures of one man during a period of six weeks, but I should be greatly interested to hear the experiences of a few more of our colleagues in different parts of the country.

THE PRESENT SITUATION AND FUTURE POLICY.

Dr. C. E. EVANS (Clapton) writes: In the belief that the profession as a whole, not to mention the decent working man, is averse to contract practice, we in Hackney are endeavouring to prevent its further extension, especially amongst juveniles, and with some success too, the only argument yet advanced against us being, "If I don't, some one else will."

It was, then, with some alarm that I read in last week's issue that certain Divisions, of their own free will, are extending contract practice to juveniles—4s. a head, with a reduction for quantity, being the latest quotation. To say the least, is it not dangerous in view of our past experience? When the Act does include juveniles, will this "penny a week" be considered a "fair case for increase," seeing it is fixed by ourselves and not by the clubs?

Surely, the socialistic tendency of the Act—for is it not socialistic to eliminate private gain and to pay the same fee whatever the "nature, quality, or extent" of medical services rendered, if not to be philanthropic at the expense of others?—surely it is patent enough without the profession helping to forward a cause in which we have nothing to gain. Cannot the aforesaid Divisions reconsider the matter, and will other Divisions be strong enough not to follow their example?

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

Dr. GARRATT (Chichester) writes: The letter of Dr. H. Cameron Kidd has been almost completely answered, notably by that of Dr. Herbert C. Jonas. There remains, however, some uncertainty as to how the extra sum required in order to bring the contribution of the aged and infirm up to that of the insured member should be raised. May I supply this information? I quote from a leaflet issued by the Insurance Commission:

Questions and Answers for Members of Friendly Societies.

- Q. As a member of a friendly society I am anxious to know if I shall benefit by my thrift in the past?
- A. Yes, certainly. Every society that becomes "approved" will receive a new reserve for all its present members who come under the State scheme. This will set free reserves which friendly societies have accumulated in the past, and which are estimated to amount to at least £10,000,000 for the country as a whole.

The italics are mine. Comment is superfluous.

THE STOCKPORT INSURANCE SCHEME.

We have received the following letter for publication:

2nd March, 1913.

Sir,

Our attention has been called to a report, in your SUPPLEMENT issued on February 22nd last, of a meeting held in Macclesfield to consider a scheme to include dependants of insured persons on the lines of the Stockport scheme; also to a letter from Dr. Brassey Brierley, which appeared in your last issue.

Though wishful to avoid any controversy, we feel that the following facts should be stated:

The principles of the "Stockport scheme" were approved by the National Medical Union in December, 1912, on the following understanding: First, that there should be no panel, but that the services of all practitioners on the Medical Register willing to serve should be available for beneficiaries; and, secondly, that the insurance risks (on the lines of reasonable payment per visit) should be taken by the Government and county councils, and not by the

profession. We are not aware whether at the present time these conditions are absolutely adhered to by those who are furthering the scheme.

Moreover, the National Medical Union is now a reorganized body, consisting of members united to oppose service under the Act as it now stands, and its attitude towards the "Stockport scheme" has not again been considered.—We are, Sir, your obedient servants,

WILLIAM COATES, *Chairman*.

J. SKARDON PROWSE, *Honorary Secretary*.

National Medical Union Offices, 5, John Dalton Street, Manchester.

Dr. LIONEL JAS. PICTON (Holmes Chapel) writes: In your report of a recent meeting of friendly society representatives and doctors in Macclesfield to consider this scheme it was correctly stated that the principles of the scheme had not only been approved by the State Sickness Insurance Committee, but also endorsed by the National Medical Union. Dr. Brassey Brierley in his letter which you printed last week takes exception to this. Does he forget that after very careful examination by a subcommittee, and slight modification, the scheme was submitted by the general committee to a postcard referendum of the National Medical Union members, and as over 90 per cent. of the replies received were favourable, it was sent under the heading, "Proposals by the National Medical Union" to every Representative, to the members of Council, to every member of both Houses of Parliament, to every secretary of a British Medical Association Division, etc.? Dr. Brierley speaks of the endorsement by the union of the National Deposit Friendly Society's principle. I think, however, if he will refer to the archives of the Union he will find that the general committee last spring adopted a report in which the principle of that society was examined, and though approved in some respects, was condemned on the ground that it afforded no real insurance. The policy of the National Medical Union is now not the same as it was when the actions I have mentioned were taken; but these remain on record, and the secretary, Mr. Webster Watts, cannot be open to criticism if he refer to them.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

The Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,
Medical Secretary.

February 4th, 1913.

ELECTION OF COUNCIL, 1913-14.

NOTICE is hereby given that nominations for a candidate for election as a Member of Council by the South Australian, Victorian, Western Australian, and Tasmanian Grouped Branches for a period not exceeding three years as prescribed by By-law 49 (2) must be forwarded so as to reach me not later than Thursday, May 1st, 1913.

Nominations must be made by any three Members of the grouped Branches, in the form prescribed below.

Election will be by voting papers, and these will contain

the names of all duly nominated candidates, and will be issued by me.

By Order of the Council,

A. E. R. WHITE,
Honorary Secretary, Victorian
Branch, and Returning Officer.

88, Spring Street, Melbourne.

March 8th, 1913.

SOUTH AUSTRALIAN, VICTORIAN, WESTERN AUSTRALIAN, AND TASMANIAN BRANCHES.

NOMINATION FORM.

BY NOT LESS THAN THREE MEMBERS OF THE GROUPED
BRANCHES.

We, the undersigned, hereby nominate

.....
of.....
.....

as a candidate for election by the South Australian, Victorian, Western Australian, and Tasmanian Grouped Branches above named as a member of the Council of the Association.

Names and addresses of nominators, and Branches to which they belong.

| Name. | Branch. |
|-------|---------|
| | |
| | |
| | |

This form should be returned to Dr. A. E. R. White, 88, Spring Street, Melbourne, not later than Thursday, May 1st, 1913.

NOTICES OF ALTERATION OF AREAS OF BRANCHES AND DIVISIONS.

THE following changes have been made in accordance with the Regulations of the Association, and take effect from the date of publication of these notices:

(1) *East Anglian and Metropolitan Counties Branches: Mid-Essex, South Essex, and Stratford Divisions.*

That the area of the Stratford Division of the Metropolitan Counties Branch be re-defined, to be as follows:

County Borough of West Ham, Municipal Borough of East Ham, Urban Districts of Barking Town, Ilford (except Claybury Asylum) and Romford, and Rural District of Romford;

and that the areas of the East Anglian and Metropolitan Counties Branches, and of the Mid and South Essex Divisions of the East Anglian Branch, respectively, be adjusted accordingly.

Representation in Representative Body: Unaffected.

(2) *Bromley and Croydon Divisions of South-Eastern Branch.*

That the Urban District of Penge be transferred from the Croydon to the Bromley Divisional area.

Representation in Representative Body: Unaffected.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held at the Manor Lodge, Upper Clapton (by invitation of Dr. C. F. Haddfield), on Tuesday, March 11th, at 9.30 p.m. (Clinical evening: Cases and discussion. Members desiring to show cases or read short abstracts are requested to notify the Honorary Secretary by March 8th.—A. G. SOUTHCOMBE, 83, Sidney Road, Homerton, N.E.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—The next meeting of the Division will be held in the Wesleyan Church Schoolroom, Leyton High Road, on Thursday, March 13th, at 4 p.m. (1) Minutes. (2) Correspondence. (3) Lantern Demonstration, Surgical Affections of the Tongue, by J. Howell Evans, M.A., F.R.C.S., Assistant Surgeon, Cancer and Tumour Hospital. (An exhibition of coloured drawings illustrating lesions of the tongue will be on view half an hour before the demonstration.) (4) Any other business.—A. PORTINGER ELDRED, Honorary Secretary.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—It has been found necessary again to alter the date of the demonstration arranged by the Newcastle-on-Tyne Division to March 23th, when Professor R. A. Bolam will lecture on Medico-legal Tests for Blood.—R. J. WILLAN, Honorary Secretary, 25, Ellison Place, Newcastle-on-Tyne.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—Sir James Barr, President of the Association, will deliver an address on Rheumatic Arthritis and Its Treatment, at the Subscription Library, Sunderland, on March 14th, at 4 p.m. The annual dinner of the Division will be held the same evening at the Grand Hotel, Sunderland, at 7 p.m.—I. G. MODLIN, Honorary Secretary, 148, Roker Avenue, Sunderland.

Meetings of Branches and Divisions.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

A MEETING of the whole profession resident in the area of the above Division was held at the Surrey Masonic Hall on February 27th, at 4 p.m., to consider the position of the medical officers of the Camberwell Borough Council Employees Sick Benefit Society, who had been dismissed when they requested the advance of the capitation fee from 4s. per member to 8s. 6d. Dr. CAPES was in the chair, and announced that a warning notice had been placed in the JOURNAL as to the above appointments, and that a letter had been sent to the Town Clerk protesting against the fact that a circular letter had been sent to the local profession inviting them to make tenders for the posts. After the matter had been fully discussed the following resolution was unanimously carried:

That this meeting pledges itself not to apply for any of the appointments resigned, and will furthermore do all in its power to dissuade any other practitioner from doing so.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

ALNWICK INFIRMARY.—House-Surgeon. Salary, £140 per annum.
BARNSTABLE: NORTH DEVON INFIRMARY.—House-Surgeon. Salary, £100 per annum.
BEDFORD COUNTY HOSPITAL.—House-Surgeon (male). Salary, £100 per annum.
BELGRAVE HOSPITAL FOR CHILDREN. Clapham Road, S.W.—(1) Assistant Physician. (2) Junior Resident Medical Officer (male). Salary at the rate of £40, increasing to £60 on appointment as Senior.
BIRKENHEAD: BOROUGH HOSPITAL.—(1) Senior House-Surgeon; (2) Junior House-Surgeon. Salary, £100 and £80 per annum respectively.
BIRKENHEAD UNION.—Senior Male Resident Assistant Medical Officer. Salary commencing at £130 per annum.
BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Third House-Surgeon. Salary, £75 per annum.
BIRMINGHAM AND MIDLAND FREE HOSPITAL FOR SICK CHILDREN.—Resident Surgical Officer. Salary at the rate of £80 per annum.
BIRMINGHAM CITY HOSPITAL.—Assistant Resident Medical Officer. Salary, £150 per annum.
EBECON AND RADNOR ASYLUM, Talgarth.—Assistant Medical Officer. Salary, £170 per annum.
BRIGHTON COUNTY BOROUGH.—Tuberculosis Officer. Salary, £500 per annum.
BRISTLINGTON HOUSE PRIVATE ASYLUM, near Bristol.—Junior Resident Medical Officer. Salary commencing at £160.
BRISTOL EYE INFIRMARY.—House-Surgeon. Salary, £80 per annum.
BRISTOL GENERAL HOSPITAL.—Honorary Physician or Surgeon to the Throat and Ear Department.
BRISTOL ROYAL INFIRMARY.—(1) Obstetric and Ophthalmic House-Surgeon. Salary at the rate of £75 per annum. (2) Honorary Surgical Registrar.

LOCAL MEDICAL COMMITTEES.

MIDDLESEX.

The Local Medical Committee for the County of Middlesex has been recognized; it is constituted as follows:

- | | |
|---|--|
| <p>Dr. E. Ward Lowry, Brentford, <i>Chairman</i></p> <p>Dr. H. Priest Shanks, 59, Abbott's Road, Southall, <i>Honorary Secretary</i></p> <p>Dr. Gilbert French, Chiswick</p> <p>Dr. Bott, Brentford</p> <p>Colonel Barrow, Ealing</p> <p>Dr. James West Ealing</p> <p>Dr. Hope, Hanwell</p> <p>Dr. Shuter, Chiswick</p> <p>Dr. Woodbridge, Acton</p> <p>Dr. Soden, Brondesbury</p> <p>Dr. Macevoy, Brondesbury</p> <p>Dr. Felce, Brondesbury</p> <p>Dr. Skene, Willesden</p> <p>Dr. Camps, Teddington</p> <p>Dr. Christian, Hounslow</p> <p>Dr. Haslett, Sunbury</p> <p>Dr. Morris, Feltham</p> | <p>Dr. Davidson, Uxbridge</p> <p>Dr. Bluett, Harrow</p> <p>Dr. Williams, Harrow</p> <p>Dr. Hatch, Pinner</p> <p>Dr. Hicks, East Finchley</p> <p>Dr. Baron, Child's Hill</p> <p>Dr. North, New Southgate</p> <p>Dr. Fuller, Crouch End Hill</p> <p>Dr. Brackenbury, Finsbury Park</p> <p>Dr. Barnes, Tottenham</p> <p>Dr. Plaister, Tottenham</p> <p>Dr. Burton, Lower Edmonton</p> <p>Dr. Shaw, Upper Edmonton</p> <p>Dr. Distin, Enfield</p> <p>Dr. Tresilian, Enfield</p> <p>Dr. Porter, Wood Green</p> <p>Dr. Wood, Wood Green</p> <p>Dr. Bower, Hendon</p> <p>Dr. G. W. H. French, Hornsey</p> |
|---|--|

At a meeting on March 6th the following resolutions were adopted:

1. That due notice be given to all insured persons who have not yet chosen their doctor that they must do so by a given date or apply to contract out.
2. That no moneys of persons who have made application to "make their own arrangements" should be dealt with in allocating the capitation fees of those insured persons who have not selected a doctor on the panel.

Three members were elected to the Medical Service Subcommittee of the Middlesex Insurance Committee as follows—Drs. Haslett, G. W. H. French, and Williams.

BERKSHIRE.

The fourth meeting of the Berkshire Local Medical Committee was held at the Royal Berks Hospital on February 6th, 1913, when nine members were present.

The HONORARY SECRETARY read a letter from the Insurance Commissioners, stating that they would recognize the Local Medical Committee as elected for a year, and also that Drs. P. Napier Jones and N. H. Joy had been duly elected on the Berks Insurance Committee.

The question of a homoeopath dispensing his own drugs for insurance patients, as the local chemists were unwilling to do so, was referred back to the Medical Service Subcommittee.

The Honorary Secretary was instructed to send the following resolution to all the doctors on the Berkshire panel:

That doctors on the panel shall not treat insured persons who have migrated (temporarily or permanently) from another district, except as private patients, until the doctor has received a notification from the Insurance Committee of the county that such person has been transferred to his list.

The medical members of the Insurance Committee were requested to bring forward the following motion at the next meeting of the Insurance Committee:

That when a person whose average yearly income from all sources exceeds £104 has been refused by the doctor of his choice on these grounds, he shall be called upon to make his own arrangements for medical benefit.

Dr. Gordon Paterson was elected on the Medical Service Subcommittee, the other members of which are Drs. P. Napier Jones, N. H. Joy (Honorary Secretary of the Local Medical Committee), Munro, C. S. Patterson.

BUCKINGHAMSHIRE.

A MEDICAL COMMITTEE has been formed for the County of Buckingham, and has been recognized by the Commissioners. It has held meetings at Aylesbury on January 30th and February 25th. Dr. Arthur E. Larking (Buckingham) is acting as secretary until the end of the quarter, when permanent arrangements will be made. The Committee has adopted and forwarded to the

County Insurance Committee resolutions on the following matters:

That any medical man resident in the county, whether on the panel or not, be eligible to serve on this Committee.

That the Local Medical Committee send up a request to the Insurance Committee that the income limit for the county should be fixed at £2 10s. a week from all sources.

That the fee for attending midwifery cases should always be a matter of arrangement between the patient and the doctor. That the statutory monetary grant should be guaranteed by the approved societies, and the doctor be assured that he gets the fee. That the fee of 15s., fixed by the Commissioners to be paid to a doctor when called in by a midwife, is not sufficient.

That the model rules for insured persons should be adopted by the Insurance Committee and a copy supplied to each insured person and to each medical man.

That the Insurance Committee be asked to notify in the press and otherwise the necessity of each insured person selecting a doctor at once, and that the secretaries of societies be requested at the end of the quarter to notify each insured person that those who have not already been accepted and placed on a doctor's list should intimate to him in writing the name of the doctor they wish to be attended by.

That the Tuberculosis Medical Officer and the Clerk to the Insurance Committee be asked to issue a memorandum as to what arrangements have been made with regard to tuberculosis cases in the County.

That to meet the cases of removal of insured persons from one part of the county to another part, or to another county, the "give and take" principle be adopted for one year.

That, as a rule, domestic servants and employees should be on the list of the doctor who practises at their home address.

That the Drug Tariff be accepted and signed by Chairman and Secretary.

That, with reference to the granting of certificates, the Bucks Local Medical Committee will advise the practitioners of the county not to sign future agreements with the Insurance Committee except on the understanding that the Approved Societies will require, in respect of each patient, only one "on" and one "off" certificate in addition to the initialling of the weekly continuation certificate. This Medical Committee also presses for a uniform simple type of certificate to be adopted by all societies. All further certificates shall be paid for.

That it be a recommendation to the Insurance Committee to appoint a consultant, to whom all cases of suspected malingering can be referred, and that his fees be paid by the Insurance Committee.

That if any insured person has consulted or placed themselves under the treatment of a bonesetter or other unqualified person, the medical man in attendance should refuse to sign any certificates.

The committee at its meeting on January 30th made a remonstrance with regard to the amount of clerical work, and informed the Insurance Committee that the medical men could not again undertake it.

With regard to the right of chemists to dispense, the Medical Committee has been informed by the Clerk to the Insurance Committee as follows:

1. That a chemist has a right to dispense in all urban districts.
2. That with regard to areas outside urban districts they have a right to dispense where the insured person is resident within one mile of the place of business of the chemist.
3. That outside the above areas the medical practitioners are entitled to dispense.

The distance is to be calculated by the carriage road.

Drs. Baker and Dunbar Dickson have been elected representatives of the profession on the County Insurance Committee.

With regard to the expenses of the committee, it was resolved to invite each medical man on the panel for the county to contribute one farthing for each patient on his list to cover the expenses of the first quarter; it was also suggested that the third-class railway fares of members attending the committee should be paid.

The committee will meet at 2.45 on each Friday previous to the meeting of the County Insurance Committee.

COUNTY OF BEDFORD.

At a meeting of the practitioners of the county, held at the Bedford County Hospital on December 12th, 1912, the following twenty-five practitioners were elected to represent them on the County Medical Committee, with power to co-opt additional members to the number of three:

Bedford (7 Members).

| | |
|-----------------|---------------|
| A. F. Goldsmith | B. C. Roberts |
| A. C. Hartley | B. J. Ross |
| H. D. Pollard | W. A. Sharpin |
| A. S. Phillips | |

Luton (7 Members).

| | |
|---------------|--------------------|
| J. W. Bone | J. Robertson |
| A. Hamilton | W. D. Rose |
| F. S. Lloyd | W. G. H. M. Verdon |
| J. M. O'Meara | |

Rural Districts (11 Members).

| | |
|--------------------------------|-----------------------------|
| G. Butters, Kempston | T. D. Holmes, Woburn Sands |
| J. G. Durran, Leighton Buzzard | J. Rollings, Leagrave |
| G. F. Dixon, Potton | W. K. Parbury, Sharnbrook |
| W. L. Garner, Ampthill | A. E. Street, Cranfield |
| K. Roberts, Shillington | J. Waugh, Toddington |
| | C. E. Winckworth, Shefford. |

A meeting of the Medical Committee was held at the Bedford County Hospital on December 31st, 1912, when the following officers were elected:

Chairman, Dr. J. W. Bone
Honorary Treasurer, Dr. S. J. Ross
Honorary Secretary, Dr. F. S. Lloyd.

The second meeting of the Medical Committee was held at the Bedford County Hospital on January 9th, Dr. J. W. Bone in the chair.

Finance.—The CHAIRMAN announced that as no arrangements were made under the Act to finance the Medical Committees, the formation of a sufficient fund was necessary to pay for: (1) Travelling expenses of members; (2) printing and stationery; (3) postage; (4) hire of rooms for meetings when necessary. It was decided that this end might be best met by a voluntary levy of $\frac{1}{2}$ per cent. (10s. in every £100) of the receipts of each practitioner from his panel work, and it was suggested that it would greatly facilitate matters if such a levy could be collected "at the source." The Honorary Secretary was empowered to circularize every panel practitioner in the county to this effect, and to request an early reply on a form enclosed.

The Duties and Powers of the Medical Committee.

The CHAIRMAN read a paper on the duties and powers of the Medical Committee under the Act, and it was agreed unanimously that the paper be printed and a copy sent to every practitioner in the county. The following recommendations of the Committee to the County Insurance Committee were then formulated:

1. *Income Limit.*—That there be an income limit of £2 per week, with "the right to challenge."

2. *Rules for the Administration of Medical Benefit.*—That the model rules be adopted by the Committee with the inclusion of the following additions:

Rule (e) to read: He shall not summon the practitioner to visit him between the hours of 6 p.m. and 9 a.m., except in cases of serious emergency.

Rule (f) to read: He shall, when his condition requires a home visit, give notice to the practitioner, if the circumstances of the case permit, before 10 a.m. on the day on which the visit is required.

The meeting was also strongly of opinion that there should be no consultations at the surgery on Sundays.

Recognition of Committee.—Formal application was made to the Commissioners for the recognition of the Committee, and a reply was received dated February 8th, granting temporary recognition until April 30th, 1913, and questioning the sufficiently representative constitution of the Committee as elected, on the ground that the eastern part of the county was not adequately represented, no representative having been appointed for Stotfold, Arlesey, Langford, and Biggleswade.

At a meeting of the Committee held at the County Hospital, Bedford, on March 6th, the reply of the Commissioners was discussed, and the Secretary was empowered to answer the Commissioners' letter to the following effect:

1. That in the opinion of the meeting, the constitution of the Committee, as elected, was sufficiently representative.

2. That owing to the power of the Committee to co-opt additional members to the number of three, it was thereby prepared to consider the claim of any area or locality which was of opinion that it had not received adequate representation on the Committee.

3. With regard to the eastern part of the county—

(a) In the case of Biggleswade, the Chairman had some days before written to one of the medical men practising there suggesting that the three medical men resident in Biggleswade should meet and choose a representative, notifying the fact to the next meeting of the Committee, who would take steps to co-opt him as a member. No reply being forthcoming, it would appear that the medical men

of Biggleswade are not enthusiastic for special representation.

(b) In the case of Arlesey, three out of the four medical men are whole-time officers of the Three Counties Asylum.

(c) In the case of Stotford and Langford, no medical man is resident in either locality.

Taking these circumstances into consideration, the Commissioners were requested—

1. To accept the present constitution of the Committee as adequately representative of the practitioners of the county.
2. To grant it permanent recognition.

County Insurance Committee.—A letter was read from the Commissioners announcing that Dr. J. W. Bone was formally elected Medical Representative on the County Insurance Committee, but that the nomination of Dr. A. Staunbury Phillips was invalid owing to insufficiency of signatures. The Commissioners, however, were prepared, at the request of the Secretary, to recognize Dr. Phillips as their own nominee for a period of five weeks, after which the Medical Committee could appoint him as their second representative. Dr. Staunbury Phillips was then elected by unanimous vote of the Committee. The Committee recommended to the Commissioners Dr. J. Rollings of Legrave to fill Dr. Phillips's place as their own nominee.

Medical Service Subcommittee.—The following were elected to serve on the Medical Service Subcommittee:

Dr. S. J. Ross.
Dr. T. D. Holmes.
Dr. H. Sworder.

The subcommittee (Drs. J. W. Bone and S. J. Ross) presented a list of operations to be undertaken under the Act by panel doctors, and the medical members were requested to present it to the County Insurance Committee with a view to its adoption as the official list for the county.

Finance.—The CHAIRMAN announced that 73 of the 95 medical men on the county panel had signified their willingness to contribute to the levy, and that doubtless many of the remainder would reply similarly; the County Insurance Committee be requested to collect the sum "at the source."

Mileage for Country Practitioners.—After considerable discussion, a decision on this question was deferred to the next meeting of the Division.

Panel Pharmacopoeia.—Dr. S. J. Ross announced that he had been approached by a firm of chemists with regard to the formation of a panel pharmacopoeia for the county. He had replied that it was for the medical men to decide this point rather than the chemists. In the discussion which followed Drs. H. P. POLLARD, J. WAUGH, J. G. DURRAN, and the CHAIRMAN took part. The general feeling appeared to be against the formation of a panel pharmacopoeia, but no decision was reached.

BOURNEMOUTH.

A LOCAL Medical Committee was elected at an open meeting of the practitioners of Bournemouth, held on December 20th, 1912. It was decided that the Committee should consist of fifteen members, with power to add to their number, and that the Committee and officers be elected for the year 1913. At the end of 1913 one third of the members of the Committee should retire, but should be eligible for re-election.

Of those originally elected, Drs. E. C. Bond and B. W. Nankivell resigned, after the decision of the meeting, held on December 28th, to work the Act; Dr. W. Johnson-Smyth, who was co-opted by the Committee, resigned for the same reason. Dr. H. G. Lys, who was elected to fill one of the vacancies, has also resigned. The Committee is now constituted as follows:

| | |
|--|----------------------|
| Dr. A. Heygate Vernon, <i>Chairman</i> | Dr. W. Davidson |
| Dr. E. M. Hyla Greves, <i>Vice-Chairman</i> | Dr. F. C. Forster |
| Dr. C. R. Willans, <i>Honorary Secretary</i> | Dr. F. Fowler |
| Dr. W. Alexander | Dr. H. P. Jervis |
| Dr. F. C. Bottomley | Dr. T. Martland |
| Dr. C. W. Branson | Dr. A. G. S. Mahomed |
| | Dr. F. Winson Ramsay |
| | Dr. H. Simmons |
| | Dr. C. F. Spinks |

The Committee has been formally recognized by the Commissioners as the statutory Medical Committee under the Act. Messrs. A. Heygate Vernon and W. Davidson have been appointed as the representatives of the medical profession on the Bournemouth Insurance Committee.

Messrs. F. Fowler, F. W. Ramsay, and A. H. Vernon have consented to act as the medical members of the Medical Service Subcommittee.

At the last meeting of the Local Medical Committee the difficult question of insured persons who come to Bournemouth as visitors and require treatment was discussed. It was decided to advise the practitioners on the panel to refuse to treat these patients except on an arrangement for payment of fees for attendance.

The Local Medical Committee is calling a meeting of the whole panel for Wednesday, March 19th, at 8.30 p.m., at the Medical Society's Rooms, Bournemouth. Seventy medical men have joined the Bournemouth panel.

ISLE OF WIGHT.

THE Local Medical Committee for the Isle of Wight has been constituted as follows:

Chairman.—Dr. K. W. Ingleby-Mackenzie (Chairman, Isle of Wight Division, British Medical Association) *ex officio*.

Honorary Secretary.—Dr. J. W. Pridmore, 40, George Street, Ryde.

Newport:

Dr. Hutton Castle
Dr. C. J. Thompson
Dr. Stanley Foster
Dr. S. V. H. Underhill

Ryde:

Dr. F. J. Wadham
Dr. P. D. Turner
Dr. L. L. Purton

Cowes:

Dr. G. R. Denton
Dr. T. A. Mayo
Dr. L. P. Gibson

Ventnor:

Dr. H. F. Bassano
Dr. R. J. Roberts

Shanklin:

Dr. J. L. Jeaffreson
Dr. J. Hammond

Sandown:

Dr. H. M. Barker
Dr. R. W. Collis

Rural Districts:

Dr. W. J. Jolliffe
Dr. R. H. Armstrong
Dr. E. F. Potter
Dr. S. L. O. Young,

together with Dr. G. Benington Wood (Sandown) and Dr. J. D. Davies (Ryde), members of the Isle of Wight Insurance Committee.

A permanent deputation of representatives of the various districts was appointed as follows:

| | |
|--------------------------|---------------------------------|
| Newport: Dr. Thompson | Rural Districts: Drs. Jolliffe, |
| Ryde: Dr. Pridmore | Armstrong, Potter, S. L. O. |
| Cowes: Dr. L. P. Gibson | Young |
| Ventnor: Dr. Roberts | Isle of Wight Insurance Com- |
| Shanklin: Dr. Jeaffreson | mittee: Drs. J. D. Davies, |
| Sandown: Dr. Collis | G. B. Wood |

Drs. J. D. Davies, G. B. Wood, and J. W. Pridmore have been elected to represent the Local Medical Committee on the Medical Service Subcommittee.

A meeting of the Local Medical Committee was held at Ryde on March 4th; the proceedings of a meeting of the Permanent Deputation with the Finance Subcommittee of the Isle of Wight Insurance Committee on February 20th were reported.

The Insurance Committee was asked to distribute the disciplinary model rules for administration of medical benefit, recently adopted at a meeting of the Permanent Deputation of this Committee with the Finance Subcommittee of the Isle of Wight Insurance Committee, and the Honorary Secretary was asked to write to the Clerk of the Insurance Committee presupposing that the elected members of the medical profession on that body had been elected members of all subcommittees. Bearing in mind the necessity of frequent meetings, the Committee resolved to ask the Commissioners to defray the expenses incurred by members of this Committee in attending these meetings, including travelling expenses, rent of room, and other attendant expenses. The Secretary was also instructed to inquire whether the Commissioners had drawn up any model rules which could be used as a guide in constituting this Committee on a permanent basis.

EAST SUFFOLK.

MEETINGS of the Committee were held on February 19th and March 4th with Dr. MUIR EVANS (Lowestoft) in the chair.

Medical Service Subcommittee.—The following were elected to serve on this Committee: Drs. Evans, E. Barnes, and T. C. Askin.

Touting for Patients.—It was reported that the Secretary of the Lowestoft Institute was collecting insured medical tickets and taking them to the institute to be signed by the doctors, and the opinion was expressed that this constituted touting. It was decided to protest against this to the Insurance Committee.

Non-insured.—It was agreed that the same fees should be demanded as in Norfolk—namely, 8s. 6d. for adults and 4s. for children up to three children—with the exception of Lowestoft, where persons should be allowed to make their own arrangements.

Itincranes.—The following resolution was sent to the Insurance Commissioners and the Insurance Committee:

That no system for the treatment of visitors can be considered equitable to the profession in connexion with the panel system unless every insured person visiting outside their own insurance area be compulsorily bound to notify their intention of doing so to the Insurance Committee of the area they intend to visit, and that inasmuch as it would be impracticable to enforce this provision the treatment of insured visitors must be met by a separate central fund, and payment be made per attendance upon a fixed scale.

Form of Payment.—It was agreed that after April 15th payment per capita pure and simple be adopted, including the 6d. allowed for domiciliary treatment of tuberculosis.

Allocation of Unassigned Persons.—It was suggested that the doctors in each district be asked to allot these amongst themselves as far as possible, and that any residue left over should be allotted by the Insurance Committee.

Insurance Subcommittee.—The Committee decided to ask the Insurance Committee to allow two doctors to serve on the above Committee, and nominated Dr. E. Barnes and Dr. Evans.

Mileage.—It was decided to collect evidence of excessive distances and difficult country, and to press the case before the Insurance Committee to obtain payment for such for the country practitioner.

NORTH RIDING OF YORKSHIRE.

The statutory Local Medical Committee for the North Riding of Yorkshire has been formed as follows, and has been recognized by the Insurance Commissioners:

| | |
|--|---|
| Dr. Robert Cuff, J.P., C.C., <i>Chairman</i> , Scarborough | Dr. Murray, Scarborough |
| *Dr. Mills, <i>Honorary Secretary</i> , The Old Vicarage, Easing- wold | Dr. Giles, Scarborough |
| Dr. Hume, Aysgarth | Dr. Fawcett, Thornaby-on- Tees |
| Dr. Woodsend, Catterick | Dr. Godfrey, Scarborough |
| Dr. Meade, Flaxton | Dr. Scott, J.P., Thornton Dale |
| Dr. Shand, Guisborough | Dr. Mitchell, Topcliffe, near Thirsk |
| Dr. Tetley, Kirbymoorside | Dr. Dougall, Welburn, near York |
| Dr. de Mirimonde, Malton | Dr. Candler - Hope, West Ayton |
| *Dr. Baigent, Northallerton | Dr. Ross, Whitby |
| Dr. McKinley, Coatham | |
| Dr. Eyres, Richmond | |

* Practitioners' representative on the National Insurance Committee, North Riding of Yorkshire.

In the letter recognizing the Committee the Commissioners state that the recognition will hold good until October 31st, and have asked that before the end of that time a scheme for constituting the committee on a permanent basis may be formulated and submitted to them.

NORTH LANCASHIRE.

At a largely attended meeting of the medical men resident in Lancashire Area No. 2, held at Lancaster on January 7th, it was decided to form a Local Medical Committee, to consist of twelve members, to be elected in proportion to the numbers of insured persons in the various parts of the area. The Committee was constituted as follows:

| | |
|---|-------------|
| Dr. F. H. Oldham, <i>Chairman</i> | Dr. Parker |
| Dr. William George, <i>Honorary Secretary</i> | Dr. Ashton |
| Dr. Barrow | Dr. Hogarth |
| Dr. Edmondson | Dr. Barwick |
| Dr. Gibson | Dr. Falkner |
| Dr. Mannix | Dr. Jackson |

At the first meeting of the Committee, held on February 7th, Dr. Oldham was elected representative on the Local Medical Committee for the County. He was also nominated for the Lancashire Insurance Committee.

It was decided to write to the Lancashire Insurance Committee, pointing out, in view of the approach of the Easter holidays, the urgent necessity of an early settlement with regard to the treatment of insured persons temporarily resident in the area.

It was decided to offer to attend all members of friendly societies, over 65 years of age, and all other members, who were members prior to June 30th, 1912, and who for various reasons were uninsured under the Act on the

following terms: (1) 8s. 6d. per member per annum; (2) free choice of doctor. It was further decided that no clubs in the area be accepted except through the Local Medical Committee and on the above terms.

At a further meeting held on March 6th it was decided to recommend all medical men practising in the area: (1) When issuing certificates for medical benefit under the Act to use only the forms supplied by the Lancashire Insurance Committee; and, further, to charge for all certificates for private clubs at a rate of 6d. per certificate. (2) In accordance with the proviso attached to their agreement to work the Act for the first three months, to treat insured persons only temporarily resident in the area as private patients only, until such time as satisfactory arrangements are made for their treatment as insured persons by the Commissioners.

After a discussion on the question of the inclusion of the families of workmen at the Iron Works at Carnferth in a club, it was recommended that the same should be attended at a rate of 8d. per fortnight with free choice of doctor, and that after the medical men in the area had been communicated with and their assent to the proposed terms obtained, the offer should be forwarded to the sick club at Carnferth. The Honorary Secretary subsequently received the assent of all the medical men, and has acted in accordance with the Committee's instruction.

The Honorary Secretary was instructed to write to every medical man in the area, and request him to supply a list of all those insured persons accepted by him for treatment who reside outside the three-mile limit, giving in every case the distance of the insured person's residence from that of the nearest practitioner, such lists to be used as evidence in support of the Committee's claim to a grant from the Special Mileage Fund.

NEWPORT.

The following members were elected on the Newport (Mon.) Local Medical Committee, which has recently been given statutory powers by the Welsh Insurance Commission:

| | |
|--|---------------------------|
| O. E. B. Marsh, M.R.C.S., <i>Chairman</i> | Reginald Brewer, M.R.C.S. |
| S. Hamilton, M.D., D.P.H. (184, Commercial Road, Newport (Mon.), <i>Honorary Secretary</i> | J. F. Neville, L.R.C.S. |
| J. Lloyd Davies, M.R.C.S. | T. M. Thomas, M.D. |
| J. Hurley, L.R.C.S. | W. J. Greer, F.R.C.S.I. |
| J. Cook, M.R.C.S. | C. B. Gratte, M.R.C.S. |
| J. Lane, M.B. | T. G. Lewis, M.B. |
| | W. M. James, M.R.C.S. |
| | W. Bassett, M.R.C.S. |

COUNTY OF GLAMORGAN.

The Local Medical Committee formed for the county of Glamorgan has been recognized by the Welsh Insurance Commissioners for the year 1913. The committee was chosen to represent the insurance areas into which the county is divided and is constituted as follows:

| | |
|--|--|
| Dr. W. E. Thomas, Ystrad, <i>Chairman</i> | Dr. D. J. Thomas, Nantymoel |
| Dr. J. Shaw Lyttle, Creigiau, <i>Honorary Secretary</i> | Dr. E. J. Parry, Pontycymer |
| Dr. T. E. Llewellyn, Peny- graig | Dr. R. M. Moyuan, Cowbridge |
| Dr. D. Naunton Morgan, Gil- fach Goch | Dr. C. Reidy, Bargoed |
| Dr. Jeanan G. Thomas, Hir- wain | Dr. T. W. Thomas, Caerphilly |
| Dr. Arthur T. Jones, Mountain Ash | Dr. J. P. T. Burke, Briton Ferry |
| Dr. A. J. Griffith, Abercynon | Dr. E. Vernon Pegge, Briton Ferry |
| Dr. A. Lloyd Jones, Mumbles | Dr. J. M. Morris, Neath |
| Dr. J. Owen, Cwmilynell | Dr. W. Bickerton Edwards, Seven Sisters |
| Dr. Trafford Mitchell, Gors- eimon | Dr. Howard Davies, Ponty- pridd |
| Dr. P. J. O'Donnell, Barry | Dr. J. Morgan Rees, Pontypridd |
| Dr. W. J. M. Barry, Penarth | Dr. W. Naunton Davies, Llan- trisant |
| Dr. John Arthur, Llandaff | Dr. Walter Kirkby, Maesteg |
| | Dr. Henry Davies, Blaengwynfi |
| | Dr. J. Arnall Jones, Aberavon |

At a meeting of the Committee, held on February 8th, a subcommittee, consisting of Drs. Pegge, O'Donnell, D. N. Morgan, J. Morgan Rees, W. N. Davies, with the Chairman and Secretary, was appointed. This subcommittee met the Insurance Committee on February 26th, when various matters were discussed, including steek mixtures, of which the Local Medical Committee did not approve; the supply of dressings and emergency drugs and the supply of dressings for patients being treated at their own homes and in cottage hospitals; canvassing by doctors and the representatives of approved societies; an income limit and certificates.

ROXBURGH.

A MEETING of the Committee was held at Newtown St. Boswells on March 5th, being convened in accordance with the regulations of the Insurance Commissioners for Scotland. Dr. W. L. CULLEN, St. Boswells, presided.

The SECRETARY read the minutes of the last meeting, on January 10th, and the regulations of the Insurance Commissioners for the election of a Local Medical Committee. The meeting then proceeded to constitute the Local Medical Committee in accordance with the provisions of the regulations, and adopted a constitution. Dr. W. L. Cullen was elected Chairman, Dr. Oliver (Hawthornedene, St. Boswells), Honorary Secretary (*pro tem.*), and the election of Drs. S. Davidson, C. J. W. Dixon, William Blair, R. E. Evans, A. Rodgers, and J. Carlyle-Johnstone at the previous meeting as an Executive Committee, was ratified.

The SECRETARY then read the regulations regarding the appointment of representatives on the County Insurance Committee; and the meeting ratified the election of Drs. A. D. Fleming and C. J. W. Dixon, made at the previous meeting.

The meeting considered a letter from the County Insurance Committee referring to complaints that had been made of the conduct of practitioners, and instructed the Secretary to reply.

The agenda for a conference to be held between the Medical Benefit Subcommittee and the Local Medical Committee was considered.

ELGIN AND NAIRN.

At meetings of the medical practitioners resident in Elgin and Nairn on December 31st, 1912, and January 15th, 1913, the following were elected to the Local Medical Committee:

| | |
|---|---------------------------------|
| Dr. Taylor, Elgin, <i>Chairman</i> | Dr. Hutchison, Grantown-on-Spey |
| Dr. James A. Stephen, Murrayfield, Elgin, <i>Honorary Secretary</i> | Dr. Rennie, Forres |
| Dr. Alexander, Elgin | Dr. Millar, Forres |
| Dr. Campbell, Elgin | Dr. Lee, Nairn |
| Dr. Brander, Lossiemouth | Dr. Johns, Nairn |

The committee has been recognized by the Scottish Commissioners provisionally till March 31st, 1913.

A statutory meeting of the duly-qualified medical practitioners in Elgin and Nairn was held in Elgin on February 15th, for the purpose of electing two representatives to serve on the Insurance Committee for Elgin and Nairn, when Dr. Taylor and Dr. Stephen were unanimously elected. The constitution and procedure of the Local Medical Committee as suggested by the Insurance Commissioners for Scotland, was formally adopted, and it was also agreed to form an association to be called the Practitioners' Association of Elgin and Nairn, for the purpose of dealing with matters concerning the Insurance Act.

Model rules for the conduct of insured persons, etc., were submitted and were agreed to, with the suggestion of an additional rule, namely:

Insured persons shall not summon a practitioner to visit him or her, and shall not attend at his surgery, on Sundays unless in cases of urgent necessity.

The Secretary was instructed to request the Local Insurance Committee to supply copies of these model rules to each insured person.

Drs. Taylor and Stephen (Elgin) and Dr. Brander (Lossiemouth) have been unanimously elected by the Local Medical Committee to the Medical Service Subcommittee of the Local Insurance Committee.

MEETINGS OF INSURANCE COMMITTEES.

LONDON INSURANCE COMMITTEE.

THE fortnightly meeting of the London Insurance Committee was held on March 5th.

Payments on Account to Medical Practitioners.

The Committee approved payments on account to medical practitioners at the rate of 9d. per insured person for the period ending February 28th. As 800,000 insured persons had been accepted by practitioners on the panel the sum to be expended would be £30,000.

Medical Members of the Committee.

It was reported that Mr. E. B. Turner and Dr. Evan Jones had been elected under Section 59 (2) (c) of the Insurance Act by the qualified medical practitioners resident in the county, to serve on the Insurance Committee, and that the Insurance Commissioners, under Section 59 (2) (c) of the Act, had appointed Mrs. Florence Willey, Dr. Lauriston E. Shaw, and Dr. H. H. Mills to be members of the Committee.

Constitution and Powers of the Medical Service Subcommittee.

Pending the receipt of a communication from the Insurance Commissioners as to the reference to the Medical Service Subcommittee of questions arising between insured persons and chemists, the Committee decided that the constitution and powers of the subcommittee be as follows:

The subcommittee shall consist of:

- (i) Three persons to be appointed by and from the members of the committee who represent insured persons.
- (ii) Three persons to be appointed by the Local Medical Committee, or if no Local Medical Committee exists, by the practitioners on the panel; and
- (iii) A chairman to be selected from those members of the committee appointed respectively by the London County Council and by the Commissioners, who are neither insured persons nor practitioners, the selection to be made by the six persons appointed as above-mentioned, or in default of selection being made by those persons, by the members of the committee appointed respectively by the London County Council and by the Commissioners;

provided that if in the opinion of the chairman any member of the Medical Service Subcommittee is interested, or in the case of a practitioner is partner or assistant to a practitioner interested in a question referred to it, that member shall take no part in the hearing thereof, but another member shall be appointed in the manner aforesaid by the persons by whom that person was appointed.

The subcommittee shall consider and report upon every question arising between an insured person and a practitioner attending him under arrangements made by the Committee in respect of the treatment rendered by the practitioner, or the conduct of the insured person while receiving that treatment, and upon any other question referred to them by the Committee arising with reference to the administration of medical benefit.

Powers of District Insurance Committees.

The Insurance Commissioners having approved a revised scheme for the appointment and constitution of district insurance committees, the Committee approved a report specifying the powers to be exercised by the district insurance committees. The powers comprised: Making investigations into applications for sanatorium benefit in consultation with medical officers of health and practitioners, supplying information to insured persons and issuing forms, and submitting to the Insurance Committee proposals for distribution amongst medical men on the panels of persons who had failed to make any selection or who had been refused by the practitioner whom they selected.

Benefits of Deposit Contributors.

The Deposit Contributors Subcommittee reported that the number of deposit contributors in London was: Men, 42,876; women, 22,220; total, 65,096. The Subcommittee recommended that in the cases of deposit contributors between the ages of 65 and 70 entitled to sickness benefit, the benefit be as follows: If the funds to their credit at the beginning of the year permitted, first thirteen weeks, men 6s., women 5s.; second thirteen weeks, men 5s., women 4s.

A member pointed out that the funds would not permit of anything like the sum suggested by the Subcommittee being paid to deposit contributors who were ill. He asked if the possibility of giving medical benefit as an alternative had been considered.

No answer was given, and the Committee approved the report.

Insured Persons who have not Selected a Doctor.

In connexion with the question of the arrangements to be made in the case of insured persons who had not selected or been accepted by doctors, the Medical Benefit Subcommittee stated that before adopting either of the three alternative methods suggested by the Insurance Commissioners, it had decided to ask the Committee representing the doctors on the panel for its views as to the method it would prefer the Committee to adopt, and

had issued a notice drawing the attention of insured persons to the advisability of arranging for their medical tickets to be signed as soon as possible.

When cases of illness arose amongst persons who had not yet selected their doctor difficulties occurred from time to time, but so far provision had been made for all such cases, and the Subcommittee proposed that medical practitioners who accepted as urgent cases persons requiring treatment in such circumstances should be granted special consideration in connexion with the distribution of the amount available for the doctors on the panel during the first quarter.

Persons Making Their Own Arrangements.

The Committee adopted the following scale of fees to doctors in respect of persons making their own arrangements (Form 431, I.C.):

| | s. | d. |
|--|----|----|
| 1. Attendance at practitioners' residence or surgery | 2 | 0 |
| 2. Visit to patient's residence | 2 | 0 |
| 3. Special visit | 3 | 0 |
| 4. Night visit (between 8 p.m. and 8 a.m.) | 4 | 0 |
| 5. Surgical operation requiring local or general anaesthetic, or case of abortion or miscarriage | 21 | 0 |
| 6. Administration of general anaesthetic | 21 | 0 |
| 7. Setting of fracture— | | |
| (a) Femur | 21 | 0 |
| (b) Others | 10 | 6 |
| (Subsequent attendances at "visit" rate.) | | |
| 8. Reduction of dislocation— | | |
| (a) Hip | 21 | 0 |
| (b) Others | 10 | 6 |
| (Subsequent attendances at "visit" rate.) | | |

The bills of the doctors calculated on this scale would be paid in full if the total amount of the bills did not exceed the total amount available in the pool. If it did, a proportion would be paid on each bill, and the insured person, in the absence of any special arrangements to the contrary, would be liable to the doctor for the payment of the balance.

Aged and Infirm Members of Friendly Societies.

On a report as to arrangements to be made for the treatment of members of approved societies over 65 years of age who were not qualified to become insured persons, Mr. E. B. TURNER said that it was agreed at a conference between the friendly societies and the British Medical Association that in consideration of the doctors undertaking their treatment they should be paid for by the societies at not less than the general insurance rates. There seemed to be an inclination to shirk this and to obtain treatment of these old persons, who were more likely to be invalided, at a lower rate than now paid by the societies. The medical profession regarded it as a matter of honour that the societies should stand by that arrangement.

A member representing the approved societies, replying to Mr. Turner, said that at the time the arrangement he mentioned was made no one had any idea that the agitation of the medical profession would have extracted an extra half-crown from the Government. That half-crown had caused a difficulty. If the doctors, from a sense of good feeling, would take these cases at 6s. the societies would have no objection to doing their part.

The Committee sat *in camera* to consider a report by the Medical Service Subcommittee relative to a complaint in regard to the treatment of an insured person.

BRISTOL.

Appointment of Medical Adviser.

THE Insurance Commissioners have sanctioned the appointment of a medical adviser to the Insurance Committee, to be selected with the advice of the Medical Service Subcommittee. This is regarded as a very important decision, and it is believed that Bristol is the only city that has arranged for such an appointment. The functions of the medical adviser are laid down in a circular letter issued to all medical men on February 25th, and are, briefly, to examine and check any certificate referred to him by the Insurance Committee and to decide in cases of suspected malingering by visiting the insured person at his own discretion or at the request of the Medical

Committee or the Insurance Committee. As the withholding of a sickness certificate might offend a patient and prejudice the future position of the practitioner, the referring of the decision to the medical adviser removes all the onus from the doctor. The adviser's duties are essentially for the safeguarding of the sickness benefit's funds, as with freedom of choice of doctor the societies have no claim on the practitioner to watch their interests. It is particularly pointed out that his duties are not those of a clinical consultant, and have no reference to the treatment of the patient. The Insurance Committee has sought and obtained the services of Dr. Bertram Rogers, who will hold the appointment for three months on certain terms, after which the question of duties and remuneration may be reopened.

AGED AND INFIRM MEMBERS OF FRIENDLY SOCIETIES.

THE friendly societies of Manchester and Salford are evidently feeling acutely the position in which they are placed by the provisions of Clause 15 (2) (e) of the Insurance Act to which reference is made in the letter of the State Sickness Insurance Committee quoted in the SUPPLEMENT last week. The clause in question states that the regulations shall require the adoption by every Insurance Committee of such a system as will secure the provision of medical attendance and treatment on the same terms as to remuneration as those arranged with respect to insured persons for the members of approved societies who were such members on December 16th, 1911, but who, owing to their being over 65 years of age or permanently disabled on July 15th, 1912, were not qualified to become insured persons; and the district secretaries of twelve friendly societies in Manchester and Salford having a membership of over 60,000 have recently adopted a memorandum which has been presented to the Chancellor of the Exchequer, calling his attention to the very serious position in which the societies are placed by this clause. The memorandum states that the societies have been paying for medical benefit at a considerably less rate than the amount which has now been arranged to be paid to the doctors for insured persons under the Act; and it appears that if the difference between the old rate and the new rate must be borne by the societies it will very seriously affect the solvency of their voluntary funds. And, further, if the excess must be made up by the societies it will be very difficult for many societies to comply with Section 72, which insists upon their solvency being absolutely ensured before any further provisions can be made for their members (that is, in the way of additional benefits). The secretaries say that unless something is speedily done to relieve the situation, a severe blow will have been delivered to the voluntary work of the friendly societies, and they express the opinion that some steps should forthwith be taken by the Government to relieve the societies from the serious liabilities which the demands of the doctors have created in respect to their uninsured members, and which many of them are unable to meet or undertake. Similar representations have been made before, and it is probable that the reply of the Government will be that while the doctors on the panels cannot as part of their contract under the Act be compelled to treat the persons in question, except on the same terms of remuneration as those arranged for the insured; on the other hand, the societies are not compelled to offer this amount if they can escape their liabilities or obtain treatment for those persons in a different or a cheaper manner. The fact is that the societies had expressed their willingness to increase the payment for treatment and medicines from the old average of 4s. up to 6s., but when they asked for the embedment of the clause in question into the Act, they never for one moment thought that the British Medical Association would be able to induce the Chancellor of the Exchequer to increase the amount for medical benefit from 6s. to 8s. 6d., and they now practically tell the Chancellor that as his giving way even so far to the doctors has put the societies into a difficulty, he ought to get them out of it by making another grant for their aged and uninsurable members.

REPORTS OF LOCAL ACTION.

LONDON.

INSURED PERSONS MAKING THEIR OWN ARRANGEMENTS.

The Memorandum 143/L.C., together with the attached form 43/L.C., which were printed in the SUPPLEMENT of March 1st, p. 212, and commented upon in an article under this title, published at p. 459 of the same issue, have been considered by the Local Medical Committee, which has passed the following resolutions:

Inasmuch as the signing of Form 43 by medical men is tantamount to joining the panel for a few patients only, medical men should be strongly urged on no account to sign it.

That the London Medical Committee also appoints a Subcommittee to endeavour to define conditions within the four corners of the Act under which proper treatment to insured persons could be given with satisfaction to the medical profession.

IRELAND.

COMMITTEE ON EXTENSION OF MEDICAL BENEFIT.

Final Sitting in Belfast.

The proceedings of the first meeting of the Committee in Belfast were reported in the SUPPLEMENT of last week, p. 242. At the second day's sitting on March 5th the following evidence was taken:

Mr. CHAS. W. GORDON, representing the Derry Chamber of Commerce, and Chairman of the Derry Federation of Benefit Societies, said that the societies numbered 10,000 members from all the workers, without distinction. The demand for doctor and medicine on the weekly payment system was general, and suited an industrial community best. The Act as applied to Ireland put the workers in the position of private patients or of dispensary patients. The workers objected to the newly organized public medical service, as the rates were higher than they had been accustomed to. At present they were attending as dispensary patients or being sent by societies as private patients to doctors. As the sickness average was lower in Ireland and as living was cheaper, it was thought 6s. 6d. in Ireland to the doctor would be the equivalent of 8s. 6d. in England. It was proposed to discriminate between the fairly-paid and the ill-paid labourer; the latter could not afford any taxation; those whose wages were over 12s. weekly should pay 1d. a week; those with wages under 12s. weekly should be allowed to go to the dispensary. Medical benefit was an essential and inseparable part of a National Insurance scheme; without medical advice the approved societies could not discharge their sick fund duties. Even with medical benefits, it would still be necessary to maintain the dispensary system.

Dr. W. J. McNULTY, representing the Londonderry Trades Council, expressed himself in favour of the extension of medical benefits to Ireland, and added that the dependants of the insured persons should be included. The societies should have control of the doctors, and not the Local Insurance Committees; the dispensary system ought to be abolished in towns. A full meeting of the workers of Derry had not been called to express an opinion on the subject. He considered that a man earning £1 a week should not be called upon to pay anything.

The Rev. T. McCOTTER, trustee of the Down and Connor Catholic Benefit Society, which embraced Belfast, part of Down, Antrim, and Derry, and had a membership of 20,000, was in favour of the extension of medical benefit; it would revolutionize the Poor Law dispensary system. The benefit ought to be extended to the dependants of the insured. A respectable but not exorbitant fee (8s. 8d.) should be given to the medical officer. The administration should be in the hands of insurance societies.

Miss GALWAY, Irish Textile Operatives' Society, said there was a general desire that medical benefit should be extended to Ireland. The dependants should be included and the Poor Law medical system abolished, and the money spent on it devoted to the Insurance Act.

Mr. JOHN MURPHY, Secretary to the Belfast Trades Council, said that the council was unanimous in favour of the inclusion of medical benefits, and that, if possible, the dependants should be included. He thought 4s. for the insured and 4s. for the dependants, making a total of 8s.,

would be a proper payment, medicines to be supplied by the chemist. If extended to large cities, he would wipe out the dispensary system in them. The Trades Council felt that the Insurance Act in Ireland would be a dead letter unless medical benefits were extended.

Dr. GEORGE ELLIOTT, Honorary Secretary to the Belfast Division and to the Belfast Medical Guild, asked to be allowed to make a few remarks, but the CHAIRMAN replied in the negative.

Sittings in Dublin.

The committee took evidence in Dublin on March 6th and 7th. The NATIONAL SECRETARY of the Ancient Order of Hibernians said that in the urban districts there was practically a unanimous opinion in favour of the extension of medical benefits to Ireland. The only difference of opinion was that while the officers of the various societies, to secure efficiency and solvency, desired medical benefits, irrespective of whether it included the dependants of the insured, the vast majority of the members of the various societies did not want an increased contribution, unless the dependants were included. As to the rural districts, at least 98 per cent. of the insured persons were entitled to medical treatment under the Medical Charities Act (1851), and these people could not realize the necessity of paying an increased contribution of 1d. per week per insured member to be attended by the same doctor, because in the majority of the rural districts there was only the dispensary doctor. He thought even the employers' opposition would be tempered if the wife and dependants were included in the attendance, as ultimately it would cause a reduction in the cost to them as ratepayers, for supporting the dispensary system, both as regarded the salaries of the doctors and the cost of drugs. In answer to questions, he stated that in the rural districts the people were not in favour of the extension of medical benefits, except in a few, and in those if medical certificates were provided he did not think that the people would be in favour of the extension.

Mr. M. J. O'LEHANE, representing the Parliamentary Committee of the Irish Trades Union Congress and also the Irish Drapers' Assistants' Association, explained the apparent change in Irish opinion, when he said that various public bodies opposed the extension of the Act altogether to Ireland but did not request to have Ireland excluded from medical benefits.

Dr. M. HAYES, representing the Conjoint Committee of the Irish Medical Association and the British Medical Association, stated that the profession as a whole had not declared for or against the extension of medical benefit to Ireland. It was waiting until they saw what scheme the Committee proposed. When asked if he did not think it the duty of the doctors to advise a Committee of such a character as to the proper spirit in which to approach this question, he pointed out that the profession in Ireland had not been asked to advise, but was merely requested to give the evidence that might be required. If the Committee was prepared to formulate a scheme it would have the whole-hearted co-operation of the profession. When asked what would be a reasonable remuneration by way of capitation grant for attending an insured patient and his family, Dr. Hayes said that the Government when providing medical benefit for its own employees fixed a rate of 8s. 6d. on selected lives; the Dublin Metropolitan Police paid £1 for attendance upon the policeman and the members of his family. Inasmuch as the sum for an individual had been fixed at 7s. and the average number in a family was five, and that women and children required far more medical attendance than men, he thought 21s. would be a fair amount as a family rate. He further stated that he did not object to the system of payment by capitation, and was in favour of the panel system. Medical benefit should in all cases be administered through the Insurance Committees and not through the friendly societies, and the medical profession should have a direct representation of 1 in 10 on such committees. If medical benefits were extended to Ireland there must be free choice of doctor by patient and patient by doctor, and medical benefit should be extended only to insured persons having an income of less than £2 a week.

The PRESIDENT of the Dublin Chamber of Commerce said that he considered that it would be most unwise to decide on the extension of medical benefits to Ireland

until it was seen how medical benefit worked in England for a year at least. The question was not urgent; there was no suggestion that between the Poor Law medical relief and the voluntary hospitals the needs of the poor were not fairly provided for. No new system of medical relief would be satisfactory which did not embrace all the people of small earnings with their families, whether they were insured or not, and whether they belonged to friendly societies or not, as the present Poor Law system did. Any new scheme should take account of hospital treatment, which was entirely ignored in the National Insurance Act. The equivalent grant in the meantime should be put to Ireland's credit, until it was decided to what purpose it could be devoted. It would prove more effective in the interest of public health if it was devoted to aiding the urban authorities in housing the poor than by appropriating it to medical benefits under the Insurance Act.

The REGISTRAR-GENERAL said that there was less sickness in Ireland than in England. The disease amongst insurable classes in Ireland that showed the greatest mortality-rate was tuberculosis. In Ireland there were no county medical officers of health, no compulsory notification of tuberculosis, and no medical school inspectors. These facts, he considered, influenced the death-rate in Ireland as compared with England. Further, the strongest amongst the population emigrated from Ireland, leaving the weaklings behind; these factors probably to a large extent co-operated to produce the smaller sickness-rate from industrial diseases.

Sitting in Cork.

The Committee sat in Cork on March 8th for the purpose of hearing witnesses from Cork, Limerick, Waterford, Queenstown, and other centres in Munster. The evidence was conflicting, especially as to rural districts, but the majority of those examined favoured the extension of medical benefits to urban areas. Representatives of trade bodies were of opinion that their members, if it became necessary, would be ready slightly to increase their contributions in order to extend the benefits to the insured person and his dependants, particularly the latter. Dr. PHILIP LEE gave evidence on behalf of the Conjoint Committee of the British Medical Association and the Irish Medical Association, and of the Cork medical profession. He said that £1 would be a fair capitation grant for medical service, to include insured persons and their dependants, but that without dependants 8s. would be a fair sum. Dr. Lee objected to the contract system because medical men would suffer scientifically, for men of highest rank would not go on with it, and also because they would suffer socially and financially.

Protest on behalf of the Medical Profession.

Dr. George Elliott, who was refused a hearing by the Committee at Belfast, has written to the daily press to state that his desire was to protest against the unfair and one-sided way in which the inquiry was conducted in allowing incomplete and misleading evidence to be placed before the Committee and the public; the profession was denied an opportunity of giving any reply. He desired also to protest against the attack made on the profession in Derry against the evident animus towards the profession displayed all through the proceedings by at least two members of the Commission and the sneering manner in which one of them referred to the Derry doctors. It seemed, he added, to be assumed by those who spoke for the trades union, that doctors were the only class not allowed to combine for their own protection. Dr. Elliott quoted one witness, the Rev. T. McCotter, and, altering the application, asked the Commission to ponder over the words: "My answer to that is that mean systems, like mean streets, breed mean men." The system the reverend gentleman was advocating was, in Dr. Elliott's view, "the essence of meanness": it would breed mean patients and mean doctors.

The general impression is that Dr. Elliott voices the views of most if not of every medical man in Ulster in his letter. To ask a medical man to attend a family—a father, mother, perhaps half a dozen children, and any bed-ridden parent or aunt—for 8s. 6d. a year is astounding. Members of the Royal Irish Constabulary pay 24s. a year for this service, and they are a healthy body of men.

The evidence of the Registrar-General, Sir W. J. Thompson, seemed to disprove completely the suggestion that, as Ireland was healthier than England, there would be less sickness and so less work for the doctor, and so a smaller remuneration was justifiable. The death-rate in Ireland in 1910 was 17.1 per 1,000, in England 13.5, and in Scotland 15.3; in 1912, Ireland 16.5, England 13.3, and Scotland 15.3. He qualified this statement by saying there was a lower death-rate among children under 1 year and between 15 and 65. Still it would appear that, no matter what a patient's age was, a doctor's services would be required, and, whether aged 1 or aged 70, a doctor would have work to do if death threatened.

MEDICAL CERTIFICATES UNDER THE INSURANCE ACT.

As already mentioned, £50,000 has been assigned to Ireland towards the cost of medical certificates of sickness and other expenses of administration; negotiations are now in progress between the Conjoint Committee of the British Medical Association and Irish Medical Association and the Insurance Commissioners as to the rate of payment for certificates. The Commissioners absolutely refused to consider the question of payment for certificates, on the grounds that they had no statistics of the number of certificates that would be required. They have suggested three schemes to the Conjoint Committee, all on a capitation basis, in which Ireland is divided into different districts according to number and accessibility of the population, the capitation fee varying in the different areas from 9d. to 2s. According to these schemes panels of certifying doctors would be formed in each area. The Commissioners state that no certificate will be required in the case of hospital in-patients, and for out-patients they propose to set aside a small sum, not less than £2,000 and probably not as much as £3,000, to be divided among the general hospitals of the larger cities to pay for certificates. This would mean that the sum for each hospital would probably be somewhere between £70 and £100. It is very hard to estimate the number of certificates that will be required, but it is quite evident that the proportion of £2,000 out of the whole sum is ridiculously small when the number of insured persons attending the large city hospitals, both as intern and extern patients, is considered. In one of the large Dublin hospitals over 25 per cent. of the intern patients since January 15th have been insured persons, and as the extern patients are, taken as a whole, of a lower class than the intern, probably at least 40 per cent., if not more, are insured persons. Considering these facts, the Standing Committee of the Clinical Hospitals, at a meeting last week, expressed its strong disapproval of the suggested schemes, and a deputation from it waited on the Conjoint Committee on March 6th. After considerable discussion two resolutions were carried. The first recommended that a certain sum of money should be provided to pay for medical certificates of sickness for intern insured patients, as the Conjoint Committee did not approve of certification by lay visitors; and, secondly, that the staffs of the hospitals should give no certificates for extern patients except at the request of the patient's panel doctor, and that in that case a suitable recompense should be provided for the member of the hospital staff. The Conjoint Committee finally agreed to accept one of the schemes of capitation payment for certificates recommended by the Insurance Commissioners.

SCOTLAND.

HOSPITAL RESIDENTS AND THE INSURANCE ACT.

ALLUSION was made in the SUPPLEMENT (February 8th, 1913, p. 137) to a petition for the Scottish National Insurance Commissioners which was coming before the First Division of the Court of Session for the opinion of the court on some questions related to the employment at the Royal Infirmary of resident physicians and surgeons, of non-resident house-physicians and surgeons, and clinical assistants, and of supervisors of the administration of anaesthetics. The Royal Infirmary stated that the persons referred to were not employed within the meaning of Part I of the Insurance Act, and also contended that there was not a contract of service between the respondents and these persons within the meaning of the Act. Counsel were heard on March 7th, before the Lord President and Lords Kinnear and Johnston; and the Court upheld the contentions of the respondents. The Lord President, after

defining the duties of the various persons referred to above, stated that in carrying out their work these persons were either themselves the judges of what was the proper course of treatment to be carried out at the moment if they happened to be the head person present, or, if they were not, were under the orders of whoever was the head physician or surgeon present at the moment. In no case were they, or could they be, interfered with by the managers of the infirmary in their treatment of patients. He was of opinion that they were not employed under a contract of service; he thought it was a contract for services, but not a contract of service. Lords Kinnear and Johnston concurred.

LEITH HOSPITAL SUBSCRIPTIONS AND THE INSURANCE ACT.

At the annual meeting of subscribers of Leith Hospital, on March 1st, it was stated by Mr. W. Kirk, in submitting the treasurer's accounts and balance sheet, that the collectors' receipts were less by £51, and that this was entirely due to subscriptions being withheld on account of the Insurance Act. He hoped that the old subscribers who had refused to renew their contributions would change their minds when they considered that the Insurance Act in no way covered the ground the hospital covered. The Chairman (Mr. E. Berry) added that if the people who did not need the hospital were to cease to subscribe, then those who required it ought to make up the difference so far as was in their power. Reference was made to the clinical department for the ear, nose, and throat, which had proved of great service to the hospital.

CORRESPONDENCE.

OTHER EXPERIENCES OF THE PANEL.

DR. ROSA FORD (New Cross Gate) writes: May I point out to Drs. Wyon and Parr that in their calculations they have supposed the number of insured on their books at the end of the forty-five days to have been there the whole time? Had they really been so, the number requiring treatment would have been larger and the remuneration, consequently, smaller. By taking the average of the insured, one can calculate with a number which may be supposed to have been on the books *each* day throughout the period.

To illustrate this point, let us suppose a medical man only signed cards on Mondays, and on the first Monday signed on 500. During each day of that week he has 500 on his books. Let us say he sees an average of 10 a day during that week, the percentage of insured requiring treatment will then be 2. On the next Monday he signs on another 500; he then has 1,000 on the books each day during the second week. He now sees, we will say, 20 a day, and the percentage remains the same. Suppose we now adopt Drs. Wyon and Parr's method of calculating. The average number of patients seen during the fortnight is 15 a day, and the number on the books at the end of the period is 1,000; the percentage will then appear to be 1.5, which is obviously incorrect. If we follow my method the average number seen per day is 15, and the average on the books is 750, and the percentage is 2, which we have seen to be correct for each week taken separately.

It is, of course, not safe to speak certainly with the figures of only thirty-one days. My estimate of 2 per cent. throughout the year is, however, confirmed in a letter in the *Daily News*, in which Dr. E. Claude Taylor states that, as far as he can gather, 2 per cent. is a fairly general rate—that is, 20 patients to be seen daily with 1,000 on the books, with a remuneration of 1s. for each, whatever the treatment they may require.

Dr. F. B. HULKE (Deal) writes: It may be of interest to some of the profession to know how the work under the Insurance Act and its remuneration will come out in figures per annum. The four weeks of February make a very good base-line for calculation. I find I have signed for 500 exactly. I had 95 of these sick during the twenty-eight days. I paid 173 visits, and had 167 attendances at my surgery—making 340 in all. This would give 4,420 per annum for £175—or just about 9½d. per visit or attendance. After trying to do good work for over twenty-five years I am now compelled by circumstances, too strong

to fight singlehanded, to descend to 9½d. per visit, with, of course, all its attendant evils. No wonder the Association considers the work derogatory, as it undoubtedly is. It may be contended that the month of February is not a fair sample from which to strike an average, but I do not think in this town the season of the year makes much difference. I find my work keeps almost the same throughout the year.

Dr. JOHN PRATT (Millom, Cumberland) writes: Having noticed some letters in the SUPPLEMENT giving experiences of work on the panel, I would like to state that my experience has not been as fortunate as that of any of your correspondents so far. Taking the month of February the amount for each attendance and each visit which I may expect is less than 6d. (with my present number of insured persons). Even allowing that I have a fair number allotted to me at the end of the quarter, the amount per visit and attendance is likely to work out well under 8d.

THE PRESENT SITUATION AND FUTURE POLICY.

Dr. C. JEROME MERCIER (East Ham) writes: Dr. Garratt (Chichester) in his letter (SUPPLEMENT, March 1st, p. 218) on "Contract versus Private Practice" criticizing Dr. Arthur King, of Bow, makes one or two remarks which provoke reply. Contract arrangements with a doctor are not comparable with insurance against death, accident, fire, or other mishap. In these cases a corporation takes the risk and pays when it loses. In the former the doctor takes the risk and pays in cheaper services when he loses. To make the situation comparable and equitable there should intervene between doctor and beneficiary a corporation which administers the pooled premiums and pays the doctor his fair charges per item. Payment per item is just as dignified and just as common in professions as payment by salary—for example, the legal profession, architects, engineers, etc. Where the demand on the time of the employee is unlimited payment by the piece is more satisfactory and more conducive to zealous work.

As to the reason why some men do not mind making contract arrangements with their poor patients, why should we blink the fact that to a doctor with good income from wealthy patients the escape from small monetary transactions with poor people is welcome? But this happy man should see that he purchases his dignity at the expense of his colleague whose whole living is from the poor, and who cannot grasp in its true inwardness the sarcasm implied in the description of a brother practitioner as Dr. X. of Bow.

Adverting to a definition of trade and profession given in your correspondence of March 1st, it is interesting and instructive to note that the medical man receiving good fees from well-to-do patients is, in this, a tradesman paid by the piece, while he is a professional man to his finger tips in his relations with the poor whom he condescends to treat in the intervals—on a salary.

Perhaps the tradesman in him nicely adjusts the degree of greeting and salutation necessary to satisfy every grade of his paying clientèle. The friendly nod and wave of the hand shows the freedom and the *bonhomie* felt in professional relations—with the poor.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

Dr. HERBERT C. JONAS (Barnstaple) writes: The report of the parliamentary debate on February 14th is fuller in the SUPPLEMENT than any daily paper, and it appears from it that Mr. Masterman quite realizes the duty of the Insurance Committees in the matter of the old and uninsured members of clubs, and then goes out of his way to ask for medical charity for them.

The Act clearly lays down that regulations shall require the Insurance Commissioners to adopt a system which shall provide medical attendance on the same terms as to remuneration (as for insured) for members of friendly societies who remain uninsured by reason of old age or disablement. Uninsured members of clubs consist of the following classes:

1. All over 65 years of age.
2. All permanently disabled.
3. Workers who were unemployed on July 15th, 1912.
4. Men who are their own masters.
5. Those whose income is over £160 a year.

Every argument brought forward in support of lower rates, and every appeal to sentiment refers to Classes 1 and 2, the two classes for which the Act makes provision as above. These two include the majority of the uninsured. Of the remaining three classes, Class 5 has no right to contract rates suitable for workers.

The members of Class 4 have had the chance of availing themselves of the voluntary part of the Act. There are, however, individual cases of hardship, which should be dealt with locally by the profession.

Class 3 is so small in numbers that they also should be, and for certain will be, dealt with by the charity of the profession. By the terms of the definition, this class ceases to exist when each individual becomes employed, and therefore State insured.

The JOURNAL reports Mr. Masterman to have stated, in answer to questions relating to medical benefit for these persons: The answer was twofold. The first was that the friendly societies should pay out of accumulated funds. The second had reference to a clause in the Act which stated that Insurance Committees must arrange for the medical attendance of those over 65 at a rate not less than a general rate for insured persons. It would appear that Mr. Masterman has inserted the word "general" to suit his own argument later. Then he gives his personal views on the subject, and tries to argue that when the clause was passed it was anticipated that insured persons would be attended at 6s. a head per annum.

The same argument was brought forward here at a meeting of friendly society representatives and doctors. They were asked, in reply, "Did any one in this room ever believe at any time during the last twelve or eighteen months that medical benefit could be got for 6s.?" Not a single representative could be found bold enough to say "Yes," and Mr. Masterman is far too clever a man to have believed anything of the sort himself.

Supposing for a moment that he or any one did believe it at the time, does it make the slightest difference to the medical position? A Chancellor of the Exchequer is, before all things, the tightener of the purse-strings, and no one would insult the present holder of the office by suggesting that he agreed to the extra grant for medical benefit until he was persuaded that it was a fair and just charge. If, then, Mr. Masterman's 9s. is right for the insured, by what process of reasoning does he evolve a fair capitation rate of 6s. for the old and permanently disabled? I say 6s., because he must mean 6s. (not 4s.) by the expression "The old figures," or else his whole argument is rendered ridiculous.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

ON Thursday, March 6th, a meeting of the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand. Mr. T. JENNER VERRALL (Chairman of Representative Meetings) was in the chair, and the other members present were: *England and Wales:* Dr. R. M. Beaton (London), Dr. E. R. Fothergill (Brighton), Miss Frances Ivens, M.S. (Liverpool), Mr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. E. O. Price (Bangor), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London). *Scotland:* Dr. J. Adams (Glasgow), Dr. R. McKenzie Johnston (Edinburgh). *Ex officio:* Dr. Edwin Rayner (Treasurer).

APOLOGIES FOR ABSENCE.

Apologies for absence were read from the Chairman (Dr. J. A. Macdonald), the President (Sir James Barr), Dr. T. M. Carter (Bristol), Dr. T. B. Costello (Tuam), Dr. J. S. Darling (Lurgan), and Dr. D. G. Thomson (Norwich).

PROPOSED SICKNESS, ACCIDENT, AND PENSION FUND.

The Subcommittee on a proposed sickness, accident, and pension fund presented a report. The discussion of this report was not concluded, and will be resumed at the next meeting of the Committee.

COMPENSATION.

The MEDICAL SECRETARY presented reports upon applications for compensation from the Central Insurance Defence Fund. In one instance, the Committee made a grant, in another it informed the applicant that it would be prepared to consider at the end of the year any loss he might be able to prove as being due to action taken out of loyalty to the policy of the Association, and in a third, the applicant was invited to supply further information.

EXPENSES OF LOCAL MEDICAL COMMITTEES.

A communication was received from the Honorary Secretaries of the Manchester Medical Committee stating that that Committee was of opinion that its administrative expenses should be defrayed by the State. The State Sickness Insurance Committee adopted a resolution reaffirming the opinion that this was not a desirable course.

UNIFORM CERTIFICATES.

A communication was read from the Honorary Secretary of a Local Medical Committee transmitting a resolution expressing the opinion that it was necessary that a uniform medical certificate for declaring on sickness benefit should be applicable to all insured persons under the Act. The Committee decided by a majority to ask the Insurance Commissioners to take action to secure the adoption by the approved societies of a uniform medical certificate.

PUBLIC MEDICAL SERVICES.

It was resolved to inform a Local Medical Committee which had submitted schemes for a public medical service in two districts that the State Sickness Insurance Committee could not consider any scheme for the treatment of uninsured persons unless or until it had been approved by the Divisions concerned.

NEXT MEETING.

It was arranged to hold the next meeting of the State Sickness Insurance Committee on Thursday, March 13th, at 10.30 a.m.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BATH AND BRISTOL BRANCH.

THE fourth meeting of the session was held at Bath, Dr. ROXBURGH, President, in the chair. There were forty-two members and visitors present.

Specific Measures in Bacterial Infections.—Dr. MERVYN GORDON opened a discussion on The Present Prospect and Limitations of Treatment by Specific Measures in the Commoner Bacterial Infections. The PRESIDENT, Mr. PAGAN LOWE, Dr. MICHELL CLARKE, Mr. FRASER, Dr. NEWMAN NEILD, Mr. BENSON, Dr. WATERHOUSE, Mr. CLUCKIE, and Dr. WALKER HALL took part in the discussion. A vote of thanks to Dr. M. Gordon was moved by Dr. CAVE, seconded by Mr. FORBES FRASER, and carried unanimously.

BORDER COUNTIES BRANCH.

A MEETING of the Border Counties Branch was held on February 27th, at Maryport, when there were present Dr. CRERAR, President (in the chair), Dr. Livingston (Secretary), and thirteen other members.

Proposed Alteration of Division Area.—Dr. FISHER drew attention to the necessity for altering the English Division area to make it correspond with the county insurance area, and it was resolved:

That the Secretary be instructed to write to the Central Council of the Association emphasizing the necessity of the Division area being altered to correspond with the county insurance area.

Thereafter Dr. CRERAR introduced Professor CAIRD, of Edinburgh, who gave an address on Peritoneal and Intestinal Tubercle.

SCOTTISH DIVISION.

A MEETING of the Division was held in the County Buildings, Dumfries, on February 28th. Dr. T. R. RODGER was in the chair. Twenty members were present.

Midwives (Scotland) Bill.—The principal business of the meeting was to discuss the provisions of the Midwives (Scotland) Bill as affecting the medical men in the various areas, and the following recommendations and amendments were submitted and approved:

The Division, having considered the Midwives (Scotland) Bill, is of opinion that the provisions of the bill are not applicable to the conditions of practice in the South-West of Scotland, believes that they are not generally applicable to Scotland, and desires to record its opinion that if the bill is required in any district, Section 2 thereof should be so amended as to make the Act adoptive by the local authority of the district, subject to the approval of the Local Government Board, who shall take into consideration any representations from the medical practitioners of the district before granting such approval.

The meeting authorized the Honorary Secretary to send the resolution to the other Divisions of the British Medical Association in Scotland and to the Scottish Committee of the Association with a request for support in taking steps to have the section amended. The Division further considered certain sections of the bill, and was of opinion that Section 5, dealing with the constitution of the Central Board, should be amended so as to give direct representation to general practitioners upon it; that Section 19 should be amended to make it clear that the officer of the local supervising authority should be the medical officer of health, if holding a full-time appointment, otherwise there would be a danger that the supervising officer would also become the consulting practitioner called in by midwives for emergencies; that in Section 20 it should be made clear that no other officer than the medical officer of health should have entry to premises. The Division was further of opinion that Section 24 should be deleted altogether, and Section 25 so amended as to secure payment of fee from approved society or Insurance Committee in all cases in which maternity benefit is payable, and from the local supervising authority where such benefit is not payable.

CAPE OF GOOD HOPE—EASTERN PROVINCE
BRANCH.

AN ordinary meeting of the above Branch was held on January 31st, at 8 p.m., at Dr. Saunders's residence. Dr. A. COWPER was in the chair, and Drs. F. A. Saunders, E. P. DRU DRURY, G. C. PURVIS, E. A. SEALE, R. T. HARRISON were present.

The Citizen Army.—A letter from Dr. Campbell Watt, containing a copy of correspondence between the Secretary of the South African Committee and the Minister for Defence (Union) as to medical officers for the citizen army and the examination of candidates was read, and the following resolution was carried unanimously:

That this, the Eastern Province Branch of the British Medical Association, is satisfied with the reply of the Minister for Defence, and approves the principle laid down by the South African Committee—that is, that any arrangement proposed by Government under the Defence Act which will affect the medical profession should be communicated to this committee prior to its final adoption.

The Fees of Expert Witnesses.—The matter of the new tariff of fees for expert witnesses was discussed, and the following resolution was unanimously adopted:

That the Eastern Province Branch of the British Medical Association requests the South African Committee to consider the new tariff of fees for expert evidence, and is of opinion that the allowance for travelling and maintenance is inadequate. Further, with regard to civil cases, this Branch questions whether the limit placed on fees is not an infringement of the right of individuals to make contracts, and suggest that, if necessary, the opinion of learned counsel be taken on this point.

The late Dr. Fitzgerald.—This being the first meeting of the Branch since the death of the late Dr. G. E. Fitzgerald, the following resolution was passed without a division:

That this Branch deeply deplores the loss which it has sustained through the death of the late Dr. G. E. Fitzgerald, who had practised for upwards of twenty years in Grahamstown and twice had been President of the Branch, and always had the best interests of the profession

at heart. The loss to this Branch is the more severe in that he was to have been President of the next South African Medical Congress. This Branch begs to thank the Witwatersrand and Western Province Branches for their kind telegrams of sympathy, and confirms the Secretary's action in writing a letter of condolence to the widow and family.

Vote of Thanks.—A vote of thanks was passed to Dr. Saunders.

LANCASHIRE AND CHESHIRE BRANCH:

SOUTHPORT DIVISION.

A SPECIAL meeting of the Division, to which non-members were invited, was held in the Masonic Room of the Victoria Hotel, on February 25th, to consider matters arising out of the Insurance Act. Twenty-seven were present. Dr. S. MEWRURN BROWN occupied the chair.

Sickness Certificates.—A reply to a letter addressed by the Secretary to the Town Clerk as Secretary of the Insurance Committee was read, in which he said that the question of acceptance of certificates from doctors not on the panel so as to enable their patients to obtain sickness benefit was one for the approved societies, but that, so far as the Southport Insurance Committee was concerned, it was prepared to accept such certificates.

Inquiry Addressed to Registered Medical Practitioners.—The circular addressed by the Association to all members of the profession asking them to reply to certain questions with regard to the working of the Insurance Act was considered, and it was admitted by many present that they had not replied.

Local Medical Committees.—The arrangements which should be made to meet the expenses of the Local Medical Committee were discussed, and the following resolution was submitted:

That the expenses of the Local Medical Committee to the extent of £5 be defrayed from the balance to date of the Local Defence Fund, and that after the £5 is exhausted the Secretary of the Local Medical Committee should appeal to the local profession for funds to defray further expenses.

This was carried *nemine contradicente* after an amendment by Dr. HENDERSON:

That the expenses of the Local Medical Committee be borne by a percentage of the amounts drawn by each member of the panel,

had failed for want of a seconder. The meeting approved a suggestion that the Town Council should be requested to grant the use of a room for the meetings of the Local Medical Committee.

Contract Midwifery Attendance.—The following resolution was carried unanimously:

That this Division is of opinion that it is undesirable that, pending further instructions, any arrangements be made by practitioners with approved societies for contract attendance in midwifery cases.

Attendance on Aged and Infirm Members of Approved Societies.—The following resolution was carried:

That this Division advises that no arrangement be made for attendance on aged and infirm members of approved societies at a less rate than that charged for insured persons.

Contract Attendance upon Uninsured Persons.—The following resolution was moved and seconded:

That this meeting of the profession approves of the decision of the Local Medical Committee that no contract practice, adult or juvenile, be taken at a less fee than 8s. 6d. per head per annum.

Dr. HENDERSON moved an amendment:

That uninsured persons be attended at 2d. per week, medicine included, but that juveniles be attended at the rate of 1d. per week, medicine included, in terms of our medical service scheme approved by the State Sickness Insurance Committee.

This was seconded by Dr. WEAVER. There were only two votes for the amendment, and the original motion was then carried *nemine contradicente*.

METROPOLITAN COUNTIES BRANCH:

WILLESDEN DIVISION.

A MEETING of the Division, to which non-members were invited, was held at St. Andrew's Schools on February 27th, when twenty-six were present, and Dr. MACEVOY took the chair in the absence of Dr. CORAM JAMES.

Tuberculosis Contacts.—Drs. Anderson Smith, Macevoy, and Miller were appointed as a deputation to meet

Dr. Buchan, Medical Officer of Health for Willesden, and Mr. Riley, to confer as to fees to be paid in respect of the examination of tuberculosis contacts under the Public Health Tuberculosis Regulations.

District Medical Committee.—It was decided that the Committee should consist of twenty members, including the Chairman and Honorary Secretary, and that the election should be by ballot. Twenty-four nominations were received, and the ballot resulted in the election of Drs. Macevoy, Skene, Armitage, Soden, Moore, Traylen, Anderson Smith, Stocker, Macauley, Smurthwaite, Macdonald, Müller, Turner, Mehan, Felce, Carson Smyth, Rawes, Cardinal, Joy, and Whitehall Cooke.

Contract Treatment of Uninsured.—Dr. MACEVOY reported that the Subcommittee appointed to prepare a scheme for the contract treatment of uninsured persons suggested (1) that contract treatment of uninsured should be worked through institutions or dispensaries; (2) that the subscription should be 2d. for adults and 1½d. for children, with a maximum of 8d. for a family, to include one adult; (3) that "extras" should be charged for; (4) that the management should be on the lines of the British Medical Association Public Medical Service, Scheme B; (5) that if possible the institutions should be subsidized from charitable funds.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

The Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,
Medical Secretary.

February 4th, 1913.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, April 23rd, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,

March 13th, 1913. *Financial Secretary and Business Manager.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.—A special meeting will be held at Southwark Infirmary, East Dulwich Grove (Station, East Dulwich Elevated Electric), on Thursday, March 27th, at 4 p.m. Agenda: Alteration of the rules of the Division as suggested by the Central Organization Committee and recommended by the Executive Committee of the Division. An ordinary meeting will be held at the conclusion of the special meeting, when Dr. Hector Cameron will read a paper on "The Uses and Abuses of Patent Foods in Infancy."—J. H. CLATWORTHY, 145, Denmark Hill, S.E.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—It has been found necessary again to alter the date of the demonstration arranged by the Newcastle-on-Tyne Division to March 28th, when Professor R. A. Bolam will lecture on Medico-legal Tests for Blood.—R. J. WILLAN, Honorary Secretary, 25, Ellison Place, Newcastle-on-Tyne.

GENERAL MEDICAL COUNCIL.

EXECUTIVE COMMITTEE.

A MEETING of the Executive Committee of the General Medical Council was held on February 24th, the President (Sir DONALD MACALISTER) in the chair.

UNIVERSITY OF HONG KONG.

An application received through the Privy Council from the Governor of Hong Kong respecting the recognition by the General Medical Council of degrees in the medical faculty conferred by the University of Hong Kong was considered, and the Executive Committee resolved to inform the Lord President of the Privy Council that the conditions of practice in Hong Kong appeared to be equitable, and to afford a just basis for establishing relations of reciprocity with regard to medical practice between the colony and the United Kingdom, and that, therefore, if His Majesty in Council declared that Part II of the Medical Act, 1886, applied to the colony of Hong Kong, the Council would be prepared to consider the question of the recognition of degrees in medicine granted in the colony.

MEDICAL ORDINANCE, UGANDA.

A draft medical registration Ordinance for Uganda was received from the Colonial Office, and the Committee, on behalf of the Council, expressed entire concurrence with the Ordinance as now amended, and observed with satisfaction that provision was made, as in other parts of the empire, to protect the public from unqualified practice. The persons entitled to medical registration are:

- The holder of any British, British Indian or British Colonial degree, diploma, or licence entitling him to registration in the United Kingdom.
- The holder of a degree, or licence in medicine and surgery of any medical school in Europe, the United States of America, or the Empire of Japan, the degrees, diplomas and licences of which are recognized as entitling to registration by the General Council of Medical Education and Registration in the United Kingdom.

CANADA MEDICAL ACT.

A copy of an Act amending the Quebec Medical Act was also received from the Colonial Office. The Act deals with the application of the Canada Medical Act to Quebec.

UNIVERSITY OF CALCUTTA.

On the application of the India Office the Committee agreed to recognize the degrees of Master in Surgery, and Master of Obstetrics of the University of Calcutta, but informed the Secretary of State for India in reference to a further application for the recognition of the diploma of public health of the same university that the Council had no power to recognize any qualifications in public health except those granted in the United Kingdom.

INSURANCE ACT.

A memorandum by the National Insurance Act Committee of the Council was received and entered on the minutes. The memorandum contained the correspondence with reference to the regulations made by the Insurance Commissioners which was published in the SUPPLEMENT of January 11th, 1913, p. 44.

The memorandum of the Committee went on to say that it was gratifying to observe that practical effect had been given to all the suggestions for the amendment of the draft regulations offered in the Council's memorandum of September 19th, 1912 (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, November 9th, 1912, p. 504), with one exception. The exception related to the provision of hospital or institutional treatment for insured persons requiring "services beyond the competence of an ordinary medical practitioner." Upon this the Committee made the following observation:

The Committee continue to hold the opinion that the system of the National Health Insurance now established will remain incomplete until proper arrangements for making such provision have been brought into operation; and that if necessary, fresh powers for the purpose should be conferred on the Commissioners by the Legislature.

Sir Robert Morant, in his letter of December 16th (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, January 11th, 1913, p. 44) stated that:

Under System A (pure capitation) the provision of the anaesthetist would be one of the services which the practitioner had

contracted to render in consideration of the inclusive capitation fee, and he would, in those circumstances, have to pay the anaesthetist himself.

Upon this the Committee makes the following comment:

The Committee observe that the practitioner agrees to "give to all persons who are for the time being entitled to obtain treatment from him . . . such treatment as is of a kind which can consistently with the best interests of the patient be properly undertaken by a general practitioner of ordinary professional competence and skill." The Committee desire to raise the question of whether the terms of Agreement A can properly be held to impose on the practitioner the duty of providing the services of a second qualified person to administer the anaesthetic, in the case of an operation to be performed by the practitioner himself. The forms of Agreement B, C, D, and E, as now officially interpreted, recognize the importance, in "the best interests of the patient," of providing that a qualified anaesthetist, other than the practitioner operating, shall be employed. The Committee having regard to the terms of the resolution of the Council cited in the President's letter of December 13th, 1912, would urge the desirability of intimating officially to Insurance and Medical Committees that local arrangements should be made for securing that qualified assistance shall be provided in cases of operation under general anaesthesia undertaken by practitioners who have accepted the capitation system of payment.

The Committee further expressed the opinion that the proposals in Circular A. S. 73 (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, February 1st, 1913, p. 117), on the administration of maternity benefit issued by the Commissioners for the guidance of approved societies appeared to obviate most of the difficulties apprehended by the Council and set forth in its memorandum of June 18th, 1912. The Committee trusted that, in the interests alike of their members, of the institutions for obstetrical training, and of the public at large, the approved societies would give full effect to the arrangements proposed by the Commissioners.

Canvassing.

The Committee considered certain inquiries received by the Registrar with reference to alleged cases of advertising and canvassing by medical practitioners in relation to the National Insurance Act, and resolved as follows:

That the President be requested to communicate with the Chairman of the National Insurance Commission asking him to forward to Insurance Committees, to Local Medical Committees, and to Approved Societies a copy of the Council's Warning Notice in regard to advertising and canvassing for patients.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments have been announced at the Admiralty: Staff Surgeon HAROLD J. CHATER to the *Vivid*, additional for the *Dublin* (for trials), March 3rd, 1913. Staff Surgeon ALFRED J. HEWITT to the *Pegasus* on recommissioning, March 11th, 1913. Staff Surgeon JOHN N. ROBERTSON, M.B., to the *Blake*, temporarily, vice Hewitt, March 11th, 1913. Staff Surgeon HENRY M. BRAITHWAITE, M.D., to the *Imogene*, additional and for medical charge on passage out, February 27th, 1913, and on recommissioning, undated. Staff Surgeon WILLIAM N. L. CHERRY to the *Victory*, additional for disposal, March 12th, 1913. Staff Surgeon HENRY C. WHITESIDE to the *Suffolk*, temporarily, February 28th, 1913. Staff Surgeon R. HUGHES, to the *Andromache*, vice Forrest, March 22nd, 1913. Staff Surgeon J. A. FORREST, M.B., to the *Berwick*, vice Osborne, March 22nd, 1913. Staff Surgeon JOHN ST. J. MURPHY, to the *Carnarvon*, additional, for Second and Third Fleets, March 3rd, 1913. Surgeon FREDERICK G. HITCHER, M.B., to the Portland Hospital, vice Cherry, March 12th, 1913. Surgeon JAMES H. WRIGER, M.D., to the *Hebe*, vice Braithwaite, February 27th, 1913. Surgeon JOSEPH A. O'FLYNN, M.B., to the *Thunderer*, vice Macintosh, March 5th. Surgeon HERBERT R. B. HULL, to the *Fantome*, additional, for medical charge on voyage out, March 5th, and the *Fantome* on recommissioning, undated. Surgeon GEORGE D. MACINTOSH, M.B., to the *Sealark*, additional, March 5th, and the *Sealark*, on recommissioning, undated.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL F. R. NEWLAND has been appointed to the Military Hospital, Dover.

Lieutenant-Colonel S. MACDONALD has been appointed Medical Inspector of Recruits of the Southern Command.

Captain JAMES H. R. WINDER, M.D., to be Major, February 27th, 1913.

Lieutenant WILFRED W. TREYES, M.B., is seconded for service under the Foreign Office, January 7th, 1913.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Sanitary Service.—Captain ROBERT BURNET, M.B., from the 2nd Wessex Field Ambulance, to be Major, February 26th, 1913. Lieutenant-Colonel FREDERICK M. WILLIAMS, Sanitary Officer of the Wessex Territorial Division, resigns his commission, February 26th,

1913. Major ROBERT BURNET to be Sanitary Officer of a Territorial Division, February 26th, 1913.

Eastern Mounted Brigade Field Ambulance.—Major EDWARD J. CROSS, M.D., to be Lieutenant-Colonel, December 7th, 1912.

First Loveland Field Ambulance.—WILLIAM COOPER GUNN, M.B., to be Lieutenant, January 31st, 1913.

First Northumbrian Field Ambulance.—Lieutenant EDWARD BAINES KITCHING, from the list of officers attached to units other than medical units, to be Lieutenant, March 5th, 1913.

Second London Sanitary Company.—Lieutenant JOHN MITCHELL, M.B., to be Captain, December 7th, 1912.

Attached to Units other than Medical Units.—Lieutenant-Colonel ROBERT I. GRAHAM, F.R.C.S. Edin., has resigned his commission and is granted permission to retain his rank and to wear the prescribed uniform, March 5th, 1913. Captain JOHN A. ANGUS has resigned his commission, March 5th, 1913.

For Attachment to Units other than Medical Units.—HAROLD WILLIAM READ, late Lieutenant 8th Isle of Wight (Princess Beatrice's) Battalion, the Hampshire Regiment, to be Lieutenant, February 26th, 1913. THOMAS ALBERT FISHER to be Lieutenant, January 20th, 1913. Squadron Sergeant-Major GEORGE FAWCETT WHITE, M.D., from the Essex Yeomanry, to be Lieutenant, March 8th, 1913.

Vital Statistics.

THE REGISTRAR-GENERAL'S QUARTERLY RETURN.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

THE Registrar-General has just issued his return relating to the births and deaths in the fourth quarter of last year, and to the marriages during the three months ending September last. The marriage-rate during that period was equal to 18.1 per 1,000, or 1.0 per 1,000 more than the mean rate in the ten preceding third quarters.

The 212,856 births registered in England and Wales during the three months under notice were equal to an annual rate of 23.1 per 1,000 of the population, estimated at 36,559,636 persons in the middle of the year; this birth-rate is 2.4 per 1,000 below the average for the corresponding quarters of the ten preceding years, but is slightly above the rate for the fourth quarter of 1911. The birth-rates in the several counties ranged from 17.0 in Sussex, 17.1 in Hertfordshire, 17.8 in Carnarvonshire, 18.5 in Somersetshire, and 18.7 in Dorsetshire to 26.5 in Northumberland, 26.9 in Staffordshire, 28.7 in Monmouthshire, 28.8 in Glamorganshire, and 29.8 in Durham. In ninety-five of the largest towns the birth-rate averaged 24.0 per 1,000, and ranged from 12.1 in Bournemouth, 13.8 in Southport, 14.1 in Eastbourne, and 14.6 in Hersey to 30.0 in Liverpool and in St. Helena, 30.4 in Rotherham, 30.6 in Stoke-on-Trent, 31.1 in Stockton-on-Tees, and 33.0 in Rhondda; in London the birth-rate was 23.9 per 1,000.

The excess of births over deaths during the quarter was 87,995, against 92,147, 86,280, and 85,492 in the corresponding quarters of the three preceding years. From a return issued by the Board of Trade it appears that the passenger movement between the United Kingdom and places outside Europe resulted in a net balance outwards of 45,336 passengers of British nationality and of 1,525 aliens; between the United Kingdom and the Continent of Europe there was a net balance outward of 19,886 persons.

The deaths registered last quarter in England and Wales numbered 124,861, and were equal to an annual rate of 13.6 per 1,000; this rate is 1.5 per 1,000 below the mean rate for the ten preceding fourth quarters, and is equal to the lowest on record for that period of any year. The lowest county death-rates last quarter were 10.4 in Surrey and in Middlesex, 10.8 in Dorsetshire, 11.0 in Buckinghamshire, and 11.2 in Wiltshire; the highest rates were 15.3 in Lancashire, 15.4 in Warwickshire, 15.8 in Durham, 16.5 in Northumberland, and 17.0 in Cumberland. In ninety-five of the largest towns the rate averaged 14.5 per 1,000; in London the rate was 15.0 per 1,000, while among the other towns it ranged from 7.7 in Ilford, 8.3 in Wimbledon, 8.6 in Enfield, 9.0 in Gillingham, 9.5 in Bournemouth, and 9.8 in Eastbourne to 18.1 in Preston and in Sunderland, 18.5 in Bootle, 18.6 in Tynemouth, 19.2 in Middlesbrough, 19.3 in Liverpool, and 19.8 in South Shields.

The 124,861 deaths from all causes last quarter included 5,265 that were attributed to measles, 1,903 to diarrhoea and enteritis (among children under 2 years of age), 1,131 to diphtheria, 1,113 to whooping-cough, 617 to scarlet fever, 412 to enteric fever, and 1 to small-pox. The average mortality from diarrhoea and enteritis among children under 2 is not available for comparison; the rate for each of the other diseases except measles was below the average.

The rate of infant mortality, measured by the proportion of deaths among children under one year of age to registered births was equal to 98 per 1,000, or 33 per 1,000 less than the average for the ten preceding fourth quarters. This rate is much the lowest recorded in the fourth quarter of any year since 1870, when quarterly records of infantile mortality were first kept. Among the several counties the rates of infantile mortality last quarter ranged from 45 in Dorsetshire, 51 in Sussex, and 58 in Hertfordshire to 123 in Lancashire, 128 in Northumberland, 129 in Cumberland, and 130 in Durham. In ninety-five of the largest towns the rate averaged 111 per 1,000, and ranged from 48 in Hastings and in Southend, 49 in Gillingham, 54 in Southport, and 55 in Brighton to 151 in Sunderland, 160 in Tynemouth, 172 in South Shields and in Middlesbrough, and 184 in Burnley.

The deaths among persons aged 1 to 65 years were at the rate of 7.6 per 1,000 of the population estimated to be living at this group of ages. In the ninety-five large towns the rate averaged 8.5 per 1,000, and ranged from 4.0 in Ilford, 4.6 in Wimbledon, in Enfield, and in Bournemouth, and 5.0 in Hersey to 11.4 in St. Helena and in Middlesbrough, 11.6 in South Shields and in Stockton-on-Tees, 11.7 in Bootle, 11.9 in Preston, and 12.3 in Liverpool.

Among persons aged 65 years and upwards the death-rate was 91.3 per 1,000; in the ninety-five towns the death-rate at this age-group averaged 103.8 per 1,000, and ranged from 54.7 in Wakefield, 66.9 in Ealing, 67.0 in Edmonton, 68.5 in Lincoln, and 69.7 in Coventry to 134.5 in Hornsey, 134.8 in South Shields, 137.2 in Burnley, 140.4 in Bootle, 141.0 in East Ham, and 158.8 in West Hartlepool.

The mean temperature of the air last quarter was above the average, the excess in the country as a whole being 0.8°. The rainfall during the quarter was rather above the average, but was much less than in the corresponding quarter of 1911. The duration of bright sunshine was just equal to the average over the country generally.

HEALTH OF ENGLISH TOWNS.

IN ninety-six of the largest English towns 8,894 births and 6,178 deaths were registered during the week ending Saturday, March 1st. The annual rate of mortality in these towns, which had been 17.2, 17.2, and 17.3 per 1,000 in the three preceding weeks, rose to 18.0 per 1,000 in the

week under notice. In London the death-rate was equal to 18.3 per 1,000, against 17.3, 18.1, and 18.2 in the three previous weeks. Among the ninety-five other large towns the death-rates ranged from 8.6 in Wallasey, 9.6 in Ilford, 10.0 in Ealing, 10.1 in Acton, and in Great Yarmouth, 10.5 in Snettisham, and 10.8 in Grimsby to 24.8 in Blackpool, 27.6 in West Hartlepool, 30.9 in Stockton-on-Tees, 32.0 in Swindon, 32.5 in St. Helens, and 33.2 in West Bromwich. Measles caused a death-rate of 2.0 in Sheffield, 2.2 in Bath and in Bootle, 2.9 in Eastbourne, 4.6 in Plymouth and in Wigan, 9.1 in West Rotherham; and diphtheria in St. Helens; whooping-cough of 2.4 in Rotherham; and diphtheria of 1.0 in Rhondda, 1.2 in Merthyr Tydfil, 1.6 in West Hartlepool, and 2.4 in Barrow-in-Furness. The mortality from enteric fever and scarlet fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 46, or 0.7 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 14 in Birmingham, 10 in Liverpool, and 2 each in London, Stoke-on-Trent, Warrington, Sunderland, South Shields, and Trowmouth. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,736, 1,701, and 1,667 at the end of the three preceding weeks, had further fallen to 1,659 on Saturday last; 185 new cases were admitted during the week under notice, against 209, 196, and 180 in the three preceding weeks.

In ninety-six of the largest English towns 8,444 births and 5,950 deaths were registered during the week ending Saturday, March 8th. The annual rate of mortality in these towns, which had been 17.2, 17.3, and 18.0 per 1,000 in the three preceding weeks, fell to 17.4 per 1,000 in the week under notice. In London last week the death-rate was equal to 18.3, against 18.1, 18.2, and 18.8 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates last week ranged from 6.6 in Southend-on-Sea, 6.7 in Willesden, 8.1 in East Ham, 8.7 in Enfield, 10.5 in Reading, and 11.3 in Edmonton and in Huddersfield to 24.1 in Ipswich, 25.6 in Preston, 27.0 in Wigan, 28.3 in Dudley, 28.7 in West Bromwich, and 30.9 in Stockton-on-Tees. Measles caused a death-rate of 4.7 to St. Helens, 5.2 in Wigan, and 10.6 in West Bromwich. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 41, or 0.7 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 6 in Birmingham, 6 in Liverpool, 6 in Gateshead, and 2 each in London, Stoke-on-Trent, West Bromwich, Preston, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,701, 1,667, and 1,659 at the end of the three preceding weeks, had further declined to 1,617 on Saturday last; 160 new cases were admitted during the week, against 196, 180, and 183 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,124 births and 895 deaths were registered during the week ending Saturday, March 1st. The annual rate of mortality in these towns, which had been 20.8, 20.4, and 18.7 per 1,000 in the three preceding weeks, rose to 20.7 in the week under notice, and was 2.7 per 1,000 above the rate recorded in the ninety-six largest English towns. Among the several Scottish towns the death-rates last week ranged from 15.0 in Kilmarnock, 15.6 in Leith, and 16.3 in Perth to 22.9 in Ayr, 23.9 in Dundee, and 24.1 in Aberdeen. The mortality from the principal infectious diseases averaged 1.8 per 1,000, and was highest in Falkirk and Motherwell. The 425 deaths from all causes registered in Glasgow included 41 from whooping-cough, 4 from measles, 3 from infantile diarrhoeal diseases, 2 from scarlet fever, 2 from diphtheria, and 2 from whooping-cough were recorded in Edinburgh, 2 in Leith, 2 in Motherwell, and 2 in Clydebank; and 2 deaths from diphtheria in Aberdeen.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, March 1st, 693 births and 532 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 620 births and 554 deaths in the preceding period. These deaths represent a mortality of 23.1 per 1,000 in the population in the districts in question, as against 24.1 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 5.1 per 1,000 higher than the corresponding rate in the ninety-six largest English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 30.1 per 1,000 of population. As rate of individual localities, that in the Dublin registration area was 26.9, as against an average of 22.8 for the previous four weeks, in Dublin city 28.4 (as against 25.5), in Belfast 23.4 (as against 23.0), in Cork 26.6 (as against 26.0), in Londonderry 10.2 (as against 17.2), in Limerick 16.2 (as against 16.9), and in Waterford 15.3 (as against 21.9). The zymotic death-rate was 1.8, as against 1.6 in the previous week.

Hospitals and Asylums.

VOLUNTARY INSTITUTIONS FOR IMBECILES.

EARLSWOOD ASYLUM.

THE annual report of this institution (the pioneer charity for the mentally deficient) gives interesting particulars of the work of the institution during the year 1911. The board of management are still financially hampered by the large expenditure necessary for extensive structural restorations, but report an increase of £1,000 in the purely charitable income, notwithstanding a decrease of £50 in the annual subscriptions. They express their earnest desire for legislation with regard to the care and control of the feeble-minded considered from the national standpoint, urging at the same time the claims of the voluntary institutions for imbeciles to participate in whatever State grants may be made, and the need for preserving and extending the powers of local authorities to contract with existing institutions for the care of cases chargeable to them. From the balance sheet it appears that no less a sum than £15,422 10s. 8d. was derived last year from payments for patients out of a total revenue (inclusive of legacies, subscriptions, farm rent, and receipts) of over £37,000.

The Medical Superintendent (Dr. Charles Caldecott) reports that during the year 1911 55 cases had been admitted, 28 dis-

charged, and 14 had died, the number remaining in the asylum on December 31st, 1911, being 499 (356 males, 143 females). The average number resident was 491, and the percentage death-rate calculated thereon was 2.8. Tuberculosis, in one of its forms, was responsible for 6 deaths, equivalent to 42.85 per cent. of the total mortality, and of these 2 occurred in connexion with an epidemic of scarlet fever, in the course of which 14 patients and 1 nurse were attacked. The board were responsible for the life-long care of 39 life-election cases, and of 33 others received on life payment, and the average age of these was between 50 and 60. Dr. Caldecott points out that the average life of an imbecile under suitable and continuous care is probably nearer 50 years than 30, which latter figure has been assumed under the actuarial scheme of the late Royal Commission. The work of the schools, industrial training shops, and farm and garden is described in some detail; and it would appear from the balance sheet that while nearly £600 profit was made from the sale of goods manufactured in the shops (including printing), the farm account shows a deficit of £204, attributable mainly to the drought of 1911.

THE ROYAL ALBERT INSTITUTION, LANCASTER.

THE forty-eighth annual report of this institution (for the feeble-minded of the Northern Counties) contains particulars of its operations during the twelve months terminating June 30th, 1912. The central committee states that since the admission of patients in December, 1870, 3,231 have passed under its care. The records show that of these about 28 per cent. have been greatly improved, whilst 55 per cent. have improved in less degree. The receipts (exclusive of legacies and life interest payments) during the year had amounted to over £30,000, £15,782 8s. 11d. of this being derived from payments for patients. The average weekly cost of maintenance had been reduced from 13s. 11d. to 13s. 8½d. per patient, showing economy of management. The necessity of permanent care in a large number of cases has always been recognized, and practical steps have been taken to increase the facilities for this purpose by the erection of a new farm colony building for the accommodation of 40 inmates, which it was hoped would be the forerunner of several similar buildings upon the estate, which now consisted of 208 acres. It is stated that over 10 per cent. of those discharged after full training in the institution are capable of maintaining themselves wholly or partially by their own exertions, a percentage which might be considerably increased were a larger proportion retained under suitable care.

The Medical Superintendent (Dr. Archibald Douglas) reports that, during the twelve months under review, 80 cases had been admitted, 57 discharged, and 13 had died, the number remaining in the institution on June 30th, 1912, being 714 (467 males, 247 females). The average number resident was 699, and the percentage death-rate calculated on this average was 1.86 (a percentage which, we may remark, is exceptionally low for this class of patients). Some form of tuberculosis is stated to be the cause of death in 9 out of the 13 patients. One case of diphtheria and 1 of erysipelas are the only infectious diseases recorded. There were, however, a large number of delicate and feeble cases in the institution, especially amongst the later admissions, and the ordinary accommodation had been severely strained, so that the reception house had had to be used as an auxiliary hospital, the desirability of a separate infectious hospital being under such circumstances obvious. The work of the schools and workshops had proceeded satisfactorily, increased attention having been given to industrial training in the former, and lace-making having been introduced as an occupation for the girls. The farm and garden continued to be a source of profitable employment, having supplied to the institution produce to the value of nearly £5,000 during the year.

An interesting address by Sir James Crichton-Browne is appended to the report, in which he quotes statistics furnished to him by Dr. Douglas as to the bearing of heredity upon mental defect. It would appear that in the records of 2,339 cases a definite pathological hereditary taint had been noted in 886, while no such definite taint had been ascertained in 1,453. In 1,716 cases the parents were presumably normal, while in 531 cases one parent was described as abnormal, imbecile, weak-minded, epileptic, insane, defective, or neurotic, and in 92 cases both were described as abnormal. In 1,793 of the cases in the institution the patient was the only defective in the family, in 256 cases there were other defectives in the family, and in 153 cases the patient was the only living child. Dr. Douglas estimates that in 250 cases parental alcoholism "seemed to be either the actual or predisposing cause of the amentia." Sir James Crichton-Browne concludes that, while much more information than we at present possess as to the transmission of character is necessary before we can exercise any extensive control over human mating, figures like the above justify careful consideration of the ethics of marriage in the light of eugenics.

THE SANDLEBRIDGE COLONY FOR THE FEEBLE-MINDED.

THE fourteenth annual report of the Incorporated Lancashire and Cheshire Society for the Permanent Care of the Feeble-Minded gives interesting particulars of the progress of this colony (nowhere, however, designated by name in the report) during the year 1912. The opening of a new house, called the Brook House Home, for the separate accommodation of the older male inmates, is referred to as the crowning stage of the work, and its twenty beds are now all filled by "men"—that is, work, and its twenty beds are now all filled by "men"—that is, male patients beyond 18 years of age. The property formerly known as Norbury House Farm, previously rented, has also been made over as a gift to the society, which, with Warford

Hall (used for older girls), must now possess a considerable landed property, though a larger acreage is desired. At the date of the report (September 30th, 1912) there were 261 inmates—151 males and 110 females; and, of these, 87 were over 16 years of age, an aggregate increase of 29 since September 30th, 1911. The number of fresh admissions during the year is nowhere stated, but 7 have been discharged, 2 "transferred," and 6 removed by parents; and there has been 1 death. This, Dr. Mellraith, the medical officer, tells us, in his brief annual report, was due to erysipelas occurring in a debilitated boy who suffered from hydrocephalus. The general health is stated to have been very good, but 20 cases of influenza, a mild case of pleurisy, and one of bronchopneumonia are mentioned, in addition to cases of tonsillitis and 2 of severe quinsy. About a dozen cases of ringworm occurred at Warford Hall. We trust that before long the infirmary, to be raised as a memorial to the late Dr. Ashby, will become *un fait accompli*, as with the increased number of colonists, the majority of whom are children, there must be pressing need for such an establishment. This would seem to be a more important and serviceable adjunct to a colony professedly for the "feeble-minded" than would be "a house especially for low grade cases" (mentioned in the report as desirable), bearing in mind the fact that for many years an admirable asylum for imbeciles has existed in the Northern Counties.

The establishment at Sandebridge, consisting as it does of residential schools for mentally deficient children under 16 and of permanent industrial homes for those above that age, presents a model which, we trust, will be widely imitated when dealing with this class has been facilitated by the passing of the Mental Deficiency Bill, as the report tells us is already contemplated in Yorkshire and Nottinghamshire. The comparatively few instances of children received by their parents during the year (six only), speaks well for the growing appreciation of the need of life-long care, though compulsory powers of detention, under proper safeguards, may in some cases be required to save these innocents from the tender mercies of their parents, which are cruel! As regards the colonists themselves, juvenile and adult alike, there can be no doubt that they are contented with their lot and desire nothing better than the cheerful surroundings and beneficial occupations which Miss Dendy and her associates provide for them at Sandebridge. No less than twenty-five boys and youths work on the farms and gardens, and the profits on these industries is estimated at £538 13s. 5d., after deducting a rent of £180. The total income of the society for 1912 is stated to be £7,499 13s. 6d., and the Endowment Fund stands at £7,368 towards the £8,200 appealed for.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.—(1) Assistant Physician. (2) Junior Resident Medical Officer (male). Salary at the rate of £40, increasing to £60 on appointment as Senior.

BETHLEM HOSPITAL.—Two Resident House-Physicians. Honorarium, £25 per quarter each.

BIRKENHEAD: BOROUGH HOSPITAL.—(1) Senior House-Surgeon. (2) Junior House-Surgeon. Salary, £100 and £80 per annum respectively.

BIRKENHEAD UNION.—Senior Male Resident Assistant Medical Officer. Salary commencing at £130 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—(1) Resident Surgical Officer; salary, £100 per annum. (2) First, Second, and Third House-Surgeons, salary, £90, £80, and £75 per annum respectively.

BIRMINGHAM GENERAL HOSPITAL.—(1) House-Surgeon to Special Departments. (2) Obstetric House-Surgeon. (3) House-Surgeon. Salary for (1) and (2) at the rate of £50 per annum, and for (3) at the rate of £40 per annum for two months, rising to £50.

BIRMINGHAM: QUEEN'S HOSPITAL.—House-Physician. Salary at the rate of £50 per annum.

BLACKBURN COUNTY BOROUGH.—Medical Officer of Health and School Medical Officer. Salary, £750 per annum.

BOOTLE BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £80 per annum.

BRECON AND RADNOR ASYLUM, Talgarth.—Assistant Medical Officer. Salary, £170 per annum.

BRIDGE OF WEIR: CONSUMPTION SANATORIUMS OF SCOTLAND.—Lady Assistant Medical Officer. Salary, £75 per annum.

BRIDGWATER HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

BRISTOL EYE HOSPITAL.—House-Surgeon. Salary, £80 per annum.

BRISTOL GENERAL HOSPITAL.—Honorary Physician or Surgeon to the Throat and Ear Department.

BRISTOL ROYAL INFIRMARY.—Obstetric and Ophthalmic House-Surgeon. Salary at the rate of £75 per annum.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary at the rate of £100 per annum.

CANTERBURY BOROUGH ASYLUM.—Assistant Medical Officer (male). Salary, £160 per annum.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—House-Physician. Salary, £80 per annum.

CHORLEY: RAWCLIFFE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

COLCHESTER: ESSEX COUNTY HOSPITAL.—House-Surgeon (male). Salary, £80 per annum.

DOUGLAS, ISLE OF MAN: NOBLE'S HOSPITAL.—Resident House-Surgeon. Salary, £90 per annum.

DREADNOUGHT HOSPITAL, Greenwich.—Assistant Pathologist. Salary, £100 per annum.

DUNDEE ROYAL INFIRMARY.—Anaesthetist to the Infirmary and Instructor in Anaesthetics in the University of St. Andrews. Salary, £200.

EDINBURGH: THE HOSPICE.—Medical Women as (1) Senior Resident, (2) Junior Resident. Honorarium, £25 and £18 per annum respectively.

GROSVENOR HOSPITAL FOR WOMEN, Vincent Square, S.W.—Registrar.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £75 per annum.

HUDDERSFIELD ROYAL INFIRMARY.—Male Junior Assistant House-Surgeon. Salary, £60 per annum.

KETTERING AND DISTRICT GENERAL HOSPITAL.—Resident Medical Officer. Salary, £100 per annum.

LANCASHIRE COUNTY ASYLUM, Winwick.—Pathologist and Assistant Medical Officer. Salary, £200 per annum, rising to £250.

LEAMINGTON SPA: WARNEFORD, LEAMINGTON, AND SOUTH WARWICKSHIRE GENERAL HOSPITAL.—(1) House-Surgeon. (2) House-Physician. Salary, £100 and £85 per annum respectively.

LEICESTER ROYAL INFIRMARY.—Assistant House-Surgeon. Salary at the rate of £80 per annum.

LIVERPOOL INFIRMARY FOR CHILDREN.—(1) Two Resident House-Physicians. (2) Resident House-Surgeon. Salary, £30 each for six months.

LONDONDERRY DISTRICT LUNATIC ASYLUM.—Junior Male Assistant Medical Officer.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—(1) Assistant Resident Medical Officer; honorarium, £40 for six months. (2) Medical Registrar; honorarium, 40 guineas per annum.

MACCLESFIELD GENERAL INFIRMARY.—(1) Senior House-Surgeon. (2) Junior House-Surgeon. Salary, £100 and £80 per annum respectively.

MANCHESTER VICTORIA MEMORIAL JEWISH HOSPITAL.—Resident Medical Officer (female). Salary at the rate of £80 per annum.

MIDDLESBROUGH: NORTH RIDING INFIRMARY.—Junior House-Surgeon. Salary at the rate of £80 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.—Junior House-Surgeon. Salary at the rate of £85 per annum.

NOTTINGHAM GENERAL DISPENSARY.—(1) Assistant Resident Surgeon (male); salary, £170 per annum. (2) Resident and Assistant Resident Surgeons for Branch; salary, £180 and £170 per annum respectively.

NOTTINGHAM WORKHOUSE AND INFIRMARY.—Two Resident Assistant Medical Officers. Salary, £150 per annum, rising to £170.

OLDHAM ROYAL INFIRMARY.—Third House-Surgeon. Salary at the rate of £80 per annum.

PARIS: BRITISH HOSPITAL.—Resident House-Surgeon. Salary, £100 per annum.

PORTSMOUTH PARISH.—Second Assistant Resident Medical Officer for the Workhouse Infirmary, etc. Salary, £120 per annum, rising to £130.

PRESTON ROYAL INFIRMARY.—Senior House-Surgeon (male). Salary at the rate of £80 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Physician. Salary at the rate of £80 per annum.

RICHMOND: ROYAL HOSPITAL.—Assistant House-Surgeon. Salary, £70 per annum.

ROCHDALE INFIRMARY.—Junior House-Surgeon. Salary, £80 per annum, rising to £90.

ROTHERHAM HOSPITAL.—Senior House-Surgeon (male). Salary, £110 per annum.

ROYAL COLLEGE OF SURGEONS OF ENGLAND.—Examiner in Dental Surgery.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—Assistant Surgeon for Out-patients.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Senior House-Surgeon. Salary at the rate of £100 per annum.

ST. MARYLEBONE GENERAL DISPENSARY, 77, Welbeck Street, W.—Honorary Surgeon.

ST. PAUL'S HOSPITAL FOR SKIN AND GENITO-URINARY DISEASES, Red Lion Square, W.C.—Honorary Assistant Surgeon.

SCARBOROUGH HOSPITAL AND DISPENSARY.—Junior House-Surgeon (male). Salary at the rate of £80 per annum.

SCOTTISH PRISON SERVICE.—Assistant Medical Officer for Perth Prison and Criminal Department. Salary, £250 per annum.

SHEFFIELD: ROYAL INFIRMARY.—(1) Ophthalmic House-Surgeon. (2) Aural House-Surgeon. (3) Assistant House-Physician. Salary, £70 per annum each.

SHREWSBURY: SALOP INFIRMARY.—House-Physician. Salary at the rate of £90 per annum.

SIERRA LEONE: PRINCESS CHRISTIAN HOSPITAL, Freetown.—Resident Medical Officer. Salary, £250 per annum.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SOUTHAMPTON: ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL.—Junior House-Surgeon. Salary at the rate of £60 per annum.

SOUTHPORT INFIRMARY.—Resident Junior House and Visiting Surgeon (male). Salary at the rate of £80 per annum.

STAFFORDSHIRE: COUNTY MENTAL HOSPITAL, Burntwood.—Junior Assistant Medical Officer (male). Salary, £210 per annum.

STAFFORD: STAFFORDSHIRE GENERAL INFIRMARY.—
(1) House-Surgeon; salary, £120 per annum, increasing to £140.
(2) House-Physician; salary, £100 per annum.

SUNDERLAND: ROYAL INFIRMARY CHILDREN'S HOSPITAL.
—Resident Medical Officer. Salary at the rate of £30 per annum.

SURREY EDUCATION COMMITTEE.—Assistant Medical Officer.
Salary, £250 per annum.

TAUNTON: SOMERSET AND BATH ASYLUM, Cotford.—Assistant
Medical Officer. Salary, £150 per annum, increasing to £180.

TIVERTON: THE HOSPITAL.—House-Surgeon and Dispenser.
Salary, £80 per annum.

TUNBRIDGE WELLS GENERAL HOSPITAL.—House-Physician
(male). Salary, £100 per annum.

**WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOS-
PITAL.**—House-Surgeon. Salary, £100 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of
Factories announces the following vacant appointments: Lis-
bellaw (co. Fermanagh), Littleborough (Lancs.).

MEDICAL REFEREES.—The Home Secretary gives notice of
vacancies of Medical Referees under the Workmen's Compensa-
tion Act, 1906, for the Dunoon and Inverary District of the Sherif-
dom of Argyll and for the Dumbarnton District of the Sherifdom
of Stirling, Dumbarnton, and Clackmannan.

APPOINTMENTS.

ROSANQUET, W. Cecil, M.D., F.R.C.P., Physician to the Hospital for
Consumption and Diseases of the Chest, Brompton, S.W.

BROWNING, S. H., M.R.C.S., L.R.C.P., Bacteriologist to the Central
London Ophthalmic Hospital.

COCKAYNE, Edward Alfred, D.M.Oxon., M.R.C.P., Assistant Physician to
the Middlesex Hospital.

GREEVES, R. Affleck, M.B., B.S.Lond., F.R.C.S.Eng., Curator and
Librarian to the Royal London Ophthalmic Hospital.

MURRELL, G. F., M.B.Lond., Assistant Physician to the Royal Berk-
shire Hospital, Reading.

RAMBATT, D. Frederick, M.D. Dubl., Medical Superintendent of the
St. Andrew's Hospital for Mental Diseases, Northampton, vice Dr.
Bayley, deceased.

TRACHTAIR, H. M., M.D., F.R.C.S. Edin., Assistant Ophthalmic Surgeon to
the Edinburgh Royal Infirmary.

WETHERED, Frank J., M.D., F.R.C.P., Fourth Physician to the
Middlesex Hospital.

BIRTHS, MARRIAGES, AND DEATHS.

*The charge for inserting announcements of Births, Marriages, and
Deaths is 3s. 6d., which sum should be forwarded in Post Office
Orders or Stamps with the notice not later than Wednesday morning
in order to ensure insertion in the current issue.*

BIRTHS.

ASHWIN.—On March 11th, at Waldyve House, Market Weighton, the
wife of Richard Hamilton Ashwin, M.D.Lond., of a son.

CRICHTON MILLER.—On March 9th, at Bowden House, Harrow-on-the-
Hill, wife of Hugh Crichton Miller, M.D., of a daughter.

DEATH.

SEDGWICK.—On March 9th, at Eslaforie, Doncaster Road, Rother-
ham, Agnes Marion Sedgwick, aged 3 weeks.

DIARY FOR THE WEEK.

TUESDAY.

**LONDON DERMATOLOGICAL SOCIETY, St. John's Hospital, 49, Leicester
Square, W.C., 4.30 p.m.**—Specimens and Cases will be
shown, and Mr. E. H. Ross (Lister Institute) will open
a discussion on the Intracellular Parasites in Syphilis
and in Allied Conditions in Animals, and will give a
demonstration of the organisms.

MEDICO-LEGAL SOCIETY, 11, Chandos Street, W., 8.30 p.m.—Professor
Harvey Littlejohn: The Determination of Minute
Traces of Blood. Dr. B. H. Spilsbury: Note on Two
Cases of Cut Throat.

ROYAL SOCIETY OF MEDICINE:

SECTION OF PATHOLOGY, 1, Wimpole Street, W., 8.30 p.m.
—Dr. H. H. Dale: Anaphylaxis. Dr. J. A. Braxton
Hicks: Organism Isolated from a Case of Septicæmia.
Dr. H. R. Dean: Permanent Preservation of Haemolytic
Complement.

SECTION OF THERAPEUTICS AND PHARMACOLOGY, 4.30 p.m.
—Adjourned Discussion on Non-Operative Treatment
of Malignant Disease. Professor A. R. Cushny, F.R.S.:
The Action of Drugs on Respiration.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ELECTRO-THERAPEUTICS, 8.30 p.m.—Adjourned
Discussion on X Rays in the Diagnosis of Pulmonary
Tuberculosis.

POST-GRADUATE COURSES AND LECTURES.

BROMPTON HOSPITAL FOR CONSUMPTION, S.W.—Wednesday, 4.30 p.m.,
Dyspnoea.

CANCER HOSPITAL, Fulham Road, S.W.—Wednesday, 5 p.m., Radium
Treatment of Cancer.

LONDON HOSPITAL MEDICAL COLLEGE, E.—Neurology Course, Mon-
day, Tuesday, Wednesday, Friday, 4.30 p.m.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.—
Daily except Saturday; Medical Clinics, Tuesday and
Thursday, 3 p.m.; Operations, Friday, 3 p.m.

**MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street,
W.C.**—Monday, Tuesday, Wednesday, and Thursday,
Demonstrations at 4 p.m.; Lectures at 5.15 p.m.

ROYAL EYE HOSPITAL, St. George's Circus, S.E.—Tuesday, 4.30 p.m.,
Senile Cataract.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—
Monday and Wednesday, 4.30 p.m.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.
—Medical and Surgical Clinics daily; Lectures, Mon-
day, Tuesday, Wednesday, and Thursday, at 5 p.m.
Operations—Gynaecology, Tuesday and Thursday,
10.30 a.m.; Throat, Nose, and Ear, Wednesday, 10 a.m.

National Insurance.

ADVERTISING, CANVASSING, AND TOUTING.

DECLARATION BY THE GENERAL MEDICAL COUNCIL.

The following communication has been addressed to the National Insurance Commission Joint Committee and to the Commissions for England, Scotland, and Wales:

GENERAL MEDICAL COUNCIL.

299, Oxford Street, London, W.,
March 14th, 1913.

To the Chairman of the National Insurance Commission.

Dear Sir,—The attention of the Executive Committee of the General Medical Council has been called to a number of communications, in which it is alleged that objectionable methods of advertising and of canvassing have been employed in various parts of the country, with the object of procuring the enrolment of insured persons or their dependants as the patients of particular medical practitioners. In some instances it is stated that the advertisements were so framed as to suggest that they were issued with the cognizance of the Insurance Commission or of local insurance authorities; in other instances touting or canvassing for patients is said to have been practised in the supposed interest of approved societies and institutions, and of medical practitioners associated with the National Health Insurance service.

The General Medical Council has repeatedly taken steps to inform practitioners themselves of the grave liability they incur by resorting to practices of the kind, and has more than once had to exercise its disciplinary functions in restraint of wilful offenders. It appears, however, to the Executive Committee that some of the local authorities, institutions, and societies concerned with the administration of medical benefit under the National Insurance Act may have acted in ignorance of the principles which guide professional conduct in relation to advertising and canvassing, and have thereby seriously endangered the position of practitioners who are professionally associated with them. The Executive Committee is accordingly of opinion that it would subserve the public interest, and conduce to the proper administration of the National Insurance Act by the bodies in question were the Commissioners to call the special attention of all Insurance Committees, Local Medical Committees, and approved societies and institutions to the appended Warning

Notices, which were published by the General Medical Council on June 6th, 1899, and December 1st, 1905, and are still operative.

I am, Sir, yours faithfully,
DONALD MACALISTER, *President.*

Resolutions of the General Medical Council.

The General Medical Council considers that, in the interests of the medical profession, it is advisable to bring to the notice of its members certain resolutions which have from time to time been adopted as expressing the views of the Council upon certain forms of professional misconduct which have been or may be dealt with as amounting to "infamous conduct in a professional respect" within the meaning of Section 29 of the Medical Act, 1858. The Council, however, wishes it to be distinctly understood that these resolutions are not exhaustive of the forms of professional misconduct which may be dealt with by the General Medical Council under its disciplinary powers, and that the Council is not in any way precluded from considering and dealing with any form of professional misconduct outside the scope or precise language of the following resolutions:

- (1) That the Council strongly disapproves of medical practitioners associating themselves with medical aid associations which systematically practise canvassing and advertising for the purpose of procuring patients. (June 6th, 1899.)
- (2) Whereas it has from time to time been made to appear to the General Medical Council that some registered medical practitioners have, with a view to their own gain and to the detriment of other practitioners, been in the habit of issuing or sanctioning the issue of advertisements of an objectionable character, or of employing or sanctioning the employment of agents or canvassers for the purpose of procuring persons to become their patients: And whereas in the opinion of the Council such practices are contrary to the public interest and discreditable to the profession of medicine: The Council hereby gives notice that any registered medical practitioner resorting to such practices thereby renders himself liable to be charged under the 29th Section of the Medical Act, 1858, with "infamous conduct in a professional respect," and if after due inquiry he is judged by the Council to have been guilty of such conduct the Council may, if it sees fit, direct his name to be erased from the *Medical Register*. (December 1st, 1905.)

British Medical Association.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

IN the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of March 8th, p. 238, a letter addressed to the National Insurance Joint Committee by the Medical Secretary, acting on the instructions of the State Sickness Insurance Committee of the British Medical Association, was printed, and it was stated that a copy had been forwarded to Mr. Masterman, M.P., Chairman of the National Insurance Joint Committee, and to all the representatives of the friendly societies present at the conferences held on October 9th and 16th, 1911. The following reply has been received from Mr. Masterman through his private secretary:

National Health Insurance Joint Committee,
Buckingham Gate, London, S.W.,
March 17th, 1913.

Sir,

Mr. Masterman desires me to reply to your letter sent to the National Health Insurance Joint Committee and to himself on 28th February and printed in the BRITISH MEDICAL JOURNAL of the 8th March, with respect to the medical attendance of existing aged and infirm members of Friendly Societies.

The members in question are persons who are not insured under the National Insurance Act; and it is their societies, and not the Insurance Committees, the Commissioners, or the Government, who are responsible for securing them medical attendance. The whole cost of such attendance must come out of the societies' Funds, and must therefore result either in a reduction of their benefits or in an increase of their contributions. The terms on which the attendance is secured are a matter between these members and their societies and their doctors, and have nothing whatever to do with the Government or the Insurance Act.

The only extent to which this position is modified is by the provisions of Section 15 (2) (e) of the Act, which require Insurance Committees to make arrangements under which societies may, if they desire, secure attendance for these uninsured members on the same terms as for insured persons.

This is, however, an option granted to societies; the Act does not make it obligatory upon a society to avail itself of these provisions nor does it, either expressly or by implication, oblige societies to make payment on as high a scale. The Commissioners, therefore, have absolutely no power, even if they desired, to compel societies to pay out of their own Funds for people who are not insured under the Act, on a scale which is not only much higher than that which they have hitherto been paying, but also much higher than that which was contemplated when this particular section was inserted in the Bill.

Moreover, the whole position with regard to this option has been altered since the passing of the Act by the voting of a large supplementary Treasury grant for Medical Benefit. In the understanding arrived at the conference between the representatives of the medical profession and the Friendly Societies on October 16th, 1911, the amount of money available for medical remuneration was not only understood to be, but was explicitly referred to in the discussion as being 6s. per head. It was on the assumption that the Friendly Societies would be willing to increase the average remuneration for their members from about 4s. to 6s. per head that the agreement was arrived at; and Mr. Masterman understands that Societies generally are willing to pay this sum for these uninsured members.

The fact that the doctors are receiving a much higher remuneration than was assumed at that conference in respect of insured persons, through the addition of a Treasury grant, would seem to be a reason rather for reduction than for increase in the remuneration they should demand for those of their old patients who are prevented by age or infirmity from becoming insured under the Act. The increase of about 5s., that is from 4s. to 9s. (largely from State sources), in the amount provided for the medical benefit of the insured members of societies (who, of course, form the great majority) should in any event enable the doctors to accept an increase of about 2s. for the treatment of the small and diminishing number of their own aged and infirm patients, many of whom have contributed through many years of good health for a medical attendance which they have only recently begun to require.

Yours faithfully,

J. A. SALTER,

Private Secretary.

The Medical Secretary,
British Medical Association.

CENTRAL INSURANCE DEFENCE FUND.

THE APPEAL FOR NEW SUBSCRIBERS.

THE following appeal is being issued:

British Medical Association,
Medical Department, 429, Strand,
London, W.C.

An Appeal to those Members of the Medical Profession who have not subscribed to the Central Insurance Defence Fund.

DEAR SIR OR MADAM,

Frequent appeals, as you know, have been made by the Council of the British Medical Association on behalf of the Central Insurance Defence Fund. This fund was instituted, with the Council as its trustees, for the following objects:

1. To assist in defraying the heavy administrative expenses necessarily incurred in organizing such combined action of the members of the profession as will enable them either (a) to enforce their demands upon the National Health Insurance Commissioners, (b) to establish a public medical service entirely under the control of the profession, or (c) to take such other action as may be found necessary.
2. To provide, when and where necessary, compensation or pecuniary assistance for practitioners who incur loss or require support because of their loyalty to the policy recommended by the British Medical Association.

Up to the present 13,472 members of the profession out of a total of over 32,000 in the United Kingdom have

guaranteed sums amounting to £134,397 to this fund. On these guarantees two calls have been made, one of £1 per head for the purpose of meeting the administrative expenses, and another, mainly for the purposes of compensation, of 20 per cent. of the sum guaranteed.

During the past two years roughly £30,000 have been spent in this campaign, and whatever may be said as to its success on other grounds, it is certain that so far as money is concerned the medical profession, as a direct result of that campaign, has now got a million and three quarters per annum more, or 2s. 6d. more for each insured person, for its work under the Insurance Act than it would have got but for the work done by the Association.

Of the £30,000 spent, about one-half has been provided by the Guarantors to the Central Insurance Defence Fund. The other half has come from the funds of the Association upon which naturally a great strain has been placed. It is felt to be most unfair that the cost of this work should fall entirely upon the Association and upon the minority of the profession who have subscribed to the Insurance Defence Fund, and I am instructed therefore to ask you, who up to the present have neither guaranteed nor subscribed anything to this fund, to take your share of the responsibility either by giving a guarantee in the ordinary way, of as much as you feel you can afford, or at least by giving a donation of £1 for the purpose of helping to defray the administrative expenses of the campaign. This does not allude to any new campaign to be undertaken, but is in respect of obligations already incurred.

I trust you will not attempt to excuse yourself for inaction on the ground that there is no necessity now for any more money. There is every necessity. The fund has now to meet claims the extent of which it is impossible as yet to gauge, and some of the money which has been spent from the funds of the Association ought to be repaid. As this work has been done in the interest of every member of the profession—that is, in *your* interest—it is hoped that you will not be content to allow other people to bear your share of the burden.

I enclose a form of guarantee which you can easily alter into a form of donation if you so prefer. Whether you send a donation or guarantee, please forward cheque for at least £1 and make it payable to the *British Medical Association*.

I am, yours faithfully,
ALFRED COX,
Medical Secretary.

We are requested to publish the following correspondence arising out of the above letter:

112, Fernhead Road, Paddington, W.,
March 15th, 1913.

To the *Medical Secretary*,
British Medical Association.

SIR,—I am in receipt of your circular letter dated 12th March, 1913, asking for subscriptions to the Defence Fund. If I may say so, the *British Medical Association* is very unfortunate, not to say ill advised, in the wording and tone of this appeal—the dictatorial manner (I had almost said discourteous) is more calculated to estrange than to annex sympathisers.

Moreover, in addressing some of us, the *British Medical Association* again shows a great lack of knowledge as to how much many of the members have suffered by their allegiance to the Association. It may interest you to learn that, personally, I have lost much more than the £10 guarantee which I promised your representative last year. I have fought tooth and nail against what I consider the degrading conditions which the Act imposes on my profession, and in support of my convictions I have, whilst my neighbours—some most unwillingly, I gladly proclaim—joined in the *débâcle*, by keeping off the panel, virtually ruined my local practice. Yet the *British Medical Association* calmly says that some of us have not taken our share in the responsibility! I do not for a moment consider that I am under any obligation to the *British Medical Association*. Some of her members, in whom we trusted, sadly failed us.

I could conscientiously make a claim on this same Defence Fund, for I have suffered seriously during the past three months. I have been urged again and again to do so by my colleagues. And yet I am now classed as one who has not upheld the cause.

Sir, from the volume of opinion which I have heard since your letter was circularized you have done more harm than good by the wording of it.

For myself, it lets me see how hopeless it is to trust any longer to those who at present are supposed to be acting for the good of my honoured profession, and unless a change is shortly effected, I may have to reconsider my membership.

Truly yours,
ALEX. M. ELLIOT, M.D.

March 17th, 1913.

SIR,—I am sorry that my circular letter in reference to the Central Insurance Defence Fund has offended you. Its language was not intended to be offensive though it certainly was designed to pierce, if possible, the indifference of members of the profession who have up to now taken no notice of the repeated appeals made on behalf of this fund.

I have made careful inquiries as to the £10 guarantee which you say you promised to "our representative" last year, but no record of it can be found in this office. If there had been such a record you would simply have been asked to fulfil your guarantee in the ordinary way.

While regretting that the language of the circular should have offended you, may I point out the great difficulty of framing a letter which should appeal with equal force and justice to nearly 19,000 members of the profes-

sion for whom the circular was intended? In some few cases we have been informed that subscriptions have been given locally, and in these cases of course the letter would not have been sent had we known of this. But the great majority of the 19,000 have failed to respond to the various appeals either through carelessness or a want of appreciation of their duty to the profession. The letter was a final attempt to bring their duty home to them, and I am glad to say that in many cases it has had the desired effect.

I am sorry to hear that you have lost through the operation of the National Insurance Act; but for that we are not responsible. The Association made the best fight it could with the material at its disposal, and I would remind you that one of the most important factors in the breakdown of the resistance of the profession was that practitioners had not responded to our appeals for money in a way which would enable us with perfect confidence to urge them to stand firm. The responsibility for the lamentable position of the profession in January last lies to a great extent at the doors of those who failed to assist at the proper time in building up a large fighting fund. It is now too late for them to remedy the disaster they helped to cause, but it is not too late for them to assist the Association in meeting claims made on it by those who have suffered appreciably by their loyalty to its policy. If you are among these you may be sure that your claim would receive the most careful consideration.

I am asking the Editor, as requested by you, to print this correspondence in the *BRITISH MEDICAL JOURNAL*.

I am, yours faithfully,
ALFRED COX,
Medical Secretary.

Dr. A. M. Elliot,
112, Fernhead Road,
Paddington, W.

We have also received the following letter:

SIR,—A number of the subscribers to the Guarantee Fund are desirous of knowing how far the guarantee is affected by the late change of policy of the *British Medical Association*. In a recent letter which I have seen the *Medical Secretary* suggests that these subscribers are merely desirous of a plausible excuse for not paying—a suggestion full of that tact and diplomacy to which we owe the insurance *débâcle*. The Guarantee Fund was commended to us by the Council as "a necessary corollary of the pledge"; it follows that the release from the pledge carries with it the release from the guarantee.

If we take the words of the guarantee, compensation was to be provided for those who "incurred loss or required support because of their loyalty to the policy recommended by the *British Medical Association*." At the time when the guarantee was given that policy was that no medical man should engage in contract practice under the Insurance Act or otherwise until the cardinal points had been granted. Now, these cardinal points have not been granted, yet some 15,000 or more men have undertaken insurance work with the concurrence and acquiescence of the Association. The policy of the Association has been changed fundamentally, and it seems quite clear that the trustees of the Guarantee Fund cannot legitimately call upon the guarantors for pecuniary support for the results of a policy to which they did not originally give their sanction.

But there is another aspect of the question which deserves consideration. The fight put up by the *British Medical Association* was only made possible by the Guarantee Fund: the Association claims, and the claim may be allowed, that by its action the amount set aside by the Insurance Commissioners for medical benefit was raised from 6s. to 8s. 6d. per head. Thanks, then, to the guarantors, the panel doctors are receiving an addition of £1,750,000 a year, and it is not creditable to them that they have not at once refunded the money expended on their behalf and in their interests by the Association and taken upon themselves any responsibilities which may still attach to the guarantors. Some men may lose a part of their income, a few a large part, owing to the introduction of the Insurance Act; but nearly twice the amount they have lost is paid to their neighbours in respect of these men's patients; and

it is only just that those who have gained should devote some part of their gains to compensate their unfortunate brethren who have suffered loss. It would not be possible to assess for each panel doctor the actual amount by which he has benefited at the expense of his non-panel neighbours, but it is quite easy by a capitation levy on the number on his insured list to replace the Guarantee Fund which has lapsed. A levy of 1½d. per quarter per head would provide each quarter £25,000, for there are 12,000,000 insured, and that sum would repay the expenses of the Association and provide ample compensation for those who have suffered. More than that, the continuance of that levy would put the profession in such a position that in two or three years it could, if united, compel the Government to grant terms in accordance with the cardinal points. Such a levy of 1½d. a quarter would entail a payment of 5s. for every 120 insured—that is, the panel doctor would receive £11 instead of £11 5s., and proportionately for any larger number. Some men are said to have 3,000 insured on their lists; the quarterly income of such a man would be reduced from £281 5s. to £275; but that is a mere trifle compared with what he has gained and what he may expect to gain in the future.

It may be, of course, that men are only waiting for a lead in this matter, and I would suggest to them that each should send his share to the trustees of the Guarantee Fund without waiting to be invited to do so, those who are guarantors notifying the trustees that their contributions take the place of the lapsed guarantors. In some such way only can the panel doctors pay their debt of honour due to the guarantors.

I should like to emphasize the point that there is no desire for a plausible or any excuse for non-payment; I believe every guarantor would willingly devote his contribution to some definite object for the good of the whole profession. But I am sure that many, if not all of us, hold that the guarantee rested on the pledge, and would never have dreamt of guaranteeing a penny if we had conceived it possible that a large number of men would go over to the enemy as soon as they found it to their own individual advantage. Whether this be a right or a wrong view, it is not open to dispute that the release of the guarantors by the profit-taking panel doctors is an act which cannot be omitted without loss of honour. By such an act also the question at issue here is solved.

I am, yours faithfully,

DONALD F. SHEARER.

Exeter.

LOCAL MEDICAL COMMITTEES.

ESSEX.

At a meeting of the Local Medical Committee on March 13th, Dr. Stuart Ryall Blake, of Forest Gate, who had been elected in due form by his area to complete the number of representatives, took his seat on the Committee. Dr. T. G. King was recommended for appointment by the Commissioners on the Local Insurance Committee, and Dr. Pottinger Eldred, who had been strongly supported for election as a representative upon the Local Insurance Committee by the Walthamstow district, was co-opted as a member of the Local Medical Committee to represent Walthamstow.

Dr. Shadwell, Dr. Ross Stoen, and Dr. Clarence Wright, previously temporary representatives upon the Medical Service Subcommittee, were elected as permanent representatives in accordance with the standing orders previously confirmed.

Certificates.—The matter of certificates was considered, the feeling of the meeting being that uniform certificates, "on" and "off" respectively, were all that should be required.

Allocation of Patients.—It was decided to recommend the Local Insurance Committee to refer the allocation of patients to the doctors in the panel areas or committees where formed.

Income Limit.—The question of an income limit was referred to the medical representatives on the Local Insurance Committee.

Conference with Commissioners.—The SECRETARY referred to the unsatisfactory conference on March 5th with

the Commissioners on the matter of temporary removals to seaside, etc., which resulted in no very definite conclusion. The Commissioners pointed out the hopelessness of expecting any further financial aid, or any new fund, and objected to the idea of patients paying for attendance, though agreeing that it was practically impossible to expect people in sound health to notify removal for a holiday. The Local Medical Committee felt that injustice would result to doctors called upon to treat an influx of patients at 1½d. per week, while in some districts thousands of healthy holiday makers absenting themselves would leave only the sick to be treated by urban doctors. It was felt that no injustice to patients on holiday would result from charging fees as private patients, which they had readily paid heretofore.

Co-ordination of Medical Bodies.—A scheme for co-ordinating the various medical unions and societies and trades unions of practitioners springing up throughout the country, and bringing them into harmonious relations with the British Medical Association, was discussed. Among other propositions was one to appoint eight whole-time organizers to attend meetings (each taking a suitable group of counties), collect information which could be communicated to other groups and to the British Medical Association's central office, with a view to correspondence of policy and unity of action throughout the three kingdoms. It was decided to place a sketch of the scheme before the Secretary of the British Medical Association with a request to bring it under the notice of the State Sickness and Organization Committees, which, the Secretary (Dr. Tomkins) understood, was, at the instance of the Representative Body, considering several points similar to those of the scheme, such as the re-arrangement of all British Medical Association Branches and Divisions so as to make them coterminous with panel areas and subareas.

WEST SUFFOLK.

THE Local Medical Committee for West Suffolk has received official recognition from the Commissioners, and held its first meeting on March 14th, when the following officers were elected:

Chairman, Dr. Wood.

Honorary Secretary, Dr. Batt (6, Abbey Hill, Bury St. Edmunds).

Medical Service Subcommittee, Drs. Batt, Trotter, and Wilkin were appointed.

Special Medical Subcommittee, Drs. Batt, Caic, and Stiff were appointed.

Conference with Insurance Committee.—Subsequently the Committee held a joint meeting with a Special Subcommittee of the County Insurance Committee. After a free discussion of all the matters in question, the joint meeting passed the following resolutions:

1. *Domiciliary Treatment of Tuberculosis.*—That the payment of 6d. per annum for the domiciliary treatment of tuberculosis, which shall include only medical attendance by the practitioner, be on a capitation basis of 1½d., paid quarterly, dating from January 15th, 1913.

2. *Method of Recording after April 14th, 1913.*—The Committee being of opinion that the card index is impracticable as a day-book, and would cause unnecessary clerical work to the practitioner, would ask the National Health Insurance Commissioners to approve a weekly day-book, which could be used in such a capacity, and would be of the character of those in common use among practitioners.

3. *Method of Remuneration after April 14th, 1913.*—The Committee unanimously decided that after April 14th payment for medical benefit should be on a capitation basis without any payment for mileage.

4. *Method of Quarterly Payment to Account.*—The Committee resolved:

(1) That the attendance of patients from January 15th to March 31st be made the index for calculating the proportion due to each practitioner on the panel of the whole medical benefit pool for the quarter ending April 14th, 1913, and that the payment of this proportion include the attendance by the practitioner to April 14th.

(2) That 50 per cent. of the medical benefit pool for payment by attendance for the first quarter be paid on a capitation basis, based on Form Med. 20, as the payment to account to each practitioner on the panel, and that the remainder of the pool for this quarter be allocated on or before July 14th, 1913. Provided that in the event of any practitioner not being entitled to a payment for attendance on a proportion of 50 per cent. of such capitation basis based on Form Med. 20, any such surplus payment which shall

be made to him for the first payment to account shall be deducted from payments made in the ensuing quarter.

(3) That in future, after April 15th, 75 per cent. of the amount due by payment on a capitation basis shall be paid at the end of each quarter.

5. *Method of Payment for Insured Persons from other Areas.*—The Committee instructed the Clerk to ask the Commissioners to rule "that payment for attendance on an insured person requiring medical benefit in an area other than that to which his index slip has been sent shall be according to a scale of fees fixed by the Commissioners after consultation with the British Medical Association, and that such payments shall be a first charge on the medical benefit pool in every area."

6. *Drugs.*—With regard to payment for drugs when working on a capitation basis, the Clerk was instructed to ask the Commissioners to inform the Committee as to the proper method of paying doctors in rural areas more than one mile from a chemist for the drugs supplied by them. Proposed alterations in the drug tariff were referred to the Medical Service Subcommittee and Pharmaceutical Committee jointly, and a letter from the Secretary of the local chemists' committee regarding "repeat mixtures" was also referred to the same joint committee.

The second meeting of the Committee was held on March 17th, when Drs. Wood, Lucas, Hinnell, and Batt were present. The following appointments were made:

Medical Special Subcommittee.—Dr. Hinnell was appointed in place of Dr. Caie, who was unable to accept service.

Representatives on the Seven Local District Insurance Committees which are in process of formation:

| | | | |
|----------------|-------------|----------------|-------------|
| District 1 ... | Dr. Batt | District 5 ... | Dr. Wilkin |
| District 2 ... | Dr. Wood | District 6 ... | Dr. Ritchie |
| District 3 ... | Dr. Barwell | District 7 ... | Dr. Everett |
| District 4 ... | Dr. Maund | | |

The Secretary was given instructions as to obtaining a substitute in the event of any of the above being unable to accept service.

BIRKENHEAD.

The Local Medical Committee for the county borough of Birkenhead has been recognized; it is constituted as follows:

| | |
|---|--------------|
| Dr. Harris, J.P., <i>Chairman</i> | Dr. Caine |
| Dr. Pearson, J.P., <i>Vice-Chairman</i> | Dr. Fardon |
| Dr. Ratcliff-Gaylard, <i>Honorary Secretary</i> | Dr. Grimshaw |
| Dr. Brewer | Dr. Dawson |
| | Dr. Crampton |
| | Dr. Robinson |

Members of Medical Service Subcommittee, Drs. Harris, Ratcliff-Gaylard, and Robinson.

Two meetings held prior to recognition and one since have dealt with the model rules, certificates, and relations of practitioners and chemists. The drug schedule has been amplified and modifications suggested in connexion with appliances. The Committee will shortly meet the Medical Benefits Subcommittee with reference to the allocation of persons who have not availed themselves of right of choice of doctor; and to question of certification. So far the Act is working smoothly.

SHEFFIELD.

At a general meeting of the local profession, held on February 14th, a Local Medical Committee, consisting of forty members (panel and non-panel practitioners), was elected, and was a few days later approved by the Insurance Commissioners. Dr. Gordon was elected chairman, Dr. Cuff vice-chairman, and Dr. F. J. Birks, Middlewood Road, Hillsborough, honorary secretary. At meetings of this committee, held on February 28th and March 10th, it was resolved:

1. That the Local Insurance Committee should bring pressure to bear on the Commissioners to insist on the friendly societies issuing a uniform form of certificate for continuation of illness.
2. That this committee cannot see its way to take any steps with regard to practitioners coming on the panel for a limited number of patients.
3. That the Insurance Committee be strongly advised that those persons with an income of over £160 per annum be allowed to make their own arrangements.
4. That this committee request payment for work done—January 15th to March 14th forthwith, and afterwards that payments be made monthly.
5. That a request be made for allocation for payments only, and such allocation shall be disbursed in equal shares.

9. Memorandum 43, I.C. The following fees were arranged:

| | £ | s. | d. |
|---|---|----|----|
| (1) Attendance on the patient at practitioner's residence... .. | 0 | 2 | 6 |
| (2) Visit to patient's residence... .. | 0 | 3 | 6 |
| (3) Special visit by call after 10 a.m. on Sunday | 0 | 5 | 0 |
| (4) Night visit between 8 p.m. and 8 a.m. | 0 | 7 | 6 |
| (5) Surgical operations | 1 | 1 | 0 |
| (6) Administration of general anaesthetic | 1 | 1 | 0 |
| (7) Setting of fracture | 1 | 1 | 0 |
| (8) Reduction of dislocation | 1 | 1 | 0 |

10. That a subscription be paid by each practitioner of 5s. per annum for the purpose of defraying the expenses of the Local Medical Committee.

11. That the number of insured persons on the list of any practitioner on the panel should ordinarily be limited to 2,000, and should under no circumstances be allowed to exceed 2,500 without the ascertained concurrence of a majority of practitioners on the panel.

At meetings held previously to February 28th by the Provisional Medical Committee it was decided:

1. That distilled water be not used by the chemists unless specially ordered by the doctors, with the exception of lotions for the eye and mixtures containing bismuth, silver, and lead.
2. That practitioners be allowed to dispense medicines for patients who live more than a mile from the nearest chemist on the panel and receive the full capitation fee (9s.).
3. That a uniform charge of 1s. 6d. as a flat rate be made for emergency medicines, etc., and a charge of 6d. for first dressings be made (agreed to by the Commissioners).

BOLTON.

The second meeting of the Bolton Local Medical Committee was held at the Bolton Infirmary on March 11th, 1913, when fifteen members were present.

The Committee adopted and forwarded resolutions to the Local Insurance Committee on the following matters:

Allocation of the Residue of Insured Persons.—The distribution of the residue of insured persons is to be in accordance with their nearness to the doctors who are willing to take them, and if any question arises as to cases where persons are as near one doctor as another, they will be allocated to the man with fewest on his list, an exception to be made in the case of those persons who wish to contract out.

Contracting Out.—The Committee expressed the belief that the Insurance Act conferred on the assured the right to contract out, and that in so far as the Act conferred this privilege it should be accorded.

A Supply of Drugs in Rural Areas.—It was decided that a medical man practising in a rural area may accept a capitation fee of 9s. for every patient residing one mile from a chemist.

Expenses of Local Medical Committee.—A levy of 5s. a head per annum having been made for extraordinary expenses of the Bolton Division, it was decided to ask the Division at its next meeting whether this fund could be drawn upon to meet the expenses of the Local Medical Committee.

Certificates.—A communication to the effect that an insured person having received a certificate of unfitness for work from a practitioner not on the panel was informed by an agent of the Prudential Insurance Company that such certificate could not be accepted unless given by a panel doctor, and that in all cases the name of the complainant must be recorded, was forwarded to the Local Insurance Committee.

DEVONPORT.

A MEETING was held in Devonport on December 14th, 1912, upon a notice sent to each medical practitioner resident and practising in the town by the Honorary Secretary of the Plymouth Division of the British Medical Association.

It was resolved that the Local Medical Committee for Devonport should consist of all registered practitioners of medicine resident and practising in the County Borough of Devonport.

Office-bearers elected for one year from the date of this meeting were:

Chairman.—Dr. G. A. Rae, J.P., 1, Outram Terrace.
Honorary Secretary.—Dr. E. McCulloch, 4, Clarendon Terrace.
Honorary Treasurer.—Dr. G. L. Lander, 14, Mount Edgcumbe Terrace.

Representatives on Insurance Committee.—Drs. Lander and McCulloch were elected.

Dr. J. E. C. Wilson was recommended to the Insurance Commissioners as their medical nominee.

Medical Members of Medical Service Subcommittee.—The Chairman, Secretary, and Dr. J. E. C. Wilson.
Executive Subcommittee.—The Chairman, Secretary, Treasurer, and Drs. Bolus, Fleming, and Wilson.

Since its formation the Committee has held, in all, seven meetings. Amongst the more important of its resolutions have been the following:

That only two sessions a day (Sundays and general holidays excepted for any but urgent cases) be given for seeing insured patients at house or surgery.

This was agreed to by Insurance Committee.

That dental extractions and anaesthetics for dental purposes are outside work required to be done under the Act.

That all certificates demanded on first day of illness, being for the voluntary side of friendly societies, be charged for (1s.).

It has been decided to recommend that the panel fund be divided amongst the members of the panel in direct proportion to the number of acceptances they have registered at the end of the current quarter (for first quarter only).

Also that the unallotted residue of insured persons be allocated among such members of the panel as desire to have them and have less than 1,000 already on their list. Allotment to be in direct proportion to the numbers already accepted.

A resolution in favour of allowing any practitioner to come on the panel for a limited number of patients has also been passed.

The Committee has been recognized by the Commissioners for the period to the end of 1913.

COUNTY OF BUTE.

A MEETING of this Committee was held in the Victoria Hospital, Rothesay, on March 10th.

County Insurance Committee.

Dr. MARSHALL (Rothesay) presided. Drs. Marshall and J. S. Hall (representing the Island of Arran) were unanimously elected to serve on the County Insurance Committee. It was agreed to recommend the Commissioners to appoint Dr. Lawson (Rothesay) as their medical representative on the Bute County Insurance Committee.

Holiday Makers and Convalescents.

Relating to the question of summer visitors on holiday, the SECRETARY read the following letter, dated December 26th, 1912, which he had received from the Commissioners:

Sir,

Medical benefit regulations make provision for an apportionment of capitation fee only in case of change of the usual permanent place of residence from one Insurance Committee area to another, and do not so provide in case of temporary absence from home. Insured persons on holiday in Buteshire will therefore require, in case of illness, to arrange privately with medical men there for attendance and treatment, or to return home to obtain medical benefit.

JOHN JEFFREY,
Secretary.

It was resolved that before signing any new agreement with the Commissioners a satisfactory arrangement be come to concerning the treatment of holiday visitors, and also the question of mileage.

Sunday Attendances: Income Limit.

It was agreed to recommend to the County Insurance Committee that Sunday attendances should be put in the same category as night attendances in the model rules.

This has been agreed to by the County Insurance Committee, and the rules will be distributed to all insured persons. The £2 income limit was agreed to some time ago by the Insurance Committee for Bute.

REPORTS OF LOCAL ACTION.

LONDON.

THE members of the Crystal Palace District Non-Panel Practitioners' Association still adhere to their decision not to join the panel nor to sign the agreement set out on Form 43/I.C., and desire to express the hope that practitioners on the panel will give the question of

renewing their agreement with the Government very careful consideration, seeing that the question is of the utmost importance to the whole profession.

SCOTLAND.

MIDLOTHIAN COUNTY INSURANCE COMMITTEE.

DR. INCH, Gorebridge, and Dr. William Young, West Calder, have agreed to represent the county on the Midlothian County Insurance Committee.

MATERNITY BENEFIT.

At a meeting of the City of Edinburgh Insurance Committee held on March 13th, Councillor F. J. ROBERTSON presiding, it was remitted to the Administration Subcommittee to consider the whole question of maternity benefit in relation to the Royal Maternity Hospital and other institutions. We understand that the managers of the Royal Maternity Hospital, after conference with the Medical Board, are proposing that the hospital should receive fifteen shillings for every insured person delivered either in the hospital itself or in connexion with the out-patient department, and we understand further that several of the large friendly societies view the proposal favourably.

LEITH BURGH INSURANCE COMMITTEE.

At a meeting of the Leith Burgh Insurance Committee on March 12th, Mr. D. W. KEMP presiding, it was announced that there were about 25,000 insured persons in Leith, of whom over 22,000 had made arrangements with doctors on the panel. There were, however, about 300 persons who wished to make their own arrangements for medical benefit. The reason of enormous clerical work was adduced for not allowing them to do so; but Baillie LINDSAY moved approval of the subcommittee's recommendation that these persons be allowed to make their own arrangements till April 15th; Dr. ALLAN GRAY seconded, and the recommendation was adopted. Of course the plan adopted is temporary, but it introduces elasticity in working, which is a matter of great moment.

IRELAND.

MATERNITY BENEFIT.

A Dangerous Proposal.

At the last Committee meeting of the Nurses' Insurance Society of Ireland the following resolutions were carried unanimously:

1. That, in the opinion of the Nurses' Insurance Society of Ireland, now numbering over 600, the present proposal to pay a fee of 5s. to a Poor Law maternity nurse, provided she conducts a case without the attendance of a doctor, is open to grave abuse. Thus, it is proposed to pay the nurse in a simple confinement case which can be conducted safely by herself, but she must forfeit her fee in a difficult and anxious case which requires the presence of a medical man, and where delay in doing so may endanger the life of the patient.
2. That the maternity nursing service should be constituted a State service, that nurses so employed should be paid a proper living wage. The service should be periodically inspected, and employment in it should terminate with the marriage of the nurse.

MEDICAL CERTIFICATES UNDER THE INSURANCE ACT.

A member of the Conjoint Committee of the British Medical Association and Irish Medical Association informs us that the statement in the concluding sentence of the paragraph under this head (SUPPLEMENT, March 15th, p. 256) to the effect that the Conjoint Committee finally agreed to accept one of the schemes of capitation payment for certificates recommended by the Insurance Commissioners is incorrect. He states that the Committee merely approved of the "principle" of a certain ratio of division as suggested by the Irish Commissioners, but as the amount of money available was not sufficient to meet the demands laid down at the different delegate meetings the Conjoint Committee declined to accept the terms offered, and unanimously passed the following resolution:

That while in sympathy with the efforts of the Irish Insurance Commissioners to settle the question of medical certification, we regard the amount of money available for this purpose as insufficient, and we express the opinion that it will be necessary for the societies or Treasury to supplement the arrangement proposed by the Commissioners before the present difficulties of medical certification are removed.

DUPLICATION OF CERTIFICATES.

THE State Sickness Insurance Committee on March 8th addressed to the National Health Insurance Joint Committee a letter, stating that irritation is being caused to practitioners serving on the panel in various parts of the country by the duplication, by the approved societies, of forms of medical certificates. The correspondence received from all over the country showed that this duplication was not only an inconvenience to the members of the profession, but that they could see no good reason for its perpetuation. The Committee in its letter expressed the hope that the Commissioners would be able to induce the approved societies to arrive at some common form of certificate. A reply, dated March 11th, has been received stating that the National Insurance Commission (England) had discussed the matter with the representatives of some of the leading approved societies, and that it was hoped that a solution of the difficulty, which the Commissioners appreciate, would shortly be found.

INSURANCE ACT IN PARLIAMENT.

AMENDING BILL.

MR. MASTERMAN informed Mr. Locker-Lampson on March 17th that, as the Prime Minister had already stated, a bill was now being prepared and would be introduced this year in order to bring within insurance legislation the grants-in-aid voted by Parliament. Other minor changes or additions might be proposed, but he was unable at present to say whether any such proposals would involve an increase in expenditure.

ADMINISTRATION OF MEDICAL BENEFIT.

Itinerant Workers.

Mr. Ingleby asked, on March 12th, what provision, if any, the National Insurance Commissioners had made to enable the 20,000 to 30,000 persons employed by the shewmen of Great Britain to obtain medical benefit.—Mr. Masterman said that the Commissioners had recently issued a memorandum pointing out that where insured persons belonged to a profession which was constantly moving about from one place to another, and staying in each of them for a very short time, they would appear to be among those to whom Section 15 (3) contemplated that permission might be given to make their own arrangements for medical attendance and treatment, and to receive a contribution towards the cost of the same.

In reply to subsequent questions by Mr. Ingleby, Mr. Masterman said that he thought that the arrangement suggested was the only practical way in which medical attendance could be given to the persons referred to. They would receive money towards any medical attendance they received. It was contemplated that the money would be paid towards medical benefit from the amount available from the funds provided by those who made special arrangements.

Proposed Extension to Ireland.

Mr. Masterman informed Mr. William O'Brien on March 17th that the evidence taken by the Committee in reference to the extension of medical benefit to Ireland would be presented to Parliament in due course.

The Limitation of Medical Treatment.

Mr. Teuche asked, on March 13th, by what authority the Insurance Commissioners made regulations restricting medical benefit to treatment of a kind which could be undertaken by a practitioner of ordinary professional competence and skill.—Mr. Masterman said that the Act under Section 15 conferred upon an insured person the right to choose from a panel, which any general practitioner might join, the particular practitioner from whom he desired to receive medical attendance and treatment. The Commissioners had framed regulations to carry this

out by providing that every doctor on the panel shall give to the insured person for whose treatment he is responsible such treatment as is of a kind which can, consistently with the best interests of the patient, be properly undertaken by a general practitioner of ordinary professional competence and skill.

Mr. Cassel: Is it not the case that Section 8 of the Act is perfectly general in its terms, and entitles the insured person to medical treatment and attendance, whatever his illness may be, even in cases which require special treatment?—Mr. Masterman: I think that is a question rather of legal interpretation. I think there is no doubt that the Act clearly sets out in Section 15 that the insured person shall choose his own practitioner to attend upon him, and that practitioner shall give the best attendance he can give.

Supply of Medicines.

Mr. Hicks Beach asked the Secretary to the Treasury, on March 17th, why insured persons who made their own arrangements for treatment by doctors off the panel were not allowed to receive medicine free from chemists on the panel in the same way as other insured persons who were treated by doctors on the panel.—Mr. Masterman said that Section 15 (3) contemplated that when insured persons were allowed to make their own arrangements for medical attendance and treatment they should also make their own arrangements for the supply of medicines and appliances. It would obviously be unfair to require chemists on the panel whose remuneration was based on a capitation system, and accordingly limited to the sums available, to supply medicines to an unlimited extent on the prescriptions of doctors who had not, like those on the panel, a collective responsibility with regard to the arrangements made for medical benefit in the area. Mr. Hicks Beach inquired whether it was not a fact that all insured persons paid through the contributions, of themselves, their employers, and the State, for benefits which included doctors and medicine; and if so, was it not very unfair that a person who paid in addition out of his private sources for the services of a doctor off the panel should lose the benefit of free medicine to which he was otherwise entitled. Mr. Masterman replied that they received a full equivalent for what they would obtain if they were attended by a doctor on the panel for drugs as well as for doctors.

Holiday Makers.

Several questions with regard to the case of holiday makers have been addressed to Mr. Masterman, who has not given any very definite reply. He has said that the question is difficult, has expressed his readiness to receive any suggestion towards its solution, and has admitted that the present regulations, requiring any insured person who moved from the area of one Insurance Committee to that of another to give notice, did not provide for a satisfactory working as a permanent system.

SANATORIUM BENEFIT.

Tuberculin.

In reply to Mr. Chancellor, who, on March 12th, asked a question as to tuberculin, Mr. Masterman said that no regulations had been published on the subject, but it was provided in Section 14 (2) (e) of the Act that no rule made by an Insurance Committee with regard to the administration of sanatorium benefit should prescribe any penalty, nor should any insured person be subject to any penalty, whether by suspension of benefit or otherwise, on account of the refusal by any such person to submit to inoculation of any kind.

Deposit Contributors.

Mr. Hicks Beach asked the Secretary to the Treasury, on March 17th, whether a deposit contributor who had received treatment in a sanatorium, and was discharged from there owing to his or her condition being unsuitable for further treatment in the sanatorium, was entitled to receive any other kind of medical relief in his or her home.—Mr. Masterman replied that a deposit contributor discharged from a sanatorium in the circumstances mentioned would be eligible for sanatorium benefit at home,

including medical treatment and the supply of medicines and other articles ancillary to such treatment. He would also draw sickness benefit from the money standing to his account.

AGED MEMBERS.

Mr. Touche asked the Secretary to the Treasury if he would recommend the Insurance Commissioners to make the provision for aged members compulsory on all friendly societies, and the cost a first charge on the released reserves.—Mr. Masterman replied that the Commissioners had no power to prescribe the application of any part of any reserve funds of a registered friendly society which might be released by the operation of Section 72 of the National Insurance Act.

Mr. Touche asked the Secretary to the Treasury if he was aware that many friendly societies which had become approved societies were receiving applications from aged members for medical benefit under the provisions of Clause 15 (2) (c) of the National Insurance Act, and complained that effective provision had not been made by the Insurance Committees to meet such cases.—Mr. Masterman said that every Insurance Committee had adopted arrangements whereby doctors on the panel were bound to give medical attendance and treatment to the persons referred to on the same terms as to remuneration as those arranged with respect to insured persons, if their society so desired.

Mr. Butcher asked whether, in the case of a person insured under the National Insurance Act, who, upon or after attaining the age of 65 years, retired from his employment on pension or otherwise, and ceased to pay further contributions under the Act, such persons would be entitled to sick or disablement benefits under the Act, and, if so, to what amount.—Mr. Masterman replied that on permanently ceasing to be employed the person in question would cease to be insured, and would not be entitled to the benefits referred to.

MATERNITY BENEFIT.

On March 13th Mr. MacCallum Scott asked whether a married woman, who is herself an insured person and who has duly paid all contributions, is entitled to maternity benefit if her husband is not insured, but is deprived of maternity benefit if her husband is insured but has not paid twenty-six contributions; whether in the absence of any definition of an insured person, doubt has arisen as to whether a man who had not paid twenty-six contributions was an assured person for the purposes of Section 18 of the National Insurance Act; and whether any steps would be taken to secure a decision on this point.—Mr. Masterman said: Under Section 18 of the National Insurance Act the maternity benefit payable in respect of the confinement of an insured married woman whose husband is not insured is paid from the funds of her own society, and is conditional upon the required number of her own contributions having been duly paid before the birth of the child; if the husband is insured it is paid out of the funds of his society, and is conditional upon the required number of his contributions having been paid. In the latter case no maternity benefit would be payable if less than twenty-six contributions had been paid by or in respect of the husband. If his contributions had been paid, maternity benefit would be payable however much the wife's contributions might be in arrear. In the case put in the question maternity benefit would not be payable, but the wife would be entitled to 7s. 6d. a week sickness benefit. I am advised that the provisions of Section 18 of the National Insurance Act on the point are not open to doubt, and that the meaning of the words "insured person" cannot be restricted in the manner suggested in the second part of the question.

Mr. MacCallum Scott: Does the right hon. gentleman recognize that there is a serious anomaly here?—Mr. Masterman: There is liberality shown to the wife of a person who is uninsured, I agree.

Mr. MacCallum Scott: Does the right hon. gentleman recognize that a woman who is married to a man who is not insured is entitled to double benefit in every case, whereas the woman married to a man who is insured may be deprived of maternity benefit?—Mr. Masterman: Of her husband's maternity benefit.

CORRESPONDENCE.

OTHER EXPERIENCES OF THE PANEL.

Dr. A. W. HARRISON (Merton) writes: It seems strange that Dr. Rosa Ford does not appreciate the fundamental error in her figures. Surely it should be obvious that during the first three months a doctor's list of accepted patients, in any given community, will contain the names of *all* those who are ill, but *not all* those who will be paid for; the average number on one's list has really nothing to do with it. Until the final distribution any calculations as to the remuneration per attendance must be fallacious, since a very large number of insured persons have not been accepted. At the end of February, for the London district, only 800,000 had been accepted out of an estimated insured population of nearly a million and a half.

Dr. G. A. WYON (Bow) writes: Dr. Rosa Ford says that I have supposed the number of insured on my books at the end of the forty-five days to have been there the whole time. I used that figure as a basis for calculation: but as a matter of fact I hold the true figure will be that which I will have at the end of the quarter. That is the figure which will be used to calculate remuneration from, and I can hardly think Dr. Ford's friend will be prepared to be paid only proportionately to the time an insured person has been on his books—he will want payment as from January 15th for each and all.

Dr. Ford's attempted proof of her point is, of course, a *petitio principii*. She says in effect: Let us say I see 2 per cent. of those accepted in the first week and 2 per cent. ditto in the second week, then the average percentage is 2 per cent." Of course; but what is wanted is *fact*, and I have since worked out from my daybook my actual figures of work done in the first six weeks. The attendances were 122 for the first week and 155 for the second, 67 (a rate of 154 per week) for January 29th to 31st, and 157, 156, 144, 174 for the four weeks of February. My acceptances at the ends of the corresponding periods were 705, 1,097, 1,189, 1,255, 1,298, 1,331, 1,375. The curve of acceptance is very steep for the first ten days, and after that very gradual. The curve of attendances ought, on Dr. Ford's theory, to be parallel to the former, and its ordinates to be about 2 per cent. of the ordinates of the former curve. As a matter of fact it is *roughly level*, and its ordinates vary from 25 per cent. on the first day to 1.7 per cent. on the seventeenth day. I can give more detailed figures if desired, but I think those above are enough to absolutely dispose of Dr. Ford's theory.

SYSTEMS OF PAYMENT.

Dr. LIONEL JAS. PICTON (Holmes Chapel, Cheshire) writes: In your issue of March 8th the three systems of payment for medical work are curiously contrasted. In your editorial you quote Mr. Sidney Webb in his advocacy of a salaried service; Dr. Ledward in his letter in the SUPPLEMENT urges the claims of payment for work done; whilst you, Sir, appear in the unexpected rôle of an advocate of contract practice.

Certainly Dr. Ledward appears to have the most statesmanlike grounds for the faith that is in him. You utter a warning against prophecy without knowledge. He, writing in the light of Gibbon's study of the German experience, points to the valetudinarianism which, more serious, more extensive, and more insidious than gross malingering, has arisen to detract from the value of the German insurance law.

What is the remedy? Gibbon points to it at once—namely, that the patient should bear some part of the cost of attendance.

That this is impossible under the present Act is beside the mark. The Irish are already asking that the medical benefit shall be extended to them only on the condition that their dependants shall be included. In arranging for the further payments which that inclusion would require—whether here or in Ireland—the responsibility of the patient to bear a moiety could be inserted as one of the features of the arrangement.

The Stockport, Macclesfield, and East Cheshire Division have shown how such a method can be adapted as a voluntary system under the existing Act.

As a correction of valetudinarianism, however, no contracting out system would fulfil the requirements.

An amending Act would be essential.

THE PRESENT SITUATION AND FUTURE POLICY.

Dr. ARTHUR KING (Bow, Devon) writes: Out of some remarks of mine in a letter in the SUPPLEMENT of February 22nd there has arisen, it seems, a little annoyance and also some controversy in respect of the meaning of terms. For the first part I am sorry; but probably those who indulged this feeling have by this time discovered their error and the way they fell into it.

May I now, by your courtesy, try to explain what I conceive to be the essential differences between a trade and profession, and especially in regard to ours?

The cleavage lies not along the lines of money, quantity, social formularies, or even education, but in something far deeper—in ideals.

Of course both trades and professions have aims and exotic laws which are common property. Both barter their wares for a livelihood and must be honest in their dealings. But the esoteric code is the distinguishing feature of the professional calling, in which, I take it, the interest of the client or patient must be the paramount consideration when giving advice or rendering a service from a highly trained and specialized knowledge or experience, although this may conflict with the material interests of the professional man. In other words, he might derive bigger fees from other advice. In the case of a man engaged in trade he is ethically under no such obligation, and, in fact, the best business man is he who sells the greatest amount of goods at the largest profit.

The Hippocratic oath has, I believe, no equivalent in trade circles, and, though the various guilds exercise a control over commercial morality, there is no real lofty human sentiment as the first principle of their organization. Dr. George Sutherland, in his *Medical Etiquette* (London: Sherratt and Hughes), epitomizes the oath thus: "The doctor must be learned, skilful in his art, and honest in every action of life." Contract practice as we know it kills the very soul of medicine. This is the chief basis of my objections from the professional standpoint.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

Dr. J. PHIFE (Leamington Spa) writes: For insured persons over 65 at the commencement of the Act, the same contributions are paid by the employees until they reach the age of 70, and in addition a special parliamentary grant is made of 2d. a week. In the case of all other insured persons, the State 2d. goes to swell the fund out of which benefits are to be paid; but not so where these veterans of labour are concerned. In their hard case it is credited to their approved society, and the only benefits they are entitled to are just such as their approved society decides they are to have. In the majority of cases the societies have decided that they are to receive no medical benefit. In effect the approved societies have apparently captured the State 2d. for their other members although it was paid into them in respect of those over 65. And once again the cry is going out over the land, "We appeal to the charity of your noble profession not to be hard on these poor old people."

HOLIDAY MAKERS AND CONVALESCENTS.

Dr. J. W. PRIDMORE (Honorary Secretary, Isle of Wight Local Medical Committee) writes: As one of the deputations present at the recent meeting with the Commissioners held to discuss the provision of medical attendance upon insured persons temporarily absent from home upon holidays or for other reasons, I cannot endorse the statement that "the net result of the conference would seem to be that the matter, so far as health and holiday resorts on the one hand and industrial centres on the other are concerned, could only be settled by a financial adjustment between the two groups" of practitioners concerned. To my mind the net result was that the medical members present largely upheld the view that it was the Government alone who should bear the onus of the situation, as it was solely due to their action that difficulty had arisen. Had they consulted the profession in the first

instance they would never have been led to promise benefits which they find it so difficult to provide. I fail to see why the representatives of the British Medical Association present should have ignored this most manifest temper of the medical deputation in their report or summary in the JOURNAL of March 8th.

I should like to repeat my suggestion made at this meeting that the sum of one penny per month for every insured person should be subscribed by those of them who desire to "pay in" for medical benefit while holiday-making. In this way a very large sum would be raised from which to settle any possible doctor's bill according to a stipulated tariff. Of course I know that such a scheme may not be possible under the existing Act, but it might be kept in view in order that it may be inserted in an amending Act which is certain to come before long.

The tacit lying-down policy of the British Medical Association, as shown in their comments on the meeting, is not likely to improve their position in the eyes of the rank and file of the profession.

Our correspondent, by omitting the first words of the sentence he quotes, has, we think, formed a wrong impression, which is reflected in his letter. These words were, "The Commissioners undertook to consider the views expressed, but the act result of the conference," etc. Various aspects of the matter have been discussed again and again in the JOURNAL, and it will receive further attention from the Association. The paragraph was not a report by the representatives of the British Medical Association, and did not contain, and was not meant to contain, any comment. After Mr. Schuster's speech, it was clear that the conference could have no other result than that indicated, since Mr. Schuster, speaking for the Commissioners, made it plain that there was no other source than the Local Insurance Fund in the localities concerned. We may refer our correspondent to the report of the meeting of the State Sickness Insurance Committee held on March 13th, published in the SUPPLEMENT for this week, p. 275.

Hospitals and Asylums.

BUCKS COUNTY LUNATIC ASYLUM.

THE annual report for the year 1911 of Dr. H. Kerr, Medical Superintendent, shows that on January 1st, 1911, there were 676 patients on the asylum registers, and 699, the highest number yet recorded, on the last day of the year. The total cases under care during the year numbered 874 and the average number daily resident 697. The increase of Buckinghamshire cases, Dr. Kerr says, during the past two years has been much above the average, and the proportion of the insane to general population has also increased. This ratio in 1911 was 3.3 per 1,000 as compared with 2.7 per 1,000 in 1891. This increase Dr. Kerr attributes in part to the larger number of congenital and senile cases, formerly taken to the workhouse, now admitted to the asylum under certificates, and also to an increasing accumulation of chronic cases in the asylum.

During the year 198 were admitted, of whom 183 were direct and 15 indirect admissions. Of the direct admissions, in 62 the attacks were first attacks within three, and in 28 more within twelve months of admission; in 43 not-first attacks within twelve months, and in the remainder, including 22 congenital cases, the attacks were of more than twelve months' duration on admission. The direct admissions were classified, according to the forms of mental disorder, into: Recent mania 36, recurrent 28; recent melancholia 21, chronic and recurrent 17; senile dementia, 22; general paralysis, 12; delusional insanity, 10; insanity with gross brain lesions, 7; insanity with epilepsy, 3; primary dementia, 3; not insane, 1; and congenital defect, 22. The large number of cases of mental disease of unfavourable prognosis is notable. As to probable causation, alcohol was assigned in 15, syphilis in 11, and influenza in 4; diseases of the nervous system in 14; other bodily diseases in 4; child-bearing in 2; critical periods in 30; bodily trauma in 2; and mental distress in 16. An insane heredity was ascertained in 56 and of other neuropathies in 5, whilst congenital defect not amounting to imbecility existed in 4. During the year 69 were discharged as recovered, giving a recovery-rate on the direct admissions of 37.7 per cent., or of recoveries in and on the direct admissions of 12.5 per cent.; also 12 were discharged as relieved and 17 as not improved.

During the year 77 died, giving a death-rate on the average number resident of 11.1 per cent. The deaths were due in 35 to diseases of the nervous system, including 9 from general paralysis; in 12 to diseases of the heart and blood vessels; in 3 to respiratory diseases; in 1 to pyonephrosis; in 1 to fracture of skull (sustained before admission), and in the remainder to general diseases, including 4 from senile decay, and 12 from tuberculous diseases.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

On Thursday, March 13th, a meeting of the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand, W.C. Mr. T. JENNER VERRALL (Chairman of Representative Meetings) was in the chair, and the other members present were: *England and Wales:* Dr. R. M. Beaton (London), Dr. E. R. Fothergill (Brighton), Mr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. E. O. Price (Bangor), Mr. E. B. Turner (London). *Scotland:* Dr. R. McKenzie Johnston. *Ex officio:* Dr. Edwin Rayner (Treasurer).

APOLOGIES FOR ABSENCE.

Apologies for absence were read from the Chairman (Dr. Macdonald), the President (Sir James Barr), Dr. J. Adams (Glasgow), Dr. T. B. Costello (Tuam), Mr. D. F. Todd (Sunderland), and Dr. D. G. Thomson (Norwich).

EXPENSES OF LEGAL ACTION.

The Committee continued from previous meetings the consideration of an application from a Division asking that certain legal expenses incurred by it should be defrayed out of the Central Insurance Defence Fund. Having fully considered the facts and the explanations given, the Committee resolved to sanction the payment in this case, but to notify that the Committee did not approve of legal expenses, which it was intended to charge to the Association or any fund administered by it, being incurred without the previous consent of the central organization.

PERSONS MAKING THEIR OWN ARRANGEMENTS.

The position with regard to the permission under the Insurance Act authorizing the Insurance Committees to allow persons to make their own arrangements for medical attendance and treatment was considered in connexion with an application from a member for advice. The Committee expressed the opinion that, in view of the uncertainty of the legal position and of the stringent regulations issued by the Commissioners with regard to contracting out, it could not take the responsibility of recommending the practitioner to remain off the panel.

POSITION IN THE EASTERN VALLEYS OF MONMOUTHSHIRE.

The MEDICAL SECRETARY reported that, in accordance with the instructions of the Committee, he had visited South Wales and had attended a meeting of the profession at Pontypool, and that he found the present state of affairs to be as follows:

That the miners had in the past paid their medical attendants a poundage of 3d. for attendance upon themselves and their families; that it had been agreed between the profession and the workmen that under the new conditions, in addition to the allowance for medical benefit under the Act, the latter should pay a twopenny poundage in respect of their families; that some of the men had considered the present a good opportunity for endeavouring to get control of the profession, and had insisted on the poundage being paid through a Workmen's Committee, but that the practitioners would not agree to that arrangement; that the workmen had also demanded the inclusion of "free midwifery" for the poundage instead of attendance on "emergency midwifery" as before, which demand the profession refused; that they were now attempting to set up a scheme for the whole district employing six whole-time medical officers of the fund, but so far had only obtained one; that the meeting had asked for an assurance of the financial support of the Committee if it were found to be necessary.

The Medical Secretary stated that he had expressed the opinion that the Committee would give such an undertaking.

The Committee instructed the Medical Secretary to assure the practitioners in the Eastern Valleys of its sympathy with them in their fight, and to inform them that, so far as the funds placed at its disposal would allow, it would be prepared to consider claims rendered necessary by their fight.

POSITION IN FOREST OF DEAN.

The MEDICAL SECRETARY further reported that he had attended a meeting of the profession in the Forest of Dean and found the following to be the state of affairs in that district:

That in the past the colliery and works surgeons had been obviously underpaid, having only received on an average 13s. for workers and families as against, in other parts of the country for a similar class of practice, 19s.; that upon the passing of the Act the profession had decided to endeavour to raise the general fees, and had after considerable discussion demanded the same general rate as before, plus the insurance payment which the workmen had declined to give; that the workmen were now endeavouring to form a medical aid association for the dependants, employing medical officers on the panel, and that they had already obtained one medical officer and threatened to introduce more; that the profession was absolutely united in its demands; and that the meeting had asked for a similar indication of the effective support of the Association as had been requested at Pontypool, to which he had given a similar answer.

The Committee gave instructions that a similar answer should be sent to the Forest of Dean practitioners as had been given to the profession in the Eastern Valleys.

TREATMENT OF INSURED PERSONS OVER 65 YEARS OF AGE.

A letter forwarded to the Commissioners, Mr. Masterman, and certain representatives of friendly societies, in accordance with the instructions of the Committee (see SUPPLEMENT, March 1st, page 222), was submitted, and Mr. TURNER stated that at a meeting of the London Insurance Committee (of which he was a member) held on March 5th a discussion had taken place concerning this question, during the course of which Mr. Moffrey and another representative of the friendly societies had stated that so long as their societies had the money the same fees would be paid for members over 65 as for insured persons in accordance with the arrangements entered into at the conference with representatives of the British Medical Association.

FUTURE ACTION.

A report by the Medical Secretary on the replies received from practitioners in answer to questions issued to them and to the Divisional Secretaries with regard to their experiences of the working of the Insurance Act, together with a note of the chief objections to panel service, with suggestions for alterations based upon these replies, were referred to a subcommittee consisting of the Chairman, Mr. E. B. Turner, Dr. Beaton, Dr. McKenzie Johnston, Dr. E. R. Fothergill, Mr. C. E. S. Flemming, Mr. E. H. Willock, Dr. W. Courtenay Milward, and Dr. H. H. Tomkins, for report.

PROPOSED SICKNESS, ACCIDENT, AND PENSION FUND.

The report of the subcommittee on a proposed sickness, accident, and pension fund was further considered, together with reports by the Financial Secretary and Business Manager, Dr. Beaton and Mr. Herbert Jones, on inquiries made since the last meeting of the Committee. A special subcommittee, consisting of the Chairman, Dr. Beaton, Dr. Biggs, Dr. Fothergill, Mr. Herbert Jones, Mr. D. F. Todd, and Dr. McKenzie Johnston, was appointed to make a further report on the subject.

RELATION OF DIVISION TO INSURANCE AREAS.

The subcommittee had recommended that the Divisions should be immediately consulted as to the desirability of their boundaries being made coterminous with those of the Insurance and District Committee areas, and the State Sickness Insurance Committee expressed the opinion that, other things being equal, it would be a distinct advantage if the areas of the Divisions were made coterminous with insurance areas. The Committee further resolved to ask the opinion of the Organization Committee.

The Committee further adopted certain recommendations to the Council bearing on the subject of the co-operation between the Divisions and the corresponding Local Medical Committees.

IMPROVEMENT TO BE OBTAINED BY AGREEMENT BETWEEN LOCAL MEDICAL COMMITTEES.

After considering another recommendation of the sub-committee the Committee resolved as follows:—

That it be recommended to the Council:

(a) That efforts be made by Local Medical Committees in every area to obtain the adoption by the Insurance Committees (in exercise of the power conferred upon them by Medical Regulation 52 (1)) of a Standing Order to the effect that all matters connected with the administration of medical benefit be referred, in the first place, to the Medical Service Subcommittee.

(b) That Insurance Committees be urged to provide by Standing Order that all matters which are considered in private by the Medical Service Subcommittee should, on report to the Insurance Committee, be considered in private by that Committee.

(c) That all matters concerning the question of the right of insured persons being "allowed to make their own arrangements" should, by resolution or Standing Order of Insurance Committees, stand referred, in the first instance, to the Medical Service Subcommittee.

(d) That the form of contract between medical practitioners and Insurance Committees should be referred to the Local Medical Committee for consideration before being sent for signature to the practitioners concerned, and should be returned to the Local Medical Committee after signature.

(e) That no agreement between practitioners and Insurance Committees should be entered into for more than one year.

(f) That in the event of the appointment of consulting medical officers they should be whole-time officers, and opportunity should be given to the Local Medical Committees to make nominations for such appointments.

SEAMEN'S NATIONAL INSURANCE SOCIETY.

The Provisional Regulations issued by the Insurance Commissioners modifying, as regards members of the Seamen's National Insurance Society, the provisions of the Act so far as concerned the administration of medical and sanatorium benefit, and the Provisional Regulations for the administration of such benefits with a memorandum by the Medical Secretary thereon, were considered. The Committee resolved to consider the matter further, but in the meanwhile adopted the following resolution:

That a communication be addressed to the Honorary Secretaries of Divisions and Branches connected with seaports, drawing attention to the successful action taken by the Southampton profession in respect of the right of "free choice of doctor," and asking them to urge the local profession to take similar action in connexion with the acceptance of service under the Seamen's Insurance Society.

HOLIDAY MAKERS AND CONVALESCENTS.

It was reported that, in response to an invitation, Dr. Fothergill and the Deputy Medical Secretary, at the request of the Chairman of the Committee, had attended the conference on March 5th between representatives of various Local Medical Committees and the Insurance Commissioners for the purpose of discussing the question of payment of practitioners for attendance upon persons temporarily absent from their homes. Dr. Fothergill reported that about thirty representatives of the profession from both inland and seaside health resorts, and from towns from which numbers of insured persons periodically went for a holiday, had been present at the conference with the Commissioners. He stated that the medical practitioners present were unanimous that payment for attendance on this class of insured persons must be upon a payment per attendance scheme; that suggestions were made for the formation of a fund for the payment of bills incurred in treating such persons by means of a payment from every insured person, and also by means of a deduction from the payments due to each doctor on the panel; that he himself had suggested that any fund formed should not be liable in respect of the treatment of persons away from their own homes for a period of less than one week; that every insured person should insure by paying an annual sum of 1d.; that the fund thus formed should be divided upon a payment per attendance system among the doctors actually treating people; that the Commissioners' representatives had listened to all the suggestions made, and had thanked the representatives for their attendance.

PUBLIC MEDICAL SERVICE SCHEMES.

It was reported that the Chairman had, on behalf of the Committee, approved schemes for the treatment of uninsured persons at the following places: Harrow, Oxford, North Manchester.

A scheme for the treatment of uninsured persons submitted by the Torquay Division was approved. Certain other schemes submitted by Provisional Committees and similar bodies were approved subject to sanction by the Divisions concerned.

CERTIFICATES FROM PANEL DOCTORS.

A letter was read from the Chairman (Dr. Macdonald), who was unavoidably absent, drawing attention to a communication from the Commissioners published in the lay press, to the effect that a panel practitioner by the terms of his agreement must furnish such certificates "as are required to be furnished by that person in connexion with any claim for sickness or disablement benefit under the National Insurance Act made by him in pursuance of the rules of the society of which he is a member, or of the Insurance Committee, as the case may be. This includes not merely certificates 'on' and 'off' benefit, but also such other certificates during the intervening period as may be required under the rules of the society or the committee."

The Committee resolved:

That, in the opinion of the Committee, notwithstanding any statement to the contrary, panel doctors are not required to give certificates during the course of an illness for any other purposes except those in connexion with a claim for sickness or disablement benefit under the Insurance Act.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BIRMINGHAM BRANCH;

COVENTRY DIVISION.

A MEETING of the Coventry Division was held on March 4th, Dr. HAWLEY being in the chair.

Ethical Rules.—After certain ethical matters had been discussed, it was resolved to take the necessary steps to adopt the new ethical rules.

Paper.—Dr. W. H. WYNNE read a paper on tuberculin in the treatment of pulmonary tuberculosis. Many questions were afterwards asked, all the speakers joining in expressing their appreciation of Dr. Wynne's kindness in giving such a clear account of a subject still controversial.

BOMBAY BRANCH.

The ordinary meeting of the Bombay Branch was held in the University Library on February 20th, when Dr. SORAB NARIMAN occupied the chair, and twenty other members were present.

Elections and Appointments.—It was announced that seven new members had been elected by the Council of the Branch. Lieutenant-Colonel C. H. L. MEYER, I.M.S., was nominated a member of the Central Council for the grouped Indian, Assam, Burma, and Ceylon Branches, and was also appointed a substitute representative in place of Major S. C. EVANS, I.M.S., till the next annual meeting.

Pathological Specimens.—Major E. F. GORDON TUCKER, I.M.S., showed the following pathological specimens: (1) Ossifying chondroma of the thyroid gland; (2) horns from a warty growth on the breast of a male; (3) aneurysm in the heart of a European who died in sleep; (4) an unusually large stone removed from the human bladder in 1832 after breaking with a cephalotribe; (5) aneurysm of the transverse aortic arch which had undergone spontaneous cure; (6) aneurysms of the right innominate and left common carotid in one patient. Major S. C. EVANS, I.M.S., showed: (1) A ureteral stone he had removed successfully after abdominal section in a girl who was operated on for a supposed haematoma; (2) sarcoma of the ovary. Lieutenant-Colonel ASHTON STREET sent a fatty tumour weighing 36 lb. which he had removed from the back of a Hindu female aged 42.

CAMBRIDGE AND HUNTINGDON BRANCH: ISLE OF ELY DIVISION.

A MEETING of the above Division was held at March on March 11th, when there were present Dr. H. C. MEACOCK (Chairman), Drs. Tylor, Nix, Horrocks, Martin, Hendley, Harding, Stephens, Carl, Beckett, Burgess, Fegan, and Waters.

It was unanimously resolved:

That this Division is of opinion that a medical union should be started throughout the country on the lines of a trades union, and registered as such; that this union should not interfere with the British Medical Association, which should continue to discharge the duties connected with the scientific and social life of the profession.

That this Division looks to the British Medical Association to take the initiative in establishing this union.

It was resolved to write to neighbouring Divisions asking particulars of their arrangements with uninsured persons, and stating those adopted in this Division.

It was resolved that a letter be sent to the Honorary Secretary of the West Norfolk Division with regard to the inclusion of Upwell and Outwell within the area of this Division.

CORRECTION.—In the report of the meeting of the Boston and Spalding Division published on March 1st, p. 223, the word "over" in the paragraph headed "Uninsured Men" should have been "under."

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

THE Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,
Medical Secretary.

February 4th, 1913.

QUARTERLY MEETING OF COUNCIL.

THE Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, April 23rd, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,
Financial Secretary and Business Manager.

March 13th, 1913.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.—A special meeting will be held at Southwark Infirmary, East Dulwich Grove (Station, East Dulwich Elevated Electric), on Thursday, March 27th, at 4 p.m. Agenda: Alteration of the rules of the Division as suggested by the Central Organization Committee and recommended by the Executive Committee of the Division. An ordinary meeting will be held at the conclusion of the special meeting, when Dr. Hector Cameron will read a paper on "The Uses and Abuses of Patent Foods in Infancy."—J. H. CLATWORTHY, 145, Denmark Hill, S.E.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—It has been found necessary again to alter the date of the demonstration arranged by the Newcastle-on-Tyne Division to March 28th, when Professor R. A. Bolam will lecture on "Medico-legal Tests for Blood."—R. J. WILLAN, Honorary Secretary, 25, Ellison Place, Newcastle-on-Tyne.

Vital Statistics.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,103 births and 862 deaths were registered during the week ending Saturday, March 8th. The annual rate of mortality in these towns, which had been 20.4, 18.7, and 20.7 per 1,000 in the three preceding weeks, fell to 19.9 in the week under notice, but was 2.5 per 1,000 above the rate recorded in the ninety-six large English towns. Among the several Scottish towns the death-rates ranged from 11.7 in Falkirk and 14.0 in Paisley and in Motherwell to 20.9 in Kirkcaldy, 21.8 in Glasgow and in Aberdeen, and 22.1 in Leith and in Greenock. The mortality from the principal infective diseases averaged 2.0 per 1,000, and was highest in Clydebank and Motherwell. The 427 deaths from all causes registered in Glasgow included 30 from whooping-cough, 8 from infantile diarrhoeal diseases, 7 from diphtheria, 3 from measles, 1 from enteric fever, and 1 from scarlet fever. Six deaths from whooping-cough and 3 from infantile diarrhoeal diseases were recorded in Edinburgh; 3 from diphtheria and 2 from whooping-cough in Aberdeen; and 3 from whooping-cough in Motherwell, 2 in Leith, and 2 in Greenock.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, March 8th, 574 births and 533 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 693 births and 532 deaths in the preceding period. These deaths represent a mortality of 23.2 per 1,000 of the aggregate population in the districts in question, as against 23.1 per 1,000 in the previous period. The mortality is these Irish areas was, therefore, 4.8 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.0 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 23.0, as against an average of 24.2 for the previous four weeks. In Dublin city 24.5 (as against 24.9), in Belfast 23.3 (as against 23.0), in Cork 24.5 (as against 26.5), in Londonderry 14.0 (as against 15.6), in Limerick 19.0 (as against 17.6), and in Waterford 34.2 (as against 23.7). The zymotic death-rate was 1.7, as against 1.8 in the previous week.

ENGLISH URBAN MORTALITY DURING 1912.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

IN the accompanying table will be found summarized the vital statistics of ninety-five of the largest English towns for the fifty-two weeks ending December 28th, 1912. The 437,364 births registered in these towns during that period were equal to a rate of 24.9 per 1,000 of the population, estimated at 17,639,881 persons in the middle of the year. In London the birth-rate was 24.7 per 1,000, while among the other towns it ranged from 14.4 in Bourne-mouth and in Southport, 15.0 in Hastings, 15.9 in Hornsey and in Blackpool, 16.2 in Eastbourne, 16.7 in Bath, and 17.6 in Ilford to 30.4 in South Shields, 30.5 in Stockton-on-Tees, 31.3 in Stoke-on-Trent, 31.4 in Sunderland, 31.7 in St. Helens and in Middlesbrough, and 33.0 in Rhondda.

The 242,689 deaths registered in these towns were equal to a rate of 13.8 per 1,000; in London the death-rate was 13.6 per 1,000, while among the other towns the lowest rates were 7.5 in Ilford, 8.9 in Southend, 9.1 in Wimbledon, 9.3 in Hornsey, 9.5 in Ealing, and 9.7 in Enfield, in Gillingham, and in Eastbourne, and the highest rates were 15.8 in Stoke-on-Trent and in Bootle, 16.0 in Manchester, 16.1 in Oldham, 16.5 in Salford, 16.6 in Preston, 17.2 in Middlesbrough, and 18.1 in Liverpool. The deaths included 780 which were attributed to enteric fever, 7 to small-pox, 8,193 to measles, 1,136 to scarlet fever, 4,594 to whooping-cough, 2,249 to diphtheria, and 4,758 to diarrhoea and enteritis (among children under 2 years of age). The 7 fatal cases of small-pox included 3 in Bristol and 1 each in London, Wolverhampton, Manchester, and Huddersfield. The 780 deaths from enteric fever were equal to a rate of 0.04 per 1,000; in London the death-rate from this disease was 0.03; in the other towns the highest rates were 0.09 in Portsmouth, 0.10 in Merthyr Tydfil, 0.12 in Warrington and in Hull, 0.14 in Wigan, 0.16 in Devonport and in Rotherham, and 0.17 in Bradford. The 8,193 fatal cases of measles were equal to a rate of 0.47 per 1,000; the measles death-rate in London was 0.40 per 1,000, and the highest rates in the other towns were 0.85 in West Ham, 0.89 in Bootle, 1.06 in Salford, 1.10 in Cardiff, 1.15 in Liverpool and in Warrington, 1.42 in Merthyr Tydfil, 1.51 in Rotherham, and 1.70 in Middlesbrough. The 1,136 deaths from scarlet fever corresponded to a rate of 0.06 per 1,000; in London the death-rate from this cause was 0.04 per 1,000, while among the other towns the rates ranged upwards to 0.17 in Coventry and in St. Helens, 0.18 in Birmingham and in Huddersfield, 0.19 in Barnsley, in Middlesbrough, and in Darlington, 0.27 in Aberdare, and 0.31 in Preston. The 4,594 fatal cases of whooping-cough were equal to a rate of 0.26 per 1,000; the mortality from this disease in London was equal to a rate of 0.22 per 1,000; in the other towns the highest rates were 0.47 in Grimsby, 0.48 in St. Helens, 0.50 in Barrow-in-Furness, 0.51 in Rhondda, 0.55 in Salford, 0.57 in West Bromwich, 0.85 in Walsall, and 1.02 in Merthyr Tydfil. The 2,249 deaths from diphtheria corresponded to a rate of 0.13 per 1,000; in London the death-rate from this disease was 0.10 per 1,000, while it ranged upwards in the other towns to 0.27 in West Hartlepool, 0.28 in Swansea, 0.30 in Gillingham, 0.34 in Preston, 0.40 in Barrow-in-Furness, 0.53 in Portsmouth, and 0.88 in Cambridge. The 4,758 deaths attributed to diarrhoea and enteritis among children under 2 years of age were in the proportion of 10.28 to 1,000 of the births registered during the year; the highest proportions recorded in the several towns were 15.25 in Walsall, 15.63 in Wigan, 16.17 in Burnley, 17.02 in Stoke-on-Trent, 17.29 in Birkenhead, and 20.42 in Liverpool.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 101 per 1,000; in London the rate of infant mortality was 90 per 1,000, while among the other towns the rates ranged from 55 in Southend, 63 in Ilford, 66 in Cambridge, 67 in Hastings, 68 in Wimbledon, and 69 in Acton and in Gillingham to 125 in Liverpool and in Middlesbrough, 128 in Stoke-on-Trent, in Wigan, in Salford, in Rhondda, and in Merthyr Tydfil, and 133 in Walsall.

The causes of 2,041, or 0.8 per cent. of the deaths in the ninety-five towns last year, were not certified either by a registered medical practitioner or by a coroner. The highest proportions of uncertified deaths per cent. of the total deaths were 4.1 in Gillingham, 4.5 in Dudley, 4.6 in South Shields, 5.6 in Gateshead, 5.7 in Darlington, and 6.0 in Southend; in twenty-three of the towns the causes of all the deaths were duly certified.

Analysis of the Vital Statistics of Ninety-five of the Largest English Towns during 1912.

| Towns. | Estimated Population (middle of 1912.) | Births. | Deaths. | Annual rate per 1,000 Living. | | Deaths from | | | | | | | | | | Deaths of Children under 1 year of age to 1,000 Births. | Rate per Cent. of Uncanceled Deaths. |
|---------------------|--|---------|---------|-------------------------------|---------|----------------|------------|----------|----------------|-----------------|-------------|---|---|---------|---------|---|--------------------------------------|
| | | | | Births. | Deaths. | Enteric Fever. | Small-pox. | Measles. | Scarlet Fever. | Whooping-cough. | Diphtheria. | Diarthosa and Enteritis (under 2 years of age). | Deaths of Children under 1 year of age to 1,000 Births. | | | | |

- COLTMAN, Frank, L.R.C.P., M.R.C.S., L.D.S.,** Lecturer on Dental Materia Medica at the Royal Dental Hospital, Leicester Square, W.C.
- CRAYEN, R., M.B.,** District Medical Officer of the Wigton Union.
- CREGAN, G. T., M.B., Ch.B.Vict.,** Assistant Medical Officer to the Crumpsall Workhouse, Manchester.
- CROMPTON, E., M.R.C.S., L.R.C.P.,** Medical Officer to the Workhouse of the Newmarket Union.
- DATE, W. Horton, M.R.O.S.Eng., L.S.A.Lond., D.P.H.R.C.S.P.I.,** Assistant School Medical Inspector for Devon, vice H. E. Goulden, M.D. Durh., D.P.H. Camb., resigned.
- DOYLE, W., M.B., Ch.M.Glas.,** Certifying Factory Surgeon for the Colne District, co. Lancaster.
- EVERSHED, A. Reginald F., M.R.C.S.,** Honorary Ophthalmic Surgeon to the London Association for the Blind.
- GARLICK, G. H., M.R.C.S., L.R.C.P.,** Assistant Medical Officer to the North Infirmary of the Parish of St. Pancras.
- HACKER, H. Pollard, M.B., B.Sc.Lond.,** House-Physician at the Hospital for Consumption and Diseases of the Chest, Brompton.
- HARPER, Margaret H., M.B.,** to the Honorary Staff of the Royal Hospital for Women, Sydney, N.S.W.

HARRIS, T. A. B., L.R.C.P. and S. Edin., L.F.P.S. Glas., Certifying Factory Surgeon for the Burton Latimer District, co. Northampton.

HENRY, F. J., M.B., Ch.B. Glas., Tuberculosis Medical Officer for Middlesbrough.

HEWITSON, John T., M.D., M.Ch., F.R.C.S., Assistant to the Chair of Midwifery and Diseases of Women in the Birmingham University.

HIGGINS, Thomas Twistington, M.B., Ch.B. Vict., F.R.C.S. Eng., Resident Medical Superintendent to the Hospital for Sick Children, Great Ormond Street, W.C.

HOOTON, W. H., M.R.C.S., L.R.C.P., Honorary Radiologist to the Batley Hospital.

HOWARTH, W. J., M.D., D.P.H. Vict., Medical Officer of Health for the City of London, vice William Collingridge.

JOHNSTON, Alexander R., M.B., Ch.B., Medical Officer of Health for the Borough of Montrose, vice Middleton Couston, M.D. Aber., resigned.

KIRKBY, Thomas L., M.R.C.S., L.R.C.P., Anaesthetist to the Queen's Hospital, Birmingham.

MACRAY, James Forbes, M.D. Edin., D.P.H., Honorary Medical Superintendent of the X-Ray and Electrical Department, Royal Mineral Water Hospital, Bath.

MATTHEW, Edwin, M.D. Aberd., F.R.C.P. Edin., Senior Physician to the Leith Hospital, vice Dr. Eason, retired.

MAUND, J. H., M.R.C.S., L.R.C.P. Lond., D.P.H. Camb., District Medical Officer of the Newmarket Union.

MITCHELL, W. F., L.R.C.P. and S. Edin., L.F.P.S. Glas., Certifying Factory Surgeon for the Hatherleigh District, co. Devon.

MOTTRAM, M., M.R.C.S., L.R.C.P., District Medical Officer of the Banbury Union.

O'BRYEN, J. W., L.R.C.P. and S. Edin., District Medical Officer of the Lewisham Union.

ORAM, Walter C., M.D., B.Ch., B.A.O., D.S.M., B.A., Medical Officer for the Treatment of Ringworm, Liverpool Corporation.

PATTERSON, D. Wells, M.B., B.S. Dunelm, Honorary Assistant Physician to the Royal Victoria Infirmary, Newcastle-on-Tyne.

PEARSON, E., L.R.C.P., F.R.C.S. Edin., Certifying Factory Surgeon for the Bideford District, co. Devon.

PENTOLD, W. J., M.B., O.M. Edin., M.R.C.S. Eng., L.R.C.P., B.Hy., D.P.H., Lecturer on Bacteriology and Clinical Pathologist to the Royal Dental Hospital, Leicester Square, W.C.

RENSHAW, Arnold, M.B., B.S. Lond., Honorary Pathologist to Ancoats Hospital, Manchester.

RICHARDSON, E. D., L.M.S.S.A., District Medical Officer of the Battle Union.

RYAN, D. J., M.B., B.Ch. R.U.I., Certifying Factory Surgeon for the Monasterevan District, co. Kildare.

SMITH, Kenneth, M.B., Ch.M. Syd., Medical Superintendent to the Royal Prince Alfred Hospital, Sydney, N.S.W., vice Dr. Schlink.

THOMSON, J. H., M.B., District Medical Officer of the Pickering Union.

WEBB, H. W., M.B., Ch.B., Resident Medical Officer to the Convalescent Home of the Edinburgh Royal Infirmary, Murrayfield.

WILSON, William, M.D., B.Sc. Manch., Honorary Assistant Aural Surgeon to the St. John's Hospital of Manchester and Salford for the Ear and Eye.

WOOD, A. Murray, M.D. Edin., Junior Physician to the Leith Hospital.

WOOSTER, F. C., M.B., Ch.M. Syd., Resident Medical Officer to the Women's Hospital, Sydney, N.S.W.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

CLARK.—On March 13th, at 2, Spital Square, Bishopsgate, E., the wife of Percy J. Clark, M.R.C.S., L.S.A., of a daughter.

MARRIAGE.

SUCKLING—SHEARBURN.—On March 14th, at St. Paul's Church, Beckenham, by the Rev. the Hon. Manrice B. Peel, John Jerome Suckling, M.B., B.S. Lond., of 5, Marine Terrace, Margate, older son of C. W. Suckling, Esq., M.D. Lond., M.R.C.P., and Mrs. Suckling, of Beech Lawn, Edgbaston, Birmingham, to Ethel Dagmar, second daughter of A. D. Shearburn, Captain, R.F., of The Oaks, Aldersmead Road, Beckenham.

DEATHS.

MACGREGOR.—On March 13th, at Victoria, British Columbia, Joseph Johnston Macgregor, M.D., F.R.C.S., of 222, Castellain Mansions, Maida Vale, London, youngest son of the late Rev. G. D. and Mrs. Macgregor. (By cable.)

TANNAHILL.—At Gibraltar, on March 9th, John Roy Tannahill, M.B., Ch.B. Edin., eldest son of J. A. Tannahill, Greenock.

DIARY FOR THE WEEK.

WEDNESDAY.

HUNTERIAN SOCIETY, Library, St. Bartholomew's Hospital, 9 p.m.—Discussion on "The Uses of Tuberculin," to be opened by Dr. Arthur Latham. Discussion will be resumed on April 9th.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION FOR THE STUDY OF DISEASE IN CHILDREN,
1, Wimpole Street, W., 4.30 p.m.—Dr. F. J. Poynton:
(1) An Interesting Cardiac Irregularity in an Infant;
(2) A Case of Rheumatic Carditis Commencing in Very Early Life. Dr. Langmead: (1) A Case of Congenital Tremor; (2) Case of Defective Ossification of the Cranial Vault. Dr. Crookshank and Mr. Sidney Royd: Congenital Deficiency of the Chest Wall; and other cases.

POST-GRADUATE COURSES AND LECTURES.

CANCER HOSPITAL, Fulham Road, S.W., Wednesday, 5 p.m.—Laboratory Diagnosis of Cancer.

LONDON HOSPITAL MEDICAL COLLEGE, E.—Neurology Course: Monday, Tuesday, Wednesday, and Friday, 4.30 p.m.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics daily (except Monday). Operations: Gynaecology, Tuesday and Friday, 10 a.m.; Throat, Nose, and Ear, Wednesday and Saturday, 10 a.m.

DIARY OF THE ASSOCIATION.

LOCAL MEDICAL COMMITTEES.

BURNLEY.

The Local Medical Committee for the county borough of Burnley has been recognized and is constituted as follows:

Chairman, Dr. Robinson.

Secretary, Dr. T. M. Scott, Thursby Square, Burnley.

Burnley.

| | |
|---------------|---------------------------|
| Dr. Anderson | Dr. Gardner |
| Dr. Beggs | Dr. Glashan |
| Dr. Bird | Dr. Haworth |
| Dr. Black | Dr. Holden |
| Dr. Callam | Dr. Marsden |
| Dr. Clegg | Dr. Pullon |
| Dr. Crossley | Dr. Purves |
| Dr. Crump | Dr. Rodgers |
| Dr. Edmondson | Dr. Whitham |
| Dr. Ferguson | Dr. Wilson ("Brierfield") |

Padiham.

Dr. Agnew Dr. Bromley

Nelson.

Dr. Normington Dr. Stewart

Representatives on Burnley Insurance Committee.—Dr. Robinson, Dr. Scott.

Medical Service Subcommittee.—Drs. Pullon, Gardner, and Marsden.

Doctors' Accounts Committee.—Drs. Crossley, Ferguson, and Rodgers.

Dispute Charge Committee.—Dr. Purves.

The business done at the meetings of the Committee has included the following matters:

1. Arrangements were made with the chemists to dispense all medicines both night and day. To dispense repeat prescriptions when the date of previous prescription was mentioned. To supply the doctors with dressings in bulk for use in their surgeries. To open their premises on Tuesday evenings 7 to 8 p.m. To open on Sundays, 12 to 1 p.m. and 7 to 8 p.m.

2. The model rules governing insured persons were considered, and with certain amendments were adopted by the Burnley Insurance Committee.

3. Certificates for insured persons obtaining benefit were considered and it was decided not to mention the nature of the illness or accident,

4. That one form of certificate should be sufficient for all the different approved societies.

5. Various complaints of insured persons with regard to:

(a) Delay in obtaining the medicine prescribed.

(b) Wrong dose put in the medicine bottle.

(c) Wrong drugs used in dispensing.

(d) Inability of chemist to supply the drugs required for several days.

(e) Difficulty in obtaining some ordinary appliances without special permission of the clerk of the Insurance Committee.

(f) The quality of the dressings used by the doctors in contradistinction to those used before the Act came into force. These dressings are supplied now to the doctors when ordered for insurance purposes.

6. Advertising and touting for patients was discussed, and communications to the Medical Secretary of the British Medical Association and to Dr. Bateman, of the Medical Defence Union, were sent.

7. Attendance upon boys under 16 years of age and men 65 years of age who work at the collieries but who do not come under the insurance medical benefits for accidents arising out of their employment.

8. The cumbersome nature of the "record of attendance" and the enormous amount of extra clerical work entailed.

It was resolved to make a levy of 5s. upon each member giving service in the Burnley area to meet the expenses of the Committee.

COUNTY OF CHESHIRE.

The eighth meeting of the Provisional Local Medical Committee was held on March 14th at Crewe, when Dr. GARSTANG was in the chair and sixteen members were present. An invitation had been sent to each of the newly constituted medical committees of the twenty-four insurance districts into which the county is divided to send representatives to the meeting, and twelve gentlemen attended in that capacity, most of the other districts being represented by committeemen.

The CHAIRMAN referred to the error in the representation on this Committee of the practitioners residing in

one of the seven divisions which enter into the area of the administrative county (see SUPPLEMENT, February 15th, p. 159). He announced that the matter had been arranged, and he understood that the Division would shortly be correctly represented. No doubt statutory recognition would then be given.

Extension of Contracts.

The business of the meeting was to consider an invitation received by the panel doctors of the county on March 10th to extend their contracts for a further period. Most of the District Medical Committees had held preliminary meetings on March 12th and 13th, at which they had handed in their signed agreements to the medical secretaries. These agreements were placed in the hands of the County Medical Committee on the understanding that they were to be sent to the Insurance Committee on certain conditions. The conditions to be attached to the agreements had been drafted, prior to the meeting, in a memorandum, which was amended and adopted as follows:

Memorandum.

In response to the invitation of the Insurance Committee to the members of the medical profession of the county to continue service under the Insurance Act, the majority of the members feel that in concluding the further agreements it is desirable that their views should be laid before the Insurance Committee, and that certain points which they regard as essential should be secured.

They would place in the forefront of their demands that so long as payment is by capitation the remuneration for dispensing by doctors in rural areas should also be by capitation. They have already laid before the Committee a reasoned statement on this point, and would now merely add that they regard it as vital.

The medical profession generally has found the burden of clerical work imposed by the Act almost intolerable.

The proposed simplification is quite insufficient, and clerical work should be abolished altogether.

The view taken by the profession on the subject of contract medical attendance on the uninsured old and infirm club members has already been brought to the notice of the Insurance Committee. That view is that the Act definitely imposes upon Insurance Committees the duty of providing medical attendance for those persons on the same terms as the insured.

[The position in Crewe and elsewhere was discussed, and it was stated that attempts were being made to import a doctor who would accept aged and infirm club members at lower terms than the insured. Legal advice had been taken by Crewe practitioners, which confirmed the opinion of the Committee as to the obligation of the Insurance Committee to provide attendance for these persons on the same terms as the insured.]

Certificates.—The Insurance Committee will recognize that the less non-medical work is imposed upon doctors the less they will be distracted from their proper duties. The form of certificate should therefore be (1) brought to the doctor by the patient; (2) printed in some uniform manner for all approved societies.

Mileage.—Certain areas on the eastern and south-eastern borders of Cheshire are mountainous and inaccessible, especially in winter, notably Mow Cop and Rainow. The practitioners attending patients in these areas should receive extra payment out of the mileage grant.

Persons Away from Home.—The profession is dissatisfied with the position as to the treatment of insured persons away from home. On the one hand has been the assurance that practitioners would receive the full minimum payment of 7s. per patient per annum; on the other is Mr. Schuster's statement at a recent conference that these same fees would be the only source from which payment for patients away from home would be forthcoming. At that conference payment by a tariff for these cases was discussed; but a fund to pay an adequate tariff could only be created by a serious and probably uniform deduction from the capitation fees of the whole of the doctors. The profession of the county would be glad to have some definite understanding on this matter.

Income Limit.—The fixation of an income limit is regarded by the profession of the county as a step which might go far towards the smooth working of the medical benefit of the Act. They would suggest that the family

income limit be fixed at £2 a week, and that insured persons with incomes above that amount should be required to make their own arrangements for medical attendance. Insured persons not dependent upon their own earnings but living mainly upon persons who are income tax payers should also be required to make their own arrangements.

All the subjects mentioned above appear to the profession matters upon which an understanding should be reached before a general agreement for a further limited period is entered upon.

Rural Areas.—Turning now from the requirements of the immediate present and looking to the ultimate relation of the profession in this county to the National Insurance scheme, the inequality resulting from the same payment being made to doctors in rural areas, who have heavy motoring expenses, as to those whose practice is concentrated in densely populated districts must eventually be removed. If the payment be adequate in the latter case, it is clearly inadequate in the former, the difference of sickness incidence not reducing the two cases to one level and the additional duty of dispensing imposed upon rural doctors at rates which they regard as wholly inadequate constituting no set-off against their travelling expenses, but, on the contrary, an added burden.

Holiday Makers and Migrants.—On the main question a strong body of medical opinion in Cheshire holds that the difficulty now being experienced in settling the question of the payment for visitors to the seaside, gangs of navvies and labourers, domestic servants, actors, canal men, commercial travellers, and other persons of a peripatetic occupation is of the essence of the problem. The system of payment for work done required to solve it would be so extensive as to be practically universal. But where there is no check to the demand for attendance, a system of payment for work done out of a limited and inadequate fund sets a premium on over-visiting. On this ground, and other still more important grounds, some check to an excessive demand for attendance suggests itself as essential. Such a check would prevent malingering and a more serious abuse still, valetudinarianism. The Cheshire profession thinks that the check can only be found when some arrangement has been arrived at which renders it to the patient's financial interest not to be excessively attended—in other words, which places some part of the responsibility for payment (at any rate, in the earlier stages of illness) upon the patient directly.

The profession is convinced that the quality of the attendance must seriously suffer if the present unnecessary strain and overwork continue.

A further list of points desired by the profession was appended as follows:

- (a) That three months' notice of resignation from the panel should suffice. This was important where a doctor with a small practice broke down in health, otherwise he would be tied to find a locum tenens.
- (b) That the fee for the anaesthetic should be paid by the patient.
- (c) That the fee for maternity benefit be paid direct to the doctor by the society.
- (d) That the profession have 10 per cent. representation on the District Insurance Committees.
- (e) That the Insurance Committee should contribute to the expenditure of the Local Medical Committee.
- (f) That no tickets entitling to medical benefit should be issued to voluntary contributors above the income limit.
- (g) That the regulations respecting the insured, and the plain information that they have the right to free choice of doctor, should be published in the local press.
- (h) That there should be a fixed fee for first attendances in accidents to cover average cost of appliances used.
- (i) That the administration of anaesthetics, the treatment of serious accidents, and the treatment of abortions and miscarriages be counted and paid for as extras.
- (j) That, pending favourable consideration of items (h) and (i), only temporary agreements as for a further period of three months be signed.

We are informed by the Honorary Secretary of the County of Cheshire Provisional Local Medical Committee that at the meeting of the Cheshire Insurance Committee on March 15th it was resolved:

1. That dispensing by doctors in rural areas should be paid for by capitation and not as had been proposed by the Medical Benefit Subcommittee according to detailed accounts of each item, in the same manner as the chemists.
2. That the time up to which messages requesting attendance upon the same day should be brought to the surgery

should be the end of the morning surgery hour of each doctor, as desired by the profession, not the uniform time of 10 a.m. as proposed by the Medical Benefit Subcommittee.

3. That the Committee do proceed to make arrangements for the treatment of the aged and infirm members of approved societies (who were members at the time of the passing of the Act) on the same terms as the insured, such treatment to be available on application.

At a meeting of the Chester and Crewe Division held at Chester on March 19th, the following were elected to represent the Division on the County Medical Committee:

| | |
|-------------------------|---------------------------|
| Dr. Phillips, Malpas | Dr. Gray, Crewe. |
| Dr. Matthews, Nantwich. | Dr. Foster, Great Barrow. |
| Dr. Hodgson, Crewe. | Dr. Briant, Helsby. |

This election completes the personnel of the County Medical Committee.

KESTEVEN.

The Local Medical Committee for the Kesteven Division of Lincolnshire has been recognized. It is as follows:

| | |
|---|-----------------------------|
| Dr. Frier, Grantham, <i>Chairman</i> . | Dr. Greenwood, Stamford. |
| Dr. Stanton, Folkingham, <i>Vice-Chairman</i> . | Dr. Macdonald, Woolsthorpe. |
| Dr. G. A. C. Shipman, 23, St. Peter's Hill, Grantham, <i>Honorary Secretary</i> . | Dr. Pim, Sleaford. |
| Dr. Gilpin, Bourne. | Dr. Ellis, Metheringham. |
| | Dr. Poole Berry, Grantham. |
| | Dr. Elliott, Stamford. |
| | Dr. Pretty, Grantham. |

Medical Representatives on the Local Insurance Committee.—Drs. C. Frier, J. A. Macdonald, and G. A. C. Shipman.
Medical Service Subcommittee.—Drs. C. Frier, W. J. Gilpin, and J. C. Ellis.

At a meeting held at Sleaford on February 18th, the following resolutions were adopted:

1. That the minimum fee for attending a confinement be one guinea.
2. That a minimum fee of sixpence be demanded for all "additional" sick pay certificates.
3. That the Commissioners be again urged to make a grant in respect of mileage in Fen districts.
4. That the methods adopted by the Grantham Medical Institute in touting for patients be brought before the notice of the Commissioners.
5. That the Local Insurance Committee be again asked to sanction a wage limit in Kesteven.
6. That practitioners not engaged in whole-time appointments be invited to subscribe six shillings to meet the current expenses incurred by the Committee.

WORCESTER.

The Local Medical Committee for the county of Worcester has been recognized. It is constituted as follows:

| | |
|--|-----------------------------------|
| Mr. J. Lionel Stretton, Kidderminster, <i>Chairman</i> . | Dr. James Pierce, Redditch |
| Dr. A. O. Holbeche, Great Malvern, <i>Vice-Chairman</i> . | Dr. B. Addenbrooke, Kidderminster |
| Dr. H. E. Moore, Oakleigh, Stourport, Worcester, <i>Honorary Secretary</i> . | Dr. H. L. Miles, Kidderminster |
| Dr. W. Horton, Great Malvern | Dr. J. Wilkinson, Droitwich |
| Dr. G. B. Buttery, Oldbury | Dr. M. Johnston, Bewdley |
| Dr. H. Clarke, Stourbridge | Dr. Dickinson, Tenbury |
| Dr. W. Kirkpatrick, Stourbridge | Dr. H. C. Kidd, Bromsgrove |
| Dr. H. B. Emerson, Pershore | Dr. F. W. Coaker, Bromsgrove |
| Dr. G. E. Harthan, Evesham | Dr. D. G. Dykes, Great Witley |
| Dr. James Montford, Upton-on-Severn | Dr. S. W. Coombs, Worcester |
| Dr. J. Stevenson, Redditch | Dr. E. H. Corder, Worcester |
| | Dr. T. B. Young, Halesowen |
| | Dr. C. L. Hawkins, Bromsgrove |
| | Dr. L. A. Taylor, Brierley Hill |
| | Dr. Neville Crowe, Worcester |

At a meeting held at Kidderminster Infirmary, on March 6th, the report of the subcommittee appointed to draw up a series of questions to be submitted to all the doctors in the county who were on the panel, in order to ascertain, if possible, the feelings of the majority on various points, was adopted.

The three medical members of the Medical Service Subcommittee were re-elected on the advice of the Commissioners, who stated that the previous election was void, as the Local Medical Committee had not been recognized at the time of election. Mr. J. Lionel Stretton (Kidderminster), Dr. A. O. Holbeche (Malvern), Dr. Kirkpatrick (Stourbridge) were elected.

Medical Representatives on District Committees.—The following were appointed:

Bromsgrove.—Drs. C. L. Hawkins and H. C. Kidd.
Droitwich.—Drs. J. Wilkinson and Curtis.
Evesham and Shipston.—Drs. O. N. Harthan and N. C. Harry.
Halesowen.—Drs. T. B. Young and McKay.
Hundred House.—Drs. D. C. Dykes.

Kidderminster.—Drs. M. Johnston and B. Addenbrooke.
Malvern.—Drs. A. O. Holbeche and W. Horton.
Oldbury.—Drs. Broughton (Langley) and Cooke (Oldbury).
Pershore.—Drs. H. B. Emerson and J. G. Rusher.
Redditch.—Drs. J. Stevenson and Prothero Smith.
Stourbridge.—Drs. W. Kirkpatrick and C. J. Dudley.
Stourport.—Drs. E. S. Robinson and J. Brocket.
Tenbury.—Drs. Dickinson (Tenbury) and Blaquiere (Pensax).
Upton-on-Severn.—Drs. Jas. Montford and Burd.
Worcester (Rural).—Drs. Bunting (Worcester) and Gent (Ombersley).

Calculation of Remuneration on a Capitation Basis.

The circular of the Insurance Commissioners (England) (10, I.C.) on a method of calculating the remuneration on a capitation basis of doctors coming on the panel prior to and during the currency of the first quarter was discussed, and the following resolutions adopted:

1. The remuneration should be calculated by the number of weeks that each person was on the doctor's list, and not by the number of persons on each list at the end of the quarter.
2. That a wage limit of £2 a week should be fixed.
3. That the mileage in terms and conditions of service should be three miles and not five miles as settled by the Insurance Committee in January.
4. That a uniform certificate should be adopted for all societies.
5. That the Insurance Committee should notify every insured person who had not already selected his doctor that he must do so at once, otherwise he would have no choice in the matter, but would be allocated by the Committee.

WOLVERHAMPTON.

The Local Medical Committee for the Borough of Wolverhampton has been recognized by the Commissioners, and consists of the following twenty-one members:

| | |
|--|---------------------|
| Dr. A. H. Carter, <i>Chairman</i> | Dr. J. O'Meara |
| Dr. E. H. Coleman, <i>Honorary Treasurer</i> | Dr. W. R. Somerset |
| Dr. H. C. Mactier, 33, Tattenhall Road, Wolverhampton, <i>Honorary Secretary</i> | Dr. A. M. Bankier |
| Dr. W. Bates | Dr. Ridley Bailey |
| Mr. W. F. Cholmeley, F.R.C.S. | Dr. J. A. Codd |
| Dr. T. C. Craig | Dr. E. Deanesly |
| Dr. F. A. Cooke | Dr. F. Edge |
| Dr. T. H. Galbraith | Dr. J. Groul |
| Dr. V. J. Magrane | Dr. H. Malet |
| | Dr. S. Poole |
| | Dr. J. F. Stockwell |
| | Dr. J. A. Wolverson |

A meeting of the committee was held at the General Hospital, Wolverhampton, on March 6th, when Dr. CARTER was in the chair.

It was decided to make a levy of 2s. 6d. per annum on all the practitioners whose names appear on the Wolverhampton panel and on all those practising in the area of the committee to defray the expenses of the committee, and Dr. E. H. Coleman was appointed Honorary Treasurer.

Dr. MACTIER gave a short report of the conference with the Commissioners on February 11th, and showed samples of the cards and prescription forms it was proposed to adopt. He also reported that the Commissioners were in favour of the adoption of a pharmacopoeia for the use of the practitioners on the panel and the chemists in the area. After discussion a resolution was adopted recommending the doctors on the panel to adopt a pharmacopoeia, preferably that already adopted by the Birmingham Local Medical Committee.

The committee then considered a complaint made by an insured person, and unanimously resolved:

That it is no part of the duty of a practitioner on the panel to prescribe glasses.

COUNTY OF STAFFORD.

A MEETING of the County of Stafford Local Medical Committee was held at Stafford on March 18th, when the Chairman (Dr. RIDLEY BAILEY) presided, and twenty-three members were present.

Correspondence.—Specimens of prescription books received from the Clerk to the Insurance Committee were handed round, and the choice of the meeting fell on Form Med. 13 (b) for adoption in the county area.

Executive Committee.—The following were appointed members: Messrs. Burd, Butter, Cookson, Daly, Smith, and Taylor, with the Chairman and the Honorary Secretary *ex officio*. Dr. Cookson was appointed Treasurer. The Executive Committee was requested to report to the next meeting on the method of collection and allocation, etc.,

of funds. The drafting of rules was also referred to the executive for consideration and report.

Proposed Pharmacopoeia.—The meeting decided that matters should be left as at present, and that no steps in regard to a pharmacopoeia be taken.

Medical Service Subcommittee.—The Chairman, Treasurer, and Secretary were appointed to act as the medical representatives.

Vacancies on the Insurance Committee.—The Committee decided to recommend Dr. Taylor (Brierley Hill) for appointment by the county council, and Dr. Steele (Kilsgrove) for appointment by the Commissioners.

WEST RIDING OF YORKSHIRE.

At the meeting of the Local Medical Committee on March 3rd. when Dr. MAY was in the chair and twenty-four representatives were present, it was announced that the Committee had been recognized by the Commissioners. It was reported that thirty-six districts of the West Riding Insurance Committee area were now represented on the Local Medical Committee. Dr. May, Dr. Hillman, and Dr. Russell were appointed members of the Medical Service Subcommittee, and it was noted that they should act with the assistance of the Secretary or other officer of the Local Medical Committee as provided in Section 4 (c) of Regulation 52.

Mileage.—The consideration of further claims from various districts was postponed, but the Committee adopted the following principle:

That it be a recommendation from this Committee to the West Riding Insurance Committee that a further capitation fee be granted of (a) half a crown (2s. 6d.) a head per annum for all insured persons resident between three and five miles from the nearest panel doctor, and of (b) five shillings (5s.) for all those more than five miles distant.

Allocation of Patients.—A letter from Mr. Dixon (the Clerk to the West Riding Insurance Committee) was read with regard to the allocation of patients who have not selected a doctor, and the honorary secretary was directed to write and say that in the opinion of the Committee the moneys available for the present quarter in respect of the unassigned residue of insured persons should be distributed equally amongst the doctors on the panel. It was considered that this would be the fairest and most equitable method of distribution.

Aged and Infirm Members of Friendly Societies.—It was reported that a letter from the clerk had stated that the rate of remuneration for attendance upon old and disabled members of friendly societies would be from 6s. 6d. to 7s. (not including drugs), the actual sum depending on the amount of the unexpended balance in the Drug Suspense Fund available for the remuneration of doctors.

Certificates.—As the Commissioners are considering the question of the form of certificate to be used by doctors, the honorary secretary of the Committee was directed to communicate with them suggesting a simple method of certification which might be applicable to the whole country.

Distilled Water.—It was resolved to notify chemists that, unless prescribed, distilled water should not be used.

Rules for Medical Benefit.—It was resolved to request the Insurance Committee to supply to each doctor one or two copies of the cards containing the rules for the administration of medical benefit suitable for hanging up in waiting rooms.

EAST SUFFOLK.

We have ascertained that the statement in the report of the meetings of the East Suffolk Local Medical Committee, published in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of March 15th, p. 251, to the effect that the Secretary of the Lowestoft Institute was collecting insured medical tickets and taking them to the institute to be signed by the doctors, was incorrect. The Lowestoft Friendly Societies' Medical Institute informs us that it has never done any touting and does not permit such a practice. We therefore desire at once to withdraw the statement and to express our regret for its publication.

HAMPSTEAD.

A MEETING of the Hampstead Provisional Medical Committee was held at 41, Belsize Park on March 17th, at 9.30 p.m., under the chairmanship of Dr. FORD ANDERSON.

A letter from the Clerk to the London Insurance Committee in reply to a communication from the Honorary Secretary of January 4th in reference to the treatment of insured persons at the Kilburn Provident Dispensary was read.

It was agreed to apply for recognition as the Statutory Local Medical Committee for the borough of Hampstead, and on obtaining recognition to appoint a representative upon the District Insurance Committee, Dr. Archer being chosen by the votes of those present for this office.

FALKIRK.

ON March 21st the Falkirk Medical Committee met to adopt the constitution drafted by the Insurance Commissioners, Dr. G. C. STEWART being in the chair. Dr. A. E. HUNTER moved, and Dr. BROWN seconded, a motion to decline to adopt the constitution, and to discontinue working under the Act after the period expiring on April 14th. The CHAIRMAN ruled that the motion was out of order; and thereafter the constitution was adopted on the motion of Dr. G. GARDNER, seconded by Dr. J. SMITH. Dr. Stewart was reappointed Chairman of the Committee.

MEETINGS OF INSURANCE COMMITTEES.

EAST SUFFOLK.

At the meeting of the Subcommittee of the East Suffolk Insurance Committee, held at Ipswich on March 18th, some matters of medical interest were dealt with.

Mileage.—From the report in the *East Anglian Daily Times* of March 19th, we learn that Dr. Barnes stated that the Medical Committee had discussed the question of practitioners' mileage in rural districts, and that with Dr. Gutch he had made inquiries which led him to suggest that the Insurance Committee should make application for a grant from the special mileage fund. It was found that there were eighty-seven parishes with a population of 29,081 between three and four miles from a doctor, and thirty-six with a population of 10,395 more than four miles away. From the replies he had received from a certain number of doctors, it appeared that there were 2,731 insured persons between three and four miles distant, 1,405 between four and five miles distant, 936 between five and six miles, and 154 over six miles. In addition he pointed out that in some parts rivers made places apparently close a good distance away by road; many roads were in a very bad state, and there were large tracts of very sparsely populated land. The Committee thanked Dr. Barnes, and decided that a claim should be made.

Lowestoft Medical Institute.—From the same report it appears that the following communication was read from the Insurance Commissioners under date March 11th:

I am directed by the National Health Insurance Commissioners (England) to state that complaints having been received by us of irregularities in connexion with the issue of medical tickets to insured members of societies affiliated to the Lowestoft Friendly Societies' Medical Institute, and in connexion with the collection of the tickets from such persons, the Commissioners have caused inquiries to be made in the matter. As a result of such inquiries it appears that the form of notice to receive medical attendance and treatment through the Institute has been sent in some cases by insured persons under a misapprehension, and with grave interference with the right of insured persons of free choice of doctors has occurred in connexion therewith. The Commissioners are of opinion that the Committee would be well advised to require a new form, Med. 19, together with a new medical ticket to be issued to each of the members of the Institute who is an insured person. The new medical tickets would be issued by the Commissioners to the secretaries of the societies concerned on receipt by the Commissioners of the tickets which had been declared invalid. An intimation, drawing the attention of each member to his right of free choice of doctor, and allowing him a reasonable period from the receipt by him of the form and of the medical ticket for the purpose of considering his decision with regard to medical benefit under the Insurance Act, should be sent in each case. The new medical tickets should be sent to your Committee duly signed by the insured person, but without any signature or endorsement on behalf of the Institute.

The Committee decided to send a copy of the letter to the Institute.

PETERBOROUGH.

At the meeting of the Peterborough Insurance Committee on March 12th it was stated that medical men not on the panel did not intend to make any formal arrangements with insured persons who might be allowed to make their own arrangements, whereupon the Committee decided not to consider any requests for permission to contract out. A list of medical men on the panel, and the number of patients (varying from 1,500 to 42) accepted by them, was received by the Committee, and is fully set forth in the local newspapers. The publication of such a detailed list seems likely to be attended with inconvenience; the practice has been adopted elsewhere of referring to medical men in all such documents issued by the Insurance Committee by numbers instead of by names. The Committee agreed to allocate the unassigned residue of insured persons in proportion to the accepted names already on the doctors' lists, having regard to the distance of the insured persons' residences from the doctors' surgeries.

EAST RIDING OF YORK.

The administration of sanatorium benefit in the East Riding of Yorkshire is being much hampered financially because the number of insured persons is 11,000 less than the Government estimate of one-third of the population. In some cases accommodation for tuberculous patients has had to be found outside the county. The Committee has refused all requests for permission to contract out. The Local Medical Committee suggests payment of 1s. a head a mile, or a capitation fee of 1s. 6d. a mile in respect of all insured persons over the three-mile limit.

FRIENDLY SOCIETIES AND THEIR AGED
AND INFIRM MEMBERS.

The following letter has been addressed by instructions of the State Sickness Insurance Committee of the British Medical Association to Mr. Masterman, M.P., Chairman of the National Insurance Joint Committee, in reply to his communication dated March 17th (published in the SUPPLEMENT of March 22nd, p. 266):

Offices of the British Medical Association,
Medical Department,
429, Strand, London, W.C.,
March 27th, 1913.

Sir,

The British Medical Association is unwilling to continue a correspondence which seems unlikely to have the effect of making clear to you a position which to the Association seems perfectly simple; but there are some statements in the letter of the 17th instant written by Mr. J. A. Salter on your behalf which the Association feels were written under an evident misconception of the facts, and to these I am instructed to reply.

You state that "the terms on which the attendance" on existing aged and infirm members of friendly societies "is secured is a matter between those members and their societies and their doctors and have nothing to do with the Government or the Insurance Act." Surely this is not the case. When the Chancellor of the Exchequer convened the conference between the representatives of the friendly societies and representatives of the Association on October 9th and 16th, 1911, he did so because certain questions were exercising the minds of the friendly societies in regard to their future relations to the medical profession, and he wished, if possible, to help the two bodies to an understanding. One of these questions was the position of the societies as regards their aged and infirm members. As Mr. Moffrey explained (page 6 of verbatim report), "we cannot expect medical men to take them on at the same rate as the younger ones, because they are at a time of life when the attendance of the doctors would be frequent." As a result of that conference, the British Medical Association undertook that this class of persons should be attended on the same terms as the ordinary insured person, and the undertaking was embodied in Section 15 (2) (e) of the National Insurance Act. The Association cannot agree that the terms thus arranged had nothing to do with the Government or the Insurance Act. The bargain then arrived at was a means of allaying some of the objections of the friendly societies to the terms of the bill. The Chancellor himself congratulated the two parties on

coming to this understanding, and the friendly societies thought so much of it that they urged that it should be embodied in the Act so that they should be secure of the medical attendance on this class of their members "on the same terms as to remuneration" as insured persons. If your memory does not serve you as to what occurred at this conference the Association would respectfully suggest that Mr. J. Smith Whitaker, Vice-Chairman of the English Commission, who at that time strenuously fought the question from the professional point of view, would be able to confirm our impression.

You state, further, that the agreement was arrived at on the assumption that the amount of money to be paid for medical attendance on insured persons was to be 6s. A careful reading of the verbatim report shows that the actual amount of remuneration was generally carefully avoided. It is true that the sum of 6s. suggested by the Government was mentioned in the course of the discussion, but obviously because that sum was the only concrete amount which had up to that time been mentioned by any one in authority. As you are aware, the Association never lost an opportunity of declaring its opinion that such a sum was inadequate and would never be accepted by the profession—an opinion which the Government has since endorsed in the most practical manner. The Association must strongly protest against your suggestion that because the profession, by reason of the Treasury grant, is receiving a higher remuneration than the 6s. which the Government quite unjustifiably assumed would be accepted, that is a reason rather for a reduction than an increase in the rate of payment for these old and disabled people. This view of the case appears to the Association to be due either to a total misconception of the real position or to wilful perversity, and, as the Association would rather accept the former explanation, it makes one more attempt to explain the position as it has always presented itself to the medical profession.

When the bill was upon the point of being passed the friendly societies grew alarmed at the possibility of their aged and infirm members being charged at an exceptional rate, as they felt they might well be if the matter were dealt with as a strictly business proposition. The Association met them on this point and agreed to accept an all-round rate. A provision for this was embodied in the request of the friendly societies in the bill, and the profession has always been willing to carry out its side of the bargain arrived at under the auspices of the Government itself. The profession is now told that because the Government raised the rate from the 6s., which no professional body ever dreamt of accepting, to 9s., the profession should take a lower rate of payment for a class whose status from the health insurance point of view is such that the Government excluded them from the ordinary benefits of the Act. That is to say, the medical profession is asked to take a risk which the Government declined, and is told in nearly so many words that it is guilty of meanness when it refuses to accept such a risk. The profession strongly resents the implication of meanness made by you in your letters and in several answers in the House of Commons. It is undeserved, as the history of the relation between the medical profession and the friendly societies proves, and in the opinion of the Association, if it had not been for the unnecessary complication of a very simple question caused by the answers given by you in the House of Commons, the profession and the friendly societies would have settled down before now to the ordinary businesslike fulfilment of the bargain made in 1911.

I am instructed to draw attention to a misunderstanding which is embodied in your statement that, because this class of friendly society members has been paying for medical attendance during years when they probably seldom required it, they should now receive it at the old rate because they are more likely to require it, rests on an entire misconception of the nature of the contract which obtained between the medical practitioner and the friendly society. It was, in fact, a form of insurance in which the good lives helped to pay for the bad, and the Association is unaware of any insurance company which takes the view as regards its business that is contained in your statement just mentioned. The medical profession is not a business corporation, but it knows of no reason outside political

exigencies for asking it to make an arrangement of this kind.

In conclusion, the Association would press the Insurance Commissioners to take immediate steps to amend Clause 2 of Regulation 51, which, as pointed out in the final paragraph of my letter of February 28th last, is inconsistent with the relevant clause of the Act.

I am, Sir,

Your obedient servant,

(Signed) ALFRED COX,
Medical Secretary.

The Right Hon. C. F. G. Masterman, M.P.,
Chairman, National Health Insurance (Joint)
Committee, Buckingham Gate, S.W.

REPORTS OF LOCAL ACTION.

IRELAND.

COMMITTEE ON EXTENSION OF MEDICAL BENEFIT.

Sitting in Dublin.

EARLIER proceedings of this Committee in Dublin were reported in the SUPPLEMENT of March 15th, p. 255. Lady ABERDEEN, who gave evidence on March 14th, said that she had sent out a list of questions to a great many people interested on the point whether medical benefits were desired by the wage-earning classes. The replies were 57 per cent. for, 25 per cent. against, and 18 per cent. doubtful. Of the 57 per cent., many replies indicated that medical benefit could not be satisfactorily applied to the towns only. Practically everybody among the superior classes of workers expressed themselves in favour of the extension of medical benefit. Where the question was understood the workers in rural districts seemed as eager as those in towns. There was not much division of medical opinion on this question. In reply to Dr. Maguire, Lady Aberdeen said that the doctors who expressed themselves in favour of medical benefit resided in rural districts. They numbered about half a dozen altogether. In reply to Mr. Lardner, the witness agreed that those agricultural labourers who would pay nothing were in favour of medical benefit, but those who would have to pay were generally against it. She added that if there were a general application of medical benefit there would have to be a considerable alteration in the Poor Law relief system and a rearrangement in regard to work-houses in order to provide the necessary hospital accommodation. The inclusion of dependants would be essential in order to make the scheme acceptable. Lady Aberdeen having stated in the course of her evidence that persons attending dispensaries who wished for better attendance often gave the doctor a fee, Dr. STAFFORD, a member of the Committee, remarked that he would like to examine the facts about that. It is unfortunate that this statement should have been made without being supported by any particular instances, especially at the present time, when there is quite sufficient cause for friction between the medical profession and the insurance authorities and public over the question of medical certificates under the Insurance Act.

At a meeting of the Committee in Dublin on March 26th evidence was given by Dr. D. A. McCURDY with regard to friendly societies in Londonderry and district. Some of the societies, he stated, had been started long ago, and the rates had not been varied since; they ranged from $\frac{1}{2}$ d. to 3d. a week. He had been informed by one doctor that, although he worked fourteen hours a day for some of the societies, he was unable to make £200 a year, and was often harassed by being brought before the committee to answer complaints. In Derry respectable working people did not like to be seen attending the dispensaries, and very few coming a wage had attended down to the end of last year. He was informed that since then there had been a considerable addition to the number so attending, and he believed that some of the societies had advised their members to go to the dispensary and get free medical attendance. Evidence was also given by Dr. ALLSON of Cork, who said that in his experience in that city the poorer classes did not regard the dispensary as having a pauper taint.

MEDICAL CERTIFICATES.

Conferences have taken place recently between the Insurance Commissioners on the one part and the chairmen of County Insurance Committees on the other. A conference also took place between the Commissioners and representatives of the Conjoint Committee of the British and Irish Medical Associations. The Irish Commissioners have since put out a statement to the effect that they had arrived at an agreement with the Conjoint Committee under which the Exchequer grant of £50,000 is, subject to certain deductions, to be distributed on a capitation basis by the Insurance Committees among the medical practitioners who would undertake to provide all medical certificates required by approved societies and insurance committees. The statement went on to say that the country would be divided into four subdivisions: (1) The six county boroughs and urban districts with a population of over 10,000; (2) the most inaccessible areas like the counties of Donegal and Leitrim and portions of counties like Clare, Kerry, and Galway; (3) the counties with net average per person of less than 7; (4) counties with a higher net average, except the portions included in subdivision (2). We are given to understand that the Conjoint Committee had agreed to the principle of a capitation fee varying according to the population of different areas, but the Commissioners further go on to state that the respective capitation grants in the four areas will be 9d., 2s., 1s. 4d., and 1s. 6d., and that the Conjoint Committee has agreed to these rates. We understand that this gives an incorrect impression of the present position, and that, on the contrary, the Conjoint Committee has declined to accept these terms on the ground that the fees are insufficient. It decided to accept either 2s. 6d. for each certificate or a capitation fee of 3s. A further meeting of the Conjoint Committee is to be held this week to consider the matter, and meanwhile it would appear to be unwise for medical practitioners in Ireland to sign the forms of undertaking which have been issued by the Insurance Commissioners, and are stated to be returnable by April 1st.

ADVISORY COMMITTEE FOR IRELAND.

The following gentlemen, who had resigned their seats on the Advisory Committee for Ireland, have at the request of the Conjoint Committee of the British Medical and Irish Medical Associations been reappointed: Dr. P. T. O'Sullivan (Cork), Dr. Thomas Donnelly (Dublin), Dr. Thomas Costello (Tuam), Dr. J. S. Darling (Lurgan).

INSURANCE ACT IN PARLIAMENT.

ADMINISTRATION OF MEDICAL BENEFIT.

Aged Members of Friendly Societies.

SIR C. KINLOCH-COOKE asked, on March 20th, whether the Treasury was aware that members of friendly societies who were 65 years of age and upwards on July 15th last, or who through permanent disablement at that date were unable to become insured persons under the Act, were called on to pay increased contributions for medical attendance and treatment, and that doctors were refusing to accept such members except at a fee at least equal to that paid for insured members; and whether the possibility of paying the difference out of moneys provided by Parliament would be considered. Mr. Mount asked a similar question.—Mr. Masterman said he was aware that while some societies had been able to make satisfactory arrangements for the medical attendance of their uninsured members, in some districts the doctors were demanding higher rates of remuneration than the societies were prepared to give. He could not understand why the fact that doctors were receiving an additional grant in respect of insured members should make them demand not only the increase of about 50 per cent. (which societies were generally prepared to give), but an increase of nearly 100 per cent. in the rates they had hitherto been receiving for their uninsured patients.

Sir C. Kinloch-Cooke: Will the right hon. gentleman take the opportunity of bringing this matter before the doctors?—Mr. Masterman: I have been doing so. A letter of mine appears in the BRITISH MEDICAL JOURNAL this week.

Assistants and the Panel.

Mr. Keir Hardie asked, on March 20th, whether doctors who were engaged as assistants and had covenanted with

their employers not to open a practice within a given radius during a certain term of years were thereby debarred from serving on the national health insurance panels within the areas specified in their contracts.—Mr. Masterman: Unless debarred by the terms of the private contract, the doctors referred to would be entitled to be placed on the panel.

Deposit Contributors.

Mr. Masterman stated, in reply to Mr. Lane-Fox, on March 19th, that he was not aware that any difficulty in obtaining medical tickets was being experienced by deposit contributors who were entitled to medical benefit, but there had been numerous applications for tickets from deposit contributors, to whom, owing to failure to notify their change of address or to furnish the necessary particulars, it had been impossible to deliver tickets until application was made.

Free Choice of Doctor.

Mr. Lane-Fox asked the Secretary to the Treasury, on March 19th, whether the National Health Insurance Commissioners had received many complaints from insured persons who were now prohibited from employing their favourite doctor under the National Insurance Act because such doctor had not seen his way to join the panel; and how long it was proposed to restrict the free choice of doctor in such cases.—Mr. Masterman said that the answer to the first part of the question was in the negative. With regard to the second part of the question, he had nothing to add to the full statement which he made on the subject on February 12th.

MATERNITY BENEFIT.

Mr. Watt asked, on March 25th, whether in Scotland, and particularly in Edinburgh, maternity benefit was not being paid to the women themselves, but to male relatives representing themselves as authorized to receive such; whether that was according to the Act, or whether the Insurance Committees had power to alter this method of payment.—Mr. Masterman said that the Scottish Commissioners were not aware that maternity benefit, either in Edinburgh or elsewhere in Scotland, was being paid to persons other than the insured persons entitled to it without proper authority from the latter. Section 18 (1) of the Act provided that where the husband was insured the maternity benefit was payable in respect of his insurance and by his society, and was to be treated as his benefit, though the society had power to administer it in cash or otherwise as they thought fit. Insurance Committees administered under similar conditions the maternity benefit of deposit contributors, but they had no powers with regard to the maternity benefit of members of approved societies.

Colonel Lockwood asked whether the maternity money should not be paid directly to the doctor or the nurse.—Mr. Masterman said that the present system was in conformity with the opinion of the House; and in reply to a further question Mr. Masterman said that the husband was exposed to prosecution and conviction if the wife was neglected during this period.

INSPECTION OF PHARMACIES INSPECTORS.

Mr. Tyson Wilson has been informed by Mr. Masterman that the question of appointing inspectors of pharmacies was under consideration.

DOCTORS AND INCOME TAX.

Mr. Malcolm asked the Chancellor of the Exchequer, on March 24th, whether he could see his way to permit doctors earning incomes under the National Insurance Act to bank such moneys free of income tax.—Mr. Lloyd George said that he did not see his way to the granting of differential income-tax treatment to doctors who might be deriving income under the National Insurance Act.

SCOTTISH CLERKS' ASSOCIATION.

In reply to Mr. James Hoggo, Mr. Masterman said, on March 20th, that the special medical scheme of the Scottish Clerks' Association was an arrangement whereby the member called in his own doctor, who rendered his bill in the usual way to the patient; the association refunded the amount of the bill in so far as it did not exceed a certain fixed sum per visit. The Commissioners

were legally advised that this scheme was not a system within the meaning of Section 15 (4) of the National Insurance Act. The association formally applied for approval of the scheme as a system on December 20th last, and was informed on January 8th that the application could not be considered as the scheme was not a system within the meaning of the subsection. He thought there were suggestions, which might fructify, of the desire of the Scottish Clerks' Association to be in combination with the ordinary system.

REPETITION OF MIXTURES.

The Secretary of the Glossop and District Pharmaceutical Association a short time ago raised with the Insurance Commissioners the question of the use by medical practitioners working under the Insurance Act of the common form "Rept. Mist." It was objected that a prescription should be complete in itself, inasmuch as the Act declared free choice of doctor, chemist, and insurance society, and a proprietary right might thus be given to the chemist who first made up the mixture. The reply of the Insurance Commissioners was published in the *Chemist and Druggist* of March 8th, stating that "they would offer no objection to the adoption of a system enabling doctors to order medicines already supplied to insured persons by reference to the person's prescriptions. The system adopted should, however, be such as will enable the chemist readily to identify the prescription to which reference is made."

CORRESPONDENCE.

THE PRESENT SITUATION AND FUTURE POLICY.

Dr. E. H. WORTH (Streatham, S.W.) writes: Your editorial remarks from time to time in the *JOURNAL* would lead one to suppose that the so-called fight about the Insurance Act is over and that we are beaten.

It may be that the country as a whole has given in without firing a shot, to the everlasting shame of our profession; but we London men are made of sterner stuff—three-quarters of our members are not on the panel, and, as far as I can see, never will be unless the conditions offered are improved.

I venture to draw up a few terms which I think may be acceptable to them:

1. The service to be called the Limited Medical Service of London, and limited to 500 insured people.
2. Wage limit to be £2 a week.
3. Doctor's name not to be advertised locally.
4. Capitation grant for insured to be pooled, and the fees to be as stated on Form 43 for payment for work done.
5. Statistics and records to be reduced to a minimum.
6. All control to be administered by a Local Medical Committee, except in cases of misconduct.

CENTRAL INSURANCE DEFENCE FUND.

Dr. W. F. MacDONOUGH (Twickenham) writes: The latter part of Dr. Donald F. Shearer's letter on page 267 of the *SUPPLEMENT* to the *BRITISH MEDICAL JOURNAL* of March 22nd contains a very valuable and practical suggestion which I should like to see carried out, more to put the profession in a position to defend its interests than to give compensation.

That compensation, and to a very large extent, will have to be given unless grave injustice is to follow is quite certain. Many men gave up their clubs to be loyal to their brethren, and now find that they have lost not only their clubs but the panel patients they were entitled to expect, because the clubs have appointed other doctors and are continuing in the same old way, except that they have clearly intimated to their members that for club purposes they will accept no certificates except such as are issued by their own club doctor.

Traction companies which have their own approved society are the worst in this respect; their members are well paid, so go on paying the old club rate over and above what they have deducted from their wages under the Insurance Act. These men cannot be troubled to go to the doctor of their choice for treatment and then to their

club doctor for certificates, so they make their club doctor their panel doctor too, knowing quite well things may not be so pleasant if they did otherwise.

Dr. W. G. DICKINSON (Portishead) writes: I wish most heartily to endorse Dr. Shearer's suggestion. As one of the many who were obliged to join a panel owing to the action of my neighbours, I shall be delighted to contribute at the rate of 5s. per 120 panel patients. I hope the matter will be taken up by the Branches and a fund raised without delay. Not the least advantage would be that we should be forcing the Government to pay for the organization of the profession. I quite agree with Dr. Shearer that when members were released from their pledge they were *ipso facto* released from their guarantee. But what I am waiting for is the publication of the actual amounts hitherto paid as compensation, and on what grounds the grants were made.

BRISTOL.

Appointment of Medical Adviser.

Dr. THOS. M. CARTER (Chairman, Bristol Local Medical Committee) writes: In the SUPPLEMENT to the JOURNAL of March 15th (p. 254) there appears an annotation respecting the appointment of Medical Adviser to the Bristol Insurance Committee which is somewhat misleading, in that it does not indicate the manner in which the interests of the general practitioner have been safeguarded.

It does not appear from your statement that the opinion of the Medical Adviser is sought in almost all cases by the general practitioner himself; and where application is made by the approved society official communication is in every case made with the doctor in attendance before the patient is seen. Only in very rare cases—none of which has yet arisen—is it provided that the Medical Service Subcommittee shall direct the Medical Adviser to visit a patient without reference to the medical attendant. The Insurance Committee and the approved societies have not the right to do so.

In a circular letter addressed on March 3rd to the local profession by the Local Medical Committee the following statements are made:

It is very desirable that insured persons in receipt of sickness benefit should become generally aware of the fact that such an officer will be called in should there be any tendency to prolong the period of sickness benefit unnecessarily, and this knowledge will be quickly spread by his being applied to in a few cases in which the slightest doubt arises; even if his decision should be that sick benefit should continue, the beneficial result of his appearance in the case would follow.

There is no need for the patient to know that the practitioner has applied for the visit of the Medical Adviser; the whole purpose being to spare the practitioner having to make a decision unwelcome to the insured person which might prejudice his future position with that patient.

A general use of the services of the Medical Adviser must tend not only to reduce definite malingering, but also to diminish that liability to invalidism which is so pronounced a result of National Insurance in Germany. (Vide article by Sir John Collie in *Practitioner* for March, 1913.)

The circular letter from the Insurance Committee to panel doctors on February 25th states:

He will act as referee in all cases that may occur in connexion with your treatment of insured persons in which his services are required.

He should be referred to whenever there is the slightest doubt as to malingering, and in all cases where there is any question whether the patient is capable of working without detriment to his health or convalescence.

As the withholding of a sickness certificate might offend a patient, and prejudice the future position of the practitioner, if the Medical Adviser is appealed to, he will bear the onus of the decision in all such cases.

His duties are essentially for the safeguarding of the sickness benefit funds, as with freedom of choice of doctor the societies have no claim on the practitioner to watch their interests.

The advisability of close co-operation between the Medical Adviser and the practitioners must be apparent, lest, as is the case in Germany, the societies should be compelled in the interests of their funds to apply to the Commissioners for the establishment of a routine inspection of all certificates by medical inspectors, not under the control of the Medical Service Subcommittee whose appointment, therefore, would not be so much for the assistance of practitioners as for overlooking their work.

Obviously it will be to the advantage of practitioners to discourage invalidism as much as possible, and it is hoped they will avail themselves freely of this assistance.

It should be noted, however, that the duties of the Medical

Adviser are not those of a clinical consultant, and have no reference to any treatment you may consider necessary for your patients.

Although only a few weeks have elapsed since this appointment was made, the benefit to the profession is already apparent; and, through the tactful manner in which the duties are carried out by Dr. Rogers, no friction whatever has arisen.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

The Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,

Medical Secretary.

February 4th, 1913.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, April 23rd, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,

March 13th, 1913. *Financial Secretary and Business Manager.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—A special meeting of the Division will be held at the Coventry Hospital on Tuesday, April 8th, at 8.30 p.m. (1) To discuss, and if approved, adopt the new ethical rules. (2) To receive the report and recommendation of the committee on an ethical matter. (3) To receive communications. (4) The rest of the evening will be devoted to clinical matters, and any member having anything of interest is requested to arrange with the Honorary Secretary—D. DAVIDSON, 15, Priory Row, Coventry.

EAST ANGLIAN BRANCH.—The spring meeting of this Branch will be held at Colchester on Wednesday, April 30th. Members wishing to read papers or to show cases or specimens should communicate at once with me.—B. H. NICHOLSON, Colchester.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held conjointly with the South-West Essex Division on Friday, April 11th, at 9.30 p.m., at Brooke House, Upper Clapton, by invitation of Dr. Gerald Johnston, when Dr. Hugh Walsham will give an address, with lantern demonstration, on Roentgen Rays in Diseases of the Chest.—A. G. SOUTHCOTTE, Honorary Secretary, 83, Sidney Road, Homerton, N.E.

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION.—A meeting of the Division will be held at the Leicester Royal Infirmary on Wednesday, April 9th, at 4 o'clock. Agenda: Minutes of the previous meeting. Election of Representatives and Deputy Representatives. The following resolution will be proposed: "That it be an instruction to the Council to take the necessary steps to form a union of medical practitioners registered under the Trade Union Acts, for such of the members of the Association and other medical practitioners as may desire to join such a union." Discussion on the proposed "Baby's Welcome" in Leicester. A discussion on "Malingering" will be opened by Mr. C. J. Bond. The following among others have promised to take part: Drs. A. V. Clarke, Moffat Holmes, McAllister-Hewlings, and C. W. Moore. Other business.—R. WALLACE HENRY, Honorary Secretary, 6, Market Place, Leicester.

MEMBERS ELECTED TO THE BRITISH MEDICAL ASSOCIATION

(JANUARY 1ST TO MARCH 13TH, 1913).

BY THE COUNCIL.

Bisset, Walter, M.B., Ch.B., Lieutenant R.A.M.C.
 Browning, Herbert Acland, L.S.A., M.A. Cantab., Surgeon R.N.
 Fergusson, George Douglas Gordon, M.R.C.S. Eng., L.R.C.P.Lond., Surgeon R.N.
 Lloyd, Robert Archer, M.D., M.R.C.S., Captain I.M.S.
 Macfarlane, Robert Maxwell, M.B., B.S.Univ. Glas., The Mission, Blantyre, Nyasaland

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

EAST YORK AND NORTH LINCOLN BRANCH: NORTH LINCOLNSHIRE DIVISION.

The following resolutions have been passed at the last two meetings of this Division:

Attendance on Non-insured Members of Clubs and Societies.

It was resolved that any arrangement for attendance on non-insured persons collectively be made with the Association, and be on a per item basis, with free choice of doctor, and an income limit of £160 per annum. The scale of fees submitted by the Seamen's National Insurance Society was approved, and was adopted for submission to other societies requiring attendance. It is as follows:

| | £ | s. | d. |
|---|---|----|----|
| One visit and medicine for two days ... | 0 | 2 | 6 |
| Each intermediate visit in dangerous cases (including medicine, if prescribed) ... | 0 | 2 | 6 |
| If beyond two miles and under three miles (outward) extra ... | 0 | 0 | 6 |
| If beyond three miles and under four miles (outward) extra ... | 0 | 1 | 0 |
| Over four miles, extra per mile ... | 0 | 1 | 0 |

In accordance with the understanding come to between the British Medical Association and the friendly societies when the National Insurance Act was passing through the House of Commons, aged and infirm members of friendly societies may be attended on a capitation fee the same as that paid for insured members (9s., including medicine), with free choice of doctor and an income limit of £160 per annum.

Contract Midwifery Attendance.

It was resolved that no contracts be made with friendly societies or other bodies for midwifery attendance.

Certificates.

It was resolved that all certificates for club benefits outside the National Insurance Act be charged 1s., first initialling of pay sheet to count as a certificate unless a certificate for the benefit involved had been previously given. Signing off certificates to be charged 1s., but no charge to be made for signing off on the usual form provided by most clubs.

Workmen's Compensation Act.

The workman is not legally required to supply certificates under the Workmen's Compensation Act of inability to work, and where the employer insists on his getting one it was suggested that a form, of which copies have been supplied to members of the Division, should be sent for signature, with an intimation that the fee for supplying such a certificate is 2s. 6d. (as settled by the Representative Meeting of the British Medical Association).

EDINBURGH BRANCH:

SOUTH-EASTERN COUNTIES DIVISION.

A MEETING of the South-Eastern Counties Division was held at Newtown St. Boswells on March 21st. Dr. J. S. MUIR, Chairman of the Division, presided, and fourteen members were present. After full discussion the following resolutions were passed:

Ethical Rules.—That the Ethical Rules, as printed in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL, under heading A, "Rules for a Division not itself a Branch," be adopted.

Central Emergency Fund.—That the present time is not favourable for a canvass in support of this fund.

Insurance Defence Fund: First Call.—That the Secretary be instructed to issue circulars to any members whom he may be informed have not met their obligations.

Expenses of Provisional Medical Committee.—The Secretary intimated that the Berwickshire Committee had not forwarded to him any claim for expenses; and the Chairman of that

Committee, who was present, announced that no claim would be made.

Contract Midwifery Attendance.—That pending further instructions, no arrangements with approved societies be made by any practitioner for contract attendance in midwifery cases.

Aged and Infirm Members of Approved Societies.—That no member should undertake to attend such persons at less than insurance rates.

Contract Attendance on Uninsured Persons.—That no adult non-insured person, either male or female, should be accepted by any practitioner at less than insurance rates, and that 16 be adopted as the minimum age for an adult.

Contract Attendance on Juveniles.—That children under 5 years of age should not be accepted. That the fee for contract attendance on juveniles should not be less than half the rate for adults, namely, 3s. 6d., exclusive of medicines, and that in the case of patients residing beyond a radius of two miles mileage should be charged as an extra.

New Form of Agreement between Insurance Committees and Practitioners.

The Standing Orders were suspended for the discussion as a matter of urgency of the new forms of agreement between Insurance Committees and practitioners recently issued by the National Insurance Commission. It was pointed out that while conditions of service, such as mileage, were referred to in the circular accompanying the stamped form of agreement, there was no reference in the agreement itself to any obligations on the part of Insurance Committees. It was also pointed out that there was no necessity for any hurry in signing, and that members were in a stronger position while giving service without an agreement than with one. It was evident that no Insurance Committee could decline to pay for work done except by risking the immediate withdrawal of practitioners' services. It was decided that another meeting should be convened shortly, and in the meantime a circular has been issued to practitioners inviting them to postpone the signature of the draft agreement, and expressing the unanimous opinion of the Division that all conditions of service should be stated clearly in the stamped agreement, the omission of any reference to mileage being particularly noted. Practitioners were recommended, in acknowledging the receipt of the communication from the County Insurance Committee, to point out: (1) That the proposed agreement was not in order, in that it does not conform to the provisions of Section 62 of the Insurance Act, whereby the Local Medical Committee must be consulted on all general questions affecting the administration of medical benefit, including the arrangements made with medical practitioners giving attendance and treatment to insured persons; (2) that there are no provisions in the agreement with respect to the conditions of service, such as referred to in the above circular letter; and (3) that the stamped agreement as drafted would only bind the medical men to service, and that it would be more satisfactory if the obligations of both parties to it were clearly stated therein. At the same time it is suggested that the practitioner should state his willingness to enter into the agreement as a temporary measure for a period of one month only in order to prevent any possible inconvenience to the public.

LANCASHIRE AND CHESHIRE BRANCH:

ROCHDALE DIVISION.

A MEETING of the Rochdale Division was held at Rochdale on March 20th. Dr. GEDDES was in the chair, and fifteen other members were present.

Model Ethical Rules.—The Model Ethical Rules were considered, and, after a short discussion, the following resolution, moved by Dr. KILROE and seconded by Dr. McKENDRICK, was carried:

That we adopt the Model Rules for Ethical Procedure, as approved by the Representative Body, without modification, and in substitution for all such rules now in use by the Divisions and Branches respectively.

SOUTH-EASTERN OF IRELAND BRANCH.

A SPECIAL meeting of this Branch was held at Waterford on March 4th, when the chair was taken first by Dr. MORRIS and subsequently by the President (Dr. MORRISSEY). Thirteen other members were present.

Annual Report.—The annual report of the Branch was submitted and adopted.

National Insurance Act.—Dr. POWER made a statement regarding the distribution of the £50,000 grant for certificates, and also a new offer regarding the domiciliary treatment of consumption. The following resolutions were adopted:

1. While in sympathy with the efforts of the Irish Insurance Commissioners to settle the question of medical certification, seeing the amount of money available is insufficient, the South-Eastern of Ireland Branch of the British Medical Association expresses the opinion that it will be necessary for the societies or the Treasury to supplement the proposed arrangement before the present difficulties are removed.
2. That the South-Eastern of Ireland Branch of the British Medical Association strongly protest against any medical committee or individual members of the medical profession propounding policies in relation to the Irish Insurance Act which are in opposition to the policy adopted by the delegates' meeting of January, 1913.
3. That this Branch absolutely refuses to accept the proposed fee of 7s. 6d. per case for attendance at midwifery recently offered by the Insurance Commissioners for insured persons.
4. That the Commissioners' proposal to allocate 4d. for domiciliary treatment of tuberculosis patients is highly objectionable, and we adhere to the original arrangement of a fee per visit.
5. That this Branch has resolved to fix the minimum consultation fee for attendance on Poor Law cases of midwifery at £2 2s.

At a meeting of the Branch Council, held subsequently, Dr. W. H. O'Brien was elected a member of the Branch, and it was decided to hold the next meeting in Carlow on April 2nd, instead of Waterford.

SOUTH-WESTERN BRANCH:

TORQUAY DIVISION.

A MEETING of the Torquay Division was held at the Torquay Hospital on March 13th, when twenty members were present.

Uninsured Members of Clubs.—A letter from a local friendly society official was read stating that the friendly societies had taken exception to the terms laid down at a previous meeting of the Division as to the uninsured members of clubs, and inquiring whether the Division would entertain a proposal to meet the friendly societies in conference. A general discussion ensued, and it was resolved to call a conference with the societies. The following were appointed members of the deputation:

| | |
|--------------|---------------|
| Dr. Goodwyn. | Dr. Nisbet. |
| Dr. King. | Dr. Williams. |
| Dr. Winter. | Dr. Hatfield. |
| Dr. Lacey. | Dr. Nichols. |
| Dr. Eales. | Dr. Tivy. |
| Dr. Cosens. | Dr. Steele. |

The deputation was instructed to adhere to the following terms:

1. 9s. per head per annum, including medicine.
2. An income limit of £2 per week.
3. Free choice of doctor, and patient by doctor.
4. That children be accepted on the terms laid down by the British Medical Association's Public Medical Service Scheme A.

It was resolved that the above terms should apply after the June quarter, and that the existing private clubs should be at once discontinued unless the terms conformed with those required by the Division.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments have been announced at the Admiralty: Fleet Surgeon WALTER J. BEARBLOCK, to the *Bellerophon*, on recommissioning, April 1st. Fleet Surgeon MATTHEW L. M. VAUDIN, M.B., to the *Cochrane*, on recommissioning, April 19th. Staff Surgeon FREDERICK M. V. SMITH, to the *Victory*, additional for disposal, April 9th. Staff Surgeon EDMUND COX, M.B., to the *Ariadne*, vice Biddulph, March 19th. Staff Surgeon WALTER P. DYER, to the *Bellerophon*, on recommissioning, April 1st. Staff Surgeon WILLIAM L. HAWKINS, to the *Cochrane*, on recommissioning, April 9th. Staff Surgeon SAMUEL H. WOODS, M.D., to the *Endymion*, on recommissioning, March 18th. Staff Surgeon ROBERT B. SCHREIBER, to the *Endymion*, additional for *Edgar*, on recommissioning, March 18th. Surgeon EDWARD M. R. THURFIELD, to the *Victory*, additional for disposal, March 13th. Surgeon WILLIAM H. KING, to the *Pomone*, additional for Royal Naval College, Dartmouth, vice Cox, March 19th.

Staff Surgeon HENRY C. ADAMS has been allowed to withdraw from the service with a gratuity, March 19th.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL D. M. O'CALLAGHAN has been appointed to the charge of the Military Hospital at Hilson.

Lieutenant-Colonel J. D. FERGUSON, D.S.O., has been appointed to the Straits Settlement.

Major C. E. P. FOWLER has been appointed Instructor in Army Sanitation at the Training School, Royal Army Medical Corps School of Instruction, Aldershot.

Major T. E. FIELDING has been appointed to the Southern Command.

Captains to be Majors: PATRICK G. HYDE, M.B., March 22nd, 1913; FREDERICK W. LAMBELLE, M.B., MARTYN C. BEATTY, M.B., THEODORE F. RITCHIE, M.B., ALEXANDER J. WILLIAMSON, M.B., ERNEST V. ATLEN, WILLIAM DAVIS, March 27th, 1913. Captain JAMES A. CLARKE, M.B., is seconded for service with the Egyptian Army, February 15th, 1913.

Captain W. B. PURDON has been appointed to Devonport.

Lieutenant B. BIGGAR has left London for service in Egypt.

INDIAN MEDICAL SERVICE.

THE Government of India have been pleased to nominate Major JAMES CURRIE ROBERTSON to be an Additional Member of the Legislative Council of the Governor-General in India, vice the Hon. Sir Charles Stewart-Wilson, K.C.I.E., resigned.

The services of Captain H. H. G. KNAPP have been placed permanently at the disposal of the Government of Burma for employment in the Jail Department.

Major A. T. GAGE has been granted one year and eight months' combined leave with effect from March 12th, 1913.

Lieutenant-Colonel J. J. PRATT has been permitted to retire from the service with effect from December 27th, 1912.

The Hon. Surgeon-General Sir C. P. LUKIS has been granted combined leave for seven months with effect from April 10th, 1913.

Surgeon-General A. M. CAOTTA, C.I.E., has been appointed to officiate as Director-General, Indian Medical Service, during the absence on leave of the Hon. Surgeon-General Sir C. P. LUKIS.

Major F. D. BROWNE died at Nowshera on February 19th, 1913, from pneumonia.

The services of Captain H. C. BROWN have been placed temporarily at the disposal of the Government of the United Provinces.

Lieutenant-Colonel C. H. L. MEYER has been permitted to retire from the service with effect from March 15th, 1913.

Lieutenant-Colonel J. M. CADELL has been permitted to retire from the service with effect from March 5th, 1913.

Major T. E. WATSON has been permitted to retire from the service with effect from March 15th, 1913.

Major H. J. B. TWIGG has been permitted to retire from the service with effect from January 15th, 1913.

Captain M. L. PURI, I.M.S., is appointed to the substantive medical charge of the 112th Infantry.

Captain S. O. PAL, I.M.S., is appointed to the substantive medical charge of the 108th Infantry.

Captain G. I. DAVYS, I.M.S., is appointed a Specialist in Prevention of Disease with effect from February 1st, 1913.

Captain F. S. SMITH, I.M.S., has been selected to undergo a course of training in serological work under Lieutenant-Colonel W. D. Sutherland, I.M.S.

Lieutenants to be Captains: MOZAFFER DIN AHMED KUREISHI, dated October 24th, 1912; RUSTAM HORMASJI BHARUCHA, FRAMROZE JAMSETJEE KOLAPORE, EDWARD G. KENNEDY, M.B., ROBERT F. D. MACFREGOR, M.B., ARTHUR L. SUEPPARD, M.B., PAUL K. GILROY, M.B., JOSEPH A. A. KEERNAHAN, MAURICE L. O'G. KIRWAN, M.B., JOHN V. MACDONALD, M.B., GEORGE L. DUNCAN, M.B., ANATH NATH PALIT, P.R.C.S.E., HUBERT A. H. ROBINSON, M.B., KALYAN KUMAR MURERJI, dated January 29th.

The King has approved of the resignation of JOHN F. H. MORGAN March 10th.

INDIAN SUBORDINATE MEDICAL DEPARTMENT.

Senior Assistant Surgeon with the honorary rank of Lieutenant to be Senior Assistant Surgeon with the honorary rank of Captain: JOSEPH AMOR, December 23rd, 1912.

To be Senior Assistant Surgeon with the honorary rank of Lieutenant: First Class Assistant Surgeon LOUIS XAVIER DE SILVA, December 23rd, 1912.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICE.

COLONEL THOMAS M. DAWSON, on vacating the appointment of an Assistant Director of Medical Services of a Territorial Division, resigns his commission and is granted permission to retain his rank and to wear the prescribed uniform, March 19th.

Lieutenant-Colonel ROBERT JACKSON, M.B., from the Third West Lancashire Field Ambulance, to be Colonel on appointment as an Assistant Director of Medical Services of a Territorial Division, March 19th.

ROYAL ARMY MEDICAL CORPS.

Third West Lancashire Field Ambulance.—Major WILLIAM B. COCKRILL, M.D., to be Lieutenant-Colonel, March 19th.

Lieutenant-Colonel NATHANIEL E. ROBERTS, M.B., Sanitary Officer of a Territorial Division, resigns his commission and is granted permission to retain his rank and to wear the prescribed uniform, March 19th.

Major DAVID SMART, M.B., from the List of Officers attached to Units other than Medical Units, to be Major on appointment as Sanitary Officer to a Territorial Division, March 19th.

Welsh Border Mounted Brigade Field Ambulance.—Lieutenant WILLIAM SMITH resigns his commission, March 22nd.

Second Northumbrian Field Ambulance.—The following Lieutenants to be Captains: ARTHUR C. H. MCCULLAGH, M.B., GEORGE R. ELLIS, M.B., December 3rd, 1912.

Fourth London General Hospital.—THOMAS C. ENGLISH, M.B., F.R.C.S.Eng., to be Captain, whose services will be available on mobilization, March 4th.

Attached to Units other than Medical Units.—Lieutenant WILLIAM E. ALSTON, M.D., to be Captain, January 1st.

For Attachment to Units other than Medical Units.—WILLIAM E. L. ELLIOTT, M.D., to be Lieutenant, February 1st.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 8,672 births and 5,817 deaths were registered during the week ending Saturday, March 15th. The annual rate of mortality in these towns, which had been 17.3, 18.0, and 17.4 per 1,000 in the three preceding weeks, further fell to 17.0 per 1,000 in the week under notice. In London the death-rate was equal to 17.6, against 18.2, 18.8, and 18.3 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 8.3 in Edmonton, 8.4 in Leyton, 10.2 in Ilford, 10.3 in Walthamstow, 10.5 in Eastbourne, and 10.8 in Wimbledon to 23.4 in West Bromwich, 23.9 in Stoke-on-Tees, 24.4 in Plymouth, 24.8 in Stoke-on-Trent, 25.1 in Walsall, and 25.9 in Wigan. Measles caused a death-rate of 1.6 in Birmingham, 1.7 in Walsall, 2.2 in Wolverhampton, 2.4 in Barrow-in-Furness, 2.9 in Wigan, 3.0 in Swindon, 4.2 in Newport (Mon.), 4.7 in St. Helens, and 8.3 in West Bromwich; scarlet fever of 1.6 in St. Helens; whooping-cough of 1.3 in Stoke-on-Trent and 1.4 in Bootle; and diphtheria of 1.3 in S.vansea. The mortality from enteric fever showed no marked excess in any of the large towns and no fatal case of small-pox was registered during the week. The causes of 50, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 15 in Birmingham, 5 in Liverpool, 3 in Warrington, and 2 each in Dudley, St. Helens, Southport, Blackburn, Sheffield, South Shields, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,667, 1,659, and 1,617 at the end of the three preceding weeks, had further fallen to 1,556 on Saturday, March 15th; 164 new cases were admitted during the week, against 180, 183, and 160 in the three preceding weeks.

In ninety-six of the largest English towns 7,794 births and 5,636 deaths were registered during the week ending Saturday, March 22nd. The annual rate of mortality in these towns, which had been 18.0, 17.4, and 17.0 per 1,000 in the three preceding weeks, further fell to 16.5 per 1,000 in the week under notice. In London the death-rate was equal to 17.2, against 18.3, 18.3, and 17.6 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 7.1 in Hornsey, 7.7 in Smethwick, 8.1 in Bournemouth, 9.6 in Ilford and in Willesden, and 10.0 in Croydon and in Coventry to 23.6 in Wigan, 23.8 in Stoke-on-Trent, 24.2 in West Bromwich and in Dewsbury, 24.4 in Plymouth, and 26.7 in Rotherham. Measles caused a death-rate of 2.2 in Walsall, 2.3 in Plymouth, 2.4 in Barrow-in-Furness, 2.7 in Walsall, 2.3 in Wolverhampton, 3.4 in Wigan, 3.7 in St. Helens, and 9.1 in West Bromwich; whooping-cough of 1.3 in Stoke-on-Trent and in York; and diphtheria of 2.4 in Barrow-in-Furness. The mortality from enteric fever and scarlet fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 47, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 9 in Birmingham, 5 in Darlington, 4 in Liverpool, 4 in Gateshead, and 3 in Southend-on-Sea. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,659, 1,617, and 1,556 at the end of the three preceding weeks, had further fallen to 1,514 on Saturday, March 22nd; 156 new cases were admitted during the week, against 183, 160, and 164 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,207 births and 816 deaths were registered during the week ending Saturday, March 15th. The annual rate of mortality in these towns, which had been 18.7, 20.7, and 19.9 per 1,000 in the three preceding weeks, further declined to 18.8 in the week under notice, but was 1.8 per 1,000 above the rate in the ninety-six large English towns. Among the several Scottish towns the death-rates ranged from 7.8 in Kirkcaldy, 8.8 in Falkirk, and 8.9 in Perth to 20.6 in Glasgow, 24.1 in Coatbridge, and 25.7 in Hamilton. The mortality from the principal infectious diseases averaged 2.0 per 1,000, and was highest in Leith and Glasgow. The 404 deaths from all causes in Glasgow included 39 from whooping-cough, 7 from infantile diarrhoeal diseases, 6 from measles, 4 from diphtheria, and 3 from scarlet fever. Four deaths from whooping-cough were recorded in Leith and 2 in Edinburgh; 4 from diphtheria in Aberdeen; and 4 from infantile diarrhoeal diseases in Dundee and 3 in Paisley.

In the sixteen largest Scottish towns 1,032 births and 795 deaths were registered during the week ending Saturday, March 22nd. The annual rate of mortality in these towns, which had been 20.7, 19.9, and 18.8 per 1,000 in the three preceding weeks, fell to 18.4 in the week under notice, but was 1.9 per 1,000 above the rate recorded in the ninety-six large English towns. Among the several Scottish towns the death-rate ranged from 4.1 in Hamilton, 9.8 in Clydebank, and 12.0 in Kilmarnock to 20.1 in Greenock, 20.5 in Aberdeen, and 20.8 in Leith. The mortality from the principal infective diseases averaged 2.0 per 1,000, and was highest in Falkirk and Leith. The 382 deaths from all causes registered in Glasgow included 33 from whooping-cough, 8 from infantile diarrhoeal diseases, 4 from measles, 3 from scarlet fever, and 1 from diphtheria. Seven deaths from whooping-cough were registered in Edinburgh, 6 in Leith, 3 in Aberdeen, and 2 in Greenock; and 2 deaths from diphtheria and 4 from diarrhoeal diseases in Aberdeen.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, March 15th, 646 births and 639 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 574 births and 633 deaths in the preceding period. These deaths represent a mortality of 23.4 per 1,000 of the aggregate population in the districts in question, as against 23.2 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 6.4 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 28.1 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 23.5, as against an average of 24.6 for the previous four weeks; in Dublin City, 25.0 (as against 25.9); in Belfast, 23.7 (as against 23.9); in Cork, 27.9 (as against 26.2); in Londonderry, 17.8 (as against 15.3); in Limerick, 19.0 (as against 18.0); and in Waterford, 26.6 (as against 23.7). The zymotic death-rate was 1.7, or the same as in the previous week.

During the week ending Saturday, March 22nd, 546 births and 499 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 646 births and 539 deaths in the preceding period. These deaths represent a mortality of 21.7 per 1,000 of the aggregate population in the districts in question, as against 23.4 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 5.2 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 23.7 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 21.6 as against an average of 23.7 for the previous four weeks, in Dublin city 22.8 (as against 25.2), in Belfast 25.0 (as against 23.8), in Cork 21.1 (as against 25.5), in Londonderry 11.4 (as against 13.4), in Limerick 20.3 (as against 18.6), and in Waterford 3.8 (as against 19.5). The zymotic death-rate was 1.6 as against 1.7 in the previous week.

Hospitals and Asylums.

WEST RIDING ASYLUM, WAKEFIELD.

THE introduction of outdoor treatment during the summer months, Dr. Shaw Bolton, the Medical Superintendent, says, has been the most important new measure for the improvement of the general health introduced at this asylum during the year (1911) under review. Over 100 patients spent each day in bed out of doors, and upwards of 1,000 left the wards directly after breakfast and only returned indoors at bedtime. In the case of the remainder of the patients, for whom the necessary provision could not be made, the airing-court hours were extended to the fullest extent possible. The results, Dr. Shaw Bolton says, exceeded his highest expectations. The wards, instead of being close and stuffy, became relatively healthy and hygienic. Side-room treatment became rare. The amount of sedative medicine became much less and the general health much more satisfactory.

On January 1st, 1911, there were 2,037 patients on the registers, and on the last day of the year 2,023. The total cases under treatment during the year numbered 2,594, and the average number daily resident 2,023, the latter being the highest numbers yet recorded at this asylum.

During the year 557 were admitted, of whom 467 were direct and 90 indirect admissions. Of the direct admissions, in 174 the attacks were first attacks within three, and in 84 more within twelve months of admission; in 95 not-first attacks within twelve months, as also in 12 in whom it was not known whether the attacks were first or not; and in all the remainder—that is, in 62, including 44 congenital cases—the attacks were of more than twelve months' duration.

The direct admissions were classified according to the forms of mental disorder into: Recent mania 79, chronic and recurrent 8; recent melancholia 106, chronic and recurrent 6; senile and secondary dementia, 40; delusional insanity, 49; general paralysis, 69; insanity with epilepsy, 22; confusional insanity, 23; less common forms, 21; and congenital defect, 44. It may be convenient here to draw attention to what Dr. Bolton says about the character of these direct admissions. The probably or entirely incurable—that is, the general paralytics, imbeciles, senile cases, severely debilitated, epileptic, and cases already chronic on admission—numbered 274, leaving only 193 as possibly or probably recoverable. "From the point of view of friends of patients and those who regard asylums as hospitals for the cure of insanity, the facts contained in the above table must necessarily be disappointing. From the aspect, however, of those who consider the prevention rather than the cure of mental disease to be one of the most important of present day social problems, such facts point rather to the urgent need of legislative measures to arrest the mental deterioration of the race." Turning to probable causation, alcohol was assigned in 44 and syphilis in 54 (unusual proportions of these two factors), and other toxins in 4; diseases of the nervous system in 34, various bodily affectious in 42, child-bearing in 18, critical periods in 153, physiological defects and errors in 33, bodily trauma in 21, and mental stress in 85.

An insane heredity was ascertained in 91, an alcoholic heredity in 8, an epileptic heredity in 5, and one of marked eccentricity in 5, whilst congenital mental defect not amounting to imbecility existed in 22.

During the year, 97 were discharged as recovered, giving a recovery-rate on the admissions of 20.77 per cent., or of recoveries in and on the direct admissions of 20.34 per cent.—both very low recovery-rates. Also 17 were discharged as relieved, and 204 as not improved. During the year, 253 died, giving a death-rate on the average numbers resident of 12.50 per cent.

The deaths were due in 76 to neuro-cerebral diseases, almost entirely (71 or 27.6 per cent. of the total deaths) from general paralysis; in 44 to diseases of the heart and blood-vessels, in 4 to ulceration of bowel, in 10 to genito-urinary diseases, in 1 to rupture of spleen, and in the remainder to general and local diseases, including 30 from pneumonia, 12 from dysentery, and in 43, or just under 17 per cent. of the total deaths, from tuberculous diseases. If, however, the numbers in which tuberculosis was contributory to death be included, the proportion of tuberculous to total deaths rises to 21 per cent.

THE RETREAT, YORK.

THE annual report for 1911 of Dr. Bedford Pierce, the Medical Superintendent, shows that this institution was full during the whole year. Nevertheless, Dr. Pierce says, there is reason to think that when the accounts are completed for the financial

year it will be found that the income was less than in the previous year, although there was no material reduction in expenditure. The present tendency in legislation, the Asylum Officers' Superannuation Act and the Insurance Act, seem likely, in his view, to increase the cost of maintenance. From the statistical tables, compiled by Dr. H. J. MacKenzie, we see that on January 1st, 1911, there were 178 certified patients and that on the last day of the year 172 certified patients and 5 voluntary boarders. The total certified cases under treatment during the year numbered 224, and the voluntary boarders 27, whilst the average number daily resident (certified cases) was 178.58.

During the year 46 were admitted, of whom 42 were direct admissions. Of the total admissions, 30 were first attack and 16 not-first attack cases. Of the direct admissions, in only 8 were the attacks first attacks within three months and in 5 more within twelve months of admission; in 12 not-first attacks within twelve months; and in the remaining 17 the attacks were of more than twelve months' duration on admission. The direct admissions were classified according to the forms of mental disorder into: Recent mania 4, chronic 3; recent melancholia 8, chronic 4; senile and secondary dementia, 4; general paralysis, 1; primary dementia and alternating insanity, 4 each; confusional insanity, 5, and acute delirium, 1. As to causation, hereditary predisposition was surmised, in 24 on account of bad family history; alcoholic intemperance was assigned in 5; and in 8 no distinct cause could be ascertained. Recovery was deemed probable in 20 of the direct admissions, doubtful in 15, and in 11 impossible.

During the year 21 were discharged as recovered, giving a recovery-rate on the direct admissions, and also in and on the direct admissions of 50.0 per cent.; also 12 were discharged as relieved and 10 as not improved. During the year 9 died, 6 of whom were over 70 years of age. All deaths were from natural causes, and do not call for special mention. The deaths give a death-rate on the average numbers resident of 5.04 per cent. Among the voluntary boarders, however, an accident occurred which cast a gloom over the household, the patient escaping from Throxenby Hall, the convalescent home at Scarborough, through an open window, and being found drowned four miles away. Such accidents happen from properly managed institutions of this kind, and cannot be avoided without reverting to what Dr. Pierce calls "the comparatively easy path of safety, involving few risks; a path bounded by walls and fences, wearisome but secure." At the inquest on this case the jury recommended that the windows should be barred or the doors should be locked, notwithstanding the protest entered by Dr. Pierce. The course recommended by the jury cannot be followed without inflicting serious deprivation and unhappiness upon the whole of the inmates of the home affected, and we have no hesitation in warmly supporting Dr. Pierce's protest against such a retrograde movement.

CUMBERLAND AND WESTMORLAND ASYLUM.

The annual report for 1911 of Dr. W. F. Farquharson, the Medical Superintendent, shows that on January 1st, 1911, there were 842 patients on the registers and on the last day of the year, 834. The total cases under care during the year numbered 995 and the average number daily resident 846. During the year 153 were admitted, as compared with 179 in 1910, 175 in 1909, 179 in 1908, and 227 in 1907. The number of admissions was, in fact, the lowest for twenty years. Dr. Farquharson does not hazard any explanation of this low admission-rate and doubts its continuance. The census returns, however, show a decrease in the population of the two counties served by this asylum, which may have had some effect.

Of the 153 admissions 147 were direct admissions, and of these latter in 53 the attacks were first attacks within three and in 23 more within twelve months of admission; in 38 not-first attacks within twelve months; and in the remainder, including 6 congenital cases, the attacks were of more than twelve months' duration on admission. The direct admissions were classified according to the forms of mental disorder into: Recent mania 53, chronic and recurrent 17; recent melancholia 35, chronic 6; senile and secondary dementia, 5; delusional insanity, 12; insanity with epilepsy, 5; general paralysis, 4; less common forms, 4; and congenital defect, 6. As to probable causation alcohol was assigned in 17 (11.1 per cent.), syphilis in none, and other toxins in 3; diseases of the nervous system in 8; other bodily affections in 8; critical periods in 9; and mental stress in 9. An insane heredity was ascertained in 43 and an epileptic heredity in 1. During the year 75 were discharged as recovered, giving a recovery-rate on the direct admissions of 51 per cent., or of recoveries in and on the direct admissions of 50.3 per cent.; also 8 were discharged as relieved and 8 as not improved. During the year 70 died, giving a death-rate on the average numbers resident of 8.3 per cent. The deaths were due in 14 to neuro-cerebral diseases, including 7 from general paralysis; in 13 to diseases of the heart and blood vessels; in 2 to gangrene of the lung; in 1 to Bright's disease; and in the remainder to general diseases, including 10 from lobar pneumonia, 6 from tuberculous disease, and 16 from senile decay. All deaths were due to natural causes, verified in every case by *post-mortem* examination. The comparatively small proportion of deaths from tuberculous disease (8.3 per cent. of total deaths) in an asylum of this size is satisfactory, and is attributed by Dr. Farquharson to the improved facilities for open-air treatment. There were 7 cases of asylum dysentery, 4 of whom died, but otherwise the institution was free from zymotic disease and the general health was good.

STIRLING DISTRICT ASYLUM.

The annual report of Dr. Robert B. Campbell, the Medical Superintendent of this asylum, which serves the counties of Stirling, Dumbarton, Linlithgow, and Clackmannan, shows that on May 15th, 1911, there were 727 patients in the asylum, and on the corresponding day of 1912 there were 746; in addition, 8 were absent on probation or pass at the beginning of the twelve months, and 9 at the end of the twelve months. The total cases under care during the year numbered 989, and the average number daily resident 748.8. During the year 254 were admitted, of whom 192 were first and 62 not-first admissions. This number of admissions has been only twice exceeded in the history of the asylum. In 100 the attacks were first attacks within three, and in 39 more within twelve, months of admission; in 67 not-first attacks within twelve months, and in the remainder—including 12 congenital cases—the attacks, whether first or not, were of more than twelve months' duration on admission. The admissions were classified according to the forms of mental disorder into: Simple mania, 43; acute mania, 37; and chronic mania, 1; simple melancholia, 26; acute melancholia, 37; secondary senile and organic dementia, 28; general paralysis, 17; delusional insanity, 21; confusional insanity, 20; acute delirium, 8; and congenital mental defect, 12. As to causation, alcohol was assigned in 45; general paralysis in 17, epilepsy in 27, and organic brain disease in 7; child-bearing in 10, critical periods in 100, bodily trauma in 3, and mental stress in 11. An insane heredity was ascertained in 83, and congenital defect existed in 12. During the year 102 were discharged as recovered, giving a recovery-rate on the admissions of 40.1 per cent.; also 59 were discharged as relieved and 1 as not improved. During the year 72 died, giving a death-rate on the average numbers resident of 7.4 per cent. The deaths were due in 28 to nervous diseases, including 12 from general paralysis; in 25 to thoracic disease, including 5 from phthisis; in 6 to abdominal diseases; in 1 to injury, and in 12 to general diseases. The general health was good throughout the year, and no illness of an epidemic nature occurred.

NORFOLK COUNTY LUNATIC ASYLUM.

The annual report for the year 1911 of Dr. D. G. Thomson, the Medical Superintendent of this asylum, shows that on January 1st, 1911, there were 1,034 patients on the asylum register, and on the last day of the year 1,036. The total cases under care during the year numbered 1,262, and the average number daily resident 1,037. All of these numbers show substantial increase on those of previous years. During the year 223 were admitted, of whom 196 were first and 32 not-first admissions. The usual table as to duration of disorder on admission does not appear in the statistical tables, but Dr. Thomson says that of the 206 Norfolk cases admitted, 56, or 24 per cent., had at some previous time been of unsound mind. The total admissions were classified according to the forms of mental disorder into: Recent mania, 77, chronic and recurrent, 54; recent melancholia, 21, chronic and recurrent, 9; senile and secondary dementia, 30; general paralysis, 7; insanity with epilepsy, 5; delusional insanity, 2; insanity with gross brain lesions, 3; less common forms, 7; and congenital defect, 13.

As to causation, alcohol was assigned in 15, syphilis in 6, influenza in 9, and other toxins in 2; nervous diseases in 14; other bodily affections in 7; child-bearing in 8; critical periods in 39; bodily trauma in 4, and mental stress in 52. An insane heredity was ascertained in 91, and of other neuropathies in 11, whilst congenital defect or eccentricity was assigned in 8. During the year 77 were discharged as recovered, giving a recovery-rate on the admissions of 35.98 per cent.; also 13 were discharged as relieved, and 22 as not improved. During the year 114 died, giving a death-rate on the average numbers resident of 10.99 per cent. The deaths were due in 26 to diseases of the nervous system, including 8 from general paralysis; in 18 to diseases of the heart and blood vessels; in 6 to respiratory diseases; in 2 to diseases of the alimentary system; in 1 to pyonephrosis; in 1 to suicide by hanging, and in the remainder to general diseases, including 22 from senile decay, and 26, or 22.7 per cent. of the total deaths, from tuberculous diseases.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Wednesday morning.

- BIRKENHEAD BOROUGH HOSPITAL.—Junior House-Surgeon (male). Salary, £80 per annum.
 BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Third House-Surgeon. Salary, £75 per annum.
 BIRMINGHAM: RUBERY HILL ASYLUM.—Junior Assistant Medical Officer (male). Salary, £150 per annum.
 BIRMINGHAM UNION.—Two Assistant Resident Medical Officers at the Dudley Road Workhouse. Salary, £125 per annum.

TEMPLE SMITH, E. C., D.D. Oxon., F.R.C.S. Edin., M.B., Ch.B., R.U.I., Honorary Assistant Ophthalmic Surgeon to St. Vincent's Hospital, Sydney, N.S.W.

WARRINGTON, W. B., M.D. Lond., Assistant Physician to the Liverpool Royal Infirmary.

ROYAL FREE HOSPITAL, Gray's Inn Road.—The following appointments have been made:

Senior Resident Medical Officer.—Mr. C. A. Joll, F.R.C.S.
Senior Obstetric Assistant.—Miss Rawlins, M.B., B.S.
Clinical Assistant to Dr. Phear.—Mrs. Westlake, M.B., B.S.

EDINBURGH ROYAL INFIRMARY.—The following appointments have been made:

Clinical Tutor.—H. W. Borcham, M.B., Ch.B., to Dr. Sym.
Resident Physicians.—W. A. Alexander, M.B., Ch.B., to Professor Sir Thomas R. Fraser; F. J. Henderson Begg, M.B., Ch.B., to Professor Wyllie; Thos. P. Herriot, M.B., Ch.B., to Sir R. W. Philip; Alex. W. Mather, M.B., Ch.B., to Dr. Lovell Gulland; and J. E. Snodgrass, M.B., Ch.B., to Dr. F. D. Boyd.

Resident Surgeons.—S. B. Boyd Campbell, M.B., Ch.B., to Mr. Hodsdon; George M'Connell, M.B., Ch.B., to Mr. Miles; Edwin D. Pullon, B.Sc., M.B., Ch.B., to Mr. Dowden; and W. Q. Wood, M.B., Ch.B., to Dr. Barbour.

Non-resident House-Surgeon.—Alan W. Sichel, M.B., Ch.B., to Dr. W. G. Sym.

Clinical Assistants.—George M. Elliott, M.B., Ch.B., and Austin N. Smith, M.B., Ch.B., to Professor Sir T. R. Fraser; W. Moir Shepherd, M.B., Ch.B., to Professor Wyllie; Harry Evans, M.B., Ch.B., to Sir R. W. Philip; H. F. W. Adams, M.B., Ch.B., to Dr. Lovell Gulland; Andrew A. Rutherford, M.B., Ch.B., to Dr. F. D. Boyd; H. L. Watson-Wemyss, M.D., M.R.C.P., to Dr. Harry Rainy (M.W.R.); A. G. Ritchie, B.Sc., M.B., Ch.B., to Dr. Edwin Bramwell (M.W.R.); John L. Annan, M.B., Ch.B., to Dr. Eason (M.W.R.); and W. S. Lindsay, M.B., Ch.B., to Mr. Miles.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

MARRIAGES.

SLATER—BEALES.—On March 24th, at St. Michael's Church, Berkhamstead, Benjamin Holroyd Slater, B.A., M.B., B.C. Oamb., F.R.C.S. Eng., of Bradford, to Ella Beales, M.B., B.S. Lond., younger daughter of Henry Francis Beales, Esq., of Ickleton, Essex.

URQUHART—MACONOCHE.—At St. James's Church, Inverleith Row, Edinburgh, on March 26th, by the Rev. A. C. Buchanan, B.A., B.D., George Hector Urquhart, F.R.C.S., 7, Clifton Drive, St. Annes-on-the-Sea, younger son of William Urquhart, Esq., St. Helens, Eskbank, to Constance Elizabeth, youngest daughter of the late D. S. D. Maconochie and Mrs. Maconochie, Edinburgh.

DEATH.

LARDER.—On February 21st, at Dakar, West Africa, Herbert Larder, of 10, Waldgrave Gardens, Uppiner, late Medical Superintendent of the Whitechapel Infirmary, aged 61.

DIARY FOR THE WEEK.

MONDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ONTOLOGY, I, Wimpole Street, W., 8 p.m.—(1) Casual Communications. (2) Papers.—Mr. J. G. Turner: The Month in relation to Surgical Operations; Mr. Gordon Shiach: An Echo of the Past.

TUESDAY.

ROENTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Papers.—Professor Sanbermann, Berlin: The Physiological Principles of Internal Radium Therapy. Dr. Colton: The Radiographic Episcopes, a new instrument for the utilization of the single X-ray print.

ROYAL SOCIETY OF MEDICINE:

SECTION OF PATHOLOGY, Pathological Department, Guy's Hospital, 8.30 p.m.—(1) Annual General Meeting. (2) Laboratory Meeting.

THURSDAY.

NORTH-EAST LONDON CLINICAL SOCIETY, Prince of Wales's Hospital, Tottenham, 4.15 p.m.—Paper.—Mr. H. D. Gillies: Chronic Middle-ear Disease and its Treatment.

ROYAL SOCIETY OF MEDICINE:

SECTION OF OBSTETRICS AND GYNAECOLOGY, I, Wimpole Street, W., 8 p.m.—(1) Demonstration of Specimens. (2) Short Communications. (3) Paper.—Dr. V. Zachary Cope and Dr. Kettle: Chorion-Epithelioma of the Fallopian Tube following Extrauterine Gestation.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF EPIDEMIOLOGY, 8.30 p.m.—Paper.—Dr. A. K. Chalmers: The House as a Contributory Factor in the Death-rate.

SECTION OF LARYNGOLOGY, I, Wimpole Street, W., 4.30 p.m.—Demonstration of Cases and Specimens, etc.

WEST LONDON MEDICO-CHIRURGICAL SOCIETY, West London Hospital.—8 p.m., Demonstration of Cases; 9 p.m., Discussion of Cases and Specimens.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—General Medical and Surgical Clinics, daily. Throat, Nose, and Ear: Monday and Thursday. Skin: Tuesday and Friday. Eye: Wednesday and Saturday. Pathology: Thursday. Radiography: Saturday.

MANCHESTER: ANCOATS HOSPITAL POST-GRADUATE CLINIC.—Thursday, 4.15 p.m., Cervical Adenitis.

ROYAL EYE HOSPITAL, St. George's Circus, S.E.—Tuesday, 4.30 p.m., Sympathetic Inflammation.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—Monday and Thursday, 4.30 p.m.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics, X Rays, and Operations, daily. Gynaecology: Monday, Tuesday, Wednesday, and Friday. Eye: Monday, Wednesday, Thursday, and Saturday. Throat, Nose, and Ear: Tuesday, Wednesday, and Saturday. Skin: Tuesday and Friday. Children: Wednesday and Saturday.

LOCAL MEDICAL COMMITTEES.

BIRMINGHAM.

The Local Medical Committee for Birmingham has been recognized, and consists of the following thirty members:

- | | |
|---|---|
| Mr. Albert Lucas, General Hospital, <i>Chairman</i> . | Dr. F. R. Greenwood, Sparkhill. |
| Dr. G. A. Wilkes, Aston, <i>Deputy-Chairman</i> . | Mr. George Heaton, General Hospital. |
| Dr. E. Osborne, Ashted Row, <i>Honorary Secretary</i> . | Dr. Claude Johnson, King's Heath. |
| Dr. B. C. R. Aldren, Edgbaston. | Dr. W. T. Lydall, Yardley. |
| Dr. W. E. Alldridge, West Birmingham. | Dr. L. G. J. Mackey, Queen's Hospital. |
| Dr. J. F. Atkins, Handsworth. | Mr. Christopher Martin, Women's Hospital. |
| Dr. Norriss D. Best, Balsall Heath. | Dr. John Notley, Small Heath. |
| Dr. H. F. W. Boeddicker, Peritend. | Dr. J. H. Ormond, Lozells. |
| Dr. F. A. L'E. Burges, Hockley. | Dr. E. W. Parsey, King's Norton. |
| Dr. Helen Fairley, Gravelly Hill. | Dr. C. E. Purslow, Queen's Hospital. |
| Dr. W. B. Featherstone, Erdington. | Dr. J. R. Ratcliffe, Moseley. |
| Mr. L. P. Gamgee, General Hospital. | Dr. W. R. Reith, Erdington. |
| Dr. W. Gordon, Sparkhill. | Dr. T. Salt, Saltley. |
| | Dr. O. B. Trumper, Aston. |
| | Mr. B. J. Ward, Children's Hospital. |
| | Dr. E. Whichello, Edgbaston. |
| | Dr. E. Wilkinson, Bordesley. |

Representatives on the Birmingham Insurance Committee.

Appointed by Insurance Commissioners.—Dr. J. B. Brash, Handsworth; Mr. J. F. Jordan, Women's Hospital.

Appointed by City Council.—Dr. J. R. Ratcliffe, Moseley; Dr. Thomas Wilson, General Hospital.

Electd by Practitioners.—Dr. B. C. R. Aldren, Edgbaston; Dr. H. G. Dain, Selly Oak.

At the first meeting of the Committee, on January 8th, 1913, a subcommittee was appointed, consisting of Drs. Helen Fairley, Greenwood, Ormond, Osborne, and Wilkinson, to compile a pharmacopoeia of stock mixtures, etc. This was done in co-operation with the Midland Pharmaceutical Committee, and the *Pharmacopoeia*¹ was

issued on February 1st, and has since proved very useful.

The Committee, at a meeting on February 10th, appointed Dr. Wilkinson its representative to attend the conference in London with the Commissioners on February 11th, and he ably carried out his instructions to get the clerical work reduced.

Income Limit.—At a meeting on March 26th, it was agreed that all persons who are not dependent on their work for their income ought to be exempt from medical treatment.

CHESHIRE.

The Local Medical Committee for the county of Cheshire has been recognized.

The reply of the Commissioners to the memorandum by this committee on the modifications of the conditions of service it desires (printed in the *BRITISH MEDICAL JOURNAL SUPPLEMENT* of March 29th, pp. 281-2) was given verbally in an interview which the Commissioners had with the chairman and clerk of the Cheshire Insurance Committee.

MEDICAL BENEFIT SUBCOMMITTEE.

The points of the reply were conveyed to a meeting of the Medical Benefit Subcommittee held at Crewe on March 29th, as follows:

1. Payment by capitation for dispensing by doctors in rural areas has already been agreed by the Insurance Committee.

2. *Clerical Work.*—The request for its abolition was refused, and Mr. Schuster urged that the Commission desired the uniform card system.

[The Subcommittee resolved to *again* press the Commissioners to accept the substitution of a loose-leaved pocket-book interleaved with alphabetical index sheets, in place of the card system. Each leaf would be a miniature of the pasteboard card desired by the Commissioners, but on India paper.]

¹ *BRITISH MEDICAL JOURNAL*, March 8th, p. 526.

3. *Uninsured Old and Infirm Club Members.*—The Committee has already agreed to provide medical attendance for these according to Regulation 51, that is, on demand. The Commission declined to accede to the view of the profession that Section 15 (2) (e) of the Act is mandatory, and expressed its readiness to sustain its reading of the clause in a test case in the courts.

[The Clerk informed the Subcommittee of a few applications for this benefit (but most of the friendly societies continue to desire to obtain it outside the Act on lower terms).]

4. *Certificates.*—The Commissioners pointed out that this was a matter for decision by friendly societies. They proposed, however, to urge upon a conference of the latter, to be held shortly, the desirability of adopting a uniform form of certificate.

A suggestion by the medical representative present at the Subcommittee that the objection of the profession in many areas to stating the diagnosis could be overcome by the use of a form stating that the patient was suffering "from illness not due to misconduct and not due to accident entitling him to compensation under the Workmen's Compensation Act" and that such form would fulfil every practical purpose for which the diagnosis was desired, was rejected by the friendly society representatives, who stated that they desired to know the actual diagnosis for the purpose of preventing malingering and estimating the probable duration of illness.]

5. *Mileage.*—The application for payment from the Extra Mileage Fund for certain hilly districts in South-East Cheshire will be entertained by the Commissioners.

6. *Holiday Makers and others away from Home.*—The Commission regarded the obligation on a given panel doctor under the capitation system to attend these as balanced by the relief to him when persons whom he has contracted to attend are taken ill away from his area. There was no fund on which to draw for any further payment.

[Should the profession desire to form, say, a penny pool from the panel receipts for this purpose no doubt the Insurance Committee would undertake the labour of administering it.]

7. *Income Limit.*—The Commissioners pointed out that this is entirely a matter for the Committee.

[The Subcommittee resolved to adhere to its decision to have no income limit. They declined to entertain even the suggestion of a £3 a week limit (which would rule out some of the gravest abuses). The motive for refusal appeared to be that it was thought a limit would operate harshly in the case of older men who had been below the limit for a large portion of their life.]

- (a) The Commission declined a three months' contract.
- (b) The anaesthetic fee was included in the contract.
- (c) Maternity benefit could not be interfered with by Insurance Committees. It was a matter for the societies.

The Subcommittee resolved to reconsider the demand for 10 per cent. medical representation on District Insurance Committees favourably later in the year.

The chemists have informed the Insurance Committee that they will decline to extend their contracts on the drug list prepared by the County Medical Committee (to which it was understood by the Insurance Committee that a deputation from the chemists had assented, and which has been, with five slight exceptions, approved by the Commissioners). They make the acceptance of a new tariff prepared by the Pharmaceutical Society a condition of their continuance. They also object to dispense "repeat" medicines unless the whole prescription is rewritten, and demand a fee of one penny for copying each prescription if not provided with a duplicate, and if a copy be required.

The District and County Medical Committees are being summoned to consider these various matters. The position is that the clerk to the Insurance Committee holds about 200 acceptances by doctors of unconditional continuance of service. About 150 other doctors have agreed to continue on the panel till May 15th, but withhold their agreements pending a satisfactory settlement of the conditions of service.

NORTH RIDING OF YORKSHIRE.

A MEETING of the North Riding practitioners was held at York on March 15th, when the question of mileage affecting the 200 panel doctors working under the capitation system of the National Insurance Act was thoroughly discussed.

Dr. ROBERT CUFF (Scarborough), Chairman of the Local Medical Committee of the North Riding of Yorkshire, who presided, pointed out that the Committee was working at a disadvantage owing to the fact that it was not aware of the exact regulations under which medical benefits were being administered, since the circular issued in December last by the Insurance Commissioners seemed to be at variance with the methods adopted, and yet no intimation of its withdrawal or of the issue of any subsequent instruction had been received. He stated that on January 21st a circular letter was sent out by the North Riding Local Medical Committee to every medical man practising in the area, dealing with a proposal to ask the Chancellor of the Exchequer for 1s. a mile over three miles, and 2s. 6d. a mile for walking after leaving a road, as had been formulated by the Wigtownshire practitioners. The circular asked doctors in the North Riding to furnish the total mileage cost per annum on the above basis in their practices. On March, 11th, 1913, a postcard vote was requested by Drs. Baigent and Mills, the two practitioners' representatives, of all panel doctors practising in the North Riding of Yorkshire on the following questions:

1. Do you want mileage—Yes or No? If so, by which of the two following methods:

- (a) Mileage by increased capitation—Yes or No?
- (b) Mileage by rate of 1s. per return mile after the second mile—Yes or No?

2. Will either of the above methods, (a) or (b) meet with your satisfaction as regards field practice—Yes or No?

If you think it necessary state nature of country in which you practise—flat, hilly, mountainous, or moorland.

The Honorary Secretary, Dr. Mills (Easingwold), had received 131 cards (and with partners signing 138 votes); the majority were in favour of mileage by capitation after the second mile. The replies established beyond a doubt that the mileage question was a very important one for a large number of doctors in the North Riding.

Dr. BAIGENT criticized the printed list of questions sent out to practitioners on the panel of the North Riding, by the Clerk of the Insurance Committee, and pointed out that it was impossible to arrive at any conclusion as to the cost of mileage which would be in the least accurate from the replies received to these questions. One question asked the practitioner to state the number of patients on his list at two, three, four, and five miles from his house, but no question as to patients beyond five miles. The replies made it evident that large numbers of patients living more than five miles distant had been included in the five miles group, but it was impossible from the figures to know how many patients were nearer another doctor. The whole subject required more accurate and detailed inquiry, and it was hoped that all practitioners on the panel would furnish the information when asked for.

Dr. R. SEDGLEY ELVINS said that it was assumed that in the event of the patient being called upon to pay mileage he would only be responsible for the difference between the nearest doctor and the one he selected. That if, for example, a patient lived five miles from one doctor and seven miles from another, and chose the latter, he would only be called upon to pay the difference between the mileage of five and seven miles.

The CHAIRMAN asked the meeting to decide by its vote the system of mileage desired—(a) capitation, or (b) mileage at the rate of 1s. per return mile after the second mile—and urged those present carefully to scrutinize both methods, pointing out that the former would give less trouble to the clerk to the Insurance Committee and to the doctors.

It was unanimously resolved to adopt the capitation system with a two-mile limit to start from, that there should be a uniform capitation fee of 4s., with more favourable treatment in specially difficult conditions, and that an extra fee of 2s. 6d. per full walking mile be asked for field practice and moorland districts. It was also resolved that, when a convenient opportunity arose, each panel doctor be asked to agree to an annual subscription of 5s. towards the expenses incurred by the North Riding of Yorkshire Local Medical Committee. It was also resolved that the tariff of the York Division of the British Medical Association for non-insured persons should be adopted in the North Riding, and that the charge of 8s. 6d. a head per annum be made for each man, woman and child.

HERTS.

The Herts Medical Committee, which has received official recognition, consists of the following:

| | |
|--|--------------------|
| Dr. Shelly, <i>Chairman</i> | Dr. Fisher |
| Dr. Bontor, <i>Vice-Chairman</i> | Dr. Frobergill |
| Dr. Sidney Clarke, 12B, London Road, St. Albans, | Dr. Gilbertson |
| <i>Secretary</i> | Dr. Grellet |
| Dr. Addison | Dr. Hatrick |
| Dr. Berry | Dr. Kinloch |
| Dr. Boyd | Dr. Lawson-Smith |
| Dr. Brittain | Dr. Ledward |
| Dr. Cheese | Dr. Shackleton |
| Dr. Clark, Cheshunt | Dr. Francis Smith |
| Dr. Cleveland | Dr. Smyth, Shenley |
| Dr. Day | Dr. Sturge |
| Dr. Dockray | Dr. Stewart |
| Dr. Edwards | Dr. Wells |
| Dr. Evill | Dr. Windsor |
| Dr. Fell | Dr. Williams |

The following are the medical members on the committees indicated:

County Insurance Committee.—Drs. Boyd and Fisher (elected by practitioners), Shelly, Dockray, and Burnett-Smith.

Medical Service Subcommittee.—Drs. Berry, Evill, Shelly, and panels of Drs. Boyd, Clark (Cheshunt), Dockray, Fisher, Gilbertson, C. H. Hall, Lipscomb, Smyth, and Windsor.

District Committees.—Barnet: Drs. Nuun and Hatrick; Berkhamsted: Drs. Bontor and O'Keefe; Bishop's Stortford: Drs. Collins and Newman; Cheshunt: Drs. Clarke and McClymont; Hatfield: Dr. Brittain; Hemsted: Drs. Holtzman and Gilroy; Hitchin: Drs. Macfadyen and Gilbertson; St. Albans: Drs. Clarke and Smith; Watford Rural: Drs. Pothergill and Shaekleton; Watford Urban: Drs. Berry and C. H. Hall; Ware: Drs. Boyd and Urban.

At a meeting in London on March 26th, when eighteen members were present, it was decided to ask the County Insurance Committee to add to its number a practitioner representing the large industrial area of West Herts, and the name of Dr. Wells was submitted. It was pointed out that there were at present only five practitioners upon the Committee, but that a promise had been given that the number should be six.

The following recommendations were made to the County Insurance Committee:

(a) That all ordinary splints may be provided by the doctor attending the injury, and that a duplicate of that splint should be obtainable by the doctor from the chemist upon prescription. Splints to be returned to the chemist upon recovery by the patient. Doctors contracting to supply appliances will furnish the necessary splints without additional payment.

(b) A uniform charge of 6d. for first dressings and 1s. 6d. for emergency medicines supplied by a practitioner be accepted by the County Committee.

(c) Allocation of residue. All insured persons residing in any town or village who have not selected a doctor to be assigned to the doctors who have accepted insured persons in such town or village in proportion to the number of accepted persons there residing who are already on each doctor's list. That an opportunity be afforded after the allotment for an exchange of patients by mutual arrangements between the practitioners concerned.

(d) Migratory patients. A provisional agreement to a system of mutual obligation so far as attendances are concerned upon insured persons moving temporarily from one part of the county to another for the present financial year. Should the "temporary" residence be of any length of time the patient must be transferred. Regarding those persons on a doctor's list outside the county the Medical Committee could only suggest that these should be treated as private patients upon a scale of fees.

(e) A card of identity should be furnished by every insured person when seeking treatment in the future as in the past.

It was resolved to request practitioners to furnish further particulars with regard to patients in isolated districts, with a view to making a claim for a grant from the central fund. Attention was drawn to letters sent to certain practitioners by the County Insurance Committee offering to allot all patients in certain districts to them. As the matter is under negotiation and a reply from the Commissioners is awaited, the Medical Committee learnt with surprise that these letters had been sent and practitioners were asked not to accept the offer pending the negotiations.

To meet the expenses of the Committee it was suggested that every practitioner should consent to a general levy; particulars of a scheme will be given in due course. The Committee, being statutory, has no claim for its expenses from the British Medical Association.

The County Committee has agreed to the term "repeat

mixture," provided the practitioner asks if the patients go to the same chemist.

A scale of fees has been adopted for those insured persons who make their "own arrangements."

A subcommittee was appointed to meet members of the Committee of the Midwives Association. It was pointed out that there was no obligation upon any practitioner to sign the agreement which may have been brought by the midwife to attend an emergency call upon the fees named, and the Medical Committee advised that if any practitioner had signed under a misunderstanding the consent should be withdrawn pending the negotiations.

The Medical Committee will be pleased to hear of any matter requiring adjustment.

SOMERSET.

The Somerset Local Medical Committee has been reorganized.

The county of Somerset is divided into twelve insurance districts, each having its district medical committees and representatives on the Somerset Medical Committee.

The following is a list of the Committee showing the districts they represent:

Chairman, John Wallace (Weston-super-Mare).

Vice-Chairman, C. Farrant (Taunton).

Honorary Secretary, C. P. Crouch (Villa Rosa, Weston-super-Mare).

Districts.

Taunton.—Drs. C. Farrant (Honorary Secretary) (Taunton), E. E. Frossard (Bishop's Lydeard), J. A. Macdonald (Taunton), G. F. Sydenham (Dulverton).

Bridgwater.—Drs. R. H. F. Routh (Honorary Secretary) (Bridgwater), and C. B. Stewart (Huntspill).

Yeovil.—Drs. C. J. Marsh (Honorary Secretary) (Yeovil), P. A. Colmer (Yeovil), and C. D. Ingle (Somerton).

Weston-super-Mare.—Drs. G. H. Temple (Honorary Secretary) (Weston-super-Mare), H. C. Bristowe (Wrington), B. C. Kelly (Burnham), E. H. Openshaw (Cheddar), E. G. D. Pineo (Langford, near Bristol).

Clevedon, Portishead, Long Ashton, and Keynsham. Drs. F. T. B. Logan (Southville, Bristol) (Chairman), E. Newsome (Honorary Secretary) (Pill, near Bristol), W. G. Dickinson (Portishead), C. B. Humphrys (Clevedon), G. Willett (Keynsham).

Clutton.—Drs. G. S. Pollard (Honorary Secretary) (Midsomer Norton), R. H. Brew (Chew Magna), T. Martin (Temple Cloud).

Frome.—Drs. R. de V. King (Honorary Secretary) (Frome), H. Bramwell (Nunney), J. M. Dupont (Frome).

Wincanton.—Dr. C. W. Edwards (Honorary Secretary) (Wincanton).

Wells and Glastonbury. Drs. H. W. Allan (Chairman) (Wells), C. Heath Gee (Honorary Secretary) (Everceech), C. R. Bishop (Shepton Mallet), D. Lawrie (Glastonbury).

Chard.—Drs. C. E. Alford (Chairman) (Crewkerne), J. G. Sibbald (Honorary Secretary) (Crewkerne), F. J. Gomez (South Petherton).

Wellington.—Drs. W. Spettigue (Honorary Secretary) (Wellington), W. Penberthy (Wiveliscombe).

Williton.—Drs. T. H. Ollerhead (Honorary Secretary) (Minehead), J. G. Graham (Watchet).

PLYMOUTH.

At a meeting of the Plymouth Local Medical Committee held on March 26th, the following matters were discussed:

Allocation of Insured Persons.—A letter from the Clerk to the Insurance Committee was read stating that no immediate allocation was contemplated of those insured persons who had not arranged with any doctor on the panel.

Income Limit.—It was stated that the recommendation by the Committee that a £2 income limit should be fixed had met with strong opposition in the Insurance Committee, and several members urged that the Committee, representing as it did both panel and non-panel doctors, should not allow the Insurance Committee to negative its proposal without a strong protest; a resolution was accordingly passed to the effect that the Committee was still of opinion that a £2 limit ought to be fixed for the Plymouth area, and the Honorary Secretary was instructed to send a copy of the resolution to the Clerk to the Insurance Committee.

Extension of Contracts.—The Committee learnt with great regret that most of the medical men on the panel had signed new agreements without waiting to see that matters outstanding with the Insurance Committee had been settled.

Division of Panel Fund.—As regards division of the first quarter's fund the Committee recommended an even proportional division irrespective of length of service on the panel.

Reciprocity between Neighbouring Local Medical Committees.—It was resolved to invite the Devonport Local Medical Committee to send a representative as a visitor to the meetings of this Committee.

DENBIGHSHIRE.

THE Denbighshire Local Medical Committee has been duly recognized by the Commissioners and is constituted as follows:

Chairman, Dr. Medwyn Hughes, Ruthin.

Honorary Secretary, Dr. Rowland, 9, Bridge Street, Wrexham.

Abergele.—Dr. Peter Jones
Brymbo.—Dr. R. Owen
Codpoeth.—Dr. Vaughan Griffith
Colwyn Bay.—Drs. Butterworth Wilks and Venables Williams
Denbigh.—Dr. David Lloyd
Gresford.—Dr. Harrison

Llangollen.—Dr. F. Drinkwater
Llanrwst.—Dr. Hill
Ruabon.—Dr. R. Lawton Roberts
Ruthin.—Dr. Byford
Wrexham.—Drs. Moss, Edwards-Jones, R. Williams, and J. Davies

A meeting, to which all practitioners on the panel were invited, was held at Chester on March 27th, when Dr. MEDWYN HUGHES was in the chair. The object of the meeting was to ascertain the views of the general body of the practitioners working under the Act, and to bring these views to the notice of the County Insurance Committee. Discussions on the following matters took place:

Remuneration for Future Services.—It was decided to ask for the full sum of 7s. or 9s. per caput, and to discontinue the system at present in vogue of deducting 6d. per caput to form a mileage fund for visits over three miles.

Allocation of Residue of Insured Persons.—It was resolved to recommend that those persons who had not yet chosen their medical attendant should be allocated in accordance with the proportion of cards already signed by each doctor.

Payments in Advance.—The meeting unanimously resolved to request the payment of two-thirds of moneys due for the current quarter's work, as early as possible.

Attendance on Migratory Insured Persons.—An animated discussion took place on this subject, the seaside practitioners present pointing out the hardship which the non-settlement of the clause entailed. The Chairman explained that the matter had received attention at the Cardiff conference with the Commissioners, and it was finally decided to leave the matter in the hands of the Local Medical Committee.

Excess Mileage.—Reference was made to the special grant for difficult country, and it was decided to apply for a share of this grant to compensate practitioners in the mountainous parts of the county.

Maternity Fees.—A promise has already been given by the County Committee to the effect that everything possible will be done to secure payment of medical men attending cases under the Act.

Representation on County Committee.—The SECRETARY explained that he had applied to the Commissioners for the full representation of the profession on the County Committee as allowed by the Act. As a result the committee had co-opted two medical men (Dr. Butterworth Wilks, Colwyn Bay, and the Secretary). Much dissatisfaction was expressed that no directly elected representatives had been added to the Committee, and it was decided to make further application to the Commissioners.

Expenses of Local Medical Committee.—The Secretary was authorized to request each panel practitioner to contribute the sum of 2s. 6d. for payment of clerical expenses and hire of rooms.

ROSS AND CROMARTY.

A SPECIAL meeting of the Ross and Cromarty Local Medical Committee, which has been recognized provisionally, was held on March 27th, Dr. McLEAN presiding, and eight other members were present.

At a previous meeting it was agreed that all medical practitioners in the county should act on the Local Medical Committee. Dr. W. McLean (Conon Bridge) was appointed Chairman, and Dr. E. H. Duncan (Sirathjeffer), Secretary.

Constitution A (Scotland) was adopted, and the Commissioners were asked to give the Committee liberty to

elect one or more medical practitioners on the county panel, but not resident in the county, as members of the Committee.

An executive subcommittee was appointed, consisting of the Chairman and Secretary, and Drs. Adam, Smith, Ross, Mackenzie, Brodie, Cameron, and Somerville.

The meeting resolved unanimously to protest against the action of the Insurance Committee in sending Form 305/I.C. Scotland to the medical men on the panel desiring the renewal of their contracts to attend insured persons for the ensuing year without the following specific points being dealt with:

1. Allocation of insured persons not having chosen a doctor.
2. Arranging for attendance to temporary residents.
3. No settlement as to method or amount of mileage.

It was pointed out that there was a hardship in asking for signatures one month before the expiration of the previous contract, while the conditions still remained as indefinite and unsatisfactory as they were at the outset.

The meeting also expressed its hearty support of the reasonable demands of the chemists as embodied in their schedule.

MEETINGS OF INSURANCE COMMITTEES.

DERBYSHIRE.

Charges for Additional Certificates.

COMPLAINTS having been made to the Derbyshire Insurance Committee as to charges by medical men for certificates given to insured persons, the Clerk to the Committee has stated that by the agreements entered into doctors had undertaken to give free of charge all certificates required by the approved society of the insured person. The trouble appeared to have arisen through some persons being members of several lodges, doctors being asked to give three or four certificates. The medical man was only required to give those needed by the approved society; for others there must be an arrangement between patient and doctor.

KESTEVEN.

Night Calls.

THE Kesteven Insurance Committee has adopted as one of the rules governing the administration of medical benefit the following:

An insured person shall not summon a medical practitioner to visit him between the hours of 8 p.m. and 8 a.m. When his condition requires a home visit he shall give notice to the practitioner, if the circumstances of the case permit, before 9.30 a.m. on the day on which the visit is required. Fine for first breach of rules 2s. 6d., and for repeated breaches 10s., and suspension of benefit for a period not exceeding one month.

OLDHAM.

Multiplication of Visits.

COMPLAINT was made at the last meeting of the Oldham Insurance Committee that insured persons were going to the doctors for ridiculous and trifling ailments. One member, Mr. HOLDEN, said he had heard of people visiting a doctor four times in one week with a different complaint each time, whereupon Dr. POCOCK remarked that the doctors considered themselves lucky if they did not get a person complaining of three or four different ailments at one time.

NEWCASTLE-UPON-TYNE.

Complicated Certificates.

THE Newcastle Insurance Committee at its last meeting decided to send to the Insurance Commissioners copies of the complicated certificates issued by some of the approved societies, in support of a request made by the Honorary Secretary of the Local Medical Committee that a uniform form of certificate should be adopted.

On the question of the assignment to medical men of the residuum of insured persons who had not chosen a doctor, the Local Medical Committee asked

that all those medical men with 1,500 insured persons and over on their list have none of the residuum allocated to them, but that it be allotted to the other doctors on the panel in inverse ratio to the number upon the doctors' lists.

A MEMBER suggested that by adopting this plan the popular doctor would be penalized, but the CHAIRMAN remarked that it was the doctors' own request. He also mentioned that some doctors who had only forty or fifty

people on their lists asked that no more might be allocated to them, whilst others had agreed to act for as many as 3,000.

The Committee agreed to adopt the course suggested by the Local Medical Committee.

READING.

Suggested Variation of the Income Limit.

DR. NAPIER JONES and Dr. N. H. JOY were given the opportunity of addressing the Reading Insurance Committee, at its last meeting, in support of a proposal that it be left to the doctors to decide whether they should accept insured persons earning between £104 and £160 a year. Dr. Joy said that medical men realized that a man earning £2 or £3 a week might not be any better off than a man earning £1 a week. Doctors knew the whole conditions of a family, and could judge better than any one else on the income question. Dr. Napier Jones urged that the proposal involved the important questions of principle, that it was an abuse of public funds to give any man that for which he was well able to pay the market price, and that to put insured persons in such a position would sap their independence. It was intimated that protests had been received from approved societies against the proposed income limit, and ultimately the Committee carried, by 15 votes to 4, an amendment fixing the income limit at £160 a year.

SURREY.

Contracting Out.

THE Surrey Insurance Committee received 2,300 applications from persons desirous of making their own arrangements for medical benefit, but on Form 43 I.C. being forwarded to them, only 93 of the applicants persisted. Expressions of dissatisfaction with the nature of the form, however, reached the Committee, the suggestions being that it was intended to force doctors on to the panel, or to force insured persons to go to doctors on the panel. The Insurance Committee has decided to hold a conference with the Local Medical Committee on the whole question.

SHROPSHIRE.

Approved Societies and Free Choice of Doctor.

DR. EXHAM, of Market Drayton, brought to the notice of the Shropshire Insurance Committee allegations that representatives of certain approved societies were handing to insured persons medical tickets already signed by medical men, thus annulling free choice of doctor. The CHAIRMAN stated that this was a very serious matter. If the publicity given to the circumstance did not cause such irregular practices to be stopped, drastic measures would be taken. The Committee decided to seek the advice of the Insurance Commissioners as to the most effective method of dealing with the matter.

WEST SUSSEX.

THE West Sussex Insurance Committee, on March 31st, considered a letter from the Local Medical Committee stating that at a meeting to which all medical practitioners in West Sussex, and others whose names appeared on the panel for the district, were invited, the following resolutions were carried *unanimously*:

Re new agreement. "That we are prepared to give service as soon as the outstanding points between the Insurance Committee and the practitioners of West Sussex have been settled—namely: (a) Income limit; (b) mileage in inaccessible places over three miles; (c) arrangements for medical attendance on aged and disabled members of friendly societies; (d) unification and limitation of certification; (e) acceptance of certificates given by a non-panel doctor."

Re allocation. "That we are unable to suggest any form of allocation until the index register is completed."

In the course of debate it was explained that the local profession attached most importance to the question of an income limit. The CHAIRMAN of the Committee said the Commissioners had stated that the matter of aged members of friendly societies was one for the approved societies and not for the Insurance Committee. The Committee then adopted the following resolution:

That this Committee approves of the principle of extra payment for mileage in respect of inaccessible places over three miles.

Dr. EUSTACE moved:

That it is desirable to fix an income limit above which insured persons shall be required to make their own arrangements for medical treatment and medicine.

Dr. Eustace said the profession was anxious to give a full and complete service, but it could not while this question was outstanding. By accepting the principle of an income limit the Committee would secure the hearty goodwill of the profession.

The motion was defeated by 10 votes to 9.

The following motion was then proposed:

That, failing the acceptance of the present agreement by the doctors within the present week, a sufficient number of salaried doctors shall be appointed to administer the Act.

Mr. VERNON, on behalf of the Local Medical Committee, promised to let the Committee know the intentions, and the motion was withdrawn, the question of the action to be taken after the reply of the profession had been received being left to the Medical Benefit Subcommittee.

FLINTSHIRE.

Income Limit of £2 for Voluntary Contributors.

THE Flintshire Insurance Committee, in response to representations by the medical profession, has adopted an income limit of £2 a week in respect of medical benefit for voluntary contributors.

INSURANCE NOTES.

NATIONAL INSURANCE PRACTITIONERS' ASSOCIATION.

At a conference called by the National Insurance Practitioners' Association in London on March 27th, resolutions were adopted recommending practitioners to give the suggested card system a trial while considering methods for limiting clerical work which are compatible with the provision of accurate records as to the amount of medical services rendered; that the allocation of insured persons who fail to choose and be accepted by a practitioner should be carried out by a subcommittee appointed for each district by the practitioners on the panel; that medical representatives on insurance committees and on the Advisory Committee be urged to use their influence to limit the number of institutes and dispensaries recognized, to prevent recognition without full local inquiry and medical inspection, and to secure that wherever recognition is given there shall be constant supervision by the insurance committees in order that the conditions laid down in the Regulations shall be complied with; that insured persons going into any district on a holiday or during illness or convalescence should be required to give notice, and that no deduction should be made from the funds at present available for medical benefit to meet any deficiency arising in particular cases, but that a separate additional fund should be provided by the Government for the payment of medical attendance on migratory insured persons.

Drs. Lauriston Shaw, Cowie, and Mills were appointed to a committee which is to develop a scheme to form a pension fund by means of contributions deducted at the source.

ALLEGED MALINGERING BY WOMEN.

A Labour correspondent of the *Blackburn Weekly Telegraph* writes that since the Insurance Act came into operation absence through sickness amongst married women in Lancashire mills has assumed not only record but even alarming proportions. Malingering is suspected in a large number of cases, and steps are being taken to test bona fides with a view to the prosecution of any who are imposing upon the insurance funds. The absence of the women has caused a shortage of hands and a stoppage of machinery in some districts. If the present sickness rates are maintained, deficiencies in the funds of approved societies, rendering necessary a levy on members or a reduction of benefits, appear imminent.

The secretary of a Lancashire approved society, interviewed by the *Manchester Dispatch* on this matter, expressed the opinion that doctors would have to deal more strictly with insured persons. He even put the proportion of malingerers at as high a figure as 90 per cent., adding that the well-to-do operative was behaving in this way because he could afford to leave work. The poorer class, for whom the Act was chiefly intended, could not afford to lose wages for the sake of insurance benefits; they returned to work before they were really better, often having to come off again.

NORTHUMBERLAND MINERS.

The miners at Ashington, a very large colliery in the south-east of Northumberland, have objected to continue to pay 9d. a fortnight in respect of medical attendance and the dispensing of medicines for miners' families. The miners offered 6d. a fortnight, in view of the fact that they pay 4d. a week under the Insurance Act. The medical profession declined this proposal, on the grounds that the work and responsibilities of the profession are increased by the Act, whereupon the miners' society advertised, and from a long list of candidates selected two doctors who agreed to accept 6d. a fortnight in respect of miners' families. The report states that the two doctors will receive the support of the men under the Insurance Act, and as about 8,000 men are concerned, they will have a busy time. The names of the selected doctors are given by the *Northern Echo* as Dr. Valentine of Salisbury and Dr. Thompson of Clydebank.

REPORTS OF LOCAL ACTION.

MANCHESTER.

THE INSURANCE ACT IN MANCHESTER AND SALFORD.

It has been decided by the medical profession in both Manchester and Salford to continue the present system of payment per attendance under the Insurance Act for another three months—that is, to July 15th. It cannot, however, be assumed from this that the profession is at all enamoured with either the Act in general or with this special system under it. The feeling has been expressed that the present system lends itself to certain abuses which are extremely difficult to deal with, and perhaps one of the worst features is a feeling of mutual suspicion among medical men may be engendered. The cases in which there is over-attendance merely to obtain a greater share in the pool will be few and far between, but unfortunately, if they occur at all, they cannot generally be known and inquiry cannot be undertaken into them until a month or perhaps several months after the patient has been discharged and returned to work, when satisfactory evidence of over-attendance can hardly be obtained. Nevertheless, if a Local Medical Committee had simply to deal with unnecessary and fraudulent over-attendance, its duty, odious as it might be, would only rarely have to be exercised, as none but the veriest outcasts of the profession would condescend to defraud his brother practitioners. By far the greatest difficulty arises in quite a different way, where there is nothing like unfair attendance ever contemplated. With the best intentions in the world it may be the practice of Dr. X. in a particular class of case to see his patients daily, while Dr. Y. considers it quite sufficient to see exactly similar cases only every two or three days; but when Dr. X. sends in his bill to the Insurance Committee for an amount which is two or three times as much as Dr. Y.'s bill, and, still further, when Dr. Y. finds that even his modest bill has to be discounted because his neighbour is claiming so large a proportion of the pool, which is insufficient to pay all bills in full, the feeling arises either that Dr. X. ought not to attend so frequently, or that Dr. Y. might just as well in the future attend oftener than has been his custom, as he has a perfect right to just as much of the pool as his neighbour for the same number of similar patients. The difficulty that may then face the Local Medical Committee is extremely great. It is not wholly theoretical, for several cases have already arisen of two practitioners practising in the same neighbourhood with about an equal number of patients and on the average a similar class of illness to deal with, where the bills sent in to the Committee by one practitioner have been almost double those sent in by the other, though no one would suggest for a moment that there has been anything in the nature of unscrupulous dealing. It is not held to that the case can be met by saying that the doctor who has given most frequent attendances should receive the greater amount for his services actually rendered, as the other doctor, with the same number of patients of a similar class on the average, naturally claims that his responsibility has been just as great and his results

just as good, and he regards it as unfair that he should receive less simply because his method of dealing with his patients has been different though equally efficient. It is evident that the Local Medical Committees will find it no easy task to adjust these cases. The idea of taking an average from the total attendances and allowing each doctor to charge only for a fixed number of attendances for each patient, or, going still further into detail, of fixing an average for each class of illness, is now receiving careful consideration. If some such plan were carried out any doctor whose attendances per patient on his list were above the average would have his bills cut down, and only those attendances which were within the average would rank for participation in the pool. No one, however, suggests that the system of averages is anything more than a very rough and ready method of dealing with the difficulty, and it is freely acknowledged that to introduce such a dead uniformity into medical practice would be most obnoxious and detrimental to efficiency. Nevertheless, it is thought that, with proper safeguards, which the Local Medical Committees are contemplating, the method of averages deserves a fair trial.

The reason for continuing the present system for another three months in Manchester and Salford is due, not to an objection to the capitation system, but to the feeling that the present system cannot have had a fair trial yet. The novelty of free medical attendance has induced a large number of patients to seek advice for mere trifles which in the future may be disregarded. Moreover, January to March are normally perhaps the busiest months of the year for general practitioners, and a pool that may be quite insufficient for the last three months may possibly be sufficient for the next three months.

That there will have to be a very considerable discounting of the doctors' bills for the last three months is now practically certain. The enormous rush of work in January, and to a slightly less degree in February, has distinctly lessened in March, but as the bills are not yet sent in for March it is impossible to say as yet what the final result will be. The tariff rate is 2s. 6d. a visit and 2s. for a consultation at the surgery; but if 1s. 9d. and 1s. 3d. respectively are actually obtained for the last three months from the pool it will almost surpass the highest hopes. Considering that the pool will be just the same in total amount for April to July as for January to March, while it is possible that the work may be little more than half as much, it is just within the range of possibility that the next three months may make up for the loss of the last three months, and it was with this hope that the decision was arrived at to continue the present system.

PRESTON.

At a special meeting of the profession of the Preston district held on March 12th, when Dr. Rigg presided and thirty-one members were present, the following motion was proposed by Dr. ARTHUR E. RAYNER:

That owing to the unsatisfactory conditions of work and remuneration the medical men of Preston refuse further service on the panel unless contracting out is allowed and an income limit of £2 per week is established.

A long and interesting discussion took place, and in reply Dr. RAYNER said that in accordance with the resolution passed in January, when it was decided to go on the panel, it was necessary to hold a meeting of the profession to decide whether or not further service should be given; he referred to the fact that in the old days holding a club appointment was purely voluntary, now it was practically compulsory; that nearly all clubs had their members medically examined before admission; that the Government had allowed the Harnsworth amendment and not allowed the Addison amendment to be put in force, and also referred, amongst other points, to the great disadvantage that country practitioners were under with regard to mileage.

The CHAIRMAN then put the resolution, when 6 voted for and 16 against, a number refraining from voting.

Dr. WALKER then moved that the Local Medical Committee be asked to consider the question of the formation of a trade union, and to get into communication with other medical committees working on the subject.

This was considered inopportune, and no seconder was obtained.

Dr. RAYNER then moved the following resolution, which was carried unanimously:

The Preston Division of the British Medical Association regards the conditions of service under the Insurance Act as unsatisfactory to both doctor and patient. It accounts the disregard of the clauses in the Act for the allowance of "contracting out" and for the institution of an income limit as a deliberate breach of faith on the part of the Commissioners and the Insurance Committees. And since an adequate panel for this district is assured, it calls upon the Preston Insurance Committee to abide honourably by its obligations and to give proper facilities for the concessions embodied in these clauses.

SCOTLAND.

EDINBURGH.

Edinburgh Burgh Insurance Committee.

THE Scottish Insurance Commissioners have appointed Dr. A. A. Matheson and Dr. John Orr members of the Burgh Insurance Committee. This Committee, which is now complete, includes seven medical men.

Medical Arrangements of Institutions.

A good many matters have recently been discussed by the Medical Benefit Subcommittee of the Burgh of Edinburgh Insurance Committee. The subcommittee has agreed to recommend that permission be given to the Chalmers Hospital to make its own arrangements for medical treatment of insured persons in its employment and resident in the institution, but not to accord that permission to the Orphan Hospital, Donaldson's Hospital (for the deaf and dumb), the Scottish Liberal Club, and the North British Station Hotel. The subcommittee delayed consideration of the applications of the Royal Hospital for Sick Children, the Episcopal Training College, Mackenzie House (Edinburgh Academy boarding-house), a nursing home, and the Church of Scotland Deaconess Hospital until further information had been obtained regarding the medical service in these institutions. With regard to a number of letters from Christian Scientists asking permission to make their own medical arrangements with Christian Science practitioners, the subcommittee resolved to recommend the committee to decline to grant the permission asked. The case of the Royal Blind Asylum and School was also considered; the suggestion had been made by the Insurance Commission that Dr. Melville Dunlop, the medical officer, might apply to the Insurance Committee to be placed on the panel for the treatment of insured members of the staff of the institution only, and the subcommittee recommended that Dr. Dunlop be allowed to have his name placed on the panel for this purpose, provided the doctors on the panel agreed to the arrangement.

Chemists and the Insurance Act.

At a meeting of the Edinburgh Insurance Committee on March 28th, the complaints of the chemists who are working under the Act found utterance. The present contract expires on April 14th, and a new one was to be signed on or before March 25th. The chemists asked for delay and for some information on various matters before contracting for a second term of service. They made the our following claims:

(1) A dispensing fee for every prescription, except for prescriptions for appliances; (2) all dispensing fees to be raised; (3) flat rates for infusions, tinctures, spirits, and waters to be abolished, and a price substituted commensurate with the intrinsic value of the preparation; (4) the price of containers not to be charged on the drug fund.

The Committee received the letter in which these claims were made, and remitted it to the Medical Benefit Subcommittee with power to receive a deputation from the Pharmaceutical Committee of the Edinburgh and District Chemists' Trade Association. An element which cannot be left out of the consideration of the matter is that the making up of some drugs—for instance, those containing phosphorus—is not a simple matter of time or even of ordinary training, but requires special skill and caution and imposes considerable responsibility. Further, the simple prescriptions of pre-insurance days, which could be made up in bulk, will not, it is thought, meet the needs or at least the demands of the insured person.

FORFARSHIRE.

The Three Miles Limit.

At a meeting of the Forfarshire Insurance Committee on March 15th it was stated that 6,000 persons within the area had not yet selected a doctor, and that this was partly due to the refusal of medical men to attend insured patients residing beyond the three miles limit. Mr. CUMMING, a member of the Committee, said that from inquiries he had made this statement appeared to be incorrect. The Committee should be careful how it accepted statements before making full inquiry. The CHAIRMAN (Provost Marshall) said the doctors could select their own patients, but, at the same time, those who went on the panel had agreed to attend patients not only within the three miles limit, but outside it. The matter was referred to the Medical Subcommittee.

IRELAND.

BELFAST.

THE Local Medical Committee for Belfast was elected on April 25th, 1912. Application for recognition was made to the Irish Insurance Commission in September, 1912, who replied that owing to the non-extension of medical benefits to Ireland they could not then recognize it. A further application was made in January, 1913, and a reply has been received that the Committee is now officially recognized. The Committee consists of sixty members, representative of all branches of the profession. The following are the office-bearers: *President*, Sir John W. Byers, M.D.; *Vice-President*, Dr. T. C. D. Cathcart; *Convener and Honorary Secretary*, Dr. Thomas A. Davidson, 6, Carlisle Terrace, Crumlin Road, Belfast.

COMMITTEE ON EXTENSION OF MEDICAL BENEFIT.

Last week the Committee appointed to inquire into the desirability of extending medical benefits to Ireland held two more sittings in Dublin, and it is understood that for all practical purposes it has completed its inquiry. The inquiry seems to have convinced the Irish public that the extension of medical benefit is unnecessary. So far as the rural districts are concerned, it was a foregone conclusion that this extension was not wanted; it appears that there is less sickness in Ireland than in Great Britain, and the provision of medical relief is already guaranteed by the existing dispensary system. The evidence tended to show that there was no room for two systems of public medical relief, and that it would be impossible to do without the Poor Law Medical Service. At the same time, it is generally recognized that this service stands in urgent need of reform, but it is thought that to superimpose the insurance system upon the present system would aggravate the problem and present another, and probably an insuperable, barrier to any hope of reform of the Poor Law. It would appear that the Committee has decided to abandon any hope of forcing medical benefits upon the rural districts, but there remains the alternative proposal that the benefits should be extended to the six county boroughs where there is some evidence that the extension is desired. But this compromise was condemned last week by no less an authority than the Actuary to the Irish Insurance Commissioners, who, when he was asked whether such partial administration of medical benefit was actuarially possible, declared that it would be "the last straw," and would "break down the working of the Act."

MEDICAL CERTIFICATES DEADLOCK.

The Secretary of the Conjoint Committee published in the press last week a letter which he had sent to the Insurance Commissioners on March 17th stating that the Conjoint Committee wished to point out that, in connexion with the scheme for medical certificates, it had made the following suggestions:

1. That its approval of the scheme could at best be on the understanding that the Commissioners will make an endeavour to increase the amount at present available by the end of the year if it is found insufficient to be a reasonable rate of remuneration.

2. That the demand of the medical profession for 2s. 6d. per certificate in urban areas and 3s. per caput in rural districts was arrived at at a general meeting of the delegates of the whole profession held in Dublin on June 11th, 1912, and that the Conjoint Committee has no power to bind the profession

to accept anything less without the authority of a similar meeting.

3. That the acceptance by the Conjoint Committee of any scheme giving less remuneration could only bind its members individually, and as it is open to any doctor to accept or refuse the capitation fee offered, the approval of the Conjoint Committee will be superfluous if the majority of the profession accept this scheme, and it will be vain if medical men refuse to go on the panels.

4. That the Conjoint Committee believe that the scheme under proper conditions will be accepted by the majority of the profession as a provisional arrangement for the remainder of this year, but further than this the Committee cannot bind itself.

A meeting of the Poor Law medical officers was held on March 27th, in the Royal College of Surgeons, Dublin, when the following resolutions were passed with enthusiasm:

That this meeting of Irish Poor Law medical officers consider that the Secretary of the Conjoint Committee acted *ultra vires* in his letter to the Irish Insurance Commissioners when he informed them that he believed the scheme (proposed by the Insurance Commissioners for medical certification) "will be accepted by the majority of the profession as a provisional arrangement for the remainder of this year"; and we further state that, when the Conjoint Committee approved, by a majority, of their secretary's letter containing this extract, they exceeded their functions as executive to the delegates' meetings of June, 1912, and January, 1913, which laid down a much higher scale of fees for medical certificates, which for districts (excepting urban areas of 10,000) was in accordance with the amount offered by the Insurance Committee of the Irish Parliamentary Party—namely, a *minimum* fee of 2s. 6d. *per caput* insured, and, if possible, a *maximum* capitation fee of 3s.

That we, as Poor Law medical officers, repudiate the action of the Conjoint Committee, and refuse to go on the panel until a fee is offered to us, such fee being not less than the 3s. the June, 1912, meeting of delegates instructed them to accept for rural areas.

That as the additional grant of £1,825,000 to the medical profession in Great Britain, for the purposes of the satisfactory working of the Insurance Act, renders available a proportionate grant for the medical profession in Ireland of £120,000, which is entirely sufficient to meet the expenses of medical certification and other demands of the Irish medical profession, therefore we consider it an unwarrantable injustice to place on friendly societies and other approved societies the necessity of refusing sick pay altogether, or for several weeks, to insured persons, who are for the most part entirely dependent for the maintenance of themselves and their families on their sick pay during their incapacity to work.

At a meeting of the Limerick medical practitioners held last week the following resolution was passed unanimously:

Having the communication from the Insurance Commissioners *re* certification before us, we consider the remuneration offered quite inadequate for the work done, and we therefore refuse to accept it, or to form a panel, until such provision is made as to satisfy our demands already expressed through the Conjoint Committee.

BENEFITS FOR INSURED PERSONS IN WORKHOUSE HOSPITALS.

At a meeting of the Lismore Board of Guardians a resolution was passed calling on the Government to have the National Health Insurance Act amended so that insured persons in Ireland, without dependants, who become inmates of union hospitals, may receive benefits other than medical in return for their and their employers' contributions.

SANATORIUM BENEFIT.

The Insurance Commissioners have published the following orders with a view to simplifying the procedure in applying for sanatorium benefit. The present arrangement for payment to medical practitioners of 5s. for each examination and report on an insured person applying for sanatorium benefit will cease, and the following procedure is to be adopted:

1. An application for sanatorium benefit will still continue to be made on Form Med. 1, or similar form, which should contain satisfactory evidence that the applicant is an insured person, and be accompanied by a brief statement, signed by the medical practitioner, that the person is, in his opinion, suffering from tuberculosis. On receipt of this application, the Committee may at once recommend the applicant for sanatorium benefit in the form of domiciliary treatment, pending further consideration of the case. The practitioner will immediately assume charge of the case, and will carry out treatment in consultation with the Tuberculosis Medical Officer, in

accordance with the Order of the Local Government Board indicating the manner of undertaking such treatment. If in the course of such treatment it is made apparent to the Tuberculosis Medical Officer that the case is one in which treatment in a sanatorium or hospital or at a dispensary would be more suitable, it will be his duty to represent the facts to the Committee, who may thereupon make a further recommendation for the necessary treatment to be provided.

By adopting the above method a formal medical report for the information of the Committee as a preliminary to the grant of sanatorium benefit will become unnecessary, thus entailing the least possible delay in extending treatment to the applicant. A further advantage will result from the fact that the medical practitioner is thus kept in touch with the patient from the very beginning, and is brought into consultation with the tuberculosis medical officer at the earliest opportunity, both thereby working in friendly co-operation for the benefit of the patient.

2. An approved society will have the right to challenge the bona fides of a certificate, and the question will then be decided by the Committee of Complaints or by the Insurance Commissioners, as the case may be.

3. Where there is a doctor in attendance on the patient, only that doctor is to give the certificate.

4. Accounts are to be settled quarterly, and the proposed arrangements will begin on April 15th, 1913, and continue till January 14th, 1914, inclusive, or such longer time as may be agreed upon between any medical practitioner and any Insurance Committee, subject to the approval of the Commission.

The Conjoint Committee has written to the Commissioners stating that it prefers that the present provisional arrangement in connexion with the domiciliary treatment of insured persons suffering from tuberculosis shall continue.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

On Thursday, March 27th, the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand, W.C. Dr. J. A. MACDONALD was in the chair, and the other members present were: *England and Wales:* Dr. R. M. Beaton (London), Dr. E. R. Fothergill (Brighton), Miss F. Ivens, M.S. (Liverpool), Dr. E. O. Price (Bangor), Dr. D. G. Thomson (Norwich), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London). *Scotland:* Dr. John Adams (Glasgow), Dr. R. McKenzie Johnston. *Ex officio:* Sir James Barr (President), Mr. T. Jenner Verrall (Chairman of Representative Meetings), Dr. Edwin Rayner (Treasurer).

ADVISORY COMMITTEES.

It appears that various members of the Association who had resigned from the Advisory Committees in accordance with the decision of the Association last autumn had recently received invitations to rejoin the committees, and the CHAIRMAN pointed out that in accordance with the minute adopted by the Special Representative Meeting on January 18th it was the policy of the Association that reappointments should be accepted if offered.

COMPENSATION.

Six applications for compensation for loss suffered by medical practitioners in consequence of their loyal adherence to the decision of the Association were considered and in four instances pecuniary assistance was granted; in the other two cases it was decided to make further inquiries.

TREATMENT OF INSURED PERSONS OVER 65 YEARS OF AGE.

The reply from Mr. Masterman, published in the SUPPLEMENT of March 22nd, p. 266, in reply to the letter addressed to him on February 28th, was read, and a draft reply was amended and approved. This reply was published in the SUPPLEMENT of March 29th, p. 285.

CONDITIONS OF PANEL PRACTICE.

The State Sickness Insurance Committee considered replies received from practitioners to the questions issued by the Association recently concerning various matters connected with the panel system. It appeared that many panel practitioners strongly disapproved of the conditions of practice, but after full consideration the Committee came to the conclusion that no good purpose would be

served by the Association calling on practitioners to leave the panel.

AMENDMENT OF THE ACT AND REGULATIONS.

The Amendments Subcommittee brought up its minutes which were discussed seriatim, and the following resolutions were adopted by the State Sickness Insurance Committee for report to the Council:

Records, etc.

That while so far as can be seen at present the new form of a prescription book and the card register are to a certain extent less irksome and laborious than the original prescription and day books, the amount of clerical work required of a panel practitioner still seriously encroaches upon the time and attention which he should give to his patients.

Mileage.

That as it appears that the question of mileage will have to be worked out in those areas affected, no opinion be expressed in this matter until it is seen how the special mileage grant is applied, but that in the meantime Divisions be requested to urge upon any Local Medical Committees in the areas concerned in the question of mileage to take immediate steps to obtain a grant from the Special Mileage Fund.

Anaesthetics.

That the Association entirely concurs in the opinion expressed by a very large number of panel practitioners that it is not to the best interest of insured persons that the administration of an anaesthetic should be included under medical benefit, and that steps be taken to exclude it therefrom.

Income Limit.

That the Association is of opinion that every effort should be made to obtain by amendment of the Act or Regulations a satisfactory income limit in each area, in view of the fact that the present provisions in this respect have so far proved singularly inefficient, and that in the meantime (a) Divisions be requested to urge Local Medical Committees in their areas to continue to make every endeavour to obtain a satisfactory income limit; (b) steps be taken to amend the Regulations so that the income limit shall be one of the items in the agreement with the practitioners which must be submitted under Regulation 8 for the approval of the Commissioners, and upon which the Commissioners must consider any representations made by the Local Medical Committee.

Certificates.

That the Association considers it essential that there should be one common form of medical certificate required by approved societies under the Act, and notes that the English Insurance Commissioners are considering this question as a matter of urgency.

That the certificate of any duly qualified medical practitioner should be accepted for any purpose in connexion with the Act.

That there should be a uniform fee in respect of all extra certificates required by the approved societies.

That attention having been drawn to the question of the desirability or otherwise of medical certificates given for the purposes of the Act stating the nature of the disease, the Association considers that this is a question affecting insured persons rather than the medical profession, and that it is for the insured persons to make representations to their approved societies if any change is considered necessary; that, in order to safeguard the position of the practitioner, any certificate bearing the name of the disease should only be handed to the insured person concerned or to his or her accredited representative.

Rules as to the Conduct of Persons in Receipt of Medical Benefit.

That attention be drawn to the desirability of the adoption and adequate circulation by Insurance Committees of rules as to the conduct of persons in receipt of medical benefit, as a means of remedying the very large number of calls which are being made upon panel practitioners to attend cases of a trivial character.

Night Calls.

That the Association press for an amendment of the Act or Regulations so as to enable practitioners to make a small charge to insured persons in respect of night

calls, such being preferable as a deterrent to any system of fines.

Veneral Diseases.

That the Association press for an amendment of Section 14 (4) of the Act so as to provide that medical practitioners shall receive extra payment for treating cases of venereal diseases.

Miscarriages and Abortions.

That the treatment of cases of miscarriage, or any condition arising therefrom within twenty-eight days, should not be included in the treatment given under the ordinary capitation payment.

Deputies.

That the Insurance Commissioners be requested to urge upon Insurance Committees the fact that their work would be greatly facilitated by the appointment of deputies for the directly elected medical practitioners on Insurance Committees.

That Divisions be requested to urge Local Medical Committees to make similar representations to the above to Insurance Committees.

Increased Representation on Insurance Committees.

That representations be made to the Commissioners to suggest to Insurance Committees the desirability of having medical representatives on all subcommittees, and that it be pointed out to the Commissioners that this desirability is a reason for an amendment of the Act increasing the representation of the medical profession on Insurance Committees.

That Divisions request Local Medical Committees to urge upon all Insurance Committees the appointment of medical representatives on all subcommittees.

Whole-time Service.

That the Association strongly oppose any effort to institute a whole-time service of practitioners for the purpose of treating insured persons.

Dressings and Emergency Medicines.

That Divisions be requested to draw the attention of Local Medical Committees to the fact that in some areas provision has already been made by certain Insurance Committees whereby chemists are providing panel practitioners with a supply of medicine for use in emergency cases and dressings for surgery use.

Medical Referees.

That, with a view to protection against malingering, consulting medical referees should be appointed by the Insurance Commissioners.

Functions of Medical Service Subcommittees.

That the latter portion of Regulation 52 (1) be amended by the substitution of the word "shall" for the words "may if they think fit" so as to provide for the consideration in the first instance by the Medical Service Subcommittee of all questions arising with reference to the administration of medical benefit.

That the Regulations be so amended as to provide that all matters which are considered in private by the Medical Service Subcommittee shall, on report to the Insurance Committee, be considered in private by that Committee.

Local Medical Committees and "Contracting Out."

That the Regulations be so amended as to provide that all matters concerning the right of insured persons being "allowed to make their own arrangements" shall stand referred, in the first instance, to the statutory Medical Service Subcommittee.

Seamen's National Insurance Society.

That the Regulations be so amended as to secure that the scheme of administration of medical benefit by the Seamen's National Insurance Society shall give absolute free choice of doctor by patient and of patient by doctor; and that the remuneration of medical practitioners for treatment of members of that society shall be upon a fixed tariff of fees.

That the Act be amended so as to allow of a similar representation upon the Management Committee of the Seamen's National Insurance Society, provided for in Section 48 (7) of the Act, as is accorded the profession in respect of Insurance Committees.

Termination of Agreements.

That the Regulations be so amended as to allow of the agreement between Insurance Committees and practitioners being terminable by three months' notice on either side.

PUBLIC MEDICAL SERVICE SCHEMES.

The Committee approved the schemes for the treatment of uninsured persons submitted by the following places: East Norfolk, Reading, North Lincolnshire, Kingston-on-Thames, and Stockton.

INSURANCE ACT IN PARLIAMENT.

ADMINISTRATION OF MEDICAL BENEFIT.

Holiday Makers.

In reply to Mr. Ronald McNeill, Mr. Masterman stated that the question of making satisfactory arrangements for providing medical benefit for insured persons resident at the seaside for holidays or otherwise was to be considered by the Advisory Committee at their meeting on March 27th.—It is understood that a prolonged discussion then took place on this subject and on the general question of the provision of medical benefit for insured persons who move from place to place; but no announcement has yet been made on the subject.

SANATORIUM BENEFIT.

In reply to Mr. Weigall, Mr. Masterman stated that in the Lindsey division of Lincolnshire forty-eight applications had been received for sanatorium benefit to March 1st. Twenty-one of these cases were sent to sanatoriums situated in Lincoln, Whithornsea, Horsforth, and Ipswich, and twenty-seven persons had received domiciliary treatment.

COST OF ADMINISTRATION.

Total Treasury Grant.

In reply to Mr. Worthington-Evans, Mr. Masterman said that the percentage cost of administration in the case of old age pensions was slightly under 4, and in the case of health insurance (out of the voted expenditure) it was about 27. He stated, however, that the comparison was misleading owing to the fact that in the case of insurance the whole cost of the central administration was borne on the votes, whilst the greater part of the cost of the benefits fell on the contributions. The total Treasury estimate in respect of insurance was £6,991,844, of which the cost of central administration was £855,659, and the grants in aid of the estimated administrative expenses of societies and committees £974,750.—In reply to a further question on this subject by Mr. Cassel, Mr. Wedgwood Benn stated, on behalf of Mr. Masterman, that the £974,750 for the administrative expenses of societies and committees was made up as follows:

| | £ |
|---|---------|
| Two-ninths of estimated expenses in respect of male members | 606,200 |
| Two-ninths of estimated expenses in respect of female members | 282,950 |
| Special grant to Insurance Committees in respect of the cost of the administration of medical benefit | 85,600 |

MATERNITY BENEFIT IN THE CASE OF AN AGED HUSBAND.

In reply to Mr. Meagher, Mr. Masterman stated that in the case of a woman at Kilmanagh, co. Kilkenny, who had paid insurance in her husband's name, maternity benefit was not granted on the birth recently of her eighteenth child on the ground that her husband was over 65 years of age. He explained that it was due to the fact that the benefits to insured men over 65 years of age were determined by their societies, according to the value of the premiums paid for that age, and that they had in this case decided not to devote any of it to the payment of maternity benefit. He added that in this case a grant of £3 had been made from the King's privy purse.

CORRESPONDENCE.

DR. C. COURTENAY LORD (Gillingham, Kent) writes: Judging by the dearth of letters in the JOURNAL, and by the general lack of interest in things concerning the Act, the profession seems once more to have relapsed into that somnolence from which it was so rudely awakened about two years ago. And yet the greatest, the most serious crisis in the whole history of the profession will occur during the next three weeks. Within three weeks from the present day the provisional agreements with Insurance Committees terminate, and permanent agreements will be submitted in their place. Those of us who have watched in vain for some move on the part of our great fighting organization have looked in vain.

There has been no move, and there will be none. Our hoary, hidebound constitution might have been specially designed by our enemies with the set purpose of rendering nugatory any of our efforts to escape from a persecution which has no parallel in the annals of our profession. Can it be fate or design that causes our Central Council to meet just a week after such a momentous decision has to be made? Beaten in the first round, owing to the action of members of the profession who were in no danger of ever having to be panel doctors, and who have political axes to grind, many had hoped that the three months before the permanent agreements came up would serve as a breathing space during which we might rally our temporarily demoralized forces and make another bid for the freedom of action which we enjoyed in the past. But what do we see? Except in a few bright instances, apathy everywhere. On all sides grumbling and dissatisfaction. But no organized effort either to escape from the tyranny of the Committee or to attempt to really tangibly ameliorate the onerous conditions of service. No doubt with the object of advertising its power, our organization made a great puff in the press of having done away with the farcical daybook. But on closer examination this effort seems to have ended in changing one system to another or in producing a state of affairs which is merely a distinction without a difference, even if it ever matures.

Surely the profession cannot seriously be going to allow this new state of affairs to remain as it is; surely some effort will be made to retrieve a defeat which has lowered the profession so disastrously in the eyes of the public—a defeat due largely to the empty threat of the whole-timer, the almost non-existent whole-timer. Can it be possible that hundreds—nay, thousands—of established medical men are to be permanently frightened into a service which they hate and abominate by the fear of being ousted by the class of man who has come so low as to lightheartedly become the servant of a lay body with the express object of pilfering his medical neighbour's livelihood on terms of grossly unfair competition? Surely, with assistants unobtainable, with the locumtenentes market dried up, and with strings of hospitals vainly striving to obtain resident officers, it must be that the "importation" bogey is laid. The statement that so long as a man can call himself a doctor the public do not mind is a gross misstatement of fact and an insult to their intelligence. This idea is one that is going in the near future to cause some sleepless nights to some of those committees which are exercising in a very high-handed manner their newly acquired power as employers of sweated medical labour. Granted that in districts where little but contract practice was ever done, certain men may be making more money than they were before. But, on the other hand, there are whole areas where very little club work was done, and in these areas men have been compelled against their will and against their higher ideals to convert their carefully built up practices into clubs. It will, of course, be advanced that any one can retain his independence by taking payment on the work done principle; but here, again, comes in the autocratic committee, which in order to save itself trouble refuses to let the individual choose his method of payment, but hurls one or other method at his head with a polite intimation that he can take it or leave it. I will make so bold as to say that if in any single large town the medical men would take their courage in both hands and leave the panels in a body, the

task of successfully replacing them would be impossible of accomplishment.

What is our position to-day? Absolutely committee-ridden. The Commissioners will not even trust us with the election of our own representatives on the County Committee, but simply run the election for us, and do not even inform us of the details of the result. We have to go hat in hand quarterly to ask the Committee how much of our earnings they will be gracious enough to pay us, while they keep our balance at usury for three, six, or nine months, as the case may be. Surely this is sufficiently degrading to make any one reconsider his position before it is too late. Can any one in his senses believe that he is going to get sympathetic consideration either from Government Commissioners or Committees after the gross breaches of faith in connexion with sanatorium benefit and the fees for uninsured members of friendly societies? No, most assuredly not. Remember that the present state of affairs is only the first step towards the complete subjugation of the profession and the complete effacement of private practice. Do not deceive yourselves with the idea that the roping in of women and children is going to be delayed for a definite period. It is on the threshold to-day; it will come like a thief in the night. It will begin insidiously and will spread like wildfire. It is an accepted fact that some one has to pay for cheap club practice. It does not pay for itself, and can only produce a bare living by the doctor undertaking much more work than he can do properly. That this is not wide of the mark is proved by the desperate efforts that are being made—at any rate, in this town—to compel dependants to go to the panel men. What is to happen when all England is one huge club? The profession alone can stop it by acting now. The time for action has come. It will never come again. It is not yet too late to reassert ourselves. If the Government wants a service it can have it, and a good one too, but it will have to pay for it, and not compel the unfortunate medical profession to do so. To-day the money is being found by taking from him that hath and handing it over to him that hath not. This can only result in dragging every one down to a common level. If the panel system remains, there is a real danger that a great gulf will be fixed between the doctor and the panel doctor. This would be most regrettable, but, silly as it may appear to us, the public take a very different view. Let us, then, be stirring. There is not a day to be lost. If we are to be free, we must make up our minds at once. It is, I suppose, too late to expect any one to give us credit for having any thought for the good of the insured. It should, however, be somewhat in our favour that many scores of men are to-day facing stark ruin rather than countenance a scheme which must be detrimental both to the public health and to the morale of the profession. All honour to these men. The public will one day realize what a debt of gratitude they owe to them.

* Dr. Courtenay Lord's assumption in the earlier part of his letter, that this matter has not received attention, is not borne out by a reference to the report of the proceedings of the State Sickness Insurance Committee on March 27th, published in this week's SUPPLEMENT, p. 304. This will show that after a careful consideration of the replies received to the recent questions issued to the profession in regard to the working of the panel system the Committee formed the opinion, and is reporting to the Council, that no good purpose would be served by the Association calling on practitioners to leave the panel. The dates of the quarterly meetings of the Council are settled at the annual meeting in each year, but means are open to members of the Council for calling a special meeting.

THE PRESENT SITUATION AND FUTURE POLICY.

Dr. GARRATT (Chichester) writes: Had Dr. Arthur King's first letter been in the style of his second, I had not criticized it. I adhere, however, to my statement that payment for work done is not on the whole characteristic of professions—witness the Church, the army, the navy, the civil services, the teaching profession, the highest branches of the law, and those most honoured of ourselves. The honorary staff serving in our great hospitals—men of European reputation—are not paid by the piece for this their finest work yet it is absurd to pretend that they are

not paid at all. They profit greatly by these coveted appointments, and are under contract, too. The essential difference between the two modes of payment is that under contract or salary the worker is expected to do his best, regardless of whether there be profit or loss on the particular task in hand, while under payment for work done it is not so. The former is widely regarded as the higher ideal. What Dr. Bow and others fail, as it seems to me, to recognize is that it is not contract service that has degraded our profession, but we who have degraded contract service, which in other professions is highly esteemed. This we have done, partly, indeed, as a result of charity or mere apathy, but far more, I regret to say, through mutual distrust and pitiful underselling of one another. Until, therefore, we reform ourselves and pull together, no improvement will or can occur. I have always strongly opposed extension of contract service beyond the really necessitous, because it is extremely difficult then to settle terms fair to both parties or to prevent abuse. I am also opposed to any doctor accepting more than he can honestly undertake. Thus restricted, the service is a genuine insurance to the beneficiary, who, though unable to afford visiting fees, may yet retain his self-respect. This is my only reply to Dr. Jerome Mercier. Finally, I would remind Dr. King that of sixty-nine Divisions of the Association but one failed, in 1905, to see the necessity for contract practice. There would seem, therefore, to be a great preponderance of "wastrels" in our ranks. Dr. King had been better advised had he withdrawn this and similar expressions unreservedly.

AN APPEAL TO PRACTITIONERS WHO HAVE NOT JOINED OR INTEND TO LEAVE THE PANEL.

We have received the following letter:

The National Medical Union.

Sir,

There are many practitioners who, having served on the panel during the "trial period" of the working of the National Insurance Act, are now determined to give up that work.

We desire, through your columns, to remind all who have reached this decision, and are not already enrolled, that membership of the National Medical Union is limited to doctors who decline to take up work of any kind under the Act until the conditions of service are acceptable and in conformity with the dignity and honour of the profession.

As the purpose of the union is the protection of the interests of its members, and of those of their brethren who retire from service under the Act; and, in addition, the maintenance of the right of the insured people to freedom in their choice of doctor, it is earnestly hoped that all who are in sympathy with these objects will assist in the effort to attain them by becoming, if possible, members of the union; and that they will, in any case, communicate at once with the honorary secretaries.

Those practitioners who are in a position to supply concrete examples of injustice and other evils consequent on the working of the Act are requested to forward details to the officers of the union, together with any suggestions they may wish to make in connexion with them.

The National Medical Union, it should be noted, is not a trade union, and its members are opposed to the suggestion that the defence of the medical profession should be undertaken on trade union lines.

We are, Sir,

Yours, etc.,

J. S. PROWSE,

E. W. FLOYD,

Honorary Secretaries, National Medical Union.

5, John Dalton Street, Manchester, April 2nd, 1913.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. on Saturdays (till 2 p.m.).

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

THE Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the BRITISH MEDICAL JOURNAL not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the JOURNAL not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,

Medical Secretary.

February 4th, 1913.

QUARTERLY MEETING OF COUNCIL.

THE Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, April 23rd, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,

Financial Secretary and Business Manager.

March 13th, 1913.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH; COVENTRY DIVISION.—A special meeting of the Division will be held at the Coventry Hospital on Tuesday, April 8th, at 8.30 p.m. (1) To discuss, and if approved, adopt the new ethical rules. (2) To receive the report and recommendation of the committee on an ethical matter. (3) To receive communications. (4) The rest of the evening will be devoted to clinical matters, and any member having anything of interest is requested to arrange with the Honorary Secretary—D. DAVIDSON, 15, Priory Row, Coventry.

EAST ANGLIAN BRANCH.—The spring meeting of this Branch will be held at Colchester on Wednesday, April 30th. Members wishing to read papers or to show cases or specimens should communicate at once with me.—B. H. NICHOLSON, Colchester.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next meeting of the Division will be held conjointly with the South-West Essex Division on Friday, April 11th, at 9.30 p.m., at Brooke House, Upper Clapton, by invitation of Dr. Gerald Johnston, when Dr. Hugh Walsham will give an address, with lantern demonstration, on Roentgen Rays in Diseases of the Chest.—A. G. SOUTHCOMBE, Honorary Secretary, 83, Sidney Road, Homerton, N.E.

MIDLAND BRANCH; LEICESTER AND RUTLAND DIVISION.—A meeting of the Division will be held at the Leicester Royal Infirmary on Wednesday, April 9th, at 4 o'clock. Agenda: Minutes of the previous meeting. Election of Representatives and Deputy Representatives. The following resolution will be proposed: "That it be an instruction to the Council to take the necessary steps to form a union of medical practitioners registered under the Trade Union Acts, for such of the members of the Association and other medical practitioners as may desire to join such a union." Discussion on the proposed "Baby's Welcome" in Leicester. A discussion on "Malingering" will be opened by Mr. C. J. Bond. The following among others have promised to take part: Drs. A. V. Clarke, Moffat Holmes, McAllister-Hewlings, and C. W. Moore. Other business.—R. WALLACE HENRY, Honorary Secretary, 6, Market Place, Leicester.

NORTH WALES BRANCH.—The spring meeting of the Branch will be held at Rhyl on Tuesday, April 15th. Members having papers to read, cases to show, or any other matters to bring forward, will please notify the Honorary Secretary before April 5th.—H. JONES ROBERTS, Llywenarth, Penygroes, S.O., Honorary Secretary.

SOUTH MIDLAND BRANCH; BUCKINGHAMSHIRE DIVISION.—The next meeting of the Division will be held at the Royal Bucks Hospital, Aylesbury, on Friday, April 11th, at 3.30 p.m.,

when Dr. Burri will read a paper on tuberculosis. The subject of the treatment of uninsured persons will also be discussed.—A. E. LARKING, Castle Street, Buckingham.

SOUTH MIDLAND BRANCH; NORTHAMPTONSHIRE DIVISION.—A meeting of the Division will be held in the Board Room of the Northampton General Hospital at 2.30 on Thursday, April 10th. A meeting of the Divisional Executive will be held at 1 o'clock in Franklin's Restaurant. Agenda: Minutes of previous meeting. Report of Representative Meeting from Dr. Dryland. Consideration of fees for uninsured persons. Adoption of Model Ethical Rules. Any other business.—P. S. HICHENS, Honorary Secretary.

WEST SOMERSET BRANCH.—The spring meeting will be held at the Taunton and Somerset Hospital on Tuesday, April 8th, at 3.30 p.m., Dr. Balfour Stewart in the chair. Agenda: Minutes of the last meeting. The election of a Representative. Report on the work of the county provisional meeting. The following clinical cases and specimens will be shown:—Dr. Birkbeck: A case of genu recurvatum, a specimen of calcified thyroid, an unusual fibroid tumour of the uterus. Mr. A. J. H. Iles: Some radiograms of rare conditions. Dr. A. E. Jocelyne: The notes on a case of bacilluria (*Coli communis*). Mr. Farrant: A stone removed from the kidney, a stone passed per urethram, two specimens of prostates removed suprapubically. Mr. Penrose Williams: Resection of bowel (1 for intussusception, 1 strangulated femoral hernia). Specimens of a parenchymatous goitre and acute torsion of a parovarian cyst, simulating appendicitis.—CHARLES FARRANT, Shrapnells, Taunton, Honorary Secretary.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

EAST ANGLIAN BRANCH:

WEST SUFFOLK DIVISION.

A MEETING of the Division was held on March 17th.

Election of Officers.—The following officers were elected.—Chairman, Dr. Wood; Vice-Chairman, Dr. Caie; Honorary Secretary, Dr. Bernard E. A. Batt.

Vote of Thanks.—A very hearty vote of thanks to Dr. Caie for his services as Honorary Secretary to the Division since 1903 was carried unanimously.

Attendance on Juvenile Club Members.—The rate of remuneration for attendance on juvenile club members was discussed, and the Secretary was instructed to bring to the notice of every practitioner in the district the decision:

That the Division does not depart from the resolution of November 7th, 1912—namely, that 4s. per annum be the capitation basis for juveniles.

Incorporation of Private Medical Clubs.—Dr. Wood introduced the question of the incorporation of all private medical clubs in the Suffolk County Medical Club, the rates of which have been revised as a result of the Insurance Act. After a general discussion, the matter was dropped for the present, Dr. Wood undertaking to ask the Secretary of the County Medical Club to inform all practitioners in the county of its present rates.

SOUTH-EASTERN BRANCH:

BRIGHTON DIVISION.

A MEETING of the Brighton Division was held on March 28th. Dr. MARSH presided, and thirty-five members and one visitor were present.

Honorary Secretaryship.—The resignation of Dr. Benham as Honorary Secretary was received, and upon the proposition of Dr. MARSH, seconded by Dr. RYLE, the Division expressed its sense of the invaluable services rendered by Dr. Benham and its regret at his resignation. Dr. Burchell was appointed Honorary Secretary until the annual meeting.

Ethical Committee.—A report of the Ethical Committee for the Division was referred to a special committee.

Warning Notices.—The matter of a medical aid society proposed to be started at Shoreham was discussed, and it was decided to continue the warning notice in the BRITISH MEDICAL JOURNAL.

Public Medical Service.—The report of the Brighton Medical Committee was received, and, in connexion with it,

the report of a special subcommittee of the Executive Committee, recommending the immediate starting of a medical service, to include the Boroughs of Brighton and Hove, for giving medical attendance upon uninsured persons. A committee was appointed to draw up a detailed scheme, and submit it at the very earliest moment to a meeting to be called.

East Sussex Medical Committee.—The report of the East Sussex Committee was also received.

DARTFORD DIVISION.

A MEETING of this Division was held at Dartford on March 29th. Dr. CHAS. FIRTH presided.

Correspondence.—A letter was received from Dr. Courtenay Lord, Representative on the Council of the South-Eastern Branch, as to the retention of his position on the Council. On the motion of Dr. SHUTE, seconded by Dr. MURISON, and supported by the CHAIRMAN, it was unanimously resolved:

That a vote of confidence in Dr. C. Courtenay Lord be accorded by this Division.

Divisional Report.—Dr. CHISHOLM WILL read the Divisional report, which had been forwarded to the Central Office and the South-Eastern Branch Council, and drew attention to the deficit on the year's accounts and to the inability of the Branch Council to give any grant to the Divisions in the present financial condition of the Branch. The following resolutions were passed unanimously:

1. That all members of the Division be requested to pay a levy of 5s. each to provide for the deficit on the year's accounts and the future working expenses.
2. That the resolution also apply to non-members in the Division.
3. That the levy be collected by the members of the executive in their respective areas.

Kent County Medical Committee.—The HONORARY SECRETARY gave a short account of the work of this Committee, on which the Division is represented by the Chairman and Secretary. Dr. WILL reported that the Committee had received statutory recognition by the Commissioners, had recently elected Dr. Maude of Westerham as Chairman in place of Dr. Tyson resigned, and had decided to levy a subscription of 5s. from all medical men in Kent on the panel to meet the expenses of the Committee. He also detailed some of the work done, and that which lay before it in the immediate future. He strongly urged all men in the Division to refrain from signing any agreement until that document had received the careful consideration of the Kent County Medical Committee. The discussion was continued by the CHAIRMAN, Drs. MURISON, GREENWAY, RENTON, FARTHING, and others. Several important points were put forward for consideration by the Kent County Medical Committee, and the further consideration postponed until the new agreement was in the hands of the members. On the motion of Dr. RENTON, seconded by Dr. MURISON, it was unanimously resolved:

That this meeting strongly advises medical practitioners to have no fixed hours for consultation on Sundays.

Attendance on Non-insured Persons.—A discussion on this question took place, and a large number of those present expressed their views as to the minimum rate to be charged, but owing to the lateness of the hour the discussion was adjourned.

GUILDFORD DIVISION.

A MEETING of the Division was held on February 14th at the Royal Surrey County Hospital. Dr. KINGSPERD took the chair and there were eighteen present.

Treatment of the Uninsured Members of Clubs.

This subject was discussed and resolutions were passed in favour of the following minimum terms. The Secretary was instructed to circulate these to all the medical practitioners in the Division and urge them not to undertake treatment of such members on any lower terms:

Age and Uninsured Members of Clubs.

1. On capitation basis: 9s. per head per annum for ordinary medical attendance and medicine.
2. On payment per attendance basis: According to scheme of the London United District of Ancient Order of

Foresters (practically that of the National Deposit), with extra for mileage.

Juvenile Members of Clubs from Ages of 3 to 16.

1. On capitation basis:
 - If only one child member in a family, 8s. per head per annum.
 - If only two child members in a family, 8s. for first and 6s. for second.
 - If more than two child members in a family, 8s. for the first, 6s. for the second, 4s. for each of others.
2. On payment per attendance basis: Similar to that of adults.

In all cases it is understood that there must be free choice of doctor, and that fractures, dislocations, major operations, and anaesthetics are not included in the above terms.

The above terms have since been approved by the State Sickness Insurance Committee.

SOUTH AFRICAN COMMITTEE.

A MEETING of the South African Committee, British Medical Association, was held at Kimberley on February 11th, 1913, when six members were present.

Medical Examination of Citizen Defence Force Recruits.

Dr. Stock, temporarily attached to the Defence Department, was present to confer with the Committee on this subject.

A letter was read from the Under Secretary for Defence stating, in reply to an invitation, from this Committee, that the Minister "will be very glad to discuss the subject (of medical organization) with the representatives of the medical profession in the Union at the stage when a scheme for creating such an organization is more fully developed."

The Committee resolved, in view of the importance of giving every facility to the Government in organizing a defence force for South Africa, to advise the various Branches and Divisions of the British Medical Association in South Africa to conduct the medical examinations of recruits during the initial stage free of charge; and a Subcommittee was formed to consult with the Government. The Committee further resolved to point out to all the Branches the necessity of their members loyally supporting its decisions and recommendations in this matter.

Draft Regulations of Congress.

This draft, prepared by the Natal members of Committee, having been previously supplied to each member, was discussed, revised, and approved with certain minor alterations, and referred to the Branches for revision. It will finally be presented to the next congress for adoption.

Club and Contract Practice.

A communication from the Transvaal Branch was considered and the opinion expressed that no general set of regulations could be formulated in view of the varying conditions in different centres, and that for the present the question should be dealt with by the local Divisions.

Annual Meeting.

It was agreed to hold this meeting at East London during the sitting of congress in July.

Fees at Court.

In view of the alteration made by Government in the scale of court fees for medical evidence, and of the varying conditions of medical practice and fees in different localities, the Committee decided that local Divisions and Branches should take up the question of a more equitable scale suitable for their own districts.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Fleet Surgeon J. CHAMBERS, M.B., to the *President*, additional, for three months' senior medical officers' course at Naval Medical School, Greenwich, April 1st. Staff Surgeon E. R. L. THOMAS to the *Vivid*, additional, for Plymouth Hospital, temporarily, March 20th. Staff Surgeon J. ST. J. MURPHY to the *Minerva*, temporarily, March 18th. Staff Surgeon C. R. RICEARD to the *Bulwark*, March 25th. Staff Surgeon H. R. H. DENNY to the *Vivid*, additional, for the *Amphion* for trials, March 19th, and on reconmissioning, undated. Staff Surgeon J. THORNHILL, M.B., to the *Endymion*, April 6th. Staff Surgeon H. WOODS, M.B., to the *Vivid* for Royal Naval Barracks.

April 6th. Surgeon C. H. L. PETCH to the *Excellent*, temporarily.
March 20th. Surgeon G. CARLISLE to the *Victory*, additional, on
expiration of foreign service leave, undated.

ARMY MEDICAL SERVICE.

COLONEL EDMUND J. E. RISK is placed temporarily on the half-pay
list on account of ill-health, March 27th, 1913. Lieutenant-Colonel
HENRY M. SLOGGETT, from the R.A.M.C., to be Colonel, March 27th,
1913.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel J. THOMPSON has been appointed to the
London District for duty at the Queen Alexandra Military Hospital.
Major J. F. M. KELLY has been posted to the Eastern Command.
Major J. POE has been posted to the Eastern Command.
Major H. A. HINGE has left London for duty at Aldershot.
Captain A. E. IRVINE on arrival in Ireland is posted to Belfast.
Captain C. J. W. WYATT has been ordered to Sierra Leone.
Lieutenant C. H. H. HAROLD has been appointed specialist in
Dermatology, Third (Lahore) Division.
Lieutenants restored to the established from the second list,
April 1st, 1913: ROBERT G. SHAW, M.B., ALEXANDER L. URQUHART,
M.B., and AVENELL F. C. MARTYN.
The date of restoration to the establishment of Lieutenant C. THBERT
J. H. LITTLE, M.B., is January 26th, 1913, and not as stated in the
Gazette of February 4th, 1913.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenant A. H. HADGWOOD to be Captain, March 22nd.
Cadet IVAN LINDLEY WADDELL, from the London University
Contingent, Officers' Training Corps, to be Lieutenant on probation,
February 14th.
WILLIAM H. JOHNSTON, late Cadet Sergeant, Royal College of
Surgeons in Ireland Contingent, Officers' Training Corps, to be
Lieutenant on probation, February 26th.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Second South Midland Field Ambulance.—Major SEYMOUR G.
BARLING and Lieutenant SAMUEL G. WEBB, M.D., have resigned their
commissions, March 29th; Captain GEORGE W. CRAIG to be
Major, March 29th.
Attached to Units other than Medical Units.—Captain ALFRED A.
HINGSTON, M.B., from the Second South Middlesex Field Ambulance,
to be Captain, February 18th.
For Attachment to Units other than Medical Units.—JOHN T. SHAW,
M.D., to be Lieutenant, March 29th.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 8,620 births and 5,792
deaths were registered during the week ending Saturday, March 29th.
The annual rate of mortality in these towns, which had been 17.4,
17.0, and 16.5 per 1,000 in the three preceding weeks, rose to 16.9 per
1,000 in the week under notice. In London last week the death-rate
was equal to 17.4 per 1,000, against 18.3, 17.6, and 17.2 in the three
previous weeks. Among the ninety-five other large towns the death-rates
ranged from 7.6 in Eastbourne, 9.3 in Wallasey, 9.6 in Enfield and in
Gillingham, 9.9 in Willesden, and 10.0 in Ealing to 22.3 in Dewsbury,
22.6 in West Bromwich, 23.1 in Stoke-on-Trent, 23.9 in Wake-
field, 24.5 in Wolverhampton, and 24.6 in Bootle. Measles caused
a death-rate of 2.6 in Bolton, 2.7 in Wimbledon, 2.8 in Smethwick,
3.0 in Edmonton and in Stockton-on-Tees, 3.1 in St. Helens, 3.5 in
Bury, and 4.1 in Gloucester. The mortality from the remaining
infective diseases showed no marked excess in any of the large towns,
and no fatal case of small-pox was registered during the week. The
causes of 51, or 0.9 per cent., of the total deaths were not certified
either by a registered medical practitioner or by a coroner after
inquest, and included 13 in Birmingham, 7 in Liverpool, 4 in Dar-
lington, 3 in Bootle, and 2 each in London, Sheffield, Preston, and
Hull. The number of scarlet fever patients under treatment in the
Metropolitan Asylums Hospitals and the London Fever Hospital,
which had been 1,617, 1,556, and 1,514 at the end of the three pre-
ceding weeks, had further fallen to 1,455 on Saturday last; 168 new
cases were admitted during the week, against 160, 164, and 156 in the
three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,218 births and 744 deaths
were registered during the week ending Saturday, March 29th.
The annual rate of mortality in these towns, which had been 19.9,
18.8, and 18.4 per 1,000 in the three preceding weeks,
further fell to 17.2 in the week under notice, but was 0.3 per 1,000
above the rate in the ninety-six large English towns. Among the
several Scottish towns the death-rate last week ranged from 0.9 in
Kilmarnock, 9.2 in Ayr, and 13.4 in Perth to 20.1 in Greenock, 22.1 in
Aberdeen, and 24.7 in Leith. The mortality from the principal infective
diseases averaged 1.9 per 1,000, and was highest in Leith and
Falkirk. The 344 deaths from all causes registered in Glasgow
included 29 from whooping-cough, 9 from infantile diarrhoeal dis-
eases, 4 from measles, 3 from diphtheria, 2 from scarlet fever, and
1 from enteric fever. Four deaths from whooping-cough were recorded
in Leith, 3 in Edinburgh, 3 in Greenock, 2 in Aberdeen, and 2 in
Motherwell; and 2 deaths from measles and 2 from diphtheria in
Aberdeen.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, March 29th, 683 births and 547
deaths were registered in the twenty-seven principal urban districts
of Ireland, as against 546 births and 499 deaths in the preceding period.
These deaths represent a mortality of 23.8 per 1,000 of the aggregate
population in the districts in question, as against 21.7 per 1,000 in the
previous period. The mortality in these Irish areas was, therefore,
6.9 per 1,000 higher than the corresponding rate in the ninety-six
English towns during the week ending on the same date. The birth-
rate, on the other hand, was equal to 29.7 per 1,000 of population. As
for mortality of individual localities, that in the Dublin registration
area was 24.2, as against an average of 23.1 for the previous four weeks,
in Dublin city 25.0 (as against 24.3), in Belfast 24.5 (as against 24.1), in

Cork 22.4 (as against 24.0), in Londonderry 20.3 (as against 15.9), in
Limerick 27.1 (as against 21.4), and in Waterford 32.3 (as against 24.2).
The zymotic death-rate was 2.1, as against 1.6 in the previous period.

Hospitals and Asylums.

GLAMORGAN COUNTY LUNATIC ASYLUM.

THE annual report for 1911 of Dr. D. Finlay, Medical Super-
intendent, shows that on January 1st, 1911, there were 1,684
patients in the asylum, and on the last day of the year 1,700.
The total cases under care during the year numbered 2,074,
and the average number daily resident 1,655.5. At the time of
his report Dr. Finlay said that the male dormitories were over-
crowded to the extent of 74. Additional accommodation for
males, contemplated for long, is now to be seriously considered.

During the year 390 were admitted, of whom 337 were direct
and 53 indirect admissions. Of the total admissions, 302 were
new and 88 relapsed cases. Of the direct admissions, in 124 the
attacks were first attacks within three, and in 68 more within
twelve, months of admission; in 65 not-first attacks within
twelve months, and in the remainder, including 25 congenital
cases, the attacks were of more than twelve months' duration
on admission. The direct admissions were classified according
to forms of mental disorder into: Recent mania, 120, chronic, 17;
recent melancholia, 64, chronic, 5; senile and secondary de-
mentia, 31; delusional insanity, 16; general paralysis, 18;
insanity with epilepsy, 19; insanity with grosser brain lesions,
11; confusional insanity, 9; primary dementia and moral
insanity, 1 each; and congenital defect, 25.

As to causation, in the direct admissions alcohol was assigned
in 68, syphilis in 19, and other toxins in 15; diseases of the
nervous system in 46 (epilepsy 31); various other bodily affec-
tions in 18; child-bearing in 25; critical periods in 53; injuries
in 10; and mental stress in 61. An insane heredity was ascer-
tained in 81, an alcoholic heredity in 47, and of the other neuro-
pathies in 8. It will be noticed that alcohol was assigned as
cause in 20 per cent. of the admissions.

During the year 108 were discharged as recovered, giving a
recovery-rate on the direct admissions of 32.0 per cent., or of
recoveries in and on the direct admissions of 31.4 per cent.;
also 35 were discharged as relieved and 44 as not improved.

During the year 137 died, giving a death-rate on the average
numbers resident of 11.2 per cent. The deaths were due in 39
to nervous diseases, including 25 from general paralysis, in 23
to diseases of the heart and blood vessels, in 6 to respiratory
diseases, in 3 to diseases of the digestive system, in 26 to
nephritis, in 2 to suicide, and in the remainder to general
diseases, including 21 from senile decay and 38, or 20 per cent.,
from tuberculous diseases. Of the two deaths by suicide, one
not previously considered suicidal hanged himself while absent
on trial, and the other, a patient recognized as suicidal, suc-
ceeded in getting her clothing on fire, burning herself so
severely that she died in nine hours. Save for influenza and
some cases of diarrhoea during the hot weather, the general
health was good throughout the year.

JOINT COUNTIES ASYLUM, CARMARTHEN.

YEAR by year the annual reports of this asylum have revealed a
great overcrowding, due to the perpetuation of a long-standing
dispute between the several county authorities concerned. In
February, 1911, a conference of county representatives was
held at the Home Office; Sir Henry Cunynghame, who pre-
sided, made an award, with the consent of all parties, settling,
as was supposed, the matters in controversy, and the Linnacy
Commissioners believed that at last the hatchet was buried and
over it grave the much-needed improvements and extensions
would be carried out. Alas for such hopes! At the end of 1911
the dispute was burning as briskly as ever; peace still on the
distant horizon, and the asylum 95 patients in excess of pro-
vided accommodation. Notwithstanding this—to describe it
very mildly—unfortunate state of affairs, the inmates of the
asylum, under Dr. Richard's administration, do not appear to
be suffering much harm, for in 1911 the death-rate decreased
and the recovery-rate increased.

Turning to the statistics, on January 1st, 1911, there were 690
patients on the asylum registers, and on the last day of the
year 695. The total cases under care during the year numbered
805, and the average number daily resident 695. During the
year 115 were admitted, of whom 105 were direct admissions.
Of the direct admissions, in 43 the attacks were first attacks
within three, and in 14 more within twelve months of admis-
sion; in 20 not-first attacks within twelve months, as in 3 more
in whom it was not known whether the attacks were first or
not; and in the small remainder, including 5 congenital cases,
the attacks were of more than twelve months' duration on ad-
mission. The direct admissions were classified according to
the forms of mental disorder into: Recent mania, 28, chronic
and recurrent, 15; recent melancholia, 27, chronic and recur-
rent, 3; senile and secondary dementia, 10; general para-
lysis, 6; insanity with epilepsy, 3; stupor, 5; delusional in-
sanity, 1; insanity with grosser brain lesions, 2; and congenital
defect, 5.

As to probable causation, alcohol was assigned in 18, syphilis
in 5, and influenza in 3; diseases of the nervous system in 7;
child-bearing in 6; critical periods in 19; bodily trauma in 6,
and mental stress in 43. An insane heredity was ascertained
in 29, and of other neuropathies in 5 more. During the year

40 were discharged as recovered, giving a recovery-rate on the direct admissions or of recoveries in and on the direct admissions of 38.0 per cent.; also 23 were discharged as recovered, and 3 as not improved. During the year also 42 died, giving a death-rate on the average number resident of 6.04 per cent., as compared with the average death-rate for this institution of 8.6 per cent. The deaths were due in 5 to nervous diseases, with 4 from general paralysis; in 10 to diseases of the heart and blood vessels; in 2 to congestion of lungs; in 3 to kidney disease; in 1 to volvulus, in 1 to asphyxia from drowning, and in the remainder to local and general diseases, including 10, or 23.8 per cent., of the total deaths from tuberculous diseases. The death from drowning was that of a farm patient who appeared to have fallen face downwards in a shallow ditch during a faint. An outbreak of epidemic diarrhoea occurred in the autumn, 18 male patients being affected, with no deaths. Otherwise the general health was satisfactory, and serious non-fatal casualties were small in number.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column avertisements must be received not later than the first post on Wednesday morning.

BRIDGWATER BOROUGH HOSPITAL.—Junior House-Surgeon (male). Salary, £80 per annum.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—House-Surgeon. Salary at the rate of £70 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Third House-Surgeon. Salary, £75 per annum.

BIRMINGHAM: RUBERY HILL ASYLUM.—Junior Assistant Medical Officer (male). Salary, £150 per annum.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.—House-Surgeon (male). Salary at the rate of £75 per annum.

BRIDGWATER HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

BRIGHTON AND HOVE HOSPITAL FOR WOMEN.—House-Surgeon. Salary, £80 per annum.

BRISTOL: COSSHAM MEMORIAL HOSPITAL, Kingswood.—House-Surgeon (male). Salary, £50 per annum.

BRISTOL GENERAL HOSPITAL.—(1) House-Physician; (2) Second House-Physician; (3) Casualty House-Surgeon. Salary, £80 per annum. (4) Assistant Anaesthetist.

BRISTOL ROYAL INFIRMARY.—Obstetric and Ophthalmic House-Surgeon. Salary at the rate of £75 per annum.

BURY ST. EDMUNDS: WEST SUFFOLK COUNTY COUNCIL.—Assistant Medical Officer of Health. Salary, £250 per annum, rising to £300.

BUNTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary at the rate of £100 per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—House-Physician. Salary, £80 per annum.

CANTERBURY BOROUGH ASYLUM.—Assistant Medical Officer (male). Salary, £160 per annum.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—House-Physician. Salary, £80 per annum.

CHORLEY: RAWCLIFFE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

DARENT INDUSTRIAL COLONY FOR THE FEEBLE-MINDED, near Dartford.—Male Third Assistant Medical Officer. Salary, £150 per annum, rising to £170.

DEVON COUNTY ASYLUM, Exminster.—Fourth Assistant Medical Officer (male). Salary, £130 per annum, rising to £140, and honorarium of £50 for pathological work.

DORSET COUNTY ASYLUM.—Third Assistant Medical Officer. Salary, £200 per annum, rising to £250.

DUDLEY: GUEST HOSPITAL.—Assistant House-Surgeon. Salary at the rate of £100 per annum.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.—House-Surgeon (male). Salary at the rate of £75 per annum.

EAST SUSSEX COUNTY ASYLUM, Hellingly.—Third Assistant Medical Officer (male). Salary, £200 per annum, rising to £225.

EDINBURGH HOSPITAL FOR WOMEN AND CHILDREN.—Senior Resident and Junior Resident (females). Honorarium, £25 and £18 per annum respectively.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Assistant House-Surgeon. Salary at the rate of £80 per annum.

GREAT YARMOUTH HOSPITAL.—House-Surgeon (male). Salary, £100 per annum.

HASTINGS: EAST SUSSEX HOSPITAL.—Assistant House-Surgeon (male). Salary at the rate of £75 per annum.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton, S.W.—House-Physicians. Honorarium, 30 guineas for six months.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.—Assistant Casualty Medical Officer. Salary, £30 for six months, and £2 10s. washing allowance.

HULL: ROYAL INFIRMARY.—Casualty House-Surgeon. Salary at the rate of £60 per annum for six months or £80 per annum for twelve months.

ITALIAN HOSPITAL, Queen Square, W.C.—Honorary Anaesthetist.

CARRUTHERS.—On April 1st, at Mooly Hall, Congleton, Edward John Walter Carruthers, M.D., aged 45.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. J. AND A. CHURCHILL have ready for publication vol. vii of the new edition of Allen's *Commercial Organic Analysis*. This volume has been rewritten under the editorship of Mr. W. A. Davis, B.Sc., and Mr. S. S. Sadtler, S.B. The subjects and authors are as follows: Vegetable alkaloids, ptomaines, or putrefaction bases, by G. Barger; glucosides, by E. Frankland Armstrong; non-glucosidal bitter principles, by G. C. Jones; animal bases, by A. E. Taylor; animal acids, by J. A. Mandel; lactic acid, by W. A. Davis; cyanogen and its derivatives, by Herbert Philipp.

Amongst their spring publications the same firm announces: *Liquid Air Oxygen and Nitrogen*, by Mr. Georges Claude, Engineer Laureate of the Institute of France, translated from the French by Mr. H. E. P. Cottrell; a second amplified edition

of Dr. J. C. Thresh's *Examination of Waters and Water Supplies*; and a *Laboratory Textbook of Chemistry*, Part I, by V. S. Bryant, Assistant Master at Wellington College, intended for use in schools.

DIARY FOR THE WEEK.

TUESDAY.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—Professor A. D. Waller:—First Oliver Sharpey Lecture: The Electrical Action of the Human Heart.

WEDNESDAY.

UNITED SERVICES MEDICAL SOCIETY, Royal Army Medical College, Grosvenor Road, S.W., at 5 p.m.—Paper:—Major Howard Ensor, D.S.O., R.A.M.C.: The Duties of an Officer of the Royal Army Medical Corps attached to an Infantry Battalion on Active Service.

THURSDAY.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—Professor A. D. Waller: Second Oliver Sharpey Lecture.

ROYAL SOCIETY, Burlington House, 4.30 p.m.—Probable Papers:—A. D. Waller, F.R.S.: The Various Inclinations of the Electrical Axis of the Human Heart. Professor J. H. Priestley and R. C. Knight: On the Nature of the Toxic Action of the Electric Discharge upon *Bacillus coli communis*, communicated by Professor J. B. Farmer, F.R.S. Surgeon-General Sir D. Bruce, F.R.S., Majors D. Harvey and A. E. Hamerton and Lady Bruce: (1) Morphology of Various Strains of the Trypanosome causing Disease in Man in Nyasaland. (2) The Wild Game Strain. (3) The Wild *Glossina morsitans morsitans* Strain. (4) Infectivity of *Glossina morsitans* in Nyasaland.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

CLINICAL SECTION, 8.30 p.m.—(1) Demonstration of Cases and Specimens, (2) Paper:—Mr. Lockhart Mummery: Ulcerative Colitis.

POST-GRADUATE COURSES AND LECTURES.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics, 2 p.m.: X Rays and Operations daily. Gynaecology: Monday, Tuesday, Wednesday, and Friday. Eye: Monday, Wednesday, Thursday, and Saturday. Throat, Nose, and Ear: Tuesday, Wednesday, Friday, and Saturday. Skin: Tuesday and Friday. Pediatrics: Saturday.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—General Medical and Surgical Clinics, daily. Throat, Nose, and Ear: Monday and Thursday. Skin: Tuesday and Friday. Eye: Wednesday and Saturday. Pathology: Thursday. Radiography: Saturday. Special lectures each week.

MANCHESTER: ANCOATS HOSPITAL POST-GRADUATE CLINIC.—Thursday, 4.15 p.m.: Some Points in X-Ray Examination.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—Monday, Thursday, and Friday, 4.30 p.m.

[For further particulars of Lectures consult Index to Advertisements.]

National Insurance.

LOCAL MEDICAL COMMITTEES.

BERKSHIRE.

At a meeting of the Local Medical Committee on March 27th at Reading eight members were present.

Homoeopaths and Dispensing.—The question of a homoeopath living in a town being allowed to dispense his own medicines because the chemists refused to keep his particular drugs in stock was again discussed, and the following resolution was passed:

That power to dispense should not be granted to a doctor solely on the ground that he prescribes drugs and preparations which are not included in the schedule.

Payments for Patients already Ill.—A letter was read from the Clerk of the Insurance Committee asking the Local Medical Committee to consider the matter of the payment of the doctor attending a patient who has moved into his district while ill, and the following resolution was passed:

This Committee is prepared to adhere for the present to the terms of the resolution passed on March 6th (SUPPLEMENT, p. 249), which is strictly in accordance with the terms of the Act; but it would suggest that the only way out of the difficulty is that the Act should be amended, and that a special fund should be formed out of which payment per attendance can be made in cases of temporary removal.

Levy for Administrative Purposes.—The District Representatives were instructed to collect a levy of 2s. 6d. from all the doctors on the Berkshire panel in this district for administrative purposes.

BUCKS.

A MEETING of the Bucks Local Medical Committee was held on March 28th. Dr. BAKER was in the chair, and seventeen other members were present.

Allocation of Patients.—Dr. BAKER stated that over 20,000 persons in Bucks had not yet selected a doctor and the secretaries of the societies had been written to. Circular 10, I.C. was read. Finally Dr. KENNISH proposed, and Dr. LARKING seconded:

That for purposes of payment the money payable on account of those insured persons who have not chosen a doctor at the end of the first quarter be divided among the doctors on the panel in direct proportion to the number on the lists sent in by each individual doctor.

It was thought that the allocation of patients would lead to great difficulties and that it was far better to wait and let them select a doctor for themselves. The number would become less and less. An amendment that this method be carried out by districts was lost and the resolution carried unanimously.

Payments for the Quarter.—The following resolution was adopted:

That this Committee expresses the unanimous opinion that those practitioners who did not join the panel on account of a conscientious objection should be paid as from January 15th for the patients on their lists, and that every medical man on the panel should be asked to agree to this.

Uniform Certificates.—A letter was read from the Clerk to the County Insurance Committee, stating that it had requested the societies to use a simple uniform type of certificate, and also that the County Insurance Committee had no funds to pay a consultant.

Drug Tariff.—Replying to a letter from the pharmacists as to increasing the price of certain drugs and other suggestions, it was resolved:

That the Bucks Local Medical Committee considers that there is no necessity to alter the drug tariff at present, or the dispensing fee, and also that they object to the abolition of the mile radius.

Model Rules.—It was resolved to print the Model Rules on a single sheet, and to send a copy to each medical man to put up in his surgery and other copies for distribution to patients.

Continuation Agreement.—It was proposed by Dr. WEAVER ADAMS, seconded by Dr. HENDERSON, and carried unanimously:

This Committee regrets that the new form of agreement 47, I.C. was issued to medical practitioners before consulting

the collective views of the profession in the county which this Committee is entitled to represent (see page 14, paragraph 50 of the Explanatory Statement), and further regrets that the issue was accompanied by a note of urgency which may have led practitioners to sign without time to obtain advice from this Committee. This Committee would like to suggest several alterations and additions to the form of agreement sent.

Appointment to Committee.—It was resolved that Dr. Deyns, who had been appointed by the Commissioners to the Insurance Committee, ought to be put on the Medical Benefits Subcommittee instead of the Finance.

Administration of the Act.—It was resolved that a circular on the present position be issued to all practitioners, and that a meeting of the medical men should be called about the beginning of May to discuss the whole matter of the administration of the Act.

COUNTY OF NOTTINGHAM.

THE following are the members of the Local Medical Committee for the Administrative County of Nottingham:

| | |
|--|---------------------------------------|
| Mr. F. H. Appleby, Newark-on-Trent | Dr. G. L. Kemp, Workson |
| Mr. H. E. Belcher, West Bridgford | Mr. J. Mackie, Nottingham |
| Dr. J. M. Bennett, Ruddington | Dr. R. W. Nairn, Farnsfield |
| Mr. C. E. Brooks, Lowdham | Mr. R. Nesbitt, Sutton-in-Ashfield |
| Dr. A. Campbell, Radcliffe-on-Trent | Mr. C. J. Palmer, Mansfield Woodhouse |
| Mr. F. Dixon, Eastwood | Dr. E. Ringrose, Newark-on-Trent |
| Mr. O. Eaton, Bingham | Dr. W. R. Smith, Beeston |
| Dr. H. Francis, Arnold | Mr. A. E. M. Smith, Retford |
| Dr. A. Fulton, Old Basford | Dr. J. W. Scott, Nottingham |
| Dr. W. Garstang, Hucknall | Dr. J. C. Teasdale, Retford |
| Dr. T. C. Garrett, Workson | Dr. G. T. Tate, Mansfield |
| Dr. A. Hunnard, Mansfield | Dr. F. K. Tweedie, Sutton-in-Ashfield |
| Dr. E. H. Houfton, Mansfield | Mr. J. F. D. Willoughby, Southwell |
| Mr. J. W. M. Hunter, Ruddington | Mr. C. E. Whittington, Tuxford |
| Mr. R. M. Hamilton, Annesley Woodhouse | |
| Dr. F. H. Jacob, Nottingham | |

NOTTINGHAM.

THE following comprise the Local Medical Committee for the County Borough of Nottingham:

| | |
|--------------------|---------------------|
| Mr. A. R. Anderson | Mr. A. T. Mulhall |
| Dr. C. H. Allen | Dr. F. R. Mutch |
| Mr. W. B. Blandy | Dr. H. J. Neilson |
| Dr. J. P. Blurton | Mr. E. Powell |
| Mr. J. H. Cox | Mr. R. M. Rendall |
| Dr. A. Charlton | Dr. A. C. Reid |
| Mr. T. J. Dabell | Mr. E. Snell |
| Dr. A. Fulton | Dr. J. B. Sim |
| Dr. W. Hunter | Dr. W. Stafford |
| Dr. O. H. Isard | Dr. J. W. Scott |
| Dr. F. H. Jacob | Dr. J. H. Thompson |
| Mr. J. Mackie | Mr. P. E. Tresidder |
| Mr. E. D. Marriott | Mr. W. M. Willis |
| Dr. C. S. Miller | |

NEWCASTLE-ON-TYNE.

THE Local Medical Committee for the County Borough of Newcastle-on-Tyne has been recognized until December 31st, 1913. It is constituted as follows:

Chairman, Dr. James Don.

Vice-Chairman, Dr. H. L. Rutter.

Honorary Secretary, Mr. R. J. Willan, 25, Ellison Place, Newcastle.

Assistant Honorary Secretary, Dr. J. Leslie Wilson.

Other Members.

| | |
|-----------------------|----------------------|
| Dr. H. B. Angus | Dr. James Hudson |
| Dr. R. A. Bolam | Dr. J. MacRae |
| Dr. A. C. Burnell | Dr. J. S. McCracken |
| Dr. T. L. Bunting | Dr. H. J. Mathews |
| Dr. A. Campbell | Dr. J. R. Morison |
| Dr. R. Dagger | Dr. E. F. Pratt |
| Dr. J. T. Dunlop | Dr. W. G. Richardson |
| Dr. J. D. Farquharson | Dr. F. Russell |
| Dr. G. Foggin | Dr. W. L. Ruxton |
| Dr. W. S. Fraser | Dr. R. W. Simpson |
| Dr. F. Hawthorn | Dr. Ethel Williams |
| Dr. A. H. Hobbs | |

Medical Representatives on Local Insurance Committee.

| | |
|-------------------|------------------|
| Dr. Adam Wilson | Dr. R. P. Dawson |
| Mr. Thomas Oliver | Dr. W. Tiplady. |
| Dr. F. Russell | |

Medical Members of Medical Service Subcommittee.

| | |
|---------------|-------------------|
| Dr. James Don | Mr. R. J. Willan. |
| Dr. R. Dagger | |

Income Limit.—The profession decided to press for a £2 income limit. This was discussed by the Local

Insurance Committee on January 14th, and its consideration was postponed for three months. Efforts were made to get the Local Insurance Committee to further consider the matter before the renewal agreements were signed but without avail.

Operations.—The following list was drawn up by the Local Medical Committee after consultation with a subcommittee of the staff and a similar subcommittee of the of the House Committee of the Royal Victoria Infirmary.

Excluding all operations requiring a general anaesthetic excepting:

1. Incisions of superficial cellulitis, abscess, or suppurating haematoma.
2. Incisions of acute abscess in:

| | | |
|---------------------------------|---|------------------------------|
| Perineum | } | Excepting in dangerous cases |
| Vulva | | |
| Groin | | |
| Palm, or dorsum of hand or foot | | |
| Olecranon bursa | | |
| Patella bursa | | |
| Finger or toe (whitlow) | | |
| Breast | | |
| Jaw | | |
| Tonsil | | |
| Lacrimal sac | | |
3. Removal of foreign bodies, when superficial, palpable or visible.
4. Scraping sinuses and ulcers when superficial, anywhere.
5. Excision of portions of tissue for microscopic examination, when superficial.
6. Application of cautery

| | | |
|---------------------------------|---|-----------------------|
| Passive movements of joints | } | Under an anaesthetic. |
| Abdominal diagnosis | | |
| Rectal | | |
| Vaginal | | |
| Painful examination of any part | | |
7. Catheterization for:

| |
|------------------------------------|
| Retention of urine. |
| Enlargement of the prostate gland. |
8. Urethral caruncle.
9. Fissure in ano.
10. Hydrocele: Tapping.
11. Phimosi:

| |
|---|
| Dilatation. |
| Circumcision, in uncomplicated cases under the age of 40. |
| Slitting up, for oedema in syphilis, gonorrhoea, or sepsis. |
12. Paraphimosi:

| |
|---|
| Reduction. |
| Circumcision, in uncomplicated cases under the age of 40. |
| Slitting up, for oedema in syphilis, gonorrhoea, or sepsis. |
13. Sterilizing, suturing, and dressing:

| |
|-------------------------------------|
| All superficial wounds. |
| Crushed fingers and toes. |
| Lacerated wounds of hands and feet. |
| Scalp wounds. |
14. Removal of necrosed bone in fingers or toes.
15. Reduction of dislocation of:

| |
|---|
| Fingers or toes (both simple and compound). |
| Wrist (simple). |
| Elbow (simple). |
| Shoulder (simple). |
| Lower jaw (simple). |
16. Amputation of fingers and toes, for any lesion.
17. Removal of ring from finger.
18. Ligature of divided superficial arteries and veins.
19. Removal of ingrowing nails.
20. Incision of simple carbuncle.
21. Setting, splinting, and treatment of fractures of:

| | | |
|---------------------------------------|---|---|
| Fingers or toes (simple or compound) | } | N.B.— a. X rays in all cases excluded. b. Operative treatment of any fracture excluded. c. Pott's fracture excluded. |
| Metacarpal bones (simple or compound) | | |
| Metatarsal bones (simple or compound) | | |
| Radius, Colles's (simple) | | |
| Radius | | |
| Ulnar | | |
| Radius and ulnar | | |
| Forearm | | |
| Humerus | | |
| Clavicle | | |
| Tibia | | |
| Fibula | | |
| Tibia and fibula | | |
| Rib | | |
22. Setting and treatment of separated epiphysis (simple), X rays excluded.
23. Treatment by rest and splints of chronic tuberculous joints.
24. Simple aspirations of any cavity.

N.B.—All the above conditions are liable on occasions to be dangerous and beyond the competence of the general practitioner

Allocation of Residue of Patients.—It was resolved with regard to the insured persons who have not chosen a doctor that none of them be allotted to doctors with 1,500 or more on their lists, and that they be allotted to the remaining doctors in inverse ratio to the numbers already on their lists. The capitation money from unallocated insured persons at April 15th, 1913, living in the east area of the borough of Newcastle-upon-Tyne is to be divided equally among the panel doctors practising in that area, and similarly for the central and western areas.

Contracting Out and Making Own Arrangements.—The Local Insurance Committee has not yet agreed to this, but has issued a new form to be filled in by insured persons wishing to avail themselves of this provision of the Act. The scale of fees recommended is:

Scale of Fees.

| | £ | s. | d. |
|--|---|----|----|
| Visit to patient at patient's house or attendance on patients at doctor's consulting rooms ... | 0 | 2 | 6 |
| Special visit, in response to messages left between 10 a.m. and 8 p.m. ... | 0 | 3 | 6 |
| Night visit, in response to calls received between 8 p.m. and 10 a.m. ... | 0 | 5 | 0 |
| Surgical operations requiring general anaesthetic or case of abortion or miscarriage ... | 1 | 1 | 0 |
| Administration of general anaesthetic ... | 1 | 1 | 0 |
| Setting of Fractures— | | | |
| Femur ... | 1 | 1 | 0 |
| All other fractures ... | 0 | 10 | 6 |
| Subsequent attendance at visit rates. | | | |
| Reduction of Dislocations— | | | |
| Hip ... | 1 | 1 | 0 |
| Others ... | 0 | 10 | 6 |
| Subsequent attendance at visit rates. | | | |

Friendly Societies.—It was resolved that a fee of 2s. 6d. be charged for examination of a person joining a friendly society; that the payment for attendance on members of friendly societies who do not come under the Insurance Act, and whose total income is under £2 a week, be either by a capitation grant of 9s. a member per annum, or at the rate of 2s. 6d. per attendance, including medicine; and that where the total income is over £2 a week attendance be charged for work done.

Midwifery Fees.—It was decided that the doctor's minimum fee be 1 guinea, except in cases where he has been called in by the midwife. With regard to the fees in colliery practice, it was resolved that the doctors residing in the county borough of Newcastle-upon-Tyne adhere to the decision come to in the county regarding their contract practice.

Certificates.—The charge for each additional certificate beyond the ones required by the Act is to be 1s. Initialing of an approved society's card does not constitute a "certificate."

Finance.—To meet the expenses of carrying on the work of the Local Medical Committee the doctors on the panel have agreed that each contribute immediately the sum of 3s. for every one hundred insured persons on his list. About £75 has been received to date.

Pharmacopocia.—Drs. Farquharson, Hudson, Fraser, and Pratt were appointed a subcommittee to meet a subcommittee of the Newcastle-upon-Tyne chemists to draw up a list of stock formulae. This has been issued as a small bound volume, for which the sum of 1s. is charged.

Hypodermic Injections.—The fee for a hypodermic injection given by a doctor (vaccines excluded) was fixed and agreed to by the Insurance Committee at 6d.

Renewal Agreements with Insurance Committee.—The profession refused to sign the renewal agreement until the Local Insurance Committee had fulfilled its promise of first discussing controversial matters. Therefore, on March 11th, an interview with the Medical Benefit Subcommittee was held, with the following results:

1. The Local Insurance Committee refused to discuss the income limit until April 14th, although it required each doctor to sign the agreement now, and stated that the doctor will not be allowed to retire from the panel should he wish to do so when the decision is given on this point on April 14th.
2. The Local Insurance Committee will recommend that the friendly societies adopt a uniform certificate on the lines of that used by the Rechabite Society.
3. It is a matter for the approved societies whether they will accept certificates of non-panel doctors.
4. The Insurance Committee have agreed to reconsider the question of contracting out, but only with doctors not on the panel.

The results of the interview were not regarded as satisfactory, and it is expected that several doctors will retire from the panel at the end of the present quarter.

The renewal agreements were eventually sent in to the Local Insurance Committee, under protest, at the end of March.

National Fund for War Fund, Superannuation, etc.—Dr. E. F. Pratt proposes that each doctor contribute 3d. quarterly for each patient on his list, and that this money be deposited with an insurance company at compound interest till April 14th, 1916, to form a war fund, the expenses of the Local Medical Committees to be meantime defrayed out of the fund, and the contributions of any member dying to be returned in full with compound interest. The insurance company would do all the work of collection, etc. At April 14th, 1916, the fund would amount to over half a million pounds, and if it were not then required as a fighting fund it would form the nucleus of a sickness, accident, and pension fund. It is held that to be successful the scheme must be a national and not a local one. It was decided to refer the matter to the Council of the British Medical Association for early consideration.

STOCKTON-ON-TEES.

The Local Medical Committee for the Stockton area has been recognized, and the following are the members:

Chairman: Dr. F. T. Talbot.
Secretary: Dr. Henry A. Collinson, Rosslyn Terrace, Stockton-on-Tees.
Committee: Drs. Ross, Wilkin, Dickson, L. J. Blandford, Beatty, Hughes, Densham, and Brydon.

BOOTLE.

A MEETING of the County Borough of Bootle Medical Committee was held on March 19th.

Local Insurance Committee.—The SECRETARY reported the election of Drs. Saunders and Macleay as representatives of the profession on the Local Insurance Committee.

Administration of Medical Benefit.—The Committee considered several questions in connexion with the administration of medical benefit, which had been submitted to it by the Insurance Committee. No opinion was expressed on several of the questions which applied to doctors on the panel only, but, on the question of persons who desired to make their own arrangements for medical attendance, the Committee resolved unanimously:

That all persons who desired to do so, should be allowed to make their own arrangements.

It was unanimously resolved:

That a suggestion should be made to the Local Insurance Committee "that a wage limit of £2 per week should be applied to the Bootle area, and that insured persons having incomes above that amount should be required to make their own arrangements for medical attendance and treatment."

Copies of these resolutions have been sent to the Clerk of the Insurance Committee.

The Committee met again on April 3rd, when eight members out of a total number of ten attended. In response to an invitation from the Local Insurance Committee requesting the Medical Committee to nominate three medical members of the Medical Service Subcommittee, as provided in Clause 52 of the medical benefit regulations, Drs. Macleay, Roberts, and Walker were nominated.

COUNTY OF CHESHIRE.

THE ninth meeting of the Local Medical Committee for the administrative county of Cheshire was held on March 28th in Manchester. Dr. GARSTANG was in the chair, and nineteen members were present.

Friendly Societies' Medical Remuneration.—The situation at Crewe and Sandbach, where the friendly societies are endeavouring to engage doctors at terms lower than those approved by the British Medical Association, was discussed, and certain decisions taken.

Allocation of Patients.—The allocation of patients who have not chosen a doctor in equal shares to doctors on the panel (excluding those who desire a limited panel), subject to considerations of distance and to grouping by the District Medical Committees, was approved, but it was resolved to leave the representatives of the profession on the Insurance Committee a free hand as to how to embody

these principles in resolutions by that Committee. The right of a District Medical Committee to allocate a larger number to one individual practitioner whom it was desired to compensate for loss of practice sustained in connexion with the operation of the Act was agreed.

The tenth meeting of this Committee was held on April 7th in Manchester. Dr. GARSTANG being in the chair, and twenty members present.

Medical Benefit.—The reply of the Commissioners to the demands of this Committee (see SUPPLEMENT, April 5th) was considered, and it was resolved:

That this Committee recommends to the District Committees of Cheshire:

1. That the new panel agreements should be sent in subject to the condition that the Insurance Committee consents to urge the Commissioners to arrange with the approved societies at the forthcoming conference (between the Commissioners and the representatives of approved societies) that it should be sufficient for printed medical certificates stating that the patient is unable to work owing to illness—(a) not due to misconduct; (b) not due to accident arising in the course of his employment—to be merely signed and dated by the doctor.
2. That the new panel agreements should be sent in subject to Regulation 49 for incomes over £160 per annum.
3. That the list of drugs drawn up by this Committee and approved by the Commissioners is the list on which the medical profession is prepared to accept.
4. That the attention of the Insurance Committee should be drawn again to the grave objections to the making the panel doctor responsible for paying the fee for the anaesthetic.

The Chairman was of opinion that doctors who have already sent in their agreements may inform the Clerk that any conditions decided on by the profession of the county shall attach to them.

ISLE OF WIGHT.

A MEETING of the Local Medical Committee was held at Ryde on April 3rd. Dr. MACKENZIE (Chairman) presided, and six others were present.

Attendance on Insured Persons Temporarily Resident at Seaside Resorts.—The HONORARY SECRETARY reported that he attended the meeting held in London on March 5th to discuss this question with the Commissioners. That meeting did not arrive at any satisfactory conclusion, but it was urged that the solution of the difficulty rested more with the Commissioners and the Government who created the situation than with the medical profession. The suggestion he made to the Commissioners was that a clause should be inserted in an amending Act to secure a monthly or yearly sum being paid by all insured persons who wished to insure against sickness when away from their homes. It was generally agreed that payment must be according to a stipulated tariff, and that payment per caput would prove unsatisfactory and unworkable.

The Payment of Expenses of the Local Medical Committee.—A letter from the Honorary Secretary of the Local Medical Committee, Essex, was read suggesting that all medical committees should be co-ordinated under one head in order to safeguard the interests of the profession under the Act, and also suggesting that the expenses of Local Medical Committees should be met by means of a contribution by doctors on the panel of 1d. a head per annum on all panel patients, plus a proportionate amount on profits made by private practice by all practitioners.

It was unanimously agreed that these expenses should not be met by a levy on the medical profession, but by a fund to be provided by the Insurance Commissioners. The opinion was expressed that the British Medical Association should adopt a more fighting policy than heretofore.

The HONORARY SECRETARY read replies to his letter to the Medical Secretary of the British Medical Association asking whether that part of the Guarantee Fund which had been earmarked at the time of guarantee for local use by the guarantors would be available for defraying the expenses of the Local Medical Committee. The reply was in the negative.

Anaesthetics.—The Honorary Secretary was instructed to write to the Insurance Commissioners complaining of the unfairness of expecting medical men on the panel to undertake this responsible duty of administering anaesthetics for operations on insured persons without payment, and drawing attention to the fact that there is no guarantee that any one practitioner would consent gratuitously to

give an anaesthetic for another except in cases of special urgency.

Disciplinary Rules.—A letter was read from the Clerk to the Isle of Wight Insurance Committee as regards the distribution of the disciplinary model rules for the administration of medical benefit among insured persons. It was understood that 10,000 copies were to be printed for distribution by the larger approved societies and the doctors on the panel. The Honorary Secretary was instructed to reply that this number was considered insufficient in view of the fact that there were estimated to be at least 22,000 insured persons in the island, and it was considered important that all these persons should receive a copy.

Representation of the Medical Profession on Subcommittees of the Insurance Committee.—A letter was read from the Clerk of the Isle of Wight Insurance Committee stating that, as there were three doctors on the Insurance Committee, Dr. Robertson (representing the Commissioners) and Drs. Davies and Wood (representing the Local Medical Committee), one should serve on each Committee—Finance, Sanatorium, and General Purposes. A resolution was proposed by Dr. PRESTON and seconded by Dr. JEAFFRESON:

That the representation proposed of the medical profession on subcommittees is insufficient, and that the two elected representatives should be on all subcommittees.

This resolution was carried unanimously, and the Honorary Secretary was instructed to write to the Clerk of the Insurance Committee to that effect.

Election on the Local Medical Committee.—Dr. DAVIES proposed and Dr. WOOD seconded that Dr. R. ROBERTSON of Ventnor be elected a member of the Committee. This was carried unanimously.

Attendance on Uninsured Members of Friendly Societies.—It was notified that the Ventnor friendly societies had decided to advertise for a medical man to attend their members, and it was stated that a Warning Notice had been inserted in the JOURNAL.

DUMBARTONSHIRE.

A MEETING, which all duly qualified medical practitioners resident in the Dumbarrow county insurance area were invited to attend, was held in Glasgow on March 27th. Ten responded, and Dr. W. S. Young was appointed Chairman and Dr. A. W. Sutherland Clerk of the meeting.

It was agreed to form a Local Medical Committee for the county, to consist of all practitioners on the county panel who reside in the county area, and to apply for statutory recognition. Constitution "B" was adopted with certain modifications.

The Local Medical Committee thereafter met and elected the following:

Chairman.—Dr. W. S. Young.

Secretary.—Dr. A. W. Sutherland (Barbain, Cardross).

Executive.—The Chairman, the Secretary, Drs. R. Anderson, C. L. Kerr, R. Blyth, John Young, John Reid, and W. B. Armstrong.

County Insurance Committee.—Drs. W. S. Young (Helensburgh) and A. W. Sutherland (Cardross) were elected to serve on the County Insurance Committee, and it was resolved to ask the Commissioners to appoint Drs. Armstrong (Kirkintilloch) and John Reid (Milngavie). Dr. Gilmour (Dunrother) has been appointed a member by the county council.

Medical Service Subcommittee.—Drs. Armstrong, W. S. Young, and A. W. Sutherland were elected to serve on this committee for the county.

Discussion took place on various matters, and it was decided (1) to ask the Insurance Committee to allocate those insured persons who have made no choice of doctor equally among those on the panel, with right of refusal in the first instance, and taking into consideration residence and distance from doctor; (2) to request issue of "Model Rules" to insured persons as soon as possible, with addition of a rule forbidding consultations or demands for visits on Sundays except in cases of serious emergency; (3) to request payment for the first quarter to be made immediately it terminates; (4) to have payment for any future period based on the average of the numbers on each doctor's list at the beginning and end of the period; (5) to observe the weekly half-holiday in each locality under the same conditions as apply to Sunday; (6) to indicate a preference for the "reduced day-book" at present, with the opinion that records are still too elaborate; (7) to ask that insured persons making a

permanent change of address and persons becoming insured be required to select a doctor without delay.

It was unanimously decided that dentistry (including extractions) is outwith the range of insurance work; also that all holiday makers and temporary residents are to be treated as private patients meanwhile.

Drs. W. S. Young, J. Gilmour, C. L. Kerr, and A. W. Sutherland were appointed to meet the Medical Benefit Subcommittee of the County Insurance Committee, and this meeting took place on March 29th, when the views of the Local Medical Committee as given above were explained and generally approved by the Medical Benefit Subcommittee. At the same time, the deputation had the opportunity of considering alterations in the drug tariff and dispensing charges suggested by the county chemists. As it was not likely that the suggested alterations would materially alter the financial position, no objection was raised.

MEETINGS OF INSURANCE COMMITTEES.

LONDON.

Improvement of Medical Service under the Act to be Considered.

At the meeting of the London Insurance Committee on April 3rd, discussion took place on the following motion:

That it be referred to the Medical Benefit Subcommittee to consider and report as to whether the present system of medical benefit provided under the Insurance Act to insured persons in London can be improved, and if so, to submit recommendations to give effect to its suggestions.

Mr. HARRIS, who moved the resolution, said that not one in a thousand of the complaints that arose under the present system came before the Committee. Was there an adequate medical service for the insured people of London at the present moment? Prior to January last there were in London not less than 1,500 medical men engaged in contract practice. There were now 1,258 medical men attending insured persons, who probably outnumbered by four to one those who were previously treated on a contract basis. There was no reason to believe that the number of doctors on the panel would be greatly increased at the end of the first quarter. Nevertheless there must be about 3,000 medical men in London available for the treatment of insured persons, and the Medical Benefit Subcommittee should consider whether a conference with medical men who were not on the panel would be useful in furthering the objects the Committee had in view. If a better service was not obtained than was the case at present the funds of the approved societies would suffer considerably; the tendency at present was for members to go on the fund much too easily and to come off much too slowly.

Mr. E. B. TURNER seconded. He said the time had come when the Committee must consider how within the four corners of the Act the conditions of service could be so modified as to attract a large proportion of the men who ought to be on the panels if the scheme was to be a success. A great number of complaints relative to the working of the Act had reached him from both sides, and made it clear that the service was not now what it ought to be. He was sure the Committee could do something to improve it. He had fought the medical sections of the Act from the beginning, not because he was opposed to the principle of insurance or of thrift, but because he did not think the conditions were such that members of his profession should be asked to serve under them, or that the remuneration originally offered was nearly sufficient. Although he had not changed his opinions to any appreciable extent, he was prepared, and those gentlemen who thought with him were prepared, if possible, to meet the Committee and see what could be done, and whether concessions could be mutually arranged.

Dr. H. H. MILLS supported the resolution, although he thought Mr. Turner took an unduly pessimistic view. In three months' working only three, or possibly four, serious complaints had come before the Committee. The working of the Act had made clear the inadequacy of medical provision in the whole of the east-end of London and in all industrial districts.

Dr. EVAN JONES mentioned that of the 1,258 medical men on the London panel a considerable number were

resident outside the county. [A member: One-tenth.] He thought that an efficient service for insured persons was possible under the Act if the Committee approached the matter in the right spirit. He was not satisfied with the panel system; the history of the panel in Finsbury alone was a contradiction of everything that had been said in favour of the working of the panel in London.

The resolution was carried by a large majority.

Return as to Number of Patients per Doctor.

A motion by Mr. ROCKLIFF in the following terms was also adopted:

That it be referred to the Medical Benefit Subcommittee to prepare and circulate to members of the Committee only a return showing in the case of doctors on the panel with more than 1,000 insured persons as patients, the name and address of such doctor, and the number of such patients so far as can be ascertained from the records of the Committee, and the amount of the cheques already paid on account of medical fees.

Non-publication of Names.

The Committee approved the principle that in view of the confidential character of reports dealing with complaints, the names of medical practitioners, chemists, and insured persons referred to therein should not appear in the agenda paper or other public documents of the Committee.

Medical Representation on the Sanatorium Committee.

Some opposition was raised by friendly society representatives to a proposal by the Sanatorium Benefit Subcommittee that its numbers should be enlarged to include seven instead of five medical members of the Insurance Committee. It was urged that if this were done medical interests would be over-represented.

Mr. E. B. TURNER urged that this was not a matter of medical men seeking representation from any ulterior motive. It would be to the benefit of the administration of sanatorium benefit that there should be represented on the subcommittee every form of practice and medical work. From Sir Shirley Murphy and Sir John Collie the subcommittee would have valuable aid when administrative questions arose; Dr. Lauriston Shaw had hospital treatment at his fingers' ends; Dr. Evan Jones and himself were representative of two classes of individual general practice; Dr. Mills represented the practitioners on the panel; and Mrs. Willey represented the women doctors.

The proposal was carried by a large majority.

MIDDLESEX.

Medical Service in Ealing.

THE Middlesex Insurance Committee on April 7th had under consideration a letter from Dr. F. M. W. James, stating that at a meeting of the Non-Panel Doctors' Association, to which every practitioner in the Ealing Division whose name did not appear on the Middlesex panel was invited, it was decided to decline an offer of the Insurance Committee to allow medical men in Ealing to place their names on the panel for a limited class or number of insured persons. The association offered instead to establish a public medical service on the lines of the Ealing scheme, with no wage limit other than that in the Act. Payment would be made out of a pool—not by capitation, but on a scale of fees for services rendered. The General Purposes Subcommittee recommended that the proposed service be not approved, and that full power be delegated to the subcommittee to deal—after consultation with the Insurance Commissioners—with any situation that might arise in the Ealing district after April 15th.

The Chairman (Mr. W. S. GLYN-JONES, M.P.) suggested that this proposal should be modified by the addition of the words:

Provided that if the subcommittee recommend the appointment of a full-time officer or officers, a special meeting of the Insurance Committee will be summoned to confirm such resolution.

On a division, however, it was decided to omit the suggested additional clause on the ground that it would weaken the position of the Committee in dealing with the situation in Ealing.

Statistics.

It was stated that the number of doctors on the panel in Middlesex was 520, and that 445 had signed renewal

agreements. There were 347 chemists on the list, and 305 had signed renewal agreements. Of 313,809 insured persons, 218,151 had selected their doctors.

BOURNEMOUTH.

At a meeting of medical practitioners on the panel, called on March 19th, it was decided to defer signing the new medical agreement until the Local Medical Committee had had an opportunity of asking the Insurance Committee,

1. To fix an income limit.
2. To make arrangements for the payment of adequate fees for attendance upon insured persons who go to Bournemouth as visitors or convalescents and who require medical treatment while staying there.
3. To deal with the question of providing a fee for anaesthetics.

The Honorary Secretary of the Local Medical Committee in transmitting these representations intimated that his Committee took strong objection to the way in which the new agreement had been sent out with the demand that it should be signed at short notice without giving the Local Medical Committee preliminary notice, or sending it a copy of the agreement for its consideration. The Committee and the practitioners on the panel had thereby been prevented from properly considering the terms of the new agreement.

Insurance Commissioners and Medical Treatment of Visitors.

The letter from the Honorary Secretary of the Local Medical Committee, and a letter received from the Insurance Commissioners, were considered by the Local Insurance Committee on March 31st. The letter from the Insurance Commissioners referred to par. 22 of the Medical Benefit Regulations, and, according to the report in the *Bournemouth Visitors' Directory*, continued as follows:

The Commissioners are aware that complaints have been made regarding the present method of financial adjustment as liable to produce an inequitable distribution of medical benefit funds, by reason of the fact that insured persons removing at very frequent periods will not take the trouble to give notice, and that accordingly the transfer of funds consequent upon notifications actually given may not augment the funds of the Committee to whose area the removals take place to a sufficient extent to defray the cost of medical treatment for which that Committee becomes responsible.

The extent to which the present arrangement may prove inequitable, however, has been exaggerated in some quarters, inasmuch as it appears to be believed that doctors on the panel are required to attend sick persons who have removed into the area served by them for the precise amount transferred by the notification of each such person. But this is not the case. The sums transferred by the notification of removal fall into the medical benefit funds of the Committee, out of which the doctor on the panel will receive remuneration at the same rate in respect of removals as in respect of permanent residents; and if it be the case that present arrangements result in an adequate transfer of funds, the net effect would be to reduce by a trifling amount the remuneration of all the practitioners on the panel for the area.

It may assist the Committee in its negotiations with doctors on the panel for the extension of their agreements to be in a position to clear up the misapprehension referred to, and to assure them that the question of any inequity in the present method of financial adjustment is receiving the careful attention of the Commissioners, with the object of making arrangements at an early date to secure that doctors should be remunerated in respect of the treatment of any cases of removals at a rate not lower than that paid in respect of other classes of insured persons.

The Insurance Committee undertook to consider the various points raised by the Local Medical Committee; as to the allocation of insured persons, the committee promised to consult the medical men on the panel, without binding itself to take any particular line of action.

£? Income Limit Refused.

Dr. DAVIDSON proposed a resolution that it be in the power of any medical man on the panel to refuse acceptance of any insured person whose income exceeded £104 per annum. It was urged in opposition to this that to lower the income limit of £160 would be to go behind an Act of Parliament, but the CHAIRMAN pointed out that it was within the power of an Insurance Committee to adopt an income limit of its own. The proposal, however, was defeated by 18 votes to 5.

Meeting of Practitioners.

A full meeting of medical men on the panel, who number sixty-nine, has been called for April 12th, when the whole

position will be discussed. So far, we are informed, only eleven of the medical practitioners on the panel have signed the new agreement, and two of these have done so subject to the approval of the Local Medical Committee.

BLACKPOOL.

Income Limit.

At the monthly meeting of the Blackpool Insurance Committee on April 2nd, the chief subject discussed was the £2 a week income limit for ordinary medical benefits.

Dr. BARTON, in urging its adoption, stated that the scheme for administering medical benefits under the Act was founded on the club system; that the clubs had come into existence for the benefit of the poor man, and that it was never intended that those capable of earning £2 or £3 a week should take advantage of them.

Dr. GODLEY gave statistics of work on the panel.

Alderman HEAP opposed on the grounds that harsh, inquisitorial methods of ascertaining a man's income would be introduced.

In answer to this and other objections, Dr. BARTON stated that medical men would not make use of any income limit regulation where it was likely to cause hardship in any individual case, and that doctors had means of ascertaining the incomes of patients without having to resort to such unpleasant methods as those suggested by the Committee.

After a full description it was resolved to defer the matter for further consideration.

COVENTRY.

Basis of Quarterly Payments.

THE Coventry Insurance Committee last week considered a proposal that at the end of the first quarter of the operation of medical benefit each doctor on the panel should be paid the sum of 1s. 9d. in respect of each insured person on his list, and 1s. 9d. calculated on a proportion of insured persons who had not chosen a doctor on an agreed date.

Dr. ORTON, on behalf of the Local Medical Committee, objected that no provision was made for the payment of doctors in respect of patients who were on the lists at the beginning of the quarter, and who died during the quarter. He also complained that the Insurance Committee had sent back to various doctors medical tickets that did not give the full particulars of the insured persons, and had stated that if the correct information was not forthcoming these cases would be treated on the same lines as those where no choice of doctors had been made. The doctors protested against this, because they held that the fact of the details being inadequate or incorrect was the fault of the approved societies.

THE CLERK TO THE COMMITTEE stated that for the quarter under consideration doctors would be paid for all members mentioned in their schedule of acceptances. In future quarters an average would be taken between the numbers on the doctors' books at the beginning of the quarter and at the end.

EAST SUFFOLK.

Capitation Payment Adopted.

THE East Suffolk Insurance Committee at its last meeting accepted the proposal of the Local Medical Committee that after April 15th payment by the capitation system be adopted, the sixpence allowed for domiciliary treatment of tuberculosis to be included.

EAST SUSSEX.

Income Limit Rejected.

A DISCUSSION on the question of an income limit of £2 per week was initiated at the last meeting of the East Sussex Insurance Committee by Dr. C. H. BENHAM, who declared that if the Act was to be worked smoothly, and the best men were to be attracted to the panels, an income limit must be fixed that would be satisfactory to the medical profession, or the payments under the Act must be increased. Only four members voted for the proposed income limit.

HULL.

Allocation of Patients.

SOME discussion took place at the meeting of the Hull Insurance Committee on the question of the arrangements to be made for the medical treatment of those insured persons who had not selected a doctor. The Committee adopted the recommendation of the Medical Benefit Sub-

committee that, in accordance with the wishes of the local medical profession, the allocation of insured persons who had not selected a doctor, or been accepted by doctors, should be in equal shares, subject to the following provisos: (1) The allocation to be carried out by areas, with the advice and assistance of resident practitioners; (2) the wishes of practitioners asking not to have any more patients allotted to them to be respected; (3) practitioners desiring only a limited number of additional patients to have such number allocated, the remainder to be divided amongst the remaining practitioners in equal shares.

SHEFFIELD.

No Limitation of Numbers on Doctors' Lists.

At the last meeting of the Sheffield Insurance Committee it was announced by the Chairman that about 20,000 people in the city had not yet selected a doctor. The medical practitioners suggested that at the end of the provisional period the Committee should distribute the funds in respect of the 20,000 persons in equal shares amongst the practitioners on the panel. As those doctors had been the guarantors of the Committee for the working of the Act it was felt that this should be done.

Dr. SORLEY moved the reference back of a recommendation of the Medical Benefit Subcommittee:

That this Committee does not at present contemplate any limit being placed on the number of persons accepted by a practitioner.

The CHAIRMAN said the Clerk advised that the Committee had no power to limit the number on any doctor's list. To attempt to do so would be to destroy the free choice of doctor. Even if the Committee had power to limit the number of patients, he did not know by what process it would decide which persons should remain on a doctor's list and which had priority of acceptance by him. If the Committee asked the Insurance Commissioners to restrict the numbers on the lists it would be asked what experience it had to suggest that doctors could not deal adequately with more than the specified number of persons. The Committee had no information which would show that medical men with large lists were not giving adequate service.

The amendment was lost and the recommendation of the Committee approved.

MIDDLESBROUGH.

Limitation of Patients.

THE Middlesbrough Insurance Committee has adopted the principle that before considering the allocation of insured persons who have not selected a doctor, a maximum number of patients be fixed beyond which no allocation would be made to any individual doctor, and that the number be 1,750. It was agreed to adopt a recommendation reached at a conference with the Local Medical Committee, that the allocation be made in equal shares amongst practitioners on the panel actually resident in the insurance area, with the exception of those who joined the panel for a special purpose.

LINDSEY (Lincs.).

Whole-time Service Proposed.

No medical man having accepted service on the panel for the districts of Coningsby, Revesby, and Marcham, Lincolnshire, the Lindsey (Lincs.) Insurance Committee decided at its last meeting to inform the Insurance Commissioners and ask them to make arrangements for sending down a doctor to undertake medical treatment in the districts mentioned, and to close the panel in respect of them.

READING.

Income Limit Abandoned.

AN income limit of 50s. for medical benefit was established by the Reading Insurance Committee during the first three months of the operation of medical benefit; a recommendation was considered at the last meeting of the Committee to discontinue this limit.

Dr. ABRAM moved that the income limit be continued for a further nine months. He said that at a conference recently held between the Local Medical Committee and the Medical Benefit Subcommittee no definite reasons were adduced for the abolition of the income limit. On the contrary, it was shown that the Act had worked so far without friction. The doctors, having undertaken service on condition that a 50s. income limit was

established, felt aggrieved when it was proposed to discontinue it.

Mr. W. E. COLLIER suggested that it was hardly worth while retaining the 50s. income limit, because only twenty people in Reading were affected by it.

Dr. ABRAM's amendment was lost by 14 votes to 9, and the proposal to abolish the income limit was adopted.

DEVONSHIRE.

District Insurance Committees Established.

THE Insurance Commissioners having objected to a proposal to establish twenty-two district insurance committees in Devonshire, the County Insurance Committee, on March 31st, adopted an amended scheme providing for twelve district committees. It was urged, nevertheless, that the areas under the amended scheme would be most unwieldy, and that some members would have to travel fifty miles to attend meetings.

INSURANCE NOTES.

THE FACULTY OF INSURANCE.

A CONFERENCE promoted by the newly formed "Faculty of Insurance" was held at the Central Hall, Westminster, on April 5th, under the chairmanship of Mr. HANDEL BOOTH, M.P., who said that the object of the Faculty was to collect statistics, spread information, and possibly train officials by means of lectures and classes. The conference was attended by about 500 persons from friendly and insurance societies throughout the kingdom, and passed a resolution to the effect that the sum allowed for administrative expenses was inadequate and that approved societies should be exempt from stamp duty.

Malingering.

In opening a discussion on administrative difficulties, Mr. H. KINGSLEY WOOD contended that the amount of malingering had been greatly exaggerated and was really small. He added that it had been found that women were remaining chargeable to the sickness fund for an average period 50 per cent. longer than men. The societies looked upon the doctors as the first line of defence against malingering. At present, particularly in London, some doctors had so many insured persons on their lists that it was impossible for them to check the claims, and it might be necessary to follow the example of the Bristol Insurance Committee by appointing a medical referee. He concluded by stating that out of twenty-five patients sent by one society to a medical referee twenty-four were found fit to work.

Sir JOHN COLLIE said that he did not believe that either of the methods of punishment prescribed by the Act to follow the triennial valuation would be sufficient to protect the societies against improper inroads upon their funds. The people responsible for these inroads were those who more or less honestly considered themselves incapable of work although really capable, and those who knew they were fit for work but remained on the funds as long as they could. Both were difficult to deal with, and the remedy was the appointment of medical referees. Doctors would object to medical inspectors, who, moreover, would not be able to do what was wanted. The duty of the medical referee would be not to interfere with the doctors, but to protect the funds of the societies.

Mr. J. BUYERS BLACK (Glasgow) spoke in favour of a national medical service and of the extension of the Act to include an additional ten million members of the working classes. He considered that malingering might best be checked by authorizing the Chairman of an Insurance Committee, assisted by an independent doctor, to investigate all alleged cases, with power to withhold sickness benefit for a certain period.

Sanatorium Benefit.

Mr. BROWN (Hearts of Oak) said that the societies were receiving large numbers of applications for treatment in sanatoriums, but were unable to deal with them owing to lack of funds. He thought that a further grant from the Treasury was necessary.

A Member of the Middlesex Insurance Committee stated that it had found the funds at its disposal insufficient to give treatment in sanatoriums, and had in consequence been obliged to give domiciliary treatment only.

A resolution was adopted in favour of making application

to Insurance Committees or to Parliament for an extra grant.

Mr. Masterman.

At an inaugural dinner of the Faculty held in the evening Mr. WORTHINGTON EVANS, M.P., proposed the toast of the Joint Committee of Insurance Commissioners and the members of Insurance Committees. Mr. MASTERMAN, who replied, after thanking the proposer for the praise he had bestowed upon the Chancellor of the Exchequer, said that 95 per cent. of insured persons had chosen an approved society through which to receive their benefit. (Out of thirteen and a half millions, six millions and a quarter remained in or had chosen membership of friendly societies; one and a half million persons were insured through trade unions, or more than double the number previously insured for sick benefit through such unions, and four and a half million insured persons had been so insured through industrial companies. He concluded by saying that an amending Act would be introduced this year, and it might be that life insurance would eventually be added to sickness benefit.

BRISTOL.

Under the heading of "Friendly Society Gossip" a very partisan account was published in the *Bristol Evening News* on April 1st of the recent rejection of a scheme brought forward to take the place of the panel system in Bristol. It is unfortunate that such a one-sided statement should have been put out, for not only does it tend to foster in the minds of those working the friendly societies the idea of antagonism between the medical profession and the societies, but there are grave inaccuracies of fact. Perhaps "Gossip" is an unintentionally fair word to use, for information received through that source is renowned for its inaccuracy. Every one knows that the panel system was on trial for three months, and that the Commissioners had the power at the end of that time to accept any scheme proposed by the medical profession, provided the general principles of the Act were observed. Such an alternative scheme was suggested to the medical men of Bristol by the Local Medical Committee, and though it was not generally acceptable a very considerable minority voted in its favour, and were prepared to work it. What is implied by the comment in the "Gossip" by the statement that several members of the Local Medical Committee were also members of the Medical Federation is difficult to fathom, for there is no reason why they should not be. There can be no harm in belonging to any society created to look after the interests of the medical profession, and we believe that friendly societies perform the same function for the laity, and particularly for those who benefit under the Insurance Act.

The criticism that "the new scheme was a direct inducement for prolongation of illness" is not founded on facts, and we can only conclude from this statement that the writer of the "Gossip" has not mastered even the outlines of the scheme, for even those who spoke against its acceptance could not bring this charge against it. The doctor "who cured his patients quickly would receive the lowest remuneration and vice versa" again shows how shallow has been the attention which the writer has given to the details, for the essence of the proposals was that the payments were made on sickness incidence and not for attendance. The principle was that each patient was to be counted once whether one or any number of visits were paid him, and that at the end of the quarter each doctor sent in his list of names and the payments were made in proportion to the number of names. It is obvious that with a small number of days of sickness the doctor would get more than he would if the incidence were heavy. The suggestion in the "Gossip" is the exact opposite of what would really happen. As a matter of fact this scheme has been worked in the Midlands for a long time, and, it is believed, satisfactorily. An attempt is also made to make capital out of the suggestion that the doctors should have the overlooking of their records by the Local Medical Committee, a body, it will be remembered, elected by the local practitioners, on the plea that doctors do not always agree. Inspection of records at all will be very distasteful, but it would be infinitely more satisfactory to be tried by one's peers than by a person whose knowledge has been gathered from popular works on medicine, or by persons who rely on gossip or even by the official of the friendly society,

who only too often in the past has shown himself none too friendly. Another misstatement is "that the money which these methods would cost was to come out of the doctors' pockets—they were to pay for their detective supervision," for the medical men were told that the Local Insurance Committee had undertaken to defray the cost if they desired it.

Articles of this type, full of inaccuracies and of the spirit that creates a feeling of distrust between the doctors and the societies, are much to be deprecated; they do no good, and are often, as in this case, written in a tone that tends rather to discord than co-operation.

REPORTS OF LOCAL ACTION.

LONDON.

CONFERENCE OF PRACTITIONERS ON THE LONDON PANEL.

A CONFERENCE of medical practitioners on the panel, called by the Local Medical Committee for London, was held at the Caxton Hall, Westminster, on April 8th. Several hundred medical men attended, the large hall being well filled. Mr. J. A. Dawes, M.P., the Chairman of the London Insurance Committee, who had promised to preside, having been detained by parliamentary duties, Sir SHIRLEY MURPHY was voted to the chair.

At the outset a critical element made itself felt in the meeting, and questions were directed to the chair from various parts of the hall inquiring the name of the body calling the meeting, its mode of constitution, and whether it had been recognized officially as the Local Medical Committee for London. Dr. B. A. RICHMOND, one of the honorary secretaries, referred questioners to a report to be presented as an answer to the inquiries, and said the committee had not been recognized as the Local Medical Committee for London. There was considerable interruption of the speakers throughout the meeting.

Report as to Action Taken.

The report of the honorary secretaries stated that the Committee was elected at two conferences held at the County Hall on December 31st and January 1st last, to which those medical practitioners who expressed their willingness to negotiate as to the terms of service under the Insurance Act were invited by the County Insurance Committee. The first meeting was held on January 7th, when the Committee decided to apply for statutory recognition under Section 62 of the Act. The medical representatives on the District Insurance Committees were chosen by the Committee, and their names submitted to the London Insurance Committee.

The question of the appointment of the medical service sub-committee was referred to the newly-elected body by the Insurance Committee at an early date. The advantages of such a committee had been already clearly demonstrated. A pharmaceutical subcommittee was appointed, and agreed upon a Pharmacopoeia of useful mixtures. Copies were available for the use of practitioners in the county and elsewhere. Various matters were discussed with the London Pharmacists Association in connexion with the dispensing of medicines to insured persons. The Committee, at the request of the Insurance Committee, considered the model rules for the administration of medical benefit, and finally decided upon the form which appeared in the panel list. The question of fixing an income limit was submitted to the Committee by the Insurance Committee, and it was resolved to fix the income limit at £160.

The Committee made representations as to the simplification of book-keeping, and had interviewed the Commissioners with regard to obtaining statutory recognition. The Committee desired to acknowledge the consideration and co-operation it had always received from the County Insurance Committee.

The Committee had always had in mind the question of increasing its numbers so as to make it fully representative of all the medical interests in the county. It had been suggested that the medical men of each of the twenty-nine boroughs be asked to elect one representative from each district; that the general hospitals be asked to elect one member of their staffs, and that a number of general practitioners not on the panel should be co-opted on to the Committee.

The very important question of the allocation of the balance of monies in the medical benefit fund and the allocation of insured persons who had not chosen their doctor had been recently considered. The Committee had made strong representations to the Insurance Committee. The balance of money undivided would be allocated at the end of the quarter, but the allocation of insured persons to doctors would be carried out after consultation, and in the manner laid down by the Local Medical Committee, which would act in co-operation with the District Medical Committee.

Relations with the Insurance Committee.

Dr. J. H. KEAY (Greenwich), as Chairman of the Committee, introduced the report. He thought that any

doubts as to the status or influence of the Committee would be set at rest when he stated that the Insurance Committee had consulted the Committee in everything appertaining to medical benefit, and in every instance had accepted the advice tendered. The Committee had proceeded on the basis that the Act would be worked and that a panel would be formed; it had laboured diligently, hoping that ultimately a sadly disunited profession would become reunited. Unity would never be achieved by depreciating the character and capability of those members of the profession who were on the panel, or by demanding differential treatment for those outside the panel. Dr. Keay claimed that after experience of the working of the Act, medical opinion in London was now less hostile. The profession must set aside differences and work unitedly to secure the best possible terms for its members under the insurance service and in the new amending Act.

The report was received.

Arrangements for the Future.

Dr. COODE ADAMS moved the following resolution:

That this meeting of London medical practitioners tenders its hearty thanks to the Committee appointed in January last for the very valuable work done, and hereby requests the Committee to continue to act for the present.

Dr. Adams urged that it was essential to continue the work of the Committee until permanent arrangements were made, in order that the interests of the profession on questions arising in connexion with the working of the Act might be protected.

Dr. BRACKENBURY seconded. He said the profession would have to resist a tendency to smooth away difficulties in working the Act by whittling down the rights of doctors.

Dr. CARDALE moved an amendment:

That the Committee be not continued in office, but that a new committee be appointed to consist of representatives to be elected locally by the Local Medical Committee of each borough council, or—if no such committee existed—by the practitioners on the panel resident in and practising in such borough, the number for each borough being one for each 50,000 insured persons, or part thereof.

Dr. T. F. KEENAN seconded.

Dr. GORDON LANE declared that the Local Medical Committee as at present constituted did not represent more than one-tenth of the practitioners of London. He criticized the methods of nomination at the conference which appointed the Committee.

Dr. B. A. RICHMOND said the Committee fully realized its unrepresentative character; this was due to the fact that at the time it was formed only a comparatively small number of practitioners had decided to work the Act and took any part in the election. He denied that there was anything underhand in the conduct of the election or the nominations. The present organization left itself entirely in the hands of the meeting with regard to the election of a new committee.

The amendment was carried with the addition of the proviso that the election of the new committee should take place in May. The motion as amended was then adopted.

Financial Proposals.

The Finance Committee proposed that to defray the expenses of the Committee every medical man on the panel should be asked to give his written consent to a deduction of 1d. in the pound from the sums paid to him under the Act, the maximum payment in any year to be £1, and the deduction to be made by the Insurance Committee. This was accepted, a motion to fix a minimum of 10s. being rejected.

Address by Dr. Addison, M.P.

The prearranged business having been concluded, the CHAIRMAN invited Dr. Addison, M.P., to address the meeting.

Dr. ADDISON said the public interest in regard to the Insurance Act could be best served by making the conditions of medical service attractive. It would be his constant endeavour in Parliament to promote that object, and to secure the removal of every legitimate grievance. The system of the panel list had only been inserted in the Act by the Government at the request of the British Medical Association. He did not think at the time that it was the best system, but as

the medical profession had asked for it, he put his own opinions on one side. He believed the Act would provide better security for the profession, and that out of it might grow an insurance and superannuation scheme for every medical man taking service under the Act. A more efficient nursing organization could also be provided, and this would lessen the labours of the medical profession.

Renewals of Service by the Profession.

It was announced by Dr. RICHMOND that on April 8th there were 1,282 medical men on the London panel. The renewals so far numbered 1,074 and only 9 withdrawals had been received.

A vote of thanks to the Chairman concluded the proceedings.

SCOTLAND.

MILEAGE.

The Intelligence Department of the National Health Insurance Commissioners has sent out the following statement:

The end of the three months' provisional period for which medical men joined the panels of Insurance Committees is approaching, and practitioners all over Scotland are now considering the question of a further term of service. It is believed that to the majority of doctors the problem presents no obstacle; in the towns especially the results of the trial engagement have been satisfactory. County doctors, however, while ready in most cases to concede that the calls upon their time by insurance patients have not as a whole been unreasonable, and that the modification in clerical work proposed by the Commissioners is likely to lighten their labours, have felt that they were still confronted by a most palpable difficulty from which the paths of their city brethren are free. That difficulty is mileage.

From a statement issued to medical practitioners on December 20th last it may be gathered that the Scottish Insurance Commissioners have been fully mindful of this important problem. On that date they wrote as follows:

We have received numerous representations from rural practitioners in Scotland as to the difficulties which they experience in visiting patients at a distance. We have carefully considered the whole question, and have made communications to the Government, as a result of which a Special Committee was appointed to deal with the Highlands and Islands. We understand that the Committee's report is on the point of being submitted to the Government.

At the same time, through our own staff, we have inquired into the conditions prevailing in rural Scotland generally, with the view of estimating a reasonable allowance towards the cost which mileage entails. Our inquiries are approaching completion. They will shortly be placed before the Government, who have already made it known that a Treasury grant will be available for the payment of mileage. The basis of payment and the total amount payable will be made known in due course. It will suffice in the meantime to say that the special grant for Scotland will be substantial, and may be expected to be sufficient to meet all reasonable demands.

The Treasury grant is to be applied in sparsely populated areas. There is scarcely a county in the whole of Scotland but has districts which may be so described. Thus the counties of Aberdeen, Forfar, Perth, Lanark, Roxburgh, Berwick, Dumfries, Kirkcudbright, Wigton, and others would all be open to receive in due course their share of the mileage allowance. Where difficulties are greatest the grant will be of most service. It will help to indemnify the country doctors for the distances which they travel and the hardships which they undergo in visiting their remoter patients.

Subsequent events would appear to show that the representations made to the Government by the Commissioners have met with a favourable reception. In the supplementary estimate for 1912-13, under the heading "National Insurance Special Grants in Aid," the following items occur:

| | |
|---|---------|
| Highlands and Islands (for mileage and other special services) | £10,000 |
| Mileage fund (Great Britain, excluding Highlands and Islands) | 50,000 |
| | £60,000 |

With reference to the Highlands and Islands two points should be noted:

1. That the £10,000 is for insured persons only. It is irrespective of any grant which may be forthcoming as a result of the report of the Highlands and Islands Medical Service Committee, of which Sir John Dewar was chairman.

2. That it is not for mileage only, but also for special services, which will enable the Commissioners, by whom the fund is to be distributed, to take into account any exceptional difficulties which doctors may have to encounter in reaching their patients.

With reference to the mileage fund of £50,000 for the United Kingdom, excluding the Highlands, it is a substantial sum, and will, no doubt, be welcome to the medical profession. But it stands as a total figure, and Scottish doctors have been in suspense to know whether their claims will receive due recognition, as against the claims by English and Welsh doctors, in the division of the grant between the countries. The Scottish Commissioners have announced that the momentous partition has now been made, and that Scotland's share will be £16,000. That is to say, £16,000 will be available to defray the cost of mileage in the Scottish Lowlands in each year. This must be held to be an ample, and indeed a generous, allowance.

Highlands and Islands.

The £10,000 for the Highlands and Islands will fall to the share of the counties of Shetland, Orkney, Caithness, Sutherland, Ross and Cromarty, Inverness, Argyll, and possibly part of Perth. In distributing the amount among doctors, the Commissioners will have to deal with conditions of the utmost diversity. It is understood that they have detached a staff of inspectors, who are now hard at work in all the Highland counties computing the distances to be travelled by doctors, noting the facts as to routes by road or foot track, journeys by moor and mountain, ferry crossings over lochs and straits, and sea passages to the scattered islands of Orkney and Shetland and the Inner and Outer Hebrides. It is stated that a number of special cases have already come under notice, such as ferrying motor cars over lochs, visiting sick persons at high altitudes, crossing to certain solitary islands, and other comings and goings on the perilous seas of the remote North and West.

From the questions which are being put by the Commission's officers it would appear that miles over three from the doctor's house are to be taken for ordinary mileage, while any sea journey, whether within or without the three-mile limit, is to count as a separate claim. But though such standards are doubtless necessary as a primary basis for distribution, it should be noted that the grant to the Highlands is for special services as well as for mileage. It should therefore be open to the Commissioners to deal with each case on its merits within the limits of the fund, and to take account of the exceptional circumstances apart from the rigid rule of distance.

Meantime, it remains to be seen how the distribution will work out. To this end, detailed calculation will be required, and the results can scarcely be forthcoming immediately; but, in view of the small population of the Highland counties, as a whole, the relatively large population in Inverness, Campbeltown, Oban, and other townships, for whom no mileage will be payable, and the relatively small proportion of insured persons to population in the area generally, there are grounds for the expectation that the £10,000 will provide a most substantial recompense to Highland doctors for the distance, outlay, and expenditure of time and energy involved in visiting their insured patients.

Lowlands.

The grant to the Lowlands—that is to say, to the rest of Scotland excluding the Highlands—is £16,000. The word Lowlands may be used in this case for the sake of brevity and convenience. It is, in fact, a misnomer, for it includes such places as Strathdon, in Aberdeenshire, where people travel in sleighs in winter; Tomintoul, in Banff, where also the winter is most rigorous; and the Island of Arran, whose rugged contours are essentially Highland in character. Indeed, the highest peak in the British Isles, excepting Ben Nevis, is situated in the Lowlands, as above defined.

Such an area may be expected to present the most varied conditions. Outside the towns the population is in general sparse. This point is of importance, for the grant is payable in sparsely peopled areas.

The counties of Banff, Aberdeen, and Bute have already been referred to. The uplands of Nairn, Elgin, Kineardine, and Forfar are beyond question sparsely peopled. Some

parts of Fife are thinly inhabited, and Kinross and Clackmannan, where they lie on the Ochils, have similar features. Great areas of the Lothians could clearly come under the same description.

The population of Peebles, Selkirk, Berwick, and Roxburgh is essentially sparse in distribution. In Roxburgh it is understood that there are considerable villages without a proper access road. In Perth, Stirling, and Dumbarton there are wide tracts of moor and mountain. Lanark, Renfrew, and Ayr, though locally populous, include much lonely upland. Portions of Dumfries are remote and isolated, and Wigton and Kirkecubright contain the Southern Highlands, where roads are few and railways far off. It would appear that country doctors in all the counties named might properly advance a claim to share in the grant in respect of their patients who reside more than the stated distance from the nearest panel doctor.

The inquiry now in progress in the Highlands will presumably be extended in due course to the Lowlands, with a view to the distribution of the fund among the doctors on a basis which will help those whose need is the sorest.

Here, again, it will remain to see how the figures will work out. But it is understood that in course of a preliminary investigation made by the Commissioners last year with respect to the Lowland counties, the total mileage which emerged was such as to justify the expectation now that the sum of £16,000 will prove to be sufficient to meet all reasonable demands.

In conclusion, the financial position may be looked at in another way. Of a total sum of £60,000 per annum to be devoted to defraying mileage in the United Kingdom, Scotland is to receive £26,000, or nearly one-half. Even after allowance has been made for the special conditions of the country as compared with England and Wales, it seems that country doctors in Scotland have good reason for satisfaction in that their claims have received such full recognition. They should carefully note further that all the sums named in these remarks are over and above the 2s. 6d. added by the Treasury to their capitation fee.

CONFERENCE OF PANEL CHEMISTS.

A largely attended meeting of panel chemists from all parts of Scotland was held in the Pharmaceutical Society's Hall, Edinburgh, on March 31st. Mr. J. P. GILMOUR, Glasgow, Chairman of the Pharmaceutical Standing Committee (Scotland), presided. Mr. JAMES LEISHMAN, Chairman of the Scottish Insurance Commissioners, addressed the meeting and answered a large number of questions. After awarding thanks to Mr. Leishman, the meeting considered what action should be taken in view of a request from Insurance Committees to sign an extension of the agreement for the supply of drugs and appliances for insured persons for a further period of nine months, so as to complete the first medical year. Ultimately the following resolution was unanimously adopted:

This general meeting of Scottish panel chemists adheres to the protest formerly made that the existing drug tariff is not sufficiently remunerative to secure an efficient pharmacy service. In view, however, of the incompleteness of the evidence and the difficulties in the way of an adequate adjustment of terms for the remaining nine months of the first medical year, and of the concessions contained in the letter of March 29th from the Insurance Commissioners and supplemented verbally by the Chairman of the Commissioners, and of a proposed conference with medical practitioners to consider the whole case, this meeting resolves to recommend Scottish panel chemists to sign an extension of the agreement for nine months, subject to the aforesaid concessions being approved by Insurance Committees and without prejudice to the claim for more adequate remuneration in any future agreements.

It was reported to the meeting that Scottish pharmacists strongly objected to the regulation transferring the dispensing of medicines to medical practitioners in the case of persons residing more than one mile from a chemist's shop, and the following resolution was unanimously adopted:

This meeting of Scottish panel chemists protests against the alteration of Regulation 30 (1) subsequent to its approval by the Pharmaceutical Standing Committee on Insurance, and without again conferring with them. Further, this meeting demands the repeal of that portion of the regulation added under the aforesaid circumstances which allows a medical practitioner to claim to supply medicines for all insured

persons residing more than one mile from a chemist's shop at a capitation fee of 2s. This provision is contrary to the principle of free choice of chemist secured to insured persons by Regulation 34, is a hardship to sick insured persons, inconsistent with the promises of the Chancellor and the provisions of the Insurance Act as to the separation of the prescribing from the dispensing of medicines, and particularly in Scotland, a great injustice to chemists on the panel who had contracted to supply medicines and appliances to insured persons, many of whom had been regular customers for years, and desire to remain so.

IRELAND.

MEDICAL CERTIFICATES.

LAST week the Insurance Commissioners of Ireland issued further circulars to the medical profession throughout the country, enclosing a copy of a resolution of the Conjoint Committee recommending the scheme of the Commissioners as regards the distribution of the £50,000 to be approved of provisionally; also stating that in accordance with a request from the Conjoint Committee the constitution of the Committee of Complaints had been changed in order to correspond with the method adopted in England, and that the date for notification of consent to join the panel had been extended to April 8th.

Throughout the whole country meetings of the Local Medical Committees and of the medical practitioners of the various counties have been held, at which resolutions have been passed unanimously refusing the offer of the Insurance Commissioners relative to payment for certificates as totally inadequate, and refusing to form panels until the demands made by the profession last summer in Dublin are acceded to. In Queen's County the doctors passed a resolution drawing attention to the great increase in the work and duties of the vast majority of Irish medical practitioners, owing to the repeated visits at long distances which they are obliged to pay to many insured persons, not for the object of affording them medical relief, but solely for the purpose of certification required by the various approved societies. So far it is only in a few of the city districts that it has been decided to form panels.

Resolutions refusing to form panels have already been passed in Carlew, Dublin, Galway, North and South Tipperary, Tralee, Tyrene, and Wexford. In the city and county of Cork the position is not clear.

A meeting of the Dublin County Borough Local Medical Committee was held in the Royal College of Surgeons on April 2nd, at which it was stated that only eleven doctors had signed the agreement to form a panel for Dublin; as there are some 80,000 insured persons in Dublin, it is quite evident that this number would be totally inadequate to form an efficient panel for the purposes of certification. The meeting was large and representative, and the following resolutions were passed:

1. That we reject as being totally inadequate the terms offered by the Irish Insurance Commissioners for certification, and decline to put our names on the panel unless, and until, the minimum terms agreed to at the general meeting of the profession in Ireland be conceded; and that we call upon all medical practitioners in this district to loyally adhere to this resolution, and any who have put their names on the panel to withdraw therefrom.
2. That this meeting of the profession in Dublin expresses its fullest confidence in the Conjoint Committee, and is of opinion that it acted to the best of its abilities under difficult conditions.

Meetings of the Dublin Medical Committee were held during the week at the Royal College of Physicians, and it was unanimously decided to refuse to grant certificates for any purpose under the National Insurance Act. Of the eleven Dublin doctors who have signed the agreement to go on the panel, it is understood that some at least did so under a misapprehension, and will at once resign and fall into line with the majority of the profession. It was stated that the Commissioners may decide to pay medical practitioners according to the number of certificates issued instead of according to the number of persons insured.

At a meeting of the Poor Law Medical Officers' Subcommittee of the Irish Medical Association, held on April 3rd, the following resolutions were passed unanimously:

1. That the Poor Law Medical Committee regard the invitation of the Irish Insurance Commissioners to Irish medical practitioners to go on a panel for medical certification as quite unnecessary since medical benefits do not apply to Ireland, and since the principle is recognized that it is only the medical attendant can certify on the

terms agreed upon at the delegates' meeting. Since the panel system under these circumstances is adopted by the Commissioners for intimidatory purposes, we strongly condemn their action, and promise it our strongest opposition.

2. That we congratulate the Irish medical practitioners in their response to the Poor Law delegates' meetings in refusing to go on the panel.
3. That, in the case of a dispute arising between a friendly society and its medical officer on a question of fees, we pledge ourselves not to apply for or accept the position. An agreement to be signed to that effect.

FRIENDLY SOCIETIES AND THEIR AGED AND INFIRM MEMBERS.

THE following letter has been received in reply to the further communication addressed by the State Sickness Insurance Committee on March 27th to Mr. Masterman, Chairman of the National Insurance Joint Committee, and published in the SUPPLEMENT of March 29th, 1913, p. 285:

National Health Insurance Joint Committee,
Buckingham Gate, London, S.W.

April 2nd, 1913.

Sir,

Mr. Masterman asks me to reply to your letter of the 27th March, as to the medical attendance of uninsured members of Friendly Societies.

Mr. Masterman agrees that no useful end would be served by prolonging the correspondence on this subject. The position seems to be quite clear. Take for instance, a doctor who has been attending 1,000 club members for whom he has received about 4s. per head for both medical attendance and medicines. As a result of the contributions from the Exchequer for insured persons he will now be receiving 7s. to 7s. 6d. a head for the medical attendance only for say 950 of these same persons who are insured. That would appear to be no adequate reason for his demanding an increase of about 4s. a head in respect of the remaining 50 who are not insured and whose medical attendance is therefore a charge falling either upon the private funds of their societies at the expense of their other benefits or directly upon themselves.

As I said in my last letter Section 15 (2) (c) of the National Insurance Act only contemplates an option to Societies and does not in any way expressly or by implication make it obligatory for them to pay as high a rate for these uninsured members as for insured persons.

Yours faithfully,

J. A. SALTER,
Private Secretary.

The Medical Secretary,
British Medical Association,
429, Strand, W.C.

INSURANCE ACT IN PARLIAMENT.

AN INSURANCE ACT AMENDING BILL.

AS announced by Mr. Masterman at the dinner of the Faculty of Insurance, a measure is under consideration for amending the Insurance Act in certain particulars. We understand that an important item in the projected measure will be altered arrangements for dealing with casual labour and for avoiding the hardships which the Act occasions in many of these cases. With a view to avoiding workers putting stamps on at their own expense in order not to be prejudiced in obtaining employment after the beginning of the week, a scheme for the institution of a day stamp has, we believe, been under consideration. It is doubtful whether opinion is yet sufficiently crystallized as to be able to say in what respect the medical provisions require amendment with a view to promoting smooth working of the Act and removing grievances. The powers of the Commissioners, without alteration of the Act, are very wide in certain directions. The elaboration of a scheme for providing medical attendance for insured persons who move from one part of the country to the other and which will also be satisfactory to medical men at the seaside and other places, has been the subject of detailed consideration by the Commissioners before and since the recent meeting of the Advisory Committee; but we are not able to say whether it has been determined that it would require any amendment of the Act. It has been contended that the formation of a pool in respect of these persons out of which

payments could be made on a payment for attendance system would probably operate most fairly on the whole.

INSURANCE COMMITTEE (MINUTES).

In reply to Mr. Worthington-Evans as to whether the minutes of Insurance Committees are open to the inspection of any insured person in the same way as the minutes of municipal bodies are open to the inspection of rate-payers, Mr. Robertson said that the committees are not required to allow inspection of their minutes, but their meetings are usually open to the public, and the minutes are read and the proceedings generally open to these present, and might be reported in the press.

ADMINISTRATION OF MEDICAL BENEFIT.

Post Office Servants.

In reply to Mr. Wardle, who inquired whether the Postmaster-General would consider the advisability of permitting a choice of doctors to postal employes from the panel in the various districts, Mr. Herbert Samuel said that Post Office employes who were insured persons might, if they so desired, select as their medical attendant any doctor on the local panel. He saw no reason for making any change in the rule that uninsured Post Office servants who were granted free medical attendance should receive it at the hands of the Post Office medical officer.

Persons Making their own Arrangements.

Mr. MacCallum Scott asked the Secretary to the Treasury: (1) Whether, in the opinion of the Insurance Commissioners, the system of medical benefit successfully worked for the past ten years by the Scottish Clerks' Association, whereby members called in their own doctors and had refunded to them by the society the doctors' fees and cost of medicine up to 4s. per visit, is a suitable one through which to permit insured persons to make their own arrangements under Section 15, Subsection (3), of the National Insurance Act, and whether the Commissioners consider that this is a suitable subject on which to make suggestions to the Local Committees; and (2) whether he is aware on what grounds the Glasgow Insurance Committee has refused to permit insured members of the Scottish Clerks' Association to make their own arrangements for medical attendance under Section 15, Subsection (3), of the Act, in accordance with the system of medical benefit successfully worked by that society for the past ten years; and, if so, will he state what are the grounds of objection?—Mr. Masterman: As I stated in answer to my hon. friend on March 27th, it is primarily the duty of the Insurance Committees concerned to consider whether, in view of these arrangements and of any other local circumstances, members of the association could properly be allowed to make their own arrangements under Section 15 (3) of the Act, and the Scottish Commissioners, after considering all the circumstances, do not feel justified in interfering with the discretion of the Insurance Committees in the matter. I understand that a number of members of the association have, in fact, received permission from the Glasgow Insurance Committee to make their own arrangements with doctors not on the panel under Section 15 (3) of the Act, and that the period of application was extended for them from January to April 14th.

Certificates from Doctors not on a Panel.

In reply to Sir William Bull, Mr. Robertson said that the acceptance or refusal of a certificate of a particular medical man whether on the panel or not was in the first instance for the approved societies to decide; otherwise he said there was nothing to add to the previous answers on this subject, but he stated that the Government auditors would not look to the secretary to refund money paid on certificates of non-panel doctors as having been unlawfully paid.

Chemists (Convictions).

In reply to Mr. King, who inquired whether if an offence was proved against a firm of chemists for not supplying insured persons with medicine in accordance with the prescription, the Insurance Commissioners had power to remove such a firm from the panel, and whether they would take steps occasionally to test the drugs supplied. Mr. Robertson, answering for Mr. Masterman, said that the Insurance Commissioners had power after inquiry to remove a chemist from the panel if his continuance

thereon was likely to be prejudicial to the efficiency of the service and could receive representations in respect of complaints from any responsible source. He also said that it was the duty of the Insurance Committee to take such steps as were necessary to insure a proper and sufficient supply of drugs and medicines.

Value of Medical Practices.

In reply to Mr. King, who enquired whether he was aware that medical practices had increased in value owing to the National Insurance Act, and if he would consider the propriety of imposing an increment duty on transferred medical practices in the forthcoming Budget, Mr. Lloyd George replied that he was aware of the facts referred to, but was unable to adopt the suggestion.

MATERNITY BENEFIT.

In reply to Mr. Watt as to whether any approved societies in Scotland were administering the maternity benefit otherwise than in cash, Mr. Masterman said that no full information was yet available, but that the matter was within the discretion of the societies as approved by the Act, and he believed that some of the societies were giving a part of the benefit otherwise than in cash, as, for instance, by payment to a doctor or in providing necessities.

SANATORIUM BENEFIT.

Tuberculosis (Wales and Monmouthshire).

In reply to Mr. Haydn Jones, Mr. Masterman stated that the Exchequer grants for Wales and Monmouthshire could be pooled by the Welsh Commissioners, and that it was open to the Commissioners to approve of a conjoint scheme as applied to Wales as a whole.

CORRESPONDENCE.

DR. CHARLES BUTTAR (London, W.) writes: I wish that it were possible to rebut Dr. Courtenay Lord's accusations of apathy, somnolence and lack of interest in things concerning the Insurance Act, and to offer him assistance in the splendid fight that he and his friends are waging in Gillingham. But I fear that many facts combine to render difficult the strong action required for success. The medical profession has always been at heart individualistic; hence it was unprepared to meet a collectivist attack based on the principle of so-called State control of everything. The only body in existence to deal with the attack was an impossible democracy without a leader; and the members of this democracy probably would not have recognized a leader even if one had been forthcoming. Medical men are too much occupied in their own struggles for existence to be able to devote the necessary time to organizing a proper campaign; they are not wealthy enough to find the money for their defence; their democratic body is without any really strong business man to guide and control the various departments, and to keep in touch with the outer world; infinite time is wasted in reforming or in revising rules, or in producing voluminous reports which nobody reads; and a large income is spent in filling wastepaper baskets.

So nebulous is the policy of the Association that probably no one could say definitely at the present moment whether the Association represents those who still maintain their freedom and those who are unwilling servants under the Act, or whether it ought not to be regarded rather as a branch of the National Insurance Practitioners' Association.

At a recent Representative Meeting I divided the profession into six groups, so far as concerns the Insurance Act:

1. Those honestly in favour of the Act and Regulations. These men, I pointed out, are Socialists, and few in number, but entitled to the respect due to honest convictions, though regarded by most people as misguided enthusiasts.
2. Practitioners openly out "on the make." This group also, in my innocence, I suggested was not numerous. I regret to say that the suggestion was received with some incredulity.
3. Those absolutely against the Act and Regulations as they stand at present, but forced, through economic pressure and the methods of deceit and intimidation employed by various authorities, to take service.

4. Those loyal persons affected by the Act, whom no threats or personal loss will induce to abandon the attitude they have taken up.

5. Certain persons whom I described as philosophic anticollectivists, whose loathing for systems of government that take away all sense of responsibility and independence from the community, and that deprive an honourable profession of its freedom, is so great that they will sacrifice time and money in the fight.

6. Those members of the profession who are indifferent (because unaffected personally) or indolent. To this class, I fear, belongs the majority of those whom we are accustomed to regard as the heads of the profession, men of light and leading, who by their spine attitude have allowed the prestige of the General Medical Council, of the universities, and of the councils of the colleges to be seriously lowered.

The time has come, perhaps, when we must recognize the formation of a seventh group, drawn chiefly from that which stands third on my list. Many of the men who protested most loudly against the Act, who urged the economic pressure under which they succumbed as an excuse for sympathy, have now tasted the sweets of increased remuneration for third-rate contract work, and, being as yet unharassed by lay control, are growing content with selling their freedom for a supposed guaranteed income. These men seem likely to forget the principles for which they fought, they are incapable of looking forward to the troubles that are bound to come, and they are content to go to sleep until another battle begins, when once more they will be loudest in their denunciation of want of preparation. I strongly suspect that some of these men are taking on insured persons of the better class, when they may never have had as patients before, feeling that the unsuitability of such persons for contract treatment is mitigated by the fact that they have dependants from whom money is to be made. Meanwhile, it seems to escape their notice that this insured person and his dependants used to be patients of some neighbour of greater loyalty and steadfastness than themselves, and that if economic pressure was their sole reason for going on the panel, the honourable course would have been to decline all insured persons except their own patients. I am afraid that, after all, my seventh group is not new: it may be simply a rather more contemptible section of the second division.

To those of us who are possessed by some quixotic obsession that the dignity of our profession is worth fighting for there must come at times a feeling of doubt whether the struggle is worth continuing—a thought that it may be well to revert to our individualistic attitude; in other words, join Group 6.

But, before doing so, it is perhaps worth while trying to combine the better men, both on and off the panels, into some strong body animated by the desire to stir up a feeling of self-respect in the community, and to maintain a consistent and honourable attitude on the part of the profession. At the present moment the British Medical Association is incapable of being such a body, owing to the hide-bound constitution of which Dr. Lord speaks. In two or three years it may have been possible to carry through such reforms as will enable the Association to do better work than manufacturing waste paper. Until that time arrives would it not be well to support the formation of a more active body, primarily devoted to Insurance Act questions, and untrammelled by a constitution that permits of no leadership and of no satisfactory organization? Such a body, having done its work, might then resign its functions to a rejuvenated and strengthened British Medical Association.

Dr. A. E. LARKING (Buckingham) writes: Gillingham is one of the very few towns where the medical men have resisted the Insurance Act to the present time. Those of us who read the *Lancet* as well as the *BRITISH MEDICAL JOURNAL* are familiar with the report of the Special Commissioner appearing in the issue of March 15th. Dr. Courtenay Lord, of this place, writes a very able letter complaining of the attitude of the Association and the "general lack of interest in things concerning the Act." But let him make no mistake—it is only apparent. Judging by the attendance at the meetings of the Local Medical

Committees, I venture to say that the interest is really increasing, and, as the effects of the Act are becoming better known, the powers of the Commissioners more fully realized and the attitude of the various Insurance Committees ascertained, such a body of opinion is being formed among medical men that if the time ever comes for the profession to assert its claims there will be a very different result to that in January last.

Even now, we are all quite willing to put our hands into our pockets to recompense Dr. Lord and others if they suffer loss from their adhesion to the policy of the December Representative Meeting, although we disagreed with it and regretted that hasty decision. It was obvious to onlookers at that meeting that its members were being misled by inexperienced and impractical enthusiasts. I well remember when Dr. Todd was putting the case for moderation how he was interrupted and heckled by a young member. I sincerely trust that a different spirit will prevail next July. The result showed that Dr. Todd was right and the majority of 187 were wrong, and that it would have been far better to have claimed a victory in getting the extra grant and then used all our influence to secure better conditions in the future. However, it was decided to fight, and we were beaten, humiliated, and forced on the panel.

As in nearly all other wars, when the main army is vanquished, isolated conflicts still continue in various parts; and so it is at Gillingham.

The question is, Are they wise in still resisting? Can they hope for success when all the others are beaten? My opinion is that it would have been far better for all the doctors there to go on the panel and endeavour to smash the institution existing there, and not play into its hands by forcing the Commissioners to put in whole-time men, or the Committee to engage special medical officers. In a place where $\frac{1}{2}$ d. a week clubs abound, one would have thought that the doctors would have welcomed being absolved from the bonds of medical aid society committees, would have accepted the 6s. 6d. or 7s. for the workers, and started a public medical service for the wives and families. But they apparently prefer an uncompromising resistance. Let us hope they may do good, and succeed in their object; they know the local conditions best, and we trust theirs is not a forlorn hope.

But there are a few points in Dr. Lord's letter that lead me to think he is taking an unduly optimistic view of the conditions, especially as to men not being available to take on the work. Dr. Lord says the locumtenens market is dried up, assistants unobtainable, and hospitals vainly striving to get resident medical officers. Now is this a fact or not?

It is the ignorance existing on this particular point that is influencing many of us. We read Dr. Lord's statement and then we turn to other parts of the *JOURNAL* and we see actual instances of men having been obtained, we see other instances of a large adverse vote when it is suggested to go off the panel. What we all want to know is, Do these men exist or not? Are they bogeys invented to frighten us, or are there hundreds of men waiting for work? It is quite time that we had some information on this point from the central office. We also want to know whether the sale value of practices is diminishing or not, and whether the money invested in our practices is lost or must be written down or "off."

In the locality in which I practise, a semi-rural one, all the medical men are on the panel. We went on after January 1st only because our neighbours did. The experience seems to be that we shall get more income than before. It is true that we have had more work but it is falling off. What a pity the Act did not come into force in July instead of January! We are getting on very well with the Insurance Committee. It has acceded to our wishes as to certificates, model rules, allocation of those not selecting a doctor, etc., and has courteously replied to other requests. The Insurance Committee is inclined to resent the frequent interference of the Commissioners and to take our side. The policy of the Local Medical Committee is to work amicably with the Insurance Committee. We believe we shall, by tactful and diplomatic dealing, obtain more than by adopting an antagonistic attitude. We intend to give the Act a fair trial. Three months is quite an inadequate time to judge it.

Let us give it at least six or nine months' trial, and then, if it is found to be "unworkable and derogatory to the profession," we shall have such a body of opinion behind us that nothing can withstand our demands.

FUTURE ACTION.

DR. W. E. BARTON (Streatham) writes: I sincerely hope all the members of our profession have read Dr. Courtenay Lord's letter in your issue of April 5th. It is not only a correct statement of the present situation, but is also, I feel perfectly sure, a true prophecy of the future of the profession if the present situation is unaltered or made worse by more men going on the panels.

Beyond this it is a distinct "call to arms" which all of those who are fighting against the degradation of the profession must thoroughly appreciate. We applaud and honour Dr. Lord and his Gillingham confrères for the noble stand they have made against tyranny.

Perhaps, however, the profession has not relapsed into somnolence so much as it seems, and it may even be that this apparent somnolence is only a "calm before the storm," and that the profession means to make another fight for freedom during this month. If this is not the case, its fate will be that of the sleeping Sisera, a fate that it will richly deserve.

Dr. Lord has pointed out what a futile bogey the "full-time man" has turned out to be. This has been proved at Gillingham and elsewhere, and has been proved to the hilt by the admission of Mr. F. G. Harris at a meeting of the Insurance Committee on April 3rd, when he said that after three months' working they had to ask themselves whether they had really got a sufficient and adequate medical service for London; that prior to last January there were no less than 1,500 medical men engaged in contract practice attending club or friendly society members in London, but that now there were only 1,258 doctors on the London panels to attend four times the number of those who had been attended as friendly society members by the 1,500 doctors. Think of it—1,258 doctors to do four times the work that required 1,500 to do!

Now, the large majority of the profession have agreed and still agree that the terms and conditions offered by the Government are degrading and derogatory to the profession and against the interests of public health. The panel doctors generally are clamouring for alteration and amendment: some have already stated their intention of resigning, and no doubt many will do so. The consequence will be that the service will become more unworkable than it is at present, and the Government will have to climb down and offer terms and conditions which can be honourably accepted. The profession will then be in a position to work the medical part of the Insurance Act with dignity and honour.

I appeal now to all who have steadfastly refrained from going on the panel to still refrain, and I appeal to all those who are dissatisfied with panel practice to resign.

We all know that many of those men who are on the panel at the present time could well afford to resign, and that their sacrifice would be a very small one. Let us be united once again now that the "importation bogey" is laid.

Even if we have been beaten in the first round, are we not ready to fight again? Some lines written by Edmund Vance Cooke in the *Windsor Magazine* a few years ago ought to appeal to all of us just now:

You are beaten to earth, well, well what's that?
Come up with a smiling face;
It's nothing against you to fall down flat,
But to lie there, that's disgrace.
The harder you're thrown, why the higher you bounce,
Be proud of your blackened eye,
It isn't the fact that you're licked that counts,
But how did you fight, and why?

Let us, then, make one more stand for the independence, honour, and liberty of our profession—one more stand against the tyranny brought to bear against ourselves and our patients—let us prove that the profession has not relapsed into apathy or somnolence. Let us back up those who have carried on the fight and are still doing so. London has set a good example already, Gillingham has set a better. Let the London doctors now show the staff they are made of by strengthening their majority of non-panelites and by backing up the London Committee and the National Medical Guild, and so win the day.

Association Notices.

ANNUAL REPRESENTATIVE MEETING, 1913.

DATE OF MEETING.

THE Annual Representative Meeting of the Association, 1913, will be held at Brighton on Friday, July 18th, and following days, as may be required.

NOTICES OF MOTION: LAST DAY FOR RECEPTION.

ATTENTION is drawn to the fact that Notices of Motion from Divisions and Branches for the consideration of the Annual Representative Meeting at Brighton in July next, relating to questions affecting the honour and interests of the medical profession or of the Association (By-law 37), must be published in the *BRITISH MEDICAL JOURNAL* not later than the issue of April 19th, and for this purpose should be received by me not later than April 12th, 1913. Notices of Motion proposing to make any addition to, or any amendment, alteration or repeal of any Regulation or By-law, or to make any new Regulation or By-law (Article 31), must be published in the *JOURNAL* not later than the issue of May 17th, and received by me not later than May 10th, 1913.

By Order,

ALFRED COX,
Medical Secretary.

February 4th, 1913.

QUARTERLY MEETING OF COUNCIL.

THE Quarterly Meeting of the Council will be held at Two o'clock in the afternoon of Wednesday, April 23rd, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,

March 13th, 1913. *Financial Secretary and Business Manager.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

EAST ANGLIAN BRANCH.—The spring meeting of this Branch will be held at Colchester on Wednesday, April 30th. Members wishing to read papers or to show cases or specimens should communicate at once with me.—B. H. NICHOLSON, Colchester.

METROPOLITAN COUNTIES BRANCH: EAST HERTFORDSHIRE DIVISION.—A meeting of the Division will be held at 3 p.m., on April 16th, at the Shire Hall, Hertford, to discuss the adoption of Ethical Rules. This Division at present has no rules governing ethical procedure, and it is hoped, in view of the great importance of the subject, that all will make a special effort to be present. A copy of the Model Rules issued by the Central Ethical Committee of the Association appears in the *SUPPLEMENT* of September 21st, 1912; if necessary, I can supply a reprint of the same to any member on application. Agenda: Minutes. Correspondence. Receive reports from the various districts in regard to contract arrangements for attendance upon the uninsured. Letter from the Honorary Secretary of the Hertfordshire Medical Committee in reference to various matters connected with the administration of medical and maternity benefits. Consider the Model Ethical Rules (*SUPPLEMENT*, September 21st, 1912). Any other business.—H. D. LEDWARD, Honorary Secretary, 123, Norton Way, Letchworth, Hertfordshire.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—The next meeting of this Division will be held, conjointly with the City Division, on Friday, April 11th, at 9.30 p.m., at Brooke House, Upper Clapton, by invitation of Dr. Gerald Johnston, when Dr. Hugh Walsham will give an address with lantern demonstration on "Roentgen Rays in Diseases of the Chest."—A. POTTINGER ELDRED, Honorary Secretary.

NORTH WALES BRANCH.—A meeting of the Branch will be held at the Westminster Hotel, Rhyl, on April 15th, 1913, at 2.15 p.m. Luncheon at 1.15 p.m., tickets 3s. The Branch Council will meet at 2 p.m. Agenda: (1) Minutes of the last regular meeting and of the special meeting. (2) Correspondence. (3) Receive the report of the Branch Council. (4) Read financial statement for 1912. (5) To consider, with the view to adoption, the Ethical Rules, as approved by the Representative Body, July, 1912. (6) Dr. Emyr O. Price will move "That all provisions made, and terms arranged between medical practitioners within the area of this Branch and the friendly societies, for the treatment of their disabled and aged members (over 65), shall be provisional only, until the end of the year." (7) Dr. C. E. Morris will move (1) "That this meeting of the North Wales Branch of the British Medical Association is of opinion that free choice of doctor should be allowed to patients in voluntary hospitals in North Wales, that facilities ought to be given in these institutions whereby patients could receive

treatment by their own doctor if so desiring." (2) That the Branch Secretary be asked to send this resolution to all the voluntary hospitals in North Wales, respectfully requesting the managements to give it their sympathetic attention." The following papers will be read: Mr. J. Hill Abram, "Cervical Glands in Abdominal Cancer"; Dr. J. E. Gemmell, "Ectopic Pregnancy"; Mr. K. W. Monsarrat, "Appendix Dyspepsia"; Dr. W. Permewan, "Two Cases of Acute Otitic Infection of the Brain without Perforation of Membrana Tympani"; Dr. W. B. Warrington, "Case of Landry's Paralysis Terminating in Recovery"; Dr. F. P. Wilson, "The Use of Crude Coal Tar in the Treatment of Eczema."—H. JONES ROBERTS, Honorary Secretary, Llywenarth, Penygroes, S.O.

STAFFORDSHIRE BRANCH: MID-STAFFORDSHIRE DIVISION.—A meeting of the Division will be held at the North-Western Hotel, Stafford, at 3.15 p.m., on Tuesday, April 15th. Agenda: (1) Minutes of last meeting. (2) The Chairman will propose and Dr. Hodder will second: "That the Annual Representative Meeting, 1913, rescind that portion of Minute 21 of the Special Representative Meeting held December 21st, 1912, in which the opinion is expressed that the regulations of and conditions of service under the National Insurance Act are unworkable and derogatory to the profession." (3) The Chairman will propose a resolution as to the appointment of Medical Officer to the Rugeley and District Amalgamated Friendly Societies.—A. E. HODDER, Acting Honorary Secretary, Stafford.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

ANNUAL REPRESENTATIVE MEETING AT BRIGHTON.

JULY 18TH, 1913, AND FOLLOWING DAYS.

NOTICES OF MOTION.

The following Notices of Motion have been received for consideration by the Annual Representative Meeting of the Association, to be held at Brighton, July 18th, 1913, and following days:

A.—AFFECTING ARTICLES OF ASSOCIATION.

Eligibility for Membership.

By NATAL BRANCH:

- (1) That the Council of the Association be instructed to take the necessary steps to have Section 4 of the Articles of Association of the British Medical Association deleted, and the following substituted:

"Any Medical Practitioner registered in any portion of the British Empire shall, subject to the By-laws, be eligible for admission as an ordinary Member of the Association."
- (2) That By-law 17 (2) (v) be deleted, and that any other By-law in conflict with the foregoing new Section of the Articles be deleted or so altered as to be in conformity therewith.

- (3) That in applications for membership a declaration should be made that the applicant is registered in a certain portion of the Empire.

Postal Vote in Questions of Urgency.

By LEIGH:

- That power be obtained to provide for a postal vote in questions of urgency.

B.—AFFECTING BY-LAWS OF ASSOCIATION.

Election of Members.

By BUCKINGHAMSHIRE:

- That the election of members be by the Divisions and not, as heretofore, by the Branch Council.

Subscription.

By SOUTH-EASTERN BRANCH:

- That the time has arrived when the Representative Body should seriously consider the advisability of raising the annual subscription.

Amount of Notice required for Special Representative Meetings.

By MAIDSTONE:

- That the following words be added at the end of Paragraph (2) of By-law 36:

In case of urgency the period of notice may be shortened at the discretion of the Council.

Mode of Election of Council.

By BUCKINGHAMSHIRE:

- That the mode of election of the Council be altered so that more notice is given of any vacancy and an opportunity given of publishing the addresses of candidates in the JOURNAL.

*Mode of Election of Members of Council by Groups
in United Kingdom.*

By WEST SUFFOLK:

That By-law 45 be altered to read as follows:

45. (1) The election of twenty-four members of Council by the Branches or groups of Branches and Divisions in the United Kingdom shall be carried out as follows:

(2) Candidates shall be nominated either (a) by a Division or (b) in writing signed by not less than three members of any such Branch.

(3) Such nominations shall be sent to the Association at the Head Office on or before an appointed day, of which not less than fourteen days' notice has been given in the JOURNAL, and to the Secretary of each Division of the Branches concerned.

(4) Voting papers, containing the names of those candidates who have been nominated, together with the names of the Division or members by whom they were nominated, and such other particulars as the Council may from time to time prescribe, shall be sent by post by the Association from the Head Office to each member of every Branch comprised in the Group.

(5) The said voting papers shall be returned to the Association at the Head Office within such time as the Council may from time to time prescribe by notice given as aforesaid.

(6) The expenses of the said election shall be borne by the Association.

*Mode of Election of Members of Council by Groups
not in United Kingdom.*

By BOMBAY BRANCH:

That no alterations be effected in By-law No. 46 (1), (2), (3), (4), and (5), as the present arrangements have worked very satisfactorily.

Reform of the Present Constitution of the Association.

By METROPOLITAN COUNTIES BRANCH:

That the following Report of the Committee of the Metropolitan Counties Branch appointed to consider the reform of the present constitution of the Association be received and considered:

REPORT OF THE COMMITTEE OF THE METROPOLITAN
COUNTIES BRANCH APPOINTED TO CONSIDER
THE REFORM OF THE PRESENT CONSTITUTION
OF THE ASSOCIATION.

DIVISIONS.

(1) The Divisions would consider all matters of local interest and all matters referred to them by the Representative Body and Council. In matters of purely local interest the Divisions should report their decisions to the Branch Council and the Branch Council shall have power to forward reports received direct to the Central Authority, otherwise to consider them from the point of view of its Divisions collectively, and then report upon the whole question to the Central Authority.

(ii) The powers of a Division in ethical matters brought before its notice be limited to the making of necessary preliminary inquiries, and to forwarding complaints to the Branch Council.

(iii) Arrangements to be made for the enlargement of scientific and social meetings, to which non-members resident in the Division would be as far as possible invited.

(iv) The system of wards to be encouraged in each Division.

(v) *Election to Branch Council.*—That each Division be allowed to have one Representative up to 200 members, and an extra Representative for every 200 members in addition or to the nearest 100 over 150 members.

(vi) *Election to Representative Body.*—The Representative Body to be elected directly by the Divisions or group of Divisions in the proportion of one Representative for every complete 200 members.

BRANCH COUNCILS.

(i) To deal, as at present, with finance and boundaries of Divisions.

(ii) To deal with all questions that concern their areas, and to co-ordinate their constituent Divisions, reporting

upon the questions involved to the Representative Body or Council, when it is necessary or desirable or when so directed by either of these bodies.

(iii) To deal with ethical matters arising in the Divisions; the power to go direct to the Central Ethical Committee, and the right of appeal, being preserved as at present.

(iv) *Composition of Branch Council.*—(a) To be composed of one Representative up to 200 members from each Division, and an extra representative for every 200 members in addition or to the nearest 100 over 150 members.

That the President, President-elect, Treasurer, and two Honorary Secretaries of the Branch be *ex officio* members of this Council.

THE REPRESENTATIVE BODY.

(i) *Composition.*—To be composed of Representatives elected directly by the Divisions by postal vote or otherwise, as determined by the Divisions.

(ii) *Duties.*—(a) To meet at least once in every year, but the existing machinery to be altered to enable meetings to be called at shorter notice than is at present possible.

(b) To be an assembly with full deliberative powers, and to be responsible for formulating the policy of the Association.

(c) To appoint the Council.

(d) To be empowered to delegate specific powers to the Council to take action upon its behalf until the next meeting of the Representative Body.

(NOTE.—The calling together of the Representative Body in a crisis may be very disadvantageous to the Association owing to the impossibility of keeping the transactions in any way private, thus involving the disclosure of the opinions and future plans of the Association to those to whom for the time being it finds itself in opposition.)

THE COUNCIL.

Election.—The Council shall be composed of the President of the Association, the President-elect, the Past-President, the Chairman of Representative Meetings, the Chairman of Council, the Past Chairman of Council, and Treasurer *ex officio*.

(i) To be elected by the Representative Body, and at least five-sixths to be members of the Representative Body. Special provision to be made for Colonial Representatives.

(ii) *Duties.*—(a) To carry out the duties assigned to it by the Representative Body.

(b) To appoint standing Committees as at present, such to be reduced in size as far as is compatible with efficiency, and to be composed in the proportion of two members of the Council to three or four members elected by the Representative Body.

(NOTE.—This course would tend to shift some of the burden of work from members of the Council.)

(c) *The Scottish and Irish Committees.*—More use to be made of these Committees, which should, in fact, co-ordinate their respective Branches.

The Scottish and Irish Committees shall have power to co-opt members for local purposes.

(NOTE.—Many questions could thus be speedily dealt with on the spot by those competent to do so, and loss of time and the expense of journeys to London avoided.)

(iii) *The Institution of New Committees.*—(a) To appoint a Parliamentary Committee, with power to co-opt additional members, to maintain and increase the influence of the Association in the Houses of Parliament, to keep in touch with all legislation, existing or proposed, that affects the medical profession, and to perform all such duties as at present are entrusted to the Parliamentary Subcommittee of the Medico-Political Committee.

(b) To appoint a new Committee to organize and control systematic endeavour to awaken and keep awake interest in the Association, and to devise means to make it more attractive.

(NOTE.—Such a Committee should always have ready to date lists of speakers on various subjects, whether medico-political or scientific, who would be willing and able to address meetings in all parts of the country, and it would be part of the duties of this Committee to arrange for interesting and attractive meetings to which non-members would be largely invited. Under the auspices of this Committee a new and valuable special department might be established to deal with all such questions of development, and, in addition, to undertake on behalf of members of the

Association only, the transference of practices, the supply of "locumtenents" and all business of that kind. If this were done at a charge for out-of-pocket expenses only, as might have to be the case, it would be a great boon to many members, and might attract others to join an Association which would be of practical use to them.)

(c) To appoint for the purposes of each lawsuit in which the Association may be engaged, a special small Committee to represent the Association in the matter of conferring with and instructing the Solicitor with regard to the preparation and presentation of the case.

Points to be Considered with Regard to General Reorganization.

(a) The Committee draws attention to the supreme necessity of economy before any question of raising the subscription is entertained.

(b) To consider the appointment of a chief to the Central Office, to supervise and co-ordinate the work, and to ensure that the services of each department shall be readily available for the other departments, and to place the whole office upon a business basis.

(NOTE.—The Committee recognizes the difficulties of such a step at the present time, and offers the suggestion that such difficulties might be overcome, for the time being, by the establishment of a small House Committee to supervise generally.)

(c) The establishment of definite departments and the more definite allocation of duties in the Medical Department, thus abolishing the present system under which all business goes through the hands of one official, and which cramps the development of the department, and throws more work upon the shoulders of one man than is wise or desirable.

The Branch Council is of opinion that it is undesirable to alter the Articles of Association, and the above plan has been proposed in accordance with this view.

C.—AFFECTING ADMINISTRATION OF ASSOCIATION.

Question of Reorganization of Branch and Divisional Areas in United Kingdom.

By SOUTH-EASTERN BRANCH:

That the Association be reorganized into Branches coinciding with the areas of administrative Counties.

By SOUTH-EASTERN BRANCH:

That the present Divisions shall as far as possible be preserved, subject to such alterations in boundaries as will make each Division be contained in a single Branch, and such other alteration as may be required by consideration of administration.

By NEWCASTLE-ON-TYNE:

That the Council be instructed to take such steps as are requisite to make the Divisions of the Association where necessary coterminous with the insurance areas under the National Insurance Act.

By CHESTERFIELD:

That the areas of the respective Divisions of the Association be made co-ordinate or to correspond with the areas of the respective Insurance Committees under the National Health Insurance Act, 1911, and for convenience in carrying on the work of the Divisions and to secure a better attendance at Divisional and Sub-Divisional Meetings that such subdivisions of the respective Divisions as shall prove to be necessary be formed.

Grouping of Branches Outside United Kingdom for Election of Council.

By BOMBAY BRANCH:

That the Colombo, Ceylon, Branch be grouped with the Far Eastern Branches, leaving Indian Branches grouped into one.

Question of Payment for Assistance in Organization and Clerical Work of Divisions.

By CHESTERFIELD:

That Divisions be authorized to engage and pay for assistance in organization and clerical work, and that such payments be made out of the funds of the Association.

D.—AFFECTING POLICY OF ASSOCIATION.

Question of Advisability of Formation of a Trade Union of Medical Practitioners.

By LEICESTER AND RUTLAND:

That it be an instruction to the Council to consider the advisability of forming a union of medical practitioners, registered under the Trade Union Acts, for such of the members of the Association and other medical practitioners as may desire to join such a union.

NATIONAL INSURANCE ACT.

Proposed General Purposes Fund.

By EAST CORNWALL:

1. That the Association take steps to form a fund for general purposes (for example, protective and fighting), on the basis of a scheme suggested in a letter from Dr. Donald F. Shearer (SUPPLEMENT, March 22nd, 1913, page 267).
2. That, in view of the fact that the efforts of the Association were successful in raising the amount set aside by the Commissioners for medical benefit from 6s. to 8s. 6d., each practitioner on the insurance panel should contribute a certain sum per head of insured persons on his list per annum to form and maintain such a fund.
3. That also, if such a fund be inaugurated, those practitioners who have guaranteed to the Central Insurance Defence Fund be exempted from their guarantees.

Amendment of Act.

By LEIGH:

That steps be taken in any amending Act which is brought before Parliament to secure that trade accidents, industrial diseases, misconduct, and miscarriage be deleted from medical benefit under the Insurance Act.

Certificates for Purpose of Sickness Benefit.

By LEIGH:

That no condition be inserted on any certificate issued for the purpose of sickness benefit under the Insurance Act.

By direction of the Chairman of Representative Meetings,

ALFRED COX,
Medical Secretary.

April 16th, 1913.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

NORTH OF ENGLAND BRANCH:

NEWCASTLE-ON-TYNE DIVISION.

At a meeting of the Division, held on March 7th, Dr. J. Leslie Wilson (Newcastle-on-Tyne) was appointed Assistant Honorary Secretary.

Treatment of School Children.—At a meeting of the Division, held on March 27th, Drs. Dagger, Hawthorn, Watson, Farquharson, Andrew Smith, and R. J. Willan were appointed the accredited representatives of the profession to inspect the treatment centres for the treatment of school children at the clinics of the Newcastle-upon-Tyne Education Authority at any time to prevent abuses.

Contracting Out under the Insurance Act.—There was a long discussion with regard to contracting out under the Insurance Act. Dr. RUTTER stated that he intended to bring up the matter of panel doctors not being allowed to contract out at an early date before the Local Insurance Committee. Dr. HUDSON urged that the best means of attaining the desired end was by way of an income limit, as the income limit was at the discretion of the Insurance Committee, whereas contracting out was in the hands of

the Commissioners. The following resolutions were carried:

- That the Division urges the Council of the British Medical Association to use every effort to induce the Commissioners to freely allow contracting out and making own arrangements to all insured persons under the National Insurance Act, and with doctors whether they are upon the panel or not.
- The Newcastle-on-Tyne Division of the British Medical Association regrets that the harmonious and efficient working of the Insurance Act is being jeopardized by the harsh and, in our opinion, unjust interpretation put on Clause 15, Paragraph 3, of the Insurance Act by the Insurance Commissioners, and asks the Insurance Committee to use their influence with the Commissioners to have this difficulty removed.

At a meeting of this Division, held on April 7th, the following resolutions were carried:

- That with reference to those members of friendly societies who do not come under the National Insurance Act, that where the total income is under the sum of £2 per week, the sum of 9s. per head, including medicine, be charged, but where the total income is over £2 per week, that attendance be charged for work done.
- That where payment is to be by attendance, the sum of 2s. 6d. per attendance is to be charged, including medicine.
- With reference to a medical examination of a person entering a friendly society, that the profession charge a fee of 2s. 6d. for such examination.
- That the minimum midwifery fee, where the parent is in receipt of maternity benefit, to be charged by medical men in the Newcastle-upon-Tyne insurance area, be £1 1s., excepting in the case of colliery doctors, where the county resolutions regarding colliery practice are to be followed.

MIDLAND BRANCH:

LEICESTER AND RUTLAND DIVISION.

A MEETING of the Division was held at the Royal Infirmary, Leicester, on April 9th, when Dr. GIBBONS was in the chair, and forty-one members were present.

Election of Representatives.—Drs. Wallace Henry and R. R. Young were elected Representatives of the Division to the Representative Meeting, and Dr. T. Arnold Johnston as Deputy Representative.

A Medical Trade Union.—Dr. HENRY proposed, and Dr. HOLYOAK seconded the following resolution:

- That it be an instruction to the Council to take the necessary steps to form a union of medical practitioners registered under the Trade Union Acts, for such of the members of the Association and other medical practitioners as may desire to join such a union.

Whereupon Dr. BURKITT proposed, and Dr. PIKE seconded, the following amendment:

- In place of "take the necessary steps to form," insert "consider the advisability of forming."

With the consent of his seconder the mover of the resolution accepted the amendment, explaining that it was only desired to again bring the matter up for discussion at the Representative Meeting. The resolution as amended was carried—in favour 41, against 0, neutral 1.

Voluntary Inspection of Infants.—A discussion then took place upon a proposed "baby's welcome." Dr. SPRIGGS having explained the proposed arrangements, Drs. HENRY, BURKITT, STRACEY, HOLYOAK, PIKE, C. H. CLARKE, and DAVIES spoke, and in order to test the feeling of the meeting Dr. SPRIGGS proposed, and Dr. FOSTER seconded the following resolution:

- That this meeting sees no objection to voluntary medical inspection of babies at the schools for mothers under the Leicester Health Society.

Dr. A. V. CLARKE and Dr. DAVIES having spoken, the resolution was lost, 4 voting in favour thereof, and 38 against.

Discussion on Malingering.—Mr. C. J. BOND opened a discussion on malingering. His observations are published at page 810. Drs. A. V. CLARKE, C. W. MOORE, R. R. YOUNG, HERRON DAVIES, BURKITT, PIKE, and the SECRETARY took part in the discussion. Nearly all the speakers laid stress on the importance of the appointment of medical referees, in view of the probable increase of malingering under the National Insurance Act, not merely to act as a deterrent, but to prevent friction between patients and doctors. The SECRETARY intimated that the Local Medical Committee had laid the matter before the Local Insurance Committee, which had viewed the proposal favourably, but had deferred a decision for further inquiry as to ways and means.

SOUTH MIDLAND BRANCH:

BEDFORD DIVISION.

A MEETING of the Bedford Division was held at the Bedford County Hospital on March 13th. Dr. HOLMES was in the chair, and nineteen others were present.

Mileage.—Dr. ROSS opened a discussion on allowance for mileage. He pointed out that mileage was a first charge on the capitation fund, that many present undertook town as well as country work, and if these obtained a mileage allowance it would mean that they would get more for country work and less for town work, that the allowance would be calculated on the basis of the number of patients on the practitioner's list who resided beyond a certain radius, and of the distance of each patient from the residence of the nearest available doctor. Dr. ROSS expressed the opinion that this would greatly complicate the working of the Act and create ill feeling between the county and town practitioners. After a discussion, in which Drs. KILHAM ROBERTS, NASH, BONE, BUTTERS, HOLMES, PARBURY, SANDERS, ROLLINGS, MILBURN, and CLARK took part, it was decided *nemine contradicente* that no extra allowance be made out of the capitation grant for mileage payment.

Certificates.—Dr. ROSS proposed, and Dr. BONE seconded, the following resolution, which was carried *nemine contradicente*:

- That certificates other than those required for the approved society through which the patient draws his sick benefit shall be paid for at the rate of 1s. per certificate.

The Panel.—Dr. ROSS brought forward the question of the action of the Insurance Committee in fixing so early a date for doctors to decide whether it was their intention to remain on the panel. Dr. BONE thought there was no hurry, and pointed out that the Insurance Committee had never met to consider the wishes of the medical men upon matters affecting their interests.

Local Medical Committee.—Dr. BONE brought up the method of financing the Bedfordshire Local Medical Committee which he had suggested, and to which the majority of the members of the Division had agreed. This was a levy of $\frac{1}{2}$ per cent. of the panel receipts upon each member of the Division. Two members who had not signed the undertaking promised to do so.

The Working of the Act.—Various questions concerning doubtful points in the working of the Act were raised and discussed, notably the case of male nurses earning £3 3s. a week; the attendance on patients over 65; the treatment of domestic servants taken ill in one place and claiming attendance in another during convalescence.

STAFFORDSHIRE BRANCH:

SOUTH STAFFORDSHIRE DIVISION.

Contract Practice among Non-insured Persons.

The Executive Committee of the Division met on March 26th to consider the reference contained in the minutes of the last general meeting on February 18th, namely:

That all arrangements for contract practice among non-insured persons be referred to the Executive Committee of the Division.

The HONORARY SECRETARY reported that he had sent out circulars to the members of the Division setting forth the resolutions passed at the last meeting, and read several letters from practitioners commenting thereon.

The Executive Committee, after a long discussion, came to the conclusion that the extension of contract practice among the dependants of the insured, the non-insured, and juveniles was not desirable. The committee therefore recommended as follows:

(a) That such contract practice be undertaken only where it is desired by any organization already in existence and is accepted by the Executive Committee of the Division, and it must include free choice of doctor by the individual, and be subject to an income limit of £160 per annum.

(b) That no new organization be started by any practitioner without the consent of the Division.

(c) That owing to diversity of opinion on the subject of the fees laid down by the last meeting of the Division, the former resolution be rescinded and the following substituted, since by this means only can unanimity be obtained:

That non-insured members of friendly societies and other clubs who were members before July 15th, 1912, and whose incomes are under £160 per annum, be charged at the capitation rate of 8s. 6d. per annum, or if they elect to pay by fees (having pooled their capitation) on a scale equivalent to 8s. 6d. per annum; that all dependants, whether adult or juveniles, be charged 6s. 6d. per annum.

(d) The Executive Committee, having fully considered all the circumstances, and feeling that the terms could easily be made

known to secretaries of existing organizations by the practitioners who formerly held appointments under them, recommend—

That any advertising of these terms by practitioners, either individually or collectively by circular, shall be deemed an attempt to extend contract practice contrary to the desire of the Division, and will be considered a breach of the ethical rules.

It was decided that from 1913 there should be free choice of doctor by non-insured as well as by insured persons, subject to the doctor's consent.

The Secretary was instructed to communicate these resolutions to the secretaries of neighbouring Divisions, in order that practitioners resident therein should not infringe the terms when practising in the area of the Division, and also to all medical practitioners in the area of the South Staffordshire Division.

Association Notices.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of the Council will be held at Eleven o'clock in the forenoon of Wednesday, April 23rd, in the Council Room at 429, Strand, London, W.C.

By Order,

GUY ELLISTON,

March 13th, 1913. *Financial Secretary and Business Manager.*

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

BRANCH AND DIVISION MEETINGS TO BE HELD.

EAST ANGLIAN BRANCH.—The spring meeting of this Branch will be held at Colchester on Wednesday, April 30th. Members wishing to read papers or to show cases or specimens should communicate at once with me.—B. H. NICHOLSON, Colchester.

DORSET AND WEST HANTS BRANCH.—The annual meeting will be held at Bournemouth on May 21st. Notices of motion should be sent to the Honorary Secretary by May 7th. The President-elect has very kindly invited members to luncheon at his house.—FRANK FOWLER, Honorary Secretary, 29, Poole Road, Bournemouth.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.—Dr. J. H. Clatworthy, Honorary Secretary, 145, Denmark Hill, S.E., gives notice that the annual general meeting will take place at the Camberwell Infirmary, Brunswick Square, S.E., on Thursday, May 1st, at 4 p.m., when the executive officers for the session 1913-14 will be elected. The executive have nominated officers, but further nominations will be received by the Honorary Secretary before or at the meeting. The Honorary Secretary will make his annual report, and the meeting will consider the motions for the Annual Representative Meeting at Brighton and instruct the Representatives. Dr. W. J. C. Keats, Medical Superintendent of the Camberwell Infirmary, will demonstrate cases in the wards.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—At a meeting of this Division to be held at the Walthamstow Hospital on Thursday, April 24th, at 4 p.m., a paper on Enlarged Tonsils, Reasons for their Removal, and Methods of Operation, will be read by Mr. Frank Rose, M.A., F.R.C.S.—A. POTTINGER ELDRED, Honorary Secretary.

MIDLAND BRANCH: LINCOLN DIVISION.—The annual meeting of the Division will be held in Lincoln on May 1st.—J. S. CHATER, Honorary Secretary, 169, Monk's Road, Lincoln.

NORTH OF ENGLAND BRANCH: NEWCASTLE-UPON-TYNE DIVISION.—Mr. R. J. Willan, F.R.C.S., Honorary Secretary, 25, Ellison Place, Newcastle-upon-Tyne, gives notice that the annual meeting will be held at the Royal Victoria Infirmary, Newcastle-upon-Tyne, on Wednesday, May 7th, at 8.30 p.m. The business of the meeting will be to elect a Chairman, Vice-Chairman, Honorary Secretary, two Representatives and two Deputy Representatives at Representative Meetings, eight

Representatives on the North of England Branch Council, and twelve ordinary members of the Executive Committee; to receive the annual report; to consider the business of the Annual Representative Meeting; to elect Representatives entitled to inspect the Newcastle Education Treatment Centres; and to propose a new rule making the Honorary Secretaryship of the winter scientific meetings of the Division a separate appointment, and to provide that the incumbent shall be an *ex officio* member of the Executive Committee of the Division.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of the South-Eastern of Ireland Branch will be held in Kilkenny Victoria Hotel on Wednesday, May 7th, at 5.15 p.m., for the installation of President-elect, the election of officers of the Branch for the ensuing year, and any other business.—P. GRACE, Honorary Secretary.

STAFFORDSHIRE BRANCH.—The third general meeting of the session will be held at the Victoria Hotel, Wolverhampton, on Thursday, April 24th. The President, E. C. Stack, Esq., F.R.C.S.I., will take the chair at 5.35 p.m. Living cases will be shown and pathological specimens exhibited, and the following papers will be read: (1) W. Spencer Badger: The Nutrition of Elementary School Children. (2) Frederick Edge: Thrombosis and Embolism after Pelvic Operations. (3) Edward Deaneys: Intestinal Obstruction. Dinner 7 p.m.; charge 5s.—HAROLD HARTLEY, Honorary General Secretary, Basford, Stoke-on-Trent.

ANNUAL MEETING AT BRIGHTON, 1913. THE PATHOLOGICAL MUSEUM.

The following is a list of the Pathological Museum Committee:

Chairman.—Dr. Hobhouse (Hove).
Honorary Secretaries.—Dr. Broadbent and Dr. H. M. Galt (Hove).

Brighton.

| | |
|----------------------------|---|
| Dr. C. F. Bailey | Dr. G. W. Stone |
| Mr. D. E. N. Caugh, L.D.S. | Mr. Toms (Museum and Fine Arts Gallery) |
| Dr. W. A. Griggs | Dr. A. W. Williams |
| Dr. E. R. Hunt | Dr. T. S. Worboys |
| Dr. H. Langton | |
| Dr. G. Morgan | |

Hove.

| | |
|-------------------|----------------------------|
| Dr. W. C. Chaffey | Dr. W. P. Harrison |
| Dr. R. A. Clapham | Mr. R. F. Jowers, F.R.C.S. |
| Dr. A. Griffith | Dr. E. J. Spitta |

Leves.

| | |
|-----------------------|-----------------|
| Dr. J. R. Steinhauser | Dr. H. Vallance |
|-----------------------|-----------------|

Ex officio Members.

The President-Elect.—Dr. W. Ainslie Hollis (Hove).
The Local Honorary Treasurer.—Dr. H. H. Taylor (Hove).
The Local Honorary Secretary.—Dr. L. A. Parry (Hove).

The Committee appointed to organize the Pathological Museum in connexion with the Annual Meeting in Brighton, 1913, proposes to arrange the material under the following heads:

- (i) Exhibits bearing on discussions and papers in the various Sections.
- (ii) Specimens and illustrations relating to any recent research work.
- (iii) Instruments relating to clinical diagnosis and pathological investigation.
- (iv) Individual specimens of special interest, or a series illustrating some special subject.

It is also proposed to make an effort to gather together a series of exhibits relating to Neurology; illustrations referring to Heredity, Mental and Physical Deterioration; series of x-ray and other photographs.

The Committee wishes it to be understood that the above are only suggestions, and if there is any subject of special interest of which specimens can be supplied they will be welcomed.

The Museum will occupy a central position in the same building as that in which the sectional work is carried on, and will be easy of access.

The Committee desires to enlist the hearty co-operation of members, and the Honorary Secretary will be glad to hear from those who are able to make an exhibit. Every care will be taken of specimens, and the contents of the Museum will be insured.

It is hoped that it will be possible for arrangements to be made whereby exhibitors may have an opportunity of demonstrating their specimens.

All communications should be addressed to Dr. H. M. Galt, Honorary Secretary, Pathological Museum Committee, 14, North Street, Brighton.

National Insurance.

NATIONAL INSURANCE ACT, 1911.

PROVISION OF MEDICAL BENEFIT TO TEMPORARY RESIDENTS.

The following Memorandum, 161 I.C., was issued by the Insurance Commissioners, England, on April 17th, 1913:

1. Numerous representations have been received by the Commissioners to the effect that the system of financial adjustment between Committees involved in the present administrative machinery of medical benefit is inequitable in its application to the case of persons changing their residence for a short period or for a temporary purpose only. To these representations the Commissioners have given very close attention; and, after careful consideration of the general experience of Committees and doctors derived from the actual working of the system during the first quarter, they have decided to introduce a modification of the present method of adjustment which will secure strict equity in the necessary apportionment of funds between Committees, and consequently in the amount of remuneration available for doctors undertaking the medical treatment of such persons.

2. The system at present in operation provides for a transfer of funds from one Committee to another upon notice given by the person removing. The amount transferred is such fraction of 9s. as is proportionate to the period during which the person so removing remains in the area of the new Committee; and as experience has shown that insured persons cannot be induced to give notice unless they are ill or expect to be ill at the time of removal, the result has been that the notice given by such persons alone does not carry with it a transfer of funds adequate to defray the cost of their treatment.

3. In considering this problem the Commissioners have had the advantage of discussing the matter at a specially convened conference of representative medical men from the areas mainly affected, and at a full meeting of the Joint Advisory Committee. In arriving at the method which they now propose to adopt they have profited by the suggestions and representations put forward not only at the conferences referred to above, but also on the occasion of the numerous deputations which they have received both from doctors and from Insurance Committees. The method described below will, it is believed, meet the objections which have been brought against other schemes, and will secure an equitable adjustment of funds with proper regard to the divergent interests of practitioners in different parts of the country. It will at the same time afford adequate facilities for obtaining treatment not only to insured persons in general, but to certain classes of insured persons in particular for whom it has hitherto been difficult to make satisfactory arrangements.

4. As from the 15th instant the treatment of all "temporary residents" by doctors on the panel will be paid for on an attendance basis at the scale of fees on p. 335, or such other scale as may be substituted for it after consultation by the Commissioners with Local Medical Committees. This scale will be a scale of credits, as in the ordinary case of payment per attendance, payable out of a Central Fund to be constituted by the Commissioners by transfers of funds in respect of "temporary residents" actually attended.

5. The Central Fund must contain such a sum as will afford a rate of remuneration, in respect of the fees charged against it, equivalent to the average rate of remuneration received by doctors all over the country in respect of the treatment of other insured persons. To secure this object the sum to be transferred in respect of every "temporary resident" from the funds of the Committee of his previous residence will be a "case-value" ascertained by calculating the average sum paid to doctors and chemists in respect of every person actually treated in that Committee's area.

6. The remuneration for the treatment of any given insured person actually attended is derived not only from

the amount available for the treatment of that insured person, but also from the sums payable in respect of other insured persons who have not fallen ill or required treatment. The fewer the insured persons who fall ill, the higher will be the rate of remuneration in respect of those actually treated, and conversely. Thus, while the sum of 9s. a year is available for medical attendance and drugs in respect of every insured person (ill or well) in a given Committee area, the average remuneration in respect of each person actually attended will be 9s. multiplied in the proportion of the number of the total insured population to the number of persons attended during the year; for example, if one-third of the insured population fall ill, the average rate of remuneration in respect of each person attended will be 9s. \times 3, or 27s. for both medical attendance and medicines. This figure will, of course, be increased or diminished according as there is less or more sickness during the year in the area in question.

7. The proposal is therefore to look to the cases of "temporary residents" who actually require treatment, and to the circumstances of the Committee areas whence they respectively come, and to transfer from each Committee's funds to the Central Fund in respect of each temporary resident receiving treatment a sum calculated on the principle illustrated above by reference to the actual degree of sickness in the area of his usual residence. *In this way no Committee will suffer a reduction of their funds by way of transfer at a higher rate than the actual rate of remuneration in their area.* In the case of a Committee area labouring under a heavy sickness rate, the rate of transfer will be automatically reduced. *On the other hand, the Central Fund will contain a sum which will be sufficient to afford remuneration to doctors attending temporary residents at a rate equal to the average rate of remuneration prevailing throughout the country.*

8. These arrangements, while complex in exposition, do not present any considerable difficulties from the point of view of actual administration. The procedure on the part of Insurance Committees, doctors, and insured persons will be simple; and the only operations of any complexity will be performed by the staff of the Commission in connexion with the administration of the Central Fund.

9. In the case of occasional removals for a temporary purpose the procedure, as affecting doctors on the panel, will be as follows:

Some evidence will obviously be required of a temporary resident before he can obtain medical benefit outside his own Committee's area to the effect that he is an insured person entitled to medical benefit, and that he is on the Register of the Committee from whose area he comes and whose funds will be subject to deduction in respect of his treatment. For this purpose a green voucher has been prepared, in the form shown on page 335, to be issued to the applicant by the Committee for his usual place of residence. Applications for a voucher will not be normally entertained by Committees unless they are made before the actual removal of the applicant; and the Committee when issuing the voucher will insert the place and period for which it holds good.

10. In no case will the special method of adjustment apply to a period of temporary residence longer than three months. If the insured person remains in the new Committee area beyond that period, he will be placed on the list of the doctor in the ordinary manner, as from the end of the three months' period, at the rate and according to the normal method of remuneration adopted in that area; and as from the end of that period the financial adjustment in respect of the insured person will be carried out according to the normal method as in respect of a permanent or semi-permanent removal.

11. On the insured person presenting himself for treatment the doctor will retain the voucher and enter upon it from time to time particulars of the services rendered by way of account in respect of the fees to be credited to him. Drugs and appliances must be prescribed for temporary residents on prescription forms specially marked or distinguished; and separate accounts will require to be presented by chemists in respect of such prescriptions.

At the conclusion of the treatment the doctor will forward the voucher to his own Committee. The vouchers so collected will be checked by a committee of practitioners on the panel; and at the end of the year the Committee will render returns to the Commissioners to enable the latter to make the requisite credit of funds to the Committee in respect of the treatment of temporary residents.

12. At the end of the year the Commissioners will proceed to make the necessary transfers to constitute the Central Fund out of which the attendance fees are to be paid. For the purpose of ascertaining the number of cases of illness in the area of each Committee they will utilize the lower portions of the record cards which are required to be forwarded to them for statistical purpose; and it is therefore essential, to avoid delay in the payment of these attendance fees, that the statistical portions of record cards should be forwarded to the Commissioners by the doctor immediately after the end of the year to which they relate.

13. On the conclusion of the necessary bookkeeping operations the final credit of Medical Benefit funds to any Committee will be reduced to the extent of any transfers, and increased to the extent of fees credited to the Committee. The Commissioners will declare a uniform dividend on the uniform scale of fees adopted, and the Committee will pay their doctors at the rate

declared, and their chemists either in full, or, in the event of a deficiency in the Central Drug Fund, at a dividend which will also be declared by the Commissioners.

14. Doctors should inform any of their insured patients who are being sent away for purposes of health as to the necessity of obtaining a voucher before departure from the area.

15. The following scale has been adopted for calculating the remuneration in respect of the medical attendance of temporary residents, subject, as explained above, to any revision which may be decided upon by the Commissioners in consultation with Local Medical Committees, who have been requested to advise in the matter:

| | £ | s. | d. |
|---|---|----|----|
| a. Attendance on the patient at the practitioner's residence, surgery, or dispensary | 0 | 2 | 0 |
| r. Visit to the patient's residence | 0 | 2 | 6 |
| s.r. Special visit, that is, visit paid by the patient's desire on the same day as a call received after 10 a.m. or on Sunday | 0 | 3 | 6 |
| n.r. Night visit—that is, visit made between the hours of 8 p.m. and 8 a.m. in response to a call received between those hours | 0 | 5 | 0 |
| cp. Surgical operation requiring local or general anaesthetic, or case of abortion or miscarriage | 1 | 1 | 0 |
| an. Administration of general anaesthetic | 1 | 1 | 0 |
| fr. Setting of fracture | 0 | 10 | 6 |
| ds. Reduction of dislocation | 0 | 10 | 6 |

LOCAL MEDICAL COMMITTEES.
ESSEX.

The fifth general meeting was held on April 10th in London, when twenty-five members were present. A plan for rearranging all the Divisions and Branches of the British Medical Association so as to be coterminous with the (lay) District Insurance Committee areas, and the co-ordination of the Divisions of the British Medical

Association with all medical unions and other medico-political bodies (see report, SUPPLEMENT, March 22nd), was discussed.

According to a "provisional scheme" issued by the Insurance Committee (Essex) the District Insurance Committees will number twenty-one, the possible number of committeemen in each being twenty-one or more. The scheme provides for only one medical representative on each committee. The Local Medical Committee (Essex)

decided to send copies of the subjoined resolutions to the Commissioners and Insurance Committee:

1. That representation be made to the Commissioners and the Insurance Committee that the medical representation of one medical practitioner per committee is totally inadequate.

It was considered that the Government and Commissioners had definitely agreed to a 10 per cent. representation.

2. That the Insurance Committee be requested to appoint two medical men out of the additional number to be chosen by that body on each District Insurance Committee in accordance with paragraph 2, page 1, of the scheme.
3. That the Insurance Committee be requested from time to time and as early as possible to keep the Local Medical Committee for the County of Essex informed of all matters affecting the interests of the medical practitioners in the county, and, in accordance with the Act and Regulations, consult the Local Medical Committee on all such matters before taking any definite action.

It was felt that the Insurance Committee should have consulted the Local Medical Committee before drawing up and publishing the Provisional Scheme. The Local Medical Committee further instructed the Secretary to ask practitioners in the various prospective District Insurance Committee areas "to take all necessary steps for the election of medical representatives on these District Insurance Committees."

In view of the fact that the Secretary held a letter from Dr. Cox informing him that a scheme, including practically all the points in the Local Medical Committee's plan for rearranging the Divisions and co-ordinating the profession, was being discussed by the State Sickness Insurance Committee, it was agreed that while the plan was advisable, all details should be left till the publication of the British Medical Association's scheme.

As it was felt impossible to carry on the work of the Local Medical Committee at the expense of its members, the following propositions were made with the intention of submitting them to every practitioner in Essex:

That a minimum subscription of £2 be asked for from every qualified medical man in Essex. That a subscription of 1d. per insured person per annum from each practitioner upon the panel be asked for. If the sum from this source prove to be less than the minimum subscription, it should be counted part of that subscription, but if in excess then the £2 should be counted as part of the total subscription from panel sources. The money thus obtained to defray expenses of a permanent secretary (preferably medical), and the third class railway fares of committeemen, hire of rooms, stationery, printing, postage, etc., and all the expenses of the twenty-one committees.

At the time that the direct representatives were being elected, some practitioners in London over the border thought that their districts were not being represented. The Secretary wishes to point out that as early as January 21st the Local Medical Committee had elected upon the most important Medical Service Subcommittee Dr. St. Clair B. Shadyell (Walthamstow), Dr. Ross Steen (Ilford), and Dr. Clarence Wright (Leytonstone), all living in London over the border. The County Council elected Dr. J. P. Atkinson (Saffron Walden) and Dr. Gidley Moore (Ongar). The Commissioners appointed (by recommendation of Local Medical Committee) Dr. Butler Harris (Loughborough), Dr. J. F. Walker (Southend), and there is reason to hope that the third practitioner recommended (Dr. King, Ilford) will also be appointed. Dr. Salter (Tolleshunt D'Arey) and Dr. W. F. A. Clowes (Colchester) are the directly elected representatives.

HERTS.

The Executive met on April 15th, and had an interview with the County Insurance Committee.

A new chemists' tariff was agreed to, but the "copying fee of 1d." was withdrawn by the Pharmacists' Association since the Medical Committee agreed to still supply the chemist with two prescriptions as hitherto.

A strong protest was made as to the exceedingly short notice to the Medical Committee of the alteration of the tariff, for it was quite impossible at the time of the meeting to consider all the alterations.

The scheme for final payment to practitioners as suggested by the Insurance Commissioners was not accepted by the Medical Committee, for it was felt that certain practitioners would suffer rather heavily. The final pay-

ment will be based upon the ultimate numbers upon each practitioner's list after the allocation of the residue is completed. The Medical Committee urged that steps be taken to complete this as soon as possible.

The scheme suggested by the Midwives Association for the payment of practitioners for an emergency call has been dropped. Practitioners are requested to acquaint themselves of the scale of fees to which they are entitled to be paid by the approved society when they are called in by a midwife in an emergency. The payment of the remainder of the fee, if any, depends upon the arrangement made between the practitioner and patient.

OXFORD.

The following are the members of the Oxford Local Medical Committee:

| | |
|--|--|
| Dr. Ormerod (M.O.H.), <i>Chairman</i> | Mr. A. J. Drew (Representative Meetings, B.M.A.) |
| Dr. Higgs, 38, St. James's Street, Oxford, <i>Secretary</i> | Dr. Alden |
| Sir William Osler (Chairman of the Oxford Division, B.M.A.) | Dr. Collier |
| Dr. Duigan (Secretary of Oxford Division, B.M.A.) | Dr. Dickson |
| Dr. H. T. Gillett (Assistant Secretary of Oxford Division, B.M.A.) | Dr. Mallan |
| | Mr. Parker |
| | Dr. Prowse |
| | Dr. Rivers-Willson |
| | Dr. Seal |
| | Dr. Thompson |
| | Dr. Wood |

Representatives on Insurance Committee.—Dr. Higgs and Dr. Rivers-Willson.

Dr. Ormerod represents the City Council on the Insurance Committee.

EAST SUFFOLK.

At a meeting held on April 8th, the following resolution was adopted:

That in the opinion of this Statutory Committee the post of chief tuberculosis officer should not be held by a medical officer of health, and that we consider the scheme of the East Suffolk County Council for the treatment of tuberculosis unsuitable and likely to produce unnecessary friction.

DARLINGTON.

The Local Medical Committee for the Darlington district has been recognized, and consists of the following:

| | |
|-----------------------|-----------------------|
| Dr. W. J. Carmichael. | Dr. J. Fern. |
| Dr. G. G. Farquhar. | Dr. J. Lawrence. |
| Dr. D. L. Fisher. | Dr. H. C. Pearson. |
| Dr. D. C. Gray. | Dr. A. P. Steavenson. |

Joint Honorary Secretaries.—Dr. D. V. Haig (Stanhope Road, Darlington) and Dr. J. D. Sinclair (Wellington College, Grange Road, Darlington).

NEWCASTLE-ON-TYNE.

The name of Dr. H. L. Rutter was accidentally omitted from the list of medical representatives on the Local Insurance Committee printed in the report of the Newcastle-on-Tyne Local Medical Committee last week, p. 314.

LANARKSHIRE.

The Medical Committee of the County of Lanark, which has received official recognition, consists of practitioners from all parts of the county, the object being to make the Committee as representative as possible. The Committee consists of—

| | |
|---|------------------------------------|
| Dr. W. G. MacPherson, Bothwell, <i>Chairman</i> . | Dr. J. B. Miller, Bishopbriggs. |
| Dr. D. V. M. Adams, Lanark. | Dr. Jas. Muir, Bellsbill. |
| Dr. R. Davidson, Shettleston. | Dr. D. McKinlay, Tolleross. |
| Dr. A. Gibson, Baillieston. | Dr. J. C. McKenzie, Douglas Water. |
| Dr. J. Goff, Bothwell. | Dr. J. McMillan, Shotts. |
| Dr. W. Grant, Blantyre. | Dr. T. McNay, Larkhall. |
| Dr. J. Harrison, Lesmahagow. | Dr. R. B. Macpherson, Cambuslang. |
| Dr. T. D. Laird, Cambuslang. | Dr. T. D. Newbigging, Abington. |
| Dr. A. M. Lindsay, Kirkmuirhill. | Dr. R. Paterson, Law. |
| Dr. W. M. Lindsay, Biggar. | Dr. J. Reid, Forth. |
| Dr. J. Lithgow, Cleland. | Dr. D. L. Stevenson, Larkhall. |
| Dr. J. W. Little, Newmains. | Dr. R. Thomson, Uddingston. |
| Dr. A. Maguire, Stepps. | Dr. A. Watt, Strathaven. |
| Dr. J. Mains, Longriggend. | |

The Secretary is Mr. W. S. McKenzie, solicitor, Larkhall.

Representatives on Insurance Committee.—Dr. W. G. MacPherson (Bothwell) and Dr. J. Lithgow (Cleland).

Representatives on Medical Service Subcommittee.—Dr. D. V. M. Adams (Lanark), Dr. W. Grant (Blantyre), and Dr. T. D. Laird (Cambuslang).

A committee has also been appointed to check chemists' accounts should occasion require it.

INSURANCE NOTES.

CHANGE OF DOCTOR.

In some parts of the country misunderstandings appear to have arisen as to the frequency with which insured persons can change their doctor. The fact that agreements between medical men and Insurance Committees have been for a provisional period of three months only is held to warrant the opinion that at the end of three months there could be a re-sorting of patients between medical men on the panel.

Northampton Insurance Committee.

The Northampton Insurance Committee has issued a statement on this matter to the effect that the facts that the medical ticket, adopted by the Commissioners as a temporary expedient in view of the incomplete state of the medical index register, expires on April 30th, and that the original contract between medical men and the Insurance Committee was for three months only, have no bearing upon the question of transferring from one medical list to another. The Committee considers that under the regulations for medical benefit a change of doctor can (subject to certain exceptions) only take place at the end of the current medical year.

Leeds.

The Clerk to the Leeds Insurance Committee, interviewed on the question by a press representative, declared that a general reshuffling of patients at the end of April was impossible, although he knew that the assumption that it would occur was very general. It would mean that the Insurance Committee would have to do all its work over again.

Dr. James Ewing, one of the medical representatives on the Leeds Insurance Committee, has pointed out that the question is a serious one to medical men who did not go on the panel at once because they felt they ought first to be released from their pledge. Hundreds of his patients had been waiting until, as they thought, their pink tickets expired to come back to him, and a number of his medical colleagues had said they would hand over the patients at the end of the quarter.

The Isle of Ely.

Discussion of the same matter arose at the last meeting of the Isle of Ely Insurance Committee. There it appeared that agreements had been entered into for periods of two years with doctors accepting service on the panel. Dr. Stephens said the local doctors refrained from going on the panel because they thought there would be another arrangement in three months. Meanwhile the Insurance Committee appointed men at Chatteris and Wisbech for two years. Dr. Meacock said the practitioners in Wisbech stood out because they believed that contracting out would be allowed. The Act could never be worked in a friendly way in Wisbech unless the panel were reopened. The doctors had been relying on the terms of the Act, the words on the medical tickets, and the speeches of the Chancellor in support of their view that contracting out would be allowed. The Chairman having refused to put to the vote a proposition by Dr. Stephens that the right of the Commissioners to sanction appointments to the panel for two-year periods be questioned, the discussion ended.

MILEAGE.

The Isle of Ely Insurance Committee has decided to apply to the Commissioners for a special grant in connexion with medical benefit in the Fen country. The draft application, which, it is explained, was drawn up by a member of the County Council Highways Committee, will be recognized by those familiar with the Fenlands of the Eastern Counties as a faithful picture of the conditions there existent. It is stated that a large number of houses are only approachable by unmetalled roads, often ditches, grass roads, the banks of the channels that drain the Fens, or mere tracks across fields. These are impracticable for motor cars and cycles, and in many cases for horse-drawn vehicles. In winter day journeys are difficult, and night journeys dangerous by reason of the deep, unfenced drains on both sides of the tracks. The innumerable watercourses and inadequate number of bridges are mentioned, and it is pointed out that it is impossible even in daylight to take a bee-line across

country, as it is necessary to go from bridge to bridge in zigzag fashion. In arriving at a scale of remuneration for mileage, distances should not be calculated from the doctor's house, as it would be impracticable for him to return there after each isolated visit. It would also be unfair to apportion the special grant in proportion to the number of insured persons living outside a radius of three miles from the doctor's residence, as by so doing a benefit would be conferred on those practitioners who had a large group of patients in one comparatively populous hamlet at the expense of those doctors who had to attend patients in many isolated houses.

NORTHUMBERLAND MINERS.

In the SUPPLEMENT for April 5th, p. 302, it was stated that the *Northern Echo* had reported that the name of one of the doctors selected by the miners' society at Ashington was Dr. Thomson, of Clydebank. We are informed that this statement is incorrect and that Dr. Thomson has not accepted, and has no intention of accepting, any such appointment. We regret that the incorrect statement should have appeared in our columns.

BOURNEMOUTH.

A meeting of the Bournemouth panel was held on April 12th to decide whether the new medical agreement should be signed as it stood or whether a clause should be added reserving the right to refuse to treat temporary patients on the present system of payment. The following resolutions were passed:

That we (the members of the Bournemouth panel) decline to attend visitors except as private patients until satisfactory arrangements have been made between the Commissioners and the Local Medical Committee.

That this resolution, or words to the same effect, be embodied in the new agreement.

That the new agreement be endorsed, "Temporary agreement for three months only."

All signed agreements to be sent in through the Local Medical Committee.

The result of this meeting is that all the members of the panel, except the few who had signed the agreement before they could be communicated with, are abiding by the decision of the meeting.

EAST SUFFOLK.

Tuberculosis Treatment.

Dr. E. G. Barnes (Eye), Dr. H. M. Evans (Lowestoft), and Dr. T. C. Askin (Alderton) attended as a deputation from the East Suffolk Insurance Committee the meeting of the Public Health Committee of the East Suffolk County Council last week, to discuss questions arising out of the provision of tuberculosis treatment.

Dr. Evans said the local medical practitioners were practically unanimous that, as regards dispensary treatment, the head of the dispensary must be a medical man specially trained in the diagnosis and treatment of tuberculosis. Dr. Evans quoted the Local Government Board in support of this contention, and said it was exceptional for medical officers of health to be able to perform the necessary clinical work, or to claim to be experts in this matter. All the official declarations on this subject indicated that it was inadvisable to appoint medical officers of health as chief tuberculosis officers. Tuberculosis officers must be consultants; if it were thought that men of large clinical experience, who knew their patients and their work, would be content to act as the house-physicians of a tuberculosis officer, however high his standing, the hope was vain.

Dr. Barnes emphasized the necessity of some form of domiciliary treatment being incorporated in the general scheme.

A subcommittee of the Public Health Committee was appointed, with instructions to meet a subcommittee of the Insurance Committee in conference upon the details of the county council's proposals.

STAFFORDSHIRE.

Protest Meetings of the Insured.

A largely attended meeting was held in Stafford on April 11th to protest against the action of the Staffordshire Insurance Committee in refusing permission to insured persons to select doctors who were not on the

panel. The Chairman said that the meeting was absolutely unpolitical, and had been organized entirely by insured persons. On the pink cards issued early in the year there was a statement which led insured persons to conclude that they could make their own medical arrangements outside the panel, and in consequence a large number of insured persons in Stafford had made application. Recently the majority of such applicants had received a curt note stating that their applications had been refused. The meeting had been called because those present felt it a great injustice that insured persons should be called upon to change their medical men at the behest of a committee which was in no sense representative, and had not been elected by the people. A resolution of protest having been duly moved and seconded, Dr. F. M. Blumer said that the opposition of the medical men was one of principle. A previous speaker had said that the Local Insurance Committee had stated that it was acting upon instructions from London, and Dr. Blumer said that the Commissioners' object appeared to be to drive every doctor on the panel. The Chancellor of the Exchequer had objected to allowing insured persons to make their own arrangements, as that plan might be used as a means of breaking down the panel system; but there was no risk of that in Stafford. The medical men in Stafford not on the panel were prepared to give service on private practice lines and to look to the pool for the payment of their bills. The resolution, which was as follows, was unanimously adopted, and a deputation was appointed to present it to the Insurance Committee:

That this meeting of insured persons, desirous of contracting out for medical benefits under Section 15 (3) of the National Insurance Act, hereby protests in the strongest possible manner against the action of the Staffordshire Insurance Committee in refusing to grant permission to such persons. It is of opinion that the wholesale refusal of applications by the Committee without giving any reasons and apparently upon no recognized general principle is a grave abuse of the power delegated to it; and this meeting pledges itself to use every effort within its power to obtain for all insured persons their right to free choice of doctor whether on the panel or off, as is allowed them under the Act.

A similar protest meeting of insured persons was held in Hanley last week, when, as at Stafford, the action of the Insurance Committee was denounced as an interference with the liberty of the subject, and, after hearing an address from Dr. Blumer, arrangements were made for organizing a formal protest against the allocation without their consent of persons who had not yet selected a doctor.

SCOTLAND.

Holiday-makers, Convalescents, and other Migrants.

A conference summoned by the Scottish Insurance Commission by invitation addressed to the Medical Committees, clerks of Insurance Committees, and others to consider the question of migrants and summer visitors was held in Edinburgh on April 11th. The Commissioners stated that it was proposed to form a general pool and to pay for medical attendance by way of fees for services rendered. Two schemes for the formation of a pool were proposed: (1) A deduction of 1d. a quarter; (2) a deduction based on a so-called "illness value," a system recommended as being fairer in its incidence. The point was at once raised whether, doctors having already signed the contract agreeing to serve under published regulations, the Commissioners had any legal power or right to make any deductions from the 7s. After some observations from the chairman and deputy-chairman. Mr. Fraser, the legal adviser, stated, we are informed, that the Commissioners had no legal power to make any such deductions. The point was raised not for the purpose of wrecking any reasonable scheme to overcome a pressing difficulty but to establish the fact that every doctor's agreement with an Insurance Committee was a contract binding on both parties, and only to be varied by the consent of both parties. The scheme or schemes, it is understood, will shortly be communicated to the Local Medical Committees in Scotland, and they will no doubt bear in mind that it is acknowledged that the Commissioners have no legal right to vary the regulations this year without the consent of those doctors who have signed contracts. Some at least of those who attended the conference considered that, apart from this, the scheme might be considered a reasonable attempt to overcome a pressing difficulty; but it is pointed out that it contains no attempt to make arrangements for those

moving within the limits of a single area, for example, from one side of a county to another. The method of deduction to form a pool, the institution of checks on irregularities, and the fees for services rendered are all matters which call for careful consideration by the Local Medical Committees.

MEETINGS OF INSURANCE COMMITTEES.

BRISTOL.

Reappointment of the Medical Referee.

THE Bristol Insurance Committee, on April 7th, received a report on the work of the medical referee. The Medical Service Subcommittee stated that a number of letters had been received from approved societies expressing appreciation of the appointment of the officer (Dr. Bertram Rogers). It was stated that the Insurance Commission had expressed approval of the appointment, and the Committee decided to renew it for a further period of three months.

NORWICH.

IN the course of a discussion on contracting out, at the Norwich Insurance Committee, the CHAIRMAN of the Medical Benefit Subcommittee said that about 260 applications had been received from persons desiring to make their own arrangements. Where any good reason was advanced the application was granted, "but not where mere sentiment was the reason."

Mrs. REEVES suggested that in the selection of a doctor sentiment was a very important factor and that the Subcommittee ought to have given due weight to it. The number of applications was comparatively small, and she thought all might have been granted. Many people felt very strongly on the question of the choice of their doctor. Mrs. Reeves moved an amendment to refer the matter back, and this was seconded by Dr. CROOK. The CHAIRMAN said that the Committee had felt that it could not ignore the memorandum of the Insurance Commissioners directing that insured persons should not be allowed to contract out except in very special circumstances. The amendment was lost and the report was adopted by 15 votes to 2.

ISLE OF WIGHT.

The recommendations of the Isle of Wight Local Medical Committee as to payment for visitors and medical representation (SUPPLEMENT, April 12th, p. 316) came before the Isle of Wight Insurance Committee at its meeting last week, but were not accepted, the opinion being expressed that the treatment of visitors was a problem which the medical profession and the Insurance Commissioners must solve rather than any one Insurance Committee. The Local Medical Committee also asked that the two elected representatives of the profession should be appointed on all the subcommittees, instead of one of the three doctors on the Committee being appointed on one subcommittee each as proposed by the Insurance Committee. After a debate, in which some heat was manifested, the request of the Local Medical Committee was refused, and one medical man was appointed to each of the subcommittees.

REPORTS OF LOCAL ACTION.

CHISWICK.

A MEETING of non-panel doctors practising in Chiswick was held at the house of Dr. Shuter on April 12th. We are informed that in Chiswick the medical men have consistently refused to work the Act under present conditions. The present state of matters was laid before the meeting under the following heads:

1. The alternative scheme has been definitely refused by the Middlesex County Insurance Committee.
2. "Contracting out" has been practically universally refused.
3. Outsiders are, if necessary, to be imported into the district.
4. There is a possibility of the certificates of doctors not on the panel being refused.

A vote was taken on the question, "Should the non-panel doctors in Chiswick continue a policy of resistance by remaining off the panel?" The voting was confined to those resident in Chiswick; the motion to remain off the panel was carried.

IRELAND.

MEDICAL CERTIFICATION.

The date (April 8th) for the closure of the panels for doctors willing to grant certificates for the purposes of the Insurance Act has passed, and in only about half a dozen districts have the medical men consented to form panels. Among these are Belfast, Derry, co. Donegal, and Cork City. In Belfast it would seem that the societies will seek to specify the doctors on the panel from whom they will receive certificates, and this, of course, must have the effect of limiting the free choice of doctor, for which the British Medical Association has always contended. It may be assumed that the local profession will object to any such exclusive system.

In Dublin the profession decided not to form a panel; eleven doctors originally signed the agreement to go on a panel, but of these three have since withdrawn their names. As there are computed to be about 80,000 insured persons in Dublin, this means that each of the eight remaining men will have about 10,000 names on his list. Even devoting their whole time to certification, they will have to work hard for the £400 a year which they would receive according to the scheme put forward by the Irish Insurance Commissioners. Among the papers sent out by the Commissioners along with the agreement to go on the panel was an "identification note," on which the following was printed:

A panel of doctors has been formed in each county and county borough in Ireland for the purpose of granting to insured persons (free of cost to them) the medical certificates which are required before sickness or sanatorium benefit can be obtained. A list of the names of the doctors on the panel for the county or county borough in which insured persons live may be seen at any post office in the county or county borough, or can be obtained on application from the Secretary, Irish Insurance Commissioners, Dublin.

The *Irish Times* of April 10th described these sentences as "a barefaced misstatement of fact." The Commissioners have published the following "explanation":

Amongst the papers issued to medical practitioners for the purpose of explaining their duties under the panel system, a specimen copy of what is called an identification note was circulated. It ought to be clear from the fact that this note is to be filled by the insured person, and the doctor, that it naturally only comes into operation when the panels have been formed. In other words it presupposes the fact that doctors have sent in their names to the various Insurance Committees, and is the particular part of the machinery that enables the insured person to exercise his choice of doctor, and the medical practitioner to exercise his choice of insured persons. The statement, therefore, in this note in the form of a notice, that a panel of doctors has been formed for each county and county borough of Ireland, can in no sense be regarded as a statement by the Commissioners that panels had actually been formed. It is, therefore, hardly a legitimate criticism to charge the Commissioners with a misstatement of fact on these grounds. Moreover, the fact that the Commissioners only fixed the 8th inst. as the last day for joining the panels, and that this identification note was sent out for the information of medical practitioners over a week ago, shows in itself how utterly misleading is the comment in the editorial article.

The first letter of the Commissioners to the medical profession accompanying the agreement contained the following statement: "The Committees (Insurance Committees of the thirty-nine counties and county boroughs of Ireland) have agreed to set up for the purpose what is known as the panel system of doctors in the area of each Committee, and have authorized the Commission to invite you to join the panel for the particular county or county borough in which you reside or any county or county borough adjoining." This statement was clearly inaccurate, as the paper was printed and circulated before the Committees had met to consider the scheme.

The position in Dublin is curious in the extreme. Last week, on the morning of the day on which the Insurance Committee was to meet and have before it the agreements to go on the panel of those doctors who had signed them, the Insurance Commissioners demanded that they should be given up to them, saying, when this demand was at first refused, that the agreement was between the doctors and the Insurance Commissioners and not the Insurance Committees. The form of agreement is headed, "Agreement between Medical Practitioner and Insurance Committee, for the period from April 13th, 1913, to January 14th, 1914, inclusive," and commences: "To the County (Borough) of . . . Insurance Committee." The agreements were handed to the Commissioners under protest.

The Commissioners have only themselves to blame if their proceedings have given rise to the impression that they have tried to bluff the medical profession in Ireland to accept the panel scheme. So far as can be made out from the apparently self-contradictory announcements that have been made, they have stated that the Insurance Committees had agreed to the scheme and authorized them to make the agreements when they had not done so, that the Conjoint Committee of the British and Irish Medical Associations had agreed to the scheme and approved of it when it had not done so, and, finally, have sent out a circular in which it was said that the panels had been formed before the date of closing the panels had arrived. It is strange that the Commissioners should have supposed that any body of their countrymen should fail to see through such methods, and it is to be hoped that the profession in Ireland will continue firm in its decision, in spite of the threat, already made by the Commissioners, to appoint whole-time men for certification purposes. Meanwhile, the insured patients encounter difficulty and delay in getting their sick money paid to them by the societies.

The question of the extension of medical benefit to Ireland is still unsettled, and the Poor Law Medical Service is left in a most mischievous state of uncertainty and suspense. Another danger is arising. The Commissioners have allowed a large number of societies to be enrolled—there are nearly a hundred small societies in Ireland to-day. The next few months will, it is thought, see a "shake out" of small societies. If this happens the result will be general confusion and the concentration of the whole national insurance scheme in the hands of half a dozen great "Orders" and two or three huge commercial organizations. The Ancient Order of Hibernians is said to have secured at least 115,000 members for the Government benefits in Ireland, and it is asserted that the influence of this society in the administration of the Act in Ireland is supreme; it is estimated that it will receive an annual grant of at least £25,000 for purposes of "organization."

At a meeting of the Advisory Committee of the Irish Insurance Commission held in Dublin on April 15th, the Chairman said that the Act was on the whole working well except in the county of Cork and the north-west corner of Ulster. The difficulty was in dealing with the grant of £50,000 for the payment of medical certificates; nevertheless, the panels had been filled in twelve counties.

SANATORIUM BENEFIT.

A difficulty has arisen with regard to the admission of persons entitled to sanatorium benefit into the Heatherside Sanatorium which is under the control of the Cork Joint Hospital Board. The resident medical officer desired to admit only early cases likely to benefit by sanatorium treatment, but the Insurance Committees for the counties of Cork, Limerick, and Tipperary objected to this, and were supported by the Insurance Commissioners. The Cork Joint Hospital Board at its meeting on October 5th adopted the following resolution:

That inasmuch as the Cork Sanatorium was erected for the treatment of early cases of consumption, it is not advisable that advanced cases should be admitted, but in so far as we have had applications from Cork County, Limerick County, Tipperary and Waterford County Borough Insurance Committees to waive the veto of the Medical Superintendent we hereby agree to do so; but if the patient does not respond satisfactorily to the treatment within a reasonable time the Medical Superintendent has power to discharge him.

PRESCRIBING AND THE DRUG FUND.

In spite of the numerous complaints made by chemists in Manchester and Salford that the dispensing under the Insurance Act does not pay, they have decided, like the doctors, to continue as at present for another three months, and probably very few, if any, of those now on the chemists' panel will withdraw their names. It is expected that for the three months, January to April, not only will the whole of the floating sixpence have to be given to the Drug Fund, but that even with this there will have to be a *pro rata* reduction in the chemists' bills of from 20 to 30 per cent.; in other words, the cost of drugs

and appliances for the quarter will approach a rate of about 3s. a year. The chemists realize, however, that the past quarter is not only about the heaviest in the year, but that the novelty of being able to obtain free medicines has probably induced many insured persons to go to a doctor for a prescription for trifling complaints, which in the future they may be inclined to neglect, and, like the doctors, they expect that the coming quarter may compensate them for the past quarter. It is alleged by chemists that some of the doctors have neglected the suggestions of the Local Medical Committees that attention should be paid to economy in prescribing so far as it is consistent with efficiency. One chemist, for example, states that he has had to dispense a prescription for a liniment containing 3 oz. each of liniment of belladonna, liniment of aconite, and liniment of chloroform, the cost of which at wholesale prices would be 2s. 7d. In other cases it is alleged that drugs have been ordered under proprietary names which might have been ordered, at less than one-third the cost to the drug fund, under their chemical name. This has no doubt often been done quite inadvertently by doctors who have not recognized that they have it in their power to effect a very considerable saving in the drug fund without any sacrifice of efficiency. There seems, too, to be little doubt that the greatest watchfulness is needed to prevent abuse by insured persons in the matter of drugs. Instances are given in which an insured person has obtained medicine for a slight cough which he really thought of no account, and, instead of taking the medicine himself, has given it to his wife or some member of his family who was not insured but was suffering from a severe cough. This not only deprived some doctor of a private patient, but was an imposition on the chemists' drug fund. It is further alleged that attempts are made by insured persons to induce chemists to repeat medicines without a fresh prescription from the insurance doctor; if the chemist complied with such requests where the system in force was for payment by attendance, he would be depriving a doctor of a consultation fee. In some cases the request arises merely from a desire to save the time taken up in a visit to the doctor, but in other cases it is believed that there has been an attempt to obtain in this way medicine for some other member of the family who was not insured. In some cases the chemists have received offers of payment if they will dispense the same medicine for an uninsured member of the family as an insured member is taking on the prescription of the insurance doctor. Evidently the chemists have it in their power in this way seriously to injure private practice, and the temptation is all the more because, if they refuse, the medicine would probably be supplied by the private medical attendant who would have to be called in. It is, however, distinctly noticeable that the effect of working of the Act so far has been to bring about a better state of feeling between doctors and chemists than formerly existed. It is seen that there is now a community of interests that did not formerly exist. The doctors are regularly asked by insured patients to what chemist they should take their prescription, and, while the chemists have obtained the dispensing which they have long regarded as their right, they have acknowledged this in not a few cases by refraining from the counter prescribing which was doing such a serious injury to many practitioners in Lancashire.

In Liverpool, we are informed, it is fairly certain that the cost of prescriptions for the first quarter will materially exceed the fourth part of 2s. a head of insured persons, but the chemists expect that the Commissioners, having sanctioned the drug tariff, will see that their bills are paid in full. Within the limits of efficient prescribing the doctors are making every effort to economize on the drug bill, and, with this end in view, a formulary has been drawn up by the Local Medical Committee. This attempt at economy does not, it is said, meet with the approval of the chemists. Further, apparently with a view to making sure of the "floating sixpence," the chemists have put forward claims for clerical fees and night fees, and have lodged an objection to the doctors sending out prescriptions in the form of "repeat mixture." It is to be hoped that an effort at compromise which is now on foot will be successful.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

On Thursday, April 10th, the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand, W.C. Dr. J. A. MACDONALD was in the chair, and the other members present were: *England and Wales:* Dr. R. M. Beaton (London), Dr. E. R. Feathergill (Brighton), Miss F. Ivens, M.S. (Liverpool), Dr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. E. O. Price (Bangor), Dr. D. G. Thomson (Norwich), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London). *Scotland:* Dr. John Adams (Glasgow), Dr. R. McKenzie Johnston. *Ireland:* Dr. J. S. Darling (Lurgan). *Ex officio:* Mr. T. Jenner Verrall (Chairman of Representative Meetings), Dr. Edwin Rayner (Treasurer).

RESIGNATION.

The resignation from the Committee of Dr. Carter (Bristol), owing to the fact that he was unable to give the time necessary for attending the Committee, was received with regret, and in order to fill the vacancy thus created the Chairman of Representative Meetings was requested to follow the procedure adopted in the case of vacancies occurring in the Council owing to the resignation of a member elected by grouped representatives.

CERTIFICATES.

Attention was again directed to the question of medical certificates required by approved societies under the Act. At its preceding meeting the Committee had recommended that, in order to safeguard the position of the practitioner, any certificate bearing the name of the disease should only be handed to the insured person concerned or to his or her accredited representative. It was now pointed out that this might not be sufficient to obtain the desired end. Dr. ADAMS stated that at the last meeting of the Advisory Committee the suggestion had been made that if the medical certificate did not state the nature of the disease from which the insured person was suffering the society concerned should apply direct to the doctor. He was advised that under Scottish law this would be a highly dangerous proceeding for a medical practitioner to adopt. The Committee resolved to address a communication to the Insurance Commissioners upon the subject.

TREATMENT OF INSURED PERSONS OVER 65 YEARS OF AGE.

The reply of Mr. Masterman, published in the SUPPLEMENT to the JOURNAL of April 12th, p. 323, to the letter addressed to him by instruction of the Committee, was considered, and, as the Committee was not satisfied with the position, it decided to take the opinion of leading counsel.

COMPENSATION.

Four applications with reference to compensation for loss suffered by medical practitioners in consequence of their loyal adherence to the decision of the Association were before the Committee. In one case a grant was made; in another the matter was postponed till the end of the year in order that the actual amount of loss could be ascertained; in a third it appeared that the Local Executive Committee had already taken action to meet certain expenses incurred by the applicant, and that it was probable that no call would be made upon the Central Insurance Defence Fund; in the fourth case the applicant suggested that he should be excused the payment of the remainder of his guarantee to the Central Insurance Defence Fund, being himself prepared to stand by the loss incurred. The Committee recommended this course to be taken.

Letters of thanks from four gentlemen whose applications were granted at previous meetings were read.

CONFERENCE OF REPRESENTATIVES OF THE ASSOCIATION AND OF THE SOCIETY OF MEDICAL OFFICERS OF HEALTH.

The Committee had before it reports of the decision of the Public Health and Medico-Political Committees at recent meetings as to holding a conference of representatives of the Public Health and Medico-Political Committees

and of the State Sickness Insurance Committee with representatives of the Society of Medical Officers of Health, and expressed approval of the proposal subject to satisfactory arrangements being made.

PAYMENT OF CHEMISTS FOR COPIES OF PRESCRIPTIONS.

Communications were received calling attention to the following note appearing in the published tariff drawn up by the Pharmaceutical Standing Insurance Committee:

Where a duplicate prescription is not supplied a fee of 1d. will be charged for copying it.

A communication on the matter, received by Dr. H. G. Morris, of West Bromwich, from the Insurance Commissioners (England), was read. The letter, after pointing out that the modification of any existing tariff is a matter for local negotiation and one upon which the Insurance Committee would, of course, consult the Local Medical Committee, continued as follows:

In considering any suggested revision which provides for a fee for the copying of prescriptions the Commissioners would require to have before them the views of the Local Medical Committee concerned.

The Committee resolved to draw the attention of Local Medical Committees to the matter, to address a protest to the Insurance Commissioners, and to suggest to Local Medical Committees that they should take the same course.

The following letter has accordingly been addressed to the National Insurance Joint Commissioners:

April 14th, 1913.

Sir,

National Insurance Act: Charges by Chemists.

It was reported to the last meeting of the State Sickness Insurance Committee that the revised tariff of drugs and dispensing charges drawn up by the Pharmaceutical Standing Insurance Committee contains the following paragraph:

"Where a duplicate prescription is not supplied a fee of 1d. shall be charged for copying."

The Committee understands that this revised tariff has not yet been under the consideration of the Commissioners, and that in considering the modification of any existing tariff the Commissioners would require to have before them the views of the Local Medical Committees concerned. It is understood, however, that in some areas the particular drug tariff above referred to has not been submitted to the Local Medical Committees concerned, though the local pharmacists are presenting the revised tariff as if it had official sanction.

The State Sickness Insurance Committee, on the evidence before it, believes that the imposition of such a charge is unnecessary, and would be unjustifiable deduction from the moneys due to the medical practitioners, and is convinced that if the tariff is allowed to come into force the profession will suffer a serious injustice.

I am instructed, therefore, to urge that the Insurance Commissioners will not approve of the proposed charge in respect of copying prescriptions.

I am, Sir,

Your obedient servant,

ALFRED COX,

Medical Secretary.

Secretary, National Health Insurance
(Joint) Commissioners.

HOSPITAL RESIDENT OFFICERS ON THE PANEL.

A case in which a hospital proposed that the senior resident medical officer should place his name on the panel for the purpose of attending the resident staff under the Insurance Act was considered, and the Committee resolved as follows:

That in the opinion of the Committee all hospitals, asylums, and other similar institutions, should be allowed to "make their own arrangements" for the provision of medical attendance and treatment (including medicines and appliances) under Section 15 (3) of the Act and Regulation 49, but that whatever system may be adopted the proper proportion of moneys received from the Insurance Committee by any such institution for medical attendance and treatment of members of its staffs should be paid to the medical officer of the institution who actually carries out such attendance or treatment.

CO-ORDINATION OF MEDICAL BODIES.

A sketch of a scheme for the co-ordination of medical bodies in an area submitted by Dr. H. H. Tomkins, Vice-Chairman of the South-West Essex Division and Secre-

tary of the Essex Local Medical Committee, was received. The Committee considered that as most of the ideas underlying Dr. Tomkins's scheme were already being considered by a special subcommittee, Dr. Tomkins should be invited to join the Special Fund Subcommittee.

PROPOSED SICKNESS, ACCIDENT AND PENSION FUND.

Certain proposals made by the Subcommittee on a proposed Sickness, Accident and Pension Fund were fully considered, but a final decision postponed pending a further report from the Subcommittee.

INSURANCE ACT IN PARLIAMENT.

ADMINISTRATION OF MEDICAL BENEFIT.

Contracting Out.

In reply to Mr. Newman, Mr. Robertson said that Insurance Committees were not required to explain in each individual case their reasons for refusing an application from an insured person for permission to make his own arrangements for receiving medical attendance and treatment. The general policy was guided by the Memorandum already issued on the subject.

Certificates.

In reply to Mr. Thomas, who asked whether an insured person claiming insurance benefit and declaring sickness on a Monday and declaring off on the following Saturday, and thereby being entitled only to three days' pay, was required to provide three certificates for this period, Mr. Robertson said that the arrangements for providing sick benefit were primarily determined by the societies administering the benefit; but he saw no reason in any case why in such circumstances three medical certificates should be required.

Medical Referees.

In reply to Mr. C. Bathurst, Mr. Robertson said that the appointment of medical referees, as in Bristol, with a view to checking malingering, was receiving the careful attention of the Commissioners.

Contracting Out in London.

In reply to Mr. Touche, who inquired whether every person who had made application for permission to contract out in London had received Form 43/I.C. and if many of these forms had been returned to the Committee, Mr. Robertson stated that all the forms in question had been issued to those applying for them, and that between 2,000 and 3,000 had been returned, and that in some cases the doctors had declined to sign the undertaking in Part II. He added that the sums available for the medical treatment of insured persons making their own arrangements were the same as for other insured persons, and that he did not see any reason at present to suggest any modification of the conditions at present existing.

Medical Committee for London.

In reply to a further question by Mr. Touche, Mr. Robertson stated that no Local Medical Committee for the County of London had yet been recognized by the Insurance Commissioners.

Scottish Clerks' Association.

In reply to Mr. Charles Price, Mr. Robertson stated that the Scottish Insurance Commissioners had had a conference with the representatives of the Scottish Clerks' Association and arranged for the association to issue medical tickets to their members. At the same time the Commissioners agreed to suggest to Insurance Committees that members of the association might, if practicable, be allowed an extension of time for the choice of a doctor.

Herbalists.

Mr. Frederick Hall asked whether, under the National Insurance Act, arrangements could only be made with duly qualified medical practitioners for the administration of medical benefit; whether, in some instances, Insurance Committees had accepted and placed on their panels the names of herbalists and other unauthorized persons; and if so, whether this had been done with the sanction of the National Health Insurance Commissioners. Mr. Robertson said the answer to the first part of the question was in the affirmative; the answer to the second part was in the negative; the third part, therefore, did not arise.

Mr. F. Hall asked whether all medical men who applied were put upon the panel irrespective of their capabilities. Mr. Robertson said that that did not enter into this question. Mr. F. Hall suggested that it arose out of the question, but the Speaker supported Mr. Robertson, and the matter was not pursued.

MATERNITY BENEFIT.

In reply to Mr. Jowett, who asked whether married men in the navy were required to give three months' notice of the approximate date of the expected confinement of their wives in order to comply with the rules governing the payment of maternity benefit, Mr. Lambert said that such notice was not an essential condition of payment, but it was solely in the interest of the men and their wives as being, under the exceptional conditions of naval service, a means of insuring that the benefit should be paid promptly after the confinement had taken place.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 9,353 births and 5,337 deaths were registered during the week ending Saturday, April 5th. The annual rate of mortality in these towns, which had been 17.0, 16.5, and 16.9 per 1,000 in the three preceding weeks, fell to 15.6 per 1,000 in the week under notice. In London in the week under notice the death-rate was equal to 16.3 per 1,000, against 17.6, 17.2, and 17.4 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 5.7 in Rotherham, 6.6 in Southend-on-Sea, 7.0 in Enfield, 7.7 in Ealing, 7.8 in Portsmouth, and 8.8 in Bourne-mouth to 20.8 in Preston, 20.9 in Stoke-on-Trent, 21.2 in Plymouth, 22.2 in Middlesbrough, 23.1 in St. Helens, and 24.9 in Stockton-on-Tees. Measles caused a death-rate of 2.8 in Plymouth and in Sneath-wick, 3.3 in Wolverhampton, 3.5 in Bury, 3.9 in Walsall, 6.0 in West Bromwich, and 7.3 in St. Helens; and whooping-cough of 1.3 in Stoke-on-Trent, 1.5 in Southend-on-Sea, and 2.1 in Warrington. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 27, or 2.5 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 5 in Birmingham, 3 in Liverpool, 3 in Warrington, 3 in Sheffield, 2 in Stoke-on-Trent, 2 in Preston, and 2 in Sunderland. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospital and the London Fever Hospital, which had been 1,556, 1,514, and 1,455 at the end of the three preceding weeks, had further fallen to 1,410 on Saturday, April 5th; 167 new cases were admitted during the week, against 164, 156, and 168 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,256 births and 744 deaths were registered during the week ending Saturday, April 5th. The annual rate of mortality in these towns, which had been 18.8, 18.4, and 17.2 per 1,000 in the three preceding weeks, was again 17.2 in the week under notice, but was 1.6 per 1,000 above the rate in the ninety-six large English towns. Among the several Scottish towns the death-rates in the week under notice ranged from 9.1 in Kirkcaldy, 9.2 in Ayr, and 11.0 in Paisley to 19.5 in Kilbarnock, 20.8 in Leith, and 24.8 in Greenock. The mortality from the principal infectious diseases averaged 1.7 per 1,000, and was highest in Leith and Greenock. The 367 deaths from all causes registered in Glasgow included 22 from whooping-cough, 8 from infantile diarrhoeal diseases, 4 from measles, 3 from diphtheria, 2 from scarlet fever, and 1 from enteric fever. Seven deaths from whooping-cough were recorded in Edinburgh, 5 in Leith and 4 in Greenock; 4 deaths from infantile diarrhoea and enteritis, and 3 from diphtheria in Dundee; and 2 from measles in Falkirk.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, April 5th, 746 births and 535 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 683 births and 547 deaths in the preceding period. These deaths represent a mortality of 23.3 per 1,000 of the aggregate population in the districts in question, as against 23.8 per 1,000 in the previous period. The mortality in these Irish areas was therefore 17 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 32.4 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 27.9 as against an average of 24.3 for the previous four weeks, in Dublin city 28.1 (as against 25.2), in Belfast 21.2 (as against 23.6), in Cork 18.4 (as against 22.5), in Londonderry 22.9 (as against 18.1), in Limerick 14.9 (as against 20.3), and in Waterford 24.7 (as against 21.9). The zymotic death-rate was 1.8 as against 2.1 in the previous period.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments, etc., have been announced by the Admiralty: Surgeon-General ARTHUR W. MAY, C.B., to the *President*, for additional service at the Admiralty Medical Department, April 21st. Surgeon-General ALEXANDER J. J. JOHNSON to the *Pembroke*, additional for Chatham Hospital April 12th. Chatham Hospital vice MAY, April 21st. Fleet Surgeon GEORGE R. MACMAHON, M.B., B.A., to the *Formidable*, vice Martin, May 8th. Fleet Surgeon FREDERICK W. PARKER to the *Victory*, additional for Portland temporarily, April 9th. Fleet Surgeon ANTHONY KIDD to the *Aboukir* on recommissioning, and for group of ships of Third Fleet, April 15th. Fleet Surgeon HENRY E. TOMLINSON, to the *Victory*, additional for Portland Depot, temporary, on the *Imperieuse* paying off, April 12th. Fleet Surgeon WILLIAM P. WALKER, M.B., to the *Gibraltar* for the *Crescent*, undated. Staff Surgeon ARTHUR S. BRADLEY, M.B., to the *Excellent*, additional for the *Dido* on recommissioning, April 9th. Staff Surgeon DONALD R.

CHAPMAN, to the *Gibraltar*, additional for the *Grafton* on recommissioning, April 9th. Staff Surgeon A. R. SCHOFIELD, M.H., to the *Prize*, additional for disposal, April 9th. Staff Surgeon W. H. DAW, to the *Astraea*, undated. Staff Surgeon ELIJAH R. L. THOMAS to the *Prize*, additional for disposal, April 28th. Staff Surgeon JOHN P. H. GREENHALGH, M.D., to the *Victory*, additional for Yarmouth Hospital, temporary. The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

RANKINE.—On April 10th, the wife of J. L. Rankine, M.R.C.S., Rowlettown, Carlisle, of a daughter.

MARRIAGES.

HARRIS-SANDBACH.—On April 3rd, at St. Cuthberts Church, Kensington, by the Rev. Henry Westall, Frederic Rosenberg Harris, M.R.C.S., L.R.C.P., of Otterbourne, Hampshire, to Nora, youngest daughter of the late Andrew Sandbach, Esq., of Ipswich.

RIGGALL-MOORE.—At Malew Parish Church, Isle of Man, on April 8th, by the Rev. Canon Spicer, Robert Marmaduke, Surgeon, Royal Navy, son of the Rev. M. Riggall, of Alford, Lincs., to Mary Douglas, eldest daughter of Lieutenant-Colonel Moore, of The Great Meadow, Castleown, Isle of Man.

DEATHS.

MILWARD.—On April 9th, suddenly, at 5, Glossop Terrace, Cardiff, W. Courtney Milward, aged 41.

STIRLING.—On the 13th Inst., at Belfield Lodge, Fallowfield, Manchester, Elizabeth Ferguson, wife of William Stirling, M.D., Professor of Physiology, Victoria University of Manchester.

DIARY FOR THE WEEK.

MONDAY.

- ROYAL COLLEGE OF SURGEONS, Lincoln's Inn Fields, W.C., 5 p.m.—
Museum Demonstration:—Mr. Shattock: Specimens
illustrating Atrophy.
- ROYAL SOCIETY OF MEDICINE.—5 p.m. Discussion: On Alimentary
Toxaemia: its Sources, Consequences, and Treatment
(Third Meeting); to be reopened by Mr. Lockhart
Munnery and continued by Professor Arthur Keith.

TUESDAY.

- MEDICO-LEGAL SOCIETY, 11, Chandos Street, W., 8.30 p.m.—Paper:
W. A. Brend, M.A., M.B.: The Futility of the Coroner's
Inquest.
- ROYAL SOCIETY OF MEDICINE:
SECTION OF MEDICINE, 5.30 p.m.—Papers:—Dr. Lyon
Smith: Gout and Chronic Rheumatism; Dr. T. D.
Lister: Ambulatory Treatment by Means of
Tuberculin.

WEDNESDAY.

- HUNTERIAN SOCIETY, St. Bartholomew's Hospital Library, 8.30 p.m.—
Dr. A. Graham-Stewart (annual medallist): Raised
Arterial Pressure and Arterio-Sclerosis.
- KING'S COLLEGE, W.C., 4 p.m.—Dr. William Brown: Abnormal
Psychology.

THURSDAY.

- HARVEIAN SOCIETY OF LONDON, Stafford Rooms, Titchborne Street,
Edgware Road, W., 8.30 p.m.—Paper:—Dr. T. J.
Horder: Infections Due to the *Bacillus coli*.
- OPHTHALMOLOGICAL SOCIETY OF THE UNITED KINGDOM, 1, Wimpole
Street, W., Annual Meeting.—10.30 a.m., Papers:—Mr.
Frank Jaler: Treatment of Keratitis in Cases of
Exophthalmic Goitre; Mr. Osmond: Permanent
Hemianopia following Migraine; Dra. Taylor and
Gordon Holmes: Heredity and Family Optic Atrophy;
Mr. Bishop Harman: Myopia, 2.30 p.m.—Papers:—
Mr. Angus Macnab: Excision of Conjunctival Sac and
Lid Margins; Mr. Dorrell: Tobacco Amblyopia; Mr.
Treacher Collins and Mr. Hudson: Congenital Staphy-
loma; Mr. Treacher Collins: Visible Vessels on the
Surface of the Iris.
- ROYAL SOCIETY, Burlington House, W., 4.30 p.m.—Cecil Revis: The
Value of *B. coli* in Soil and Production of Two
Permanent Varieties.

FRIDAY.

- OPHTHALMOLOGICAL SOCIETY OF THE UNITED KINGDOM, 1, Wimpole
Street, W.—10.30 a.m., Discussion on Vascular and
other Retinal Changes in Association with General
Disease. 2.30 p.m., at the Royal London Ophthalmic
Hospital.—Demonstration and Discussion of Cases.
- ROYAL COLLEGE OF SURGEONS, Lincoln's Inn Fields, W.C., 5 p.m.—
Museum Demonstration:—Professor Keith: Spec-
imens illustrating Congenital and Acquired Deformities
of the Spine.

ROYAL SOCIETY OF MEDICINE:

- SECTION OF DISEASES OF CHILDREN, 4.30 p.m.—Demon-
stration of Cases and Specimen. Communications:—
Mr. Anglin Whitelocke: (1) Operation for strangulated
hernia in an infant 18 days old. (2) Case simulating
meningitis.
- SECTION OF EPIDEMIOLOGY AND STATE MEDICINE, 8.30 p.m.
—Dr. T. Shadick Higgins: The Diphtheric Bacillus
and Scarlatinal Infection. Surgeon McCowen, R.N.:
Sleeping Sickness in Principe Island and Angola,
West Coast of Africa.

POST-GRADUATE COURSES AND LECTURES.

- MANCHESTER: ANCOATS HOSPITAL, POST-GRADUATE CLINIC, Thursday
4.15 p.m.—Demonstration of Medical and Surgical
Cases by the Members of the Honorary Staff (Post-
Graduate Clinic).
- LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital,
Greenwich.—General Medical and Surgical Clinics,
daily. Throat, Nose, and Ear: Monday and Thursday.
Skin: Tuesday and Friday. Eye: Wednesday and
Saturday. Pathology: Thursday. Radiography:
Saturday. Special lectures each week.
- MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street,
W.C.—The following Clinical Demonstrations have
been arranged for next week at 4 p.m. each day:
Monday, Skin; Tuesday, Medical; Wednesday, Surgical;
Thursday, Medical; Friday, Ear, Nose, and Throat.
Special Lectures at 5.15 p.m. daily.
- QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—Thursday,
4 p.m.: The Common Eye Disease of Childhood—
Phlyctenulosis.
- ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—
Monday and Thursday, 4.30 p.m.; Friday, 3.30 p.m.
- WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.
—Medical and Surgical Clinics, 2 p.m.; X Rays and
Operations daily. Gynaecology: Monday, Tuesday,
Wednesday, and Friday. Eye: Monday, Wednesday,
Thursday, and Saturday. Throat, Nose, and Ear:
Tuesday, Wednesday, Friday, and Saturday. Skin:
Tuesday and Friday. Pediatrics: Saturday.

[For further particulars of Lectures consult the Index to
Advertisements.]

RECENT PUBLICATIONS.

- A Compendium of Aids to First Aid.* By N. Corbet Fletcher, B.A.,
M.B., B.C. Cantab. London: John Bale, Sons, and Danielsson,
1913. (Medium 16mo, pp. 40. Price 6d. net.)
- A booklet containing a number of tips, of a kind familiar
to medical and other students, for the benefit of first aid
workers. The author is lecturer to the Broad Street
Division of the ambulance department of the London and
North-Western Railway, and a brief preface is supplied by
Mr. J. Cantile.

LOCAL MEDICAL COMMITTEES.

HACKNEY.

The following are the names of practitioners in the borough of Hackney elected to form the District Medical Committee:

| | |
|---|----------------------------|
| Dr. Rowland Smith, J.P., <i>Chairman</i> | Dr. H. Christoffers Powell |
| Dr. C. Wyndham Gittens, 38, Powerscroft Road, Clapton, N.E., <i>Secretary</i> | Dr. Geo. C. Simon |
| Dr. A. G. Southcombe | Dr. J. Gundlach |
| Dr. C. E. Evans | Dr. F. T. Keenan |
| Dr. Montague Smith | Dr. W. J. Deighan |
| Dr. T. Rushbrooke, J.P. | Dr. A. T. Swan |
| Dr. A. W. Miller | Dr. W. Brander |
| Dr. Myer Cohen | Dr. H. C. Dixon |
| Dr. A. W. Vardon | Dr. O. F. Hadfield |
| Dr. E. J. T. Moore | Dr. J. M. Laughton |
| | Dr. D. Petty |
| | Dr. S. Wilson |

Representatives on the District Insurance Committee.—Dr. T. Rushbrooke, J.P., Dr. A. W. Miller.

Application has been made to the Insurance Commissioners for recognition.

BOURNEMOUTH.

The Bournemouth Local Medical Committee met again on April 19th to give further consideration to the scheme formulated by the Commissioners for the treatment of temporary residents. It was decided to advise the panel to accept it provisionally, and to sign the new agreement for three months from April 15th. The Committee considered the scheme to be a genuine attempt to solve this very difficult problem, and was therefore willing to give it a fair trial, but it has pointed out to the Commissioners that if it results in the practitioners on the panel having to accept anything less than the very moderate fees set out in para. 15 of Form 161/I.C., it will point to a very grave defect in the Act and a very serious injustice to the profession generally. The Committee therefore reserved the right to raise the question again, if necessary.

The Secretary was instructed to write to the Insurance

Committee strongly objecting to the suggested charge on the part of the chemists of 1d. for each prescription copied. The panel would prefer to continue giving a duplicate prescription rather than allow this charge to be made.

BRADFORD.

The following is a list of the members of the Bradford Local Medical Committee:

| | |
|--|----------------|
| Dr. Manknell, <i>Chairman</i> | Dr. Dunlop |
| Dr. J. F. Allen, 39, Whetley Lane, Bradford, <i>Secretary</i> | Dr. Hope |
| Dr. Bell | Dr. Mitchell |
| Dr. Campbell | Dr. Naylor |
| Dr. Carroll | Dr. Sharpe |
| Dr. Clow | Dr. Shackleton |
| Dr. Duasmore | Dr. Wheatley |
| | Dr. Willson |

Representatives on Insurance Committee.—Elected by the profession: Drs. J. F. Allen and H. Shackleton. Appointed by the Commissioners: Drs. Campbell and Enrich.

Representatives on the Medical Service Subcommittee.—Drs. Carroll, Mitchell, and Sharpe.

NORTHAMPTON.

A MEETING was held at the General Hospital on April 15th. Dr. BUSZARD was in the chair, and seventeen other members were present.

A letter was read from the Northampton Insurance Committee approving of the scale of fees suggested by the Medical Committee for insured persons who temporarily resided in the area. The meeting agreed to the recommendation of the Insurance Committee that:

Money available for the period ending April 14th from those persons who have not selected a doctor be distributed in equal shares among medical men on the panel.

The Honorary Secretary was directed to write to the Insurance Commissioners asking that a uniform certificate be issued for all approved societies, and that not more than one "declaring on" certificate be required.

Dr. BEATTY announced his resignation from the Insurance Committee.

Dr. ROSS was elected Honorary Treasurer, and Mr. COOKO re-elected Honorary Secretary.

Drs. MILLIGAN, CAIRNS, and SANDERS were selected to serve on the Medical Service Subcommittee.

LEICESTER.

THE Local Medical Committee for the Borough of Leicester has been recognized and is constituted as follows:

Dr. R. WALLACE HENRY, *Chairman*.

Dr. E. W. HOLYOAKE, 2, Tower Street, Leicester, *Honorary Secretary*.

Dr. ASTLEY CLARKE

Dr. C. H. CLARKE

Dr. CROSFIELD

Dr. EWNES

Dr. L. K. HARRISON

Dr. HIGGS

Dr. MOFFAT-HOLMES

Dr. MACALLISTER HEWLINGS

Dr. MARTIN

Dr. LILLEY

Dr. PEAKE

Dr. SALOMON

Dr. SHEARER

Dr. P. E. SNOAD

Dr. WAITE

Dr. WILLIAMS

Representatives on the Local Insurance Committee.—Drs. R. WALLACE HENRY and MOFFAT-HOLMES.

The Pharmacopoeia of the Leicester Public Medical Service, with a few minor alterations, has been accepted, and is now being used throughout the town in prescribing not only for insured but also for non-insured persons. The Oddfellows and Foresters have "contracted out" under the Harmsworth amendment, and arrangements have been made whereby the members of these societies may be attended by any of the staff of the Public Medical Service.

The Local Insurance Committee has agreed to postpone for two months the date of allotment of those persons who have not yet chosen a doctor, and it has been decided to divide the money due on account of those persons in direct proportion to the number of persons on each practitioner's list.

As the result of representations made to the Local Insurance Committee, a letter has been sent by it to the Commissioners urging that anaesthetics, diseases due to misconduct, miscarriages, and abortions be treated as extras.

Representations have been made to the Local Insurance Committee to the following effect: (1) That the "Model Rules" be adequately circulated among insured persons; (2) that it is advisable to appoint deputies for the directly elected representatives on the Insurance Committee; (3) that it is advisable to appoint medical referees with a view to the prevention of malingering.

An improved form of prescription book has been decided on which does away with the use of the carbon paper, and in which the prescriptions are written in duplicate.

WEST SUFFOLK.

AT a meeting of the Local Medical Committee on April 5th the Secretary was instructed to send a report of the meeting to all practitioners on the panel, to draw their attention to the powers of Local Medical Committees, and to request them not to sign any papers referring to medical or sanatorium benefit, should such be issued by the Insurance Committee, without consultation with the Local Medical Committee, and, further, to request practitioners to refer all matters of doubt or dispute to the Local Medical Committee.

It was agreed to undertake to continue service to May 31st, 1913.

The proposed new contract (Form Med. 29) was discussed in conjunction with the recommendations of the State Sickness Insurance Committee of the British Medical Association, and further recommendations were drawn up and adopted for consideration at a joint meeting with the Emergency Medical Benefit Subcommittee of the County Insurance Committee.

At the joint meeting held subsequently Dr. WOOD, on behalf of the Local Medical Committee, protested against the issue of Circulars M.B., 23 and 26, without reference to the Local Medical Committee, which had the right to be consulted on all matters relating to medical benefit. The CHAIRMAN and CLERK of the Medical Benefit Subcommittee having explained the circumstances in which the circulars were issued, gave an unqualified assurance that

in future all such matters would be referred to the Local Medical Committee. A discussion of the recommendations of the Local Medical Committee followed, and the members of the Insurance Committee expressed their readiness to meet the profession to the full extent of their powers.

MEETINGS OF INSURANCE COMMITTEES.

CAMBRIDGESHIRE.

Illnesses and Village Gossip.

AT the last meeting of the Cambridgeshire Insurance Committee the Medical Benefit Subcommittee recommended that certificates with regard to sickness benefit should be uniform for all societies and should specify the nature of the illness. Dr. B. E. FORDYCE said that patients had complained that the illnesses from which they were suffering were becoming public property and the subject of gossip. It was most desirable that friendly society officials should use great discretion in this matter. Miss BRISCOE remarked that people's illnesses should not be the subject of discussion in small villages. The CHAIRMAN said the friendly societies must have the information, but if anything leaked out through officials there was a possibility of their being discharged. The recommendations of the subcommittee were approved.

SURREY.

Contracting Out.

IT was reported to the Surrey Insurance Committee last week that 225 applications for permission to make their own arrangements had been received from insured persons, and of these 220 had been granted, 143 being in respect of persons who desired to continue their present medical attendant. General ELLES, who moved the adoption of the report, remarked that there was not a discordant note throughout a conference held with medical men, although only one of the doctors was on the panel and one or two had been pronounced opponents of the Act. He added that the scale of fees fixed in connexion with contracting out were higher as regards attendance at home or surgery and for special visits than the scales fixed in Kent and London, but the Committee did not see any disadvantage in this. There was only so much money, and it had all to go to the doctors. The report was adopted.

DERBY.

Objections to Publicity regarding Sanatorium Benefit.

STRONG objection was taken at the last meeting of the Derby Insurance Committee to the publication in the printed agenda sent to members of the names, addresses, and occupations of recipients of sanatorium benefit. It was mentioned that persons had been deterred from applying for sanatorium benefit by the knowledge that the fact would become so widely known.

A motion that in future the cases should be designated by numbers was defeated by 13 votes to 9. It may be pointed out that in London and Middlesex, to mention two cases, the system rejected in Derby has been adopted without question from the outset.

NORTHUMBERLAND.

Mileage Rate in Inaccessible Districts.

THE Northumberland Insurance Committee having approved a mileage rate of 2s. 6d. for distances over three miles in those districts of the county coming under the description of "mountain and fell," the medical men concerned asked that the limit of distance should be two miles instead of three. The Chairman, Mr. GERALD FRANCE, M.P., at a meeting of the Committee last week, said he had put the matter before the Insurance Commission, which would raise no objection to any alteration that satisfied the Committee as being fair. Medical men in other parts of the county raised no objection to the limit of two miles asked for by their colleagues, and he proposed that the request be granted. There was some opposition, but ultimately the motion was carried by 22 votes to 9.

INSURANCE NOTES.

THE ALLOCATION OF THE "RESIDUE."

THE period during which insured persons might select a doctor having expired, questions connected with the allocation of the residue who have not made a selection are now occupying the attention of many Insurance Committees. In the larger cities it appears that many clerks and others in similar occupations, whose incomes are near the income limit of £160, not only have not chosen a doctor but are unlikely to call in the doctor to whom they are allotted. They will continue to be attended by their own medical man. This point has come before the Bristol Insurance Committee, and it is stated that as the Insurance Fund cannot make a saving in respect of these cases, the usual payment will go to the doctor to whom the insured person is allotted, whether that person goes to him or not when ill.

As has been the case in regard to other matters involving questions of principle, widely differing decisions have been arrived at by various Insurance Committees in the matter of allocation.

The Paisley Committee has approved the principle, with regard to allocation, that no doctor shall have more than 1,800 names on his list until each has at least 1,800, and that any balance of a doctor's share remaining after bringing his total up to that number shall fall into a common pool for division equally among the others. Women doctors will only have female insured persons allocated to them.

The Dundee Committee on April 16th decided that no doctor whose list exceeded 1,800 (there were fourteen doctors with lists in excess of this number) would share in the allocation, and a process of levelling up would be adopted. Any doctor with 1,200 to 1,700 was to have his list increased to 1,800; those with 800 to 1,100 were to be increased to 1,550, those with 500 to 700 were to be increased to 1,300, and those with 100 to 300 were to be raised to 1,000. It was suggested that the Local Medical Committee should deal at a future date with those cases in which doctors have a very large number on their lists.

The arrangements of the Walsall Committee were criticized by Dr. Martin and Dr. Hawley on the ground that the method of allocating would penalize the doctors who had done all the work during the quarter. Objection was raised, particularly, to the money accrued during the quarter in respect of the "residue" being handed over to the doctors to whose lists the names would be added for the quarters to come. The suggestion was that this money should be divided equally among all the doctors on the panel.

At the last meeting of the Brighton Insurance Committee Dr. Ryle moved and Dr. Fothergill seconded a motion to instruct the Medical Service Subcommittee to consult the Local Medical Committee on the principles to be adopted in the allocation of insured persons who had not chosen a doctor. The motion was lost after debate, and the Insurance Committee subsequently decided as follows:

That for the purposes of allocation the borough be divided into districts; that the clerk ascertain from the doctors on the panel the number of insured persons in addition to those already on their lists for whose medical treatment they are prepared to be responsible; and that the Medical Benefit Subcommittee on receipt of that information be authorized to carry out the allocation in such a manner as may be deemed most expedient by it.

INSURED PERSONS AND HERBALISTS.

The West Riding Insurance Committee having decided not to recognize for the purposes of medical treatment under the Insurance Act any but duly registered medical practitioners, a protest meeting was held on April 17th at Sowerby, where (the *Yorkshire Observer* states) a medical herbalist has an extensive practice. A resolution was passed protesting against discretion being refused to insured persons to make their own arrangements for treatment, whether orthodox or unorthodox.

NATIONAL MEDICAL UNION.

A meeting of the Executive Committee of the National Medical Union was held at 5, John Dalton Street, Manchester, on April 16th. The present position under the National Insurance Act as it affects those practitioners

who have not taken service was discussed. It was reported that inquiries with regard to membership had been received from doctors all over the country. Many of them had retired from the panel, while others had expressed their determination to do so at the first available opportunity. Twelve men from the Salford area had notified that, having removed their names from the lists, they wished to join the Union. The Honorary Treasurer reported that the finances of the association were in a satisfactory condition. It was decided that a general meeting of the Union should be held shortly, and a sub-committee was appointed to deal with the organization of the Union with a view to concerted action in the future.

We are informed that the following medical men resident and practising in Broughton and Prestwich districts within the area of the Salford Division have decided to refuse to attend patients under the National Insurance Act: Drs. G. H. Pinder, D. MacMillan, A. M. Kinghorn, J. W. Grange, G. W. Beesley, W. C. Johnson, S. Yeoman, F. Stephenson, D. P. Paul, A. C. Clarke, E. T. Larkam, T. P. Allen, C. Politachi, and J. Rust.

REPORTS OF LOCAL ACTION.

IRELAND.

National Insurance Act.

A MEETING of the Advisory Committee to the National Health Insurance Commissioners was held in Dublin on April 15th. Mr. J. A. GLYNN, Chairman of the National Insurance Commissioners, who was in the chair, said that the Commissioners had, through the Insurance Committee Branch and Medical Branch, recognized locally twenty-six Medical Committees which were set up by the doctors under Section 62 of the Act, and although Ireland had not medical benefits the Commissioners had acquiesced in the desire of the doctors to appoint those Medical Committees, and to consult them in all questions which affected the medical profession in the counties in which they were set up. There were thirteen of these still to be set up, and as soon as the nominations were received for those areas Medical Committees for them would be approved. Practically all the county councils had taken in hand the matter of sanatorium benefits, and were erecting either alone or in conjunction with other county councils their own sanatoriums or making provision with existing sanatoriums for the indoor treatment of their patients. Mr. Glynn then gave a history of the negotiations with the societies and the Conjoint Committee of the British Medical Association and Irish Medical Association with regard to the grant of £50,000 for certification. The Conjoint Committee, he said, had recommended that for the six county boroughs and larger towns the capitation fee of 1s. suggested by the Commissioners should be reduced to 9d., and that the capitation rates in the county areas should be correspondingly increased. Up to April 14th acceptances had been received from 610 doctors in Ireland to act on the panel; of these, 14 had since withdrawn. The panels in Belfast, Cork, and Londonderry were filled in these cities, having respectively 117 out of 260 doctors, 37 out of 96, and 17 out of 40. The panels in Dublin, Limerick, and Waterford had not been filled. The panels were completed in twelve counties, by which he meant that the number of doctors who had joined the panels in these counties was sufficient for every insured person in the county. The counties that had filled were Antrim, Armagh, Clare, Cork, Donegal, Down, Fermanagh, Londonderry, Longford, Mayo, Monaghan, and Sligo. Some of the other counties had got a reasonable number of doctors, but not a sufficient number to cover the whole of the areas. The Commissioners had guaranteed to doctors working on the panels that they would get the preference in any scheme that was formulated or in any arrangements that might be come to. In only eight counties and county boroughs had no application been received. In those counties where panels had not filled the Insurance Commissioners were determined that, so far as in them lay, the people would be provided with efficient medical certification. The following resolution and addendum were passed:

That in certain insurance areas, where the panels have failed to fill, the Commissioners, after consultation with the approved societies and Insurance Committees of these areas, appoint medical practitioners for purposes of certification.

That in the case of societies which already have medical officers certificates from these officers will be accepted and paid for per capita in accordance with the number of members of these societies in those areas covered by the first part of the resolution.

The following members dissented: Dr. Power, Dr. Donnelly, Dr. Darling, and the Right Hon. M. F. Cox, P.C., M.D.

The Honorary Secretary of the Longford Local Medical Committee has since written to the daily press expressing amazement at hearing that the panel in that county had been filled. He states that, on making inquiries at the post office, nothing is known about it there; he thinks that possibly one doctor in the whole county has accepted the position. At a meeting of the medical practitioners of the county, held on April 5th, it was unanimously decided to refuse to form a panel. With regard to co. Down also there seems to be some doubt as to the correctness of Mr. Glynn's statement.

County Councils and the Extension of Medical Benefits.

At a meeting of the County Councils General Council held in Dublin on April 18th, the question of the extension of medical benefits to Ireland was considered. One of the speakers said that the friendly societies desired this extension because they already gave medical benefit to their members, and that some of the higher wage-earners in the cities would be willing to pay increased contributions for medical benefit, but that this was the beginning and the end of the argument for extension. A resolution was passed declaring that medical benefits should not be extended to Ireland, except in county boroughs, unless accompanied by a revision of the Poor Law medical system. As the Actuary to the Irish Insurance Commissioners has stated that extension to the county boroughs and not to the rest of the country is "actuarially impossible," this would seem to be a resolution directly against the extension to Ireland unless accompanied by a revision of the Poor Law system. It is admitted that a very large number of the people receive benefits under the Medical Charities Act who would never come under the National Insurance Act; therefore it is not enough merely to abolish the Poor Law system to make way for the extension of medical benefit. The question of the amalgamation of the two systems, even if possible, presents many difficulties, and would demand prolonged deliberation before it could be attempted.

Derry Doctors and the Friendly Societies.

As a result of the failure of the Federation of Derry Benefit Societies to arrange terms with the local doctors, it has been decided to import a number of medical men to the city. The dispute has gone on since the doctors resigned their contract appointments in January last. At a meeting of the Federation last week, a deputation which had waited on the city doctors in the hope of being able to settle the dispute, reported that the doctors had rejected their terms. A proposal to bring to the city a number of doctors who had applied for appointments was carried unanimously.

SCOTLAND.

Local Medical Committee for Midlothian.

The Local Medical Committee for Midlothian consists of Dr. Andrew Douglas Ramsay Thomson, Musselburgh, and of Dr. Alexander Maitland Easterbrook, Gorebridge, representing the practitioners; of Dr. Simson Carstairs Fowler, Juniper Green, and Dr. James Cameron, Loanhead, representing the Commission; and of Dr. Robert Inch, Gorebridge, and Dr. William Young, West Calder, representing the County Council.

Edinburgh Medical Guild.

The Medical Guild (Edinburgh), which, it will be remembered, is an association of medical practitioners who have not joined the panel under the Insurance Act, at its meeting on April 17th, when Dr. PLAYFAIR was in the chair, adopted the following motion unanimously:

That it is against the policy of the Guild for members to sign the private arrangements circulars which have been issued by the Edinburgh and Leith Insurance Committees.

It was recommended that any members who had signed those circulars should apply to the clerks of the committees for permission to withdraw their signatures. The Secretary was instructed to circularize the members regarding this motion.

Change of Doctor.

The Secretary to the Scottish Insurance Commissioners (Mr. John Jeffrey) has replied (April 17th) as follows to a correspondent who made inquiry as to change of doctor:

The transference of an insured person from the list of one doctor to that of another on the same panel cannot take place in the course of the year except under the following circumstances: (1) With the written consent of the two doctors affected and of the insured person on the appropriate form obtainable from the Insurance Committee; (2) upon a change of residence within the area of the Committee rendering it impossible for the insured person to obtain treatment from the doctor selected, in which case the Insurance Committee should be notified; (3) as the result of an inquiry arising between the insured person and his panel doctor where the Insurance Committee consider a change of doctor desirable; or (4) upon a doctor ceasing to practise within the area or being removed from the panel. In all other cases the insured person remains on the list of the doctor who accepted him or to whom he has been assigned till the end of the medical year. A change of doctor may be arranged for the following year by the insured person giving notice to the Insurance Committee not later than one month before the date of revision of the medical list, of which public notice will be given by the Insurance Committee. Special provisions apply in the case of an insured person changing his residence from the area of one Insurance Committee to that of another.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

On Thursday, April 17th, the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand, W.C. Mr. T. JENNER VERRALL (Chairman of Representative Meetings) was in the chair, and the other members present were:—*England and Wales*: Dr. R. M. Beaton (London), Dr. E. R. Fothergill (Brighton), Miss F. Ivens, M.S. (Liverpool), Dr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. E. O. Price (Banger), Dr. D. G. Thomson (Norwich), Mr. E. B. Turner (London). *Scotland*: Dr. John Adams (Glasgow), Dr. R. McKenzie Johnston.

APLOGIES FOR ABSENCE.

Apologies for absence were read from the Chairman and Mr. D. F. Todd (Sunderland).

REPORT TO COUNCIL.

The greater part of the time of the Committee at this meeting was given up to the consideration of the recommendations which it should make for the consideration of the Council at its meeting on April 23rd. The decision of the Council with regard to these recommendations will be embodied in the annual report of the Council to be published in the next issue of the SUPPLEMENT.

DISPENSING.

The Committee adopted the following resolution with regard to practitioners dispensing:

That the present is not an opportune time for the Association to take action in pressing that medical practitioners should be allowed to dispense medicines for those of their patients who are insured persons.

DISPENSERS HOLDING APOTHECARIES' SOCIETY'S CERTIFICATE.

On consideration of a communication from the Society of Apothecaries the Committee resolved that as the matter was not one directly affecting the medical profession, the Association should not press for amendment of the Insurance Act to protect the interests of persons holding the certificate in dispensing from the Society of Apothecaries.

TRANSFER OF PATIENTS.

A communication from the Honorary Secretary of the Tower Hamlets Division, drawing attention to the fact that the form of application issued by the London Insurance Committee for transfer from one practitioner to another required a statement by the insured of his reason for changing, and pointing out that the Regulations authorized the patient to change his medical attendant subject to the consent of the two practitioners concerned, was received and discussed. The Committee resolved to address the following letter to the Insurance Commissioners:

April 21st, 1913.

Sir,

The attention of the State Sickness Insurance Committee of the Association has been drawn to Form M.B. 3 issued by the Insurance Committee for the County of London. This is a form issued to insured persons desiring to be transferred from one practitioner to another under Regulation 26 (a). The form requires a statement from the insured as to his reasons for desiring to so change his doctor.

I am instructed to state that the State Sickness Insurance Committee is unable to find anything in Regulation 26 which requires such a statement to be made. In fact, according to the final paragraph of that Regulation, a transfer may actually have taken place seven days before a practitioner need give notice of the transfer to the Insurance Committee. Form M.B. 3, on the other hand, would lead any one reading it to believe that the consent of the Committee was necessary to the transfer, and, furthermore, that any transfer could not take place until that consent had been obtained.

The State Sickness Insurance Committee is unable to find anything in Regulation 26 bearing that colour, and, moreover, is of opinion that any demand for the reasons for change on the part of the Insurance Committee is not only an infraction of the Regulation, but will place serious obstacles in the way of a procedure which seemed quite simple, and was accepted as satisfactory by the medical profession.

My Committee trusts that the Commissioners will at once draw the attention of the Insurance Committee for the County of London to the fact that the form in question goes beyond the terms of the Regulations.

I am, Sir,

Your obedient servant,

ALFRED COX,
Medical Secretary.

The Secretary,

National Health Insurance (Joint) Committee,
Buckingham Gate, S.W.

A letter was addressed to the London Insurance Committee in identical terms, except that in place of the last paragraph of the letter to the Commissioners it was asked whether the London Insurance Committee had received authority from the Commissioners to issue the form.

PUBLIC MEDICAL SERVICE SCHEMES.

Schemes for the treatment of uninsured persons submitted by the Woolwich Division and by the West Herts (Watford Ward) Division were approved, subject in the second case to the clearing up of one point in doubt.

INSURANCE ACT IN PARLIAMENT.

AMENDING BILL.

In reply to Mr. Worthington-Evans, the Prime Minister stated that he could not yet give a date for the introduction of the bill to amend the National Insurance Act.

MEDICAL BENEFIT TO TEMPORARY RESIDENTS.

As anticipated in our notes in a recent issue, the Commissioners have decided to establish a Central Fund to be managed by the Commissioners for the purposes of paying for the medical attendance and treatment of insured persons who either remove occasionally for a temporary purpose, as, for instance, seaside visitors, or move frequently in the course of their occupation from place to place, as, for instance, members of theatrical companies.

The proposals of the Commissioners are explained in the Memorandum I61/I.C. which was printed in our issue last week.

It is laid down that the Central Fund "must contain such a sum as will afford a rate of remuneration in respect of the fees charged against it equivalent to the

average rate of remuneration received by doctors all over the country in respect of the treatment of other insured persons." To secure this object the sum to be transferred in respect of every "temporary resident" requiring treatment from the funds of the committee of the district of his previous residence will be at an ascertained "case-value." The "case-value" is ascertained by calculating the average sum paid to doctors and chemists in respect of every insured person actually treated in that committee's area—for example, if one-third of the insured population is ill, the average rate of remuneration in respect of each person requiring treatment would yield a "case-value" of 27s., being 9s. x 3, for the provision of medical attendance and drugs.

The distribution of the Central Fund in respect of persons moving from one Committee area to another is to be managed by the Commissioners, and the notification of the removals and the provision of the vouchers is substantially the only work which will fall on the Local Insurance Committee.

In order to take advantage of this arrangement, the insured person who makes a temporary move must obtain a voucher in the form of a green card, similar to the one now issued for medical men's records. This voucher will be presented by the insured person to the medical man whom he may require to call in when temporarily away from his ordinary abode.

In the case of the second class—namely, those persons who habitually move from place to place, it is proposed that the whole of the money for medical benefit (9s. for each insured person) shall be pooled in a central fund, out of which the payments will be made. In this case there is no "case-value" attached to the individual insured person, as the whole of the moneys are pooled in respect of the whole class.

Out of the Central Fund the Commissioners will credit to the different societies the amount which represents their share of the pool to pay the medical men's accounts in the area—in other words, the system is that of payment for attendance out of a pool applied to these classes of persons.

REPRESENTATIVES OF INSURED PERSONS ON INSURANCE COMMITTEES.

In reply to Mr. Snowden, Mr. Robertson stated that Regulations had been issued by the Scottish Commissioners with regard to the election of the representatives of insured persons on Insurance Committees, and the corresponding Regulations for England, Ireland, and Wales were now under consideration. The Regulations of the Scottish Commissioners were so framed as to take into account the number of members of each society operating in each committee area.

ESTIMATED COST OF ADMINISTRATION.

Mr. Jesse Collings asked the Secretary to the Treasury the total cost, including every item, of administering the National Insurance Act for the year 1912-13, and the total estimated cost of the same for the year 1913-14.—Mr. Robertson replied as follows: The figures of actual expenditure for 1912-13 are not yet available. The estimated figures for 1913-14, as I have explained in my reply to previous questions, are:

| | |
|--|------------|
| Central administration | £ 855,659 |
| Approved societies and Insurance Committees | 2,615,200 |
| | <hr/> |
| | £3,470,859 |

The sum of £2,615,200 includes the aggregate of the maximum amounts allowed to be carried by societies to their administration account. Any sums saved within these maximum amounts will ultimately be available after valuation for additional benefits.

MR. SCHUSTER'S APPOINTMENT.

In reply to Mr. J. D. Rees, Mr. Robertson stated that Mr. Claud Schuster had been appointed legal member of the Health Insurance Commission as from May 13th next without extra remuneration as compared with his former post of secretary and legal adviser. He stated that the separation of the posts of secretary and legal adviser would entail the addition of £1,000 a year on the administrative side in respect of the salary of the new secretary, but that a saving of about the same amount on the legal

side would be made in view of the additional time which Mr. Schuster would be able to devote to that side of the work.

MARRIAGE CERTIFICATES.

In reply to Mr. Stanier, Mr. Masterman stated that the question of enabling insured persons who require copies of their marriage certificates in connexion with a claim for benefits under the National Insurance Act being able to obtain them at a reduced rate was receiving consideration.

NUMBER OF LOWLY PAID CONTRIBUTORS.

In reply to Mr. Worthington-Evans, Mr. Masterman stated that the number of employed contributors of 21 and over whose rate of remuneration did not exceed 2s. a day, and in respect of whom claims had been made for the first quarter for the payment of the State contribution of 1d. were as follows:

| | | | | |
|-------|-----|-----|-----|---------|
| Men | ... | ... | ... | 85,000 |
| Women | ... | ... | ... | 326,000 |

These figures applied to all parts of the United Kingdom.

MEDICAL BENEFIT.

Dispensing by Country Practitioners.

In reply to Mr. Fitzroy, who inquired as to whether in rural districts where a medical man dispenses his own drugs to insured persons he is entitled to have inserted in his agreement a clause securing to him the right to receive the additional 2s., and whether he was aware that county Insurance Committees, whilst assuring rural doctors that they were entitled to the money, had stated that they had no authority to insert a clause in the agreement to that effect, but that the medical men must rely on their undertaking only, Mr. Robertson said it was open to an Insurance Committee to make a special agreement to the effect suggested in the question, but it was not necessary, as the security desired was afforded by the terms of the agreement as it stood and did not depend simply on an undertaking of the committee.

Limiting Medical Lists.

Mr. Wardle called attention to a resolution of the medical men for South Shields limiting the number of patients to 800, and allocating those insured persons who had not selected their medical adviser on March 22nd, 1913, to those doctors who had less than 800 persons on their lists, and inquired whether such practice was contrary to the provision of the National Insurance Act, which guaranteed free choice of doctor, and what it was proposed to do in face of the local dissatisfaction which had been caused by this resolution. Mr. Robertson stated in reply that he understood that the method of allocation proposed had been recommended by the Local Medical Committee and by a majority of the practitioners on the panel present at a meeting held to consider the question, but that the Insurance Committee had not yet arrived at any decision. The proposed allocation only applied to those insured persons who had failed to exercise their right of choosing, and therefore it could not if adopted have the result of preventing more than 800 persons choosing a particular doctor.

Scottish Clerks' Association.

In reply to Mr. Watt, Mr. Robertson stated that it was proposed to issue within a short time a full statement with regard to the position of the Scottish Clerks' Association and the arrangements for medical benefit.

In reply to a further question by Mr. Watt, who inquired whether it was necessary for an approved society itself to employ and pay medical attendants or whether it was possible for the individual members to employ and pay where they made their own arrangements and to be refunded by the society, Mr. Robertson said that the answer of the first part of the question was in the negative, and that medical benefit would be administered by the Insurance Committees and not by the approved societies, and that persons who were allowed by Insurance Committees to make their own arrangements would receive contributions from the committees towards the cost of such attendance and treatment through the committees and not through the societies.

SCOTTISH INSURANCE COMMITTEES.

In reply to Major Hope, Mr. Robertson stated that the new Scottish Insurance Committees would be constituted

by July 14th at the latest, and, in answer to a further question, stated that the Scottish Insurance Commissioners had received no objections from approved societies and insured persons to the present Insurance Committees making contracts for medical attendance beyond July 14th next.

IRELAND.

Sir John Lonsdale asked the Chancellor of the Exchequer if he was aware that the Conjoint Committee of the Irish Medical Association and British Medical Association received a definite pledge that a minimum capitation rate of 2s. 6d. would be provided for certification in the event of medical benefits for Ireland being deleted from the National Insurance Act; and if, in redemption of this pledge, he intends to make a further grant to enable the Irish Commissioners to meet the financial difficulties in the way of the efficient working of the Act in Ireland?—Mr. Masterman: The answer to the first part of the question is in the negative. The second does not therefore arise.

CORRESPONDENCE.

FUTURE ACTION.

DR. E. T. LARKAM (Prestwich, Manchester) writes: Most medical men must agree with Drs. Courtenay Lord and Buttar that the present apathy of the profession is most unsatisfactory and may spell disaster in the future.

Many men seem quite happy and content in the knowledge that, on the panel, they will get any sum varying from 6d. to 1s. 6d. a visit or consultation, but seem totally oblivious of the fact that when the Government has them in complete subjection they will lose practically all their independence; then, indeed, will they lament their present supineness, especially when they are compelled to submit to the indignity of answering complaints, mostly trivial and vexatious, before the tribunal set up by the Act. Will life then be worth living? Surely now is the time to refuse further work, more particularly as the number of medical men and the entries at the medical schools are stated to be decreasing.

There is little doubt that, for the present, the Commissioners are causing all complaints to be shelved, with the view of placating the profession and of allowing it to fall into a false sense of security, but this will only last for a time.

It would be a good move for the many associations of non-panel men throughout the United Kingdom to form one strong combination with local branches with the view of mutual help and defence, and of endeavouring to induce the unwilling workers to leave the panels. It must not be forgotten that there are vast numbers of medical men not on the panel, and in many districts more than half the local profession is so situated.

In conclusion, we must all applaud the consistent and firm attitude taken up by Dr. Courtenay Lord and the Gillingham stalwarts.

DR. HECTOR LEAK (Winsford, Cheshire) writes: The fact that at present about half the work done by the medical profession is contract work is forcing us to consider the necessity of acquiring the organization best calculated to secure that this contract work will not be undertaken at a price and under conditions which are neither satisfactory to the profession nor to the advantage of the public.

That the British Medical Association as at present constituted is not the best organization for the purpose seems to be admitted. The question that arises is whether it is better for the British Medical Association to alter its organization so as to meet satisfactorily the new conditions of steadily increasing contract work, or whether a new society should be formed for the purpose. It is evidently difficult to adjust the British Medical Association to the new conditions, and it would appear to be both easier and better for the British Medical Association to form a new society for this special purpose.

If this latter method were adopted, the British Medical Association should hand over to the new society the "maintenance of the honour and interests of the medical profession," including the ethical and political work, so that the new society should not merely be one for securing

fair conditions of service as between medical men and their patients or the public, but should also help to regulate the behaviour of medical men to one another, and by political action help to secure that the health of the community should be properly cared for, as well as the interests of the profession efficiently guarded. The British Medical Association would then become a purely scientific body most helpful to the advancement and dissemination of medical knowledge.

To the new society would become affiliated the societies which exist for the protection of the interests of special groups of medical men, as the Poor Law Officers' Association, the Association of Public Vaccinators, etc., and these would have representatives on the governing body. It would probably take over the work of the medical defence societies and benevolent and other work for the benefit of the profession.

It would be necessary for such a society to build up a large fund in order to compensate those members who might suffer from adherence to its policy, and to form a bond of union amongst its members. For this purpose a much larger subscription would be necessary—at all events at the commencement—than the subscription to the British Medical Association; and with advantage it might be made to include membership of the British Medical Association, or at least the receipt of the JOURNAL, the SUPPLEMENT of which would constitute the organ of the new society. Such a society would in a very short time justify its existence and its cost by improved conditions of service, including remuneration, and be helpful to the public by maintaining the proper status of medicine and public health.

Dr. A. E. BROWN (Lady Grey, Aliwal North, C.P.) writes: Please find enclosed cheque for £3 3s., being first contribution to Central Insurance Defence Fund. I wish the fund every success, and trust there will be a wide and generous response to it from all parts of the world.

I, as a humble unit, have been following with close interest the action taken by the British Medical Association in the United Kingdom in defence of the honour and interests of the medical profession and in defence of scientific progress.

I am of opinion that the Insurance Act in its present form will affect most unfavourably the welfare of those it is calculated to benefit—namely, the insured—and can have but the most disastrous consequences on the morale of the medical profession and on the progress of medical science. It is but a glorified form of "club practice" on a large scale, and carries with it all the evils of this form of contract practice.

It is to be regretted that we did not maintain to the end the *esprit de corps* evinced in the earlier stages of the campaign, and to a man refuse to work the Insurance Act in its present form. The British Medical Association needs to be reorganized on a trade union basis, and the contribution of members considerably raised to meet emergencies of this description as they arise in the United Kingdom and elsewhere. A substantial defence fund will greatly assist to maintain the much needed *esprit de corps*, would work for the benefit of the general public, our material benefit, our honour and self-respect. I am for one quite willing to subscribe £5 5s. or more annually to secure respect for our profession if others will do the same.

CO-ORDINATION OF MEDICAL BODIES.

Dr. HARDING H. TOMKINS (Vice-Chairman, South-West Essex Division) writes: Under the above heading, in the SUPPLEMENT of April 19th, p. 341, my name is mentioned in connexion with a "scheme for co-ordination of medical bodies in an area." While thanking the State Sickness Insurance Committee for giving me an opportunity to lay the matter before them by appointing me upon the Special Fund Subcommittee, I would like to say the scheme is for the co-ordination of every medical body with all the Divisions of the Association by means of whole-time paid medical organizers. I have hopes they might be recognized as Representatives, and so present the accumulated knowledge of the opinions of members and non-members to that body in a very much shorter time than is taken by the usual routine, and more concisely, since in the past fight many Divisions did not even discuss some

of the points sent down for their consideration, which fact afterwards formed the basis for the repudiation of policy adopted at the Representative Meeting. They would actually present all important points to the meetings personally throughout the kingdom, as each being responsible for a definite group of counties, could arrange meetings to fall consecutively so that he could be present. This is an idea I have had for some years, and Dr. Ross Steen presented one to my Local Medical Committee (Essex) almost identical, with a suggestion for financing it, and other details which as secretary I was asked to propose to the central authorities of the British Medical Association. I do not desire to claim the scheme as my own.

At a meeting of members of medical unions of east and north-east London and other bodies, at which I was present, a resolution was passed asking the British Medical Association, "in view of the coming Representative Meeting at Brighton, to call a meeting of chairmen and secretaries of all Local (statutory) and Provisional Medical Committees, and all other bodies interested in medical organization, to consider the national organization and consolidation of the entire medical profession."

MEDICAL TREATMENT OF TEMPORARY RESIDENTS.

Dr. J. W. PRIDMORE (Honorary Secretary, Isle of Wight Local Medical Committee) writes: I must apologize for writing again, and plead the importance of the subject as my excuse. The memorandum which we have all received within the last few days, on the medical treatment of temporary residents who are insured persons, should be received with a burst of indignation by the whole of the medical profession, more especially those members of it who are resident in health resorts and the larger manufacturing centres from which this class of beneficiaries is largely drawn.

The National Health Insurance Commissioners, with Mr. Lloyd George at their back, appear to excel all other bodies—past, present, or, it is to be hoped, future—in their barefaced way of transferring the contents of one trouser-pocket into its fellow on the opposite side. They calmly ask the doctors in health resorts to pay their professional brethren in manufacturing districts, and vice versa.

The system on which the memorandum is founded is the formation of a central fund from which medical accounts are to be paid. So far, so good. But the method of its formation is the deduction from the minimum 6s. 6d. originally promised of a sum in inverse proportion to the excellence of the public health in each particular district. It is thus self-evident that practitioners in health resorts will have to pay heavily for the privilege of having the accounts of visitors settled under the Insurance Act.

Twelve months ago such juggling with figures would have raised a veritable storm of protest; let us hope that the same spirit will be in evidence now. It remains therefore to be seen whether we shall accept this system, whereby we are allowed meekly to pay our own bills, or insist on payment on an equitable and more satisfactory basis.

MATERNITY BENEFIT.

Dr. T. RANDOLPH HUNTER (Cardenden, Fife, N.B.) writes: It seemed to come as a great surprise that maternity benefit forms are being signed at least in Fife by persons unskilled and uncertificated. The space left to be signed by person who attends the case has distinctly printed "Name of doctor or certified midwife." In our district "next door neighbours" are often called in, and after giving what attention they can, sign the maternity benefit form. The maternity benefit was provided so that women who are going to be confined should be attended by a person possessed of proper skill. In the present state of affairs it is only too evident the doctors will be called in only in difficult cases, or when the inexperienced persons fail. Surely this cannot be to the advantage of the patient, who more than likely is contaminated by the dirty fingers of an inexperienced woman. Another point: We are called in about the third day because the person who was confined is not keeping well. We attend for the remainder of the period until the patient has recovered, and get no fee.

This is unfair to medical men. Unless the medical

profession take some kind of stand to prevent being imposed on, it is difficult to know what we may be asked to submit to. It seems regrettable that now Scotland has adopted a national basis for attendance on miners' dependants that a national tariff cannot be drawn up to regulate maternity fees, vaccinations, and other branches of medical or surgical work. Some years ago Burnley, I know, had a uniform list of charges drawn up, and it was a decided boon, binding all medical men in the town to the same charges. Undercutting is no doubt the great drawback to the welfare of our profession.

I trust some one will be able to suggest some remedy for the above complaints.

Hospitals and Asylums.

KENT COUNTY LUNATIC ASYLUMS.

Barming Heath.

THE feature of the administration of this asylum during 1911 was the improvement of the conditions under which the staff live. The bedrooms were refurnished and decorated, and mess-rooms and recreation rooms provided. As the Medical Superintendent, Dr. H. Wolsley Lewis, points out, the noticeable improvement of the behaviour of insane patients which has occurred in the last half century so marked that "furious mania" has become practically extinct, is due in no small degree to the altered attitude to the patients of their attendant staff, and everything that conduces to the comfort and well-being of the staff helps to secure the service of a higher class of attendants, and thus at the same time directly benefits the asylum patients.

The year 1911 was also characterized by the lowest admission-rate for twenty years, the highest recovery-rate for nineteen years, and the lowest death-rate ever recorded at this institution. On January 1st, 1911, there were 1,629 patients in the asylum, and on December 31st, 1911, there were 1,952, and the average number daily resident was 1,607. During the year 323 were admitted, of whom 296 were direct and 27 indirect admissions. Of the direct admissions, in 95 the attacks were first attacks within three, and in 52 more within twelve months of admission; in 80 instances the attacks were not the first, and in 4 it was not known whether the attacks were first attacks or not; and in the remainder, including 22 congenital cases, the illness was of more than twelve months' duration on admission.

The direct admissions were classified according to the forms of mental disorder into: Recent mania 43, chronic and recurrent 16; recent melancholia 85, chronic and recurrent 26; senile and secondary dementia, 18; delusional insanity, 19; insanity with epilepsy, 21; general paralysis, 15; primary dementia, 12; alternating insanity, 8; insanity with gross brain lesions, 4; less common forms, 7; and congenital defect, 22. As to causation, and still considering only the direct admissions, alcohol was assigned in 35, syphilis in 16, and other toxins in 10; diseases of the nervous system in 55; various bodily diseases in 9; critical periods in 73; child-bearing in 19; bodily trauma in 16; and mental stress in 82. An insane heredity was ascertained in 105, an epileptic heredity in 4, a neurotic heredity in 10, and an alcoholic heredity in 25.

During the year 142 were discharged as recovered, giving a recovery-rate on the direct admissions of 47.9 per cent., or of recoveries in and on the direct admissions of 44.5 per cent. Also 20 were discharged as relieved and 47 as not improved. During the year 124 died, giving a death-rate on the average number resident of 7.7 per cent. The deaths were due in 19 to diseases of the nervous system, including 15 from general paralysis; in 17 to heart disease and in 14 to diseases of the blood-vessels; in 11 to respiratory diseases; in 4 to diseases of the alimentary system; in 5 to genito-urinary diseases; in 1 to suicide; and in the remainder to general diseases, including 6 from senile decay, 7 from dysentery, and 26, or 20 per cent. of the total deaths, from tuberculous diseases.

There were 2 cases of scarlet fever among the female patients both of whom recovered, and 24 cases of dysentery, of whom 7 died. The mortality (20.8 per cent.) among the cases of dysentery was an improvement on the previous year.

GLASGOW EYE INFIRMARY.

THE report presented to the annual meeting of contributors to the Glasgow Eye Infirmary, over which Sir Hector Cameron presided, stated that the number of house-patients during the year was 1,641. The average daily number was 79.7, as against 78.7 in the previous year. Of the total cases 981 were cured, 536 improved, 56 were unchanged or left before completion of treatment, and 68 remained in the house at the end of the year. The total number of new cases attending the dispensaries in Berkeley Street and Charlotte Street was 28,548. The total ordinary income amounted to £4,533, and a sum of £513 was collected by special appeal. The ordinary expenditure was £5,775, as against £5,164 in the previous year. The chairman, in moving the adoption of the report, emphasized the need for more liberal support from the public, and pointed out that, having regard to the special services which it rendered, the Eye Infirmary would not be affected by the National Insurance Act, and that its claim on the charity or generosity of the public was quite as great, and even greater, than before the Act was passed. The report was adopted.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

LANCASHIRE AND CHESHIRE BRANCH: ROCHDALE DIVISION.

THE annual meeting of the Division was held on April 16th, when Dr. GEDDES occupied the chair, and thirteen other members were present.

Annual Report.—The annual report showed that there had been added to the members—who at the end of 1911 numbered 53—three members who had moved into the area from other districts, and 2 new members, making a total of 58; there had been 1 death, 2 resignations, and 1 member had ceased owing to arrears, so that the net membership at the end of 1912 was 54. The financial statement showed a balance in hand slightly larger than at the end of the previous year, and it was stated that the expenses of the Local Provisional Committee had been defrayed from head quarters.

Election of Officers.—The following officers were unanimously elected for the ensuing year: *Chairman*, Dr. Geddes (Heywood); *Vice-Chairman*, Dr. Lord (Castleton); *Secretary and Treasurer*, James Melvin (Rochdale); *Representative to Representative Meeting*, Dr. Walker (Rochdale); *Deputy Representative*, Dr. Lord (Castleton). The following with the officers were elected to form the Executive Committee: Drs. Carse, Grant, Harris, and Walker.

Expenses of Representatives, Councillors, and Committees.—On the motion of Dr. BATEMAN, seconded by Dr. STANDING, it was unanimously resolved:

That a voluntary levy of 5s. be made by each member of the Division.

Dr. CARSE moved, and Dr. GRANT seconded, the following motion, which was carried unanimously:

That our Representative be paid £2 2s. per day for expenses at the Representative Meeting.

Votes of Thanks.—Dr. HITCHON moved, and Dr. KILROE seconded, and it was unanimously resolved:

That the best thanks of this meeting be given to Dr. Brown, of Bacup, for his services for the past years as our Representative.

On the motion of Dr. HITCHON, seconded by Dr. BATEMAN, it was unanimously resolved:

That a hearty vote of thanks be passed to the officers for their services during the past year.

Chemists and the Insurance Act.—A letter was read from head quarters on the chemists' new tariff, and, on the motion of Dr. KILROE, seconded by Dr. HARTLEY, it was referred to the Medical Committee. Dr. GRANT moved, and Dr. WALKER seconded:

That a committee be formed to draw up a minimum medical tariff.

This was carried, and the following were elected as the committee: Drs. Chadwick, Cox, Forbes, Geddes, Grant, Henry, Kerr, Lord, Melvin, Standing, Stanwell, H. Thorp, and Walker. The first meeting to be held on Wednesday, April 30th.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

A SPECIAL meeting was held on March 27th at Southwark Infirmary, East Dulwich Grove, to consider the alteration of certain rules of the Division. Dr. CAPES was in the chair, and nine members and two visitors were present.

Rules of Division.—Certain alterations in the rules of the Division as passed on November 14th, 1912, were unanimously agreed upon.

At the conclusion of the special meeting an ordinary meeting was held.

Camberwell Borough Council's Employees' Sick Benefit Society.—The HONORARY SECRETARY read a letter from Dr. D. M. Sergeant stating that in the case of the medical appointments under the Camberwell Borough Council's

Employees' Sick Benefit Society, the original holders of the posts had been reinstated in their position at a capitation fee of 8s. 6d.

Paper.—Dr. HECTOR CAMERON, Physician in Charge of the Department for Diseases of Children at Guy's Hospital, then read a paper (see page 872 of this issue) on "The Uses and Abuses of Patent Foods in Infancy," at the conclusion of which an interesting discussion took place in which MESSRS. CAPES, ESLER, CLARK, LANGFORD, CLITHEROW, BATTEN, and PARTRIDGE took part.

Treatment of School Children.—A communication was read from the Honorary Secretary of the Metropolitan Counties Branch as to the appointment of a medical officer to undertake the treatment of school children under the London County Council suffering from minor ailments by a district nursing association. After the matter had been discussed, Dr. PARTRIDGE proposed and Dr. BATTEN seconded the following resolution, which was carried unanimously:

That when public money is expended, nominations for medical appointments should be made either by a body of medical men or by a duly elected body representative of the ratepayers.

Votes of Thanks.—Votes of thanks to Dr. Cameron for his very interesting paper, and to Dr. Bruce, Medical Superintendent of the Infirmary, for his hospitality, were carried unanimously.

EAST HERTFORDSHIRE DIVISION.

A MEETING of this Division was held at the Shire Hall, Hertford, on April 16th. Dr. BOYD was in the chair, and seventeen members were present.

Insurance Act.—Arising out of the minutes of the last meeting the HONORARY SECRETARY reported:

1. That the scheme proposed by the Hertfordshire Midwives Association for guaranteeing payment to doctors called to the assistance of midwives would be dropped, as the suggested fees were in the opinion of the County Medical Committee quite inadequate.

2. That three more medical practitioners had been appointed to the County Insurance Committee, making five in all, namely, Dr. Burnett Smith nominated by the County Council, and Drs. Shelly and Dockray by the Insurance Commissioners.

3. That further nominations to District Insurance Committees were as follows:—Ware: Drs. Boyd and Sturge. Hertford: Drs. Shelly and Lawson Smith. Hitchin: Drs. Gilbertson and Macfadyen. Hatfield: Dr. Brittain.

Contract Terms for Uninsured Members of Friendly Societies.—Reports were received from the various districts which showed that the societies for the most part had agreed to pay 8s. 6d. a year, and in one district 10s. The only exception appeared to be in Hitchin, where it was reported that two societies had succeeded in making arrangements for 5s. a year. The Honorary Secretary was instructed to make inquiries in regard to this, and if the report proved to be correct to make a strong protest.

Local Insurance Committee.—A letter was received from the Honorary Secretary of the County Medical Committee in reference to various points in connexion with the administration of medical and maternity benefits. The views of the Division being invited as to the best means of providing funds for the expenses of the Medical Committee, it was resolved (*nem. con.*) that a levy should be made of one farthing for each insured person on a practitioner's list.

Ethical Rules.—The question of the adoption of ethical rules by the Division was then discussed, and it was finally agreed to adopt the model rules as issued by the Central Ethical Committee.

OXFORD AND READING BRANCH:

OXFORD DIVISION.

A SPECIAL general meeting of the Division was held on April 4th at the Radcliffe Infirmary, Oxford. In the absence of Sir William Osler, Dr. TURRELL took the chair. About thirty members attended.

Contracting Out.

Mr. H. FREEBORN addressed the meeting on the subject of his application, on behalf of the Great Western Railway men, to the City Insurance Committee that they should be allowed to contract out under him. He understood that the panel doctors had informed the Committee that they were against any doctor coming on the panel for a restricted class of patient, but he had no wish to join the panel at all. He had held the railway club for twenty-

nine years, and wished to retain it, and argued for the free choice of doctor which the Act promised. Dr. RIVERS-WILLSON, a representative on the Insurance Committee, said that Mr. Freeborn's application came before the Committee in the form of an application to join the panel for this special class of railway men alone. So far as contracting out was concerned, he informed the Committee that he had been instructed by the Medical Committee to apply for as large a measure of contracting out as possible, and that was his own wish. Dr. HIGGS, also a representative on the Insurance Committee, pointed out that the question of contracting out was outside the province of the panel doctors; what did concern them, and what they were empowered by the Commissioners to express an opinion on was the question of a doctor joining the panel for a restricted class of patients without taking his share of allocated patients. To this proposal the panel doctors were hostile. In the course of further discussion it appeared that the panel doctors were not in favour of special communities, other than those already specified by the Commissioners, being allowed to contract out, as it was thought such a course would leave an unfair proportion of undesirables to be attended by the panel doctors.

Constitution of the Committee.

The Secretary, Dr. DUGAN, raised the question of the relative position of the Medical Committee and of the doctors on the panel. There seemed to be some danger of their adopting mutually hostile attitudes on such a subject as contracting out.

Dr. HIGGS said that there were only five panel doctors on the Medical Committee out of fifteen members, and that they did not consider that sufficient representation.

Dr. TURRELL, Chairman, said that any cleavage was to be deprecated; the Medical Committee had endeavoured to represent the views of men on and off the panel.

After some further discussion, a proposal by Dr. COLLIER to appoint a subcommittee to organize the Medical Committee on a better representative basis was adopted *nemine contradicente*. Drs. Collier, Higgs, Duigan, Rivers-Wilson, and Mallam were chosen to serve on it.

Tuberculosis Officer.

A letter from Sir William Osler, Chairman, was read, in which he expressed an opinion in favour of the appointment of a whole-time tuberculosis officer for city and county, the work to be carried on in connexion with the Infirmary. After the matter had been discussed at some length, a resolution approving the appointment of a whole-time clinical tuberculosis officer (or officers) for the city and county of Oxford was adopted, with two dissentients.

SOUTH-EASTERN OF IRELAND BRANCH.

An ordinary meeting of the Branch was held at Carlow on April 2nd. Six members were present, and Dr. COLGAN was elected to the chair.

A vote of sympathy and condolence with the relatives of the late Dr. Carey was adopted, and Dr. J. V. RYAN (Carlow) was elected in Dr. Carey's place to represent the Branch on the Irish Committee.

SOUTH MIDLAND BRANCH:

BUCKINGHAMSHIRE DIVISION.

A MEETING of the Bucks Division was held on April 11th, at the Royal Bucks Hospital. The weather was very inclement, a heavy snowstorm prevailing, and this accounted for the small attendance. In the absence of the Chairman and the Vice-Chairman, Dr. BAKER was voted to the chair, and eleven other members and two visitors were present.

Paper.—Dr. BURRA read a paper on the diagnosis of early tuberculosis. A discussion took place in which Drs. BRADBROOK, HENDERSON, KENNISE, LARKING, PERRIN, and BAKER took part. A hearty vote of thanks was passed, and a wish was expressed that Dr. Burra would read another paper on treatment.

Motions for the Representative Meeting.—The following motions to be brought forward at the Representative Meeting were passed:

1. That the election of members be by Divisions, and not, as heretofore, by the Branch Councils.
2. That the mode of election of the Central Council be altered so that more notice is given of any vacancy, and an

opportunity given of publishing an address on candidates in the JOURNAL.

A third motion referring to a proposed election of associate members at a reduced subscription who should receive the SUPPLEMENT only and be allowed the other privileges of members was lost by 5 votes to 4.

Treatment of Uninsured Persons.—The question of the treatment of uninsured persons was discussed, and a letter read from Mr. Tunks, Secretary of a body called the Bucks Friendly Society Council asking that a deputation from the Division should meet them. The Secretary was instructed to reply to this letter, and it was decided that a report should be submitted to the next meeting of the Division.

Ethical Procedure.—The SECRETARY reported an ethical case, with regard to which a recommendation had been made, that he had not carried out all the procedure detailed in the new ethical rules. It would have cost a good deal for postage and printing. The meeting decided that the complainant be asked if he wished the case to go on, considering the expense it would entail, and whether he would be satisfied if the decision of the Committee were communicated to the defendant and the matter allowed to drop. It was pointed out that a member who had been censured by the vote of a Division incurred the risk of being refused to be met in consultation, etc.

NORTHAMPTONSHIRE DIVISION.

A MEETING of this Division was held at the Northampton General Hospital on April 10th. Dr. BAXTER was in the chair and twenty-one other members were present.

Dr. DRYLAND gave a short report of the last Representative Meeting, and a hearty vote of thanks was accorded to him for his services.

Fees for Uninsured Persons.—Dr. HICHENS read a communication from the Medical Secretary of the Association urging that the Local Medical Committees should not take the place of the Association, and emphasizing the importance of obtaining proper fees for uninsured persons. He also read letters from Dr. Boissier of Banbury and Dr. Larking, Secretary to the Buckinghamshire Division, emphasizing the latter point. In the general discussion which followed Dr. BAXTER urged that the fees must on no account be lowered and ought to be increased where the friendly societies had the 2s. 6d. a head promised to them, Dr. COOKE spoke of the fees in Northampton, Dr. DRYLAND of those in Kettering, Dr. ROBB and Dr. HOLLIS of those in Wellingborough, and Dr. DARLEY and Dr. CHURCHHOUSE of those in the Mid Division of the county.

Model Ethical Rules.—The model ethical rules were adopted.

Certificates.—On the proposition of Dr. BAXTER, seconded by Dr. ROBB, the following motion was carried:

That the forms of certificates of the various approved friendly societies by their variety, and in many instances by their unsuitability, interfere seriously with the legitimate work of panel doctors. This Committee is of opinion that the best way to deal with this question is by the Commissioners issuing approved forms for general adoption by the societies.

Medical Referee under the Insurance Act.—Dr. BAXTER raised the question of appointing a medical referee to prevent malingering under the Insurance Act.

Expenses of Medical Committee.—It was unanimously resolved that a deduction of 5s. per cent. from the quarterly payments to panel doctors should be made to defray the secretarial expenses of the Medical Committee and for medical charity.

STAFFORDSHIRE BRANCH:

MID-STAFFORDSHIRE DIVISION.

A MEETING of the Division was held at Stafford on April 15th. The chair was taken by Dr. COOPER, and twenty-three other members were present.

Appointment of Secretary.—Dr. T. D. S. Shaw (Lichfield) was appointed Honorary Secretary.

Contract Practice.—A resolution relating to contract practice at Rugeley was then considered and adopted.

National Insurance Act.—The CHAIRMAN proposed—“That in view of the fact that probably some 10,000 members of the Association are now acting on the panels under the National Insurance Act, it is evident that the

Act is not ‘unworkable,’ and that it is a reflection on them to say that they are taking part in something which is ‘derogatory’ to the profession, the Representative Body rescinds Minute 21 of the Special Representative Meeting of December, 1912, and Minute 45 of the Special Representative Meeting of January, 1913, and resolves that the policy of the Association in regard to the Act is as contained in Minute 48 of the Special Representative Meeting, January, 1913, namely—

That the Council be instructed: (a) To take all necessary steps to watch and protect the interests of the profession under the National Insurance Act. (b) To take any opportunity that may be afforded for placing the representatives of the Association on the Advisory and Insurance Committees. (c) To obtain statutory recognition of Local Medical Committees in every insurance area. (d) To collect information as to defects in the Act and Regulations and to take all possible opportunities of remedying them.”

The motion was seconded by Dr. HODDER. The following members also spoke: *Pro.*—Drs. STACK and LOWE; *Con.*—Drs. REID, ROWLAND, PRIESTLEY, MILLER, BLUMER, FREER, McVITTIE. On a vote being taken there voted for the resolution, 3; against, 16. The Chairman and four members did not vote.

WEST SOMERSET BRANCH.

THE spring meeting was held at the Taunton and Somerset Hospital on April 8th, at 3.30. Dr. BALFOUR STEWART took the chair, fifteen in all being present.

Election of Representative.—Dr. Macdonald was re-elected Representative of the Branch by acclamation. Dr. MACDONALD briefly thanked the Branch for his re-election, and made a short reference to the amount of work the post had entailed in the past year. He also referred to the work being done by the County Medical Committee, and said that there was a decided danger in these committees causing difficulties, owing to the inclination to enter upon work which was no part of the duties for which they had been appointed.

Ethical Rules.—The rules governing procedure in ethical matters of a Branch, as approved by the Representative Body, July, 1912, were unanimously adopted, and on the motion of Dr. GOMEZ, seconded by Mr. WILLIAMS, it was resolved that a copy be sent to each member of the Branch.

Clinical Cases and Specimens.—The following clinical cases and specimens were exhibited:—Dr. BIRKBECK: A case of genu recurvatum; a specimen of a calcified thyroid cyst; an unusual fibroid tumour of the uterus. Mr. FARRANT: A stone removed from the pelvis of a kidney, evidently formed by the deposit of oxalates on an old blood clot; two stones (phosphatic) which had been passed per urethram; two specimens of prostates which had been removed suprapubically. Mr. PENROSE WILLIAMS: Three specimens of resections of the bowel; a parenchymatous goitre; a parovarian cyst, which by acute torsion had simulated a case of appendicitis. Mr. A. J. H. ILES showed some interesting radiograms of some rare conditions.

BOMBAY BRANCH.

THE annual meeting of the Bombay Branch was held in the University Library on March 14th. Dr. SORAB K. NARIMAN occupied the chair, and about twenty members were present.

Branch Council.—The Branch Council was then elected according to Rules 5, 6, and 9 of the Branch as follows:

President, Surgeon-General H. W. Stevenson, I.M.S., C.S.I.; *Vice-Presidents,* Lieutenant-Colonel C. H. L. Meyer, I.M.S., and Dr. Sorab Nariman, M.D.; *Honorary Secretary and Treasurer,* D. R. Bardi, Esq., F.R.C.S.I.; *Members of the Branch Council,* Lieutenant-Colonel Ashton Street, I.M.S., Dr. R. Row, M.D., D.Sc., Major E. F. Gordon Tucker, I.M.S., Dr. Sorab Engineer, M.R.C.P. Edin., Miss A. M. Benson, M.D., Assistant Surgeon Eruch Bharucha.

Annual Report and Financial Statement.—The report of the Branch Council and the statement of accounts were received and adopted.

Election of Representative.—On the motion of Dr. SORAB NARIMAN, seconded by Dr. D. R. BARDI, it was unanimously resolved to elect Lieutenant-Colonel C. H. L. Meyer, I.M.S., as the Representative in Representative Meetings for the year 1913-14.

Electon of Members.—It was announced that the following members had been elected by the Branch Council: Drs. A. K. Dalal, J. S. Shah, D. P. Karaka, and N. B. Mehta.

Vote of Thanks.—After a hearty vote of thanks, proposed by Major GORDON TUCKER, I.M.S., and seconded by Dr. SORAB NARIMAN, had been passed unanimously for the successful and good work done by the Honorary Secretary (Dr. Bardi), which was suitably acknowledged by him, the meeting was dissolved.

HONG KONG AND CHINA BRANCH.

The third meeting of the Session 1912-13 of the Hong Kong and China Branch of the British Medical Association was held at the offices of the Sanitary Board at 9 p.m. on March 7th. Colonel J. M. IRWIN, President, was in the chair, and twenty other members were present. Dr. J. Mitford Atkinson was nominated to represent the Hong Kong and Malaya Branch on the Central Council, Dr. Forsyth was elected Representative at the Annual Representative Meeting, and Dr. O. Marriott (Honorary Secretary) was appointed to represent the Branch at the meeting of secretaries.

Association Notices.

ADJOURNED COUNCIL MEETING.

THE Council not having concluded its business at 11.15 p.m. on April 23rd, the meeting stood adjourned to 2 o'clock in the afternoon of Wednesday next, April 30th.

GUY ELLISTON,

Financial Secretary and Business Manager.

April 24th, 1913.

NEW BRANCH: CHANGE OF NAME OF A DIVISION.

THE following changes have been made in accordance with the Regulations of the Association, and take effect from the date of publication of these notices:

1. FORMATION OF A NEW BRANCH OF THE ASSOCIATION.

Orange Free State Branch.

THAT a new Branch of the Association be formed, to be known as the Orange Free State Branch, and that the Branch area consist of the combined areas of (1) the Orange Free State Province and (2) Basutoland.

Representation in Representative Body.—Under the general principle adopted by the Council with regard to the representation in the Representative Body of Branches outside the United Kingdom, the new Branch will be entitled to separate representation in the Representative Body for 1914-15, to return one Representative.

2. CHANGE OF NAME OF A DIVISION.

Rochester and Chatham Division.

THAT the Rochester and Chatham Division be henceforth designated the "Rochester, Chatham and Gillingham Division."

BRANCH AND DIVISION MEETINGS TO BE HELD.

To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.

BATH AND BRISTOL BRANCH.—Mr. W. M. Beaumont and Dr. Newman Neild, Honorary Secretaries, give notice that the sixth ordinary meeting of the session will be held at the Museum, Bath, on Wednesday, April 30th, at 8 p.m., Dr. Roxburgh, President, in the chair. The following communications are expected: (1) C. E. S. Flemming: Acute Oedema of the Lung. (2) G. H. H. Almond, M.B.: The Urinary Products

of Intestinal Intoxication. (3) T. Pagan Lowe: A Note on the Physiological Action of Radio-active Water. (4) R. Waterhouse, M.D.: A Case of Cervical Rib.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The Honorary Secretaries, Dr. Ernest C. Hadley, Burbury Street, Lozells, Birmingham, and Dr. H. Hoyle Whalite, Elsinore, Gravelly Hill, Birmingham, give notice that nominations for the following officers must be in the hands of the Honorary Secretaries by the first post on Monday, May 5th, in order that the names may be inserted in the notice convening the annual meeting of the Division to be held shortly: (1) Four Representatives of the Representative Body, (2) Chairman, (3) Vice-Chairman, (4) Honorary Secretaries.

EAST ANGLIAN BRANCH.—The spring meeting of this Branch will be held at Colchester on Wednesday, April 30th. Members wishing to read papers or to show cases or specimens should communicate at once with me.—B. H. NICHOLSON, Colchester.

DORSET AND WEST HANTS BRANCH.—The annual meeting will be held at Bournemouth on May 21st. Notices of motion should be sent to the Honorary Secretary by May 7th. The President-elect has very kindly invited members to luncheon at his house.—FRANK FOWLER, Honorary Secretary, 29, Poole Road, Bournemouth.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—Dr. Eleanor C. Bend, Honorary Secretary, gives notice that the annual meeting of the Division will be held at the Medical Library, 74, Old Christchurch Road, Bournemouth, on Wednesday, April 30th, at 4 p.m., to elect officers for the ensuing year and to transact other business.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—Dr. H. G. Cooper, Honorary Secretary (Foye, Manchester Road, Altrincham), gives notice that the general meeting of the Division will be held at the Lion and Railway Hotel, Northwich, on Wednesday, April 30th, at 4.30 p.m. A dinner will be held after the meeting if sufficient names be received by the Honorary Secretary before April 28th.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.—Dr. J. H. Clatworthy, Honorary Secretary, 145, Denmark Hill, S.E., gives notice that the annual general meeting will take place at the Camberwell Infirmary, Brunswick Square, S.E., on Thursday, May 1st, at 4 p.m., when the executive officers for the session 1913-14 will be elected. The executive have nominated officers, but further nominations will be received by the Honorary Secretary before or at the meeting. The Honorary Secretary will make his annual report, and the meeting will consider the motions for the Annual Representative Meeting at Brighton and instruct the Representatives. Dr. W. J. C. Keats, Medical Superintendent of the Camberwell Infirmary, will demonstrate cases in the wards.

MIDLAND BRANCH: LINCOLN DIVISION.—The annual meeting of the Division will be held in Lincoln on May 1st.—J. S. CHATER, Honorary Secretary, 169, Monk's Road, Lincoln.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: FURNESS DIVISION.—Dr. John Livingston, Honorary Secretary, 18, Hartington Street, Barrow-in-Furness, gives notice that the annual meeting of the Division will be held on Friday, May 16th. (By a printer's error the postcard issued gave a wrong date.)

NORTH OF ENGLAND BRANCH: NEWCASTLE-UPON-TYNE DIVISION.—Mr. R. J. Willan, F.R.C.S., Honorary Secretary, 25, Ellison Place, Newcastle-upon-Tyne, gives notice that the annual meeting will be held at the Royal Victoria Infirmary, Newcastle-upon-Tyne, on Wednesday, May 7th, at 8.30 p.m. The business of the meeting will be to elect a Chairman, Vice-Chairman, Honorary Secretary, two Representatives and two Deputy Representatives at Representative Meetings, eight Representatives on the North of England Branch Council, and twelve ordinary members of the Executive Committee; to receive the annual report; to consider the business of the Annual Representative Meeting; to elect Representatives entitled to inspect the Newcastle Education Treatment Centres; and to propose a new rule making the Honorary Secretaryship of the winter scientific meetings of the Division a separate appointment, and to provide that the incumbent shall be an *ex officio* member of the Executive Committee of the Division.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of the South-Eastern of Ireland Branch will be held in Kilkenny Victoria Hotel on Wednesday, May 7th, at 5.15 p.m., for the installation of President-elect, the election of officers of the Branch for the ensuing year, and any other business.—P. GRACE, Honorary Secretary.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held at Caxton House, Westminster, on April 17th, with Sir FRANCIS H. CHAMPNEYS in the chair.

National Insurance Act.

A letter was considered from the Town Clerk of Birmingham with regard to the effect of the National Insurance Act on the work and future training of midwives. The Board decided to inform the Town Clerk (a) that the question does not come within the scope of the duties of the Board, and (b) that the correspondence will be forwarded to the Privy Council.

Nurses' Case Book.

A letter was considered from the clerk of the Flintshire County Council suggesting that the Board should adopt "a simpler form of case book . . . for the use of nurses." The Board decided to reply that it sympathized with the difficulty of the Flintshire County Council, but that the register had been carefully thought out, and it was hoped that the education of the midwives might so greatly improve as to render any alteration of it unnecessary.

Attendance of Midwives with Pupils.

A letter was considered from the Clerk of the Middlesex County Council inquiring as to the extent to which "approved" midwives should themselves attend with their pupils (a) at the time of the confinement, (b) during the lying-in period. The Board decided to reply that it holds each "approved" midwife directly responsible for the cases attended, and for any neglect in supervising the training of pupils, but did not specify the number of visits which must be paid, as this must vary greatly in different cases.

belonging to the several boroughs, the deaths occurring in public institutions having been distributed among the boroughs in which the deceased persons had previously resided.

The 11,551 births registered in London during 1912 were equal to a rate of 24.7 per 1,000 of the population, estimated at 4,519,754 persons in the middle of the year. The lowest birth-rates last year in the several boroughs were 13.6 in the City of Westminster, 14.3 in Hampstead, 17.8 in Chelsea, 18.0 in Kensington, 19.5 in Paddington, and 19.7 in Stoke Newington; among the highest rates were 30.1 in Poplar, 30.4 in Bermondsey, 30.6 in Shoreditch, 32.4 in Stepney, and 36.7 in Finsbury.

The deaths of 61,100 London residents registered during the year were at the rate of 13.6 per 1,000 of the population, the rates in the three preceding years having been 14.0, 12.7, and 15.0 per 1,000. Among the several boroughs the death-rates ranged from 9.8 in Hampstead, 10.2 in Wandsworth, 10.4 in Lewisham, 11.6 in Woolwich, and 12.1 in Stoke Newington and in Hackney to 16.4 in Poplar, 16.7 in Southwark, 16.8 in Bermondsey, 18.1 in Shoreditch, and 18.8 in Finsbury.

During last year 4,869 deaths were referred to the principal infectious diseases; of these 117 resulted from enteric fever, 1 from small-pox, 1,799 from measles, 159 from scarlet fever, 970 from whooping-cough, 452 from diphtheria, and 1,371 (among children under 2 years of age) from diarrhoea and enteritis. The mortality from each of these diseases, except diarrhoea, was below the corrected average for the five preceding years; in the case of diarrhoea the average is not available for comparison.

The greatest proportional mortality from enteric fever was recorded last year in Fulham, St. Marylebone, Shoreditch, Poplar, Bermondsey, Lambeth, and Lewisham. The number of enteric fever patients admitted into the Metropolitan Asylums Hospitals during the year was 381, against 539, 745, and 552 in the three preceding years; 37 cases remained under treatment at the end of the year, against 62, 88, and 76 at the three preceding years. The highest death-rates from measles were recorded last year in Finsbury, Shoreditch, Bethnal Green, Stepney, Poplar, Southwark, and Bermondsey.

Scarlet fever was proportionally most fatal in St. Marylebone, Finsbury, Bermondsey, Deptford, and Greenwich; the number of scarlet fever patients admitted into the Metropolitan Asylums Hospitals during the year was 10,488, against 16,185, 9,889 and 9,631 in the three preceding years; 2,088 cases remained under treatment at the end of the year, against 2,329, 1,574, and 1,878 at the end of the three preceding years.

The highest death-rates from whooping-cough last year were recorded in Fulham, Finsbury, Shoreditch, Stepney, Poplar, Bermondsey, and Greenwich. Diphtheria was proportionally most fatal in Hampstead, Holborn, Finsbury, Shoreditch, Greenwich, Lewisham, and Woolwich; 6,184 diphtheria patients were admitted into the Metropolitan Asylums Hospitals last year, against 5,799, 4,882, and 6,336 in the three preceding years; 959 cases remained under treatment at the end of the year, against 904, 827, and 1,294 at the end of the three preceding years. The mortality from diarrhoea and enteritis among children under two years of age, measured in proportion to the births recorded during the year was greatest in Paddington, the City of Westminster, Shoreditch, Stepney, Southwark, and Bermondsey.

The 6,069 deaths from phthisis were equal to a rate of 1.35 per 1,000, the rates in the three preceding years having been 1.31, 1.14, and 1.35 per 1,000. The rates last year ranged from 0.64 in Hampstead, 0.70 in Lewisham, 0.87 in Paddington and in Stoke Newington, and 0.93 in Wandsworth to 1.75 in Bermondsey, 1.87 in Southwark, 1.92 in Finsbury, 1.98 in the City of London, 2.07 in Holborn, and 2.10 in Shoreditch.

Infant mortality, measured to the proportion of deaths among children under 1 year of age to registered births, was equal to 90 per

Vital Statistics.

VITAL STATISTICS OF METROPOLITAN BOROUGHS DURING 1912.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL"]

In the accompanying table will be found summarized the vital statistics of the City of London and of each of the metropolitan boroughs based upon the Registrar-General's returns for the year 1912. The mortality figures relate to the deaths of persons actually

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during 1912.

| BOROUGH. | Estimated Popu-lation middle of 1912. | Births. | Deaths. | Annual Rate per 1,000 Living. | | Deaths from | | | | | | | | | Deaths of Children Under 1 Year of Age to 1,000 Registered Births. |

* No correction is made for births in lying-in institutions; the boroughs principally affected are marked thus (*).

1,000 last year, against 102 and 128 in the two preceding years. Among the lowest rates were 37 in the City of London, 58 in Holborn, 65 in Hampstead, and 71 in Lewisham and in Woolwich; while the highest rates were 107 in Paddington, 112 in Poplar and in Southwark, 113 in Bermondsey, and 130 in Shoreditch.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 8,293 births and 5,195 deaths were registered during the week ending Saturday, April 12th. The annual rate of mortality in these towns, which had been 16.5, 16.3, and 15.6 per 1,000 in the three preceding weeks, further fell to 15.2 per 1,000 in the week under notice. In London the death-rate was equal to 14.9 per 1,000, against 17.2, 17.4, and 19.3 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 7.5 in Tottenham and in Edmonton, 7.7 in Coventry, 7.9 in Carlisle, 8.2 in Croydon, and 8.3 in Willesden and in Horsey, 22.5 in Warrington, 22.7 in Gloucester and in Stoke-on-Trent, 24.3 in Halifax, 26.7 in St. Helens, and 27.9 in Stockton-on-Tees. Measles caused a death-rate of 2.0 in Bolton and in Stockton-on-Tees, 2.1 in Smethwick, 2.2 in Wolverhampton, 2.3 in West Bromwich and in Wigan, 2.4 in Newport (Mon.), 3.1 in St. Helens, and 5.2 in Gloucester. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 42, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 4 in Birmingham, 3 each in Stoke-on-Trent, in Liverpool, and in Gateshead, and 2 each in Gloucester, in Bury, and in Newcastle-on-Tyne. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,514, 1,455, and 1,410 at the end of the three preceding weeks, had further fallen to 1,357 on Saturday, the 12th inst.; 148 new cases were admitted during the week, against 156, 168, and 167 in the three preceding weeks.

In ninety-six of the largest English towns 8,960 births and 5,420 deaths were registered during the week ending Saturday, April 19th. The annual rate of mortality in these towns, which had been 16.9, 15.6, and 15.2 per 1,000 in the three preceding weeks, rose to 15.8 per 1,000 in the week under notice. In London the death rate was equal to 16.4, against 17.4, 16.3, and 14.9 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 4.6 in Ealing, 6.1 in Enfield, 6.6 in Ilford, 7.2 in Leyton, 7.5 in Bournemouth, and 8.6 in Northampton and in Wallasey to 21.6 in Preston, 21.7 in Hastings, 21.8 in Stoke-on-Trent and in Carlisle, 21.9 in Stockton-on-Tees, 22.3 in Dewsbury, and 24.0 in Wolverhampton. Measles caused a death-rate of 1.9 in Willesden, 2.3 in Wigan, 2.6 in Bolton, 2.9 in Southend-on-Sea, 3.1 in St. Helens, 3.3 in Wolverhampton, 3.8 in West Bromwich, and 6.2 in Gloucester; diphtheria of 3.0 in Stockton-on-Tees; and whooping-cough of 1.9 in Merthyr Tydfil and 2.2 in Southend-on-Sea. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 60, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 9 were registered in Birmingham, 7 in Liverpool, 4 in Stoke-on-Trent, 4 in Warrington, and 3 each in Bootle, in St. Helens, and in Sheffield. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,455, 1,410, and 1,357 at the end of the three preceding weeks, had further declined to 1,334 on Saturday last; 215 new cases were admitted during the week, against 168, 167, and 148 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,196 births and 746 deaths were registered during the week ending Saturday, April 12th. The annual rate of mortality in these towns, which had been 17.2 per 1,000 in each of the two preceding weeks, was again 17.2 in the week under notice, and was 2.0 per 1,000 above the rate in the ninety-six large English towns. Among the several towns the death-rates ranged from 10.7 in Ayr, 11.9 in Perth, and 12.0 in Kilmarnock, to 23.8 in Greenock, 21.6 in Coatbridge, and 22.0 in Dundee. The mortality from the principal epidemic diseases averaged 1.9 per 1,000, and was highest in Aberdeen and Greenock. The 352 deaths from all causes registered in Glasgow included 25 from whooping-cough, 5 from measles, 5 from diphtheria, 5 from infantile diarrhoea, and 1 from scarlet fever. Eight deaths from whooping-cough were recorded in Edinburgh, 4 in Greenock, 2 in Leith, 2 in Motherwell, and 2 in Hamilton; and 4 deaths from measles and 3 from diphtheria in Aberdeen.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, April 12th, 716 births and 517 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 746 births and 535 deaths in the preceding period. These deaths represent a mortality of 22.5 per 1,000 of the aggregate population in the districts in question, as against 23.3 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 7.3 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 31.3 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 27.2 as against an average of 25.2 for the previous four weeks, in Dublin city 29.9 (as against 26.4), in Belfast 19.6 (as against 22.6), in Cork 24.5 (as against 21.6), in Londonderry 14.0 (as against 17.2), in Limerick 19.0 (as against 20.3), and in Waterford 20.9 (as against 20.4). The zymotic death-rate was 1.7, as against 1.8 in the previous week.

During the week ending Saturday, April 19th, 661 births and 481 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 716 births and 517 deaths in the preceding period. These deaths represent a mortality of 20.9 per 1,000 of the aggregate population in the districts in question, as against 22.5 per 1,000 in the previous period. The mortality in these Irish areas, was, therefore, 5.1 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate on the other hand was equal to 28.7 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 24.1 as against an average of 25.8 for the previous four weeks, in Dublin city 25.2 (as against 27.0), in Belfast 16.9 (as against 20.6), in Cork 22.4 (as against 21.9), in Londonderry 12.7 (as against 17.5), in Limerick 23.8 (as against 22.7), and in Waterford 11.4 (as against 22.3). The zymotic death-rate was 1.3, as against 1.7 in the previous week.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments and resignation have been announced by the Admiralty: Fleet Surgeon HERBERT H. GILL, M.B., to the *Centurion*, on recommissioning, undated. Fleet Surgeon GEORGE GIBSON, to the *Irresistible*, vice Gill on the *Centurion*, recommissioning, undated. Fleet Surgeon ERNEST A. PENFOLD, to the *Excellent*, additional for the *Albemarle* on recommissioning, May 15th. Staff Surgeon MAURICE T. MALE, M.B., to the *Egmont*, additional for service with T.B.D. Flotilla, temporary, April 18th. Staff Surgeon THOMAS W. MYLES, M.D., B.A., to the *President*, additional for R. F. A. Marine, vice Male, April 18th. Staff Surgeon RICHARD F. CLARK, to the *Diana* and for group of ships of Third Fleet on *Diana* becoming parent ship, undated. Staff Surgeon ARTHUR L. SCHOFIELD, M.B., to the *Centurion*, on recommissioning, undated. Staff Surgeon THOMAS E. BLUNT, to the *Rosario*, vice Rutherford, April 18th. Surgeon JAMES H. WRIGHT, M.B., B.A., to the *Wildfire*, additional for Sheerness Yard and Barracks, vice Myles, April 18th. Surgeon FRANCIS J. BURKE, M.B., to the *Hebe*, vice Wright, April 18th. Surgeon WILLIAM C. CARSON, to the *Pembroke* for R.N. Barracks, vice Burke, April 18th. Surgeon BASIL TAYLOR, M.B., to the *Excellent*, additional for the *Albemarle*, on recommissioning, May 15th. Surgeon ARCHIBALD FAIRLEY, M.B., to the *Merlin*, vice Blunt, April 18th. Acting Surgeon P. L. GIBSON, M.A., to the *Factory*, additional, for course of instruction at Greenwich and Haslar, April 30th. Surgeon JOHN MCCUTCHEON, M.B., has been allowed to retire from the service with a gratuity, April 15th.

ARMY MEDICAL SERVICE.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

ANNUAL REPORT OF COUNCIL, 1912-13.

(A) Preliminary.

THE BRIGHTON MEETING.

1. In presenting its Report for 1912-13, on the occasion of the 81st Annual Meeting of the British Medical Association, at Brighton, the Council considers it is a matter of congratulation that such a centre should have been chosen, as Members are promised a warm welcome from the President, Dr. Ainslie Hollis, and his colleagues, who are leaving no stone unturned to assure a Meeting worthy of the best traditions of the Association.

THE SCIENTIFIC WORK OF THE ANNUAL MEETING.

2. The Address in Medicine will be given by Dr. George R. Murray, of the Royal Infirmary, Manchester, and the Address in Surgery by Sir Berkeley Moynihan, of the University, Leeds. There will be also a Popular Lecture, which will be delivered by Mr. Edmund J. Spitta, of Brighton.

The remainder of the Scientific work has been divided into sixteen Sections.

THE ANNUAL MEETING, LIVERPOOL, 1912.

3. This is a fitting occasion to again refer to the success of the Liverpool Meeting, under the Presidency of Sir James Barr. The thanks of the Association are also due to all the Members of the Liverpool Executive who worked so well for the success of the Meeting, and especially to Professor Thelwall Thomas, the Honorary Local Secretary, for the admirable arrangements made.

LORD ILKESTON.

4. By the death of Lord Ilkeston the British Medical Association has lost an earnest and valued friend, and the medical

profession has no longer a representative in the House of Lords. Throughout his professional career he exhibited the deepest interest in the work of the Association and occupied from time to time many posts of trust. As far back as 1897 it was a special pleasure to the Association to present Lord Ilkeston (then Sir Walter Foster) a Gold Medal for Distinguished Merit for services rendered to the British Medical Association and to the medical profession in many official positions during a period extending over more than a quarter of a century, for his work as one of the direct Representatives of the profession on the General Medical Council from 1886 to 1896, and for his assistance in Parliament and at the Local Government Board as the first member of the medical profession selected for Ministerial office in the Government of this country. The deep interest Lord Ilkeston exhibited throughout his career in the welfare of the Association never flagged up to the day of his death.

GROWTH OF THE ASSOCIATION.

5. It must be a matter of general satisfaction that the steady growth of the Association continues. At the close of 1912 the membership stood at 26,568. It is instructive to compare these figures with the membership of 11,600, when in 1886 the Association last met at Brighton.

ATTENDANCES OF COUNCIL AND COMMITTEES: HONORARY WORKERS FOR THE ASSOCIATION.

6. Owing to stress of work in connection with the National Insurance Act several additional Meetings of the Council have been necessary, but Committee work has been concentrated more especially on matters arising out of the working of the Act. The Council desires to remind Members how much they are indebted to those who so unselfishly devote their time to

the Committee work of the Association, and desires also to take the opportunity of the close of a period of exceptional difficulty and strenuous work to express its special thanks to the Honorary Secretaries of Divisions and Branches for their untiring and devoted service. No praise can be too warm for those who have so generously expended their time and strength in the service of the profession during this critical period.

MEDICAL BENEVOLENCE.

7. During the year amounts have been collected through the Central Office for Medical Benevolent purposes, as follows:—The Royal Medical Benevolent Fund, £656; Royal Medical Foundation of Epsom College, £434; Royal Medical Benevolent Fund Society of Ireland, £33.

The Council is glad of this opportunity to again commend these splendid charities as deserving of generous support.

THE CHAIRMAN OF COUNCIL.

8. At the Brighton Meeting Dr. J. A. Macdonald will complete his three years as Chairman of Council, during which period as the Chief Executive Officer he has devoted endless time and trouble to further the interests of the British Medical Association. His term of office has coincided with the greatest crisis in the history of the medical profession and the Association. Throughout, his ripe experience and sound judgment have been of the utmost value. During the heated discussions incidental to the passing of the National Insurance Act, the confidence of the Association in Dr. Macdonald never wavered. It is no exaggeration to state that since the reconstruction of the Association he has made on behalf of the medical profession personal sacrifices never surpassed. The Council in particular is deeply conscious of how much the Association owes to his sound and practical statesmanship.

THE TREASURERSHIP.

9. Dr. Rayner was appointed Treasurer of the Association at Exeter in 1907 and will complete a second term of service at Brighton this year. His acceptance of re-election at London in 1910 was due to a special desire in the Association that during a time of great anxiety in the matter of its finances the Association might rely on the continued help of the Treasurer's valued experience.

The Council wishes to emphasise how much the Association is indebted to Dr. Rayner for the close attention he has given to the duties of his office and to tender him a cordial vote of appreciation and thanks for the same.

INSTRUCTIONS OF ANNUAL REPRESENTATIVE MEETING, 1912 AND OF SPECIAL REPRESENTATIVE MEETING, JANUARY, 1913.

10. Lists of the resolutions of the Annual Representative Meeting at Liverpool and of the Special Representative Meeting, London, January, 1913, containing instructions to the Council, will be found in Appendices I and II, respectively, to the present Report, together with references to the paragraphs of this Report in which the various subjects are dealt with.

(B) Finance.

FINANCIAL STATEMENT.

11. The Finances of the Association continue to be a grave anxiety to the Council, and it is a matter of deep concern that for the first time during the last forty years the expenditure should have exceeded the revenue, and the reserve, so carefully built up, has had to be encroached upon to the extent of £8,849. The large increased expenditure is primarily due to the National Insurance Act, the increased circulation and size of the JOURNAL referred to later, and litigation in which the Association was involved. Apart from the expenses of litigation, a constant risk so long as the law of libel remains unaltered, the Council feels that unless substantial economies can be effected without seriously curtailing the activities of the Association, there is no alternative but to increase the amount of subscription.

In the Balance Sheet itself, the Loan from the Bank has had to be increased and the outstanding liabilities are about £1,400 more than in the previous year.

REVENUE, OR PROFIT AND LOSS ACCOUNT.

12. The total increased expenditure for the year 1912 is something like £11,000, while the Revenue shows a *bona fide* increase of about £4,400. To meet these heavy additional charges arising out of the National Insurance Act the Insurance Defence Fund contributed £600 more than the previous year, and £8,834 was drawn from reserve.

GENERAL ASSOCIATION EXPENSES.

13. The Interest on the Loan has cost £200 more. Money has been more expensive and a larger amount has been on loan. It is urged that the earliest steps possible be taken so that the

Association may have power to create a mortgage, and thus obviate the risk of paying a varying rate of interest.

Legal expenses show an increase of £7,400 consequent upon litigation and damages awarded against the Association.

CENTRAL MEETING EXPENSES.

14. These are recited in Abstract B. Although the Representative and Council Meetings expenses were heavy in 1911, it will be noticed that for the year 1912 they have increased again by £1,300. The Committee expenditure has been rather less. Many ordinary Meetings have not been held, while in 1911 the State Sickness Insurance Committee spent large amounts in circularizing the Members of the Association and the medical profession in general. The total increase in expenditure for Central Meeting Expenses has been about £200.

CENTRAL PREMISES EXPENSES.

15. These remain normal with the exception of general repairs and upkeep. During the year it became necessary to do certain outside painting on the roof and east side of the building.

PRINTING, STATIONERY AND POSTAGES.

16. Expenses show a slight diminution as compared with 1911, but even now they are nearly £400 more than in 1910.

CENTRAL STAFF EXPENSES.

17. These represent an increase of £656. The financial department is £123 and the Medical Department £625 more, owing to pressure of work in connection with the National Insurance Act. The travelling expenses of the Medical department were less by £111.

LIBRARY ACCOUNT.

18. This shows practically no variation on last year's working

JOURNAL ACCOUNT.

19. The Editorial expenses show little variation from 1911. The amount spent on Analyses is less, but since the publication of the book "More Secret Remedies" fewer Analyses have been undertaken. Managerial expenses show an increase of close on £5,000. Of this amount nearly £1,000 were spent on the books "Secret Remedies" and "More Secret Remedies," an expenditure which is reflected in the receipts. The remaining £4,000 increased expenditure is caused by the increase in the circulation of the JOURNAL, the increased size of the JOURNAL and Supplements, involving more composition, machining, and paper, while for the despatch of the JOURNAL the postage has increased by over £400, or nearly £8 per week. In 1912 the total number of JOURNALS issued was 1,529,688 against 1,416,139 in 1911.

There has again been an increase in the number of pages published. The manner in which this increase was distributed among the several parts of the JOURNAL is shown in the following table:—

| | 1911 | 1912 | Increase. | |
|-------------------------|-------|--------|-----------|-----------|
| | | | Pages. | per cent. |
| JOURNAL and Epitome ... | 3,506 | 3,596* | 90 | 2.5 |
| Advertisements ... | 3,876 | 3,940 | 64 | 1.6 |
| | 7,382 | 7,536 | 154 | 2.0 |
| Supplement ... | 1,300 | 1,628 | 328 | 25.2 |
| Grand Total ... | 8,682 | 9,164 | 482 | 5.5 |

* Reports of Annual Meeting in 1912 occupied 102 pages more than in 1911.

It will be seen that the number of pages in the Supplement increased by 25 per cent. The increase in the number of pages in the literary matter of the JOURNAL, excluding the Supplement is rather more than accounted for by the greater amount of matter received for publication from the Annual Meeting in 1912. There has been for many years a tendency to increase the number of sections at the Annual Meeting. It seems desirable that this tendency should be carefully watched in order to take care that it does not exceed legitimate needs nor make an undue call on the resources of the Association.

The average increase in the pages is 10½ per week, which with the additional 113,519 copies required during the year explains the increase in the amount of paper consumed. Any average JOURNAL and Supplement during the year would represent over 150,000 words. Incidentally in order to convey what such a number of words represents, it may be stated that an ordinary six-shilling novel would rarely exceed 85,000 words. The Council hopes that as the pressure on the JOURNAL owing to the National Insurance Act becomes less it will be possible to curtail the number of pages each week and thereby materially reduce the cost of production.

British Medical Association.

Having examined the Balance Sheet, dated 31st December, 1912, and Accounts with the books and vouchers of the Association, and having received all the information and explanations we have required, we report that the Balance Sheet is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Association according to the best of our information and the explanations given to us and as shown by the books of the Association.

We have verified the Investments of the Association on General Account and on account of the Trust Funds shown and of the Office Staff Superannuation Fund, and we have verified the possession by the Bankers of the Association of the Deeds of the Freehold Property.

EDWIN RAYNER,
Honorary Treasurer.

GUY ELLISTON,
Financial Secretary and Business Manager.

PRICE, WATERHOUSE & CO.,
8, Frederick's Place, Old Jury, E.C.,
April 7th, 1913.

REVENUE.

20. In Revenue, the Advertisements in the JOURNAL have produced some £500 more than in 1911, which is satisfactory as far as it goes. During the year many advertisements, which would have produced considerable revenue, have been refused insertion on the ground that they are being published elsewhere in a misleading and exaggerated manner, while others have been declined as not conforming to the requirements of the Association. The diminution of revenue due to this refusal cannot be exactly estimated from the value of the advertisements actually declined, since in many instances the advertisement so declined would have been repeated, and probably have been the first of a series extending possibly over several years. The keeping up of Revenue from Advertisements is a matter of some anxiety. The general sales of the JOURNAL have gone up by £100, or £2 per week. Reprints also show an increase, while for the book "Secret Remedies" there continues a steady demand, and the book "More Secret Remedies" has already attained a substantial circulation.

SUMMARY.

21. The Council trusts that the serious demands made upon the resources of the Association during the past two years will not be continued. At the same time, in striking a balance the Council would urge Members to remember that the attitude and outlay by the Association in connection with the National Insurance Act has resulted in large pecuniary benefits to the medical profession. Had not the Association taken a determined stand the additional one and three-quarter millions would certainly never have been available for annual distribution to those accepting service on the panels under the Act. It is hoped that those outside the Association will realise that it was left to the Association to take up the fight on behalf of the whole medical profession and will show their appreciation of what was accomplished by becoming members and consummating the ambition that membership of the profession and of the British Medical Association shall be co-terminous.

Apportionment of Member's Subscription.

22. The following table shows how a Member's subscription of £1 5s. has been apportioned towards defraying the expenses of the Association during the year ending December 31st, 1912:—

| | £ | £ | s. | d. |
|---|--------|----------|----------|----------|
| General Association Expenses ... | 11,421 | 0 | 8 | 8 |
| Central Meeting Expenses ... | 11,486 | 0 | 8 | 9 |
| Central Premises Expenses ... | 1,621 | 0 | 1 | 2 |
| Printing, Stationery, and Postages | 1,688 | 0 | 1 | 2 |
| Central Staff Expenses ... | 6,654 | 0 | 5 | 0 |
| Library Account ... | 333 | 0 | 0 | 3 |
| "Journal" and Supplement ... | 42,487 | 1 | 11 | 11 |
| Subscriptions Written off ... | 1,159 | 0 | 0 | 11 |
| Written off for Investments, Plant, and Type ... | 1,188 | 0 | 0 | 11 |
| Grants to Branches and Divisions | 3,770 | 0 | 2 | 10 |
| Total Expenditure per Member | | 3 | 1 | 7 |

To arrive at the net expenditure it is necessary to deduct the Receipts from the "Journal" Account amounting to £29,859, the sums derived from Investments and Rents, the Insurance Defence Fund, and the Reserve. This is shown as follows:—

| | Receipts. | |
|---|-----------|-------------|
| | Total. | Per Member. |
| "Journal" Account. | | |
| Receipts from Advertisements and Sales ... | £29,859 | £1 2 6 |
| Investments and Rent ... | 2,788 | 2 1 |
| From Insurance Defence Fund ... | 7,054 | 5 4 |
| From Reserve ... | 8,834 | 6 8 |
| | 48,535 | 1 16 7 |
| From the Members' Subscriptions to the Association ... | 33,200 | 1 5 0 |
| | £81,735 | £3 1 7 |

The total expenditure on the production and distribution of the "Journal" and Supplement was £42,487. Of this amount the Association was recouped £29,859 from receipts from advertisements and sales, leaving £12,632, which is equivalent to 9s. 6d. per member, to be provided out of the subscriptions of members, which amounted to £33,200.

SUPP. 2

23. Estimate of Expenditure and Receipts for 1913.

EXPENDITURE.

| | £ |
|---|--------|
| General Association Expenses | 3,000 |
| Central Meeting Expenses | 10,000 |
| Central Premises Expenses | 1,600 |
| Printing, Stationery and Postages | 1,600 |
| Central Staff Expenses | 6,100 |
| Library | 300 |
| "Journal" Account | 42,500 |
| Capitation Grants | 4,000 |
| Arrears of Subscriptions | 1,000 |
| Depreciation | 1,000 |

Estimated total expenditure for 1913 **£71,100**

RECEIPTS.

| | £ |
|---|--------|
| Subscriptions | 33,500 |
| Advertisements | 24,000 |
| Sundry Sales of "Journal," etc. | 4,000 |
| Investments | 400 |
| Rents | 2,400 |
| Discounts on Purchase of Paper | 1,200 |

Estimated deficit for 1913 .. **65,500**
5,600

£71,100

It is well that members should fully appreciate that if the demands are not considerably reduced the Association must cripple itself financially. For the year 1912 it was calculated that there would be a deficit of £8,500, and the actual amount was £8,834. Now again, for 1913, it is estimated there will be another deficit of £5,600 unless considerable reductions are effected, and in this direction the Council already has taken steps to curtail expenditure. Central Meeting Expenses will have to be reduced when a diminution of expenditure will follow all round. Further, it is with the JOURNAL that considerable saving can be effected; it is not commercially sound to turn out each week a JOURNAL and Supplement which together aggregate not far short of 96 pages of literary matter. It would be difficult, probably impossible, to find any other publication with such a bulk of literary matter being issued each week.

The Council recommends:

Recommendation A.—That the Minutes of the Representative Meeting issued at the end of the Representative Meeting to Members of the Representative Body shall be the daily Minutes corrected and collected together. That Honorary Secretaries of Divisions and Branches who are not members of the Representative Body also be supplied with a copy.

Recommendation B.—That the taking of verbatim shorthand notes of the Representative and Council Meetings is unnecessary and should be discontinued. In order to minimise the risk of any inaccuracy occurring in the preparation of the Minutes, the Chairmen of these bodies respectively be requested to enforce that a written copy of a Motion or Amendment to be submitted to the Meeting be furnished for the information of the Chairman.

Recommendation C.—That the Representative Body rescind Resolution No. 187, passed at Leicester, 1905, which authorises the sending of a bound volume of the Supplement to the Secretaries of all Divisions, viz.: That the Supplements be bound and sent down twice annually to Secretaries and Representatives of Divisions, and that such volumes remain the property of Divisions.

24. The Council has also decided to discontinue the practice of sending to each Honorary Secretary, Chairman and Representative a separate copy of all reports to Divisions which appear in the Supplement. The attention of the Secretaries of Divisions and Branches will be specially drawn to reports as they appear in the Supplement.

(C) Organisation.

MEMBERSHIP OF ASSOCIATION.

25. The total membership of the Association on December 31st, 1912, was 26,568 as compared with 25,301 on the corresponding date of 1911. The increase numbers 1,267, as compared with the increase of 2,853 in 1911, and 1,043 in 1910.

QUESTION OF NEW COMPANY.

26. As reported to the Annual Representative Meeting at Liverpool, representatives of the Association waited upon the new Comptroller of the Companies Department of the Board of Trade on May 1st, 1912, with reference to the alteration of the proposed new Memorandum of the Association suggested by the Board of Trade, namely, the addition of words (to clause 3 (g)) to provide as follows:—

“The Association shall not support with its funds or endeavour to impose on or procure to be observed by its Members or others any regulation, restriction or condition, which, if an object of the Association, would make it a Trade Union.”

The Comptroller stated that he could not see his way to recommend that the above addition should not be insisted upon, and pointed out that even if it were not inserted in the Memorandum the Association would nevertheless be subject to its provisions.

On consideration of the draft Memorandum, Articles and By-laws as thus settled by the Board of Trade, it was decided to ask Counsel to furnish (i.) a statement of the powers which would be vested in the Association under the proposed new Memorandum of Association, as amended, as compared with the powers under the present Memorandum, (ii.) an estimate of the probable cost of winding up the present Company and forming the new Company, and (iii.) an opinion as to whether it would be possible for the present Company to acquire power to borrow money otherwise than by winding up the present Company and forming the new Company. The Council submits (see Appendix III.) Counsel's opinion on the above questions, together with (see Appendix IV.) additional information received through the solicitor to the Board of Inland Revenue as regards the question of the probable cost of the formation of a new Company.

On consideration of the whole matter the Council arrived at the following

Conclusions.

(1) That the winding up of the present Company and the formation of a new Company would necessitate the expenditure of approximately £400 to £600.

(2) That the extension of the present Memorandum of Association to enable the Association to borrow money on mortgage or otherwise, including submission of the proposed alteration to the Board of Trade, and an application to the High Court, entailing the attendance of Counsel, would necessitate the expenditure of approximately £100.

(3) That the most urgently needed and important power sought by the Association is the power to borrow money.

(4) That the additional powers obtainable by the formation of a new Company are not commensurate with the additional expense involved.

The Council is of opinion, therefore, that the proposed formation of a new Company should not, for the present at least, be further proceeded with. The Council recognises that this proposal will give rise to feelings of disappointment that the long and expensive work done by the Association in connection with the matter has had so little result. Especially may this be so in the case of those Overseas Branches which have been more particularly anxious to obtain certain new powers. It is now evident, however, that those powers (promotion of candidatures for Parliament, provision of medical benevolence and individual medical defence) cannot be obtained through any new Company which shall effectively preserve the identity of the present Association. The powers which can be obtained in this way are all, with the exception of the establishment of a medical benevolent fund and the borrowing of money, powers which are already exercised by the Association, though the legal right of the Association to do so as regards some of them is not specifically stated in the present Memorandum of Association, and can only be inferred therefrom. In view of the fact that the Overseas Branches would in any case probably prefer to start separate Benevolent Funds of their own, which they can do at present under Trusts, and that the power of borrowing money can be obtained by the cheaper method of application to the High Court, the Council recommends this plan in preference to that of forming a new Company.

The Council recommends:—

Recommendation A.—That the Association do not proceed further at present with the proposed formation of a new Company.

Recommendation B.—That the Representative Body instruct the Council to take the necessary steps to obtain an extension of the Memorandum of the present Company to include the power of borrowing money on mortgage or otherwise.

QUESTION OF MODE OF ELECTION OF MEMBERS OF COUNCIL BY BRANCHES OUTSIDE UNITED KINGDOM.

27. Being of opinion that the present procedure for election of members of Council by Overseas Branches, as provided for under present By-law 46, is unnecessarily cumbersome, and that it would be possible and advantageous to apply to these Branches with necessary modifications the procedure adopted, under By-law 45, with regard to Branches in the United Kingdom, whereby these elections are carried out as far as possible through the Head Office, the Council has prepared and now submits to the Representative Body alterations in the By-laws to provide accordingly.

The Council recommends:—

Recommendation C.—That the following new By-law 46 be adopted by the Annual Representative Meeting, 1913, in substitution for existing By-law 46:—

Mode of Election by Groups not in United Kingdom.

46.—(1) The election of seven Members of Council by the Groups of Branches not in the United Kingdom shall be conducted in the manner prescribed by this By-law.

(2) All nominations of candidates shall be in writing sent to the Association so as to be received at the Head Office on or before such day, not being later than the 15th February in each year, as shall be specified for the purpose by a notice published in the JOURNAL during the second or third week of October in the preceding year, and no nomination paper received after the day so specified shall be valid.

(3) The said notice shall prescribe a form in which the nominations are to be made, and the nominations shall be made in the form so prescribed, or in a form to the like effect. Nomination papers may be signed by not less than three members of any Branch comprised in the group.

(5) As soon as may be after the 15th day of February in each year:—

(a) In the case of any Group for which one candidate only has been duly nominated, there shall be published in the JOURNAL a notice that such candidate has been elected as Member for that Group; and—

(b) In the case of any Group for which more candidates than one have been duly nominated, a voting paper shall be sent by post from the Head Office to each Member of every Branch comprised in that Group.

(5) Every voting paper shall contain a statement that the same must be returned to the Association so as to be received at the Head Office on or before a specified day (not being later than the succeeding 15th day of May), and no voting paper received after the day so specified shall be counted.

(6) Not later than the 2nd week in the succeeding month of June, a notice of the result of the elections shall be published in the JOURNAL.

[Existing By-law 46.]

Mode of Election by Groups not in the United Kingdom.

46.—(1) The election of seven Members of Council by the Groups of Branches not in the United Kingdom shall be by voting papers sent by post by the Secretary of each Branch comprised in the Group to each Member of that Branch.

(2) The said voting papers shall contain the names of those candidates who have been nominated either (a) by a Division or (b) in writing, signed by not less than three Members of any such Branch on or before an appointed day, of which such notice shall have been given in the JOURNAL as the Rules of the Branch may prescribe.

(3) The said voting papers shall contain such other particulars (if any), and shall be sent to such one of the said Secretaries (hereinafter called "the Returning Officer"), and within such time as the Council may from time to time prescribe by notice given as aforesaid.

(4) It shall be the duty of the Returning Officer to count the votes given for each candidate and to make a return of the result of the election to the Association at the Head Office.

(5) The expenses incurred by each Branch in respect of the election shall be borne by the Association.]

ELECTION BY BRANCHES OF MEMBERS OF COUNCIL FOR 1913-14.

(a) *Grouping of Branches in United Kingdom for 1913-14.*

28. Pursuant to the decision of the Annual Representative Meeting, 1912 (Minute 43), the Branches in the United Kingdom are grouped for the election of Members of Council for the year 1913-14 in the same way as for the year 1912-13.

(Note.—For the Scheme of Grouping for 1913-14 see Appendix V.)

(b) *Grouping of Branches not in United Kingdom for 1913-14.*

The Council has considered the following Minutes of the Annual Representative Meeting, 1912:—

Minute 73.—Resolved: That it be an instruction to the Council to settle the grouping of Branches outside the United Kingdom for election of members of Council for the year 1913-14 on consideration of the views of the Branches concerned.

Minute 74.—Proposed: That the new arrangement of grouping of Branches not in the United Kingdom, whereby the Hong Kong and China Branch is grouped with the various Branches in India, Burma, Ceylon and Malaya for the purpose of electing one member of the Council of the Association does not give that Branch adequate representation and seriously curtails the rights

and privileges of the Members of the Branch, that therefore one Member of Council should be allotted to the Hong Kong and China Branch, together with the Malaya Branch and another Member of Council allotted to the Branches in India, Burma and Ceylon, which Branches have interests more or less in common; and that, in the event of this proposal being approved by the Representative Body, the Member of Council representing the Hong Kong and China and Malaya Branches should be elected from Members of each of the two Branches alternately.

Minute 75.—Whereupon an amendment: That the matter be referred to the Council for consideration and report, and such amendment of the regulations, if any, as may in the opinion of the Council be desirable. The amendment was carried; also as a substantive motion;

and has also considered replies by the Branches outside the United Kingdom on the question of their grouping. The Council now submits to the Representative Body the Scheme of Grouping of Branches not in the United Kingdom for the election of members of Council, 1913-14, as decided upon by the Council pursuant to the instruction of the Representative Body. The Council has also recommended the Branches outside the United Kingdom to exercise their powers under By-law 29 (2), so that Members of Council elected by these Branches be appointed to serve for a period of three years. In connection with *Minute 74* of the Annual Representative Meeting at Liverpool, the Hong Kong and China Branch has been informed that there is no objection to arrangements being voluntarily made between that Branch and the Malaya Branch, now grouped with it, whereby the Member of Council representing these Branches shall be elected from each of the two Branches alternately.

(*Note.*—For the Scheme of Grouping of Branches outside United Kingdom for 1913-14, see Appendix VII.)

ELECTION BY BRANCHES OF MEMBERS OF COUNCIL FOR 1914-15.

(a) *Grouping of Branches in United Kingdom for 1914-15.*

29. The Council recommends:

Recommendation D.—That the Branches in the United Kingdom be grouped for election of Members of Council for the year 1914-15 in the same way as for the year 1913-14.

(*Note.*—For the Scheme of Grouping for 1913-14, see Appendix V.)

(b) *Grouping of Branches outside United Kingdom for 1914-15.*

30. The Council recommends:

Recommendation E.—That the Branches outside the United Kingdom be grouped for the election of Members of Council for the year 1914-15 in the same way as for the year 1913-14.

(*Note.*—For the Scheme of Grouping for 1913-14, see Appendix VII.)

QUESTION OF PAYMENT OF EXPENSES OF REPRESENTATIVES.

31. The Council has considered the following Minutes 22-5 of the Annual Representative Meeting, 1912:—

Minute 33.—Proposed: That, in the opinion of this Meeting, the time has now come when the Council should take into consideration the payment of the necessary out-of-pocket expenses of Representatives at Representative Meetings.

Minute 34.—Whereupon an amendment: That the question of the payment of the personal expenses of the Representatives at Meetings of the Representative Body be postponed for twelve months, on account of the heavy expenditure caused by the National Insurance Act. The amendment was carried. Also as a substantive motion.

Minute 35.—Resolved: That in the meanwhile the Council point out to each Division the possibility of opening a Special Fund which can be supported by practitioners resident in the area, and out of which such expenses of the Representatives as the Division may determine could be paid.

In accordance with *Minute 35* of the Representative Body at Liverpool, the Council has pointed out to the Divisions that it is within the power of each Division to open a Special Fund to be subscribed to by members and other practitioners voluntarily, from which such expenses of the Representative or Representatives as the Division may decide, can be paid.

The Council recommends:

Recommendation F.—That, having regard to the existing state of the finances of the Association, the time is still inopportune for acceding to the proposal that the out-of-pocket expenses of Representatives at Representative Meetings, other than their travelling expenses as at present, be paid out of the funds of the Association.

FORMATION OF CONSTITUENCIES: GENERAL PROCEDURE.

32. The Council has considered the following resolution of the Annual Representative Meeting, 1912:—

Minute 77.—Resolved: That the Council take into consideration the question of fixing a date after which alterations of constituencies shall not be effective as regards election of Representatives for that year's Representative Meetings;

and has adopted a Standing Order whereby, in forming constituencies in accordance with By-law 30, the Council shall have regard only to the Divisions as they existed at the time of making up of the Annual List for the year. Thus any changes made in the list of, or boundaries of Divisions, subsequent to the publication of the Annual List in May of each year, which may, in the opinion of the Council, necessitate alteration of constituencies, shall not be taken into account by the Council until the following year.

CONSTITUENCIES, 1913-14.

33. The Constituencies formed by the Council for the purpose of the election of the Representative Body for 1913-14, are, provisionally, the same as those for 1912-13, except that independent representation has been given to the following Divisions:—Birmingham Central, Kingston-upon-Thames, Richmond, Scarborough, York; and that Walsall and West Bromwich, Woolwich and Greenwich and Deptford (or Lewisham), Kesteven and Boston and Spalding, and Rotherham and Sheffield, have been grouped.

The Scheme of Constituencies will be finally determined when the Annual List, 1913, figures are available.

ELECTION OF MEMBERS BY BRANCHES.

34. The Council has considered the following resolution of the Annual Representative Meeting, 1912:—

Minute 253.—Proposed: That the following Sub-section (3) be added to present By-law 5 of the Association:—

(3) Where a candidate for election has been recently domiciled within the territory of an oversea Branch, election of such candidate by a Branch in the United Kingdom or another oversea Branch shall be provisional until the Council of the Branch in the previous place of domicile has been communicated with.

Minute 254.—Resolved: That this Meeting approve the principle involved in the above Motion, and that it be referred to the Council for consideration.

The Council regrets that, for the reasons given below, it is unable to agree with the suggestion of the Victorian Branch the principle of which was approved by the Representative Body (*Minute 253* of A.R.M., 1912), that where a candidate for election has been recently domiciled within the territory of an oversea Branch the election of such candidate by a Branch in the United Kingdom or other oversea Branch shall be provisional until the Council of the Branch in the previous place of domicile has been communicated with: (a) It would entail asking every candidate in the United Kingdom whether he had recently been domiciled in the area of an oversea Branch; (b) it would raise difficulties as to the exact meaning of "domiciled"; (c) it would entail the holding up of all applications for membership pending enquiry, which would in many cases be vexatious to intending members; (4) the principle, if adopted, would have to be extended generally, and before a member could be elected by a Branch outside the United Kingdom an enquiry would have to be made as to whether he had recently been domiciled in the United Kingdom or in any Branch, and so forth.

The Council is of opinion that the evidence at its disposal as regards the grievance which the proposal of the Victorian Branch was intended to remove does not justify the proposed change in view of the manifest difficulties of the proposed procedure.

The Council therefore recommends:

Recommendation G: That the regulations as to election of members remain as at present.

TIME OF HOLDING ANNUAL REPRESENTATIVE MEETINGS.

35. The Council has considered *Minute 257* of the Annual Representative Meeting, 1912, namely:—

Minute 257.—Resolved: That the following Motion by Chelsea, with the Amendment by Birmingham Central, be referred to the Council:—

That the Annual Representative Meeting shall commence on the third Tuesday in July.

Amendment by Birmingham Central:—That the Annual Representative Meeting shall commence on the Thursday immediately preceding the Annual Meeting, and reports as follows:—

(1) That general experience has shown that the most convenient week for the Annual Meeting, and one which is now fixed by custom, is the third week in July;

(2) That it has been found necessary to keep clear of the week immediately preceding August Bank Holiday, on account of the difficulty of arranging excursions on the Saturday;

(3) That, accordingly, the Friday which falls on July 15th or 21st, or between these dates, is, in the opinion of the Council the best date for the commencement of the Annual Meeting;

(4) That the desire for an extension of the time required for the business of the Annual Representative Meeting, expressed in the proposals of the Chelsea and Birmingham Central Divisions, has probably only arisen out of the circumstances of the past two years, which were admittedly exceptional, and that, in the opinion of the Council, the necessity for such an extension of time is not now likely to arise.

REPRESENTATIVES AND DEPUTY-REPRESENTATIVES.

36. The following Minute 258 of the Annual Representative Meeting, 1912, has been considered by the Council:—

Minute 258.—Resolved: That the following motion, with amendments and riders thereto, be referred to the Council for consideration:—

Motion by Westminster: That the Council be instructed to frame alterations in the Regulations of the Association, carrying out the principles contained in the following Motion, and submit them to the next Representative Meeting, Special or Annual:—

That it should be possible for a Representative to resign his position and for the post to be filled up at any time; that it should be possible for a Division to dismiss a Representative by a majority of those present at a Special Meeting of the Division called for the purpose; that in the event of a Representative being able only to attend part of a Representative Meeting it should be possible for a Division to appoint a Deputy to act during such time as the Representative is unable to attend.

Amendment by Hampstead: That the words "of two-thirds" be inserted after the word "majority" in line 4.

Amendment by Cardiff: That the words "three-fourths majority of those present and voting" be substituted for the words "majority of those present" in lines 4 and 5.

Amendment by Manchester (South): That the words "the Chairman and Secretary" be substituted for the word "Division" in the eighth line.

In the opinion of the Council,

(1) The Representative of a Constituency should be able to resign his position.

(2) Any vacancy arising should be filled by the Constituency in accordance with the Rules of the Division or Divisions forming the Constituency.

(3) If a Representative be permitted to resign, the Constituency should not be empowered to dismiss a Representative, but should be able, at a special meeting called for the purpose and by a three-fourths majority of those present and voting, to call upon a Representative to resign.

(4) It would be inadvisable to allow a Deputy to act for a Constituency during such portion only of a Meeting as the Representative might be unable to attend.

The Council therefore recommends:

Recommendation H.—That the Council be instructed to prepare the alterations in the Regulations of the Association necessary to carry out the above suggestions.

QUESTION OF APPEALS TO COUNCIL IN CONNECTION WITH ETHICAL DECISIONS OF COUNCILS OF BRANCHES OUTSIDE UNITED KINGDOM.

37. The Council has considered Minute 256 of the Annual Representative Meeting, 1912, to the effect that words be added to the statement of the duties and powers of the Central Ethical Committee in the Schedule to the By-laws, to provide that where an ethical complaint has been dealt with by the Council of a Branch outside the United Kingdom, an appeal to the Council of the Association shall not be allowed except by permission of the Council of the Branch.

The Council recommends:

Recommendation I.—That in order to carry out the proposal contained in Minute 256 of the Annual Representative Meeting, 1912, the following words be added by the Annual Representative Meeting, 1913, to the definition of the "Duties, Powers, etc." of the Central Ethical Committee, contained in the Schedule to the By-laws:—

"Provided that notwithstanding the foregoing provisions the Committee shall not adjudicate in or entertain any such matter of dispute as aforesaid which has arisen in a Branch not in the United Kingdom having a membership of not less than thirty, except upon the request of the Council of that Branch."

CO-ORDINATION OF ACTION OF DIVISIONS AND LOCAL MEDICAL COMMITTEES.

38. As will be seen from paragraph 102 of this Report in the State Sickness Insurance Section, the Council is of opinion that it would be to the advantage of the profession if it were within the power of the Branches and Divisions to secure that certain medical members of Insurance Committees and of Local Medical Committees, being also members of the Association, should be members *ex officio* of the Councils of the Branches, and of the Executive Committees of the Divisions concerned. In the event of the opinion of the Council being endorsed by the Representative Body the Council suggests that By-laws 16 and 18 be amended to make this possible.

The Council recommends:—

Recommendation J.—That By-laws 16 and 18 of the Association be amended to read as follows, respectively (words proposed to be inserted are printed in italics):—

By-law 16.

Local Management: Branches.

16. The management of the affairs of each Branch shall, save as otherwise provided in the By-laws, be vested in a Branch Council, composed of the following Members:—

(a.) Those Members of the Council who are elected (as hereinafter provided) by the Branch or by any group of Branches to which the Branch belongs, or (wholly or in part) by Representatives of Constituencies comprised in the Branch.

(b.) The Members elected to represent on the Representative Body the Divisions comprised in the Branch.

(c.) Such Officers of the Branch as the Branch shall declare to be members *ex officio* of the Branch Council.

(d.) *Such Members (if any) of any Local Medical Committee formed under the National Insurance Act, 1911, and such Medical Members (if any) of any Insurance Committee formed under that Act, being (in either case) ordinary Members of the Association resident within the area of the Branch as the Branch may declare to be Members ex officio of the Branch Council.*

(e.) In the case of a Branch comprising more Divisions than one, Members elected by such Divisions in such manner that the number to be elected by each Division shall be as nearly as possible proportionate to the Membership of such Division.

By-law 18.

Local Management: Divisions.

18. The management of the affairs of each Division shall, save as otherwise provided in the By-laws, be vested in an Executive Committee composed of the following Members:—

(a) The Member or Members representing the Division on the Representative Body;

(b) The Member or Members representing the Division on the Branch Council;

(c) *Such Members (if any) of any Local Medical Committee formed under the National Insurance Act, 1911, and such Medical Members (if any) of any Insurance Committee formed under that Act, being (in either case) ordinary Members of the Association resident within the area of the Division as the Division may declare to be Members ex officio of the Executive Committee.*

(d) Such other Members elected by the Division as the Division may determine.

ANNUAL REPORTS OF DIVISIONS AND BRANCHES.

(a) *Reports of Divisions in United Kingdom for 1912.*

39. Satisfactory Reports have been received from most of the Divisions in the United Kingdom in respect of the year 1912. From the following Divisions, however, no Report has up to the present been received:—

Aberdeen, Ashton-under-Lyne, Ayrshire, Belfast, Blyth, Bradford, Carlou, Derry, Dublin, Ealing, East Leinster, Hendon and Finchley, Hexham, Kendal, Mid-Connaught, Mid-Essex, Mid-Leinster, Monaghan and Cavan, North-west Leinster, Rotherham (formed, December, 1912), Sevenoaks, Shetland, South Connaught, South Shields, South Munster, Waterford, West Cornwall.

In addition, the following Divisions are unorganised; that is to say, have no Officers and have held no meetings during the year:—

Consett, Enniskillen, Isle of Man, Kilkenny, North Connaught, North Leinster, North Munster, Omagh, Orkney, South-East Leinster, West Munster.

Under the By-laws every Division should report in January. The Council desires to impress upon the Divisions the importance of these Reports being duly made, as they constitute a valuable means of information respecting the activities of the Divisions.

(b) *Reports of Branches in United Kingdom for 1912.*

40. Annual Reports for 1912, due on March 15th, have also been received from, and found satisfactory in the case of the majority of the Branches in the United Kingdom. The following Branches, however, have not yet reported:—

Aberdeen, Connaught, Glasgow and West of Scotland, Leinster, North of England, Ulster.

The Council desires again to emphasise the fact of the unnecessary delay and difficulty caused in connection with the accounts of the Association by non-receipt or delayed receipt of the Annual Reports. It is obviously difficult for the Council to arrange for grants to Branches for any year in the absence of a satisfactory Report from the Branch for the previous year, and the Council has accordingly adopted a Standing Order that no grant shall be made unless a satisfactory Report for the previous year has been furnished. An analysis of the Reports of the Branches in the United Kingdom for 1912 in respect of membership, finances and meetings will be found appended.

(Note—For the Analysis see Appendix VI.)

(c) *Reports of Branches outside United Kingdom for 1912.*

41. Reports from a considerable number of these Branches have already been received, but owing to the distances involved the Reports of some Branches which ordinarily report are still outstanding. The Reports of the Branches outside the United Kingdom will therefore be dealt with in the Supplementary Report of Council.

GRANTS TO BRANCHES FOR 1913.

(a) *Branches in United Kingdom.*

42. Grants for 1913 varying from 2s. to 4s. per member have been made by the Council to those Branches in the United Kingdom which required grants and have furnished satisfactory Reports for 1912. No grant has been made to Branches which had a balance of over 5s. per head in their possession as at December 31st, 1912.

(b) *Branches outside United Kingdom.*

43. Grants for 1913 have as in previous years been made to Branches outside the United Kingdom at the rate of 4s. per member who has paid the full subscription for the year, and 2s. per member, elected after July 1st, who has paid half the ordinary subscription.

RULES.

44. Notwithstanding repeated requests for the adoption of such Rules, the Council regrets to find that there are still 82 Divisions and 4 Branches in the United Kingdom which have not adopted ordinary Rules of Organisation. The attention of these bodies is again drawn to the urgency of their being equipped with Rules. Copies of the Model Rules drawn up for the purpose by the Council are obtainable on application to the Medical Secretary. Without Rules of the kind, and Ethical Rules, it is impossible properly to conduct the ordinary business of a Division or Branch, still less to conduct successfully disputes in which the Division or Branch may at any time become involved. The attention of the defaulting Divisions and Branches above referred to is further drawn to the fact that, under Article 17, Rules do not become operative until their adoption by the Division or Branch has been notified to and approved by the Council.

QUESTION OF RELATION OF DIVISION AND INSURANCE AREAS.

45. On consideration of the relation between Division and Insurance areas, the Council is of opinion that, other things being equal, it would be of distinct advantage for the Division areas to be made co-terminous with Insurance areas. The question, however, presents considerable difficulties, and before taking any steps to secure such a readjustment of areas throughout the country, the Council thinks it well that the matter should be laid in detail before the Divisions for their consideration. This will be done at an early date.

ANNUAL CONFERENCE OF SECRETARIES.

46. The Conference of Secretaries at Liverpool, 1912, appointed a Committee of nine to consider matters referred to it by the Conference. The Council, fearing that there might be

a risk of the work of the Conference overlapping the work of the Standing Committees of the Association, and also having in view the undesirability of the setting up of fresh large and therefore expensive Committees at a time when economy is imperative, came to the conclusion that the organisation of the Conference had better be left as before to the Organisation Committee. The Council has accordingly arranged for the Conference of Secretaries Sub-committee of the Organisation Committee to include three of the nine members appointed by the 1912 Conference, and for future Conferences being invited to nominate three members for co-option to that Sub-committee.

The Annual Conference of Secretaries at Brighton has been fixed for Wednesday, July 23rd, 1913, at 4 p.m., and the Secretaries' Dinner at 7 p.m.

DIVISION AND BRANCH AREAS.

(1) *New Divisions and Branches.*

47. The following new Divisions and Branches have been formed since the Council reported to the Annual Representative Meeting, 1912:—

(a) *In United Kingdom:*

Divisions.

Camberwell, Chesterfield, Isle of Ely, Kingston-upon-Thames, Kesteven, Lewisham, North-West Essex, Rotherham, Tower Hamlets.

(b) *Outside United Kingdom.*

Branches.

East Africa and Uganda, Orange Free State, Rhodesian.

(2) *Other changes.*

48. Other less important changes of boundaries have been carried out, including some changes of name. All such were duly published in the Supplement.

RESIGNATIONS.

49. Certain misleading statements having been made in the lay press as to the number of resignations of membership of the Association about the end of the year 1912, the Council authorised publication in the lay press of the fact that resignations from the Association in the period October 15th, 1912, to January 11th, 1913, numbered only 638, as against 405 for the corresponding period in the previous year. The Council desires to call special attention to the figures of the resignations for the year, and though regretting that so many practitioners have thought fit to withdraw from the Association, is of opinion that the comparatively small number is a proof that the profession as a whole recognises the urgent necessity of maintaining the organisation of the Association in view of future necessities.

COMPILATION OF PRONOUNCEMENTS OF ASSOCIATION:

PREPARATION OF SECRETARIES' HANDBOOK.

50. The work of compilation of the various pronouncements of the Association, and the preparation of a Secretaries' Handbook, are well advanced, but are temporarily in abeyance owing to considerations of expense as regards the amount of printing involved.

UNDER CONSIDERATION.

51. (a) Minutes 40 and 42 of A.R.M. 1912, as to Referendum and Postal Vote, as to which the Council hopes to report in its Supplementary Report.

(b) Proposed alteration of Regulations of Association as to change of address of members and amenability of members to Rules of Divisions in the area of which they practise but of which they are not members.

(c) Proposal for shortened period of notice of Special Representative Meetings.

(D) *Journal.*

BRITISH MEDICAL JOURNAL.

52. It is satisfactory to note that the circulation continues to grow, and that in 1912 the total issue was 1,529,688 copies, or an increase of 113,549. Not only has the circulation increased, but the number of pages has been more. To issue weekly so large a publication and catch the Mails to all parts of the World, is a constant source of anxiety. That this is accomplished with constant regularity, and with comparatively rare complaint as to the JOURNALS going astray, must be a matter of general satisfaction, and reflects no small credit on those concerned.

SUPPLEMENTS.

53. As pointed out elsewhere, the pages of the *Supplement* increased during 1912 by 328 pages to an average of over 31 pages per week. The issue of so large a *Supplement*, nearly half an average *JOURNAL*, involves heavy expense, and it is hoped to arrange that the *Supplement* shall not exceed an average of 16 pages each week.

LIBEL ACTIONS.

54. The Council has carefully considered what steps should be taken in the event of any further Libel Actions being threatened against the Association, and it is believed that the procedure laid down will tend to reduce the risk of future litigation. The Council refrains from entering into the matter of the possibility of the prevention of the recovery of damages against the Association by the registration of the Association as a Trade Union, as under the terms of Minute 68 of the A.R.M. Liverpool, the whole question is to be reconsidered at Brighton.

ADVERTISEMENTS.

55. Throughout the year greater stringency has been exercised as to what advertisements shall or shall not be accepted for insertion in the BRITISH MEDICAL JOURNAL, and the principle now laid down is that no advertisement shall be accepted which is also being issued to the general public in an exaggerated or misleading fashion. Further, no advertisements are accepted if they do not comply with the requirements formulated from time to time by the Association.

"SECRET REMEDIES" AND "MORE SECRET REMEDIES."

56. The book "Secret Remedies" continues to have a steady sale and it is hoped in the course of time that the issue of the book "More Secret Remedies" will rival that of the first publication. The books have been constantly referred to before the Select Committee of the House of Commons, and some of the analyses have been called into question, but in no instance has any witness been able to prove any material defect in the analyses given. It is gratifying in this respect to report that the Commonwealth of Australia requested permission to reprint as a Parliamentary Paper the whole of the two volumes, a request which the Council at once complied with. It is hoped that the circulation of the information contained in these volumes will have a salutary effect on the traffic in secret and proprietary remedies.

(E) Science.

SPECIAL COMMITTEE ON TREATMENT OF SIMPLE FRACTURES.

57. The Special Committee on Treatment of Simple Fractures, appointed by the Council in 1911 at the suggestion of the Section of Surgery of the London 1910 Meeting, has completed its inquiry. The complete Report of the Committee was published in the BRITISH MEDICAL JOURNAL of November 30th, 1912.*

The Council is pleased to report that a most gratifying expression of appreciation of the work of the Fractures Committee has been received from the American Surgical Association, which is proposing to set up a similar Committee and has asked for advice and assistance.

SCIENTIFIC WORK OF ANNUAL MEETING, 1913.

58. The Scientific work of the forthcoming Annual Meeting of the Association at Brighton is being organised in sixteen Sections, namely:—

Bacteriology and Pathology; Climatology and Balneology; Dermatology; Diseases of Children, including Orthopaedics; Electro-Therapeutics; Gynaecology and Obstetrics; Laryngology, Rhinology and Otolaryngology; Medical Sociology; Medicine; Navy, Army and Ambulance; Neurology and Psychological Medicine; Ophthalmology; Pharmacology, Therapeutics and Dietetics; State Medicine; Surgery; Tropical Medicine.

SCIENTIFIC WORK OF DIVISIONS AND BRANCHES.

59. The Council has under consideration the question of the best means of developing and organising the scientific work of the Divisions and Branches. A communication will shortly be addressed to those bodies as to the question of co-operation between them and the Science Committee in the matter.

STANDING THERAPEUTIC SUB-COMMITTEE.

60. Owing to the demands upon the time and energies of the Association in connection with the National Insurance Act the Standing Therapeutic Sub-Committee has not met during the year 1912-13, but certain researches commenced under its auspices are being steadily prosecuted. One of its reports, on a research on the action of Salicylic Acid and chemically allied bodies in Rheumatic Fever, by Professor Stockman, appeared in the BRITISH MEDICAL JOURNAL of March 22nd, 1913.

INTERNATIONAL CONGRESS ON DISEASES OF OCCUPATION.

61. The Council has arranged for the Association to be represented at the Third International Congress on Diseases of Occupation, to be held in Vienna in 1914.

STEWART PRIZE.

62. The Stewart Prize, for work in connection with the origin, spread and prevention of epidemic disease, will be awarded during the current year.

* Reprints of the Report can be obtained on application at the Central Office, price 6d. post free.

THE FISHMONGERS' COMPANY AND SHELLFISH.

63. A Special Committee of the Fishmongers' Company has approached the Association with reference to an enquiry proposed to be carried out by that Committee in regard to shellfish, particularly in reference to bacteria, and as to what other standards, besides freedom from bacteria, should be adopted to render shellfish suitable for human consumption. In response to the wish of the Fishmongers' Company, names have been suggested of gentlemen possessed of special knowledge of the subject with whom the Special Committee might confer. From these the Fishmongers' Company has selected Dr. J. C. G. Ledingham.

UNDER CONSIDERATION.

64. (a) Minute 102 of Annual Representative Meeting, 1912, as to methods in which researches in connection with scholarships and grants awarded by the Association are carried out.

(b) Award of Middlemore Prize in 1914.

(F) Medical Ethics.

WARNING NOTICE REGULATIONS.

(a) Continuation of Warning Notices.

65. The Council has considered the question of those Warning Notices which have been published regularly for more than a year, and has made application for fuller information as to the necessity for their continuance to the Divisions and Branches concerned. Of these only a quarter replied. In the opinion of the Council the responsibility attached to Warning Notices is so great that it is essential that Divisions and Branches inserting them should understand that unless they are willing to keep the Central Office in constant touch with the progress of the dispute in connection with which the Notice is inserted, the Association will decline to continue publication. The Council has accordingly given a standing instruction that Divisions and Branches which have Warning Notices inserted in the JOURNAL, and do not reply to a request for information as to the progress of the dispute, be given notice that, failing the receipt of such information within seven days, the Notice will be discontinued.

(b) Insertion of New Warning Notices to depend on adoption of Ethical Rules.

66. Still further to safeguard the position, the Council has made it a standing instruction that Divisions and Branches for which Warning Notices are being inserted, but which have not adopted the new Model Ethical Rules, be informed that the Notice has been inserted as a matter of favour, and that, in future, a Notice will be inserted only if the Model Ethical Rules are adopted. In order that Branches and Divisions may not be taken unawares this instruction will not take effect until after July 31st, 1913.

(c) Warning Notices as to Ship Surgeoncies.

67. The Council has noted the decision of the Representative Body at Liverpool (Minute 158) that the remuneration of Ship Surgeons shall not be less than £10 per month, and instructions have been given accordingly for the exclusion from the columns of the JOURNAL of advertisements proposing to offer a smaller salary. In view of the possibility that Warning Notices may at any time be required in connection with cases where a less salary is offered, the Council has amended the Regulations with regard to the publication of Warning Notices, by providing that in the case of a ship surgeoncy a Warning Notice may be sanctioned upon the application of the Chairman of the Standing Ship Surgeons' Sub-Committee of the Medico-Political Committee.

EXPULSION.

68. The Council regrets to have to report that it has been found necessary to remove from membership of the Association a member who accepted and continued to hold an appointment, the holding of which was in opposition to the declared views of the Division and Branch complaining.

POSITION OF PRACTITIONERS EXAMINING PATIENTS WHO ARE UNDER THE CARE OF OTHER PRACTITIONERS.

69. The Report on the position of practitioners examining, on behalf of interested persons, patients who are under the care of other practitioners, has been amended in accordance

with the instructions contained in Minutes 105 and 106 of the Annual Representative Meeting, 1912, and instructions have been given for the circulation of the amended Report to Divisions and Branches for their information.

CASES SUBMITTED TO GENERAL MEDICAL COUNCIL.

70. In the Annual Report of last year the case of a practitioner in which the Association acted as prosecutor before the General Medical Council, was mentioned. The practitioner in question had employed an unqualified assistant to attend and treat patients, and the General Medical Council, having found the case proved, postponed judgment from its May to its November, 1912, Sessions in order to give the offending practitioner an opportunity of submitting evidence as to his practice and conduct in the interval. After long deliberation the Council finally decided not to direct the Registrar to erase the practitioner's name from the Medical Register.

CANVASSING AND TOUTING FOR PATIENTS IN CONNECTION WITH THE NATIONAL INSURANCE ACT.

71. Many cases of advertising and toutting for patients in connection with the National Insurance Act have been reported to the Association. Some of the offenders were warned direct, some were reported to the Registrar of the General Medical Council, who communicated with them, while in one flagrant case the Association decided to prosecute before the General Medical Council. Information was received, however, that the cases reported to the General Medical Council had been so numerous that that Council would be quite unable to deal with them in the usual way, and, taking a lenient view of the circumstances, had decided to issue a general warning to the profession. In these circumstances the Council felt that it would be useless to prosecute any individual case until the warning had been issued and its effect seen. The Council will act promptly in any case reported to it in which canvassing or toutting are proved to have occurred subsequent to the issue of the warning of the President of the General Medical Council, and Divisions are urged to take immediate steps to expose and punish future cases of conduct which has been a scandalous breach of the traditions of the profession.

(Note.—For warning issued by the President of the General Medical Council, see Supplement to BRITISH MEDICAL JOURNAL of March 22nd, 1913.)

ETHICAL RULES OF DIVISIONS AND BRANCHES.

72. The Council has considered certain suggestions made by the Brighton Division as to alteration of the Model Ethical Rules of Divisions and Branches which were referred by the Annual Representative Meeting at Liverpool for consideration. The resolutions of the Representative Body were as follows:—

Minute 112.—Resolved: That the suggestions, contained in items 3, 5, 6, 7, 8 and 9 (Minute 109), be referred to the Central Ethical Committee for consideration.

Minute 118.—Resolved: That all Divisions and Branches in the United Kingdom be urged to adopt the Model Rules for Ethical Procedure, as approved by the Representative Body, without modification and in substitution for all such Rules now in use by the Divisions and Branches respectively.

In the opinion of the Council no advantage would accrue from making the amendments in the Model Ethical Rules, suggested by the Brighton Division, referred to in Minute 112 above. The Council is further of opinion that until experience has shown that these Rules, as now in operation in the case of many Divisions and Branches, are unsatisfactory in any respect, no change should be made, it being of the utmost importance that there should be uniform ethical Rules of procedure in operation throughout the United Kingdom. The Rules, in the form approved by the Representative Body at Liverpool, were published in the Supplement of September 21st and 28th, 1912, and in accordance with the instruction of the Representative Body the Divisions and Branches in the United Kingdom have been urged to adopt them without modification and in substitution for all such Rules previously in use. As mentioned in connection with Organisation Rules, the Council regards this question of the adoption of Rules (both Ethical and Organisation) by Divisions and Branches as an important and urgent one, inasmuch as experience has repeatedly shown the impossibility of a Division or Branch dealing effectively with disputes when these have arisen, if not in possession of satisfactory Rules. Up to the present, however, only 95 Divisions and 12 Branches (out of the 219 Divisions and 38 Branches in the United Kingdom) have adopted the Model Ethical Rules, as follows:—

(a) Divisions.

Barnstaple, Bath, Bedford, Belfast, Birmingham Central, Blackburn, Blackpool, Bolton, Bournemouth, Brighton, Buckinghamshire, Camberwell, Cambridge and Huntingdon, Cardiff, Chelsea, Chesterfield, Chichester and Worthing, City, Cleveland, Darlington, Dartford, Derby, Derry, Dover, Dunbartonshire and Argyllshire, Dundee, Eastbourne, East Cornwall, East Norfolk, Exeter, Forfarshire, Glasgow Eastern, Glasgow North-Western, Greenwich and Deptford, Guildford, Harrow, Hastings, Hereford, Inverness, Isle of Ely, Isle of Thanet, Isle of Wight, Kesteven, Kingston-on-Thames, Lambeth, Leicester and Rutland Lewisham, Lincoln, Liverpool, Maidenhead, Manchester (Central), Manchester (North), Manchester (South), Mid-Norfolk, Mid-Staffordshire, Monmouthshire, Newcastle-on-Tyne, North Lincoln, North Glamorgan and Brecknock, North Staffordshire, Nottingham, Nuneaton and Tamworth, Portadown and West Down, Plymouth, Reigate, Richmond, Rochdale, Rochester and Chatham, St. Helens, Scarborough, Scottish, Southport, South Middlesex, South Staffordshire, South Suffolk, South-West Essex, South-West Wales, Southampton, Stockport, Macclesfield and East Cheshire, Stockton, Sunderland, Swansea, Torquay, Tower Hamlets, Tynside, Walsall, Wandsworth, Warrington, West Bromwich, Cornwall, West Norfolk, West Suffolk, Willesden, Winchester, York.

(b) Branches.

Dorset and West Hants, Dundee, Fife, North of England, Northern Counties of Scotland, Southern, South-Western, Staffordshire, Stirling, Ulster, West Somerset, Yorkshire.

MACHINERY OF ASSOCIATION IN CONNECTION WITH DISPUTES.

73. The following Minute, which was referred to the Council by the Annual Representative Meeting, 1912, has been duly considered:—

Minute 62.—Proposed: That unless in cases which concern only a Division, no Warning Notice shall be inserted except in accordance with a decision of the Association under Article 31.

In the opinion of the Council it would be inadvisable to adopt the suggestion contained in Minute 62, inasmuch as it is impossible at the commencement of a dispute to determine whether such dispute will concern a particular Division only.

UNDER CONSIDERATION.

74. (a) Question of conference between consultants and general practitioners.

(b) Question of medical practitioners advertising in lay press.

(G) Medico-Political.

NURSES REGISTRATION BILL.

75. This Bill, which is intended to regulate the qualification of trained nurses and to provide for their registration, was introduced into Parliament on March 18th, 1913. It has been prepared at the instance of the Central Committee for the State Registration of Trained Nurses, which represents, by delegation, the British Medical Association, the Matrons' Council of Great Britain and Ireland, the Royal British Nurses' Association, the Society for the State Registration of Trained Nurses, the Fever Nurses Association, the Association for the Promotion of the Registration of Nurses in Scotland, the Scottish Nurses' Association, and the Irish Nurses' Association. The object of the Bill is to ensure that the community shall have a guarantee that the nurses they employ are skilled in their professional duties, and, through standardisation, to give security to the public that the services of fully qualified nurses shall be readily obtainable. The Bill establishes a "General Council for the Registration of Nurses in the United Kingdom," consisting of persons appointed by the Privy Council, Local Government Boards in the United Kingdom, British Medical Association, Medico-Psychological Association, medical superintendents of Fever Hospitals recognised as training schools under the Bill, and registered nurses themselves. The General Council will consist of 21 persons, of whom 3 will be appointed by the British Medical Association, 8 by the registered women nurses, and 1 by the registered male nurses. The Bill was introduced by Mr. Muir Ferguson, and is backed by Dr. Addison, Mr. Alden, Mr. Bryce, Mr. Duncan Millar, Mr. Scott Dickson, Mr. Remnant, Viscount Wolmer, Sir George Younger, Mr. Ramsay Macdonald, Mr. Field, and Mr. Kerr-Smiley. In the Bill as introduced a printer's mistake has been made in Sub-clause 4 (d) which was meant to provide for the appointment on the General Nursing Council of 3 representatives of the British Medical Association. The mistake,

however, will be rectified to make clear that the Association shall have three representatives. The Council has expressed to the Prime Minister the Association's approval of the Bill and has urged that it be given facilities. A deputation from the Central Committee for the State Registration of Trained Nurses, including two representatives of the Association, has waited upon the Prime Minister in connection with the Bill and the proceedings are duly reported in the BRITISH MEDICAL JOURNAL of May 3rd, 1913.

MENTAL DEFICIENCY BILL OF THE GOVERNMENT.

76. The Government re-introduced on March 25th, 1913, its Mental Deficiency Bill, which, owing to demands on Government time, had been withdrawn in the 1912-13 Session. As re-introduced, the Bill is substantially the same measure as the previous Bill, which was approved by the Association last year except in so far as it proposed to set up a new central authority, the policy of the Association in this respect being that there should be only one authority dealing with the whole subject. The proposal for a new central authority ("Board of Control") is retained in the new Bill, while the former Clause forbidding marriage with a defective has been omitted.

ELEMENTARY EDUCATION (DEFECTIVE AND EPILEPTIC CHILDREN) BILL OF THE GOVERNMENT.

77. The Council has approved on behalf of the Association the Elementary Education (Defective and Epileptic Children) Bill, introduced by the Government in the House of Commons on March 31st, 1913. The Bill imposes on education authorities the duty of providing for the education of mentally defective children over seven years of age.

AMENDMENT OF INDECENT ADVERTISEMENTS ACT: SALE OF PREVENTIVES OF CONCEPTION, ETC.

78. The Annual Representative Meeting at Liverpool approved the action of the Council in forwarding a Memorial to the Home Secretary urging legislation to give effect to the recommendations of the Select Committee of 1908 of both Houses of Parliament on Lotteries and Indecent Advertisements. The Council has since received a communication from the Home Secretary stating that he is fully alive to the importance of the subject, which was dealt with in a Bill which he had caused to be drafted. Up to the present no Bill of the kind has been introduced into Parliament, and the Council understands that no steps will be taken pending publication of the Report of the Select Committee upon Patent Medicines, which Committee is dealing with the subject. The matter is being watched.

CERTIFICATES AND REPORTS UNDER WORKMEN'S COMPENSATION ACT.

79. The Council has considered Minutes 142-4 of the Annual Representative Meeting, 1912, as to certificates and reports in cases under the Workmen's Compensation Act, including the suggestion that a simple form of request from employer to doctor should be drafted at the Central Office and sent to Divisional Secretaries. The following form of request has accordingly been prepared and the Council has directed that it be issued to Honorary Secretaries:—

I require to submit himself for examination by you in accordance with the provisions of paragraph 4 (or 14) of the first schedule of the Workmen's Compensation Act, 1906.

Please report to me as to his condition. I will be responsible for the payment of your fee.

Signed.....
Address.....

PAYMENT OF CORONERS' FEES TO NAVAL SURGEONS.

80. The Annual Representative Meeting, 1912, approved of the action taken by the Council with reference to the question of the payment of Coroners' fees to naval surgeons. This matter was first brought to the notice of the Association in 1908, when attention was drawn to a recent Order of the Admiralty prohibiting naval surgeons from accepting fees from coroners for evidence given at inquests, while leaving these officers under the statutory obligation to give such evidence and make post-mortem examinations when so ordered by a coroner. Repeated representations were made by the Association to the Admiralty, asking their Lordships to consider the desirability of withdrawing the Order in question.

The Council is glad to report that these representations have at length had the desired result, the Council having received in February, 1913, a communication to the effect that, while the Admiralty were advised that the Coroners' Act, 1887, did

not apply to Naval Medical Officers serving on board his Majesty's ships, the Lords of the Admiralty had decided to re-issue the Order in question in the following form:—

"When called upon under the Coroners' Act of 1887 to act at an inquest a naval medical officer may accept the usual fees tendered to him by the Coroner for his services." Naval surgeons are thus now placed on exactly the same footing as regards their evidence at inquests as other medical practitioners. The Council has evidence that this decision of the Admiralty has given great satisfaction to the Royal Navy Medical Service.

ISSUE OF ORDER BY GOVERNMENT OF MADRAS AUTHORIZING GRATUITOUS MEDICAL TREATMENT, IRRESPECTIVE OF THEIR CIRCUMSTANCES, FOR ALL PATIENTS ATTENDING HOSPITALS SUPPORTED FROM PUBLIC FUNDS.

81. Frequent representations have been made by the Council to the Secretary of State for India concerning the terms of an Order issued in September, 1908, by the Government of Madras to the effect that the medical services of state hospitals were to be placed at the disposal of all members of the community irrespective of means or social position. In view of the long delay in receiving a satisfactory reply on the subject, Sir J. D. Rees, M.P., on the initiative of the Association, questioned the Government on the matter in the House of Commons in November, 1912, and was informed that the Secretary of State was considering the question in consultation with the Government of India. Subsequently (March 20th, 1913) the Council received a letter from the India Office, forwarding a copy of a resolution, dated February 19th, 1913, of the Government of India on the question of discrimination between the various classes of patients visiting hospitals and dispensaries in India maintained or assisted by public funds. The resolution in question, a copy of which has been forwarded by the Government of India to local governments and administrations for their information and guidance, lays down the principle of discrimination as that to which all provinces should work; further, that every patient who can afford to pay for separate accommodation should be charged a reasonable sum, in addition for attendance and medicines; that care should be taken not to undersell private nursing homes and chemists' shops or to compete with private medical practitioners; and states, finally, that it is the wish of the Government of India that the object to be secured, namely, that persons should not be treated at the public expense who can afford to pay, should be consistently kept in view and action gradually taken, as circumstances permit, to attain this end. The Council has expressed to the Secretary of State for India its gratification at the adoption by the Government of India of the only sound principles on which in its opinion hospital attendance should be given.

QUESTION OF PUBLICATION IN JOURNAL OF ADVERTISEMENTS FOR APPOINTMENTS IN WHICH APPLICANTS ARE REQUESTED TO STATE SALARY.

82. The Council has decided that, in future, advertisements of vacant appointments tendered for insertion in the JOURNAL in which applicants are requested to state the amount of the salary they would require or accept, shall not be accepted for publication.

QUESTIONS CONNECTED WITH PUBLIC HEALTH AND THE MEDICAL PROFESSION SUITABLE FOR SUBMISSION TO CANDIDATES AT COUNTY, COUNTY BOROUGH, MUNICIPAL BOROUGH AND OTHER LOCAL ELECTIONS.

83. Under the instructions of the Council, memoranda and questions in connection with the policy of the Association on matters affecting the public health and the medical profession, suitable for submission to candidates at County, County Borough and Municipal Borough and District Council elections have been prepared. The preoccupation of the profession with matters connected with the National Insurance Act made it inexpedient to issue these documents during the past Session, but they are in readiness and will be forwarded to Division and Branch Secretaries on application to the Medical Secretary. (Note.—For the Memoranda and Questions, see Appendix VIII.)

UNDER CONSIDERATION.

84. (a) Minute 101 of A.R.M., 1911, as to treatment of school children in hospitals.
(b) Questions as to coroners' law and death certification.
(c) Questions as to status and remuneration of ship surgeons, including Minute 158 of A.R.M. 1912.
(d) Question of fees for medical examinations for life insurance, including Minute 161 of A.R.M., 1912.

(H) State Sickness Insurance.

85. MEETINGS AND ATTENDANCES (FROM JANUARY 23RD TO
APRIL 17TH, 1913, INCLUSIVE).

| | Committee. | | Sub-Committee. | |

| Mr. H. H. Tomkins | — | — | 2 | 2 |

REFERENCE TO, AND APPOINTMENT OF, COMMITTEE.

86. The Committee was appointed at the Special Representative Meeting, November, 1912, with the following reference:—

Minute 54.—That a State Sickness Insurance Committee be appointed by the Representative Body to watch the interests of the profession in relation to the National Insurance Act and to report on the situation to the Council, and that the Committee consist of (a) twelve Members elected by Grouped Representatives in the same manner as Members of Council under By-law 43 (c); (b) the "ex-officio" Members; and (c) two women medical practitioners to be nominated, one by the Northern Association of Medical Women and one by the Association of Registered Medical Women.

Minute 60.—Resolved: That the Society of Medical Officers of Health be requested to nominate a member of the State Sickness Insurance Committee.

The reference was renewed at the Special Representative Meeting, January, in the following Minute:—

Minute 50.—Resolved: That the Meeting do not appoint a new Committee, and that the State Sickness Insurance Committee appointed in November, 1912, continue to act under instructions of the Council.

On consideration of this reference the Council, at its January Meeting, instructed the Committee to proceed as heretofore, namely, dealing itself in the intervals between Council Meetings with such matters as could not be delayed, and reporting to the Council.

VACANCIES UPON COMMITTEE.

87. Drs. T. M. Carter and E. O. Price and Mr. E. H. Willock having resigned their membership of the Committee, the Chairman of Representative Meetings appointed, upon the recommendation of the Representatives of the grouped Branches concerned, Mr. C. E. S. Flemming, Drs. E. O. Price (re-elected) and E. R. Fothergill in their places.

ACTION UNDER MINUTES OF THE SPECIAL REPRESENTATIVE MEETING, JANUARY, 1913.

88. The principal references to the Council by the Special Representative Meeting, January, were those contained in the following Minutes 48 and 52:—

Minute 48.—Resolved: That the Council be instructed (a) to take all necessary steps to watch and protect the interests of the profession under the National Insurance Act; (b) to take any opportunity that may be afforded

for placing the representatives of the Association on the Advisory and Insurance Committees; (c) to obtain statutory recognition of Local Medical Committees in every insurance area; (d) to collect information as to defects in the Act and Regulations and to take all possible opportunities of remedying them.

Minute 52.—Resolved: That, it being evident that a very large number of the doctors who have gone on to the Panels have been compelled to do so by fear of injury to their practices, which in some cases might even amount to actual financial ruin, the Representative Meeting suggests to the Council the following as a means of giving effect to Section (d) of Minute 48:—

That a letter be sent to every member of the Medical Profession asking (1) if he is on the Panel; (2) if so, whether he has taken service willingly or against his inclination owing to coercion; (3) whether, if he be not satisfied with the conditions both as to service and remuneration, he is prepared to decline to renew his contract for Panel service at the termination of the provisional three months, provided that the other practitioners who have been induced to take service by similar methods do the same; (4) if he be not on the Panel whether he has any wish to go on, and (5) whether he has any intention of undertaking any whole or part-time appointment to treat insured persons under the Act.

COLLECTION OF INFORMATION AS TO DEFECTS IN ACT AND REGULATIONS

89. In accordance with the instructions contained in Minutes 48 (d) and 52, the Council, on February 11th, 1913, issued to all medical practitioners in Great Britain a circular letter containing a series of questions relative to the National Insurance Act, and asking for information as to their experience of the work on which the future action of the Association could to some extent be based. A circular letter (D.32) was at the same time issued to the Honorary Secretaries of Divisions and Branches asking them to bring all the machinery of their Divisions and Branches to bear in urging practitioners in their area to return an early answer to the questions forwarded to them. Practitioners were requested to reply not later than March 1st, 1913. Up to that date replies were received from only 8,040 practitioners out of 28,867 to whom it had been addressed. The Council, after consideration of an analysis of the replies, came to the following conclusions:

GENERAL CONCLUSIONS.

Conditions of Service under Act.

(a) That as the replies received from practitioners to the questions issued by the Association concerning various matters connected with the panel system are so few, no useful conclusions can be drawn from them as to the opinion of the profession as a whole.

Practitioners coming off Panels.

(b) That while the replies received show that many insurance service practitioners strongly disapprove of the conditions of practice, there is also evidence of a great deal of mutual distrust among practitioners generally, and that therefore no good purpose would be served by the Association calling on practitioners to leave the panels.

Records, etc.

(c) That while so far as can be seen at present the new form of prescription books and the card register are to a certain extent less irksome and laborious than the original prescription and day books, the amount of clerical work required of an insurance service practitioner still seriously encroaches upon the time and attention which he should give to his patients.

90. The Council has noted the opinions expressed by many practitioners in regard to the possibility of a whole-time Insurance Service, and thinks it well to reiterate what it believes to be the general opinion of the profession on this subject, namely:—

Whole-time Service.

(d) That the Association should strongly oppose any effort to institute a whole-time service of practitioners for the purpose of treating insured persons.

MATTERS ON WHICH EARLY ACTION SHOULD BE TAKEN.

Mileage.

91. The Divisions have been informed of the following expressions of opinion and have been urged to make representations, in regard to some of the paragraphs, to the Insurance Committees through the Local Medical Committees. The earliest opportunity will be taken to approach the Commissioners as regards the proposed amendments of Regulations, and to table appropriate amendments of the Act when the promised Government Amending Act is introduced.

(a) That as it appears the question of mileage will have to be worked out in those areas affected, no opinion be expressed in this matter until it is seen how the special mileage grant is applied, but that in the meantime Divisions be requested to urge upon any Local Medical Committees in the areas specially concerned in the question of mileage to take immediate steps to obtain a grant from the Special Mileage Fund.

Payment.

(b) That as the information contained in the replies of practitioners to the questions sent to them does not afford a sufficient basis upon which to form an opinion upon the question of payment of medical practitioners under the Act, decision upon this matter be postponed, but that in the meantime the Association considers that it is very essential that insurance service practitioners should keep proper records of their attendances upon insured persons for assistance in arriving at definite conclusions on the matter.

Anæsthetics.

(c) That the Association entirely concurs in the opinion expressed by a very large number of insurance service practitioners that it is not to the best interest of insured persons that the administration of an anæsthetic should be included under medical benefit, and that steps be taken to exclude it therefrom.

Income Limit.

(d) That the Association is of opinion that every effort should be made to obtain by amendment of the Act or Regulations a satisfactory income limit in each area, in view of the fact that the present provisions in this respect have so far proved singularly inefficient, and that in the meantime (a) Divisions be requested to urge Local Medical Committees in their areas to continue to make every endeavour to obtain a satisfactory income limit; (b) steps be taken to amend the Regulations so that the income limit shall be one of the items in the agreement with practitioners which must be submitted under Regulation 8 for the approval of the Commissioners, and upon which the Commissioners must consider any representations made by the Local Medical Committee.

Certificates.

(e) That the Association considers it essential that there should be one common form of medical certificate required by Approved Societies under the Act, and notes that the English Insurance Commissioners are considering this question as a matter of urgency.

(f) That the certificate of any duly qualified medical practitioner should be accepted for any purpose in connection with the Act.

(g) That there should be a uniform fee in respect of all extra certificates required by the Approved Societies.

(h) That attention having been drawn to the question of the desirability or otherwise of medical certificates given for the purposes of the Act stating the nature of disease, the Association considers that this is a question affecting insured persons rather than the medical profession, and that it is for the insured persons to make representations to their Approved Societies if any change is considered necessary.

(i) That in order to safeguard the position of the practitioner, any certificate bearing the name of the disease should only be handed to the insured person concerned or to his or her accredited representative.

NOTE.—The question of the legal bearings of the above safeguard (i.) in all parts of the United Kingdom is being referred to the solicitor of the Association.

Rules as to the Conduct of Persons in receipt of Medical Benefit.

(j) That attention be drawn to the desirability of the adoption and adequate circulation by Insurance Committees of rules as to the conduct of persons in receipt of medical benefit, as a means of preventing the very large number of calls which are being made upon insurance service practitioners to attend cases of a trivial character.

Deputies.

(k) That the Insurance Commissioners be requested to urge upon Insurance Committees the fact that their work would be greatly facilitated by the appointment of deputies for the directly elected medical practitioners on Insurance Committees.

(l) That Divisions be requested to urge Local Medical Committees to make similar representations to the Insurance Committees.

IMPROVEMENTS IN LOCAL ADMINISTRATION OF ACT.

92. The Council having considered the question as to the improvements in the local administration of the Act which it might be possible to obtain by agreement between Local Medical Committees and Insurance Committees, and apart from any amendment of Act or Regulations, has arrived at the following decisions which have been conveyed to the Divisions:

(a) That efforts be made by the Local Medical Committees in every area to obtain the adoption by the Insurance Committees (in exercise of the power conferred upon them by Medical Regulation 52 (1)) of a Standing Order to the effect that all matters connected with the administration of medical benefit be referred, in the first place, to the Medical Service Sub-Committee.

(b) That Insurance Committees be urged to provide by Standing Order that all matters which are considered in private by the Medical Service Sub-Committee should, on report to the Insurance Committee, be considered in private by that Committee.

(c) That all matters concerning the question of the right of insured persons being "allowed to make their own arrangements" should, by resolution or Standing Order of Insurance Committees, stand referred, in the first instance, to the Medical Service Sub-Committee.

(d) That the form of contract between medical practitioners and Insurance Committees should be referred to the Local Medical Committee for consideration, before being sent for signature to the practitioners concerned, and should be returned to the Local Medical Committee after signature.

(e) That no agreement between practitioners and Insurance Committees should be entered into for more than one year.

AMENDMENTS OF ACT OR REGULATIONS.

93. The Council has adopted the following suggestions as to amendments of the Act and Regulations, which will be pressed forward at the earliest opportunity, and has instructed the State Sickness Insurance Committee to take the necessary action on its behalf;—

(i.) That since an amending Act is shortly to be brought into the House of Commons, steps be taken to obtain such amendments to the National Insurance Act as will secure:

Free Choice.

(a) That an effective free choice of doctor by patient be secured to every insured person whether the doctor chosen be on the panel or not.

Income Limit.

(b) That an Insurance Committee be required, after consulting the Local Medical Committee, to fix an income limit for its area for all insured persons and to submit it for the approval of the Insurance Commissioners; and that in determining the income of an insured person his income from all sources should be included.

Composition of Insurance Committees.

(c) That the composition of Insurance Committees be so altered as to prevent the representatives of any one interest being given a permanent majority over all the other interests.

Medical Representation on District Insurance Committees.

(d) That the medical representation on all District Insurance Committees shall be the same as is accorded the profession on Insurance Committees.

Night Calls.

(e.) An amendment of the Act or Regulations so as to enable practitioners to make a small charge to insured persons in respect of night calls, such being preferable, as a deterrent, to any system of fines.

Veneral Diseases.

(f.) An amendment of Section 14 (4) of the Act so as to provide that medical practitioners shall receive extra payment for treating cases of venereal diseases.

Miscarriages and Abortions.

(g.) That the treatment of cases of miscarriage or any condition arising therefrom within twenty-eight days should not be included in the treatment given under the ordinary capitation payment.

Medical Referees.

(h.) That in the event of the appointment of consulting medical officers the question of whether they shall be whole or part time officers shall be referred to the Local Medical Committees who shall make nominations for such appointments; and that any such officer appointed in connection with the National Insurance Act shall be appointed by the Commissioners, and shall (a) be removable by the authority by whom he is appointed with the consent of the National Health Insurance Joint Committee and not otherwise, and (b) shall not be appointed for a limited time only.

ADVISORY AND INSURANCE COMMITTEES.

94. With respect to the instructions contained in paragraph (b) of Minute 48 of the Special Representative Meeting, January, 1913, namely, that the Council should take any opportunity that might be afforded for placing the representatives of the Association on the Advisory and Insurance Committees, the Council reports as follows:—

Advisory Committees.

95. All the practitioners nominated by the Association and appointed in April, 1912, to the various Advisory Committees have been invited by the Commissioners concerned to accept re-appointment and have, the Council understands, with the exception of Mr. Neal, accepted re-appointment.

The Deputy Medical Secretary (Mr. Neal) was a private practitioner at the time of appointment and was nominated by the Association and resigned office with the rest of the Association's nominees. He was also invited to rejoin the Joint and English Advisory Committees and submitted the invitation to the State Sickness Insurance Committee. The Committee, however, felt that the question of an official of the Association serving upon the Advisory Committees was a matter which should be decided by the Council, and accordingly submitted the matter to the Council for decision. The Commissioners having been asked whether they were aware of Mr. Neal's official position, and having replied that that fact made no difference so far as their invitation was concerned and that the Association was at liberty to submit another nomination in his place, the Council approved of an official of the Association being appointed on the Advisory Committees, and has left the matter in the hands of the State Sickness Insurance Committee.

Insurance Committees.

96. The Council made representations to the Commissioners as regards the delay caused in the appointment of medical practitioners upon Insurance Committees owing to their failure to issue Regulations governing the question, and when the Regulations were issued urged the Divisions to take action at once to secure the appointment of direct representatives on the Insurance Committee. This has now been carried out in the large majority of the Insurance areas, and the Council is glad to report that in a very large number of instances the places have been filled by prominent workers for the Association.

LOCAL MEDICAL COMMITTEES.

"Recognition."

97. The Divisions have been urged to furnish full information to the Central Office as regards the medical personnel of the Local Medical Committees and Insurance Committees, and this has been done in a considerable number of cases. It is hoped that information will be supplied as regards all these

Committees as it is most important that the Association should be able to get into touch at once with all medical representatives on the various Committees operating the Act. The Committee has intimated that the columns of the Supplement to the JOURNAL are open for the reports of meetings of Local Medical Committees, and this opportunity has been freely taken advantage of. The reports are found to be of the greatest value to the profession.

Administrative Expenses.

98. The Council has given careful consideration to the following Minute 56 of the Special Representative Meeting (January), 1913:—

Minute 56.—Resolved: That the Council be requested to consider how far it is advisable in the interests of the Local Medical Committees and of the British Medical Association, to seek payment from State funds of the expenses of Local Medical Committees,

and is of opinion that no action should be taken by the Association to seek payment of the expenses of Local Medical Committees from State funds, because these Committees were set up at the request of the British Medical Association, are a purely optional part of the machinery of the Act, and the profession should be willing to support them for its own advantage.

99. The Council after consideration of the desirability of steps being taken by the Association to finance Local Medical Committees, decided that it could not recommend the application of the general funds of the Association to that purpose.

100. Requests having been received from one or two Local Medical Committees that the Association should sanction the payment of the administrative expenses of these Committees out of that portion of guarantees to the Central Insurance Defence Fund earmarked for local use, the Council expressed the opinion that the guarantees to that fund had not been obtained for certain defined objects of which this was not one, and it was not certain that if called up the money could be used for any other purposes without the express sanction of every guarantor.

CONTINUANCE IN OFFICE OF PROVISIONAL LOCAL MEDICAL COMMITTEES.

101. The advice of the Association having been sought as to whether Provisional Medical Committees should continue or cease to exist, the Council expressed the opinion that the Provisional Local Medical Committees should no longer continue after a Local Medical Committee has been recognised for the area.

CO-ORDINATION OF ACTION OF DIVISIONS AND LOCAL MEDICAL COMMITTEES.

102. The Council has considered the question of the manner in which the action of Local Medical Committees could best be brought into line with that of the Divisions of the Association and for this purpose submits the following suggestions:—

A. That where necessary, the Rules of Divisions and Branches be so amended as to allow of the following being *ex-officio* Members of the Executive Committees and Branch Councils as the case may be:—

(i.) one or more members of the Local Medical Committee who are resident in the area of the Division or Branch,

(ii.) all medical members of the Insurance Committee who are resident in the area of the Division or Branch,

provided that they are members of the British Medical Association.

B. That, as regards London, until such time as the medical profession in that area decides to co-operate in working the Act, only the directly elected medical members of the Insurance Committee shall be permitted to be *ex-officio* members of the Executive Committee of the Division or of the Branch Council in whose area they reside, provided they are members of the British Medical Association.

C. That the rules adopted by Local Medical Committees should include the following provisions:—

(i.) that the *ex-officio* members of the Committee include one or more representatives of the Executive Committee of the local Division or Divisions of the British Medical Association, and all medical practitioners on the Insurance Committee, provided that (as regards

London) until the medical profession in that area decides to co-operate in the working of the Act only directly elected medical members of the Insurance Committees should be *ex-officio* members of the Local Medical Committee;

(ii.) that the election of Members of the Committee shall take place annually, either by voting papers or such other method as may be decided;

(iii.) that there shall be an Annual Meeting of the constituents of the Committee;

(iv.) that a Special Meeting of the Committee may be convened upon the requisition of _____ per cent. of the Committee;

(v.) that a Special Meeting of the profession may be convened upon a demand by _____ per cent. of the profession of the area;

(vi.) that the Members of the Committee shall hold office for one year and at the end of that time shall be eligible for re-election, unless they have served for six consecutive years, in which case they shall for one year be ineligible for re-election;

(vii.) that the method of appointment of the three medical members of the Medical Service Sub-Committee of the Insurance Committee shall be specified.

103. As it would not be possible to carry out the suggestion contained in Section A of the above without alteration of By-laws 16 and 18, which define the composition of Branch Councils and Division Executive Committees respectively, the Council is recommending that if its suggestion be approved certain amendments be made in these By-laws, which will be found in paragraph 38 of this Report under the head "Organisation."

Work of Divisions and local Medical Committees.

104. The Council desires to impress on the Divisions the importance of their retaining their own work in their own hands and not delegating to Local Medical Committees any work not directly connected with the National Insurance Act. This applies more especially to the arrangements for medical attendance and treatment of uninsured persons.

REPORT OF ACTION TAKEN WITH A VIEW TO REMEDYING DEFECTS IN THE ACT AND REGULATIONS.

105. The action reported in the following Section has been taken under the following Section (d) of Minute 48 of the Special Representative Meeting of January, 1913:—

Minute 48.—Resolved: That the Council be instructed(d) to collect information as to defects in the Act and Regulations and to take all possible opportunities of remedying them.

RIGHT OF INSURED PERSONS TO BE ALLOWED TO "MAKE THEIR OWN ARRANGEMENTS."

106. The question of the interpretation of Section 15 (3) of the National Insurance Act under which insured persons are given the right to apply to the Insurance Committees to be allowed to make their own arrangements for medical attendance and treatment has come very prominently before the profession and the public during the past three months.

107. The subject was given special publicity by the action of the London Medical Committee, a Committee which was elected in the first instance as a Provisional Local Medical Committee representative of every Division area in the County of London and which, had the profession in London as a whole been prepared to take service under the Act, would doubtless have become the Local Medical Committee for London. This Committee took up a distinctly fighting attitude and initiated a campaign urging insured persons to claim the right to "make their own arrangements." The London Medical Committee sought the support of the Association, but the Council did not see its way to accept the responsibility for the work of the London Committee nor the financing of it, and limited its help to providing a room in the office of the Association from which the propaganda of the London Committee was directed. Many thousands of a form for use by insured persons in making the request to be allowed to "make their own arrangements" were circulated in London and were filled in by insured persons and sent to the London Insurance Committee.

108. The Council issued a circular to all Division Secretaries offering to supply them with copies of a similar form of application on the part of insured persons to be allowed to make their own arrangements, and some 600,000 were distributed. The result throughout the country was to draw special attention to the relative section of the Act, to make Insurance Committees extremely chary of granting permission even in cases which seemed eminently suitable for such exceptions to be made, and to cause a great deal of dissatisfaction on the part of the public with this high-handed attitude.

POSITION IN WALES AS REGARDS SECTION 15 (3) OF THE ACT

109. Section 15 (3) of the Act is capable of another application of equal importance to the medical profession which in Wales has met with the strongest disapprobation of the medical profession.

110. Combinations of workmen and their dependents, formed for the purpose of employing medical practitioners either whole or part time have failed in many instances to secure recognition under Section 15 (4) (Harmsworth Amendment), on the ground that they were not in operation at the time of coming into force of the Act, but, encouraged by the Welsh Commissioners they have proceeded to ask permission of the Insurance Committees to make their "own arrangements" collectively under Section 15 (3) and have succeeded in getting the approval of some of the Insurance Committees to a number of schemes, which, if approved by the Commissioners and successful in finding practitioners willing to be employed, will have the effect of exploiting the local medical profession and bringing them under lay control to a far greater extent than anything possible under the panel system.

111. It remains to be seen whether these Schemes will be allowed by the Welsh Commissioners. If they are, the effect will be to raise to exasperation the feelings of the medical men of South Wales at what is regarded by them as a distinct breach of faith with the medical profession on the part of the Commissioners and the Government. It is considered that where the profession is willing to provide an efficient panel service it has a right to expect the first claim upon the Insurance Committees and Commissioners, and that the action of the Insurance Committees in stretching this Section of the Act to approve what is really a new creation of "Harmsworth institutions" is disastrous to the interests both of the public and of the medical profession.

112. The Council is taking the opinion of eminent Counsel on the question of the right of the Insurance Committees to sanction these "schemes" in which dependents are included, under Section 15 (3), and more particularly as to their right to take part in encouraging them, and has assured the Welsh practitioners of all the support the Association can give them in their fight against a kind of practice which is considered to be pernicious for the patients and most derogatory to the profession.

TREATMENT OF AGED AND DISABLED MEMBERS OF APPROVED SOCIETIES.

113. The Council has given considerable attention to statements made by Mr. Masterman, Financial Secretary to the Treasury, in the House of Commons concerning the medical treatment of two classes of members of Friendly Societies, namely, those who, being over 65 years of age and employed at the time of the passing of the Act, came into Insurance in the ordinary manner, but were excluded from medical benefit; and, secondly, those persons who, being disabled at the time the Act came into force, did not become insured persons. The statements were to the effect that the doctors were dealing unfairly with the Friendly Societies in expecting the same remuneration for these persons as for insured persons.

114. The Council has made strong protests against these unjust aspersions and entered into a correspondence with Mr. Masterman which was published in the Supplements to the JOURNALS of March 8th (p. 238), 22nd (p. 266), 29th (p. 285) and April 12th, 1913 (p. 323). The replies of Mr. Masterman were unsatisfactory, he still adhering to his opinion that the profession should have consented to attend these persons on lower terms than those arranged with respect to insured persons. The Council is firmly of opinion that Section 15 (2) (c) of the Act, which was inserted at the request of the Friendly Societies as the result of a bargain between them and the Association, definitely fixes the remuneration and other conditions of attendance on these persons on the same terms as those arranged for insured persons. The Council would urge on Divisions and on Local Medical Committees that it is their duty to insist that this class of persons shall not be attended at less than the Insurance rate.

115. The Council considers this matter of great importance, not so much as regards the financial interests involved, as because of the aspersions on the honour and humanity of the profession implied in Mr. Masterman's statements, and is taking steps to assure itself as to the legal position.

PAYMENT UNDER ACT FOR MEDICAL ATTENDANCE UPON INSURED PERSONS TEMPORARILY ABSENT FROM THEIR OWN HOMES.

116. As was foreseen by the Representative Body, the question of the arrangements for the payment for medical attendance upon insured persons temporarily absent from their homes, has proved to be an exceedingly difficult problem. The practitioners in various seaside places and other health resorts have made strong representations to the Association and also to the Commissioners as to the grievances under which they labour in being compelled under the terms of the Regulations to give medical attendance to all insured persons temporarily resident in their neighbourhood, who have notified their intention of removing, both to their own Insurance Committee and to the seaside or health resort Insurance Committee. These practitioners feel that it is most unjust to ask them to accept such payment as could be obtained from a fund made up of those fractions of the 6s. 6d. per annum due for the medical attendance on each temporarily transferred insured person which would be available for them, seeing that they will be attending persons a large proportion of whom will be ill on arrival and will need attention all the time of their stay. The Commissioners invited two representatives of the Association to be present at a conference they held with representatives of certain Local Medical Committees on March 5th, 1913, and Dr. E. R. Fothergill and the Deputy Medical Secretary attended. In view of the statement made by Mr. Schuster on behalf of the Commissioners that whatever scheme was evolved for the payment for medical attendance on this class of insured persons the money must come from the sum already allotted for medical benefit, the Council awaits with interest the production of a scheme by the Commissioners which will carry this out without unfairness to the general body of insurance service practitioners while paying the health-resort practitioners at an adequate rate.

117. As this report was on the point of publication the Council received the new scheme of the Commissioners, but was unable to consider it in the time at its disposal. The result of its consideration of this document must be deferred to the Supplementary Report of Council.

MEDICAL CERTIFICATES UNDER THE ACT.

118. Many representations have been made to the Association as to the urgent necessity for the adoption by Approved Societies of a uniform form of medical certificate for the purposes of the Act. The varying forms at present in use have exacted quite unnecessary clerical labour from the profession and, together with the large amount of similarly unnecessary labour called for by the medical bookkeeping, have aroused considerable feeling, even in those areas most favourable to the panel system. The Association made representations to the Commissioners on the subject and has been assured that the matter is being discussed with some of the leading Approved Societies, and that it is hoped that a solution of the difficulty will shortly be found.

Extra-Act Certificates.

119. The Council would call attention in this connection to the fact that in some areas Societies are demanding certificates gratuitously for which they have no claim. It was distinctly understood that the only certificates the practitioner on the panel would be bound to provide are:—

- (i.) a certificate entitling insured persons to claim sickness or disablement benefit,
- (ii.) "continuing" certificates,
- (iii.) a "declaring off" certificate.

120. If other certificates are required for other benefits outside the Act the practitioner is entitled to demand a fee, and the Council desires to impress upon Local Medical Committees and practitioners generally the desirability of a uniform payment for these extra certificates.

Statement of Nature of Disease in Certificates.

121. Several Divisions have taken exception to the nature of the disease being stated on the form of certificates under the Act. While realising the objections which are felt to what may in some cases seem to be a breach of professional secrecy the Council is of opinion that this is a question which primarily concerns the insured person and not the medical profession.

The requirements of the certificate are a matter for the Approved Societies, and if any hardship is felt it is surely the duty of the members of those societies who feel themselves aggrieved to take steps to alter the rules of their societies, or to transfer to others whose requirements are less onerous. It is believed, however, that this subject is receiving the attention of the Commissioners and Approved Societies in considering the question of a uniform medical certificate. Certain legal matters connected with this question have been referred to the Solicitor of the Association.

SEAMEN'S NATIONAL INSURANCE SOCIETY.

122. The Council has considered the Provisional Regulations issued by the Insurance Commissioners modifying as regards the members of the Seamen's National Insurance Society the administration of medical and sanatorium benefit. The conditions of the administration of medical benefit for sailors are by Section 48 of the Act placed in the hands of this Society, which may be taken as fulfilling, as regards sailors, the same duties as an Insurance Committee performs for the insured persons in its area. The Seamen's Society has decided, in view of the peculiar conditions of employment and domicile of seamen, that it will pay for their attendance on a scale of fees which on the whole appears to the Council to be a very reasonable scale, especially when it is remembered that these fees are being paid in full and that there is no intention on the part of the Seamen's Society to discount them. The Society has also decided, however, that as the sailors in some of the great ports cannot be said to have a domicile or any family doctor, it cannot allow free choice of doctor in these cases, as the risk of undue demand on its funds would be too great. The Seamen's Society has, therefore, allowed absolute free choice of doctor in certain ports, such as Southampton and Lowestoft, where the marine population is comparatively fixed and domiciled, and has selected a list of medical men in other ports, such as London, Liverpool, and Hull. Exception was taken by several Divisions to the setting up of such a selected list of doctors, and the Council drew the attention of the sea-board Divisions to the successful action taken by one of the Divisions, Southampton, in obtaining free choice for members of the Seamen's Society among all the members of its Public Medical Service.

123. The Council is of opinion that steps should be taken for the recognition of the medical profession on the management of the Seamen's National Insurance Society, which is at present composed only of representatives of the Board of Trade, of shipowners, and of members of the Society, and the Council recommends:—

Recommendation A.—That steps be taken to so amend Section 48 (5) of the National Insurance Act as to allow of a similar representation upon the Committee of the Seamen's National Insurance Society, as is accorded the profession on Insurance Committees.

PAYMENT OF CHEMISTS FOR DUPLICATE PRESCRIPTIONS.

124. It was reported to the Council that the revised Tariff of Drugs and Dispensing Charges drawn up by the Pharmaceutical Standing Insurance Committee contained a statement to the effect that where a duplicate prescription was not supplied a fee of one penny should be charged by chemists for copying the prescription. The Council caused a letter to be issued to Local Medical Committees (M 1) drawing their attention to the subject. The letter in question stated that it was understood that the revised tariff had been prepared and published in many instances without being previously submitted to the Local Medical Committee concerned; that after full consideration of the circumstances which have led to the suggested innovation it had been decided to address a communication to the Insurance Commissioners strongly protesting against any such charge, but that if a charge were made the suggested fee was an exorbitant one; that it was understood that the drug tariff referred to had not yet been under the consideration of the Commissioners, and that, in considering the modification of any existing tariff the Commissioners would require to have before them the views of the Local Medical Committees concerned; that Local Medical Committees should address a strong protest to the Insurance Commissioners, urging them not to approve of the proposed charge; that it was important that such steps should be carried out immediately as unless a vigorous protest was made before the Tariff was allowed to come into force the profession might suffer a serious injustice.

125. The Council is glad to report that its communication seems to have had the desired effect of stimulating many of the Local Medical Committees to insist more strongly on their right to be consulted about such matters by the Insurance Committees.

QUESTION OF PLACING RESIDENT MEDICAL OFFICERS OF HOSPITALS AND OTHER INSTITUTIONS ON PANELS.

126. The attention of the Council has been drawn to the proposal of a voluntary hospital to place the name of its resident medical officer upon the local panel for the purpose of attending those members of the resident staff who are insured persons. In this case it was proposed that the institution while drawing the sum of about £50 from the Insurance Committee should increase its medical officer's salary by about £10. The Council is of opinion that the best way of meeting the circumstances of these institutions is that hospitals, asylums and other similar institutions should be allowed to "make their own arrangements" on behalf of insured persons in their direct employ for the provision of medical attendance and treatment, under Section 15 (3) of the Act, but that whatever system may be adopted, the proper proportion of the moneys received by the institutions should be paid to the medical officer or officers who carry out the attendance or treatment.

FEES OF MEDICAL PRACTITIONERS FOR ATTENDANCE UPON CONFINEMENTS IN RESPECT OF WHICH MATERNITY BENEFIT IS RECEIVED.

127. The Council has carefully considered the question of the prescribed fees allowed under the Insurance Commissioners' Provisional Regulations to medical practitioners in connection with attendance upon maternity cases to which they are summoned in pursuance of the Rules made under the Midwives Act, 1902, and refers the following expressions of opinion to the Divisions for consideration:—

(a) That the maximum fee of 15s. allowed to medical practitioners under the Provisional Regulations for attendance upon those maternity cases to which they are summoned by a midwife is entirely inadequate.

(b) That pending reconsideration of the Provisional Regulations by the Insurance Commissioners, or the adoption of suitable local schemes, Divisions are recommended not to accept the fees and conditions laid down in the Provisional Regulations, but to continue to hold each patient attended privately responsible for a suitable fee.

(c) That the Council realises that the arrangements adopted in any area for attendance by medical practitioners upon midwifery cases in connection with the National Insurance Act must depend upon the local conditions of that area and the desire of the local profession as regards the retention of the midwifery as far as possible in the hands of the profession.

(d) That every endeavour should be made by the medical profession to keep the practice of midwifery whether by medical practitioners or by midwives as far as possible under the control of the profession.

(e) That in some of the areas where midwifery practice is to a considerable extent in the hands of midwives, the interests of the patients and of the profession, and the principle enunciated in Recommendation 5 would be best conserved by the adoption of some contract scheme of co-operation between the Approved Societies, doctors and midwives.

(f) That the Council having considered various schemes put forward, is of opinion that any scheme adopted at the present time should be of a purely provisional character, and should not be for a longer period than six months.

(g) That in order that information should be collected as to the best way of dealing with this subject and to prevent bad precedents being established, all schemes for contract midwifery attendance by medical practitioners should be submitted for the approval of the Council of the Association in the same manner that Public Medical Services and arrangements for the treatment of uninsured persons on a contract basis are being submitted.

(h) That under no circumstances would the Council approve schemes embodying any of the following principles:—

(i.) the control of professional matters in relation to midwifery arrangements by a lay body;

(ii.) the setting up of a midwifery panel, except by the organised local profession itself;

(iii.) arrangements between practitioners and midwives whereby the latter insure with the Midwives Institute, which pays over to the doctor the fee prescribed in the Regulations.

(i) That where a contract arrangement is preferred the following scheme is suggested as suitable for adoption by any Local Medical Committee, Public Medical Service, or Provident Dispensary:—

(a) Arrangements to be made by which Approved Societies or Local Insurance Committee pay to the Local Medical Committee, Public Medical Service, or Provident Dispensary a sum of £1 on each maternity case, to be divided between doctor, midwife, and a special fund to be formed for the payment of second opinions, or anaesthetist, in such proportions as may be approved by the Service or Dispensary.

(b) For the information of Local Medical Committees, Public Medical Services, and Provident Dispensaries the following division of this £1 is suggested as a basis of discussion:—

| | | | |
|--------------|-----|-----|----------|
| Doctor | ... | ... | 6s. 6d. |
| Midwife | ... | ... | 12s. 6d. |
| Special Fund | ... | ... | 1s. |

(c) Formation of lists of doctors and midwives practising in the area of the Service or Dispensary, who desire to be upon such lists

(d) Patients to select beforehand both midwife and doctor from the lists, subject to the consent of doctor and midwife.

(e) Midwife to attend each case as usual under Rules of Central Midwives Board.

(f) Doctor to attend when sent for by midwife, and in every case to see the patient within 24 (or 36 hours) after delivery.

In such a scheme as outlined above:

A. The advantages to the patient would be:

(i.) Fixed inclusive financial liability of patient and Approved Society;

(ii.) Supervision of each case by doctor at ordinary visit;

(iii.) Reduction of the risks of future illness, owing to supervision by doctor through the confinement.

B. The advantages to the medical profession would be:—

(i.) Increased remuneration and security of payment;

(ii.) Regain of control of midwifery practice without the burden of the routine work which can be done by midwife.

128. The Insurance Commissioners will be informed of the opinion of the Council as to the inadequacy of the fee allowed under their Provisional Regulations, and urged not to make these Regulations permanent pending the ascertainment of the considered opinion of the Divisions of the Association, after which further representations will be made to them on the whole subject.

TREATMENT OF CASES IN RECEIPT OF MATERNITY BENEFIT BY MATERNITY HOSPITALS.

129. The Council has carefully considered the matter of the treatment of maternity benefit cases conducted under the aegis of a maternity hospital "recognised" for the teaching of medical students of pupil midwives.

The Council has noted the following Minute 246 of the Annual Representative Meeting, 1912:—

Minute 246.—Resolved: (i.) That inability to pay for adequate treatment, or the recommendation of a medical practitioner, shall be the consideration for the participation of parturient women in the benefits of maternity and voluntary hospitals and other charitable institutions; (ii.) that women in receipt of Maternity Benefit under the National Insurance Act, should not be regarded as eligible for charitable treatment except in cases of difficulty and danger, and on the recommendation of a medical practitioner.

The Council has also given consideration to the following expression of opinion by the Hospitals Committee following on its consideration of the subject, which it will be noted is in opposition to the principles approved in Minute 246 of the Annual Representative Meeting, 1912, namely:—

That it be reported to the Representative Body that after careful consideration of Minute 247 of the Annual Representative Meeting, 1912, the Council is of opinion that provided the Association's Model Rules for the Management of Hospitals and as to the admission of patients to charitable institutions are adhered to, there is no objection to a charge being made to insured persons for maintenance.

Minute 247.—Resolved: That the following motion be referred to the Council for consideration:—

That no Maternity or Voluntary Hospital, or other charitable institution, shall receive fees from any woman who is entitled to Maternity Benefit, either directly or indirectly;

In connection with this subject the Council has ascertained from enquiries made of various teaching hospitals that a considerable number of such institutions are already making charges, varying from 5s. to 15s., on behalf of insured women and the wives of insured men receiving maternity assistance at such institutions.

In view of the conflicting views on this subject and especially regarding the practice already obtaining in certain teaching hospitals,

The Council recommends—

Recommendation B.—That the Representative Body, in view of the above stated differences of opinion, consider the question of the desirability or otherwise of the amendment of the policy as laid down in the above quoted *Minute 246* of the Annual Representative Meeting, 1912.

FEES AND CONDITIONS FOR PROVISION OF MEDICAL ATTENDANCE AND TREATMENT OF UNINSURED PERSONS.

150. The question of the fees and conditions upon which members of the profession should offer to undertake the provision of medical attendance and treatment of uninsured persons having been raised in various parts of the country, the Council upon consideration of the following *Minute 122* of the Special Representative Meeting, November, 1912, and *Minute 59* of the Special Representative Meeting, January, 1913:—

Minute 122.—Resolved: That until some general scheme of contract or other form of medical service is approved by the Association, the members of the British Medical Association decline, after 25th March, 1913, to undertake or conduct any form of contract practice for non-insured persons, except upon such terms as shall be approved in Great Britain by the Council of the Association and in Ireland by the Conjoint Committee.

Minute 59.—Resolved: That the Council be requested to consider the following motion by Stockport, Macclesfield and East Cheshire:—

That where medical attendance on insured terms is desired for the families of insured persons it should be based on the following principles:—

1. Free choice of doctor from the Medical Register subject to the doctor's consent.
2. Payment for work done on a standard tariff. No insurance risk to be borne by the profession.
3. It should be to the patient's financial interest not to receive over attendance.
4. There should be provision for the higher and special forms of medical work, and general practitioners should assist therein for payment.
5. The dependents of the insured should be included in medical benefit for an extra payment in proportion to the income of the insured, and irrespective of the number of the dependents, but the payment to the doctors for their treatment should be on the same standard tariff as applies to the insured persons,

passed the following resolution at its Meeting on January 29th, 1912:—

Minute 490.—That, having regard to the fact that in many localities schemes are already working, or upon the point of being put into operation, for the treatment of uninsured persons upon contract terms, the question of fees and other conditions concerning attendance upon uninsured persons is a matter which should be settled in each locality, subject to the approval of the State Sickness Insurance Committee, and not by a general scheme throughout the Association.

131. The State Sickness Insurance Committee, upon consideration of the above decision of the Council, drew up certain conditions which it considered to be essential to any scheme submitted for its approval, and these were:—

Minute 281.—Resolved: That, in general, in considering the necessity for obtaining the approval of the State Sickness Insurance Committee for schemes for the treatment of uninsured persons upon contract terms, the following principles and conditions must be adhered to:—

(a) Free choice of doctor by patient and of patient by doctor;

(b) Remuneration to be not less than that paid in respect of insured persons, i.e., 9s. per annum including medicines;

(c) Persons earning over £160 not to be treated under contract terms at all;

(d) Juveniles (under 16) to be treated at special rates.

Minute 282.—Resolved: That the Committee realises that the conditions in certain areas will not allow of the above terms being obtained; and that in these circumstances the approval of the State Sickness Insurance Committee of a Scheme involving a less payment may be given provisionally when the local profession can show that the economic conditions in the area demand it.

Minute 283.—Resolved: That one of the conditions necessary for the approval of schemes containing lower rates of payment shall be the inclusion amongst the rules, in a prominent position, of a statement that the approval of the Association has been given to the rates only because of special economic conditions.

132. The above decisions of the Council and Committee were issued to Divisions and Branches in a circular letter (D. 32), with the result that a number of scales of charges for the treatment of uninsured persons have been submitted to, and in a number of cases approved by, the Committee.

133. The Council, however, feels that in view of the necessity for safeguarding the future position of the profession when attempts may be made to extend medical benefit to the dependents of insured persons, the time has now come for the Representative Body to lay down a definite line of policy upon this question, and, therefore, recommends:—

Recommendation C.—That the Representative Body adopt the following principles as essential to the formation of any schemes for the provision of medical attendance and treatment of uninsured persons:

(1) That, in general, in considering the necessity for obtaining the approval of the Council for schemes for the treatment of uninsured persons upon contract terms, the following principles and conditions must be adhered to:

(a) Free choice of doctor by patient and of patient by doctor;

(b) Remuneration to be not less than that paid in respect of insured persons, i.e., 9s. per annum including medicines;

(c) Persons earning over £104 not to be treated under contract terms at all.

(2) That the Representative Body realises that the conditions in certain areas will not allow of the above terms being obtained, and that in these circumstances the approval of the Council may be given provisionally to a scheme involving a less payment when the local profession can show that the economic conditions in the area demand it.

(3) That one of the conditions necessary for the approval of schemes containing lower rates of payment shall be the inclusion amongst the rules, in a prominent position to a statement that approval by the Association has been given to the rates only because of special economic conditions.

CENTRAL INSURANCE DEFENCE FUND.

Present Position of the Fund.

134. The following Resolutions were passed by the Special Representative Meeting of December, 1912:—

Minute 65.—That the question of the amount of the guarantee to be called up be left to the Council, and that the Divisions be again urged to support the Central Defence Fund, especially by obtaining fresh guarantees.

Minute 70.—That every member of the Profession in the British Isles and Colonies be requested to subscribe £1 in January, 1913, to be added to the General National Insurance Campaign Funds of the Association.

Acting on these instructions the Council called up 20 per cent. of the total amount of the guarantees to the fund. The result up to 15th April, 1913, was that a total of £13,488 was received, whereas the call should have produced a sum of £27,672.

135. The Council desired that the practitioners in those areas where a separate local fund existed should have the opportunity of subscribing their fair share to the central expenses, seeing that the local funds would now probably not be required. The Honorary Secretaries of these Funds were therefore asked to make a 20 per cent. call on all their guarantors, with the exception of those who had also guaranteed to the Central Fund, and forward the total amount collected to the Central Office after deducting the necessary local expenses. It was estimated from the information in the Council's possession that the total local funds amounted to £37,484. A 20 per cent. call on these should have realised £7,496. As the guarantors to the Local Funds have, in the majority of cases, also guaranteed to the Central Fund, and only 7 out of 23 Divisions have, up to 15th April, 1913, intimated that they are willing to make any call on their local funds, the proceeds from this application cannot possibly approach the figure stated. The amount received up to 15th April, 1913, was £137.

136. A similar policy was pursued as regards those practitioners who had ear-marked their guarantees for local purposes, and they were asked to ignore this ear-marking as the money would probably not now be required for local purposes.

137. The Council proposes to set aside the money received from this 20 per cent. call, mainly for purposes of compensation.

Calls for Administrative Purposes.

138. Minute 70 of the Special Representative Meeting of December, 1912, was an instruction that every member of the profession both in the United Kingdom and the Colonies be requested to subscribe £1 to the Central Fund for administrative purposes. In view of a 20 per cent. call being made on guarantors to the Fund, the Council felt that it would be unwise to make a double call on these practitioners, but the request for £1 has been made to all Members of the Association residing outside the United Kingdom, and up to 15th April, 1913, had resulted in the sum of £63 being collected.

139. The Council is glad to report that the Durban Division on its own initiative forwarded the sum of £50 for the purposes of the Fund before the special application was made, therefore this item is not included in the above total. At the same time the Division expressed its sympathy with the efforts of the Association for the protection of the profession.

140. An urgent request for a donation of at least £1 in respect of administrative expenses, was also sent to some 18,000 members of the profession resident in the United Kingdom, who had not guaranteed to the Central Fund. To this appeal the sum of £458 had been received up to 15th April, 1913.

Arrangements with regard to administration of the Fund.

141. In Minute 70 of the Special Representative Meeting of December the Council was instructed to place the management and distribution of the Central Insurance Defence Fund under the control of the State Sickness Insurance Committee. It had apparently escaped the notice of the Representative Body that the Council is acting as trustees of this Fund, which is not Association money, and that technically speaking therefore the Representative Body had no control over it, and could not instruct the Council in regard to it. The management of the Fund had previously been placed in the hands of the Finance Committee, but having regard to the wishes of the Representative Body the Council at its meeting in January, 1913, placed the administration in the hands of the State Sickness Insurance Committee subject to the approval of the Council of its action.

Grants from Fund.

142. Important matters at once arose as to the policy to be pursued in making grants from the Fund, and this was left entirely in the hands of the State Sickness Insurance Committee, guided by the following decisions of the Council as to general policy:—

Resolved (*nem. con.*): (a) That inasmuch as the Representative Body considers the Act unworkable and derogatory the action of the Council and the State Sickness Insurance Committee shall continue to be in opposition to the Act and Regulations as at present constituted:

(b) That the interests of those practitioners not on the panel, out of loyalty to the Association, shall continue to be paramount; and

(c.) That steps be taken to assist those practitioners who wish to resign from the panels in April next if the Association calls upon them to do so.

143. Appended will be found a statement as to the present position of the Fund. (*See Appendix IX.*) The Council has not thought it necessary to give the names of the practitioners to whom grants have been made, but the following is a general statement on the subject:

144. Five practitioners who resigned positions as whole time Medical Officers of Friendly Society Institutes at the request of the Association, and who, by the terms of their appointments were unable to commence practice in the neighbourhood, have received sums varying from £100 to £660 to enable them to buy practices or shares in practices, thus placing them in a position financially equal to those they had resigned. In three of these cases, part of the grants are on loan to be repaid over a term of years. Two whole time Medical Officers were not under bonds preventing them starting practice in the same town, but grants of £200 and £100 respectively were given to tide them over the difficult time of commencing practice and to pay expenses of removal, furnishing, etc.

145. In making these grants the Council was guided by a special feeling of responsibility towards those practitioners who had at the call of the Association given up appointments which afforded a certain annual salary, and which in every case they might have retained, generally at an increased salary. There are still one or two cases of this kind which will probably need compensation.

146. Compensation varying from £5 to £75 has been given to five practitioners who resigned club appointments at the bidding of the Association, and who have sustained loss by either (a) not accepting service on the panel (3 cases), or (b) holding out until after the abrogation of the Pledge and Undertaking though their neighbours did not wait until then.

147. In each case the Secretary of the Division concerned has been consulted and the amount granted has in every case (exclusive of those of whole time officers) been more in the nature of an acknowledgment of the loyalty of the practitioner concerned, than a pecuniary equivalent of the loss sustained.

148. Many other applications have been received, but the Council, not feeling satisfied that the loss at present experienced might not be made up in various ways before the end of the year, has intimated that the consideration of these claims is postponed until later.

149. The Council has made the following arrangements for the future administration of the Fund:—

A. The Central Insurance Defence Fund is now vested in the names of the Chairman of Representative Meetings and the Chairman of Council for the time being.

B. All cheques drawn upon the Central Insurance Defence Fund are signed by the Chairman of Representative Meetings or the Chairman of Council for the time being and counter-signed by the Financial Secretary and Business Manager.

C. All moneys received on behalf of the Central Insurance Defence Fund are paid into a Suspense Account pending allocation by the State Sickness Insurance Committee at regular intervals between an Administration and a Compensation Account.

D. All moneys received on behalf of the Central Insurance Defence Fund in respect of applications for subscriptions or calls upon guarantors, for compensation purposes, are paid, upon allocation by the State Sickness Insurance Committee, into a Compensation Account.

150. Acting on the above principles the Council has, of the moneys received up to April 15th, allocated to the Administration Fund the sum of £1,501. 18s. 5d. and to the Compensation Fund the sum of £12,536. 6s. 5d.

PROPOSED SPECIAL FUND.

151. The Council has carefully considered the following Minutes 54, 55 and 60 (7) of the Special Representative Meeting, January, 1913, and has arrived at certain provisional decisions concerning the formation of such a Special Fund as is suggested in those Minutes:—

Minute 54.—That in order to carry Minute 48 into effect, it be an instruction to the Council to put into operation the following proposals amongst others:—

(1) That the funds placed at the disposal of the Council as Trustees for the proposed campaign be augmented by such a voluntary quarterly levy during the next three years on each member of the Association in the United Kingdom as will, with the annual subscription, amount to not less than £3 a year per member.

(2) That through the local Medical Committees or otherwise a quarterly levy of one farthing per insured person on each practitioner's list be made for three years on each such practitioner, which shall be used by the Council to provide efficient local, clerical and professional assistance to these Committees and to the Divisions and generally in forwarding the aims and objects of the campaign.

(3) That the Central Office organisation be developed so as to allow the Medical Staff visiting every Division in the United Kingdom and interviewing each local Medical Committee at least once in each year.

(4) That out of this Special Campaign Fund an honorarium, on a scale to be determined by the Council, be paid to the members of the medical profession who devote time to the campaign or who have to absent themselves from their district attending Representative, Committee, Deputation and other Meetings.

(5) That the aims and objects of the campaign be kept prominently before Members of Parliament, County and County Borough Councils and other Bodies as well as the laity generally by means of the press and otherwise, as also the reasons for the position taken by the profession from time to time during the campaign.

(6) That the Medical Staff be placed at the disposal of Divisions in the United Kingdom and of Local Medical Committees, in order to assist them in interviews with Lay Bodies, more often than has been the case in the past.

(7) That the Divisions be consulted as to the desirability of their boundaries being made co-terminous with those of Insurance and District Committee areas, and in those cases where the proposal is approved it be carried into effect, if practicable, at the earliest possible moment.

(8) That it be an instruction to the Council by means of a campaign amongst the Staffs of Voluntary Hospitals, similar Institutions and otherwise to take such action as will induce the Government to provide an efficient medical and surgical service for those insured for medical benefits under the National Insurance Act.

Minute 55.—Whereupon an amendment by Mr. W. F. Dearden (Manchester West), seconded by Dr. J. Sorley (Sheffield);

That it be an instruction to the Council to consider the advisability of giving effect to the above proposals.

The amendment was **carried**.

Minute 60.—Resolved: That the motions appearing on the printed and stencilled Agenda not dealt with by this Meeting (except Motion 59 by Hampstead [withdrawn]) be referred to the Council.

(7) *Motion* by Newcastle-on-Tyne Division: That the Council be instructed to consider the advisability of a National Fund being raised on such lines as the following:—

(a) There be (compulsory) deducted from each quarterly cheque of each doctor on the panel the sum of 3d. for each person on that doctor's list.

(b) This sum be deposited each quarter at compound interest with some Insurance Company.

(c) The expenses of the Local Medical Committees be defrayed out of this fund.

(d) In the event of the death of a Member, his contributions be returned to his executors plus 3 per cent. compound interest.

(e) The rest of the money so deducted each quarter remain on deposit at compound interest till April 14th, 1916.

(f) On that date, if it be necessary, the total sum be available for use as a War Fund.

(g) If at that date a War Fund be unnecessary, a sum of at least £200,000 be placed to a Special Reserve to be used at any time solely as a War Fund; and that this sum be added to each year.

(h) The balance be placed with an Insurance Company, to provide a nucleus for a Sickness, Accident and Pension Fund.

(i.) The contributions be national, and be continued so long as the Insurance Act is in operation.

152. The question of the formation of a Special Fund to provide for certain objects which are outside the legal powers of the Association is receiving the careful consideration of the Council, and the Council, while not being in a position to report fully at this juncture, mentions the following as objects which the Fund if established might include:—

(a) the provision of legal and clerical assistance to and payment of administrative expenses of Local Medical Committees;

(b) the provision of the services of the British Medical Association in protecting the interests of medical practitioners as affected, directly or indirectly, by the National Insurance Act, not only in contract medical work, but in all other forms of medical practice;

(c) the provision of a reserve for the support of medical practitioners affected by action undertaken by the Association in pursuit of any future policy adopted by it;

(d) the organisation and development of the British Medical Association so as to allow the medical staff visiting every Division in the United Kingdom and interviewing each Local Medical Committee at regular intervals, and otherwise assisting the profession in any locality as and when required;

(e) the payment out of the Special Fund of honorariums on a scale to members of the medical profession absenting themselves from their practices in performance of any of the following duties:—

(i.) for attendance at Representative Meetings;

(ii.) for attendance at Central Council and Committee Meetings.

The feasibility of including certain other important benefits, such as medical defence, insurance against law costs of lost actions, sickness and accident insurance, and pensions, is also being inquired into, and upon this a report will shortly be made to the Divisions.

(I.) Public Health and Poor Law.

SALARY FOR COMBINED WHOLETIME APPOINTMENT OF MEDICAL OFFICER OF HEALTH AND SCHOOL MEDICAL OFFICER.

153. Advertisements having been proffered by a Town Council for a combined wholetime appointment as Medical Officer of Health and School Medical Officer at a salary of £300, the Council approved action taken in refusing publication of the advertisement in the British Medical Journal, and informed the Town Council and Division concerned that no advertisement would be accepted for insertion for such an appointment at a less salary than £400.

The Council is aware that up to the present there has been no declaration of policy by the Representative Body with regard to the salary for these combined appointments. The terms of the following declarations of policy, however, afford ample ground for believing that the present policy of the Association is inconsistent with approval of such a salary as £300 for the combined wholetime appointments in question:—

Assistant Medical Officers of Health.

Minute 225 (A.R.M., 1909).—Resolved: That the Association considers that the minimum salary of wholetime Assistant Medical Officers of Health should be £250 a year.

Wholetime Principal Medical Officers of Health.

Minute 241 (A.R.M., 1912).—Resolved: That the Association support, wherever possible, the recommendation of the Local Government Board that the salary of Medical Officers of Health, debarred from private practice, be not less than £500 per annum; and that in no case where a less salary than £250 is offered for a wholetime Medical Officer of Health, whether principal or assistant, should an advertisement be accepted for publication in the Journal.

Wholetime Principal and Assistant School Medical Officers engaged in Medical Inspection of School Children.

Minute 151 (A.R.M., 1912).—Resolved: That paragraph 3 (i.) of the Report on Medical Inspection and Treatment of School Children as approved by the Annual Representative Meeting, 1909, and amended by the Annual Representative Meeting, 1912 (Minute 87), be amended to read as follows:—

“On the subject of salaries the Association has already approved the suggestions of the Medico-Political Committee, namely, that for whole time junior or Assistant Medical Officers the commencing salary should not be less than £250 per annum, and that for more experienced whole time School Medical Officers, the commencing salary should not be less than £500 per annum. These sums are to be understood as exclusive of travelling expenses, clerical assistance, cost of stationery, postage, etc. Also that in any appointments of this kind, provision should be made that the salaries of both officers should rise automatically.”

Wholetime Principal and Assistant School Medical Officers engaged in Treatment of School Children.

Minute 89 (A.R.M., 1911).—Resolved: That as regards remuneration of whole time Medical Officers engaged in the treatment of school children, the scale already approved by the Association for School Medical Officers engaged in inspection should be applied, namely, that for Junior or Assistant Officers the salary should not be less than £250 per annum, and that for more experienced Officers the salary should not be less than £500. These sums to be understood as exclusive of travelling expenses, clerical assistance, postage, etc. Also that in any appointments of this kind provision should be made that the salaries of both officers should rise automatically.

154. The Council is of opinion that the time has now come when a definite decision should be arrived at as to the minimum salary for the combined appointment of Medical Officer of Health and School Medical Officer.

The Council recommends:

Recommendation: That in no case where a less salary than £400 is offered for a combined wholetime appointment as Medical Officer of Health and School Medical Officer should the advertisement be accepted for insertion in the JOURNAL.

MEDICAL OFFICERS OF HEALTH (SUPERANNUATION) BILL.

155. The Medical Officers of Health (Superannuation) Bill of the Association was re-introduced into the House of Commons on March 13th, 1913, by Sir Philip Magnus, supported by Sir Henry Craik, Mr. Lough, Mr. Charles Bathurst, Sir Henry Norman, Mr. Godfrey Locker Lampson, and Mr. Glyn Jones, and was down for second reading on April 18th. The whole of the time of the House was, however, occupied by another Bill, and the Superannuation Bill was not reached. Sir Philip Magnus has kindly promised to do everything in his power to press the Bill forward, and the thanks of the Association are due to him for his valuable assistance in this and other matters in which the Association is interested.

156. The object of the Bill is to enable all Medical Officers of Health by definite contributions from their salaries to provide themselves with superannuation allowances as a provision for old age and in case of permanent infirmity. As statutory provision of a similar nature has already been made for Poor Law Medical Officers by the Poor Law Medical Officers Superannuation Act, 1896, and for the officers of asylums by the Asylums Officers Superannuation Act, 1899, it is hoped that Parliament and the Government will deal sympathetically with this proposed legislation for an important body of public officials. Steps are being taken in co-operation with the Society of Medical Officers of Health to obtain the sympathy and support of the Local Government Board and of individual Members of Parliament.

MILK AND DAIRIES BILL OF THE GOVERNMENT.

157. The Government introduced late in the last Session of Parliament (December 10th, 1912) and has reintroduced in the present Session, a Milk and Dairies Bill, to make adequate provision as to the sale of milk and the regulation of dairies. The main objects of the Bill are stated as follows:—

- (1) The more effective registration of dairies and dairy-men.
- (2) The inspection of dairies and the examination of cows therein and the examination of milk.

(3) The prohibition of the supply of milk from a dairy where such a supply has caused or would be likely to cause infectious disease, including tuberculosis.

(4) The prevention of the sale of tuberculous milk.

(5) The regulation of the importation of milk so as to prevent danger to public health arising therefrom.

(6) The issue of regulations for securing the supply of pure and wholesome milk.

(7) The establishment by local authorities in populous places of milk depots for the sale of milk specially prepared for infants.

158. The Council has expressed to the Local Government Board the Association's approval of the Bill, subject to the following sub-clause as regards the application of the Bill to London, contained in the previous Bill, being included in the present Bill:—

“The provisions of this Act shall apply to London subject to such modifications as may be made by regulations of the Local Government Board, and such regulations may provide for any of the powers and duties of sanitary authorities and their medical officers of health under those provisions with respect to dairies being exercised and performed by the London County Council and the medical officer of health for the London County Council.”

159. The Council has asked that support be given to amendments which will be moved having for their object the conferring of security of tenure on the Medical Officers of Health, upon whom further responsible and delicate duties will be imposed by the Bill in co-operation with the Society of Medical Officers of Health, has arranged for the tabling of the amendments necessary.

REMUNERATION OF MEDICAL OFFICERS OF HEALTH.

160. Many recent legislative and administrative enactments have considerably added to the duties devolving upon Medical Officers of Health, without in any way increasing their remuneration. The special hardship entailed by some of these enactments is that Medical Officers of Health are required to make considerable outlays for out-of-pocket expenses, especially in regard to travelling, such as were not contemplated at the time the salaries of the majority of Medical Officers of Health were fixed. The Council understands that representations are being made to the Local Government Board on the subject by a deputation of District Medical Officers of Health, and in order to strengthen the hands of the deputation the Council, on behalf of the Association, has represented to the Board its sympathy with and support of this claim of Medical Officers of Health.

DEFENCE OF VACCINATION.

161. As foreshadowed in the Report of the Council on the subject, approved by the Annual Representative Meeting at Liverpool, the Council has appointed a Standing Sub-Committee of the Public Health Committee for the purpose of taking any necessary action in the matter of the defence of vaccination. Enquiries made of the relatives of the late Dr. Bond, Honorary Secretary of the Jenner Society, have elicited the fact that they will welcome the continuation by the British Medical Association of the work of the late Dr. Bond and of the Jenner Society, and the pamphlets and other documents in defence of vaccination belonging to that Society have been handed over by Dr. Bond's relatives to the Standing Sub-Committee above referred to. The Council has accordingly made arrangements for a part of a room in the Office of the Association to be occupied by the vaccination literature and pamphlets of the Jenner Society, the collection to be styled “The Jenner Collection.” Dr. Arthur Drury, of Halifax, who has done such yeoman service in connection with this subject, has kindly consented to act as Honorary Secretary of this Sub-Committee.

RELATION OF MEDICAL OFFICERS OF HEALTH TO GENERAL PRACTITIONERS.

162. The Council has already reported to the Representative Body as to the Conference of representatives of the Association with representatives of the Society of Medical Officers of Health, held on November 12th, 1912, and a report of the proceedings of that Conference was published in the Supplement of November 23rd (page 575). As there are many questions of mutual interest to general practitioners and Medical Officers of Health at present requiring consideration, a further conference of representatives of, as before, the Public Health, Medico-Political and State Sicknes Insurance Committees, on behalf of the Association, with representatives of the Society of Medical

Officers of Health, has been arranged for an early date, and the Council hopes to report the result in its Supplementary Report for the year.

PUBLIC HEALTH AND POOR LAW APPOINTMENTS AS TO WHICH ACTION TAKEN.

163. Action has been taken by the Council with regard to the following Public Health and Poor Law Appointments:—

Isle of Wight (County Medical Officer of Health and School Medical Officer); Winchester, Micheldever District (District Medical Officer); Ilford Urban District Council (Medical Officer of Health); Cheltenham (Assistant Medical Officer of Health and School Medical Officer); Chorley (Medical Officer of Health, etc.); West Suffolk (County Medical Officer and School Medical Inspector); Southampton (Assistant Medical Officer of Health); Hartlepool (School Medical Officer and Medical Officer of Health); Burnley (District Medical Officers); Honiton (Medical Officer of Health); Wrexham Rural District (Medical Officer of Health); Wrexham Borough (School Medical Officer and Medical Officer of Health); Yeovil (Medical Officer of Health and School Medical Officer).

(J) Hospitals.

REPORT OF SPECIAL COMMITTEE OF KING EDWARD VII. HOSPITAL FUND ON HOSPITAL OUT-PATIENT DEPARTMENTS.

164. The Council reported to the Divisions and Annual Representative Meeting, 1912, that in response to an invitation received from the Special Committee appointed by the King Edward's Hospital Fund for London, the Association had given evidence on the question of out-patient departments before that Committee. The Report of the Special Committee of the King Edward's Hospital Fund has now been published and the Council has pleasure in reporting that that Committee has adopted to a large extent the views of the Association as to the proper scope and method of management of Hospital out-patient departments. The conclusions of the Special Committee are strongly in favour of the development of the out-patient department on consultative lines and in favour of restricting admission to this department. The Special Committee has not adopted the view of the Association that the only means of admission, except for emergency cases, should be by recommendation by a private practitioner, though agreeing that co-operation with the private practitioner should be encouraged. The Special Committee is in favour of an extensive development of the almoner system in addition.

165. The report of the Special Committee of the King Edward's Hospital Fund for London and the Memorandum of Evidence by the Association on out-patient departments, were published in the Supplement to the JOURNAL of February 22nd, 1913.

166. The Council has expressed its appreciation of the recognition by the Special Committee of the principles put forward by the Association with regard to out-patient departments, and its hope that the Council of the King's Fund will take steps to secure the adoption of these principles by those Hospitals to the funds of which they contribute.

MATERNITY AND VOLUNTARY HOSPITALS AND OTHER CHARITABLE INSTITUTIONS CHARGING FEES FOR MIDWIFERY CASES.

167. The Council has noted the two principles contained in the following Minute 246 of the Annual Representative Meeting, 1912, as declarations of policy of the Association, for its guidance in dealing with matters in connection with the management of hospitals, and has given instructions that both principles be included in the Association's Model Rules for the Management of Hospitals:

Minute 246.—Resolved: (i) That inability to pay for adequate treatment or the recommendation of a medical practitioner shall be the consideration for the participation of parturient women in the benefits of maternity and voluntary hospitals and other charitable institutions; (ii.) That women in receipt of Maternity Benefit under the National Insurance Act should not be regarded as eligible for charitable treatment except in cases of difficulty and danger and on the recommendation of a medical practitioner.

(See, however, paragraph 129 under heading "State Sickness Insurance.")

ADMISSION TO CASUALTY OR OUT-PATIENT DEPARTMENTS OF VOLUNTARY HOSPITALS.

168. The following motion, referred to it by Minute 248 of the Annual Representative Meeting, 1912, has been considered by the Council:

Minute 248.—Motion: That it be an instruction to the Council to take such steps as are necessary in order to obtain the approval of Staffs of Hospitals for the principle "that no person be seen in the casualty or out-patient department of a Voluntary Hospital except in emergency or on the introduction of a medical practitioner."

In the opinion of the Council it is not desirable to take steps in the sense of the above proposal at the present time, for the following reasons:—

(i.) The Association recently laid its views on the subject before an important Committee of the King Edward's Hospital Fund.

(ii.) These views have been to a considerable extent adopted by that Committee and it is desirable to await the action of the Fund, as, if such action is in the direction of the recommendations of its Committee it must prove of the very greatest assistance to the policy of the Association.

(iii.) Many Hospital authorities have recently considerably restricted the access to their out-patient departments in consequence of the operation of the National Insurance Act. It is desirable to wait until the effects of this step can be more accurately estimated.

UNDER CONSIDERATION.

169. Minute 224 of A.R.M., 1910, as to advisability of all members of Staffs of Voluntary Hospitals being paid.

(K) Naval and Military.

QUESTION OF REDUCED RAILWAY FARES FOR OFFICERS OF ROYAL ARMY MEDICAL CORPS AND INDIAN MEDICAL SERVICE.

170. The Council has addressed an enquiry to the Secretary of State for India as to the present position in connection with the complaint, previously lodged by the Association, regarding the ruling of the Government of India that the concession of reduced railway fares in certain circumstances to regimental captains and subalterns, notified in India Army Order No. 162, 1911, does not apply to Officers of the Royal Army Medical Corps or Indian Medical Service.

VACANCY IN COUNCIL.

171. A vacancy upon the Council has occurred by the resignation of Lt.-Col. Davie-Harris, R.A.M.C., who was appointed a Member of Council by the Representative Body to represent the Army Medical Service on the Council for the term 1911-14. The Council considers it of importance that the vacancy should be filled by the Representative Body, since otherwise that Service would be unrepresented upon the Council until the end of the period stated.

In accordance with By-laws 43 and 52, the Council submits the name of Lt.-Col. Waller Barrow, R.A.M.C., for election by the Representative Body as representative of the Army Medical Service upon the Council, in place of Lt.-Col. Davie-Harris, resigned, to hold office until the close of the Annual Representative Meeting, 1914.

(L) Scotland.

ORGANISATION OF PROFESSION IN SCOTLAND.

172. The Council has considered the question of the organisation of the profession in Scotland, having regard to the difficulties that arise partly from differences of the law of Scotland from that of the rest of the Kingdom, partly from difficulties of communication by post and rail with London, and also from the changes consequent upon the National Insurance Act. Being of opinion that the work of the organisation of the profession in Scotland would be carried out more efficiently by the transfer to the Scottish Committee, so far as Scotland is concerned, of some of the duties at present carried out by central Committees, the Council has made the following changes in the detailed organisation of the Association as affecting Scotland:—

1. The Scottish Committee has been empowered to arrange for its clerical work being done in Scotland by the appointment of a part-time clerk at the cost not exceeding £75 per annum.

2. The holding of a conference once a year of representatives of the Scottish Local Medical Committees with the Scottish Committee has been authorised, special conferences to be held subject to the approval of the Council, at a probable total cost of £75 per annum.

3. A grant of £200 has been made to the Scottish Committee for meeting the above and its ordinary expenses.

173. The question of the extension of the duties of the Scottish Committee to include the organisation of Branches, Divisions and Local Medical Committees in Scotland is under consideration.

NATIONAL INSURANCE ACT.

(a) *Financial Position in connection with work of Scottish Medical Insurance Council.*

174. The Council has received from the Scottish Committee a report as to the financial position of the Scottish Medical Insurance Council, which, it will be remembered, consisted of representatives of the Scottish Committee of the Association and of the Scottish Medical Corporations. A grant of £250 was made last year to the Scottish Committee in connection with the work which was thus jointly undertaken in connection with the National Insurance Act. The expenses to date having been paid, a balance of £14 of the £250 grant made is being returned by the Scottish Committee to the Association. It has been decided that the Scottish Committee shall now withdraw from membership of the Scottish Medical Insurance Council.

(b) *Medical Officers of Health and Sanatorium Benefit under the Act.*

175. The Scottish Committee has had under its consideration the question of the position of medical officers of health in connection with the administration of Sanatorium Benefit under the National Insurance Act, and has issued a communication to the Scottish Branches and Divisions advising them that, without interfering with the administrative work of medical officers of health, it is essential for the successful organisation of a tuberculosis service that the Chief Tuberculosis Officer should be independent of the Public Health Department.

(c) *Assistance by Members of Parliament.*

176. The thanks of the Association have been conveyed by the Scottish Committee to Sir John Barran, M.P., and Sir John Jardine, M.P., for their kind assistance in advancing in Parliament the claims of the Medical Profession in Scotland in connection with the National Insurance Act.

MEDICAL TREATMENT OF DEFECTIVE SCHOOL CHILDREN.

177. A communication has been forwarded by the Scottish Committee to the Divisions and Branches in Scotland, drawing their attention to the grants for medical treatment of school children which are being made to the various School Boards, and urging them to use every endeavour to secure that such treatment is carried out in accordance with the declared policy of the Association, namely, by general practitioners either by means of part-time appointments, or by establishing a rota, and not by whole-time medical officers.

(M) Ireland.

NATIONAL INSURANCE ACT.

178. The Council has received from the Irish Committee a report of the work done by the Conjoint Committee of the Irish Committee and the Irish Medical Association, and has granted a sum of £200 from the Central Insurance Defence Fund towards the expenses of the Conjoint Committee, on condition that the Irish Medical Association contributed not less than £100 for the same purpose.

179. The position of Ireland in connection with the National Insurance Act being different from that of the rest of the United Kingdom, the work of the Association for the profession in Ireland in connection with the Act has necessarily devolved almost entirely upon the Irish Committee and Conjoint Committee named. Valuable work has been done during the year, as to which the Council will report in the Supplementary Report of Council.

(N) Branches Outside United Kingdom.

TITLE OF COLONIAL COMMITTEE.

180. The Council has had under consideration the advisability of altering the name of the Colonial Committee, in view of the nomenclature now used in Imperial matters.

The Council recommends:—

Recommendation:—That steps be taken to alter the title of the Colonial Committee to that of "Dominions Committee," and that it be referred to the Council to carry out the necessary alteration of the By-laws.

MEDICAL AND DENTAL REGISTRATION IN UGANDA.

181. The Council has received from the Secretary of State for the Colonies a Draft Ordinance for the Registration of Dental and Medical Practitioners in the Uganda Protectorate, with a request for the comments of the Association thereon. Approval by the Association of the proposed Ordinance has been intimated to the Secretary of State, inasmuch as the Ordinance corresponds with similar Ordinances already approved by the Association locally and centrally.

SUBSCRIPTIONS TO BRANCHES OUTSIDE UNITED KINGDOM.

182. The question has been raised by the Council of a Branch outside the United Kingdom as to whether any member of a Branch outside the United Kingdom which has under the By-laws by Rule required each member to pay an annual subscription in addition to the ordinary Association subscription, can legitimately forward, to the Central Office or otherwise, the ordinary annual Association subscription and claim to receive the full privileges of membership of the Branch although not paying the full local subscription. A reply has been addressed to the Branch to the effect that, under By-law 14, members of such a Branch must pay the special Branch subscription duly authorised in accordance with the Regulations of the Association, in addition to the ordinary Association subscription. Directions have been given by the Council that payments of any less amount than the total subscription, received by the Central Office, must be regarded and acknowledged as payments on account merely.

SOUTH AFRICA.

183. The work of organisation of the profession in South Africa now largely devolves upon the South African Committee, a body representative of all the South African Branches, the constitution of which was approved by the Council in October, 1903. This Committee has proved of the greatest use to the profession in that country and its constitution will probably be followed, with the necessary modifications, in Australia. The Council is glad to note increasing interest in the affairs of the Association, as shown by the formation of Rhodesian and Orange Free State Branches, and the proposal to constitute the two Divisions of the Natal Branch as two separate Branches.

184. The Council has had an invitation to send Representatives to the South African Medical Congress in July, 1913. The time of meeting, so near to that of the Annual Meeting of the Association, added to the usual difficulty of distance and expense, makes the acceptance of the invitation almost impossible. The Council desires in the name of the Association to wish the Congress every success.

AUSTRALASIA.

185. The Council is pleased to report great activity in the Australasian Branches, in great part due to threatened legislation which will bring the profession much more closely under the supervision and control of the State. Affairs at home have therefore been closely followed by a profession which feels that its turn is coming and that it must be prepared. It is hoped that the suggested formation of an Australian or Australasian Federal Committee representative of all the Branches (*see* Minute 259 of A.R.M., 1912) will soon become an accomplished fact.

FEES OF MEDICAL WITNESSES IN NEW HEBRIDES.

186. A complaint has been received from a practitioner in the New Hebrides as to the inadequacy of the fees given to expert medical witnesses in the New Hebrides. On consideration of the matter, a communication has been addressed to the Secretary of State for the Colonies pointing out the inadequacy of these fees and urging that they be increased to a proper amount.

MEDICAL CERTIFICATES AS TO GOVERNMENT OF CEYLON EMPLOYEES' INABILITY TO WORK.

187. At the request of the Colombo, Ceylon, Branch, representations have been made to the Secretary of State for the Colonies for the rescission of the present rule by which medical practitioners in Ceylon, other than Government Medical Officers, are debarred from issuing certificates of ill-health in respect of Government servants.

J. A. MACDONALD,

Chairman of Council.

30th April, 1913.

APPENDIX I.

LIST OF MATTERS (OTHER THAN IN CONNECTION WITH NATIONAL INSURANCE ACT) REFERRED TO COUNCIL BY ANNUAL REPRESENTATIVE MEETING, LIVERPOOL, 1912.

| Minute of A. R. M., 1912. | Subject. | Para. of present Report. |
|---------------------------|--|--------------------------|
| 28 | Increase of Subscription | 11 |
| 35 | Special Fund for Payment of Expenses of Representatives | 31 |
| 40, 42 | Referendum and Postal Vote | 51 |
| 61-62 | Machinery of Association in connection with Disputes | 73 |
| 72 | Time of Annual Conference of Secretaries | 46 |
| 73-5 | Grouping of Branches not in United Kingdom for 1913-14 | 28 (b) |
| 77 | Constituencies | 33 |
| 102 | Scholarships and Grants | 64 |
| 105-6 | Position of Practitioners examining Patients who are under care of other Practitioners | 69 |
| 107a | Co-operation of Divisions in Ethical Cases | 72 |
| 112-21 | Model Ethical Rules of Divisions and Branches | 72 |
| 143-4 | Certificates and reports on cases under Workmen's Compensation Act and Members of Hospital Staffs | 79 |
| 158 | Remuneration of Ship Surgeons | 84 |

| 65 | Question of enforcing Guarantees ... | 134-41 |
| 67 | Resignations of Membership | 25, 49 |
| 68 | Record of Work of Panel Doctors | — |

APPENDIX III.

OPINION OF COUNSEL ON QUESTIONS IN CONNECTION WITH PROPOSED FORMATION OF A NEW COMPANY.

1. If the New Company were registered with a Memorandum of Association in the form which has now been approved by the

Board of Trade, certain definite powers not possessed by the existing Company would be acquired. These are:—

Power to promote and oppose legislation affecting the public health or the profession.

Power to take part in certain legal proceedings affecting the profession.

Power to establish, endow and manage benevolent funds (with the restriction that no grant may be made directly to a member of the Association, a member may if indigent be benefited indirectly by a grant to his relatives or dependents).

Power to borrow and mortgage.

In addition clear powers would be obtained and all doubts removed as to certain other matters which probably come within the scope of the objects of the existing Company, but are not clearly provided for in the existing Memorandum. These are:—

Power to provide libraries and places for social intercourse.

Power to undertake trusts for the benefit of the profession.

General powers of management of and dealing with property.

2. A fee of £20 would be paid on the registration of the new Company (Companies (Consolidation) Act, 1908, First Schedule, Table B).

The Stamp Duty on the transfer of the Property from the old to the new Company, would, if exacted, be very heavy. £1 per cent. on the value of the property transferred. See Finance (1909-10) Act, 1910, ss. 73, 74.

But in the case of a reconstruction of a Company where the members of the old and the new Company are the same and there is no alteration of their rights, it has been the practice of the Inland Revenue Authorities not to exact the ad valorem duty and to require only the deed stamp of 10s. to be affixed to the instrument.

But this practice may have been altered since the enactment of s. 74 of the Act of 1910 above referred to. Probably the Inland Revenue Authorities would answer a question as to what their practice now is or as to what Stamp Duty would be required in the circumstances of the present case.

The Duty if payable would be so heavy that the matter ought not to be left in doubt until after irrevocable steps have been taken as to winding up.

3. Power to borrow on mortgage or otherwise could be obtained by the existing Company (without winding up) by a Special Resolution altering the Memorandum in this sense and confirmed by the Court on Petition (Companies (Consolidation) Act, 1908, S. 9.).

If this is contemplated the consent of the Board of Trade should be obtained. The Board are not likely to object since they have allowed the desired power in the Draft Memorandum of the new Company.

I presume that there are no creditors who would object, and if this be so, I see no reason why the Court should not allow the alteration.

(Signed) T. R. COLQUHOUN DILL,
Lincoln's Inn,
11th July. 1912.

APPENDIX IV.

INFORMATION OBTAINED FROM SOLICITOR TO BOARD OF INLAND REVENUE AS TO COST OF FORMATION OF A NEW COMPANY.

"The Agreement for transfer by the old Association of all the real and personal estate of the old Association would be chargeable for duty as a Conveyance in Sale on the amount of the liabilities of the old Association, which liabilities would be taken over by the new Association, and would form the principal consideration for the transfer of the property to the new Association.

"Therefore the Duty would be at the rate of £1 for every £100 of the liabilities of the old Association.

"The same rate of Duty would also be payable on the amount of the costs of carrying out the entire arrangement, because the Agreement by the new Association to pay such costs would form part of the consideration for the transfer of the property. This would only be a small sum.

"In addition there would be a very small sum for Duty payable in respect of other Covenants in the transfer which probably would not exceed £2 or £3."

APPENDIX V.

APPENDIX VIII.

MEMORANDA AND QUESTIONS DEALING WITH MATTERS AFFECTING PUBLIC HEALTH AND THE MEDICAL PROFESSION FOR SUBMISSION TO CANDIDATES AT COUNTY, COUNTY BOROUGH, MUNICIPAL BOROUGH, AND DISTRICT COUNCIL ELECTIONS.

1.—*Payments to Voluntary Hospitals and Sanatoriums in order to provide Accommodation for the use of the Inhabitants of their Districts.*

The voluntary hospitals and many of the existing sanatoriums are institutions in which provision is made through the contributions of benevolent private individuals, and through the gratuitous services of members of the medical profession, for persons who are unable to provide at their own expense such treatment as they require.

The Public Health Act, 1875, allows these local authorities to contract for the use of any hospital or part of a hospital for the reception of the sick inhabitants of their districts on payment of such annual or other sum as may be agreed on.

Section 12 (2) (c) of the National Insurance Act provides that in the case of members of approved societies who have no dependants and who become inmates of "a hospital, asylum convalescent home or infirmary supported by a charity or by voluntary subscriptions," an agreement may be made between these institutions and an approved society or Insurance Committee by which payments may be made out of sickness, disablement or maternity benefit towards the maintenance of such persons in these voluntary and charitable institutions.

Section 16 (1) compels Insurance Committees to make arrangements for the treatment of tuberculosis and the other diseases to be scheduled by the Local Government Board, with the managers of sanatoriums or other institutions, regardless of the fact that many of them are voluntary and charitable institutions.

Section 21 allows "an approved society or Insurance Committee to grant such subscriptions or donations as it may think fit to hospitals, dispensaries or other charitable institutions," such grants presumably being made in return for the treatment of insured persons in such charitable institutions.

Thus it is probable that most of the hospital treatment and a considerable part of the sanatorium treatment of insured persons may be obtained through hospitals and sanatoriums which have been established as voluntary and charitable institutions, to which the medical profession has hitherto given its services gratuitously.

The British Medical Association would submit that the proposed provision relating to hospitals and other charitable institutions is wrong in principle, and is an improper application of public funds. If contracts are entered into with these institutions for the treatment of persons the expense of whose treatment is rightly chargeable to public funds, they cease to that extent to be charitable institutions and the whole basis of their constitution is altered.

Question: Would you oppose contracts with or payment to voluntary hospitals and sanatoriums being made by public authorities to secure medical treatment until the medical staffs are remunerated for such State service?

Question: Are you in favour of the Local Medical Committees being consulted with reference to the arrangements for giving sanatorium benefit?

2.—*Election of Medical Practitioners by County and County Borough Councils on Local Insurance Committees.*

Section 59 (2) (d) of the National Insurance Act lays down that County and County Borough Councils shall elect duly qualified medical practitioners, in certain proportions, to the local Insurance Committees.

Question: Are you in favour of the local Medical Committees being consulted by these Councils with a view to nomination by the Committee of suitable registered medical practitioners as candidates for election?

3.—*Treatment at Voluntary Hospitals of School Children found upon Medical Inspection to be defective.*

The Association considers that the making of arrangements for the treatment at voluntary hospitals of school children found upon inspection to be defective involves a confusion between State services and charitable institutions which must tend to undermine the present charitable basis of those institutions and also involves injustice to the private medical practitioner who is a ratepayer and is perfectly competent to undertake the work.

As the result of a very careful investigation of the whole subject, the Association believes that the only satisfactory system will eventually be found to be the treatment of children by medical practitioners directly employed by the Education Authority working at convenient treatment centres (clinics) established by the Authority.

Questions: (a) Would you oppose arrangements being made with Voluntary Hospitals for the systematic treatment of school children?

(b) Would you support the treatment of school children in their own districts by local medical practitioners adequately paid, with other suitable provision for treatment where local medical practitioners are not available?

4.—*Separation of the Medical Inspection of School Children from the Medical Treatment of those Children found upon inspection to be defective.*

The British Medical Association has repeatedly urged that the medical inspection of school children should be separated from the medical treatment, which should be carried out by local registered medical practitioners. The reasons for the adoption of this principle are:—

(1) Medical practitioners who are engaged in general private practice have a wider experience of the detection and treatment of disease than those whose work is confined to the treatment (or the treatment and inspection) of school children.

(2) The treatment of diseases of children gives those who carry it out opportunities of obtaining valuable experience. Unless this treatment is entrusted to the local practitioners they will lose this special experience and the authorities will lose the advantage of the experience gained by private practitioners who are engaged, apart from their school work, in treating members of the general public.

(3) The employment of private practitioners gives the Education Authority a wider field of choice than if the work is carried out by school medical officers.

(4) The treatment of school children may be expected to develop into a great national undertaking, the value of which will be enhanced in proportion to the number of persons who are interested in it. From this point of view, it is better that as many as possible of the medical profession should have a personal interest in the work, than that it should be confined to a small class of public officials.

(5) At the outset the employment of private practitioners has a special advantage, in that it does not create any vested interest. The necessity of dismissing a special staff would, on the other hand, create serious difficulties for an authority desirous of changing its system.

(6) The separation of treatment from inspection gives the opportunity for a second opinion on each case, namely, the opinion of the private practitioner, in addition to that of the medical inspector. If this second opinion were given and the treatment carried out, by local practitioners whom the public knew and had confidence in, the advantages of the treatment offered would be far more appreciated by the parents of the children.

Question: Are you in favour of the treatment of school children being carried out by those local registered medical practitioners who are able and willing to act, a rota of such practitioners being formed for the purpose where desired?

Association Notices.

ELECTION OF CENTRAL COUNCIL, 1913-1914.

Notice is hereby given that nominations of candidates for election as Members of Council by Branches or Groups of Branches in the United Kingdom for the year 1913-14 must be forwarded to reach the Financial Secretary and Business Manager, at the Office of the Association, not later than Saturday, May 17th, 1913. Each nomination must be on the prescribed form, copies of which will be furnished by the Financial Secretary and Business Manager upon application.

Separate forms have been prepared:

- (A) For a nomination by a Division, and
- (B) For a nomination by any three Members of a Branch respectively.

Those applying are requested to state for which purpose the form is desired.

An announcement of the Nominations received will be made in the Journal of May 24th, 1913.

Election will be by voting papers. These papers will contain the names of all duly nominated candidates, and will be issued from the Central Office on Saturday, June 7th, and will be returnable not later than Saturday, June 14th.

The result of the election of Members to the Central Council will be published in the Journal of June 28th, 1913.

BY ORDER OF THE COUNCIL,

GUY ELLISTON,

Financial Secretary and Business Manager.

May 3rd, 1913.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The Honorary Secretaries, Dr. Ernest C. Hadley, Burbury Street, Lozells, Birmingham, and Dr. H. Hoyle Whaite, Elsinore, Gravelly Hill, Birmingham, give notice that nominations for the following officers must be in the hands of the Honorary Secretaries by the first post on Monday, May 5th, in order that the names may be inserted in the notice convening the annual meeting of the Division to be held shortly: (1) Four Representatives on the Representative Body, (2) Chairman, (3) Vice-Chairman, (4) Honorary Secretaries.

DORSET AND WEST HANTS BRANCH.—The annual meeting will be held at Bournemouth on May 21st. Notices of motion should be sent to the Honorary Secretary by May 7th. The President-elect has very kindly invited members to luncheon at his house.—FRANK FOWLER, Honorary Secretary, 29, Poole Road, Bournemouth.

LANCASHIRE AND CHESHIRE BRANCH.—Mr. F. Charles Larkin, Honorary Secretary, 54, Rodney Street, Liverpool, gives notice that a meeting of the Organization and Finance Committee of the Branch will be held at the Liverpool Medical Institution on May 14th at 4.30 p.m., and that a meeting of the Branch Council will be held at the same place on May 21st at 4 p.m.

LANCASHIRE AND CHESHIRE BRANCH: PRESTON DIVISION.—Dr. Walter Sykes, Honorary Secretary (31, Winckley Square,

Preston) gives notice that the Annual Meeting of this Division will be held at the Crown Hotel, Wednesday, May 7th, at 8.45 p.m.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: FURNESS DIVISION.—Dr. John Livingston, Honorary Secretary, 18, Hartington Street, Barrow-in-Furness, gives notice that the annual meeting of the Division will be held on Friday, May 16th. (By a printer's error the postcard issued gave a wrong date.)

NORTH OF ENGLAND BRANCH: NEWCASTLE-UPON-TYNE DIVISION.—Mr. R. J. Willan, F.R.C.S., Honorary Secretary, 25, Ellison Place, Newcastle-upon-Tyne, gives notice that the annual meeting will be held at the Royal Victoria Infirmary, Newcastle-upon-Tyne, on Wednesday, May 7th, at 8.30 p.m. The business of the meeting will be to elect a Chairman, Vice-Chairman, Honorary Secretary, two Representatives and two Deputy Representatives at Representative Meetings, eight Representatives on the North of England Branch Council, and twelve ordinary members of the Executive Committee; to receive the annual report; to consider the business of the Annual Representative Meeting; to elect Representatives entitled to inspect the Newcastle Education Treatment Centres; and to propose a new rule making the Honorary Secretaryship of the winter scientific meetings of the Division a separate appointment, and to provide that the incumbent shall be an *ex officio* member of the Executive Committee of the Division.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of the South-Eastern of Ireland Branch will be held in Kilkenny Victoria Hotel on Wednesday, May 7th, at 5.15 p.m., for the installation of President-elect, the election of officers of the Branch for the ensuing year, and any other business.—P. GRACE, Honorary Secretary.

British Medical Association.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

The Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows:

1. An ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.
3. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research into some subject relating to the causation, prevention, or treatment of disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1913. A Scholar may be reappointed for not more than two additional terms.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of Research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

Applications.

Applications for Scholarships and Grants for the year 1913-14 must be made not later than Tuesday, June 10th, 1913, in the prescribed form, a copy of which will be supplied by the Medical Secretary on application.

Each application should be accompanied by testimonials, including a recommendation from the head of the laboratory, if any, in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work, and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

ALFRED COX, *Medical Secretary.*

429, Strand, London, W.C.

National Insurance.

THE POSITION IN SOUTH WALES.

RESOLUTIONS AND RECOMMENDATIONS OF THE SOUTH WALES AND MONMOUTHSHIRE BRANCH.

At a meeting of the South Wales and Monmouthshire Branch of the British Medical Association, held at Cardiff on April 24th, the following resolutions were unanimously adopted:

In respect to the position of the Medical Aid Associations in certain areas of the Branch, it having been ascertained that such associations have already been established in certain areas since the passing of the National Insurance Act, and have been sanctioned by the Medical Benefit Subcommittees, we feel that such action is inimical to the interest of the whole profession, and constitutes a breach of faith on the part of the insurance authorities.

The Branch, therefore, calls upon the Divisions to take immediate and drastic steps to counteract the evil, and suggests, *inter alia*, that they should call upon the staffs of the various hospitals in South Wales to refuse professional recognition to medical practitioners who accept such appointments, and to decline to attend in general and cottage hospitals members of such associations or schemes except in circumstances of grave emergency.

ACTION OF THE MEDICAL STAFF OF THE SWANSEA HOSPITAL.

We have already on several occasions given accounts of the steps by which the present position has been brought about, and have reproduced the resolution in which the honorary medical staff of the Swansea Hospital defined its attitude and expressed its strenuous determination to do all in its power to maintain the solidarity of the profession in South Wales. The resolution was as follows:

Recognizing that underpaid medical work is equally as bad for the patient as for the doctor, the hon. medical staff have decided that in the event of the establishment of any society or association having for its object the employment of medical men under conditions not approved of by the medical profession, they will under no circumstances meet in consultation or have any professional dealings with any medical man holding office under such society or association in connexion with a patient either privately or at the hospital, and, moreover, they will decline, except in cases of the gravest emergency, to treat in hospital any member of such society; also that the staff adopt the same attitude towards medical men undertaking contract work at terms below those decided upon by the medical profession of any district.

The following letter from the Chairman of the Medical Board brings the story down to the latest date, and should be read in conjunction with the above resolution, the occasion for which it will help to explain:

Sir,

Our profession is at close quarters with a calamity of the gravest kind, and we must face the trouble resolutely and without delay.

In the district immediately around Swansea, as probably in many other places, the working classes are hard at work forming medical aid societies, and every pressure is being put, through their labour organizations and otherwise, to bring all insured persons into the fold.

Medical men are imported into the town or district, they join the panel, they become whole-time servants of these societies, and are paid a fixed salary in addition to being provided with a residence and a fully equipped surgery.

The Local Insurance Committees, controlled as they are by an easy working majority of the labour element, under Section 15, subsection 3 (own arrangements clause), have agreed to hand over to these medical aid societies the annual sum of 9s. reserved under the Insurance Act for medical attendance. These payments are pooled, and the medical man is required to attend not only the insured persons but also their wives and families, and possibly also their dependants.

These are the facts. It seems hardly necessary for me to point out the inevitable sequence unless we take some strong action to prevent such a state of affairs.

The partial control of the profession by the friendly societies in the past was bad enough, but that degradation fades into insignificance compared with what now threatens us. Medical aid societies will be formed in any and every place where there are sufficient insured people, the funds for medical attendance will be handed over to them by the Insurance Committees, and in an incredibly short space of time the members of our profession who seek a living from contract practice will be absolutely under the thumb of the working classes, who will have control of ample funds to enable them to enforce their own terms and to sweat and browbeat the profession in a way we never thought to be possible.

The Vice-Chairman and the Secretary of the Welsh Insurance Commission met our Local Medical Committee a few days ago, and much to the surprise and indignation of the meeting we were told, in particularly plain language, that it will be futile to look to them for redress. The Commissioners would, in fact, not attempt to interfere with the Local Insurance Committee in their methods of disposing of medical funds; we must fight these medical aid societies as best we can without any help from them.

As a member of the staff of the Swansea Hospital I would like to take this opportunity of making it known that we are taking the strongest steps we possibly can to stop this business. We are refusing to have any professional dealings with any medical man who so debases himself and his profession as to work under such conditions as I have indicated, and, further, we are refusing, except in cases of the very gravest emergency, to treat their patients either in the wards or the out-patient departments of the hospital. On behalf of my colleagues on the staff I would like to express the hope that the staff of any other hospital in the country that is faced with similar conditions will take action in some such way as we have done.

At a recent meeting of the Board of Governors of our hospital we were taunted with the fact that the staff of no other hospital in the kingdom had acted as we have done, and that we were not justified in bringing a charitable institution into any fight we might have with the working classes. But we feel that our position on the staff constitutes our best, if not our only, defence, and is too powerful a weapon to neglect. It is surely absurd for us to extend our charity within the walls of the hospital to those who are doing their utmost to ruin our professional brethren outside. No one has a right to demand that our charity should be abused in this way.

It is inconceivable that the Government can be aware of what is going on, but if they intend to allow insurance funds to be handed over direct to combinations of insured persons for them to make what arrangements they choose for medical attendance, then I say they are guilty of downright treachery to our profession, and this must be met by every self-respecting medical man withdrawing from the panel.

In conclusion, it may be pointed out that this question is one that does not concern us alone.

A nation does well to be served in health and sickness by men and women of the highest intellectual and moral type. The practice of medicine has hitherto not called in vain for such recruits, for a fair share of the best men of the age have continually found in medicine an attractive calling which has afforded full scope for their talents, and has provided them with opportunities, such as is given to no other profession, to work for the good of the community.

Any factor which tends to render a medical career less attractive and to produce an inferior type of doctor is assuredly a menace to our national welfare—it is a danger that our politicians and others concerned in public affairs should take into earnest consideration.

R. L. Stevenson says of the physician:

He is the flower of our civilization; he will be thought to have shared as little as any in the defects of the period and most notably exhibited the virtues of the race. Generosity he has such as is possible to those who practise an art, never to those who drive a trade; discretion tested by a hundred secrets; tact tried in a thousand embarrassments; and what are more important, Heracleian cheerfulness and courage. So that he brings air and cheer into the sick room, and often enough, though not so often as he wishes, brings healing.

Is that the type of man who will enter the medical profession and become the slave of a medical aid society?—I am, etc.,

EDGAR REID,
Chairman of the Honorary Medical Staff of the
Swansea General and Eye Hospital.

INTERVIEW WITH THE WELSH INSURANCE COMMISSIONERS.

On April 29th Mr. W. J. Greer and Dr. W. E. Thomas, honorary secretaries of the South Wales and Monmouthshire Branch of the British Medical Association; Dr. Cox, Medical Secretary of the Association, and Dr. D. Naunton Morgan, honorary secretary of the South Wales and Monmouthshire Works Surgeons' Association, had an interview with the Welsh Insurance Commissioners, and laid before them the views of the profession with regard to the two Subsections of Section 15 of the Insurance Act above referred to—namely, Subsection 3 and Subsection 4, and an early answer is expected from the Commissioners on the points submitted to them.

LOCAL MEDICAL COMMITTEES.

BUCKS.

At a meeting of the Bucks Local Medical Committee held at Aylesbury on April 25th, with Dr. BAKER in the chair, it was decided to ask the County Insurance Committee to postpone the allocation of patients who had not yet selected a doctor as long as possible, and to express the opinion that patients might be allotted to medical men in proportion to the numbers already on their lists, subject to agreement between the medical men in the various districts.

A motion in favour of forming an association of Bucks panel practitioners was, after discussion, withdrawn.

The question of the proposals for providing medical attendance for insured persons temporarily resident in another locality was discussed, but postponed for further consideration.

It was resolved to request a Financial Committee consisting of Drs. Baker, Doyne, Henderson, Larking, Rose, and E. O. Turner to submit the financial statement drawn up by the Secretary (Dr. Larking) to a meeting of the whole of the medical men practising in Buckinghamshire which is to be held in Aylesbury this month.

COUNTY OF CHESTER.

A MEETING of this Committee was held at Crewe on April 12th, when Dr. GARSTANG was in the chair, and fifteen members were present.

Representations to the Insurance Committee.

It was reported that the twenty-three District Committees had been consulted with regard to the conditions which should be insisted upon before agreeing to a further term of panel service beyond the extended period (May 14th). After full consideration the Committee drew up certain recommendations, which were submitted to the Insurance Committee at Crewe on Saturday, April 25th, by the Vice-Chairman of the Medical Committee, Dr. Marsh. The following is a summary of the results of the negotiations:

1. *Capitation Payment for Dispensing by Doctors in Rural Areas.* Agreed.
2. *Simplification of Clerical Work:* loose leaf pocket-book instead of card index cabinet. Agreed and sanctioned by Commissioners.
3. *Old and Infirm Members of Societies.* To be provided with medical benefit if their societies ask for it. As a matter of fact in the great majority of cases the societies are not claiming it, hoping to obtain it cheaper "outside the Act."
4. *Certificates.* The Committee declines to press the Commission to urge upon approved societies the adoption of a simple form of certificate which obviates the need for stating the diagnosis.
5. *Mileage.* The claims of mountainous districts are approved, and are being submitted to the Commission.
6. *Holiday Makers and others away from Home.* The Insurance Committee has not dealt with this matter.
7. *Income Limit.* Dr. Marsh advocated a uniform limit of £160, but the Committee declined to fix any limit.
8. *Additions to Drug List.* The Committee decided to maintain the additions (already sanctioned by the Commission) which were proposed by the Medical Committee, in spite of the objections of the chemists.

9. *Anaesthetic Fee.* The Committee instructed the Clerk (by a narrow majority on a vote) to write to the Commission urging that the anaesthetic fee should be paid out of a special fund and not by the panel doctor.

10. "*Rep. Mixt.*" The Committee agrees that this may be used within any one quarter.

11. *Duplicate prescriptions* will not be necessary.

[10 and 11 were agreed subject to the assent of the pharmacists, which it is understood was intimated, to the arrangement that the original prescriptions should be filed by the chemists, submitted quarterly to audit by the Insurance Committee, which undertook to return them for preservation by the chemist as required by the Pharmacy Act.]

12. *Allocation of persons who have not chosen a doctor.* As requested by Medical Committee, namely, in equal shares to the nearest doctor or doctors, all the doctors residing in one parish to be regarded as equidistant. District medical committees to finally allot according to doctor's customary rounds; and to have right to vote by a two-thirds majority that a given number be deducted from the share of each doctor in favour of any doctor who may be considered to have suffered hardship by the operation of the Act.

[Allocation is not thought likely to be made for some months to come. About one-tenth of the insured have not yet chosen a doctor. The money for the medical benefit of this one-tenth will be kept in hand by the committee to the end of the year, and it is considered likely to suffice for the claims of other counties and county boroughs in respect of temporary residents coming from Cheshire.]

13. *Quarterly payments* will be made at the rate of 1s. 9d. per name on a doctor's list, plus 6d. extra for rural patients for whom he dispenses. The first payment should be made this week.

[Attention is called to the fact that the deduction which will be made from the capitation fees in respect of persons absent from home will not be apparent until the balance of the annual capitation income in respect of the whole of the insured class comes to be paid at the end of the year.]

The result of the negotiations as set out above will be considered at the approaching meetings of the District Medical Committees, which will be asked to decide whether doctors shall or shall not continue on the panel, or whether they shall endorse their agreements to the effect that they will only attend insured persons with incomes of over £160 if they are required to make their own arrangement under Regulation 49. It is suggested that any doctor who may already have signed his agreement unconditionally and now desires to withdraw it, or to endorse it as above, should write to the Clerk of the Insurance Committee to return the document at once, as the present conditions of service expire on May 14th.

Permanent Organization of the Committee.

The Committee met again in Manchester on April 22nd, sixteen members being present. Dr. MARSH, of Macclesfield, who took the chair in the unavoidable absence of Dr. Garstang, was elected Vice-Chairman. With regard to the expenses of the District Committees, it was arranged that each member of the profession should contribute 2s. 6d. a quarter to the County Committee, and that of this amount 2s. should be paid by the treasurer appointed by the Committee (Dr. Hodgson) into a deposit account for the purpose of accumulating a fund to be available in times of emergency for legal and other expenses incurred in the general interests of the profession in the county. The remaining 6d. it was arranged should be used for current expenses. The meeting approved the following principles embodied in a scheme for the permanent organization of the Committee, drawn up by Dr. Garstang:

1. That each district (there are twenty-three) should contribute one member to the Committee. That the district with the greatest number of doctors resident in the area should have two extra representatives, and that five with the next greatest number should each have one extra (total 30).
2. That the six nominees of the profession on the Insurance Committee should be *ex officio* members.
3. That the Chairman (if not already a member) should be directly elected by the Committee from the profession of the county (grand total 37).

It was further resolved that only doctors resident in the area should be eligible for the District Medical Committee of that area.

Medical Benefit to Temporary Residents.

The memorandums of the Commissioners (SUPPLEMENT, April 19th, p. 334) with reference to medical attendance on insured temporary residents were considered, and the Secretary was instructed to draft a letter to the Commissioners on the subject. The following is the text of the letter:

Saddler's Close,
Holmes Chapel, Cheshire,
April 26th, 1913.

Cheshire County Local Medical Committee.

Sir,

The memoranda of the Commission (159/I.C. and 161/I.C.) referring to the method of payment for medical attendance on persons away from their home area have been considered by this Committee, and, in response to the invitation to Local Medical Committees to state their views in this connexion, which is contained in paragraph 15 of 161/I.C., I am instructed to address the following observations and inquiries to the Commission:

1. The matter which is particularly referred to in paragraph 15 of 161/I.C. as a subject in which Local Medical Committees may be heard is the tariff of charges. My Committee is of opinion that for fractures and dislocations the charges of the Poor Law scale form a better basis of remuneration than those laid down in the tariff proposed by the Commission. It also notes that there is no mention of mileage. Otherwise it would endorse the tariff as a reasonable rate of remuneration.

2. My Committee, however, gathers that the tariff charges are not those which it is actually proposed to pay, but that they are only counters with which to reckon the share each doctor shall receive of the total fund available for temporary residents. It is clear therefore that the element of chance enters largely into the question of the amount of money which the doctor will receive for his services, even though rendered upon an agreed tariff. My Committee regards such a method of payment as unsound.

3. After a careful review of the memoranda, it is not clear to this Committee whether the Commission proposes to pay to the central fund the case value for a whole year of each insured person who makes use of a "green voucher"; or, on the other hand, whether the intention is only to take a moiety of it proportionate to the length of absence from home. As the proposal for Class A only deals with temporary residence of three months or less, such a moiety would never be more than one-quarter of the annual case value.

(a) If the intention of the Commission be the former of these alternatives, my Committee would observe that it opens up the possibility of a distribution of money very disproportionate to services. A single attendance upon a convalescent at a health resort would result in a withdrawal from the medical fund of his home area of several times the amount of his whole annual capitation fee, despite the fact that his illness itself had been treated at home.

My Committee fails to see why the whole case value for twelve months should be paid out of the funds of the home area in respect of a patient who is away from home for less than three months, and often only for one or two weeks. Contrasting the case of those away from home for less than one-quarter with that of those who are permanently wandering this anomaly is to be noted; that the former contributes the central fund its case values, or perhaps three times as much as the latter, which only contributes its capitation fees.

To illustrate the Commission's proposal in the light in which it appears to my Committee, allow me to assume that of 30 insured persons 10 will fall ill during the year, one of whom will apply for and use a "green voucher." The gross medical benefit fund in respect of those persons will be $(30 \times 7s.) = 210s.$ The case value will be $(2 \times 2s) = 21s.$ The net medical benefit fund will be $(210s. - 21s.) = 189s.$ The net capitation fee will therefore be $(\frac{189s.}{30}) = 6s. 3\frac{3}{4}d.$

The dividends of the central fund will be a poor set-off against this deduction of 8\frac{3}{4}d. from the capitation fee of 7s. in areas which are not health resorts.

(b) But if the Commission only intends to pay to the central fund a fraction of the case value proportionate to the length of the absence of the insured person from his home area the central fund would probably be inadequate even approximately to meet the tariff charges.

4. My Committee is concerned, and especially if the former of these two interpretations be the correct one, with the deductions from the ordinary capitation fee of doctors on the panel which the proposals set forth in the Commissioners' memoranda imply.

It has been understood generally that remuneration of at least 7s. per head was promised by the Government. The "Explanatory Statement as to Medical Benefit" issued in December last by the Commission definitely sanctions that anticipation. "If the object desired is that each practitioner shall know as exactly as possible the income on which he can rely . . . the method to be adopted," it runs, "is obviously that of simple capitation, under which he will know definitely that if he has 1,000 insured persons on his list for the year he will receive . . . at least £325. With the 6d. for treatment of tuberculosis and 6l. from the Drug Suspense Fund (when the cost of drugs does not exceed 1s. 6d. per head) it will be £375." . . . "The expression 'on his list for the year' obviously cannot mean on his list at any one moment. . . . The payment for each quarter shall be on the average of those on his list on the first day of the quarter and those on his list on the last day of the quarter. Subject to these small adjustments the practitioner . . . may confidently rely upon receiving at least 7s. . . ."

From the recent memoranda of the Commission the profession may gather that it may no longer "confidently rely" on 7s., but that that sum will be subject to a deduction, uniform throughout each area, greatest in industrial and business

neighbourhoods, less when there is less sickness incidence, and with little compensation in the way of fee-paid attendance on visitors, except in health resorts.

The figure of 7s. in the controversy last winter was constantly contrasted favourably with the capitation payments which the profession had hitherto accepted. The latter, however, including that paid by the Post Office, were subject to no deductions for the temporary absence of beneficiaries, but were fixed annual sums.

A payment per head which is subject to an unknown and variable deduction is not a capitation payment as hitherto understood.

My Committee, while recognizing that the Commissioners themselves have endeavoured in their memoranda to meet the difficulties of the problem in a spirit conciliatory to the profession, ventures to think that the promise of a minimum capitation fee of 7s., absorbing the whole sum estimated, is incompatible with the provision of a form of medical benefit which adheres to an insured person during a temporary removal.

It is of opinion that payment by a capitation fee of fixed value, or according to the actual terms of a standard tariff, are the only methods of remuneration to which the profession as a whole can look with any permanent satisfaction; and it recognizes that such a basis of payment can only be realized by amending legislation.

I am, Sir,

Your obedient servant,

(Signed) LIONEL JAS. PICTON,

Honorary Secretary.

The Secretary,

National Health Insurance Commission (England),
Buckingham Gate,
London, S. W.

CONGLETON.

The District Medical Committee for the Congleton area has received statutory recognition and is constituted as follows:

Dr. C. Bennett (Sandbach), *Chairman and Representative on the District Insurance Committee*; Dr. M. J. H. Sayers (Alsager), *Honorary Secretary*; Dr. H. Crutchley (Alsager), Dr. J. C. Furness (Kidsgrove), Dr. A. B. Greatrex (Kidsgrove), Dr. H. F. Kingston (Alsager), Dr. G. W. Lloyd (Alsager), Dr. W. A. McDonald (Talk-o'-th'-Hill), Dr. L. J. Picton (Holmes Chapel), Dr. R. Riddell (Sandbach), Dr. J. Steele (Kidsgrove), and G. Jefferson (Talk-o'-th'-Hill).

DENBIGHSHIRE.

A MEETING of the Denbighshire Local Medical Committee was held at Chester on April 23rd to meet Drs. Meredith Richards (Deputy Chairman) and Llewellyn Williams (Medical Officer) of the Welsh Commission.

The CHAIRMAN (Dr. Medwyn Hughes, Ruthin) offered a hearty welcome to Drs. Meredith Richards and Ll. Williams, and spoke of the great advantages to be gained by a direct conference between the medical members of the Welsh Commission and the Local Medical Committee.

Dr. MEREDITH RICHARDS, in addressing the meeting, said that migratory persons came under two classes: (1) Those whose occupation entailed constant travelling, such as actors, contractors, workmen, etc.; (2) those who were away from their permanent residence occasionally, such as seaside visitors, servant girls, etc. The whole of the 9s. available from the first class would be paid into a central fund, and medical attendance would be paid for at tariff rates (see SUPPLEMENT, April 19th, p. 334). For the second class payment would also be given per item of attendance, the funds to come from the localities in which the patients permanently resided. The latter scheme might reduce by a few pence the capitation fee now received of 7s. or 9s. On the question of excess mileage he said that unless the Denbighshire panel practitioners decided to continue the scheme promulgated last quarter of deducting 6d. a head per annum, no extra payments would be received for journeys over three miles, except in the case of a few practitioners who practised in mountainous districts, who would receive a share of the £8,000 allotted to the whole of Wales. As regards certificates, he announced that a simple form, making provision for "going on," "continuing on," and "going off" the sick list would shortly be issued for use in all cases. The question of malingering was, he said, largely a matter for the approved societies, but, if necessary, a medical referee would be appointed. The new drug tariff, he considered, differed very little from the old one, the average prices being the same. The 1d. asked for by the chemist for copying a prescription could be saved by giving prescriptions in duplicate as at present.

In reply to questions, Dr. Richards stated that in the

case of migratory persons staying in hospitals or convalescent homes, where the inmates usually received gratuitous medical attendance, no payments would be given under the Act. If practitioners desired, arrangements could be made with the Insurance Committee to fix uniform hours of attendance at surgery for insured persons. Materials for dressings could be obtained from the chemist on prescription for each case, but the Commissioners would not sanction the supply of dressings in bulk to be kept at the surgery. On being reminded of the injustice to the profession in that it had no directly elected representatives on the County Committee, Dr. Richards stated that this matter would be rectified after July 31st.

Dr. LLEWELLYN WILLIAMS detailed the methods of applying sanatorium benefits and the domiciliary treatment of tuberculosis in conjunction with the Consulting Medical Officer of the Welsh National Memorial Association.

The meeting accorded a hearty vote of thanks to Drs. Meredith Richards and Ll. Williams for their attendance and addresses, and the courteous manner in which they had replied to the numerous questions asked of them.

This was suitably acknowledged by these gentlemen.

Complaints having been received from the Pharmaceutical Committee with regard to excessive prescribing, it was resolved to appoint a subcommittee of three to investigate these complaints.

Owing to the lateness of the hour, the appointment of the medical members of the Subservice Committee was again deferred.

WEST SUFFOLK.

THE fourth meeting of the West Suffolk Local Medical Committee was held at Bury St. Edmunds on April 22nd.

Temporary Residents.—Memo. 159 I.C. was discussed, and the Committee concluded that no better solution of the problem could be found at present.

Proposed Rules for Insured Persons in Receipt of Medical Benefit.—The CHAIRMAN and SECRETARY submitted the following rules for consideration:

An insured person in receipt of medical benefit shall comply with the following rules:

(a) He shall obey the instructions of the practitioner attending him.

(b) He shall not conduct himself in a manner which is likely to retard his recovery.

(c) He shall not make unreasonable demands upon the professional services of the practitioner attending him.

(d) He shall, whenever his condition permits, attend at the surgery or place of residence of the practitioner attending him on such days and at such hours as may be appointed by the practitioner.

(e) He shall not summon the practitioner to visit him between the hours of 8 p.m. and 8 a.m. except in cases of serious emergency.

(f) He shall, when his condition requires a home visit, give notice to the practitioner, if the circumstances of the case permit, before 10 a.m. on the day on which the visit is required.

(g) He shall not take a railway journey or sleep away from home without the consent of the practitioner attending him.

(h) He shall not summon the practitioner to visit him on a Sunday except in cases of urgency.

These rules were approved, and the Secretary was instructed to forward them to the Clerk to the Insurance Committee for consideration by the Medical Benefit Subcommittee. The Clerk to the Insurance Committee then reported to the meeting the replies to the recommendations put forward at the joint meeting held on April 15th as follows:

Recommendation: (1) Records.—Commissioners can not allow the adoption of any alternative to the card index at present. Suggestions may be considered later if experience shows any widespread desire for change.

(2) *Anaesthetics.*—Recommendation refused.

(3) *Income Limit.*—No decision yet.

(4) *Certificates.*—Approved by Medical Benefit Subcommittee, but the Committee states that it cannot interfere with friendly societies' rules.

(5) *Rules: accepted; (6) Night Calls, (7) Miscarriages, (8) Deputies, (9) Representation.*—Refused by the Commissioners.

(10) *Dressings.*—Withdrawn at joint meeting of Medical Special and Pharmaceutical Committees.

(11) *Medical Referees.*—Medical Benefit Subcommittee considered it not at present expedient to appoint one.

Dispensing in Rural Areas.—Medical Benefit Subcommittee agreed to the capitation payment of 9s. per annum to practitioners who dispense.

Pharmacopœia.—A Subcommittee was appointed to prepare a pharmacopœia for use in the area.

WEST RIDING OF YORKSHIRE.

THE seventh meeting of the Local Medical Committee for the West Riding of Yorkshire was held on April 11th; Dr. MAY occupied the chair, and twenty representatives were present.

Mileage.—It was reported that the Medical Benefit Subcommittee had approved the recommendation that mileage should be paid on the capitation system.

Rules for Administration of Medical Benefit.—It was resolved to ask that the rules for the administration of medical benefit should be supplied not only to doctors, but also to insured persons where desired.

Conference with Chemists.—It was reported that a conference between representatives of the Insurance Committee, the West Riding County Pharmacists' Association, and the Local Medical Committee had been held and agreements arrived at on the points considered. Drs. Eames, Fry, and Gabriel were appointed a subcommittee to draw up a pharmacopœia.

Income Limit.—After discussion, the following resolutions were carried unanimously and directed to be sent to the Insurance Committee:

That all insured persons whose incomes reach £160 per annum should be regarded as outside the receipt of medical benefit.

That the onus of reporting those insured persons whose incomes reach £160 should be removed from the medical attendant.

District Insurance Committees.—The scheme for the appointment of District Insurance Committees, together with a letter from the Clerk to the Insurance Committee requesting that the appointment of medical members should be made through the Local Medical Committee, was received, and it was agreed:

That each Representative shall call the doctors together in his own district as soon as possible to make the required nominations, which are to be forwarded to the Honorary Secretary.

HAMPSTEAD.

A MEETING of the Hampstead Provisional Medical Committee was held on April 23rd. Dr. FORD ANDERSON was in the chair, and seven members were present.

A letter was read from the Secretary to the Insurance Commissioners, England, stating that the scheme for the formation of a District Insurance Committee for the borough of Hampstead had not yet been sanctioned. A communication from the Medical Secretary of the British Medical Association with reference to charges by chemists for copying prescriptions was read, and the Honorary Secretary instructed to ask for more definite information as to the nature and source of the imposition.

EDINBURGH.

At a meeting of the medical practitioners resident in the Edinburgh area, on April 23rd, the Statutory Local Medical Committee for the purposes of the National Insurance Act was elected as follows:

Dr. D. M'F. Barker
Dr. L. F. Bianchi
Dr. J. M. Bowie
Dr. Wilson Buchanan
Dr. J. Aitken Clark
Dr. John Craig
Dr. W. J. Crow
Dr. J. M. Darling
Dr. M. Dewar
Dr. T. Finlay
Dr. F. W. N. Haultain
Dr. R. J. Johnston
Dr. Angus Macdonald
Dr. A. M. M'Intosh
Dr. J. M'Laren
Dr. R. M'Laren
Dr. M. M'Larty
Dr. W. L. Martin

Dr. A. A. Matheson
Dr. R. M. Matheson
Dr. W. Morrison Milne
Dr. J. Murray
Dr. John Orr
Sir R. W. Philip
Dr. R. Robertson
Dr. R. M'D. Robertson
Miss E. Selkirk
Dr. J. W. Senter
Dr. J. A. Shoolbread
Dr. A. T. Sloan
Dr. R. Thin
Dr. A. Veitch
Dr. Norman Walker
Dr. Chalmers Watson
Dr. A. Wilson
Dr. James Wilson

MEETINGS OF INSURANCE COMMITTEES.

LONDON.

Extension of Medical Ticket.

At the meeting of the London Insurance Committee on April 24th the Medical Benefit Subcommittee recommended the extension of the medical ticket until July 14th, in order that the medical register might be completed and insured persons given a further opportunity of selecting their doctors.

Mr. ROCKLIFFE desired to move that doctors with more than 2,000 patients on their lists should be required not to accept any more, but was ruled out of order by the CHAIRMAN, who said that the question was too important to be discussed as a matter of urgency. Mr. ROCKLIFFE then moved the adjournment, and in the course of his remarks said that a circular recently issued purported to show that no fewer than eighty doctors had over 2,000 patients, a score had over 3,000, and some had over 4,000, 5,000, and even 6,000 patients. He added that 400,000 persons in London, or nearly one-third of the total, had not yet selected their doctors, and it would be monstrous to allow practitioners with an excessive list to go on accepting additional patients. The motion was lost by a narrow majority.

[At a meeting of the Medical Benefit Subcommittee, on April 30th, a return showing the number of insured persons on the lists of eighty doctors was considered, and the subcommittee made certain recommendations, but it was pointed out that the three doctors on the panel with over 5,000 patients each had partners who shared in the work. The statement made by Mr. Dawes, Chairman of the Committee, in the House of Commons on the same day, is noted elsewhere.]

Acceptance of a Limited Number of Patients.

The subcommittee also reported that it had had under consideration representations from medical men who expressed willingness to join the panel if they were permitted to limit the total number of persons whose treatment they were expected to undertake. It appeared that the extent of the private practices of a number of medical men was a bar to their unconditional consent to join the panel. In this connexion the subcommittee quoted an answer given in the House of Commons on February 14th by the Financial Secretary to the Treasury, to the effect that if an Insurance Committee allowed doctors to accept a limited number of lives these must be an "average sample" of lives, and the approval of other doctors on the panel must be obtained. The subcommittee understood that the suggested limitation would enable a large number of medical practitioners to join the panel. The Insurance Commissioners had stated that there would be no necessity to include names of medical practitioners in the lists of doctors supplied for use in each metropolitan borough, provided that their names were included in the alphabetical list for the whole county, and that this list was publicly exhibited. The medical practitioners on the panel had already agreed to a proposal to allow a doctor to limit the number of insured persons accepted by him.

The subcommittee recommended that doctors should be permitted to join the panel for the purpose of treating a limited number of persons, and this was approved.

A Complaint.

At the meeting of the Committee, on April 3rd, the Medical Service Subcommittee reported that a complaint had been made of a medical practitioner on the panel that when asked to attend a patient he said he wanted "live men, not dying ones." The doctor denied absolutely the whole of the circumstances, but the subcommittee, after careful inquiry, reported that it was satisfied the statements made by the complainant were correct. A recommendation that a copy of the report be forwarded to the practitioner was referred back to the subcommittee on the ground that more stringent action should be taken.

The matter again came before the Committee on April 24th, when Mr. R. C. K. ENSOR said that under the Regulations the Committee had no middle course between the extreme measure of reporting to the Commissioners with a view to removal of the doctor from the panel and doing nothing.

Mr. E. B. TURNER asked if it was not possible for the Committee to do something more definite than pass a vote of censure. It was very necessary that it should have some method of marking its view of such conduct.

Mr. O. E. WARBURG, the Chairman of the Subcommittee, remarked that the punishment in this case was not contained in the fact that a transference of the patient to another medical man was proposed. That was merely incidental; the subcommittee felt that in conveying to the doctor on the authority of the Insurance Committee that, after hearing his evidence in full, the Committee had

come to the conclusion he was not speaking the truth, a penalty of some severity was being inflicted. This expression of opinion would be on record, and it was tantamount to a reprimand.

The Committee approved of the action taken by the subcommittee.

SELKIRKSHIRE.

The practitioners' representatives on the Insurance Committee for Selkirkshire are Dr. Muir of Selkirk and Dr. Tyrrell of Galashiels. These two gentlemen are respectively Chairman and Secretary of the Local Medical Committee. The Commissioners' representative is Dr. Henderson, Galashiels, and the County Council Representative is Dr. Wilson, Selkirk.

REPORTS OF LOCAL ACTION.

MANCHESTER AND DISTRICT.

THE LANCASHIRE COUNTY INSURANCE AREA.

THE practitioners of Area No. 22 of the Lancashire County Insurance Committee, which comprises many of the districts immediately outside Manchester and Salford on the west, have apparently come to the conclusion that the system of payment by attendance which was in force for the first three months' trial is not, on the whole, satisfactory. The system adopted in January was in most respects similar to that adopted in Manchester and Salford, the quarter's income for medical benefit being pooled and payment by attendance being made out of the pool, as far as it went, according to an agreed scale of fees. The Manchester and Salford practitioners have decided to continue this system until July, as it was thought that it had hardly had a fair trial in the first three months, which are always the busiest in the year. The county practitioners, on the other hand, seem to have made up their minds that, on the whole, the system of payment by attendance lends itself to certain abuses, especially the risk of over-attendance, which are absent from the capitation system, and it has accordingly been decided to adopt the capitation system. Probably the labour involved in checking all the separate bills of each doctor has had something to do with this decision. It was felt, too, that, even at its best, the system of payment by attendance from a pool places every doctor to some extent at the mercy of any particular doctor whose custom may be to attend patients more frequently than the average, and to have to cut down any doctors' bills showing attendances above the average, before allowing them to rank for the division of the pool, was felt to be a most invidious task which, however carefully performed, would be certain to cause dissatisfaction in some quarters. In spite, however, of these disadvantages there still remain a considerable number of practitioners who would prefer to have continued the system of payment by attendance as approximating more nearly to private practice than the capitation system, and it is possible that the reduction in the number of practitioners on the new panel may partly be due to this cause. On the panel issued in February 168 names appeared, but in the April list just issued there are only 134 names. Three or four names appear for the first time, leaving between thirty and forty who have refused, or possibly in some cases neglected, to give in their names for the new list under the capitation system. On looking over these who have dropped off the panel a considerable number are seen to be practitioners not residing in the county area, but in Manchester or Salford or other areas, in some cases residing several miles away from the nearest part of the area in question. These probably joined the county panel in January in the hope of retaining individual patients whom they had previously attended privately, while others, perhaps, joined on the bare chance of obtaining county patients. But there still remain a number of practitioners actually residing in the county area who have deliberately refused to continue on the panel from dissatisfaction on various grounds with the insurance system. In order as far as possible to lessen the number of unnecessary calls on the doctors and calls out of hours, the Lancashire Insurance Committee has just distributed a large number of circulars giving the rules for the conduct of persons in receipt of benefit, and drawing attention to the penalties

that may be inflicted for breach of the rules. It may be noted that the Salford Division of the British Medical Association comprises not only the borough of Salford, but a large part of the county area, so that many of the Salford practitioners are now under two systems—payment by attendance in the borough, and capitation system for any patients residing outside the borough in the county area. The same applies to a less degree to some of the Manchester Divisions.

IRELAND.

The Certification Grant.

As showing the inadequacy of the grant of £50,000 for medical certification in Ireland, the figures for King's County may be taken. It was estimated that about £600 would be available, to be divided among about twenty doctors, giving each of them £30 a year. One of the smaller dispensary districts is some 70 square miles in extent, and another is as much as 144 square miles. It can at once be seen that £30 would not go far towards paying the travelling expenses involved in signing certificates for patients in such scattered districts, without taking into consideration the time and trouble expended. It is not much wonder that the doctors of the county refused to form a panel. These figures are more or less typical of many county districts in Ireland—in fact, in many counties the areas are much larger and the population scantier, so that the amount of money available for each medical man would probably be less. £50,000, of course, looks large as a lump sum, and it has been skilfully and seductively dangled before the eyes of the notoriously overworked and underpaid Poor Law medical officers of Ireland, but at their meeting in Dublin, on April 21st, they showed that they had not allowed themselves to be dazzled by the magnitude of the sum, and definitely refused this dole from the £120,000 which is said to be Ireland's proper due.

Dublin.

At the last weekly meeting of the Insurance Committee for the County Borough of Dublin a Subcommittee of Inspection was appointed to visit sanatoriums and report upon patients sent by the Committee and the conditions of treatment generally. The following resolution was passed:

That the Insurance Commission be requested to allocate to this Committee the amount available for purposes of medical certification in the County Borough of Dublin, in order that the Committee may be in a position to negotiate with the medical profession in that area for the formation of a panel of doctors on terms to be arranged, subject to the approval of the Commission.

Clogheen Guardians and Outside Doctors.

The Clogheen Board of Guardians have passed a resolution strongly disapproving of outside doctors being employed by the Insurance Commissioners to certify in the cases of insured persons treated under the Medical Charities Act, adding:

We believe such a proposal to be objectionable for the reason that it will mean two sets of doctors in antagonism visiting the patients, and in this way cause much disagreeableness to the sick, and possibly retard their recovery. We are also of opinion that since there is about £120,000 of a proportionate grant due to Ireland, owing to the additional grant made to England for medical benefits, the just demands of the Irish Poor Law medical officers should be conceded.

SCOTLAND.

The Medical Ticket.

The Scottish Insurance Commissioners have received a number of representations that it is desirable that a medical ticket or other voucher should be in the hands of insured persons as an aid to identification. It has been pointed out that in many cases insured persons are not yet personally known to practitioners on whose list they will be placed, and that at certain times many insured persons will not be in possession of either a contribution card or an insurance ticket. In order to save the expense and trouble which would be caused to approved societies and insurance committees if a new medical ticket or voucher were to be issued to insured persons on the expiry of the existing medical ticket on April 30th, the Commissioners have proposed to continue the currency of the red medical ticket for the remainder of the present year—that is to say,

until January 14th, 1914. The question of a more permanent medical voucher and the method of supplying it to insured persons is under consideration.

Medical Grant to the Highlands and Islands.

The Secretary to the Treasury, at an interview with the members of Parliament for the Highland constituencies, announced that the Government had decided to give effect to the recommendations of Sir John Dewar's Committee on the Medical Condition of the Highlands and Islands. The announcement had been delayed owing to the difficulty of deciding whether the administration of the scheme should be entrusted to the Scottish Local Government Board, the Scottish Insurance Commissioners, or to a specially created body, as the Dewar Committee proposed. The last course has now been adopted. The new body will consist of representatives of the Local Government Board, the Scottish Education Department, the Board of Lunacy, and the Insurance Commissioners, with a chairman nominated by the Secretary for Scotland. The intention is to introduce a bill at an early date, and after its second reading to refer it to the Scottish Grand Committee.

The fact that the Government has adopted the proposals of the Committee may be taken as an indication that it is prepared to find the money declared to be necessary to carry out the scheme—£40,000 a year. It was at first thought that the money would enable the scheme to be started without legislation, but Mr. Masterman's announcement disposes of this idea.

Representatives of Insured Persons on Insurance Committees.

It has been felt, at least by medical men who serve on Insurance Committees, that the insured person has not been fully represented. The approved societies have been represented chiefly by paid officials, as, for example, by district superintendents of the different insurance societies in an insurance area. The Commissioners have issued regulations as to the manner of the appointment of representatives of insured persons on Insurance Committees, which will require careful study by the clerks of the different Insurance Committees, as the machinery seems rather cumbersome. Regulation 5 provides that the "Clerk shall ascertain the total number of insured persons resident within the area of the Committee," and then fix an "electoral unit," by dividing the total number of insured persons by the total number of representatives on the Committee to be appointed to represent insured persons; the resulting figure is to be the "electoral unit" for insured persons for that area. For electoral purposes all approved societies are divided into two classes. All approved societies having resident within the area of the Committee, as disclosed by the index slips, a number of members less than the figure representing the electoral unit will be classified by the clerk as B societies, and all approved societies having resident a number of members equal to a greater figure than that representing the electoral unit will be classified as A societies. From these electoral units delegates are to be appointed who meet with the clerk as returning officer; and the delegate in attendance from that B society having the largest number of members resident in the area, as shown by the return, will be called by the clerk to the chair, and will call on the delegates to nominate and elect the required number of representatives on the Committee. Election will be by the vote of the delegates in attendance, and each delegate will have a number of votes equal to the required number of representatives on the Committee. The election of representatives of A societies is to be made by the clerk sending a notice to each A society asking that a representative be appointed on the Committee.

INSURANCE ACT IN PARLIAMENT.

PAYMENTS TO MEDICAL AID ASSOCIATIONS.

CAPTAIN KNIGHT asked the Secretary to the Treasury whether there was any obligation on county committees to make payments, in advance or otherwise, to medical aid associations, approved under the Act, on account of members of approved societies who desired to take their medical benefit through such associations; and, if so, whether such payments ought to be made on the same

dates as those made to panel doctors?—Mr. Masterman said that an Insurance Committee might contribute towards the expenses of the treatment furnished by any approved institution to insured persons who were members of the institution. Before making any contribution towards the expenses of the treatment furnished by any approved institution the Insurance Committee would have to satisfy itself as to the cost of the treatment furnished by the institution, by inspection of the audited accounts or such other evidence as might be considered necessary. Subject to this and to a guarantee that the rules of the institution complied with the Medical Regulations and the conditions of the Parliamentary grant, it would be open to the Insurance Committee to make payments on account of the sum to be ultimately contributed to the institution on any date that might be convenient.

LEICESTERSHIRE INSURANCE COMMITTEE.

In reply to Mr. Cautley, who inquired as to the conditions under which medical benefit was given in the parishes of Woodhouse Eaves and Woodhouse, in Leicestershire, and as to the importation of a doctor from outside (Dr. Cullen), whilst, as stated in the question, about 200 insured persons had had their cards signed by a former medical officer and desired to be attended by him, Mr. Masterman said that as the Leicestershire Insurance Committee were unable to secure an adequate medical service in the parishes referred to they were authorized by the Commissioners, under the proviso to Section 15 (2) of the Act, to dispense with the panel system and to make a special arrangement whereby Dr. Cullen undertook to attend and treat all the insured persons in those parishes on condition that he was given the exclusive right of practising amongst the insured persons in that area for a period of three years from January 15th last. Dr. Cullen had the right possessed by every other duly-qualified medical practitioner of being included on a panel where the panel system existed. The Committee stated that the other doctor referred to in the question did not sign the medical tickets (with the exception of fifteen) until after the panel system in Woodhouse and Woodhouse Eaves had been dispensed with.

In further reply to Mr. Worthington Evans, Mr. Masterman said, so far as he understood, the reason for the action of the Leicestershire Insurance Committee was that otherwise it was unable to provide medical benefit for insured persons in that area.

CHOICE OF DOCTOR.

Viscount Valentia asked the Chancellor of the Exchequer whether he was aware that much indignation was felt by a considerable number of railway employees resident in Oxford who were unable to avail themselves, under the provisions of the Insurance Act and Regulations, of the services of a doctor who had for years attended them, and who, though willing to go upon the panel in respect of these patients and having obtained the consent of the Insurance Committee to do so, was precluded by the intervention of the panel doctors. Mr. Masterman said that acceptance of a limited number of insured persons by a doctor on the panel was only possible where attendance by doctors on the panel was assured for all insured persons in the area, and therefore could only be granted by an Insurance Committee with the consent of the doctors on the panel. The responsibility for treatment of the insured persons must be collective, and no one doctor could be allowed to select good lives amongst insured persons with the same remuneration per head as those who accepted a general average. In further reply to Mr. Worthington Evans, who inquired as to whether in this case there could be any question of choosing good lives, and whether Mr. Masterman would not make some effort to give the insured persons in question the doctor they wish to employ, Mr. Masterman said that the Insurance Committee must have the consent of the doctors on the panel before they could allow contracting out.

Mr. John Taylor asked the Secretary to the Treasury whether he was aware that a certain number of insured persons connected with lodges of the Durham Miners' Association were desirous of changing their doctor; that, when they signed for their present doctors, it was on the understanding that it held good for three months only; and that objection was now taken by the Insurance Com-

missioners to the transfer on the ground that the present arrangements held good for twelve months; and whether he would inquire into the matter with a view to the initial understanding being adhered to and the men being allowed to make the change of doctor desired.—Mr. Masterman replied that the matter was being investigated. In general insured persons might change their doctors within the year either by consent of doctor and patient or by consent of the Insurance Committee on complaint of the medical treatment received.

DUTIES OF MEDICAL MEN ON THE LIST.

In reply to Mr. Newdegate—who inquired whether panel doctors were not required by the Insurance Act to pay a visit to a patient at his or her own house, however ill that patient might be, during any twenty-four hours, if not requested to do so before 10 a.m.; and whether this regulation had been made owing to the immense load of work placed in many cases on panel doctors—Mr. Masterman said that the rule required the insured person to give notice to the doctor before some time, fixed by the Committee, in the morning of the day on which the visit was required, if, but only if, the circumstances of the case permitted. The rule therefore obviously did not apply to a case of urgency. In further reply, Mr. Masterman said that the conditions would be the same as prevail now and as had prevailed heretofore in ordinary private practice.

HERBALISTS AND CHRISTIAN SCIENTISTS.

In reply to Sir J. D. Rees, Mr. Masterman said that he had no information that any Insurance Committee had allowed any insured persons to make their own arrangements with herbalists or Christian Scientists. In reply to another question by Mr. F. Hall, Mr. Masterman said that, as he had explained on many previous occasions, only qualified medical practitioners registered under the Medical Acts were entitled to be included on a panel list.

INSURED PERSONS IN HOSPITAL.

Mr. Worthington Evans asked whether, in the case of an insured person without dependants having to pay 5s. a week for her maintenance in a hospital during a time when she was otherwise qualified for sick benefit, the fact that she was in a hospital prevented her society paying her sick benefit, although the society had made no arrangement for any payment to the hospital.—Mr. Masterman replied that under Section 12 of the Act, the sickness benefit was not payable directly to the insured person in the circumstances referred to, but the sum which would ordinarily have been payable might be applied by the society in the provision of surgical appliances or otherwise for the benefit of the insured person.

IRISH LABOURERS AND MEDICAL BENEFIT.

In reply to Major M'Calmont as to how Irish labourers coming to England, and paying the increased contributions which would make them entitled to medical benefit, could obtain that benefit, Mr. Masterman said that such a labourer should apply to the clerk of the Insurance Committee of the area to which he went, who would give him the necessary instructions; that he could always obtain the information as to whom application should be made from his approved society, and that generally he (Mr. Masterman) thought that an application addressed to the municipal offices of the borough or county to which he had moved would secure it for him. Mr. Masterman added that such a worker would have to make a contribution of an extra amount, as he would not previously have been paying for medical benefit in Ireland.

VALUE OF MEDICAL PRACTICES.

Mr. Chiozza Money asked the Secretary to the Treasury if he had observed that advertisements were now appearing pointing out the enhanced value of medical practices through the operation of the Insurance Act; and if he had been able to form any estimate of the total increase in the actual value of medical practices owing to the Act. Mr. Masterman said that his attention had been called to such advertisements, but he had no means of providing any estimate of the total increase in the value of medical practices.

SANATORIUM BENEFIT.

Mr. O'Grady asked the Secretary to the Treasury whether he had received a statement from the Leeds Insurance Committee showing that the estimated income

for sanatorium benefits is £9,893 15s.; and that on the year's working, if the provisions of the Insurance Act are to be fully carried out, the amount required will be £37,836 17s. 6d., showing a deficiency of £27,943 2s. 6d.; if so, what steps, if any, the Treasury intend taking to meet this case.—Mr. Masterman replied that the figures in the estimates of the Committee were being carefully considered, and he hoped that a conference would shortly take place, after which it would be easier to see what steps, if any, were needed to supplement the present provision for sanatorium benefits. He thought the estimates were excessive, as they were based on the assumptions that all applicants required institutional treatment, that all applicants admitted to the institutions required to stay there through the whole of a year, and that the number of beds required in this area would be about seven times the number required on the basis of the recommendations of the Astor report. Mr. Masterman has informed Mr. Cooper that a return supplementing that of February 12th of the number of insured persons suffering from tuberculosis who had applied for and were receiving treatment would be issued in the course of a few weeks.

AMENDMENT OF THE ACT.

In reply to Sir J. D. Rees, who inquired whether the Amending Bill would provide for free contracting out, for real choice of medical attendant, and for exclusion of married women outworkers. Mr. Masterman said that the first and third proposals of the hon. member were open to the gravest objections; the second was already provided for in the present Act.

In reply to Lord Henry Cavendish-Bentinck, who inquired as to whether any amendment could not be introduced into the Insurance Act with a view to preventing the exploitation of juvenile labour, that is, of children between 14 and 16 in various confectionery, fruit-preserving, pickle making, tea packing, and other trades in the East End of London. Mr. Masterman said he thought it was a matter which might be dealt with by other legislation, but he did not think it could be met by an amendment of the Insurance Act.

DEBATE ON THE ADMINISTRATION OF THE INSURANCE ACT.

On Wednesday, April 30th, a debate took place on the administration of the National Insurance Act. Colonel Chaloner, who had been successful in the ballot for motions which private members are entitled to bring on on Wednesday evenings, selecting their own subject, moved a general resolution to the effect that the administration of the National Insurance Act should be brought into harmony with the speeches of the Chancellor of the Exchequer before and during the passage of the Act. The Government whip issued indicated that it was regarded as tantamount to a vote of censure, and as a result there was a large attendance on the ministerial side.

Colonel Chaloner, in introducing his motion, complained for the most part of the position taken up by Insurance Committees in disallowing contracting out and thereby restricting the free choice of doctor to those whose names were on the medical list.

Mr. G. Locker-Lampson seconded the motion. He dealt first with the reserve funds of the friendly societies, but his speech was mainly directed to a criticism of the administration of medical and sanatorium benefits. He complained that the provision of laboratory aids for diagnosis was not regarded as a part of medical benefit, and instanced further cases of insured persons being refused contracting out of the lines suggested by Colonel Chaloner. He suggested that the disallowance of contracting out had resulted in a number of doctors on the panel having a much larger number of persons on their lists than they were able properly to attend, and he quoted three cases in the London district which, he thought, supported his contention.

Mr. Dawes, the Chairman of the London Insurance Committee, deprecated the use in debate of the names of individual men of high qualifications and of a private and confidential document. He showed that in the three cases quoted by Mr. Locker-Lampson he had either been misinformed or was under a wrong impression. Dr. Salter of Bermondsey, who had 6,017 insured persons on his list, had four partners, all of whom were on the panel, and all of whom by arrangements had no insured persons

in their own names, but their names were good with Dr. Salter as one firm. The second case quoted—that of Dr. Young—was similar, for Dr. Young and his four partners had 6,929 insured persons on their list. The third case—that of Dr. Madden, with 5,560 insured persons—was also similar; he had one partner. The average per doctor, therefore, in the case of Dr. Salter and his partners was about 1,200 each. In the case of Dr. Young 1,400 each, in the case of Dr. Madden 2,780 each. With regard to the allegation that a large number of complaints had been lodged, and demands made to be allowed to contract out, he said that in London there were 1,430,000 insured persons, but up to the present only 19 complaints and 2,900 applications to be allowed to make their own arrangements had been received; of these 293 had been granted. The Committee was willing to grant exceptions to persons whose occupation rendered it impossible for them to secure the services of a particular doctor, to those who desired a special form of treatment, to those suffering from special ailments (including all cases of tuberculosis and heart disease), and to women who desired a woman doctor where there were none on the panel within a reasonable distance; the Committee was very willing that medical officers of hospitals and general practitioners should come on the list for a limited number of insured persons so long as there was no selection between good and bad lives. He said that of the nineteen complaints in London the actual number against doctors was only 8; several of the complaints related to certificates and such like matters. There were now 1,250 qualified medical practitioners on the London panel, and the number was increasing every day; the Committee was only too anxious to deal with every real complaint, and was receiving considerable assistance in making the Act acceptable from gentlemen who had been prominently associated with the British Medical Association. As to the complaint of the inefficiency of the sanatorium treatment, he described the difficulties in obtaining beds, and said that at the present moment 1,425 people for whom the London Committee was responsible were undergoing treatment for tuberculosis: 557 were in sanatoriums, 113 in the hospitals, and 267 at dispensaries; 24 were attending hospitals as outpatients, and 464 were receiving domiciliary treatment.

Mr. Arnold Ward, in continuing the debate, criticized the restriction of the free choice of doctor, and asked for the facts as to the grant on capital expenditure for sanatoriums.

Mr. J. Thomas (Derby), an officer of the Amalgamated Society of Railway servants, generally expressed his satisfaction with the experience so far, and said that the difficulties were less than they anticipated. He, however, seriously complained as to the expenses of administration, and suggested that great economies could be effected by the issue of six-monthly cards instead of quarterly cards, and that some arrangement should be made for paying the expenses of members who attended the work of Insurance Committees.

Mr. Masterman, in reply, expressed his readiness to consider the question of a six-monthly card in connexion with the forthcoming amending Act, and said that the Government was desirous of removing any real difficulties that could be dealt with in an amending Act. The places where people had been deprived of free choice of doctor owing to the suspension of the panel system were few and small, containing in all 27,000 insured persons out of 14,000,000 insured persons. The numbers of doctors on the panels on April 14th was 18,584, which he thought was between 80 and 90 per cent. of the doctors engaged in industrial practice. In fifty-eight Insurance Committees out of ninety-eight, over 80 per cent. of the practitioners were on the panel. In a large number of big towns and counties, in consequence of medical men outside the area putting their names on the panel, more than 100 per cent. of the doctors resident in the area were on the panel. He described the difficulty of dogmatizing as to the number which any given medical man could with proper organization deal with, and instanced the case of Swindon, where the average number of persons for each doctor was over 5,000. He contended that in the poorer districts of the cities there had not hitherto been a sufficient staff of medical men. Over 99½ per cent. of the insured population had complete free choice of doctor in consequence of

the large proportion of medical men who were on the panels. He paid a compliment to the work of the Insurance Commissioners, and expressed the anxiety of the Government to deal with real difficulties. He hoped the controversial spirit on this subject might be abandoned; the Government would be glad to receive the co-operation of the Opposition.

Mr. H. W. Forster, who concluded the debate for the Opposition, agreed with Mr. Masterman in his compliment to the Commissioners, and expressed his desire to co-operate in making the administration acceptable and successful. He complained that the Insurance Committees had taken the line they had with respect to contracting out largely in consequence of pressure from the Chancellor of the Exchequer, and maintained that an attempt had not been made in a sufficiently liberal spirit to give effect to the Chancellor's undertakings. He brought forward the case of the Scottish Clerks' Society, and outlined their scheme for providing medical benefit for their members, which was likely to be destroyed by the action of the Commissioners, and, without asking for a reply at that stage, invited the Government to give consideration to the case he put before it. (The Chancellor was understood to assent to this.) He said that notwithstanding the rosy picture presented by Mr. Masterman, there were serious and well-grounded dissatisfaction in many parts of the country as to the conditions under which medical benefit was being administered, and it was making the Act seriously unpopular. The motion had been brought forward in the hope that good would result to the insured people and that the benefits would be improved.

On a division the motion was rejected by 270 to 77.

CORRESPONDENCE.

FUTURE ACTION.

DR. E. H. WORTH (Streatham) writes: The idea of Dr. Larkham that the non-panel men all over the country should form a combination is an excellent one.

May I suggest that we should all join the National Medical Guild? This is really the old London Medical Committee, which is the only body that helped the London men to stick to their pledge. I freely grant that the name of "trade union" is an unpleasant one, but when we have to deal with men like Mr. Lloyd George, who refused to take the advice of the profession, a trade union is about the only society that can hold its own with them.

We have to fight the good fight with all our might, counting financial loss as next to nothing so long as the honour and dignity of the profession of medicine is upheld.

The worst feature of this Act, to my mind, is the driving away of poor people who have looked upon their doctor as a friend for a number of years.

I trust there is a time of reckoning coming both for the politicians and also for the late members of the Council who have caused their weaker brethren to fall.

MEDICAL BENEFIT TO TEMPORARY RESIDENTS.

DR. W. G. BENNETT (Worcester) writes: It is strong evidence of the state of lethargy into which our profession appears to have fallen that the latest memorandum of the Insurance Commissioners relative to the treatment of temporary residents has been received in almost absolute silence. With the exception of a letter from Dr. Pridmore, of the Isle of Wight, and some meagre notices in the JOURNAL, we apparently think that the matter is too trivial for notice.

Do you, Sir, and the profession generally realize that this is far and away the most important matter which has arisen since the Insurance Bill became law, as far as our interests are concerned? It is nothing less than an attempt to cut down our capitation fees of 7s. by an indefinite amount, which we are wholly unable to check. We do not now know whether we shall receive 5s. 6d. or 6s. or what per head.

The scale of fees which are suggested seem reasonable as such (although nearly double that which I receive per attendance on insured persons), but they should be paid out of a separate fund, not out of the pockets of other practitioners.

We must resist the latest attempt to popularize the Insurance Act at our expense. If people can afford to go

to the seaside for holidays they can pay for their own medical attendance, as heretofore.

If our committee are firm we ought to win on this particular point, as the proposed action would constitute a violation of contract and be apparently illegal.

DR. T. CUMING ASKIN (Woodbridge, Suffolk) writes: I opened my JOURNAL this morning hastily, anxiously, expecting to find some definite action had been taken in connexion with Memorandum 161/I.C., which was merely printed in last week's SUPPLEMENT without any comment.

Apart from Dr. Pridmore's excellent letter, this supremely important matter is practically not mentioned this week. What is the State Sickness Insurance Committee doing?

Is the Association absolutely helpless? Is this vital matter not worth even a leading article? The apparent apathy and indifference of the profession is appalling, and the attitude of the so-called leaders of the profession is and has been positively wicked. They seem quite unconcerned, and yet this Act will kill scientific medicine if not amended. As far as general practice is concerned, it will be a case of one huge, hateful club.

DR. J. CUTHBERTSON WALKER (Rochdale) writes: Most members of the profession will heartily agree with the remarks made by Dr. Pridmore in your issue of April 26th. The novel proposals of the Commissioners for dealing with the question of the medical treatment of temporary residents constitute the first nibble of the Government at our inadequate capitation fee. One cannot help wondering whether the next bite will be for the support of medical referees.

In the first place, the assumption contained in Memo. 161/I.C., that temporary residents in any locality are provided for in respect of medical attendance by the Revised Regulations, is entirely unwarranted. Regulation 22 reads:

Insured Person Applying during Year.

22. Where an insured person who has elected to receive treatment under the arrangements made by the Committee with practitioners on the panel changes his residence to the area of another Committee, he shall upon arriving in that area give notice to the last-mentioned Committee, and thereupon that Committee shall make arrangements whereby he can receive treatment including drugs and appliances in that area, and such adjustment shall be made between the two Committees as is equitable in the circumstances, regard being had to the proportion of the year spent by the insured person in the area of each of the Committees respectively, and the arrangements made by each of the Committees with the practitioners on the panel in their respective areas shall be so adjusted as to conform with the adjustments so made.

The heading of the foregoing paragraph, the expression "changes his residence" (which cannot fairly be held to mean going to the seaside for a week or a month), and the whole tenor of the Regulation show clearly that the question of providing temporary residents with medical attendance was not contemplated for a moment. If it were otherwise, the statement in the circular that "insured persons cannot be induced to give notice" is a confession of incompetence on the part of the Commissioners to insist on the carrying out of their own regulations.

The whole procedure, as affecting the practitioners on the panel, is not calculated to inspire confidence in the methods of the Insurance Commissioners. But by far the most serious matter, and one which has apparently escaped general attention, is the studied ignoring of the British Medical Association as the mouthpiece of, and proper channel of communication with, the panel practitioners. This has been observable ever since the coming into force of medical benefit, and calls for prompt action by the Association. If it is to be permanently ignored, there is little hope for any concerted action by the profession. No official negotiations with the Commissioners should be countenanced, except such as are carried on through the British Medical Association.

MEDICAL REFEREE.

DR. SHEPHERD BOYD (Harrogate) writes: Under the new conditions of medical work it will be absolutely necessary to have the proper men appointed for the work of medical referees. Men of experience who have worked amongst and understand the ways of the working man will be of enormous advantage to the Government.

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

BARNLEY: BECKETT HOSPITAL AND DISPENSARY.—Second House-Surgeon. Salary, £100 per annum.

DIARY FOR THE WEEK.

MONDAY.

ROYAL SOCIETY OF MEDICINE, 1, Wimpole Street, W.—Special Meeting of Fellows, 5 p.m. Discussion: On Alimentary Toxemia: Its Sources, Consequences, and Treatment (fifth session). To be reopened by Professor H. J. Hntchens and continued by Sir James Goodhart and others.

TUESDAY.

RÖNTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Agenda:—Paper: Dr. Hernaman Johnson, Darlington: Theory and Practice in Ray Therapeutics. Demonstration: Dr. Hampson: A New X-Ray Couch.

ROYAL SOCIETY OF MEDICINE: SECTION OF SURGERY, 5.30 p.m.—(1) Annual Meeting. (2) Papers: Mr. J. Hutchinson: The Symptoms produced by Aberrant Renal Arteries, and a Clinical Study of the Indications and Results of Operation.

Mr. H. S. Pendlebury: Two Cases of Excision of Spleen. Mr. F. Kidd: Two Cases of Splenectomy—(a) for Banti's Disease, (b) for Enlarged Spleen (? cause). Mr. J. Hutchinson: Case of Splenic Anaemia after Operation.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE, 1, Wimpole Street, W.—Special Meeting of Fellows, 5 p.m. Discussion: On Alimentary Toxemia: Its Sources, Consequences, and Treatment (final meeting). To be reopened by Dr. H. D. Rolleston and summed up by the President and Dr. W. Hale White.

SECTION OF OPHTHALMOLOGY, 8.30 p.m.—Demonstration of Cases and Specimens.

THURSDAY.

ROYAL SOCIETY, Burlington House, W., 4.30 p.m.—The following are among the probable papers for reading:—A. D. Waller, F.R.S.: The Various Inclinations of the Electrical Axis of the Human Heart. Surgeon-General Sir D. Bruce, F.R.S., Majors D. Harvey and A. E. Hamerton, and Lady Bruce: *Trypanosoma pecorum* (Nyasaland). S. Russ, D.Sc., and Helen Chambers, M.D.: On the Action of Radium Rays upon the Cells of Jensen's Rat Sarcoma.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—General Medical and Surgical Clinics, daily. Throat, Nose, and Ear: Monday and Thursday. Skin: Tuesday and Friday. Eye: Wednesday and Saturday. Pathology: Wednesday. Radiography: Saturday. Special lectures each week.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.—Lectures daily (Saturday excepted) at 12 and 4 p.m. Practical Laboratory work daily (Saturday excepted), 10 to 12 a.m., 2 to 4 p.m. Medical Clinics, Tuesday and Thursday at 3 p.m. Operations, Friday at 3 p.m.

MANCHESTER: ANCOATS HOSPITAL.—Post-Graduate Clinic, Thursday, 4.15 p.m., Chronic Joint Disease: Diagnosis and Treatment.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following Clinical Demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Medical; Friday, Ear, Nose, and Throat. Special Lectures at 5.15 p.m. each day except Friday and Saturday.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Tuesday and Friday, 3.30 p.m.: Treatment of Neurasthenia.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—Wednesday, 4 p.m.: Demonstration of Skin Cases.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith Road, W.—Medical and Surgical Clinics, 2 p.m.: X Rays and Operations daily. Gynaecology: Monday, Tuesday, Wednesday, and Friday. Eye: Monday, Wednesday, Thursday, and Saturday. Throat, Nose, and Ear: Tuesday, Wednesday, Friday, and Saturday. Skin: Tuesday and Friday. Pediatrics: Saturday.

[For further particulars of Lectures consult the Index to Advertisements.]

DIARY OF THE ASSOCIATION.

| Date. | Meetings to be Held. | Date. | Meetings to be Held. |
|---------|--|----------|---|

8. Motion: That the following Recommendation B of Council be adopted (paragraph 23 of Annual Report of Council, page 369):

That the taking of verbatim shorthand notes of the Representative and Council Meetings is unnecessary and should be discontinued. In order to minimize the risk of any inaccuracy occurring in the preparation of the Minutes, the Chairmen of these bodies respectively be requested to enforce that a written copy of a Motion or Amendment to be submitted to the Meeting be furnished for the information of the Chairman.

Proposed Rescission of Minute 187 of A. R. M., 1905, as to Bound Volumes of Supplements.

9. Motion: That the following Recommendation C of Council be adopted (paragraph 23 of Annual Report of Council, page 369):

That the Representative Body rescind Resolution No. 187, passed at Leicester, 1905, which authorizes the sending of a bound volume of the Supplement to the Secretaries of all Divisions, namely: "That the Supplements be bound and sent down twice annually to Secretaries and Representatives of Divisions, and that such volumes remain the property of Divisions."

Remainder of Report under heading "(B) Finance."

10. Motion: That the remainder of the Annual Report of Council under heading "(B) Finance" (paragraphs 11 to 24, see pages 362-9) be approved.

Subscriptions.

11. Rider (arising out of paragraph 11, "Financial Statement") by SOUTH-EASTERN BRANCH:

That the time has arrived when the Representative Body should seriously consider the advisability of raising the annual subscription.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

(C) Organization.

Question of New Company: Question of Advisability of Association becoming a Trade Union.

12. Motion: That the following Recommendation A of Council (paragraph 26, page 371) be adopted:

That the Association do not proceed further at present with the proposed formation of a new Company.

13. Motion: That the following Recommendation B of Council (paragraph 26, page 371) be adopted:

That the Representative Body instruct the Council to take the necessary steps to obtain an extension of the Memorandum of the present Company to include the power of borrowing money on mortgage or otherwise.

14. Motion (by the CHAIRMAN): That the question raised in the following Minutes 66-8 of the Annual Representative Meeting, 1912, be further considered:

66. Proposed: That it be an instruction to the Council of the Association to seek to obtain the opinion of the Divisions as to the desirability of the Association becoming a registered trade union.

67. Whereupon an amendment:

That it be an instruction to the Council of the Association to report to the Divisions on and obtain their opinion as to the desirability of the Association becoming a registered trade union.

The amendment was carried.

68. On being put as a substantive motion, an amendment was moved:

That the consideration of this subject be postponed to the next Annual Representative Meeting.

The amendment was carried; also as a substantive motion.

15. Motion by LEICESTER AND RUTLAND:

That it be an instruction to the Council to consider the advisability of forming a union of medical practitioners, registered under the Trade Union Acts, for such of the members of the Association and other medical practitioners as may desire to join such a union.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

Question of Mode of Election of Members of Council by Branches outside United Kingdom.

16. Motion: That the following Recommendation C of Council (paragraph 27, page 371) be adopted:

That the following new By-law 46 be adopted by the Annual Representative Meeting, 1913, in substitution for existing By-law 46:

Mode of Election by Groups not in United Kingdom.

46.—(1) The election of seven Members of Council by the Groups of Branches not in the United Kingdom shall be conducted in the manner prescribed by this By-law.

(2) All nominations of candidates shall be in writing sent to the Association so as to be received at the Head Office on or before such day, not being later than the 15th February in each year, as shall be specified for the purpose by a notice published in the JOURNAL during the second or third week of October in the preceding year, and no nomination paper received after the day so specified shall be valid.

(3) The said notice shall prescribe a form in which the nominations are to be made, and the nominations shall be made in the form so prescribed, or in a form to the like effect. Nomination papers may be signed by not less than three members of any Branch comprised in the group.

(4) As soon as may be after the 15th day of February in each year:—

(a) In the case of any Group for which one candidate only has been duly nominated, there shall be published in the JOURNAL a notice that such candidate has been elected as Member for that Group; and—

(b) In the case of any Group for which more candidates than one have been duly nominated, a voting paper shall be sent by post from the Head Office to each Member of every Branch comprised in that Group.

(5) Every voting paper shall contain a statement that the same must be returned to the Association so as to be received at the Head Office on or before a specified day (not being later than the succeeding 15th day of May), and no voting paper received after the day so specified shall be counted.

(6) Not later than the second week in the succeeding month of June, a notice of the result of the elections shall be published in the JOURNAL.

[Existing By-law 46:

Mode of Election by Groups not in the United Kingdom.

46.—(1) The election of seven Members of Council by the Groups of Branches not in the United Kingdom shall be by voting papers sent by post by the Secretary of each Branch comprised in the Group to each Member of that Branch.

(2) The said voting papers shall contain the names of those candidates who have been nominated either (a) by a Division or (b) in writing, signed by not less than three Members of any such Branch on or before an appointed day, of which such notice shall have been given in the JOURNAL as the Rules of the Branch may prescribe.

(3) The said voting papers shall contain such other particulars (if any), and shall be sent to such one of the said Secretaries (hereinafter called "the Returning Officer"), and within such time as the Council may from time to time prescribe by notice given as aforesaid.

(4) It shall be the duty of the Returning Officer to count the votes given for each candidate and to make a return of the result of the election to the Association at the Head Office.

(5) The expenses incurred by each Branch in respect of the election shall be borne by the Association.]

17. Amendment by BOMBAY BRANCH:

That no alterations be effected in By-law 46 (1), (2), (3), (4), and (5), as the present arrangements have worked very satisfactorily.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

*Election by Branches of Members of Council for 1914-15.**(a) Grouping of Branches in United Kingdom for 1914-15.*

18. **Motion:** That the following Recommendation D of Council (paragraph 29, page 372) be adopted:

That the Branches in the United Kingdom be grouped for election of Members of Council for the year 1914-15 in the same way as for the year 1913-14.

(NOTE.—For the scheme of grouping for 1913-14 see Appendix V to Annual Report of Council, page 391.)

(b) Grouping of Branches outside United Kingdom for 1914-15.

19. **Motion:** That the following Recommendation E of Council (paragraph 30, page 372) be adopted:

That the Branches outside the United Kingdom be grouped for the election of Members of Council for the year 1914-15 in the same way as for the year 1913-14.

(NOTE.—For the scheme of grouping for 1913-14 see Appendix VII to Annual Report of Council, page 394.)

20. **Amendment by BOMBAY BRANCH:**

That the Ceylon Branch be grouped with the Far Eastern Branches, leaving Indian Branches grouped into one.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

Question of Payment of Expenses of Representatives.

21. **Motion:** That the following Recommendation F of Council (paragraph 31, page 372) be adopted:

That, having regard to the existing state of the finances of the Association, the time is still inopportune for acceding to the proposal that the out-of-pocket expenses of Representatives at Representative Meetings, other than their travelling expenses as at present, be paid out of the funds of the Association.

Election of Members by Branches.

22. **Motion:** That the following Recommendation G of Council (paragraph 34, page 372) be adopted:

That the regulations as to election of members remain as at present.

Representatives and Deputy-Representatives.

23. **Motion:** That the following Recommendation H of Council (paragraph 36, page 373) be adopted:

That the Council be instructed to prepare the alterations in the regulations of the Association necessary to carry out the following suggestions contained in paragraph 36, subparagraph 2, of the Annual Report of Council:

(1) The Representative of a Constituency should be able to resign his position.

(2) Any vacancy arising should be filled by the Constituency in accordance with the Rules of the Division or Divisions forming the Constituency.

(3) If a Representative be permitted to resign, the Constituency should not be empowered to dismiss a Representative, but should be able, at a special meeting called for the purpose and by a two-thirds majority of those present and voting, to call upon a Representative to resign.*

(4) It would be inadvisable to allow a Deputy to act for a Constituency during such portion only of a Meeting as the Representative might be unable to attend.

Question of Appeals to Council in connexion with Ethical Decisions of Councils of Branches outside United Kingdom.

24. **Motion:** That the following Recommendation I of Council (paragraph 37, page 373) be adopted:

That in order to carry out the proposal contained in Minute 255 of the Annual Representative Meeting,

1912, the following words be added by the Annual Representative Meeting, 1913, to the definition of the "Duties, Powers, etc.," of the Central Ethical Committee, contained in the Schedule to the By-laws:

"Provided that, notwithstanding the foregoing provisions, the Committee shall not adjudicate in or entertain any such matter of dispute as aforesaid which has arisen in a Branch not in the United Kingdom having a membership of not less than thirty, except upon the request of the Council of that Branch."

[Minute 255 of A. R. M., 1912, referred to:]

256. Resolved: That the following words be added at the end of the statement of duties, powers, etc., of the Central Ethical Committee in the Schedule to the present By-laws:

Where an ethical complaint has been dealt with by the Council of a Branch outside the United Kingdom, an appeal to the Council of the Association shall not be allowed except by permission of the Council of the Branch.

[Extract from present Schedule to By-laws:]

Duties, Powers, etc., of Central Ethical Committee.

To advise the Council on questions connected with Rules of Divisions and Branches relating to professional conduct, to investigate and report to the Council upon the cases of members whose conduct is to be considered by the Council on the representation of Divisions or Branches pursuant to the Regulations, and generally to advise and, where so directed, act for the Council on all questions of professional conduct; also to adjudicate in matters of dispute as to professional conduct arising between members of the Association or members of the profession, or at the discretion of the Committee to refer any question arising in connexion with such a dispute to any Division or Branch, or to any Divisions or Branches jointly, for investigation or for adjudication subject to an appeal to the Committee; and so that any person directly concerned in such a dispute shall have a right of appeal to the Council from the decision of the Committee, and that the decision of the Committee subject to such appeal, and the decision of the Council upon any such appeal shall be binding upon the parties and upon all members of the Association.]

Co-ordination of Action of Divisions and Branches with Action of Local Medical Committees and Medical Members of Insurance Committees.

25. **Motion:** That the following Recommendation J of Council (paragraph 38, page 373) be adopted:

That By-laws 16 and 18 of the Association be amended to read as follows respectively (words proposed to be inserted are printed in italics):

By-law 16:

Local Management: Branches.

16. The management of the affairs of each Branch shall, save as otherwise provided in the By-laws, be vested in a Branch Council, composed of the following members:

(a) Those Members of the Council who are elected (as hereinafter provided) by the Branch or by any group of Branches to which the Branch belongs, or (wholly or in part) by Representatives of Constituencies comprised in the Branch.

(b) The Members elected to represent on the Representative Body the Divisions comprised in the Branch.

(c) Such Officers of the Branch as the Branch shall declare to be members *ex officio* of the Branch Council.

(d) Such Members (if any) of any Local Medical Committee formed under the National Insurance Act, 1911, and such Medical Members (if any) of any Insurance Committee formed under that Act, being (in either case) ordinary Members of the Association resident within the area of the Branch as the Branch may declare to be Members *ex officio* of the Branch Council.

(e) In the case of a Branch comprising more Divisions than one, Members elected by such Divisions in such manner that the number to be

* The Recommendation of Council contemplated a "two-thirds" majority, and the words "three-fourths" were printed in the Annual Report of Council by an inadvertence.

elected by each Division shall be as nearly as possible proportionate to the membership of such Division.

By-law 18:

Local Management: Divisions.

18. The management of the affairs of each Division shall, save as otherwise provided in the By-laws, be vested in an Executive Committee composed of the following Members:

(a) The Member or Members representing the Division on the Representative Body;

(b) The Member or Members representing the Division on the Branch Council;

(c) Such Members (if any) of any Local Medical Committee formed under the National Insurance Act, 1911, and such Medical Members (if any) of any Insurance Committee formed under that Act, being (in either case) ordinary Members of the Association resident within the area of the Division as the Division may declare to be Members *ex officio* of the Executive Committee.

(d) Such other Members elected by the Division as the Division may determine.

Remainder of Report under heading "(C) Organization."

26. **Motion:** That the remainder of the Annual Report of Council under heading "(C) Organization" (paragraphs 25-51, pages 369-74) be approved.

Question of Payment for Assistance in Organization and Clerical Work of Divisions.

27. **Rider** (arising out of paragraph 39, "Annual Reports of Divisions and Branches") by CHESTERFIELD:

That Divisions be authorized to engage and pay for assistance in organization and clerical work, and that such payments be made out of the funds of the Association.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

Question of Reorganization of Branch and Divisional Areas in United Kingdom.

28. **Rider** (arising out of paragraph 45, "Question of Relation of Division and Insurance Areas") by SOUTH-EASTERN BRANCH:

That the Association be reorganized into Branches coinciding with the areas of administrative counties.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

29. **Rider** (arising out of same paragraph) by SOUTH-EASTERN BRANCH:

That the present Divisions shall as far as possible be preserved, subject to such alterations in boundaries as will make each Division be contained in a single Branch, and such other alteration as may be required by consideration of administration.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

30. **Rider** (arising out of same paragraph) by NEWCASTLE-ON-TYNE:

That the Council be instructed to take such steps as are requisite to make the Divisions of the Association where necessary coterminous with the insurance areas under the National Insurance Act.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

31. **Rider** (arising out of same paragraph) by CHESTERFIELD:

That the areas of the respective Divisions of the Association be made co-ordinate or to correspond with the areas of the respective Insurance Committees under the National Health Insurance Act, 1911, and for convenience in carrying on the work of the Divisions and to secure a better attendance at Divisional and Sub-Divisional Meetings that such subdivisions of the respective Divisions as shall prove to be necessary be formed.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

(D) Journal.

32. **Motion:** That the Annual Report of Council under heading "(D) Journal" (paragraphs 52-6, pages 374-5) be approved.

(E) Science.

33. **Motion:** That the Annual Report of Council under heading "(E) Science" (paragraphs 57-64, page 375) be approved.

(F) Medical Ethics.

34. **Motion:** That the Annual Report of Council under heading "(F) Medical Ethics" (paragraphs 65-74, pages 375-6) be approved.

(G) Medico-Political.

35. **Motion:** That the Annual Report of Council under heading "(G) Medico-Political" (paragraphs 75-84, pages 376-7) be approved.

(H) State Sickness Insurance.

Seamen's National Insurance Society.

36. **Motion:** That the following Recommendation A of Council (paragraph 123, page 382) be adopted:

That steps be taken to so amend Section 48 (5) of the National Insurance Act as to allow of a similar representation upon the Committee of the Seamen's National Insurance Society as is accorded the profession on Insurance Committees.

Treatment of Cases in Receipt of Maternity Benefit by Maternity Hospitals.

37. **Motion:** That the following Recommendation B of Council (paragraph 129, page 384) be adopted:

That the Representative Body, in view of the differences of opinion as to the treatment by Maternity Hospitals of cases in receipt of Maternity Benefit, stated in paragraph 129 of the Annual Report of Council, consider the question of the desirability or otherwise of amendment of the policy laid down in the following Minute 246 of the Annual Representative Meeting, 1912:

Minute 246.—Resolved: (i.) That inability to pay for adequate treatment, or the recommendation of a medical practitioner, shall be the consideration for the participation of parturient women in the benefits of maternity and voluntary hospitals and other charitable institutions; (ii.) that women in receipt of Maternity Benefit under the National Insurance Act should not be regarded as eligible for charitable treatment except in cases of difficulty and danger, and on the recommendation of a medical practitioner.

Fees and Conditions for Provision of Medical Attendance and Treatment of Uninsured Persons.

38. **Motion:** That the following Recommendation C (1) of Council (paragraph 133, page 384) be adopted:

That the Representative Body adopt the following principles as essential to the formation of any schemes for the provision of medical attendance and treatment of uninsured persons:

(1) That, in general, in considering the necessity for obtaining the approval of the Council for schemes for the treatment of uninsured persons upon contract terms, the following principles and conditions must be adhered to:

(a) Free choice of doctor by patient and of patient by doctor;

(b) Remuneration to be not less than that paid in respect of insured persons—that is, 9s. per annum including medicines;

(c) Persons earning over £104 per annum not to be treated under contract terms at all.

39. **Motion:** That the following Recommendation C (2) of Council (paragraph 133, page 384) be adopted:

(2) That the Representative Body realizes that the conditions in certain areas will not allow of the above terms being obtained, and that in these circumstances the approval of the Council may be given provisionally to a scheme involving a less payment when the local profession can show that the economic conditions in the area demand it.

40. **Motion:** That the following Recommendation C (3) of Council (paragraph 133, page 384) be adopted:

- (3) That one of the conditions necessary for the approval of schemes containing lower rates of payment shall be the inclusion amongst the rules, in a prominent position, of a statement that approval by the Association has been given to the rates only because of special economic conditions.

Remainder of Report under heading "(H) State Sickness Insurance."

41. **Motion:** That the remainder of the Annual Report of Council under heading "(H) State Sickness Insurance" (paragraphs 85-152, pages 378-86) be approved.

Certificates for Purpose of Sickness Benefit.

42. **Rider** (arising out of paragraph 91 (e), "Certificates") by LEIGH:

That no condition be inserted on any certificate issued for the purpose of sickness benefit under the Insurance Act.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

Amendment of National Insurance Act.

43. **Rider** (arising out of paragraph 93, "Amendments of Act or Regulations") by LEIGH:

That steps be taken in any amending Act which is brought before Parliament to secure that trade accidents, industrial diseases, misconduct, and miscarriage be deleted from medical benefit under the Insurance Act.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

Proposed General Purposes Fund in connexion with National Insurance Act.

44. **Rider** (arising out of paragraphs 151-2, "Proposed Special Fund") by EAST CORNWALL:

1. That the Association take steps to form a fund for general purposes (for example, protective and fighting), on the basis of a scheme suggested in a letter from Dr. Donald F. Shearer (SUPPLEMENT, March 22nd, 1913, page 267).
2. That, in view of the fact that the efforts of the Association were successful in raising the amount set aside by the Commissioners for medical benefit from 6s. to 8s. 6d., each practitioner on the insurance panel should contribute a certain sum per head of insured persons on his list per annum to form and maintain such a fund.
3. That also, if such a fund be inaugurated, those practitioners who have guaranteed to the Central Insurance Defence Fund be exempted from their guarantees.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

(I) Public Health and Poor Law.

Salary for Combined Whole-time Appointment of Medical Officer of Health and School Medical Officer.

45. **Motion:** That the following Recommendation of Council (paragraph 154, page 387) be adopted:

That in no case where a less salary than £400 is offered for a combined whole-time appointment as Medical Officer of Health and School Medical Officer should the advertisement be accepted for insertion in the JOURNAL.

Remainder of Report under heading "(I) Public Health and Poor Law."

46. **Motion:** That the remainder of the Annual Report of Council under heading "(I) Public Health and Poor Law" (paragraphs 153-63, pages 386-8) be approved.

(J) Hospitals.

47. **Motion:** That the Annual Report of Council under heading "(J) Hospitals" (paragraphs 154-9, page 388) be approved.

(K) Naval and Military.

Vacancy in Council.

48. **Motion** (by CHAIRMAN):

That the Annual Representative Meeting consider the question of the filling of the vacancy upon the Council created by the resignation of Lieutenant-Colonel Davie-Harris, R.A.M.C., who was appointed to represent the Army Medical Service on the Council for the period 1911-14, and in connexion therewith consider the name of Lieutenant-Colonel Waller Barrow, R.A.M.C., submitted to the Representative Body by the Council in accordance with By-laws 43 and 52 as suitable for election by the Representative Body to represent the Army Medical Service upon the Council for the remainder of the period in question, terminating with the close of the Annual Representative Meeting, 1914. (See Standing Order 49 of Representative Body, p. 419, of this Supplement.)

Remainder of Report under heading "(K) Naval and Military."

49. **Motion:** That the remainder of the Annual Report of Council under heading "(K) Naval and Military" (paragraphs 170-1, page 388) be approved.

(L) Scotland.

50. **Motion:** That the Annual Report of Council under heading "(L) Scotland" (paragraphs 172-7, pages 388-9) be approved.

(M) Ireland.

51. **Motion:** That the Annual Report of Council under heading "(M) Ireland" (paragraphs 178-9, page 389) be approved.

(N) Branches outside United Kingdom.

Title of Colonial Committee.

52. **Motion:** That the following Recommendation of Council (paragraph 180, page 389) be adopted:

That steps be taken to alter the title of the Colonial Committee to that of "Dominions Committee," and that it be referred to the Council to carry out the necessary alteration of the By-laws.

Remainder of Report under heading "(N) Branches outside United Kingdom."

53. **Motion:** That the remainder of the Annual Report of Council under heading "(N) Branches outside United Kingdom" (paragraphs 180-7, page 389) be approved.

GENERAL APPROVAL OF ANNUAL REPORT OF COUNCIL.

54. **Motion:** That, subject to the amendments and other resolutions adopted by the Meeting with reference thereto, the Annual Report of Council be approved as a whole.

IV.—SUPPLEMENTARY AND ANY OTHER SPECIAL REPORTS OF COUNCIL.

(NOTE.—The Supplementary Report of Council will be published in the B.M.J. SUPPLEMENT on or about July 5th, 1913.)

V.—REPORTS OF COMMITTEES (IF ANY).

VI.—PROPOSED ALTERATION OF ARTICLES OF ASSOCIATION.

Eligibility for Membership.

55. **Motion** by NATAL BRANCH:

- (1) That the Council of the Association be instructed to take the necessary steps to have Section 4 of the Articles of Association of the British Medical Association deleted, and the following substituted:

"Any Medical Practitioner registered in any portion of the British Empire shall, subject to the By-laws, be eligible for admission as an ordinary Member of the Association."

- (2) That By-law 17 (2) (v) be deleted, and that any other By-law in conflict with the foregoing new Section of the Articles be deleted or so altered as to be in conformity therewith.
- (3) That in applications for membership a declaration should be made that the applicant is registered in a certain portion of the Empire.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

[Existing Article 4 and By-law 17 (2) (v):—

ARTICLE 4.
Eligibility.

4. Any Medical Practitioner registered in the United Kingdom under the Medical Acts, and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualification as shall, subject to the By-laws, be prescribed by the Rules of the said Branch, shall be eligible as an ordinary Member of the Association. Subject as aforesaid the mode and conditions of election to membership shall from time to time be determined by or in accordance with the By-laws.

BY-LAW 17 (2) (v), relating to Special Powers of Branches not in the United Kingdom:

17 (2). A Branch not in the United Kingdom shall be competent from time to time to adopt by the vote of a General Meeting of the Branch, and without the approval of the Council, Rules dealing with all or any of the following matters, which Rules shall be binding upon the Members of the Branch:—

(v) The eligibility of practitioners not registered in the United Kingdom for election by the Branch as Members of the Association.]

Postal Vote in Questions of Urgency.

56. **Motion** by LEIGH:

That power be obtained to provide for a postal vote in questions of urgency.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

VII.—PROPOSED ALTERATIONS OF BY-LAWS OF ASSOCIATION.

(See also Items 16, 23, 24, and 25 above.)

Election of Members.

57. **Motion** by BUCKINGHAMSHIRE:

That the election of members be by the Divisions and not, as heretofore, by the Branch Council.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

[Existing By-laws 5 and 6:—

Election by Branches.

5. (1) In the case of a Branch in the United Kingdom the mode of election of new members shall be as follows:—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the Association at the Head Office, and to every member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said notice. A Branch may require that each candidate for election shall furnish a certificate signed by two Members (either of the Association, or of the Branch, or of the Division in which he resides, as the Rules of the Branch may prescribe) stating that from personal knowledge they consider him a suitable person for election.

(2) In the case of a Branch not in the United Kingdom the mode of election shall be such as may, with the consent of the Council, be prescribed by the Rules of the Branch.

Election by the Council.

6. Every candidate who does not reside within the area of any Branch shall forward his application to the Association at the Head Office, together with a certificate signed by three Members of the Association stating that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the Association from the Head Office to every Member of the Council, and the candidate, if not disqualified by any of the Regulations or the By-laws, may be elected a Member of the Association by the Council at any Meeting thereof held not less than one month after the date of the said notice.]

Amount of Notice required for Special Representative Meetings.

58. **Motion** by MAIDSTONE:

That the following words be added at the end of Paragraph (2) of By-law 36:

“In case of urgency the period of notice may be shortened at the discretion of the Council.”

(B.M.J. SUPPLEMENT, April 19th, 1913.)

[Existing By-law 36:

Special Representative Meetings.

36.—(1) Representative Meetings, other than the Annual Representative Meeting, shall be styled Special Representative Meetings, and shall be convened at any time by the Chairman of Representative Meetings on the requisition of the Council, or on the requisition of not less than seven Constituencies.

(2) At least fourteen days' notice of such meeting shall be given in the JOURNAL, and such notice shall indicate the object for which such meeting is convened.

(3) No business shall be dealt with by a Special Representative Meeting other than that for which it is specifically convened.]

Mode of Election of Council.

59. **Motion** by BUCKINGHAMSHIRE:

That the mode of election of the Council be altered so that more notice is given of any vacancy and an opportunity given of publishing the addresses of candidates in the JOURNAL.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

[Existing By-law 52:

Casual Vacancies.

52. Any casual vacancy occurring in the Council not less than four months before the Annual Representative Meeting amongst the Members of Council elected by Representatives of Constituencies shall be filled by the Chairman of Representative Meetings. Any other vacancy which may so occur shall be filled by the body which appointed the Member of Council whose place shall have become so vacant, and the election to fill such last-mentioned vacancy shall be conducted in the same manner as the annual election. Any person so chosen shall retain his office so long only as the member in whose office such casual vacancy shall have occurred would have retained the same if such vacancy had not occurred.]

Mode of Election of Members of Council by Groups in United Kingdom.

60. **Motion** by WEST SUFFOLK:

That By-law 45 be altered to read as follows:

45. (1) The election of twenty-four Members of Council by the Branches or groups of Branches and Divisions in the United Kingdom shall be carried out as follows:

(2) Candidates shall be nominated either (a) by a Division or (b) in writing signed by not less than three members of any such Branch.

(3) Such nominations shall be sent to the Association at the Head Office on or before an appointed day, of which not less than fourteen days' notice has been given in the JOURNAL, and to the Secretary of each Division of the Branches concerned.

(4) Voting papers, containing the names of those candidates who have been nominated, together with the names of the Division or members by whom they were nominated, and such other particulars as the Council may from time to time prescribe, shall be sent by post by the Association from the Head Office to each member of every Branch comprised in the Group.

(5) The said voting papers shall be returned to the Association at the Head Office within such time as the Council may from time to time prescribe by notice given as aforesaid.

(6) The expenses of the said election shall be borne by the Association.

(B.M.J. SUPPLEMENT, April 19th, 1913.)

[Existing By-law 45:

Mode of Election by Groups in the United Kingdom.

45.—(1) The election of twenty-four Members of Council by the Branches or Groups of Branches and Divisions in the United Kingdom shall be by means of voting papers sent by post by the Association from the Head Office to each member of every Branch comprised in the group.

(2) The said voting papers shall contain the names of those candidates who have been nominated either (a) by a Division or (b) in writing signed by not less than three members of any such Branch and sent to the Association at the Head Office on or before an appointed day, of which not less than fourteen days' notice has been given in the JOURNAL.

(3) The said voting papers shall contain such other particulars (if any), and shall be sent to the Association at the Head Office within such time as the Council may from time to time prescribe by notice given as aforesaid.

(4) The expenses of the said election shall be borne by the Association.]

Reform of Present Constitution of Association.

61. Motion by METROPOLITAN COUNTIES BRANCH:

That the following Report of the Committee of the Metropolitan Counties Branch appointed to consider the reform of the present constitution of the Association be received and considered:

REPORT OF THE COMMITTEE OF THE METROPOLITAN COUNTIES BRANCH APPOINTED TO CONSIDER THE REFORM OF THE PRESENT CONSTITUTION OF THE ASSOCIATION.

DIVISIONS.

(i) The Divisions would consider all matters of local interest and all matters referred to them by the Representative Body and Council. In matters of purely local interest the Divisions should report their decisions to the Branch Council and the Branch Council shall have power to forward reports received direct to the Central Authority, otherwise to consider them from the point of view of its Divisions collectively, and then report upon the whole question to the Central Authority.

(ii) The powers of a Division in ethical matters brought before its notice be limited to the making of necessary preliminary inquiries, and to forwarding complaints to the Branch Council.

(iii) Arrangements to be made for the enlargement of scientific and social meetings, to which non-members resident in the Division would be as far as possible invited.

(iv) The system of wards to be encouraged in each Division.

(v) *Election to Branch Council.*—That each Division be allowed to have one Representative up to 200 members, and an extra Representative for every 200 members in addition or to the nearest 100 over 150 members.

(vi) *Election to Representative Body.*—The Representative Body to be elected directly by the Divisions or group of Divisions in the proportion of one Representative for every complete 200 members.

BRANCH COUNCILS.

(i) To deal, as at present, with finance and boundaries of Divisions.

(ii) To deal with all questions that concern their areas, and to co-ordinate their constituent Divisions, reporting upon the questions involved to the Representative Body or Council, when it is necessary or desirable or when so directed by either of these bodies.

(iii) To deal with ethical matters arising in the Divisions; the power to go direct to the Central Ethical Committee, and the right of appeal, being preserved as at present.

(iv) *Composition of Branch Council.*—(a) To be composed of one representative up to 200 members from each Division, and an extra representative for every 200 members in addition or to the nearest 100 over 150 members.

That the President, President-elect, Treasurer, and two Honorary Secretaries of the Branch be *ex officio* members of this Council.

THE REPRESENTATIVE BODY.

(i) *Composition.*—To be composed of Representatives elected directly by the Divisions by postal vote or otherwise, as determined by the Divisions.

(ii) *Duties.*—(a) To meet at least once in every year, but the existing machinery to be altered to enable meetings to be called at shorter notice than is at present possible.

(b) To be an assembly with full deliberative powers, and to be responsible for formulating the policy of the Association.

(c) To appoint the Council.

(d) To be empowered to delegate specific powers to the

Council to take action upon its behalf until the next meeting of the Representative Body.

(NOTE.—The calling together of the Representative Body in a crisis may be very disadvantageous to the Association owing to the impossibility of keeping the transactions in any way private, thus involving the disclosure of the opinions and future plans of the Association to those to whom for the time being it finds itself in opposition.)

THE COUNCIL.

Election.—The Council shall be composed of the President of the Association, the President-elect, the Past-President, the Chairman of Representative Meetings, the Chairman of Council, the Past Chairman of Council, and Treasurer *ex officio*.

(i) To be elected by the Representative Body, and at least five-sixths to be members of the Representative Body. Special provision to be made for Colonial Representatives.

(ii) *Duties.*—(a) To carry out the duties assigned to it by the Representative Body.

(b) To appoint standing Committees as at present, such to be reduced in size as far as is compatible with efficiency, and to be composed in the proportion of two members of the Council to three or four members elected by the Representative Body.

(NOTE.—This course would tend to shift some of the burden of work from members of the Council.)

(c) *The Scottish and Irish Committees.*—More use to be made of these Committees, which should, in fact, co-ordinate their respective Branches.

The Scottish and Irish Committees shall have power to co-opt members for local purposes.

(NOTE.—Many questions could thus be speedily dealt with on the spot by those competent to do so, and loss of time and the expense of journeys to London avoided.)

(iii) *The Institution of New Committees.*—(a) To appoint a Parliamentary Committee, with power to co-opt additional members, to maintain and increase the influence of the Association in the Houses of Parliament, to keep in touch with all legislation, existing or proposed, that affects the medical profession, and to perform all such duties as at present are entrusted to the Parliamentary Subcommittee of the Medico-Political Committee.

(b) To appoint a new Committee to organize and control systematic endeavour to awaken and keep awake interest in the Association, and to devise means to make it more attractive.

(NOTE.—Such a Committee should always have ready to date lists of speakers on various subjects, whether medico-political or scientific, who would be willing and able to address meetings in all parts of the country, and it would be part of the duties of this Committee to arrange for interesting and attractive meetings to which non-members would be largely invited. Under the auspices of this Committee a new and valuable special department might be established to deal with all such questions of development, and, in addition, to undertake on behalf of members of the Association only, the transference of practices, the supply of "locumtenents" and all business of that kind. If this were done at a charge for out-of-pocket expenses only, as might have to be the case, it would be a great boon to many members, and might attract others to join an Association which would be of practical use to them.)

(c) To appoint for the purposes of each lawsuit in which the Association may be engaged, a special small Committee to represent the Association in the matter of conferring with and instructing the Solicitor with regard to the preparation and presentation of the case.

Points to be Considered with Regard to General Reorganization.

(a) The Committee draws attention to the supreme necessity of economy before any question of raising the subscription is entertained.

(b) To consider the appointment of a chief to the Central Office, to supervise and co-ordinate the work, and to ensure that the services of each department shall be readily available for the other departments, and to place the whole office upon a business basis.

(NOTE.—The Committee recognizes the difficulties of such a step at the present time, and offers the suggestion that such difficulties might be overcome, for the time being, by the establishment of a small House Committee to supervise generally.)

(c) The establishment of definite departments and the more definite allocation of duties in the Medical Department, thus abolishing the present system under which all business goes through the hands of one official, and which cramps the development of the department, and throws more work upon the shoulders of one man than is wise or desirable.

The Branch Council is of opinion that it is undesirable to alter the Articles of Association, and the above plan has been proposed in accordance with this view.

(B. M. J. SUPPLEMENT, April 19th, 1913.)

VIII.—ELECTION OF OFFICERS.

62. (a) Elect a President of the Association under By-laws 37 and 57 and Standing Order 34 (see page 418 of this SUPPLEMENT).

63. (b) Elect a Chairman of Representative Meetings under By-laws 37 and 58 and Standing Order 34 (see page 418 of this SUPPLEMENT).

64. (c) Elect a Deputy-Chairman of Representative Meetings under By-law 37 and Standing Order 34 (see page 418 of this SUPPLEMENT).

65. (d) Elect a Treasurer under By-law 60 and Standing Order 34 (see page 418 of this SUPPLEMENT).

IX.—ELECTION OF VICE-PRESIDENTS AND HONORARY MEMBERS (IF ANY),

Under By-laws 62, 8, and 37, and Standing Order 35 (see page 418 of this SUPPLEMENT).

X.—ELECTION OF MEMBERS OF COUNCIL.

67. (a) Election of 12 Members of Council by Grouped Representatives under By-law 43 (c) and Standing Order 36 (see page 418 of this SUPPLEMENT).

68. (b) Elect 4 Members of Council under By-law 43 (d) and Standing Order 37 (see page 419 of this SUPPLEMENT).

XI.—ELECTION OF MEMBERS OF COMMITTEES.

69. Elect 4 Members of Finance, 3 of Organization, 3 of Journal, 6 of Central Ethical, 6 of Medico-Political, 4 of Public Health, 6 of Hospitals, 2 of Naval and Military, and 2 of Colonial Committee, and other Committees, if any, under By-law 66 and Schedule thereto, and Standing Orders 38-48 (page 419 of this SUPPLEMENT).

XII.—STANDING ORDERS.

70. Consider proposed amendments, if any, of Standing Orders, other than relating to Order of Business.

XIII.—ANY OTHER BUSINESS.

XIV.—CONFIRM MINUTES.

By Order,

ALFRED COX,

Medical Secretary.

May 7th, 1913.

STANDING ORDERS

RELATIVE TO

BUSINESS AT REPRESENTATIVE MEETINGS.

As adopted at Liverpool, July, 1912.

I.—ORDER OF BUSINESS.

(A)—*Annual Representative Meeting.*

1. Except as may be otherwise determined in the manner prescribed by the Standing Orders, the order of business shall be as follows:—

- i. **Election Returns.**—Receive the return of the Election of Representatives of Divisions for the year, and receive notices, if any, of the appointment of substitutes for Representatives under By-law 34.
- ii. **Standing Orders.**—Adopt Standing Orders.
- iii. **Annual Report of Council.**—Receive the Annual Report of the Council with the Balance Sheet and Financial Statement for the past year, and the Estimate of income and expenditure for the current year presented under Article 40, and consider motions relating to the adoption thereof in whole or in part.
- iv. **Special Reports of Council.**—Receive Special Reports of the Council, if any, in the order in which the Council shall submit them for consideration, and consider motions for the adoption thereof in whole or in part.
- v. **Reports of Committees (if any).**—Receive Reports of Committees, if any, and consider motions for the adoption of the same in whole or in part.
- vi. **Consider By-laws.**—Consider, in such order as the Meeting shall determine, any motions placed upon the Agenda of the Meeting, by which it is proposed to make By-laws or to alter or repeal existing By-laws.
- vii. **Consider other Motions by Divisions or Branches.**—Consider, in such order as the Meeting shall determine, any other motions placed upon the Agenda of the Meeting by Divisions or Branches.
- viii. **Election of Officers.**—Elect at such time as the Meeting shall determine:—
 - (a) President of the Association under By-law 57.
 - (b) Chairman of Representative Meetings, under By-law 58.
 - (c) Deputy-Chairman of Representative Meetings, under By-law 37.
 - (d) Treasurer (if the office be vacant), under By-law 61.
- ix. **Election of Vice Presidents and Honorary Members.**—Consider, at such time as the Meeting shall determine, nominations, if any, by the Council of:—
 - (a) Vice-Presidents, under By-law 62.
 - (b) Honorary Members, under By-law 8.
- x. **Election of Members of Council.**—Elect at such time as the Meeting shall determine:—
 - (a) Twelve Members of Council, under By-law 43 (c);
 - (b) Four Members of Council, under By-law 43 (d);
 - (c) Three Members of Council, under By-law 43 (e).
- xi. **Election of Members of Committees.**—Elect Members of Standing Committees in accordance with the By-laws, and such Members of other Committees and Conferences, if any, as it falls to the Representative Meeting to elect.
- xii. **Amendment of Standing Orders.**—Consider proposed amendments of Standing Orders, other than those relating to the order of business.

2. **General Order of Daily Sessions: Confirmation of Minutes.**—The matters described in Clause 1 shall be considered in the order therein prescribed, or as otherwise duly determined, from day to day until the completion thereof or until the expiration of four days from the first day of the Meeting, whichever shall first occur; provided that at each

daily session after the first, the Meeting shall, before proceeding to the consideration of the matters aforesaid, (A) confirm the Minutes of the Proceedings of the previous daily session; (B) consider motions, if any, relating to the order of business of the day. At the conclusion of the business of the last daily session the Meeting shall confirm the Minutes thereof for presentation to the Council.

3. Hours of Daily Sessions.—All Representative Meetings not concluded by 6.30 p.m. shall stand adjourned either to 8 p.m. of the same day, or to the next day, as may be decided by a show of hands. All such Meetings shall stand adjourned at 10 p.m.

4. Varying Order of Business.—The order of business may be varied at any time by the vote of two-thirds of those present and voting.

5. Precedence of Motions of which Notice Given.—Motions and amendments of which notice shall have been given to the Secretary of the Meeting in time for them to be circulated with the Minutes of the previous day's proceedings, shall have precedence, in the order in which such notice shall have been given, over those relating to the same subject, or otherwise having a like claim to precedence in the order of business, of which such notice has not been given.

6. Motions on the Same Subject.—If two or more of the motions placed on the Agenda of the Meeting by the Council and by Divisions and Branches shall appear to the Chairman to relate to the same subject, he shall ascertain the will of the Meeting in respect of the consideration of one of such motions as an original motion, and of the others as amendments thereto, in such order as the Meeting may determine.

7. Motions on Subjects dealt with in Reports.—If any motion placed upon the Agenda shall in the opinion of the Chairman relate to the same subject as a recommendation or other portion of a Report submitted by the Council or by a Committee, the Chairman shall ascertain the will of the Meeting as to whether the said Motion shall be considered as an Amendment or Rider to the adoption or approval of the said Recommendation or other portion of a Report.

8. Resolutions Involving Special Expenditure.—The Meeting shall not proceed on any motion involving special expenditure which has not previously been considered by the Finance Committee.

(B)—*Special Representative Meetings.*

9. Read Authority for Convening Meeting.—Read the Resolution of Council, or the requisition from Divisions, in pursuance of which the Meeting is convened.

10. Notice of Substitutes.—Receive notices, if any, of the appointment of substitutes for Representatives.

11. Order of Business.—If the Meeting is convened to consider more than one matter, determine the order in which such matters shall be considered.

12. Special Business.—Consider the matters which the Meeting is specifically convened to consider, in order determined by the Meeting.

13. Minutes.—Confirm the minutes of the Meeting for presentation to the Council.

II.—COMPOSITION AND ARRANGEMENT OF THE MEETING.

14. Composition.—The Persons constituting the Meeting, hereinafter called members of the Meeting, shall be those duly elected Representatives of Divisions, or substitutes duly appointed under By-Law 34, of whose election or appointment the Secretary of the Meeting shall have received due notice, together with Members of Council for the time being in office, or elected to take office at the conclusion of the Meeting.

15. Arrangement.—Distinctive seats shall be provided for the following groups of persons respectively, namely:

- (A) Representatives of Divisions.
- (B) Members of Council who are not Representatives of Divisions or Officers of the Association.
- (C) Officers of the Association, present in virtue of their office, or at the request of the Meeting, for the assistance thereof.

(D) Members of the Association who are not Representatives of Divisions or Members of Council.

(E) Reporters representing such journals as may be authorised by the Chairman, subject to the approval of the Meeting.

16. Withdrawal of Strangers.—It shall be competent at any time for a member of the Meeting to move that persons who are not members of the Meeting be requested to withdraw, or that persons who are not Members of the Association be requested to withdraw, but it shall rest in the discretion of the Chairman to submit or not to submit such motion to the Meeting.

III.—PROCEDURE.

17. Temporary Chairman.—In the absence of the Chairman of Representative Meetings, the Deputy-Chairman shall preside; or, if he be also absent, the Chairman of Council or the Treasurer, if present, shall take the chair, and call upon the Meeting to appoint a temporary Chairman.

18. Minutes.—Minutes shall be taken of the proceedings of the Meeting, and the same shall be duly entered in a book provided for the purpose. The Minutes of each daily session of the Annual Representative Meeting shall be printed and circulated to the Members of the Meeting. Minutes (if) (when) printed in the Daily Journal of the Annual Meeting shall be deemed thereby to have been circulated as required by this order.

19. Attendance.—No Representative shall leave the Meeting without permission obtained personally from the Chairman at the time of leaving. If during any daily session of a Representative Meeting it shall at any time appear to the Chairman that a quorum is not present, the roll shall be called of Representatives appointed to attend the Meeting, and those Representatives who are found to be then absent, not having previously obtained leave from the Chairman, shall be deemed to have been absent from the said session. A list of Members reported as absent from any daily session or sessions of a Representative Meeting shall be supplied at the close of such Meeting to the Chairman and shall by him be transmitted to the Council, together with such explanations of the cause of absence as any Members so reported may have furnished to him in writing.

20. There shall be an Agenda Committee of the Representative Body to consider and report to each Meeting of the Representative Body on the method of dealing with the Agenda of such Meeting, and such Committee shall consist of the Chairman of Representative Meetings, the Chairman of Council, and the four members of Council elected by the Representative Body under By-law 43 (d), then in office.

21. Reports: Notice.—Subject as herein provided, no Report by the Council, or by a Committee, to the Representative Meeting shall be considered by the Meeting unless it shall have been sent to the Divisions and published in the JOURNAL at least one month before such Meeting. The exceptions to this rule shall be—

- (A) That the Council shall submit, in addition to their Annual Report, a Supplementary Report dealing with those matters of importance, arising subsequent to the issue of the Annual Report in which action has been taken, or action by the Representative Meetings is recommended.
- (B) That any Special Committee appointed by the Representative Meeting shall report in accordance with the terms of the instructions given to such Committee by the Meeting.

22. Form of Reports.—Reports of Council and Reports, if any, of Standing Committees, to the Representative Meeting, shall comprise the following:—

- (i.) A list of matters referred by the Representative Meeting to the Council or Committee.
- (ii.) Reports with specific recommendations upon all matters in which the Council or Committee considers that action should be taken involving a new declaration of policy or expenditure not already authorised.
- (iii.) A short report of all action taken by the Council or Committee in accordance with instructions of the Meeting.
- (iv.) A list of matters under consideration but not completed.

23. Presentation of Reports.—The report of the Council or of a Committee shall be presented by the Chairman, or, in

his absence, by a Member, of the body submitting such Report, who shall move—

- (i.) That the Report be received.
- (ii.) That the Recommendations, if any, be adopted.
- (iii.) That the rest of the Report be approved.

The adoption of each recommendation shall be the subject of a separate motion. The approval of the rest of the Report shall be moved as a whole, unless the Chairman rule or the Meeting resolve that the approval of each paragraph, or of any specified paragraph, be the subject of a separate motion.

24. Amendments and Riders—

- (i.) To a Motion that the Report be received, no amendment shall be moved.
- (ii.) To a motion that a Recommendation be adopted amendments may be moved.
- (iii.) To a motion that a Report, or a specified paragraph of a Report, be approved, an amendment may be moved to the effect that the Meeting do disagree with, or do refer back to the Council or Committee, any specified portion thereof, or that with reference thereto the meeting do express an opinion in terms stated.

25. Procedure as to Other Motions.—Motions placed on the Agenda of the Meeting by a Branch shall be introduced by a Member of Council elected by the Branch, and Motions so placed by a Division shall be introduced by the Representative thereof.

26. Absence of Authorised Mover of Adoption of Report or Other Motion.—In the absence of any Member authorised to make any motion referred to in Standing Order 23 or 25, any other Member deputed by such Member may make such motion on his behalf, and if no Member shall have been so deputed, such motion shall be made formally by the Chairman.

27. Seconding Motions.—No seconder shall be required for any of the motions referred to in Standing Order 23 or 25. All other motions and all amendments shall be required to be moved and seconded.

28. References to Central Executive.—Each motion or amendment which is of the nature of an instruction or reference to any central executive body, other than a Committee, specially appointed by the Representative Meeting, shall be moved in the form of an instruction or a reference to the Council.

29. Rescission of Resolutions.—No motion to rescind any Resolution of a Representative Meeting, arrived at after due consideration of the Divisions, shall be in order at any subsequent Representative Meeting, unless at least two months' notice of such proposed motion shall have been given to the Divisions through the Supplement to the JOURNAL.

30. Time Limits of Speeches.—(A) A member of the Meeting shall be allowed to speak for fifteen minutes in moving a resolution which does not require seconding, and for ten minutes in moving any other resolution, or any amendment. Except as aforesaid, no speech shall exceed five minutes.

31. Reducing Time Limit.—(B) The Meeting may at any period of any session reduce the time to be allowed to speakers, whether in moving resolutions or otherwise, during the remainder of such session.

32. Voting.—Only Representatives of Divisions shall vote on any question before the Meeting.

33. Mode of Voting.—Voting shall be by show of hands, except in the cases following, namely :—

- (i.) **Vote by Card.**—(A) If, upon the Chairman proceeding to take the vote of the Meeting upon any motion or amendment, any Representative of a Constituency shall move that the said vote be taken by card, and twenty Representatives rise in their places in support of such motion, the vote shall be taken by card, and the names of those voting for and against such motion or amendment, of those not voting, and of the Constituencies which they severally represent, shall be entered on the minutes.
- (ii.) **Division.**—(B) If the Chairman, after taking a vote by show of hands upon any motion or amendment, shall be of opinion that the numbers of members voting for and against such motion or amendment are not thereby ascertained with sufficient accuracy, he shall have power to direct that the Meeting shall divide upon the said motion or amendment.

- (iii.) **Vote by Roll Call.**—(c) If, upon the Chairman proceeding to take the vote of the Meeting upon any motion or amendment, it shall be moved and seconded that the said vote be taken by roll call, and ten Representatives rise in their places in support of such motion, the vote shall be taken by roll call, and the names of those voting for and against such motion or amendment, of those not voting, and of the Constituencies which they severally represent, shall be entered on the minutes and published in the Supplement.

34. Election of Officers of the Association :

NOMINATION.

- (i.) Nominations for the offices of President of the Association, Chairman of Representative Meetings, Deputy Chairman of Representative Meetings, and Treasurer, shall be handed in writing to the Secretary of the Meeting not later than one hour after the commencement of the second day's proceedings. Each nomination shall be signed by the nominator, and shall contain a declaration that the candidate nominated has agreed to serve.
- (ii.) If only one candidate be nominated for any office, such candidate shall at once be declared by the Chairman to be elected.

VOTING.

- (iii.) If more than one candidate be duly nominated, the names of all such candidates shall be duly placed in a voting paper, which shall be issued and collected at such times as the Meeting shall direct. Each voter shall number the names of the candidates for each office in the order of his preference.

The Scrutineers shall proceed as follows :

- (a) On the first count each candidate shall be credited with the number of votes given by those voters who have numbered him (1), and if any candidate be found to have received an absolute majority of votes cast he shall be declared to be elected.
- (b) If no candidate be thus elected, that candidate who has received fewest votes shall be excluded, and his votes shall be transferred to the candidates respectively numbered as next preference on his voting papers, and any candidate now found to have an absolute majority shall be declared to be elected.
- (c) If after the first transfer, no candidate be declared to be elected, the procedure of exclusion and transfer shall be repeated, and so on until one candidate is declared to be elected.
- (d) If on a count between three candidates no candidate be found to be elected, and the candidates who have fewer have an equal number of votes, the preferences on the voting papers of the highest candidate shall, for the time being, be credited to the other two candidates, and that candidate who has fewer votes shall be excluded.
- (e) If on a count between two candidates, after the others have been excluded, the votes are equal, that candidate who has the larger number of first preference votes shall be declared to be elected.
- (f) In any case of equality subsisting after this procedure, one of the candidates shall be excluded by lot.
- (g) Any voting paper shall become invalid if its preferences be exhausted before a candidate is declared elected.

ENTRANCE INTO OFFICE.

- (iv.) Except with regard to *ex-officio* membership of Council and Committees, the Chairman and Deputy Chairman so elected shall not assume their functions until the close of the Annual Meeting.

35. Election of Vice-Presidents and Honorary Members.—The name of any person nominated by the Council for election as a Vice-President or an Honorary Member shall be submitted to the Meeting from the Chair.

36. Election of Twelve Members of Council by Grouped Representatives under By-law 43 (c)—

- (i.) The election shall take place at the time of the Annual Representative Meeting.
- (ii.) Nominations for a Member of Council to be elected by any group of Representatives shall be required to be made by a Division (through its Representative)

or by a Representative of a Division included in the group.

- (iii.) Nominations shall be required to be on the prescribed form.
- (iv.) Nominations shall be received up to the end of the first hour of the third days' session of the Annual Representative Meeting.
- (v.) There shall be issued to each Representative or Deputy Representative of a Constituency in the United Kingdom in attendance at the Meeting a voting paper containing the names of all candidates duly nominated for election as Members of Council by the group to which such Representative belongs.
- (vi.) The voting paper shall be in the prescribed form.
- (vii.) Each Representative shall number the candidates on the list in the order of his preference. The voting papers shall be collected at such time as the Meeting shall direct.
- (viii.) The votes shall be counted in accordance with the method of the Single Transferable Vote. In the event of two candidates being found at any stage in the counting to have the same number of votes in their favour, each voter shall be credited with the number of votes which he would be entitled to give on a vote by card, and the candidate who shall then be found to have received the greatest number of votes shall have the preference.
- (ix.) The details of the voting shall be placed before, and verified by, the Chairman before being declared.

37. Election of 4 Members of Council under By-law 43 (d)—

- (i.) Nomination of candidates for election as Member of Council by the Representative Meeting under By-law 43, Sub-paragraph (d), shall be handed to the Secretary of the Meeting not later than the end of the first hour of the morning session, on the fourth day of the Annual Representative Meeting.
- (ii.) Any Member of the Association may be nominated for election.
- (iii.) A nomination may be made by any person entitled to take part in the meeting. Each nomination shall be on the prescribed form, which shall contain a statement of the candidate's experience in the Central Executive work of the Association, and shall contain, or be accompanied by, a statement by the candidate that he is willing to serve if elected.
- (iv.) Voting papers containing the names of all candidates duly nominated, with such particulars as to their previous official experience as are stated in the nomination papers, shall be distributed to all Representatives or Deputy Representatives in attendance at the Meeting, at the commencement of the afternoon session on the fourth day of the Annual Representative Meeting.
- (v.) Each voter shall number the names of candidates in the order of his preference—*one, two, three, etc.*, and sign the Voting Paper.
- (vi.) The votes shall be counted and the result of the Election ascertained by the method of the single transferable vote.
- (vii.) The details of the voting shall be submitted to, and verified by, the Chairman before the result is declared.

Election of Members of Standing Committees.

38. There shall be an Election Returns Committee of the Representative Meeting, which shall consist of the Chairman of Representative Meetings, the Chairman of Council, the Deputy-Chairman of Representative Meetings, the Chairmen of those Standing Committees of which under the By-laws Members are appointed by the Representative Meeting and the Chairman of the Scottish and Irish Committees.

39. The Committee shall prepare a Return showing for each Committee, Members of which are elected by the Meeting: (1) the Members of such Committee for the past year (those not appointed by the Representative Meeting being specially indicated); (2) the years of service on the Committee; (3) their possible and actual attendances at (i.) Meetings of the full Committee, and (ii.) Meetings of its Sub-Committees, held up to three weeks before the commencement of the Annual Meeting. The Return shall be issued to each Representative with the Agenda of the Meeting.

40. With regard to the Finance, Journal, and Organisation Committees, only Representatives of Divisions shall be eligible for appointment.

41. After the commencement of the Annual Representative Meeting, the Committee shall prepare a list of nominations for the various Committees. In this list it shall indicate which of those nominated are Representatives, and which, if any, are Members of Council for the ensuing year.

42. In preparing the list the Committee shall have regard to (A) geographical representation on Committees where this is important; (B) the previous attendance of Members on Committees; (C) the declarations of Members as to the Committees on which they are prepared to serve.

43. With the Agenda of the Representative Meeting nomination papers for Committees shall be issued to all Members of the Meeting.

44. Each Member of the Meeting shall be entitled to nominate not more than one Member for each Committee.

45. Nomination papers by Members of the Meeting shall be handed to the Secretary of the Meeting.

46. No Representative shall be eligible for election by the Representative Meeting as a Member of more than two Committees, and no person not a Representative shall be eligible for election by the Representative Meeting as a Member of more than one Committee. If any Representative be nominated as a Member of more than two Committees, the Committee shall ascertain from him on which he prefers to serve, or, if this be impracticable, shall decide which nomination shall stand; and if any person, not a representative, be nominated for more than one Committee, the Committee shall decide which of such nominations shall stand.

47. Voting papers, containing the names of all candidates duly nominated, shall be circulated to all Representatives at the commencement of the fourth day's proceedings, and shall be collected before 1 p.m. that day.

48. The word "Representative" in these Standing Orders shall be taken as meaning the duly appointed Representative of a Constituency, or, in his absence, the Deputy duly appointed in his stead, in attendance at the Meeting.

49. Election of Service Members of Council.—The election of Members to represent the Royal Naval Medical Service, the Army Medical Service, and the Indian Medical Service on the Council shall be conducted as follows:—

- (i.) In addition to Members nominated by the Council, it shall be open to any Member of the Representative Body to nominate a candidate for election as a Service Member of Council.
- (ii.) Voting papers containing the names of all candidates duly nominated shall be circulated to the Representatives and be collected at the same time as the voting papers for the election of the Chairman and Deputy-Chairman of Representative Meetings.
- (iii.) The votes shall be counted and the result of the election ascertained by the method of the single transferable vote.
- (iv.) The details of the voting shall be submitted to the Chairman of Representative Meetings and verified by him before the result is declared.

Committee of the whole Representative Body.

50. Upon it being resolved that any item or items of the Agenda of a Representative Meeting be considered in Committee of the whole Representative Body, the following shall be the procedure:—

- (i.) The consideration of the business in Committee shall take place at such time as the Representative Meeting shall determine.
- (ii.) In Committee of the Representative Body, Representatives of Divisions and Members of Council respectively shall have the same rights of voting and speaking as in a Representative Meeting, and the rules of debate shall be the same as for a Representative Meeting, except that a Member may, subject to the consent of the Chairman, speak more than once on the same motion or amendment.
- (iii.) On the conclusion of the consideration of the business referred to the Committee, the Committee shall confirm its Minutes as the Report of the Committee to the Representative Body, and the Representative Meeting shall thereupon resume.
- (iv.) The proceedings of the Committee may be temporarily suspended at any time by a resolution that the

Committee be adjourned, whereupon the Representative Meeting shall resume. The business of the Committee shall be resumed at such time as shall be fixed by the Committee, unless otherwise determined by a vote of the Representative Meeting.

IV.—RULES OF DEBATE.

51. Every member shall be seated except the one who may be addressing the Meeting, and when the Chairman rises, no one shall continue to stand, nor shall any one rise until the Chair is resumed.

52. A member of the Meeting shall stand when speaking and shall address the Chair.

53. A member who speaks shall direct his speech strictly to the motion under discussion, or to a motion or amendment to be proposed by himself, or to a question of order.

54. A member shall not address the Meeting more than once on any motion or amendment, but the mover of a resolution or amendment may reply, and in his reply shall strictly confine himself to answering previous speakers, and shall not introduce any new matter into the debate; provided always that a member may speak to a point of order, or, by consent of the Meeting, in explanation of some material part of a speech made by him, which he believes to have been misunderstood.

55. A motion or amendment once made and seconded shall not be altered or withdrawn without the consent of the Meeting.

56. An amendment shall be either—

To leave out words;

To leave out words and insert or add others;

To insert or add words;

or in such form as shall be approved of by the Chairman, provided always that the amendment be relevant to the motion on which it is moved, and be not equivalent to the direct negative thereof.

57. No notice of motion, or amendment to any motion before the Meeting, not already published, shall be considered by the Meeting until a copy of the same with the name of the proposer has been handed in in writing to the Chairman.

58. Whenever an amendment upon an original motion has been moved and seconded no second or subsequent amendment shall be moved until the first amendment shall have been disposed of, but notice of any number of amendments may be given.

59. If any amendment be rejected, other amendments may be moved on the original motion. If an amendment be carried, the amendment or motion as amended shall take the place of the original motion, and shall become the question upon which any further amendment may be moved.

60. If it be proposed and seconded that the Meeting do now adjourn, or that the debate be adjourned, or that the Meeting do proceed to the next business, or that the question be now put, such motion shall immediately be put to the vote without discussion, except as to the time of adjournment, provided always that the Chairman shall have power to decline to put to the Meeting the motions that the Meeting do proceed to the next business, or that the question be now put.

61. A motion that the Meeting do now adjourn, or that the Meeting do now proceed to the next business, or that the debate be now adjourned, or that the question be now put, shall not be made within a period of one hour after a previous motion to the like effect, unless, in the opinion of the Chairman, the circumstances are materially altered.

62. Smoking shall not be allowed during such time as the Chairman is in the Chair.

V.—SUSPENSION OF STANDING ORDERS.

63. Any one or more of the Standing Orders, in any case of urgency, or upon motion made on notice given through the Daily Journal, may be suspended at any Meeting, so far as regards any business of such Meeting, provided that three-fourths of those present and voting shall so decide.

Association Intelligence.

PROCEEDINGS OF COUNCIL.

A MEETING of the Council was held at 429, Strand, London, W.C., on Wednesday, April 23rd, at 11 a.m.

Present:

| | Mr. E. H. WILLOCK, Croydon |

THE WORK OF THE COUNCIL.

Owing to the amount of business on the agenda for the quarterly meeting, although the Council sat from 11 in the morning until 11.15 at night, it was unable to complete its business on April 23rd, and stood adjourned until April 30th. The attention of members is specially directed to the appended report of the transactions at these two meetings, but it must be borne in mind that a large amount of business transacted at these meetings is embodied in the Annual Report of Council already published in the SUPPLEMENT of May 3rd.

ELECTIONS TO THE COUNCIL.

The CHAIRMAN reported that Dr. J. Livingstone Loudon (Glasgow and West of Scotland, Border Counties and Stirling Branches) and Dr. B. E. Fordyce (Cambridge and Huntingdon, East Anglian, and South Midland Branches) had been appointed members of the Council, and extended a welcome to both gentlemen, who were present.

CONDOLENCES.

The Council resolved to convey to the families of the late Dr. Cecil E. Shaw (Belfast) and Mr. Jordan Lloyd (Birmingham) an expression of sincere sympathy in their bereavement.

Replies to resolutions of condolences passed at the previous meeting upon the deaths of Lord Ilkeston and Dr. Marriott were received from the Dowager Lady Ilkeston and Mrs. Marriott.

REPORT OF FRACTURES COMMITTEE.

A letter was received from the Chairman of the Committee of Fractures of the American Surgical Association expressing the high appreciation which the members of his committee felt for the work done by the Fractures Committee of the British Medical Association, and asking for suggestions with regard to the constitution of its work by the Committee of the American Surgical Association. The Chairman of Council was requested to inform the American Surgical Association that the British Medical Association valued this expression of opinion, and would be glad to assist in the manner suggested.

AUSTRALASIAN MEDICAL CONGRESS.

The CHAIRMAN reported that a letter had been received from the Executive Committee of the Australasian Medical Congress confirming the invitation to members of the Association to attend the meeting of the Congress in Auckland in February, 1914 (9th to 14th), which had been given by Dr. Barrett, of Melbourne, during the annual meeting at Liverpool. The Council resolved that any member of the Council desirous of attending the Congress should be requested to communicate with the Chairman with a view to being appointed a representative of the Association.

REFORM OF THE PRESENT CONSTITUTION.

The report of a committee of the Metropolitan Counties Branch appointed to consider the reform of the present constitution of the Association was communicated to the Council by the Honorary Secretary of the Branch. The report was published in the SUPPLEMENT of April 19th, p. 330, as one of the notices of motion for the Annual Representative Meeting at Brighton. After a short discussion, during which several members of the Council pointed out the importance of the changes proposed, the report of the Metropolitan Counties Branch was referred to the Organization Committee with instructions to report to the Council at an early date on this and several cognate subjects. It was also resolved that the Council should hold a special meeting for the consideration of this report on a sufficiently early date to enable it to make a report to the next Annual Representative Meeting. It was left for the Chairman of Council to decide the most convenient date for this meeting.

PROPOSED JOINT MEETING WITH THE AMERICAN MEDICAL ASSOCIATION.

A letter was received from the Chairman and Board of Trustees of the American Medical Association stating that that Association, at its annual meeting in June, 1912, had appointed a committee with a view to finding out whether a joint meeting of the British Medical and American Medical Associations was desirable and possible. The Council resolved to appoint a special committee consisting of the officers of the Association to consider this suggestion.

FINANCES OF THE ASSOCIATION.

The Finance Committee reported that at its meeting on January 22nd it had appointed a special Subcommittee, consisting of the Chairman of Representative Meetings, the Chairman of the Organization Committee, Dr. Buttar, Dr. F. J. Smith, and Mr. D. F. Todd, to consider (a) the proposed increase in the subscription, (b) to inquire into the number and quantity of printings issued by the Association, (c) the advisability of the Finance Committee meeting more frequently, (d) to prepare a return of the duties and salaries of the office staff of the departments of the Editor, Financial Secretary and Business Manager, and the Medical Secretary.

The Finance Committee had held a special meeting to receive the report of this Subcommittee, and submitted a series of recommendations which were received and discussed by the Council, and the findings were embodied in the Annual Report of Council published in the last SUPPLEMENT.

JOURNAL COMMITTEE.

The quarterly report of the Journal Committee was presented by the Chairman, Mr. ALBERT LUCAS.

Threatened Actions for Libel.

It was resolved that a standing subcommittee be appointed to deal with threatened actions for libel arising out of matters published in the JOURNAL and other publications of the Association.

Ethical Inquiries.

The Council approved the recommendation of the Committee that ethical inquiries with respect to which a pronouncement of the Association cannot be quoted should be referred by the Editor to the Ethical Committee.

Advertisements Excluded.

A list of advertisements excluded from the JOURNAL from December 31st, 1912, to March 15th, 1913, was submitted by the Committee and directed to be entered upon the minutes.

SCIENCE COMMITTEE.

Middlemore Prize.

The quarterly report of the Science Committee was presented by the Chairman, Dr. F. J. SMITH. The Middlemore Prize of the Association will be awarded in the year 1914 for an essay on a subject to be determined by the Committee.

Scientific Work.

The Committee reported that, in accordance with instructions, it had considered the question of the best means of organizing the scientific work of the Association in the Divisions and Branches, and had appointed a Subcommittee to elicit the opinion of Divisions and Branches as to the most useful way in which the Committee could co-operate with them in carrying out this object.

Shellfish for Human Consumption.

The Committee reported that it had, as instructed, suggested to the Fishmongers' Company the names of three medical men from which a selection could be made of one for election on the special committee nominated by the Fishmongers' Company to report on the subject of shellfish, particularly in reference to bacteria, but also as to other standards which should be adopted to ensure that shellfish used for human consumption was in a suitable condition. At the adjourned meeting of the Council it was reported that the Fishmongers' Company had accordingly appointed Dr. J. C. G. Ledingham, of the Lister Institute, to be a member of its Committee.

ORGANIZATION COMMITTEE.

Referendum and Postal Vote.

The quarterly report of the Organization Committee presented by the Chairman, Mr. F. C. LARKIN, stated that the Committee had had under consideration the question of what alterations could be made in the constitution of the Association to enable the views of the profession to be obtained in a more effective and rapid manner than at present, and whether a postal vote could and should be provided for under the constitution. On the advice of the Committee the Council resolved to take the opinion of counsel on certain points, and requested the Organization Committee to hold a special meeting to consider *inter alia* the question of the postal vote with a view to advising the Council on the tenor of the report it should make to the Annual Representative Meeting.

Annual Conference of Secretaries.

It was arranged that the annual conference of secretaries should be held on Wednesday, July 23rd, at 4 p.m., and the dinner of the secretaries at 7 p.m.

CENTRAL ETHICAL COMMITTEE.

Warning Notice and the Model Ethical Rules.

The quarterly report of the Central Ethical Committee was presented by the Chairman, Dr. M. G. BRIGGS, who stated that the Committee had considered the question of warning notices, especially those which had been published regularly for long periods, and advised that the Council should authorize the Committee to discontinue the publication of a warning notice if the Division or Branch on whose initiation the notice was published failed to reply promptly to inquiries. The Committee also recommended that it should have authority to insert as a matter of favour a warning notice at the request of a Division or Branch which had not adopted the new model ethical rules, but that the notice should not be repeated, and that those Branches and Divisions which had not adopted the model rules should be notified that they were expected to do so before July 31st next.

The Committee reported that it had approved the adoption of the model rules governing procedure in ethical matters adopted by three Branches and forty-three Divisions.

MEDICO-POLITICAL COMMITTEE.

The quarterly report of the Medico-Political Committee was presented by the Chairman, Mr. T. W. H. GARSTANG, who had been elected in the vacancy caused by the resignation of Mr. C. E. S. Flemming.

Elementary Education (Defective and Epileptic Children) Bill.

On the recommendation of the Committee the Council adopted the following resolution:

That the Council approve the Government Elementary Education (Defective and Epileptic Children) Bill (60) which imposes on Education Authorities the duty of providing for the education of mentally defective children over seven years of age; and that the President of the Board of Education be informed accordingly.

Mental Deficiency Bill.

The Committee reported that it had considered the Government Mental Deficiency Bill, read for the first time in the House of Commons on April 2nd, and the matter was left in the hands of the Committee to report to a future meeting of Council.

State Registration of Nurses.

The Committee recalled that the Council in 1909 appointed five representatives to a Central Committee then formed to promote the State registration of nurses. The work of this Central Committee had been for some time in abeyance, but renewed efforts were now being made to advance the subject, and a communication had been received from the Central Committee asking the Association to again appoint five members, nominating one for appointment on the Executive Committee and two to take part in a deputation to the Prime Minister. The Medico-Political Committee had accordingly appointed its Chairman (Mr. Garstang), Mr. Domville, Mr. T. Jenner Verrall, Sir Victor Horsley, and the Medical Secretary to be representatives of the Association upon the Central Committee, and Sir Victor Horsley and the Medical Secretary to act upon the deputation to the Prime Minister. [The proceedings at this deputation were reported in the BRITISH MEDICAL JOURNAL of May 3rd, p. 944.] The Chairman of the Committee had nominated Mr. Verrall to act on the Executive Committee of the Central Committee.

The Medico-Political Committee reported further that the Nurses Registration Bill introduced into the House of Commons by Mr. Munro Ferguson, and read a first time on March 18th, was the same bill as that to which the Association had given so much time and attention, and recommended the Council, on behalf of the Association, to forward to the Prime Minister an expression of its approval of the Nurses Registration Bill (41) urging that, if possible, facilities should be given for its proper discussion in Parliament, subject to Clause 4 (c) being amended so as to make it clear that three members of the Council to be set up were to be appointed by the British Medical Association, one resident in England, one in Scotland, and one in Ireland. The Council approved this recommendation.

Advertisements requesting Applicants to State Salary.

Certain difficulties were reported by the Medical Secretary in connexion with advertisements tendered for insertion to the JOURNAL for appointments in which the applicants were asked to "state salary," and the Council resolved that the following should be added to the regulations in respect to the acceptance of advertisements:

That advertisements of a vacant appointment tendered for insertion in the JOURNAL, in which applicants are requested to state the amount of salary they would require or accept, be not accepted.

Milk and Dairies Bill.

Reports upon this bill made by the Medico-Political and Public Health Committees were presented by Mr. Domville, Chairman of the latter. The Public Health Committee stated that, after consultation with the Society of Medical Officers of Health, it had decided to recommend the Council to forward a communication to the Local Government Board stating that the Association approved the Milk and Dairies Bill (62) generally, but urging the acceptance by the Government of amendments having for their object the security of tenure of medical officers of health.

The Council approved this course, and also a recommendation from the Medico-Political Committee that the approval should be subject to the inclusion of the following clause contained in the Government bill of last session, which would tend to promote uniformity of procedure and efficiency of work:

The provisions of this Act shall apply to London, subject to such modifications as may be made by regulations of the Local Government Board, and such regulations may provide for any of the powers and duties of sanitary authorities and their medical officers of health under those provisions with respect to dairies being exercised and performed by the London County Council, and the medical officer of health of the London County Council.

PUBLIC HEALTH COMMITTEE.

The quarterly report of this Committee, presented by its Chairman, Mr. E. J. DOMVILLE, in addition to the above matter, dealt with the following points:

Medical Officers of Health Superannuation Bill.

The Committee reported that it was taking all possible action to press forward the Association's Medical Officers of Health Superannuation Bill introduced into the House of Commons by Sir Philip Magnus, and read a first time on March 13th. It was in communication with the Local Government Board and hoped to enlist its sympathy.

Analysis of Water Supplies.

The resolution of the Section of State Medicine at the Annual Meeting of 1912, as to analysis of water supplies, had been carefully considered by the Committee, but it did not recommend the Council to take any further action.

Conference with Society of Medical Officers of Health.

In view of the fact that many questions interesting both to general practitioners and medical officers of health, called for attention, the Committee, after consulting the Medico-Political and State Sickness Insurance Committees, had resolved to promote a further conference at an early date with representatives of the Society of Medical Officers of Health, and had nominated as its representatives its Chairman (Mr. Domville), Dr. T. B. HEGGS, Dr. R. A. Lyster, Dr. Courtenay Lord, and Mr. F. E. WYNNE.

The Jenner Collection.

The Council approved the arrangements which had been made for housing the Jenner collection of vaccination literature, which had belonged to the late Jenner Society. Several inquiries for vaccination literature had been received and had been dealt with by the Vaccination Subcommittee during the quarter.

District Medical Officers of Health.

The Committee advised the Council to give its support to a deputation of district medical officers of health, which proposed to make representations to the Local Government Board with regard to the increased duties imposed upon medical officers of health by recent legislative and administrative changes. No corresponding provisions had been made for increasing the remuneration of the officers, who, moreover, were called upon to make a considerable outlay in out-of-pocket expenses, especially in regard to travelling. The recommendations of the Committee were approved by the Council.

FINANCE COMMITTEE.

Annual Financial Statement.

The TREASURER submitted the financial statement for the year ending December 31st, 1912. It was approved, and directed to be presented to the Annual General Meeting and Annual Representative Meeting. It was published in the report of the Council printed in the SUPPLEMENT to the JOURNAL of May 3rd.

Size of Journal.

The Council, on the recommendation of the Finance Committee, resolved that efforts should be made to restrict the average size of the weekly issue of the JOURNAL to 152 pages. [The allocation of pages contemplated would be—JOURNAL and Epitome 64, SUPPLEMENT 16, advertisements 72.]

Accounts for the Quarter.

The accounts for the quarter ending March 31st, 1913, amounting to £13,895 11s. 7d., were received and approved, and the Treasurer empowered to pay those remaining unpaid, amounting to £4,096 4s. 6d.; the sum of £25 was voted to the office staff annual excursion.

COLONIAL COMMITTEE.

The report of the Colonial Committee was presented by the Chairman, Dr. T. D. GREENLEES.

Election of Members of the Council.

The Committee reported that it approved the proposed grouping of Colonial Branches for election of members of the Council.

South Africa.

The Committee had considered various matters raised on behalf of the Border Branch, South Africa, and had expressed the opinion to the Branch that the existing regulations of the Association determined in a satisfactory manner the choice of a practitioner living on the borderline of two Branches in selecting the Branch to which he would prefer to belong.

The Committee had not been able to advise the Council to arrange that a representative of the Central Office should be present at the fourteenth South African Medical Congress in July next. It wished every success to the Congress, but felt that the proposal could not be entertained on the ground of the expense involved, and the exceptionally large demands made on home practitioners recently in the way of service to their profession.

The Committee had intimated to the Organization Committee that it saw no objection to the proposal of the Natal Branch for the rearrangement of its boundaries.

STATE SICKNESS INSURANCE COMMITTEE.

The quarterly report of the State Sickness Insurance Committee was presented by its Chairman, Dr. J. A. MACDONALD, and considered paragraph by paragraph. The decisions and recommendations of the Council upon this subject were embodied in the paragraphs of its report referring to State Sickness Insurance (see SUPPLEMENT, May 3rd, p. 378).

NAVAL AND MILITARY COMMITTEE.

The report of the Naval and Military Committee was presented by Dr. T. D. GREENLEES, in the unavoidable absence of Surgeon-General J. P. Greany, I.M.S. On the recommendation of the Committee, the Council nominated Lieutenant-Colonel Waller Barrow, R.A.M.C., for election by the Representative Body upon the Council as representative of the Royal Army Medical Corps, in place of Lieutenant-Colonel Davie Harris, R.A.M.C., resigned.

The Committee had had under consideration the desirability of taking action with regard to certain matters affecting the Royal Army Medical Corps (T.F.), and had been in communication with the late Territorial Forces Special Committee. The Committee, however, was not prepared to recommend the Council to take action at present.

SCOTTISH COMMITTEE.

Organization of the Profession in Scotland.

Dr. J. R. HAMILTON, Chairman of the Committee, reported that the Committee had considered the question of the organization of the profession in Scotland. Having regard to the difficulties which arise, partly from the differences between the law of Scotland and that of the rest of Great Britain, partly from difficulties of communication with London, and partly from the changes consequent on the passage of the Insurance Act, the Committee had come to the conclusion that the work of organization in Scotland would be accomplished much more efficiently if the Council transferred to the Scottish Committee, so far as Scotland is concerned, some of the duties at present performed by central committees, and made a financial allowance for the necessary clerical assistance. The Committee did not consider that the present constitution required any alteration, but held that its efficiency would be greatly enhanced if it had the power on special occasions to secure conferences with representatives of Local Medical Committees. The Committee concluded its report with certain recommendations, after the consideration of which the Council adopted the following resolutions carrying out the changes desired by the Scottish Committee:

That the duties of organizing the Branches, Divisions, and Local Medical Committees in Scotland be transferred to the Scottish Committee.

That the Organization Committee be instructed to prepare and submit the alterations of the By-laws necessary to carry out the foregoing resolution.

That the Scottish Committee be empowered to arrange for its clerical work being done in Scotland by the appointment of a part-time clerk at a cost not exceeding £75 per annum.

That a conference of representatives of the Scottish Local Medical Committees with the Scottish Committee of the British Medical Association be authorized to be held once a year, and that special conferences may be held subject to the approval of the Finance Emergency Subcommittee, at a probable cost of £75 per annum.

That the Scottish Committee be empowered to make all necessary arrangements for the holding of annual or special conferences of the Committee with Representatives of the Scottish Local Medical Committees.

That the sum of not more than £200 per annum be granted to the Scottish Committee for the above-mentioned and other expenses of the Committee, it being understood that this sum includes the ordinary expenses of the Committee.

The Scottish Committee further reported that it had adjusted its liability with the Treasurer of the Scottish Medical Insurance Council, and proposed to return the balance of £14 of the grant of £250 received from the Council. It also reported that it had appointed a sub-committee to carry out the arrangements for the conference with representatives of Scottish Local Medical Committees.

HOSPITALS COMMITTEE.

At the adjourned meeting of the Council on April 30th Dr. Briggs presented the report of this Committee for the Chairman, Mr. R. J. JOHNSTONE (Belfast), who found himself unable to attend the adjourned meeting.

Vacancy on the Committee.

The Committee was instructed to fill the vacancy caused by the resignation of Dr. Lauriston Shaw.

Proposed Weir Hospital.

With regard to the matter of the proposed Weir Cottage Hospital, the Committee stated that it proposed to report fully thereon at a later date.

LISTER MEMORIAL FUND.

A letter was received from Sir John Rose Bradford, Honorary Secretary of the Lister Memorial Fund Committee, asking the Association to appoint a representative to serve on the Committee, and the Council appointed the President, Sir James Barr, accordingly.

ANNUAL REPORT OF COUNCIL.

The annual report of Council was considered clause by clause, and approved for publication in the form in which it appeared in the SUPPLEMENT to the JOURNAL of May 3rd.

SOLICITOR TO THE ASSOCIATION.

The Council reappointed Mr. W. E. HEMPSON to be Solicitor to the Association for the ensuing twelve months.

MR. ANDREW CLARK.

The Council accepted with thanks the gift by Mr. Andrew Clark of a portrait of himself to be hung in the offices of the Association.

ELECTION OF CANDIDATES.

Twelve candidates whose names had appeared on the notice convening the meeting were elected members of the British Medical Association.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.

THE annual meeting of this Division was held at Dorchester on April 24th.

Presentation to Honorary Secretaries.—Before the meeting there was a luncheon at the King's Arms Hotel, at which twenty-four members were present, Dr. P. W. MACDONALD presiding. After luncheon, a presentation of solid silver tea services was made to Dr. T. MacCarthy and Dr. J. Miller. In making the presentation Dr. MACDONALD referred in graceful terms to the services rendered by the Honorary Secretaries during trying times, and pointed out that the gifts were not only tokens of appreciation for services rendered, but also of the goodwill of the profession of West Dorset.

Election of Officers.—The following officers were elected for the ensuing year: *Chairman*, Dr. P. W. Macdonald; *Vice-Chairman*, Dr. J. F. L. Whittingdale; *Honorary Secretary*, Dr. J. Miller; *Representative at Representative Meetings*, Dr. Decimus Curme; *Representatives on Branch Council*, Drs. Edwards, Macdonald, Morrice, Unwin, Whittingdale; *Members of Executive Committee*, Drs. Cosens, Daniell, Drury, Marsh, MacCarthy.

Ethics.—The Ethical Rules were passed and the Ethical Committee for the Division was duly elected.

LANCASHIRE AND CHESHIRE BRANCH: ST. HELENS DIVISION.

A WELL-ATTENDED meeting of this Division was held on April 24th, Dr. REID, the Chairman, presiding.

Payment of Representatives.—The meeting unanimously approved the payment of Representatives when attending Committee, Council, or Representative Meetings, and agreed to a voluntary levy on all members of the Division for this purpose.

Treatment of Insured Persons.—It was agreed for the present not to enter into negotiations with regard to family clubs or friendly societies. It was reported that serious efforts had been made in the neighbourhood to form a large family club at a lower rate than 8s. 6d. a person, and that a whole-time surgeon had been engaged. Partly on representation being made to those concerned as to the possible action which might be taken by the local Division of the British Medical Association, the attempt was abandoned. It was agreed, considering the somewhat exceptional position of Prescot (in the St. Helens Division) with regard to friendly society members not insured under the Insurance Act, that the present practitioners be permitted to accept those persons at a rate of not less than 8s. 6d. a head, a wage limit of £160, and the free choice of doctor. It was resolved to draw the attention of all local practitioners by special circular letter to the necessity of keeping a full and complete record in the day-books, particularly so in the light of the memorandum relating to "provision of medical benefit to temporary residents."

Certificates.—It was resolved that certificates should be characterized by simplicity and uniformity, and should be accepted by all approved societies from non-panel as well as panel doctors.

Dispensing.—The meeting resolved that representation should be made to the effect that in any amended Insurance Act, dispensing should be made optional on the practitioner's part.

Rules for Insured Persons.—It was decided to ask the Local Insurance Committee to bring to the notice of all insured persons the "model rules for the conduct of persons in receipt of medical benefit," etc., which were recently approved and adopted.

Medical Referees.—It was also resolved that when and where medical referees were appointed (a) they should be "whole-time" men, (b) nominated by the Local Medical Committee, (c) appointed centrally.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

THE annual meeting of the Camberwell Division was held at Camberwell Infirmary, S.E., on May 1st. Dr. CAPES was in the chair.

National Insurance Act.—Communications from the State Sickness Insurance Committee re the National Insurance Act were referred to the Provisional Medical Committee for the County of London.

Annual Report of Division.—The HONORARY SECRETARY presented his annual report, which stated that the inaugural meeting was held on November 14th, 1912, when the rules for the Division were adopted, and had since received the sanction of the Council of the Association. The principal work of the Division had been in connexion with the Insurance Act. A matter of considerable interest had been dealt with in connexion with the capitation rate for uninsured persons. The four medical officers of the Camberwell Borough Council Employees' Sick Benefit Society resigned their posts, as they did not consider 4s. an adequate remuneration. The Town Clerk of Camberwell sent a circular to all local practitioners inviting them to tender for the vacant posts. The Executive Committee at once addressed a letter of remonstrance to the Town Clerk, placed a Warning Notice in the BRITISH MEDICAL JOURNAL, and circularized every local practitioner, explaining the circumstances of the case and convening a meeting at which a resolution was passed that no one should apply for the vacant posts. The committee of the society passed a resolution reinstating the original holders of the posts in their position, and left the question of remuneration open for a short time. One meeting had been held at which a scientific paper had been read and the ordinary business of the Division transacted. A school clinic had been successfully started in the area of the Division at 412, Old Kent Road, and was working very smoothly. There was a balance in hand of £1 17s. out of a grant of £5. It was resolved that the report be adopted.

Election of Officers.—The following were appointed officers for the ensuing year: *Chairman*, Dr. G. B. Batten; *Vice-Chairman*, Dr. W. T. Partridge; *Representative on Branch Council*, Dr. J. T. Clark; *Representative in Representative Meetings*, Dr. F. C. Langford; *Executive Committee*, Dr. R. Capes, Dr. H. G. Clitherow, Dr. R. Esler, Dr. W. Cooper Keates, Dr. B. A. Richmond, Dr. R. Tilbury, Dr. E. Archer Wood; *Honorary Secretary and Treasurer*, Dr. J. H. Clatworthy consented to take on the work until a successor could be found.

Vote of Thanks.—Dr. BATTEN, on taking the chair, thanked the Division for the honour done him, and at the same time proposed a very hearty vote of thanks to Dr. Capes for his past chairmanship. This was seconded by Dr. PARTRIDGE and carried by acclamation. Dr. CAPES suitably responded. It was resolved to thank Dr. Sergeant for the trouble he had taken in connexion with the dispute with the Camberwell Borough Council's Employees' Society.

Instruction of Representative.—It was resolved that it be left to the discretion of the Representative as to how he should vote at the coming Representative Meeting unless a special meeting of the Division was called for the purpose of instructing him.

The meeting concluded with a hearty vote of thanks to Dr. W. J. C. Keats for his hospitality and to the guardians for the use of the infirmary.

NORTH WALES BRANCH.

A MEETING of the Branch was held at Rhyl on April 15th. In the absence of the President, Dr. EMYR O. PRICE was voted to the chair. Thirty-six members attended.

Report of the Branch Council.—The Honorary Secretary (Dr. H. JONES ROBERTS) read the report of the Branch Council held that day, and on the proposal of Dr. RICHARD JONES (Blaenau Festiniog), seconded by Dr. J. E. THOMAS (Bangor), the report was adopted.

Financial Statement for 1912.—The balance sheet which had been printed and circulated showing a balance credit of £9 9s. 7d. in the general fund, and of £6 16s. 9d. in the private fund, was received and adopted.

Adoption of Ethical Rules.—The Ethical Rules as approved by the Representative Body, July, 1912, copies of which had been circulated, were, on the proposal of the

HONORARY SECRETARY, seconded by Mr. J. W. ROWLANDS, adopted.

Insurance Act.—Dr. EMYR O. PRICE proposed, Dr. MARION MCKENZIE (Beaumaris) seconded, and it was resolved:

That all provisions made and terms arranged between medical practitioners within the area of this Branch and the friendly societies for the treatment of their disabled and aged members (over 65) shall be provisional only until the end of the year 1913.

The following proposal of Mr. C. E. MORRIS (Holywell), seconded by Mr. J. TUDOR GRIFFITH (Prestatyn), was referred to the Branch Council for report to the next meeting:

That this meeting of the North Wales Branch of the British Medical Association is of opinion that free choice of doctor should be allowed to patients in voluntary hospitals in North Wales, that facilities ought to be given in these institutions whereby patients could receive treatment by their own doctor if so desiring.

Letters were read from the Honorary Secretaries of the South Wales and Monmouthshire Branch, and from the Medical Secretary, with reference to the action of the Welsh Insurance Commissioners and the working in South Wales of Sec. 15 (3) of the Insurance Act. Dr. RICHARD OWEN (Brymbo) proposed, Dr. J. MEDWYN HUGHES (Ruthin) seconded, and it was resolved:

That this meeting of the North Wales Branch of the British Medical Association is of opinion that it is contrary to the honour and interests of the medical profession for any medical man to accept appointments under schemes, institutes, or systems formulated under Sec. 15 (3) of the National Insurance Act.

THE HONORARY SECRETARY proposed, Mr. H. W. FOX (Bettws-y-coed) seconded, and it was resolved:

That the British Medical Association be asked to use all its influence and power to oppose the formation of such schemes, as being derogatory to the medical profession.

Papers.—The following papers were read: Dr. J. HILL ABRAM, Cervical Glands in Abdominal Cancer; Dr. J. E. GEMMELL, Ectopic Pregnancy; Dr. W. B. WARRINGTON, Case of Landry's Paralysis, terminating in recovery; Dr. F. P. WILSON, The Use of Crude Coal Tar in the Treatment of Eczema. A vote of thanks was accorded to the readers of the papers and to the President.

Luncheon.—Prior to the meeting the members lunched together at the Westminster Hotel.

SOUTH-WESTERN BRANCH:

TORQUAY DIVISION.

An ordinary meeting of the Torquay Division was held at the Torbay Hospital on April 17th, when sixteen members were present.

THE HONORARY SECRETARY read a report of a conference between a deputation of friendly society officials and a deputation of medical men on April 11th. The friendly society officials read a resolution offering 6s. for medical attendance on adults and 4s. for attendance on juveniles, to include medicine.

After Dr. EALES had given some further information, a general discussion ensued, and it was decided that the above terms could not be accepted by the Division, and it was resolved:

That the original terms for adults should now be altered from 9s. to 8s. 8d. per annum, or 2d. per week.

That in the case of children those persons should be accepted on the following terms:

| | |
|------------------------|------------------------------------|
| One child | 1½d. per week, or 6s. 6d. per ann. |
| Two children | 2d. " 8s. 8d. " |
| Three or more children | 3d. " 13s. " |

That an income limit of £2 from all sources should apply, and that there should be free choice of doctor and patient by doctor.

That these terms shall take effect from June 24th next, and that if not accepted by the persons applying for contract attendance, that all present holders of club appointments shall cease to attend uninsured persons after June 24th.

That the Honorary Secretary notify all medical men practising in this Division of the terms and conditions of contract attendance permitted by this Division, and that private clubs must conform with the above terms or be terminated.

THE CHAIRMAN explained the new arrangements to be made for mileage above the two-mile limit demanded by the profession, namely, 2s. a person for distance beyond two miles by road from the nearest doctor's residence.

Association Notices.

ANNUAL GENERAL MEETING.

Notice is hereby given that the 1913 Annual General Meeting of the British Medical Association will be held in the Hove Town Hall, Hove, Brighton, on Tuesday, July 22nd, 1913, at Two o'clock in the Afternoon.

BY ORDER OF THE COUNCIL,

GUY ELLISTON,

Financial Secretary and
Business Manager.

May 8th, 1913.

BRITISH MEDICAL ASSOCIATION.

ANNUAL MEETING IN BRIGHTON.

Masonic Meeting.

THE Worshipful Master, Wardens, and Brethren of the Hove Ecclesia Lodge, No. 1466, extend a cordial welcome to all medical Masons to attend a special lodge which has been summoned for the purpose of giving a Masonic greeting to all Masons attending the Annual Meeting.

Reception and Tea at the Old Ship Hotel (to follow the Church Service) at 4.30 p.m. on Wednesday, July 23rd, 1913. The lodge will be opened at 5.15 and closed at 5.45 p.m. Morning dress.

Brethren who cannot be vouched for must either bring their Grand Lodge certificates or be prepared to give proofs.

All brethren who wish to be present are asked to communicate with Bro. C. H. Benham, 14, North Street, Brighton, as early as possible, and in any case not later than Monday, July 21st.

NOTICE OF ALTERATION OF BOUNDARIES OF DIVISIONS.

Horsham and Reigate Divisions.

THE following change has been made in accordance with the Regulations of the Association, and takes effect from the date of publication of this notice:

That the Civil Parish of Crawley be transferred from the area of the Reigate Division of the South-Eastern Branch to the area of the Horsham Division of that Branch, and that the definitions of these Divisions be modified accordingly.

Representation in Representative Body: Unaffected.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The Honorary Secretaries, Dr. Ernest C. Hadley (Burbury Street, Lozells, Birmingham) and Dr. H. Hoyle Wbaite (Elsinore, Gravelly Hill, Birmingham), give notice that a special meeting of this Division will be held in the Medical Institute, Edmund Street, on Wednesday, May 21st, at 3.30 p.m., for the purpose of electing four Representatives and one Deputy Representative for this Division upon the Representative Body of the Association. The annual meeting of this Division will be held in the Medical Institute, Edmund Street, on Wednesday, June 25th, at 3.30 p.m., for the purpose of electing a Chairman, Vice-Chairman, two Honorary Secretaries, Representatives of the Division in the Branch Council, and members of the Executive Committee. Nominations for officers of the Division must be in the hands of one of the Honorary Secretaries not later than Tuesday, June 3rd.

DORSET AND WEST HANTS BRANCH.—The Honorary Secretary, Dr. Frank Fowler (29, Poole Road, Bonnemouth), gives notice that the annual meeting will be held at the Bourne Hall Hotel, Bournemouth, on Wednesday, May 21st, at 3.30 p.m. The reports of the Branch and Divisions will be presented and the Ethical Committee will be elected. Dr. H. G. Lys will deliver the presidential address. Dr. W. Johnson Smyth will read notes on a case of abdominal section. The President-elect, Dr. H. G. Lys, very kindly invites members to luncheon at his house, Southbrook, Poole Road, at any time between 1.30 and 3 o'clock.

LANCASHIRE AND CHESHIRE BRANCH.—Mr. F. Charles Larkin, Honorary Secretary, 54, Rodney Street, Liverpool, gives notice that a meeting of the Organization and Finance Committee of the Branch will be held at the Liverpool Medical Institution on May 14th, at 4.30 p.m., and that a meeting of the Branch Council will be held at the same place on May 21st, at 4 p.m.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—Dr. A. G. Southcombe, Honorary Secretary (83, Sidney Road, Homerton, N.E.), gives notice that the eleventh annual general meeting of the Division will be held in Balfour Hall, Dunstan Street, Kingsland Road, on Friday, May 30th, at 3.30 p.m.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.—The Honorary Secretary, Dr. Francis W. Goodbody, gives notice that a meeting of the practitioners of the borough of Marylebone will be held at 11, Chandos Street, W. (Medical Society of London), on Monday, May 19th, at 4.45 p.m., when a Local Medical Committee for the year 1913-14 will be elected. The Committee consists of twenty practitioners, ten in general and ten in consulting practice. Nominations signed by two practitioners, and accompanied by the signed consent of the nominee to serve, should reach Dr. Roxburgh, 30, Seymour Street, W., by Friday, May 16th. The annual general meeting of the Division will be held at the same place at 5 p.m., or at the conclusion of the meeting called for 4.45 p.m., to receive the Annual Report of the Executive Committee, to elect officers of the Division for the ensuing year, and to consider questions of which due notice has been given.

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION.—Dr. R. Wallace Henry, Honorary Secretary (6, Market Street, Leicester), gives notice that the annual meeting of the Division will be held at the Royal Infirmary, Leicester, on Wednesday, May 21st, at 4 p.m., for the election of Vice-President and Representatives of the Division on the Branch Council, and of officers and members of the Executive Committee of the Division. The annual report of the Executive Committee will be presented.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: FURNESS DIVISION.—Dr. John Livingston, Honorary Secretary (18, Hartington Street, Barrow-in-Furness), gives notice that the annual meeting of the Division will be held on Friday, May 16th. (By a printer's error the postcard issued gave a wrong date.)

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—Dr. P. S. Hichens, Honorary Secretary, gives notice that the annual meeting of the Division will be held in the Board Room of the Northampton General Hospital on May 29th, at 2.30 p.m. The meeting will be preceded by a luncheon at Franklin's Restaurant, Guildhall Road, at 1.30 p.m. Those wishing to attend the luncheon should notify the Honorary Secretary two days beforehand. Agenda: Election of officers for the ensuing year. Annual report of the Division. Consideration of agenda for the Representative Meeting. Consideration of other memoranda sent down from the Association. If time permits some clinical cases will be shown.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

The Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows:

1. AN ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.
3. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research into some subject relating to the causation, prevention, or treatment of disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1913. A Scholar may be reappointed for not more than two additional terms.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of Research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

Applications.

Applications for Scholarships and Grants for the year 1913-14 must be made not later than Tuesday, June 10th, 1913, in the prescribed form, a copy of which will be supplied by the Medical Secretary on application.

Each application should be accompanied by testimonials, including a recommendation from the head of the laboratory, if any, in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work, and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

ALFRED COX, *Medical Secretary.*

429, Strand, London, W.C.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 9,013 births and 5,052 deaths were registered during the week ending Saturday, April 26th. The annual rate of mortality in these towns, which had been 15.6, 15.2, and 15.8 per 1,000 in the three preceding weeks, fell to 14.8 per 1,000 in the week under notice. In London the death-rate was also 14.8, against 16.3, 14.9, and 16.4 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 5.0 in Tottenham, 5.2 in Southend-on-Sea, 6.6 in Ilford, 7.2 in Leyton, 8.6 in Wallasey, and 8.7 in Enfield to 19.5 in Bootle, 20.3 in Middlesbrough, 21.9 in West Bromwich and in Stockton-on-Tees, 22.3 in Walsall, and 26.2 in St. Helens. Measles caused a death-rate of 1.6 in Wolverhampton and in St. Helens, 1.7 in Hastings, 2.2 in Walsall, 2.3 in West Bromwich, and 2.6 in Bury; whooping-cough of 1.3 in Gateshead, 1.6 in West Hartlepool, and 2.0 in Stoke-on-Trent and in Aberdeen; and diphtheria of 1.3 in Portsmouth. The mortality from scarlet fever and enteric fever showed no marked excess in any of the large towns. A fatal case of small-pox was registered in Liverpool, but not one in any other of the ninety-six towns. The causes of 38, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number, 7 were recorded in Liverpool, 6 in Birmingham, 4 in St. Helens, 3 in Bootle, 3 in Preston, and 2 in South Shields. The number of scarlet fever patients in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,410, 1,357, and 1,334 at the end of the three preceding weeks, were 1,339 on Saturday, April 26th; 185 new cases were admitted during the week, against 167, 148, and 215 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,265 births and 768 deaths were registered during the week ending Saturday, April 19th. The annual rate of mortality in these towns, which had been 17.2 per 1,000 in each of the three preceding weeks, rose to 17.7 in the week under notice, and was 1.9 per 1,000 above the rate in the ninety-six large English towns. Among the several Scottish towns the death-rates ranged from 9.0 in Kilmarnock, 10.8 in Hamilton, and 13.4 in Clydebank to 21.4 in Ayr, 21.7 in Dundee, and 26.7 in Perth. The mortality from the principal infective diseases averaged 1.7 per 1,000, and was highest in Motherwell and Leith. The 339 deaths from all causes registered in Glasgow included 23 from whooping-cough, 8 from measles, 6 from infantile diarrhoeal diseases, 2 from enteric fever, 2 from diphtheria, and 1 from scarlet fever. Eight deaths from whooping-cough were recorded in Edinburgh, 3 in Leith, 3 in Greenock, and 2 in Motherwell; 3 deaths from measles in Aberdeen, and 2 from diphtheria in Dundee.

In the sixteen largest Scottish towns 1,283 births and 751 deaths were registered during the week ending Saturday, April 26th. The annual rate of mortality in these towns, which had been 17.2 and 17.7 per 1,000 in the two preceding weeks, fell to 17.3 per 1,000 in the week under notice, but was 2.5 higher than the rate in the ninety-six large English towns. Among the several Scottish towns the death-rate ranged from 7.4 in Perth, 10.8 in Coatbridge and in Hamilton, and 11.0 in Clydebank to 19.0 in Glasgow, 21.4 in Ayr, and 23.8 in Paisley. The mortality from the principal infective diseases averaged 1.8 per 1,000, and was highest in Glasgow included 18 from whooping-cough, 9 from infantile diarrhoeal diseases, 8 from measles, 2 from scarlet fever, 2 from diphtheria, and 1 from enteric fever. Three deaths from whooping-cough were recorded in Edinburgh, 3 in Paisley, 3 in Motherwell, and 2 in Greenock; 9 deaths from measles in Aberdeen, and 3 from infantile diarrhoeal diseases in Dundee.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, April 26th, 673 births and 491 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 661 births and 481 deaths in the preceding period. These deaths represent a mortality of 21.3 per 1,000 of the aggregate population in the districts in question, as against 20.9 per 1,000 in the previous period. The mortality in these Irish areas was therefore 6.5 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 29.3 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 2.45 as against an average of 25.9 for the previous four weeks, in Dublin city 26.9 (as against 27.5), in Belfast 20.4 (as against 19.5), in Cork 23.8 (as against 22.3), in Londonderry 17.8 (as against 16.9), in Limerick 16.2 (as against 20.0), and in Waterford 17.1 (as against 18.5). The zymotic death-rate was 1.2 as against 1.9 in the previous week.

VITAL STATISTICS OF LONDON DURING THE FIRST QUARTER OF 1913.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."] In the accompanying table will be found summarized the vital statistics of the Metropolitan boroughs and of the City of London based upon the Registrar-General's returns for the first quarter of the year. The mortality figures in the table relate to the deaths actually belonging to the several boroughs, and are obtained by distributing the deaths in institutions among the boroughs in which the deceased persons had previously resided. The 28,946 births registered during the quarter were equal to an annual rate of 25.7 per 1,000 of the population, estimated at 4,518,191 persons in the middle of the year; in the corresponding quarters of the three preceding years the rates were 26.4, 26.0, and 25.8 per 1,000 respectively. The lowest birth-rates last quarter were 12.6 in the City of Westminster, 13.7 in Hempstead, 18.5 in

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during the First Quarter of 1913.

* No correction is made for births in lying-in institutions; the boroughs principally affected are marked thus (*).

Kensington, 19.8 in Chelsea, and 20.3 in Paddington; among the highest rates were 31.9 in Poplar, 32.1 in Southwark, 32.5 in Bernondsey, 32.8 in Shoreditch, and 36.1 in Finsbury.

During last quarter the deaths of 19,699 London residents were registered, equal to an annual rate of 17.5 per 1,000; in the corresponding quarters of the three preceding years the rates were 15.4, 17.2, and 15.3 per 1,000. The death-rates last quarter ranged from 12.4 in Lewisham, 12.6 in Hampstead, 13.8 in Wandsworth, 15.3 in Woolwich, and 15.4 in Fulham to 19.1 in Kensington, 19.9 in Bethnal Green, 20.2 in Southwark, 20.8 in Bernondsey, 21.4 in Finsbury, and 23.7 in Shoreditch.

The 19,699 deaths from all causes included 29 from enteric fever, 844 from measles, 52 from scarlet fever, 309 from whooping-cough, 113 from diphtheria, and 298 among children under 2 years of age from diarrhoea and enteritis. Enteric fever was proportionally most fatal in St. Marylebone, St. Pancras, Islington, Bethnal Green, and Lewisham; measles in Kensington, Hammersmith, Finsbury, Shoreditch, Bethnal Green, and Battersea; whooping-cough in Paddington, Hammersmith, Kensington, Bernondsey, Camberwell, Deptford, and Greenwich; and diphtheria in Bernondsey, Deptford, Greenwich, and Lewisham. The 52 deaths from scarlet fever included 7 in Islington, 5 in Lambeth, 4 in Hackney, 4 in Wandsworth, 3 in St. Marylebone, and 3 in Poplar. The mortality from diarrhoea and enteritis among children under 2 years of age in proportion to the births registered during the quarter was greatest in Hammersmith, the City of Westminster, Islington, Shoreditch, Bethnal Green, and Stepney.

The deaths from phtisis among London residents last quarter numbered 1,748, and were equal to an annual rate of 1.55, against 1.52 in the corresponding quarters of each of the two preceding years. The death-rates from this disease last quarter ranged from 0.70 in Hampstead, 0.81 in Lewisham, 0.90 in Wandsworth, 1.03 in Stoke Newington, and 1.08 in Kensington to 2.15 in Stepney and in Southwark, 2.20 in Bethnal Green, 2.24 in the City of London, 2.27 in Finsbury 2.30 in Shoreditch, and 2.99 in Holborn.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 116 per 1,000 last quarter, against 101, 108, and 95 in the corresponding quarters of the three preceding years. Among the lowest rates recorded last quarter were 53 in Stoke Newington, 86 in Lewisham, 88 in Hampstead, 91 in Lambeth, and 92 in Holborn and in Woolwich; the highest rates were 134 in Bethnal Green, 139 in Islington, 149 in Battersea, 150 in Hammersmith, 161 in Kensington, and 185 in Shoreditch.

A. G. WILKINSON, B.A., to the *Ermouth* for voyage home, undated. Surgeon SIDNEY W. GRISWADE, M.B., to Malta Hospital, vice Staff Surgeon Wilkinson, May 1st. Staff Surgeon DOUGLAS D. TURNER to the *Urid* for R. N. Barracks, vice McCutcheon, May 18th. Surgeon WILLIAM W. D. CHILCOTT to the *Superb* on recommissioning, May 6th. Surgeon ALEXANDER S. PATERSON, M.B., to the *Goliath*, on becoming parent ship, undated.

The following Acting Surgeons have been appointed to the *Victory*, additional, for course of instruction at the Naval Medical School, Royal Naval College, Greenwich, and Haslar Hospital, April 11th: A. M. HENRY, G. F. B. PAGE, M.B., A. J. PATERSON, D. G. ARTHUR, R. E. P. SAYERS, W. A. S. DUCK, P. B. WALLIS, M. MECHAN, H. E. Y. WHITE, M.B., A. SIMPSON, M.B., F. C. WRIGHT, I. S. GABB, A. G. TOZER, D. V. H. PEARSON.

Fleet Surgeon ANTHONY KIDD has been placed on the Retired List at his own request, April 22nd.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

MAJOR P. S. O'REILLY has been granted eight months' leave out of India.

Captain DANIEL L. HARDING to be Major, April 26th. Lieutenant-Colonel F. P. S. TAYLOR has been appointed to Dover. Lieutenant-Colonel L. WAY has been appointed to the command of the Station Hospital, Ferozepore.

Major A. CHOPPING has been appointed Registrar at the Royal Victoria Hospital, Netley, vice Major J. R. MacMaun.

Major F. J. PALMER has been granted five months' and three days' leave, ex India.

Major A. W. N. BOWEN has been granted 185 days' leave, ex India.

Major G. J. BUCHANAN has been appointed Medical Inspector of Recruits, Eastern Command, vice Lieutenant-Colonel J. D. Ferguson, D.S.O.

Major R. S. H. FUHR, D.S.O., has been selected for appointment at the Royal Arsenal, Woolwich.

Captain E. C. WHITEHEAD has been appointed Clinical Pathologist at Queen Alexandra Military Hospital, vice Captain A. B. Smallman.

Captain T. E. HARTY has been posted to York for duty as specialist in Dermatology.

Captain R. J. FRANKLIN has been appointed to the charge of the Cantonment Hospital at Solon.

Captain R. G. S. GREGG appointed to the charge of the Brigade Laboratory at Karachi.

Captain A. W. A. IRWIN has been appointed to Cork.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Sixth London Field Ambulance.—Major (Honorary Major in the Army) WILLIAM M. O'CONNOR, M.D., to be Lieutenant-Colonel, March 31st.

Highland Mounted Brigade Field Ambulance.—Lieutenant JOHN M. GRANT, M.B., resigns his commission, May 3rd.

First South Midland Mounted Brigade Field Ambulance.—Lieutenant DOUGLAS M. SPRING, M.B., to be Captain, April 30th.

Fifth London Field Ambulance.—Lieutenant JOHN P. GRANGER resigns his commission, May 3rd.

Attached to Units other than Medical Units.—Lieutenant WILLIAM A. VALENTINE, M.D., to be Captain, May 24th.

For Attachment to Units other than Medical Units.—HARRY L. GAUNTLETT to be Lieutenant, April 1st.

Captain NORMAN DUKERTON to be Adjutant to a School of Instruction, vice Major Thomas E. Fielding, vacated March 31st.

| Dr. H. Holt | Dr. F. E. Tylecote |
| Dr. W. F. Jackson | Dr. F. J. Webb |
| Dr. E. Johnstone | Dr. Brockbank |

Medical Representatives on the Manchester Insurance Committee.—(Elected by the profession) Dr. T. A. Helme and Dr. R. G. McGowan. (Appointed by the Manchester City Council) Dr. A. W. Chapman and Dr. J. Staveley Dick. (Appointed by the Insurance Commissioners) Dr. E. Johnstone and Dr. Brockbank.

Members of the Profession on the Medical Service Subcommittee.—Dr. T. A. Helme, Dr. C. G. L. Skinner, and Dr. A. E. Cotterill.

Scale of Fees.

The following is the scale of fees agreed upon with the Manchester Insurance Committee:

| | £ | s. | d. |
|--|---|----|----|
| 1. Attendance on the patient at the practitioner's residence, surgery, or dispensary... | 0 | 2 | 0 |
| 2. Visit to the patient's residence ... | 0 | 2 | 6 |
| 3. Special visit, that is, a visit paid the same day in response to a call received after 10 a.m. ... | 0 | 3 | 6 |
| 4. Night visit, that is, a visit made between the hours of 9 p.m. and 9 a.m., in response to a call received between those hours ... | 0 | 5 | 0 |
| 5. Surgical operation requiring local anaesthesia (other than incision of abscess) ... | 0 | 10 | 6 |
| 6. Cases of abortion and miscarriage to be treated at ordinary rates. | | | |
| 7. Administration of a general anaesthetic ... | 1 | 1 | 0 |
| 8. Setting of fracture or reduction of dislocation ... | 0 | 10 | 6 |
| 9. Sanatorium benefit report, Med. 2 ... | 0 | 5 | 0 |
| Ordinary fees for succeeding visits or consultations. | | | |

A Subcommittee has been appointed to report whether certain procedures requiring a local anaesthetic are to be entered as operations under Section 5 of the above scale. It may be found desirable to arrange for a revised scale with a schedule dividing the operations commonly undertaken in general practice under local anaesthesia into groups at different fees. In the meantime practitioners are advised to follow as closely as possible the lines of ordinary practice, and book as operations under local anaesthesia only such procedures as have hitherto been usually charged at the rate of 7s. 6d. or more in addition to the ordinary visiting or consultation fee.

Extension of Provisional Agreement.

On March 11th the Committee was informed that the Commissioners desired the Insurance Committee to enter into arrangements for a permanent service after April 14th, and to issue immediately to the practitioners on their list forms of agreement, to be signed and returned by March 15th. The Medical Committee informed the Insurance Committee that it could make no recommendation to the profession to renew the agreement or otherwise without further consideration. On March 18th the Committee decided that, in view of the lack of necessary information,

its only course was to obtain a further period of consideration, during which such information might be collected, circulated, and discussed, so as to afford every medical man reasonable grounds on which to base his ultimate decision as to giving service. At a meeting of the Insurance Committee on the same evening this suggestion was accepted, subject to the condition that the Medical Committee would at once recommend to the profession a three months' extension of the existing agreement in order that the Insurance Committee should be assured of an efficient service during the extended period. This condition appeared so reasonable and the alternative of immediate settlement of a permanent arrangement so objectionable that it was accepted by the medical members of the Insurance Committee, and their action was unanimously approved by the Medical Committee at its next meeting.

Remuneration.

It was pointed out that the amount available for medical benefit being limited, the Insurance Committee will only be able to pay a proportion of each practitioner's account for the first few months. Unpaid balances will be carried forward, and taken into account at subsequent settlements. The amount available for the first six weeks is equivalent to a payment of over 11s. in the £ on the total accounts sent in. How far the diminution of sickness during the healthier months of the year and the consequent lowering of the total medical attendance, whilst the amount available for medical benefits remains fairly constant, will lift that equivalent, and enable the Insurance Committee to reduce the unpaid balances, cannot at present be determined, but the arranged extension of the provisional agreement for a further period of three months should produce facts and figures which will enable the profession to form an approximately accurate opinion.

Organization.

The Committee recognizes the necessity of establishing a system of ready and effective intercommunication between itself and individual members of the profession, and has decided to divide the insurance area into convenient districts, in each of which it will be the duty of a member, or members, of the Committee to keep in touch with resident practitioners by means of meetings, correspondence, personal interviews, or in other ways. Postal votes will be taken, or general meetings held if it appears advisable, and the Committee has invited suggestions.

Expenses.

To meet the immediate expenses of the Committee it has been decided to make a levy of 5s. on each practitioner, and every medical practitioner in the area has been asked to forward that sum to the Honorary Treasurer, or alternatively his written permission for the deduction of that amount from the sum due to him from the Insurance Committee. It has been suggested that a proportional deduction from insurance accounts should be arranged, and some such scheme will probably be submitted for consideration at a later date, as offering a more equitable and business-like solution of the problem; but for the present the Committee considers that the simple expedient of collecting so small a sum from each member of the profession, to be used in the protection of the common interests of all, should not only meet with no opposition, but be received with unanimous approval and immediate response.

Treasurer's Report.

The Accounts Subcommittee has presented a first report on the work done in the city of Manchester under the Insurance Act. The number of practitioners making returns for January was 260 and for February 256 out of a medical population of about 520—that is, about 50 per cent., and the amount of work done by these practitioners was:

| | Con- sulta- tions. | Visits. | Special Visits. | Night Visits. | Opera- tions. | Anae- sthetics. | Fractures and Dis- locations. | Patients. |
|------------|--------------------------|---------|--------------------|------------------|------------------|--------------------|-------------------------------------|-----------|
| January... | 44,887 | 14,829 | 345 | 110 | 114 | 5 | 20 | 24,675 |
| February | 97,024 | 27,389 | 426 | 158 | 154 | 6 | 12 | 39,598 |

Upon these figures the TREASURER makes the following observations:

The most noticeable feature of these figures is the fact that in January 24,675 and in February 39,598 insurance patients out of 240,000 consulted doctors "on the list" in Manchester. This gives a daily average of 1,451 in January and 1,414 in February. The remarkably small drop in the daily average in February seems to dispose of the idea that there was a considerable rush in the early days of the medical benefit. Even if we do not add those numerous insured persons who consulted doctors *not* "on the list," these astounding figures support very strongly the assertions of the profession as to the incidence of disease, and dispose very effectively of the inept optimism of Mr. Masterman as to the amount of sickness to be expected. As a consequence of this huge incidence the amounts of the bills reach for January £6,505 16s., and for February £13,333 10s. 6d., a total of £19,839 6s. 6d. Since the estimated income for the forty-five days is £11,500, this is equal to 11s. 1d. in the £. It was immediately seen that drastic reductions must be made. Obviously the easiest plan for the Committee was to adopt a *pro rata* distribution, when 11s. 1d. in the £ would have been the dividend, disposing of Lloyd George's dictum that bad debts would be much reduced under the new régime. A cursory glance at the accounts speedily showed that this method would be eminently unfair, and your Subcommittee decided to proceed on other lines. First, the average cost per patient for each month was determined, being for January 5s. 4d. and for February 6s. 9d. Accounts below these averages were examined for the common errors and passed. Each account above these averages was scrutinized twice by two different pairs of members of the Subcommittee, and reduced either to the average or an allowance made when satisfactory explanations were given for the excess by the practitioner. The accounts above the average for which no explanations were forthcoming were then reduced to a general average.

Your Subcommittee wish it to be definitely and distinctly understood that the reductions they have made do not carry in any sense a reflection on the bona fides of the practitioner whose account is reduced. The reduction is a regrettable necessity owing to the lack of funds and not a condemnation. A few errors in book-keeping have occurred, as was to be expected, but in subsequent accounts these will no doubt be eliminated.

The total amounts to submit to the Insurance Committee for payment now came to, for January £5,981 9s. 4d., and for February £12,968 7s. 3d., giving on the reduced accounts a dividend of 12s. 2d. in the £, and on those amounts the Insurance Committee will proceed to pay a sum on account. The balance of the amounts due will then be carried forward to the next month, when, if the amount required does not reach the amount available, a further distribution will be made. This will continue to the termination of the year, when the accounts will be balanced and a final dividend declared. By this method a practitioner's easy months will help to balance his busy months, and there will result the most equitable distribution. Your Subcommittee are unanimously of the opinion that under present methods of working the amount available for distribution during the whole twelve months—probably about £84,000—will by no means meet the twelve months' bills. They are glad to report that in the months under review the work appears to have been carried on according to the ordinary lines of the practitioner's practice, and they regret to point out that if the remuneration is to meet the work done a distinct differentiation must be made between the treatment of insurance patients and ordinary private patients. For the guidance of practitioners your Subcommittee estimate roughly that the remuneration offered will not pay for three-quarters of the attention given to private patients. In other words, practitioners will either have to reduce by at least one-quarter their attendance on their insurance patients, or they must continue to exercise their charity by facing the alternatives of an account considerably reduced by the Medical Committee, or a reduced *pro rata* distribution by the Insurance Committee.

Finally, your Subcommittee desire to point out how much more accurate was the profession's estimate of 8s. 6d. as the minimum amount *per caput* on which the scheme could efficiently be worked than the estimate of 6s. 6d. of the Chancellor of the Exchequer. If the 8s. 6d. had been granted it is probable that, for work on the lines of ordinary private practice, approximately 20s. in the £ would have been paid.

BLACKPOOL.

A JOINT meeting of panel practitioners and members of the Blackpool Medical Committee was held on April 30th.

Temporary Residents.—The following resolution was carried unanimously, and the secretary was instructed to forward a copy to the Commissioners with a covering letter explaining the case of the local profession in respect of work among visitors:

That this meeting demands a definite guarantee from the Insurance Commissioners that the Central Fund for treatment of temporary residents shall be large enough to ensure payment of all doctors' fees for attendance without discount; that a payment on account be made within three months of such attendance; and that until such guarantee is received the panel declines to attend insured persons under the regulations and conditions embodied in Memo. 161, I.C.

STAFFORDSHIRE.

A MEETING of the Local Medical Committee for the county of Staffordshire was held on May 2nd.

The SECRETARY presented an interim report of the Executive Committee, and the following recommendations were adopted:

- That for the current year a levy of 5s. be made on every doctor on the county panel and every doctor resident in the area of the administrative county, whether on the panel or not.
- That out of the funds so provided, if adequate, third-class return railway fare be paid to members attending meetings of the committee or subcommittees.
- That the expenses of District Medical Committees to be defrayed out of such fund be printing, stationery, postage, and hire of a room for meetings where necessary.

Prescription Books and Provision of Duplicate Prescriptions.—A correspondence which had passed between the Secretary to the Committee and the Clerk to the Insurance Committee on the matter of the adoption by the latter of a form of book other than that selected by the Local Medical Committee and without consulting it, was read, and it was agreed that the present form should stand for the time being, subject to the matter being reopened before a fresh supply of books was ordered. The SECRETARY also read a reply from the Insurance Commissioners to a letter protesting against the proposed charge of one penny for copying a prescription in cases where such copy was not furnished by the medical man; the reply stated that the proposal had not come before the Commissioners, and had not been approved by them. Such modification should be considered by the Insurance Committee after consultation with the Local Medical Committee, and its views on the question submitted to the Commissioners, together with the comments of the Local Medical Committee. The meeting then after discussion decided that the doctors should no longer furnish a duplicate of a prescription for the use of the chemist, on the ground that they were under no legal obligation to do so, and that, as the chemist required the copy solely for his own purposes, he should make it for himself and at his own expense, if expense there were.

Medical Representation on Insurance Committees.—The Secretary was instructed to write to the Medical Secretary, British Medical Association, requesting that body to use its influence to insure that in any Act for amending the National Insurance Act the right be given to the medical profession to choose all its representatives on the Insurance Committee up to the 10 per cent. representation.

HOLLAND (LINCOLNSHIRE).

A MEETING of the Local Medical Committee was held on April 30th at Boston. Dr. WHITE was in the chair, and five other members were present.

Confinement Fees.—It was resolved to ask the Holland Insurance Committee or the approved society to guarantee the payment of these.

Wage Limit.—It was resolved to urge the Holland Insurance Committee most emphatically to fix this at £2 or £2 10s.

Allotment of Those who have not Chosen a Doctor.—It was resolved that the allotment should be in proportion to those already on each doctor's list.

Duplicate Prescriptions.—It was resolved to ask the Insurance Committee not to agree to the proposed charge by chemists for copying prescriptions.

LEICESTER.

The name of Dr. P. Southam was accidentally omitted from the list of the Local Medical Committee for the Borough of Leicester published on April 26th, p. 346, and the name of Dr. Emms was incorrectly printed.

NORFOLK.

A MEETING of the Local Medical Committee for Norfolk was held at Norwich on May 3rd. Dr. B. D. Z. WRIGHT was in the chair, and twenty-one other members and Dr. D. G. Thomson, honorary secretary, were present. The business of the meeting was chiefly concerned with communications received from the County Insurance Committee.

Attendance on Asylum Staff.—The Committee notified to the Insurance Committee its approval of the application of the Medical Superintendent of the Norwich City Asylum to go on the panel with a view to giving medical attendance to the staff of that asylum only.

Free Choice of Doctor.—A complaint by a layman alleging that a medical practitioner had interfered with the provisions of the Act with regard to the free choice of doctor would, it was stated, be referred to the Medical Service Subcommittee.

Drug Tariff.—A revised drug tariff was considered, the chief point of difference being a proposal by the chemists to charge a fee of one penny for the prescriptions not sent in duplicate, a proposal against which the honorary secretary stated the State Sickness Insurance Committee had protested. A conference then took place with representatives of the chemists, who exhibited an improved form of prescription book issued by the Pharmaceutical Society. The Medical Committee agreed that practitioners in Norfolk should write their prescriptions in triplicate as requested, and the revised tariff was then approved, after the chemists' committee had been notified that unless distilled water was specified in prescriptions it should not be charged for.

Old and Disabled Members.—A letter from the Clerk to the Insurance Committee was read stating that the Committee was being pressed to make arrangements for the medical attendance on old and disabled members of approved societies under Section 15 (2) (c) of the Insurance Act, and that, providing the medical practitioner did the dispensing to which such persons were accustomed, the remuneration would be 8s. 6d. a head per annum. The suggestion was accepted, and satisfaction was expressed that this long-discussed matter was in sight of settlement in a way consonant with the original demands of the profession so long and ably urged by the British Medical Association.

Payment of Medical Practitioners.—It was notified that the Insurance Committee intended to pay 75 per cent. of the capitation grant to every doctor at once, but that the drug payment would be held over pending fuller information from the doctors as to the insured persons for whom they had dispensed. It was pointed out that the doctors should claim not merely for those for whom they had actually dispensed but also for those for whom they were entitled to dispense.

Allocation of Insured Persons.—It was notified that the Insurance Committee had decided to delay the allocation of those insured persons who had not yet made their choice of doctor until July 31st, the pink ticket remaining valid until that date. The Committee, however, agreed to the suggestion of the Insurance Committee that all insured persons placed on the doctor's list after April 14th should be considered for the purposes of payment as having been on the doctor's list for the first quarter. The Medical Committee decided to abide by its previous decision that insured persons who had not yet selected a doctor should be put on the list of the nearest practitioner. An instance was mentioned in which an insured person had been refused by all the doctors in a small town, and it was agreed that this was one of those rare cases in which the District Committee would have to appoint one of the local panel to attend the patient.

BERKSHIRE.

A MEETING of the practitioners on the Berkshire panel was held on May 2nd, at the Royal Berkshire Hospital. Dr. GORDON PATERSON was in the chair, and the total attendance numbered thirty. The following resolutions were passed:

It is inadvisable at present to fix a maximum number of insured persons which may be accepted by any medical practitioner.

With regard to the allocation of insured persons who have not chosen their doctor, their yellow cards shall be sent to the District Secretaries, and allotted by the doctors in each district.

KENT.

A MEETING of the Kent County Medical Committee was held at Ashford on April 30th. Dr. A. MAUDE, Chairman, and sixteen other members being present.

The Committee adopted a resolution to the effect that the nurses and other insured persons of hospitals and infirmaries, whether voluntary or rate-aided, were fit and proper persons to contract out.

It was resolved to co-opt as representatives of non-members of the British Medical Association Drs. Randell and Fairweather, and to receive other names at the next meeting.

As representatives of general and special hospitals, Messrs. Fairweather, Travers, Wachter, and Potts were co-opted.

A subcommittee consisting of Drs. Starling, Hulke, Parr, Dudley, Heggs, Fairweather, and Coke, with the Chairman, Vice-Chairman, and Secretary as *ex officio* members, were appointed to organize the profession in the county on practical lines, especially as regards finance.

The following motion was also carried:

That the District Insurance Committees should hand over the allocation of insured persons to the District Medical Committees; such allocation will be subject to the approval of the District Insurance Committee.

The Honorary Secretary was empowered to employ clerical assistance at a cost not exceeding £25 per annum.

REIGATE.

At a joint meeting of the Reigate Division of the British Medical Association and of practitioners resident in the Reigate insurance area, convened by the Executive Committee of the British Medical Association, and held at Reigate on February 19th, the following were elected to form the Local Medical Committee under the Insurance Act:

Reigate and Redhill.—Drs. Hewetson, Gayner, Palmer, Ogle, Thornton, and Walters.

Dorking.—Drs. McKenzie, G. A. Robertson, and Sebastian.

Horley.—Drs. Clarke, Pagden, and Williamson.

Chipsstead.—Drs. Binney, French, and Weir.

At a further joint meeting held under the same auspices on April 25th the following appointments were made:

Chairman of Meetings.—Dr. A. R. Walters, Reigate.

Chairman of Committee.—Dr. Spencer Palmer, Redhill.

Secretary.—Dr. Thornton, Springfield House, Reigate.

Representatives on the Surrey Medical Committee.—Drs. A. R. Walters, Gayner, and Clarke.

Representatives on the Local Insurance Committee.—Drs. Spencer Palmer and Mackenzie.

Finance.—It was proposed by Dr. WATSON, seconded by Dr. PRINCE, and carried unanimously:

That £d. in the £ be contributed by all doctors on the panel to meet the expenses of the Committee, and the secretary be instructed to make application for such sums to be deducted centrally.

Midwifery Fees.—On a discussion arising out of regulations issued by the Insurance Commissioners, fixing midwifery fees under maternity benefit, it was proposed by Dr. CRICHTON, seconded by Dr. PRINCE, and carried unanimously:

That the fees proposed are inadequate, and that no midwifery work should be undertaken at a lower fee than 1 guinea.

ISLE OF WIGHT.

A MEETING of the Isle of Wight Local Medical Committee was held at Newport on April 30th, when Dr. K. W. INGLEBY-MACKENZIE was in the chair and seventeen others were present.

Anaesthetics.—A letter from the Secretary of the Insurance Commissioners was read stating that there were

no funds available from which extra payments for the administration of anaesthetics could be made. The meeting adopted the following resolution, which the Honorary Secretary was instructed to send to the Insurance Commissioners and to the State Sickness Insurance Committee of the British Medical Association:

That this meeting of the Isle of Wight Local Medical Committee strongly protests against the administration of anaesthetics to insured persons without provision for the payment of an adequate fee.

Medical Representation on Committees.—The Honorary Secretary was instructed to write to the Local Insurance Committee asking it to reconsider its decision not to appoint the two elected medical representatives on all subcommittees, or to allow a deputy to act in the case of a member of a subcommittee who was prevented from attending.

Allocation of Insured Persons.—A deputation of four members was appointed to meet a corresponding number of the Insurance Committee to discuss the question of allocating insured persons who had not yet chosen their medical attendant.

Temporary Residents.—The following resolution was adopted, and the Honorary Secretary was instructed to forward it to the Insurance Commissioners and to the State Sickness Insurance Committee of the British Medical Association:

That inasmuch as each practitioner serving on the panel was promised a minimum 7s. (including payment for treatment of insured persons suffering from tuberculosis) any deduction therefrom is a breach of contract, and that this meeting of the Isle of Wight Local Medical Committee strongly protest against Memo. 161/I.C.¹

Medical Service Subcommittee.—The Honorary Secretary was instructed to write to the Insurance Committee suggesting that it should adopt a standing order (in exercise of the power conferred upon them by Medical Regulation 52 (1)) to the effect that all matters connected with medical benefit should in the first place be referred to the Medical Service Subcommittee, and pointing out that such a course would obviate many misunderstandings which might arise if the matter were first debated by the full Insurance Committee; the Honorary Secretary was also asked to urge that all matters considered in private by the Medical Service Committee should afterwards be also considered in private by the Insurance Committee, and that a standing order should be adopted to that effect; and, further, to suggest that in future forms of contract should be referred to the Local Medical Committee before being sent to the practitioners on the panel for signature, and should be returned to the Insurance Committee through the Local Medical Committee. On the question of certificates, he was instructed to suggest that a common form of medical certificate should be employed for use under the Act.

Tariff of Drugs.—The revised tariff of drugs was accepted, and it was resolved to recommend practitioners to supply duplicate prescriptions. The Committee expressed the opinion that where duplicate prescriptions were not supplied to the chemist the clerical fee of 1d. should be charged to the individual practitioner who supplied the prescription.

ROXBURGH.

A MEETING of the Roxburgh Local Medical Committee was held at Newtown St. Boswells on May 1st. Dr. W. L. CULLEN, Chairman, presided, and nine members were present.

Dr. W. L. JOHNSTONE communicated a report of proceedings at a conference with the Medical Benefit Subcommittee of the County Insurance Committee, and the meeting appointed the following representatives on the subcommittee, subject to their consent to serve: Drs. W. Blair, A. D. Fleming, and W. T. Barrie.

The circular from the Insurance Commissioners relating to payment for services rendered to temporary residents was considered.

Practitioners were recommended to sign the continuation agreement for a period of three months only, until such time as terms for service were satisfactorily adjusted with the Insurance Committee. It was reported that

with few exceptions this course is being taken by all the practitioners on the panel.

It was resolved that all matters hitherto under the consideration of the Local Medical Committee should be remitted to the Executive Committee with powers, and also such new and urgent matters as might in its opinion require immediate settlement.

The Secretary was instructed to make inquiries as to the feasibility and arrangements necessary for the appointment of a member of the legal profession as a permanent secretary to the Local Medical Committee.

Model rules for patients, submitted by the Insurance Committee, were considered and approved with few alterations.

MEETINGS OF INSURANCE COMMITTEES.

BOURNEMOUTH.

Conference Promised on the Question of Income Limit.

At the meeting of the Bournemouth Insurance Committee a month ago, a resolution in favour of a £2 income limit was rejected (SUPPLEMENT, April 12th, p. 318). The matter was referred to again last week, when Dr. HEYGATE VERNON said that the Medical Committee was statutory, and had a right to negotiate with the Insurance Committee on matters of this kind. It asked the Insurance Committee to confer, and the only reply was that the Insurance Committee could not consider the question at all. An amicable settlement of this matter would go a long way towards getting the profession to accept service on the panel permanently; until it was settled amicably he did not believe the agreements would be signed.

The Committee passed a resolution agreeing to appoint four members to meet the doctors. It was suggested that the doctors' representatives should be men on the panel, and Dr. Vernon promised to convey the suggestion to the Local Medical Committee.

Publication of Doctors' Names.

Doubtless through inadvertence, the Bournemouth Insurance Committee has permitted to be published in the local newspapers its Finance Committee's statement of the precise amounts paid to medical men on the panel, the names of the doctors being also given. The practice of referring to doctors by a number, adopted elsewhere, would prevent undesirable publicity of this kind.

MANCHESTER.

At the last meeting of the Manchester Insurance Committee the Chairman, Mr. WALTER DAVIS, gave some interesting figures in regard to the Insurance Act in Manchester. He stated that the number of insured persons in Manchester is at present 254,700. The number of cases which had received medical treatment in January was 24,675, in February 39,598, and in March 39,320; the aggregate cost to the Committee from January 14th to March 31st was £31,479. The Committee has decided to pay at once to the doctors two-thirds of this amount, and cheques to the amount of £20,986 had been drawn, the balance being retained for the present. The total amount available for the whole year for distribution among the medical men would probably be about £84,000, and at this rate the amount available for the three months (January 14th to April 14th) would be about £21,000 to defray the actually incurred cost of over £31,000. It was thus evident that if the average amount of work for the year was anywhere near what it has been in the three months the total amount of money available would be very considerably below what the doctors would have earned. As the Medical Committee had pointed out, this proved how much more accurate was the profession's estimate of 8s. 6d. as the minimum amount per caput on which the scheme could efficiently be worked than the estimate of 6s. 6d. of the Chancellor of the Exchequer. If the 8s. 6d. had been granted, it was probable that for work on the lines of ordinary private practice approximately 20s. in the £ could have been paid. As to the chemists, their bills for medicines and appliances supplied to the prescriptions of the doctors up to the middle of April amounted to about £6,000, and the Insurance Committee issued orders that 50 per cent. of this should be

¹ SUPPLEMENT to the BRITISH MEDICAL JOURNAL, April 19th, p. 334.

paid at once. Mr. Davis further stated that over 500 cases of consumption were actually receiving treatment, and the committee had under consideration a more extended scheme for the working of sanatorium benefit.

COUNTY OF LANARK.

At a meeting of the Insurance Committee of the County of Lanark, held on April 30th, the CHAIRMAN reported on the work of the Medical Subcommittee for the past quarter. He said that, while all matters had not been finally adjusted, the major difficulties had been overcome, and, so far as the Committee could ascertain, no difficulty had been experienced in providing for insured persons within the county the medical treatment and medicines promised them under the Act. The number of insured persons within the county was 83,346, and altogether £2,000 forms had been received from the doctors. It was evident, however, that over 16,000 persons, or 20 per cent., would have to be allocated among the doctors. At the present time there are 201 doctors and 131 chemists on the panel for the county, and, almost without exception, every doctor and every chemist within the county was on the panel. The question of mileage was a difficult one, and it was not known yet what sum would fall to the county of Lanark. The doctors within the county had, however, arranged that a deduction should be made from the sum due to them of 2d. an insured person. This would amount to £700 per annum, and would be called the "mileage fund." The grant from the Treasury would be applied to meet the demand for mileage, and, so far as it was not sufficient, the balance would be paid out of the special mileage fund. At the end of the year any balance in the mileage fund will be repaid to the doctors. The Convener of the Sanatorium Benefit Committee reported that up to date 134 applications had been received, and that the great majority had been met.

REPORTS OF LOCAL ACTION.

IRELAND.

Medical Certification under the Insurance Act.

At a recent meeting of the Conjoint Committee of the British and Irish Medical Associations in Dublin the following resolutions were passed unanimously:

That this Committee protest against the endeavour of the Insurance Commission to appoint medical men who are not in attendance on patients to certify for sickness benefits, such action being in contravention of all canons of medical ethics, and the Committee appeal to all medical men to refuse to accept such appointments.

That having heard the statement of Dr. Thomas Hennessy, supported by letters to him from Messrs. J. C. Lardner, M.P., J. Cullinan, M.P., and Surgeon M'Arde, this Committee is satisfied that the Irish Parliamentary party is definitely pledged to procure a minimum fee of 2s. 6d. per caput for the notification of insured persons in Ireland under the National Insurance Act.

Last week the Insurance Commissioners notified the Insurance Committee of Dublin, in reference to the proposed arrangement for the medical certification of insured persons, that, as a sufficient number of practitioners had not agreed to join the panel in the area of the Committee, it had been decided to convene a conference immediately to determine the means that should be adopted to secure adequate facilities for the provision of certificates, having regard to all the circumstances and the funds available at the appropriate capitation rates. The Commissioners also sent a list of eight medical men who had agreed to join the panel, and pointed out that whatever arrangements might eventually be come to, the claims of these gentlemen must receive prior consideration. It was requested also that the conference should furnish the names and addresses of any other doctors recommended for appointments and who would be willing to act. A conference was accordingly held between the County Borough of Dublin Insurance Committee and the approved societies operating in the area. The Secretary reported that another medical man had intimated his intention of sending forward his name for inclusion on the panel. After considerable discussion

as to the panel system and its alternatives, including the appointment of whole or part-time medical referees, the following resolution was adopted:

That the local medical profession be requested to reconsider the question of fees and arrangements for certification, and to appoint a delegation, with full powers to enter into negotiations with this conference and with the National Health Insurance Commission. Failing action by the profession within eight days, this conference hereby recommends that the Commission allocate to the approved societies their appropriate share of the amount available for the provision of medical certificates, and that the societies be left to make their own arrangements in that regard.

A general meeting of the whole medical profession in Dublin on May 2nd, summoned by the Dublin County Borough Local Medical Committee, decided to send seven representatives to the conference, with power to make arrangements for certification under the following conditions:

1. The administration of the money for certificates to be in the hands of the Insurance Committee, and not the friendly societies.
2. If a panel is formed it must be open, and there must be no preferential treatment given to the medical men whose names are already on it.
3. That the fee should be 2s. 6d. per certificate, or a 1s. 6d. capitation fee.
4. That the certificate must be signed by the doctor in attendance on the case.

It is suggested that as the money available is already not enough to pay for certificates, advantage might be taken of a section of the Act to the effect that where there is not enough to pay for the costs of administration the balance in excess may be defrayed half by a Treasury grant, and half by a local rate. If this were done it would be easy to come to an agreement with the doctors by substituting a capitation rate of 1s. 6d. for the absurd 9d. offered by the Commissioners.

County Longford and the Panel.

At a meeting of the County Longford Medical Committee a resolution was unanimously adopted disagreeing with the statement of the Chairman of the Insurance Commission, as given in the press and in Parliament, regarding the formation of a panel of doctors in County Longford. The resolution further stated that all the men practising in the county had given a written pledge not to go on such a panel, that they awaited with interest the production of the chairman's panel, and that they could not avoid giving expression to their surprise at the statements by the Insurance Commissioners and their officials as to their relations with the profession. Though the above statement was published in the daily press early last week, no explanation has so far been offered by the Insurance Commissioners, and the panel in question has not been published.

County Down.

A large and representative meeting of the medical men of South Down, representing the districts of Warrenpoint, Rathfriland, Killeel, and Restrevor, held in the last-named town on May 2nd, passed the following resolutions unanimously:

1. That we approve of the resolutions passed at the meeting of Poor Law medical officers on March 27th, 1913, and refuse to be bound by the recommendations of the Conjoint Committee to accept the terms offered for certification of insured persons.
2. That we regret to observe that the Insurance Commissioners have withdrawn from the arrangement entered into with the medical profession for examining and certifying for sanatorium treatment tuberculous cases and their domiciliary treatment, necessitating—as their ill-judged parsimony will—the suspension of the fight against the white plague; and that in order to minimize as much as possible this fatal error on the part of the Commissioners we are prepared, as a temporary measure, to examine and report on such cases for the fee of 5s. and to give them domiciliary treatment at 2s. 6d. and mileage per visit.
3. That those of us who are members of the Irish Medical Association call on that body to request their nominees to retire from the Conjoint Committee, as that Committee has forfeited the confidence of Irish rural doctors.
4. That pending the settlement of the dispute we bind ourselves not to give certificates at a lesser fee than 2s. 6d. in urban and 3s. in rural districts.

INSURANCE NOTES.

NURSES FOR INSURED PATIENTS.

THE Leicester Insurance Committee at its last meeting decided to arrange a conference with representatives of approved societies and local nursing associations with a view to engaging nursing to supplement medical benefit to insured persons. Mr. C. J. Bend expressed the opinion that the services of a trained nurse would tend to shorten the period of illness and also help to check malingering. Mr. Brake, the insurance inspector for the district, expressed the opinion that there was a great deal of malingering in Leicester. Dr. Wallace Henry supported the holding of a conference, remarking that the success of medical treatment depended upon the doctor's instructions being properly carried out.

SANATORIUM TREATMENT.

Having found the funds at its disposal for sanatorium benefit inadequate, the Westmorland Insurance Committee consulted the Insurance Commissioners, and in reply received a letter suggesting that the sanatorium should be used for educative purposes and that the period of residence should be shortened. Several members expressed disagreement with the suggestion of the Commissioners, and it was decided to appoint a special subcommittee to consider the question.

MEDICAL BENEFIT IN REMOTE VILLAGES.

At an inquest on a labouring man who died from pneumonia at West Hougham, Kent, it was stated that there was no doctor on the panel for the villages of Hougham and Capel. The coroner remarked that presumably, as the two villages were out of the way places, the Insurance Committee had not been able to get doctors who were prepared to go on the panel in respect of these places. However, the Insurance Act provided for dealing with such a case, and the Commissioners might suspend the right to medical benefit in respect of the insured persons, paying instead to each person a sum equal to the estimated cost of his medical benefit. He did not know that the price would be a very tempting one to the doctor; it worked out at something between 8d. and 9d. a visit. That being the case, it would be understood that there would be a difficulty in getting a professional man to come from either Folkestone or Dover to that rather inaccessible place. The jury, in passing a verdict of death from natural causes, asked the coroner to call the attention of the Insurance Committee to the position at Hougham and Capel.

DEPOSIT CONTRIBUTORS.

At the last meeting of the Aberdeen Insurance Committee it was reported that an attempt to convene a meeting of deposit contributors, for the appointment of their representatives to the Insurance Committee, had been unsuccessful, only two people attending. A letter from the Insurance Commissioners for Scotland was read stating that the Commissioners, while in sympathy with the desire of Committees to reduce the number of deposit contributors as much as possible, did not approve of personal canvassing of insured persons.

The Lynn (Norfolk) District Insurance Committee last week decided to obtain the names of deposit contributors, so that an impartial committee might be appointed with a view of inducing these insured persons to become members of approved societies.

MILEAGE IN NORFOLK.

The Norfolk Insurance Committee has asked medical men on the panel to supply information with regard to conditions in their respective areas, with a view to an application to the Insurance Commission for a special mileage grant.

THE POSITION IN SOUTH WALES.

SOME account was given last week of the tension which has arisen in South Wales owing to the action of combinations of workmen who are seeking to take advantage of Subsection 3 of Section 15 of the Insurance Act, commonly called the Addison amendment, for the purpose of contracting to obtain medical attendance and treatment

for themselves and their dependants upon terms and conditions which the profession in the district cannot accept. As was stated last week, representatives of the South Wales and Monmouthshire Branch of the British Medical Association and of the South Wales and Monmouthshire Works Surgeons' Association accompanied by the Medical Secretary of the British Medical Association had an interview with the Welsh Commissioners. We now learn that the Chancellor of the Exchequer has consented to receive shortly after the Whitsuntide recess a deputation of practitioners from South Wales to discuss the situation which has been brought about. In regard to this matter we have received the following letter from Dr. H. A. Latimer, Direct Representative on the General Medical Council:

Sir,

The letter published in the SUPPLEMENT of last week's JOURNAL appearing above the signature of Dr. Reid, the Chairman of the Honorary Medical Staff of the Swansea General and Eye Hospital, is of a most urgent nature, and may be aptly described as a call to arms on the part of all hospital staffs in the kingdom, who, through the action of this body of practitioners living in a district which is particularly subject to labour disputes, have been forced into the forefront of a struggle with the friendly societies.

The issue has been so clearly set forth in that letter that I feel it will be superfluous for me to add to it; but as one who was long resident in Swansea, and who has been an active member of its hospital staff, I ask leave to put some further considerations of the matter before your readers.

It is desirable, in the first place, to recognize that although hospitals are ostensibly charities their character as such has been altered of late years owing to the fact that in many districts, and notably in Swansea, their funds have been derived from two sources. As hitherto, the charitably minded well-to-do, and fairly well-to-do classes, have given annual subscriptions for their maintenance without any expectation or desire of receiving any medical or surgical assistance in return. Such gifts are true charity. Their donors, recognizing the inestimable value of such assistance, and knowing that poverty or faulty surroundings of its working class recipients prevent them from paying professional fees for the same, give of their substance so that the latter may be provided with these necessities. And the medical staffs of the hospitals, in their turn, spend long hours of anxious labour in furtherance of this charitable work absolutely without any payment for such services. It is true that in return for this work they acquire experience and reputation, and that in this way they are partly recompensed; but every one must acknowledge that hospitals cannot be carried on without their services, and that if they were paid for the same they would still acquire skill and reputation as they now do by their unpaid work.

But of late years a new class of subscribers to these charities has come on the scene, and these new-comers no longer claim the benefits of hospital relief on a charitable basis but demand them as a right. This class consists of working men. In the aggregate their contributions amount to a considerable sum. In return for these contributions they have secured a large representation on the board of management of the Swansea Hospital, and, as is the custom wherever they gain a power, they are determined to make their influence felt on that board. Many of them are members and officials of friendly societies, and as such they are irritated at the action of the medical staff, who intimated some months ago that when the National Health Insurance Act would come into force they would cease to give ordinary attendance on insured persons who would be provided for under the provisions of this enactment.

For my own part, I should have thought that the board of management would have immediately seen the reasonableness of this action. All hospital authorities have a continual struggle to obtain funds for carrying on their work, and surely there can be no reason for using moneys given to a charity for people who are already provided with medical attendance as a right. By adopting the course laid down by the hospital honorary staff expenses would be lessened by a diminution of the amount spent in administration, and justice would be done to those who are provided for by the State. But, from the first, this action of the staff met with the strongest opposition of the labour and friendly society representation on the hospital committee, and this opposition assumed the form of threats to withhold future contributions from the workmen if the medical recommendations were adopted and put in force.

Now, the subject of medical attendance on insured persons and their dependants has advanced one stage further. Resisting the doctors' claims for certain payments for attendance on the dependants of insured persons, the local friendly societies, as stated by Dr. Reid, have decided on starting medical aid societies, in which they will employ imported medical men as whole-time officers, to the exclusion of those practitioners who have accepted service under the panel system, and they demand that their people shall have hospital relief as heretofore, where they consider that such is necessary; and they demand what, as trade unionists they refuse to allow in labour disputes—namely, the recognition of men brought in from outside to cope with and break down a combination of men engaged in another form of labour to whom they are opposed.

There is no new feature in this action on their part. All members of our profession who have practised in South Wales, and the British Medical Association as a whole, have realized the fact that trade unionists, when they become employers, throw their most cherished principles of collective bargaining to the winds; the Ebbw Vale dispute is a standing illustration of this fact.

The amusing thing in the Swansea Hospital dispute is to read the remarks made by some speakers at the Swansea Hospital board of management meeting, as reported in the local press. It is reported in the *South Wales Daily Post* of April 30th last that one speaker, addressing himself to a motion calling for the deletion of a recommendation by the House Committee that the use of the board room should be allowed to the Local Medical Committee on two Thursdays monthly, and for occasional meetings, said "the workers objected to the hospital being used as the fighting ground for a medical trade union." It is indeed sad to think of the outraged feelings of these poor people. They only are the workers in the community. They only are entitled to combine for the purpose of coercing those who do not agree with them. All unions of men not engaged in certain defined forms of labour are to be opposed, and are to be condemned as being trade unions! What with them is a term of honour, when applied to themselves, becomes a term of reproach when applied to people who are opposed to them.

The practical lesson of this dispute is that Swansea must be supported all along the line of hospitals throughout the kingdom. If the statement made at the meeting that there are seventy-five large towns where medical aid associations have been established (and the doctors there are working in harmony with the other doctors of the town) be correct, the medical profession is faced with a return to the former unsatisfactory bondage to the friendly societies which all its well-wishers have so earnestly sought to see done away with. Labour trade unionists refuse to allow employers to introduce alien labour into districts where there is a strike, and they also refuse—and notably in South Wales—to allow the employment of non-unionists alongside of them. In the *Standard* I see that "a huge strike is in progress in the South Wales coalfield. Over 52,000 men are idle because they object to the employment of some 3,000 non-unionists." Although we have no trade union operating in our profession, we have union amongst ourselves; and if we are content to give professional courtesy, sympathy, and assistance to medical men who have been imported into various towns for the purpose of defeating our just combination for proper terms of remuneration for our work, then good-bye to all our hopes of obtaining the same. Do not let us shelve this issue or fall into a panic, as happened recently when we accepted service under the Insurance Act against our own inclinations. Hospital staffs are for the most part composed of high-minded and well-established men of good repute. Let them stand shoulder to shoulder with Swansea in the stand which its hospital staff is making in this dispute, bearing well in mind that "united we stand, divided we fall.—Yours faithfully,

H. A. LATIMER.

Tunbridge Wells, May 3rd, 1913.

NATIONAL INSURANCE ACT, 1911.

PROVISION OF MEDICAL BENEFIT TO TEMPORARY RESIDENTS.

As indicated in the Memorandum 161/I.C.—received by us on April 17th and published in the SUPPLEMENT of April 19th, p. 334—temporary residents are divided into two classes: (A) Persons occasionally removing for a temporary purpose, and (B) those frequently moving from place to place. This memorandum was extended in certain respects by another memorandum, No. 159/I.C., received on April 18th.

(A) Persons Occasionally Removing for a Temporary Purpose.

The paragraph in 161/I.C., which describes the green voucher reproduced on page 335 of the SUPPLEMENT of April 19th, is expanded by the addition of the following paragraph, now numbered 11:

11. If the insured person bearing such a voucher falls ill in the area in which the voucher entitles him to treatment, he will proceed in accordance with such local arrangements as may be made by the Committee for that area, due notice of which must be given on the panel lists in Post Offices and in such other way as may be convenient. In small county boroughs it will be possible for the Committee to require the production of the voucher at the Committee Offices, in order that any necessary instructions may be given to the insured person. In the case of larger areas, however, it will be necessary for the Committee to make an announcement on the Post Office Notice that vouchers may be presented direct to doctors on the panel.

The concluding paragraphs of this part (A) of the memorandum have been amplified in the following form:

14. Having constituted the Central Fund out of similar debits against every Committee whose vouchers have been used to obtain treatment, the Commissioners will subdivide it into a Central Panel Fund and Central Drug Fund, containing respectively fourteen-eighteenths and four-eighteenths of the whole. They will then proceed to aggregate the special chemists' accounts; and if the aggregate sum due is within the amount in the Central Drug Fund, they will credit to the Drug Fund of each Committee the amount of the chemists' bills for that area. If the aggregate chemists' bills exceed the amount in the Central Drug Fund, the credits to the Drug Funds of individual Committees will be proportionately reduced. Any balance left in the Central Drug Fund not exceeding one-eighteenth of the total Central Fund will be transferred to the Central Panel Fund; but any balance in excess of that amount will remain in the Central Drug Fund to meet future drug charges.

15. The Commissioners will then proceed to aggregate the total attendance fees returned, and ascertain what dividend the Central Panel Fund (augmented by any balance of the Central Drug Fund) will provide. Having declared this dividend they will then credit the funds of each Committee with the amount necessary to defray the attendance fees earned in respect of temporary residents in their area on the basis of the declared dividend.

16. The net effect of the operations described above will be that the final credit of Medical Benefit funds to any Committee will be reduced to the extent of any "case value" transfers, and increased to the extent of fees credited to the Committee. The Commissioners will declare a uniform dividend on the uniform scale of fees adopted, and the Committee will pay their doctors at the rate declared, and their chemists either in full, or, in the event of a deficiency in the Central Drug Fund, at a dividend which will also be declared by the Commissioners.

17. If an insured person falls ill outside his own Committee area without being in possession of a voucher, and then makes application for a voucher, the Committee from whose area he comes may comply with his application in cases of urgency or of special circumstances. Doctors on the panel should be requested to inform any of their insured patients who are being sent away for purposes of health as to the necessity of obtaining a voucher before departure from the area.

(B) Persons Frequently Moving from Place to Place.

The text of this part of the memorandum is as follows:

18. Such persons will be permitted, if they can substantiate a claim to the satisfaction of the Committee to be regarded as persons frequently moving from place to place, to derive the whole of their medical benefit during the year under these "temporary resident" arrangements. A form of application and further instructions will be issued in due course. In such cases the Committee, if they consent to the application, will forward it to the Commissioners, expressing their consent, and enclosing the applicant's Index Slip. The whole 9s. will then be credited to the Central Fund instead of to the Committee; and a voucher similar to that enclosed will be issued by the Commissioners to the insured person. As far as concerns Committees in whose area such a person may receive treatment, the procedure will be identical with that described above; but as the whole 9s. has been carried to the Central Fund there will be no "case value" transfer in respect of him.

PROVISION OF MEDICAL ATTENDANCE AND TREATMENT TO INSURED PERSONS OVER 65 ON JULY 15TH, 1912.

The Insurance Commission for England has issued the following Memorandum (155/A.S.), dated April, 1913, on this subject. A reference to this matter will be found in the body of the JOURNAL, p. 1015.

1. The Exchequer Grant of 2s. 6d. per annum is payable in respect of every insured person receiving medical attendance and treatment, including insured persons over 65 on July 15th, 1912.

2. This latter class may be subdivided as follows:

1. Insured persons over 65 on July 15th, 1912, for whom their society has decided to provide medical attendance and treatment wholly out of State funds as one of the benefits provided under Section 49 of the National Insurance Act.

2. Insured persons over 65 on July 15th, 1912, for whom medical attendance has been provided out of the private funds of the society and for whom their society has decided not to provide medical attendance and treatment as one of the benefits under Section 49 of the Act.

3. In the case of both classes it is proposed that the Exchequer Grant should be paid direct to the society. In both cases the medical treatment will be administered by the society and not by the Insurance Committee.

CLASS 1.—WHERE MEDICAL ATTENDANCE IS PROVIDED WHOLLY OUT OF STATE FUNDS.

4. The maximum amount available for medical attendance and treatment will be a sum of 8s. 6d. a year, including the grant of 2s. 6d. It will, however, be open to societies to make inclusive contracts with doctors for the provision of both medical attendance and medicines, and should they be able to make arrangements at a lower inclusive rate than 8s. 6d. per annum, they will be able to give the contributor the advantage of the amount saved in the form of an addition to his sick pay, which would be increased at the rate of 3d. a week for every shilling saved.

CLASS 2.—WHERE MEDICAL ATTENDANCE IS NOT PROVIDED WHOLLY OUT OF STATE FUNDS.

5. With regard to insured persons over 65 on July 15th, 1912, for whom medical attendance has been provided at the expense of the private funds of the society, the grant of 2s. 6d. per annum may be paid into these funds towards recouping the society for the expenses so incurred. If the whole 2s. 6d. is not required to meet the increased cost of providing medical attendance the saving will be available towards reducing the contributions which would otherwise have been payable by this class of member for such attendance and treatment.

Method of Claiming the Grant.

6. Societies which have insured members who were over 65 on July 15th, 1912, will in due course be furnished with forms on which to claim the grant.

ARRANGEMENTS MADE UNDER SECTION 15 (2) (c).

7. A friendly society which finds it impossible to make an arrangement with a doctor within the maximum amount available in the year may, in the case of those of its members to whom Section 15 (2) (c) of the Act applies, call upon the Insurance Committee for the area in which the members reside to put into operation the provisions of that section.

8. This section requires Insurance Committees to make it a condition of their arrangements with doctors on the panel that the latter shall be willing, if required, to afford medical attendance to members of friendly societies in the classes referred to in that section at the same rate of remuneration as that payable in the case of insured persons entitled to medical benefit. It must be pointed out that the section refers to medical attendance only, and not to the provision of medicine, etc., and that it merely affords a maximum rate of remuneration at which, of no lower rate can be arranged by private negotiation, doctors on the panel can be required to attend insured persons of the classes in question. Further, the section, and the paragraphs in the Medical Benefit Regulations giving effect to the section, in no way involve Insurance Committees in the administration of the medical treatment concerned; their duties are limited to enforcing upon doctors upon the panel, if called upon to do so, one of the conditions of those doctors' contract with the Committee, and to declaring the rate of remuneration (namely, a figure between 6s. 6d. and 7s.) at which doctors on the panel can be required to agree with societies for the treatment of their members in these classes.

9. It should not, however, save in rare circumstances, be necessary for the machinery of Section 15 (2) (c) and Regulation 51 to be put into operation. It is not anticipated that any doctor on the panel will actually require the Committee to call upon him formally to accept the rate of remuneration prescribed under Regulation 51 by declining to do so in private negotiation. But, for the exceptional circumstances in which it may be necessary for a Committee, at the request of a friendly society, to require a doctor to fulfil this condition of his agreement, arrangements have been made which are described in paragraph 11 below.

10. Section 15 (2) (c) applies, however, not only to insured members of friendly societies who by reason of age are not entitled to medical benefit—that is, to members in Classes 1 and 2 above-mentioned—but also to uninsured members of friendly societies, which have become approved or have established separate sections, who were prevented from becoming insured under the National Insurance Act because of permanent disablement. For the reasons already explained it will probably be more convenient to a society to make a private inclusive contract with a doctor for the medical attendance and medicines of these persons than to put Section 15 (2) (c) into operation for the provision of medical attendance only; and it will probably be unnecessary for societies to resort to Section 15 (2) (c) except in the rare circumstances referred to above. There should presumably be little difficulty on the part of the society in inducing a doctor on the panel to accept any inclusive terms for medical attendance and medicines which are more profitable to him than the prescribed rate for medical attendance only.

11. For the exceptional cases in which societies call upon Insurance Committees to put into operation the provisions of Section 15 (2) (c) the enclosed Form of Undertaking and Voucher has been prepared. This Form provides for an undertaking by the society in accordance with paragraph 51 of the Medical Benefit Regulations to pay the prescribed fee, and for a request by the society to the Committee to allot the member specified to a doctor on the panel. On receipt from the society of the form, with the undertaking duly filled in, the Committee will fill in the name of the doctor selected by them, and forward the form to that doctor for his signature, at the same time notifying the member of the doctor who has become responsible for his attendance. The doctor in question will then sign the document and return it to the society.

References in this Memorandum to Societies will, of course, apply to registered branches also.

Form Med. 33.

NATIONAL HEALTH INSURANCE.

The

Society.

MEDICAL TREATMENT.

We, the undersigned, being the Secretary (Treasurer) and three members of the above-named society, on behalf of the society hereby request the Insurance Committee of the county (borough) of _____ (hereinafter called the Committee) to provide medical treatment under the arrangements made by them for the treatment of insured persons to _____ of _____ who was on the 16th December, 1911, and still is a member of the above-named Society, and is not entitled to medical benefit under the National Insurance Act, 1911, by reason that he was on the 15th July, 1912, subject to permanent disablement, of the age of 65 or upwards, and we hereby undertake to pay to any medical practitioner on the panel for the said county (borough), in consideration of his undertaking the medical treatment of the above-named member, remuneration at the rate and upon the terms and conditions hereinafter mentioned:

1. The treatment given by the practitioner shall be not inferior in nature, quality or extent to that provided by him for insured persons under his agreement with the Committee, save that it shall not include any treatment included in sanatorium benefit under the Act, nor the provision of any medicines or medical or surgical appliances.

2. The remuneration of the practitioner in respect of treatment for each year shall be such amount as the Committee may determine to be the sum available for the medical treatment (exclusive of medicines and appliances) in that year under the arrangements made by the Committee of an insured person entitled to medical benefit and resident in the said county (calculated on the basis of payment by capitation fees), and a proportionate amount in respect of treatment for any part of a year.

3. Payment shall be made to the practitioner not later than seven days after the date of the determination by the Committee of the amount available for the medical treatment of an insured person entitled to medical benefit under the arrangements made by the Committee.

* Strike out the words which are not applicable.

4. The society may at any time, by giving two calendar months' notice in writing to the practitioner and to the Committee, determine the agreement as from the end of that period.

5. If at any time the Committee give notice to the society of their intention to assign the above-named member to another practitioner on the panel this agreement shall upon the date specified in that notice determine.

6. For the purposes of this agreement the word "year" means the period fixed by the Insurance Commissioners for the purposes of medical benefit under the said Act as the medical year.

Signature of Secretary
or Treasurer. }

INSURANCE ACT IN PARLIAMENT.

MEDICAL BENEFIT.

Medical Lists and Transfers.

In reply to Mr. Hunt, Mr. Masterman stated that no medical man in London had as many as 7,000 insured persons on his list, as had been stated, and that a misapprehension had arisen owing to the fact that in a large number of cases the large lists publicly credited to individual medical men really belonged to medical men and their partners, and not to a single medical man only. With regard to transfer from one medical man to another, he said if any insured person failed to obtain adequate medical attendance and treatment from the doctor he had selected, the Insurance Committee, on the case being brought to its attention by himself or his approved society or otherwise, would arrange for his transfer to another doctor.

Medical Tickets: Change of Doctor.

Major Hope asked the Secretary of the Treasury whether, owing to the statement on the medical tickets and accompanying leaflets issued in December, 1912, that these tickets were only valid until April 30th, 1913, many insured persons were led to believe that their selection of a doctor by means of the medical ticket only held good until April 30th, 1913; whether these insured persons would be permitted to choose, if they wished another doctor from the panel to attend them after April 30th; or whether they would only be permitted to make a change subject to the consent of the first doctor.—Mr. Masterman, in reply, said neither the medical tickets nor the accompanying leaflets contained any statement implying that the selection of a doctor at the beginning of the year only held good until April 30th; but, as he had stated in reply to previous questions, insured persons might change their doctors within the year, either by consent of doctor and patient, or by decision of the Insurance Committee if the committee considers transference desirable on any question arising between an insured person and the doctor attending him.

Medical Referees.

Mr. Tyson Wilson asked the Secretary to the Treasury how many Insurance Committees had appointed medical referees; and whether he would state what the duties of the referees were and from what fund they were paid. Mr. Masterman said that if medical referees who would

determine questions as to the scope of medical benefit under paragraph 55 of the Medical Regulations were referred to, no such referees had yet been appointed, as no such questions had yet arisen for decision in that manner. One or two medical advisers had been appointed in connexion with the checking of sickness certificates, etc. He would send the hon. member a memorandum setting out in detail the terms of appointment of those officers.

Representatives of Insured on Insurance Committees.

In reply to Mr. Tyson Wilson, Mr. Masterman said that the Commissioners were that day discussing with the Advisory Committee the method of appointing the representatives of insured persons on Insurance Committees (Section 59, Subsection (2) (a)), and the appointments would be made as soon as possible thereafter.

Aged and Disabled Persons.

In reply to Mr. Montague Barlow, Mr. Masterman said that a special grant at the rate of 2s. 6d. a head had been voted by Parliament towards meeting the cost of the provision of medical benefit under the National Insurance Act for all insured persons entitled to that benefit, and a similar amount was also available towards meeting the cost of providing medical attendance and treatment for persons insured under the Act who were between 65 and 70 years of age at the date of their entry into insurance and who were not entitled to medical benefit, but for whom their societies were providing medical attendance and treatment, either as one of the benefits under Section 49 of the Act, or out of their private funds under arrangements made prior to the passing of the Act. The grant out of parliamentary funds towards the cost of benefits was limited to persons insured under the Act.

Contracting Out.

Mr. F. Hall asked the Secretary to the Treasury how many insured persons had employed doctors not on the panel in order to ensure prompt and efficient attention, and whether the cost of medical attention so obtained or any proportionate part thereof was refunded.—Mr. Masterman said that as insured persons could obtain prompt and efficient attention from doctors on the panel, there was no need for them to employ other doctors on that account, nor had he any evidence that this course was being taken. In any case of complaint of neglect the insured person should communicate with the Insurance Committee, whose duty it was to investigate the matter.

Small Societies.

In reply to Mr. Charles Bathurst, Mr. Masterman said the number of registered friendly societies of all sizes in England and Wales on December 31st, 1910, was 6,310; no information was available as to the number of unregistered societies. Of these, 1,318 registered friendly societies and 700 unregistered had been approved under the National Insurance Act; 955 registered friendly societies had been dissolved and the registry of 74 had been cancelled since the above date. During the same period 309 new societies had been registered. If desired information as to Scotland would be obtained. Societies had not been classified in the records as large or small.

In further reply to Mr. Bathurst, Mr. Masterman said that a number of associations, with functions mainly advisory in character, had been formed to assist small societies in their work under the Act. In England the information in the possession of the Insurance Commissioners showed that such associations had been formed or were in the course of formation in eleven counties or groups of counties. In Wales also eleven associations of small societies had been formed under Section 22 of the Friendly Societies Act. Many of those associations would doubtless be used for the purpose of Section 39 when the time arrived.

It may be explained that Section 39 relates to associations of small societies for the special purpose of partly pooling any surpluses or deficiencies disclosed by a valuation.

Ireland.

In reply to Mr. Bridgeman, the Chancellor of the Exchequer, on behalf of the Prime Minister, said that the Government was anxious that an opportunity should be given for the discussion of the appointment of the Treasury Committee on this subject, and that an oppor-

tunity would arise on the Temporary Commissions Vote. He thought it would be better not to have the discussion until the Committee had reported.

Orkney and Shetland Committees.

In reply to Mr. Chiozza Money, Mr. Masterman stated that a return obtained by the Scottish Insurance Commission showed about 3,144 and 4,570 insured persons in Orkney and Shetland, but the return was not yet complete and those figures were subject to some increase. He was afraid that the money voted for mileage and other special charges in the Highlands and Islands of Scotland in the Supplementary Estimates of 1912-13 could not be used to defray the expenses of members of Insurance Committees.

SANATORIUM BENEFIT.

Provision of Sanatoriums.

In reply to Mr. Chiozza Money, who inquired as to the number of public authorities which had availed themselves of the provisions of the capital grant of £1,500,000 towards the building of institutions for the treatment of tuberculosis; and how much of that sum had yet been granted to or earmarked for particular authorities, the President of the Local Government Board said that the Board had been in communication with all the county councils and county borough councils in England, and in the majority of cases had promised capital grants towards the cost of providing institutions. Some small grants had already been paid, but in most of the cases the schemes had not been matured in sufficient detail to enable him to say what grants would be given. Practically all those authorities had already indicated that they proposed to avail themselves of the capital grant, and the whole of the English share of the grant has been provisionally earmarked in proportion to the population of the several areas.

Tuberculosis Administration in London.

In reply to Mr. Astor, Mr. Burns said that the Local Government Board proposed to recognize the London County Council as the central organizing body for the provision of institutional treatment. The London County Council had already been informed to that effect, and the Board understood that the Council had such a scheme in preparation.

CORRESPONDENCE.

THE BRITISH MEDICAL ASSOCIATION AND A PRACTICAL POLICY.

DR. JAMES PEARSE, Honorary Secretary, Wilts Local Medical Committee (Trowbridge), writes: There are several points connected with the administration of the National Insurance Act on which it is very essential that Local Medical Committees should have guidance from the central authority, and in which co-ordinated action should, if possible, be taken. The following instances may be given:

(a) *The Definition of the Term "Rural Area."*—The regulations provide for dispensing by medical men in rural areas where the insured person lives more than a mile from a chemist. But they give no definition of the term. In a circular issued by the Commissioners they expressly state that the term has no technical meaning as "rural district," but the interpretation is left to each Insurance Committee. In this county the opinion of the Local Medical Committee was sought and a definition given as applying "to insured persons who live outside an urban district and are more than a mile from a chemist." To this the chemists have taken exception, and the Insurance Committee will arrive at its own interpretation after hearing both sides. But I do not think that our official Association has taken cognizance of a point which is obviously of great importance to rural practitioners, and it would seem that the matter is one which might well have been discussed between the Association and the Commissioners.

(b) *The Drug Schedule.*—This again is a matter which is brought under the consideration of each Local Medical Committee, and on which it is very advisable that they should have some authoritative central opinion, but there is no evidence that it has received detailed attention.

(c) *Fees Payable under Maternity Benefit.*—This may raise acute difficulties. The clause in the Act which

authorizes the payment of "the prescribed fee" to the medical attendant when called in by a midwife was inserted during the passage of the bill through the House of Lords, and was, I believe, intended in the interests of the medical profession. But it was obviously impossible for the Commissioners from the limited sum of 30s. to prescribe an adequate fee, and at the same time provide for the payment of the midwife and the needs of the mother. Thus we are faced with the prospect of a prescribed fee of 15s. recoverable from maternity benefit for the major complications of midwifery, and the opinion has been expressed that it may not be possible to recover more from the patient. This is obviously a point on which direct communications should take place between the Association and the Commissioners.

Dr. Walker, in his letter in the SUPPLEMENT of May 3rd, draws attention to the "studied ignoring of the British Medical Association" by the Commissioners. I agree with him that it is very essential that official communications should take place on such points as he mentions and others to which attention might be drawn. But I am not sure that the fault is wholly that of the Commissioners. The difficulty is that there are two contradictory policies before the Association at the present time. The last Representative Meeting resolved (Minute 48): "That the Council be instructed to take all necessary steps to watch and protect the interests of the profession under the National Insurance Act; (b) to take any opportunity that may be afforded for placing the representatives of the Association on the Advisory and Insurance Committees; (c) to obtain statutory recognition of Local Medical Committees in every insurance area; (d) to collect information as to defects in the Act and Regulations and to take all possible opportunities of remedying them." The last clause would seem to include an instruction to approach the Commissioners. On the other hand, the Report of Council, page 142, contains the following resolution:

That inasmuch as the Representative Body considers the Act unworkable and derogatory, the action of the Council and the State Sickness Insurance Committee shall continue to be in opposition to the Act and Regulations as at present constituted.

It would seem impossible under this resolution for the Association to approach the Commissioners officially, and equally impossible for the Commissioners to approach the Association. At the same time, without such negotiation it would be impossible for the Association *per se* to take opportunity to remedy defects in the Regulations, and Local Medical Committees must work out their own salvation. It is very essential that before the next Representative Meeting the Association should make up its mind which of these two contradictory policies is to be pursued.

THE MEMORANDUMS ON "TEMPORARY RESIDENTS."

DR. J. W. PRIDMORE (Honorary Secretary, Isle of Wight Local Medical Committee) writes: My excuse for again writing to you is to expose what appears to me to be a flagrant piece of sharp practice on the part of the Insurance Commissioners. In order to do this, I must go back as far as the week before last, when I, in common with all other practitioners on the panel, received Memorandum 161/I.C. on the subject of "Provision of Medical Benefit to Temporary Residents." This document was, I presume, perused and discussed by individual practitioners and various Local Medical Committees; some concluded they were in a fool's paradise, others a paradise lost, others a paradise regained, but it has, at any rate, been discussed. The general opinion formed, as far as I can ascertain, is that it is a document very carefully drawn up in order to befog us, with a statement at the conclusion that we shall be paid according to certain stated rates. The view the Isle of Wight Local Medical Committee took at its meeting on April 30th will be recorded in this week's SUPPLEMENT, and can thus be easily referred to.

To return to the main point, yesterday morning (Sunday) I received another document Memorandum 159/I.C., with a covering letter, which I opened and studied, at first under the impression that it was 161/I.C. in duplicate to be used for official purposes by Local Medical Committees. On further examination I found that this was not so. [Dr. Pridmore then quotes paragraphs 15 and 16 (see page 434) and continues:]

I look in vain for any guarantee on behalf of the Commissioners that the Central Panel Fund will be sufficient to pay the doctors' fees in full; it appears to me that they will merely declare a dividend.

But the question of payment is, after all, a minor matter; the thing which stands out is that the principle of cutting down our capitation fee by an indefinite amount is involved, as pointed out by Dr. Bennett in last week's SUPPLEMENT. This should not be tolerated by our profession.

What I want to ascertain is, Why were these paragraphs in 159/I.C. omitted in 161 I.C., which was received by us a fortnight or so before the former memorandum although presumably it was issued later.

May I venture to suggest an explanation of what has happened as regards the publication of these two pamphlets? In the first instance 159 I.C. was published, and on perusal the above-quoted paragraphs were taken exception to as being likely to upset the doctors, after which the boiled-down edition 161/I.C. was published and circulated to make the way clear for the original and more dangerous article.

Dr. C. COURTENAY LORD (Gillingham) writes: I am not surprised to see that financial wails are beginning to be heard in the land. On the same analogy that medical benefit is being financed by taking from him that hath and giving it to him that hath not, so are the temporary dwellers by the sad sea wave to be paid for by sweating the earnings of the unfortunate inland town doctor. Dr. Bennet is shocked at the apathy manifest, Dr. Askin is aghast! Dr. Pridmore is furiously indignant at the very latest trick. All honour to him, for is he not one of those who stand to gain by it? But do they not see the game? "Get the profession nicely divided and you can do what you like with them." Somebody's advice to somebody else, not so very long ago. Why will nothing be done? Because a very large number will stand to gain and a very large number will lose, and the two large numbers will never unite for common justice. Was not this the very cause of our defeat on the main issue? Many stood to gain a little, many stood to gain a lot, but it recked them little that an enormous number must lose to supply that gain. I have always maintained that the profession was financing this venture by the conversion of paying patients to clubbites. With all the force at my command I tried to make the Representative Meeting see that the 7s. was only a basis of payment, and that as a capitation fee the profession would never see it. I roundly denounced those who said that every thousand patients was a certain £350. But my words fell on deaf ears. Form 161 I.C. is only another of the financial juggles that dressed up 6s. 6d. so as, to the casual observer, to look like 8s. 6d. Now my words seem to be coming true. In Lancashire, I read, 12s. 6d. in the £ is to be paid on the "work done" scheme, while a dole of 30 per cent. of earnings is to be tossed to the capitation fraternity. In the doctors' El Dorado, which lies all around me as I write, no doctor has seen a single sixpence. Mr. Rockliff also is reported as having said that the average payment to doctors will be 6s. 8d. Is it too much to hope that the profession in the health resorts will rise as one man and refuse to accept a scheme of payment which is financed by the robbery of their inland brethren? Here is a fine chance of recovering some of our lost prestige.

Dr. S. L. CRAIGIE MONDY (Tottenham, N.) writes: One is not surprised to read in the JOURNAL the indignant protests against the latest action of the Insurance Commissioners—that is, their stated intention to deduct from our capitation fee in order to pay for sickness during holidays when any of our panel patients go away. That this is robbery cannot be denied. Having signed to attend patients at a definite fee per annum in our own districts it appears to me to be illegal to deduct anything, especially when patients cannot change their doctor without that doctor's consent.

What is "our representative" (Mr. Smith Whitaker) on the Commission doing for the profession? It would be interesting to know his opinion on this point. Perhaps it is asking too much to expect him to fight for us now that he has left us. It is very evident, whatever he may say

or think, that the interests of the profession are quite a secondary consideration with the Commissioners.

* * Resolutions on this matter adopted by the Local Medical Committees of Blackpool and Isle of Wight will be found at pp. 429, 430.

CHOICE OF DOCTOR.

Dr. E. W. M. HIGGS, Honorary Secretary, Oxford Medical Committee and Panel (Oxford), writes: As Secretary to the Oxford Medical Committee and Panel I feel that it is my duty to the medical men forming the panel for this city to point out to your readers the inaccurate information supplied to Viscount Valentia, on which he based his question to the Chancellor of the Exchequer *re* the Great Western men and their old doctor; the question, as given in the SUPPLEMENT of May 3rd, p. 404, was:

Whether the Chancellor was aware that much indignation was felt by a considerable number of railway employees resident in Oxford, who were unable to avail themselves, under the provisions of the Insurance Act and Regulations, of the services of a doctor who had for years attended them, and who, though willing to go upon the panel in respect of these patients, and having obtained the consent of the Insurance Committee to do so, was precluded by the intervention of the panel doctors.

As you, Sir, are aware, the Insurance Committee could not give their consent to any medical man joining the panel for a limited number of patients without first having obtained the consent of the panel doctors; therefore, the panel doctors could not intervene and refuse to allow what the Insurance Committee had already granted. The Insurance Committee had not given any such consent, for when the question was brought before the Insurance Committee the clerk read a communication from the panel expressing their refusal to agree to the proposal, and the Committee at once passed to the next business.

But after-events put an entirely different complexion on the whole affair. As reported in the SUPPLEMENT of April 26th, a special general meeting of the Oxford Division was held to discuss this very matter, and Dr. Freeborn addressed the meeting on the subject of his application, and during his speech stated that he had never been on the panel, had never applied to go on the panel, and never meant to go on the panel. As I pointed out at that meeting, Dr. Freeborn's own statement removed all cause of complaint against the panel doctors, for we have no power to interfere with the Insurance Committee on the question of contracting out; and if Dr. Freeborn, as he himself says, never applied to go on the panel (the only point on which we have any authority), it seems to me very unfair that it should go out to all your readers that Dr. Freeborn was willing to go on the panel, that the Insurance Committee had agreed to his doing so, that the railway men were delighted at retaining their old doctor, and then those jealous panel doctors suddenly come on the scene and put an end to this happy arrangement.

We have every sympathy with Dr. Freeborn in this matter, and if the Insurance Committee allow these men to contract out we have absolutely no power to interfere, neither do we wish to do so; and I am sure Dr. Freeborn, after his statement at the meeting that he would not go on the panel, would be the last to suggest that it is the panel doctors who are preventing these men remaining his patients.

PROMETHEUS.

Dr. J. NESFIELD COOKSON (Stafford) writes: The concluding paragraph of the letter by Dr. Walker in the SUPPLEMENT of May 3rd (p. 406) is of great interest to me. He draws attention in that paragraph to the "studied ignoring of the British Medical Association as the mouth-piece and proper channel of communication with the panel practitioners;" and also that this "calls for prompt action by the Association." As Chairman of the Division in which I reside, I have been impressed by both these points, and it was with these very points in mind that I proposed a resolution at the last Divisional meeting to recommend the Representative Body to rescind both Minute 21 of the December Special Representative Meeting and Minute 45 of the January Special Representative Meeting, in both of which the Act is said to be derogatory to the profession, and more besides. In view of those minutes I feel it is futile to expect the Council or the State Sickness Insurance Committee, hard as they have worked, to be successful in increasing the influence of the Association, and that only through helping Local Medical Committees

can they do anything at all to carry out Minute 48 of the January Special Representative Meeting. I regret the support my resolution met with was small, but, on reading through the Report of Council, I find a paragraph (142) which to me fully explains the position now occupied by the Association in regard to the Act, as set out in Dr. Walker's letter, and also fully justifies such a resolution as proposed by myself. In that paragraph we are told that both the Council and the State Sickness Insurance Committee feel bound by Minutes 21 and 45 to "continue to be in opposition to the Act and Regulations as at present constituted," and also consider the interests of those not on the panel paramount. I would ask, How can either the Council or the State Sickness Insurance Committee, feeling that Minutes 21 and 45 bind them in that way, act "as the mouthpiece of, and proper channel of, communication with the panel practitioners"? The Act is now the law of the land, and will be administered by whatever Government may happen to be in power. It will be amended, but, in face of the interpretation which the Council has been bound to put on those minutes, it is futile to expect that those who have the power to make amendments will consider the Association to be the mouthpiece of the panel practitioners.

Considering the large proportion of those in general practice and members of the Association who are panel practitioners, Dr. Walker's contention that "prompt action to restore the power of the Association" is necessary cannot be controverted. Minute 48 instructs the Council to do certain things which will certainly tend to strengthen and improve the Act, but by the previous minutes it says in effect that any one doing so will be degrading the profession of which he is a member. As long as such a Gilbertian policy is adopted, so long will the Association be useless "as the mouthpiece of the panel practitioners."

Vacancies and Appointments.

VACANCIES.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

ABERYSTWYTH INFIRMARY AND CARDIGANSHIRE GENERAL HOSPITAL.—House-Surgeon and Secretary. Salary, £150 per annum.

BARNESLEY: BECKETT HOSPITAL AND DISPENSARY.—Senior and Junior House-Surgeons. Salary, £120 and £100 per annum respectively.

BELFAST: HOSPITAL FOR DISEASES OF THE NERVOUS SYSTEM, PARALYSIS, AND EPILEPSY.—Honorary Physician. **BIRKENHEAD BOROUGH HOSPITAL.**—Junior House-Surgeon (male). Salary, £80 per annum.

BIRKENHEAD UNION.—Senior Male Resident Assistant Medical Officer. Salary, £130 per annum.

BIRMINGHAM: QUEEN'S HOSPITAL.—Two House-Surgeons. Salary at the rate of £50 per annum each.

BIRMINGHAM: RUBERY HILL ASYLUM.—Junior Assistant Medical Officer (male). Salary, £200 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Third House-Surgeon. Salary, £75 per annum.

BIRMINGHAM UNION.—Assistant Medical Officer to the Dudley Road Infirmary. Salary, £125 per annum.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.—Gynaecologist.

BRADFORD EDUCATION COMMITTEE.—Two Assistants (one male and one female) to the School Medical Officer. Salary, £350 per annum each.

BRIDGWATER HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

BRIGHTON: ROYAL SUSSEX COUNTY HOSPITAL.—House-Physician (male). Salary, £100 per annum.

BRISTOL: COSSHAM MEMORIAL HOSPITAL, Kingswood.—House-Surgeon (male). Salary, £100 per annum.

BRISTOL GENERAL HOSPITAL.—(1) First House-Physician. (2) Second House-Physician and Casualty House-Surgeon; salary, £80 per annum. (3) Honorary Surgeon. (4) Honorary Assistant Surgeon.

BRISTOL ROYAL INFIRMARY.—Obstetric and Ophthalmic House-Surgeon. Salary at the rate of £75 per annum.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary at the rate of £100 per annum.

CANTERBURY BOROUGH ASYLUM.—Assistant Medical Officer (male). Salary, £160 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—Two Honorary Physicians.

CARDIFF: KING EDWARD VII WELSH NATIONAL MEMORIAL ASSOCIATION.—Medical Officer to the Tuberculosis Hospital. Salary, £200 per annum.

CARNARVON EDUCATION COMMITTEE.—Dentists. Salary, £100, with travelling expenses.

CHELTEMHAM GENERAL HOSPITAL.—House-Physician. Salary, £100 per annum.

CHESTERFIELD AND NORTH DERRBYSHIRE HOSPITAL.—(1) Senior House-Surgeon. Salary, £120 per annum. (2) House-Physician. Salary, £90 per annum.

DENBIGH: DENBIGHSHIRE INFIRMARY.—House-Surgeon. Salary, £100 per annum.

DERBY: DERBYSHIRE ROYAL INFIRMARY.—House-Physician. Salary at the rate of £100 per annum.

DEVONPORT: ROYAL ALBERT HOSPITAL.—(1) House-Surgeon; salary, £50 for first six months, £75 for second, and £150 during second year of service. (2) Assistant House-Surgeon; salary at the rate of £75 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—House-Surgeon. Salary at the rate of £75 per annum.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Assistant House-Surgeon. Salary at the rate of £80 per annum.

FARRINGDON GENERAL DISPENSARY, Etc., 17, Bartlett's Buildings, E.C.—(1) Honorary Ophthalmic Surgeon. (2) Honorary Gynaecologist. (3) Resident Medical Officer; salary, £100 per annum.

GLASGOW DISTRICT MENTAL HOSPITAL, Lenzie.—Junior Assistant Medical Officer. Salary, £150 per annum.

GUY'S HOSPITAL DENTAL SCHOOL.—Radiographer. Remuneration, £50 per annum.

HASTINGS: EAST SUSSEX HOSPITAL.—Senior and Assistant House-Surgeons. Salary at the rate of £100 and £70 per annum respectively.

KING'S COLLEGE FOR WOMEN.—Lecturer in Hygiene. Salary, £150 per annum.

LEAMINGTON SPA: WARNEFORD, LEAMINGTON, AND SOUTH WARWICKSHIRE GENERAL HOSPITAL.—House-Physician. Salary, £85 per annum.

LINCOLN MENTAL HOSPITAL.—Assistant Medical Officer. Salary, £150 per annum.

LIVERPOOL EYE AND EAR INFIRMARY.—House-Surgeon. Salary, £80 per annum.

LIVERPOOL: PARK HILL SANATORIUM.—Resident Medical Superintendent. Salary, £350 per annum, increasing to £400.

MANCHESTER: ANCOATS HOSPITAL.—(1) Assistant House-Surgeon. (2) Assistant House-Physician. Salary, £70 and £80 per annum respectively. (3) Honorary Dental Surgeon.

MANCHESTER VICTORIA MEMORIAL JEWISH HOSPITAL, Cheetham.—Two Surgeons and one Physician.

MANCHESTER: VICTORIA UNIVERSITY.—Lecturer in Observation of Children and School Hygiene.

MIDDLESEX COUNTY ASYLUM, Napsbury.—Junior Assistant Medical Officer. Salary, £200 per annum.

MONTREAL: MCGILL UNIVERSITY.—Robert Reford Chair of Anatomy.

NOTTINGHAM GENERAL DISPENSARY.—Assistant Resident Surgeon (male) for Branch. Salary, £180 per annum.

NOTTINGHAM GENERAL HOSPITAL.—Locumtenent. Salary, £3 3s. per week.

PADDINGTON GREEN CHILDREN'S HOSPITAL, W.—(1) Honorary Surgeon to the Eye Department. (2) House-Surgeon. Salary at the rate of £52 10s. per annum.

POPULAR DISPENSARY FOR THE PREVENTION OF CONSUMPTION, Bow Road, E.—Assistant Tuberculosis Officer. Salary, £300 per annum.

PORTSMOUTH: ROYAL PORTSMOUTH HOSPITAL.—House-Physician. Salary at the rate of £75 per annum.

PRESTWICH: COUNTY ASYLUM.—Locumtenent.

REDHILL: EARLSWOOD ASYLUM.—Junior Assistant Medical Officer. Salary, £150 per annum.

ROTHERHAM HOSPITAL AND DISPENSARY.—Assistant House-Surgeon (male). Salary, £100 per annum.

ROYAL EAR HOSPITAL, Soho, W.—House-Surgeon (non-resident). Honorarium, £40 per annum.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL, King William Street, W.C.—Clinical Assistants.

SALISBURY INFIRMARY.—Assistant House-Surgeon. Salary, £50 per annum.

SHEFFIELD CITY TUBERCULOSIS DISPENSARY.—Assistant Medical Officer. Salary, £300 per annum.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN.—Assistant House-Surgeon. Salary, £60 per annum.

SHEFFIELD ROYAL HOSPITAL.—Assistant House-Physician. Salary, £60 per annum.

SHEFFIELD: ROYAL INFIRMARY.—Assistant House-Surgeon. Salary, £70 per annum.

SIERRA LEONE: PRINCESS CHRISTIAN HOSPITAL, Freetown.—Resident Medical Officer. Salary, £250 per annum.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £90 per annum.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—House-Surgeon. Salary, £100 per annum.

SUNDERLAND: MONKWEARMOUTH AND SOUTHWICK HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SURREY COUNTY COUNCIL.—Two Tuberculosis Medical Officers. Salary, £40 per annum each.

TAUNTON: SOMERSET AND BATH ASYLUM, Cotford.—Assistant Medical Officer. Salary, £180 per annum, rising to £200.

WEST HAM COUNTY BOROUGH.—Assistant School Medical Officer. Salary, £250 per annum, rising to £400.

WESTERN GENERAL DISPENSARY, Marylebone Road, N.W.—(1) Honorary Physician. (2) Honorary Dentist.

WHITTINGHAM: COUNTY ASYLUM.—Assistant Medical Officer. Salary, £150 per annum, increasing to £250.

WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—Resident Medical Officer. Salary, £100 per annum.

WORCESTERSHIRE ASYLUM, Bromsgrove.—Second Assistant Medical Officer (male). Salary, £200 per annum.

MEDICAL REFEREE.—Medical Referee under the Workmen's Compensation Act, 1906, for Blackburn and Darwen, Haslingden and Accrington, Basing and Rawtenstall, and Clitheroe County Courts.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Wednesday morning.

APPOINTMENTS.

AUSTIN, J. A., M.D. Aberd., Medical Officer of the Workhouse of the Westbury and Whorwellsdown Union.

ADDENBROOKE, B., M.D. Durh., District Medical Officer of the Kidderminster Union.

BARRON, W. N., M.R.C.S., L.R.C.P., District Medical Officer of the Easthampstead Union.

BELL, Robert Gordon, M.D. Glasg., F.R.C.S. Edin., Medical Referee under the Workmen's Compensation Act for County Court Circuit No. 2, and to be attached more particularly to Sanderland and Seaham Harbour County Courts, vice A. E. Morison, M.D., C.M. Edin., resigned.

BISHOP, G. S. A., M.B., Ch.B. Liverp., District Medical Officer of the Melton Mowbray Union.

CHALLENGOR, L. T., M.R.C.S., L.R.C.P., Second House-Surgeon to the Royal Infirmary, Leicester.

COGHILL, H., M.R.C.S., L.R.C.P., Tuberculosis Officer to the County of Middlesex.

COULDBREY, T. R., M.R.C.S., L.R.C.P., District Medical Officer of the Glanford Brigg Union.

CROFTON, J. H., M.B., B.C. Camb., District Medical Officer of the Oswestry Incorporation.

DAWNA, A. H. Payan, F.R.C.S. Eng., Fall Surgeon to the Western Ophthalmic Hospital, Marylebone Road, W.

SMITH, Wilberforce, M.B., B.S., F.R.C.S., Honorary Gynaecologist to the St. Marylebone General Dispensary, and Surgeon-Accoucheur to the Western General Dispensary, W.

SIMPSON, George C. E., M.B., B.C. Lond., F.R.C.S., Honorary Surgeon to the Northern Hospital, Liverpool.

THACKER, W. S., M.D. Dub., F.R.C.S. Edin., First House-Surgeon to the Royal Infirmary, Leicester.

WARRINGTON, W., M.B., Medical Officer of the Workhouse and Children's Home of the Chorley Union.

WATKINS, J. P., M.R.C.S., L.R.C.P., District and Workhouse Medical Officer of the Romsey Union.

DIARY FOR THE WEEK.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ELECTRO-THERAPEUTICS, 8.30 p.m.—(1) Annual General Meeting. (2) Demonstration of Cases and Specimens.

SECTION OF OTOTOLOGY, 5 p.m.—(1) Annual General Meeting. (2) Demonstration of Cases and Specimens.

POST-GRADUATE COURSES AND LECTURES.

DUBLIN: ROTUNDA HOSPITAL.—Wednesday, 10 a.m., Obstetrical Lecture, The Induction of Labour; Friday, 10 a.m., Gynaecological Lecture, Pelvic Infection. Major Operations: Tuesday and Thursday, 10 a.m. Minor Operations: Wednesday and Friday, 11 a.m. Classes in Gynaecological Diagnosis, Tuesday and Friday at 4 p.m.

LONDON SCHOOL OF CLINICAL MEDICINE, Dreadnought Hospital, Greenwich.—General Medical and Surgical Clinics, daily. Throat, Nose, and Ear: Monday and Thursday. Skin: Tuesday and Friday. Eye: Wednesday and Saturday. Pathology: Wednesday. Radiography: Saturday. Special lectures each week.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following clinical demonstrations have been arranged for next week at 4 p.m. each day: Tuesday, Medical; Wednesday, Surgical; Thursday, Surgical; Friday, Ear, Nose, and Throat. Lectures at 5.15 p.m. on Tuesday, Wednesday, and Thursday.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Friday, 3.30 p.m., Forced Movements.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.—Medical and Surgical Clinics and Operations at 2.30 p.m. daily. Also Monday, Throat; Tuesday, Gynaecology; Wednesday, Skin, Eye, Children, X Rays; Friday, Eye. Special Lectures and Demonstrations as announced.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—Friday, 4 p.m., Rectal Diseases in Children and Infants.

SEAMEN'S HOSPITAL SOCIETY, Royal Albert Dock, E.—Lectures daily (Saturday excepted) at 12 and 4 p.m. Practical laboratory work daily (Saturday excepted) 10 to 12 a.m. Practical Protozoology, 2 to 3.30 p.m. daily; Advanced Protozoology, 10.30 a.m. to 1 p.m. daily. Medical Clinic, Thursday, at 3 p.m. Operations, Friday, at 3 p.m.

[For further particulars of Lectures consult the Index to Advertisements.]

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

BYRNE.—On May 4th, 1913, the wife of Eugene Byrne, L.R.C.P. and S.I., Slane, co. Meath, of a son.

COLT.—At 12, Bon Accord Square, Aberdeen, on May 5th, the wife of G. Herbert Colt, F.R.C.S., of a daughter.

CYRIAX.—On April 30th, the wife of Richard J. Cyriax, M.D. Brux., M.R.C.S., L.R.C.P., of 4, Craven Hill, Lancaster Gate, W., of a daughter.

MARRIAGE.

RUTHERFORD—NORTON.—On May 1st, at St. Mary's, Ilford, by the Rev. Alan Campbell Morris, B.A., Alexander Rutherford, M.B., C.M. Edin., of 45, S. 14th Park Parade, Seven Kings, Essex, eldest son of the late James Rutherford, M.D., Mountinhall, Dumfries, to Edith Maud Noonan, eldest daughter of Stephen Norton, Esq., 6, Avonmore Terrace, Seven Kings, Essex.

DEATHS.

GROSVENOR.—On May 6th, at 72, Priory Road, West Hampstead, Alfred Octavius Grosvenor, M.D. Funeral Saturday (10th), at 12 noon, St. Mary's, West Hampstead, and at Hampstead Cemetery.

MANLEY.—On May 4th, at New Street, West Bromwich, Herbert Manley, M.D., D.P.H., Barrister-at-Law, aged 57. Cremation at Perry Barr, Wednesday, 1 p.m. No flowers. Kindly accept this the only intimation.

DIARY OF THE ASSOCIATION.

British Medical Association.

EIGHTY-FIRST ANNUAL MEETING,
BRIGHTON, JULY, 1913.

PROGRAMME OF BUSINESS.

President: SIR JAMES BARR, M.D., LL.D., F.R.S.E., Consulting Physician, Royal Infirmary, Liverpool.

President-elect: WILLIAM AINSLIE HOLLIS, M.A., M.D., F.R.C.P., Consulting Physician, Sussex County Hospital, Brighton.

Chairman of Representative Meetings: THOMAS JENNER VERRALL, M.R.C.S., L.R.C.P., Consulting Surgeon, Sussex County Hospital, Brighton.

Chairman of Council: JAMES ALEXANDER MACDONALD, M.D., LL.D., M.Ch., R.U.I., Honorary Physician, Taunton and Somerset Hospital, Taunton.

Treasurer: EDWIN RAYNER, M.D.Lond., B.A., F.R.C.S. Eng., Consulting Surgeon, Stockport Infirmary, Stockport.

The Eighty-first Annual Meeting of the British Medical Association will be held in Brighton in July, 1913. The President's Address will be delivered on Tuesday, July 22nd, and the Sections will meet on the three following days. The Annual Representative Meeting will begin on Friday, July 18th, at 10 a.m.

The Address in Medicine will be delivered by Professor GEORGE F. MURRAY, M.D., F.R.C.P., Physician, Royal Infirmary, Manchester, on Wednesday, July 23rd.

The Address in Surgery will be delivered by Sir BERKELEY MOYNIHAN, M.S., F.R.C.S., Surgeon, Leeds General Infirmary; Professor, Clinical Surgery, University, Leeds, on Thursday, July 24th.

The Popular Lecture will be delivered by EDMUND JOHNSON SPITTA, L.R.C.P.Lond., M.R.C.S.Eng., Hove, Brighton, on the evening of Friday, July 25th,

THE SECTIONS.

The scientific business of the meeting will be conducted in sixteen Sections, which will meet on Wednesday, July 23rd, Thursday, July 24th, and Friday, July 25th.

The President, Vice-Presidents, and Honorary Secretaries of each Section constitute a Committee of Reference for that Section, and exercise the power of inviting, accepting, or declining any paper, and of arranging the order in which accepted papers shall be read. Communications with respect to papers should be addressed to one of the Honorary Secretaries.

With the object of encouraging useful debates, it is proposed, as in previous years, to publish in the BRITISH MEDICAL JOURNAL early in June an abstract or syllabus of the remarks intended to be made in introducing each discussion arranged in any Section. Such publication serves as a guide to members who may desire to take part in the discussion. It is particularly requested that the introducer of each discussion will send an abstract or syllabus of his remarks to one of the honorary secretaries of the Section in which the discussion is to take place not later than Monday, May 26th.

A paper read in the Section must not exceed fifteen minutes, and no subsequent speech must exceed ten minutes.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL without special permission.

The following sixteen Sections have been authorized by the Council:

BACTERIOLOGY AND PATHOLOGY.

President: J. W. H. EYRE, M.D., M.S., London. *Vice-Presidents:* G. MORGAN, F.R.C.S.Edin., Brighton; MYER COPLANS, M.D., Leeds; Professor E. J. McWEENEY, M.D., F.R.C.P.I., Dublin. *Honorary Secretaries:* H. MILLER GALT, M.B., F.R.F.P.S., Sussex County Hospital, Brighton; J. A. BRAXTON HICKS, M.D., Westminster Hospital, London, S.W.; C. H. BENHAM, M.D., M.R.C.P., 27, Sackville Road, Hove.

The following is the provisional programme:
Wednesday.—Papers:

FARRANT, Mr. R. (London). Hyperthyroidism.
MCWEENEY, E. J., CROFTON, W. M., and MOORE, H. F. On Paratyphoid Infection.
GALT, Mr. Miller. On the Value of the Blood Count in Obscure Bacterial Infections.

Thursday.—Joint discussion with the Section of Pharmacology, Therapeutics, and Dietetics on Anaphylaxis: To be opened by Professor W. E. DIXON; followed by Professor G. Sims Woodhead (General Pathological Aspects), Drs. Thiele and Embleton (Special Bacteriological Aspects), E. W. Goodall (Clinical Aspects), H. H. Dale (General Experimental Point of View), Myer Coplans (Leeds) (On the Action of Asbestos and other Finely Divided Substances on certain Toxins, Ferments, Protein, and other Materials), Myer Coplans and Mr. W. Gibbs Lloyd (On the Action of Asbestos on certain Physiological Substances).

Friday.—Papers:

The Staff of the John Howard McFadden Research Fund. Some Researches on the Jelly Method of Staining Cells Alive.
BUCHANAN, Dr. R. M. (Glasgow). On *Empusa Muscae* as a Trajectory of Bacterial Infection.
LYONS, Mr. W. C. On the Specific Diagnostic and Therapeutic Value of Proteose-free Tuberculin.
GALT, Mr. Miller. Microscopical Demonstrations on Haematology.

SECTION OF CLIMATOLOGY AND BALNEOLOGY.

President: F. J. PALEY, M.D., Hove. Vice-Presidents: R. WHITTINGTON, M.D., B.Ch., Brighton; W. GORDON, M.D., F.R.C.P., Exeter; R. ACKERLEY, M.B., B.Ch., Llandrindod Wells. Honorary Secretaries: A. H. COPEMAN, M.D., Pavilion Parade, Brighton; D. DURWARD BROWN, M.R.C.S., L.R.C.P., Norfolk Lodge, Leeds Road, Harrogate.

The following programme has been adopted:

Wednesday.—Discussion on Sea Bathing: To be opened by Dr. W. J. TYSON.

Thursday.—Discussion on International Aspects of British Health Resorts: To be opened by Dr. NEVILLE WOOD.

Friday.—Papers.

DERMATOLOGY.

President: J. H. SEQUEIRA, M.D., F.R.C.P., London. Vice-Presidents: A. W. WILLIAMS, M.B., Brighton; F. H. BARENDT, M.D., F.R.C.S., Liverpool; W. GRIFFITH, M.B., M.R.C.P., London. Honorary Secretaries: A. M. DALDY, M.D., F.R.C.S., 17, Palmeira Square, Hove; F. GARDINER, M.D., F.R.C.S. Edin., 60, George Square, Edinburgh.

The following subjects have been chosen for discussion on two of the days of the meeting:

(1) The Fungus Affections of the Glabrous Skin: To be opened by Dr. H. G. ADAMSON. (2) The Nature, Varieties, Causes, and Treatment of Lupus Erythematosus: To be opened by Dr. J. M. H. MACLEOD.

The exhibition and demonstration of cases will be an important feature of the Section, and arrangements will be made for the demonstration of cases on the Thursday and Friday.

DISEASES OF CHILDREN, INCLUDING ORTHOPAEDICS.

President: G. F. STILL, M.D., F.R.C.P., London. Vice-Presidents: W. C. CHAFFEY, M.D., Hove; L. A. PARRY, M.D., F.R.C.S., Hove; A. F. VOELCKER, M.D., F.R.C.P., London; P. N. BLAKE ODGERS, F.R.C.S., Northampton. Honorary Secretaries: A. G. BATE, M.B., F.R.C.S. Ed., 8, Palmeira Avenue Mansions, Hove; A. E. NASH, M.B., M.R.C.P., 5, Clarkehouse Road, Sheffield.

The following discussions have been arranged:

Wednesday.—Affections of the Heart in Childhood: To be opened by Dr. F. J. POYNTON and Dr. CAREY COOMBS.

Thursday.—The Choice of Methods in dealing with Paralytic Deformities in Children: To be opened by Mr. T. H. OPENSHAW, C.M.G.

Friday.—The Diagnosis and Treatment of Acute Inflammatory Conditions of the Abdomen in Children: To be opened by Mr. C. B. LOCKWOOD.

Thursday.—Paper:

Professor FOERSTER (Breslau): Posterior Root Section in the Treatment of Spastic Paralysis.

ELECTRO-THERAPEUTICS.

President: W. DEANE BUTCHER, M.R.C.S., London. Vice-Presidents: C. F. BAILEY, M.D., M.R.C.P., Brighton; A. F. HERTZ, M.D., F.R.C.P., London; W. IRONSIDE BRUCE, M.D., London. Honorary Secretaries: W. B. PROWSE, M.R.C.S., 31, Vernon Terrace, Brighton; L. E. CREASY, M.R.C.S., L.R.C.P., 36, Weymouth Street, London, W.

The following is the preliminary programme:

Wednesday.—Papers and discussions on Roentgen Diagnosis.

Thursday.—Papers and discussions on Electro-diagnosis and Electro-therapeutics.

Friday.—Papers and Discussions on Roentgen Therapy and Radium.

There will be an exhibition of radiographs (negatives, prints, and lantern slides), and of photographs of cases treated by electro-therapeutic methods, x rays, and radium. Members desirous of exhibiting are requested to communicate with Dr. Prowse.

GYNAECOLOGY AND OBSTETRICS.

President: R. SANDERSON, M.B., Hove. Vice-Presidents: CONSTANCE E. LONG, M.D., London; T. H. IONIDES, M.B., F.R.C.S., Hove; R. J. JOHNSTONE, M.B., F.R.C.S., Belfast; Professor BENJAMIN P. WATSON, Toronto. Honorary Secretaries: LOUISA MARTINDALE, M.B., B.S., 10, Marlborough Place, Brighton; W. RITCHIE, M.B., 10, St. James Terrace, Glasgow.

The following is the preliminary programme:

Wednesday.—Discussion on the Best Methods of dealing with Malpositions of the Uterus, especially with reference to Retrodisplacements and Prolapse.

Thursday.—Discussion on Affections of the Urinary Tract complicating Pregnancy.

Friday.—Short Papers and Pathological Demonstrations.

LARYNGOLOGY, RHINOLOGY, AND OTOTOLOGY.

President: A. J. HURCHISON, M.B., Brighton. Vice-Presidents: H. S. BAIRWELL, F.R.C.S., London; C. E. WOAKES, London. Honorary Secretaries: A. J. MARTINEAU, F.R.C.S. Edin., 22, Cambridge Road, Hove; W. S. SYME, M.D., 10, India Street, Glasgow; E. D. DAKELAN DAVIS, F.R.C.S., 81, Harley Street, London, W.

The following programme has been arranged:

Wednesday.—Discussion: The Technique and After-Treatment of the Radical Mastoid Operation.

Thursday.—Discussion: The Care of Patients after Operations on the Nose and Naso-Pharynx.

Friday.—Papers.

Arrangements have been made to exhibit preparations, specimens, drawings, or any instruments or apparatus appertaining to the work of the Section in the Annual Pathological Museum. Such exhibits should be sent to Mr. A. J. Martineau, 22, Cambridge Road, Brighton.

MEDICAL SOCIOLOGY.

President: R. J. RYLE, M.D., M.A., J.P., Brighton. Vice-Presidents: G. E. HASLIP, M.D., London; H. GERVIS, M.B., J.P., Brighton. Honorary Secretaries: E. R. FOTHERGILL, M.B., B.S., 38, Dyke Road, Brighton; H. D. LEDWARD, M.A., M.B., 123, Norton Way, Letchworth, Herts.

The following subjects have been chosen for discussion:

1. Crime and Punishment. Dr. CHARLES MERCIER, Sir BRYAN DONKIN, M.D., and Dr. JAMES SCOTT will read papers on different aspects of this subject as an introduction to a general discussion.

2. Hospitals in Relation to the Stage, the Public, and the Medical Profession. Sir HENRY BURDETT, K.C.B., and Mr. I. G. GIBBONS, D.Sc., will read papers on this subject, and their discussion will, it is hoped, prove valuable in helping to elucidate the problems involved in providing hospital accommodation for insured persons under the National Insurance Act.

3. Eugenics. It is expected that the discussion on this subject will be introduced by Professor BATESON, and that he will be followed by Dr. Stewart Mackintosh (Hamptstead) and Mr. Benedict Davenport (New York).

MEDICINE.

President: E. HORHOUSE, M.D., F.R.C.P., Hove. *Vice-Presidents:* J. F. GORDON DILL, M.D., M.R.C.P., Hove; R. HUTCHISON, M.D., F.R.C.P., London; W. BROADBENT, M.D., M.R.C.P., Hove; A. P. BEDDARD, M.D., F.R.C.P., London. *Honorary Secretaries:* DONALD HALL, M.D., M.R.C.P., 29, Brunswick Square, Hove; T. FRASER, M.B., 45, Elmbank Terrace, Aberdeen; W. LANGDON BROWN, M.D., F.R.C.P., 60, Welbeck Street, London, W.

The following programme has been adopted:

Wednesday.—Discussion on Non-diabetic Glycosuria. To be opened by Dr. A. E. GARROD, F.R.S.

Thursday.—Discussion on Fibrositis and Muscular Rheumatism. To be opened by Dr. A. P. LUFF.

Friday.—Papers.

NAVY AND ARMY, AND AMBULANCE.

President: Colonel J. TURTON, V.D., F.R.C.S., late Assistant Director of Medical Service, T.F., Brighton. *Vice-Presidents:* Lieutenant-Colonel C. J. JACOMB-HOOD, R.A.M.C.T.F., Brighton; Deputy Surgeon-General P. B. HANDYSIDE, R.N., Plymouth; Major E. T. BIRRELL, R.A.M.C., Queen Alexandra Military Hospital, Grosvenor Road, S.W.; Colonel C. H. MILBURN, V.D., Hull. *Honorary Secretaries:* Lieutenant J. R. STEINHAUSER, M.D., T.F., St. Andrew's Place, Lewes; Captain J. A. ROOTH, R.A.M.C.T.F., 1, Goldsmid Road, Brighton.

The arrangements so far made are as follows:

Wednesday.—Papers: (1) Major BIRRELL, R.A.M.C., Notes on the Work of a British Red Cross Unit with the Bulgarians. (2) Lieutenant-Colonel DONEGAN, R.A.M.C., The Relation of and Utility of Aeroplanes in connexion with Medical Services in the Field.

Thursday.—Papers: (1) Dr. LOUIS DUREY, French Army Service, Study of the Use of Kinesitherapy in the After-Treatment of Injuries received in War. Lieutenant D. G. KENNARD, R.A.M.C.T.F., A proposed Light Ambulance for Yeomanry Regiments. Major J. W. HOUGHTON, R.A.M.C., Spinal Analgesia in Military Service.

The following subjects are also suggested for discussion: The Medical Service in the Tropics.

Hospital Ships.

Disinfection and its Application in Ships.

Diet of the Soldier.

Sanitation on the Line of March.

Water Supply on Field Service.

NEUROLOGY AND PSYCHOLOGICAL MEDICINE.

President: J. TAYLOR, M.D., F.R.C.P., London. *Vice-Presidents:* A. W. MACKINTOSH, M.D., Aberdeen; W. H. B. STODDART, M.D., F.R.C.P., London; HELEN BOYLE, M.D., Hove. *Honorary Secretaries:* J. L. BASKIN, M.D., New Church Road, Hove; T. G. STEWART, M.B., 54, Queen Anne Street, London, W.

The following is the preliminary programme:

Wednesday.—Discussion on Sleep and the Treatment of Sleeplessness: To be opened by Sir GEORGE H. SAVAGE, followed by Dr. W. H. BUTTER STODDART.

Thursday.—Discussion on Vertigo: its Significance and Treatment. To be opened by Dr. RISIEN RUSSELL.

Friday.—Papers.

Members are invited to contribute any preparations, specimens or drawings, or any instruments or apparatus pertaining to the work of the Section, which have been designed by themselves, in order that arrangements may be made to form a special exhibit of such objects.

OPHTHALMOLOGY.

President: T. H. BICKERTON, M.R.C.S., Liverpool. *Vice-Presidents:* H. H. TAYLOR, F.R.C.S., Hove; W. W. GRIFFIN, F.R.C.S., Hove; A. NICHOLSON, M.B., Hove; J. H. PARSONS, F.R.C.S., London. *Hon. Secretaries:* W. B. INGLIS POLLOCK, M.D., F.R.C.P.S., 276, Bath Street, Charing Cross, Glasgow; W. H. BRAILEY, M.D., 21, Lansdown Place, Hove.

The following subjects have been chosen for special discussion:

The Question of Excision in cases of Injury of the Eye.

School Clinics and the Prevention of Myopia.

The Treatment of Chronic Dacryocystitis.

PHARMACOLOGY, THERAPEUTICS, AND DIETETICS.

President: W. HALE WHITE, M.D., F.R.C.P., London. *Vice-Presidents:* J. C. UHTROFF, M.D., Hove; H. BATTY SHAW, M.D., F.R.C.P., London; H. C. CAMERON, M.D., M.R.C.P., London. *Honorary Secretaries:* V. COW, M.D., The Bridge House, Great Shelford, Cambridge; E. R. HUNT, M.D., 3, Goldsmid Road, Brighton.

The following subjects have been selected for discussion: Wednesday.—Urinary Antiseptics: To be opened by Mr. J. W. THOMSON WALKER, F.R.C.S.

Thursday.—Anaphylaxis: To be opened by Professor W. E. DIXON. (Joint discussion with Section of Bacteriology and Pathology. For a list of those taking part in the discussion see p. 442.)

Friday.—The Use and Abuse of Hypnotics: To be opened by Dr. W. H. WILLCOX.

STATE MEDICINE.

President: E. W. HOPE, M.D., D.Sc., Liverpool. *Vice-Presidents:* A. GRIFFITH, M.D., Hove; G. V. BENSON, M.R.C.S., Lewes; W. A. BOND, M.D., M.O.H., London. *Honorary Secretaries:* G. W. STONE, M.R.C.S., L.R.C.P., Cumnor, Dyke Road, Brighton; T. B. HEGGS, M.D., Town Hall, Sittingbourne.

The following subject has been selected for discussion:

Port Sanitary Administration and the Importation of Disease: To be opened by Dr. HERBERT WILLIAMS, M.O.H. Port of London.

Other subjects suggested are: (a) The need for Popular Education in matters affecting the Public Health. (b) Maternity Benefit under the Insurance Act and its Connexion with the Midwives Act. (c) Treatment of School Children; Arrangements recently adopted for. (d) Prevention and Treatment of Tuberculosis; the need for an Exact Comparison of the Methods at present used in. (e) Measles and Whooping-cough; the Need of Laboratory Investigation into the Means of Prevention.

SURGERY.

President: W. THELWALL THOMAS, F.R.C.S., Liverpool. *Vice-Presidents:* R. F. JEWERS, F.R.C.S., Hove; W. TAYLOR, F.R.C.S.I., Dublin; STANLEY BOYD, F.R.C.S., London; J. W. BATTERHAM, F.R.C.S., St. Leonard's-on-Sea; W. FURNER, F.R.C.S., Hove. *Honorary Secretaries:* H. J. WALKER, F.R.C.S., The Priory, Springfield Road, Brighton; C. A. R. NITCH, F.R.C.S., 69, Harley Street, W.; F. K. SMITH, M.B., 207, Great Western Road, Aberdeen.

The following subjects have been selected for discussion:

1. The Diagnosis and Treatment of Injuries of the Knee-joint other than Fractures and Dislocations: To be opened by Mr. A. M. MARTIN (Newcastle-on-Tyne).

2. The Diagnosis and Treatment of Primary Carcinoma of the Stomach: To be opened by Mr. G. H. MAKINS, C.B.

TROPICAL MEDICINE.

President: Lieutenant-Colonel Sir WILLIAM LEISHMAN, M.B., F.R.S., R.A.M.C., London. *Vice-Presidents:* E. IRWIN SCOTT, M.D., Hove; Professor W. J. R. SIMPSON, C.M.G., M.D., F.R.C.P., London; Major W. S. HARRISON, R.A.M.C., Royal Army Medical College, Grosvenor Road, S.W. *Honorary Secretaries:* E. CURWEN, M.A., M.B., B.C., 1, St. Aubyn's, Hove; F. W. O'CONNOR, M.R.C.S., London School of Tropical Medicine, Royal Albert Dock, E.

The following subjects have been selected for discussion:

Wednesday.—The Causes of Invaliding in the Tropics: To be opened by Dr. CURWEN.

Friday.—Filariasis: To be opened by Dr. Low.

PROVISIONAL PROGRAMME.

The following is the provisional time table for the Brighton meeting:

Lewes.

| | |
|------------------------|-----------------|
| Dr. J. R. Steinhaeuser | Dr. H. Vallance |
|------------------------|-----------------|

Ex officio Members.

The President-Elect, the Local Honorary Treasurer, and the Local Honorary Secretary.

The Committee appointed to organize the Pathological Museum in connexion with the Annual Meeting in Brighton, 1913, proposes to arrange the material under the following heads:

- (i) Exhibits bearing on discussions and papers in the various Sections.
- (ii) Specimens and illustrations relating to any recent research work.
- (iii) Instruments relating to clinical diagnosis and pathological investigation.
- (iv) Individual specimens of special interest, or a series illustrating some special subject.

The Committee wishes it to be understood that the above are only suggestions, and if there is any subject of special interest of which specimens can be supplied they will be welcomed.

The Museum will occupy a central position in the same building as that in which the sectional work is carried on, and will be easy of access.

The Committee desires to enlist the hearty co-operation of members, and the Honorary Secretary will be glad to hear from those who are able to make an exhibit. Every care will be taken of specimens, and the contents of the Museum will be insured.

It is hoped that it will be possible for arrangements to be made whereby exhibitors may have an opportunity of demonstrating their specimens.

All communications should be addressed to Dr. W. Broadbent or Dr. H. M. Galt, Honorary Secretaries, Pathological Museum Committee, 14, North Street, Brighton.

Meetings of Branches and Divisions.

DORSET AND WEST HANTS BRANCH:

BOURNEMOUTH DIVISION.

THE annual meeting of this Division was held on April 30th, at the Library of the Medical Society, Bournemouth. The chair was taken by Dr. LE FLEMING, and twenty-four members were present.

Election of Officers.—The following officers were elected for the ensuing year:

Chairman.—Dr. W. H. L. Marriner.
Vice-Chairman.—Dr. Harold Simmons.
Honorary Secretary.—Dr. Eleanor C. Bond.
Representative.—Dr. Johnson Smyth.
Representatives on Branch Council.—Drs. Alexander, Badley, Bond, Le Fleming, Marriner, Milner, Montgomery, Simmons, Johnson Smyth, Spinks, and Willans.
Executive Committee.—The Representatives on the Branch Council and Drs. Ramsay, Forster, and Haylock.
Ethical Committee.—Drs. Batterbury, Davidson, Greves, Milner, Muspratt, Ramsay, and Vernon. *Ex officio:* The Chairman and Honorary Secretary.

Treatment of Uninsured Persons.—It was reported that in the Bournemouth area the rate paid was 8s. 6d. for adults and 6s. for children; in Parkstone 9s. was being paid for adults and 1s. weekly for children.

Ethics.—The report and recommendation of the Ethical Committee, a copy of which had been sent to each member, was unanimously approved and adopted.

LANCASHIRE AND CHESHIRE BRANCH:

LIVERPOOL DIVISION.

A MEETING of this Division was held at the Medical Institution, Liverpool, on May 9th, when Dr. R. J. RICHARDSON, J.P., occupied the chair.

Waters Testimonial Fund.—A letter was read by the Divisional Secretary (Dr. FRANCIS W. BAILEY) from Dr. J. Walker in reference to the Testimonial Fund in recognition of the work done by the late Dr. Henry Waters, of Trinity Road, Bootle, as Divisional Secretary and Representative on the Representative Body. It was pointed out that the appeal to the members of the Liverpool Division had resulted in the addition of £60 13s. 6d. to the amount already subscribed, the total contributions being £240 15s.

Election to Central Council.—The meeting unanimously agreed that Mr. F. Charles Larkin be nominated by the Division as a candidate for election to the Central Council at the forthcoming election.

Matters Referred to Divisions.—Regarding the matters referred to Divisions and published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL, April 19th, it was agreed to instruct the Representatives at the Representative Meeting to vote against the motion by the Natal Branch; to leave discretion to the Representatives on the motion of the Leigh Division; and to vote against the motions by the Buckinghamshire Division.

Expenses of Representatives.—It was agreed to support the resolution of the Branch Council regarding a voluntary levy to meet the expenses of the Representatives, members of Council, and members of Committee, and to ask each individual member of the Division to contribute his proportion to a levy of £101 10s.

Nominations to County Medical Committee.—It was agreed to nominate Dr. J. Dunn and Dr. Pendlebury as candidates for election on the County Medical Committee of Lancashire for No. 19 and No. 10 district insurance areas respectively.

Divisional and Insurance Areas.—Consideration of the readjustment of the Divisional area to coincide with the Insurance Act area was postponed, pending the report of the Council of the Association on this matter.

METROPOLITAN COUNTIES BRANCH:

HAMPSTEAD DIVISION.

A MEETING of the Hampstead Division was held at the Central Library, Finchley Road, on the evening of May 9th. Mr. WARE was in the chair, and fourteen members were present. The recommendations of the Committee in regard to possible amendments of the National Insurance Act or Regulations contained in a letter from the Medical

Secretary dated April 19th, and the report of the State Sickness Insurance Committee in SUPPLEMENT TO BRITISH MEDICAL JOURNAL, April 5th, were carried unanimously. An interesting paper was read by Mr. E. LAMING EVANS on the detection and treatment of scoliosis in its initial stages. A short discussion followed. Mr. Evans answered the points raised, after which a hearty vote of thanks was proposed by Dr. PRITCHARD, seconded by Mr. HILLS, and carried by acclamation.

MIDLAND BRANCH:

LINCOLN DIVISION.

THE annual meeting of the Lincoln Division was held at Lincoln on May 1st, when nine members were present.

Election of Officers.—The following were elected Divisional officers for the ensuing year:

President-elect.—Dr. Gemney.
Representative on Branch Council.—Dr. Purves.
Ordinary Members of Executive Committee.—Drs. Denny (East Barkwith), Lowe, Barlow.
Chairman.—Dr. Clements.
Vice-Chairman.—Dr. Watkins.
Honorary Secretary.—Dr. Rainforth.
Representative.—Dr. McFarland.

Annual Report and Financial Statement.—The annual report of the Executive Committee and financial statement was read and approved.

Fees to Practitioners Called in to Assist Midwives.—The following motion was adopted:

That it is desirable that practitioners, when called in to assist a midwife, do not accept a less fee than one guinea, and that all medical men practising in the city be informed of this resolution.

NORTH OF ENGLAND BRANCH:

NEWCASTLE-UPON-TYNE DIVISION.

THE tenth annual meeting of the Newcastle-upon-Tyne Division was held at the Royal Victoria Infirmary, Newcastle-upon-Tyne, on May 7th. Dr. ANDREW SMITH, sen., occupied the chair.

Election of Officers.—The following officers were appointed for the ensuing year:

Chairman.—Dr. A. Campbell.
Vice-Chairman.—Dr. James Hudson.
Honorary Secretary.—Dr. J. Leslie Wilson.
Representatives at Representative Meetings.—Dr. J. W. Smith, sen., Dr. R. A. Bolam.
Deputy Representatives at Representative Meetings.—Dr. Andrew Smith, sen., Dr. James Don.
Representatives on North of England Branch Council.—Drs. W. C. Beatley, R. Dagger, J. Don, Rutherford Morison, W. G. Richardson, A. Smith, sen., J. S. McCracken, H. L. Rutter; *ex officio:* Drs. A. Campbell, Leslie Wilson, J. W. Smith, R. A. Bolam.

Ordinary Members of Executive Committee.—Mr. H. B. Angus, Drs. A. C. Burnell, J. J. Campbell, J. T. Dunlop, G. Foggin, W. S. Fraser, E. F. Pratt, R. W. Simpson, A. H. Hobbs, J. D. Farquharson, W. L. Ruxton, T. C. Hunter; *ex officio:* Mr. R. J. Willan.

Annual Report for the Year 1912.—The annual report showed that forty meetings had been held during the year. The number of members was 204, an increase of 24. The sum of £1,591 had been guaranteed to the Defence Fund in connexion with the National Insurance Act up to December 31st, 1912, and £159 had been paid up in calls. The principle of school clinics had been established in Newcastle-upon-Tyne, but the Local Education Committee had stated that it had no intention of undertaking treatment on a large scale; that strict care would be taken not to include patients whose parents could afford to pay a doctor; and that accredited representatives of the profession would be allowed to inspect the treatment centres at any time.

Winter Scientific Meetings.—It was agreed that an honorary secretary of the winter scientific meetings carried on by the Division should be appointed, and should be an *ex officio* member of the Executive Committee. Mr. R. J. Willan was appointed.

Inspection of School Treatment Centres.—Drs. R. Dagger, F. Hawthorn, G. E. Watson, J. D. Farquharson, A. Campbell, and Leslie Wilson were appointed the accredited representatives of the profession to inspect the centres for the treatment of school children.

Votes of Thanks.—A very hearty vote of thanks was accorded to Dr. Andrew Smith, the retiring chairman,

and Mr. R. J. Willan, the retiring honorary secretary, and also to Dr. J. W. Smith, sen., and Dr. R. A. Bolam, the Representatives at Representative Meetings. The Honso Committee of the Royal Victoria Infirmary was thanked for its kindness in affording facilities for holding all the various meetings at that institution, as was the matron of the Royal Victoria Infirmary for her kindness in supplying teas to the winter scientific meetings and committee meetings.

SOUTH-EASTERN OF IRELAND BRANCH.

THE annual meeting of the South-Eastern of Ireland Branch of the British Medical Association was held at Kilkenny on May 7th, Dr. MORRISSEY, President, in the chair, and thirteen others were present.

Election of Officers.—The following were elected for 1913-14:

President.—Dr. P. O'Gorman (Cowran, co. Kilkenny).
President-elect.—Dr. Thomas O'Connell (Fethard, co. Tipperary).
Secretary.—Dr. P. Grace (Kilkenny).
Treasurer.—Dr. Jellett (Waterford).
Representative at the Representative Meetings.—Dr. Laffan (Cashel, co. Tipperary).
Deputy Representative at the Representative Meetings.—Dr. J. Power (Ardinnan).
Nominated for Election on the Central Council.—Dr. Denis Walsh (Graigue).
Representative on the Irish Committee.—Dr. J. Ryan (Carlow).
Representatives on the Branch Council.—Drs. James, Shee, Walsh, Grace (Kilkenny); Drs. Morrissey, Morris, Mackesy, Jellett (Waterford); Drs. J. V. Ryan and H. Kidd (Carlow); Dr. Thomas O'Connell (Fethard, co. Tipperary).

Votes of Condolence.—Votes of condolence were passed with Dr. G. Mackesy on the death of his son, and with Dr. Shee (Callan) on the death of his brother.

STAFFORDSHIRE BRANCH:

SOUTH STAFFORDSHIRE DIVISION.

THE annual meeting of the Division was held at Wolverhampton on May 6th. Dr. CRAIG was in the chair, and fourteen members were present.

Election of Officers for 1913-14.—The following officers were elected:

Chairman.—Dr. T. H. Galbraith.
Vice-Chairman.—Dr. T. Connell Craig.
Honorary Secretary.—Dr. H. C. Mactier.
Three Representatives on Branch Council.—Dr. Craig, Dr. Hartill, and Dr. Malet.
Six Members of Executive of Division.—Dr. Ridley Bailey, Dr. Bankier, Dr. Cooke, Dr. A. H. Carter, Dr. Deanesly, and Dr. Groat.

Annual Report of Council.—The annual report of Council was then considered, and the Representative, Dr. Mactier, was instructed thereon.

Amendment of Insurance Act.—On the motion of Dr. MALET, seconded by Dr. SPAIN, it was resolved:

That in the Act to amend the Insurance Act provision should be made that all the representatives of the profession on the Insurance Committees should be elected by the profession itself in the respective areas.

Votes of Thanks.—A vote of thanks to Dr. Craig for his conduct of meetings during his year of office was moved by Dr. MACTIER, seconded by Dr. RIDLEY BAILEY, and carried by acclamation. Dr. CRAIG, in replying, expressed his pleasure that the members were satisfied with his efforts during a most strenuous year.

YORKSHIRE BRANCH:

HALIFAX DIVISION.

A MEETING of this Division was held on April 23rd at 8.30 p.m. In the absence of Dr. Crossley Wright, the chair was taken by Dr. A. DRURY, the Vice-Chairman, and sixteen other members were present.

Emergency Visits to the Workhouse.—The SECRETARY read correspondence with reference to the refusal of the Halifax Guardians to pay Dr. F. E. Wayte, a member of the Division, for an emergency visit to the workhouse made at the request of the master, the workhouse medical officer not being available. The meeting resolved to recommend Dr. Wayte to sue the guardians, and that he should have the support of the Division.

Fee for Medical Certificates.—The case of a medical man in the Division was reported to the meeting, who continued

to give medical certificates required for admission to clubs and societies for the fee of 1s., contrary to the decision of this Division a year ago to raise the fee to 2s. 6d. The Secretary was directed to write to the medical man in question.

Insurance Act.—The recommendations of the State Sickness Insurance Committee were read, and for the most part approved. The Secretary was instructed to transmit them to the Secretary of the Halifax Medical Committee, and to request that copies be sent to representatives of Local Medical Committees outside Halifax, but in the Division.

Model Rules for Ethical Procedure.—The Model Ethical Rules were adopted after some discussion, with the exception of Rules 12 and 22. On the motion of Dr. P. K. STEELE, seconded by Dr. PRIESTLEY LEECH, it was decided that any appeal should go from the Divisional Ethical Committee direct to the Central Ethical Committee, and not through the Branch Council, as proposed in the rules. Notice of adoption of the rules was ordered to be placed on the agenda of the next Division meeting.

Contract Practice.—The question as to whether contract practice should be allowed in the Division outside the Insurance Act was discussed at considerable length. The Executive Committee had consented to a member of the Division resuming a club which he had resigned at the request of the Association during the controversy as to the Insurance Act. This was severely criticized, and on the motion of Dr. D. J. MACAULAY, seconded by Dr. McWILLIAMS HENRY, the following resolution was carried unanimously, and ordered to be placed on the agenda of the next Division meeting in order that it might be binding on all the members:

That this Division does not approve of contract practice outside the Insurance Act.

Medical Men and Coroners' Inquests.—The question of the discussion at inquests of the conduct of medical men who were not given the opportunity of defending themselves was then considered, but it was decided to take no official action in the matter at present.

Association Notices.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A list of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The Honorary Secretaries, Dr. Ernest C. Hadley (Barbury Street, Lozells, Birmingham) and Dr. H. Hoyle White (Elsinore, Gravelly Hill, Birmingham), give notice that a special meeting of this Division will be held in the Medical Institute, Edmund Street, on Wednesday, May 21st, at 3.30 p.m., for the purpose of electing four Representatives and one Deputy Representative for this Division upon the Representative Body of the Association. The annual meeting of this Division will be held in the Medical Institute, Edmund Street, on Wednesday, June 25th, at 3.30 p.m., for the purpose of electing a Chairman, Vice-Chairman, two Honorary Secretaries, Representatives of the Division in the Branch Council, and members of the Executive Committee. Nominations for officers of the Division must be in the hands of one of the Honorary Secretaries not later than Tuesday, June 3rd.

BIRMINGHAM BRANCH: COVENTRY DIVISION. Drs. Laurence E. Price and Duncan Davidson, Honorary Secretaries (15, Priory Row, Coventry), give notice that the annual meeting of the constituency of the Nuneaton and Tamworth and Coventry Divisions will be held at 3.30 p.m. on Thursday, June 5th, at the Coventry Hospital, to elect a Representative for the Brighton Meeting, and any other business. At the conclusion of this meeting the annual meeting of the Coventry Division will be held for the election of officers, to consider a proposed alteration of date of meetings, and to receive the report of the Executive Committee.

DORSET AND WEST HANTS BRANCH.—The Honorary Secretary, Dr. Frank Fowler (29, Poole Road, Bournemouth), gives notice that the annual meeting will be held at the Bourne Hall Hotel, Bournemouth, on Wednesday, May 21st, at 3.30 p.m. The reports of the Branch and Divisions will be presented and the Ethical Committee will be elected. Dr. H. G. Lys will deliver the presidential address. Dr. W. Johnson Smyth will read notes on a case of abdominal section. The President-elect, Dr. H. G. Lys, very kindly invites members to luncheon at his house, Southbrook, Poole Road, at any time between 1.30 and 3 o'clock.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—Dr. A. G. Southcombe, Honorary Secretary (83, Sidney Road, Homerton, N.E.), gives notice that the eleventh annual general meeting of the Division will be held in Balfour Hall, Dunstan Street, Kingsland Road, on Friday, May 30th, at 3.30 p.m.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.—The Honorary Secretary, Dr. Francis W. Goodbody, gives notice that a meeting of the practitioners of the borough of Marylebone will be held at 11, Chandos Street, W. (Medical Society of London), on Monday, May 19th, at 4.45 p.m., when a Local Medical Committee for the year 1913-14 will be elected. The Committee consists of twenty practitioners, ten in general and ten in consulting practice. Nominations signed by two practitioners, and accompanied by the signed consent of the nominee to serve, should reach Dr. Roxburgh, 30, Seymour Street, W., by Friday, May 16th. The annual general meeting of the Division will be held at the same place at 5 p.m., or at the conclusion of the meeting called for 4.45 p.m., to receive the Annual Report of the Executive Committee, to elect officers of the Division for the ensuing year, and to consider questions of which due notice has been given.

METROPOLITAN COUNTIES BRANCH: TOWER HAMLETS DIVISION.—Dr. W. H. E. Oxley, Honorary Secretary (119, East India Road, E.), gives notice that the annual meeting of the Tower Hamlets Division will be held on Tuesday, May 20th, at the Public Health Offices, White Horse Street, Stepney.

MIDLAND BRANCH: BOSTON AND SPALDING DIVISION.—Dr. E. A. Wilson, Honorary Secretary (Boston), gives notice that a special meeting of the Division will be held on Wednesday, May 21st, at the White Hart Hotel, Boston, at 3.30 p.m., to meet the Medical Secretary (Dr. Cox) to discuss the provision of medical treatment for all uninsured persons.

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION.—Dr. R. Wallace Henry, Honorary Secretary (6, Market Street, Leicester), gives notice that the annual meeting of the Division will be held at the Royal Infirmary, Leicester, on Wednesday, May 21st, at 4 p.m., for the election of Vice-President and Representatives of the Division on the Branch Council, and of officers and members of the Executive Committee of the Division. The annual report of the Executive Committee will be presented.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—Dr. P. S. Hichens, Honorary Secretary, gives notice that the annual meeting of the Division will be held in the Board Room of the Northampton General Hospital on May 29th, at 2.30 p.m. The meeting will be preceded by a luncheon at Franklin's Restaurant, Guildhall Road, at 1.30 p.m. Those wishing to attend the luncheon should notify the Honorary Secretary two days beforehand. Agenda: Election of officers for the ensuing year. Annual report of the Division. Consideration of agenda for the Representative Meeting. Consideration of other memoranda sent down from the Association. If time permits some clinical cases will be shown.

SOUTH-EASTERN BRANCH.—Dr. E. A. Starling, Honorary Secretary (Chillingworth House, Tunbridge Wells), gives notice that the sixty-ninth annual meeting of the Branch will be held on Wednesday, June 11th, at 1.30 p.m., at the Lion Hotel, High Street, Guildford. Dr. Arthur M. Mitchell (President-elect) invites members to lunch at the Lion Hotel, High Street, at 12.45 p.m. sharp. Agenda: In addition to the business of an ordinary meeting, (1) to receive the report of the election of officers for 1913-14; (2) to receive the annual report of the Council and financial statement, and (3) the ethical rules presented by the Council; (4) to consider the following resolution: "The South-Eastern Branch Council advise the Branch to request the Council of the Association to consent to the division of the unwieldy South-Eastern Branch into three Branches, corresponding with the three counties of Kent, Sussex, and Surrey." An excursion is arranged for the afternoon, to view the Lord Mayor Trelor's Cripples' Home at Alton, where Dr. and Mrs. Gauvain kindly invite the members to tea. The special train leaves Guildford Station at 2.40 p.m., returning about 5.30 p.m. Tickets for the return journey, 5s. 6d. each. The annual dinner will be held at the Lion Hotel, at 6.30 p.m. Members intending to be present at the lunch, excursion, or dinner wishing hospitality for the night are requested to signify their intention to Cecil P. Lankester, Esq., 1, Rectory Place, Guildford, not later than Saturday, June 7th.

National Insurance.

LOCAL MEDICAL COMMITTEES.

ABERDEENSHIRE.

A MEETING of the Aberdeenshire Local Medical Committee was held in the Medico-Chirurgical Hall on May 2nd, Dr. RORIE, Chairman, presiding.

Temporary Residents.—After considering the question of medical benefits for temporary residents, Memorandum 159/I.C., it was unanimously agreed to inform the Commissioners that the Committee could sanction no scheme involving a deduction from the 7s. contracted for, as it would operate unfairly in the area.

Charges by Chemists.—The letter from the Medical Secretary of the British Medical Association as to charges of chemists was considered, and it was agreed to protest against the neglect to consult the Local Medical Committees in the matter as being contrary to the purview of the Act.

Payment of Expenses.—The Secretary (Dr. BRUCE) reported that the Committee had already communicated with the Commissioners, the Local Insurance Committee, and the local members of Parliament on the matter of the expenses of Local Medical Committees, and it was agreed to press that this question should be settled in the forthcoming amending Act.

Uninsured Club Members.—The secretary was instructed to remind certain members of the profession by letter of the arrangement previously arrived at—namely, that no contract be entered into for this purpose at a less rate than 7s. a head exclusive of medicine.

Specification of Disease on Sick Certificate.—Correspondence was read from a friendly society demanding the insertion of the disease in all cases on sick certificates. It was unanimously agreed that nothing further than "illness" or "accident," as the case might be, should be used, the doctor's signature being an adequate guarantee of the genuineness of the case. Comment was made on the delay by the Commissioners in issuing a uniform sick certificate, and the inconvenience at present caused by the multiplicity existing, according to the taste and fancy of the different societies.

Mileage.—The question of mileage was again discussed, and it was unanimously agreed to press forward the point that the proposed "three miles free" was absolutely unfair to the average country doctor, and that one mile free was a fair offer on the part of the practitioners. It was pointed out that while practitioners in the Highlands and Islands and the sparsely populated areas might ultimately receive some help, the country practitioner with a radius of three to seven miles was being most unfairly treated as compared with his town brother.

The Scottish Committee of the British Medical Association.—The Local Medical Committee expressed its cordial approval of the proposed devolution of purely Scottish medical affairs to this Committee, and of the steps being taken to secure that it can speak as a national representative body in putting forward the claims of the medical profession in Scotland.

KIRKCALDY.

THE Local Medical Committee for the Burgh of Kirkcaldy has been recognized, and is composed of all practitioners resident or practising in the burgh and willing to act. The office-bearers are:

Chairman.—Dr. A. Leslie Curror.

Secretary.—Dr. J. Isdale Greig, 23, Townsend Place, Kirkcaldy.

Medical Representatives on Insurance Committee.—Dr. John Smith, Dr. W. T. M. Wallace.

Medical Members of Medical Service Subcommittee.—Dr. A. Leslie Curror, Dr. H. A. Laing, Dr. W. T. M. Wallace.

Several meetings have been held and various questions connected with the Insurance Act discussed. A deputation from the various friendly societies desired to know if the medical profession could not modify its terms of 7s. a head for aged members of friendly societies, and would be willing to enter into contracts for attending juveniles between the ages of 12 and 14 at the rate of

2s. 6d. per annum exclusive of medicine. After discussing the matter the CHAIRMAN informed the deputation that the terms could not be modified and that juveniles could not be contracted for.

Allocation of Patients.—It was suggested that a three-mile limit should be observed, and that those doctors having under 1,000 on their panel should receive twice as many as those having over 1,000.

Excessive Ordering of Drugs.—The Insurance Committee has informed the Committee that the chemists' accounts for the first quarter amounted to £374, while the Drug Fund and the Drug Suspense Fund together amounted to £340. After discussion, it was resolved to ask for further information before reporting.

Attendance on Temporary Residents.—Memorandum 159 was discussed, and it was decided that the "case-value" method was the better alternative.

Supply of Emergency Drugs and Appliances.—It was decided to recommend that each doctor should notify what he was likely to require, to an amount not exceeding 10s. a quarter.

Objectionable Inspection.—A letter was read from a member complaining of the methods of a person who represented herself to be an inspector under the Act, and invited complaints, inspecting the medicine, etc. The Secretary was instructed to write to the Commissioners and also the Insurance Committee on the matter.

NORTH RIDING OF YORKS.

A MEETING of the North Riding of Yorks Local Medical Committee was held at York on April 30th. Dr. ROBERT CUFF (Scarborough), Chairman of the Committee, presided.

Expenses of Committee.—It was pointed out that it had been found impracticable for the subscriptions towards the Local Medical Committee's expenses to be collected by the Clerk to the Insurance Committee, and each practitioner in the North Riding was therefore asked to send 5s. direct to Dr. Mills, who had consented to add to his duties as Honorary Secretary those of Treasurer also.

Proposed Fee for Copying Prescriptions.—It was resolved to protest against the proposed charge by chemists of 1d. for copying prescriptions—first, as being disproportionate to the work done, and secondly, because the charge was being introduced without consultation with the Local Medical Committee.

Allocation of Patients.—The CHAIRMAN suggested that the Insurance Committee should be asked to send to each insured person who had not agreed with a doctor a reply paid post-card asking him without delay to name the doctor of his choice. The request should be accompanied by an explanation in simple language of the necessity of gaining the doctor's consent to act. Dr. Cuff also alluded to the reasonable action of the Surrey Insurance Committee in allowing contracting out, and hoped that the example would be endorsed by the Commissioners and followed by other Committees.

Mileage.—Dr. BAIGENT said that the question of mileage could not be settled until all the patients were allotted and details obtained from each practitioner on the panel of the number of patients at varying distances and the nature of the country over which he had to travel. Dr. TETLEY gave his experiences of a moorland district, and informed the Committee that he had refused several patients who lived in inaccessible parts, owing to the absence of a mileage arrangement. It was decided that the question of drawing up a circular letter requiring particulars on which a mileage claim might be made should be left in the hands of Drs. Baigent, Meade, and Mills, three members of the Insurance Committee, who would act in conjunction with the officials of that Committee in this matter.

Emergency Subcommittee.—A subcommittee of three was appointed to deal with any urgent business which might arise between the ordinary meetings of the Committee, which it was suggested should as a rule take place once a quarter.

Major Operations.—It was suggested that a major operation would be one necessitating the administration of a general anaesthetic; and the CHAIRMAN pointed out that the Regulations provided that any case in doubt should be referred to the Local Medical Committee.

Anaesthetics.—The Committee decided that general anaesthetics, except nitrous oxide, should be paid for as an extra.

BOOTLE.

At a meeting of the Bootle Local Medical Committee, held on May 9th, the Secretary was instructed to write to the Insurance Commissioners protesting against the proposed charge for copying prescriptions. It was further resolved that the scale of fees proposed for payment of services rendered to temporary residents was satisfactory to the Committee, and the Secretary was instructed to reply to the letter of inquiry to that effect.

ROCHDALE.

Temporary Residents.

A LETTER has been addressed to the Insurance Commissioners (England) by Dr. James Melvin, Honorary Secretary of the Local Medical Committee, in reply to the circular letter covering the memoranda on medical attendance on temporary residents. The letter states that the Committee is unanimously of opinion that as medical benefit for temporary residents is not provided for in the present Regulations it cannot discuss the scale of fees laid down by the Commissioners in the novel scheme now promulgated for the first time. The letter concludes as follows:

Regulation 22, entitled "Insured Person Applying during Year," refers to an insured person who "changes his residence to the area of another Committee." The word "temporary" is not used at all in this Regulation; and the expression "changes his residence" can reasonably be held to refer only to a permanent removal. As at present advised, my Committee is of opinion that they cannot, on behalf of the practitioners on the Rochdale panel, discuss the spending of moneys subtracted without their consent from the capitation fees legally due and accruing to such practitioners.

SHEFFIELD.

At a meeting of the Local Medical Committee for Sheffield, held on May 6th, it was resolved:

That our Medical Representative shall raise the question at the next meeting of the Local Insurance Committee that those insured persons with incomes over £160 a year be required to make their own arrangements for medical benefit.

That the following resolution be forwarded to the Local Insurance Committee:

That the Local Medical Committee regrets that, so far, no Medical Representative has been placed on appropriate subcommittees, and suggests that it is desirable that at least one such representative shall be placed on such subcommittees as deal with matters affecting the interests of the medical profession and wherever their special knowledge is likely to be useful.

That the following resolution be forwarded to the National Health Insurance Commissioners:

That the Sheffield Local Medical Committee protests strongly against the method proposed in Memo. 159 I.C. for providing medical benefits for insured persons who are temporarily resident in any part of the country.

That the Sheffield Local Medical Committee request the State Sickness Insurance Committee to insist that a card be issued by the Local Insurance Committees to each insured person to show name, address, age, and occupation of the insured person and name of doctor, such card to replace the red medical ticket, and to be produced when attendance is required.

COUNTY OF CHESHIRE.

The thirteenth meeting of this Committee was held on May 8th at Manchester; Dr. GARSTANG was in the chair, and sixteen members were present.

The Committee resolved, in the light of the decisions received from the District Committees, to hand in agreements for a further period of panel service till January 14th, 1914, accompanied by a strong protest against the failure of the Insurance Committee to fix an income limit, with regard to the obligation to state the diagnosis in certificates, and against the deduction from the capitation fees for persons away from home. The Insurance Committee will be informed that these questions will be raised again prior to accepting a further term of service.

DERBY.

Temporary Residents.

As a result of the consideration of the Memorandum 159 I.C. by the Derby Borough Medical Committee, the honorary secretary was directed to reply to the following effect:

1. The Central Fund suggested in the Memorandum is to be made up by certain (variable) deductions from the capitation fee at present due to panel doctors.
2. The amount of this fee, after being promised in a circular from the Commissioners, was finally established by being embodied in the stamped and signed agreements entered into between the various Insurance Committees and the individual doctors.
3. Speaking for the doctors whom it represents, this Committee cannot possibly consent to any such breach of contract as would be caused by the reduction in the capitation fee proposed by this Memorandum.

DENBIGH.

A CONFERENCE with the County Insurance Subcommittee was held at Wrexham on May 1st.

Mileage.—During the first quarter a deduction of 1½d. a head was made to pay for excess mileage above three miles, but this arrangement was vetoed by a substantial majority at the next meeting of the panel practitioners. The result was conveyed to the Subcommittee, who declined to accept this finding on the grounds of the sparse attendance at the general meeting, and asked that another vote should be taken. A postal vote of the 96 "panel" men in the county was taken, and the Secretary reported that, of the 60 replies received, 14 were for the deduction and 46 against. Notwithstanding the large majority, the Subcommittee decided to accede to the wishes of the minority, and continue the deduction for this year; this has caused much indignation, and the panel practitioners of Colwyn and Colwyn Bay have addressed the following letter to the Insurance Committee:

We, the panel practitioners of Colwyn Bay and district, representing a population of close upon 20,000, and composed of practitioners who have both town and country practice, at a specially convened meeting held this day, May 6th, protest in the strongest possible manner against the decision of the County Insurance Subcommittee to whittle down a promised minimum fee of 7s. per head per annum to 6s. 6d. Apart altogether from the breach of faith involved in the matter, we consider it most unjust that this decision should have been arrived at in face of a 3 to 1 majority against it in a postal vote taken on the specific question. We trust that the County Committee will see their way to allocate the minimum 7s. provided by the Government in accordance with the expressed wishes of the overwhelming majority of panel practitioners conveyed through the Local Medical Committee.

Allocation of Patients.—The CLERK stated that it would not be possible to issue the new register cards for several weeks, and it was decided to continue the use of the red cards until the register was complete. Owing to this delay no allocation could be made, but it was agreed that the moneys due in respect of persons not allocated should be divided among practitioners in proportion to their lists of accepted persons.

Excessive Prescribing.—An inquiry into an alleged case of excessive prescribing on the part of a practitioner was held, and after hearing the doctor concerned the Committee resolved that the case constituted a breach of the Regulations (Clause 46), and left the Insurance Committee to decide what penalty should be enforced.

ISLE OF WIGHT.

At a meeting of the Local Medical Committee at Newport on May 8th, Dr. CASTLE was in the chair, and eleven others were present.

Allocation of Insured Persons.—The report of the meeting of the deputation of this Committee with a deputation of the Isle of Wight Insurance Committee on the question of allocating those insured persons who had not yet chosen their doctor was received, it having been decided that the allocation should not take place until after May 31st, and that an advertisement should be inserted in the local press stating that if the cards were not signed before that date the persons holding them would be distributed by the Insurance Committee. The Insurance Committee would ask each doctor by circular to state how many of the unallotted he would be willing to take in the area in which he practised, and allocation would be in equal shares among those doctors willing to accept them.

Temporary Residents.—The report of the meeting of medical practitioners serving on the panel on the subject of temporary residents was received and adopted. It embodied the following resolution which has been sent to the Commissioners:

That inasmuch as the medical profession has been guaranteed a minimum capitation fee of 7s. per head per annum by the National Health Insurance Commissioners, we (the medical practitioners serving on the panel in the Isle of Wight) decline to accept 15s and 16s I.C. as a fair solution of the question of payment for medical attendance on temporary residents as it must involve the reduction of the amount of the capitation fee in other areas, but we are of opinion that persons who can afford to go to health resorts can afford to pay a reasonable fee to the medical men in practice there.

The Honorary Secretary was instructed to write to the Commissioners in reply to their letter asking whether the scale of fees proposed in Memoranda 159 I.C. and 161 I.C. were acceptable, stating that although the committee approved the scale of fees submitted as adequate, it strongly disapproved of the manner in which the central fund was to be raised, and pointing out the promise held out to practitioners about to join the panel in the official Explanatory Statement, Section 22, published in December, 1912:

If the object desired is that each practitioner shall know as exactly as possible the income on which he can rely in respect of his liability to give attendance under the head of Medical Benefit during the year, the method to be adopted is obviously that of simple capitation, under which he will know definitely that if he has 1,000 insured persons on his list for the year he will receive in a district in which he does not dispense at least £325.

PLYMOUTH.

At a meeting of the Plymouth Local Medical Committee on April 24th and an adjourned meeting on May 8th the following matters came up for discussion:

Reciprocity between Neighbouring Local Medical Committees.—An arrangement was made between Plymouth and Devonport Local Medical Committees by which the Honorary Secretary or another member was invited to attend as a visitor the meetings of the Local Medical Committees in the neighbouring town.

Copying Fee for Chemists.—This matter having been referred to a committee of doctors on the panel, the following arrangement was decided upon and assented to by this Committee:

1. That after a date (to be fixed by the Insurance Committee) the panel doctors must issue a duplicate for all original prescriptions.
2. A single copy to suffice for repetitions.
3. The single copy to contain no additions to the original.
4. Chemists to be paid 1d. copying fee from April 14th till the above regulations come in force.

Maternity Fees in Midwife Cases.—It was decided to urge all medical men to refrain from making contracts; the fee was considered inadequate.

Medical Referee.—The feeling was strongly in favour of the principle of appointment of an independent referee if not a paid officer of the friendly and insurance societies.

Scale of Fees.—The following scale of fees was recommended for persons making their own arrangements (Form 43 I.C.):

| | £ | s. | d. |
|-------------------------------------|-----|----|-----|
| Visit or consultation | ... | 0 | 2 6 |
| Special visit | ... | 0 | 3 6 |
| Night visit | ... | 0 | 7 6 |
| Surgical operation from | ... | 1 | 1 0 |
| Anaesthetic from | ... | 1 | 1 0 |
| Fracture or dislocation from | ... | 1 | 1 0 |

WESTMINSTER AND HOLBORN.

At a meeting held under the auspices of the Provisional Medical Committee for Westminster and Holborn on April 24th, with Dr. BERNARD O'CONNOR in the chair, the Provisional Medical Committee was dissolved and two Medical Committees for Westminster and Holborn respectively elected as follows:

Westminster.—Drs. Barlet, A. E. Cope, Dutch, Haslip, Hay, Maitland, Pennington, Starkie, Miss D. A. Stepney (Honorary Secretary).

Holborn.—Drs. Barton, Bolton (Honorary Secretary), Colquhoun, Geoghan, Gould, Longinotto, Kennard, McLeod, and O'Connor.

The Committees include members who have joined as well as others who have not joined the panel.

IRELAND.

Proposed Arrangement for Medical Certification.

LAST week a conference was held at the offices of the County Borough of Dublin Insurance Committee between representatives of the Committee and of the approved societies for the further consideration of the proposed arrangements for the medical certification of insured persons, with a view to determining the means to be adopted to secure adequate facilities for the provision of certificates, consequent on the failure to form a panel of practitioners in Dublin at the capitation rate fixed by the Commissioners. A deputation, consisting of Dr. Robert J. Rowlette, Dr. Thomas Donnelly, Dr. W. J. Delaney, Dr. L. Farrell, Dr. Thomas G. McGrath, Dr. M. Vaughan, and Dr. William Doolin, attended on behalf of the medical profession, and stated the terms which had been agreed to at the meeting of the profession on May 2nd, reported last week. After the retirement of the deputation, the conference discussed the question of payment by certificate as an alternative to the capitation grants, and it was pointed out that the only funds available for the purpose in Dublin amounted to about £3,500. It was suggested that the Treasury be asked to supplement the £50,000 grant. The representative of the Irish Transport Workers said that the experience of his society was that the panel system in operation in Belfast was absolutely useless, owing to certificates being given without examination of the patients. The following resolution was adopted:

That the Commission adopt a capitation rate of 1s. 6d. per insured person for the purpose of medical certification in the county borough of Dublin, an open panel of doctors to be formed, and certificates to be accepted only from the medical men in actual attendance, the administration to be in the hands of the Insurance Committee.

A further inaccuracy of the Insurance Commissioners has come to light. A doctor writes from Castlebar, co. Mayo, to say that on casually asking in the local post-office for a list of panel doctors for Mayo, he was amazed to find his own name second on the list. He states that he never joined the panel or signified his intention of doing so, nor has he ever signed or promised to sign any form whatsoever. It will be interesting to see if this method of forming panels has been adopted to a large extent.

SCOTLAND.

MEDICAL SERVICE IN THE HIGHLANDS.

THE Argyll County Council has unanimously adopted a resolution approving generally of the policy recommended in the report of the Highlands and Islands Medical Service Committee, but strongly opposing the suggestion to create a new central authority. The council was of opinion that the control of the medical service in the Highlands should be entrusted solely to the Local Government Board, acting through the local public health authorities with the addition of one or two co-opted members. The council resolved to communicate with the other Highland county councils with a view to united action.

INSURANCE NOTES.

ALLEGED BOYCOTT OF DOCTORS IN SALFORD.

AT the last meeting of the Salford Town Council, Councillor Dr. Pinder, who is chairman of the Watch Committee, said he wished to ask a question of the chairman of the Health Committee, Alderman Huddart, who is also chairman of the Salford Insurance Committee. It appears that Dr. Pinder and his two partners, who were on the Salford panel from January to April, have refused to continue on the panel for a further period of three months up to July 15th, and Dr. Pinder alleged that certain doctors, including himself and partners, had been boycotted by an approved society under the Insurance Act. The society in question had refused to accept their certificates or to pay their patients the sickness benefit unless a doctor on the panel were employed. Over a third of the population of Salford were insured persons, and he wanted an assurance from the chairman of the Health Committee that insured persons were at liberty to employ any doctor they liked and to receive a certificate from him

whether he were on the panel or not. A large proportion of the public thought they could not go to a private doctor but were bound to go to a panel doctor in order to get a certificate to draw insurance money. Alderman Huddart said he felt a good deal of sympathy with the doctors in this matter. A case such as Dr. Pinder had mentioned had been before the Court of Appeal, where a society had refused a certificate given by a doctor who was not on a panel, and he was pleased to see that the court had decided in favour of the doctor. He promised that he would do all that he could to correct the injustice.

THE POSITION IN SOUTH WALES.

With regard to the difficulty in Swansea, owing to the action of combinations of workmen who are seeking to use Subsection 3 of Section 15 of the Insurance Act for the purpose of contracting to obtain medical attendance and treatment for themselves and their dependants on terms and conditions repugnant to the local profession, the Mayor of Swansea has recently made another attempt to arrange a conference. The *South Wales Daily News* of May 10th states that the medical men at once assented to this proposal, but the labour and friendly society representatives unanimously decided at a meeting to proceed with their present policy and to advertise for doctors. The representatives discussed a proposal to withhold subscriptions towards the local hospital in consequence of the attitude of the honorary medical staff in strongly supporting the profession generally in this matter. It was agreed, in order that the funds of the institutions should not suffer, to continue the subscriptions for the first half of the present year, leaving any further action for future consideration.

A clear and forceful statement of the medical point of view has been sent to the local press under the signatures of Dr. H. E. Quick (Honorary Secretary of the Swansea Division of the British Medical Association) and Dr. Edgar Reid (Chairman of the staff of the Swansea Hospital).

OFFICIAL PUBLICATIONS.

CONSTITUTION OF INSURANCE COMMITTEES.

THE National Health Insurance Commission for England has issued regulations for the election of representatives of insured persons on Insurance Committees, and with them an explanatory circular numbered 18/I.C. At the date of the first formation of the committees elections could not be held, since no definite information was available as to the number of persons who would become insured in such area, or as to their distribution between the various approved societies. The Commissioners, acting under Section 78 of the Act, made temporary appointments of representatives, which terminate on July 15th. The Regulations now made provide that the number of representatives of insured persons on any Insurance Committee must be three-fifths of its total membership. Such membership must, under the Act, be not less than 40, nor more than 80, and the Commissioners intend to vary the scale already obtaining in various areas only to the following extent: Committees numbering 50 members will be raised to 60, and those numbering 70 to 80. The representatives of insured persons will fall into three classes—direct representatives of members of approved societies, indirect representatives of members of approved societies, and representatives of deposit contributors; the proportion of each class is likely to vary in every area. Nowhere will there be anything in the way of local elections, for both classes of representatives of approved societies must be chosen by the societies themselves, not by their branches; the appointment of representatives of deposit contributors is subject to restrictions of like effect. The number of direct representatives will depend upon the number of societies which in any given area have a sufficient number of members to constitute an electoral unit; one representative will be appointed for each such complete unit. The electoral unit is the figure given by dividing the total number of insured persons in the area by the total number of representatives of insured persons to be placed on the committee. For instance, if in a given area the insured persons number 48,000 and the committee numbers 40, then three-fifths of this committee will be 24 and the electoral unit will be 48,000 divided by 24—namely, 2,000.

The number of indirect representatives will be the balance left after deducting from the total number of representatives the direct representatives and the representatives of deposit contributors. Each society working in an area but having an insufficient number of members to form an electoral unit is entitled to nominate two persons to serve as indirect representatives—one man and one woman—and when all the nominations have been received they will be invited to decide between them by a ballot conducted on the principle of the transferable vote. Two of the indirect representatives in each area must be women.

Deposit contributors will have not less than one representative in every committee area. If in such an area an association of deposit contributors has been recognized by the Commissioners, then the appointment of a representative will be left in its hands; in the alternative the appointment will be made by the members of the existing committee appointed by the Commissioners, by the local authority, and by the medical profession acting together. Stress is laid on the desirability of choosing a woman as representative, since, in the case of deposit contributors, committees will have to administer maternity benefit. In any case, if there is more than one representative, one at least must be a woman.

Persons elected as representatives need not necessarily be resident in the area they are to represent, nor insured persons; and in the case of representatives of members of approved societies they need not be members of the society. But the Commissioners point out that it is not desirable that members should be appointed who live such a distance from an area as to make their regular attendance at committee meetings a matter of difficulty.

Provision is made for completion of the elections by June 29th. The persons elected will serve for three years.

SCOTLAND.

The Scottish Insurance Commission has issued a *Handbook to the Administration of Sickness and Maternity Benefits by Approved Societies in Scotland*.¹ The handbook contains a list of the members of the Insurance Commission, and of inspectors, with addresses, and the names of the clerks of Insurance Committees in Scotland. There is a short introduction dealing mainly with the general duties of the secretary of an approved society; thereafter follows seven chapters dealing with the membership register, the contribution ledger and cards, sickness and maternity benefit, and the method of dealing with claims, and with various difficulties and special classes of members, and with financial matters. In the appendix a number of circulars, forms, etc., are given, together with a list of sanatoriums and other institutions approved by the Local Government Board for Scotland down to March 20th, 1913.

FRIENDLY SOCIETIES AND THE INSURANCE ACT.

THE administration of the Insurance Act was the principal topic of discussion at various friendly society conferences held during the Whitsuntide holiday, when strong views on the working of the measure were expressed.

The Manchester Unity of Oddfellows met at Scarborough, when the Grand Master of the Order, Mr. J. R. Bailey of Norwich, mentioned the huge increases of membership, especially on the female side, but remarked that the most encouraging feature was that the Order had 600,000 members independent of the State. He wished that the State could have supplemented friendly society work instead of attempting to replace it; the tendency of legislation to discourage individual effort and create a sense of dependence on the community was to be deprecated. He regretted that the administration of medical benefit had been taken away from the friendly societies; "in order to appease the British Medical Association the House of Commons had deliberately sacrificed the friendly societies." Friendly society workers should demand the restoration of the provision of medical service to the societies for their own members, and make it a test question at every election.

¹ Price 4d., to be obtained from H.M. Stationery Office, Scottish Branch, 23, Forth Street, Edinburgh, or through any bookseller.

Mr. Lister Stead, an Insurance Commissioner, addressing a conference of secretaries of the Order of Rechabites at Bristol, commented on the fact that the number of deposit contributors had proved to be only about 3 per cent., and attributed this to the efficiency of the friendly societies. There had been conferences between the approved societies and the medical profession, and a point had been reached when a form of certificate or certificates could be recommended which would be satisfactory to the societies. In this matter the medical profession had dealt very fairly indeed with the Commission, and had shown no unwillingness to help the friendly societies.

At this conference, Mr. S. A. Scarlett, of Norwich, the president of the Order, declared that medical men were unduly lenient in the matter of sickness certificates, and prescribed too readily "a holiday without medicine." He complained, also, that the demands of the profession in respect of treatment of uninsured members were excessive, and said that in taking up its present attitude the profession was treading on dangerous ground.

At Keigley, Mr. Milne, the Chief Shepherd of the Loyal Order of Ancient Shepherds, declared that deadly formalities had almost killed the working of the Act. He advocated combination of approved societies to press for amendments, and for complete severance of the voluntary and State sections.

Mr. T. W. Mills (London), addressing the delegates of the Hearts of Oak Benefit Society in London on May 15th, said that the Insurance Act, with its multitudinous regulations, had placed an incubus on the voluntary work of the friendly societies, and had retarded rather than helped the principle of mutual co-operation. Nevertheless, there was so much that was good in the measure that friendly societies must assist the progress of the insurance scheme in every way possible. Mr. Mills made the suggestion that the treatment of tuberculosis should be quite separate from the insurance scheme, as it could only be dealt with effectively as a separate problem.

INSURANCE ACT IN PARLIAMENT.

MEDICAL BENEFIT.

Non-Insured Members of Friendly Societies.

Mr. GODFREY LOCKER-LAMPSON asked whether, as a result of the National Insurance Act, the North London district of the Manchester Unity of Oddfellows had found it necessary, in order to continue medical benefit for members not falling under the Act, to form a special medical fund, the contributions to which were 8s. 8d. a year, or double the amount charged to members for medical benefit prior to the passing of the National Insurance Act.—Mr. Masterman said that he did not possess information as to the arrangements which particular societies, or local branches of societies, made for the medical attendance of those of their members who were not insured under the Insurance Act. As he had often stated, he could not understand why the fact that doctors were receiving an additional grant in respect of insured members should make them demand not only the increase of about 50 per cent. (which societies were generally prepared to give), but an increase of 100 per cent. in the rates they had hitherto been receiving for those of their old patients who were not insured, and whose medical attendance was therefore a charge falling either upon the private funds of their societies at the expense of their other benefits or directly upon themselves.

Responsibility of Assistants.

Mr. Godfrey Locker-Lampson asked whether the assistants of doctors on the London Insurance Committee panel were responsible to any one but their medical employers; and whether all such assistants were themselves on the panel.—Mr. Masterman replied: Under the regulations it is open to any duly qualified assistant to place his name on the panel, and if he joins the panel he is directly responsible to the Insurance Committee. If he does not join the panel he can only treat insured persons on behalf of his principal when the latter is precluded by urgency of other professional duties, absence from home, or other reasonable cause from giving personal attendance to the insured persons under his care; and in these exceptional cases his principal is responsible for him to the Insurance Committee.

Certificates.

In reply to Mr. John Ward, who called attention to a circular issued by the Chairman of the Newcastle-upon-Tyne Medical Committee, in which it was stated that 1s. would be charged for each certificate given to sick insured persons over and above one to be given free, Mr. Masterman said that the 1s. referred to certificates required for purposes other than for claiming sickness benefit under the Act, and that where the 1s. had been charged for certificates necessary for obtaining sick benefit the money had been refunded to the insured persons.

Inadequate Panels.

Mr. Lane-Fox asked Mr. Masterman whether, in addition to Selby, the towns of Huddersfield and Holmfirth were included in the "obscure villages" in which alone free choice of doctor under the National Insurance Act was not now enjoyed. In reply, Mr. Masterman said that the panel system was in operation in all three of the districts named. In Selby five out of eight doctors were on the panel, in Holmfirth three out of six, and in Huddersfield fifty-six out of sixty-eight; there was free choice of doctor from among all those who had accepted service under the Act.

Contracting Out.

In reply to Mr. George Terrell, Mr. Masterman said: I am informed by the Wiltshire Insurance Committee that between January 13th and the end of March they received applications from about 100 insured persons (mostly from the neighbourhoods of Colerne and Box) for permission to make their own arrangements for medical attendance and treatment. These applications were on identical printed forms, and gave no reasons and no indication of what arrangements the applicants proposed to make. The Committee were of opinion that there was an organized attempt to break down the panel system, and accordingly decided not to grant the applications.

Persons Making their Own Arrangements.

In reply to Mr. F. Hall, Mr. Masterman explained that persons who were allowed to make their own arrangements for receiving medical attendance and treatment would be required, as a part of it, to make their own arrangements for obtaining the necessary drugs and medicines, and that chemists on the panel could not supply them as a part of the arrangement entered into for the supply of drugs to patients being attended by medical men on the ordinary lists.

Scottish Clerks' Association.

In reply to Sir J. D. Rees and Mr. Watt, Mr. Masterman said that he did not think any promises were made to this association which had not been fulfilled, and in his written reply he said:

So far as I am aware there is nothing to prevent the association from working a scheme for additional medical benefit on the private side with free choice of their members for ordinary attendance among panel doctors or (where the Local Insurance Committee permits it) amongst non-panel doctors also, of whom in Scotland in most districts there are very few. The Commissioners are advised that the special medical scheme of the association could not legally be approved as a system or institution under Section 15 (4) of the National Insurance Act.

POST OFFICE DEPOSITORS.

On May 8th, in reply to Mr. Booth, Mr. Masterman stated that there were 489,757 Post Office depositors and 13,109,520 members of approved societies which were distributed as in the accompanying table:

| | |
|--|------------|
| Approved societies formed by friendly societies | 6,275,258 |
| Approved societies formed by industrial insurance companies (including a society formed by an amalgamation of industrial companies and collecting societies) | 4,469,873 |
| Approved societies formed by trade unions | 1,468,968 |
| Approved societies formed by collecting societies | 823,496 |
| Other approved societies | 71,925 |
| | 13,109,520 |

SALE OF INSURANCE STAMPS.

In reply to Mr. Hicks Beach, Mr. Masterman said that the total amount received by the sale of insurance and unemployment stamps issued to the public through the Post Office or otherwise for the period from July 15th, 1912, to March 31st, 1913, had been £13,130,000 and £1,232,920 respectively.

THE INSURANCE SCHEME.

STATE SICKNESS INSURANCE COMMITTEE.

A MEETING of the State Sickness Insurance Committee appointed by the Special Representative Meeting in November, 1912, was held at the house of the Association, 429, Strand, W.C., on Thursday, May 8th. Dr. J. A. MACDONALD (Chairman) was in the chair, and the members present were:—*England and Wales*: Dr. R. M. Beaton (London), Mr. C. E. S. Flemming (Bradford-on-Avon), Dr. E. R. Fothergill (Brighton), Dr. Herbert Jones (Hereford), Dr. Constance E. Long (London), Dr. D. G. Thomson (Norwich), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London). *Scotland*: Dr. John Adams (Glasgow), Dr. R. McKenzie Johnston (Edinburgh).

APPOINTMENT TO VACANCY.

It was reported that the Chairman of Representative Meetings, after consulting the wishes of the Representatives of the grouped Divisions, had appointed Mr. C. E. S. Flemming, of Bradford-on-Avon, to fill the vacancy caused by the resignation of Dr. T. M. Carter.

INSURANCE ADVISORY COMMITTEE.

The CHAIRMAN made a report as to communications which had passed with the Insurance Commissioners in regard to the appointment of an official of the Association to be a member of the Joint and English Advisory Committees, and it was resolved to nominate Dr. Alfred Cox, Medical Secretary.

CERTIFICATE FOR SICKNESS BENEFIT IN MATERNITY CASES ATTENDED BY MIDWIVES.

The Committee, having considered a reference from the Council, resolved to inform the Insurance Commissioners that it had, after careful consideration, come to the opinion that it was outside the duty of insurance service practitioners under the terms of their agreement to visit maternity cases under the care of midwives for the purpose of giving certificates for sickness benefit.

DELIMITATION OF DIVISION AND INSURANCE AREAS.

A minute of the Organization Committee referred to the State Sickness Insurance Committee by the Council with regard to making the boundaries of insurance areas coincide with areas recognized by the Association was considered. The State Sickness Insurance Committee found itself in agreement with the recommendations of the Organization Committee, and hoped that the latter would take all necessary action in the matter as early as possible. The Organization Committee, after considering a letter received from Dr. A. H. Williams of Harrow, had arrived at the following conclusion:—

It is advisable:

That the boundaries of the Branches should be so arranged that each insurance area should fall wholly within the territory of a single Branch—that is, that there should be no insurance area (county or county borough) lying partly within one Branch and partly in another Branch.

That the boundaries of Divisions should be so arranged that each insurance *district* should fall wholly within the territory of a single Division, or that a Division should include two or more complete insurance areas.

TEMPORARY RESIDENTS.

The State Sickness Insurance Committee considered Memorandums 159¹ and 161² issued by the Insurance Commissioners concerning the provision of medical benefit to temporary residents. The Committee disagreed with the principle involved in the proposal contained in the memorandums to the effect that the fund from which practitioners were to be paid for medical attendance upon temporary residents should be formed by deduction from the money due to the practitioners on whose list they were when at home. With a view to removing the difficulties connected with the provision of medical attendance and treatment of insured persons temporarily absent from their homes, the Committee expressed the following opinion:

(i) That concerning that class of insured persons temporarily changing their residence for holiday or health purposes, the Regulations should be so amended as to provide that "medical benefit" shall not be understood to include medical attendance and treatment on such class while so temporarily resident.

(ii) That insured persons temporarily resident by reason of the nature of their occupations should be "required to make their own arrangements."

It was resolved to communicate the above expression of opinion to the Commissioners and to urge that the Act shall be so amended as to allow the formation of a special fund, entirely apart from any moneys already allocated for medical benefit, to provide for the medical attendance and treatment of insured persons temporarily resident on account of ill health. It was further resolved to notify the Divisions, Branches, and Local Medical Committees of the foregoing decision, and to suggest that they should urge all practitioners in their area:

(a) Not to agree to any deduction of the moneys due to them under the Act for the purposes of the scheme outlined in Memorandum 161; and

(b) To treat the above-mentioned classes of insured persons only as private patients until such time as suitable arrangements are provided by the Commissioners.

CO-ORDINATION OF LOCAL MEDICAL COMMITTEES.

The CHAIRMAN reported that, in view of the necessity for immediate action, he had authorized the issue of a circular to the honorary secretaries of Divisions and of Local Medical Committees:

(i) Stating that a national scheme for the co-ordination of all Local Medical Committees and for the payment of their expenses is at present under the consideration of the Association.

(ii) That such scheme, though under the aegis of the Association, is intended to appeal to all members of the profession, whether members of the Association or not.

(iii) That the Association, being informed that many Local Medical Committees are considering local schemes of organization, would urge that no steps be taken with regard to such schemes pending the issue of the scheme of the Association; and

(iv) Suggesting that for the present a small local levy be made to cover the expenses of the Committee to the end of the present year.

The action of the Chairman in causing the circular to be issued was approved.

PAYMENT OF CHEMISTS FOR COPIES OF PRESCRIPTIONS.

In the report of the meeting of this Committee on April 10th (SUPPLEMENT, April 19th, p. 340), it was reported that the Committee had instructed the Medical Secretary to send a communication to the Commissioners expressing the opinion that the imposition of a charge of Id. to be paid to the chemist for copying a prescription where a duplicate was not supplied by the doctor, was unnecessary, and would be an unjustifiable deduction from the moneys due to medical practitioners. The Committee was now informed that a reply had been received, dated April 25th, from the Insurance Commissioners containing the following paragraphs:

Any modification in the existing terms of the chemists' contract is primarily a matter for local negotiation between the Insurance Committee, the Local Medical Committee, and the Pharmaceutical Committee. Proposed alterations in existing drug tariffs must, however, be submitted by the Insurance Committee to the Commissioners for their approval, and before approving any material alteration, such as the insertion of a fee for the copying of prescriptions, the Commissioners would require the Insurance Committee to consult the Local Medical Committee and submit to the Commissioners details of the proposals, stating the views of the Local Medical Committee thereon.

In considering any such proposal the Commissioners will give due weight to any representations that may be made on behalf of the practitioners in the particular area concerned.

TRANSFER OF PATIENTS.

It was noted in the report of the meeting of the Committee on April 17th, published in the SUPPLEMENT of April 26th, p. 349, that a letter had been addressed to the Insurance Commissioners and the London Insurance Committee pointing out that the request on the form of application issued by the London Insurance Committee for transfer of an insured person from one practitioner to

¹ SUPPLEMENT to the BRITISH MEDICAL JOURNAL, April 19th, p. 334.

² SUPPLEMENT to the BRITISH MEDICAL JOURNAL, May 10th, p. 435.

another, which required a statement by the insured of his reasons for changing, was not in accord with the regulations for medical benefit made under the Insurance Act. It was now reported that a reply had been received from the Clerk to the London Insurance Committee to the following effect:

... the intention of including in the form a space for a statement by the insured person as to his reasons for desiring to change a doctor is in order that both medical practitioners concerned in the transfer may be thus satisfied as to the reasonableness of the insured person's application. It was in no way intended to convey that the consent of the Committee would be necessary to the transfer, as it is clear under the Regulations and as pointed out in your letter that any transfer may be effected with the consent of the three parties concerned—namely, that of the two medical practitioners and of the insured person. The Committee have no desire to place any obstacles in the way of a person changing his or her doctor, and the form was rectly framed for the purpose of facilitating such transactions, and for the convenience of the practitioners. So far as the Committee are concerned, it would save trouble if the form were withdrawn altogether, but in that case I am afraid that it would give the doctors considerable additional trouble, as a form of some kind is required by the Regulations to be sent in by the doctor to whom the insured person is transferred.

The Committee considered and approved the reply the Medical Secretary had made to this communication, and instructed him to inform the London Insurance Committee to this effect, and to add that the Committee, while fully appreciating the reasons of the London Insurance Committee for inserting the request for the statement in question, was of opinion that the interests of everybody concerned would be better served if such statement were deleted from the form, especially in view of the fact that the Commissioners themselves had now issued a form (Med. 23) in which no such statement was required.

STATEMENT OF NATURE OF DISEASE UPON CERTIFICATE.

The Committee had before it an opinion of the Solicitor with regard to the legal aspect of the question of stating upon a medical certificate the nature of the disease from which the patient was suffering. The CHAIRMAN stated that at a meeting of the English Advisory Committee held the previous week a form of certificate to get over the difficulty had been considered and settled, and would, it was understood, be issued at an early date. The Commissioners had, however, expressed the opinion that both under the English and Scottish law practitioners would not be liable in respect of giving any certificate demanded from them under an Act of Parliament.

DISPENSING IN RURAL AREAS.

A letter was read from Dr. James Pearse, honorary secretary of the Wiltshire County Union of Medical Practitioners, pointing out the importance, particularly as regards dispensing, of the question of the definition of "rural areas." The Committee resolved to endeavour to secure the right of dispensing by practitioners in all cases where the patient was more than a mile from a chemist.

PUBLICATION OF AMOUNTS PAID TO INSURANCE SERVICE PRACTITIONERS.

In consequence of representations received the Committee resolved to ask the Insurance Commissioners to require that Insurance Committees should not supply to the lay press details of the amount paid to the insurance service practitioners. At the same time it was recognized that the members of an Insurance Committee were entitled to receive the information in the minutes of the Committee.

DIMINUTION OF CLERICAL WORK.

Dr. E. O. Price (Bangor), who was unable to attend the meeting, transmitted a letter he had received from the Welsh Insurance Commission stating that no objection would be raised to medical practitioners stamping their names on record cards with rubber stamps instead of writing them.

COMPENSATION CASES.

Three applications for compensation were considered. In one case it was resolved to seek further information, but to authorize the Chairman to make an emergency grant if necessary. In another the Chairman was given discretion to make a loan of £200 without interest, and in the third, the applicant was informed that the Committee was prepared to assist him, but desired further details as

to the form which such assistance might best take. A letter of thanks from a recipient of compensation in another case was read.

TREATMENT OF TUBERCULOSIS IN VOLUNTARY HOSPITALS.

A communication was received from the Medico-Political and Hospitals Joint Committee as to the payment of staffs of voluntary hospitals in respect of treatment of cases of tuberculosis. The State Sickness Insurance Committee agreed with the suggestion that the Representative Body should be invited to reaffirm Minute 194 of the Annual Representative Meeting, 1912, as follows:

That no tuberculosis dispensary should be opened or beds be provided for treatment of those in receipt of sanatorium benefit at a voluntary hospital or infirmary, except on the condition that the organization is entirely independent of that of the voluntary hospital or infirmary, the accounts of the departments being kept separate, and that the services of all medical practitioners are paid for.

The State Sickness Insurance Committee also concurred with the suggestion that the Representative Body should be recommended to adopt the following resolution:

That any arrangements whereby the staffs of hospitals and other consultants arranged to give consulting service at the homes of insured persons on the introduction of the medical attendant, for an agreed honorarium, would be a highly objectionable extension of contract practice.

SCHEMES FOR TREATMENT OF UNINSURED PERSONS.

The CHAIRMAN reported that since the last meeting he had approved the scale of fees for treatment of uninsured persons submitted for approval by the Torquay Division. In another case the Committee resolved to advise the Division to reject the proposal of a friendly society's council to pay 3s. per annum for juvenile members. Another case submitted raised a matter of principle, since it appeared that approval of the system proposed locally would involve the Association in approving the principle of the further extension of contract medical practice to dependants of insured persons. The State Sickness Insurance Committee took note of the fact that though the subject had twice been before the Representative Body it had not been fully considered, and therefore recommended the Council to advise the Representative Body that it should, in view of the importance of the matter, give it careful consideration.

THE POSITION IN SOUTH WALES.

The MEDICAL SECRETARY made a report upon the position in South Wales, and as to the interview which in company with the representatives of the South Wales and Monmouthshire Branch and the South Wales Colliery and Works Surgeons' Association, he had had with the Welsh Commissioners at Cardiff on April 29th (see SUPPLEMENT, May 3rd, p. 399).

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 8,700 births and 4,866 deaths were registered during the week ending Saturday, May 3rd. The annual rate of mortality in these towns, which had been 15.2, 15.8, and 14.8 per 1,000 in the three preceding weeks, further fell to 14.2 per 1,000 in the week under notice. In London the death-rate was also equal to 14.2, against 14.9, 16.4, and 14.8 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rate ranged from 4.2 in Acton, 4.3 in Devonport, 5.5 in Cambridge, 6.2 in Lincoln, 6.3 in Bonremouth, 6.8 in Edmonton, and 7.6 in Leyton to 20.9 in Stoke-on-Trent, 21.6 in Sunderland, 22.8 in Aberdare, 23.0 in Burnley, 24.8 in Gloucester, and 27.9 in Stockton-on-Tees. Measles caused a death-rate of 1.6 in St. Helens and in Salford, 1.8 in Newport (Mon.), 2.3 in West Bromwich, and 3.9 in Walsall, and whooping-cough of 1.2 in Leyton, 1.4 in Bootle, 2.0 in Dudley and in Stockton-on-Tees, 2.2 in Stoke-on-Trent, and 2.7 in Brighton. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 40, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest, and included 10 in Birmingham, 7 in Liverpool, 4 in Stoke-on-Trent, 4 in Preston, and 2 in Warrington. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,357, 1,334, and 1,339 at the end of the three preceding weeks, had risen to 1,375 on Saturday, May 3rd; 216 new cases were admitted during the week, against 148, 215, and 185 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,259 births and 746 deaths were registered during the week ending Saturday, May 3rd. The annual rate of mortality in these towns, which had been 17.2, 17.7, and 17.3 per 1,000 in the three preceding weeks, further fell to 17.2 in the week under notice, but was 3.0 per 1,000 above the rate recorded in the

ninety-six large English towns. Among the several towns the death-rates ranged from 7.6 in Ayr, 11.5 in Motherwell, and 12.3 in Leith to 18.3 in Paisley, 19.1 in Glasgow, and 20.3 in Hamilton. The mortality from the principal infective diseases averaged 2.4 per 1,000, and was highest in Falkirk and Aberdeen. The 375 deaths from all causes registered in Glasgow included 24 from whooping-cough, 16 from measles, 6 from infantile diarrhoeal diseases, 5 from scarlet fever, 5 from diphtheria, and 1 from enteric fever. Five deaths from whooping-cough were recorded in Edinburgh, 4 in Paisley, and 3 in Leith; 10 from measles in Aberdeen, 2 in Edinburgh, and 2 in Dundee; and 2 from scarlet fever in Aberdeen.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, May 3rd, 725 births and 425 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 673 births and 491 deaths in the preceding period. These deaths represent a mortality of 18.5 per 1,000 of the aggregate population in the districts in question, as against 21.3 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 4.3 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 31.5 per 1,000 of population. As for mortality in individual localities, that in the Dublin registration area was 16.8 as against an average of 23.1 for the previous four weeks, in Dublin city 16.6 (as against 24.6), in Belfast 18.7 (as against 18.9), in Cork 26.5 (as against 24.3), in Londonderry 16.5 (as against 15.3), in Limerick 14.6 (as against 22.0), and in Waterford 17.1 (as against 16.6). The zymotic death-rate was 0.9, as against 1.2 in the previous week.

National Insurance.

British Medical Association.

REPRESENTATIONS TO THE JOINT INSURANCE COMMITTEE.

IN accordance with the decisions of the State Sickness Insurance Committee at its meeting on May 8th (published in the SUPPLEMENT of May 17th, p. 452), the following letter has been addressed to the National Health Insurance Joint Committee:

May 16th, 1913.

Sir,

The State Sickness Insurance Committee, on behalf of the Association, has instructed me to communicate with you concerning the following matters, to which attention has been drawn by representations from several parts of the country.

Certificates for Sickness Benefit in Respect of Cases Attended by Midwives.

The rules of the majority of approved societies require that an insured person shall produce a certificate from a medical practitioner when claiming sickness benefit. The Committee understands that this requirement is adhered to by many societies as regards those cases of confinement in which sickness benefit can be claimed. In cases in which the confinement has been attended by a midwife, it is the custom to call on the medical practitioner on whose list the insured woman is to give a certificate for sickness benefit purposes.

It appears to the Committee to be unfair that the medical practitioner should be called upon in these cases to make a special visit, often at considerable trouble, merely for the purpose of making a statement that the woman has been confined, for which he will receive no payment.

The Committee, therefore, desires to urge the Commissioners to make it quite clear that under the terms of the agreements of practitioners with Insurance Committees it is no part of their duty to visit maternity cases which

have been attended by midwives for the purpose of certifying the fact of confinement, and thereby enabling insured women to obtain sickness benefit.

Temporary Residents.

Memorandum 159 and 161 of the Commissioners, having reference to the question of the provision of medical benefit to temporary residents, received the careful consideration of the Committee at its last meeting. The Committee found itself unable to agree with the principle involved in the proposals contained therein—namely, that the fund from which practitioners would be paid for medical attendance upon temporary residents should be formed by deductions from moneys due to practitioners on whose lists such insured persons appear when at home.

The Committee being fully aware of the difficulties surrounding this question, desires, with a view to assisting in the removal of those difficulties, to suggest the following for the consideration of the Commissioners:

(a) That concerning that class of insured persons temporarily changing their residence for holiday or health purposes, the Regulations should be so amended as to provide that "medical benefit" shall not be understood to include medical attendance and treatment on such class while so temporarily resident; and

(b) That insured persons temporarily resident by reason of the nature of their occupations should be "required to make their own arrangements."

In making these suggestions for the consideration of the Commissioners, the Committee desires at the same time to urge that in the forthcoming amending Act provision should be made for the formation of a special fund, entirely apart from any moneys already allocated for medical benefit, to provide for the medical attendance and treatment of insured persons temporarily resident on account of ill health.

As regards proposal (a) above, it may be pointed out that no real hardship is entailed thereby, so far as concerns those insured persons simply away from home on holiday.

This class has always, in the past, been quite content to take its chance of having to provide for any sudden illness occurring at these times, and it is quite in a position to do so.

Those insured persons whose temporary residence is occasioned by ill health are, of course, the real difficulty, and the Committee appreciates that any Act having for its object the provision of insurance against loss of health and for the prevention and cure of sickness must of necessity make provision for this class. The Committee would, however, point out that in the past this class also has been recognized as outside the ordinary contributory contract medical practice arrangements, and provision, either individually or collectively, has always been made against sickness in the circumstances above described. Therefore, to place the cost of the treatment of either of these two classes, when temporarily resident, upon the medical profession (which the proposal of Memorandum 161, if carried out, would do) is imposing a burden upon the profession which it has never before borne, and which the amount of the remuneration provided for ordinary medical attendance does not justify.

Proposal (b) above is of course merely carrying out arrangements that have held good in the past, and the principle of which has already been recognized by the Commissioners in making provision for actors, travellers, etc., being allowed to make their own arrangements.

In connexion with this question of medical benefit for temporary residents the Committee, impressed by many urgent representations received on this point, feels that it is its duty to point out to the Commissioners that no arrangements will be acceptable to the profession which entail any deduction from the limited amount of money already available for medical benefit.

Publication of Details of Amounts Paid to Insurance Service Practitioners.

The attention of the Committee has been drawn to the practice obtaining in various parts of the country of publishing in the press details of the amounts due to individual practitioners for attendance under the Insurance Act upon the insured persons upon their lists. The Committee fully realizes that members of Insurance Committees are entitled in their official capacity to have this information, but it cannot perceive what good object can be served by publication in the local papers. It will be appreciated that from the point of view of the medical profession such a practice is to be strongly deprecated, and I am instructed to express the hope that the Insurance Commissioners will use their influence with the Insurance Committees in order that they shall not publish, or allow to be published, details of the amounts paid to insurance service practitioners.—I am, Sir,

Your obedient servant,
ALFRED COX,
Medical Secretary.

The Secretary,
National Health Insurance Joint Committee,
Buckingham Gate, S.W.

MEDICAL CERTIFICATES FOR SICKNESS BENEFIT.

OBJECTIONS TO INSERTING MEDICAL DETAILS AS TO NATURE OF DISEASE.

The following statement has been forwarded to the Lancashire County Insurance Committee on behalf of the medical practitioners of Leigh (Lancashire County area 21) by Dr. G. H. Shaw, Honorary Secretary to the Leigh Medical Committee and to the Leigh Division of the British Medical Association.

The statement was drawn up for use at a conference between representatives of the Local Medical Committee and of the Lancashire County Insurance Committee. In the covering letter Dr. Shaw pointed out that medical practitioners could not follow the argument that an insured person who refuses to disclose his illness *ipso facto* agrees that he is not entitled to the benefits provided for him by the Act. The letter further pointed out that the male insured alone in the area who have corporately expressed their strong wish for non-insertion numbered over 12,000; their contention was that a certificate of incapacity was sufficient evidence, and that on producing such evidence they were entitled to their benefit as the money is not provided by the approved societies. The contract being a direct one between the State and the insured, they hold that a third body, not concerned in the contract

but acting as the agent from one to the other, cannot arbitrarily withhold the benefit, as it is a statutory obligation on the one hand and a statutory right on the other.

Statement.

It is asserted freely that the medical profession in this and other areas, by their action in this matter, are wilfully and maliciously embarrassing the approved societies in the performance of their duties, and so obstructing the working of the Act. We think we may be absolved from the charge of such a stupid and foolish action.

We have undertaken to do our part in the administration of medical benefit, and we earnestly desire that this administration shall run smoothly and efficiently, so that the insured shall receive to the full the benefits the Act provides, without moral or material damage to their common rights.

It is said that we are not keeping our contract.

We desire that this point shall be made quite clear and beyond dispute.

Before we undertook service we had certain documents and statements placed in our hands. These are as follows:

1. Explanatory statement as to medical benefit as affecting medical practitioners, issued by the Insurance Commissioners, it is stated there under the heading "Records," page 5, "In this way any risk of violation of professional secrecy will be obviated."
2. Memorandum as to medical benefit, furnished to the British Medical Association by the Chancellor of the Exchequer. In Section VI, Records and Reports, Clause 30, we find the following: "Thus secrecy will be secured, and any danger of breach of professional confidence entirely avoided." Both these paragraphs refer to the elaborate precautions taken by the Chancellor and the Commissioners in the day books, and later in the cards, to avoid any risk of breach of confidence.
3. Statements repeated by the Chancellor and Mr. Masterman in the House of Commons that there is no possibility of any one knowing what a person is suffering from, and that professional secrecy is fully secured.

If words mean anything at all, this is a very precise and definite undertaking securing professional secrecy. In the words of the Chancellor, "Thus secrecy will be secured, and any danger of breach of professional confidence entirely avoided."

This undertaking, therefore, is the foundation and basis of our agreement with the Commissioners, through your Committee, as far as this subject is concerned. The only other contract we have entered into is a personal one—to give proper and adequate medical attention to the insured on our lists. We have not entered into any contract with any approved society, and we are not directly concerned with their rules.

Obviously the professional secrecy of the Commissioners and the Chancellor's "any danger of breach of which is entirely avoided" is not compatible with the disclosure of the patient's illness to a society through a collector.

It is suggested in a leaflet issued from the County Office on April 15th that it is a matter of opinion as to whether such disclosure is a breach of secrecy. We wish to understand each other and not to use phrases the words of which mean one thing, whilst the suggested meaning is something else.

Professional secrecy means respecting the knowledge we acquire in the intercourse with our patients and not disclosing that information to a third party; it does not mean, and can never mean, the exact opposite.

Moreover, if one can use comparisons of degree in such a matter, the requested breach of confidence takes place at its very worst point.

The disclosure takes place, not to impartial and non-interested bodies, such as the Commissioners or even the County Committee, but it takes place in the immediate surroundings of the insured, often to people or bodies who may have a direct interest in the insured. Thus the moral or material damage to the insured may be very considerable and affect their daily life.

The Act is a simple contract by the State to provide the insured, if they have paid certain sums, with certain benefits. We cannot find it suggested or contemplated in any part of the Act that such benefits would carry with them certain possible disabilities.

It has been heard on appeal, before the Lord Justices Vaughan Williams and Hamilton, and Mr. Justice Bray, that the approved societies could not impose conditions affecting the statutory rights of the insured, and "that

the right of a man to give satisfactory evidence, and certainly in the form of a medical certificate, was not a matter to be decided by the arbitration body of the society, but by the courts."

The ethical objections to such disclosures need only be considered by each of us in a personal way to be fully realized, especially in the case of females, the large proportion of whose ailments are connected with the sexual apparatus.

People generally object to such disclosures, and very rightly, as privacy in such matters is a right established by common consent and usage for the protection of us all, and females intensely object.

That this is so, we may state in proof that none of us in this area have met a patient who voluntarily desires to have his ailments disclosed, nor do we know of any medical man who has. The only reason the insured ask for insertion of a condition is the threat of non-payment by the society.

We have here resolutions from the following bodies strongly supporting this statement—namely, National Union of Railwaymen, Cloggers, Engineers, Spinners, Wagon and Carriage Makers, Wheelwrights and Carpenters, Carpenters and Joiners, all the branches of the Miners' Federation, and the Labour party, numbering over 11,000 members.

All these are men's organizations; the females have no official mouthpiece, but we ask you to accept our statement on their behalf, as we have ample evidence from our patients.

We now come to the question which is the cause of the dispute between ourselves and the approved societies (a dispute which we consider ought to be a friendly one, without imputation of motives, other than on the one hand the protection of our patients and on the other the protection of funds), that is, the protection against malingering.

We spend all our lives amongst conditions which the approved societies have now for the first time to deal with, and we think the societies ought to realize that the medical profession are in no way responsible for these conditions. They are inherent to the problem itself, just so much as human nature is inherent to the problem. They are one and the same thing. How can we deal with the matter?

We ask the societies to believe us when we say that the insertion of a condition is no solution. What proof have we?

The reply is simple. The medical profession have a fuller knowledge of the conditions of our patients than ever the approved societies can hope to have, yet this has not solved the problem for us, and we have to deal with such cases every day of our lives. Some of the older and more powerful societies realize this, and do not demand the condition.

The solution—and this we are afraid will not be complete from the very nature of the case—can only be obtained by the willing and friendly co-operation of the profession and the societies. It should be obvious to every thinking person that, still respecting each other's rights, our interests are largely in agreement.

The work of the profession under the Act is laborious enough in all conscience without the profession suicidally adding to its labours by keeping people on our lists and on the funds who are not entitled to be on, if by any means we can possibly prevent it.

We can in many cases help each other, and if any society has doubts about any cases, we shall be only too glad to receive any information which may help us to decide many of these difficult cases and serve our mutual interests in lightening a little our daily toil and protecting the funds of the Act.

LOCAL MEDICAL COMMITTEES.

LIVERPOOL.

SINCE its formation on February 7th, 1913, the Liverpool Local Medical Committee has met fifteen times, the average attendance being 17 members out of a total of 26.

A standing subcommittee consisting of six panel practitioners was appointed to consider and report upon any points of detail arising out of administration of medical benefit.

A formulary has been adopted by the Committee for the use of medical men on the panel. It has been approved and will shortly be published under the auspices of the Liverpool Insurance Committee.

The following tariff was adopted by the Committee and approved by the Liverpool Insurance Committee for insured persons permitted to make their own arrangements for medical benefit, provided that the statutory sum allotted be sufficient for this purpose:

| | £ | s. | d. |
|---|---|----|----|
| For visit at patient's home | 0 | 2 | 6 |
| For consultation at doctor's surgery | 0 | 2 | 0 |
| For special visit (if notice be given by 10 a.m.) | 0 | 3 | 6 |
| For night visit (8 p.m. to 8 a.m.) | 0 | 5 | 0 |
| For surgical operations requiring local or general anaesthetic or the treatment of miscarriage or abortion | 1 | 1 | 0 |
| For setting a fracture... .. | 1 | 1 | 0 |
| For reduction of dislocation | 1 | 1 | 0 |
| For administration of a general anaesthetic | 1 | 1 | 0 |

A conference of subcommittees appointed by the Local Medical and Pharmaceutical Committees respectively was held with the object of: 1. Revising the tariff of drugs. 2. Considering (a) the question of extra fees for dispensing out of the regular hours; (b) the question of "repeat" prescriptions; (c) stock mixtures.

It was decided that no proprietary articles be admitted to the official list of drugs.

The question of securing the identification of insured persons was discussed, and it was resolved that the attention of the Liverpool Insurance Committee should be drawn to this subject.

It was decided unanimously that every member of the profession in the Liverpool area should be asked to contribute 5s. to cover the expenses of the Committee during the first year, and Dr. S. Hamilton Shaw, of 23, Prince's Avenue, was appointed Honorary Treasurer.

WEST RIDING OF YORKSHIRE.

THE eighth meeting of the Local Medical Committee for the West Riding of Yorkshire was held on May 9th. Dr. MAY was in the chair, and twenty members were present.

THE SECRETARY reported that the resolutions adopted at the previous meeting regarding rules for medical benefit and income limit had been communicated to the Clerk of the Insurance Committee.

Charges for Emergency Dispensing.—It was announced that since the conference between the Committee and the chemists the Insurance Committee had arranged to pay a flat rate of 6d. per prescription for emergency dispensing as from April 15th.

New Representatives.—Dr. John Orford was appointed the Representative for Pontefract and Dr. W. Craik for Swinton.

Excessive Ordering of Drugs.—A letter was read from the Clerk to the Insurance Committee enclosing statement of account for special drugs ordered by a panel doctor, and it was resolved, in view of the powers of the Local Medical Committee in such matters as set out in Regulation 46 for checking extravagant prescribing, to ask the practitioner to attend the next meeting of the Committee to explain his prescribing for the last quarter.

Range of Medical Service.—A letter was read from a panel doctor inquiring what fees he might charge in the case of an insured married woman attended through a long illness, including confinement with eclampsia, etc. The Committee adopted a resolution expressing the opinion that the medical man could charge what he considered a suitable fee for the confinement, and that the practitioner called in to assist him at the confinement was entitled also to a suitable fee, but that the illness before the confinement and after the puerperal period of twenty-eight days was included in the contract for medical service.

West Riding Pharmacopoeia.—A report of the Pharmacopoeia Subcommittee was received, and the consideration of the draft pharmacopoeia postponed till the next meeting. The revised tariff of drugs was remitted to the Subcommittee for consideration and report.

District Insurance Committees.—The nomination of medical members was received and approved and directed to be forwarded to the Clerk of the Insurance Committee, as was also a resolution drawing the attention of the Insurance Committee to the fact that the full tenth of medical members had not been allowed for, as promised, on all the District Insurance Committees under the West Riding scheme, and requesting the Insurance Committee to do so alter the scheme as to rectify this defect.

Temporary Residents.—Circulars 159 I.C. and 161 I.C. having been considered, the Committee adopted the following resolution:

That this Local Medical Committee protests against the proposed scheme as a breach of the contract entered into by members of the medical profession in the West Riding of Yorkshire, and cannot give its consent to any reduction in the amount of the remuneration which, as agreed in the original contracts, is to be paid to each practitioner on the panel in respect of each person included in his list.

LEICESTER.

Temporary Residents.

THE memorandums 159 I.C. and 161 I.C. with reference to medical attendance on temporary residents were considered at a meeting of the Local Medical Committee on May 6th. The proposal contained in the memorandums was strongly condemned, and the opinion of the meeting has been conveyed to the Insurance Commissioners for England in the following letter:

2, Tower Street,
Leicester,
May 14th, 1913.

Dear Sir,

I am in receipt of your letter of the 3rd inst. with reference to Memo. No. 159 I.C.

My Committee have considered this Memo. 159 I.C. together with No. 161 I.C., and view with the greatest alarm this, the first attempt on the part of the Commissioners, to reduce the capitation rate of 7s. definitely promised by the Government and Commissioners during last winter.

Your letter states that the Commissioners have "decided to adopt" the arrangement mentioned in the above-named Memorandum, and it is only on the question of the scale of fees which the Commissioners desire the opinion of the various Local Medical Committees throughout the country. Inasmuch as the whole subject is one which affects the country at large, and not merely the health resorts, surely places other than health resorts have a right to a voice in the matter, and my Committee would suggest a conference with representative medical men from all parts of the country, and not merely "from the areas mainly affected" (par. 3, 161 I.C.)

Taking the Commissioners' own instance of 27s. as being the case-value of any particular person, my Committee is of the opinion that it is grossly unfair that this should be deducted from the amount available for the practitioners of this town. There are in Leicester about 90,000 insured persons, of whom probably at least 40,000 will be away for periods varying from one week to one month during the course of the year; and of these, judging by the amount of illness during the last quarter, about 10,000 will require treatment. Let us assume, however, that even only half this number is more nearly accurate, then 5,000s. x 27s.—that is, £6,750—would be deducted every year from Leicester alone towards the central fund—that is, an average of £96 per medical man on the panel.

This town not being a health resort, there would be practically no incoming persons to counterbalance this.

In the "Explanatory Statement as to Medical Benefit" issued in December last we were told that "the practitioners may confidently rely on receiving at least 7s., etc. In less than six months we find that we can no longer confidently rely" on the promises of the Commissioners, even on such an important matter as the amount of remuneration.

In face of the basis of contract signed by practitioners in January, this Committee is of opinion that the action of the Commissioners is *ultra vires* and definitely illegal.

Yours faithfully,

E. W. HOLLYOAK.

Honorary Secretary Local Medical Committee.

WEST SUFFOLK.

THE West Suffolk Local Medical Committee has resolved to request every practitioner to record on the cards all services rendered in accordance with the symbols of Circular 156 I.C., paragraph 12, in order that any future claim for special payment for extras may be supported by evidence available to the Commissioners of actual work done.

The *Birmingham Health Insurance Pharmacopoeia* was adopted for use in the area, and the Clerk of the Insurance Committee has been instructed to notify all practitioners and chemists in the area accordingly.

After a conference between the representatives of the Local Medical Committee and the Medical Benefit Subcommittee, it was agreed that the contract embodied in Form Med. 29 should be signed to run until December 31st, 1913; that the distance beyond which persons should not be assigned to any practitioner should be three miles; and that the amount payable in respect of services rendered under the agreement including the domiciliary treatment of tuberculosis should be at the rate of 1s. 9d. a quarter.

It was resolved to ask the Commissioners to receive a deputation from the Local Medical Committee with regard to the payment for anaesthetics, miscarriages, etc.

It was announced that the Clerk to the County Insurance Committee would on request supply to practitioners concerned forms for the transfer of patients by mutual consent under Regulation 26.

It was announced, further, that the card index register for patients would be issued at the earliest possible moment, and that the Medical Benefit Subcommittee had decided that the pink ticket should remain in force until June 30th, 1913.

It was reported that the new rules drawn up by the Medical Benefit Subcommittee had been accepted and that a copy would be sent to each friendly society and to every deposit contributor, as well as to every practitioner on the panel.

TUNBRIDGE WELLS.

THE Local Medical Committee for the Tunbridge Wells district has been elected as follows and has received the recognition of the Insurance Commissioners:

Tunbridge Wells.—Dr. J. Cecil Rix (Chairman), Dr. F. A. Rouch, 45, Mount Pleasant (Honorary Secretary), Drs. Perkins, Pincott, Riley, and Starling.

Southborough.—Dr. Biggs.

Tonbridge Urban.—Drs. Cardell and Watts.

Tonbridge Rural.—Drs. Oldham and Clarke.

MIDDLESEX.

THE Middlesex County Local Medical Committee met on May 15th. Dr. Lowry (Chairman) presided.

Dr. Tresilian's resignation was received with regret, and Dr. Busfield (Enfield) nominated in his place.

The Committee will come to an end on October 31st, 1913, and a scheme for election of a new committee, prepared by Dr. A. H. Williams, was approved, and referred to a subcommittee consisting of Drs. Lowry, Williams, Camps, Brackenbury, Macevoy, North, and Shanks, for completion.

It was agreed to resist the attempts by the chemists to make a charge for copying prescriptions.

Temporary Residents.

It was pointed out that Medical Regulation No. 22 made no mention of "temporary" residents, and also that the "Explanatory statement of medical benefit as affecting medical practitioners" (page 7, paragraph 23) read: "The number on the list will fluctuate through removals, transfers, deaths, and persons becoming newly insured—subject to these small adjustments the practitioner may confidently rely on receiving at least 7s. per head per annum." No mention was made of "temporary" removals. Dr. Williams further showed that many of the "agreements" specified 1s. 9d. a quarter in the Fourth Schedule, the 1s. 9d. being filled in in ink when sent out by the Insurance Committee. Dr. Lowry pointed out that the contract with patients was for "the year."

After considerable discussion the following resolutions were adopted *nemine contradicente*, one member not voting:

That any deductions for medical attendance on persons temporarily away from their district be resisted, and that we endeavour to organize the panel doctors to resist it.

That the scheme set out in 161 I.C. was inequitable.

The Honorary Secretary was instructed to forward these resolutions to the Commissioners.

WESTMINSTER AND HOLBORN.

WE are requested to state that at the meeting of the Provisional Medical Committee for Westminster and Holborn, at which two Local Medical Committees for these boroughs were respectively elected, Dr. PENNINGTON moved that the distinction between panel and non-panel doctors should not be perpetuated, and that inasmuch as the London Medical Insurance Committee comprised medical practitioners both on and off the panels, a similar plan should be adopted by local committees. An amendment was moved designed rigorously to exclude all practitioners on the panel, but this was withdrawn in favour of an amendment moved by Dr. BOLTON, making a distinction between those who had gone on the panel before the pledge was abrogated and those who joined afterwards. This was carried by 5 votes to 3, the majority of those present not voting.

COUNTY OF FIFE.

A MEETING of the Fife Local Medical Committee was held in the Station Hotel, Kircaldy, on May 1st. In the absence of the chairman (Dr. Orr) Dr. DOUGLAS presided, and seventeen others were present.

The Commissioners having stated that there were no funds at their disposal under the National Insurance Act which could be made available for defraying the expenses incurred in connexion with Local Medical Committees, it was decided that a temporary levy of 5s. per panel doctor be made for the ensuing year.

Temporary Residents.—The proposed alternative schemes for the provision of medical benefit to temporary residents were discussed, and the following motion was eventually carried:

In regard to the provision of medical benefit for temporary residents, the Local Medical Committee, while holding that the contract by medical men on the panel for medical service is one between each individual doctor and the Commissioners, and as such a contract with which they cannot interfere, would express its preference for a scheme worked on the case-value basis or the first alternative method.

Allocation of Insured Persons.—The method to be adopted in allocating insured persons who have not exercised their right of choice was defined in the following resolution, which was carried unanimously:

That the moneys which have accumulated during the first quarter in respect of those persons who have not selected their doctor be divided equally amongst the doctors on the panel in each district, and that there be urged upon the Insurance Committee the necessity of giving those persons who have not chosen their doctor a further opportunity to do so by sending an application form to each person who has not selected a doctor, that is, that the onus of selecting a doctor still be upon the insured persons rather than that they should have a doctor selected for them.

Persons Making their Own Arrangements.—The following motion was carried *nemine contradicente*:

That the Local Medical Committee inform the Fife County Insurance Committee that they do not approve of the applications of insured persons for permission to make their own arrangements being refused, as has been done in the circular letter from them of April 21st, 1913.

Treatment of Tuberculosis.—It was decided to adhere to the rates of payment for treatment for dependants suffering from tuberculosis laid down by the State Sickness Insurance Committee and already submitted to the Insurance Committee for the county, namely: Visit 2s. 6d., consultation 2s. 6d., injection of vaccine 2s. 6d. (the vaccine to be at the expense of the local authority), report 5s., and mileage 1s. per mile beyond a radius of two miles.

Model Rules for Insured Persons.—The Honorary Secretary was instructed to recommend the Local Insurance Committee to circulate model rules as to conduct of insured persons in receipt of medical benefit amongst insured persons throughout the county.

DUMBARTON.

At a meeting of the Dumbarton County Local Medical Committee in Glasgow on May 1st it was reported that the County Medical Benefit Subcommittee had approved the representations of the Local Medical Committee except in regard to the rule governing Sunday work, which it wished not to refer to "surgeries" and to the method of allocating of insured persons, holding that no more insured persons should be allocated to doctors with 1,500 or more already on list. It was unanimously decided to press for equal division of the residue irrespective of the number already on each list, and to urge the adoption of a rule limiting Sunday work at practitioner's residence and surgery, or patient's home, to cases of serious emergency. The scheme for temporary residents was discussed, and by a majority of one it was decided to approve capitation deduction to form a central fund, but several of those present indicated that they would refuse to allow a deduction. It was agreed to adopt the card system of records of illness. It was decided to ask that full payment be made at the end of each quarter in future, also to ask that correspondence with the Insurance Committee be franked and that cheques include branch charges. It was further resolved to point out to the Insurance Committee that doctors entitled to payment at 9s. a head per annum had not been paid at that rate, and request an adjustment of the payments. It was also decided to

request the Insurance Committee to make arrangements whereby doctors could order such drugs and dressings as were required for emergencies to be supplied direct to them by chemists. It was agreed to make representations to the County Insurance Committee on various other matters.

MEETINGS OF INSURANCE COMMITTEES.

NOTTINGHAM.

Proposed Recognition of Herbalists.

At a meeting on May 17th the question of whether insured persons should be allowed to make their own arrangements with a view to receiving treatment from herbalists was decided in the negative by a majority of 1 on a total vote of 33. The decision was reached after prolonged discussion of a report of the Medical Service Subcommittee, which had reached the same decision also by a majority of 1 on a total vote of 6. In the course of the discussion stress was laid on the fact that only about 40 applications for permission to contract out in the fashion indicated had been received, though the area included over 90,000 insured persons; if permission were granted it would open the doors to Christian Scientists and others. Admittedly the applications were made not because of any monetary advantage, but because it would give herbalists a status which they had not yet enjoyed. The proper solution was for herbalists to get themselves registered as medical practitioners. Dr. Price pointed out that to grant the applications would be a breach of faith with the local medical profession, since it would associate them with unregistered persons in the treatment of the insured, and this might be ground for disciplinary action by the General Medical Council. Dr. Jacob suggested that it would be possible for an insured person who had been treated by a herbalist, but not received satisfaction, to bring an action against the Committee which was responsible for providing adequate treatment. Prior to the discussion a letter had been read from the Council of the Nottingham District United Friendly Societies, urging that "qualified medical herbalists" should be placed on the panel.

SOKE OF PETERBOROUGH.

At the monthly public meeting on May 14th it was decided to leave for decision by the Committee which comes into office next July the question whether medical men on the local panel should hand to each patient two prescriptions, in addition to keeping a copy for his own use. In connexion therewith it was stated that the chemists claimed that their agreements entitled them to expect panel doctors to write prescriptions in triplicate, he keeping one copy for his own use and handing the patient two, one to be retained by the chemist for reference purposes and the other to be sent by him with his bill to the Committee, and that if the chemist received only one prescription he should be allowed to charge a fee of 1d. for copying it. On the other hand it was indicated, on the authority of Dr. J. N. Collins, Honorary Secretary of the Local Medical Committee, that the panel medical officers regarded the proposal to charge a booking fee as preposterous. For the time being they would, under protest, continue to give each patient two prescriptions, but meanwhile the Local Medical Committee would address the national Insurance Commissioners on the question.

On consideration of the report of the Sanatorium Subcommittee it was resolved, on the suggestion of Dr. H. Clapham, that in public discussions on sanatorium questions, as also in the minutes of the General Committee, individual patients should be mentioned not by their names, but by numbers corresponding to their cases in a register which would be open to inspection by members of the Committee.

BATH.

Publication of Amounts Paid to Insurance Service Practitioners.

A discussion took place at the last meeting of the Bath Insurance Committee relative to the publication of the sums received by medical men on the panel. Objection was made to payments being sanctioned by the Committee without names being attached, but the Chairman pointed

ent that the full particulars were available to members. Representations, he said, had been made by the medical practitioners in favour of non-publication of names and amounts, and the chemists had also asked that details as to the number of prescriptions made up by each chemist should not be published, as they thought that publication would operate unfairly. A proposal that the names and amounts be published was defeated by 10 votes to 6.

HAMPSHIRE.

A Half-holiday.

The Insurance Committee, at the request of the local Division of the British Medical Association, at its last meeting considered the question of a half-holiday for doctors, and resolved:

That the Committee approves that the doctors do not see insured persons, except urgent cases, on Wednesdays after 1 p.m., and that the chemists do not dispense prescriptions on Wednesdays after 1 p.m., except between 6 and 7 p.m.

INSURANCE NOTES.

DISCLOSURE OF THE NATURE OF ILLNESSES.

At a meeting of representatives of labour organizations at Wigan, Dr. F. Rees gave an address on the subject of the disclosure of patients' illnesses on Insurance Act certificates. He mentioned that medical men in Leigh and elsewhere had refused to state the exact nature of the illness, and the doctors of Wigan had decided to take a similar course. Medical men were under an obligation not to reveal anything in relation to their patients, and the law said that if a doctor broke professional secrecy and revealed something which proved detrimental to a patient the latter could claim damages. He doubted whether the Insurance Act would exempt doctors from this liability. Insurance companies and employers might take advantage of the publication of the nature of a man's illness, and refuse in the one case to insure a man and in the other to employ him. It was well known how careful employers were at present in signing on men for the pits owing to their liability under the Workmen's Compensation Act. A man, after having rheumatic fever in his youth, might have a slight affection of the heart which would not prevent him from following his work, if careful, but if it were stated on a certificate that the man was suffering from heart disease he might be discharged at the first opportunity. Medical men were making this stand to maintain the honourable understanding and confidential relationship which had always existed in the past between doctor and patient.

Mr. Stephen Walsh, M.P., who presided, said that the thanks of the meeting were due to the doctors who were making such an honourable stand in this matter. The meeting, by its applause, endorsed this view.

TREATMENT OF TUBERCULOSIS IN CORNWALL.

The Cornwall County Council has resolved that, as the difference between treating insured persons and their dependants who are suffering from tuberculosis and treating all persons in the county is estimated at less than £1,000 a year, it is desirable to include all persons suffering from tuberculosis in the provision to be made.

MEDICAL TREATMENT ON AILSA CRAIG.

The medical practitioners on the panel in Girvan have intimated to the Ayr Insurance Committee that they cannot give their services to insured persons on the island of Ailsa Craig on the terms at present offered. It appeared that during the winter no boats went to the island from the mainland except when a beacon was lit. The journey often took twelve hours in such circumstances, and boat hire cost about £7. A subcommittee of the Insurance Committee has discussed a special mileage rate and a payment of so much an hour, and has decided to bring the matter before the Insurance Commissioners.

SANATORIUM BENEFIT IN ROCHEDALE.

The Insurance Commissioners have disapproved as too costly a proposal to send Rochdale insured persons suffering from tuberculosis to the institution of the Bury and District Hospital Board at a payment of 35s. a week, with a minimum of £200 a year. At the last meeting of the Insurance Committee Dr. Bateman said that, in consequence of this decision, sanatorium benefit was a dead

letter in Rochdale, although sufferers were supposed to have been receiving treatment since July 15th. Dr. Carse summarized the benefits at present being received by insured consumptives as "cod-liver oil and death certificates."

REPORTS OF LOCAL ACTION.

IRELAND.

Withdrawal of Approval of Friendly Society.

SOME time ago we drew attention to the risks attending the approval by the Insurance Commissioners of many small societies. At a meeting of the members of the Irish Railway Workers' Trade Union, summoned last week at the request of the Irish Insurance Commissioners, Dr. Murphy, on behalf of the Insurance Commissioners, stated that the society ought not to continue in existence as an approved society any longer. One member complained that, though he had been sick twice, he had got no benefits. Dr. Murphy announced that the Commissioners would withdraw approval from the society, and recommended those present to join other approved societies; this action, however, will apparently not relieve them of their liability to the present society. It is thought probable that in the near future the same fate may overtake some other approved societies.

Proposed Importation of Practitioners into Limerick.

As was reported over a month ago, the medical practitioners in Limerick have notified the Insurance Commissioners that they consider the remuneration offered for medical certificates under the Insurance Act quite inadequate, and refused to form a panel until such provision was made as would satisfy the demands previously made through the Conjoint Committee. We are informed that advertisements have recently been inserted in the Dublin and Limerick papers by the Insurance Commissioners, inviting applications from medical practitioners for appointments at a salary of £130 a year each, for the purpose of furnishing to approved societies and the Insurance Committee the medical certificates required for persons resident in the City of Limerick, in connexion with the administration of the National Insurance Act. The medical practitioners in Limerick have maintained their refusal to go on the panel for certificates, and the action of the Commissioners in seeking to make these appointments is clearly taken in the hope of breaking down this resistance. The Commissioners must, of course, fail if the medical profession remains true to itself and if medical practitioners in other parts of the United Kingdom refuse to accept the paltry bribe offered to enlist them as auxiliaries in defeating the local profession.

Londonderry Doctors and the Friendly Societies.

A situation, unique so far as Ireland is concerned, has arisen in Londonderry in connexion with the question of medical benefits under the Insurance Act. A public medical service has been organized by the doctors, and a substantial number of insured persons have joined it. In a published statement the doctors pointed out that under the old conditions persons were receiving medical attendance at as low a figure as a halfpenny a week, and it had become necessary for the doctors to make a stand to obtain a living wage. They therefore resigned all factory and workshop appointments and drew up a scale of remuneration, which the friendly societies rejected, whereupon the public medical service was formed, the terms being 1d. a week for workers under 16, 2d. a week for insured persons, with 1d. additional for wives, and a further 1d. for all members of a family under 16 not working. These terms were to include drugs. After this service was started a deputation of employers of labour suggested the following terms to the doctors for employees of factories and workshops: A halfpenny a week for each 5s. earned, with a limit of 2d., the contributions to be collected by the employers and paid over to the medical service, free choice of doctor to be retained. The medical men accepted these terms, but the friendly societies prevented their adoption by the employees, and the scheme fell through. The offer of the friendly societies is 1d. a week, including drugs. This offer the medical men have

all refused, and the Federation of Friendly Societies, it is reported, has brought, or intends to bring, a medical man from England to attend to insured persons in the city.

Trade Union Congress and Medical Benefits.

At the Trade Union Congress, held in Cork last week, the following resolution was passed:

That the delegates of the various trades affiliated to the Irish Trades Congress demand that the medical benefits be extended to Ireland, and we consider 7s. 6d. as a capitation fee per insured member sufficient to cover member and wife and members of the family up to 16 years of age, and we strongly condemn the dispensary and Poor Law system at present in vogue in Ireland, as it makes a person a pauper; we desire that a true and proper system of help for deserving cases shall be instituted in place of the present degrading system, and the sooner it is done the better for the welfare of the country. The inquiry which has been held has not given satisfaction to organized labour.

CORRESPONDENCE.

FUTURE POLICY.

DR. STANLEY YEOMAN (Prestwich, Manchester) writes: What is the policy of the British Medical Association? Is it to wait and see how the cat jumps? Surely the cat has jumped, and though the majority did not like the jump, yet they have taken it, believing that their existence depended upon it. This jump was made immediately after the Association had given up the game. The British Medical Association, and almost every other association in the country, had declared by large majorities that the National Insurance Act was derogatory to the profession, yet within a few days the British Medical Association told all to work out their own salvation (on certain conditions certainly), with the result that most medical associations were at once in a funk, and took what was offered in the easiest way.

This is no doubt past history, but the present history is also plain. A good many doctors are making more money than they did before, and as long as they are making more they are content. Others are making less, though on the panel, because their best work is of the most importance. The remaining few are out of the Act, and though they are probably losing, yet they are gaining in self-respect. Money, though important, is not everything.

The future history is also plain. The profession will be divided into panel doctors and non-panel doctors. Which of these classes is going to be most thought of? Is it well for the profession to be so divided? Is it good for the country to have this division?

The whole medical profession a very short time ago said it was not, but they now say, "Well, it might have been worse," and some say they are better off. They are better off because A says, "I will attend B under the Act if B's family call A in," and for those who say it might have been worse—well, I agree with them; but it does not make it good for the nation.

We have now had over three months to find an answer to these questions. Neither the British Medical Association nor any other body has answered them. The solution may be almost impossible. If so, then can the British Medical Association act both in the interests of panel and non-panel doctors. I believe that it is utterly impossible. Then is it not time for the British Medical Association to say which party it is going to act for; in the meantime they are having help from both sides, and that is not fair. I have tried to put facts in as blunt a way as possible. It is no time to mince matters. If it is good for the nation, I shall be with you; if it is not good for the nation to have this division in the profession, I think the British Medical Association should at once say so.

Dr. GEOFFREY PRICE (Kington) writes: Cannot we do anything about this amending Act?

I take it that we are willing to attend insured persons for 9s. annually, payable quarterly in arrear.

We want:

- The right to dispense.
- Limitation of medical benefit—that is, no bandages, dressings, purgatives, or appliances to be supplied.
- Right of patient to change his doctor quarterly only.
- Abolition of temporary resident system.
- Abolition of bookkeeping.

List of quarter's patients to be in our hands on the first day of the quarter, and no new patients to be accepted during the quarter.

Right to treat any insured patient whose name we did not receive on the first day of the quarter as a private patient during the quarter.

Income limit of £2 a week.

Abolition of medical benefit for domestic servants (their mistresses give us as much trouble as though they were private patients), or for any employed person who lives in the dwelling-house of his employer. In these cases the employer should be responsible for his doctor.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

The Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows:

1. AN ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.

3. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research into some subject relating to the causation, prevention, or treatment of disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1913. A Scholar may be reappointed for not more than two additional terms.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of Research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

Applications.

Applications for Scholarships and Grants for the year 1913-14 must be made not later than Tuesday, June 10th, 1913, in the prescribed form, a copy of which will be supplied by the Medical Secretary on application.

Each application should be accompanied by testimonials, including a recommendation from the head of the laboratory, if any, in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work, and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

ALFRED COX, *Medical Secretary.*

429, Strand, London, W.C.

Hospitals and Asylums.

EDINBURGH DENTAL HOSPITAL.

THE report presented to the twenty-first annual general meeting of the Incorporated Edinburgh Dental Hospital and School, over which Dr. Guy, dean of the hospital, presided, stated that the hospital continued to do work for the men and recruits of His Majesty's Army under arrangement with the War Office. During the year 162 recruits were rendered dentally efficient, while 153 regulars and 117 men of the Special Reserve were treated. The Army Council had noted "the excellent service rendered by the Edinburgh Dental Hospital."

HAWICK COTTAGE HOSPITAL.

THE annual report of this hospital stated that, although there was a deficit for the year of £44 15s. 10d., the annual subscriptions had kept up, notwithstanding the new burden which the National Insurance Act had imposed on employers and employed. During the year 224 patients were treated in the hospital, a decrease of 18 on the previous year, and 82 out-patients made use of the dispensary. The hospital now contains five public and two private wards, with twenty beds in all.

Meetings of Branches and Divisions.

GLASGOW AND WEST OF SCOTLAND BRANCH:

DUMBARTONSHIRE AND ARGYLLSHIRE DIVISION.

THE annual business meeting was held in Clydebank on April 29th. The annual report submitted by the HONORARY SECRETARY, which showed an increase in the number of meetings and a marked advance in the average attendance, was approved.

Election of Officers.—The following office-bearers were elected:

Chairman.—Mr. J. Wilson, Ashville, Dumbarton.
Vice-Chairman.—Dr. John Gilmour, Dalnair.
Honorary Secretary.—Dr. A. W. Sutherland, Barbain, Cardross.

Representative for Representative Meeting.—Dr. E. H. Cramb, Radnor Park.

Representatives on Branch Council.—Dr. A. D. McLachlan, Dr. A. W. Sutherland.

Executive Committee.—Dr. J. R. F. Cullen, Dr. T. M. Strang, with the above office-bearers.

Meetings.—It was unanimously agreed to meet in Dumbarton during the ensuing year unless exceptional circumstances require a meeting elsewhere.

Maternity Benefit.—It was agreed to recommend Local Medical Committees in the Division to approach Insurance Committees and Commissioners with a view to establishing a method of securing payment of the fee of the doctor in attendance at confinements where maternity benefit was claimed.

Model Ethical Rules.—The model ethical rules were unanimously adopted.

GLASGOW CENTRAL DIVISION.

THE annual meeting of this Division was held on May 19th, Dr. ROBERT JARDINE in the chair.

With two dissentients, it was resolved to transmit to the Representative Meeting a notice of motion to delete Minute 45 of the Special Representative Meeting in January, in which work under the National Health Insurance Act is said to be "derogatory to the profession." It was felt that while the minute remained a friendly and strong co-operation of all members of the Association for the good of the profession was hardly possible.

Election of Officers.—The following office-bearers were elected:

Chairman.—Dr. J. Grant Andrew.
Vice-Chairman.—Dr. John Paterson.
Representative to Representative Meeting.—Dr. John Adams.
Honorary Secretary and Treasurer.—Dr. W. S. Syme.
Ordinary Members of Committee.—Dr. W. B. Inglis Pollock, Dr. R. Stockman, Dr. P. Maguire, Dr. P. N. Grant, Dr. G. H. Edlington, Dr. R. Jardine.

Vote of Thanks.—A vote of thanks was passed to Dr. Jardine for his services as Chairman during the past five years, and the same compliment was paid to Dr. Adams.

LANCASHIRE AND CHESHIRE BRANCH:

LEIGH DIVISION.

AT the annual meeting of the above Division held on May 15th, the following officers were elected for the ensuing year:

Chairman.—M. J. Halton.
Honorary Secretary.—G. H. Shaw.
Representative on Branch Council.—H. S. Hall.
Executive Committee.—T. Gray, W. Y. Martin, W. G. Robertson, C. W. Turner.

It was decided to send a copy of the statement forwarded to the Lancashire Insurance Committee setting out the objections of the profession to inserting on medical certificates details of the nature of the illness, which is published at p. 458, to the Medical Committees of all insurance areas in Lancashire.

OLDHAM DIVISION.

THE annual meeting was held in the Oldham Royal Infirmary on May 15th.

Model Ethical Rules.—The Model Rules were adopted.
Representative's Expenses.—It was resolved to create a fund from which the expenses of the Representative at

Representative Meetings could be defrayed, and for this purpose it was decided to make a levy of 5s. a member.

Agenda for Representative Meeting.—This matter was left to the new committee for consideration.

Votes of Thanks.—Votes of thanks were cordially passed to Dr. Maitland and Dr. Frank Radcliffe for the invaluable services which they had rendered to the Division as Chairman and Honorary Secretary during a series of years.

Election of Officers.—The following were appointed:

Chairman.—Dr. Frank Radcliffe.
Vice-Chairman.—Dr. Godson.
Representative.—Dr. Pochin.
Members of Branch Council.—Drs. Fort and Pochin.
Honorary Secretary.—Dr. Malcolm Hutton (Shaw, near Oldham).
Committee.—Drs. Maitland, Doble, Edward Kershaw, Lendrum.

Ethical Committee.—The above with Dr. Patterson.

SOUTHPORT DIVISION.

THE annual meeting of this Division, to which all members of the profession resident in the area of the Division were invited, was held in the Masonic Room of the Victoria Hotel at 8 p.m. There was an attendance of fifteen.

Annual Report.—The annual report of the Executive Committee was read.

Election of Officers.—The following officers were elected for the ensuing year:

Chairman.—Dr. Mackay.
Vice-Chairman.—Dr. Schofield.
Representative at Representative Meetings.—Dr. Baildon.
Deputy Representative.—Dr. Schofield.
Representatives on Branch Council.—Dr. Baildon and Dr. Harris.

Honorary Secretary and Treasurer.—Dr. Harris.
Members of Executive Committee.—Drs. Brown, Corkhill, Penrose, and Priddy.

Matters Referred to Divisions.—A discussion took place on the matters referred to Divisions (SUPPLEMENT of April 19th, May 3rd, and May 10th) and on letters from the Medical Secretary dealing with these and allied subjects. During its course attention was called to the paragraph in the annual report of the Council condemning canvassing and touting for patients in connexion with the National Insurance Act (SUPPLEMENT, May 3rd, p. 376), and to the warning issued by the President of the General Medical Council (SUPPLEMENT, March 22nd, 1913, p. 265). Resolutions were passed unanimously instructing the Representative to vote against the raising of the annual subscription of the Association, and against forming a trade union in connexion with it.

Co-ordination of Action of Divisions and Local Medical Committees.—The proposal of the Council that in order to promote the co-ordination of action between Divisions and Local Medical Committees, members of such committees and medical members of Insurance Committees who are ordinary members of the Association resident within the area, should by resolution of the Branch be made *ex officio* members of the Branch Council was discussed, and the Representative was instructed to use his judgement in voting on the subject.

Expenses of Representatives.—A communication was received from a Branch Secretary with reference to the share of the Southport Division in the cost of paying the expenses of members attending meetings of the Representative Body, Council, and Committees was read, and the Secretary was instructed to invite every member of the profession in the Division to subscribe a sum not exceeding 10s.

Reports of Medical Service Subcommittee.—The Secretary of the Local Medical Committee, at the request of the Division, undertook to call the attention of the Insurance Committee, of which he is a member, to the importance of making reports from the Medical Service Subcommittee private.

Election to the Central Council.—The Division unanimously resolved to nominate Mr. F. C. Larkin for election to the Central Council of the Association.

Reorganization of Branch.—The question of the reorganization of the Branch and Divisional areas was considered, but a decision postponed to a later meeting.

METROPOLITAN COUNTIES BRANCH:
HARROW DIVISION.

The annual meeting was held on May 15th in the Gayton Rooms, Harrow, Dr. A. H. WILLIAMS in the chair.

Election of Officers.—The following were elected:

Chairman.—Dr. J. Davidson.

Vice-Chairman.—Dr. H. S. Wansbrough Jones.

Honorary Secretary and Treasurer.—Dr. C. M. Pennefather.

Representative in Representative Meetings.—Dr. C. M. Pennefather.

Deputy Representative in Representative Meetings.—Dr. P. K. Muspratt.

Ordinary Members of Executive Committee.—Drs. B. H. Barton and A. H. Williams (Harrow), W. E. Dyson (Wembley), H. R. Harley (Wealdstone), H. J. Hildige (Pinner), R. E. Humphrey (Northwood), P. K. Muspratt (Uxbridge), and R. L. Romer (Stanmore).

Representative on the Branch Council.—Dr. G. M. Edwards.

Report of Executive Committee.—The HONORARY SECRETARY read the report for the year. It stated that the past year had been one of exceptional activity, and numerous meetings had been held to consider the medical provisions of the Insurance Act. As a result of this no papers on scientific subjects had been read before the Division. Nine meetings of the Division had been held, and to all of these meetings non-members of the Association had been invited. The average attendance was 29.4. The Provisional Medical Committee had met on seven occasions, with an average attendance of 12.7, and had been mainly occupied in drafting a scheme on the lines of a public medical service, originally intended to provide medical attendance for both insured and uninsured persons. Owing to the formation of panels of medical men for the treatment of insured persons this scheme now referred only to uninsured persons and juveniles, and several clubs and friendly societies had intimated their acceptance of the scale of fees. The membership of the Division, which in June, 1912, was 73, was now 64, the reduction in membership being due to one death and removal of members to other Divisions. Local District Medical Committees had been formed for the following three areas of the County of Middlesex Insurance Committee contained within the Division, and had received official recognition:

1. For Harrow Urban District, Ruislip, Northwood Urban District, and Pinner Parish—Chairman, A. H. Williams; Honorary Secretary, H. J. Hildige.
2. For Wealdstone and Wembley Urban Districts, Stanmore Parish, Kingsbury and Edgware—Chairman, G. H. Butler; Honorary Secretary, W. E. Dyson.
3. For Uxbridge Urban and Rural Districts, Yiewsley and Hayes Urban Districts—Chairman, J. Davidson; Honorary Secretary, P. K. Muspratt.

The Division held its first social function on May 1st, 1913, when a complimentary dinner was given to Dr. A. H. Williams, who retires from the chair, a post he has held for the last two years.

The *Financial Report* showed a small balance in hand.

Business of the Annual Representative Meeting.—This was considered, and instructions given to the Representative.

MARYLEBONE DIVISION.

The annual general meeting of the Division was held at the rooms of the Medical Society of London on May 19th, at 5 p.m., Mr. ATWOOD THORNE in the chair. Eighteen members and one visitor were present.

Annual Report.—The annual report was presented, discussed, and adopted.

Election of Officers and Representatives.—The following officers were elected:

Chairman.—Dr. Charles Lyall.

Vice-Chairman.—Mr. Bishop Harman.

Honorary Treasurer.—Dr. Comyns Berkeley.

Honorary Secretary.—Dr. Francis W. Goodbody.

Representatives to the Branch Council.—The Chairman, Miss Margaret Fraser, Dr. Gordon Holmes, Mr. Warren Low, Mr. Betham Robinson, Dr. F. J. Smith, and Dr. Percy Spurgin.

Representatives to the Representative Meetings.—Dr. W. Griffith, Mr. Bishop Harman, Dr. Gordon Lane, Dr. Montgomery-Smith, Dr. Newton Pitt, Dr. David Roxburgh, and Dr. Francis W. Goodbody.

Nominations for Officers of Branch Council.—The Division nominated the following:

President-elect.—Mr. Atwood Thorne.

Honorary Treasurer.—Mr. Atwood Thorne.

Honorary Secretaries.—Dr. Crosse, Mr. Bishop Harman.

Election to Central Council.—On the motion of Dr. GOODBODY, seconded by Dr. GORDON LANE, the Division decided to support the candidatures of Drs. G. M. Biggs, C. Buttar, E. C. Montgomery-Smith, and F. J. Smith to the Central Council.

Votes of Thanks.—On the motion of Dr. MONTGOMERY-SMITH, seconded by Mrs. MARY SCHARLIEB, a hearty vote of thanks was accorded to the Chairman and Secretary for their services during the past year. Mr. ATWOOD THORNE acknowledged the compliment. Dr. WALL proposed, and Dr. HOLMES seconded, a hearty vote of thanks to the Representatives for their services during the past year. This was carried, and Dr. GOODBODY replied.

STRATFORD DIVISION.

Presentation to the Honorary Secretary and Representative.

SOME seventy members of the medical profession residing in the Old Stratford Division of the British Medical Association attended at the Stratford Town Hall on May 1st for the purpose of presenting to Dr. J. S. Nicoll, J.P., and Dr. Percy Rose a testimonial as a mark of esteem and appreciation of the valuable services rendered by those gentlemen as Honorary Secretary and Representative respectively during the past ten years.

Dr. SANDERS presided; Dr. Cox, the Medical Secretary, attended to do honour to the occasion, and Dr. Haslip, President of the Metropolitan Counties Branch, made the presentation, which consisted of a large and handsome silver tray and two pairs of massive silver candlesticks to Dr. Nicoll and an English lever gold watch and chain to Dr. Rose, which were suitably inscribed. To the fund for the presentation 124 medical practitioners had subscribed.

Dr. HASLIP said that it was especially gratifying, at a time when officials of the Association were being severely criticized in many quarters, to find the medical men practising in that large area united in recognizing the labours ungrudgingly entered upon and pursued for years by these two local officials of their great Association.

Dr. NICOLL, in acknowledging the presentation, said that he must speak the words that came straight from his heart and try to express his feelings in ordinary language. The testimonial he had received was far too handsome, and the words of Dr. Haslip far too flattering, for no one was more conscious of his demerits than he himself. At the same time, he felt most deeply the recognition by his brother practitioners of any services he had been able to render them, and was indeed bountifully repaid for his work.

Dr. ROSE, in responding, said he had been proud to act for so long a period as the official mouthpiece of the Stratford Division. He had certainly tried to do his best, and it gave him intense satisfaction to find his professional brethren felt he had in some small degree succeeded.

Future Organization of the Profession.

The presentation was followed by a discussion on the future organization of the profession, which was opened by Dr. Cox, who urged the necessity of keeping the Association strong and active, as the one body which represented every section of the profession. He deprecated the expenditure of the energy of members of the profession in internal bickering and the raising of class distinctions when what was necessary was to remain united in face of the common enemy. He alluded to the formation of various bodies for the professed purpose of doing things which it was alleged that the Association could not do, and advised caution, as, in his opinion, a body representative of a large majority of the profession would be more effective in advancing its interests than a small body, even if the latter possessed all the powers of a trade union. Dr. Cox quoted a number of instances in which the British Medical Association had been able to be of general assistance to the profession, including the Royal Navy and the Indian Medical Services.

Dr. HASLIP deprecated dividing the profession into two classes—panel and non-panel, and said the Association was democratic enough to contain all classes.

The discussion was continued by, among others, Drs. ROSE, STEEN, and HAY; and Dr. Cox made a general reply,

WIMBLEDON DIVISION.

THE annual meeting of the Wimbledon Division was held on May 15th, Dr. POWELL EVANS in the chair.

Annual Report and Election of Officers.—The annual report was received and adopted, and the following officers elected for the year 1913-14:

Chairman.—Dr. Bentley (Mitcham).

Vice-Chairman.—Dr. P. Evans.

Honorary Secretary and Treasurer.—Dr. George Cowie.

Executive Committee.—Drs. Barton, Bellios, Brabyn, Farie, Nash, Purcell, and Randall.

Representative at Representative Meeting.—Dr. Deas.

Representative to Branch Council.—Dr. Purcell.

The meeting decided unanimously to join the Surrey Branch in the event of such a Branch being formed.

NORTH LANCASHIRE AND SOUTH
WESTMORLAND BRANCH:

FURNESS DIVISION.

THE annual meeting of the Furness Division was held at the Masonic Club, Barrow-in-Furness, on May 16th. Dr. DANIEL was voted to the chair, and thirteen other members were present.

Election of Officers.—The following officers were appointed for 1913-14:

Chairman.—Dr. Pooley.

Vice-Chairman.—Dr. Allen.

Honorary Secretaries.—Drs. Alexander and Thompson.

Representative at Representative Meetings.—To be appointed by Keadal Division.

Deputy Representative.—Dr. Callaghan.

Representatives on Branch Council.—Drs. Callaghan and Johnston.

Two Members of Executive Committee.—Drs. Daniel and Livingston.

Vote of Thanks.—On the motion of Dr. ALEXANDER a vote of thanks was accorded with acclamation to Dr. Livingston, the retiring Secretary, who had held that position for five years, and who had worked so strenuously on behalf of the Association during the passage of the Insurance Bill through Parliament.

Juvenile Clubs.—A prolonged discussion took place on the question of juvenile clubs, in which most of the members present took part. Eventually a scheme for juvenile contract practice was drawn up, and the Secretaries were instructed to present it to the State Sickness Insurance Committee for approval.

SOUTH-EASTERN BRANCH:

CROYDON DIVISION.

THE annual meeting of the Croydon Division was held on May 14th.

Model Ethical Rules.—The Ethical Rules were adopted.

Election of Officers.—The officers for the year 1913-14 were elected as follows:

Chairman.—Dr. J. A. Howard.

Vice-Chairman.—Dr. John Wayte.

Honorary Secretary.—Dr. E. H. Willock.

Assistant Secretary.—Dr. C. G. C. Scudamore.

Representatives for Representative Meeting.—Dr. E. G. C. Daniel, Dr. E. H. Willock.

Deputy Representative for Representative Meeting.—Dr. C. G. C. Scudamore.

Representatives on Branch Council.—Dr. C. Owen Fowler and Dr. C. G. C. Scudamore.

Executive Committee.—Drs. W. V. Braddon, A. B. Carpenter, G. A. Clarkson, A. Z. C. Cressy, E. G. C. Daniel, W. McD. Ellis, C. O. Fowler, G. G. Genge, W. Gripper, R. M. Hugo, G. W. H. Newington, F. Nicholls, A. A. H. Partridge, J. J. Redfern, E. N. Reichardt, J. S. Richards, C. Tylor, G. Wale, R. J. Willson, C. Wray.

SOUTHERN BRANCH:

SALISBURY DIVISION.

A MEETING of this Division was held on May 7th, when sixteen members were present.

Election of Officers.—The following officers were elected for the ensuing year:

Chairman.—J. O. March.

Vice-Chairman.—G. Kempe.

Secretary and Treasurer.—J. Armitage.

Representative of Division.—J. E. Gordon.

Representatives on Branch Council.—W. W. Or, T. B. Henderson.

Executive Committee.—Drs. Saunders, Fison, Gould, Luckham.

Member of Golf Committee.—Mr. T. B. Henderson.

Votes of Thanks.—A unanimous vote of thanks was accorded to Mr. L. D. Saunders for his arduous duties as Chairman of the Division during the preceding year. On the motion of Dr. BLACKMORE, a vote of thanks was

accorded to Dr. J. E. Gordon for the exceptional services he had rendered to the Division, not only in his fifteen years of office, but particularly during the last year, when he did an enormous amount of work in connexion with the Insurance Act, and was also entirely responsible for the Public Medical Service.

Insurance Act.—Dr. J. E. GORDON said that the points mentioned in the letter from the Medical Secretary as proper to be brought to the notice of the County Insurance Committee—including mileage, certificates, remuneration, income limit, representation on Insurance Committee—were receiving the attention of the Local Medical Committee.

Annual Report and Financial Statement.—The annual report of the Division stated that there had been nine meetings of the Division held during the year 1912, with an average attendance of 25. The business of the meetings was almost entirely devoted to matters relating to the National Insurance Act. The balance in the hands of the Treasurer was £2 11s. 5½d. It was again decided to give the sum of £2 2s. to the Salisbury Infirmary as a recognition of its kindness in allowing the Divisional meetings to be held at the infirmary.

Ethical Rules.—The meeting unanimously decided to adopt the Model Ethical Rules for a Division, as published in the BRITISH MEDICAL JOURNAL SUPPLEMENT of September 21st, 1912 (including Rule Z).

Alteration of Grouping of Divisions.—A letter was read from the Branch Secretary in reference to the alteration of the grouping of the Divisions. A general discussion took place on the subject, and the feeling expressed by the meeting was that an alteration of the boundaries of the Division would probably have to be made. It was thought that there should be further discussion on the matter after more information had been received from the Branch Council and the other Divisions of the Branch.

Election of Members of Central Council.—It was decided that the Salisbury Division should support the nomination of the other Divisions of the Branch, and that it was desirable that all the Divisions of the Branch should nominate the same candidate for membership of the Council of the Association.

Clinical Meetings.—On the motion of Dr. WILLIAMS-FREEMAN, seconded by Dr. FISON, it was unanimously resolved:

That the Executive Committee consider the best means to insure the holding of clinical meetings at regular intervals and to make arrangements accordingly.

Presentation.—Before the meeting the members of the profession in the Salisbury Division presented their retiring Honorary Secretary, Dr. J. E. Gordon, with a gold watch, and Mrs. Gordon with a rose bowl, to show their great appreciation of the work they had done, and to serve as a reminder of the continued gratitude and good will of the profession. Out of 52 men in general practice in the area of the Division 49 subscribed to the testimonial.

WAKEFIELD, PONTEFRACT, AND CASTLEFORD
DIVISION.

A MEETING of this Division was held at the Clayton Hospital, Wakefield, on May 6th. Dr. J. W. WALKER (Wakefield) was in the chair, and twelve other members were present.

Model Ethical Rules.—The revised model ethical rules, approved by the Representative Meeting of July, 1912, and printed in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL of September 21st and 28th, 1912, were unanimously adopted.

Fund for Payment of Representative.—The Treasurer (Dr. STEVEN) presented his account, showing that the expenses during last year amounted to ten guineas, leaving a balance of £22 10s. 6d. in the bank.

Congratulations to Officers.—Upon the proposal of Dr. EARDLEY, seconded by Dr. WALKER, the congratulations of the Division were offered to Dr. May and Dr. Hillman, who have been appointed Chairman and Vice-Chairman respectively of the Local Medical Committee of the West Riding of Yorkshire.

Date of Next Meeting.—It was decided to hold the next meeting of the Division not later than the end of May or beginning of June to consider the annual report of Council and the provisional agenda of the Annual Representative Meeting.

Association Notices.

NOMINATIONS FOR COUNCIL, 1913-14.

ENGLAND AND WALES.

North of England, and North Lancashire and South West-morland Branches:

David Fee Todd, L.R.C.P., Beech House, Sunderland.

Yorkshire Branch:

Henry Johnstone Campbell, M.D., 36, Manningham Lane, Bradford.

Lancashire and Cheshire Branch:

John Brown, M.D., Burwood House, Bacup.

Thomas Arthur Helme, M.D., 8, St. Peter's Square, Manchester.

Frederic Charles Larkin, F.R.C.S., 54, Rodney Street, Liverpool.

East York, North Lincoln, and Midland Branches:

Adam Fulton, M.B., Army, Basford, Nottingham.

Cambridge and Huntingdon, East Anglian, and South Midland Branches:

Boston Elphinstone Fordyce, M.B., 61, Chesterton Road, Cambridge.

Birmingham and Staffordshire Branches:

Albert Lucas, F.R.C.S., 9, Easy Row, Birmingham.

North Wales, Shropshire, and Mid-Wales, and South Wales and Monmouthshire Branches:

William Frederick Brook, F.R.C.S., Longlands House, Swansea.

Metropolitan Counties Branch:

Moses George Biggs, M.D., 101, Northcote Road, Battersea, S.W.

Charles Buttar, M.D., 10, Kensington Gardens Square, W.

Major Greenwood, M.D., 243, Haekney Road, N.E.

Edwin Charles Montgomery-Smith, M.R.C.S., L.R.C.P., 36, Abbey Road, St. John's Wood, N.W.

Basil Gordon Morison, M.D., 115, Green Lanes, N.

Frederick John Smith, M.D., 138, Harley Street, W.

Bath and Bristol, Gloucestershire, West Somerset, and Worcestershire and Herefordshire Branches:

George Parker, M.D., 14, Pembroke Road, Bristol.

Dorset and West Hants and South-Western Branches:

Frank Fowler, M.D., 29, Poole Road, Bournemouth.

Oxford and Reading and Southern Branches:

Bonner Harris Mumby, M.D., Boro' Asylum, Portsmouth.

South-Eastern Branch:

Charles Henry Benham, M.D., 27, Sackville Road, Hove.

Thomas Barrett Heggis, M.D., Town Hall, Sittingbourne, Kent.

Cyril Courtenay Lord, M.R.C.S., L.R.C.P., 155, High Street, Gillingham, Kent.

John Scott, M.B., 18, Widmore Road, Bromley, Kent.

SCOTLAND.

Aberdeen, Northern Counties of Scotland, Dundee, and Perth Branches:

John Gordon, M.D., 1, Rubislaw Terrace, Aberdeen.

Edinburgh and Fife Branches:

John Rogerson Hamilton, M.D., Elm House, Hawick, N.B.

Glasgow and West of Scotland Branch (Four City Divisions):

John Adams, M.B., 1, Queen's Crescent, Glasgow.

Glasgow and West of Scotland (Four County Divisions), Border Counties, and Stirling Branches:

James Livingstone London, M.D., Linnwood, Hamilton, N.B.

IRELAND.

Connaught and South-Eastern of Ireland Branches:

Denis Walshe, L.R.C.P.I., Graigue, co. Kilkenny.

Leinster Branch:

No nomination.

Munster Branch:

Professor Honry Corby, M.D., 19, St. Patrick's Place, Cork.

Ulster Branch:

Robert James Johnstone, F.R.C.S., 14, University Square, Belfast.

SPECIAL MEETING OF COUNCIL.

A SPECIAL Meeting of the Council will be held at Eleven o'clock in the forenoon of Friday, June 13th, in the Council Room at 429, Strand, London, W.C., to consider a Report of the Organization Committee on the Reform of the Present Constitution of the Association.

By Order,

GUY ELLISTON,

May 22nd, 1913.

Financial Secretary and Business Manager.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH.—Mr. W. M. Beaumont (4, Gay Street, Bath) and Dr. Newman Neild (9, Richmond Hill, Clifton, Bristol) Honorary Secretaries, give notice that the annual meeting of the Branch will be held on Wednesday, May 28th, in the Museum, Bath, at 5.30 p.m., when Dr. Roxburgh will resign the chair to Dr. J. Wigmore, President-elect, who will deliver the presidential address. The business of the meeting will be to receive the report of the Council and the Annual Financial Statement; to elect the officers of the Branch; to receive the report of the election of members of Council and of the Representatives of Divisions; to transact the necessary business; and to consider such subjects connected with the interest of the Branch and of the profession as may be brought before it.

BIRMINGHAM BRANCH.—Mr. J. Furneaux Jordan and Dr. J. G. Emanuel, Honorary Secretaries (9, Newhall Street, Birmingham), give notice that the annual meeting of the Birmingham Branch will be held in the Medical Institute on Thursday, June 19th, at 3 p.m. Business: Election of officers. Annual report and financial statement. Inaugural address by the incoming President, Mr. W. F. Haslam.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—Drs. Laurence E. Price and Duncan Davidson, Honorary Secretaries (15, Priory Row, Coventry), give notice that the annual meeting of the constituency of the Nuneaton and Tamworth and Coventry Divisions will be held at 3.30 p.m. on Thursday, June 5th, at the Coventry Hospital, to elect a Representative for the Brighton Meeting, and any other business. At the conclusion of this meeting the annual meeting of the Coventry Division will be held for the election of officers, to consider a proposed alteration of date of meetings, and to receive the report of the Executive Committee.

MALTA AND MEDITERRANEAN BRANCH.—Dr. A. V. Bernard, Honorary Secretary (Valetta) gives notice that the annual meeting of the Branch will be held at the Central Civil Hospital, Floriana, on May 31st, at 4 p.m.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—Dr. A. G. Southcombe, Honorary Secretary (83, Sidney Road, Homerton, N.E.), gives notice that the eleventh annual general meeting of the Division will be held in Balfour Hall, Dunstan Street, Kingsland Road, on Friday, May 30th, at 3.30 p.m.

METROPOLITAN COUNTIES BRANCH: EAST HERTFORDSHIRE DIVISION.—Dr. H. D. Ledward, Honorary Secretary (123, Norton Way, Letchworth) gives notice that the first annual meeting of the Division will be held at 2.30 p.m., on Friday, June 20th, at the Town Hall, Ware, to elect officers, the Representative of the Division on the Branch Council, the ordinary members of the Executive Committee, and the Representative of the Division in Representative Meetings. To receive the Honorary Secretary's Annual Report. To alter Rule I defining the area of the Division in accordance with the decision of the Organization Committee of the Association. To consider the business of the Annual Representative Meeting and instruct the Representative thereon.

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—Drs. Walter E. Fry and P. C. Raiment, Honorary Secretaries, give notice that the annual meeting will take place at Kensington Town Hall on Friday, June 13th, at 5 p.m., for the transaction of the following business: Annual report. Elect officers and Representatives for 1913-14, and elect Executive Committee.

NORTHERN COUNTIES OF SCOTLAND BRANCH: INVERNESSSHIRE DIVISION.—Dr. J. W. Mackenzie, Honorary Secretary (5, Castle Street, Inverness) gives notice that the annual meeting of the Division will be held at the Northern Infirmary, Inverness, on Wednesday, May 28th, at 3.30 p.m. Business: Executive Committee's Report. To elect Office-bearers and Representative and Deputy Representative in the Annual Representative Meeting, and to consider the business of that meeting. Members are requested to bring to the meeting the BRITISH MEDICAL JOURNAL SUPPLEMENT of April 19th, May 3rd and 10th, which contain matters specially referred to the Division.

SOUTH-EASTERN BRANCH.—Dr. E. A. Starling, Honorary Secretary (Chillingworth House, Tunbridge Wells), gives notice that the sixty-ninth annual meeting of the Branch will be held on Wednesday, June 11th, at 1.30 p.m., at the Lion Hotel, High Street, Guildford. Dr. Arthur M. Mitchell (President-elect) invites members to lunch at the Lion Hotel, High Street, at 12.45 p.m. sharp. Agenda: In addition to the business of an ordinary meeting, (1) to receive the report of the election of officers for 1913-14; (2) to receive the annual report of the Council and financial statement, and (3) the ethical rules presented by the Council; (4) to consider the following resolution: "The South-Eastern Branch Council advise the Branch to request the Council of the Association to consent to the division of the unwieldy South-Eastern Branch into three Branches, corresponding with the three counties of Kent, Sussex, and Surrey." An excursion is arranged for the afternoon, to view the Lord Mayor Treloar's Cripples' Home at Alton, where Dr. and Mrs. Gauvain kindly invite the members to tea. The special train leaves Guildford Station at 2.40 p.m., returning about 5.30 p.m. Tickets for the return journey, 3s. 6d. each. The annual dinner will be held at the Lion Hotel, at 6.30 p.m. Members intending to be present at the lunch, excursion, or dinner wishing hospitality for the night are requested to signify their intention to Cecil P. Lankester, Esq., 1, Rectory Place, Guildford, not later than Saturday, June 7th.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—Dr. P. S. Hichens, Honorary Secretary, gives notice that the annual meeting of the Division will be held in the Board Room of the Northampton General Hospital on May 29th, at 2.30 p.m. The meeting will be preceded by a luncheon at Franklin's Restaurant, Guildhall Road, at 1.30 p.m. Those wishing to attend the luncheon should notify the Honorary Secretary two days beforehand. Agenda: Election of officers for the ensuing year. Annual report of the Division. Consideration of agenda for the Representative Meeting. Consideration of other memoranda sent down from the Association. If time permits some clinical cases will be shown.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—Dr. S. Colen Legge, Honorary Secretary (24, Foregate Street, Worcester), gives notice that a meeting of the Branch will be held at the Imperial Hotel, Malvern, on May 29th, at 4.15 p.m.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-six of the largest English towns 9,013 births and 4,765 deaths were registered during the week ending Saturday, May 10th. The annual rate of mortality in these towns, which had been 15.8, 14.8, and 14.2 per 1,000 in the three preceding weeks, further fell to 13.9 per 1,000 in the week under notice. In London the death-rate was equal to 13.6, against 16.4, 14.8, and 14.2 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rates ranged from 7.5 in Acton, 8.1 in Bournemouth, 8.3 in Edmonton, 8.6 in Eastbourne, 8.8 in Southend-on-Sea, and 9.6 in Leyton and in Ilford to 18.8 in Carlisle and in Aberdare, 19.9 in Stockton-on-Tees, 20.2 in Bootle, 20.3 in Middlesbrough, and 22.3 in Walsall. Measles caused a death-rate of 1.6 in Wolverhampton, 2.3 in Edmonton, 2.7 in Wimbledon, 3.5 in Smethwick, 4.5 in Walsall, and 5.8 in St. Helens, and whooping-cough of 1.3 in Stoke-on-Trent, 1.4 in Bootle, and 1.6 in Brighton. The mortality from the remaining epidemic diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 38, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 6 were recorded in Birmingham, 6 in Liverpool, and 2 each in Warrington, Manchester, Preston, Barrow-in-Furness, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,334, 1,339, and 1,375 at the end of the three preceding weeks, had further risen to 1,403 on Saturday, the 10th inst.; 206 new cases were admitted during the week, against 215, 185, and 216 in the three preceding weeks.

In ninety-six of the largest English towns 7,833 births and 4,368 deaths were registered during the week ending Saturday, May 17th. The annual rate of mortality in these towns, which had been 14.8, 14.2, and 13.9 per 1,000 in the three preceding weeks, further fell to 12.8 per 1,000 in the week under notice. In London the death-rate was equal to 12.0, against 14.8, 14.2, and 13.6 per 1,000 in the three preceding weeks. Among the ninety-five other large towns the death-rate ranged from 5.8 in Oxford, 6.4 in Great Yarmouth, 6.6 in Ilford, 7.0 in Reading and in Lincoln, and 7.7 in Tynemouth and in Newport (Mon.) to 18.1 in Sunderland, 19.0 in Walsall, 19.2 in Brighton, 20.3 in Stoke-on-Trent, 20.8 in Preston, and 22.9 in Wakefield. Measles caused a death-rate of 1.7 in Stoke-on-Trent, 2.2 in Wolverhampton and in Salford, 2.7 in Wimbledon, 3.1 in St. Helens, and 4.5 in Walsall. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 36, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 6 were registered in Birmingham and 2 each in Stoke-on-Trent, Liverpool, St. Helens, Bury, Preston, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 1,339, 1,375, and 1,403 at the end of the three preceding weeks, had further risen to 1,411 on Saturday, May 17th; 171 new cases were admitted during the week, against 185, 216, and 206 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,174 births and 719 deaths were registered during the week ending Saturday, May 10th. The annual rate of mortality in these towns, which had been 17.7, 17.3, and 17.2 per 1,000 in the three preceding weeks, further fell to 16.6 in the week under notice, but was 2.7 per 1,000 above the rate in the ninety-six

large English towns. Among the several Scottish towns the death-rates ranged from 6.0 in Kilmarnock, 9.2 in Ayr, and 11.0 in Clydebank to 18.0 in Coatbridge, 22.8 in Aberdeen, and 23.8 in Perth. The mortality from the principal infective diseases averaged 2.4 per 1,000, and was highest in Perth and Aberdeen. The 343 deaths from all causes registered in Glasgow included 26 from whooping-cough, 12 from measles, 11 from infantile diarrhoeal diseases, 6 from diphtheria, and 2 from scarlet fever. Sixteen deaths from measles, 3 from whooping-cough, and 2 from diphtheria were recorded in Aberdeen; 4 from whooping-cough in Edinburgh, 3 in Motherwell, 2 in Paisley, and 2 in Hamilton; and 5 from infantile diarrhoeal diseases in Dundee.

In the sixteen largest Scottish towns 1,250 births and 711 deaths were registered during the week ending Saturday, May 17th. The annual rate of mortality in these towns, which had been 17.3, 17.2, and 16.6 per 1,000 in the three preceding weeks, further fell to 16.4 in the week under notice, but was 3.6 per 1,000 above the rate recorded in the ninety-six large English towns. Among the several towns the death-rates ranged from 7.3 in Falkirk, 8.9 in Motherwell, and 11.0 in Clydebank to 20.3 in Hamilton, 20.4 in Coatbridge, and 23.5 in Kircaldy. The mortality from the principal infective diseases averaged 2.1 per 1,000, and was highest in Falkirk and Aberdeen. The 341 deaths from all causes registered in Glasgow included 18 from whooping-cough, 13 from measles, 7 from infantile diarrhoeal diseases, 3 from scarlet fever, and 1 from enteric fever. Eight deaths from whooping-cough were recorded in Edinburgh, 2 in Aberdeen, and 2 in Greenock, and 16 deaths from measles in Aberdeen and 3 in Dundee.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, May 10th, 629 births and 443 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 725 births and 425 deaths in the preceding period. These deaths represent a mortality of 19.3 per 1,000 of the aggregate population in the districts in question, as against 18.5 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 5.4 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 27.4 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 20.4 as against an average of 21.4 for the previous four weeks, in Dublin city 23.9 (as against 23.1), in Belfast 17.1 (as against 18.3), in Cork 23.8 (as against 24.1), in Londonderry 5.1 (as against 15.0), in Limerick 24.4 (as against 21.3), and in Waterford 20.9 (as against 16.6). The zymotic death-rate was 1.2 as against 0.9 in the previous week.

ENGLISH URBAN MORTALITY IN THE FIRST QUARTER OF 1913.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

In the accompanying table will be found summarized the vital statistics of ninety-six of the largest English towns, based upon the Registrar-General's weekly returns for the first quarter of the year. The 113,172 births registered in these towns during the quarter were equal to an annual rate of 25.4 per 1,000 of the population, estimated at 17,852,766 in the middle of the year. In London the birth-rate last quarter was 25.7 per 1,000, while among the ninety-five other large towns it ranged from 13.1 in Hastings, 14.3 in Southport, 15.2 in Bournemouth, 15.3 in Bath, 15.4 in Hornsey, 16.0 in Blackpool, and 17.0 in Ilford to 31.7 in St. Helens and in Stockton-on-Tees, 32.0 in West Ham, 32.1 in Middlesbrough, 32.5 in Rhondda, and 32.9 in Warrington.

The 75,152 deaths registered in these towns during the quarter under notice corresponded to an annual rate of 16.9 per 1,000. In London the death-rate was 17.5 per 1,000, while among the other towns it ranged from 10.9 in Hornsey, 11.0 in Ilford, 11.2 in Ealing, 11.3 in Gillingham, 11.4 in Enfield, 11.6 in Eastbourne, and 11.8 in Walthamstow to 20.3 in West Hartlepool, 20.5 in Liverpool, 20.7 in Bootle and in South Shields, 21.7 in Preston, 22.1 in West Bromwich, 23.8 in Wigan, 24.7 in Stockton-on-Tees, and 25.7 in St. Helens.

The 75,154 deaths from all causes included 170 which were referred to enteric fever, 3,112 to measles, 312 to scarlet fever, 913 to whooping-cough, 668 to diphtheria, and 969 (among children under 2 years of age) to diarrhoea and enteritis. The 170 deaths from enteric fever were equal to an annual rate of 0.04 per 1,000; in London the rate from this disease was 0.05 per 1,000, while among the other towns it ranged upwards to 0.15 in Gillingham, in Wakefield and in Stockton-on-Tees, 0.17 in Preston, 0.20 in Stoke-on-Trent, and 0.24 in Merthyr Tydfil. The 3,112 fatal cases of measles corresponded to an annual rate of 0.70 per 1,000; in London the rate was of 0.75 per 1,000, while among the other towns it ranged upwards to 2.22 in Stockton-on-Tees, 2.34 in Barrow-in-Furness, 2.92 in Swindon, 4.55 in Wigan, 5.17 in West Bromwich, and 5.65 in St. Helens. The 312 deaths from scarlet fever were equal to an annual rate of 0.07 per 1,000; in London the scarlet fever death-rate was 0.05 per 1,000, while it ranged upwards in the other towns to 0.28 in Cambridge and in Darlington, 0.32 in Rhondda, 0.40 in St. Helens, 0.41 in Preston, and 0.46 in Aberdare. The 913 fatal cases of whooping-cough corresponded to an annual death-rate of 0.21 per 1,000; in London the death-rate from this disease was 0.27 per 1,000, while among the other towns it ranged upwards to 0.53 in Ipswich, 0.57 in Wigan, 0.77 in Acton, 0.81 in Warrington, 0.84 in Cambridge, and 0.93 in Rotherham. The 668 deaths from diphtheria were equal to an annual rate of 0.15 per 1,000; in London the mortality from this cause was at the rate of 0.10 per 1,000, while among the other towns it ranged upwards to 0.40 in Burnley, 0.47 in Swansea, 0.52 in Rhondda, 0.53 in Portsmouth, 0.66 in Coventry, and 0.80 in Barrow-in-Furness. The 969 deaths from diarrhoea and enteritis among children under 2 years of age were equal to a rate of 8.55 per 1,000 of the births registered during the quarter; in London the proportion was 10.30 per 1,000, while in the other large towns it ranged upwards to 13.61 in Ipswich, 13.73 in Salford, 16.00 in Oxford, 16.31 in Burnley, 16.89 in Bolton, 21.29 in Stoke-on-Trent, and 30.24 in West Bromwich.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 125 per 1,000 last quarter. In London the rate of infant mortality was 116 per 1,000, while among the other towns the rates ranged from 65 in Hornsey, 68 in Gillingham, 69 in Eastbourne, 70 in Devonport, and 73 in East Ham to 177 in West Hartlepool, 183 in Rotherham and in Carlisle, 185 in St. Helens, 187 in Stoke-on-Trent, 202 in Preston, and 230 in Wigan. The causes of 654, or 0.9 per cent., of the deaths registered in the ninety-six towns last quarter were not certified either by a registered medical practitioner or by a coroner. In 38 of the towns the causes of all the deaths were duly certified; among the other towns the highest proportions per cent. of uncertified deaths were 3.2 in Gillingham, 3.4 in Coventry and in Southport, 3.6 in Birmingham, 4.2 in Tynemouth, 4.6 in Bootle, 4.8 in Dudley, 5.4 in Warrington, 5.6 in Gateshead, and 6.8 in Darlington.

Analysis of the Vital Statistics of Ninety-six of the Largest English Towns during the First Quarter of 1913.

| Towns. | Estimated Population middle of 1913. | Births. | Deaths. | Annual rate per 1,000 Living. | | Deaths from | | | | | | | | | | Deaths of Children under 1 year of age to 1,000 Births. | Rate per Cent. of Unexcused Deaths. |

LOCAL MEDICAL COMMITTEES.

BRISTOL.

The following compose the Bristol Local Medical Committee, which has been recognized by the Commissioners:

Chairman.—Dr. Harry Grey.
Vice-Chairman.—Dr. A. N. Heron.
Honorary Treasurer.—Dr. George Parker, 14, Pembroke Road.
Honorary Secretary.—Dr. Leonard A. Moore, 45, Ashley Road.
Group Representatives.—Those marked with an asterisk are the conveners of the group—
 Clifton.—Drs. C. Atchley, Lily Baker, Carling, Dacre, Flemming, Freeman, Harris, Lees, Myles, and Cecil Williams.
 Westbury and Avonmouth.—Drs. *Ormerod and Rolfe.
 Redland, Cotham, and Bishopston.—Drs. Barker, *Brasher, Hall, Heron, and McLeod.
 Central.—Drs. Collinson, Moore, and *Page.
 South.—Drs. Kerfoot, Logan, Lucas, and *F. E. Peake.
 Eastville, Fishponds, and Staple Hill.—Drs. Bernard, Brown, and *Grey.
 St. George.—*Dr. Mather.
 Kingswood.—*Dr. Perrott.
 Bristol General Hospital.—*Dr. Newman Neild.
 Other Institutions.—*Dr. T. A. Green.
 Co-opted.—*Dr. George Parker.
Er Officio (Insurance Commissioners' nominees on the Local Insurance Committee).—Dr. Michell Clarke, Dr. T. M. Carter.
Executive.—The Chairman, Vice-Chairman, Treasurer and Secretary with Drs. Bernard, Bernard, Brasher, Brown, Collinson, and Hall.
Subcommittees: Representation Committee (to consider the reorganization of the Local Medical Committee on a permanent basis).—Drs. Barker, Logan, and Hall.
Drug Committee.—Drs. Bernard, Newman Neild, and Moore.
Medical Members of the Medical Service Subcommittee of the Local Insurance Committee.—Drs. Bernard, Brown, Collinson, Hall, and Elwin Harris.
Direct Representatives of the Profession on the Local Insurance Committee.—Dr. E. G. Hall and Dr. Leonard A. Moore.

Meetings of Committee.—The Local Medical Committee meets ordinarily every alternate Thursday. Group meetings are convened as occasion requires to ascertain the

opinion of the profession on questions of major importance. It is hoped that practitioners in the city, and especially those on the panel, will bring to the notice of the Committee or of their representatives, any matters of interest, as this Committee has a statutory right to lay its views before the Local Insurance Committee.

Expenses of Committee.—The expenses of the Committee (printing, postages, etc.) are being met *pro tem.* by a levy of 5s.

Temporary Residents.—At a meeting of the Committee held on May 13th the following resolution was carried:

That inasmuch as each practitioner on the panel was promised a minimum 7s. (including payment for domiciliary treatment of insured persons suffering from tuberculosis) any deduction therefrom is a breach of contract; and that the Bristol Local Medical Committee strongly protests against the action proposed in Memo. 161 of the Insurance Commission.

BOURNEMOUTH.

Temporary Residents.—The members of the Bournemouth panel have signed a provisional agreement for three months from April 14th, and have thereby tentatively and under protest accepted the Commissioners' scheme for the payment for attendance upon temporary residents. It is felt that if any united action is to be taken in opposition to this scheme it ought to be initiated as soon as possible. The Bournemouth Local Medical Committee will do its utmost to bring the local panel into line with any general action in this matter; but to have any effect it must be very general, and it must be taken promptly. The agreement which the Commissioners ask the doctors on the panel to sign is an agreement in perpetuity, and once such an agreement has been definitely signed by the doctors all over the country it will be almost impossible to get anything like unanimous action.

Income Limit.—A subcommittee of the Local Insurance Committee met a subcommittee of the Local Insurance Committee to discuss this question. So far the majority of the Insurance Committee has been very strongly against any income limit. It was pointed out by the doctors that in accordance with the Act any person who

is employed manually, or has been an insured person for five years and elects to remain a voluntary contributor, is entitled to medical benefit at the ordinary rate, no matter how large his income may be, unless an income limit is fixed, and that the absence of an income limit has kept doctors from joining the panel. After a very interesting discussion, the members of the Insurance Subcommittee intimated that they were prepared to support the fixing of an income limit of £160 per annum if this was agreed to by the Local Medical Committee, but that they could not consider any lower limit than this. "Also that the committee should favourably consider any applications by insured persons to contract out if the reason stated be that they could afford to pay higher fees for attendance." The Medical Subcommittee considers that even an income limit of £160 is important, and will advise the Local Medical Committee and the panel to agree to this rather than have no limit at all.

Deputies for Medical Representatives on the Insurance Committee.—The Commissioners have been approached on this point, but their reply was not favourable.

EAST SUSSEX.

THE East Sussex Local Medical Committee has recently held four meetings, at which the average attendance has been nearly 50 per cent.

At a conference between the Executive Committee and the Local Insurance Committee, held on February 25th, it was agreed:

That all medical practitioners on the panel should be paid alike, irrespective of the date on which they joined.

That the allocation of insured persons who had not selected their medical attendant should stand over for the present, but that the final principle be that the unassigned residue be distributed in proportion to the number of persons already on the doctor's list. The unassigned residue of remuneration to be allocated on the same principle, except that practitioners desirous of limiting their list will not receive any part of the unassigned residue.

It was also suggested that a small subcommittee be formed, representing doctors on the panel, to allot sick insured persons who had been unable to secure acceptance by a doctor on the panel.

With a view to the special mileage grant, it was resolved to collect information as to the number of insured persons resident in places difficult of access.

At the adjourned meeting, on March 5th, the principal business was the consideration of the minutes of a conference mainly concerned with the methods of remuneration, held between the Medical Benefit Subcommittee of the Insurance Committee and a subcommittee of the Local Medical Committee. Instructions were given to arrange for meetings of medical practitioners in the ten insurance areas of East Sussex, and to form local subcommittees from each meeting. The principal duty of these committees will be to arrange for the medical attendance on insured persons, and for the distribution of those insured persons who had not yet been allocated.

At a meeting held on March 26th, the question of a night fee to chemists was discussed. It was finally resolved that while the Committee had no objection to the chemists receiving a night fee, it considered that it should be paid only to such chemists as made arrangements to supply medicines at any hour, both on Sundays and week-days, and should be a deduction from the drug suspense fund.

It was also resolved that a circular should be sent to practitioners advising them not to sign the new agreements while matters that had not been satisfactorily settled between the Insurance Committee and the Local Medical Committee were outstanding.

A conference was held at Lewes on April 7th between the Medical Benefit Subcommittee and the East Sussex Medical Committee, when Mr. W. HAVILAND, Chairman of the Medical Benefit Subcommittee, presided.

Fees for Anaesthetics.—Mr. Haviland stated that the Insurance Committee had no funds for this purpose, as the doctors had selected the capitation system of remuneration; but that if they desired to form a special fund for such fees, the Committee would give the matter careful consideration.

Certificates.—The Chairman stated that the Subcommittee realized that it would be more convenient that a common form of certificate should be adopted, that the form suggested by the Commissioners was unsatisfactory, and that the Medical Service Subcommittee would recommend the Insurance Committee to

make recommendations to the Commissioners on the subject. With regard to the objection made by the Medical Committee to stating the nature of the disease on the certificate, the Chairman contended that this was a matter for the insured persons to settle.

Income Limit.—The Chairman ruled the discussion of the question of an income limit out of order, having regard to the decision of the Insurance Committee.

Contracting Out.—The Chairman stated that the Insurance Committee had resolved that persons could only be allowed to make their own arrangements in exceptional circumstances, but would carefully consider every case on its merits.

At the meeting held on April 16th, the question of prescription books was considered, and it was agreed to write the prescriptions in triplicate. A special form of book with 150 leaves was designed and ordered to be submitted to the Insurance Committee.

Temporary Residents.

At the meeting held on May 21st, the following resolutions relating to temporary residents were passed:

That the East Sussex Medical Committee, while approving the system of payment by attendance and accepting the scale of fees set out in Memorandum 161/I.C. of the National Health Commissioners regarding temporary residents, is of opinion that it would be unjust that the fund from which such payments are to be made should be deducted from the capitation fee of 6s. 6d. which the Government has agreed to pay.

The Committee is further of opinion that the Government should undertake to pay in full fees for attendance on temporary residents, and that it would be more satisfactory if the same system were adopted in the case of temporary removals within the county area as well as in that of temporary removals from other insurance areas.

KENT.

A MEETING of the Kent County Medical Committee was held on May 26th at Maidstone. Dr. A. MAUDE (Chairman) and eighteen members were present.

Allocation of Insured Persons.—The CHAIRMAN stated that the Districts Subcommittee had recommended that the allocation of patients should be carried out with the approval of the District Medical Committees and practitioners.

Staffs of Infirmarys and Hospitals.—The CHAIRMAN reported that the Medical Benefit Subcommittee had not declined to permit contracting out of insured staffs of workhouse infirmarys, but, on the recommendation of the Kent County Medical Committee, had agreed that the insured staffs of voluntary hospitals should be allowed to contract out if they so desired. The resident medical officers of such hospitals would not be placed upon the county list.

Medical Attendance on Dependants of Insured Persons.—The scale of fees for the treatment of dependants of insured persons in Gillingham was considered, and the following resolution was adopted:

That this Committee thinks it is a very inopportune time for the Kent Insurance Committee to take any steps in supporting any scheme of whole-time panel doctors in any attempt to obtain practice among dependants of insured persons at any price, as in their view it must cause more friction between panel and non-panel doctors, which it should be the endeavour of the Insurance Committee to allay.

Renewal of Agreements.

The following resolutions were adopted:

That this Committee recommend that the medical practitioners who signed agreements until July 15th be advised to again sign for no longer than until September 15th.

That the Executive Committee be instructed to draft representations to the Kent Insurance Committee for such concessions and alterations to agreement as they may consider necessary.

Co-optation of Members.—Drs. Scott and Starling were co-opted members of the Committee as President and Honorary Secretary of the Branch Council, owing to their residence in Kent.

TUNBRIDGE WELLS.

At a meeting of the Tunbridge Wells District Medical Committee, held on May 20th, it was reported that it had been recognized by the Commissioners.

The following resolutions were adopted:

A fee of 1s. be charged for each certificate required before the third day.

That a letter be written to the Kent Medical Committee pointing out the desirability of appointing a medical referee.

That this Committee advises all practitioners on the county list to refuse to treat insured persons temporarily resident outside their own district except as private patients until arrangements satisfactory to the profession have been formulated by the Commissioners, and also to decline to agree to any deduction from the amount which they should receive, under their agreement for a capitation payment, for the purposes of forming a fund for the provision of medical benefit for temporary residents.

The following matters were deferred to the next meeting: Method of allocation, scale of fees for anaesthetics and assistants, drug tariff, meeting of the practitioners in the district who are on the county list.

LEEDS.

Temporary Residents.

At a meeting of the Leeds Local Medical Committee, held on May 22nd, Form 159/I.C. was discussed, and the following resolution was unanimously adopted:

That the scale of fees mentioned in the memorandum was satisfactory, but that the Insurance Commissioners should also be informed that this Committee protests emphatically against any agreement being made for holiday makers and convalescents, nor does it think such a course at all wise, as introducing an element into the working of the Act which is unwieldy and extremely difficult. Furthermore, it is pointed out that the proposed arrangement foreshadows an alteration in the rate and method of payment, which is a breach of the agreement signed by every doctor on the panel, and to such a breach of agreement the Committee cannot agree.

WIGAN.

A LOCAL Medical Committee for the county borough of Wigan has been constituted, and will hold office for twelve months. The Chairman is Dr. E. H. Monks, and the Honorary Secretary Dr. Thomas Campbell (Platt House, Platt Bridge, near Wigan), the total number of members of the committee being twelve.

Dr. John Blair and Dr. T. M. Angior have been appointed medical representatives on the Insurance Committee by the council of the county borough, and Dr. Ferdinand Rees by the Insurance Commissioners.

MEETINGS OF INSURANCE COMMITTEES.

LONDON.

THE London Insurance Committee sat for two hours on May 22nd, practically the whole of the time being occupied in dealing with medical questions.

Distribution of Unallotted Funds.

The Medical Benefit Subcommittee reported as to the distribution amongst doctors on the panel of £34,000 which had accumulated during the first quarter in respect of 400,000 insured persons who had not chosen a doctor. The subcommittee felt that the most equitable method of distributing this money would be according to the number of patients actually treated by each practitioner, but the data available was insufficient for payment to be made on this basis. Methods of payment in equal shares and payment in proportion to the number of accepted persons on each doctor's list had been considered. The latter method had been suggested by the committee representing the practitioners on the panel, and the subcommittee, after careful consideration, concurred with this view. The attention of certain doctors had been drawn to the fact that the Committee viewed with some uncertainty the possibility of adequate treatment being provided in cases where an exceptionally large number of insured persons had been accepted by a practitioner, and the subcommittee thought it would be inadvisable to pay any medical practitioner with over 2,000 persons on his panel list any of the moneys in the fund which had not yet been allocated.

The CHAIRMAN (Mr. J. A. Dawes, M.P.) moved a resolution in accordance with the subcommittee's report.

Mr. P. ROCKLIFF asked if the meeting could have chapter and verse for the right of the Committee to allocate the money amongst the doctors at this time. He could not find anything bearing on the matter.

The CHAIRMAN: The justification of the subcommittee's recommendation is Circular 10/I.C. of February 18th.

Mr. ROCKLIFF suggested that the Act or the Regulations, and not a circular, should weigh with the Committee.

The CHAIRMAN (after examining a document): Circular

10/I.C. does not refer to any Regulation or section of the Act. As this point has been raised—and it is an important one—I think I shall have to withdraw the recommendation.

Dr. H. H. MILLS reminded the Committee that the point had been before it for some time. In many districts Insurance Committees had already allocated the money accumulated in respect of persons who had not chosen a doctor.
