THE BILL-BROKERS AND THE BANK OF ENGLAND.

IS A COMPROMISE POSSIBLE?

The dispute between the bill-brokers and the Bank of England, in consequence of the habitual exclusion of the former from the Discount Office of the latter, still continues. There has been of late much oral discussion on the subject in Lombard street, and some pamphlets have been written about it. If the interest of the parties themselves were only in question, we should not interfere in the controversy,-we should leave it to be settled as other matters of business are settled; but as the interest of the public is concerned also, we wish to say a few words on it.

The interest of the public is concerned in this way. The bill-brokers of Lombard street hold a large part of the banking reserve of the country. Both London bankers and country bankers deposit with them, at call or on short notice, the sums of money which they are either unable or unwilling to employ in their own business. These are the sums which the bankers first resort to in time of pressure, and which they rely upon to meet unforeseen and sudden demands. The bill-brokers are in some sense "the bankers" "bankers"; they keep the unemployed balance of bankers, just as bankers keep the unemployed balance of the commumity at large.

The safety, therefore, of the great bill-broking houses in Lombard street is a matter of grave concern. We are all interested in the safety of our bankers, and most of our bankers are interested in the safety of the bill-brokers. It is almost of national importance that the trade of the billbrokers should be conducted as soundly as possible by themselves, and be interfered with as little as possible by others.

It is impossible to deny that this trade was formerly conducted on principles which are by no means sound. The bill-brokers held very large sums of money payable on demand, and they kept no reserve to meet them. There was a sort of agreement—not a definite compact, but a loose understanding—that the Bank of England would always advance to the bill-brokers any amount they might require, so long as they had good bills to offer as security for it.

After the panic of 1857, the Bank of England declined to continue this practice. They now say to the bill-brokers, —'You are bankers as much as we are, and you must keep 'your own reserve just as we do; we cannot engage to help 'you in a time of panic; we cannot say that we will keep 'large sums in readiness for you whenever you require 'them: you are our competitors in quiet times; you must 'not come to us in troubled times.' The reasonableness of this course can scarcely be gainsaid. The bill-brokers under the old system were not regular customers of the Bank of England; they kept no money at the Bank; they had no regular and continuous discount account there; they were perpetually competing with the Bank; they were reducing its profits at the very time that they were relying on it for their safety.

No. 867

On the other hand, however, the inconvenience to the public that may under certain circumstances arise, from the absolute exclusion of the brokers from the Discount Office, is undeniably great. It is little felt in times of quiet, but it may be much felt in times of anxiety. We feel that we are speaking on a most delicate subject. We do not wish to speaking on a most delicate subject. We do not wish to allude in any manner to the credit of individual houses, or to any circumstances that, even in a remote degree, relate to But still it is certain that, in the next panic, the credit of the bill-broking firms cannot be as good as it was in the last. Then it was understood that the Bank would advance to them what was required for their stability; and in matter of fact the Bank did so advance; the firm of Messrs Saunderson only failed because they had no more proper securities to offer to the Bank ;--now it is understood that the Bank will not so advance, let the results be what they may. It is inevitable that so great a change must tell greatly on the credit of the bill-brokers, and must tell unfavourably. It is said that the bill-brokers may protect themselves by refusing to discount; but in practice this is not so easy. It is not pleasant to tell a regular customer that you cannot lend him what you have always lent him, and what he has had reason to expect you will lend him. A few rough refusals to dis-count would soon injure a bill-broking or a banking business; the sounder part of the trading community like to be sure of having certain stated advances at certain stated times; and they will be disinclined to deal with parties who may be compelled peremptorily to refuse such advances when they are most required. Moreover, abruptly refusing to discount at the commencement of a panic is a sure way to aggravate that panic. It causes more conversation, uneasiness, terror, than any other step which could be taken. The billbroking firms may, at the early stages of the next panic, de-cline at once to discount, but we fear it would not improve their position ; we believe it would impair their credit exceedingly. Considering, therefore, that the credit of the large discount houses is a matter of national concern-that any injury to it may at a time of anxiety cause the ruin of thousands who never ought to be ruined, —we cannot but regret that the rule of the Bank should have effects so unfavourable to it.

Is, then, a compromise impossible ? We have seen that the rule of the Baak is founded on sound principles, but may not the bill-brokers by a real change in their system bring themselves within those principles ? The rationale of the Baak regulation is this : a baak, it 'is

The rationale of the Bank regulation is this : a bank, it 'is ' justly said, ought only to engage to advance, as a rule, defined ' sums to regular customers : as the bill-brokernare not regula

H S L

<sup>4</sup> customers of the Bank, they have no claim upon it : there is <sup>5</sup> no reason for their having an exceptional privilege.' But why should not the bill-brokers become regular customers of the Bank? The bill-brokers. it is evident, must now keep some reserve : unless they do so, now that they have no access to the Discount Office of the Bank, their position is not safe for a day. In fact, it is stated that the highest class of them do keep a reserve. But why should they not keep it at the Bank of England? If the bill-brokers habitually kept a large balance to their credit at the Bank, and would have a right to be treated as other good customers are. They would have a right to make terms. 'We shall want, or we may want,' they would be able to say at certain times, 'certain sums ' of money:--will you advance us those sums?' It would be quite within the rules of good banking that the Bank should say,---"Yes, we will lend you them. We will do for you as ' we do for other people what you make it worth our while to ' do. As you give us the use of a large cash balance on all ' ordinary occasions, we will lend you sums not exceeding a ' stated amount on extreme occasions.'

The distinctness of the limit of such advances is an essential element in the legitimacy of the compromise. A banker never ought to engage to make unlimited advances to any one, on any security, for any motive. He has no right to undertake to do what he may not have the money to enable him to do. But if only a limit be fixed to the requirements of the brokers, we think they may safely be placed on the footing of other customers; they may have such advances as their account will justify. We should much regret to hear that they had more, and equally regret to hear that they had less.

#### "THE SITUATION" CALMLY REVIEWED.

In our last week's impression we expressed a belief that the annexation of Savoy, the mode in which it had been effected, and the assurances and denials by which its consummation had been preceded, might—if the warning were duly interpreted and laid to heart-prove an indirect source of and tranquillity for Europe. But we should be sorry to lull our countrymen into fallacious or unwarranted security. Forewarned is forearmed; and without becoming alarmists we think it most desirable that all men-merchants as well as politicians-should carefully consider all the features pre ented by the present aspect of the Continent and all the rocks-a-head which a dispassionate observation can discover and lay have. It is foolish to pretend a comfort or tran-quillity which we are far from feeling; to shut our eyes to obvious dangers, or to "cry 'Peace, Peace,' when there is " no peace"--nor, as far as we can discern, much prospect of peace for some time to come. We do not fear immediate rupture, nor any definite scheme of hostility; but we cannot disguise from ourselves that the position of affairs abroad is becoming singularly complicated, embarrassing, and uneasy, and calls for a more than ordinary amount of sagacity, vigilance, and resolution on the part both of the British Government and the British people. A simple and obvious peril may be met and averted—and it would not become a pern may be met and averted—and it would not become a great nation to manifest extreme anxiety in the face of such ; but the *perplexities* arising from a variety of opposite and crossing contingencies, all imminent and all grave, constitute a very different difficulty to deal with ;—and it is precisely this *perplexity* which is to our minds the peculiar feature of "the Situation."

Savoy and Nice are annexed to France—Tuscany, Lombardy, and the Emilian Provinces to Piedmont. But these arrangements, which might seem to be the termination of the "Italian question" which has kept us in hot water for 18 months, are, in truth, only the commencement and the signal for fresh imbroglios. They are less the settlement of a conflict than the opening of a crisis. The *natural* complications and inevitable dangers are vast enough in themselves; but they are enormously aggravated by the fact that they are used by an inscrutable and unquiet will, seated at the Tuilleries and brooding over the confusion—a will whose plans we cannot penetrate, whose designs may not, perhaps, even be clearly formed as yet, but of which we know only that it is morbidly and incurably restless, and that its hopes and purposes do not and cannot harmonise with our own. Cast a glance at Naples to begin with. The Monarch,

weak and bad, at the head of a considerable army and an ignorant and somewhat brutal population, is oppressing and maltreating all that is wealthy, noble, or respectable in his dominions, in a fashion which indicates almost a settled determination to drive them into frenzy and revolt. England and France remonstrate and advise, and get laughed at for their pains, because the King knows perfectly well that their views with regard to his dominions are wholly discrepant ; that they will not combine to coerce him into decency; and that without the aid of one or the other, his own subjects are powerless to drive him out. The Neapolitan Bourbons are incurably bad: both France and England have now arrived at this conclusion : a republic would be welcome by no foreign State, and would have little real root at home: France would fain establish Muratthere, but this England will not listen to : England probably would fain see Naples joined to Piedmont as one great Italian Kingdom, but this H rance will certainly oppose. It would appear, therefore, as if the continuance of the actual state of things were impossible, continuance of the actual state of things were impossible, and either of the only yet proposed changes were equally so. A third solution—which is at least possible—has not yet re-ceived the consideration to which it is entitled. Why should not Murat be reinstated at Naples, which never was so well governed as under his grandfather; and why should not Sicily-which was never under Murat--be united to Sardinia, as it once was and wishes to be again ? Meanwhile, however, the Neapolitan territories may any day be in flames, which will almost necessitate European intervention to extinguish them.

Again : The scarcely formed kingdom of Central Italy (or whatever name it may ultimately assume) is menaced with disturbances on both its South-Eastern and North-Eastern frontiers, and this even before the amalgamation of its recently acquired Provinces is fairly carried out. Romagna, it must be understood, includes only about half the Adriatic portion of the Estates of the Church, terminating near Rimini. Now, the remaining or Southern portion of these Provinces East of the Appennines, usually called *The Marches*, are in-habited by a population similar in character to that of the Legations, and every whit as hostile to the Papal rule. Even now they are kept quiet with the greatest difficulty: they groan under and resent the lot which makes the brethren free citizens, yet leaves them slaves of Rome. It is more than probable that, as soon as the French forces evacuate Rome, the Papal troops will so misconduct themselves in these districts, already exasperated almost to the boiling point, as to precipitate an outbreak ; and if, m is reported, the Neapolitan soldiers are to replace the French, such outbreak may be considered absolutely certain. The suggestion of employing these troops-if made, as rumoured, by the Emperor of the French-can only be explained on the assumption that his real object is to render this outbreak in the Marches inevitable, so as either still further to embarrass the Pope, or to embroil affairs in the South of Italy in order to give himself a pretext for renewed The asserted appointment, with his sanction, interference. of General Lamoricière to the command of the Papal troops, is scarcely explicable on any supposition whatever. It is true that the Orleanist or Parliamentary Party have always been disreputably remarkable for their dislike and distr of the Italian Liberals, and some of them even for their adhesion to, and professed admiration of, the Papal Government; -but it is difficult to believe that so distinguished and honourable a member of that party as General Lamoricière has always been esteemed, should have sold himself either to the Emperor or the Pope. So we can only hope that the news of his nomination is not true. In any case, however, the peril is very great; for whether there be a voluntary in-surrection in the Marches, or whether the Papal forces so behave there as to call forth the too vivid sympathy of their nowfree Romagnese brethren, or whether the principle of nonintervention be again violated by the entry of the Neapolitan troops, it will be almost impossible for the people and soldiers of Central Italy not to march to their assistance.

A similar peril threatens in the North. The Venetians are now suffering grievously under the Austrian yoke: they are nearly maddened by the combination of fresh severities and cruelties with the bitter disappointment of their recent hopes; and they earnestly stretch out their hands to Piedmont for sympathy and rescue. The moment the new Kingdom is consolidated, the pressure will be tremendous (

1

1

#### THE ECONOMIST.

upon Victor Emmanuel to aid them, both on the part of his new subjects and his old ones. If he steadily refuses, he will lose much popularity and will encounter a degree of internal opposition which will greatly weaken his Government :---if in an evil hour he consents, or is dragged into the conflict in spite of all his efforts, he will find himself at the head of an ill-amalgamated and incomplete Kingdom, involved in a fresh war with Austria, in which France will either stand aloof, or drive her own hard bargain for assistance. Thus, both on its Southern and its Northern frontier the new Kingdom may be forced to fight almost for its existence with Austria, the Pope, and Naples, and with no ally.

The case between Savoy and Switzerland is more immediately and obviously, if not more certainly, menacing to the peace of Europe. On this point, serious as it is, we need say little, for it is fully before the public and is in every body's thoughts. It is not very probable that the Emperor will consent to abandon his grasp on Chablais and Faucigny in deference to the uneasiness and remonstrances of the Great In deterence to the uncashess and remonstrances of the Great Powers of Europe. It is not very probable that these Powers, who are all specially bound by treaty, even where not specially interested, to maintain and protect the neutrality and independence of Switzerland, will be persuaded to consent to an arrangement which so seriously compromises both ; -for there is no doubt in the mind of any one who knows the country that the possession of these Provinces gives not only the command of the adjacent Swiss Cantons,viz., Geneva, Neufchatel, Pays de Vaud, and the Valais, -but also the command of the Simplon Pass and every facility for marching thence into or out of the Northern Provinces of Italy. The Emperor may make some concessions to the alarm and the protests of the other Powers, but as long as these are only in the form of promises and assurances they can avail little, and "material guarantees" or securities he will be loth to give. Those who suspect him -as who does not-of ulterior, if at present ill-defined, projects of aggrandisement, cannot fail to observe what ad-vantages the military occupation of the Lake of Geneva will give him for carrying them into effect.

The only other difficulty and complication in our impending or menacing European relations which we shall mention is If the next move of this unquiet spirit is directed against this. the Rhine, as in all probability it will be, what is to be the process of resistance? and in what way can that resistance be made successful? We do not apprehend any open and piractical attack : the probability is in favour of some artificial demonstration of sympathy and desire for annexation being got up among the adjacent Rhenish Provinces of Baden, Bavaria, or Luxembourg, under cover of which Louis Napoleon may commence diplomatic or forcible encroach-ments. If Austria and Prussia were cordially united, and had the promise of the cordial and active support of England, we do not for a moment apprehend that any such scheme could succeed, even if it were then attempted. But two points have to be considered :--what is the prospect of a really united Germany? and what is the probability of the energetic and hearty co-operation of England therewith P In the first place, the smaller States of Germany are jealous of Prussia, and attached to Austria, and if Prussia alone were first menaced, might be lukewarm in the cause: we do not do Prussia the injustice to believe that this feeling would be reciprocated were the cases to be reversed. But the danger must be very obvious, immediate, and common, which would effect a real and cordial junction between the two great German rival Powers,-between whom the events of the Italian war have increased the normal coolness, and whom the French Emperor would use every contrivance to keep asunder ;---and even were they sincerely to agree to make common cause as far as diplomatic agreement was concerned, how could they act together in the field cordially and efficiently? Who would command the combined forces? Would either army willingly right under a general belonging to the rival nation? Would Prussian soldiers feel any confidence in chiefs who so frightfully mismanaged the Italian campaign? Would not the first battle or piece of strategy display the inherent weakness for active purposes of the Germanic Confederation?

In the second place, though England should be disposed most earnestly to second the efforts of Belgium and Prussia, —and of Germany if Germany were to become a really

XUM

united Power,—the difficulty of our position would appear the moment we found ourselves fighting side by side with Austria. Such an alliance might approve itself to our statesmen—might even be wise, just, and necessary ; but it would never be welcome to the English people. If Austria were again engaged in a war with France on behalf of German interests and the German frontier, Hungary and Venetia would assuredly be up in arms for their emancipation, either of their own motion or at the instigation of the French Emperor;—and in such a case our sympathy would go with them, and against the ally by whose side we were fighting;—and such divided feelings could not fail to sap our strength and paralyse our zeal. These sentiments would find echo in our Parliament, and would hamper the action of our Ministers. They would be known and well understood by Austria, and would naturally sow mistrust between us and her.

These difficulties, we may be sure, are perfectly well un-derstood by Louis Napoleon, and give him an enormous advantage, which he will use to the uttermost. The plans and hopes of Russia in the East, he may so assist or promise to assist, as possibly to induce that Power to remain a quiet spectator of his proceedings in the West :---Italy is still and always on the brink of insurrection and war both in the North and in the South-a condition which he can any moment foster and irritate into an open catastrophe ;-a fresh conflict with Piedmont would so occupy Austria as to make her almost powerless to resist him in Switzerland or on the -as matters now and usually stand, a cordial alliance Rhine ;between England and Austria is almost impossible; and an honest and efficient junction of national forces between Austria and Prussia is scarcely less so. Meanwhile, all Europe is kept in hot water, and will remain so as long as he pleases. There is one remedy, and only one, that we can see. But it would be a most complete, permanent, and instantaneous one. Let Austria at once resign Venetia on payment of an ample value, and restore to Hungary her ancient constitution. She would by one stroke recover the affections and the cordial aid both of subjects who now abhor her and of allies who now stand aloof from her in irrepressible antipathy : she would become as powerful as she was of yore :--Louis Napoleon, with all Central Europe against him, would be reduced to inaction and comparative impotence for mischief, and we might have peace and freedom and prosperity assured to us for many generations.

#### MR WILSON'S PLAN FOR A PAPER CURRENCY IN INDIA.

It is rather curious that we have received by telegraph the account of Mr Wilson's speech on the introduction of a Bill for the creation and regulation of a paper currency in India, just at the moment when his Minute, dated Meerut, 25th December, 1859, has been laid before Parliament. We do not in general lay long extracts from Parliamentary documents before our readers, and they would rarely thank us to do so. But, in the peculiar circumstances of the present case, we think our readers will, probably much prefer to read Mr Wilson's description of his own proposal.

He begins by explaining the advantages of a paper currency, and by alluding to some previous discussions which have taken place at Calcutta upon the subject. He then proceeds thus:--

"10. But in order to render paper, which has of itself no intrinsic value, a safe and useful substitute for coin, there are certain conditions which must attach to it. These may be thus stated :---

- "First, The paper must be identical in exchangeable value with the coin it represents:
- "Second, To be identical in value it should be identical in quantity with the coin which is displaced by its use, so that, in point of fact, the mixed currency of notes and coin would be of the same amount as if it were wholly of coin :
- "Third, All the laws which would determine variations in the quantity of coin in circulation from time to time should apply equally to a mixed circulation of coin and paper; the latter not being an addition to the currency, but only a substitution of a portion of the coin which would otherwise be required :

"Fourth, In order that paper should perform all the functions of coin, it is essential that it should be a legal tender for all payments, except by the issuers, by whom it should be convertible into the coin it represents at the will and on the demand of the holder.

"11. In order to obtain all these conditions of a safe and secure paper currency, and to maintain its value at all times to the full of the coin it represents, and so to prevent depreciation, the great essential is that it shall at all times be readily convertible, on demand, at the will of the holder, into such coin, on presentation to the issuers of the paper.

"12. But it is not enough, and especially in a country like India, where the system is new and credit in such issues has yet to be created, that the convertibility of paper shall be professed or even enacted by law; it is needful that such a suitable reserve of silver shall be provided and maintained as shall ensure such convertibility at all times, and, moreover, that assets of an undoubted and available character shall always exist sufficient to represent the entire amount of such issues especially set aside and appropriated for that purpose. And it is worthy of remark, that it is exactly in proportion as such provisions are known to exist for the security of a paper currency that the circulation will be freest, and that "13. By maintaining at all times a fixed proportion of sile-

"13. By maintaining at all times a fixed proportion of silver to the amount of notes in circulation, and convertible public securities for the remainder, not only is the immediate convertibility of any probable portion of notes likely to be presented provided for, and the ultimate payment of the whole specially secured, but a natural and self-acting limit is placed upon the amount of the circulation, a limit which would expand and contract according to the wants of the community, in the same manner and to the same extent as a purely silver currency would do. "14. It will be readily admitted that, these conditions being

"14. It will be readily admitted that, these conditions being attained, we should have a perfect paper currency, fulfilling all the legitimate advantages to be derived from so economical a substitute for coin, and, at the same time, perfectly sourced against any of the abuses to which it is liable.

"15. Such being the case, it remains to be considered in what way these principles can best be applied in India; and these considerations will naturally be ranged under the following heads:—

- "First, The agency through which such issues should be made :
- "Second, The manner in which the essential securities and conditions laid down can be best applied, and the machinery necessary to secure their continuance and permanency:
- "Third, The functions of the body entrusted with the issuing of such paper :
- "Fourth, the denomination of the notes to be issued :
- "Fifth, The securities to be taken against forgery.
- "First, then, as to the agency through which issues shall be made. Paper money is issued usually either by govern-ments or banks. The main objection to governments undertaking these functions is the neglect which has usually existed as to any strict regulations by which they could be bound to the necessary precautions for maintaining the convertibility of the note, and thereby placing such a limit upon the amount of issue as should secure its identity of value with the coin. The consequence of the absence of such a check has too frequently been to lead to over-issues and great depreciation of the value of the notes. As Sovereigns have to frequently not hesitated to tamper with their coin, by reducing its intrinsic value, so they have abused their power of issuing notes by making them inconvertible, but at the same time a legal tender. The two vices are similar at the same time a legal tender. The two vices are similar in their character. Otherwise, and upon general considerations, it might fairly be thought that governments were the best agencies through which notes could be issued, as their credit may be supposed to be the highest in the State, and inasmuch also as the credit of individuals or of private corporations could hardly be made the basis of a legal tender. And no doubt this would be the case, provided any means could be discovered for placing an independent check upon the amount of issue, and of taking security for the maintenance of a sufficient metallic reserve to guarantee the convertibility of the note. The absence of such independent checks hitherto has led to the common practice of leaving the issue of notes to banks,

public and private, although the functions of issuing notes is not necessarily part of the business of the banker. few examples, however, exist where an attempt has be made to give to such notes the character of a legal tender. This has necessarily resulted from the absence of any absolute guarantee which the State has taken for the payment of such notes. The private and joint stock banks in England, Scotland, and Ireland furnish no security whatever for their notes, although by the Acts of 1844 and 1845 and in fixed limit is placed upon the amount of their issues. In France, the Bank Their notes are not a legal tender. of France gives no security to the State, nor is there any attempt made to place a limit upon its issues, except that which arises from the condition that the notes shall always be convertible, and which, as long as that condition is maintained, will no doubt act as a natural limit. But no security is taken for the maintenance of a metallic reserve, or for the ultimate payment of the notes. Although therefore, the question has often been raised before the Government whether the notes should be made a legal tender, it has, on these grounds, up to this time, declined to adopt the suggestion. In the State of New York, and in other States of the Union, notes are issued by all the banks, but by law they are compelled to deposit with a public department public stocks of the State or of the Union to the full amount of their issues, which are held as a specific security for the ultimate payment of the notes. The notes are convertible at pleasure by the banks, but no arrangement exists for ensuring the main-When, theretenance of a specie reserve for that purpose. fore, those banks temporarily suspended payments two years ago, the notes fell to a slight discount, notwithstanding the fact that the State held security for their ultimate payment. The notes are not a legal tender. Indeed, it may be laid down as a rule to be strictly observed, that if notes are to be made a legal tender without any risk of their abuse, two conditions are requisite :-

"First, That a provision should be strictly maintained for a sufficient metallic reserve to ensure the immediate convertibility of the notes at all times :

"Second, That there shall be absolute ultimate security for the payment of the notes.

These two conditions for a legal tender paper money are somewhat inconsistent with the other business and obligations of banks. Banks of issue have a variety of claimants; depositors, holders of their drafts or bills of exchange, and note-holders. To set aside so large a portion of their assets in coin and securities as would be required to cover their note issues, for the particular use and security of one class of their creditors, would be to reduce the security of the others, and, in the event of failure, would lead to a direct preference to one class of creditors to the injury of the others.

injury of the others. "16. The nearest approach that has yet been made to the conditions I have laid down as necessary to secure a paper issue of legal tender is in the case of the Bank of England, under the Act of 1844. By that Act a separation has been made between the two branches of the business of the Bank; the one being called the Issue Department, and the other the Banking Department. The functions of the Issue Department are only to issue notes for coin, or in the purchase of bullion, and to exchange bullion or coin in redemption of their notes. The functions of the Banking Department are those of a general banking business in all its parts. In theory and in practice, inside the walls of the Bank, the two departments are as much separated and as independent of each other as if they belonged to two separate bodies. In the Issue Department a certain proportion of bullion is always held regulated by law which secures the immediate convertibility of the notes, and the balance of the issues over that amount is represented by Government securities. There would, therefore, appear to be ample security both for conwertibility into coin, and for ultimate payment of the notes, which are constituted a legal tender. But there is this dewhich are constituted a legal tender. But there is this de-fect in the plan, which, however, in the case of the Bank of England, is of little consequence. The Bank of England, as a whole, is a single corporation of proprietors, and however it may be able to make such separation of its functions, yet it cannot by that separation, even under the direction of the Act of 1844, set aside and earmark any part of its ass for the sole benefit of a particular class of its creditors the

[April 7, 1860.

#### THE ECONOMIST.

note-holders. It is, therefore, undoubted that, notwith-standing the appropriation of the bullion and securities in the Issue Department to the notes, the whole assets of the Bank are in common liable to meet the demands equally of all the creditors of the Bank. In the case of so wealthy an establishment as the Bank of England, with a paid-up capital and reserve of profits amounting to about seventeen millions sterling, and whose trans-actions and positions are at all times so open to the public by means of their weekly returns, this defect in the application of the principle insisted upon can only be regarded as nominal. But it would be far otherwise were it attempted to create in India a bank of corresponding magnitude. In order to be profitable it would necessarily have to embark in all the ordinary business of banking, and, however prudently conducted, there would be all the early risks attendant upon commercial success : and it would be a long time before the same confidence could be reposed in it as there now is in the Bank of England. To make such a new bank, therefore, the instrument for supplying a paper currency of legal tender, it would be necessary to make an actual separation and appropriation of bullion and securities for the purpose, and not a mere nominal one, as in the case of the Bank of England. And such an actual appropriation of a large portion of the assets of a bank to one class of its creditors would be inconsistent with the just claims of others, and would be so injurious to the credit of the establishment as to be impracticable.

"17. But if the objections to a legal tender note circulation by banks generally are so strong, in India they become much more so. If it is desirable to establish in any country such paper money, it is essential that it should be of general use throughout, and issued under a single authority. We have only to consider how impossible it would be for any banking establishment to extend its agencies over the greater part of India, to see that no such bank could possibly fulfil the functions of conducting universally the circulation of notes.

"18. But, on the other hand, if there are special reasons why this function could not be performed by banks, there are very special grounds which point to the facility which the Government of India possesses more than any other government in the world for such a duty. In the great capitals of the Presidencies, and in many of the large emporiums of trade, little difficulty could arise, however the circulation might be conducted, but it is the Government alone that has agencies established in every part of India, however remote. Moreover, it is through these agencies in the collection of land and other revenues, in the payment of troops, in the purchase of commissariat stores, and in disbursements for the performance of public works, &c., that a great bulk of all the monetary transactions of a great part of India takes place; and therefore, whatever may be the currency in use, it is really constantly passing out of and into the Government treasuries.

"This fact alone would secure to notes issued by the Government not only the most extensive use, but their being available for payments of revenue would instantly establish them in high credit with the people.

"19. I have no doubt, therefore, that the only means by which a paper note circulation can be extensively applied to India, such as shall be universally current, and can be safely made a legal tender, is through the agency of the Govern ment, and that it possesses means particularly favourable for the useful exercise of such a function.

"20. This brings me to the second head for consideration, the manner in which the essential conditions already laid down as needful to maintain the convertibility of the note at pleasure, and in any case its ultimate security, can best be applied. What we have to do is not merely to lay down theories which ought to be complied with, but also to erect a machinery as simple as possible for securing the prac-tical observance of the rules necessary to give effect to those theories.

"In order to do this I would propose, in the first place, that the functions to be performed by the agency to be erected should be confined exclusively to those now performed by the Issue Department of the Bank of England; i.e., to the exchange of notes for coin and bullion, and the payment of notes in coin or bullion, and in issuing orders for notes at one branch for bullion or notes received at another, on such conditions as may be fixed; and that it should undertake no other

business of any kind whatever, either for the Government or for others. I see no advantage that could arise from em-ploying this agency for the deposit of the public balances, while such a connection might endanger that perfect separation from the Government finances and expenditure which I hold to be necessary in order to maintain the complete integrity of the system. In order, then, to avoid any danger of the system being tampered with by the Govern-ment of the day, the duties connected with the issue of notes should be entrusted to officers rendered as independent as possible of the Executive Government. They might be appointed by the Governor-General in Council, but they should not be removable except by the Secretary of State; and their functions should be strictly defined by an Act of the Legislature, to which they should be bound to adhere,

265

under heavy penalties. "201. The establishment which I would erect for the objects described would be in connection with the Mint. would form a Currency Commission, composed of one Chief Commissioner, with whom I would associate the Master of the Mint and some other public functionaries,-the Chief Commissioner being the acting officer for the management and issue of notes, while the others should form only a check upon the conduct of the department, upon the reserve of coin to be maintained, and upon the stock of notes in hand, in the same way that certain public functionaries at all our commissariat stations exercise a check upon the chest. Deputy-Commissioners would be appointed, one for each currency circle into which the country would be divided, in the manner hereafter described, with whom would also be joined certain other public officers who might be found at the station, whose duty it would be periodically to check the balances of cash and notes of the local issuing department.

21. The business of the Commissioners in Calcutta should be :-

"First, To manufacture all the notes required, not only for their own district, but also for the whole of India. For many reasons, which is not necessary to refer to, it is essential that all the notes should be made at one place, but, following the practice of the Bank of England, the notes intended for the use of different provincial circles would be dated from the centre at which the bank of issue of the circle would be placed. As, however, the numbering and dating of the notes is a separate process of printing, the whole stock of the half completed notes would be available to be completed for any circle as they might be required from day to day : Second, To exchange with the Treasury and with private

persons, on demand, notes of the district for coin, and coins for notes of the districts :

Third, To purchase silver bullion and foreign coin at the fixed price per onnce, thus giving the importer of silver the opportunity of converting his silver at once into money, and avoiding the inconvenience such as was recently felt at Bombay, when money could not be obtained for silver, simply because the Mint could not turn out coin sufficiently fast; this would be giving to the merchants in India a similiar facility for disposing of their silver at once for notes or coin as the London merchant possesses of disposing of his gold to the Bank of England:

Fourth, To supply from day to day the demands of the local

- issuing banks with notes, keeping accounts with each : "Fifth, To purchase and hold public securities, to whatever extent should from time to time be deemed advisable, and which should be in conformity with the regulations laid down by law:
- Sixth, To give orders upon district issuing banks for notes in exchange for coin, or in payment for Calcutta notes, on terms to be stated and published monthly."

Although this scheme is, we believe, essentially sound, and quite sufficient to secure the convertibility of the paper currency for India, it certainly is not in accordance with the technical provisions of the Act of 1844. Under Mr Wilson's scheme, one-third of the circulation is to be kept in bullion, and the rest, or as much of the rest as is deemed expedient, is to be invested in securities. The securities are, therefore, a variable quantity, and are to be extended from time to time. Under the Act of 1844, on the contrary, the scentiles are an invariable element; the amount of them securities are an invariable element; the amount of them was fixed by Sir R. Peel. It can only be changed by an

XUM

366

Act of Parliament. It was not to be expected that this difference should escape the eye of Sir C. Wood, the chairman of the committee upon the result of whose investigations the Act of 1844 was founded. Nor has it escaped him. He observes :---

"12. Another of the duties of the Commissioner at Calcutta is described in the Minute, as ' to purchase and hold public securities, to whatever extent should, from time to time, be deemed advisable, and which should be in conformity with the regulations laid down by law.' These expressions may convey an impression, which I am well assured, is not Mr Wilson's meaning, that the Commissioners might become constantly purchasers and sellers of Government securities.

"13. The sound principle for regulating the issue of a paper circulation is that which was enforced on the Bank of England by the Act of 1844, *i.e.* that the amount of notes issued on Government Securities should be maintained at a fixed sum, within the limit of the smallest amount which experience has proved to be necessary tor the monetary transactions of the country; and that any further amount of notes should be issued on coin or bullion, and should vary with the amount of the reserve of specie in the Bank, according to the wants and demands of the public. "14. The important condition is thus realised, that the

"14. The important condition is thus realised, that the mixed currency of notes and coin should vary in quantity exactly as if it were wholly of coin.

"15. In this country, the smallest amount of notes required had been ascertained by long experience; but what that quantity may be in India, can only be ascertained in like manner; and as it is impossible, at present, to say what the minimum amount of notes in India will be, the proceedings for determining this point must necessarily be tentative and experimental."

Nothing is more curious than to observe the constant recurrence of the same points in controversies on the currency. We see in these paragraphs respecting India the same arguments which we have so often heard respecting England. As it is left by Sir C. Wood, the matter is not very clear. But we apprehend that the only practicable course is to adopt Mr Wilson's scheme for the present just as he has proposed it. When it has been introduced for a considerable period, the minimum to which the Indian paper currency will ever be reduced may be ascertained, and the invariable amount of securities to be retained in the Issue Department may be fixed with reference to it. But, until the scheme has been long in operation, this will be impossible; and, therefore, Sir C. Wood proposes to "proceed tentatively and experimentally, and to suggest no alteration in Mr Wilson's scheme for the present.

#### SOME FALLACIES ABOUT REFORM.

In spite of the small amount of hearty assent to the principles of the coming Reform Act amongst statesmen, and the small amount of active enthusiasm on the subject in the country, it might have been predicted some years back that the agitation for Reform would probably succeed. The whole Liberal party have, since the agitation for the first Reform Bill, been committed to one or two leading fallacies on the subject of Parliamentary Representation, which they are now merely following out to some of their logical consequences.

It was a favourite doctrine thirty years ago, that the suffrage was to be extended downwards till it had arrived at the lowest class who had, what was called, sufficient intelligence to exercise it. That is to say, that there is a certain minimum amount of reading, writing, and arithmetic, which just suffice to entitle a man to be a voter, and that all men who equal or exceed that limit have a natural and inalienable right to an equal voice in the government of the country. This fallacious proposition gained acceptance perhaps through another fallacy,—namely, that the opinion of a majority is more likely to be correct than the opinion of a minority, which is true only when the whole are in the same position with regard to the interests at stake, and also have the same means of judging,—that is, in the case of politics, when they have the same amount of political intelligence, judgment, and knowledge. In any other scientific question, no one would think of arriving at a decision by the votes of a

majority of a body composed of the highly skilled, the moderately skilled, and those who had merely acquired the rudiments. Why the science of government and legislation should have so different a treatment, it is impossible to see. Moreover, in any other practical matter no one would think of arriving at a decision by the votes of a majority of a body representing only a one-sided interest in the result of the decision. Yet, when you throw the whole of the legislation of a country into the hands of a single class, you deliderately provide for a partial decision,—and, in the present case, for partiality unmodified by high intelligence.

The wide acceptance that this latter majority-fallacy, as it may be called, has obtained, can only be accounted for by the unconscious adoption by the reasoner of a third fallacy, -namely, that representative or constitutional government is founded upon some natural right of the governed to assent to the form of government under which they live. In a monarchy, whether constitutional or otherwise, it is of course absurd seriously to advance such a proposition, as neither the Crown nor the House of Lords, as parties whose assent is necessary to any new legislation, could stand be-fore such a test. Therefore, merely to state the doc-trine is a sufficient refutation of it to all but advocates of a democratic republic. But even the advocates of a democratic republic, if forced to work out their theory of natural right, would in the end be driven to aban-don it, or to take refuge in fresh fallacies, for the assent of a majority of adult males is not the assent of the whole people. It is, however, necessary to admit, that the doctrine of a government according to the will of the majority of adult males in a nation being founded on natural right, is the least obviously illogical of the fallacies we have noticed; for it is, at all events, the best attempt at working out the idea of the natural right of the governed to assent to the government under which they live, and an attempt which fails only from the obvious absurdity of counting the voices of women and children. For this reason the doctrine of universal and equal suffrage is, in fact, more tenable than any of the other fallacies we have noticed, and on this ground it is that we assert that the present Reform Bill might have been predicted from the opinions advocated by the Liberal party during the last thirty years. In the same way, it with equal certainty be predicted that the lowering of the suffrage cannot stop at the present Reform Bill, or at any point short of universal suffrage, unless sounder ideas on the theory of representative government are adopted by the thinking classes, and *bonâ fide* introduced into the constitution. The arbitrary drawing of the line of minimum intelligence at the 61 householder can no more be permanently sustained than the placing the same limit at 10/. The adoption of any such arbitrary line, coupled with the equalisation of all grades of intelligence above the limit, is utterly indefensible upon any theory :- it is not a government by the most educated and intelligent ; or all grades of intelligence would not be placed upon a level :--- it is not a government by classes; for all classes above the limit are placed upon an equality :---it is not a government by numbers; or there would be no such limit :----and, finally, there is little reason to suppose that the intelligence of the householders between 10/ and 6l is in any respect greater than that of the additional body of voters who would be admitted by universal suffrage. A position logically so weak, must therefore give way before even a feeble assault. It was easy for the advocates of extended suffrage to say that the limit of 10/,-proper enough, perhaps, when the first Reform Bill was passed, -has become too high, now that education has been so much extended. And it will be equally easy and equally unan-swerable to say the same of the 6/ limit some 20 years hence; and, inasmuch as the appeal will be made to a now extended and lowered constituency, it will, probably, find a still more ready acceptance. And the ultimate certainty of this third Reform Bill is scarcely attempted to be denied by the advocates of the present Bill, of which the favourite defence is that it will probably last 25 or 30 years !

There is still another ground, however, on which the advocates of extended suffrage are strong, and the supporters of the present system are weak,—namely, the cry,—or supposed cry, which for electioneering purposes does nearly equally well,—of the unrepresented for political rights; an argument supported by a formidable array of figures showing

[April 7, 1860.

t

THE ECONOMIST.

the smallness of the number of the present electors as compared with the total population. The logical inconsistency, therefore, of adhering to a limit of lowest intelligence fixed therefore, or adhering to a finit of lowest intelligence fixed when the state of popular education was different, and the Englishman's laudable desire to extend to others the same political rights which he himself possesses, have inevitably led to the present Reform Bill, and, moreover, must inevi-tably lead to another and another of the same character, in the character is adoption of some principle that whill the absence of the adoption of some principle that shall harmonise our constitution with some sound theory of representative government, and at the same time do away with sentative government, and at the same time do away with the outside pressure, at present chiefly imaginary, but which may hereafter become a reality, of an unrepresented mass, by taking them within the pale of the constitution.

There is, however, one cheering element in the success of the present Reform agitation,-namely, that though arising from fallacious reasoning on the part of the Liberal party, it the interests of the great middle class, without whose practical assent the Reform Bill could never pass, being, in fact, opposed to an extension of the suffrage, the effect of which to take so large an instalment of political power out of eir hands. If, therefore, the English nation can once be their hands. persuaded that the suffrage now about to be adopted is not founded upon sound principles, there is still hope that the false step about to be made may be remedied. Retraced, strictly speaking, it can never be, nor is it necessary that it should. For it by no means follows, because a numerous but little instructed class cannot be admitted to an equal voice in the government with a less numerous but better in-formed class, without disastrously lowering the character of the whole, that the most numerous class in the State must be altogether excluded from the government. The only refage from democracy is not a restricted constituency, which may be called a mild form of oligarchy. If the notion of an equal voice to every voter be once abandoned, it would become possible to take in even a much larger body than are now about to be admitted into the constituencies, without the slightest risk to the constitution. It is easy to reply to this proposal, as is constantly done, that the people will not suffer it, and that the unrepresented classes about to be enfranchised would not accept such a suffrage as a concession of their claims. However much this answer might have imposed upon people a year ago, it is now abundantly clear that there is no such paramount popular feeling to check our adoption of that which the present governing classes may on any account accept as the most just and soundest form of representative government. Having adopted extension of the suffrage as a logical conclusion from mistaken premises, it is being carried indeed, but carried without a particle of enthusiasm, as a foregone conclusion which all men are weary of discussing. Had we a race of statesmen to lead us, we might have been saved from this great error, and public opinion might have been gradually educated till the adoption of some of the many different modes by which the representation of classes in some reasonable proportion to their intelligence and capacity for governing (in place of a mere numerical rule) might have been secured. Let the possibility, however, of such a result, even after the passing of the Reform Bill now before the House of Com-mons, not be altogether despaired of. There is a vast fund of good sense and public spirit in the English people, and let them once be persuaded that a system which gives to the workpeople of a single large contractor or manufacturer a voice in the constitution equal to the united voices of all the merchants in the Royal Exchange, is not only unsound in itself, but is not the only available means of giving the working classes any voice in the constitution at all, and there will yet be hope of modifying our constitution on a basis that shall endure for ten times the period for which the new Reform Bill is warranted to secure peace and quietness to the Government.

MR WILSON ON THE AMOUNT OF THE INDIAN DEFICIT: ITS REAL CAUSE AND ITS TRUE CURE.

to which we should aim to arrive? Even if we could do so with regard to the Army, you must bear in mind that I have already shown you that, in the last three years, the interest of the debt has increased in round numbers by 2,000,0001; and there are other increased charges beyond our control. But even were this otherwise, and even if it were possible that we should be able to regain the standard of 1857, would that be wholly satisfactory? We have a deficiency of upwards of 30,000,0001 in three years, but is that a new state of things? Sir, I hold in my hand a return showing the deficits and surpluses of Indian Revenue as a whole in India, and at home since 1814 down to 1860, and what is the result ? The period embraces forty-six years : of that number we had a surplus in thirteen years amounting on the whole to 8,895,4377, a sum not equal to the deficit of the present year, and we had deficits in the remaining thirty-three years amounting in the whole to the large aggregate sum of 72,195,4167-thirteen years of surplus at an average of only 684,264/ a year, thirty-three years of an average of 5,540,000l a year. Nor was this deficit at state of things peculiar to the earlier part of the period to which I have referred. Taking the return only from 1834, when the management of India became purely governmental, we have a period of twenty-six years : of these the finances of India were in surplus only for seven years, while in the remaining nineteen years they exhibited large deficiencies. Again, Sir, I find by a return to Parliament in the last Session, that of the fifty-nine years which have elapsed in the present century, in no fewer than forty-four of those years have considerable, often large, additions been made to the Indian Debt, while in fifteen only have diminutions taken place; so that the normal state of Indian Finance may be said to be deficiency of income and addition to debt. Shall I ask, if that is a satisfactory state in which the finances of a great Empire should remain? Is that a condition to which we should be content to return ? Sir, all who have the honour, dignity, and future security of India and of her teeming population at heart, will emphatically answer-

367

We have a grave conjuncture of affairs to deal with. I think you will already begin to perceive that the evil is deeper and broader than at first it appeared. I think you will begin to see that our task will be heavier, and must extend to great questions of administrative reform, as well as to immediate questions of finance. You will, therefore, I am sure, pardon me if I feel it to be my duty to the best of my ability to unbare before you the whole extent of the evils as they present themselves to my mind. Sir, I sincerely in the free observations which I feel comtrust that, pelled in the performance of my duty to make, I shall be understood not to reflect unfavourably either upon any individual or upon any class. It is to the system, and the system alone, that I refer. Nay, I will say more. It has been a matter of surprise to me that, with so defec-tive a system, greater evils have not arisen, and that they have not, I attribute only to individual zeal and care. It is, Sir, with that system we shall have to deal, with a system under which in thirty-three years out of forty-six we have suffered a deficiency in our finances at the rate of 5,500,000/ a year, and amounting in the whole to 72,195,416/, under which we have now a deficit in the present year of upwards of 9,000,000/, and a prospective deficit in the next year of about 6,500,000/, under which our don't has increased in about 6,500,0001, under which our debt has increased in three years by upwards of 38,000,0007, and the annual charge upon it by about 2,000,0007. That is the price the Mutiny has cost the people of India. It cannot be repeated too often.

But, Sir, there is one point upon which I must remark. Until we have one central point of responsible control of Army finances, as of all others, established, it will be in vain to expect great reduction. Our first course must be to consider carefully what force is sufficient, and not more than sufficient. Our next point must be to have carefully revised estimates, what is here improperly called a Budget System, for military and all other charges, submitted to the Supreme Government annually, as they are in England to Parliament, to sanction only what is necessary, and strictly to keep every province and every department within their limits. Till you have this central financial and revenue control, it is in vain (Extract from his Budget Speech on 18th February.) I HAVE confined my observations to the period that has elapsed since May 1857. Are we to take that as a standard to look for economy;—when you have it, you may safely give

Co Est St Ti Pro

1

much greater executive responsibility to local authority. Sir, in England there is more local government than in any country in the world ; but there is no country where the central authority and control of the Government itself is so strong. And, I will add, that it will be in vain that we make improvements and reforms in our finances, if these administrative reforms do not take place. You must rely upon a sound system if you will have permanency, and not upon any indi-vidual, especially in a country where individuals change so rapidly. Sir, this is nothing new. You have had Finance Commissions over and over again. What have they done ? In looking over the archives of the Government of India, I must say, that the minutes left on record of no Governor-General have struck me with more force than those of Lord Ellenborough, and they have induced me to regret that his stay in India had not been longer. That noble Lord is a distinguished member of a great party, always opposed to that with which I have had the honour of acting, and my testimony may therefore be regarded as impartial. Sir, that noble Lord saw and understood the evil of which I speak : he warned the Court of Directors of it. On the 7th of August, 1842, he wrote as follows :-

But I cannot hold from the Honourable Court the expression of my decided and long formed opinion, that whatever diminution may be made by my exertions in the amount of expenditure will only be of a temporary character, without an entire change in the financial department, and some very material modification of the system of carrying on the Government. There is now no one officer charged with the duty of viewing the expenditure of the State as a whole, and of considering every proposed or existing item of charge, not by itself only, but with reference to the total charge upon the revenue.

Without this concentration of duty and authority in a really responsible officer, I have no hope of giving permanence to the influence of economical principles in the financial administration of India, or of even dealing satisfactorily with the details of expenditure.

Sir, this is exactly what I would say now. No doubt an attempt was made, but most feebly, to supply a remedy. A financial department was created, I think, in 1843 or 1844, but without any real power or responsibility. Sir, you cannot exact responsibility without giving power, and you ought not to give power without exacting responsibility. Will it be credited that the officer who had to administer the finances, was confined to the disbursement of public money, without either power or even cognisance in any shape of the revenues by which the treasury was to be supplied. Sir, we are now engaged in applying a remedy to this anomaly. In order to show how much our army expenditure is capable of reduction, I have only to compare the expenditure of the current year with that of 1856-57, for army, military police, new levies, police and military public works. The cost in the last four years for all India was :---

	30	
1856-57	13,213,454	
1857-58	17,215,674	
1858-59	24.717.638	
1859-60	21,732,681	

#### THE ANGLO-FRENCH TREATY.

THE following communication from Her Majesty's Government has been forwarded to the different Chambers of Commerce relative to the working of the Commercial Treaty with France, in order that they may be put in possession of any facts that may make the measure more perfect, and at the same time be in accordance with the practical views of the manufacturing interests of this country :--

Office of Committee of Privy Council for Trade, March 24, 1860.

Sir,-I am directed by the Lords of the Committee of Privy Council for Trade to request that you will inform the Chamber of Commerce of that, with a view to negotiations which are in progress for the purpose of arranging the details of the new French tariff of import

for the purpose of arranging the details of the new French tariff of import duties upon the articles of the produce and manufactures of the United Kingdom enumerated in article first of the treaty of the 23d of January, 1860, they are desirous of obtaining any information which the Chamber may be able to supply in connection with the branches of the British exportation trade in which that body is more especially interested. These are the three questions in regard to which my Lords more especially desire accurate and detailed statements at the earliest convenience of the Chamber:—

1. As to the classification which, in its opinion, it would be desirable to adopt in respect of such manufactures with a view to the arrangement of specific duties by weight in the French tariff. 2. As to the average prices of each class of such manufactures with eference to such classification.

3. Upon what description of each class of goods it is more especially important that the duties should be reduced below the maximum of 30 per cent. ad valorem, whether such duties should be charged at valorem or the ad valorem state be taken as a basis on which to assess specific duties, and upon what special grounds such reductions are important.

In reference to the accord head, I am to observe that the 13th article of the treaty with France of the 23rd of January, 1860, provides that the average price of the articles of British produce and manufactures enumrated in the treaty during the six months last preceding its signature shall be taken as a basis in fixing the ancount of the import duty upon them; my Lords would, therefore, desire to be furnished with a statement of such average prices during the period therein mentioned; but they would be glad at the same time to obtain a similar statement of such average prices during each of the three years immediately preceding the date of the treaty. I am to add, that my Lords will be happy to receive any statement or suggestion with regard to the branches of trade represented by your Chamber which that body may think likely to be of us to Her Majesty's Government in the present negotiation. I am, is conclusion, to state, with references to a desire-which has been expressed in certain quarters, that deputations should be sent to Paris on the subject of the treaty. I my Lords would suggest for the consideration of the Chamber of Commerce of — whether it may not be possible and desirable that a delegate might be selected from each branch of the indutries with which the Chamber is connected to represent the common interest of such particular branch, and to proceed, if it be necessary, to Paris, to supply any information on the spot which may be required in the regotiations of the French tariff.—I am, Sir, your obedient servant, JAMES BOOTE.

To the Secretary of the ----- Chamber of Commerce, -----,

At a meeting of the Council of the Chamber of Commerce, held at Birmingham, on Wednesday, the following reply was agreed upon to the above questions submitted by the Board of Trade:-

1. This Chamber considers that the duties upon half-manufactured articles—such as iron and steel; iron, steel, bravs, and copper wire; brass and copper sheets; iron and brass tubes for boilers, steam, and gas, &c.; and tin plates—should be levied by weight; and that the duties upon all articles entirely manufactured should be taken *as valorem*.

all articles entirely manufactured should be taken da valorem. 2. This Chamber is unable to give the average price of the manufactured articles known as " hardware." The goods are so varied, and the qualities of each single article so numerous, that any approximate calculation would be of little assistance to my Lords; for instance, brass locks, which are made from 9d to 1805 per dozen and upwards; steel pen, from 1<sup>1</sup>/<sub>2</sub> d per gross to 13s 6d and upwards; fire irons, from 10d per set to 20s and upwards; plated candlesticks, from 4s per pair to 80s and upwards; jaanned tea-trays, from 8d per dozen to 80s and upwards. Numerous other articles might be mentioned as further illustrating the impossibility of affording any information to my Lords on this subject.

3. This Chamber is of opinion that the French treaty will be of little benefit to the manufacturers of Birmingham in the event of a duty at all approaching 30 per cent. being levied upon manufactured articles, as such a duty would afford the French manufacturer a protection which would prevent the importation into France of most of the leading articles of this district.

Upon the articles known as hardwares, this Chamber is of opinion that moderate duties, such as those levied by the neighbouring countries of Belgium and Holland, would greatly benefit the trade of this locality.

This Chamber is of opinion that upon the articles enumersted in their reply No. 1, the following should be the maximum duties, viz.:--

Wire, iron, 6f per 100 kilogrammes; wire, steel, 10f ditto; wire, copper and brass, 10f ditto; copper and brass sheets, 10f ditto; tubes, iron, 10f ditto; tubes, copper and brass, 15f ditto; tin plates, 6f ditto.

The duty on iron, as stipulated in article 17 of the treaty, although considered by the manufacturers of this district as too heavy, will still allow the import of certain best brands, though probably only to a very limited extent.

In conclusion, this Chamber begs to direct the attention of my Lords to the fact that though an abolition of total prohibitions in the French tariff may benefit a few isolated branches of the manufactures of this district, they cannot forbear comparing the tariff of Belgium with that proposed by France, as they find, with much lower duties levied in Belgium upon articles known as "hardware," the demand for the products of this locality is exceedingly limited, and with an *ad valorem* duty of 30 per cent. this Chamber feels convinced that the advantages Birmingham and the neighbourhood would derive from the new French tariff would prove exceedingly limited.

With regard to the suggestion of my Lords that deputations should be sent to Paris on the subject of the treaty, the Council of this Chamber are of opiniou that the branches of the trades represented by them are too numerous to admit of the suggestion being carried into effect. The Council has, however, appointed a sub-committee to consider the questions referred to by my Lords, and the committee will have much pleasure in affording any further information which may be required by them in the pending negotiations.

ERRATUM.—In our first leader, last week, at the bottom of the 2nd column, 2nd page, *later* was erroneously printed for *earlier*. The passage should run thus:—"To tax the *later* stage of manufacture more than the *earlier* is to give a protection to those who are engaged in the later stages."

#### Agriculture.

CROPS AND PROSPECTS.

CROPS AND PROSPECTS. Arrage passing through a winter of such an unusual character, and during which the fluctuations and changes of weather and tempe-rature have been so unfavourable to vegetable life, a few notes on the present aspect of the crops and the prospects of agriculturists will not be inappropriate. The commencement of very severe frost in the middle of October, followed almost to the present time by continuous alternations of short periods of sharp frosts and heavy rains, present a combination of phenomena not often known. We have had sensors more wet, we have had as in-tense and much longer continued frosts; but no one recollects, nor is there any recorded account of any winter during which tense and much longer continued frosts; but no one recollects, nor is there any recorded account of any winter during which so much and such severe frost has been accompanied, we perhaps should say alternated, with so much and such heavy rain. Some of the consequences of this state of things are remarkable. Early in the season a good deal of mangold wurtzel was destroyed by the October frosts, many of the growers being then engaged in the work of storing it, and had left large quantities in the field pulled up ready for carting, and such roots were in a great measure destroyed. Others, notwithstanding the frost, continued to store their roots, and these have, as might be expected, rotted in the clamps. Where, Others, notwithstanding the frost, continued to store their roots, and these have, as might be expected, rotted in the clamps. Where, however, the mangold was allowed to remain untouched until the frost had gone off, and the succeeding rains had somewhat subsided, the crop was stored in good condition and has kept well. The crop, too, having been very large, and the breadth grown greater than heretofore, there has been an abundant supply of this pro-vender throughout the season at about the ordinary price. This is the more fortunate, the turnip crops, usually left in the fields, having been so greatly injured during the winter as to leave the farmers at some loss for provender, especially for their sheep. The drafts on the haystacks have in consequence been uncommonly heavy. The effect of the season on the wheat crop has been still more remarkable. The October frost and the succeeding wet weather interrupted wheat sowing to a greater extent and for a longer time than any such interruption which has

taken place for many years ;---so much so, that farmers who had got in any considerable portion of their seed wheat congratulated themselves on their superior good fortune as compared with their less forward neighbours. In December, however, an interval oo-curred during which considerable breadths of wheat were sown, but the seed generally remained in the ground till February with-out making its appearance, and so much rain fell during that time that many uncasy apprehensions were expressed as to its ultimate appearance. The result, however, according to present appear-ances, seems to be, that the latest sown wheat is the most promising. The early sown is thought to have lost plant too much to be ances, seems to be, that the latest sown wheat is the most promising. The early sown is thought to have lost plant too much to be capable of yielding a full crop. We believe such apprehensions to be premature, for if we have a genial spring, the plant may so gather and spread as to show no deficiency at harvest, and it is certain the late sown wheat crops are full of plant and thriving. Beyond these there is much land intended for autumn wheat which has been either sown with spring wheat or barley. The most observ-ing farmers, therefore, calculate on somewhat higher prices for wheat as a consequence of the smaller breadth sown than the average of this country. And the recent advance of mice seems to justify as a consequence of the smaller breadth sown than the average of this country. And the recent advance of price seems to justify that opinion. We may note that vegetation is generally very back-ward in the meadows and gardens as well as in the wheat fields. The spring corn has gone in well. Notwithstanding the large falls of rain, and the complete saturation the land has from time to time undergone, the soil has worked well, and the seed has been deposited in a kindly bed. The unusually dry state of the land for two or three preceding years will probably go far to account for this condition of the soil. The acricultural report for March of the Mark Lane

369

for this condition of the soil. The agricultural report for March of the Mark Lane Express says :--- "The backward appearance of the young wheats has, in many instances, given rise to unfavourable reports in reference to the prospect of the next yield; but at present we see no reason why a short crop should be anticipated as the result of a backward spring, because, as far as we can accer-tain, no actual damage has been sustained by the winter wheat." The South Lincolnshire reporter of the same paper says the season for putting in the spring crops has been one of the most satisfactory they have had in that district for some years. The Warwickshire report to 31st of March admits that in that country

the wheat, "until about ten days ago, did look bad, and was very backward," but since that time "it has fast recovered its looks, and is now growing fast," though many farmers have had to fill up the blank places in the rows with spring wheat. The land is here, also, said to be in a fine state to receive the barley. The Essex report says that the wheat has altered greatly for the better during the past month, and especially so on the light lands, though hitherto the strong-land wheats have looked the best. The difference of the past month, and especially so on the strong land wheat have looked the best.

hitherto the strong-land wheats have looked the best. The chief point, however, on which the agricultural mind is now most anxious, is the provision for live stock. Turnips have proved greatly deficient, and both flocks and feeding beasts are necessarily carried on at much greater cost than in ordinary seasons; in con-sequence all are desirous of selling fat stock with as little delay as possible. This may occasion a temporary depression in the meat markets, which have hitherto been well sustained, but so great is the demand from the flourishing state of trade that no serious fall is to be apprehended in the price in this most important part of the farmer's produce. The flocks are the source of more embarrassment. farmer's produce. The flocks are the source of more embe The Lincolnshire report before referred to, after complaining of scarcity of food for stocks, says :---" Sheep are suffering most, their chief dependence being upon cut chaff from oats, or oats and pea-straw, with cake and corn; altogether a very expensive course or keeping." Some accounts speak of the appearance of the foot and mouth disease amongst the cattle, and it is said to be virulent.

#### CROSS-BREEDING. TO THE EDITOR OF THE ECONOMIST.

SIE,-May I beg a small portion of your space to offer a few comments on parts of an article on cross-breeding, which appeared in your number of March 10th, and to which my attention has been called by a friend. I ask this with the more confidence, as my name, principles, and practice are prominently introduced and freely discussed in the article alluded to.

I beg leave most fully to coincide with and to thank you for the clear and able distinction you have drawn between cross-breeding as a means of producing an animal for the butcher, and the butcher -breeding only, and adopting the same system as a means of *perpetuating* a breed of animals, and most fully endorse your reprobation of the latter practice. You have demonstrated the fallacy of it so mating the latter practice. You have demonstrated the completely that I need not reopen the question; but when you proceed to adduce my flock as bearing on the subject, the asser-tions show such an imperfect acquaintance with its history and tions show such an imperfect acquaintance with its history and the principles that have guided me in the management of it, that I must offer some explanations. To refresh the memory of the reader, I will transcribe the passage. "He [Mr Spooner] cites the Leices-ter flock of Mr Valentine Barford, of Foscote, near Towcester, as an instance of pure breeding, and says that gentleman 'has the pedigree of his sheep from the days of Bakewell in 1783 to the present time, and from 1810 he has bred entirely from his own stock, without any interchange of male or formal from the days of the source of the sou present time, and from 1810 he has bred entirely from his own stock, without any interchange of male or female from any other flock.' And Mr Barford rather prides himself on breeding from the nearest affinities. Though his sheep are small, they have not lost any of their fecundity which is supposed to result from in-and-in breeding. But it is a mistake to note this as an instance of pure breeding, for Mr Barford neglects the advantages offered to him by his fellow-breeders of Leicester sheep for the sake of preserving purity of descent from a particular flock, that of the original unprover Bakewell. Surely some credit might be given to subsequent improvers of Leicesters, &c."

Sir, I do not "pride myself on breeding from the nearest affini-ties." It is true that half a century of experience has convinced me, where two nearly-related animals are true in form, sound in constitution, and I am sure that they have no hereditary tendency to disease, in-and-in breeding does not induce degeneracy, and therefore I have no hesitation in coupling them. In fact, I think relationship is a consideration of much less importance than form and constitution.

and constitution. Nor do I "neglect the advantages offered to me" by my fellow-breeders MEBELT "for the sake of preserving purity of descent," (this being, as I have just said, when not combined with purity of round, of no value at all, but rather the reverse), but because I doubt whether they are advantages. At one period of my life, from about the years 1812 to 1825, I was anxious to improve my flock, if possible, by the introduction of fresh blood; and for this purpose I inspected, I believe, every flock of new Leicesters then in any repute, but (I say it without any wish to depreciate others) I could not find one whose form and quality I thought equal or at least superior to my own, and so I became an in-and-in breeder, if you call it so, not so much from choice as necessity, and the same remaon superior to my own, and so I became an in-and-in breeder, if you call it so, not so much from choice as necessity, and the same reason for remaining so has existed ever since ; for it is absurd to suppose that Ishould, knowingly, use an animal inferior to my own. I grant that in this view of the case, my ultimate success or failure hinged upon whether I had or had not formed a correct opinion as to what was the true form of a sheep. That I was correct, is, I think, amply demonstrated by the undisputed fact that my sheep have not de-generated in any one desirable quality; for it is evident that any flock or herd bred for the number of years I can point to without addition of fresh blood, must have almost died out from sheer diminution of numbers, under the "careful selection and rigorous

weeding" necessary in all flocks, and in the few remaining, purity of descent would only increase the evil, from their greater liability to transmit defect to their offspring; and, on the other hand, purity of descent, when combined with true form, becomes of immense, I had almost said of inestimable value, and which increases with every year the breed is maintained.

But, Sir, I go a step further, and without ignoring " the labours of improvers subsequent to Bakewell," let me ask if most of them of improvers subsequent to Bakewell," let me ask if most of them have not sought to *improve* the breed by introducing alien blood. Judging from the diversity of type and character that nearly every flock of Leicesters exhibits when compared with others, and with those of ten or twenty years since, as well as from common report, I firmly believe this. In fact, I cannot account for this diversity in any other way; and taking into consideration the frequent ex-change of rams between all the principal breeders, it is almost im possible that one can exist without some stain in blood, however re-mote. How, then, can L, who have kent mine pure, use a ram of mote. How, then, can I, who have kept mine pure, use a ram of any other breeder's without cross-breeding, and thus committing the very error you have so clearly described and so emphatically condemned ?

I shall, perhaps, be considered too partial a witness if I assert I shall, perhaps, be considered too partial a witness if I assert that my sheep are not small. An animal of true symmetrical pro-portion always appears smaller than he really is, and I invite every one, before giving a decided opinion, to measure the girth, length, &c., of mine, and compare them with others. And I am certain I could by now have shown them many sizes larger, had I induged and forced them as many breeders have, but I am sure I should have lost more in hardihood and constitution than I should have gained in size. in size.

Fearing to trespass further on your space,-I am, Sir, your valentine Barford. obedient servant,

Foscote, near Towcester, March, 1860.

#### Literature.

THE LETTERS OF HORACE WALPOLE, EARL OF ORFORD. Now first chronologically arranged. Edited by PETER CUNNINGHAM. Part I. Bentley.

A COMPLETE and reasonably cheap edition of Horace Walpole's Letters has long been a desideratum. Here is the first instalment of such a work, which will extend to eighteen monthly parts. Horace Walpole, fop and fribble as he is severely but not alto-gether unjustly termed by Macaulay, will always be a classic in a branch of literature which may now be considered as extinct,—we branch of literature which may now be considered as extinct,—we mean that of letter-writing. It is needless to dwell on the patent and obvious reasons why we must expect no more such series of letters as these, or Cowper's, or Lamb's, but it may be observed that those which we do possess are enhanced in value by this very fact. Walpole's letters, moreover, besides their value as perfect specimens of their class, have that of throwing no incon-siderable indirect light upon the public men and public business of a century or so ago. To yield the most in this respect they re-quire careful editing and annotating, and, judging from this first part, they have received both from Mr Peter Cunningham. The notes are not too numerous and they are to the purpose. The part, they have received both from bur reter commingnant. The notes are not too numerous and they are to the purpose. The paper, printing, and engravings are all good, and the price is as low as could be expected in the case of a work which it would have been unbearable to read in a careless, cheap, and shabby The edition.

- THE POETICAL WORKS OF JOSEPH ADDISON, GAY'S FABLES, and SOMEBVILLE'S CHASE. With Memoirs and Critical Dissertations, by the Rev. GEORGE GILFILLAN.
- CHAUCER'S CANTERBURY TALES. Vol. I. With Memoir and Critical Dissertation, by the Rev. George Gilfillar. James Nichol, Edinburgh; Nisbet and Co., London.

THREE standard poets and three critical memoirs of the same, forth in clear, large, and excellent type, is assuredly a triumph of the publishing art. In spite of the mediocre quality of some of the the publishing art. In spite of the mediocre quality of some peetry, and the false and affected taste of much of Somer "Chase," there are many worse volumes than this to have in "The memoirs" of Somerville's one

"Chase," there are many worse volumes than this to have in one a portmanteau as a resource against country inns. The memoirs by Mr Gilfillan have less of his peculiar farfetched style of criticism than usual, contain the leading facts in the lives of their subjects, and, it is hardly necessary to say in this case, are not too long. In the usual, contain the leading facts in the lives of their subjects, and, it is hardly necessary to say in this case, are not too long. In the "Canterbury Tales," which are to be completed in three volumes, the memoir will appear in the second and the dissertation in the third. This volume takes us to the end of the "Man of Law's Tale." third. This volume takes us to the end of the "Man of Law's Tale." It includes also Mr Tyrwhitt's valuable essays on the language and versification of Chaucer, as well as his introductory discourse to the "Canterbury Tales." In modernising the text, the plan adopted by Mr Cowden Clarke, in his "Riches of Chaucer," has been followed, and, as in the case of Spencer, the glossary has been placed in the margin. As far as we have examined it, it is suffi-cient and correct. The general getting-up of the work is as ex-cellent as it is in all the volumes that we have seen of this admir-able edition of the British roots. able edition of the British poets.

(4) THE REFORM BILL AND THE QUEEN'S UNIVERSITY IN IRELAND: A Letter to the Right Hon. Edward Cardwell, M.P., Chief Secretary for Ireland. By WILLIAM LUPTON, M.A., of the Inner Temple. Dublin: Hodges, Smith, and Co. 1860.

Inner Temple. Dublin: Hodges, Smith, and Co. 1860. (1) (2) (3) (4) With the exception of the last of them, the four pamphlets on political reform, which conclude our list, scarcely deserve even passing notice. The writers,—with this one excep-tion,—are either utterly at sea on matters of principle, or having, by some happy accident, got hold of a true principle, manage to discredit it and perplex themselves in a labyrinth of absurd ap-plications. We need not say that we heartily agree with the fol-lowing statement of Sir John Maxwell, in his preface :— In reconstructing the laws which regulate the electoral franchise, there are two objects which ought never to be lost sight of :—The first it, that there laws should secure a full and fair representation of all the interests of the country in Parliament; and the second is, that they should, as far as possible, subserve the education of the people. If he had confined himself to this thesis, and adequately sup-ported it, Sir John Maxwell would have done good service. In-

perted it, Sir John Maxwell would have done good service. In-stend of so doing, he wanders off to, and loses himself in, a semi-protectionist dissertation on labour and capital. When he returns protectionist dissertation on labour and capital. When he returns to his proper subject, his suggestions are not very valuable. He seriously proposes to enfranchise "every one who has saved the life of a fellow-creature, who has devoted his life to the care of cholers and typhus patients," or who has discharged with credit the duties of parish constable. The medallists of the Humane Society, and Mrs Gamp and her sisterhood, would obviously qualify under the two former heads. Sir John Maxwell would also give yets to "men who devote their income to educate children of het sores to observe parentic to act honestly to reach twithfull." votes to "men who devote their income to educate children of both sexes,—to obey parents, to act honestly, to speak truthfully, to do no violence, to honour the sovereign, and to love their neighbaurs." How these estimable characters are to be found out, or through what investments a man can "devote his income" to filial obedience, to veracity, loyalty, and the other civil and domestic virtues, we cannot explain; for Sir John Maxwell does not in-form us. Good intentions, and honest and painstaking though confused thought, are apparent in his pamphlet. The author of the pamphlet which bears the affected title of "Old John Bull in a New Coat," also starts from the principle of the representation of interests, and, to the extent of his power, makes a sound principle appear ridiculous by, the elaborate abarytimebers for counties and broughs; one member to be elected by landlords and owners of houses exclusively, the other

elected by landlords and owners of houses exclusively, the other by occupiers and tenants. Railway proprietors are to have 6 members; fundholders, 10; shareholders in gas and water companies, 4 each; woollen, cotton, silk, and linen manufacturers, 2 each; and so on. The scheme is too ridiculous for discussion. It is a gross 2 each gross It is a gross The caricature of the scheme of representing separate interests. true theory of class-representation recognises the natural aggre-gation of men into those smaller communities, which, taken together, make up English society. Each town and county has gation of men into those smaller communities, which, taken together, make up English society. Each town and county has its own peculiar characteristics, derived from predominant occupa-tion and other causes, and as such is a factor in the national life, ton and other causes, and as such is a factor in the national life, and is entitled, within the limits of practicability, to separate re-presentation. To group men, spread over the surface of England, according to their professions, or mere local distinctions, in equal electoral districts, is to neglect the real units of English society. It is to make a false analysis of its component parts. The views of "Reform, Universal Suffrage, and the Ballot," with which Mr C. H. Elsley, M.A., has favoured the world, do not call for remark. He states, very weakly, arguments which in their strongest form have heen refuted over and over again. The ballot

strongest form have been refuted over and over again. The ballot is Mr Elsley's panacea for most evils. But he has nothing new to say in its favour, except the following remarks, in reference to its alleged failure in America and France :--

America is only half civilised. Ballot has answered well in France, for it has placed a great man at the head of the Empire; he must needs be a great man, else our journalists would not sit on the heights of Dover, barking at him, with good twenty miles of sea between him and them. It he were not a great man, but an insignificant, weak, silly prince, they would not undergo the fatigue of barking. Like most democrats, Mr Elsley has a weakness for despotiam. This cogent reasoning is a fair specimen of his appreciation of facts and powers of argument.

and powe rs of argument.

It It is with a feeling of refreshment that we turn from the weak and ill-considered effusions just noticed, to Mr Lupton's vigorous and in-considered effusions just noticed, to Mr Lupton's vigorous plea in favour of the Parliamentary representation of the Queen's University in Ireland. In a clear and unaffected style, and with irresistible force of logic, Mr Lupton points out the considerations which render it just and (we may almost say) necessary that the Queen's University should be enfranchised. We trust his letter to Mr Cardwell may yet be effectual for the purpose which it is intended to promote, and cordially recommend it to the attention

of all our readers. The following extract refers to a matter of no slight significance : I cannot presume

371

of all our readers. The following extract refers to a matter of no slight significance:— I cannot presume to offer any opinion on the general scope of the reform measures, now submitted to Parliament, but I may be permitted to say, that they have been obviously framed for the purpose of enfranchising a large number of the working classes. The Reform Act of 1832 had for its object the enfranchisement of the middle classes. It has, I submit, always been a principle of our Constitution, that a class of men, different from the landed proprietors and farmers, the commercial and labouring classes, should be represented in Parliament. Hence we have had the universities represented from an early period. It is not difficult is find a reason for this: in the clash of material and local in-terests, it is well that there should be a class of men who can hold them-selves calm and unprejudiced, and who can bring to the discussion of social and political questions a comprehensiveness of view which is the result of their large knowledge and trained habits of thought. Now that means have been provided for extending the representation of the other classes of the community, in a manner adequate to the requirements of the age, is it not most desirable that a s milar extension of the represen-tation of the university class should be provided f. The due equilibrium of interests, in the House of Commons, requires that this be done, and it is in recognition of this necessity that we find that the University of Lon-don and the Scotch universitives are henceforth to be represented; I submit that this necessity for such balancing of interests is not less in Ireland than in Scotland or England. It would ill become me to speak of the character of Irish representatives ; but I may say that it is on to more moderate in tone than that of the sister countries. In fact Irish members generally are somewhat extreme in their political view, and I cannot think that it would tend to the increase of this *ultra-ium*, to introduce among them a por moderate in tone than that of the sister countries. In fact Irish members generally are somewhat extreme in their political views, and I cannot think that it would tend to the increase of this *ultra-ism*, to introduce among them a portion of that toleration and liberality, of temper at least, which the Queen's Colleges are, happily, diffusing among the educated classes of the people. The extension of the franchise, at present pro-posed, will tend to throw a large portion of political power in the hands of those who are naturally least moderate; but who will, I trust, prove not unworthy of the boom. I ask for the countervailing concession to moderate men. moderate men

The foregoing extracts and remarks present a fair sample of the quality of the pamphlet-literature of the day. The per centage of excellence is something like that of human virtue in the days of source warred with a mong a thousand ". It is considered Solomon, scarcely "one good among a thousand." It is consolatory to think, that if the world knows little of its wisest men, it knows to think, that it the world knows little of its wisest men, it knows almost as little of its most foolish ones; for, of the many pamphlets published, very few, we believe, are sold, and still fewer read. Still it is instructive occasionally to consider what persons, not of the wisest, are thinking and saying on the topics of the day. This must form our excuse for having bestowed a passing comment on some of the *brochures* named at the head of this notice.

#### (FROM OUR CORRESPONDENTS.)

PARIS, Thursday. The Protectionist party in the Legislative Body has attempted to delay the discussion of the Bill relative to the reduction of the import import duties on sugar, coffee, &c., by proposing that, instead of being referred to a special committee, as is usual with such mea-sures, it shall be sent to the Committee on the Budget for examisures, it shall be sent to the Committee on the Budget for exami-nation, on the ground that, as it affects the revenue, it falls within its province. But the Chamber has had the good sense to refuse this insidious proposition. I fear, however, that the Protectionists, not content with their check on this point, will again endeavour to create obstacles to the passing of the Bill. They will do so, not so much from repugnance to the measure itself,—for why should they object to cheaper sugar and coffee ?—as to show animosity to the Government for concluding the treaty with England, which treaty will fortunately not (as I have before said) be submitted to them. But, nevertheless, the Bill will pass, because the Government wishes it to pass.

The Government has just presented to the Corps Legislatif the budget for the year 1861. The expenses are estimated at 1,844,188,685f (73,780,000l), which are 14,472,737f more than those 1,844,188.685f (73,780,000), which are 14,472,737f more than those of 1860: the receipts at 1,845,733,670f, which are 19,879,291f more than those of 1860. Deducting the expenses from the receipts, there will appear a surplus of 1,544,000f. Though this surplus is a small one, it is satisfactory; but unfortunately in this country budgets are somewhat fantastic things, inasmuch as the Government largely exercises the power with which it is invested of modifying them by the grant of "supplementary credits" for this or that object. In the report with which the Minister of Finance accompanies his budget, there are two or three points worth notice. First of all he calculates that the abolition of the duty on wool and cotton will cause a loss to the revenue ot 25,409,000f; the reduction of the duty on coffee one of 6,442,000f; the reduction of the duty on sugar one of 53,243,000f; and

[April 7, 1860.

that on navigation duties, 3,500,000f—total 88,594,000f. 'As to the reduction of the duties on cocces and tea, he sets down nothing on that score, because he thinks that the increase in the quantity consumed will compensate for the falling off in the revenue. As set-off to the said total loss of 88,594,000f, the Minister counts on—17,702,000f from the natural expansion of the direct and some other taxes, and of those Customs duties not affected by the Eng-lish treaty or the proposed reforms; 1,170,000f to be obtained by increasing the impert duty or freshow wines from 266 to 12f the lish treaty or the proposed reforms; 1,170,000f to be obtained by increasing the import duty on foreign wines from 25c to 12f the hectolitre, an augmentation which, he says, will not materially affect consumption; 2,282,000f from the duty on English iron, of which the importation under the treaty may be expected to increase; 3,321,000f from the duty, which may be 30 per cent. *ad valorem*, on the import of goods heretofore prohibited; and, lastly, 24,000,000f from an increase which he proposes in the duty on alcohol. These various items make up a total of 48,475,000f, and that reduces the aforesaid loss to 40,119,000f. To make up this sum the Minister proposes to suspend the operation of the sinking fund, by which he will get 40,000,000f. Such is the budget of 1861. 1861.

The proposed augmentation of the duty on alcohols will neces-sarily, to a certain extent, affect the import into England which has been counted on under the treaty. The duty at present is 50f the hectolitre, and the Minister demands that it shall be increased by 25f, or, including the two decimes, by 30f. He justifies the in-crease on the ground that alcohols being less wholesome than wine, beer, or coffee, are a fit object for taxation; and also from the fact that experience has demonstrated that an augmentation of price, caused by an addition to the tax, does not reduce materially the con-sumption. The quantity consumed in 1858 was 482.000 hectolitree. sumption. The quantity consumed in 1858 was \$42,000 hectolitres, and the Minister calculates on a consumption of not less than \$00,000 hectolitres with his new tax. He remarks that, even when increased, the tax will be much lower than that levied in England; and yet that in the latter country the consumption considerably exceeds what it does in France, though the population is less.

On the subject of sugar, the Minister calculates that, as was the se in England, the reduction of the duties, which is to be about onehalf of what they are now, may be expected to cause an increase in the consumption of 28 per cent. for three years. In 1858, he says,

the consumption of 28 per cent. for three years. In 1858, he says, the consumption was 201,000 tons, and in 1861 he supposes that it will be 258,000 tons; not counting in the latter year about 56,000 tons of raw brought in to be refined and then re-exported. On the subject of coffee the Minister enters into no details. One other point remains to be noticed in this budget of 1861. It is that a sum of 773,370t will be required for the payment of "interest on the last loan of 520,000,000f, which was not suffi-ciently provided for in the budget of 1860;" and a further sum of 2,893,801f of rentes, "which will have to be given to the Caisse de la Dotation de l'Armée in exchange for the capital coming from its surplus receipts." This last item is a new proof of the national debt. national debt.

In order to impress on the public mind, and especially on the Corps Legislatif, the great advantages of the commercial treaty with England, the official Moniteur has (an unexampled circumwith England, the official Moniteur has (an unexampled circum-stance I believe) twice published,—onee on Monday the 2d, and again yesterday, the second time in flaming type—a table, showing item by item "the duties to which French productions were sub-jected in the United Kingdom compared with what they will enjoy in virtue of the treaty." This document (in which the English measures, weights, and moneys are turned into French) presents, in a more striking manner than I have yet seen, the really vast concessions which England makes to France by the treaty. I should be very slad to remothere it, but it would take un unger concessions which England makes to France by the treaty. I should be very glad to reproduce it, but it would take up more space than you could afford. The number of times to which, under the treaty, the word "exempt" is placed to articles which previously paid heavy duties, and the large reductions made in duties retained, must, I should think, produce an impression on the hearts of even the most obdurate Protectionists and Prohibitionists in this country; and must even, I should imagine, make them suppose (according to their manner of reasoning) that "Albion," in-stead of being "perfidious," as they have been rotaing for the last 50 years and more, is the most idiotic of nations. The Moniteur ought in common fairness to add to its tablean of English concerought in common fairness to add to its tableau of English conces-sions, one of those which France makes to us :---the contrast would sions, one of those which France makes to us — the contrast would be astounding. Perhaps that contrast might shame the French Government, I will not say into making larger concessions—for that is a thing not to be expected—but at least into acting with something, like honesty in the great question of rags, and the still greater one of reciprocity in shipping,—the only two matters it seems on which we have consented to ask for anything. In an article on the subject of the aforeasid tableau, the Moniters of this article on the subject of the aforesaid tableau, the Moniteur of this morning, after detailing once again some of the concessions of the English as regards articles de Paris, and especially jewellery, bronzes, boots, shoes, hats, artificial flowers, and women's bonnets and drazes boots, shoes, hats, artificial flowers, and women's bonnets bronzes, boots, shoes, hats, artificial flowers, and women's bonnets and dresses, — mentions a striking fact which shows the great ad-vantage of the treaty to France. This fact is that many of the exemptions and reductions of duties accorded by England having come into force as soon as they were voted by the House of Com-mons, it appears from official returns that in the brief space of five days of the month of March (from the 24th to the 28th, both inclusive) Paris alone exported of articles of its fabrication

3,313,000f worth, whereas in the corresponding five days of the same month last year the export was only 2,716 quently there was an increase of 600,000f (24,000%)

quently there was an increase of 600,000 (24,0004.) At a meeting of influential merchants and others held yesterday in the Hotel du Louvre, under the presidency of M. Arles Dufour, the well known silk merchant, the resolution was come to, to estab-lish an "Association for Commercial Reform." M. Jean Dollfus, of the Chamber of Commerce of Mulhouse, was appointed President of the Association. M. Arles Dufour, M. Lopes-Dubee (President of the Chamber of Commerce of Bordeaux), M. Pastré (President of the Chamber of Commerce of Marseilles), and M. Delaunay (a deputy), Vice Presidents. A Council of 54 members was elected, and is was resolved to increase the number of it to 100. The and it was resolved to increase the number of it to 100. The Association, which has been sanctioned by the Government, will form Committees in the departments, and cannot fail to do great good.

From the report read at the meeting of the shareholders of the Western Railway Company, which (as stated in my last) was held last Thursday, it appears that the total receipts of 1859, after deducting Government taxes and some other charges, were deducting Government taxes and some other charges, were-47,929,283f; and that, after deducting working expenses and ordinary outgoings, there remained 11,250,000f for the share-holders. This, as stated last week, makes the revenue of each share 37f 50c. A meeting of the Orleans Railway shareholders was held last Friday. A dividend of 97f per share was declared for last year; of which 30f have already been paid on account. Authorisation was given to the directors to raise a loan of 200,000,000f. The Parisian Gas Company has also held its annual meeting within the last few days; it declared a dividend of 60f, of meeting within the last lew days, it declared a dividend of 60f, of which 25f have been paid on account. The Parisian Omnibus Company resolved that 36f per share should be distributed as balance of the dividend for 1859; but that it shall not be paid until the 1st July next. The last two companies are under the protection of the Credit Mobilier.

As was foreseen, there has been a reaction on the Bourse; but on the whole it has not been so great as from the suddenness of the rise had been expected: this, however, is owing to Government establishments having continued their purchases.

quality; four marks were lower than last week,-55f 25c for the current month, 56f to 56f 25c for May, 56f 56c to 56f 75c for May and June, and month, 56f to 56f 2 57f for June alone.

WHEAT at Paris, yesterday, was not active, and quotations were 32f to 34f the sack of 120 kilogs. As regards the provincial markets, 73 pre-sent a rise of 14c to 1f the hectolitre, 16 a fall of 15c to 1f, and 34 remained unchanged.

sent a rise of 14c to 1f the hectolitre, 16 a fall of 15c to 1f, and 3e remained unchanged. Corrow-At Havre, in the week ending Friday, the sales did not ex-ceed 5,548 bales; and prices for "low" of all sorts fell 1f, other qualities remaining unchanged. Low New Orleans was consequently 99f the 50 kilogs (nearly 1 cwt); very ordinary ditto was 106f. The arrivals during the week were 4,804 bales. The stock on the 1st of this month was 241,300 bales. Business this week has been very alack, and yesterday low New Orleans was 98f to 99f. Sucar,-At Havre, in the week ending Friday, the market was calmer. 169 hogsheads French West India went at 62f 50c to 63f the 50 kilogs duty paid; 5,000 bales Rounion, 63f 50c; 18 casks Havana, 38f in bond. The arrivals were nearly 800 casks West India, 200 sacks Persambuso, 9,150 sacks Reunion, 63f 50c; 18 casks Havana, 38f in bond. The stock of French West India on the 1st was 233 tom Dua-kirk. The stock of French West India to the 1st was 233 tom Dua-kirk. The stock of 55 50c, and a small lot of French West India at 62f. There were no sales of foreign. This week as many as 7,000 bales Re-union have been sold, but the prices are not given; and , in addition, 326 bales were sold at 61f. At Narke, last week, basiness was important, as many as 80,000 askis and 1,800 casks Reunion and Mauritius having been sold for delivery in June and July, 6,798 ascks Reunion disposable, and 500 casks Reunion mork was 1,800 casks Reunion and Mauritius having been sold for delivery in June and July, 6,798 ascks Reunion disposable, and 500 cashs French West India. The horker first effect the quotations of many as 80,000 secus and 1,900 casks Keunion and Mauritius narmany been sold for delivery in June and July, 8,798 sacks Reunion disposable, and 500 casks French West India. The brokers fixed the quotations of the week at 63f Reunion, 66f Mauritius (in bond), 37f Havana. This week, upwards of 8,000 bales Reunion have been sold, part at prices not stated; part, superior quality, 65f; also a small lot of "gros grain," at 67f to 67f 50c. At Marseilles, last week, there were norms large sales of Reunion and Mauritius.

COFFEE.-Although the market at Havre, in the week ending Friday, was calmer than in the preceding formight, sales were not unimportant, and no marked reaction in prices took place. 900 sacks Hayti Port-au-

#### THE ECONOMIST.

Prince went at 797 the 50 kilogs in bond; 721 Hayti Cape, 81f; 280 Gonaives and 800 St Marc, 81f; 118 sacks Rio, not washed, 767 to 80f; 500 sacks Maisbar triage, 133f 50c; 3,370 sacks and nearly 300 casks Porto Rico, 100f. In addition, 2,500 sacks. Hayti, damaged, were sold. The arrivals were about 20,000 sacks. The stock on the 1st was 83,141 sacks. This work the sales have been inconsiderable: Hayti, 79f; Gonaives, 92f; dito Cape, 81f; Rio, washed, 93f. At Nanke, last week, there were no sales, nor have there been any this week. At Bordenux, last week, the sole transaction was mentioned in last week's Economist. Seme large sales have taken place this week, but the details are pot given: among them were 410 casks Santiago and 594 damaged Java. At Mareillen, last. week, 7,500 eacks Rio were sold at 72f 50c the 50 kilogs in bond; sad 600 sacks Hayti at 80f. INDIGO.-Nothing was done at Havre, in the week ending Friday. but

kiloga in bond; and 600 sacks Hayti at 80f. INORGO.-Nothing was done at *Havre*, in the week ending Friday, but a small quantity of Java was imported. The stock on the lat was rather more than J,100 cases. There have been no sales this week. At *Bor-demus*, last week, the sales were 35 cases Kurpah, but the prices are not demus. On the lat the stock were 55 cases Kurpah, but the prices are not

deaux, last week, the sales were 35 cases Kurpah, but the prices are not given. On the lst, the stock was 551 cases. Only 2 cases Java and Bengal have been sold this week. HIDES.—At Haure, in the week ending Friday, the demand was calm. 1,961 dry La Plata went at 143f to 161f the 50 kilogs duty paid; 1,927 ditto of animals dead of epidemy, 138f; 405 Australia salted, 57f 50e to 65f; 500 New York salted, 63f 25c; 276 Algeria salted, 60f. A considerable quantity of Eucnos Ayres, Monte Video, Pernambuco, La Plata, Irish, Texan, Peruvian, and East Indian were offered for sale by public auction, hat only very insignificant lots were sold. The arrivals exceeded 25,000. This week the sole sale has been 281 horse Buenos Ayres salted, 13f each dawn and.

This week the state state week ending Friday, was more active. 60 Woot at *Haure*, in the week ending Friday, was more active. 60 bales La Piata, unwashed, went at 1f 50c to 2f  $67\frac{1}{2}c$  the kilog in bond; 6 bales ditto at 80c duty paid; 500 Peru, unwashed, lf 35c to 1f 65c; 57 bales sheepskins La Piata, 1f 35c to 1f 65c. The arrivals exceeded 500 bales. This week, 9 bales sheepskins Buenos Ayres, washed, have old at 2f 64c in bond.

been sold at 21 64c in bond. TALLOW.—At Havre, last week, there were no sales; and have been nome this week. At Paris, yesterday, the 100 kilogs were 1355 75c, a rise on hat week's quotations. SFIRITS.—At Paris, yesterday, 3-6 of 90 deg. was 102f to 103f the hectolitre; Montpollier of 86 deg., 135f. At Bordeaux, the day before yesterday, 3-6 Languedoc was 132f 50c; bestroot, first quality, 106f.

#### March 30. VIENNA

There is decidedly not the slightest prospect that the new loan of 200,000 florins which the Government wants to raise will be sub-scribed in this country, notwithstanding the very favourable con-ditions which are offered as regards interest and premiums. Fore-sceing this, the Minister of Finance has sent circulars to the Board seeing this, the Minister of Finance has sent circulars to the Board of Directors of the Elizabeth, Northern, Franco-Austrian, and other railways, *inviting* them to subscribe, and expressing a con-fident conviction that they will not neglect the invitation. Of course this is equivalent to a positive command; and in a despotic country like this a command, however unjust it may be, must be obeyed, whatever the cost to the individual. The Government professes to want the loan to reduce its debt to the Bank, and to be het the the transmission of the proventies that when the locate conenable the latter to resume cash payments: but when the last can was raised, a promise was made to pay the Bank; but not only was it not kept, but on the strength of it, ---the promise, ---- a fur-ther advance of 80,000,000 florins was obtained :--- and, no doubt, on this occasion also we shall see the Government appropriate to its own purposes all the money that may be raised and leave the Bank in the lurch. In addition to the subscriptions extorted from companies, the Government intends, I hear, to make the Hungarian municipalities and capitalists subscribe largely, in order arian municipalities and capitalises and capit to pur

The "Association for Customs Reform" has addressed a letter to the Minister of Finance, expressing hearty approbation of his proposed abolition of octrois (duties levied on provisions and articles brought into towns and villages), but at the same time pointing out the necessity of making Customs reforms "on a large and rational scale."

#### COMMERCIAL AND MISCELLANEOUS NEWS.

Advices from Calcutta state that Mr Wilson had delivered his speech in the Council on his new issue of notes. Money, in India appears to have been in good demand, at full rater. The import trade, almost generally, was inactive.

The commercial letters at hand from Australis, this week, state that trade was in a depressed state, and that the value of goods was barely

supported. Mr Ed. Khull, of Melbourne, has furnished the annexed particulars of the gold-fields of Victoria for the year 1859. Gold received per escorts at Melbourne, 1859, 2,202,012 ounces; brought by private hand, 162,123

We have advices from Jamaica to the 10th ult. Al the 41st half-yearly meeting of the shareholders of the Bank of Jamaica the directors' report was adopted. A dividend at the rate of 7 per cent. per annum was declared; which, when paid, will law e a surplus on the half-year's business of 1,996/2s 1d. The supply of coffee was still limited, and all that had been brought to market was readily taken at 41s to 44s for common to good ordinary. There was readily taken at at to was readily taken at at to was readily taken at at to was readily taken at  $2_{\rm T}^2$  d cash. Sugararemained as last quoted, sales bavin been made of dark at 16s to 17s, and of fair grocery at 20s per 100 lbs. ving

been made of dark at 16s to 17s, and of fair grocery at 20s per 100 lbs. Commercial advices from Rio de Janeiro are to the 9th ult. The con-tinued pertinacity of dealers in coffee in exacting previous high rates, in which they had been supported by the moderate extent of supplies (not averaging more than 4,000 bags per diem), was the main cause of the restricted amount of business that had been done since the departure of the previous steamer. Sales from the 7th to the close of February amounted to 50,000 bags only, of which 22,000 were for the United States. In some few instances a slight difference in price in favour of the pur-chaser was perceptible. After the arrival of the steamer some movement appeared, chiefly for France, and of 59,500 bags sold since then about 36,000 were for that quarter. The prices of assorted lots for the United States had ruled from 6,300 to 6,500 reis, and a very choice one was sold on the 8th ult. at 6,600 reis. Total sales from 7th of February to date, 112,700 bags, of which 35,700 weres for the United States, 3,300 for the Mediterranean. Stock, 120,000 bags. The anticipated rise in sugars had been realised. Prices advanced to 5,400 reis redendo, 5,000 to 5,200 baido, and 4,000 to 4,400 mascavo; and 1,122 cuses 809 pack-ages Campos had been sold, nearly the whole for exportation. Of sugars had been realised. Prices advanced to 5,300 to 5,400 reis redendo, 5,000to 5,200 batido, and 4,000 to 4,400 mascavo; and 1,122 mass 890 pack-ages Campos had been sold, nearly the whole for exportation. Of sugars from the North, 11,747 packages and 160 cases were disposed of at 5,400to 6,400 for white, and 3,200 to 4,200 brown, all for home use. The market had latterly become calm. Stock, 1,078 cases 769 packages Campor, and 327 cases 9,000 packages Pernams. At Bahis late rains had cheered up the prospects for the growing crop of sugar. There was no material alteration in the price of sugar, sales having again been effected at 2,700 to 2,800 per arrous for brown Nazareths, and 2,900 to 3,000 for Bahas in bags. Bahias in bags.

	-				

At the corresponding period of the year 1850, diplomatic relations were about to be resumed between England and Spain, through the medium of Belgium. Specie was being remit ted to Russia on account of Messrs Baring's loan. There was. a continued rush of emigration from the United States to California.

In 1857, there was great pressure in the money market, accompanied and partly caused by a drain of silver to the East and of gold to the Continent. The Bank reserve had fallen to four millions and a quarter, and fears were entertained (though not at that period realised) that the rate of discount, which had just been raised to 6<sup>1</sup>/<sub>2</sub> per cent., would be advanced to 7. At Hamburg the value of money was 8 per cent.

In 1858, Mr Disraeli's Budget was waited for. Notwithstanding the payment of about one-third of the Indian loan of 5,000,0001 (many of the subscribers paying in full), the money market was very easy.

NOMIST.

[April 7, 1860.

In 1859, another Indian loan was daily expected; the Russian 3 per Cent. loan of 12,000,000/ was likewise on the eve of issue; and payments upon the Chilian loan of 1,554,000/ were in progress. Great depression was mani-fested in the stock markets throughout Europe, the con-ditions and time of meeting of the proposed Congress having become very uncertain, and the continued armaments of France, Sardinia, and Austria clearly portending war. Lord Derby had announced his intention of dissolving Parliament, as soon as the necessaary money bills could be passed through Parliament.

The amounts of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,956,441*l*; in 1857, a deficiency of 12,230,775*l*; in 1858, a deficiency of 2,886,489*l*; and in 1859, a deficiency of 4,796,981*l*. In 1860, the deficiency is 10,998,416*l*.

The money market during the present week has continued very tight, as the changes shown in the Bank return indicate. The supply The market has not resumed its usual aspect. of money in all channels has been rather limited, and holde have seemed occasionally indisposed to part with it. Some transactions have taken place in the best paper at the Bank minimum, but in the majority of instances discounters have been reluctant to do business below 44 to 5 per cent. Th prospect of being compelled themselves to apply to the Bank serves to explain their caution. Consequently, this week, as last, an unusually large demand has been experienced at the Bank of England, which may be said to retain in a marked degree the control of the market. There was an apprehension in some quarters that the Bank rate of discount might be raised to 5 per cent. at the weekly court yesterday. The be raised to 5 per cent. at the weekly court yesterday. The movement in the reserve indicates that a rise to 5 per cent. might have been decided upon yesterday with at least as much reason as the rise to  $4\frac{1}{2}$  on the previous Thursday; but the Bank Board were probably influenced by a desire not to provoke criticism of the manner in which they deal with the public balance. After the dividends shall have been paid they will preden for the they have been paid, they will, perhaps, feel that they have a freer action.

Yesterday, as soon as it transpired that no alteration had been made in the rate of discount at the Bank, the supply of money became rather more liberal, and the general market was somewhat less stringent. It will be noticed that a good deal of money has been absoluely drawn from the Bank into circulation. Moreover, the mercantile engagements maturing in the first week in April have been met, and the approach of the dividend period tends to relax the demands of money holders. Some interest is felt to see what effect will be produced by the repayment to the Bank of that portion of the dividend-money which may be said to be represented by the advances made by the establishment during the shutting of the transfer-books. The extraordinarily large amount of the "other" securities in the Bank denotes a strained condition of the market, which is shown to be dependent upon the Bank in an unusual degree. Should the "other" securities run off largely upon the release of the dividends, it will be at the cost of a draught upon the outer market. These considerations do not by any means encourage the idea of a reaction from the late rise in the rates of discount. The principal reassuring features are still the soundness of trade and the absence of any foreign drain of bullion.

The dividends will be payable at the Bank of England on Monday next.

On Saturday last, news was received of the arrival of the steamer Parana from the West Indies and Isthmus with no less than 537,000l in specie, nearly all silver. This mass of treasure has reached the Bank. The other imports of specie and bullion this week have comprised a total of about 110,000%.

The firmness of the Continental exchanges has been increased by the tightness of the money market here. In several instances the rates were quoted yesterday afternoon slightly more favourably than last week. The quotation for bills on Belgium, amongst others, has advanced. The movements in bullion and in the Indian Government

paper are thus noticed by Messrs Pixley, Abell, and Langley, under date yesterday :-

Gold.—Since the date of our last circular (29th ult.), the Welles-ley with 94,000, has arrived from Melbourne; the New York, with 26,000, and the Australasian, with 20,000, both from New York; the America, from Boston, with 4,000, ; and the Tyne,

#### THE ECONOMIST.

375

from Brazil, with 6,464′. These amounts have been taken for exportation; although, owing to the demand not being so brisk, the price has not recovered from the fall mentioned last week. Some small sums (25,000/) have been taken from the Bank, but these were for exceptional orders. The Parana brings 48,000ℓ, in gold, from the West Indies, but this will not be deliverable until next week. The Australian mail mentions the sailing of seven additional vessels with gold, and we give a list of all the ships now on the way:—The Copenhagen, out 100 days, with 157,000ℓ; Suffolk, out 85 days, with 129,000ℓ; Monarch, out 71 days, with 116,000ℓ; Greyhound, out 78 days, with 20,000ℓ; Norwood, out 71 days, with 36,000ℓ; Ocean Chief, out 71 days, with 128,000ℓ; Montmorency, out 68 days, with 36,000ℓ; Lightning, out 56 days, with 53,000ℓ; Lincolnshire, out 56 days, with 128,000ℓ; making a total of 802,000ℓ. total of 802,000%.

Silver .- Our market for silver has been flat ; and, as some large Silver.—Our market for silver has been flat; and, as some large sums have been imported from the Continent, the price has again receded to 613d per oz standard. The demand for the last mail to India and China was very limited, caused partly by the tight-ness of the money market here,—the steamer taking only about 100,000. The letters from Bombay, which will be delivered on the 5th inst., are expected to bring orders; but we do not look for much recovery in the price. The Parana has brought 489,000/, in silver and dollars; but this amount will not be deliverable until Tuesday or Wednesday next. The Tagus has brought 3,768 from the Peninsula. the Peninsula.

the Pennaula. Mexican dollars will be materially affected in price by the large quantity brought by the Parana. As they will not be delivered to the consignees until next week, the price is not likely to be altered until the receipt of the next telegram from Ch

Exchange on Bombay and Calcutta, 60 days' sight, for bank drafts, is 2s 0<sup>1</sup>/<sub>2</sub>d per rupee; Madras, 2s to 2s 0<sup>1</sup>/<sub>2</sub>d; documented bills, 1s 11<sup>1</sup>/<sub>2</sub>d.

India Government Loan Notes have improved the last two days, India Government Loan Notes have improved the last two days, and have recovered from the lowest point of  $108\frac{1}{2}$  to  $108\frac{1}{2}$ - $\frac{2}{3}$  for  $5\frac{1}{2}$  per Cents., and from  $97\frac{1}{2}$  to  $97\frac{1}{2}$  for 5 per Cents. The amounts that have changed hands at these quotations have not been large; but the improvement is satisfactory, as showing that the lowest point has most probably been touched. The quotations from Bom-bet to hand this day are 964 and 103 to 104 for 5 mer Conta and buy to hand this day are 961 and 103 to 104 for 5 per Ceuts. and 51 per Cents. respectively. To-day, being Good Friday, was, of course, observed as a

close holiday in commercial circles.

The adjudication of the Victoria Government railway loan of 2,650,000/, fixed for Wednesday next, is looked forward to with a good deal of interest. Most persons seem to be of opinion that a fraction over 105 per cent. is a very fair price for subscribers to offer, considering the uncertainty of foreign politics, the state of the money market, the obligation of pay-ing up the entire amount of the debentures at once, and, what must not be forgotten, the reasonable margin for profit which every person who takes part in an operation of this kind has a right to look for. Subscribers can have little inducement to take up a new stock unless it is offered upon terms relatively cheaper than those already current for stock of a similar description.

The scrip of the new Brazilian loan has recovered to 1 discount to par.

It is rumoured that the sum divisible amongst the share-holders in the South Austrian and Lombardo-Venetian Railway Company on the 1st of May as interest and dividend has been fixed at 221 per share, making, with the 71f already paid as interest, a total distribution of 30f for the whole year 1859. This is equal to about  $12\frac{1}{2}$  per cent per annum upon the par value of the capital paid up. sum of 221f will be receivable at the date fixed for the call of 2l per share. After the payment of the dividend, there will remain a surplus profit of 220,000/ or 230,000/ to be carried forward.

Another call of 5 dols has been unexpectedly announced upon the shares in the Illinois Central Railway.

The latest prices for shares in new projects yesterday afternoon were as follows :- Ocean Marine Insurance, 27 to 34 prem.; Universal Marine Insurance, ½ to ½ prem.; Lon-don and Provincial Marine Insurance, ½ to ½ prem.; San Paulo (Brazilian) Railway, ½ to ¼ dis.; Bank of Turkey, 1½ to 1¼ dis.; City of London Brewery Preference, ¾ to ⅔ prem.; and Buenos Ayres and San Fernando Railway, 2½ to 24 prem. to 2‡ prem.

A rise of about # per cent. has taken place this week in the A rise of about # per cent, has taken place this week in the French funds. The 3 per Cents, closed yesterday at 70 for money, and 69.90 for the end of April. A more confident feeling seems to prevail with regard to politics. It is also stated that the purchasers of the rentee for account of sundry public funds have not yet ceased.

The English funds have likewise rallied. The announcement that the Emperor of the French is willing to submit to the Great Powers the question of the neutralised districts of Savoy has had a favourable effect, and the improvement on the Paris Bourse naturally reacts here. Moreover, as we pointed out last week, Consols now carry three months' dividend. Under the influence of re-purchases by previous dividend. Under the influence of re-purchases by previous speculative sellers, an extreme rise of  $\frac{5}{6}$  per cent. was at-tained, Consols reaching yesterday  $94\frac{5}{6}$  to  $\frac{3}{4}$ . The usual speculative reaction followed in the afternoon, and the latest quotations were  $94\frac{3}{6}$  to  $\frac{1}{2}$  for money, and  $94\frac{1}{2}$ , "sellers," for the 11th inst. These prices are  $\frac{1}{2}$  per cent. above those of last Friday. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :-this day :-

The course of the market for British railway stocks continues to corroborate all the sanguine anticipations that have been expressed concerning it. The traffic is excellent, the increase being especially large in the manufacturing districts, in consequence of the remarkable activity of trade. The increase in the traffic occurs, too, in most instances, without any increase in the number of miles of railway open. The public, instead of selling, are encouraged to make fresh in-vestments in this class of property, of the solidity of the basis of which they have perfectly satisfied themselves. Thus, the railway share market has been almost unaffected by the recent rise in the value of money. Yesterday's closing quo-tations, compared with those of last Friday, show a rise of e of 21 per cent. in Midland stock (which continues in extraor-dinary favour, and has been dealt in as high as 1183), 11 per cent. in Great Western and Lancashire and Yorkshire, 14 per cent. in Berwick, 1 per cent. in Great Northern and York and North Midland, 2 per cent. in Caledonian, London and North-Western, North British, and South-Eastern, 1 per cent. in London and South-Western, &c. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :-

#### COMMERCIAL EPITOME.

FRIDAY NIGHT.

377

FRIDAY NIGHT. The demand for wheat at Mark lane this week has continued in a healthy state, at full quotations. All kinds of spring corn and four have commanded extreme rates, with a good consumptive in-quiry. The imports of produce from abroad have continued limited. Some of the Greek firms, in order to throw risk upon English consignees, have advised their correspondents that in future "the cargoes are to be taken as they stand, and that should any sea accident affect the quantity on board the vessels, invoice quan-tity to be final." This attempt to throw all losses upon the pur-chasers must surely fail: besides, after this notification, no one would be justified in buying without a positive guarantee, both as regards quantity and quality. There must, of course, be two par-ties to all contracts ; and the final settlement of this much vexed question, in reference to floating cargoes, should at once be set at rest by the buyers. Mr Ed. Rainford states that 11 cargoes have arrived offcoast since the 30th ult, and that the demand has con-tinued steady, at full quotations. tinued steady, at full quotations.

Messrs Briggs and Co., of Alexandria, report the state of the grain trade to the 27th ult., as follows :---

grain trade to the 27th ult., as follows :--Receipts of wheat and beans in our grain market during the past week have nearly "altogether ceased. Purchases of the former have been entirely for local consumption, and in the latter the only transaction is a re-sale, from second hands, of a lot of about 700 ardebs noted below. For Indian corn the demand is active, at advencing rates. The follow-ing are the transactions since our last advices 'of the 17th instant, with present prices, free on board, viz. :--Wheat, Saide, 560 quarters, at 36s field to 37s per quarter; Behira, at 33s field to 34s per quarter; beans, Saide, 455 quarters, at 28s field to 29s; Behria, 185 quarters, at 27s field to 28s per quarter; Indian corn, 4,520 quarters, at 26s to 27s per quarter; leatis, 75 quarters, at 26s field to 27s field per quarter; at 66s field to 67s of per quarter.

The Liverpool cotton market week closed on Thursday, and the total sales in five days have amounted to 40,000 bales, of which spinners have taken 32,000, speculators 1,000, and exporters 7,000 bales. Quotations are unchanged from Friday last. There has been a moderate demand throughout the week, but the quality offering is so considerable, that the inquiry is freely met, and with difficulty only prices of the lower descriptions are maintained. Yestorday the market closed quiet and lifeless ; sales, 7,000 bales, without change in prices.

There has been very little business doing in the tea market, and, to force sales, lower rates must be submitted to by the importers.

The inquiry for all raw sugars has ruled somewhat heavy, and the quotations have, in most instances, given way 6d per cwt. Refined goods move off slowly at barely stationary prices. Letters from the Mauritius to the 8th ult. state that the prospects of the sugar crop were favourable. The total shipments to the 6th ult. were 196,621,059 lbs, against 190,238,613 lbs to the same date in 1859. in 1859.

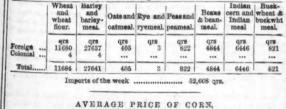

#### Messrs Trueman and Rouse furnish the annexed table :-

Wheat # d 44 5

		8
In comparing the above total imports of sugar with the previous aonth, we find that in February they amounted to 46,710 tons. The stock, however, declined 3,960 tons, viz., from 136,700 to 32,740 tons. The imports of coffee increased 11,080 tons, and he stock rose from 41,440 to 43,620 tons—a strong proof of the boundness of the trade since the commencement of the year.	The arrivals of tin at this port last month amounted to 12,660 slabs, all of which were Straits, with the exception of 479 slabs Banca, making the imports since 1st January as follows:- 1860 1859 slabs slabs slabs Banca 2135 1850 10793 Straits 2667 9102 2020	
Great firmness has continued to prevail in the inquiry for coffee, at fully the late upward movement in price. Cocoa, however, has commanded less attention.	Total 28702 10952 13393 The present stock here is estimated at 1,300 tons.	
Rice has sold freely; but we have no change to notice in the alue of any kind.	The following is the monthly report for Banca tin in Holland :	
The wool trade in London has been devoid of animation. here are, however, no sellers, except at full quotations. n reference to the wool trade, at Liverpool, Messrs Ronald and	Stock, February 2

#### THE ECONOMIST.

379

The tallow market has been in a very inactive state, and prices have had a drooping tendency. P. Y.C., on the spot, is somewhat freely offered at 555 9d to 56s per cwt. "The demand for dry goods," observes the New York Shipping List of the 24th ult., "continues moderate. The bulk of the Southern trade is over, but there are purchases for shipment South still effected to a considerable extent. All kinds of cotton fabrics remain steady at previously quoted rates. Woollen goods are quiet, and prices nominally unchanged. Foreign goods continue dull, except for favourite patterns and makes, which sell freely at full prices. The auction sales continue to be well attended, but the bidding is not very spirited, and the prices realised are rarely astisfactory." tisfactory.

The cotton market continues depressed. A very moderate amount of business has been transacted. The lower qualities of American are again cheaper by  $\frac{1}{2}$ d to  $\frac{1}{2}$ d per lb. The better qualities of American are again the second seco

## MARKETS IN THE MANUFACTURING DISTRICTS.

Although there has been much less activity in the demand for goods in the manufacturing disfricts, both for home use and export, prices generally have continued steady, and merchants have shown no disposi-tion to accept lower prices in any instance. Stocks are still unusually low for the time of year, the operatives are well employed, and machinery is running full time. In iron a very limited businees has been passing, on easier terms. Coals, however, have continued in active request. MANCHENTRATER, April 5.-This market has been quiet, but the length of engagements on hand has kept prices in general moderately firm. India buyers have been without fresh intelligence on which to act, and their goods, in particular shirtings and T'cloths, have been chiefly up-ported of late by previous transactions for Chies. Offers for India have been current at 14d per piece under last week's rates, but little has been done. A few purchases have occurred of 40's and 50's mule, the latter of which had been for some time neglected. Continental bayers have been restrained by the aspect of European politics. An advance on the wages of spinners and other operatives has been paid at Preston and various other districts. DOMPARATIVE STATEMENT OF THE OUTION THADE.

#### CORN.

# AMERICAN GRAIN AND FLOUR MARKETS.

AMERICAN GRAIN AND FLOUR MARKETS. Naw York, March 24.—FLOUR AND MRAL.—The market for State and Western flour remains unaitered, only a moderato demand having prevailed, which has been confined almost exclusively to the requirements of the local and Eastern trade. Some kinds advanced 5 cents per bbl on the lower grades. Canada flour is in better demand, and prices are stiffer; the sales comprise 1,050 bbls, including 300 yesterday, at 5.50 dols to 7.25 dols per bbl. Southern flour of all kinds continues to be wanted at full prices. Rye flour is steady and unchanged. Export of wheat flour from 1st to 20th March, 37,379 bbls, against 32,772 bbls in 1859. Gaans.—The market for all kinds of wheat has been unausally depressed, and to effect sales to any extent a considerable reduction in prices would have to be conceded. The receipts are very light as yet, but, with favourable weather, pretly large quantities are looked for. The sales during the three days have been very light, having reached only 5,250 busbels, including 1,250 white Indiana at 1.64 dol to 1.65 dol; 500 Milwaukee Club, 1.25 dol; 300 amber Micbigan, 1.59 dol; 700 white Kentucky, 1.70 dol; aleo, 500 ditto, 1.72 dol; and 2,000 red

45 60

29

26 15 15

Int

Western, 1.47 dol, yesterday. Corn has been in moderate request, and the market has ruled heavy, with a declining ten dency in rates. Export from 1st to 20th March: wheat, 8,747 bushels. against 600 bushels in 1859; corn, 32,029 bushels, against 17,792 bushels in 1859.

#### LONDON MARKETS.

#### STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, FRIDAY EVENING.

Most of the markets held since we last wrote have been very moderately supplied with wheat, in, for the most part, somewhat improved Although the demand for all kinds has been much less active condition. than in the previous week, prices generally have been well supported, and, on the whole, good clearances have been effected. Both here and at the outports, foreign wheat has changed hands at extreme quotations. The small quantities of barley on offer have sold readily, but we have no further advance to notice in prices. Oats, beans, and peas have moved off, chiefly in retail quantities, but at full currencies. No advance has, as yet, taken place in the value of flour equal to the rise in wheat : con

sequently, millers' profits are now very small. It is asserted, however, that the consumption of flour in London is small, when compared with some former years; but we believe that there is now a very keen competi-tion for business on the part of the country millers, who are now forwarding very large supplies of flour to the metropolis, and of a very superior condition lity.

Most of the markets on the Continent have ruled firm for wheat, on higher terms, and some large parcels have changed hands for export to England in the spring. Barley and all other articles have sold steadily, at very full prices. In the United Stater, flour has produced rather more money; but flour and Indian corn have had a drooping tendency. The

In Ireland, produce generally has commanded more attention. How-er, very little change has taken place in prices. This being a close holiday, no market has been held here, to-day; but, oth on Monday and Wednesday, wheat and all other articles of produce wars in steady request, at fully previous rates.

#### TB. TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE " POSTSCRIPT MINCING LANE, THURSDAY MORNING

SUGAR.--The market opened flatly, and rather easier rates were in some cases accepted for low to middling qualities. Yesterday, the strong kinds of Siam brought forward found ready buyers at the full valuations, and two floating cargoes of foreign were reported sold for this kingdom. West India remains quiet, the quantity sold is two days being only 250 casks. Arrivals keep moderate. The deliveries are steady, and the stock at this port is about 49,500 toor, against 43,000 tons last year, 42,000 in 1858, and 38,250 toor, in 1857 at the same period. The stock of Great Britain may be computed at 90,000 tons, against 75,000 tons last year. 70.000 andtons in 1857.

Interview of the provided by automatical as 5,000 told, against 15,000 tons last year, 70,000 andtons in 1858. Mauritius.—10,220 bags offered by auction only partly found huyers at previous rates to 6d decline: low to good yellow, 40s to 44s 6d, includ-ing grainy; low to good brown, 33s to 38s 6d; crystalised grey, 43s to 45s per cwt. Some few of the bought-in parcels have since been sold. Madras.—834 bags native brought 32s to 35s per cwt for brown and solor

yellow. Per -670 bags brought 38s to 42s 6d per cwt for brown to good yello w.

soft yenow. Foreign.-Of3,160 bags clayed Manills, about 800 bags sold at 38s fid for middling, the remainder being held above the value. 120 backets Java

brought 40s 6d to 42s 6d; brown, 39s to 39s 6d. 3,220 bags sold with some animation : strong greyish yellow to white, 43s to 47s; soft, 40s 6d to 42s 6d; brown, 38s 6d to 39s. A cargo of Rio Grande has sold for the United Kingdom at 24s; and also a cargo of Havana, No. 12, at 28s 3d per cwt.

XUM

ed is quiet and rather cheaper. Low goo ds quoted 51s to Reprint is quiet and rather cheaper. Low goods quoted 51s to 51s do per cevt. Crushed and pieces offer upon easier terms than before Rust.—Common kinds still meet with partial inquiries. 250 cash of East India have been sold at 1s 7d per proof gallon, and some far transactions are reported in West India at last week's rates. Correg.—Business has been restricted by the diminished supplie

ed supplies

transactions are reported in West India at last week's rates. Corsus-Business has been restricted by the diminished supplies offering, but all descriptions remain exceedingly firm, and two flaating cargoes of foreign have sold at high prices. 60 casks plantation Ceylon by auction, yesterday, went at 70s to 75s fid for low middling to middling; and 342 casks, &c., 877 hags native, at 60s to 65s for good ordinary to good. A floating cargo of good firsts Rio is reported at 60s for the Baltic, and one of 85 to Domingo at 62s per cew for a near port. Cocoa.--Nothing of interest has transpired by private contract, and there are several sales announced for to-day. TEA.-The transactions have been of a most limited character, and several kinds are offering at the low rates established in the sales last week. Common congou is nominally 1s 4d per 1b. Ricz.--A strong demand continues to prevail, especially for soft grain hinds, and considerable transactions having taken place, holders are in many cases asking higher rates. Privately, white Bengal has sold at 9s 6d to 13s for low to good; old Moulmein, Necrancie, and Rangoon, from 8s 4dd to 9s 4dd; new Moulmein, 9s 6d to 9s 7dd; pinky Madras, 9s 6d to 10s per cwt. 1,000 bags old Necrancie Arracan, by auction, were bought in at 10s 6d. 4,750 bags Java sold at high rates: low middling broker to good white, 11s 6d to 14s 6d; fane, 16s to 16s 6d per cwt. Information and Desuverses of Rics to March 31, whith Broker on hand.

per lb. Отника DTRETUFFS.—Gambier is quiet. Of 1,885 bales, a few lots e OTHER DTESTUFFS.— Gambier is quiet. Of 1,885 bales, a few lots sold at 16s 9d for good; the remainder being held at 16s 9d to 17s. Cutch is again cheaper, and 2,676 bags only partly met with purchasers, at 26s 6d to 27s. Bengal Turmeric was bought in at 16s. 60 bales Bengal sofflower went from 51 12s 6d to 9/2s 6d per cwt. LAC DTS remains inactive. 226 cheats offered yesterday were bought in, and there is not much business passing in the article by private contract, although holders remain firm. RUBDER.—A small quantity of East India sold at 2s, and some fine Para at 2s 44d per lb. Stocks of the former are still very moderate. DTEWOODS.—Manilla Sapan has been disposed of at 6l 7a 6d to 7l 15s. Good Siam is held firmly. Red Saunders in the public sales resilied 5/ 12s 6d per cwt.

Good Sham is near himity. Acta standard and sold at 81 per cwt. 51 12a 6d per cwt. DRuca.—The market is quiet. Camphor has sold at 81 per cwt. OLLS.—There has not been any change of importance in these mar-kets, and prices generally are stationary. Linseed has sold at 28s per Here deal

w. Rape dull. SPIRTS OF TURPENTINE have advanced to 36s 9d per cwt for American, ad there is now a better feeling in the market. Hurse.-The public sales of East India held this morning went off

HURE.-The public sales of East India held this morning went of flatly, there being few export orders here. METALE.-The most important feature of the week has been the increased business done in spelter; 525 tons finding buyers yesterday at 20/10s to 20/12s 6d per ton, which was rather under the previous nominal quotation. The stock of 3,110 tons is about the same as in 1859. British copper cannot be obtained at the reduction made last week. Foreign tin remains inactive, but it is not offered upon lower terms. Small sales of good Stratis have been effected at 131s per cwt. Scotch pig iron has declined to 55s per cwt. HEME.-Sales of Manilla continue to be restricted by the high preten-sions of holders. A small parcel of fine selected quality has sold privately at 33/10s. Petersburg clean is firm at the late advance. JUTE.-Large public sales were held yesterday, viz., 10,250 bales, which passed off very flatly, and about 1,500 bales only sold at the previous value. The stock is 12,200 tons, against 8,900 last year, and 3,600 tons in 1658.

in 1858.

in 1858. TALLow.-Quotations of foreign have further receded 6d to 1s, on the spot or for early deliveries, at which decline a moderate business has been done, but the market is now quiet again. Ist nort Peteraburg Y. C., 56s to 56s 3d: April to June, 54s 6d; and for the last three months of the year, 52s 3d per cwt demanded.

#### POSTSCRIPT.

SUGAR.—There was only one sale of augar to-day, viz., 1,176 bagy emang, which wont off steadily at 38s to 43s 6d for low soft to good ellow. 700 baskets Java sold privately, No. 111 at 43s; and 1,300 bags w Siam at 31s 9d per cwt. The week's business in West India ated to 500 hhds.

CorrEE .- 51 casks plantation Ceylon found buyers at full prices.

Cocos .- 1,809 bags Gusyaquil were bought in at 73s to 74s per cwt. BICE.-4.275 bass Bengal were bought in at 10s 6d to 13s 6d for low middling to good white. 1,000 bags old Moulmein were taken in at 5s 6d. About 8,000 bags have sold by private contract.

SALTFETRE firm, with buyers for arrival at 44s per cwt.

LAC DYE .- 140 chests were partly sold : middling at 9d; good, 1s 3d

to 1s Sid per Ib. GAMBIER .- 1,107 bales were taken in at 16s 9d per cwt.

#### ADDITIONAL NOTICES.

REFINED SUGAR. - The home market for refined sugar has been very quiet this week. Grocery lumps sold at 51s. For export, nothing doing. The demand for Dutch crushed here is not worth noting.

The demand for Duth crushed here is not worth noting. GABEN FAUT.—The market is depressed, owing to large arrivals. fany cargoes of oranges being out of condition, combined with the weather to being favourable for contumpilon, has caused prices to be lower. ione cargoes of oranges, sold by Keeling and Hunt at public sale, went at a reduction of is to 2s per package. Lemons dull. Nuts of all kinds mainer for purchasers, but as the Easter holidays are approaching, the market is expected to rally. Day FRUIT.—The market continues stagmant. At public sale a small parel badly damaged currants sold without reserve from 291 to 30s. Selected Valencias bought in at 45s. Clearances continues on a fair scale. ENGLISH WOOL.—Rather a botter feeling in the demand. In prices, however, no change has taken place. COLOMIAL AND FORMIGN WOOL.—The market is without change. HBMP AND FLAX.—In flax nothing is doing. The hemp market is tigady this week at the quotations. COTOM.—No reported sales in cotton this week. SILK.—The market is unchanged. The demand is still inactive ; yet prices are without alteration. TOBACC.—A steady demand has continued for most descriptions, but inde for most descriptions, but a reductio

prices are without alteration. Tobacco.—A steady demand has continued for most descriptions, but chiefly for good and fine sorts of home trade qualities, at irregular prices, especially for midding and ordinary. Leaf of fine export quality, stock of which is very limited, has been more inquired after. LEATHER AND HIDEs.—There was not any improvement, either in the demand or value of leather at Leadenhall this week. A fair average munt for the account of the year was cold at previous refer.

the demand or value of leather at Leadenhall this week. A fair average amount for the season of the year was sold at previous rates. Maratas.—There is little to remark on the state of the market, which is flat, as for some time past. Copper has had some attention at the last reduction, and buyers to a considerable extent have come forward. Prices for all descriptions are very firm. Iron does not rally in demand, and prices are a triffe easier. Scotch pig keeps pretty steady, at last week's deeline. Lead is barely so buoyant. Spelter has changed hands to the extent of 500 tons on the spot and for arrival, but there is little life in the warket. Tin is a triffe easier for foreign; English without change. The plates in moderate demand. Tallow.—Official market letter issued this evening :—

#### Imports this week 474 casks.

#### METROPOLITAN CATTLE MARKET.

MONDAY, April 2.—The total imports of foreign stock into London last teek amounted to 2,602 head. In the corresponding week in 1859 we weived 2,801; in 1858, 1,620; in 1857, 1,194; in 1856, 722; in 1855, 534; md in 1854, 1,629 head.

and in 1854, 1,629 head. From our own grazing districts the arrivals of beasts fresh upthis morning were raker on the increase, and in somewhat improved quality. The best Sots and crosses were in fair request, at full prices. Otherwise the best frade was in a sluggish state, and in some instances the quotations ruled a shade lower. The extreme value for Scots was 4s 10d per 8 lbs. We were moderately well, but not to any heavily supplied with sheep. The best Downs and half-breds moved off steadily at very full prices. Most other breads were dull, but not cheaper. The best Downs in the wool sold at 5s 3d, ext of the wool 4s 3d per 8 lbs. The lamb trade was somewhat active at extreme rates, viz., 6s to 7s per 8 lbs. Calves were in short supply and improved request at 2d to 4d per 8 lbs. The very supplied to a start of the start of

pound. There were very few good beasts on offer, and the supply of inferior descriptions was short; the beef trade therefore ruled steady. The mutton trade was tolerably good and prices firm, a fair clearance being effected. Veal and pork was in good demand, at previous prices. Price per stone of 5 lbs, sinking the offal.—Beef, 3s 4d to 4s 43; mutton, 4s 4d to 5s 8d; veal, 4s 8d to 6s; pork, 3s 8d to 4s 8d. Head of cattle at mar-ket:—Beasts, 720; calves, 253; sheep, 7,170; pigs, 140.

#### HOP MARKET.

BOROUGH, Monday, April 2.—Our market during the past week has exhibited but little change, the business transactions being very limited, and mostly induced by some concession in value. Our currency is nominally as follows :—Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

#### POTATO MARKET.

POTATO MARKET. Southwark Waterstift, Monday, April 2.-During the past week the arrivals construines have been moderate, but still more than oqual to the demand. The trade continues very heavy. The following are this day's quotations:--York Regents, 90s to 150s; Lincolnahire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; Perth, Forfar, and Fifeshire ditto, 80s to 100s; ditto Rocks and reds, 75s to 85s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton. TRURSDAY, April 5.-The supplies of home produce have been moderate at this market since our last report, principally by water conveyance, and trade generally keeps pretty sotive, 140s to 150s; Kent and Essex ditto, 80s to 120s; Soteh ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

#### COAL MARKET.

WEDNESDAY, April 4.—Bower's West Hartley 16s—Byass's Bebeide West Hartley 16s—Hastings' Hartley 16s—Howard's West Hartley 15s 9d —Tanfield Moor 12s 6d—Tanfield Moor Bute's 12s 6d—Wyism 16s. Walls-end: -Acorn Close 19s 3d—Eden 19s 3d—Kepier Grange 19s 3d—Heagh Hall 19s 3d—Kelloe 19s 6d—Morth Hartlepool 15s 6d. Carway and Duffryn Malting 23s—Firth's Robin Hood 14s 9d. Ships at market, 25; sold, 25.

#### LIVERPOOL MARKETS.

#### WOOL

(FROM OUR OWN CORR. MDENT. THURBDAY, April 5.—Our market is rather quiet, continental politics serising a depressing influence, and inducing buyers to continue to act ith great caution and restrict their purchases to actual requirements only ; rices, however, have not undergone any alteration yet, as stocks are but with gre light.

#### METALS.

(FROM OUR OWN CORRESPONDENT.) (FROM OUR OWN CORRESPONDENT.) THURSDAY, April 5.—The market for manufactured iron has, through the past week, continued without change in prices, but with oaly a limi demand. In Scotch pig iron there has been less depression, and a business has been done during the week. For copper, there has be rather more inquiry since the recent reduction in price. Little doing lead. Other metals remain as before. d a fair

GREAT WESTERN OF CANADA.—The half-yearly meeting of this company was held on Wednesday. The chairman, in moving the adoption of the report, stated that when it was before the directors in proof they received letter from Mr Brydges, the managing director, stating that he had seen Mr Galt, the Minister of Finance, and that it had been arranged that the interest on the Government loan should not be called for during three years, and as the board understood it that no interest would be charged, or that the Minister would forego the interest for that period, they had stated in their report that a 2 per cent. dividend would be declared; but now they had to make an unpleasant correction of that period, they had stated in their report that a 2 per cent. dividend would be declared; but now they had to make an unpleasant correction of that period, they had stated in their report that a 2 per cent. dividend would be declared; but now they had to make an unpleasant correction of that paragraph, because they and aince been informed, on the arrival from Canada of Mr Reynolds, their financial director, that such was not the case, but that the Minister was willing to allow the interest on the Government loan to stand over for three years as a loan to the company, with a view to help them over the Government of Canada that the interest would not be called up for three years, and that it would stand over as a loan at 6 per cent. He (the chair-fan) thought it would not do to pay a dividend widen oneay. They had paid off all their floating debt, and therefore they did not want tated in the report, the directors had resolved not to do so. LONDONDERERY AND ENNIKULIN.—The directors of this company have

stated in the report, the directors had resolved not to do so. LONDONDERRY AND ENNISKILLEN.—The directors of this company have agreed, subject to the aproval of the shareholders, to lease the undertaking to the Dundalk and Enniskillen Railway Company. The lease its com-mence on the 1st of January, 1860, for a period equal to perpetuity, at a rental of 26,000 per annum, for three years; than to be increased by 20 per set, on the gross receipts from the two railways, exceeding 95,000 per nanum, till the yearly rent amounts to 33,000 per annum, when it is to remain at that sum. The rent is to be paid weekly, without any deduction. The Dundalk Company are to take the severed lands, and to carry out all areements and contracts entered into by the Londondrry and Enniskillen Railway Company, excepting the completion of their land purchases. TRAFFIC RETURNS.—The traffic returns of railways in the United King-fom for the week ending March 24 amounted to 463,310, and for the cor-responding week of 1895 to 432,430, showing an increase of 30,880. The pross receipts of the eight railways having their termini in the metropolis amounted to 194,272, and for the corresponding week of last year to 185,985/ thowing an increase of 8,287.

#### RAILWAY AND MINING SHARE MARKET. LONDON.

LONDON. MONDAY, April 2.—The firmness of Consols acted favourably upon the railway market, several of the heavier stocks closing at an advance. There were few transactions in the foreign market, and some of the smaller under-lakings exhibited an advarse tendency. San Paulo left off 4 to 4 discount, and Lombardo-Venetian 14 pus. The proposed dividend of the latter for the year 1359 is 22½ france per share, with a reserve of 220,000. In American railway securities an improvement occurred in the bonds and harse of the Illinois Ceutral, Michigan Southern bonds, and New York Central shares. Mines were heavy, except St John del Rey, in which a further rise took place.

Central shares. Mines were heavy, except St John del Key, in which a further rise took place. TUESDAY, April 3.—The railway market was very firm, and showed an advance of  $\frac{1}{2}$  to  $\frac{1}{2}$  per cent. Midland and Great Northern A stocks presented the principal improvement. The colonial market was less buoyant than the home, but soveral Indian guaranteed descriptions were slightly higher. Grand Trunk of Canada stock advanced 1 per cent, to 35 to  $\frac{1}{2}$ ; and Great Western shares an eighth, to 13 $\frac{1}{2}$  to  $\frac{1}{2}$ . French railways improved. Lombardo-Venetian were likewise firm in the morning, but subsequently went to  $\frac{1}{2}$  pm., or the same as yesterday. American rail-way scourities were steady. Mines were dull, and in one or two cases the closing quotations showed a decline. WEDMENDAY, April 4.—The railway market was steady, and at one period experienced a further improvement. A reaction, however, after-pal feature in the colonial market was a fall in the abares of the Great West-ern of Canada, ou the non-declaration of a dividend at the meeting this morn-ing. Indian guaranteed were firm, East Indian especially, closing 101 $\frac{3}{2}$  to 12 $\frac{1}{2}$ . In foreign descriptions, Pernambuco, Lombardo-Venetian, and Great Luxembourg improved. Pernambuco were finally quoted 1 $\frac{1}{2}$  to 1 dis., and San Paulo  $\frac{3}{2}$  to  $\frac{1}{2}$  to 1 dis., and San Paulo  $\frac{3}{2}$  to  $\frac{1}{2}$  charts for the Rey. THURSDAY, April 5.—A further rise took place in most British descrip-tions. Great Worthern bub the ordinary and A tooke Midland Lanceaburg

relapse in St John del Rey. THURSDAY, April 5.—A further rise took place in most Britiah descrip-ions, Greak Northern, both the ordinary and A stocks, Midland, Lancashire and Yorkshire, and North-Eastern showed the chief improvement. A partial reaction, however, occurred before the cl.se, but the market re-mained firm. In colonial descriptions there was another rally in Great Western of Canada. Grand Trunk also improved to 35% to 36, and Indian uaranteed stocks were firm. French shares, except Eastern of France, dvanced, but in other foreign railways no alteration of importance took alco. Mines were little dealt in, and occasionally showed a reduction.

De Bann's delicious Health-restering Revatarsta-Rausaca Foco-Gertificate No. 36, 415. In our practice w hire been enabled to appreciate the virtues of Du Rary's Focd. In the effect on chronic Dyspecial (Indigestion), Nervousness, Constipation, Diarrheas, Mises and Liver Complaints, Cosgh, Asthma, Debility and Incipient Consumption, we find it the safest remody. W Ure, MD, F.B. S.; Dr;Harvey; "Dr Bright, Dr Shor-ind; Dr Campbell.

#### THE ECONOMIST.

DR. DE JONGH'S

(Knight of the Order of Le old of Belgin LIGHT-BROWN COD LIVER OIL, Li administered with the grantast success in mass of Concurring, Baconomics, Astana, Couens, Ranoux, risk, Goya, Ganzara, Daminier, Domasse or run Skin, Richard, Byrarrice Marrie, and All Sca Fulnes, Jayasrite Marrie, and All Sca Fulnes, Arrantose.

Extensive experience, and the recorded testimony of numberiess eminent medical practitioners prove that a half-pint of Ds Ds Jorows' of U is equal is remained is effects to a quart of any other kind. Hinnes as it is incompar-ably the beat, so it is likewise for the cheapset. Palatableness, speedy efficacy, safety, and economy unitedly recomend this univalied preparation to in-valids.

Opinion of A. B. GRAWVILLE, Esq., M.D., L.R.C.P., F.R.S., Anthor of "The Spas of Germany," "On Sudden Death," dc. "Dr Granville has found that Dr. Dr. Joxon's Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the names and indigestion tiso often consequent on the administration of the Pale Newioundiand Oils. The Oil being, more-over, much more palatable, Dr Granville's patients have themselves expressed a preference far Dr Ds Jongh's Light Brown Cod Liver Oil."

Sold ONLY IN IMPERIAL Half-pints, 28 6d; Pints, 48 9d; Quarts, 9a, capsulad, and labelied with DB DS JONGN'S stamp and signature, WITHOUT WHICH NOME CAN FORBELT BE CHNINK, by respectable chamists. SOLE CONSIGNEES, ANSAE, HARFORD, and CO. 77 STRAND, LONDON, W.C

DEANE'S TWO-HOLE BLACK PENS DEANE'S TWO-HOLE BLACK PENS which are menualid for their durability and easy action, are adopted by the gontiemen of the Stock Ex-change, and the principal bankers, merchants, and public companies of the city of Loudon, heatiles several of Her Majesty's judges, the most eminent counsel, and the reversual his clergy. Their cheapness and popularity has induced many unprincipled people to patforth imitations of the genules articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped "G. and J. Deane, London Bridge," and the box, which contains exactly trevieve dozen, has there a variously coloured label, inscribed "G. and J. DeANE'S Two-Hole Black Pens, 46 King William strest, London bridge."

#### DINNEFORD'S

PURE FLUID MAGNESIA PUKE FLUID MAGNESIA has been for many years annihilation of the most eminent of the Medical Profession, as an excel-lent remody for additise, hearburn, headache, gout, and indigestion. As a mild aparient it is admirably, adapted for delicate females, particularly during preg-mancy; and it prevents the food of infants from turning sour during digestion. Combined with the Addidlated temon Syrup, it forms an effective agapted traught which is highly agreeable and effections Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horas hair Gloves and Beitz), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

## IMPORTANT STANDARD BOTANICAL WORK WITH NATURE-PRINTED PLATES. splete, price 61 ds, half-bound, in Imperial Folle, with 51 plates,

THE FERNS OF GREAT BRITAIN and IRELAND. Nature-Printed by HENRY BRADBURY. With full descriptions of the Speries and Varieties, by THOMAS MOORE, F.L.S.; Edited by Dr LINDLEY.

Varieties, by THOMAS MOORE, F.L.S.; Édited by Dr LINDLEY. "This magnificent folio is the first-fruits of the Nature-mining process in this country. Those who have made the study of Ferns the recreation of their laisure hours will bedelighted with Mais volume, not only as represent-ing their old favourites in a truly living form, but on ac-count of the great attention given to the representation of varieties, and the synearsnee of the plants in every stage of their development. Nothing is more puzzling to the young botanies than the varieties of form which the same species of Fern assumes according to locality and other circomstances. These cannot be made evident by descriptions alone; and certainly in no in-stance has any author ever attempted to illustrate so large a number of varieties of Ferns as are found hers. Of the way in which they are Nature-printed in this book, we can asfely say they are better done than any-uhing of the kind we have seen before. Such beautiful representations of natural objects Jeserved good illustra-tive heits-press, and in the services of Mr Moore and De Lindey, Mr Henry Braibury has enjoyed the aids of competent/scienco. The description of the species, and the aids of the press. The description of the species, the synonyms, and the general remarks, are more catended than in any work hitherto devoted to the British Ferns. -Armaxum, April 27, 1867.

Bradbury and Evans, 11 Bouverie street.

A AMPHITTHEATRE: Proprietor, Mr Wm. Batty. In announcing the RE-OPENING on EASTER MONDAY, April 98, of this far-fasses I Amphithests again under his own management, Mr Batty feels press in calling to mind the widely-extensed and distant patronage, including even that of Her Ment Gradow Majesty the Queent, and wilch patronage, during his former period of catering for the public annusmant, wa at all times so lavishiy bestowed. During the ressa, the interior of the Amphithestre has been excitely re-decorated and embellished, and surrounded with cosity and unique lastres, and a new gigantic and most beamful ful searce crystal chandelier, manufactured by Defines and Son, of Houndaltich. The whole awary of an proprietor has been directed to gathering together, who have each achieved success. He has not besitated to expend immense labour and capital in its accomplish-ment, and looks, with heps, for the fallest patronage of the public.

d'un Drapeau," (now performing, with great success, in Paris), and entitled THE HISTORY OF A FLAG.

S AUCE S.--CONNOISON OF A FLAU S AUCE S.--CONNOISE URS have Pronounced LEA and FBRRINS" WOR-CESTERSHIRE SAUCE "one of the best additions to Sonp, Flah, Joints, und Game. The large and increasing demand has caused unprincipled traders to manufacture a purious article; but the "GENUINE" all bear Lei and Perrins' name on Bottle Label, and Stopper. Sold by Crosse and Blackwell, London, and all re-spectable Olimen and Grocers. Sols manufactures-Lea and Perrina, Worcester.
